It is plain from the letter that your correspondent believes in Christ Jesus. It is strange, then, that he should be at such pains to identify Christian Science with occult religions, for there is nothing occult or mysterious about the teachings of Christ Jesus or of Christian Science. Indeed, had he noticed the exact coincidence between the teaching of Christian Science and that of Christ Jesus, as well as the renewal of the spiritual healing of sin and sickness as in the Saviour's time, your correspondent would have spared himself the trouble of making fine spun connections between Christian Science and anything else than Christianity itself.

Digitized by Google

Refusing Christian Scientists the name "Christian" for reasons already referred to, the critic avers that the term "Science" is a misnomer, because Mrs. Eddy taught that matter is not real. Evidently he has a correct view of at least one of the fundamentals of Christian Science teaching—fundamental in that the reality of self-existent matter cannot be logically reconciled with the omnipresence of God, Spirit; and the reality of matter as a product of Spirit cannot be harmonized with the infinite wisdom and goodness of God, of whom John spoke as "love." Jesus had no partiality for the belief in matter, but said, "The flesh profiteth nothing." Even material scientists can tell us nothing about the ultimate nature of matter; their hypotheses are only statements of their beliefs. What is really known about matter may be stated in terms of negation,—it does not think, love, or act; that is, it is not like God, the source of all real being.

According to your correspondent's quotation, Buddhism's finale for man is "virtual annihilation." Let us compare that with Mrs. Eddy's statement on page 317 of "Science and Health with Key to the Scriptures," in considering the nature and work of Christ Jesus: "The individuality of man is no less tangible because . . . his life is not at the mercy of matter. The understanding of his spiritual individuality makes man more real, more formidable in truth, and enables him to conquer sin, disease, and death."

✧

[S. T. Downs in *Indianapolis* (Ind.) *Times*]

It is incorrectly presumed by many that Christian Science, of which Mrs. Eddy was the Discoverer and Founder, is chiefly interested in the healing of diseases of the human body. On the contrary, physical healing in Christian Science is only incidental to the healing of sin. Mrs. Eddy's writings unfold the spiritual meaning of the Scriptures and reveal that through right thinking the human consciousness is lifted above the love of and the belief in the reality of sin. Since all manner of discordant conditions—physical, moral, financial—are the results of sin, their healing naturally follows the destruction of their cause. We see then that Mrs. Eddy wrote primarily of and Christian Science is engaged in the salvation of mankind.

Through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, one finds that the Christian Science teaching and the common belief about "the soul and its destiny" are quite different. Christ Jesus said, "I am come that they might have life, and that they might have it more abundantly," and the great apostle taught that "now is the accepted time; now is the day of salvation." In referring to this apostolic teaching in Science and Health (p. 39) Mrs. Eddy says, "Not that now men must prepare for a future-world salvation, or safety, but that now is the time in which to experience that salvation in spirit and in life."

✧

[W. J. Tucker in *The World-News*, Roanoke, Va.]

I have read the editorial entitled "Healing by Faith" with much interest and appreciation. With only one of your conclusions would I take issue, that is, that death is invincible. Your breadth of view is inspiring, and I would only urge that there is ample Scriptural authority for extending your optimism to agree with Paul, who said: "For he must reign, till he hath put all enemies under his feet. The last enemy that shall be destroyed is death." While this passage indicates that the demonstration over death is the last and greatest in a sequence of victories over the beliefs of the carnal mind to be accomplished, it also contains the promise of its fulfilment.

Jesus did not surrender to death for the reason other mortals do,—that is, lack of spiritual understanding,—but rather that he might prove by his resurrection that the spiritual understanding which he possessed was able to destroy death. It was a voluntary act on his part, as is borne out by his words: "No man taketh it from me, but I lay it down of myself. I have power to lay it down, and I have power to take it again." When he finally left this earthly scene, he did not yield to death.

That death is not a divinely ordained event of any man's experience, as indicated by Jesus' words, "Verily, verily, I say unto you, If a man keep my saying, he shall never see death," was proved by Enoch and Elijah, both of whom attained to the necessary spirituality to rise above death, even if Moses did not. That the demonstration over death requires immense spiritual growth cannot be questioned, but it is equally true that it is a growth to which we must all attain before it shall come to pass that death and hell are cast into the lake of fire.

Christian Science teaches us how to begin with the simplest problems, and by natural growth and through successive upward steps to attain to greater works, until finally the last great enemy shall be destroyed. To doubt that we shall reach this goal, because at present we are taking the primary steps, is like fearing that the student in simple arithmetic will never be able to solve problems in differential calculus. The lesser victories which all working Christian Scientists are constantly achieving are proofs of the truth of their Principle, and point to final complete salvation.

✧

[Henry Hauser in *Artesia* (Cal.) *News*]

We attended the Christian Science lecture in our Brick Hall and listened to a very forceful and logical discourse on the teachings of Christian Science. It was free from sarcasm or ridicule of any other religious sect or denomination, a most favorable symptom in religious progression that should not be overlooked, and which principle might well be embodied in the ethics of every other religious denomination.

There certainly must be something in the arguments of the Christian Science principles which commands both the attention and respect of so great a portion of all classes of people, and particularly of the thinking classes, when we witness so large a gathering of people from every section of our near-by communities as crowded into Brick Hall, leaving standing room available only in the vestibule, and very little of that. Another thing which impressed us was that there were just about as many men present as women, a fact not generally found at religious meetings of latter-day times. It must be that the duty of right thinking, and the theory of God as a God of love, not of vengeance or judgment with a fire and brimstone sentence, appeal more favorably to man's conception of what is consistent with a just and loving heavenly Father.

That the advanced present-day thought has no use for inconsistencies, or what are believed to be such, must be the answer to this trend of thought of men and women everywhere to Christian Science, for nothing could have attracted such a crowd to a religious lecture save one desire,—that of hearing what they believed was truth. It was not curiosity, for there appeared not a restless person within the sound of the speaker's voice; neither was it music, for there was none.

What was it, then, that held this large audience motionless from the beginning to the end of the lecture, except when a late arrival crowded his or her way into hearing distance? It is well worth thinking about!

Editorial

Looking Forward

Six years have passed since the first reader read from the desk of The Mother Church the following words of Mary Baker Eddy from page 135 of "Miscellaneous Writings":—

"*My Beloved Students:*—You may be looking to see me in my accustomed place with you, but this you must no longer expect.

. . . . . .

"All our thoughts should be given to the absolute demonstration of Christian Science. You can well afford to give me up, since you have in my last revised edition of Science and Health your teacher and guide."

December 3d, 1910, marked the close of an era in the history of the Church of Christ, Scientist, and thus of the world, and dated the beginning of a new era. In this new era, as in the past, the revealed law of divine Mind continues to be the "teacher and guide" of Christian Scientists, even though they have been deprived of the personal direction of Mrs. Eddy. This, the beginning of the seventh year since the passing from mortal sight of the beloved Discoverer and Founder of Christian Science, seems an appropriate time for briefly reviewing some of the accomplishments of the past six years, for considering the opportunities of the present hour, and for a forward look to the vast possibilities of the future, which only await consecrated thought and effort.

The first effort of evil to destroy Mrs. Eddy's life-work was expressed in an attempt to break her will and to divert the funds of her estate from the purposes designed by her. This was prevented, after a long period of litigation, with the result that large sums of what may be truly described by our Leader's term, "love currency" (The First Church of Christ, Scientist, and Miscellany, p. 14), have been and are now being distributed for church buildings, literature distribution, lectures, etc., thus more effectually extending the religion of Christian Science throughout the world.

By no means the least of the accomplishments of these years has been the construction of the memorial to our Leader, which is today nearly completed. The fund for its construction, representing voluntary contributions, like the widow's cruse of oil, has never failed. It eloquently speaks to the world today of love for and loyalty to the great Founder of Christian Science, in terms which the world can understand. Had Mrs. Eddy claimed her discovery to be a mortal achievement, mortal mind would have hailed it with joy and pride, but since her spiritual understanding revealed to her the truth of Jesus' statement, "I can of mine own self do nothing," so giving God the glory of her discovery, every possible effort was made to prevent the erection of any testimonial to her human life-work. Christian Scientists may well be grateful that through form and inscription this memorial will continue to speak of life in the midst of the world's belief in death, and of immortality in the midst of the symbols of the darkness and despair of mortality. In this connection the field is invited to read what our Leader herself wrote in regard to these symbols, on page 14 of her work "People's Idea of God."

During these six years the by-laws of our Church Manual, and the precedents established by Mrs. Eddy, have been subjected to every strain to which perverted ingenuity could put them, but in no way have they failed amply to justify their existence. Thus is our Leader's prophecy, "Notwithstanding the sacrilegious moth of time, eternity awaits our Church Manual, which will maintain its rank as in the past, amid ministries aggressive and active, and will stand when those have passed to rest" (The First Church of Christ, Scientist, and Miscellany, p. 230), being fulfilled.

This period of six years has been for Christian Scientists largely a period of adjustment. It has been a testing time, a period wherein opportunity has been given to demonstrate the great fact that the Church of Christ, Scientist, is an emanation of divine Mind, and therefore that divine Mind, not human personality, directs its destiny. Today we may all rejoice in the fact that no demands have been made upon it which have been beyond its strength, and no problems have been presented for which the by-laws have not already provided the solution. These six years have afforded an opportunity to Christian Scientists throughout the world to adjust local problems, to build many church edifices, and to lay in their own consciousness the foundations for broader developments in all of the departments of this great movement.

The Mother Church is extending the channels of its usefulness. It is taking a forward look, to make provision for that day, now near at hand, which will compel a broader, more comprehensive, and more universal activity. In this hour when human thought is turning instinctively from mortal strife and suffering to the substantial things of Spirit, Christian Scientists find themselves, as watchmen on the watchtowers of Zion, confronted with the necessity of providing for the care of those who from the depths of suffering and despair have caught the message of hope which Christian Science brings, and who are turning to it for relief from their sorrow and afflictions.

In pursuance of the special wish of the Leader, repeatedly enjoined upon us, a new channel of usefulness for The Mother Church has been established in the institution of the Christian Science Benevolent Association. Among the humanitarian purposes of this Association for which there is at present a definite need, is that of caring for some of the early students of Mrs. Eddy, and for others who helped lay the foundations of this movement and who are now in need of proper provision for their peace and comfort.

During these six years it has been the policy of the Directors of The Mother Church to avoid making calls on the field for financial assistance; but an era of more intimate cooperation is now dawning, and in furtherance of this idea the following data are given, which will prove of much interest to the field:—

Numerous valuable parcels of real estate, adjacent to the property already owned by The Mother Church and necessary for extensions and betterments, have been acquired and are now in friendly hands. It will be necessary to provide the sum of $526,500 before title can be taken to these properties.

Deeply impressed by the need for adequate preparation on the part of us all to assist in the fulfilment of the glorious mission of Christian Science, we call upon the field for renewed consecration to the work of healing the sick, saving the sinner, and comforting the afflicted. The time has come when every Christian Scientist must be ready and willing to prove his faith by his works, and to make this healing instantaneous and permanent. No Christian Scientist is exempt from this demand. We must all be healers of the sick, fulfilling the responsibility which each one assumed when he claimed the name of Christian Scientist. Now as always The Mother Church looks to the whole field of Christian Scientists for cooperation in working out its divine mission.

True giving is the realization of the inexhaustible nature of divine supply, and can only be manifested as our under-

Digitized by Google

standing of that supply unfolds. Then we begin to demonstrate the scientific fact that "giving does not impoverish us . . . neither does withholding enrich us" (Science and Health, p. 79), and we break the pretended law which would pauperize mankind by arguing a sense of personal possession.

We therefore briefly summarize the channels which are now open to the field and to which it is heartily invited to contribute, both individually and through the church and society organizations.

1st For real estate as hereinbefore stated..... $526,500

2d To erect and equip the buildings and provide a maintenance fund for the first institution of the Christian Science Benevolent Association, not less than..... $600,000

Respectfully submitted,

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.

Coordination of the Vine and Its Branches

MRS. EDDY writes in the Preface to Science and Health (p. xi), "When God called the author to proclaim His Gospel to this age, there came also the charge to plant and water His vineyard." Quite naturally the most important part of this planting and watering of the Father's vineyard —with the exception of the publication of Science and Health—was the organization of The Mother Church, and as time went on of the branch churches. Both The Mother Church and these branches, during the early decades of their establishment and growth, passed through a number of states and stages of organization and development under Mrs. Eddy's watchful care and demonstration. Thus guided and fostered they finally became what they now are in form and government, organizations which are necessary for the protection of Christian Scientists and for the safeguarding of the orderly progress of Christian Science as that religion which is reinstating primitive Christianity and demonstrating the power of Christ, Truth, to heal the sick and save the sinful today as in our Master's ministry.

In its early years The Mother Church was the only one of the denomination, and Mrs. Eddy's personal work as its pastor engaged a great deal of her time and attention. Later she induced a number of the students whom she herself had taught, to enter upon the work of organizing branch churches in the larger centers of population and engaging as their pastors. Mrs. Eddy's next progressive step was the ordination of the Bible and Science and Health as the pastor of all Christian Science churches, including The Mother Church, and the form of service which she then instituted stands today as the completed and permanent form of service for each and every church of this denomination.

It was also necessary that an organization to preserve the integrity of the Christian Science church should be built up; and coincident with her work in instituting a most beneficent and satisfactory church service, Mrs. Eddy gave much of her time to the establishment of The Mother Church in a manner which would assure not only its own permanency and usefulness, but equally that of the branch churches, which would establish a perfect relationship between them, and which would through them preserve the letter, the spirit, and the practice of Christian Science free from adulteration and perversion. The intimate nature of this relationship has been likened to that of a vine and its branches, because of the necessity for each to perform its own functions, and because a branch must draw its vitality from the vine, which is firmly rooted in the soil that provides nourishment for both.

On page 62 of "Miscellaneous Writings" Mrs. Eddy says, "The theology of Christian Science is Truth; opposed to which is the error of sickness, sin, and death, that Truth destroys;" and it is the purpose of the Church of Christ, Scientist, to spread the understanding of this Truth throughout the world. To accomplish this requires unity of action, and this unity has been secured by the wise rules and by-laws provided by Mrs. Eddy for the whole denomination in the Manual of The Mother Church. The importance and permanence of this Manual, and the need for all Christian Scientists to be familiar with it, is well set forth in Mrs. Eddy's words on page 230 of Miscellany as follows: "Notwithstanding the sacrilegious moth of time, eternity awaits our Church Manual, which will maintain its rank as in the past, amid ministries aggressive and active, and will stand when those have passed to rest. . . . This church is impartial. Its rules apply not to one member only, but to one and all equally. Of this I am sure, that each Rule and By-law in this Manual will increase the spirituality of him who obeys it, invigorate his capacity to heal the sick, to comfort such as mourn, and to awaken the sinner."

ARCHIBALD MCLELLAN.

Gospel Testimonies

EVEN if the beginner in Christian Science has been a church member for many years, he is usually surprised to discover how many testimonies of healing there are in the gospels, for the healing of the sick was not a distinguishing feature in the work of his own church, as it is in the Church of Christ, Scientist. He had probably received the impression from his religious instructors that healing by spiritual means was a thing of the past and had no relation to one's religious experience at the present day; therefore the cases of healing given in the gospels—and they are very numerous —had been passed over, with perchance a deep regret that these things were no longer possible.

It however often happens that little children eagerly read the gospel stories of healing in the dear Master's ministry, and sorrowfully ask, when they themselves or some one dear to them is ill, why God does not heal us today as He did in Jesus' time. It is by no means easy for them to accept the oft repeated argument that the Christ-healing belongs to another age, for there is nothing in the gospels which would support such a belief; and so they continue to hope, until they finally come to accept the almost universal verdict that God no longer heals by spiritual means, but works through material remedies. Happily, however, a hope which has its roots in the spiritual fact can never be wholly crushed, so it appears again when the need is greatest, and Christian Science teaches us that as Jesus' work was based upon eternal, divine Principle, it is therefore with us forever.

Our revered Leader gives us in no uncertain terms her estimate of the value of the healing work of Christian Science, and the testimony to this healing which should always follow it. In Article VIII of the Manual of The Mother Church, Section 24, she says, "Testimony in regard to the healing of the sick is highly important." This section further states that testimony in Christian Science shall not include "a description of symptoms or of suffering,"—a requirement which has perhaps not yet been clearly understood by Christian Scientists. They of course learn at the time of their own healing that to talk about disease or any other phase of error not only is wrong, but in many instances is a very serious hindrance to the recovery of the sick. The ability to state clearly and definitely the wonderful power of divine Truth, as manifested to human sense in the overcoming of sickness and suffering as well as the belief in sin, is however a matter of spiritual growth; and our understand-

Digitized by Google

ing of the spiritual law of healing is greatly quickened by a faithful and intelligent study of the gospel narratives of healing. The literary beauty of these passages alone makes the study well worth while, and we finally begin to perceive that the fewness of the words actually gives larger room for the expression of the divine idea.

Among the many wonderful and beautiful accounts of healing found in the gospels is that of Peter's wife's mother, which is given by Matthew, Mark, and Luke in two brief verses. We learn that she had "a great fever," that she was healed at once, and that she immediately began to minister to others. Luke tells us that Jesus "rebuked the fever,"—showing that his method, which was mental and spiritual, is reverently followed in Christian Science today. The awakening of the widow's son at Nain from the dream of death is wonderfully told in five verses, and nothing is left out which could add to the simple grandeur of that demonstration of the ever-presence and all-power of divine Truth and Love. The awakening of Jairus' daughter is also given in the first three gospels, the one account supplementing the other; but, as in the other instances just cited, few words are needed to tell the wondrous story.

In Christian Science we learn daily to value more and more highly the work and teaching of Christ Jesus, and to estimate better our indebtedness to Mrs. Eddy, who has made his work and teaching as truly a power in our midst today as it was two thousand years ago. We therefore approach the altar with our gifts of grateful love, and gladly testify to the healing power of Truth.

ANNIE M. KNOTT.

✧

The Word Hypocrisy

THE advancing Christian Scientist may suffer temporarily from the self-accusation of hypocrisy unless the line of demarcation between the real and the unreal is kept sharply drawn. The apparent discrepancy between the absolute which dawns upon human apprehension and human life itself, between endeavor and fulfilment, may react upon the worker if the world's estimate of reality is once admitted.

Mortal mind attempts to maintain a double standard. It fosters a fictitious double-mindedness, and so incurs the reproof of James, who writes, "A double minded man is unstable in all his ways." It would declare that good and evil are both of divine origin, hence true and real. Metaphysically considered, therefore, hypocrisy is the belief in the reality of both Mind and matter, Spirit and the flesh, Soul and material sense, Principle and corporeality, Life and death, Truth and error, Love and hate or fear. Mrs. Eddy writes on page 360 of Science and Health: "Either Spirit or matter is your model. If you try to have two models, then you practically have none." Whoever is earnestly striving to demonstrate the unreality of evil through the spiritual understanding of the reality of God, good, need not barb the arrow of condemnation by accepting the accusation of hypocrisy.

The world has a yardstick of its own wherewith to measure its belief of hypocrisy, but Christian Science, elucidating the Scriptures, digs much deeper into human consciousness, and lays bare fundamental hypocrisy as a false belief about reality. In the gospel of Matthew we read that Jesus warned his disciples against "the leaven of the Pharisees and of the Sadducees." This leaven, we are told, the disciples understood to be the doctrine of these schools of thought, and in Luke's gospel Jesus further defined this leaven as "hypocrisy." The leaven or doctrine thus condemned, namely, the belief that good and evil are both true and real, was the one generally prevailing at that time, and is still prevailing today except in so far as it is being destroyed by Christian Science.

If the Christian Scientist is striving to lay bare and destroy this deep seated belief in his own habit of thought and in the thought of those who seek his help, he has no valid reason for self-condemnation, even though his achievements do not keep pace with his right desires. But if the scientific Christian who is fighting the world's battles ahead of the world can be induced to shrink before the finger of worldly scorn and call himself a hypocrite because his human practice falls short of his divine preaching, he will presently find himself among the camp followers in the rear of the army of spiritual warriors, instead of at the front.

The world greatly admires what it is pleased to call consistency toward its own doctrine of the reality of both good and evil, and is correspondingly quick to condemn those who reject that doctrine. Thus the worldling's argument may take the form of asserting: I at least am consistent; I do not claim to be perfect, and therefore I conform my ideals to my achievements. It is very easy to be consistent with mortal mind; all one has to do is to lower one's ideals and the work is done; self-justification is then invited to sit in the seat of righteousness, and the individual has thereby reached a dead level of mortal consistency, but has lost his hold on heaven. He may indeed win a convenient peace, but at the sacrifice of his understanding of Life, Truth, and Love.

Now it is interesting to note that Jesus reserved his terrible denunciations, not for the despised "publicans and the harlots," but for the respected and hypocritical "scribes and Pharisees." It was the latter, the teachers of a conventional double standard of reality, of an impossible double-mindedness, who called forth the thunders of his awful reproof, whereas he sat at meat with recognized sinners who were receptive to truth, and fed them with the bread of heaven. On page 304 of Science and Health Mrs. Eddy thus describes the true leaven: "This is the doctrine of Christian Science: that divine Love cannot be deprived of its manifestation, or object; that joy cannot be turned into sorrow, for sorrow is not the master of joy; that good can never produce evil; that matter can never produce mind nor life result in death."

WILLIAM D. MCCRACKAN.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday School, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m., International Trust Company Building (second floor), 45 Milk Street, near Devonshire, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

PHILADELPHIA, PA.—Germantown Christian Scientists are contemplating the erection of a church to cost nearly two hundred thousand dollars, plans for which have already been drawn. The building will be erected on the east side of Greene Street south of Schoolhouse Lane. The auditorium will seat one thousand persons, and there will be commodious rooms for the Sunday school and other church activities.

Digitized by Google

The Christian Science organization is known officially as Second Church of Christ, Scientist, having been the second congregation of the denomination organized in this city. It was started in Masonic Hall, Germantown, in June, 1912.

Philadelphia Record.

CORTLAND, N. Y.—The Christian Science Society has purchased the plot of ground at the northeast corner of South Church and William Streets. It has a frontage of 89 feet on South Church Street and 140 feet on William Street.

Cortland Standard.

The Lectures

Colville, Wash.

An interesting lecture on Christian Science was delivered at the Colville Opera House by Dr. Walton Hubbard. He was introduced by Mayor W. L. Sax, who said:—

The object of a Christian Science lecture is more fully to establish in the minds of men the truth about God and His creation. William Penn once wrote: "Truth is worthy of inquiry; for it is of all things the most reasonable." Jesus said, "If ye continue in my word, . . . ye shall know the truth, and the truth shall make you free," free from self-imposed bondage, from petty cares and annoyances, from worries and uncertainties of business, and from the fear of sickness and death. With the present conditions it is not necessary for me to cite instances of the many problems confronting the world today,—in national and international affairs, in civic and social problems, not to mention our own personal troubles. There are many people now who believe that there is involved in the solution of these problems a law based on truth, a law that is higher and more far reaching than mere human enactments are; that the full solution depends on the working out of God's law. This is not a new proposition; the teaching of Christ Jesus is full of promises and examples of what God's law will do for man.

The Statesman-Index.

✧

Flint, Mich.

Walter W. Powers, in introducing Charles I. Ohrenstein, who lectured on Christian Science, said:—

Two things impress the observer with particular significance in regard to the course of the sincere Christian Scientist. One is that his religion is not confined to Sunday. After a day in which praise and gratitude to God have been uppermost in thought, he goes forth again on Monday morning not feeling in the least that his whole duty has been discharged because the Sabbath conventionalities have been observed, but with a new song in his heart, pouring forth that praise and glory to God which, expressed in terms of action, is prayer unceasing. The other point is, that Christian Science offers no opportunity for a compromise with conscience, but daily, hourly, momently, accepting as absolutely true the statement that "in him we live, and move, and have our being," the Christian Scientist is measuring his way by the rule of Truth, which changeth not, and is applying to every problem that which he has learned of God's unfailing and unfaltering government of His universe.

No wonder that the Christian Scientist comes to be imbued with an ever present sense of that peace which passeth all human understanding. In seeking to account for this serenity, mankind has, both ignorantly and wilfully, confused Christian Science with many phases of mere belief; but the great mass of mankind is not maliciously wilful, nor does it desire to be ignorant. Therefore many have been the expressions of gratitude that the facts with regard to what Christian Science really teaches of unalterable truth have been and are being set forth by the members of the board of lectureship.—*Correspondence.*

Testimonies of Healing

As a child I never knew anything of God and never went to church. At the age of fifteen I was all alone in Paris, working to support myself and helping to pay the bills of doctors and druggists for both my father and my mother, who had been sent to the country to recover their health. However, despite all drugs, changes of climate, and consultations with specialists, whom I begged on my knees to save my parents, they both passed on, as did one of my two brothers, and there was a strong desire in me that I might join them.

I then heard of Christian Science, which told me of a God of goodness; and this appealed to me, as I always felt very keenly the difference between good and evil. Shortly afterward an aunt in Vancouver, British Columbia, offered me a home, which was accepted, as I dreaded to live alone; but for the next two years I was still unhappy, mourning my people and wishing to be sick and die. My wish seemed about to be fulfilled, for the doctor who was consulted by the family said that one of my lungs was seriously affected, that I must be sent right away to a sanitarium, and that I could never work again.

While I was at the sanitarium a Christian Science practitioner worked daily for me and wrote letters which were a great help for a time, but at the end of two months, as I had been gradually getting worse, I was taken back to Vancouver to the home of some Christian Scientists, where the practitioner came almost daily to see me. From the first day I improved steadily. Though I sometimes got impatient, never once did I have any doubt of eventually being well, because as the practitioner would answer my questions about God and explain the way to Him in the light of Christian Science, I felt a new desire to live and try to follow as much as I knew the narrow and straight way. I ceased to think of myself as alone in the world, and learned that it was my right as God's child to be well and happy, and that nothing but wrong thoughts or actions could make me suffer. I learned to be thankful for all small blessings, and soon experienced bigger ones. I saw that since God is Life, without beginning or end, there is in reality no death, and that when I was crying for those I could not see, it was more through selfishness than for themselves. In three months I was declared perfectly well by the same doctor who had sent me to the sanitarium.

For four years I have been teaching without missing a day, speaking sometimes six or seven hours continuously. My voice, which had entirely gone, is now stronger than ever, and I am able to sing up to high B. The doctor had said that Vancouver was the worst climate I could live in, but nevertheless it was in this city that perfect health came, and I have lived in this province ever since. My heart is full of joy, and I thank God daily for my health, my friends, my work, my happiness; in a word, for Christian Science.

Twice, when every one around me was speaking of hard times, I proved that God looks after those who are willing to trust in Him. Once I went to a city where I did not know any one, but soon had all the pupils I needed; and when two years later it seemed right for me to return to Vancouver, I again in a short time, but only through entire reliance on God, got all my day's work. If it had not been for Christian Science I could never have accepted and kept a position as a teacher in a big boys' college, where I was the only woman teacher, but from the start I was able to maintain perfect order and good work.

For two years now my brother has been at his post in the French army. He also reads "Science and Health with Key to the Scriptures" by Mrs. Eddy, translating word for word from English to French, and striving to get the right meaning. He spends his few moments' rest daily in studying the Lesson. Each of his letters tells of how thankful he feels for the proofs he receives of God's protection. Neither he nor I could speak a word of English when we took up the study of our text-book. I learned this language through the study of our literature, which is now my daily food. For the help it is to me I can never be grateful enough.

ANDRÉE FINQUENEISEL, Vancouver, British Columbia.

It is with the deepest sense of gratitude that I send this acknowledgment of some of the things Christian Science has done for me. I was almost an invalid from what was diagnosed as perforation of the large intestine, accompanied by hemorrhages from time to time. I was greatly helped by Christian Science treatment when the attacks came on, but the complete healing was effected only as I studied our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and tried to live according to its teachings.

I was also perfectly healed of a diseased condition of the facial bone, which would at times partly lock the jaws, allowing me to open my mouth only far enough to put one finger between the teeth. A few years ago acute lung trouble was overcome for me, and since then I have been healed of spasms of the heart in a most violent form. I know that I owe my life to the healing power of Truth as revealed through Christian Science. My eldest daughter was perfectly and permanently cured of a terrible form of erysipelas, leaving no scars. She was also healed of what was diagnosed as chronic appendicitis after having had three attacks. There has been no return in over six years.

While I am deeply grateful for these and many more healings, I am much more grateful for the wonderful regeneration of thought and life that has taken place in me. I have depended entirely on Christian Science for ten years and it has never failed me. This Science of Life has given me a different outlook on life and man, has made me less selfish, and is proving to me every day what our dear Leader, Mrs. Eddy, tells us in Science and Health (p. 494), that "divine Love always has met and always will meet every human need."—MARGARET J. WALKER, Salt Lake City, Utah.

I have received so much help and encouragement from reading the testimonies in the Christian Science periodicals, that I should like to tell of two of the many healings which have taken place in my family. My little daughter, now seven years of age, had suffered from a skin disease almost since birth, and we had tried various remedies without success. During the summer of 1914 it again made its appearance, so I took her to a Christian Science practitioner for treatment. She was completely healed in two treatments, and there has been no return of the trouble.

The other healing seemed most wonderful, and came entirely through absent treatment. My son was suffering from a wisdom tooth, which seemingly could not come through the gum, and after days of suffering a case of blood-poison and lockjaw was fast developing. Finally, after he had passed a sleepless night, I realized he must have help soon, as his face was badly swollen and becoming stiff. He had been making daily visits to the dentist, but they had not seemed to do any good. While I had not been studying Christian Science long, I had learned to go to it for every need, so I called a practitioner. My own fear was very great, but it gradually disappeared, and in an hour from the time the practitioner

Digitized by Google

was called, the boy was asleep and the pain gone. The help received was almost instantaneous, and is another proof of the power of absent treatment as understood in Christian Science. At seven o'clock in the morning he had been barely able to get the end of a spoon between his teeth and swallow a little milk; in two hours he made a visit to the dentist, who got his mouth open wide enough to remove a tooth in front of the diseased one, allowing a discharge to take place. The dentist continued to watch the case for several days, as he still had fear of lockjaw, but finally dismissed it, telling my son he was a lucky boy.

Many other problems have been worked out in Christian Science. A relative who was visiting me had lost her position, and as she was entirely dependent upon herself, became discouraged, especially as so many people were looking for employment. Merely for the sake of having something to read, she picked up Science and Health, and I asked her why she did not take her problem to Christian Science. When she replied that she thought it was for sick people, I told her the beautiful part of this religion was that no problem was too large or too small to be worked out in Christian Science. She continued to read the text-book, and one day asked me if I would write to my practitioner for her, state her problem, and ask for treatment. I did so, and at the first place she applied for work she was offered a position, which she accepted, and every condition was beautifully met.

I have no words to express my thankfulness to God for these and many other healings, and my gratitude to Mrs. Eddy, who gave to the world the true understanding of God as Love.—Frances Tuttle, Jersey City, N. J.

✧

With a heart filled to overflowing with thankfulness to God and gratitude to Mrs. Eddy I give my testimony, in the hope that divine Love will carry it to some one and thus help him out of bondage. My physical ailments disappeared shortly after I went to a Christian Science practitioner for treatment, and along with them went the habits of smoking, liquor drinking, and profanity.

When the study of Christian Science was taken up, I was working under an assumed name. From boyhood until the time divine Love healed me, my life was steeped in sin. On account of this, and because of the rigid rules of a certain corporation governing its applications, I changed my name in the endeavor to secure a position, and it was while working under this alias that Christian Science came to me, but I scoffed at the thought of its healing me.

Just three weeks prior to my advent into this wonderful truth I had returned from Fort McDowell in San Francisco Bay, where I was examined by Government physicians for enlistment in the United States Army Signal Corps, but was rejected, as the doctors claimed I had heart trouble. Three years ago I was examined by three different physicians of Fostoria, Ohio, and by the state board of health at Columbus, Ohio, and they pronounced me a consumptive. A local doctor advised me to leave for a different climate, intimating that I would not last long if I remained in Ohio. I immediately went to Texas, but along with me I took sin, and the climate did me no good.

I was living under the above illusions when the help of a Christian Science practitioner was sought. Through his clear understanding of God and of man in God's image and likeness, I was healed, and God has taken care of me ever since. It has now been sixteen months since this wonderful experience. I have not taken any medicine or used any material remedies whatever in that time, and have gained in weight. Although no physician has examined me since my healing, I know it is complete, for today I am in perfect health. The physical healing was wonderful, and I thank God for His constant care, but that for which I am most grateful is the regeneration, contentment, peace, and harmony that is gradually dominating my life, where before all was sin, discontent, discouragement, and inharmony. The Bible has become a daily companion, and through the interpretation that "Science and Health with Key to the Scriptures" gives, I am able to understand Jesus' teachings.

Soon after this wonderful truth came to me, divine Love led me into a new position with a responsible firm. The work was new to me, but I have given entire satisfaction and my salary has been advanced twice in less than a year. I also work a few hours every evening in another position without any ill effects, whereas to mortal sense it would seem to be an overtax upon my strength. Mrs. Eddy tells us in Science and Health (p. 494) that "divine Love always has met and always will meet every human need," and this has surely been proven to me. My daily prayer is that my light may so shine, in reflecting Life, Truth, and Love, that it will draw others unto the peace which passeth all understanding.

Fred D. Miller, Los Angeles, Cal.

✧

For several years a disfiguring eruption appeared at intervals on my face, and would not clear up entirely at any time. The cause was looked for in stomach trouble, nerves, and so on, but finally I was advised to let it alone, as neither ointments, lotions, nor internal remedies proved even helpful. After I became interested in Christian Science, in searching for hindrances to my understanding of the spiritual law the thought of resentment was uncovered. As this was overcome, the eruptions disappeared and have never returned. Another proof of the power of the right thought over the wrong was afforded on reading the Christian Science article on the Home Forum page of the *Monitor* one day, when I seemed to be at low tide financially. Only a few days elapsed before the seeming condition was changed and I was manifesting the activity and result that God's idea should manifest.

Christian Science healed me after almost twenty years of invalidism. To be grateful for the many blessings received is a small return for so much, but the striving to live in the light of the law of Life, Love, and Truth, to be faithful to Mrs. Eddy's teachings, is an ever present desire. I am grateful for every loyal Scientist, and for our literature, which carries countless blessings to all who are willing to be helped.

Kate Mayhew Widmer, New York, N. Y.

✧

At the time I turned to Christian Science no part of my anatomy was in a normal condition. I had never known what it was to feel strong or well, and increasing years seemed only to bring added physical distress. When I was a young girl, tubercular trouble developed, and as rapidly as one condition was overcome another claimed attention. Three times I had been upon the operating table and submitted to what is known in medical circles as major operations. On the last of these occasions, about two and a half years ago, three distinct operations were performed by one of the most skilful surgeons in Philadelphia, which had been my home for twenty years.

After this experience it would seem impossible that any one whose hold upon life was so frail could live, but to my sorrow I did. After spending fourteen weeks in the hospital, I went to a suburban town and struggled through several months of convalescence, returning at intervals of ten days for medical treatment, which produced intense suffering but failed to bring permanent relief. About this time I decided to resume my duties, only to collapse completely and return

Digitized by Google

to the hospital within a month. As soon as able to do so I started for Dexter, Mich., where my parents reside.

There is no doubt in my mind that the condition was of a malignant type. I suffered intensely, was greatly emaciated, almost helpless; in fact I was in a truly pitiful state. Later I consulted another surgeon with no satisfactory results, but was finally led to visit a Christian Science practitioner, and with four treatments I was completely healed. It is impossible to describe the relief which the first visit to the practitioner brought me. A great weight seemed lifted, and for the first time in many years I realized that it was a joy to live. The following morning I burned an elaborate jacket or belt which I had been wearing; in fact since the hospital days I had never held an upright position without it, and was told that I must wear it until it was worn out, and even then might have to replace it with a new one. There was no uncertainty in my mind as to the result, when I destroyed it and threw away everything in the line of medicine and medical appliances which I possessed. From that day to this no drugs of any kind have passed my lips.

The transformation in mind and body was truly wonderful. I gained flesh rapidly, and as the weeks passed the change in my personal appearance was, as it still is, a source of amazement to my friends, many of whom are reading Science and Health that they may know more of this truth. My earnest desire is to progress in the understanding of divine Life, Truth, and Love, and thus show my gratitude to Mrs. Eddy and her many followers who labor so earnestly to provide us with daily helps and show us how to live so as to do the Master's work.—Clara V. Hessler, Ann Arbor, Mich.

✧

The first words of the Preface of Science and Health (p. vii), "To those leaning on the sustaining infinite, today is big with blessings," have been proven many times in our home within the past seven years. With the exception of the practitioner when we first came into Science, the Bible and Science and Health have been our only help in a family of four, and not only for ourselves but for the many other problems that come up on a farm. There have been times when it seemed we must have help, but the thought would come that it is not the practitioner that heals; it is God, and He "is no respecter of persons."

We have been truly blessed in many ways. Mrs. Eddy says that "every trial of our faith in God makes us stronger" (Science and Health, p. 410). It is the proving of the truth that gives us such happiness. For the new understanding of the Bible which I have gained I daily thank God; and for all the benefits received I am deeply thankful to Him and grateful to Mrs. Eddy. My sincere desire is for a constantly increasing understanding of Christian Science. Each day brings added proofs of the power and allness of God.

Anna C. Gamache, Shrewsbury, Mass.

✧

It would be impossible to express in words the wonderful change that has been wrought in my life through the teachings of Christian Science. I have been studying and applying the truth for almost eight years, and in that time it has solved every problem presented to me.

Christian Science has lifted me up from the deepest despondency, and has healed me of a violent temper and a quarrelsome disposition. It has taken hatred and envy out of my life, and in its place has given me a great measure of the peace that passes all human understanding. In less than two weeks after taking up the study of Science and Health and beginning to take treatment, I was healed instantaneously of the tobacco habit of fifteen years' duration, and with that went all desire for alcoholic drinks. I have been able to overcome for myself falling hair and to restore hair growth on a bald spot. The hair is now growing normally all over my scalp.

For years I had been a sufferer from organic heart disease, which at times made it necessary for me to sleep propped up with pillows. No special treatment was given for this trouble, which vanished with the general purification of my thought. A malignant growth that caused me unspeakable agony seemed to defy the practitioner's treatments; but as my thoughts became more spiritual the pain grew less, and suddenly the misery completely faded away, so that now only a small discoloration of the skin remains. Many other ailments have disappeared.

I am profoundly thankful to God, also grateful to Mrs. Eddy, who has shown us how to overcome the things that hinder and mar our lives. That for which I am most thankful is the uplift of spiritual thinking that removes one from the sordidness of material life. Christian Science is a daily help to me in my work and shows me how to be on harmonious terms with my fellow man.—Hans C. Lybye, Cleveland, Ohio.

✧

Many years ago, when I sought a practitioner for help in Christian Science, I did so very reluctantly, as I had no faith in what I thought it to be. I was suffering from severe nervous troubles, but was soon freed from bondage through the power of Truth. At once I put away all medicine, and have not touched it for over sixteen years. I have passed through deep sorrows,—to sense dear ones have passed on and with them worldly possessions,—but through it all divine Love sustained me, and with the psalmist I can truly say, "The lines are fallen unto me in pleasant places; yea, I have a goodly heritage."

Only love, obedience, and constant service can prove my thankfulness to God for the blessings that have come to me through Christian Science. I am grateful to our Leader, Mrs. Eddy, for her great discovery.

Marion B. Reid, Chicago, Ill.

✧

[Translated from the German]

In so far as I have endeavored to make practical application of the teachings of Christian Science I have had beautiful experiences, and I would not let the opportunity of acknowledging them publicly go by.

A short time ago, during a heavy thunderstorm, I realized that I was completely free from the effects of a fright caused in childhood by a severe electric storm. In my childhood days these effects were manifested (only during a thunderstorm) as fear, and later on in that I could tell exactly when a storm was approaching and whether it would be a heavy or a light one; besides, I could not bear to see the lightning, and my whole body felt electrified. In short, all manner of unpleasant physical symptoms showed the extent to which I was under a false belief of power and therefore how it affected me.

Although I had been acquainted with the teachings of Christian Science for several years, I made no special effort to overcome these conditions; but my duties compelled me to rise above sense-testimony whenever occasion demanded. Through the gradual understanding of God and of man's relation to Him as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, all these peculiar symptoms ceased to manifest themselves, and a storm does not now affect me in the least.

Digitized by Google

I gratefully acknowledge that Christian Science has given my life a new meaning and a far broader scope. It has been my sole helper and support in times of great trouble. My desire is for a better understanding of what it means to be grateful for all the good received.

FRIEDA CARL, Berlin-Wilmersdorf, Germany.

✧

To the many weary seekers after Truth I gratefully and lovingly give my testimony in behalf of that wonderful liberator of enslaved mankind, Christian Science. Early in 1912, when this teaching was brought to my attention by a loving Christian Scientist, I was to mortal sense a hopeless, incurable inebriate, having tried every means known to rid myself of the drink habit, but with failure after failure, until at last I was utterly despondent. I felt myself without hope and without a God, having earnestly prayed for deliverance to my then far-off God without avail.

While in this condition one afternoon I visited a Christian Science practitioner, and I shall never forget the loving, charitable, and helpful words that were spoken to me at the time. Deliverance came instantaneously! That was the beginning of happiness for me—a happiness never to leave me throughout all eternity. I left her office realizing for the first time my God-given dominion over material sense. Only by loving God's entire creation and by earnest consecration to divine Principle can I ever express the boundless gratitude that is in my heart for that day of salvation. Since then I have become a devoted student of Christian Science and have been able to demonstrate its teachings whenever and wherever necessary.

I have been enabled to discontinue the wearing of glasses, my sight being excellent without them, also catarrh of years' standing has disappeared. God has since been our only physician. The result is a healthy and well provided for family, instead of the former conditions, which were just the reverse in both respects. In every need, whether manifested as health or supply, I have been able to demonstrate that beautiful thought presented to us by Mrs. Eddy in Science and Health (p. 494), "Divine Love always has met and always will meet every human need." My earnest hope is that this message may reach many of those who find themselves in the same bondage as that from which I was freed. To such I wish to say that there is hope, for God is a very present help in time of trouble.

ROBERT W. GOLDENSTEIN, Peoria, Ill.

✧

Since studying Christian Science, a period of about nine years, I have had such wonderful proofs of God's care that I wish to express my sincerest gratitude and also to tell of a recent experience of healing.

One evening at dinner in a hotel some food was placed before me which is considered not good to eat in warm weather. The evening was very hot, and as I began to eat I was filled with fear which I was unable to overcome. In the night I became ill and somewhat frightened at my condition, but at once began to read in Science and Health and to declare the truth as best I could. While my condition improved I was not entirely healed, so after a few days I went to a Christian Science practitioner. She made clear to me that there are not minds many, but that there is only the one Mind, one God, one Life. After fifteen minutes' conversation with her I knew that I was healed, and I went home rejoicing and thanking God for His goodness and love.

I am very grateful for our literature and for the help I have received from other Christian Scientists.

ANNA L. ROTH, Washington, D. C.

From Our Exchanges

[The Christian Work]

To let in the blazing light of the spiritual upon the material; to let in the blazing light of the ideal upon the expedient; to let in the blazing light of the Holy Lord upon all the works of darkness,—this surely must be the Puritan business of our time. We are to see the Invisible, and then by our life to reveal Him, so that our track in the ways of men shall be as a shining light that will make it impossible for men to forget the high concerns of the soul.

And as we are ministers of spiritual vision we shall also be contributors of moral dynamic. The loftiness of our characters will give them their weight. We need have no concern about the force of our life if only we are concerned about its height. Our moral influence will be constant, and will always be the minister of elevation and of rectitude. In the home life, in private business, in the affairs of the city, and in the larger concerns of the state, we shall recognize only one realm, one kingdom, and we shall accept only one standard, as we shall bow to only one sovereign King. The modern pilgrim will be a spiritual seer and a moral contagion, for "he that dwelleth in me, saith the Lord, out of him shall flow rivers of water;" and on the banks of the river shall grow "the tree of life, bearing all manner of fruits, and the leaves of the tree shall be for the healing of the nations."

[The Methodist Recorder]

Our fathers had to contend, as we have, with the indifference of the world toward spiritual things; but it was for the most part the indifference of ignorance. We have to face the indifference of knowledge,—immeasurably more difficult. The upheaval of these days is compelling men in the face of grave issues to ask great questions. It has compelled multitudes of believers to verify their faith, to rediscover the essential spiritual realities. And this is all to the good. The church will not in the future face the world with old traditions but with living experiences. Truth has not changed, but we have. The old gospel! True, but a new message. Men are ready for it. The world wants God. It has always wanted Him, but today it knows that it wants Him.

[The Jewish Chronicle]

"The secret things belong to the Lord our God, but the revealed things belong to us and to our children forever, that we may do all the words of this law." By "secret things" we are to understand the things which God had not revealed even to Moses with regard to Israel's future—especially the time and manner of the fulfilment of those promises and threatenings which were made contingent on their obedience or disobedience. Moses discourages too eager a prying into the future. Sufficient has been revealed to us to teach us the whole of our duty to God and man. The Bible is primarily a book of practical guidance to conduct and was never intended to solve the many speculative difficulties with which human curiosity concerns itself.

[The Christian]

How many do we meet constantly to whom the ill will of luck is sufficient reason for almost any dereliction of duty, any cowardly flight from difficulty, or any weak refusal of the challenge of circumstances! "I never seem to have any luck," said one the other day, who having pulled his oars in-board is beginning to drift dangerously. He only spoke the language of that large company of men and women who are content to rule God out of their lives. Convinced that

Digitized by Google

life's power is not in their own hands, they must have some sort of blind force to fall back upon, if only for explanation of their own heart's questionings. And "luck" is the god they have erected. To say that its worship satisfies them, would be an entire denial of what their lives attest. To say that it grows upon them, blinding them to all true values, and imprisoning them in a pitifully small and entirely vicious circle of uncertainty, is but to speak the bare truth. For the fact is that a large part of the dissatisfaction of heart which makes men aimless wanderers in God's world is altogether due to the disappointed worship of luck. What poor exchange do they make who refuse life to the fatherly control of God in Christ.

[*The Methodist Times*]

The leading Christian types organized in denominations have both value and vitality. Yet they should not merely exist side by side, but permeate one another with the highest influences of a fellowship which, while it respects differences, transcends them in common agreement. Such spiritual relations will undoubtedly help us toward a fuller apprehension of Christ and more successful effort in behalf of his kingdom. Unity of life cannot be maintained without unity of action. And unity of action is impossible without an organization which is in correspondence with its spirit and aims.

[*The Universalist Leader*]

Salvation, as we define it, means the developing of a Christian social consciousness until no individual soul can be entirely happy until all are happy; no individual soul can be entirely saved until all are saved. This is the Christian goal. No soul can find itself until it forgets itself. Salvation is the awakening of the sense of the unity of the human race, and the interdependence of all men with each other and all with God. This is the salvation we go forth to proclaim.

[*Homiletic Review*]

Many of the cross-roads churches that were built during the last century were monuments of denominational pig-headedness; their decay is a compliment to the growing common sense of Christian people. But others that at one time ministered to the legitimate needs of country people are in a bad way mainly because they have been left in the rear as the generation now growing up has adopted the new life.

[*The Congregationalist and Christian World*]

Every dawn is God's "again" written in light, every recurrent duty the call to a finer fidelity. All these "agains" which we welcome or fear are but the mercies of God offering us another chance to make amends for our faults, profit by our failures, correct our mistakes, and make more nobly manifest the fruits of the Spirit in our lives.

[*The Christian Intelligencer*]

The passion for money makes beasts of men and leads to the abnormal conditions back of present social unrest. The fundamental need of America is the old gospel, and until the spirit of Christ becomes controlling, our fair civilization will never outgrow the reign of the beast.

[*Northwestern Christian Advocate*]

"What is the matter with Christianity?" Nothing. What is the matter with Christians? Ah, now we are coming close to the point. There is much the matter there. There is a difference between the Christ of the New Testament and his representative today.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

As the advertising pages of the *Journal* and *Herold* go to press the 20th of the month, to insure publication in a desired number requests for changes in a church or practitioner's card should reach the Publishing Society at least six weeks previous to the actual date of issue.

"Law and Work," one of the pamphlets recently issued by the Publishing Society, is now printed in the New York point system, and the American Braille and the English Braille systems of type for the use of the blind. For convenience in reading, the pamphlet has been printed in two volumes, and may be purchased at the following prices: Single copy (in two parts), prepaid, $1.00; six or more copies, prepaid to one address, each 75 cents. When ordering please specify whether the New York point, the American Braille system or English Braille system is desired.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under those titles in this price list.*

Items of Interest

A question of interest all along the Great Lakes is whether the drainage canal at Chicago, in diverting water from Lake Michigan to carry Chicago's sewage down the Des Plaines River and thence to the Mississippi, is actually lowering the level of the Great Lakes so as to interfere with commerce. There is litigation now in the Federal courts between Chicago and the United States Government involving this point. The issue in the Government suit is the proposed reduction of the canal capacity of 840,000 cubic feet a minute to 250,000 feet a minute. It is running now 450,000 feet a minute.

Chicago holds that when the canal was built at such a huge cost the Government said nothing about the regulation of the flow in regard to lake levels; and since the stipulations regarding Federal control were expressly named and have been complied with, therefore the Government cannot now step in and regulate the canal in such a way as to destroy its usefulness. As for alleged breaking of treaty obligations with Great Britain, Chicago declares that Canada cannot now, with good grace, question the effects of the canal, because when the treaty of 1909 with reference to boundary waters was adopted, compensation was made to Canada for diversion of water at Chicago by allowing the Dominion an excess of diversion at Niagara Falls.

It is expected that the United States Department of Justice during the next four years will find a lessening necessity for prosecuting combines to bring about their dissolution. New combinations are no longer being formed, and many of the old ones have already been dissolved or suits are now under way against them. The Federal Trade Commission, under its large powers, will do much to eliminate unfair business practices which before the commission's creation might have had to be attacked under the Sherman law, if at all.

When the dissolution suits now under way have been argued before the Supreme Court, most of the largest and best known of the combines will have come under the scrutiny of the law. The "anthracite combine" cases, involving the Reading and the Lehigh Valley railroad-mining groups, have already been argued. On the Supreme Court docket to be argued are the Harvester, Steel, Kodak, United Shoe Machinery, American Can, and Motion Picture Patents Companies' cases.

The project for the construction and equipment of a Volga-Don canal, as designed by the Russian minister of ways of communications, has been approved by the Government. The projected canal will play an important part in the economic development of southeastern Russia and of the Volga and Don basins. Grain from Tsaritsin and timber and ore from the Urals will thereby obtain a direct outlet to the ports of the Sea of Azof and thence to the Black Sea. Moreover, the canal will make it possible to supply coal to all the chief cities and industrial centers of the Volga and surrounding country from the rich coal district of the Donetz basin.

The peanut, or ground nut, although grown in places all over India as a garden and even an occasional field crop, is produced on a commercial scale only in the Madras and Bombay Presidencies, in Burma, and in that part of French India (Pondicherry) that adjoins Madras. According to the latest official figures for the crop, 1915-16, the total area in British India devoted to peanut cultivation is 1,935,000 acres, estimated at 1,011,000 tons of nuts in shell. In the same period the shipments of peanut oil from Madras ports were 262,641 gallons, valued at $135,613.

During the early part of the year the irrigation department of Siam took over the works of a large private irrigation company at Klong Rangsit, in order to extend the irrigation not only to the entire district covered by the activities of the company but also farther north. The extensive plans for irrigation proposed last year have now taken definite shape, the "Prasak" scheme, involving an outlay of about four million two hundred and fifty five thousand dollars, having been selected for the first part of the plans, which if completed will cost about fifty million dollars.

It is probable that a move may be made at the next session of the legislature to convert the Massachusetts Farmland Bank, which was being organized when the Federal farm loan act was passed on July 17, into a bank to handle mortgages on farms exclusively, and to serve as an auxiliary to the Federal bank which will be established in this district. The idea is to have the Massachusetts bank loan up to seventy-five per cent of the value of the land and of the permanent improvements.

A 100 inch reflector is to be put in place at the Mt. Wilson (Cal.) solar observatory, located 6000 feet above the sea level. It will be used chiefly for photographing stars by their own light, obtaining their spectra, and studying their motions. The mirror will be the largest of its kind in the world. The next largest is the 72 inch reflector on Vancouver Island, Canada. The new instrument will gather twice as much light as the Canadian mirror and more than twice as much as the 60 inch instrument now in use on Mt. Wilson.

As a result of recommendations made by the United States secretary of agriculture, the "Old Kassan National Monument," consisting of thirty-eight acres within the Tongass National Forest, Alaska, has just been created by presidential proclamation. The tract embraces the well known abandoned Haida Indian village of Old Kassan, situated on Prince of Wales Island in southeastern Alaska, about thirty miles west of the city of Ketchikan.

The President of Brazil has granted a concession for the construction and operation of a railway from Cuyabá, the capital of the state of Matto Grosso, to connect with the Araraquara Railway. The total extension will be about six hundred and twenty miles in length, and will furnish direct railway communication between the city of Cuyabá and the ports of Rio and Santos.

Hankow is in the heart of China, 600 miles from the ocean, with which the Yangtze River is the only practicable communication. It is a flourishing city with many modern conveniences, and with a trade passing through the maritime customs of $113,940,933 in 1915, exclusive of treasure and coins, which amounted to $20,957,909. Its foreign trade equaled that of the port of Baltimore in 1914.

Stuttgart, Germany, is building a new central station which, when completed, will cost $12,000,000. The statistics of the municipal building department for the first six months of 1916 show the issuance of 600 building permits, calling for construction work that will cost $1,775,000. During 1915 there were issued 1000 permits for buildings, aggregating in cost $2,330,000.

Almost eight million trees will be available for next spring's reforesting operations in New York State from the stock now in the state forest nurseries. Over half of the eight million seedlings are white pines. The following species make up the remainder: Norway spruce, Scotch pine, pitch pine, European larch, Japanese larch, sugar maple, and Douglas fir.

The Jordan Marsh Company of Boston, Mass., announces that it will share its profits with its employees. The plan involves the distribution of more than one hundred thousand dollars a year. Its initial distribution will be made in December. The usual holiday presents will also be made.

One hundred and twenty-four pairs of birds nest and raise their families on the average farm of 108 acres in the northeastern states, according to estimates based upon the second annual bird count conducted by the Biological Survey of the United States Department of Agriculture.

Ten Danish shoe manufacturers have combined in one joint-stock company, under the name of The United Shoe Factories, in order the better to meet the foreign competition that is likely to arise after the close of the present war.

The Somers system of taxation, which has been in effect in Augusta, Ga., since Jan. 1, 1913, has proven its worth, and in the opinion of the city assessor is equally valuable to assessors, real estate dealers, property owners, and the public.

A test of the constitutionality of the Adamson eight hour railroad law recently passed by Congress is to be made in the Federal court. The Union Pacific Railroad Company has filed a suit at Omaha, Neb., to make that test.

A tunnel is to be built by the Union Pacific Railroad under Sherman Hill in the Rocky Mountains in Wyoming. This is the highest point on the line.

Sixty-one million dollars is named as the value of the manufactured furs annually bought by the people of the United States.

Direct trans-Pacific wireless service between the United States and Japan through the Marconi Company has been opened.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XIX December 9, 1916 No. 15

The Church of Christ, Scientist

FRANK H. SPRAGUE

CHRISTIAN SCIENTISTS are sometimes confronted with the suggestion that material organization is inconsistent with the ideal of spiritual freedom inculcated by Jesus the Christ. In support of this contention it is pointed out that our Lord neither established nor, so far as appears, made provision for any outward form of worship or organized means of carrying on the work which he inaugurated. In order to see the issue in its true light we need to consider both the physical and the metaphysical aspects of this question. Any form of organization which is fitted to subserve the ends of spiritual growth must come naturally into existence to meet practical demands as they arise in experience.

In the order of divine Science it was the mission of the Messiah, as Jesus himself declared, to demonstrate the control of Spirit over material beliefs, even to the overcoming of death, but in carrying out this ideal his public ministry was cut short after a comparatively brief season. Forced to labor with unpromising material and under adverse circumstances, his work was mainly directed to awakening in a handful of chosen followers some faint sense of the great truths of spiritual being. The master Teacher evidently appreciated the futility of outlining steps in progress which were in advance of the disciples' attainments. He declared: "I have yet many things to say unto you, but ye cannot bear them now. Howbeit when he, the Spirit of truth, is come, he will guide you into all truth."

Even had the founding of an organization at that time been feasible from any point of view, Jesus' followers, by no means weaned from ritualistic beliefs, were probably not equipped to cope scientifically with the problems which such a step would have precipitated. Then again, human concepts had not matured sufficiently to be subjected to the metaphysical harvesting process whereby the understanding of divine Science separates the wheat of spiritual sense from the tares of material sense. Hence the Master foresaw and foretold the necessity for a second coming to human consciousness of the Christ, when the spiritual leaven should have more fully prepared humanity to receive the impersonal idea of the Christ, Truth.

In the fulness of time the return of "the Son of man" was heralded by Mrs. Eddy's discovery of Christian Science, the definite and exact knowledge of God. After verifying her discovery by thorough experimental tests, she was constrained to embody the truths of this Science in the permanent and universally available form of a text-book, "Science and Health with Key to the Scriptures." Later, as these truths came to be demonstrated by an ever increasing number of students, the urgent demand for ways and means of nurturing and protecting the embryonic thought, as well as of carrying on the propaganda, was fulfilled in the institution known to the world as the Church of Christ, Scientist.

On page 583 of Science and Health Mrs. Eddy defines "church" as "the structure of Truth and Love." While the real church, like the real man, must ever be purely spiritual, the human belief of material existence imposes the necessity of recognizing outward ways and means of dealing with the collective problems and economic requirements of mankind in the same sense that the belief of corporeality compels a consideration of bodily needs. The essential facts concerning mortal mind are not altered either by the subdivision of mortal thought into alleged personal units or by its multiplication into complex social bodies.

Civil governments are an outgrowth of the attempt to work out the problem of man's unity on the basis of material relationships. If the student of Christian Science renders unto Cæsar the tribute due to such materially conceived systems by loyally fulfilling the duties of citizenship, is he not under still greater stress to take up the church problem as it stands at the present stage of spiritual demonstration and help to work it out step by step in orderly progression, until the point is reached where the beliefs of material organization shall dissolve in the complete realization of man's oneness as the pure reflection of Spirit? Error, as a suppositional false claim, is one, whether it be manifested in the limitations and inharmonies of a carnal body or a body of Christian disciples; and it is to be overcome in the one case as in the other, not by disembodiment, but rather, as the apostle Paul expresses it, by being "clothed upon, that mortality might be swallowed up of life," by working naturally toward the goal of pure spirituality along the line of improved beliefs.

The first step in demonstrating the church ideal is to prove order, harmony, and efficiency within the organization; just as the first step in meeting the claim of corporeality lies in realizing the truth of being to such an extent that the body shall be made "every whit whole." The integrity of spiritual being can be proven only by defeating error in its strategic stronghold, the belief of separate, disagreeing minds. Where, it may be asked, if not in the ranks of professing Christians, united by the common bond of spiritual understanding, shall the demonstration be achieved?

Membership in the Church of Christ, Scientist, affords opportunity not alone for helping to work out the issue of human redemption in the only really effectual way, but also for learning invaluable lessons in handling one's individual problem by proving patience, alertness, obedience, humility, gratitude, and manifold other qualities which divine Mind expresses in man. If, for example, one is tempted to feel incensed by the testimony of the senses as to conditions of self-seeking or disunity among the members, he may perchance rise higher in the scale of demonstration by proving that an attitude of silent trust and watchfulness is the most effectual rebuke to error. The ancient axiom to the effect that he who finds God is silent, points a lesson in self-effacement in order that spiritual power may be exalted.

Then again the argument may present itself that one has advanced to the point where he no longer requires the ways and means of organization as an aid to spiritual growth. If it were true, however, that one had attained such a position, would not his example and support be all the more needed by his fellow servants who had not reached such heights?

It is written that our Lord, "being in the form of God, . . . humbled himself." Must not materiality be eliminated from the concept of church by sacrificing the sense of personal selfhood and magnifying Spirit?

For a considerable period after her epoch-making discovery our Leader hoped, as she tells us, to avoid the necessity of adopting any outward form of organization, lest, as had invariably been the case in the past, the material form should in time usurp the place of the spiritual idea. But God's ways are not as our ways. The unique and indispensable function of organization in Christian Science dawned on her consciousness by degrees, until at length she was impelled to write concerning the Manual of The Mother Church: "Heaps upon heaps of praise confront me, and for what? That which I said in my heart would never be needed,—namely, laws of limitation for a Christian Scientist" (The First Church of Christ, Scientist, and Miscellany, p. 229).

The Christian Science organization, then, is not an end in itself, but it is a logical necessity at the present stage of Christian demonstration. Coming into existence as the result of spiritual demonstration to meet unforeseen requirements, it represents a proposition to be proved step by step. It is not a finished product, a closed book; rather is it the open door by which mankind must progress out of the realm of material beliefs into the spiritual estate of man. To this end our Leader with prophetic insight laid down in the Manual certain general lines along which the orderly unfolding of Truth must inevitably proceed in order to establish the impersonal leadership of the Christ, Truth, as the head of the church. We may safely trust the Mind which in "the fiery, cloudy pillar" guarded and guided the Israelites in their journey through the wilderness, to open up and illumine the way ahead.

"Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Such was the declaration of Jesus the Christ. Did not these significant words have reference to the wider field and higher range of spiritual demonstration which would open up as "the Comforter" was acknowledged and accepted as he who would guide into all truth? Thus shall the earlier promises and prophecies of Christianity be fulfilled in the rule and reign of spiritual harmony described by the inspired writer in the Apocalypse: "And I saw a new heaven and a new earth: for the first heaven and the first earth were passed away."

Joy Overcomes Sorrow

FLORENCE E. B. DONALDSON

In one of those striking passages which so often bring instant conviction of their truth to the readers of the textbook of Christian Science, "Science and Health with Key to the Scriptures," Mrs. Eddy gives utterance to the following statements (p. 304): "This is the doctrine of Christian Science: that divine Love cannot be deprived of its manifestation, or object; that joy cannot be turned into sorrow, for sorrow is not the master of joy; that good can never produce evil; that matter can never produce mind nor life result in death." This definite reversal of things generally believed is well calculated to startle the human mind out of some at least of its dreams of false belief and erroneous teaching. The passage quoted is so wide in its application that it will be sufficient to take the single phrase which puts joy and sorrow into their correct relative positions, and implies that sorrow is merely the denial of the fulness and immutability of man's heritage of joy. Joy is positive and real, while sorrow is negative, temporal, and unreal.

In strange reversal of the truth, the human mind has continually placed sorrow on a pedestal, as something to be admired, looked up to, and if not actually sought after, at least as counting for much more than joy. So curiously perverted has the world's judgment of Christianity proved itself in this respect, that it has recognized Christ Jesus, its ideal, as mainly a "man of sorrows," rather than as the anointed of God; yet he himself gave an exact opposite of this picture when he said, "These things have I spoken unto you, that my joy might remain in you, and that your joy might be full."

Christian Science teaches that that which is spiritual is eternal. St. Paul declares joy to be one of the fruits of Spirit. It is the understanding of reality which brings joy to the heart, for it is based on a knowledge of God. There could be no possible conception of sorrow in divine Mind. Omnipotent, omniscient, and omnipresent good could not know a thought of loss or separation. It is spiritual sense alone which enables mankind to rise above the seeming sense of void. When David mourned and wept over a sick child, but rose up, and anointed himself, and resumed his normal mode of living as soon as he was told the child had died, his servants failed to understand his action; but the man after God's own heart, who had realized the need of true penitence for sin, could not be mastered by sorrow for one he knew to have only passed to another plane of consciousness. Sorrow cannot stand before an abiding sense of good.

It is not contended that sorrow will not claim to assail mankind, but Christian Science shows that it is a false claim, and that as such sorrow must be fought and overcome just as earnestly and as unremittingly as sin or sickness, for it is equally unlike God. The commonly accepted belief under theological teaching, that trouble of all kinds comes from the heavenly Father, who thus governs and chastens His children for their ultimate good, has led to many phases of unbelief. To bow in unquestioning submission even to what seemed a most unjust decree, has been considered to be the only possible attitude for a Christian. Mrs. Eddy's reversal of this false teaching has changed many a rebellious heart into one of loving gratitude, and has placed many a cowering victim of despair upright upon his feet, strong in the strength of "the joy of the Lord."

There is another condition of the human mind which hugs sorrow persistently and refuses to be comforted. When any natural reaction tries to assert itself, the sufferer tightens his hold on the sense of loss, and clings to his mental picture of something he believes to have swept away his every hope of happiness. Such a one would be greatly surprised to be told that his condition was one of self-centered thought, and that even a small amount of real love for others would do much to eliminate it from his consciousness.

Sorrow being in belief a manifestation of conscious mortal mind, it is consequently more difficult to overcome than physical ills. It is evident, however, that obedience to the first commandment makes it no less imperative for the sorrowing to turn and repent,—that is, to change their thought,—than it is for the devotee of any other belief in that which is opposed to God, or good. If any think they can of themselves heal their own sorrows, or imagine that they are called upon to do so, they will fall into the error of setting up personality, and are bound to fail in their efforts. Truth alone heals; and the understanding that sorrow is not real, because it is not of God, begins at once to destroy the false claim and illumines the thought with the light of spiritual understanding. Emotional joy is merely the human counterfeit. True joy is spiritual and is founded on the knowledge of spiritual reality. It is this joy alone that is able to dispossess sorrow.

Digitized by Google

There is a frequently expressed belief that joy belongs to youth, but Christian Science shows that this fruit of the Spirit is necessarily continuous in a grateful heart, and no less progressive in unfoldment than other fruits of Spirit. Another belief claims that the cooperation of time is always required to alleviate the sense of sorrow; but in the understanding of a full salvation, the apostle Paul declared that "now is the accepted time," and Christian Science reiterates and endorses the statement. Joy should be sedulously cultivated as one of the first among Christian virtues. Fear and the dread of possible evil, and brooding over sorrow, not only cloud the thought, but prevent the manifestation of joy and hinder the efficacy of prayer. The basis of true spiritual communion with God must be thanksgiving. It is in this way only that we can truly dwell "in the secret place of the most High," seeing that, as the psalmist elsewhere says, "In thy presence is fulness of joy."

Giving of Testimony

COLIN RÜCKER EDDISON

Two students of Christian Science had attended a Wednesday evening testimony meeting, and both felt that there had been something unsatisfactory about the service. The testimonies had come haltingly, and each had been followed by a somewhat oppressive pause. Altogether there had been an apparent absence of that joyous sense of freedom which is not the least valuable characteristic of a Christian Science meeting. The two who were discussing this matter realized that there was some fundamental truth in connection with the giving of testimonies which they had not as yet seen, but which, once recognized, would overcome the apparent difficulty in this direction. In determining to study the question they gratefully remembered these words of our Master: "It is written in the prophets, And they shall be all taught of God."

The light which came to one of the two as a result of a prayer for more spiritual understanding, was very helpful, for it made clear many past mistakes, and also proved the value of the Manual of The Mother Church in working out such a problem. A careful study was made of the by-law entitled "Testimonials" (Art. VIII, Sect. 24), which begins with a quotation from St. Paul: "Glorify God in your body, and in your spirit, which are God's." This then is the first and foremost requirement in a testimony, to glorify God; that is, to show forth the unlimited power of divine Mind, to acknowledge that there is but one God, infinite good, and that because good is infinite, evil is unreal, whether it takes the form of sickness, lack, or faults of character.

The by-law goes on to elaborate this idea: "Testimony in regard to the healing of the sick is highly important. More than a mere rehearsal of blessings, it scales the pinnacle of praise and illustrates the demonstration of Christ, 'who healeth all thy diseases.'" Here let us remember that Christ, Truth, is the universal Saviour, and that it is no merit of our own if we have received some of the crumbs that fall from the Master's table. Is there not a danger, if we indulge in a mere rehearsal of blessings, that we may think of ourselves as having done something wonderful, and thus admit a sense of self-righteousness which robs God of the glory? Or again, we may be led to lay too much stress in our thought on the physical benefits received. Mrs. Eddy warns us that "if we are ungrateful for Life, Truth, and Love, and yet return thanks to God for all blessings, we are insincere and incur the sharp censure our Master pronounces on hypocrites" (Science and Health, p. 3). We must be genuinely grateful for the divine Principle at work in our lives, and not be thankful only for the loaves and fishes. True gratitude would lead us to give up gladly much to which we are prone to cling, and we should then welcome the discipline of Truth, which knows no compromise with error. True, this is not always easy, but Christian Science teaches us how it may be realized and expressed.

Not only should a testimony illustrate the demonstration of Christ in the sense that it shows to those who hear it that God is omnipotent on earth even as in heaven, but it should in itself be a demonstration of God's guiding care. It should be the outcome of the giver's understanding that man is the image and likeness of God, reflecting the activity of the one Mind, and none other. He who is trying to realize that divine Mind is the only cause, the only activity, will see that criticism of others is a useless waste of time, and will rely on divine Love to find its own channel for expression.

Christian Science, the more we study it, shows us that God, good, is the only power; that good is infinite and impersonal, that it belongs to all God's children alike, and is never circumscribed by human concepts. As this truth becomes real to us, we shall go to a testimony meeting ready to accept humbly and gratefully all the good we can get, and ready to give of our best, knowing that we can give only what we reflect. Fear will have no power to prevent our speaking, nor will a false sense of responsibility lead us to think that it is incumbent on us to fill up pauses, for we shall trust in God's guidance. In this way the demonstration of Christ will be truly illustrated and made plain to the world. On page 332 of Science and Health Mrs. Eddy writes, "Christ is the true idea voicing good, the divine message from God to men speaking to the human consciousness."

✧

True Attraction

ETHEL M. MC CANDLESS

THAT children have to be amused in order to attract and hold their attention, is a time-worn belief to which we all have been in bondage more or less; and we find that this belief even tries to obtain a foothold in Christian Science Sunday schools, especially the smaller ones just starting in their work. It is often asked by those in charge of such organizations, if there is not some way or something to make the work more attractive to the little ones. Mrs. Eddy says in Science and Health (p. 102), "There is but one real attraction, that of Spirit," and if those who have the sacred charge of teaching these little ones keep this truth constantly before them and daily strive to demonstrate it, they will find that the children quickly respond to Truth's silent attraction and manifest attention and obedience.

The writer has always been associated with children, being one of a large family and also having children of her own, and she has found that there is nothing so attractive to the child thought as the truth. Her little sons would ask her, when she was about to begin a story, if it were "a true one," and they would sometimes refuse to listen if it were merely imaginative, thus rebuking that sense which sought to entertain by appealing to the sentimental nature of the child.

In Article XX of the Manual of The Mother Church we find all that is necessary for us to know about Sunday school work, and if we carefully and prayerfully study this, all lingering doubts will be dispersed. The seventh commandment should often be pondered by every teacher in a Christian Science Sunday school, and God will guide every sincere and humble seeker in the way of unadulterated Christian Science. A teacher in one of our Sunday schools said it had been her experience that when she herself did all that was required of the pupils, and that when she learned the Golden Text, usually she found a wide awake, interested, and interesting

Digitized by Google

class awaiting her on Sunday morning. There is much food for thought in this, and all who are engaged in Sunday school work will do well to adopt the same method.

Let him who thinks that we have to turn aside from the absolute truth contained in the Bible and Science and Health in order to reach the child thought, study these two answers given in a class of little ones from four to six years of age. After the children had repeated the twenty-third psalm, the teacher said, " 'The Lord is my shepherd; I shall not want,'—now, what does that mean?" A little hand went up and a small tot replied, quoting Mrs. Eddy's words, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). The child no doubt had been taught these words, but could any grown-up with his so-called mature thought have applied them to better advantage? Again, when the subject of the Lesson-Sermon was "Reality," the teacher asked what the word meant. The answer came quickly, "Anything that God knows." Surely "a little child shall lead them."

When we lay the burden and responsibility of the teaching on God, thinking of our work as teachers only as a privilege and a joy; when we, like the Good Shepherd, carry the lambs in our bosom,—that is, when we mother these innocent, pure thoughts that come into our fold and look to us for instruction,—we shall find our hearts reaching out with a deep tenderness and love. Then will be fulfilled those wonderful words of our Master: "And I, if I be lifted up from the earth, will draw all men unto me."

An Analogy

WILLIAM LLOYD

How often has a Christian Science practitioner been called to a home where he found the patient lying in a darkened room, a trained nurse by his side, with anxious relatives and possibly the doctor on guard at the door. From such a scene we pass to another of similar character. In the book of the Acts of the Apostles we read that Peter lay in prison, in the dark, asleep, with sleeping guards by his side. He was bound with chains, and other guards were at his prison door. Into his prison enters an angel, and with the angel comes light. On page 581 of Science and Health we are told that angels are "God's thoughts passing to man; spiritual intuitions, pure and perfect." In this account of Peter's experience we read that the angel strikes Peter to awaken him, then bids him arise. When the chains fall off he is told to gird himself, to bind on his sandals, to clothe himself; and then, and not until then, is he ready to follow the angel out of the prison into freedom.

When the Christian Science practitioner enters a sick-room and finds the patient and the nurse asleep in the belief that man's life and health are bound up in matter, his very entrance brings light, for spiritual understanding is light; yet how often has he to arouse the patient's dormant thought with a statement of God's allness, love, and power that almost amounts to a blow to material sense! Having once awakened the patient, he bids him rise at least somewhat above his belief of life in matter, and with the effort to obey comes partial release. The patient becomes in a measure aware of man's spiritual power; then comes the further command to gird himself for renewed effort. As in Peter's experience, this may mean, "Bind on thy sandals," reach out and put on the understanding of the omnipotence of Love. Then to the awakening thought the command is, "Cast thy garment about thee." "Clad in the panoply of Love" (Science and Health, p. 571), the next step is to follow the angel of light past the anxious guards, out through the prison doors, into the broad sunlight of health and harmony, into the consciousness of God's allness and man's indestructibility.

We should note that Peter had to do each of these things himself. The angel told him what to do and showed him the way out, practically held the prison doors open for him, but Peter had to walk through. If he had not done his part, would he ever have found liberty? Paul says, "Work out your own salvation . . . For it is God which worketh in you both to will and to do of his good pleasure."

Compulsion

CAPT. GEOFFREY WILKINSON

In nothing, perhaps, are the dominating tendencies of mortal mind more pronounced than in the manner in which one person would compel others to follow his prejudices and inclinations. Because the human mind has decided that a certain course is right,—as a matter of fact it is probably in many instances entirely wrong,—it demands that all others should follow its behests. The fact is, that the human mind has no definite guidance to follow, and thus its inclinations usually spring from the feeling of the moment, or in other cases from its particular fears.

It is extraordinary how many people think they know exactly what their neighbors ought to do, and who criticize and interfere in consequence, though they would very much object to being similarly criticized or interfered with. An instance of this is presented in the ninth chapter of Mark's gospel, where John is recorded as objecting to another's work and saying, "Master, we saw one casting out devils in thy name, and he followeth not us: and we forbade him, because he followeth not us." The reply of Jesus made for that essential liberty which all of his followers should ever enjoy, and it is interesting that John was the center of a further incident along much the same lines, when Peter said to Jesus, at the breakfast after the Master's resurrection: "Lord, and what shall this man do?" Again the reply of Jesus put aside the tendency to meddle in other men's affairs and pointed out to Peter that the only thing he was concerned with was that he himself should follow in the footsteps of his Master.

It is, however, well to distinguish between liberty and license, a point which is often overlooked. Here again the right attitude was indicated by the Master in the famous injunction, "Render to Cæsar the things that are Cæsar's, and to God the things that are God's." It is at this point that we are carried from the demands of the individual to the demands of the city or state. Human government is admittedly defective and its ordinances are apt to cause injustice; but even in such cases the injunction to render to Cæsar "the things that are Cæsar's" still holds good, and it was entirely in line with this attitude that Mrs. Eddy counseled Christian Scientists to obey the law even when it seemed to discriminate unfairly and injuriously against them.

After all, there is considerably more self-sacrifice required in the observance of tyrannical or unjust law than in the lawlessness which would glory in setting it at naught, and if the objectionable human law is obeyed it is quite possible for the man who relies on the availability of spiritual law to avoid unpleasant consequences. On page 97 of Science and Health Mrs. Eddy has written of "those who discern Christian Science" that "they will maintain law and order, and cheerfully await the certainty of ultimate perfection." More and more will human law be dominated by the spiritual law, and whatever in the former seems unjust, tyrannical, or imperfect must tend to disappear.

Digitized by Google

Referring to this tendency Mrs. Eddy writes (Science and Health, p. 340): "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

Spiritualized Memory

MARY LORD

On page 407 of Science and Health we read: "If delusion says, 'I have lost my memory,' contradict it. No faculty of Mind is lost. In Science, all being is eternal, spiritual, perfect, harmonious in every action." Mind, thus capitalized, means ever the divine, and the writer is grateful for the light of a better realization of memory, as viewed in this larger sense. She had always prided herself on a remarkable memory, but in school days, before divine Science had revealed to her the one Ego, and "every good gift and every perfect gift" as coming down "from the Father of lights, with whom is no variableness, neither shadow of turning," the false sense of memory served the ends of evil even more than the purposes of good, and proving itself to be a "house divided against itself," was of necessity frequently "brought to desolation." As she was apt at memorizing, a day's lessons were carelessly skimmed over, and when examination periods drew near, that which seemed so readily attained was found to be not sufficiently absorbed, did not reflect a true understanding, and memory's proud boast suffered its fall. Many arduous hours of applied study were then requisite in order to escape complete failure.

"Heaven and earth shall pass away: but my words shall not pass away," was the prophecy of Jesus the Christ, and this prophecy is approaching its fulfilment. As we grow in the knowledge of God, the false sense of the heavens and earth vanishes from those chambers of memory stored with useless knowledge; but the truth which His word imparts, the dawning light on some passage from Science and Health, or the wonderful correlatives found in Mrs. Eddy's other writings, are never lost.

When the periods of self-examination arrive, with the honest endeavor to "press toward the mark for the prize of the high calling of God," the messages of Truth stand out in letters of fire, illuming our path to meet our need, and failure is unknown, for the Word is indeed proven "quick, and powerful." On page 276 of Science and Health Mrs. Eddy says, "Real consciousness is cognizant only of the things of God;" hence memory, being a faculty of Mind, can hold fast only that which is good. It cannot therefore hold to fears and superstitions, it cannot entertain resentment or hate; neither can it dwell on a dead past with all it seemed to hold of sin, sickness, and sorrow, but "forgetting those things which are behind," the student of Christian Science is willing to "let the dead bury their dead." This enables him to see true manhood and true womanhood in all their perfection. It also shows him how to aid some struggling one to forget the dream of pain or woe from which he is awakening, and to remember man's creator, who made all and beheld it as "very good."

In "Miscellaneous Writings" (p. 290) Mrs. Eddy writes, "When thought dwells in God,—and it should not, to our consciousness, dwell elsewhere,—one must benefit those who hold a place in one's memory, whether it be friend or foe, and each share the benefit of that radiation."

Selected Articles

[Judge Clifford P. Smith in *The Boston (Mass.) Herald*]

The comments on Christian Science by a doctor of divinity now transiently in our city should have been discontinued long ago, for they have no point when the actual teachings of this religion are intelligently considered. Nearly everything he said in relation to this subject was given such point as it had by ignoring the distinction made by Christian Science between the real man of God's creating and the counterfeit of man, which includes sin, disease, and death. This distinction is plainly made throughout the authorized literature of Christian Science, and it is easily understood as well as easily followed by any fair-minded reader.

Moreover, the distinction just stated is not peculiar to Christian Science. It is to be found in the Bible, particularly in the teachings of Christ Jesus, Paul, and John. Here is where Mrs. Eddy found it; and other writers, either with or without her aid, have also noticed it. For instance, Prof. Lucius Hopkins Miller of Princeton University said in his recent book entitled "Our Knowledge of Christ," "In a real sense man is a child of God, and in another sense, equally real, he must become a child of God." In a sense man does not sin, sicken, or die, but is coexistent with God as His image or reflection. In another sense man needs to be saved from these evils and from all evil. Thus Jesus declared, speaking of God, "He is not a God of the dead, but of the living: for all live unto him." Yet the Master also said, "I am come that they might have life, and that they might have it more abundantly." Although Paul said, speaking of God, "In him we live, and move, and have our being," yet he also spoke of an "old man," including "mortality," to be "put off."

John made the same distinction emphatically. In his writings the reality of man's being and the human need of achieving it are plainly declared. For instance, in the first epistle of John we read, "Beloved, now are we the sons of God;" also, "Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God." Yet the same writer said in the same letter, "If we say that we have no sin, we deceive ourselves, and the truth is not in us." Such apparent contradictions disappear when account is taken of the Scriptural distinction between God's man and what is called a mortal. Likewise the efforts of the reverend gentleman to array the Bible against Christian Science were supported only by his own failure to read or heed its actual teachings.

Christian Science accepts the Scriptural account of the Virgin Mary's conception of Jesus, and Mrs. Eddy's explanation of this marvel has been regarded by reverend men of many faiths as both beautiful and satisfactory. Any one who wishes to consider it for himself is cordially invited to do so by reading Luke i. 26-38, and "Science and Health with Key to the Scriptures" by Mrs. Eddy, from page 29, line 12, to line 13 next page.

Besides the points to which I have now referred, the gentleman in question also said, "Christian Science says, 'Prayer is idle.'" No reasonable excuse for this statement exists in the authorized literature of Christian Science. On the contrary, the exact opposite of this statement can be found by any fair-minded reader frequently reiterated from the beginning to the end of Mrs. Eddy's writings. On the very first page of the above named text-book Mrs. Eddy said: "Prayer, watching, and working, combined with self-immolation, are God's gracious means for accomplishing whatever has been successfully done for the Christianization and health of mankind."

Digitized by Google

Mrs. Eddy herself aimed to live a life of prayer, and it was her constant habit to suspend other activities at least three times every day for a period of prayer. Moreover, there are a multitude of people who have, through Mrs. Eddy's discovery and leadership, gained some definite and practical grasp of the facts which she has thus stated on page 39 of "No and Yes": "Prayer can neither change God, nor bring His designs into mortal modes; but it can and does change our modes and our false sense of Life, Love, and Truth, uplifting us to Him. Such prayer humiliates, purifies, and quickens activity, in the direction that is unerring. True prayer is not asking God for love; it is learning to love, and to include all mankind in one affection. Prayer is the utilization of the love wherewith He loves us."

The experience of Christian Scientists has proved to their satisfaction that their religion is both spiritual and practical,—both divine and applicable to human needs. For them, and for many people who are not yet avowed Christian Scientists, the knowledge of absolute truth about man and his relation to God which this religion teaches and renders available for human progress, has brought forth the fruits of better health, more genuine goodness, and a greatly increased measure of happiness. To all other people, and particularly the clerical profession, Christian Scientists would say: We shall be glad to offer you the benefits of Christian Science when you want them. Meanwhile, we only ask that you speak of our religion with such fairness as you would desire if our positions were reversed.

✧

[Avery Coonley in *Oak Leaves*, Oak Park, Ill.]

In a communication signed "Neutral," a contributor attributes to "a Christian Scientist" at a needle club the statement that she could "think a headache or severe illness on any one she cared to." Permit me to say that Christian Science does not enable one to do anything of the sort and does not sanction anything of the sort. On the contrary, it is a religion of love, in which evil motive can have no place. The operation of one human mind upon another is wholly foreign to the modus of Christian Science, which teaches that such action is hypnotism or animal magnetism and is false and powerless. To quote from page 103 of "Science and Health with Key to the Scriptures" by Mrs. Eddy: "It is the false belief that mind is in matter, and is both evil and good . . . This belief has not one quality of Truth. . . . In Christian Science, man can do no harm, for scientific thoughts are true thoughts, passing from God to man."

✧

[William E. Krupp in *Parkersburg* (W. Va.) *State Journal*]

A local revivalist makes the charge that the fad and sham religions of today are the influences of hell which are trying to lead people down the paths to the lower world, that the majority of their members either become insane or infidels, and a further charge that Christian Science is such a religion.

Christian Science is essentially Christian, and involves the acceptance and practice of the teachings of the Master. It declares the infinity of God and His three principal attributes, omniscience, omnipotence, and omnipresence,—God possessing infinite wisdom and intelligence, infinite power, and being ever present. It accepts and demands the practice of the ten commandments, and lays particular stress upon the first, "Thou shalt have no other gods before me." Its essence is the Sermon on the Mount, and all of its adherents not only accept but strive to live these sayings of Jesus. It declares the divine mission of Jesus and accepts him as the Way-shower, in accordance with his own statement, "I am the way, the truth, and the life." It accepts and teaches the divinity of the Christ, and the doctrine of the atonement,—the at-one-ment of God and man here and now; and finally, it not only believes in the efficacy of prayer but it proves that prayer is answered, the proof being the healing of sickness and the overcoming of sin in human experience.

Christian Science is a religion of acts, not of thoughts alone; of deeds, not merely of words; of practice, not merely of profession. Thoughts, words, and professions of Christianity are well enough as such, just as are the rules of arithmetic, but they need to be applied in daily conduct; and when so applied,—and acts, deeds, and practice are shown,—then there is sounded the key-note of true Christianity. Jesus proved the truth of his teachings by his works, and he showed also that the healing works are incident to the understanding of his teachings. Did not the Master say, "He that believeth on me, the works that I do shall he do also"? And did he not also say, "Believe me for the very works' sake"? When the messengers of John came to Jesus to know if he were the Messiah, Jesus answered, "Go and show John again those things which ye do hear and see," and then he recounted his healing works. It is to be remembered that the representatives of the dominant church of that day also charged that the Master performed his mighty works, not in demonstration of the power of God, but "by Beelzebub the prince of the devils."

How absurd it is then to charge that Christian Science is a sham religion, when it is everywhere regenerating mankind, giving them health and more happiness than they ever before experienced; when it has lifted thousands from the very brink of the grave and restored them to perfect health, and then, in the language of the apostle Paul, it has transformed them by a renewing of the mind and brought into their experience a sense of that peace "which passeth all understanding."

Nor can Christian Science be likened to hell. Hell is a negation and can exist only in mortal belief. We know that it is neither a place nor a thing, and that it is only a remnant of the religion of fear developed during the dark ages. How can Christian Science, following as it does the teachings of the Master and like him proving the truth of its teachings by its works of healing and regeneration, have an evil influence? How can it lead humanity down the paths to the lower world, when its results are better health, purer lives, and a higher spirituality? "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit. . . . Wherefore by their fruits ye shall know them."

In Christian Science churches on every Wednesday evening thousands upon thousands testify to the regenerating power of this religion, its influence for good, and as a guess it may be safely stated that seventy-five per cent of its adherents have previously been members of other churches. They testify too that while the Bible had previously been an uninteresting book, full of conflicts and contradictions and seldom read, it has become their chart of life and their daily companion, teaching them the way of a salvation which is to be attained both here and now. In the face of such overwhelming proof of its regenerating power and influence, it would seem to be the height of the ridiculous to charge that a majority of Christian Scientists either become insane or infidels.

Among these aggregations of itinerant preachers, commonly called evangelists, it seems to be the common practice to indulge in the reckless use of language and to make any charge or assertion that may attract public attention to themselves. The golden rule is preached and instantly violated, the beatitudes are declared and at once stones are hurled at others; anything, provided only it attracts atten-

Digitized by Google

tion to themselves and arouses the public to a discussion of their meetings, for perchance it may cause the curious to attend in the hope of hearing something startling. It seems more than passing strange that the ministers who regularly occupy the pulpits will permit methods and means to be resorted to that they would scorn and mercilessly condemn, were it not that such seems the almost universal practice in this method of evangelization. If the purpose is to bring humanity to Christ, certainly a better example must be set, the example of the lowly Nazarene ministering unto the multitudes, healing the sick and casting out evil everywhere.

✧

[Charles W. J. Tennant in *Southend and Westcliff* (England) *Graphic*]

A clergyman as reported in the *Graphic*, speaking of Christian Science, says that "it contains much that is extraordinarily valuable. Its central teaching of omnipresent love is specially helpful. . . . Further, its philosophy of the nonexistence of matter and pain, and its consequent denial of sin and death, are neither Christian, nor scientific, nor common sense. Yet I know it has helped and healed those who could really believe it." Our critic seems to have forgotten that the Founder of Christianity taught that a good tree could not bring forth evil fruit, and *vice versa*.

Christian Science is Christianity in its fullest sense, for it teaches and proves, as did our Master, the infinitude of God, Spirit, and hence the unreality of everything that is not included in this infinitude. Christian Science is Christian, for it is founded on the teaching and practice of Jesus the Christ, in conformity with his command to preach the gospel and heal the sick. It is scientific, because it evinces scientific or systematic knowledge.

St. Paul tells us that the "natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." The study of Christian Science enables one to gain this spiritual discernment and prove it by demonstration.

✧

[Robert S. Ross in *The Courier*, Buffalo, N. Y.]

It is no mean undertaking for a scholastic theologian to speak or write dispassionately of a school that differs so widely from his own as does Christian Science. Because of this there were a few statements in the report of a recent sermon that need correcting. For example, the critic said that "unless their faith is gradually to descend into a blind and besotted fanaticism," Christian Scientists "will see its limitations; and when they need a physician or surgeon will send for one." If one accepts the proposition that God, good, is both omnipresent and omnipotent, one must also admit that there is never an instant when God is not only available but capable of meeting "every human need" (Science and Health, p. 494). Asa turned from God to medicine and died; and does not Paul assure us that "the word of God is quick, and powerful, and sharper than any twoedged sword"? Surely it is not "blind and besotted fanaticism" to have more and more faith in Spirit, God, and less and less in matter.

The critic says that one reason why he is not a Christian Scientist is that he cannot assent to the teaching of the unreality of matter. For the same reason he could say that he is not a Christian. The teachings of Christian Science and Christianity are identical on this as on every other point. Speaking of material existence, or the flesh, Jesus referred to it as "a liar, and the father of it." What is the father of a liar but a lie? Reasoning in another direction, Christian Science says that God, Spirit, Mind, is the one and only creator. He made all, and it must be spiritual, not material. In each case the conclusion is the same: matter is not because Mind is.

If matter is proved by Christian metaphysical analysis to be unreal, any system based on this unreality must likewise be unreal. The only real science is that which interprets God, Truth. In Science and Health Mrs. Eddy writes: "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all. Spirit is immortal Truth; matter is mortal error. Spirit is the real and eternal; matter is the unreal and temporal. Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual" (p. 468).

Contrary to the opinion of the critic, the reasoning of Christian Science is logical and irrefutable. Furthermore, Christian Science is demonstrable. These are the elements that satisfy, and make the teachings of Christian Science acceptable to thinkers in all departments of human activity. On page 93 of Science and Health Mrs. Eddy says: "Divine logic and revelation coincide. If we believe otherwise, we may be sure that either our logic is at fault or that we have misinterpreted revelation."

No more unjust statement could be made than that Christian Scientists lack sympathy for their fellow beings. It is quite true that Christian Scientists have no sympathy for error, whether it be called sin, or sorrow, or sickness. What sufferers need is the help that will enable them to see the powerlessness and unreality of the troubles which beset them. In more than one place the Bible records that error cried out at the approach of Jesus, knowing that instead of agreeing with or coddling it, he would cast it out. To error Truth seems the cruelest of tyrants, because Truth alone is capable of destroying the errors of belief.

With all due regard for the efforts of philanthropic methods to relieve human suffering, each succeeding year will make plainer their inadequacy. Nothing short of Truth understood individually will free mankind from bondage to sin, disease, and death. Therefore the Christian Scientist concludes that the one thing most needed is spiritual understanding. Until mortals get this understanding the problems confronting them cannot be definitely and finally disposed of, and they will not seek it until their thought is ready for it. Because of this, Christian Scientists do not attempt to force their views on others. They stand ready at all times, however, to respond to calls for help. The aim of Christian Scientists is to make their literature available to all, so that all who will may understand this Science.

✧ ✧ ✧

[Written for the *Sentinel*]

All Mine

EMMA VIOLA WHEELER

ALL mine the joys of Spirit—all mine to send abroad
Some thought to help my neighbor, some truth about our God;
Mine too the tender loving, the omnipresent care,
The perfect understanding that Love is everywhere.
I would not then be greedy, but see that others live;
Mine thus to aid the needy—and mine to have and give.

All mine the peace of heaven, the harmony of Mind,
The sense of Love impartial, reflected in mankind.
Mine, mine, the sweet assurance that nothing ever harms,
That 'round and underneath me are the everlasting arms.
All mine; but oh, what pleasure it gives me just to tell
That every dear prized treasure is all mankind's as well.

Editorial

Spiritual Healing

SINCE the healing work of Christian Science has become a matter of such common knowledge as it is today, there has been increasing evidence that the older Christian denominations are under great stress to provide some means by which the healing work done by Christ Jesus and the early Christians will again become a part of the official work of the ministry of these denominations. As an example of the effort which is being made to meet this need, we quote from the parish newspaper of one of the most prominent churches in the state of New York, as follows:—

A class for the study of spiritual healing, conducted by ———, will be organized shortly, to be continued as long as the interest and attendance warrant.

By spiritual healing, whether of body, mind, or spirit, is meant "the pouring in of the grace of God through prayer or sacraments, through faith and silence and meditation, through the charged atmosphere of common worship, through human intercession and religious benediction."

That there is a growing need for this ministry of healing is manifested by the many inquiries upon the subject, and by the loss of church members in increasing numbers to Christian Science, New Thought, and other healing cults. It is to meet this need, and to prove that within the church are to be found such means of healing as are sought elsewhere, that the class is planned.

Right here let us say that we are glad that in this instance the reason given for forming this class is not primarily to prevent "the loss of church members in increasing numbers to Christian Science," but to meet the need of those who are distressed in mind, body, and estate, those who have a right to expect and do expect that the complete gospel of Christ Jesus, as set forth in the New Testament, will be preached and practised within the Christian church with which they have allied themselves. In former years such announcements, when made by churches which were willing to admit that the healing of the sick by spiritual means was not the work of Beelzebub, usually were based upon no sounder reasons than the desire to keep the members of their flocks from straying into strange folds, just as children might be given candy to induce them to stay at home.

The one thing which is ground for thanksgiving is that there is now a more general admission than heretofore that the healing power used by Jesus was not something solely pertinent to himself and those personally associated with him,—a special dispensation both as to time and persons,—but that it was and is an essential part of his teaching and his ministry, and that it should be practised so long as sickness and disease are believed in and manifested by humanity.

When our Master was questioned by John's messengers, he did not attempt to prove in any other way than by the power to heal, that he was the Messiah. He told these messengers, "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." When he appeared to the disciples for the last time, his words to them left no doubt of his intention that the healing of sickness should continue for all time as the hall-mark of Christianity. He did not tell these disciples that they alone should do these mighty works, that they alone had received the truth by which the sick might be healed. His promise was to "them that believe," and this promise was without further qualification.

When we realize that fifty years ago there was but one Christian Scientist on the earth, and that today the churches of this denomination encircle the globe, we welcome the "signs of the times" and confidently look forward to the complete fulfilment of Mrs. Eddy's twenty year old prophecy on page 22 of "Pulpit and Press," wherein she says:—

"If the lives of Christian Scientists attest their fidelity to Truth, I predict that in the twentieth century every Christian church in our land, and a few in far-off lands, will approximate the understanding of Christian Science sufficiently to heal the sick in his name. Christ will give to Christianity his new name, and Christendom will be classified as Christian Scientists.

"When the doctrinal barriers between the churches are broken, and the bonds of peace are cemented by spiritual understanding and Love, there will be unity of spirit, and the healing power of Christ will prevail. Then shall Zion have put on her most beautiful garments, and her waste places budded and blossomed as the rose."

ARCHIBALD MCLELLAN.

Choosing the Better Part

ON the occasion of the dedication of the extension of The Mother Church in June, 1906, our Leader sent a message to the members entitled, "Choose Ye." It was a clarion call to draw the line of demarcation between good and evil and to choose the former. It may be safely stated that every Christian Scientist now within the ranks of the movement has found Christian Science by choosing what appeared to him to be the better part, until the best dawned upon his consciousness. Only by a process of selection, impelled by right desire and guided by understanding, can any human being advance from better to best.

It is obvious that passivity, indifference, apathy, or what is technically known as neutrality, can never under any circumstances further obedience to the Leader's call. The consciousness of a Mary of Bethany, who was finally able to recognize the Christ, must have been previously at work choosing the better part; while a Martha, confused over many things, accepting all that came to thought as equally real, was like the foolish virgin who had no oil in her lamp when the bridegroom came. Better to have made mistakes in choosing, than never to have chosen at all, for the end of the latter state of inaction is marked by an inability to distinguish between good and evil, that is to say, by a state of moral idiocy.

In unmistakable terms Mrs. Eddy has laid down the following rule for human conduct on page 289 of "Miscellaneous Writings": "From a human standpoint of good, mortals must first choose between evils, and of two evils choose the less; and at present the application of scientific rules to human life seems to rest on this basis."

The advancing Christian Scientist needs to guard against accepting theoretical statements of truth without making the necessary applications to specific problems. Clearly the simplest method of escaping this danger is to keep on proving the Principle of Christian Science by applying the rule. It may be safely recommended to every loyal follower of Mrs. Eddy's teachings to continue to heal the sick and save the sinner, no matter what the arguments may be that would hinder such activity. Self-condemnation, the charge of hypocrisy or unworthiness, the desire to stop work or to surrender wholesome activities, the purpose to feather one's own nest or to save up for a rainy day, the feeling of being misunderstood, the cares of this world,—these and innumerable other aggressive mental suggestions may seem to justify self in ceasing the healing work.

The wise Scientist will not listen to these arguments, for they are all based upon the assumption that mortal man

Digitized by Google

heals, and that consequently he must wait until he is perfect before he can practise Christian Science. God heals the sick, and His work is permanent. The Christian Science text-book on page 495 explains, "God will heal the sick through man, whenever man is governed by God." Man is divinely authorized to do this work under God's government, and is therefore competent to do it by understanding God's law; but the negative animality which refuses to choose between good and evil, or even to choose the lesser of two evils in human conditions, can never fit any one for this holy mission.

Even after Joshua had settled the children of Israel in the land of Canaan, he was obliged to remind them to continue steadfastly their choice between good and evil: "And if it seem evil unto you to serve the Lord, choose you this day whom ye will serve; . . . but as for me and my house, we will serve the Lord." Thus the Christian Scientist, obedient to the Leader's call, willingly sets aside the iron of self-will, that it may rust through disuse, and accepts the gold to be refined for eternity. Daily, hourly, he makes his choice between God and mammon, between God and Cæsar, and does not disdain to apply this choice to the qualities exhibited by men and nations. Thus only can he pass from the cross which is symbolized by the beginning of The Mother Church edifice to the crown of its extension.

WILLIAM D. MCCRACKAN.

Holding Fast

IN Paul's second epistle to Timothy he says, "Hold fast the form of sound words, which thou hast heard of me, in faith and love which is in Christ Jesus." Christian people in all the centuries have undoubtedly seen the importance of heeding this admonition, but in some cases they have been led astray by what the apostle calls "doubtful disputations," by personal opinions, or by material considerations. Paul himself makes it clear how we may hold fast "that good thing" which has been committed unto us, when he says that we should keep it "by the Holy Ghost." From the Christian Science viewpoint this would mean that we can only hold fast to the truth by understanding the divine Science of being, which is also the Science of the Scriptures, and which compels us to turn away from mere personal opinion, our own or that of others, and to take every problem direct to divine Principle.

In time of trial or temptation the Christian Scientist knows that he can only emerge safely from the shadows of mortal belief by holding fast to what he knows of the truth, yet the temptation often is to cling to mortal evidence and to listen to the arguments of personal sense, which would make it difficult to overcome the seeming conditions, whether these be expressed through sickness and suffering or some other phase of mortal discord; but all the while the one important thing to be done is to "hold fast that which is good."

It is well known by all students of human experience that tremendous impressions for good have been made from time to time upon human consciousness through the work and teachings of some great thinker, but it is also too evident that these teachings, whether they were along strictly religious lines or dealt specifically with some phase of human progress, seemed to lose their value after a time, because the high ideal of the original thinker had been obscured by poor interpreters, who substituted their own imperfect views for the high ideals offered to the race.

There are very few who would deny that Christendom has not in any true sense held fast to the teachings of Christ Jesus, for had mankind done so the evils of modern society would long since have been outgrown, and the truer sense of manhood, expressing the original birthright of dominion, would have been regarded as the only consideration of importance in the education of the young and the practical work of those more mature. Christian Science has, however, come to show us how we may unfailingly and unfalteringly hold fast the truth delivered unto us, and respecting this Mrs. Eddy says, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, p. 261).

In the twenty-seventh chapter of Acts we have a wonderful account of a storm in the Mediterranean Sea, and what would have been certain shipwreck with great loss of life, had it not been that Paul, whose words have been quoted, knew what it meant to hold fast to the truth. Not only was he himself calm and serene in the face of apparently great danger, but his companions, gathering strength from his calm assurance, were ready to take all the human steps indicated by him, even to eat bread with him on the deck when they were being fast driven upon the shore, and in this perilous moment he did not forget to give thanks to God "in presence of them all." The result of his faith and understanding was the deliverance of the two hundred and seventy-six who were his fellow travelers, and as soon as they were on land Paul found opportunity to demonstrate the Christ-healing for the people of Melita, to prove the same Principle to which he had held fast during the fourteen days of storm and darkness.

On page 231 of Science and Health Mrs. Eddy says, "To hold yourself superior to sin, because God made you superior to it and governs man, is true wisdom," and she adds, "To hold yourself superior to sickness and death is equally wise."

ANNIE M. KNOTT.

Among the Churches

Current Notes

GENEVA, ILL.—At a meeting of the members of First Church of Christ, Scientist, held last evening [Oct. 6], it was unanimously agreed to proceed immediately with the completion of the present church building on South Second Street, with the hope of having the auditorium ready for occupancy by Jan. 1, 1917. For the past eighteen months services have been held in the completed basement.

Geneva Republican.

LOUISVILLE, KY.—The members of First Church of Christ, Scientist, at the regular quarterly business meeting last night [Oct. 5], approved the plans of the building committee to begin construction work on the foundation of the handsome new edifice it is proposed to construct at Third Street and Ormsby Avenue. When completed the structure will represent an outlay of more than one hundred and twenty-five thousand dollars, and will be 88 feet wide and 187 feet long. The auditorium will seat twelve hundred people.

Louisville Post.

SALAMANCA, N. Y.—The Christian Science churches and societies of Cattaraugus County conducted a literature booth at the county fair held at Little Valley Sept. 11, 1916. Calls for literature were more frequent than in previous years, and the following periodicals were given out: 542 *Sentinels*, 162 *Journals*, 1 *Herold*, 720 *Monitors*, 57 pamphlets, making a total of 1582 pieces.—*Correspondence.*

ALBERT LEA, MINN.—The Christian Scientists maintained a reading-room at the fair in the old log cabin, the first

Digitized by Google

house built in Freeborn County. More than three hundred pieces of reading matter were distributed to visitors during the fair.—*Albert Lea Tribune.*

WACO, TEXAS.—First Church of Christ, Scientist, has leased the entire second floor of the new building being erected at the corner of Eighth and Washington Streets, the plans of which were drawn especially for this church. There will be an auditorium seating four hundred people. The structure will be ready for occupancy by Jan. 1, 1917.

Correspondence.

PHILADELPHIA, PA.—Second Church of Christ, Scientist, is asking for bids for an edifice to be erected at Germantown. The building will probably cost somewhere in the neighborhood of one hundred thousand dollars.—*Public Ledger.*

BEATRICE, NEB.—The Christian Science church at the corner of Eighth and Ella Streets is undergoing numerous improvements.—*Correspondence.*

The Lectures

Stamford, Conn.

First Church of Christ, Scientist, on Prospect Street, was filled when John W. Doorly lectured on Christian Science. He was introduced by Alfred T. Child, clerk of the local church, who said:—

Today, as never before, the world needs a clearer idea about spiritual things. In order to obtain this clearer perception we must start with an entirely new concept of God. For centuries men have believed that God was capable of being both good and evil, and these two forces were constantly warring in His creation. This wrong conception of God has brought untold misery to man in every age. Christian Science begins by declaring that God is infinite good, and that man as the child of God inherits the right to freedom, health, happiness, and holiness. You will remember that in the book of Genesis God is recorded as pronouncing all His creation good. Hence evil could never have entered the world through divine power.

If Christ had believed in both good and evil, he could never have performed the wondrous works that he did. The healing power that Jesus demonstrated was lost two or three hundred years after he disappeared from human sight. This happened because men insisted on mixing their own ideas about religion with the teachings of Christ Jesus and because the power of evil was again reinstated. About fifty years ago Christian Science, based upon the truths Jesus taught, was brought to the attention of the world by Mrs. Eddy. Not until she had proved this Science by many remarkable cures did she give her discovery to the world. Since that time thousands of sufferers from all kinds of ills have sought and found relief in Christian Science.—*Stamford Advocate.*

New York, N. Y.

Campbell MacCulloch, first reader, in introducing William W. Porter, who lectured on Christian Science for First Church of Christ, Scientist, said:—

In its simplest formal statement Christian Science is the scientific application of the truths taught by Jesus the Christ. To many persons possessed of the most superficial information on this vast subject, Christian Science is merely a new ism of some strange sort that is trying to compete with physicians in the cure of sickness. Few statements could be farther from the fact; for the aim and object of Christian Science is the regeneration of mankind, and not merely the palliation or cure of its physical difficulties.

The broad standard adopted by this new-old religion is that found in the book of Jeremiah, "For they shall all know me [God], from the least of them unto the greatest of them," and repeated by Jesus when he said, "And this is life eternal, that they might know thee the only true God." In modern words the function of Christian Science is to effect a complete redemption of mankind from all forms of difficulty by the simple method of getting an accurate knowledge of God, the divine Principle of the universe. Christian Science does not concern itself alone with the healing of sickness; it aims at the solution of all human problems, whatever they may be.

Correspondence.

Anacortes, Wash.

The Rose Theater was packed to hear the lecture on Christian Science by Dr. Walton Hubbard. In introducing the speaker W. V. Wells said:—

When we contemplate the rapid growth of the Christian Science church, we cannot help asking ourselves: What are the causes? Why is it that so great a multitude of thinking people is flocking into this church organization of comparatively recent date? The Christian Scientist will say that his church has discovered that there is science in religion and religion in science, and the faithful application of the one to the other is bringing these results. I believe that one essential to the success of the Christian Science church is, that the Christian Scientist keeps the Bible close to him all the time; he has his daily lessons; he feeds his mind and soul from the law with about the same regularity as he feeds his body. In speaking of the godly man, the psalmist said: "His delight is in the law of the Lord; and in his law doth he meditate day and night. And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper."—*Anacortes Citizen.*

Halifax, England

John Sidney Braithwaite, who lectured on the subject of Christian Science, was introduced by Francis Eagle Clarke of Leeds, who said:—

Christian Science is growing so rapidly that during the past year new Christian Science churches and societies have been established at the rate of one every six days, and during the last ten years the membership of The Mother Church in Boston has increased 116 per cent. The reason of this growth is undoubtedly the fact that the present age is an intensely practical one,—an age which is tired of theory and dogma and which insists on thinking for itself, an age which demands that religion shall be as practical as the religion of the Founder of Christianity. Indeed, you will remember that that was the test which Christ Jesus himself applied to true religion. He said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." And again, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

The growth of Christian Science is due to the fact that the world is discovering that it accepts the test of Christ

Digitized by Google

Jesus, namely, that of fruits. The evidence of the healing power of Christian Science is overwhelming. It is doing the works that he required of his followers, and it is doing them through the understanding of the presence and power of God, divine Love.—*The Halifax Courier.*

✧

Melbourne, Australia

Clarence W. Chadwick, who lectured on Christian Science in the Auditorium, was introduced by Albert Cope Stone, who said in part:—

The world for all time has been looking for and seeking a savior, one who would free mankind from the powers of sin and sickness. I suppose there has never been a time in the world's history when men and women have been tried more than they are at the present time, and when this need for a savior has been greater; for the world cry is, "Where is God, and where is Christ?" This large and representative audience is evidence that you have come to hear what Christian Science has to say with regard to God and His Christ.

Correspondence.

✧

Minneapolis, Minn.

The introductory words of Henry Deutsch at the noonday talk on Christian Science, given by Charles I. Ohrenstein in Shubert Theater, under the auspices of the combined churches of Minneapolis and St. Paul, were as follows:—

The common concept of Christian Science, even well known as this religion is, is that it is merely some new form of therapy or system for healing the sick. While it is true that Christian Science has demonstrated to a degree that is almost marvelous its efficacy in healing all kinds of sickness and disease, the fact is that Mrs. Eddy emphasized and her works continue to lay stress upon the fact that the healing of sickness, although very important, is not the most essential and vital feature of Christian Science healing. It is merely demonstrative of the essential, vital Principle, which is efficacious for the regeneration of mankind in all phases of human activity. Christian Science has been remarkably successful in regenerating sinners, saving them from drugs, liquor, and other habits, and has been particularly happy in the experience of many in its application to business and other problems which confront us in our daily experiences, so that its Principle may be said to be a panacea not only for physical disorders but for every class and kind of discordant conditions.—*Correspondence.*

✧

Portland, Ore.

The ever increasing public interest in Christian Science was evidenced by the large audience that assembled in First Church of Christ, Scientist, Nineteenth and Everett Streets, to hear a lecture on Christian Science by Ezra W. Palmer. He was introduced by Mrs. Anna S. Brown, who said in part:—

In the twenty-third chapter of Jeremiah we read, "Am I a God at hand, saith the Lord, and not a God afar off?" The one and only need of suffering humanity is a "God at hand." It is the gracious mission of Christian Science to reveal to all who will receive Him, a "God at hand," a God who fulfils the Scriptures, a God who heals the sick and the sinning. Christian Science teaches us how to lay hold on Him today, to think His thoughts, to follow His unerring guidance, and to rest secure in His ever present care and love. This is its peculiar mission, and this is its appeal to mankind.—*Portland Telegram.*

Lectures to be Delivered

[By Members of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.]

CALIFORNIA—Los Angeles (Fifth Church): Prof. Hermann S. Hering, Church Edifice, 7107 Hollywood Boulevard, 3 p.m., Dec. 17, and 8 p.m., Dec. 18.
Los Angeles (Sixth Church): Prof. Hermann S. Hering, Church Edifice, East Forty-second and Wadsworth Streets, 8 p.m., Dec. 19.
Oakland (Seventh Church): Bicknell Young, Municipal Auditorium, 3 p.m., Dec. 17.
Palo Alto: Bicknell Young, Church Edifice, Bryant Street and Forest Avenue, 8 p.m., Dec. 18.
San Francisco (Fifth Church): Paul Stark Sceley, Native Sons Hall, 8 p.m., Dec. 15; Dreamland Rink, 8 p.m., Dec. 17.
Taft: Bicknell Young, I. O. O. F. Hall, 8 p.m., Dec. 21.
Tulare: Bicknell Young, Theater Tulare, 8 p.m., Dec. 19.
CONNECTICUT—Hartford (First Church): Bliss Knapp, Parsons Theater, 3:30 p.m., Dec. 17.
DISTRICT OF COLUMBIA—Washington (First and Second Churches): Virgil O. Strickler, Poli's Theater, 3 p.m., Dec. 17, and First Church Edifice, Columbia Road and Euclid Street, 8 p.m., Dec. 18.
ILLINOIS—Chicago (Sixteenth Church): John Randall Dunn, Rogers Park Woman's Club, North Ashland and Estes Avenues, 8 p.m., Dec. 15 and 16.
Highland Park: Edward A. Merritt, Church Edifice, 125 Hazel Avenue, 8 p.m., Dec. 19.
Lincoln: John Randall Dunn, Circuit Court Room, Court House, 2:30 p.m., Dec. 17.
IOWA—Cedar Falls: Dr. Walton Hubbard, Cotton Theater, 3 p.m., Dec. 17.
Independence: Clarence C. Eaton, High School Auditorium, 8 p.m., Dec. 19.
MASSACHUSETTS—Boston (Third Church): Charles I. Ohrenstein, Everett Square Theater, Hyde Park, 3:30 p.m., Dec. 17.
Framingham: Willis F. Gross (note change), The Gorman Theater, 3:30 p.m., Dec. 10.
Holyoke: Charles I. Ohrenstein, High School Hall, 8 p.m., Dec. 16.
Medford: Bliss Knapp, Pitman Hall, 180 High Street, near Winthrop Square, 8 p.m., Dec. 12.
NEBRASKA—Bloomfield: Ezra W. Palmer, City Hall, 3 p.m., Dec. 17.
Kearney: Bicknell Young, Crescent Theater, 8 p.m., Dec. 10.
McCook: Bicknell Young, Temple Theater (note change), 8 p.m., Dec. 11.
NEVADA—Goldfield: Bicknell Young, Elks Hall, 8 p.m., Dec. 14.
Red Cloud: Ezra W. Palmer, Orpheum Theater, 8 p.m., Dec. 19.
Reno: Bicknell Young, Majestic Theater, 8 p.m., Dec. 16.
NEW JERSEY—Paterson: John W. Doorly, Church Edifice, Fair and Auburn Streets, 8:15 p.m., Dec. 15.
Ridgefield Park: John W. Doorly, Strand Theater, Hackensack Road and Park Street, 3.30 p.m., Dec. 17.
NEW YORK—Brooklyn (First Church): John W. Doorly, Church Edifice, New York Avenue and Dean Street, 8:15 p.m., Dec. 18 and 19.
Mechanicsville: William W. Porter, Park Avenue Opera House, 3:30 p.m., Dec. 17.
Newburgh: Charles I. Ohrenstein, Academy of Music, Broadway and Grand Street, 8 p.m., Dec. 18.

Testimonies of Healing

When I first heard of Christian Science many years ago, it was presented to me in such a way that I took no notice of it. Then I heard of the text-book, and the title appealed to me strongly. "Science and Health" sounded reasonable, because if we had the real science it certainly would mean health; and then, a "Key to the Scriptures" appealed to me even more strongly, for I was always reading the Bible from my earliest days, though not with much understanding. My most earnest prayers did not, however, seem to be answered, and at last I did not know what I believed, or if I really believed anything. Worst of all, I did not know what to teach my children. I was groping about vainly for the light, feeling that God must be somewhere, if only I could find Him.

Just when things seemed about unbearable, we went away for a trip, on account of the health of one of the members of my family. We were taking a walk one day, in a small town on the coast of California, when we saw written up before us, "First Church of Christ, Scientist." My husband and I both exclaimed, "Now is our opportunity to find out something about this Christian Science." We very soon started going to the reading-room and the services, and bought the text-book and other literature. I cannot say it appealed to me at all, at first, for the services were so unlike what I had been accustomed to, and my old theological training kept telling me this was very dangerous ground. Still there seemed an attraction about it.

My husband would read the text-book for hours at a time, then I would take it up and read. The more I read the more I liked it, and yet I was afraid. It seemed too good to be true. I, however, had practically lost faith in the church of my bringing up, and I prayed very earnestly that in this matter I might be led aright. I felt that even if I took up Science, still I must always go to communion in my own church, for it was the only thing to which I seemed to cling. I awoke early one Sunday morning, pondering the matter earnestly and longing to know what I ought to do. Then these words on page 34 of Science and Health came very clearly to my mind: "If Christ, Truth, has come to us in demonstration, no other commemoration is requisite, for demonstration is Immanuel, or *God with us;* and if a friend be with us, why need we memorials of that friend?" Right then and there all desire for communion in the old orthodox way left me. Only one who has been brought up as I had been can understand what a wonderful demonstration this was, the best and most complete I have ever had.

Though it is chiefly for deliverance from the old theology that I am specially grateful, yet we have by no means been without abundant proof of the physical healing of Christian Science. In our family of five we have never had to turn to medical means in the nine years we have known of Christian Science. The member of the family for whose health we took this all-important trip, has been beautifully restored to strength of mind and body, and although what we had to go through from friends and relatives, on our return home, was to the senses an ordeal such as I had never even contemplated as possible, still I could always feel that it was well worth it, and looking back now it seems as nothing. Words can never express my thankfulness to God for leading me, as He surely did, to realize "the Christ, and not the creed" (Poems, p. 75) and my gratitude to our dear Leader for what she endured to make plain this saving truth for all mankind.

Florence Eveleigh Fitz-Gerald, Grenfell, Saskatchewan, Canada.

I became interested in Christian Science through the healing of a friend who has since become my wife. In 1901, while living in western Kansas, I met this lady, who had been advised by the doctors to go there for her health. She was suffering from stomach, bowel, and kidney troubles, also from other ailments, and was a frail, sad woman. After a few months she returned to the East, not much improved. In 1903, after all material means had failed, she heard of and was induced to try Christian Science, with the result that she was entirely healed of the bowel disorder in the first treatment. During the two weeks' treatment that followed the stomach trouble was overcome, glasses were laid aside, and she was greatly benefited both physically and mentally.

In 1911 my friend again came West, this time the picture of health and happiness. Knowing she had passed through deep sorrows, I wondered at her cheerfulness, and on making inquiry as to her health, was told of her healing in Christian Science and loaned a copy of the *Sentinel.* As this periodical often referred to "Science and Health with Key to the Scriptures" by Mrs. Eddy, I asked what this book was, for I had never heard of or seen it. She then loaned me a copy of the text-book, and I read it every spare moment, or as long as my eyes, then in a weakened condition, would allow. After reading about one third of the book I was much surprised to find that the desire for tobacco, to which I had been a slave for about twenty-seven years, had disappeared. My eyes began to improve, and my sight is now perfect.

After my marriage I took up the study of the Lesson-Sermons with my wife, and have since been healed of a growth in the nose which three doctors agreed was a polypus and would have to be operated on. This growth had troubled me for fourteen years, and for seven of them I could breathe through only one nostril. While on the ranch we had many proofs of the power of Truth in the healing of domestic animals.

We are grateful for the privilege of membership in the local Christian Science church and also in The Mother Church. We are thankful to God, and grateful to Mrs. Eddy for a better understanding of the Bible.

John W. Bedrang, South Bend, Ind.

With heartfelt gratitude I bear testimony to the truthful statements of my husband. Words fail to express even in part my thankfulness for all the blessings, physical, moral, and financial, which have been and are ours. My one desire is to reflect love to all, and in so doing give to others of the good I have received through the study of the Bible, together with Science and Health and the rest of Mrs. Eddy's writings. I am indeed grateful for the Christian Science literature.

Anna M. Bedrang.

✧

So much of help and encouragement has been received from the testimonies in the Christian Science periodicals that I pray my experience may help others. Over eight years ago I was healed in three days through Christian Science treatment, after doctors in the West and in the East, also in England, had said I would never be well again. Five operations had been performed and the doctors declared a sixth was needed, but they were afraid my condition would not warrant it. I was slowly getting worse, when Christian Science healed me of organic heart disease, intestinal growths, fear of being alone, and sleeplessness, as well as faith in medicine.

Since then I have been able by the study of the Bible and Science and Health, together with the patient help of a practitioner when needed, to overcome gall-stones, hemorrhage of the kidneys, and gravel. Christian Science has also healed

Digitized by Google

me of influenza, colds, bowel trouble, stomach disorder, cuts, burns, tiredness, worry, and other conditions that arise from belief in a power apart from God. Severe headaches that nearly drove me frantic were relieved very quickly, but several years passed before they entirely disappeared. Not a drop of medicine have I taken or wished to take since turning to Christian Science. Greater than all else, however, is the understanding of God as a loving Father-Mother.

I thank God for giving our beloved Leader, Mrs. Eddy, strength, wisdom, and courage to stand against the persecution of the world, so as to give to mankind the spiritual interpretation of the Bible in her wonderful book "Science and Health with Key to the Scriptures." It is truly a key which unlocks untold treasures to the one who patiently and lovingly strives, as Jesus taught, to learn of God, and brings peace, joy, and hope to all who willingly seek.

MARGARET NORTHCROFT, New York, N. Y.

✧

I wish to express my gratitude for what Christian Science has done for me. One afternoon, while going up a stairway with a heavy burden in my arms, I fell backward, dislocating my right shoulder, and was picked up in an unconscious condition. I was carried to a doctor's office, and my shoulder put back in place. To mortal sense the shoulder was paining me severely, and I was cautioned by the doctor to be very careful. After I had been encased in bandages and taken home, I called for a Christian Science practitioner, who came to the house. The practitioner gave me treatment, and in a few minutes I went to sleep.

When I awoke three hours later the pain was gone, and the next day I went to the doctor and asked him to take the bandages off, but he advised me to wait another twenty-four hours; then I told him I did not see that it was any use to be tied up longer, as the shoulder was all right. After examining it with the X-ray, he said everything was indeed all right, so he cut off the bandages. There was not even a discolored spot. While I used the shoulder with care, I did not have to lay off work for a moment on account of it. I am truly thankful to God and grateful to Christian Science that I am able to give this testimony. I am in excellent health today.

A. L. JOHNSTON, Portland, Ore.

✧

Reared in a Christian home and at an early age having united with the church of my parents, I had endeavored to live a Christian life, but that peace which I felt should accompany such a life was not experienced to the degree that I thought it should be. I knew God was not the author of the discords that came into my life, but the puzzling thought was why they should come to me when I was trying to do right, while others were passed by untouched. I longed for guidance, yet when these mental cross-roads were reached I saw no sign-posts and the burden of decision was left to me.

One by one the things most dear to me had been given up, until I questioned "What next?" There was fear in my thought that I might reach the limit of endurance and succumb to insanity. A trip to the West was planned six years ago, in order that I might see new things and therefore have something different to think about. Near the close of this trip I stopped in Los Angeles and was entertained for a few days in the home of a Christian Science friend. Here I became conscious of the presence of that long looked for peace, and decided if Christian Scientists had this "pearl" I would see how they got it. With this began my search for Truth. In less than a year all fear of insanity had left me; in fact I had learned that I could not lose my mind, for Mind is God and man is the expression of this one Mind. During this period, glasses which had been worn constantly for twelve years were laid aside through the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The understanding of God and of man's relation to Him has brought that peace "which passeth all understanding" and is a living presence.

To all who have thrown the light of Truth upon my path I am indeed grateful, and especially to our Leader, who with undaunted courage has blazed the way from a night of materiality into the dawn of Spirit. I am also grateful for the provision she has made for giving to mankind through our church services, our lectures, teachers, and periodicals the truth unadulterated.—GEORGIA A. VANCIL, Belton, Texas.

✧

I feel very grateful for the knowledge I am gaining of Christian Science. I went to my first Christian Science service in the Southport church in July, 1914, and was much impressed by the real worship and peace expressed. Several services were attended, yet it was difficult for me to grasp the teachings for some time, as I seemed to be surrounded with error of various forms, which to me appeared very real. I had much sick nursing to do, my mother being practically an invalid for over twenty-five years, and I as an only daughter was her constant companion and nurse. Slowly a little understanding was gained through earnest study of Science and Health, and of the Christian Science literature which was given to me by willing and helpful Scientists and for which I now thank all who helped me in this manner.

I did not seek physical healing, although greatly in need of it, but Christian Science appealed to me as a pure religion. Most of my study of Science and Health along with the Bible was done after retiring to bed late at night, as I was occupied all day with my mother. I would read until two or three in the morning and then daily try to put into practice as best I could what I learned. Eventually I realized that I must turn my thoughts from material things and seek to gain a higher understanding of my true being and man's at-one-ment with God, and learn to meet life aright on a spiritual, not a material, basis. Many seeming difficulties had to be battled with and I felt I had not the time to read sufficiently. Most beginners find that difficulty has to be overcome, for if we are to receive the blessings promised in the Bible we must do first things first, and not just live on, giving daily work in business or at home our first thought. Studying our Lesson every morning and studying it aright, we find ourselves much more refreshed and renewed spiritually to meet each day's problems, whatever their nature, and if we are faithful over the few things we shall be made rulers over many.

In October occurred the healing of chronic asthma, from which I had suffered for over sixteen years, and which for the past two years had been developing very fast and was most distressing. It is a great joy to be free from that complaint and to get a refreshing night's sleep. I did not have a practitioner, but the healing came through studying and trying to practise Christian Science in daily living. I have also been able to overcome other difficult problems and have received many blessings. Above all, I am most grateful for having been shown that divine Love is all powerful and is ever guiding us. I find that Christian Science is opening out many things in my life so wonderfully, and I intend to press on steadily in seeking to gain a further knowledge of the truth, and so be able to live a higher life.

Christian Science has made a great difference in our home, for almost as long as I can remember we used to have more or less sickness. My mother is slowly progressing in the knowl-

Digitized by Google

edge of Christian Science. Words fail to express the gratitude we feel for the unfolding of the truth. We are proving the words, "Ye shall know the truth, and the truth shall make you free."

Miss M. Gerrard, Birkdale, Southport, England.

✧

This testimony is sent in grateful acknowledgment of what an understanding of Christian Science has done for me. It has unfolded to me the wonderful truth that God is Love, and that He is an ever present help to all who know how to approach Him. Four years ago I was to material sense a mental and physical wreck, having labored under the illusion of so-called nervous exhaustion for about six years, and also under the bondage of the tobacco and drink habits, besides many other vices. The doctors were unable to help me; all they could advise was travel and rest, and this gave only temporary relief. I had given up all hope of receiving help from material sources and had reached that point where "man's extremity is God's opportunity," when through the efforts of kind friends I was induced to try Christian Science. Although I had no faith in this teaching, I was willing to have treatment. After a number of treatments, together with the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I awoke on the morning of May 11, 1912, to find myself completely healed of the old afflictions as well as of the habits and vices, and from that day to this I have tasted the joys of heaven.

I had not read the Bible for practically twenty-five years, but after my wonderful healing I became an ardent student of the Scriptures as they were illumined through the study of Science and Health. The light that appeared to me has been with me ever since, and has brought unbounded happiness, and the peace that passeth human understanding. The spiritual uplift far transcends the physical healing. My family have all become interested in Science, and through our understanding of man's relationship to God we have had many demonstrations of His infinite care for His children. For some time it was hard to realize that the kingdom of heaven could be enjoyed on earth now, but I have learned that it is a present possibility for all to avail themselves of "the glorious liberty of the children of God," and be free.

Words are inadequate to express my gratitude to God for His "lovingkindness and tender mercies," and surely I cannot be thankful enough to Mrs. Eddy, who through her unselfed love and sacrifice gave to suffering humanity our text-book.—Peter Peterson, Park Ridge, Ill.

✧

Eleven years ago Christian Science healed my mother, who had been confined to bed for months with what the doctors called organic heart trouble. She had spent years at a time in hospitals and sanitariums, and had tried change of climate only to grow steadily worse, until her condition was pronounced hopeless. A friend told her of Christian Science, and although prejudiced against what she thought it to be, as a last resort she called a practitioner. In two weeks she was up and walking, and she has been unusually well and active ever since.

This healing seemed so wonderful to us that we realized Christian Science must be the same truth Jesus taught and practised, and we began to read Science and Health with the desire to understand it. I found that it answered questions about which I had wondered all my life, and that it made Jesus' teachings plain and practical,—that it made the Bible a book I could understand. For eleven years it has met every physical need, healing me of a serious nervous breakdown and giving me increasingly better health. It helped me wonderfully when my baby was born. I was at the piano, playing and singing Christian Science hymns, twenty minutes before the child came.

While I am deeply grateful for the physical help received, I am much more grateful for the understanding of God which Christian Science has given me,—a God who is not far off, but with us all the time, who is infinite good, our Life, our consciousness, our Father-Mother; who has made us perfect and given us all good. I am learning that God is Love, and that as God's image and likeness I must reflect Love; I must have no thought that is not loving and kind, that does not reveal perfect God, perfect man, and a perfect universe to me. I am learning to watch my thoughts more carefully and to try to follow Jesus' teachings and example, to have that Mind "which was also in Christ Jesus," the Mind which heals and blesses.—Jessie Houseman Spitzley, Detroit, Mich.

✧

For a considerable period in my youthful days I vaguely entertained the idea that I had been specially created to do as I pleased, in other words that I might do wrong how and when I would, and that somehow I should have little or no penalty to pay; but there was also at times the feeling that some day, a long, long way in the future, I must reform. By pursuing such a course I was naturally led into much suffering and needless anguish. When my mother first told me of Christian Science, in my childish, ignorant egotism I scorned it, but tried to read Science and Health as a disagreeable duty. I dabbled at the study of this teaching for a good many years, but was not willing to let go of some heavy forms of dissipation.

In 1906 I was stricken with some sort of abdominal trouble. One doctor said it was appendicitis; another said that the appendix ought to be removed anyway. Frequently the pain was so great that an opiate was used to give temporary relief. A Christian Science practitioner was called upon for help, and though I was supposed to be passing on (indeed it was reported that I had already done so), after some days of faithful work by the practitioner I began to mend, and although the convalescence was slow, it was sure, so that in a few weeks I was quite myself.

In 1911, while in a western state, I was attacked by a fever and other alarming symptoms. Upon my arrival at my sister's home near Chicago, I was in an extremely serious condition. Again a Christian Science practitioner was called upon. He saw me just once during my stay at my sister's home, and not again until I was able to go to his office, so that the healing in this case was accomplished almost entirely by absent treatment.

Christian Science has healed me of many physical ills, and now is showing me how to overcome pride, fear, strife, and envy. It is showing me how to help my fellow man; and my prayer is that I may be worthy to scatter seeds of brotherly love. I have never enjoyed better health or more freedom from the so-called ills of the body, and the mental transformation for the better is marked in many ways,—ways that are sure marks of the effects of prayer as demonstrated by and through Christian Science.

I take this opportunity to acknowledge my debt of gratitude to our revered Leader, Mrs. Eddy, for making it possible for me to find the way out of sickness and sin, here and now. For the Christian Science publications I am truly thankful, and to the loving friends who have borne so patiently with me I am far more obliged than words can express. Last, best, and greatest of all, I thank God Almighty for my many blessings.—Louis B. Foley, New York, N. Y.

Digitized by Google

I wish to give praise to our heavenly Father for His wonderful goodness, and to our blessed Saviour, who came to give us great gladness and freedom from sin, sickness, and death. I also love our revered Leader, Mrs. Eddy, for giving us that wonderful book, "Science and Health with Key to the Scriptures."

About four years ago I was healed of asthma in its worst form through Christian Science. My physician could do nothing for me; the old remedies failed to help me. I then turned to Science. The practitioner came, and three days later I was able to be dressed, and with assistance walked through two rooms to our screened porch, remaining there nearly all day. I have never seen a day since when I could not do the same and much more. I have also been healed of stomach trouble, and have not needed any medicine in that time. My health is better than for many years before turning to Science, so I have much for which to be thankful to God. Having received so much benefit from reading the testimonies in the *Sentinel* and *Journal*, I thought I might comfort some poor suffering or discouraged one by giving this testimony.—Mrs. C. C. Chandler, Tropico, Cal.

✧

"Woman, thou art loosed from thine infirmity." These words of Jesus to the woman who was "bowed together" for eighteen years, have for me a glorious meaning, now that I understand the power, Truth, and Principle back of them. The healing of our little son of infantile paralysis has been accomplished through Christian Science. A few years ago he suddenly became very ill with this dreaded affliction. The right foot was drawn up even with the knee of the left leg, and he seemed to have lost all control of it. If moved by force, it gave him great pain. He suffered more or less continually, lost his appetite, and slept very little. His mother and I did what we could to help him, but he grew steadily worse, so we sought the assistance of an experienced practitioner. On the following day, however, he seemed worse. Paralysis was something I had always been terribly afraid of, and my thought was far from being clear.

One evening when he seemed much worse, I told the practitioner I was positive my son could be healed in Christian Science, but something was keeping him from getting the needed help, and under the circumstances I felt it was better to take him to the hospital. By this time the practitioner realized where the seat of the trouble was, and told me that it was in my thought, and that I needed help far more than the boy. I would not admit this, but nevertheless asked for treatment. The following night the child was in great pain and cried continually, and I decided to take him to the hospital in the morning. Just as the day was dawning, however, I closed my eyes in a receptive, fervent prayer for more light. Instantly the truth flashed into my consciousness, and it seemed to me that the very gates of heaven were thrown open, and for the first time in my life I saw through tears of joy the perfect spiritual universe, in which there could be no disease. The moment this light came to me our little boy received the help. One instant he was screaming with pain and the next was sound asleep. When he awoke a few hours later he said his leg did not hurt a bit. He was somewhat lame for a few days, then the healing was complete.

My appreciation of Christian Science is beyond description. I can now see that if my thought on the Science of being had been perfectly clear, he could have received the help at the beginning of the trouble. There have been no indications of a return of the disease, and the boy goes to school every day.

A. Le Roy Van Ornum, Minneapolis, Minn.

From Our Exchanges

[The Christian Work]

During the night Jesus communes with God on lonely mountain tops, and how radiantly beautiful he is as the light of heaven shines from his eyes and face! The morning finds him going about among the people as the good man, helping, advising, healing, providing meals for the poor. His words are blessed, mystical at times, stirring strange emotions in the heart; at the same time his deeds are the most practical conceivable. He goes up the mount of transfiguration to meet God, and goes straight down to cast devils out of people. When one examines the Scriptures he finds the Old Testament and the New emphasizing this same ideal of Christian manhood. It recognizes diversities of gifts,—and Paul urges the church to thank God for all kinds of men and welcome them,—but continually it holds up the man who both prays and serves. Jesus would have his disciples pray unceasingly, but at the same time he is greatest who serves. The Old Testament sums up the spiritual man perfectly when Malachi says he is one who loves mercy and does justly, and at the same time walks humbly with God.

[Samuel Zane Batten, D.D., in *The Biblical World*]

Men are in hell now, the hell of lost manhood and wasted life. Men are lost here and now, lost to the kingdom and its uses. Men may be saved now, saved for God and His kingdom. Men are saved here and now when they become members of the kingdom and live for life's true ends. Perdition and salvation are present facts. Heaven and hell are here and now. All around us are lost lives, men and women who are missing the mark and losing their one chance of serving the kingdom of God. What the future may bring of doom or glory we do not know, but doom and glory are present facts in the lives of men; and the separations before the great white throne are but the results of the lives here.

[The Christian]

To one man God gives five talents, to another two, and to another only one talent. Each commitment serves in some way His wise design; and we do well to regard it thus, especially when entrusted with but the smaller endowment. For failure to do this is apt to make even Christian men self-pitying and cynical, as though "luck" had somehow gone against them and had imposed a permanent handicap upon their powers. Many a one, by reading "luck" where he should have read love, has made pitiful wreck of his whole life. For in the final judgment of things it will be clearly revealed that each of us has been ideally circumstanced for the carrying out of our life's chief end.

[The Church Family Newspaper]

We hold that truth is one, and that our Lord is "the way, the truth, and the life." Scientific, historical, and religious truths are not in conflict. They are one in their roots, and the man who starts with the conception that spiritual peace can only be purchased by the surrender of intellectual life makes the greatest of mistakes. To hold this is to alienate Christianity from the man who reverences truth and determines to "prove all things," and "hold fast that which is good."

[The Christian Advocate]

Why was it that the face of Moses shone so wondrously when he came down from the heights of Sinai and mingled again with the people, after having stood in the very presence of God? May it not have been because he had entered

Digitized by Google

into an experience of spiritual bliss, faith, and peace such as no other mortal had ever enjoyed? The reality of God had been made so definite and satisfying to him that his heart was glad with an unusual joy, the cup of his happiness was overflowing, the floods of peace had broken their barriers, and—"the skin of his face shone." The exquisite gladness of his soul was disclosed to the people. His joy had found him out.

[Rev. John A. Hutton, D.D., in *The Christian World*]

Our business is—knowing what we know, having seen what we have seen—so to live that God, goodness, holiness, kindness, love, pity, mercy, the things of the Spirit, will become for men of the world not curious matters about which to debate, but a kingdom of realities as firm, as stable, as near to them, as convincing, as the ground beneath their feet. For, when all is said, there is no proof of God except goodness. When Jesus would make the Father known to us, he did not argue. He simply came down into the midst of us. He simply went about doing good. And afterward men knew that God had been near to them, by the very warmth and astonishment of their hearts.

[*The Guardian*]

We have never joined in the parrot cry that the church is a failure. There is a sense in which the church must always be a failure; but, as we are reminded, it is a great thing that "it has kept up in the country a good tradition of an honorable life for all classes of society." In so far as the church has fallen short of its ideals its people must share the responsibility. The responsibility of its ministers begins to be greater than theirs only when they present eternal truths so weakly, so unconvincingly, and in a guise so overloaded with conventional ideas and so wrapped in "common form" language that they make no impression upon their hearers.

[*Western Christian Advocate*]

Spiritual vision sees life in its interior quality and processes; fathoms its significance and eternal purpose, and foresees its moral destiny. It is not a natural endowment, but the gift of God's renewing and enlightening Spirit. It cannot be gotten in the schools or learned in the practical experiences of daily life. It is possessed only by those who know God, and who learn from Him the secret of all right character and of all right human relationships.

[Rev. Simon Blocker in *The Christian Intelligencer*]

The Christian life is the greatest and most beautiful adventure to which man can be summoned. It is the perpetual surrender, moment by moment, of life to Christ, in order that through his indwelling Spirit we may go on to realize the utmost moral and spiritual possibilities of the soul. God is constantly making the impossible real in personal religious experience.

[*The Sunday School Times*]

It was the tragedy of Israel that while they kept hoping for great days, there went along with the hoping another current of refusing each particular manifestation of the things hoped for, and they made the great rejection of the Christ because they had too long been prodigal of lesser ones.

[Most Rev. Daniel S. Tuttle, D.D., in *The Living Church*]

Salvation is health—spiritual health. Humanity needs it. Diseased, distorted, weakened, rebellious, sinning humanity needs the restoration to spiritual health, which is salvation. In the proffered and perfected restoration God and we are coworkers.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

As the advertising pages of the *Journal* and *Herold* go to press the 20th of the month, to insure publication in a desired number requests for changes in a church or practitioner's card should reach the Publishing Society at least six weeks previous to the actual date of issue.

"Law and Work," one of the pamphlets recently issued by the Publishing Society, is now printed in the New York point, the American Braille and the English Braille systems of type, for the use of the blind. For convenience in reading, the pamphlet has been printed in two volumes, and may be purchased at the following prices: Single copy (in two parts), prepaid, $1.00; six or more copies, prepaid to one address, each 75 cents. When ordering please specify whether the New York point, the American Braille or English Braille is desired.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 61 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

In order to relieve congestion and to eliminate the expense of extra handling of freight between New Brunswick and Prince Edward Island, a car-ferry service from Cape Tormentine on the mainland to Carleton Point on the island was authorized some time ago by the Canadian Government. The work of carrying out the project has now advanced to such a stage that the end of the current calendar year is expected to see the new service in full operation. The distance between the terminals is approximately nine miles, and the intervening strait is often dangerous to any but full powered craft. The boat, designed with special regard to the local conditions, is of large size, with a freeboard much greater than that of ordinary car ferries, is heavily built to cope with ice, and is equipped with powerful engines.

Port Kembla, when it is finished, will be one of the finest harbors of New South Wales. The work of construction in connection with the breakwater and wharfage accommodations has been proceeding for fifteen years but is now nearing completion. The port is situated fifty miles south of Sydney and is destined to be the shipping port for the bulk of the coal from the southern fields. Vessels of any tonnage can now enter in all weathers and unload cargoes with perfect safety. The depth of water at the northern end of the breakwater is 65 feet, and at the eastern end 70 feet, with an average of 70 feet between the two walls.

The so-called "starch trust," representing aggregate capital of $80,000,000, was adjudged guilty of "unfair methods" of competition, in violation of the Sherman antitrust law, and a plan for its dissolution was ordered filed with the Federal Trade Commission within 120 days, by a final decree filed Nov. 18 in the Government suit against the combine. The corporate defendants, which include the Corn Products Refining Company and its allied concerns, are enjoined from continuing unlawful practices, but not, however, from carrying on their business at prices and under methods adopted in good faith "to meet fair, free, and bona fide competition."

Examination of the brightly hued cliffs of Gay Head on the island of Martha's Vineyard, Mass., with the object of taking about one hundred acres around the lighthouse for a state reservation, has been begun by the Massachusetts Waterways and Public Lands Commission. Hitchcock in his geology of Massachusetts says: "The height of the cliff [Gay Head] from the shore is 150 feet, with a richness of color that renders it a striking and even splendid object from the ocean. The clays are red, blue, and white; the sand white and yellow, and the lignite black. All of these are arranged in individual strata without much order. There is nothing to compare with it in New England."

In two coast departments of Peru the cultivation of rice claims the attention of the greater part of the inhabitants. The land is fertile, there is an abundance of water, and the climate is favorable. About sixty thousand acres in these two departments are cultivated, giving an average yield of about fifteen hundred pounds an acre. It is estimated that the total production in these and other provinces will reach 40,000 metric tons in 1915-16. The quality is said to be unexcelled, and it finds a market in other countries as well as at home.

Work on the comprehensive plan of the Canadian Government for the port of Halifax is steadily moving forward, and it is expected that sufficient progress will be made in pier construction for the docking of three, and perhaps four, steamers this winter. When the plan, which calls for an expenditure of $30,000,000, is completely carried out, Halifax will, it is claimed, have the best equipped port on the Atlantic seaboard. The harbor is naturally one of the finest in the world, being well protected, open all the year round, and easy of access by night or day.

The constitutionality of the Adamson eight hour law will be decided by the United States Supreme Court on the suit instituted by the receivers of the Missouri, Oklahoma & Gulf Railroad. On that case alone the railroads of the country will fight the labor law which was enacted by Congress last September to prevent a nation wide strike of railroad trainmen. The case goes up to the Supreme Court on an appeal from a decision of Judge Hook of the Federal court that the law is unconstitutional.

Suits demanding treble damages aggregating $18,250,000 and alleging violation of the Sherman antitrust law, have been begun in the Federal court at New York on grounds of unfair competition against the Motion Picture Patents Company and several other motion picture companies and individuals on behalf of the Colorado Film Exchange, the Chicago Film Exchange, and other film agencies in the Middle West.

Population of continental United States on Jan. 1, 1917, will be 102,826,309, and with its outlying possessions 113,309,285, the Census Bureau estimates, upon the increase as shown by the Federal censuses of 1900 and 1910. Treasury Department statisticians, using a different method of calculation, estimated the population of continental United States as 103,002,000 on Nov. 1.

Most of the whale fishing of Norway is done in the southern hemisphere. In 1915 operations were carried on around Iceland, Faroe Islands, South Georgia, South Shetland, South Orkney, Falkland Islands, coast of Chile, Alaska, Gulf of St. Lawrence, West, South, and East Africa, and along the coast of West Australia. The total catch yielded 465,000 barrels of whale oil and 115,000 bags of guano, bone meal, etc., with a value of $8,500,000.

Of the 466 miles of railroad to be built by the United States Government from Seward to Fairbanks, Alaska, 186 miles are now in operation, with daily trains. The estimated cost of constructing the 466 miles of road is $25,642,000. Approximately eleven million dollars will have been spent by the close of the present fiscal year. A force of about four thousand men is employed, and work will continue throughout the winter.

Forest fires reported to the Massachusetts state forestry department by the fire observation stations this year amounted to 1281, and the total damage from the fires is estimated at $36,000. Last year 3008 fires were reported, with a loss of $141,073 worth of property. Of these fires 344 are claimed to have been set by sparks from railroad locomotives.

Guadeloupe, the largest island of the French West Indies, has a population of about one hundred and eighty-three thousand and a total area of 722 square miles, 32 per cent of which is under cultivation. The important crops are sugar cane, coffee, cocoa, vanilla, and also lime trees. The soil is fertile, and the rainfall is usually sufficient for the needs of the crops.

The predominating article of export from the Madras Presidency, India, is leather. This consists almost entirely of cow and buffalo hides, tanned but not curried, and of goat and sheep skins, tanned but only partly dressed. Shipments of tanned hides in 1915-16 amounted to 222,418 hundredweight of 112 pounds, valued at $7,675,444.

The total value of Ceylon's imports for 1915 was $53,089,540 and of her exports and reexports $88,692,283. Tea, rubber, coconut oil, desiccated coconut, and plumbago were the six leading exports in the order named. Together they made more than 92 per cent of the total.

A symposium on the sand dunes of Indiana, now under consideration for a national park, was presented at the semiannual meeting of the Chicago Chapter of the Wild Flower Preservation Society of America in the Art Institute.

President Wilson has issued a proclamation by which the Pisgah National Forest, in western North Carolina, is made a Federal game preserve. The land is located near Asheville and Biltmore, N. C.

A new wireless station has recently been erected at Viacha, Bolivia, near La Paz. Commercial service was established Oct. 20 between this station and the Lima wireless station at San Cristobal.

The liners "Victoria" and "Umatilla," the last vessels to leave Nome, Alaska, this season, arrived in Seattle, Wash., recently with $1,000,000 in gold bullion and shipments of tin ore and furs.

There are now nine plants in Spain devoted to the making of Portland cement. At present about three hundred and fifty thousand tons of cement are produced annually.

Eight million trees will be available for next spring's reforesting operations in Pennsylvania from the stock of the state nurseries.

A forecast of the bean harvest in Manchuria for 1916 states that 1,910,000 tons can be exported this year.

The foreign trade of Martinique, French West Indies, for 1915 amounted to $12,884,179.

A Progressive Step

ADAM H. DICKEY

Our Leader was for many years deeply impressed with the thought that the Christian Science movement should have places where people suffering from ills of various sorts could retire for treatment, rest, and recuperation. The members of Mrs. Eddy's household who ministered to her needs have heard her many times express herself quite freely on this subject. She knew that patients under Christian Science treatment were at times placed in a position where they needed the care and attention of a skilfully trained person who was also a Christian Scientist. Her own experience had shown her the great need for a place of refuge to which sufferers could retire, and where they would receive proper care and attention as well as freedom from criticism while under Christian Science treatment. The purpose which the Directors of The Mother Church seek to accomplish in organizing the Christian Science Benevolent Association is one that is in direct obedience to our Leader's wishes and which had for a long time been uppermost in her thought.

The Christian Science movement has barely passed its infancy, and is only now branching out to fulfil some of the requirements that naturally fall upon it as a large and successful Christian organization and one from which so much is expected. First came the demonstration of the Principle of Christian Science in the overcoming of sickness and sin. Then came the formation of churches and the erection of church edifices, both of which have been done to an extent that has awakened the thought of the world to the importance of Christian Science as a religious movement. After this must come the establishing of what we might call hospitals or sanitariums, and the training of people to act as attendants in the sick room.

The question arises at this point and will doubtless be put to many, Does this mean that the Christian Science movement will establish schools, orphans' homes, insane asylums, and the like? This involves a conclusion which has not yet been reached, and which perhaps it would be unwise to discuss at this period, since we do not know what the future may bring forth. Mrs. Eddy waited a long time before she established *The Christian Science Monitor*. She also waited many years before venturing to call for the establishment of the institution which is now being launched by The Christian Science Board of Directors. She learned through experience to wait on God, and in her admonition to us she has at times expressed the thought that we as Christian Scientists should wait patiently until God moves upon the face of the waters of mortal mind before engaging in any important undertaking. In her article "Obedience" in "Miscellaneous Writings" Mrs. Eddy says: "The disobedient make their moves before God makes His, or make them too late to follow Him. Be sure that God *directs* your way; then, hasten to follow under every circumstance" (p. 117).

All we know is that today the Christian Science movement is preparing to take care of the sick while they are under treatment, and this being the natural and lawful thing to do, it should meet with commendation and encouragement from all right thinking persons. The time will come when the Christian Science denomination will do many things that have not yet been attempted, but which will be undertaken when sufficient spiritual understanding is attained to deal wisely with the needs of the hour. Our Leader says in the Manual of The Mother Church (Art. VIII, Sect. 15) that God "supplies within the wide channels of The Mother Church dutiful and sufficient occupation for all its members," but until the time comes for the undertaking of these activities it would seem best not to discuss them.

It is quite likely that newspaper men will express their views of this new activity of our cause, hence the advisability of Scientists refraining from making statements in advance of their present demonstration. The metaphysical fact is that all is Mind and Mind's ideas; that there is nothing in this universe but Mind and what Mind creates. The real newspaper then, the avenue or the channel through which authentic information is given out, can be nothing more or less than the voice of Truth,—of wisdom uttering itself and declaring itself to human consciousness.

On page 123 of Science and Health Mrs. Eddy says, "Divine Science . . . excludes matter, resolves *things* into *thoughts*, and replaces the objects of material sense with spiritual ideas." Thus we see that for every object of sense there is a spiritual idea, or right idea, which is the only thing that Christian Scientists should consider. A newspaper, then, while it is in belief a material object, is in reality a spiritual idea, and when we cling to that thought and maintain it, it will have its visible effect on the newspaper and on the newspaper man, and nothing can be printed which is not right or just. Mortal mind is not a creator; all that is real belongs to God, and the only newspaper man there is, is that condition of thought which expresses the truth. Mortal mind has no ways or means to misrepresent Christian Science, its aims or its objects. The divine Mind is the only possible means of expression, and it utters and declares only that which is right and true, and the only man that can read or think about it or know it is God's man,—the reflection and the expression of infinite Mind.

Jesus said, "If therefore thine eye be single, thy whole body shall be full of light." If in obedience to this we keep in thought one thing, viz., that "the earth is the Lord's, and the fulness thereof,"—that everything in the universe belongs to God and is under His direct control,—then nothing can darken or hinder or misinterpret the utterance of Truth. Again he said: "But if thine eye be evil, thy whole body shall be full of darkness." If we believe in two powers, evil and good; if we allow fear to come into thought that mortal mind can misrepresent the word of Truth, then we shall utterly fail in the accomplishment of our purpose.

All is Mind. There are not two sides to this proposition. The metaphysical standpoint is the only one to be considered, and is the only safe rule for the guidance of a Christian Scientist. When we have reduced things to thoughts, we

Digitized by Google

shall then see that there is no personal proprietorship, no man or set of men that can claim ownership of an idea. The so-called possessions of mortal mind, including all the paraphernalia of a newspaper office, are ideas; and these belong to God and to His man. When we have learned this, we can see how it is that God governs the universe and that these ideas, as our Leader says, "are obedient to the Mind that makes them" (Science and Health, p. 295). The responsibility of conducting something immediately drops from our shoulders, and we find that all we have to do is to think rightly and leave the guidance of everything to God. "The government shall be upon his shoulder," and when we realize this we become followers instead of leaders.

The development and the establishment of God's cause on earth go steadily on, and just to the degree that we see and understand this will we be found occupying our right place and bringing out the true sense of what Christian Science has come to establish.

Wilderness Experiences

ROBERT RAMSEY, M.B.

In the account of the temptation of Jesus as given in the fourth chapter of Matthew, is to be recognized an epitome of the temptations common to all believers in the reality and continuity of time. The careful study of the definitions of "time" and "wilderness," as given in the Glossary at the end of Science and Health, is a key by which these temptations can be translated into terms of the present. When it is seen that the vision of Truth gained by the acceptance of Christian Science corresponds in a degree with Jesus' vision of divine sonship, we have an explanation of the not uncommon experience of Scientists, who after the first clear perception of Truth seem precipitated into a wilderness period of struggle. This is simply a demand for proof and practice, and is bound to continue until the belief in the continuity of time is given up. Sometimes the devil indeed leaves us, but it is only for a season.

In the experience of Jesus, once in the wilderness seemed to suffice, and as he is the "way," this naturally raises the question how he got out of the wilderness and remained out. In "The First Church of Christ, Scientist, and Miscellany" (p. 210), Mrs. Eddy warns us against the notion that Christian Science ever should be two-sided. This is well shown in the temptations, for it is clear that each of the three was met by Jesus with a specific declaration of truth, precisely denying the specific error.

In the three temptations Christ Jesus wielded "the sword of the Spirit, which is the word of God;" he acted as Scientists are told to act, by "prayer, watching, and working, combined with self-immolation" (Science and Health, p. 1). To meet the belief of a return of evil, however, complete self-immolation is the only weapon. It was therefore the practical recognition by Jesus that he "of himself" could do nothing which met and overcame this supposed necessity for a return into the wilderness. The reason the Scientist has trouble in keeping out of the wilderness is therefore lack of self-immolation, and the "self" which has to be immolated is the belief of a continuous existence in time and hence apart from eternity, this belief being in itself the wilderness. Mrs. Eddy, in her best known hymn, "Shepherd, show me how to go" (Hymnal, p. 188), prays that neither tear nor triumph harm. The difficulty of immolating self immediately after victory is the stumbling-block of most mortals. At that moment in his experience Napoleon was crowned Emperor of France, and at that stage in her experience Mrs. Eddy closed her college.

The Christian Scientist is still humanly in the midst of a belief in time, but by denying the continuity of time and recognizing that the present so-called time-being is superseded by the eternal "now" of God's creation, angels come to him, and will continue to do so just as long as the student refuses to admit the reality of any other form of continuity, —that is, remains self-immolated. Jesus did so, though it must have cost him many a severe struggle.

It is to be observed that in the Biblical story Jesus did not face and overcome the belief of a return of evil until he had overcome the three temptations. Mankind, however, are always anxious to do the last first; their desire is to get the devil to leave them by any means at their command; they want to lose the pains of sense but to hold on to its so-called pleasures, unfortunately for them. Only that consciousness which has laid down not only the pains but also the pleasures of the senses is receptive to angels. Even Scientists need to remember that there is a vast difference between getting the devil away for a season and getting out of the wilderness.

What is true of the individual is true of his world, and the wise Christian Scientist today is striving not for a material sense of peace, with a devil ready to return, but by self-immolation is trying to attain that understanding of the allness of God and His angels which will establish the nothingness of evil and its temptations as an inevitable correlative.

Progress Toward Perfection

OLIVE ALLISON

According to an old German proverb, "He who goes not forward, goes backward." One cannot stand still. When yesterday's ideal is attained, it becomes the lever of today for lifting tomorrow's ideal to a higher plane of thought. Every step of progress toward perfection ennobles one's ideal so that it always seems beyond present realization. Robert Browning says that—

> A man's reach should exceed his grasp,
> Or what's heaven for?

To put off "the old man with his deeds" and put on "the new man" in Christ is the law of spiritual progress necessary to those who would become earnest Christian Scientists. What is it that seems to oppose spiritual progress, and what is it that supports our efforts to reach perfection?

Jesus exposed the greatest foes to progress by means of three parables: the lost sheep; the lost piece of silver; and the prodigal son. The sheep, one of a hundred, was led astray by its own ignorance. The piece of silver, one of ten, was lost because of carelessness. The prodigal, one of two brothers, was brought to suffering and grief because of his own wilfulness. According to this interpretation of these parables, one per cent of humanity goes astray because of ignorance; ten per cent are lost because of carelessness; while fifty per cent lead lives of sin because they choose to do so. Each parable, let us joyfully remember, tells of eager searching for that which was lost and of great rejoicing when it was found.

If ignorance, carelessness, and wilful disobedience are hindrances to our progress, then the three great aids to progress must be knowledge, carefulness, and obedience. Knowledge of Christian Science is gained only as one lays aside all prejudice and earnestly studies the Bible together with the text-book of Christian Science, "Science and Health with Key to the Scriptures." Christ Jesus said, "If ye continue in my word, . . . ye shall know the truth, and the truth shall make you free." Each newly acquired idea of Christian Science,

Digitized by Google

showing how the old man with his deeds may be put off, must be put into practice. We learn by doing. Often we hear the remark, "I wish I had a better understanding of Christian Science." Is it not true, however, that we all understand more than we use?

Growth in Christian Science is retarded more often because of a failure to put into practice what one knows than because of inadequate knowledge of the truth. Even in our early study of Christian Science we learn that God is Love and that Love is supreme. With this also comes the revelation that hate, the opposite of love, has no presence, entity, or power. As Christian Scientists we must prove this. We are not doing so if we yield to anger, impatience, rebellion, or resentment, for these are but varying degrees of hate. Again, one of the first glimpses of Christian Science reveals the omnipotence of God and the consequent impotence of evil. Yet how frequently we harbor a belief in the power of evil by a constant talking or thinking about it. When we entertain feelings of self-pity, we are practically acknowledging the dominion of evil.

Let us heed Mrs. Eddy's counsel (Science and Health, p. 323), "In order to apprehend more, we must put into practice what we already know." Thoughtful study of the fundamental truths of Christian Science, and the application of these to our daily life, destroy the percentage of our mistakes caused by ignorance, and bring a constant unfoldment of Truth to consciousness, together with a growing realization of God's allness.

Our second aid to spiritual progress is that characteristic termed carefulness. In order to develop carefulness in thought, word, and deed, we are exhorted to watch and pray. Frequently, when we are off our guard, erroneous thoughts secure a foothold within consciousness. They come, not because we are ignorant of their negative quality, nor because we would wilfully disobey a divine mandate, but because we are not continuously careful in standing "porter at the door of thought" (Science and Health, p. 392). In our daily contact with a world of seeming discord we must cultivate carefulness in thinking aright, especially about the petty annoyances of human affairs. We must constantly make the effort to reduce to zero the error which apparently touches us only remotely. A crowded car, a discourteous person, an uncleanly individual, a trying delay, should not cause us, even momentarily, to have an unloving thought or to make an unscientific remark. It must be remembered that all error is only relatively great or small; and that all error, whether seemingly great or small, must be overcome. That the woman in the parable lost one tenth of her silver through carelessness shows us the need of careful mental supervision, lest we too lose even a part of our spiritual treasures.

If it is assumed that fifty per cent of all sin and suffering is caused by the wilful disobedience of mankind, the importance of obedience is clearly manifest. We are all aware of the command, "Thou shalt have no other gods before me." With all our devotions consecrated to the one Life, Truth, and Love, the false gods of material sense could not rob us of harmonious being. Obedience to the golden rule would bring peace among nations, and the real brotherhood of man would be established. If Jesus' admonition to love one another were heeded, all personal animosity and strife would cease.

Obedience should not be delayed, for "now is the day of salvation" from every form of error. When the necessity for overthrowing a specific sin is recognized, prompt obedience to the voice of Truth frees one from the false sense that sin gives pleasure. Then false appetites are overcome; time is not wasted in idle and frivolous amusement; feelings of ill-will, jealousy, and revenge are dismissed. Unwavering obedience to the commands of God must support the desire to overcome sickness. The lame man received his healing because of his ready response to the command of Jesus, "Rise, take up thy bed, and walk." The voice of Truth speaks to the afflicted today, and the same ready obedience brings the healing now as surely as it did two thousand years ago. Obedience is an expression of faith, gratitude, and love. The Master said, "If ye love me, keep my commandments;" while in Isaiah we read: "Then the eyes of the blind shall be opened, and the ears of the deaf shall be unstopped. Then shall the lame man leap as an hart, and the tongue of the dumb sing."

Progress is God's law. By learning the truth, by carefully applying it to every detail of daily life, and by rendering obedience to Him alone, we are able to fulfil the law of spiritual progress. The beauty and the blessedness of this law is that progress shall continue forever, for, as Mrs. Eddy says (Science and Health, p. 3), "to understand God is the work of eternity."

✧

"Could ye not watch with me one hour?"

IDA R. SIMONEAU

On the wall space of a certain Christian Science Sunday school room wherein temporarily are held also the church services, there is transcribed with excellently planned and loving foresight for its application, the question that Jesus in Gethsemane asked of Peter and those with him who were found sleeping: "Could ye not watch with me one hour?" In view of the fact that Christian Science Sunday services, the Wednesday evening meeting, and the Sunday school each occupy about one hour, could a more direct appeal be made than this reminder to members, pupils, teachers, and the entire audience, for their undivided attention during any of our dearly loved services, meetings, or lectures?

Our Church Manual reads: "A Christian Scientist is not fatigued by prayer, by reading the Scriptures or the Christian Science text-book. . . . Truth and Love rest the weary and heavy laden" (Art. XVII, Sect. 1). This applies as assuredly to participants as to members, who equally share in the observance and the resultant blessing. How subtle error is in making us "heavy with sleep," as were Jesus' disciples, for thereby cometh failure to heed the command to "watch and pray, that ye enter not into temptation," as the Master admonished. There is also the temptation to absent ourselves from these privileged services, of leaving before the closing hymn, or the equally erroneous and no less marked one of having attention attracted in every direction save that wherein we are watchers with the spiritual idea, the ever present Christ, that inspires and heals mankind.

The spiritual unfoldings which came from the application of that question have remained with at least one reader at services and in places far distant from the place mentioned. The uplifting result gave additional proof of the truth of Mrs. Eddy's statement that "Christian Science presents unfoldment, not accretion" (Science and Health, p. 68), in all good ways. At times the loving rebuke of the Master has been very insistent while the writer was forced to listen to distracting conversations, or noted inattention and even irreverence on the part of the careless in our midst. Then it is that the clouds of self-righteousness may well be scattered by turning to our Master's closing demand in that memorable record, "Rise, let us be going." Let us then rise to our true consciousness in God, good,—rise to watchfulness of self, to resist all that is unlike Him.

We must know the truth about our church services as well as about ourselves. When the right idea replaces a wrong

Digitized by Google

concept, evidenced in imperfection, harmonious moments are soon found adding themselves to form the perfect hour of spiritual unfoldment. We are then true watchers indeed, and have answered a significant question lovingly and obediently; therefore we find ourselves sitting "in heavenly places" to receive "the Comforter" promised by the Master,—"whom the Father will send in my name, . . . and bring all things to your remembrance, whatsoever I have said unto you."

✧

"Now is the accepted time"

TIMOTHY L. ROBERTS

A LARGE proportion of the discontent, worry, in a word unhappiness in the world, comes from fearing the future or regretting the past; therefore it comes from that which is provably unreal. How so? Well, the future has not yet come, else it would not be future. How can it be said that a thing which never came into existence has in the final sense any reality? This being admitted, does the future really exist?

Now, let us assume that some one may suddenly seem to manifest certain inharmonious symptoms. Simultaneously mortal mind—always officious, insinuating, accusing, itself the sole cause of these symptoms—begins to set up "in the dark recesses of mortal thought" (Science and Health, p. 102) its scarecrow, an image in this same mortal thought composed of the advanced stages of the particular disease that mortal mind has decided to express on the body. Let us note that these advanced stages, the things which the subject fears, are all in the future, which, as has been shown, does not in reality exist. Immediately fear of the approach of these advanced stages proceeds to install itself in the mortal consciousness; and as "fear hath torment," the victim of these false processes is already discontented and worried, in a word unhappy. Job's saying, "The thing which I greatly feared is come upon me," is therefore applicable in this case, for fear flings wide open the doors of consciousness to any suggestion that is ready to enter. The victim, knowing not how to ward off aggressive mental suggestion, is apt to submit to the inevitable and proceed to manifest the disease.

But "thanks be to God, which giveth us the victory through our Lord Jesus Christ," and thanks to the teachings of our beloved Leader, Mrs. Eddy, Christian Science has come to this age to restore the Christ-healing to human consciousness. God is Love, and Christian Science has come to reassert this age-old truth and demonstrate its fulness of meaning now. As the Bible teaches that God is All-in-all, the specter, fear, should have no place in human consciousness. Christian Science is showing this to be a fact which is now operative and capable of present proof. There need therefore be no fear of the future, for one infinite Mind governs that which to human sense is past, present, and future.

Do these statements sound transcendental? They did to the writer before he became a student of Christian Science, and was healed and regenerated physically, morally, and spiritually through its holy ministrations.

Now as to the past: What reality is there in an experience that is past and gone? Can the progress of time be reversed and set back, as a clock may be set back? No; this would be an impossibility. Then as with the future so it is with the past,—it has no reality, it has ceased to exist. If Paul had spent his time sighing over his past life, which was spent in persecuting Christians, and regretting that he was ever engaged in such unholy employment, we could never have received from him such inspiring sentiments as these: "Forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

Some one may say here: I regret my past sinful habits, and want to correct them. Ah, now we come into the true sense of the present, which is always teeming with golden opportunities! God, man, heaven, eternity, are all in the present. Man is the image and likeness of God now. Disease fades away into nothingness and nowhere before this statement of truth understandingly uttered, for "the Word was with God, and the Word was God." Christian Science is proving that this Word has lost none of its efficacy in the healing of disease since it was invoked by Jesus of Nazareth in the dawn of the first century. We cannot regret the past experiences which have led us or driven us, as the case may be, to Christian Science. No more can we dread the future, for, as God is All-in-all and is good, there is nothing but good in prospect.

Mrs. Eddy writes (Science and Health, p. 367), "I long to see the consummation of my hope, namely, the student's higher attainments in this line of light." Here is present employment for us indeed, employment full of present compensation,—to search diligently for the meaning, the full import, of her inspired words, and to follow obediently, fully, and unequivocally their always healthful leading.

✧

"Love's recompense"

MAY HARRIS

THAT inspired sentence, "Whatever holds human thought in line with unselfed love, receives directly the divine power," is from the pen of Mary Baker Eddy, and may be found on page 192 of the Christian Science text-book, "Science and Health with Key to the Scriptures." It has been the great pleasure of the writer to prove the truth of this statement many times, but one of the sweetest proofs came to her through a little child.

A little fellow of ten sat at the breakfast table one morning and complained bitterly because his salary of ten cents for the coming week was inadequate to cover his many needs. He realized that this amount was not to be added to by either father or mother, for the lesson to be learned in its expenditure was "wisdom" and "economy" (see Church Manual, Art. XXIV, Sect. 5). A sense of limitation does not, however, stay long with one of the Father's little ones, and a few minutes later he came bounding up, with bright eyes, to say good-by before starting to school. Glancing straight into his mother's eyes, the tears he saw there reminded him that mother's heart was heavy with a grief of her own that day. His little face grew sober and thoughtful as he left the house, but he returned radiantly happy a short time afterward and, asking his mother to close her eyes, deposited in her lap a ten cent bunch of sweet peas!

Thought had been held "in line with unselfed love" and had therefore received directly the divine power, for as the mother folded her arms about the boy, realizing that he had given his all to comfort her, her grief rolled away like the unreal thing it was, and she found herself healed! Circumstances had not changed, but viewing them through this reflected love, they lost their power to harm or grieve. How true it is that "a little child shall lead them," lead human sense out of the maze of the unreal into the sunlight of Love's presence! In the clear light of that moment she saw that to attempt material repayment would be to lessen the spiritual joy which was his, and so she left him to his joy, knowing, as our Leader tells us on page 3 of "No and Yes," that she could "trust Love's recompense of love."

Digitized by Google

Late that afternoon a little boy, with eyes shining with wonder and happiness, held out a dirty little hand to his mother and in the palm reposed a shining new dime! "Mother," he said between excited gasps, "she just wouldn't let me do the errand unless she paid me for it and so I had to take it!" He knew, child as he was, that this was "Love's recompense," all the more wonderful because unsought, and because the dear neighbor knew nothing of the morning's experience. But our Father knows all, and while the thoughts of mother and boy went out in gratitude to Him, the giver of all good gifts, they did not forget our dear Leader, who had spirituality enough to understand Him and to make clear to mortals the fuller intent of the Master's words, "It is more blessed to give than to receive."

Sunlight of Mind

IDA MAE HAWKS

An experience came to the writer recently which proved to her that light is in reality, as Mrs. Eddy tells us on page 510 of Science and Health, "a symbol of Mind, of Life, Truth, and Love, and not a vitalizing property of matter." I was living at the time in an apartment overlooking the Pacific Ocean, where the sea in its wonderful beauty could be viewed at all times of the day. This so filled my consciousness with the joy of the beauties beheld by the eye, that the clearer, higher thought of realizing this as only typical of the light and glory of Mind was obscured in the pleasure of beholding what the eye seems to see. Too often do we forget Paul's admonition, which bids us "look not at the things which are seen, but at the things which are not seen." To this he adds: "For the things which are seen are temporal; but the things which are not seen are eternal."

In a short time after this financial reasons made it necessary for me to take an apartment in the rear of the building, where this beautiful view was not visible to the eye and where no sunshine came into the room. At first this seemed a great trial, but in studying the Christian Science Lesson-Sermon, "God the Only Cause and Creator," the following words from the sixtieth chapter of Isaiah corrected false thinking on the subject of light and so came with healing power: "The sun shall be no more thy light by day; . . . but the Lord shall be unto thee an everlasting light, and thy God thy glory." Another verse opened up the thought of joy and gratitude in these words: "The Lord shall be thine everlasting light, and the days of thy mourning shall be ended." Then a reference from Psalms brought added joy, "Blessed is the people that know the joyful sound: they shall walk, O Lord, in the light of thy countenance."

This spiritual joy and the sunshine of Mind opened up new avenues of thought and action. A clearer insight had been obtained into Mrs. Eddy's statement, "Christian Science brings to the body the sunlight of Truth, which invigorates and purifies" (Science and Health, p. 162). God was seen as the source not only of real light but also of all supply, and His real children were recognized as enrobed in the "beauty of holiness." As this spiritual vision was held to, divine Love opened the way, so that eventually the family spent the remainder of the winter in full view of the ocean, grateful for a lesson learned on the meaning of light.

✧ ✧ ✧

For thee I have no fear
Midst foes and war's alarms,
Above, beneath thee are
Love's everlasting arms!

[Editorial in *Holyoke* (Mass.) *Daily Transcript*]

It has probably been a very great asset of Christian Science that the medical world assailed it so far as to try to prevent its practice for the healing of disease. Physicians have had to fight for every advance they made, from the assertion of the circulation of the blood to the use of vaccines for small-pox and for typhoid prevention. But that is no reason why they should fight the other fellow, even in defense of the sacredness of their profession—and be it said right here that no profession in the world cherishes itself as a profession to compare with the profession of medicine. The various schools of medicine have had hard times getting on their feet. The attacks on homeopathy by the allopathists are still remembered by laymen. But these schools have now assimilated each other fairly well and dwell in peace.

When Christian Science came along with its refusal of medicine and its practice of healing, accepting money in return just as physicians do, the medical world denounced it so vigorously that the attack actually helped the new idea. It was not enough to denounce the Christian Scientists as fakers; they were opposed to the extent of taking their cases into court. A great many people have the feeling that in America a man can cure himself or fail to cure himself in any way he likes, so long as the public health is not menaced; so the opposition only served to help Christian Science.

A decision in the New York Court of Appeals yesterday sends back to re-treat a famous case by which Willis Vernon Cole, a New York Christian Science practitioner, was convicted for the illegal practice of medicine. The case against him was brought by an agent of the New York County Medical Society. The judge who presided when it was tried charged the jury thus: "If you find from the evidence in this case that this defendant did engage in the practice of medicine as alleged in the indictment, within the definition which I have given you, it is no defense that he did what he did from any sense of duty, or that he did these acts in the practice of a religious tenet of the Christian Science church." The Court of Appeals now decides that the court was in error in so charging the jury, and that the practice of Christian Science methods of healing is permitted by the statute that specifically exempts those who in the treatment of bodily ills follow out the tenets of any religion. It has taken four years to get this decision from the court, and the case now goes back for retrial.

If Mr. Cole wins in the next round the Christian Scientists will have commanded a great victory, and if he does not win it will not be for lack of able presentation. The Christian Scientists are powerful because they make their appeal on the whole to the educated and the trained. They are endlessly patient, and they will not let themselves lose through court decisions or public scorn, regarding the latter as something they can overcome by persistence and using all the agencies to command favor in court, including first the ablest available lawyers to present their cases.

[Hector Wallace Smith in *Kincardineshire* (Scotland) *Observer*]

Our critic admitted that Christian Science had a grain of truth in its teaching. Are we not thus reminded of one of our Lord's parables about a certain grain of mustard seed and how it grew into a great tree? This is just exactly what has happened in the history of Christian Science. In 1866 a grain of truth was divinely planted in the loving heart and pure consciousness of that noble woman, Mrs. Eddy, the Discoverer and Founder of Christian Science. Today, just

Digitized by Google

fifty years afterward, this world wide movement has indeed become to unnumbered thousands of human beings a great tree of life, with many branches shooting out from the parent stem and spreading to the uttermost parts of the earth. Moreover, do we not read in Revelation that the leaves of the tree of life were for the healing of the nations?

On page 162 of "Science and Health with Key to the Scriptures," the well known text-book of Christian Science, Mrs. Eddy has written these words: "Christian Science acts as an alterative, neutralizing error with Truth. It changes the secretions, expels humors, dissolves tumors, relaxes rigid muscles, restores carious bones to soundness." The right way and indeed the only way to judge of Christian Science is by its fruits; that is, by ascertaining some of the tremendous amount of good it has done in healing the sick and the sinning. Multitudes are continually expressing their gratitude for the healing they have received from Christian Science, and also for the great and enduring services which Mrs. Eddy has thus rendered to humanity. No one who properly understands the teachings of Christian Science and has fairly investigated its results, could possibly condemn it, or say an unkind word about Mrs. Eddy. "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." These simple yet remarkable words uttered by the Master many centuries ago are still true today.

✧

[Thorwald Siegfried in *The Winlock* (Wash.) *Live Wire*]

It is a sad commentary on the progress of avowed Christian sects that the barrenness of their efforts leads their ministers to occupy their time so largely in attacking other religious movements. Recently an evangelist holding services in your city went out of his proper domain to attack Christian Science; and what was worse, he repeated certain worn out falsehoods about Mrs. Eddy, whom all men who are unbiased by sectarian prejudice, recognize as a high minded woman and one of the noblest characters of the age.

Perhaps his criticism of the architecture of Christian Science churches is not worthy of notice, but if a building without spires is not in his mind a church, may it not be because he thinks of heaven as a locality "up there"? How unfounded the criticism is in truth may be seen by the fact that the top of the dome of The Mother Church in Boston is twenty-nine feet higher than that of the State House and one foot above that of Bunker Hill Monument.

The Lord's Prayer is repeated audibly by the congregation in every Christian Science service, whether on Sunday or Wednesday. Strangers attending Christian Science services for the first time catch a new significance in the well known words, born as it is of the feeling that Christian Scientists try to realize, here and now, that "Thine is the kingdom." On page 15 of "Christian Healing" Mrs. Eddy writes: "Prayer will be inaudible, and works more than words, as we understand God better. The Lord's Prayer, understood in its spiritual sense, and given its spiritual version, can never be repeated too often for the benefit of all who, having ears, hear and understand."

It is difficult to believe that in these days any minister would speak evil of Mrs. Eddy's life. The facts are too well known. Mrs. Eddy's history is an open book, and only those who will not investigate facts and who prefer to believe thoughtless and malicious gossip speak ill of her. Even though lies find their way into print, in periodicals ever intent on getting the dimes of those who will buy from mixed motives, they are forever rebuked by the facts; and ministers of the gospel should be the last to utter statements so groundless and so contemptible. A large number of men and women now engaged in Christian Science activities have spent months and years in Mrs. Eddy's household in daily contact with her. It would be startling indeed if such falsehoods could be true of Mrs. Eddy and remain unknown to these persons, or that they would remain true to her leadership if her practices were inconsistent with her teachings in the least particular.

Quoting Isaiah's words, Jesus said, "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord." Ministers of the gospel cannot do better than to follow the Master's example.

✧

[S. T. Downs in *Indianapolis* (Ind.) *News*]

No Christian Scientist would presume to criticize the clergyman for disbelieving in Christian Science, or for his preference for material means of treating diseases, but his statement that the practice of Christian Science is "precarious and morally dangerous," made somewhat indirectly, is not only exceedingly unjust, but impossible of proof. On the contrary, almost an unlimited amount of evidence can be offered to show that Christian Science conduces to the very highest morals, and this is attested not only by the personnel of its membership and adherents, but by the healing of all manner of evil and vice in all walks of life.

In his statement, "The power of mind over matter is mighty," our brother has not stated Christian Science teaching, even though that is a very common supposition in regard to it. Christian Science teaches the power of Mind (spelled with a capital letter and therefore meaning God) over mortal mind, or the carnal mind, as St. Paul called it. This understanding and demonstration of the power of God in Christian Science has healed almost countless numbers of "structural organic disease," our critic's statement to the contrary notwithstanding. These healings include broken bones, deformed and misshapen children, blindness, deafness, heart disease, Bright's disease, tuberculosis in its last stages, and in fact practically every disease known to mankind, after reputable physicians had given a diagnosis. Many such healings have taken place right here in our own midst, and the proofs of them, as well as of their completeness, are at the command of those who ask for them.

✧

[John M. Tutt in *Star-Journal*, Warrensburg, Mo.]

Christian Scientists can agree with our critic in her reminder that "Christianity is not a religion of theory or of opinion, but a religion the essentials of which are historical facts, incontrovertibly attested as any other facts of history." But Christian Science insists that these essentials are complete in the life and teaching of Christ Jesus, and that he alone is the founder of the religion bearing his name.

It is reasonable that Jesus knew and practised the essentials of Christianity and that he gave them in their completeness to the world. Upon these fundamentals the four gospels are in agreement, and these elementary facts are unreservedly accepted by Christian Science and so recorded in its authorized literature. Christian Science however points out that the essence of the scheme of salvation is the spiritual import of the component parts thereof. They therefore turn away from the material and seek the spiritual observance and understanding of what Christ Jesus set forth as the way.

This critic would exclude other denominations from Christianity because she holds the church to be a very great part

Digitized by Google

of the plan of salvation. Now the facts are that the Founder of Christianity did not establish a system of worship nor did he subscribe to a creed or ritual. Instead he urged the worship of God as Spirit and said, "The hour cometh, when ye shall neither in this mountain, nor yet at Jerusalem, worship the Father." Creeds and rituals do not make Christianity, but subscription to and practice of the teachings of Jesus do unfailingly mark a disciple of Christ. In this test Christian Scientists are not wanting, for they strive to preach the gospel and heal the sick as commanded by Jesus.

Christian Science emphasizes every element of the plan of salvation and gives Jesus his proper place in that plan, the place he claimed for himself; and because Christian Science spiritualizes Christian worship and life, it is therefore nearest right. Jesus himself rose above matter and presented the example for all mankind. Christian Science obediently turns thought away from matter to Mind and thereby seeks to "go to the Father." Material observances detract from this heavenward propulsion and inhibit man's recognition of himself as spiritual. Jesus said, "They that worship him must worship him in spirit and in truth."

The central idea of Christian Science is not, as this critic avers, the denial of the existence of matter, but is rather the revelation of the allness of divine Mind, God, and His infinite idea, man and the universe. The denial of matter as real, that is, God-created, is logically correlative with the affirmation of the allness of Mind and its ideas. As for that illusive phenomenon termed matter, even the physicists admit its ultimate explanation must be left to the metaphysician. Christian Science explains matter logically and conclusively, which is something, we must admit, hitherto unaccomplished by material theories.

✧

[Henry Van Arsdale in *La Mesa* (Cal.) *Scout*]

A recent article quotes from a clergyman to the effect that religion as expressed through the various churches, including the Christian Science church, is entirely ineffective to meet prevailing economic conditions. He says, "I take my stand on the life and spirit and teaching of Jesus." This is exactly the position of Christian Science. The life and works of Christ Jesus were devoted to an amelioration of every adverse human circumstance and condition. His promise was that those who believed on him should not only do the works that he did, in the way of bringing about better living and social conditions, but that such believers should do even greater works, these greater works undoubtedly referring to the wider opportunities which this age presents to those who follow the Master in deed and in truth.

The Church of Christ, Scientist, was founded in 1879 by Mrs. Eddy, and upon her motion "it was voted,—To organize a church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing" (Manual, p. 17). Christian Science recognizes that the healing wrought by the Master was a complete healing, not only of bodily infirmity and disease but of all the ills from which mankind suffers. Christian Scientists are firm believers in the first commandment, that is, they do not give power to that which is unlike God, who is good, and who is Love.

On page 340 of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," which is the text-book of Christian Science, occurs this statement: " 'Thou shalt have no other gods before me.' (Exodus xx. 3.) The First Commandment is my favorite text. It demonstrates Christian Science. It inculcates the triunity of God, Spirit, Mind; it signifies that man shall have no other spirit or mind but God, eternal good, and that all men shall have one Mind. The divine Principle of the First Commandment bases the Science of being, by which man demonstrates health, holiness, and life eternal. One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

Christian Scientists are doing their best to live up to this statement, and as individuals associated with each other in church organizations they are engaged each day in correcting within themselves "whatever is wrong in social, civil, criminal, political, and religious codes." As this correction goes on with the individual, it must permeate the mass exactly in accordance with the continued growth of Christian Science.

✧

[Lloyd B. Coate in *Fostoria* (Ohio) *Times*]

Christian Scientists believe in the only true and living God, and believe that mankind can be saved only through Christ, Truth, as Jesus taught and demonstrated. Christian Science is giving mankind a better understanding of Jesus' words and works, and this spiritual understanding has brought healing physically and morally to thousands of people. Christian Science increases our love for God and the Bible. Are Christian Scientists to be stoned from the pulpit for teaching mankind to have more faith in God even as Jesus commanded? Are Christian Scientists to be stoned by the clergy for having gained a more spiritual understanding of Jesus' teachings, which brings healing as the Master taught: "And these signs shall follow them that believe"?

Are those ministers who criticize and condemn Christian Science healing the sick through the gospel as Jesus commanded? If they are not obeying Christ's command to heal the sick in the way Jesus taught, the supremacy of Spirit over every material condition, does not the burden of proof rest with them rather than with Christian Scientists, who are striving to obey the Master's word? Would it not be well for the critics of Christian Science to give heed to Gamaliel's advice, "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

✧

[H. S. Hughes, Jr., in *Milwaukee* (Wis.) *Journal*]

Christ Jesus said, "I am not come to destroy, but to fulfil," and he unfolded inward grace wherewith to meet outward evils. Mrs. Eddy, through Christian Science, restates this teaching, enabling man to acquaint himself intelligently with God, and be at peace. For this constructive work, whose activity is encircling the globe, ritualism and creed would, if it could, defame and malign her fair name and brand her doctrine as "murderous heresy," as evidenced by a local evangelist's statement. When prejudice gives place to tolerance, and the winning grace of the indwelling truth speaks from our pulpits, then the method of winning souls to Christ will be constructive instead of destructive, and it will universally be seen that Mrs. Eddy, known and honored by thousands through her writings and good works, has taken nothing of good from religion or medicine, but through Christian Science has inspired them with a "diviner nature and essence" (Science and Health, p. 107).

✧ ✧ ✧

What we need is not a new compass every year, but a new determination to steer straight by the old compass, which is the Word of God in Christ.—HENRY VAN DYKE, D.D.

Digitized by Google

Editorial

Not Decadence, but Progress

From time to time some of those who it is assumed are authorized to speak for the Christian church, express a somewhat despondent view of the progress of Christianity, from which one might almost feel that the growth of the religion of Christ Jesus has come to an end, and that there is no hope or desire on the part of mankind for a betterment of what are alleged to be the existing conditions. As a sample of these expressions we quote from a well known religious periodical as follows:—

"Two thousand years ago the Prophet of Galilee announced the most daring spiritual program ever conceived. It involved utter reliance upon the certainties of spiritual law, and utter confidence in goodness, a belief in the truth as being able, willing, and sure to care for and reward them that put their destiny in its hands and doubted not. We have never dared to act upon his program. We have praised it, wondered at it, lauded its majesty and beauty, but to live it has been too much for our cowardly souls."

Like every other expression of despondency, this statement is too general, goes too far, and proves that the person who makes it has his eyes closed to what is going on around him. It would seem that he does not know that Christian Science, which stands for all these things, is growing by leaps and bounds, and that it is growing because its followers are modeling their lives upon the life of Jesus, and that they are not only preaching his gospel, but also to the extent of their ability they are doing the works which he did. Notwithstanding the "welter of war" which has convulsed so large a portion of humanity, it is not claiming too much to say that the world is today, because of Christian Science, closer to the spiritual program of Christ Jesus than it has been at any time during the past fifteen centuries. There are more people than ever before who place implicit reliance upon the certainties of spiritual law, who have confidence in goodness, because God is good, and who believe in divine Truth as being able, willing, and sure to care for and reward them that put their destiny in His hands.

Christian Science is teaching men and women to make this spiritual program their own, and they are doing so in increasing numbers. And not only this, but they are proving by their works that they safely do so. They are also proving that Jesus' program was founded upon demonstrable truth, and that he was a true prophet when he said that those who believed on him should do the works which he had done. Christian Science asserts that there is no power other than God, infinite Mind, Truth, and that He cares for man. It is upon this truth of the omnipotence, omniscience, and omnipresence of God that Christian Science is reinstating primitive Christianity and giving men such an understanding of Him as enables them to trust Him. On page 441 of Science and Health Mrs. Eddy writes, "No law outside of divine Mind can punish or reward Mortal Man;" and again, on page 135 of the same book, "Christianity as Jesus taught it was not a creed, nor a system of ceremonies, nor a special gift from a ritualistic Jehovah; but it was the demonstration of divine Love casting out error and healing the sick, not merely in the *name* of Christ, or Truth, but in demonstration of Truth, as must be the case in the cycles of divine light."

When all Christians realize that the works of Christ Jesus were as much a part of his ministry as were his words, and that these works may be done by all who believe, they will have reason to know that Christianity is not on the wane, but on the contrary that it is making great progress, and that a greater number than ever before are striving more earnestly and more intelligently to be obedient to the apostolic admonition, "Let this mind be in you, which was also in Christ Jesus." Christianity is not decadent while there are steadily increasing numbers who may humbly and gratefully say with Paul, "We have the mind of Christ."

Archibald McLellan.

"We shall all be changed"

St. Paul's words here quoted have many times been the subject of discussion among Christian people; nor is this to be wondered at, for he himself introduces the statement by saying, "Behold, I show you a mystery." In considering this text most people have related it mainly to the change which supposedly comes with death, and they have wondered just what it would mean. But Paul says plainly that "we shall not all sleep;" therefore the change of which he speaks is one which begins when the belief in flesh and blood—that is to say, the belief in material existence—begins to give place to the true idea of man in the divine likeness.

There is perhaps nothing in the realm of nature which has taught such a wonderful lesson to thinkers as the chrysalis state of the butterfly. Many have argued that this state typified the period following the experience called death, when the mortal body was laid in the grave, afterward to rise in a new and higher form; but in Christian Science a much higher lesson is learned, for there is nothing in the Bible to show that when we have finally laid aside the flesh and blood which the apostle says "cannot inherit the kingdom of God," we shall ever take it up again.

As we come to understand man's spiritual existence, we learn that this dream of life in matter in a certain sense does correspond with the chrysalis state of the butterfly; and yet even so a great change is going on for the little creature in its close-sealed envelope. Naturalists tell us that the latent energies of the butterfly must be developed through struggles unseen by the outward eye, and that these become very strenuous at the period of emergence through the tiny opening which may be likened to the Scriptural figure of the eye of a needle. From the evidence of physical sense it would seem as if the butterfly had no chance to emerge; in fact it could never do so were it not for the divine energy which fills the universe and which operates through everything that presents the semblance of an idea. During its seeming imprisonment this little creature is having its wings developed, and is getting ready for flight in the sunlit air.

Now Christian Science teaches us very plainly that the idea of Truth "changes not," but it also declares that "eternal Truth is changing the universe" (Science and Health, pp. 543, 255). Mrs. Eddy adds here, " 'Let there be light,' is the perpetual demand of Truth and Love, changing chaos into order and discord into the music of the spheres." This makes it very clear that while Truth itself and Truth's idea are always perfect, the operation of Truth in human consciousness produces the most marvelous changes, and there is perhaps no more inspiring statement in our text-book than this declaration of the ceaseless action of "eternal Truth" in producing the changes needed to bring out the manifestation of God's idea.

It is hardly supposable that the unborn butterfly is dreaming of sin, sickness, and death in its long sleep; but mortals unfortunately are doing this nearly all the time from childhood up, and so their emergence is sometimes a seemingly slow and painful process; but it will be a harmonious one

Digitized by Google

when the operation of the spiritual law in the new birth is once recognized. Those who accept Christian Science begin at once to realize in some measure the divine energies which lift one out of all limiting conditions; and, to follow the figure already presented, the wings of divine aspiration are being fitted for flights above earth and earthliness.

The one important consideration for us is to realize constantly that the change from matter to Spirit, from death to life, is going on, and to declare with faith and understanding that no outside influence of mortal belief can crush the unfolding thought. To mortal sense this great change from the mortal to the immortal concept may seem to go on slowly; but if we are in earnest, we shall be ready for the trumpet sound which lifts us in the twinkling of an eye above all that is corruptible, ready to give thanks for the victory gained through Christ, Truth.

ANNIE M. KNOTT.

Overlooking Is Not Overcoming

THERE is nothing in the teaching of Christian Science which could lead any one to suppose that evil is to be overcome by overlooking it. The Christianly scientific teaching in regard to the unreality of evil is explicit and should leave no loophole by which perversion or subversion can enter. The understanding of the absolute reality of God and His creation, the All-in-all, carries with it as a necessary corollary the unreality of a supposititious devil and all his works, but in relative human experience every statement of truth must be proved and every form of error uncovered in order to be definitely overcome.

Overlooking, ignoring, avoiding, suppressing, pretending, are all futile phases of the attempt to pervert and subvert the Science of Christianity and to render vain the labor of its discovery and founding. It may therefore be taken for granted that a condition of indolence, indifference, apathy, or neutrality toward the standard of good and evil, is a premonitory symptom of mental dry-rot or of trouble in the brewing. More often such a state of passive neutrality is the prelude to a tragedy on the stage of human happenings, wherein nations as well as individuals suddenly become involuntary and, for the time being, helpless actors.

The question then naturally presents itself what the method may be by which argumentative subtlety can hope to induce a well meaning Scientist to believe that overlooking evil can possibly result in overcoming it. May not the line of reasoning follow this course: Insinuation number one, "You say that evil is unreal; then why try to make it so?" The well meaning Scientist may be taken unawares and momentarily nonplused by this question, so that he may not bethink himself in time to reply, that in truth evil is unreal, but in mortality it seems to be truth itself, and so requires to be handled again and again in its different phases before its total unreality can appear.

If the Scientist has been taken off his guard by this first question, he may then be considered by the tempter to be fair game for insinuation number two: "Do you not say that all is good? Then evil must be good also." Having attempted to overlook evil, the bewildered Scientist suddenly finds it reappearing to his consciousness because it has not been made unreal, looking very real, and moreover this time disguised as good. Therefore the end of this temptation may be that the well meaning Scientist finds evil to his great surprise classified as both real and good, and so love's long labor may be temporarily lost. Thus he may even have opened wide to animal magnetism the very consciousness which he had with much effort swept and garnished for the reception of good only. The legerdemain of necromancy by a clever mental twist may juggle with good and evil in a consciousness first made defenseless by prevailing preachments inculcating apathy or neutrality.

Solomon, who seems to have been assailed by many of the subtler forms of evil masquerading as good, wisely prayed for "an understanding heart," that he might "discern between good and bad." In this momentous hour in human history Christian Scientists welcome their Leader's rebuke, found on page 209 of "Miscellaneous Writings": "Peace has no foothold on the false basis that evil should be concealed and that life and happiness should still attend it . . . egotism and false charity say, '"Not so, Lord;" it is wise to cover iniquity and punish it not, then shall mortals have peace.'"

Overlooking will not overcome. Unless evil is seen as nothing, it seems to be something, a part of that eternal somethingness which is all good; hence, as a final consequence, evil itself would be good. Over against the ignoble habit of attempting to ignore error the instructed Christian Scientist follows the procedure outlined in the Scriptures, "And God divided the light from the darkness." When God's dividing line has been drawn taut against evil, then evil can be realized as nothing, but not till then. Christian Science uncovers evil as nothing, but never as good.

WILLIAM D. MCCRACKAN.

Lecture in The Mother Church

The First Church of Christ, Scientist, Boston, Massachusetts, announces a free public lecture on Christian Science by John W. Doorly, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul Streets, Back Bay, Friday evening, Dec. 29, 1916, at 8 o'clock. The public is cordially invited.

Among the Churches

Current Notes

WINNIPEG, MANITOBA, CANADA.—The Christian Science literature distribution committee for the half year ending June 30, 1916, handled 4883 *Sentinels*, 369 *Journals*, 88 *Heralds*, 13,615 *Monitors*, 58 pamphlets, 583 lectures, 327 Christian Science articles, making a total of 19,923 pieces. This literature has reached several hospitals, fire halls, homes for incurables, overseas contingents, returned soldiers, police stations, convalescent homes, sanitariums, coffee houses, quarries, theaters, and many other places, and has been taken to those institutions by individuals. Many people have been reached through mailing lists and individual mailing, and also by the literature distribution committee.

Correspondence.

WHEATON, ILL.—Work has begun on the church edifice to be erected by First Church of Christ, Scientist, on its lot at the corner of Main and Center Streets. The seating capacity of the auditorium will be three hundred, but it can be increased to five hundred. There will also be an adequate Sunday school room. The total cost of grounds and building will be in the neighborhood of thirty-five thousand dollars.—*Wheaton Illinoian.*

HUNTINGTON BEACH, CAL.—Articles of incorporation have been filed by the Christian Science Society of Huntington Beach.—*Santa Ana Register.*

PHILADELPHIA, PA.—The First Bible Christian Church, on Park Avenue below Berks Street, more commonly known as the "Vegetarian Church," is being demolished. On the same site workmen are preparing to erect a graystone structure that will be known as Third Church of Christ, Scientist. The auditorium will accommodate more than six hundred persons, and there is to be a Sunday school room in the basement. The edifice will cover a plot of ground 50 by 90 feet.

Philadelphia Ledger.

MARION, IND.—First Church of Christ, Scientist, located at Fourth Street and Whites Avenue, will be opened Sunday [Oct. 1]. The dedication will follow when full settlement of all indebtedness is made, as that is the rule of the church. The auditorium will seat two hundred and seventy-five persons. The cost of the building, with grounds, was about seventeen thousand five hundred dollars.

Marion Tribune-Leader.

NEW HAVEN, CONN.—Plans are being figured for the proposed addition to First Church of Christ, Scientist, on Winthrop Avenue.—*New Haven Journal.*

The Lectures

White Plains, N. Y.

Introducing Charles I. Ohrenstein, who lectured on Christian Science, Ernest F. Clymer said:—

Christian Science could not have survived without proof of its demonstrable teachings. Christian Science treats of the forces of the almighty God as preached and practised by Christ Jesus, and how to understand and use them.

About eighteen years ago the lecturer of this evening and I resided in the same city. He was then a student of Christian Science, while I was a practising physician. As a doctor of medicine I was not particularly fond of Christian Scientists, but for some reason I made an exception in his case, for I could chat with him with satisfaction regarding our respective philosophies. Those talks were always helpful, but I could not then define the reason; now, however, I regard those friendly discourses as being a contributing cause of my exodus from the confines of medicine, and I am sure that in those days I could not have imagined myself rendering this particular service for him, in which I take unusual pleasure.—*Correspondence.*

✧

St. Louis, Mo.

John Randall Dunn, who lectured on Christian Science in the edifice of Fourth Church of Christ, Scientist, was introduced by James Randall Dunn as follows:—

I find great joy in speaking for this church tonight,—in giving you a loving welcome and in introducing one of the new members of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, of Boston, Mass. Under the circumstances I may be pardoned if in performing this pleasant duty I strike a personal note, for the whole career of the guest of the evening, as boy and man, has been the object of my paternal if sometimes critical interest, and always of my tenderest love.

It seems but a few short years since a little lad asked my permission to attend a certain political meeting. "Why do you wish to hear this particular speaker?" I asked. "Because I belong to his party," he replied. "Why?" "Because I believe in it," he said. "Why?" I asked again. "Because you do," was the response. In stern admonition I said: "Never let me hear you make such a statement again. Don't be anything, do anything, or believe anything because some one else does. Do your own studying and thinking and believing." Now I must confess that there have been times and occasions in which I wished my injunctions had not been obeyed with literal consistency, but the advice was wholesome and, except as to an inherited religion, it was fruitful in fostering the development of a faculty of independent thought with a most congenial fellowship as a corollary.

A dozen years ago I was brought out of the shadow of virtual invalidism into health and strength through Christian Science treatment. This wondrous event set us both to thinking, and to seeking for the how and the why and the wherefore of a healing which seemed almost miraculous, and presently we were as the two blind men by the wayside, asking the Saviour as he passed by that our eyes might be opened. The Master heard our cry, and in due time the light of this great truth, Christian Science, dawned upon our sight. The other "blind man" has devoted his young manhood to the work of spreading this gospel of light and life and love, and while introducing him to this most welcome audience I may with a very full heart repeat the words of Paul to Timothy: "My son, be strong in the grace that is in Christ Jesus. . . . Study to show thyself approved unto God, a workman that needeth not to be ashamed, rightly dividing the word of truth."—*Correspondence.*

✧

Paterson, N. J.

Frank Bell delivered a lecture on Christian Science at the Regent Theater before a large and attentive audience. Mr. Bell was introduced by former Congressman Henry C. Allen, who spoke in part as follows:—

Those of us in this community who have availed ourselves of the teachings of Christian Science have found in it a "pearl of great price." We sought this teaching—I think it perfectly safe to say the majority of us did—out of the depths of despair. Some of us were suffering from great bodily ill health, pronounced in some instances incurable, others were in bondage to evil and destructive habits, and others in great mental unrest and discord. We have found health for body and mind, freedom from the bondage of habit, and harmony in place of discord and unrest. We have come, in fact, to a realization of that great promise of the Master, "Ye shall know the truth, and the truth shall make you free." Can anything be more natural than a desire on our part to present to you some idea of this wonderful truth?

Paterson Call.

✧

Bellingham, Wash.

Clarence W. Chadwick delivered an address on Christian Science to a large audience in the Grand Theater. The lecturer was introduced by Prof. R. H. Ewing, principal of the Roeder School, who said:—

Some twenty years ago we first met with persons who styled themselves Christian Scientists. Since then it has been our fortune to meet and know more or less intimately hundreds, perhaps thousands, of them. We have seen them about their daily business, at work in the public service, and in their homes as neighbors. So far as our experience reveals, not one of these has ever tried to influence another with his own opinions in politics or religion; not one has ever been concerned in a personal or community difference; not one of them has ever asked of the public service favors

Digitized by Google

for self or church; nor have we ever known one of them to seek public position, or to use it for personal aggrandizement or to further the cause of his church.

I have read, on the contrary, that each Scientist regards his religion as a personal matter; that each seeks to know and to understand the meaning of the sayings of Christ, and to live simply and effectively according to the philosophy of the lowly Nazarene; that they claim to have learned that these things, including his method of healing, may be known and proven in the life and experience of each person. They further believe that this church is a necessary agency in the restoration of original Christianity and the realization of the highest ideal of hope and faith.

Christian Science is a world religion. If there be any connection between this wonderful growth and its simple appeal to the human intellect, then the fruits of the Spirit are ample, and the judgment of Isaiah peculiarly appropriate: "Say ye to the righteous, that it shall be well with him: for they shall eat the fruit of their doings."

The Bellingham Herald.

✧

Madison, Wis.

John W. Doorly, who lectured on Christian Science in the Woman's Building, was introduced by Harry N. Baum, first reader, who said:—

In the brief space of fifty years Christian Science has challenged the attention of the world. The reason for this remarkable growth and widespread interest is surely obvious. It is because Christian Science has not confined itself to mere professions of the truth, but has demanded and produced proofs of its practical application to all sorrow, sickness, and sin. This Christianly scientific religion comes to the storm tossed world of today with the comforting assurance that the works which Jesus did and told his followers to do are being accomplished at this very moment. People in general are gradually awakening to the fact that Christian Science is not a new religion, but is a new application of the basic truths taught by Christ Jesus.—*Correspondence.*

✧

Seattle, Wash.

The introductory remarks of Thorwald Siegfried in presenting Dr. Walton Hubbard who lectured on Christian Science on behalf of Second Church of Christ, Scientist, at the Princess Theater, were as follows:—

We have come here to learn more of what is unquestionably the ultimate Science,—the Science of being,—since time out of mind mortals have been fully aware that they are, without knowing at all what they are. Christian Science makes plain that which is of greatest concern to us all, namely, the nature of our own existence. The truth about ourselves is radically different from what mortals have long believed. When truth enters any one's thought, false belief goes out, and with the false belief there goes whatever depended upon it for existence; hence the importance of learning that which banishes death, disease, and sin from the life of every one who lives the truth he learns.

Christian Science, being absolutely scientific, needed a discoverer. Its Discoverer was an American woman, Mrs. Eddy, who was descended from well known pioneers of New England and who lived for many years in Boston, Mass., and in Concord, N. H. She found Christian Science stated in the words and perfectly exemplified in the works of Christ Jesus, as recorded in the Bible. She wrote the text-book, "Science and Health with Key to the Scriptures," as a help to others in understanding the Bible, and also many other books on Christian Science. She taught this Science to many, and founded the five Christian Science periodicals. In addition to all this she established on an enduring basis the organization of The Mother Church as outlined in the Church Manual, by means of which Christian Scientists are rapidly and permanently establishing religious truth all over the world.

Correspondence.

✧

Evanston, Ill.

A lecture on Christian Science was given in the edifice of First Church of Christ, Scientist, Chicago Avenue and Grove Street. The speaker, Virgil O. Strickler, was introduced by A. E. Mabie, first reader, who said:—

Mrs. Eddy, the Leader of the Christian Science movement, states in "Science and Health with Key to the Scriptures" (p. 254) that "the human self must be evangelized," and that "this task God demands us to accept lovingly today." The world was in need of and was ready for the Christ, or Jesus would not have manifested and demonstrated the Christ; and when the Master was parted from his disciples at the little town of Bethany he told them to continue his work, and said to them that the Comforter would come.

This age was in need of and was ready for Christian Science, or Christian Science would not have been revealed of God to our beloved Leader, and Science and Health would not have been written by her divinely directed hand. Christian Scientists understand that Christian Science is the Comforter that was promised by the Master, and that the human consciousness will be redeemed through its beneficent operations; and they are lovingly accepting God's demand and are evangelizing "the human self."—*Evanston News-Index.*

✧

New York, N. Y.

In introducing Edward A. Merritt, who lectured on Christian Science for Fifth Church of Christ, Scientist, Richard P. Verrall said:—

Christian Science makes its appeal primarily to thinkers, and to those who desire something more vital and inspiring than the ordinary forms of religion. The reconciliation of faith and works which has been effected through the discovery by Mrs. Eddy of the divine Principle of Christian healing, brings us back once more to the teachings and practices of the early Christian church and reminds us of the words of the Founder of Christianity, who said, "By their fruits ye shall know them."—*Correspondence.*

Testimonies of Healing

The wonderful blessings which my children and myself have experienced through Christian Science impel me to send my testimony. On Aug. 14, 1914, my little three year old girl lay in my arms, beyond all medical aid. We were just waiting for her to be taken from us when my mother asked me to send for a dear woman who had been healed in Christian Science. Until this time, when my loved one seemed slipping away from me, I had been very bitter against what I thought Christian Science to be, so it was with reluctance that I consented to try it.

At three o'clock in the afternoon the lady came, when the little one's condition seemed most critical, the fever being very high. After talking to me and explaining that God is our Life, she treated the child, who was instantly healed. The fever left, and the child was able to play with her sister and brother before falling into a more healthy, natural sleep than she had ever known. From birth she had been delicate. We had three doctors for her, and at last a specialist put her right leg in a cast and a brace on the other one. Since she had Christian Science treatment, her legs have become perfectly straight and she wears ordinary shoes, no supports of any kind. Under the care of the specialist she had seemed for a while to improve. I was giving her five different kinds of medicine at half hour intervals, but finally she could no longer take medicine or retain food. Hers was a peculiar and rare case, according to medical science, and of interest to our Stockton doctors, two of whom offered to give their services free to experiment; but I refused. It has been a pleasure to know of many who have been healed by Christian Science through the healing of our baby, and many are seeking to find the cause. The child is now so healthy and fat that people can hardly believe she ever saw a sick day.

Several months later I was awakened one night by my little boy, five years old, who had a high fever and was delirious; in fact he had every symptom of acute lung trouble. I telephoned to the Scientist who had done the work for my little girl, and she gave him absent treatment at eleven o'clock; but my fear was so great that the fever grew worse, and at one o'clock I again called her to tell her of the alarming symptoms. After promising to treat the boy, she told me to read page 410 of Science and Health. A sense of peace came over me and the child's breathing became easier, but as he still seemed to have some fever at two o'clock I telephoned to her again. I shall never forget the great joy I experienced when she told me the child was healed. On returning to his bedside I realized in a few minutes that he was sleeping naturally and had no fever. He awoke in the morning without a trace of the severe experience of the night before and played out of doors as usual all day.

I feel greatly indebted to the loyal Scientist who first brought me the glad tidings and did so much for my little family and myself. I am especially thankful for the spiritual uplift, the true understanding of God, which Mrs. Eddy has revealed to the world through Christian Science; it brings rest to the heavy laden, life to the dying, and light and joy to all.

Another most beautiful demonstration of the power of Truth we experienced when our baby suffered from heat prostration, lying all day in a semiconscious condition, with high fever. I called a practitioner on the telephone in the morning and she gave her absent treatment. As the child seemed dangerously sick to all who saw her, I became extremely anxious. At two o'clock in the afternoon, our fear being so great, I again asked for treatment for her, and in a few minutes the baby asked for some milk. When her father came home in the evening, I called the practitioner and told her of the fear which he had concerning the child, and fifteen minutes after the treatment she was perfectly healed. Next day she ate very heartily, whereas under a doctor's direction sometimes it is many weeks before a patient recovering from fever is allowed solid food. Surely God's word is "quick, and powerful, and sharper than any twoedged sword." This has been proven again and again. One evening baby fell, striking her head sharply on the window-sill, and it was several minutes before she regained consciousness. The healing from this by Christian Science was instantaneous.

I am grateful every day for Christian Science, and wish to express my appreciation of the *Sentinel*, which is a great help to me.—Mrs. W. H. Watters, Stockton, Cal.

✧

I take pleasure in testifying to the healing power of Christian Science in sickness, accident, sorrow, business difficulties, and other problems of earthly existence. For many years I had been searching for God, feeling certain that only sufficient knowledge was necessary to enable me to live so as to be successful, happy, and contented. I sought without prejudice, but found that material philosophers offered nothing better than an unknowable God or first cause. I found that "mental science" offered many nice sounding phrases, which could be used for self-hypnotism or autosuggestion, but that it had no basis. The study and proof of Christian Science has set at naught these erroneous beliefs in a power apart from God, divine Mind, and has given me a sure foundation in the ever-presence and omniscience of God.

The first reading of Science and Health convinced me that it contained the truth about God, man, and the universe, and though the way has been devious and thorny, faith in Truth has held me always in the Father's loving arms. At times I seemed to be engulfed in sin and disease and felt that I did not understand, but a more earnest study carried me through the waves of error to the haven of a clearer knowledge of divine Mind.

Many trials have come to me during the past ten years. Several years ago, while in a small southern city, a fireworks bomb struck my forehead between the eyes, crushing in the base of my nose and splintering the bones of the forehead, at the same time filling my face with powder. With the terrific shock came the thought that God is our Life, and that nothing could harm me as God's spiritual child. I held closely to the "scientific statement of being" (Science and Health, p. 468) and the Lord's Prayer with its spiritual interpretation (p. 16). This clinging to what I had learned about God and man kept out of consciousness the belief in accident and pain. All pain stopped within an hour, although I was compelled to work it out myself, as there was no practitioner in town.

A surgeon offered his services, and three stitches were taken to close an artery which had been cut over the eye. I allowed him to do this, but refused an anesthetic. After arriving home, although the pain had been overcome there were many other beliefs regarding breathing, sight, and so on, that had to be destroyed, consequently a telegram was sent to a practitioner in a distant city. The surgeon insisted on giving me a hypodermic injection so that I could sleep, until he was finally told that I had Christian Science treatment and could sleep without drugs. He left the needle and tablets, but the ninety-first and twenty-third psalms, together with Science and Health, proved to be indeed restful, though this was contrary to the doctor's prophecy.

Digitized by Google

Thanks to the power of infinite Mind there was no fear, hence no fever, and on the following morning the surgeon found my pulse and temperature normal. Within a few days I could see again, although some time elapsed before the sense of sight was fully restored; also the straightening of the nose and forehead has proceeded continuously, but it was two years before the skull felt fully knit together. A month after the accident I was attending regularly to business.

The healing power of Truth was shown likewise in the case of a broken toe, in healing chapped hands, colds, and an acute attack of bronchitis. When confronted with the passing on of loved ones, the knowledge that God is our Life and that all of His ideas are forever inseparable from Him and from each other, carried me through these experiences safely and with increased knowledge of divine Love's ever-presence. The greatest blessing of all, however, is the peace and confidence which comes to us in the spiritual study of the Bible in connection with Science and Health, and the resultant desire to become pure and to have that Mind in us "which was also in Christ Jesus," so as to be able to take part in the healing work of Christian Science. I am sincerely grateful for this revelation.—W. N. Holmes, Chicago, Ill.

✧

Many times I have picked up the *Sentinel* or the *Journal* and derived just the help I needed from some testimony. It is therefore with joy and gratitude that I send mine in the hope it will help some one as I have been helped. The blessings I have received are without number. Before coming into Science life was a burden to me, and I was so discontented and unhappy that I did not care to live; but this has all been changed to joy and peace, and a spiritual uplift which is far greater than the physical healing. I had many healings, but was always opposed to Science until I was instantaneously healed after being in bed a week, not able to lift my head or taste food. The physician said I would have to undergo an operation, but after having one Christian Science treatment I could not get down stairs to prepare a meal fast enough.

Then I thirsted to know why I was healed, so studied from five to eight hours a day. In seven months I gave birth to a beautiful baby girl. The same day I sat up, the third day took all care of the baby, and in a week rode fifteen miles over rough roads with her, to go to the dentist. We have never used material remedies with the child and she is a constant joy. The doctor predicted terrible things when I appeared on the street the first time, but I am thankful there are no laws of disease in God's universe. The baby has been healed instantaneously of bowel trouble, burns, and fever. I have been healed of numerous ills,—mental, moral, and physical. We have had many wonderful demonstrations of supply; I asked daily for guidance in knowing that true substance is not in material riches.

I feel so grateful for the truth that is helping me from sense to Soul, also to Mrs. Eddy for being so pure as to make plain to all the true way of living. I have learned to rejoice always, for "underneath are the everlasting arms."

Willetta McPherson, Orondo, Wash.

✧

I began the study of Christian Science in 1905 entirely for the physical healing, after losing all faith in *materia medica*. For twenty-five or thirty years I suffered from the worst form of asthma, with all its attendant complications, but was healed of this distressing disease through Christian Science. I am thankful to God for this convincing proof of the power of divine Love, and am also grateful to our dear Leader, Mrs. Eddy, for giving to humanity this blessed truth that makes free. I was treated for over a year, and the healing came very slowly, but gradually I have been enabled to gain a better spiritual understanding of God and of man's relation to Him, and for this I am deeply thankful.

I am learning day by day that God is our ever present help in trouble, and I feel like exclaiming as did the psalmist, "Bless the Lord, O my soul!" My sincere desire is daily to learn more and more to trust God completely, to seek to do His will, and to show my gratitude to Him for Christian Science by living it and loving more. I trust this testimony may influence some discouraged and suffering one to seek and realize this healing truth.

Elizabeth Peacock, Clarksdale, Miss.

✧

About a year ago I had occasion to go underneath an elevator to make some repairs. As it did not descend below the first floor I felt perfectly safe, but overlooked the fact that the ponderous weight of some two tons descended to where I was working. While I was busily engaged adjusting a spring, the elevator was suddenly run up to the sixth floor, the weight coming down and crushing my left foot against the stone wall. I was held there for several minutes before being liberated. I tried to realize that accidents are unknown to God, immortal Mind, but the pain was so intense that I could not collect my thoughts.

Finally, when the power was reversed and the weight lifted, I was carried to the first floor and my foot examined. The boot was torn to pieces, the foot to the instep was badly discolored and apparently crushed. On my way home in an automobile I called at the house of a Christian Science practitioner and asked for treatment. After arriving home I was placed on my bed and tried to read Science and Health, but suffered so from the pain that I could read only a few words at a time. In about half an hour after I left the practitioner, the pain stopped and it did not return. A second treatment was given me that night. Next morning the discoloration was nearly all gone, and after a third treatment, with the aid of a cane I walked two blocks. The third day, Sunday, I put on my boot and walked about half a mile to church. On Monday I went to work as usual and have not lost one hour since.

I feel very grateful for what God has done for me through Christian Science and hope my testimony may be the means of helping others.—J. C. Givens, Winnipeg, Canada.

✧

Christian Science help came to me in dire need. My physician had allowed me only a limited diet, which he said I must follow all my life, but that even then I could never again be well. Two friends, though not Christian Scientists themselves, urged me to go to a practitioner, so after a while I yielded. I must have been healed in the first treatment, for I had no pain or other difficulty, though I ate whatever I wanted. The proof of my complete healing was shown later, when I was obliged to be examined by a physician in order to take out insurance papers. He then commented particularly on my sound physical condition.

For those who hold a doubting attitude toward Christian Science I wish to relate a recent experience. In childhood I met with an accident which resulted in a peculiar break of the right arm. Since then I had never been able to get it up as far as the other arm, and in consequence had to use the left arm instead. After beginning to study Christian Science I thought of having treatment for this difficulty, but as the arm rarely caused me pain, I decided not to do so; however, I kept in mind this thought: "Man, as God's offspring, must be spiritual, perfect, eternal," and "When 'the Word' is 'made flesh' among mortals, the Truth of Life is rendered

Digitized by Google

practical on the body" (Unity of Good, pp. 24, 39). My effort was to realize that the right way to live is to dwell on perfection instead of imperfection. I do not know when the healing took place, but one day I found I could raise my right arm so as to use it as well as the left. Although the physician had told me nothing could ever be done to the bone of the arm and I had remained in bondage to that belief for thirty years, now I am free.

No words can prove adequate to express the gratitude one feels when he has grasped from experience the meaning of the text, "Ye shall know the truth, and the truth shall make you free." My prayer is to live my gratitude. For Mrs. Eddy's loving work and all other Christian Science help I am deeply grateful.—Evelyn M. Denison, Yonkers, N. Y.

✧

When Christian Science first came into my life, over five years ago, I was a very delicate girl with many ailments, the worst of which was extreme nervousness. All sorts of remedies had been tried, but they did no permanent good. My sister, who was then beginning to be much interested in Science, lent me her copy of Science and Health, which we read straight through together, and long before it was finished I knew Christian Science was the truth and the religion I had been wanting always. I was much benefited at the time, but did not work hard enough, and was not ready to give up many material pleasures that were considered necessary to my happiness, so I continued for quite a while to read the letter without imbibing the spirit. It is only when we honestly try to apply what we know of Truth that we obtain results.

After many bitter experiences I turned to Christian Science with all my heart, and now am a different person, healthier and better than I have been for years. The nervous condition has greatly improved, and fear is slowly yielding to Truth. With the help of a practitioner I was healed in a few treatments of an abnormal growth, and my little son was healed instantaneously of a severe cough. Greatest of all is the spiritual and moral healing, which is wonderful. Mrs. Eddy tells us to "emerge gently from matter into Spirit" (Science and Health, p. 485); it makes no difference how long it takes, for Science never fails.

For all these blessings I am exceedingly thankful to God. I am also grateful to Mrs. Eddy for showing us the truth which we can all prove for ourselves, if we are faithful and obedient, however difficult our surroundings may seem.

Madge Stott, Hallaton, England.

✧

I am not a member of the Christian Science church, but wish to testify to the benefits I have received from the healing power of Truth. Over twenty years ago I underwent an operation for fistula, but it was far from successful, leaving me in such a condition that material means had to be resorted to twice daily. Also for a number of years I was a sufferer from hemorrhoids and hemorrhage; at times the suffering was so great I was unable to be on my feet all day, and it finally became so intense that my general health began to fail. Several good physicians were consulted, all of whom agreed that another operation was absolutely necessary; but having had some knowledge of the surgeon's knife, both from observation and from experience, I did not want any more of it.

A good friend insisted on my trying Christian Science, but my faith was too weak to believe that such long standing diseases could be healed by this treatment. About the first of March, 1918, however, the suffering was so great that I came to the conclusion that something must be done, so decided to take my friend's advice. I called a practitioner, stated my case, and asked for treatment. Much to my surprise my general health began to improve at once, and after taking one treatment a week for four weeks and giving a little time to reading Christian Science literature every day, I was healed. Today I am in better health than I have been for twenty years.

For all these blessings I am thankful to God, and grateful to the one who made available to the world this healing power of Christ, Truth.—O. E. Horrum, Los Gatos, Cal.

✧

Before coming into Christian Science I was very unhappy and irritable; it seemed as if I could not find my place in life. While in a state of almost utter hopelessness of ever being as other people, Christian Science was presented to me by a colleague in the office in which I then worked. I used to wonder about this girl and wish I were like her. I became deeply interested and secured all the literature necessary to my study. It was not long before I was taken up on the mount of revelation, and words cannot describe the wonders I saw.

After this I was taken down into the valley, where a mental chemicalization took place which was misunderstood in the home and by all who knew nothing of Christian Science. Beliefs of sickness, sin, and what not of mortal mind illusions came to the surface to be destroyed. My books were taken from me, I was put under a physician's care, and later sent to a sanitarium, but all this well meant attention was of no avail. I grew worse until nothing remained but a faint knowledge of Christian Science. Just as soon as I was allowed to have treatment, the clouds began to lift. Through the help of a practitioner I was raised from the depths into a life of true happiness and usefulness to others.

I am truly grateful for my experiences and for all the loving helps along the way expressed by fellow students, through the literature, and through the Wednesday evening and Sunday services of the Church of Christ, Scientist. The daily study of the Bible together with our text-book, "Science and Health with Key to the Scriptures" by our revered Leader, Mrs. Eddy, is lifting the veil from the understanding and I am beholding more and more of God's allness.

Emma Ringel Klaus, Pittsburgh, Pa.

✧

When I became interested in Christian Science about seven years ago, I had reached the very depths of human suffering and bitterness, after having been a semiinvalid for six years. During this time I had followed the advice of a number of reputable physicians and specialists, but without any permanent relief. I shall, however, always remember very kindly their efforts in my behalf, and now rejoice that the last one I consulted in Washington, D. C., which is my home city, was broad minded enough to suggest my trying Christian Science, stating that there was nothing known to medical science that could give me any relief. With the assistance of a Christian Science practitioner I was enabled in the short space of four weeks to resume my usual duties.

Besides the physical discomfort, everything in my little world seemed to have gone wrong, but I am now happy to say that all these conditions have been changed through a better understanding of the Bible and of man's relationship to God as revealed in Science and Health. In Christian Science I have indeed found the "pearl of great price," for aside from the material benefits, which have been numerous, there has come a peace which the world can neither give nor

Digitized by Google

take away. Most of my time during the past seven years has been spent in office work, and the past two years I have done very heavy work requiring special care and of a most exacting nature. I am sure that in the past five years I have not been away from my office duties on account of indisposition more than five days altogether.

I am particularly grateful for the privilege one has in the understanding of Christian Science of being able to point a way of relief to our fellow man, no matter how greatly or in what way he may be afflicted and troubled. Again I am grateful that Mrs. Eddy was pure enough to comprehend a higher meaning of the Scriptures and give it to humanity in such a form that all may study and find its practical benefits.—ELIZABETH SLYER, New Smyrna, Fla.

✧

Christian Science is the greatest blessing that has come into my life. It was presented to me when my extremity was "God's opportunity." My little girl was very ill and according to the doctor's verdict was passing away from an illness which began with chicken-pox and developed into torpid liver and finally diphtheria. A dear friend who was a Christian Scientist told me that God could and would heal my child. These words brought comfort to me, as I had striven to serve God from an early age and prayed unceasingly, but my prayers seemed of no avail. I took the child to a Christian Science practitioner, who gave her a treatment, and in less than three hours she asked for food for the first time in three days; in five days she was herself again.

Christian Science has healed me of several discordant conditions which physicians pronounced incurable, and in December, 1914, a most beautiful demonstration took place in our home at the birth of our son. Through the help and careful guidance of a Christian Science practitioner every material law was broken, and all duties were resumed after a week. The baby has not had a single material remedy. There have also been other healings in our family, such as the overcoming of sick headache, sprained ankles, ptomaine poisoning, stomach disorder, and rheumatism. My mother was healed of paralysis of the spine.

I am indeed grateful for the physical healing, but most of all for the higher concept of God, man, and the universe that I am gaining. Through the understanding of God as taught in Christian Science our home has become more harmonious than ever before. Words are inadequate to express my gratitude. I feel I owe a great debt of love to our revered Leader, who so patiently brought to mankind this new-old religion.—HENRIETTA W. SAWYER, Houston, Texas.

✧

Deep gratitude impels me to testify to the great blessings I have received through Christian Science. In July, 1914, after having doctored for nearly a year for something that had grown over my eyes, my mother had them treated by a Christian Science practitioner and they were healed in a short time, so that I was able to read all I wanted to in just a few days. I can now see to do anything I wish to do. During that year I missed school and music, but have been able to make it all up with the help of Christian Science.

LUCIA BRONSON, Colville, Wash.

I can testify to the truth of what my daughter has written, and want to express my deep gratitude for what Christian Science has done for me. It is an ever present help in all my daily trials. I have had many demonstrations of the power of Truth and am thankful to God for the understanding I have. I am daily trying to gain a better understanding of the Bible and of Science and Health.—MRS. W. H. BRONSON.

From Our Exchanges

[*American Lutheran Survey*]

Underneath the noise and smoke, and the struggle of the world, the silent power of the Christian religion is working steadily onward toward the transformation of the whole human race. Wars have raged and ceased in former ages, kingdoms have risen and fallen, waves of worldliness have swept over vast areas, devastating the fairest fields of civilization; but they have found their cliffs, have been broken and have receded, and this indestructible life has made the devastated areas to bloom and to bear more beautifully and more fruitfully than before.

Among all things mutable the Word of God, the heart of the Christian religion, stands immutable and indestructible. When other powers wane it waxes; when material and intellectual achievements of men crumble and disintegrate, the spiritual life produced by the Christian religion but gives additional proof that it is everlasting. Moreover, the Christian religion is the only transforming power the world has ever known. It is the religion of the true life. It contains both the principles and the power by which redemption is applied and by which life is transformed.

[The Dean of Canterbury in *The Record*]

The main concern of the writer of every epistle is to expound and bring home to his readers the truths which were finally and fully revealed by the death, resurrection, and ascension of Christ, and then the outline of the Christian life and the Christian character seems to arise easily and naturally as the result of these truths. We shall never produce a fuller realization and observance of Christian ideals until we have produced a fuller and deeper conviction of such truths. Once produce that, and the improvement of our institutions and our habits will follow as the light follows the rise of the sun. Our great national danger is, that by a perverted use of scientific truth and a false criticism of Scriptural truth the hold of our people on "Jesus Christ and him crucified," with all the deep convictions which that involves, has been weakened.

[Dr. J. D. Jones in *The Christian World*]

That is a suggestive and significant incident in the gospel story which tells how the voice from heaven which came to Jesus for his encouragement in the last tragic week of his life was variously accounted for by the people who heard it. Apparently everybody heard a sound of some kind, but they put differing interpretations upon it. Christ himself heard in it his Father's voice; the multitude—*i.e.*, the great majority of the bystanders—said it was a clap of thunder; a minority declared, "An angel hath spoken to him." Here is the same sound producing different impressions upon different people. What accounts for the difference? This is Godet's explanation: "The voice was perceived by each in proportion to his spiritual intelligence." The difference in impression was not due to any difference in the physical capacity for hearing: it was due to a difference of soul.

[Samuel Zane Batten, D.D., in *The Biblical World*]

The purpose of God in the world, so far as we can understand that purpose, is the preparation for the kingdom of God of the largest number of great lives, developed in mind, disciplined in will, loving in heart, trained in the divine art of living together, and cooperating with God in the fulfilment of His purposes. Sin is the missing of this mark; it is the refusal of man to enter into God's will and to serve His

Digitized by Google

purposes; it is the choice of the smaller self against the greater whole; it is the preference to stoop when God asks man to rise; it is the refusal to move in line with the divine process, because of unbelief or cowardice. The life is lost when it misses this mark and fails to serve the kingdom and its uses. The life is saved when it finds this true end, lives in the purpose of God, serves the uses of the kingdom. The kingdom of God is a present fact, and man is saved or lost now in so far as he is saved for the kingdom or is lost to its uses.

[The Rev. the Hon. W. E. Bowen, M.A., in *The Church Family Newspaper*]

If we think of God as a creator who stands aloof from His creation, who watches from afar the working of the laws which He has ordained, then no doubt we feel how strong and relentless is the grip of the atheist's argument. But we who profess and call ourselves Christians entertain no such idea of the character of God. We associate with the thought of God Bethlehem, and Nazareth, and Jerusalem, and Gethsemane, and Calvary. So God loved the world.

There have been many martyrs in the history of mankind, —and before the last chapter of that history is written there will doubtless be many more,—but there has been none, and there will be none, greater than the Son of God. If we face the problems of life with that conception of God in our minds, they may continue to seem to us heavy and even grievous, but they will not appear to us to be absolutely intolerable. We shall still be able to lift up our hearts in faith and joy and thanksgiving and self-surrender.

[*Western Christian Advocate*]

There is the marvel of a quiet courage. It faces sacrifice with the assurance that there is no crown without a cross. It deliberately plans, and quietly, even with conscientious scruples, sets about to do the courageous thing, believing that all experiences, whether bitter or sweet, will work together for the soul's good. What power of quiet courage was manifest in the life of our Lord! How quietly he turned his footsteps toward Jerusalem! How courageously he stood and answered the test in Pilate's hall! How uncomplainingly he passed the weary hours upon the cross!

[*The Jewish Chronicle*]

"The Lord, the Lord is a merciful and gracious God, long-suffering and abounding in goodness and truth, keeping mercy unto thousands, forgiving iniquity, transgression, and sin." There is but one condition attaching to His gracious pardon,—that we must win it by our efforts of active amendment. Without any regretful looking back, the sinful life of the plain must be left utterly behind, exchanged for life on the heights of toilsome endeavor.

[Rev. Thomas French, Jr., in *New-Church Messenger*]

A spiritual watchman is one who is spiritually awake, one who is looking from things temporal to things eternal, one whose eyes are open to the light of life and whose heart responds to the voice of love. The voice of the watchman on the walls of the Word of God is the voice of divine love speaking out of the heart of God and proclaiming a wisdom not of man.

[*The Christian*]

The war is forcing men back upon elemental realities. It is removing—not only from national life, but from individual faith also—the things that can be shaken. But it is rooting the firmer in Christian consciousness the things that cannot be shaken. And this is one of them: that God is never indifferent to human affairs; that because He knows and loves we may call upon Him in entire confidence; that we have to do with a faithful creator.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

As the advertising pages of the *Journal* and *Herold* go to press the 20th of the month, to insure publication in a desired number requests for changes in a church or practitioner's card should reach the Publishing Society at least six weeks previous to the actual date of issue.

"Law and Work," one of the pamphlets recently issued by the Publishing Society, is now printed in the New York point, the American Braille and the English Braille systems of type, for the use of the blind. For convenience in reading, the pamphlet has been printed in two volumes, and may be purchased at the following prices: Single copy (in two parts), prepaid, $1.00; six or more copies, prepaid to one address, each 75 cents. When ordering please specify whether the New York point, the American Braille or English Braille is desired.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study. Also printed in Dutch and German.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Subscription Price

Payable in advance

Annual subscription price, postpaid, in the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL will begin with the current issue unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVI indicates the year 1916; XVII is used for the year 1917. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year, or two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Items of Interest

The construction of concrete highways is going on in twenty-two cities and towns in Connecticut, and when these contracts have been completed there will be about seventy miles of concrete surfaced pavement in that state. The highways are 18 feet wide and cost $15,000 a mile. The longest single stretch of concrete road in Connecticut is two miles in Cheshire, on the main highway from Plainville to New Haven. Considerable progress has been made in concreting the old Boston Post Road between Hartford and New Haven. These concrete highways are being built with the expectation that no other surfacing substance will ever be applied to them. There is said to be little complaint from horse owners about the roads, and as they are not slippery they are better for automobiles than asphalt or any of the bituminous pavements. Reports show that they are costing the state for repairs just $32.80 a mile. Connecticut has about twelve thousand miles of highways, of which about sixteen hundred miles have been improved during the past twenty-one years at a cost approximating fourteen million dollars.

At the request of the authorities of the Canal Zone the United States Bureau of Fisheries recently sent there 450 black bass, 500 rock bass, 1000 catfish, and 800 sunfish, which have been distributed in Gatun Lake in order to determine whether such fish will thrive in its waters. As this lake varies from an abundance of shallow water to a depth of 85 feet, and as it is very irregular in shape, dotted over with islands, and generally bordered with forest growth, it seems to be an ideal place for the propagation of fish adapted to a tropical climate. If the present experiment succeeds, this lake, which covers 164 square miles, might furnish enough fish to meet a considerable part of the demand for fresh fish in the Canal Zone.

Giant Forest, the privately owned tract of the world's largest trees in the heart of Sequoia National Park, Cal., is about to pass into the hands of the Government through cooperation between the Interior Department and the National Geographic Society. Congress appropriated $50,000 to purchase the land, but the owners refused to sell unless adjacent holdings valued at $20,000 were taken at the same time. An option on the entire tract was secured, and the managers of the Geographic Society appropriated the $20,000 to make possible the immediate payment of $70,000. In the Giant Forest, which is a table-land about two miles in diameter, are trees said by experts to be 4000 years old. One of them, the largest in the world, has a circumference at its base of 209 feet and towers 279.9 feet into the air.

Canada's industrial disputes investigation act, passed in 1907 and designed to prevent strikes and lockouts in mines, railroads, street railways, steamships, telegraph and telephone lines, gas, electric light, water, and power works, is receiving considerable attention in connection with a proposed amendment to the existing Federal statute which provides for mediation, conciliation, and arbitration of such controversies as resulted in the eight hour law passed by Congress last September to prevent a threatened railroad strike. The proposal would add a provision that in case the methods of accommodation now provided for shall fail, a full public investigation of the merits of every such dispute shall be instituted and completed before a strike or lockout may lawfully be attempted.

The linking up of the Siamese Southern Railway line with Singora and Trang, the most southern and important ports in the Siamese Malay States, has now been carried out, the line from Bangkok to these cities having been opened to traffic on Oct. 8, 1916. According to the present arrangement the journey from Bangkok to Trang will occupy four days, two nights being spent at rest houses erected at Chumporn and Tung Song. Travelers to Siam may now proceed from Singapore by way of Penang in the British Federated Malay States to Trang and thence by rail to Bangkok. The total length of the southern line now under traffic is 972 miles, of which 575 miles represent the main line.

Judge Learned Hand, in the Federal court for the southern district of New York, has ordered that all proceedings in the injunction suit instituted in his district to test the constitutionality of the Adamson eight hour law by the New York, Ontario & Western Railway Company, be continued until a decision is reached by the United States Supreme Court on the test case now before it. The order further directs that the railroad from and after Jan. 1, 1917, shall keep its books and accounts in such a manner that, if the constitutionality of the act is upheld, it shall ascertain the amount due to employees affected and pay them the amounts due.

Representatives and senators to Congress from Massachusetts have received the following telegram from one of the largest shoe manufacturers of Lynn, through a former president of the Massachusetts Retail Shoe Merchants and Manufacturers Association: "The condition in the leather market is extremely serious and prices are advancing daily. If present conditions exist for a much longer time the manufacturers will be unable to secure stock enough to make shoes for the American people. Will you aid in starting a Governmental investigation through the proper channel to protect the manufacturer, retailer, and public?"

The President of Cuba signed a decree on Nov. 16 granting a subsidy of $9650 a mile for the construction of a railway connecting the city of Pinar del Rio and the port of Esperanza, on the north coast, with a connecting branch to La Palma. It is reported that the company will begin work at once. The new railway will traverse a rich agricultural and mineral section, including the valley of Viñales, noted for its scenic beauty. Viñales, the port of Esperanza, and La Palma are now connected with the provincial capital city of Pinar del Rio by a splendid highway.

The United States Supreme Court sustains the Pennsylvania state court award of $145,830 damages to the Sonman Shaft Coal Company because the Pennsylvania Railroad failed to furnish an adequate supply of cars. The amount allowed was triple the estimated actual loss, because of coal not mined and of higher cost of each ton mined at less than the mine's capacity. The railroad contended that the Pennsylvania court had no jurisdiction.

The Hydro-Electrical Commission of Ontario, Canada, has decided to undertake forthwith the construction of the projected canal, some twelve miles in length, between Chippewa Creek and Queenstown for the supply of 200,000 horse-power of additional electrical energy for the people's system. It is estimated that the cost of construction of the entire canal, together with its electrical equipment, will reach $9,000,000.

The longest bridle path in the United States, extending through an almost continuous belt of from twenty-five to thirty thousand acres of forest around the suburbs of Chicago to the north, west, and south, is in prospect. The Forest Preserve Commission is acquiring the land, and the bridle path is urged by the Chicago Equestrian Association. The cost of the land through which this path will run will probably be from eight to ten million dollars.

It is estimated that there are more than thirty thousand sawmills in the country. Each of these mills in operation will be asked by the Forest Service to make a detailed report of its production. Information is sought as to the total quantity of each kind of wood sawed, the number of laths and shingles manufactured, and the average mill value for each species.

Beginning Dec. 18, the firms composing the American Clothing Manufacturers' Association will grant increased wages to 32,000 employees. This will add about eight million dollars to the pay-rolls. The increase will be given to all employees, regardless of whether or not they are affiliated with the union.

The opening of the branch line of the South African Railways recently completed to Umtata was the occasion of a notable gathering. Umtata is 212 miles by rail from East London. The railway to Idutywa was completed in July, 1913, and the line to Umtata is a 58 mile extension of this branch.

In proportion to its population Norway is the greatest seafaring nation in the world. On Jan. 1, 1916, its mercantile marine consisted of 3486 vessels, with a tonnage of 2,756,391, or an average of more than one ton for each inhabitant, and practically the whole fleet is owned by Norwegian citizens.

Peanuts are among the chief sources of agricultural wealth of the Madras Presidency, India. The area under peanuts in 1915-16 was about one million seven hundred and fifty thousand acres. The total yield was estimated at 633,000 tons.

The Chicago & Alton Railroad plans to expend $9,000,000 on improvements, including grade reductions and double tracking. The first work will be double tracking part of the western division from Mexico to Boothe, Mo.

There were admitted into the United States in October 37,056 immigrant aliens, in September 36,398.

Jesus' Practical Example

STOKES ANTHONY BENNETT

"WHOM say ye that I am?" the Master once asked his disciples. Simon Peter answered for his brethren, "Thou art the Christ, the Son of the living God." Paul, reasoning with the Jews in the synagogue at Thessalonica, remarked, "This Jesus, whom I preach unto you, is Christ." In the Hebrew and the Greek tongues the words for Christ have an identical meaning,—"Messiah, the Anointed;" "the anointed One." The Hebrew term for "anointed" denotes consecration, while the Hebrew term for "consecration" signifies devotion to the service of God. Therefore it is plain that the mission of Jesus the Christ was to do not his own but the Father's will. In other words, his mission was to preach and to demonstrate absolute truth, that truth which is defined in Christian Science as a scientific knowledge of God.

Mrs. Eddy writes in Science and Health (p. 313): "Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." Because Jesus was Christianly scientific,—was possessed of an absolute or provable knowledge of God,—he was mighty. Because he was not content to accept and abide by so-called material sense testimony, but harkened to and was governed by spiritual sense evidence, he met with unparalleled success. Acquainting mortals with the Christ, the divine idea of God, Jesus was indeed the great Teacher and Wayshower of mankind.

Jesus was the most practical man as well, for to be scientific means to have "exact knowledge or perception." He who has an exact knowledge of any subject which is founded upon truth, must in consequence be the master of it. Such a one is equipped to handle his subject practically,—to set forth and to demonstrate its fundamental rules logically and correctly. Such a one is sure of his course as it relates to the subject in hand, and being sure of it he forges ahead, knowing neither doubt nor defeat.

The subject which was uppermost with Jesus was the salvation of the race, and he knew full well that to be successful in handling this all-important subject he must begin aright. He knew too, as Science and Health (p. 170) states it, that "spiritual causation is the one question to be considered, for more than all others spiritual causation relates to human progress." Through his teachings we are convinced that God is the source and support of whatever really is, and we are also convinced that human salvation rests wholly upon a scientific understanding of God and of His universe, including man.

Through meditation and prayer, reason and revelation, the Master gained the perfect understanding of God as Spirit, Mind, Principle, Life, Truth, and Love, and of God's entire creation as spiritual. In this manner he realized the allness of God and His ideas, and saw the utter powerlessness, nothingness, and illusion of that which seemed to be unlike or opposed to Truth, namely, evil, matter, sin, sickness, sorrow, discord, and death.

In his every demonstration Jesus brought to light the omnipotence and omnipresence of God, good. When the sick and the sinful came to him for help, and were ready to be helped, he forgave them their sins and healed them of their diseases. That is to say, he uncovered and destroyed for them their belief in sin and sickness through an exact or scientific knowledge of Him who, as the Old Testament affirms, is "of purer eyes than to behold evil," and cannot look on iniquity; who forgives all our iniquities, and heals all our diseases. Jesus never for a moment ignored or overlooked the difficulties which appeared to bind so many of those with whom he came in contact; instead he overcame them. Humanly speaking he took cognizance of the ills and discords of the flesh, but metaphysically he looked away from the flesh and its conditions and saw naught but the infinitude of harmonious Spirit and its manifestations.

The faithful application of this spiritual understanding, the bringing to bear of the real and true upon the unreal and untrue, wiped out asserted inharmony and distress and established concord and peace. It enabled the Master not only to heal all manner of sin and sickness, but also to put under foot every so-called law of matter which seemed to operate contrary to the perfect laws of God, Spirit, Mind. In a word, it enabled him to show mankind how to work out their own salvation,—to get the victory over the world, the flesh, and evil.

While emphasizing the value of Jesus' practical example, a clergyman of one of the older denominations, in the course of a sermon some time ago, said, "If Christ could heal the sick, and the apostles could do it for more than three hundred years afterward, why cannot we do it now, if we are true Christians?" It would indeed seem that no true Christian could read the words of Christ Jesus, and recount the works which he performed as illustrations or object-lessons of his words, without recognizing their supreme worth and setting himself to gain a demonstrable understanding of both these words and these works.

That the Christian church should have set aside for many hundred years the mighty demonstrations of the Master and of his immediate adherents, and should have looked upon these as intended only for a certain period and a certain people; and that it should have been content to make preaching rather than practice the test of its ability and influence, is quite remarkable. It is becoming more and more apparent that if the race would win what it rightly desires,—health, harmony, happiness, and success,—it must do so through a scientific, demonstrable religion, the religion which Christ Jesus founded and which was responsible for the many signs and wonders in the first century.

The Master plainly declared that one's love for him and for his accomplishments would be manifested in the keeping of his commandments,—not merely a few of them, but all of them. Now two of Jesus' commandments were: "Preach the gospel," and "Heal the sick." Nowhere did he say, or even intimate, that the injunction to preach could in any wise take the place of the injunction to heal. According to the record of his own public career it would seem that he did much more healing than preaching.

Copyright, 1916, by The Christian Science Publishing Society

Digitized by Google

While the scribes and the Pharisees, the rabbis and the doctors of the law, were occupying their time in discussing and dispensing the mere letter of the Hebrew Scriptures, Christ Jesus was going about among the people, quietly and meekly doing good; that is, he was daily demonstrating the divine power to heal and to save as revealed in these Scriptures, and at the same time was modestly teaching the life-giving truth which lay back of his demonstrations. To the Master action meant vastly more than speech; practice vastly more than preaching. While he was aware that one must have a correct knowledge of the letter of Holy Writ in order to solve one's problems, he was also aware that the letter without the spirit—or, as the apostle James puts it, "faith without works"—is meaningless, dead.

Throughout his ministry the Master strove to have mortals see that God was the source of all his inspiration and strength, and that of himself he could do nothing. When wonderment was expressed at his accomplishments, he quickly pointed to God, to divine Principle, Life, Truth, and Love, as the power underlying his success. The Master was strictly opposed to aught that savored of personal worship, and he sternly rebuked those who in any way attempted to worship his personality. He even objected to being called good, saying that only One is good, and that this One is God. Jesus continually enjoined his followers to seek a provable understanding of God, divine Mind, and to cling steadfastly to this understanding, assuring them that if they would do this they would be able to repeat his works.

That the power of God to save men physically, mentally, and morally has never in the least lessened, but that only mankind's practical understanding of this power has lessened, thus precluding the winning of the rewards won by the Master and by his immediate adherents, is the contention of Christian Science. This Science teaches, however, that all who will here and now take up their cross and walk in the footsteps of the great Teacher and Wayshower, thereby overcoming sin, sickness, sorrow, and discord through a spiritual or scientific apprehension and application of the Scriptures, can reach the divine heights of success that were reached hundreds of years ago in Judæa and in Galilee.

The countless thousands throughout the world who have been healed, transformed, and started on the straight and narrow way by Christian Science, are living witnesses to the sure, practical worth of the Master's great and glorious example. These are they who have proved the verity of the command, "Believe on the Lord Jesus Christ, and thou shalt be saved."

Spiritual Law and Growth

THURLENE I. WADSWORTH

In the transitional stage of thought through which we as mortals pass in our growth out of a material sense of existence into the spiritual understanding of what constitutes our true selfhood, there are many helpful lessons to be learned when once the eye of faith is open to the ever active, omnipresent operation of the law of good in our daily affairs. A recent lesson brought to me such an illumination of spiritual understanding that I desire to give it out in the hope that it may help others.

Early in the fall it became necessary to separate into three sections a plant of the common ribbon-grass variety, the roots of which had become pot-bound. So far as it was possible the division was a fair and equal one, each part being planted in the same kind of soil and the same kind of flower pot. One plant was placed in a sunny bay-window, where it was regularly watered and where the bright sunlight coaxed it into an immediate response. The other two were carried to a third floor room where the light was poor, where the plants were frequently chilled, and where water was not always supplied when needed.

One day it dawned upon me that these three plants were unfolding to my consciousness a symbolical expression of the action of Truth in human consciousness. They typified three expressions of mortal thought, in each of which was the possibility of perfect unfoldment toward a spiritual ideal. In each case the soil was good, but the conditions under which each had to unfold were very different. In the one case the growth was quick and spontaneous. That thought which has awakened to the Christ-ideal and is alert to the necessity of guarding and protecting it from the mortal conditions which would chill and starve it, will see that this budding, upspringing plant, this tender, newly awakened desire for godlikeness, is kept in the warmth and light of divine Love, is given that water of which if a man drink he shall never thirst again. Under these life-giving conditions growth will be as symmetrical and normal in human experience as in that of the plant. Those students of Christian Science who have been fortunate enough to take their first steps in an environment which fosters and nourishes every right effort, usually give the same evidence of rapid and beautiful growth as did the first plant.

After several months the other plants were apparently holding their own, but as there was no evidence of growth or activity in either of them, it was rather impatiently decided that they were not worth taking care of; but then came the thought that they had really done a great deal, and a lesson began to unfold which will never be forgotten. A sense of deep gratitude for the vitality and eternal activity of Truth began to fill my consciousness; a realization that here was a type of an indestructible idea of Mind expressing God's eternal mandate of growth, and because of the irresistible law of Life it had gone on living in an atmosphere which seemed antagonistic to its welfare and repressive to its growth. The analogy to the growth and experience of many seekers after Truth became apparent, and with it was awakened a compassionate love and tenderness for those "little ones" who were apparently just standing still; who needed a warmer, tenderer atmosphere in which to expand, a little more light let in upon their darkness of doubt and fear, and full draughts of the water of life of which all may so freely partake.

With a glad, joyous appreciation of what would surely follow, I placed the two plants by the side of the first one, ever mindful of that which they were symbolizing, ever looking for a fresh shoot to spring from the center of each plant. As day after day passed and this had not appeared, I began to wonder if it were not too late. Had mortal mind's seemingly inexorable laws chilled the native impulse and energy of these plants?

The question then presented itself, Is it possible that the real man could be so deeply buried under mortal beliefs that the energizing, life-impelling declarations of truth could not bring forth the normal evidences of his being? Then came another lesson from the plants. When patience had had its "perfect work" there appeared one day a tiny point, just an indication that deep down out of sight something was effectively at work. This meant a rebuke to the doubting quality of mortal mind which, like Thomas, insists that it will not believe except it can both see and feel materially. What a lesson was thus learned! There came in that moment a deeper understanding of our beloved Leader's words (Science and Health, p. 242): "In patient obedience to a patient God, let us labor to dissolve with the universal

Digitized by Google

solvent of Love the adamant of error,—self-will, self-justification, and self-love,—which wars against spirituality and is the law of sin and death."

After the first indication of growth in the plant there seemed again to be a period of inactivity. The budding promise was not being externalized. Every worker in this field of spiritual activity knows how essential it is lovingly to watch and to nourish the budding spiritual desire, the reaching out of the human heart for its "rightful nutriment" (Science and Health, p. 365). Perhaps one may be tempted into a sense of human anxiety, into questioning why his care is not more quickly rewarded, why after the tender shoot appears it does not at once blossom forth into fragrance and beauty.

While thinking deeply along these lines, a look at the plant brought immediate discernment of the cause; all the old leaves, imperfect and unlovely to the eye, were still attached to the plant, shutting out the light and absorbing its vitality. They were at once cut off, leaving nothing but the new and active expression of life at the center, frail and tiny as it seemed. The wondrous growth which followed brought each day a new sense of rejoicing, a glad appreciation that the "old man with his deeds" can be put off, and that the "new man" may spring forth in all the "beauty of holiness," with nothing of a material nature to shut out Love's omnipresence or to retard his growth heavenward.

✧

Sublimity of Truth

CHARLES A. DANFORTH

THE writer knows a man who had labored for years under the seeming burden of a great weakness, and who was made so sick and brought so low morally by drink and profanity that he contemplated an erroneous way of leaving the world. Instead of following out this plan, he sought out a Christian Science practitioner and appealed to him, "For God's sake help me!" This appeal to Christian Science, after material efforts had failed, revealed a childlike trust and full dependence on God's word understood, as an absolute healing power in time of need. When this man left the practitioner his thought had become so purified and uplifted, his whole basis of reasoning had become so regenerated, that he found himself healed. The false appetite, the desire for that which was not good, the belief that pleasure and pain existed in matter, had all left his consciousness; and in place there came the uplifting assurance of his true self, the self that reflected God, the self that could never express anything other than peace and harmony and health and happiness. Like unto those who were healed in Jesus' time, and those who are healed in Christian Science today through the Christ-understanding of God's spiritual law of good, this man had found the truth that frees human consciousness from material viewpoints and erroneous beliefs, and therefore frees the body from all expressions and manifestations of such beliefs.

We may glean from this man's experience a lesson,—that, whatever our walk in life may be, if health and strength and freedom from all untruth is our aim, we must trustfully and understandingly realize that truth not error, harmony not discord, divine Principle not human device, are the real things that guide and govern and protect us in the daily activity of our work. It is not merely the word of God affirmed and declared that demonstrates the healing power of Truth, but the word spiritually understood, consecratedly lived, and intelligently applied. Jesus said, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life."

Spiritual understanding, far removed from mortal conjecture and human reasoning, solves every earthly problem. There is no error, discord, or failure in Truth,—no sin, sickness, sorrow, or exaggeration in the real man. Truth can never change or vary, and Principle is the divine source of all truth. It is only when the subtlety of doubt, distrust, fear, or mistaken human belief creeps into consciousness—the illusion that matter in some way has a power apart from God—that the healing work is retarded or hindered, until we bow our hearts in humble obedience to divine Love, in whom is no shadow of turning. It is only through such striving, such conscientious effort, that we awaken from the dream of physical sense, with its false pleasures and pains and pretensions, and find ourselves standing firmly and honestly with God upon the rock of Truth. Then, as naturally and inevitably as the light of day follows the darkness of night, the doors of heaven (perfect being) are opened to our spiritualized thought and the healing of all discord is ours.

In Christian Science one of the first requirements of the seeker after Truth is the demonstration of justice and purity, and his prayer should be a sincere desire to clear from his consciousness all material arguments and theories, and to accept only the dictates of divine Mind,—the spiritual Christ, Truth. Otherwise he cannot progress very far along life's roadway, and will find himself incapacitated for the giving out of that truth which is always replete with healing. Mrs. Eddy writes in Science and Health (p. 149), "If you fail to succeed in any case, it is because you have not demonstrated the life of Christ, Truth, more in your own life,—because you have not obeyed the rule and proved the Principle of divine Science." On page 171 she clearly states, "Through discernment of the spiritual opposite of materiality, even the way through Christ, Truth, man will reopen with the key of divine Science the gates of Paradise which human beliefs have closed, and will find himself unfallen, upright, pure, and free."

The truth of being is sublime because it is of God. It is a healing power because it reflects every quality of God's law of good. It lights up the human consciousness because it is of Love. It regenerates mortal thought and cleanses from all sin because it is spiritual.

✧

What Is a Christian Scientist?

W. W. GRISWOLD

OFTEN the question is asked, What is a Christian Scientist? A concise reply is, that a Christian Scientist is one in whose consciousness is developing the scientific understanding of God, good, and that the recognition of this omnipotent goodness, this divine Principle, constitutes all that he is, or has, or does. It is in fact the earnest endeavor of every consistent student of Christian Science to exemplify in his daily affairs the fact that he is in reality the child of the omnipotent, all-wise, and all-loving God, endowed with dominion over the things which come his way in the course of the world's operations.

In the first chapter of Genesis we are instructed that God created the heaven and the earth and all that therein is, and then made man in His own image and likeness and gave him dominion over all the things of the earth. It is also recorded in that same chapter that when God viewed the heaven and earth He had created, including the man made in His image and likeness, He declared them all to be "very good." Could we have a more positive assurance of our right to be superior to all the vicissitudes and circumstances which seem to produce discord in mind, body, or estate?

Why then are we burdened from time to time with the

Digitized by Google

world's discordant conditions? It is simply because we do not come forward and accept in its entirety man's God-given inheritance of dominion over the things of the earth, which means freedom from sin, disease, limitation, and inharmony of every sort. Such conduct would make of us sluggards in the race. We must consistently and persistently strive to reach the goal of our God-given perfection and to occupy the position of dominion and effectiveness which rightfully belongs to all of God's children.

On page 148 of "The First Church of Christ, Scientist, and Miscellany" Mrs. Eddy says, "Christianity is the summons of divine Love for man to be Christlike—to emulate the words and the works of our great Master." What an enjoyable existence this present one would be if every one who desires to live rightly in the Christian Science way would make it the primary object of his life to strive continually in his daily affairs to live and work by this standard!

Problems Big and Little

CAROLINE LAURA HESSE

ALL too frequently we hear the argument put forward that certain forms of disease are more difficult to overcome, and that it requires a longer period of time and a greater understanding of Principle to overcome them, than those which seem to mortal sense to be minor ailments. Sometimes, at the beginning of the struggle to reach mental and physical freedom through Christian Science, the weary heart loses sight for the time being of the one Principle, and turns from proffered encouragement or the story of some wonderful healing with the impatient cry (in the case of a physical ill), "Yes, but my condition is so much more serious;" or, in the case of mental or moral discord, "Yes, but he did not have so much to meet, so much to contend with, as I have."

What a stride forward would be taken if all who are thus tempted to listen to error's lying testimony would read and follow to its logical conclusion the statement made by Mrs. Eddy on page 97 of Science and Health, where she says: "In reality, the more closely error simulates truth and so-called matter resembles its essence, mortal mind, the more impotent error becomes as a belief. . . . The more destructive matter becomes, the more its nothingness will appear, until matter reaches its mortal zenith in illusion and forever disappears. . . . The more material the belief, the more obvious its error, until divine Spirit, supreme in its domain, dominates all matter, and man is found in the likeness of Spirit, his original being."

What a flood of light is turned upon the darkness of fear and doubt by this illuminating statement. To those of us who have felt the healing touch of divine Truth, and who by following its teachings have been able to overcome even one seemingly small manifestation of discord, it should not be difficult to bring the above statement into practical daily application to all our problems. And then what becomes of that cry of discouragement over the trouble which seemingly is more serious than the one over which our neighbor has successfully demonstrated?

Applying the logic of reason to the belief in a certain process of the progression of physical ills, should not a supposedly malignant growth be easier to handle—if there can be any difference—than the first claim of a bruise, which according to the weight of mortal opinion may have caused the latter growth? And so on through the entire chain of dread beliefs which seem to hold mortal man in bondage, for in the final analysis are not so-called incurable diseases, speaking in the relative sense, nearer destruction and therefore still farther from possessing any reality or power than the early belief in a bruise or a slight cold? To overcome with divine Science any ill whatsoever, one must possess an understanding of Principle, God, an understanding that, as the "scientific statement of being" declares (Science and Health, p. 468), "there is no life, truth, intelligence, nor substance in matter." The application of this truth to the first manifestation of error should logically be the only step needed to prevent difficulties. If we can realize, through an understanding of divine Love, that the bruise or any minor ailment is a mortal illusion, that it does not in reality exist, and thus cause it to vanish into the nothingness whence it sprang, should we not also realize that the most dread and terrible belief—give it what name we will—is after all only a multiplication or an addition of many false beliefs, and that it is only more of an illusion than the minor ill? Is it not a false belief come nearer to destruction than in its earlier stages?

Let each one who feels that his ills are of a very serious nature, take a fresh hold on the Science of man's being, and realize that it cannot matter how sense-testimony may classify his ailments, since, as there are no evil realities in the one Mind, there surely can exist no shades of difference between them; and that while the discord may be seemingly slight or seemingly serious, no ill is ever in reality anything less or more than the one false belief, the one lie, that there is a power apart from God, good.

To grasp the fact that God is all-power, ever present, all knowing, is to meet and overcome either the so-called big problem or so-called little problem with equal readiness. Granting the true premise, that a false belief with its outward manifestation possesses no reality, because it is not of God, and that it can not, does not exist in the light of the true understanding of God as All,—this precludes absolutely the possibility of its having dominion over man, who is God's idea.

Make-believe

EMILY A. ASHCROFT

WE all know how fond most small boys are of playing at soldiers. We have frequently seen a band of little fellows being marshaled along by a boy, perhaps a little bigger than themselves, who is pretending to be a great general and assuming that officer's name and authority. The small boys are quite willing, for the time being, to be led by him and to obey his orders. They become so earnest in their game that it all seems very real to them.

A bystander watching such a scene finds plenty to amuse him, mainly in the total unlikeness of the acting to the real thing. The more familiar the onlooker is with the reality, the more absurd this futile attempt at imitation appears. He does not, however, grow indignant that an insignificant little person should assume the name, title, and powers of a general. Why? Because he knows it is all in fun, all make-believe. This little bit of acting does not interfere with the work of the real general. That goes on exactly the same as before, and in fact the original is totally ignorant of the existence of his imitator.

On page 212 of "Science and Health with Key to the Scriptures" Mrs. Eddy says, "The realities of being . . . and the origin of all things are unseen to mortal sense; whereas the unreal and imitative movements of mortal belief, which would reverse the immortal modus and action, are styled the real." Mortal mind is nothing but a would-be imitator of the divine Mind. As we watch the farce of mortal existence, if all would but see that mortal mind is no more the real governor of man than this self-constituted boy com-

Digitized by Google

mander is the real ruler of armies, all could afford to be amused. A Christian Scientist has the means of gaining this point of view instead of being the willing follower of a fictitious pretender. God is totally unconscious of this self-appointed authority, mortal mind, because it does not exist in the all-knowing consciousness of God and is no part of His universe; hence error cannot countermand God's orders, alter His plans, annul His laws, or upset the harmony of His universe. The more familiar we are with God's universe, the more absurd and unreal will mortal sense testimony become.

What about those who are willing to be led by error? Sooner or later they will have to become dissatisfied with error's ways. Let us look again at the little band of boys. What has happened? Why, one boy has grown tired of pretending, declares that the game is silly, and remembers that his father is going to dig potatoes for their dinner, and he wants to help. Another does not want to lie still for five minutes, as the commander has ordered them to do; it is too tedious. Or again, perhaps the sense of commandership has become too strong for the little leader, and he is growing somewhat tyrannical. The boys' sense of justice is aroused, and, waking up to the fact that they do not really need to obey this leader, that it is only a game after all, they disband, and the illusion is ended.

So all will learn some day that they are free, though they come to this state of consciousness in various ways. One grows weary of the pettiness of mortal existence and desires to do something worth while. "Desire is prayer," Mrs. Eddy says on page 1 of Science and Health, and such a one's prayer will be answered when Christian Science enters his life and he realizes that instead of serving an unreal master he can really be a help to his fellows. Another, perhaps, is weary of waiting for the happiness which never seems to come. He has been educated to believe that we must wait till after death before we can be truly happy. At length he rebels, leaves the religion of his fathers, and goes to seek he knows not what. By and by he too will find the truth for which he is searching, and Christian Science will reveal to him the grand fact that happiness is spiritual and everywhere present now. Another finds the ruler of this world very tyrannical, ordering sickness, poverty, loneliness, and misery, and he tries to escape from this domination. Christian Science shows him the way. So at length the whole army of mortal mind will be disbanded, and God's reign of peace on earth will be established.

"Life's burdens light"*

AGNES FLORIDA CHALMERS

"Each man shall bear his burden." This true word
Brought peace and joy one stressful eventide
After a day of toil. I plainly heard
Paul's message, and the flood-gates opened wide
To let in gratitude. "He shall rejoice
Within God's word alone." Again the voice
Of Truth brought consolation. Truly, Love
Was leading me in ways I knew not of.

"Each man shall bear his burden." Ah, the peace
Of trusting God alone in troublous hour,
Of talking, walking, praying,—taking these
Steps heavenward with Him whose only power
Is good. Each man his burden bearing, here
And now, with gentle fortitude and cheer,—
Each man rejoicing in God's word alone
Shall bear his burden till he reach Love's throne.

*Poems, p. 12.

Selected Articles

[Editorial in *Whiting* (Ind.) *Call*]

The lecture on Christian Science included in this issue of the *Call* adds a value to the number that can hardly be estimated. Those who shall fortunately become possessed of one of these extra copies containing this lecture will show great wisdom in carefully preserving it for future perusal and consideration. A movement of such scope and power as has been manifested by Christian Science is not to be lightly ignored or carelessly dismissed by any who would wish to be considered in any way informed as to matters pertaining to the spiritual and physical welfare and progress of the race.

✧

[Thorwald Siegfried in *The Winlock* (Wash.) *News*]

Many of your readers have been listening to the futile efforts of an evangelist, who attempted to persuade people to accept Christianity by convincing them that Christian Science, in which the world experiences again the redemptive work of the Christianity of the early centuries, is a work of the devil. In justice to the Christian Scientists of your community and in order that your readers may have definite information about Christian Science, I would like to have space for a few statements of fact about it.

First, Christian Science distinguishes between the real man, described in the first chapter of Genesis as created in God's image and likeness, and the earthy man, whose construction by the Lord God is described in the allegory which begins with the fourth verse of the second chapter. It points out that the latter is unreal, the counterfeit and opposite of the former; that humanity has quite generally believed itself to be of the nature of the earthy man, and accordingly has sought health and happiness in matter, where it does not reside.

Christian Science proves that man is really spiritual, godlike, now; that the belief that man is material is only a belief, nothing more. And, however unbelievable it may seem to one who has not applied Christian Science as taught in its text-book, "Science and Health with Key to the Scriptures," it becomes perfectly apparent when sin, disease, discord, and poverty vanish into vacuity. It must follow that human, material personality is of no avail in finding the kingdom of heaven, and that the human will or so-called mind, expressing itself in hypnotism and suggestion, cannot really heal anything. To be really effective, material man must "deny himself," as Jesus pointed out; he must become conscious of the everlasting union with and dependence on God of real manhood; he must learn to say, "I can of mine own self do nothing." This is the transformation which the Christ brings to human thought "by the renewing of your mind," as Paul phrased it.

Pride rebels at the self-abnegation of material personality demanded by real Christianity. Spiritual selfhood is the blessed substitute for self-assertive life in matter, typified by that earthy man already referred to, of whom the Scripture says that "every imagination of the thoughts of his heart was only evil continually." Mrs. Eddy finds the spring of that antagonism against Christian Science in unwillingness to exchange material pride for spiritual humility. On page 345 of Science and Health she says, "This thought of human, material nothingness, which Science inculcates, enrages the carnal mind and is the main cause of the carnal mind's antagonism."

Finally it may be said that any system which assumes that it knows exactly what man is,—that he is a material

Digitized by Google

organism, and that this material organism is the image and likeness of God,—must end in confusion. Christian Science, on the contrary, discovers God, Spirit, as the only creator; it stands on the Scriptural declaration that the real man is made in His image and after His likeness, and therefore declares that this material personality is not man at all, but only a false belief about man; and that the real man is spiritual, like God, who is Spirit and Love. This correct knowledge of man heals the sick, as any one can prove by reading Science and Health for himself.

✧

[Charles W. J. Tennant in *Trowbridge* (England) *Advertiser*]

A letter from a critic, in which she states a few of the reasons why she does not consider Christian Science to be the true theology of Jesus, shows that she has completely misunderstood the teachings of Christian Science.

In order to understand what Mrs. Eddy means by the unreality of sin, disease, and death, it is necessary to observe that it is from the standpoint of the absolute that she is speaking. It will be acknowledged by all Christians that sin, disease, and death do not proceed from God, who is the only creator. They will agree with Habakkuk that God is "of purer eyes than to behold evil." They will therefore have to concede that there can be no absolute reality or being in anything of which God is not conscious. We are told that our Master came to destroy the works of the devil. Sin, disease, and death were the conditions he destroyed. Again, our Master has defined the devil as a murderer from the beginning, which "abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." From the relative standpoint, which is the point of view of the human or carnal mind, of course sin, disease, and death seem real. They are temporal phenomena which can never have any connection with the eternal reality of true being.

With regard to God being personal, Mrs. Eddy writes on page 116 of "Science and Health with Key to the Scriptures": "If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense."

Our critic says: "The Scriptures show that neither Jesus nor his apostles experienced healing, nor did any of the early church so far as the record shows, nor was this because none of them was sick." She seems to forget that Jesus had to heal his own hands and feet and side after the crucifixion. There is authentic historical record that the early Christians were able to raise the dead as well as heal the sick for some two hundred years after the ascension. Spiritual healing was a sign of spiritual understanding, and it is as requisite to a proper understanding of the theology of Jesus today as it was two thousand years ago. It will be remembered that when John the Baptist in his prison heard of the works of Jesus, he sent two of his disciples to inquire of him, "Art thou he that should come, or do we look for another?" Jesus' reply set forth the conditions by which the Christ should be known for all time: "Go and show John again those things which ye do hear and see: The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them."

Our critic says: "The gifts of healing were done in exceptional cases for the purpose of convincing the people respecting the church, and for the establishment of the church. Even Jesus himself did not heal all who needed aid." We are distinctly told in Luke that Jesus healed "them that had need of healing." We are also told that in one locality "he did not many mighty works . . . because of their unbelief." We cannot get away from the fact that the Christianity which preaches the gospel and heals the sick has much more resemblance to that of the Founder of Christianity than the forms which only attempt one half the command, namely, to preach the gospel. If our critic tries to argue that the command to heal the sick, in the sixteenth chapter of Mark, is an interpolation, she will have some difficulty in explaining away the command of our Master in John, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." On page 138 of Science and Health Mrs. Eddy writes: "Jesus established in the Christian era the precedent for all Christianity, theology, and healing. Christians are under as direct orders now, as they were then, to be Christlike, to possess the Christ-spirit, to follow the Christ-example, and to heal the sick as well as the sinning."

✧

[John D. Sherwood in *Tyler* (Texas) *Courier-Times*]

Our critic, after accepting without reservation all that a lecturer on Christian Science had said when defining God and God's attributes, demurs to the lecturer's statement that the records of creation given in the first and second chapters of Genesis are contradictions. Our critic contends that "the first chapter relates the fact of man's creation, the second tells how and of what he was created." Now let us examine the Scriptures, where we find in the first chapter of Genesis the record of the Elohistic creation, where God spake and it was so. Here it is recorded that divine Mind made all things spiritually; that God saw all that He had made, and pronounced His works "very good." Here it is recorded that God made man in His own image and likeness—in the image and likeness of infinite Spirit—and gave man dominion over the work of His hands.

In the second chapter of Genesis we find an account of the Jehovistic record of creation, where "the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul." No mention is here made which intimates that this creation was good; no record is made that the man of dust was given dominion. The second chapter does not contain the record of the spiritual creation; but rather does it give the record of a dream allegory,—the Adam-dream,—where everything seems to be upside down. Isaiah alludes to Adam in the admonition given by him, "Cease ye from man, whose breath is in his nostrils: for wherein is he to be accounted of?" God is Spirit, and man in God's image is spiritual; but Adam was formed "of the dust of the ground," hence he was not the man whom God had made in His own image and likeness. St. Paul said, "Let God be true, but every man a liar."

Our critic says of the lecturer, "Then he told us that matter has no real existence." The lecturer had quoted a recognized authority who had denominated matter "a suppositional vacuum in a hypothetical medium," and had repeated the words of Mr. Balfour, former prime minister of Great Britain, who has said, "The material sciences are now explaining matter by explaining it away." God made all that was made; and since God, Spirit, is infinite, there is naught else beside Him; hence that which is called matter is not substance. It is but the phenomenon of mortal mind, —the suppositional opposite of infinite Spirit,—and there can be no reality in it, since to make a place for matter would necessitate displacing Spirit; but that is not possible, because infinite Spirit is omnipresence, and there is no room for matter outside of inexhaustible Spirit.

Our critic contends for the reality and existence of pain, sickness, and death. If this trio exist in reality, who made

Digitized by Google

them? and if mortals believe that God made sin, sickness, and death, why did His Son come to destroy them? But St. John tells us, "For this purpose the Son of God was manifested, that he might destroy the works of the devil." "The works of the devil" are not a part of the spiritual creation of the infinitely good God, who made all, and who pronounced "very good" all that He had made; hence the only conclusion left is that sin, sickness, and death are the errors of belief that have to be seen as errors and be overcome by an understanding of the truth. Christ Jesus said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

A Christian Scientist does not believe that heaven is a material place. Christ Jesus continually rebuked that erroneous belief. He said, "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you;" and on page 590 of Science and Health Mrs. Eddy defines the kingdom of heaven as, "The reign of harmony in divine Science; the realm of unerring, eternal, and omnipotent Mind; the atmosphere of Spirit, where Soul is supreme."

✧

[Henry A. Teasdel in *The Ogden* (Utah) *Standard*]

It seems difficult to comprehend how a Christian minister can spend his time trying to hinder the growth of a Christian religion because its exponents are not traveling the road to heaven that he is traveling and that he himself believes to be the right one. That one should do this in regard to Christian Science can only be accounted for by the fact that he lacks understanding of its teachings. If he were acquainted with many Christian Scientists, the lives they lead would be an object-lesson to him and would cause him to investigate more closely to find out what it is that makes them healthier, happier, and more contented than they had heretofore been.

Our friend does not distinguish between the spiritual man made in God's image and likeness and the Adam or mortal man. He takes exceptions to a published report of a Christian Science lecture recently delivered in Ogden where the lecturer stated: "We cannot imagine a sick God, and therefore man cannot be sick." God is Spirit and consequently is not subject to the ills of the flesh; neither is the spiritual man, the man made in His image and likeness. This is the man referred to in the lecturer's statement and not the mortal or sinning man who suffers for his sins.

Our friend further says: "Many refined and cultured people of the churches have thus been misled," and "the trick in his reasoning becomes the trap for many." Perhaps so, according to this critic's view, but is it not reasonable to suppose that the class of people he refers to would be sufficiently educated to be equally capable of discovering that trap, if there were one? And again: "Their training has been Bible training; now they are taking the *Quarterly*. Their training has been to a life of prayer, but now they follow the teachings of Mrs. Eddy, who says that 'prayer to a personal God is a hindrance.'" One half of the Lesson-Sermon is composed of Bible references, so that if the *Quarterly* is used their Bible training is greater than ever before. Christian Science teaches us to pray aright so that prayer may be answered. Such prayer is not offered to a material, personal God. We read in John, "God is a Spirit: and they that worship him must worship him in spirit and in truth."

Christian Science does not deny that mortal man can suffer affliction, but it does deny that God sends affliction or uses it for man's betterment. Affliction is frequently caused by wrong thinking and wrong living, and it is cured when these are corrected. It is unwise to speak slightingly of the healing power of Christian Science, for there are many thousands of living witnesses as to its efficacy. Science is the law of God, and on page 22 of "Miscellaneous Writings" Mrs. Eddy says: "That Christian Science is Christian, those who have demonstrated it, according to the rules of its divine Principle,—together with the sick, the lame, the deaf, and the blind, healed by it,—have proven to a waiting world. He who has not tested it, is incompetent to condemn it; and he who is a willing sinner, cannot demonstrate it."

✧

[Robert S. Ross in *Cornwall Press*, Cornwall-on-Hudson, N. Y.]

Real Christians cannot entertain thoughts of evil, because Christian thoughts are derived from God alone, and He knows no evil. If professed Christians entertain thoughts of evil and hate, and voice unkind utterances toward others, they are not thinking God's thoughts; they are believing in the presence and power of more than one God or intelligence, thereby forfeiting their right to be called Christians. Christian Science is the Christianity taught and practised by Jesus of Nazareth two thousand years ago, and established in this age through the book "Science and Health with Key to the Scriptures" by Mary Baker Eddy. This is the Christianity which a woman evangelist attacked in her sermon in a building dedicated to the cause of "on earth peace, good will toward men."

The world will some day admit that Christianity is a thing of the heart as well as of the head. It will see that he is the best Christian who does the most good in the world, irrespective of creed or dogma. Jesus did not point out that true discipleship could be measured by the tenacity of one's belief about his teachings, but by one's ability to put these teachings into practice. Hear these words: "He that believeth on me, the works that I do shall he do also;" again: "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

If the critic had studied the Christian Science text-book instead of the writings of those aiming to disprove its merit, I am sure she would have found in it only that which is in harmony with the Sermon on the Mount. At the present time she is not in fact attacking Christian Science, but that which she believes Christian Science to be. The writer submits that it is the sacred duty of the minister of the gospel to turn his flock into the path of truth, not out of it.

✧ ✧ ✧

[Written for the *Sentinel*]

His Friend

SAMUEL JOHNSTONE MACDONALD

My friend is not in height or weight,
In figure, texture, color, gait,
Or beauty which may charm the eye
Yet swiftly as a shadow fly;
But in the grace his words imbue,
Compassion gentle as the dew,
Fidelity which cannot fail,
As needle true through every gale.

My friend is Life and Love and Truth
Reflected in abiding youth
Which ne'er may alter or decay,
Degenerate or pass away;
For, held forever strong in Mind,
By Truth from falsities refined,
He lives—the Father's witness bright,
An earnest of supernal light.

Editorial

The True Christmas

ALTHOUGH the twenty-fifth day of December is now annually celebrated by Christian nations the world over as the birthday of Christ Jesus, there is in reality no authentic information as to the precise date of his earthly advent. As a matter of fact it was not until several centuries had elapsed that, as a compromise to the diversity of opinion and custom which hitherto had assigned various dates between Nov. 17 and May 20 as the day of Jesus' nativity, what we know as Christmas day was finally agreed upon by the church authorities as the day to be celebrated.

All this goes to prove that what the world from year to year is celebrating as a religious festival is simply Christendom's own concept of that for which the Founder of Christianity stands in the history of the world. Dating from that first Christmas day, when the three wise men came with joy and thanksgiving to offer their treasures of "gold, and frankincense, and myrrh" to the babe so humbly cradled, Christmas, irrespective of any Christian or religious sense, is at least theoretically associated with ideals of kindness, affection, charity, hospitality, and good cheer. These are Christian virtues, and to the extent to which they are practised at this or any other season the world is helped and made better; but even these do not represent all that Christmas means, nor are they the sum total of Christianity.

On Jan. 2, 1898, in her Communion message to The Mother Church for that year, Mrs. Eddy wrote: "Beloved brethren, another Christmas has come and gone. Has it enabled us to know more of the healing Christ that saves from sickness and sin? Are we still searching diligently to find where the young child lies, and are we satisfied to know that our sense of Truth is not demoralized, finitized, cribbed, or cradled, but has risen to grasp the spiritual idea unenvironed by materiality?" (Miscellany, p. 122.) In these few words our Leader turns our thoughts from the material sense of Christmas, with its barter and exchange, its "mortal, material, sensual giving . . . merriment, mad ambition, rivalry," to the "quietude, humility, benevolence, charity," in which she loved to observe this holiday, letting, as she expressed it, "good will toward man, eloquent silence, prayer, and praise express my conception of Truth's appearing" (Miscellany, p. 262). Mrs. Eddy goes on to explain the difference between "the birth of a human, material, mortal babe" and the coming of the Christ to human consciousness, which is the true Christmas.

It is of great importance to Christian Scientists that Christmas shall mean to them a perpetual festival, the constant recognition of Christ, Truth, the spiritualization of thought and desire, and that it shall be a daily and hourly rather than a yearly experience. To Christian Scientists the questions asked by Mrs. Eddy in the message from which we have quoted are most important, and the answers we make to them will tell of our progress heavenward or our descent earthward. If we can truthfully answer "Yes" to both questions, we may well feel encouraged and exalted; but if the answer is "No," then the only course for us is to renew our faith and redouble our efforts, and putting aside all doubt and discouragement, "press toward the mark for the prize of the high calling of God in Christ Jesus," as did Paul.

Paul knew that the promises which Christ Jesus had made to his followers were capable of fulfilment, because he had seen many of them fulfilled; and so it is with Christian Scientists today. They have witnessed, they have even borne a part in the fulfilment of that wonderful declaration, "He that believeth on me, the works that I do shall he do also," for in this age as in Jesus' day the sick are healed, sinners are reformed, and to the poor the gospel is preached. Because man is the image and likeness of God, infinite Mind, he is in reality as perfect as is God Himself, and through the true understanding of this perfection we may realize the "*happy Christmas*" of which Mrs. Eddy speaks on page 263 of Miscellany, "a feast of Soul and a famine of sense,"—the forever coming of the Christ to human consciousness.

ARCHIBALD MCLELLAN.

Mother and Child

CHRISTMAS tells the story of a mother who loved so deeply and divinely that her babe became the Wayshower for the world. She drank of the pure well of that love undefiled which springs from the very rock of Truth itself. She found the great source from which is supplied the river of life, the gentle rain from heaven and the dew which jewels even human affection. This woman knew intuitively what the beloved disciple later put into writing, that "God is love," and her child therefore grew in wisdom and strength until he overcame the enemies of love and ascended triumphantly to the Father-Mother.

In the ascending scale of spiritual awakening the Christian Scientist seems to reach first the concept of the child rather than that of the mother. The conclusion is soon reached that man is the child of God, and with it comes the supreme sense of protection and the baptism of purification. This is the experience when human thought is led to "where the young child was," which Mrs. Eddy interprets on page 191 of Science and Health as leading "even to the birth of a new-old idea, to the spiritual sense of being and of what Life includes." Later perhaps comes the perception of the motherhood of God to complete the concept of divine parentage, and with this the vision of the Apocalypse which symbolizes generic man by "a woman." Thereafter a new mantle of tenderness and fearlessness clothes the advancing Christian and protects him from the sting of death.

Without love there can be no joy, no fruition, no song, no healing, no harmony, and no health. The Scientist soon learns that man's true career can only flourish in the atmosphere of love, just as the counterfeit Adam begins and ends in fear. The Scientist recognizes that his treatments must leave his patients with love; that his mornings dawn in its effulgence, and his twilights are tremulous with its beams. He learns that without love he cannot face the world, the flesh, and the devil, neither the condemnations of the Pharisees nor the subtleties of treachery.

What though the concept of love may at first be far from scientific, much mixed with material belief, tinged with self, and narrowed by personality; if it be the best one has, let it not be stamped out with will-power, crushed or suppressed by bigotry, or ostracized by ecclesiasticism. Let it rather be transformed by the renewing of the affections. Love abhors a vacuum. Better the reaching out for love than no love at all; then, when divine Love comes to humanity, it will not find an unreceptive void and turn away in sadness from the awful emptiness. Let it be known that every act of lowliest kindliness begets more love and brings the divine blessing. Not a single one of the many activities for which the Christian Science movement calls, can be performed without love, charity, and compassion. The dry pedantries of scholastic theology and its barren intellectualism cannot act the Samaritan to those who have fallen among thieves. The

Digitized by Google

utmost efficiency, the most approved system, the keenest wit and worldly astuteness, are but chaff when blows the zephyr of a single thought of love. Not even Moses' ten commandments can save and heal unless the law is tempered with the love of Jesus' Christian gospel.

On page 108 of Science and Health Mrs. Eddy writes of "immortal cravings," and quotes the expression, "the price of learning love." In deep humility the advancing Scientist accepts this task of "learning love," and stands ready to pay "the price" if it be demanded. But let it not be said that those who refuse to learn love can cause those who are learning it to pay this price into their own empty treasury, or to exact of them the "pound of flesh," or punish them for their mistakes, or prevent them from repenting by numbering them among the so-called fallen.

Yet when the account is drawn and values measured, who has really received the most? He who, entrenched in the world's approval, has forgotten or perhaps never known how to love, or he who, stumbling through the night, nevertheless follows the star and at last finds the house where abides "the young child with Mary his mother"?

WILLIAM D. MCCRACKAN.

True Observance

As the Christmas season approaches, many beginners in Christian Science ask how it should be observed,—whether the festivities, gift exchanging, and all the traditions of the past should be set aside, and if so what should be put in their place. Here it may be observed that those who have studied Mrs. Eddy's writings for a number of years find in them the best and broadest instructions as to how the most good can be gathered from the Christmas season, as well as from all others.

With the aid of the second concordance to our Leader's writings, we may find a number of truly helpful and inspiring statements respecting Christmas; and in all of them we discover as an undertone the gentle counsel given on page 485 of Science and Health, namely, "Emerge gently from matter into Spirit." This does not of course mean, as some may imagine, that we are to emerge haltingly, with a backward look over the past, as in the case of Lot's wife; but that we should advance with due consideration for the faltering steps of others, of those who have only begun to look into Christian Science as well as those who still believe that life, substance, and intelligence are dependent upon matter, and happiness upon material things.

On page 261 of Miscellany Mrs. Eddy tells us that "the full supply of juvenile joy" is not to be stinted, but she warns parents against the danger of the Santa Claus myth, because of the need that we "mold aright the first impressions of innocence." This recalls the experience of a mother who was becoming interested in Christian Science, when her little daughter returned from the Sunday school of another church and told wonderful tales of Santa Claus which had been given out there. The mother at this point felt that the child's budding faith should rest on something better than a myth, and so she told her that these stories had no foundation in truth. The child's distress was very great, and she tearfully asked if all she had been taught about the nativity of Jesus was just the same as the Santa Claus story. The mother of course explained to her the great difference between these, and showed her that the appearing of Christ Jesus meant the working out of the world's salvation from sin, sickness, and death; that the divine idea represented by Christ Jesus was too far above the mortal plane ever to have been conceived by mortal mind, that it was the revelation of God and His idea; so the child was comforted, and Christmas had for her a new and wonderful meaning.

It goes without saying that under Mrs. Eddy's teaching Christian Scientists have grown away from the mere exchange of gifts at Christmas time, and their giving has been more after the manner indicated by the prophet Isaiah, who bids us "to loose the bands of wickedness, to undo the heavy burdens, . . . to deal thy bread to the hungry, and that thou bring the poor that are cast out to thy house." This is followed by the assurance, "Then shall thy light break forth as the morning, and thine health shall spring forth speedily." Of course the children in Christian Science families must be taught the same truth which blesses their elders, and to find their chief joy in giving even more than in receiving. They should also understand that Christ Jesus came to teach us that in spiritual things was to be found the joy of true living, and the real joy of Christmas.

One Christian Scientist recalls a Christmas day some years after she had come into Christian Science, spent alone with God and herself, the members of her family all being at a distance. It was made the occasion of some deep introspection; and numerous old beliefs of past grievances which had been hidden from sight were taken out and canceled by Truth. Her indebtedness to divine Love was also taken account of as never before, with the result that boundless gratitude gave new inspiration to the outlook upon a new year. With it all came deeper and truer gratitude to our beloved Leader and to all who were faithfully following her teachings, and this made the joy of Christmas something which encircled with its light and gladness all the year.

ANNIE M. KNOTT.

An Announcement

THOSE wishing to contribute to either or both of the funds described in the article "Looking Forward," which appeared in the *Sentinel* of Dec. 2, 1916, may send remittances to the Treasurer, Adam H. Dickey, 236 Huntington Avenue, Back Bay, Boston, Mass., indicating whether the amount is to be applied to the fund for the purchase of additional real estate or for the Christian Science Benevolent Association.

The following excerpts from letters already received are indicative of the willingness and promptness with which the field are responding to the opportunity which has been offered them:—

"I will send my mite to the cause. I am eighty-six years old and have no income to depend on, but want to do a little for the cause of God; so accept this, please."

"The *Sentinel* bearing date of Dec. 2 has just come, and the article 'Looking Forward' was the first I read. My first thought was one of deprivation that I could not send a generous contribution immediately. Next I thought, 'If every Christian Scientist would send, now, the sum he or she could honestly give, the amount would be completed before another issue of the paper; while if each waits to have more in hand, the argument of procrastination will become operative.' In line with this I am joyfully sending the enclosed one dollar, and will send more as I have it."

"Enclosed is check for five dollars, to be used as follows: Mrs. Eddy's Memorial Fund, one dollar; War Relief Fund, one dollar; Benevolent Association Fund, two dollars; Real Estate Fund, one dollar. It is an expression of gratitude for the unnumbered blessings which have come to me through the understanding of God as taught me from reading 'Science and Health with Key to the Scriptures' by Mary Baker

Digitized by Google

Eddy. And it is a joy and privilege to feel that, though the amount is not great, each of us has his place in the perfect whole and by withholding because of the smallness, I would not only limit my own supply but that of the whole church of which I am a branch."

"Only a dollar, but lots of love with it."

"Ever since 'Looking Forward' appeared in the *Sentinel* I have been counting anew my debt to divine Love, as revealed to me through the teachings of our beloved Leader. The enclosed check for one thousand dollars is sent in grateful acknowledgment of the debt and of my earnest desire to cooperate with the Board of Directors in this matter. I leave with you the decision as to whether this amount shall be applied to one of the purposes indicated in the article or to both."

"The following resolution was adopted at a special business meeting held this evening:—

"Whereas, a glorious opportunity has been offered to the Christian Science field to unite in a mighty demonstration of love and gratitude, and whereas we know that unlimited good will come to the Christian Science movement and to us individually by swift, joyous obedience to this call, therefore,

"Be it resolved, that we, the members of Fifth Church of Christ, Scientist, Chicago, Ill., in business meeting assembled, extend to The Christian Science Board of Directors of The Mother Church our appreciation of the wisdom of their action, and pledge to the work of the Christian Science Benevolent Association, and to the fund for the purchase of real estate, as specified in the editorial in the *Christian Science Sentinel* of Dec. 2, 1916, the sum of twenty thousand dollars; such sum to be raised by the voluntary subscriptions of the members of this church as an expression of our thanks to God for the revelation of infinite Mind which is constantly being manifested to us."

"The article in last week's *Sentinel*, 'Looking Forward,' brought great joy to a vast number of people I feel sure, for it opens up a channel of usefulness not only much needed but of opportunity for service to those who will be glad to give. I am enclosing a check for one hundred dollars, and if needed will try to give more."

"We desire to express our appreciation of the article 'Looking Forward,' and our gratitude for the opportunity given us to contribute our mite of 'love currency' for the purposes designated in that article. Please accept the enclosed check for one thousand dollars and divide it equally between the two funds. Let me add that we do not look upon this as from us, but as from the one Giver."

"In acknowledging with gratitude your editorial in the *Sentinel* of Dec. 2, regarding the great progress of the Christian Science movement, we deem it a privilege to cooperate with you in this work of securing additional real estate, and of establishing the first institution of the Christian Science Benevolent Association. Knowing this will be a blessing to all mankind, we are pleased to enclose our check for two hundred dollars,—one hundred for each fund."

"The *Sentinel* for this week with the article 'Looking Forward' has just been received, and I have read with interest and joy this message to the field. I am enclosing herewith twenty-five dollars. I am grateful for this opportunity to give expression to my joyous and heartfelt thanks to our heavenly Father for His loving-kindness and merciful goodness. I know I will be able to do much more, but I am impelled by divine Love to send this response at once."

"We rejoice in your announcement to the field—'Looking Forward.' It is our desire to contribute five dollars a month for the purposes set forth in your statement, and we enclose herewith our first instalment. We take this opportunity to express anew our allegiance to the cause of Christian Science as established by our revered Leader, and to its government as reposed in The Christian Science Board of Directors."

"First Church of Christ, Scientist, Cleveland, Ohio, desires to notify The Christian Science Board of Directors of the action taken at its members' meeting held Monday, Dec. 11, pledging ten thousand dollars in response to the call in the *Sentinel* of Dec. 2."

Among the Churches

Current Notes

SALIDA, COL.—We are a small band of workers in a city of some five thousand inhabitants. The *Monitor* has been placed in the Elks Home, the Sherman House, the Palace Hotel, the high school, and the public library, the *Sentinel*, the *Journal*, and the *Herold* in the library, and all the periodicals in the railroad station. Altogether there are sent out from this reading-room between four hundred and six hundred pieces of literature each month. At the semiannual business meeting of the church last July it was reported that in the first half of 1916 there were sent out 657 *Sentinels*, 86 *Journals*, 17 *Herolds*, 2439 *Monitors*, 32 *Quarterlies*, and 77 pamphlets.—*Correspondence.*

MCMINNVILLE, ORE.—The new church edifice of the Christian Science Society of this city, located at the corner of North D and Pine Streets, will be opened to the public Sunday afternoon. The building is 42 by 50 feet, and the auditorium has a seating capacity of one hundred and twenty. The cost will be approximately four thousand dollars.—*McMinnville Register.*

ROCHESTER, N. Y.—The new edifice erected by First Church of Christ, Scientist, at East Avenue and Prince Street, begun in October, 1914, is nearing completion. It is expected to be ready for occupancy before Jan. 1, 1917. The building will cost two hundred thousand dollars and the auditorium will seat one thousand persons.

Rochester Herald.

The Lectures

Ventura, Cal.

Judge Merle J. Rogers of the superior court in introducing Ezra W. Palmer, who lectured on Christian Science at Dixon Theater, said in part:—

The chairman of the committee having in charge the arrangements for this afternoon's meeting knew perfectly well, when he requested me a few days ago to introduce the speaker upon this occasion, that I am not a member of the Christian Science organization or a believer in its doctrines. Being assured, however, that such membership or belief is not essential to qualify one to act in this capacity, I readily consented to do so; for I recognize and rejoice in the fact that we live in a nation which enjoys religious freedom,—a nation in which each individual has the right to worship the Supreme Being in such manner and to such extent, and to attribute to Him such qualities and manifestations, as the judgment or conscience of the individual may dictate. I rejoice too that we live in an age of tolerance,—an age when people do not cease to be friends merely because they do not see these great questions alike.

Digitized by Google

Though not a Christian Scientist, I am, as it seems to me every one should be, deeply interested in the subject, and in common with every one else I have been especially interested to note the remarkable growth of this cult or system, and the high character, culture, and intelligence of many of its adherents. Holding myself open-minded, willing to hear and to learn, and carefully to weigh and consider, and earnestly to seek the truth, I trust I shall always have the courage to follow the truth wherever it may lead, when once believing that I have found it. So I am personally glad to have an opportunity, with you, to learn of Christian Science from one authorized and qualified to teach and to explain it.

Correspondence.

✧

Cleveland, Ohio

A lecture under the auspices of Fourth Church of Christ, Scientist, was delivered by John W. Doorly. The first reader, Arthur W. Marriott, 2d, introduced the speaker as follows:—

Mortal man believes that everything he understands is capable of being used for both good and evil. He believes that the applied sciences can be used with certainty to produce the comforts he desires, and that with the same degree of certainty they can be used to produce the most awful discord and misery. He believes that the goodness of nature is capable of bringing comfort and discomfort; that a beautiful flower which delights his eye can at the same time bring disease and suffering. He believes that, even if a thing does not have an apparent evil application, too much of any good thing plays havoc with peace and contentment. In short, mortal man believes that nothing is of itself absolutely good; and when in misery and suffering he turns to religion for help, he finds even there the same idea in a God who is pictured at one instant as loving and saving His children, and in the next as punishing and destroying them in the utmost fury. So that even evil itself has been excused on the ground that an incomprehensible though wise God has permitted it for some good purpose. Not so taught Jesus, who said, "A good tree cannot bring forth evil fruit." Christian Science has come to this age to combat this belief in the confusion of good and evil; to proclaim God unchangeable and eternal good, who sends no evils but who heals all our diseases and comforts all our sorrows. This expression of the Christ is thronged by the multitude here today just as it was centuries ago on the shores of Galilee; and so it will ever be.—*Correspondence.*

✧

New York, N. Y.

The remarks of Warren C. Klein, first reader of Second Church of Christ, Scientist, in introducing William W. Porter, who lectured on Christian Science, were as follows:—

The constant cry of mankind is for health, happiness, and progress. Christian Science, discovered and founded by Mrs. Eddy, is restating the message of the Master, and is proving to the world, as did Jesus, that perfect health, genuine happiness, and true progress are achieved only through the spiritual understanding of God and the practical daily exercise of faith, hope, and love.

The message of Christian Science is definite and clear, and is directed to all humanity. It is wholly beneficial and wholly constructive. For proof of these assertions it points to the works that have been accomplished. To the honest doubter it replies in the same language as that used by Christ Jesus in his famous answer to the query of John the Baptist, "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." More than all else, Christian Science can and does assist the individual to live a happy, healthful, and progressive Christian life here and now.—*Correspondence.*

✧

Kansas City, Mo.

Z. R. Moorman's introduction of Virgil O. Strickler at the lecture on Christian Science given under the auspices of Fourth Church of Christ, Scientist, in Gladstone Theater, was in part as follows:—

Two thousand years ago, in the hills of Judæa, Jesus promised the world a Comforter. It is evident that this Comforter was not to have a mortal form, for Jesus stated that He should abide with us forever,—"even the Spirit of truth." Today, out of the wilderness of doubt, fear, and tribulation, many are asking of Christian Science, "Art thou he that should come?" Christian Science answers in the words of the Master, "The blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached."

Christian Science offers you no new God, but a new conception of God, who is "the same yesterday, and today, and forever." It comes reaffirming the words of the lowly Nazarene, "I am not come to destroy, but to fulfil." It seeks not to impair your faith in the power and presence of God, but to increase it. It seeks not to destroy your love and reverence for the Holy Bible, but rather to enable you to demonstrate and confirm the promises therein contained. It comes to open the door of the human understanding, that we may enter into "the glorious liberty of the children of God," where we may "abide under the shadow of the Almighty;" to give a consciousness wherein we may realize the truth of the psalmist's assurance, "There shall no evil befall thee, neither shall any plague come nigh thy dwelling."—*Correspondence.*

Lectures to be Delivered

[By Members of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.]

ARKANSAS—Little Rock: John Randall Dunn, Palace Theater, 3 p.m., Dec. 31.

CALIFORNIA—Los Angeles (Ninth Church): Prof. Hermann S. Hering, Church Edifice, 430 South New Hampshire Avenue, 8 p.m., Jan. 5.

CANADA—St. John, New Brunswick: Edward A. Merritt, Imperial Theater, 3 p.m., Dec. 31.

IOWA—Centerville: John Randall Dunn, Drake Avenue Theater, 8 p.m., Jan. 4.

KANSAS—McPherson: John Randall Dunn, Opera House, 8:15 p.m., Jan. 2.

KENTUCKY—Middlesboro: Virgil O. Strickler, Court House, 8 p.m., Jan. 4.

Winchester: Virgil O. Strickler, Opera House, 8 p.m., Jan. 5.

MISSOURI—Mexico: Frank Bell, Church Edifice, 223 East Promenade Street, 8 p.m., Jan. 5.

Webster Groves: Virgil O. Strickler, Monday Club Hall, Cedar Street and Maple Avenue, 3 p.m., Dec. 31.

NEBRASKA—Lincoln: William R. Rathvon, Church Edifice, Twelfth and L Streets, 12 noon, Jan. 3, and 8 p.m., Jan. 4.

Omaha (First Church): Ezra W. Palmer, Church Edifice, St. Marys Avenue and Twenty-fourth Street, 8 p.m., Jan. 4 and 5.

OREGON—Dallas: Paul Stark Seeley, Orpheum Theater, 3 p.m., Dec. 31.

TENNESSEE—Memphis: Virgil O. Strickler, Church Edifice, Dunlap Street and Monroe Avenue, 8 p.m., Jan. 1 and 2.

WASHINGTON—North Yakima: Paul Stark Seeley, Masonic Temple Auditorium, 8 p.m., Jan. 4.

WEST VIRGINIA—Wheeling: Frank Bell, Court Theater, 3 p.m., Dec. 31.

Testimonies of Healing

I feel it both a duty and a privilege to add my testimony to that of the unnumbered thousands who have received healing and other blessings through Christian Science.

Some years ago my young son surprised me by returning from school in the middle of the morning session. One look at his face, however, told me that he was feeling very ill, and as there was at that time an epidemic of scarlet fever in his school, I had no doubt as to what had been in his teacher's thought when she hurried him home. For a moment I was terrified; then I determined to send for a friend who is a Christian Science practitioner, and put the case in her hands.

When this lady arrived, the child was in bed, his face flushed with fever, and he was getting delirious; but after she had sat silently beside him for some time, to my wonderment and joy I saw the unnatural color fading from his face, and his eyes regained their normal expression. Soon the delirious raving ceased, and he fell into a peaceful sleep. The same afternoon he got up and dressed, declaring himself to be all right, and that was the end of what I feel sure would have been a serious illness had it not been for the blessed salvation wrought by Christian Science. That I was not alone in this belief was evidenced by his teacher, who would not allow him to return to school for the remainder of the week, she was so positive she had sent him home ill with the dreadful disease.

Several years later the same boy was taken violently ill after eating ice-cream at a small shop where the cream was doubtless stale and, to mortal sense, poisonous. By morning his appearance was alarming. I again called for help in Christian Science and another dear friend and practitioner came to us. She remained several hours with the boy, but very shortly all nausea had left him and he fell into refreshing sleep, from which he awoke well and asked for food.

I need hardly say that for these and other deliverances from evil I am deeply thankful to divine Love and grateful to the Discoverer of Christian Science.

MARIE H. FROHMAN, New York, N. Y.

✧

It has been nearly seven years since I began the study of Science and Health in connection with the Bible, and I am thankful to God for the benefits which I have derived thereby; both spiritually and physically they have indeed been wonderful. During many years previous to the time that Christian Science was presented to me, I had been in poor health almost constantly, although able to keep upon my feet. About two years before coming into Science a great sorrow came suddenly into my life, seemingly without a moment's warning, and the shock was so great that I was eventually overwhelmed with a complication of diseases from which my physician and relatives had little hope of seeing me recover. As I grew better my thoughts were awakened and I began to read the Bible and ponder its meaning. Although I had been brought up religiously and had read the Bible faithfully, I could not unravel the meaning of the greater part of it.

About six or seven months later I was again taken suddenly ill and was treated by four different doctors, two of these being considered especially fine. Three of the doctors who examined me pronounced my trouble an abnormal growth. I underwent several different kinds of treatment, but was finally told I must submit to an operation or I would never be well. I had made all arrangements for the operation, but just a few days before the date set for it a friend spoke to me of Christian Science. I knew nothing whatever of this teaching, but she told me of the healing of her sister's child, and she herself reflected such a sunshiny life that I decided at once to have treatment, being as much in need of something to brighten my life as I was of physical healing.

The following evening I went to see a practitioner, and as it was just about time for the Wednesday evening meeting she asked me to accompany her to the service. On our return she gave me a treatment, and I cannot explain the sense of peace and joy that came into my life from that first treatment. I had been suffering also from bowel trouble, but this was instantaneously overcome, and I experienced such relief in every way that after one week's treatment I felt that I was well. Being in Chicago at that time, I hastened to Omaha, where my mother lived, to tell my family the good news. The practitioner gave me one or two absent treatments to assist me in finding employment, which was soon done. After that I had no help and was not among Scientists for two years or more, but I had purchased a copy of Science and Health before leaving Chicago, and this I read constantly.

The growth had not disappeared, but so little discomfort was experienced that I paid hardly any attention to it, as my general health was so much improved. However, after quite a severe fall which seemed to aggravate this condition, I was compelled to ask for help from a practitioner. Treatment was given me for nearly three weeks, and during this time the growth entirely disappeared. Although during those three weeks I had conditions to meet which under a physician would have compelled me to stay in bed, through Christian Science treatment, which gives strength to the weak, I was able to be at the office every afternoon with my husband and to assist him as usual.

These are only a few of the many benefits I have derived from Science. There have been many other physical healings and I have been helped through many difficult problems. My mother and sister also have experienced some wonderful healings. I am learning the lesson of love and forgiveness. My husband always attends the lectures whenever the opportunity presents itself. For all this I am indeed grateful to Mrs. Eddy, who so unselfishly spent her life to benefit humanity.—ESTELLA BELL, Sheridan, Wyo.

✧

[Translated from the German]

It affords me great joy to tell of the healing which I have experienced through Christian Science. A few years ago I contracted a disease of the right hand as the result of an accident, and the thumb became very much swollen. I held a position at that time which required me to use my hand, the condition thereby becoming aggravated. Although I bathed my hand every three hours, the pain grew more and more severe. I now felt I must seek medical aid, and the physician pronounced the trouble tubercular gangrene in the severest form. An incision was made and the discharge removed, but as it quickly returned, the physician said that the finger would have to be amputated. He intended to operate at once, but to this I would not consent, for I thought there must be some other and better remedy. I immediately went home and then tried another physician, but the verdict was the same. Five different physicians saw me, but none of them would give me any hope, as the arm by this time had become swollen and the diseased condition had reached the shoulder. Almost a year had elapsed since the trouble started, and both the pain and the thought of probably losing my arm drove me to despair.

Digitized by Google

It was then that a dear relative called on me and asked me to attend a Christian Science service with her. She said she knew that I could be healed, and asked a practitioner to take the case. I consented, and behold the wonder!—the pain decreased instantly, and we went home filled with joy and gratitude. The fingers, which presented a very bad appearance as a result of the long standing disease, gradually became normal, and the affection with attendant swelling of the arm yielded completely. There has been no relapse since.

For the great help and all the good which I have received through Christian Science I am most deeply grateful to God, and thankful to our revered Leader, Mrs. Eddy.

FRAU MARIE BOSSHARD, Attikon, Ct. Zurich, Switzerland.

✧

Seven years ago Christian Science found me on crutches with sciatic rheumatism. I had been given up by two doctors, who said my only hope was an operation, but that it might leave me a cripple for life. Even with crutches I could not walk without great suffering. Driven to despair, the thought of self-destruction was fast getting the mastery of me, when Christian Science brought the truth. In three treatments the pain had gone, and the fifth day I walked two and a half miles without crutches, pain, or trouble of any kind. Shortly afterward I went back to work. Since then I have had my eyes burned accidentally with lime and my throat burned with ammonia, each case seeming to be very severe; but a few absent treatments helped me quickly.

In the fall of 1914 I was taken ill with hard chills and pain in the right side. Friends thought I would pass on, and for legal reasons a doctor was called. He summoned another doctor for consultation, and they both pronounced the ailment an acute attack of appendicitis and said that an operation must be performed at once; but I refused to undergo it, knowing that God could be trusted to do more than the knife or doctors, and again Truth did its perfect work. May my life show my gratitude and love for what Christian Science has done for me and mine, and may my mental sight behold always the perfect man, made in God's image and likeness.

HENRY S. WILLIAMS, Canton, Ohio.

✧

With the earnest desire to help others who may be unable to see the truth clearly, I want to tell what God has done for me through Christian Science. One day when I was closing the door of a safe my hand got caught and the nail of the thumb was broken and the thumb badly bruised. The shock was so severe that I lost consciousness. My son, a physician, feared a collapse, as my heart was very irregular, so called in another physician to avert if possible serious heart failure; but in spite of all the care given me I grew steadily worse. The heart was said to be enlarged and the kidneys in a bad condition, performing hardly any functional work, while chronic appendicitis and a paralyzed right side left me almost unable to walk.

The doctor, who came each day and oftentimes twice a day, tried to keep me comfortable by giving strong medicines, but life seemed worse than death and I longed for rest in any way. Another doctor, a specialist, told my people that I might live a few days, but hardly longer, as it was impossible for any one whose heart was in such a condition to live any length of time. I survived this, however, and a great deal of time was spent at a certain sanitarium.

Everything possible was done for me there, but without avail. It seemed to me, and to those about me, that I had all one human being could bear. When my eyesight failed, I was in despair and could see no ray of light, because I did not then know that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). My son, always faithful in his care of me, was suddenly taken very ill, and thus my last prop was removed. There seemed no further use of living, for I knew that medical science could help us not at all. A friend who heard of my distress came to see me and told how she had been marvelously helped through Christian Science. As a last resort a practitioner was called, with the result that I became well within an hour. I have been in normal condition ever since.

Each day I prize Christian Science more and more, and am grateful to our dear Leader, who made the way plain for all to follow. I am happy and content to realize how Christian Science can be taken into the little cares of every-day life and help one to come out victorious and glad for the many blessings that are for all.

MRS. EDWARD H. ROOS, Buffalo, N. Y.

✧

I write this testimony to express my deep gratitude for what Christian Science has done for me. For eight years I had suffered from internal pains. One day I picked up a copy of the *Journal;* on it was written a verse from Deuteronomy: "The eternal God is thy refuge, and underneath are the everlasting arms: and he shall thrust out the enemy from before thee; and shall say, Destroy them." I felt as if I had been lifted up. I opened the periodical, and after reading some testimonies of healing said that if Christian Science could heal these people, it would heal me.

At the first opportunity I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and started to read it carefully. In less than a week all my pains had disappeared. It seemed too good to be true, but I have since found out that nothing is too good to be true. The spiritual uplift was far greater than the healing. Rheumatism has also been overcome. I had the most severe pains in my back, and could hardly move. Four treatments were given me by a practitioner and I have had no return of the trouble. That was several years ago. I have also experienced instantaneous healing of an ingrowing toe-nail from which I had suffered for two years.

Before coming to Christian Science I was always taking medicine, but have not taken a drop since beginning the study of this Science. I have gained a better understanding of the Bible, and find the daily study of the Lesson-Sermon a great help. I am thankful to God for all the good that I have received and am daily and hourly receiving; and know that, as we are told in Science and Health (p. 494), "divine Love always has met and always will meet every human need." I am very grateful to our Leader, Mrs. Eddy, for bringing us this beautiful truth that is helping so many.

ANNA LANDUS, Chicago, Ill.

✧

Christian Science was first presented to me over three years ago by a friend who had been greatly benefited by it. At that time I was in very poor health, being subject to severe headaches as well as nervous and stomach troubles. I had tried several physicians, but received no relief, although medicine was taken continually. The year before Christian Science was brought to my notice the headaches became more frequent and severe, and there was scarcely a day that I was free from pain, but I am happy to say that all these ailments were gradually overcome through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and treatment from a practitioner. An attack of acute lung trouble was overcome through the faithful help

Digitized by Google

of the same practitioner, and I suffered no ill effects, but was able to continue my work. Eight years ago I was in bed for weeks with a similar attack and did not regain my strength for months.

I am very thankful to God for these healings and for all the blessings that have come to me through Christian Science, and I am grateful to Mrs. Eddy for giving to the world this glorious truth.—Amelia Butcher, Naugatuck, Conn.

I became interested in Christian Science through the healing of my mother. This truth has been of great benefit to me, enabling me to a great extent to overcome fear, worry, extreme sensitiveness, prejudice toward people, and many other errors. Through the reading of Science and Health I have been healed of bowel disorder and catarrh, to both of which I had been subject for years. For a number of years I thought it necessary to lie down each day in order to be well and strong, especially when recovering from a severe illness, but now I know that God is my strength, and that "I can do all things through Christ which strengtheneth me." I can do any amount of work and almost never know what it is to be fatigued.

I am more thankful than I can express for all the benefits I have received and am receiving every day. I am grateful to Mrs. Eddy, and also for the Christian Science literature, which is indeed a great help to me.

Ada P. Hoadley, Naugatuck, Conn.

It is about eleven years since I began to study the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which was brought into our home by a relative who came from America at a time when all was darkness, and sorrow, sickness, and sin seemed to surround us. For many years I had prayed to God, but without result, and my faith in the orthodox teaching began to wane. I felt that a God who could punish me for doing what He made me capable of doing was not worth praying to, and so finally came to the conclusion that there was no God.

Science and Health was in our home at this time, and I felt an overwhelming desire to read it,—indeed, my curiosity could not be checked, although I had several times ridiculed Christian Science. There was a rash on my hands, but as it was said to be incurable I did not seek the physical healing; I wanted to know if there was a God, and what and where He was. The chapter on Prayer was a revelation to me, and my concept of God was entirely changed. Then one morning I became conscious that the eruption could scarcely be seen, and in a few weeks it was entirely gone. I continued to read the book and seemed to forget my ailments, one of which was severe pain in the ears, attacks of which had caused me much suffering since childhood. I did not have a single attack after taking up the study of Christian Science.

I continued my journey from sense to Soul, sometimes with bitter experiences to face, for almost every phase of error came up to baffle and to test me. A great sorrow came into my life, and my mental condition was so disturbed that it manifested itself as an internal displacement. Christian Science treatment was sought and help was received; but not until I analyzed every thought and strove hard to overcome all error in myself did the permanent healing come. This seems to have been the greatest battle in Science that I have been called upon to fight, for I now realize greater peace and harmony than ever before.

I am very grateful for our periodicals, which to me are as necessary as my daily food. On one occasion, when my cross seemed almost too heavy to bear and I had given way to tears, the postman brought the *Monitors* to the door. As I opened them eagerly with the hope of finding something to antidote my sorrow, my eyes fell on an article which had these words: "I have seen thy tears; behold, I will heal thee." I felt at that moment that God had spoken to me and answered my prayer, and I was comforted, and eventually all sense of sorrow vanished.

I am grateful for a better and higher sense of love which knows no hate and is unchanging in its affections, for I have learned from the teachings of Christian Science that there is only one Love, Truth, and Life, and that one spiritual. My heart goes out in gratitude to God that this age has produced a woman who was pure enough to discern the Bible in its true light and unselfish enough to give it to the world. My daily prayer is that I may follow Mrs. Eddy's example and do for others what has been done for me.

Minnie Bullock, Blackpool, England.

My thankfulness goes out to God, the giver of all good. Eight years ago my daughter, then twelve years old, was instantaneously healed of a severe case of shingles through the application of Christian Science. I had heard of this teaching but could not understand it. After this healing I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the book was indeed a revelation to me. While reading I was healed of chronic bowel trouble, rheumatism, and sick headaches. This proved to me the absolute truth of Christian Science. Two years later divine Love fully sustained me during a time of deep sorrow, my husband and my mother having passed on within two months of each other. Two years after this I had a stroke of paralysis, considered hereditary, but it was overcome in four treatments. I have had no return of these ailments.

My daughter has been healed of a sprained ankle and a sprained wrist at different times, one treatment only being necessary in each case to destroy the fear. Merely to say we are grateful to our beloved Leader, Mrs. Eddy, for her patience and love to all mankind, does not adequately express our feeling.—May Philson, Los Angeles, Cal.

I wish to verify the statements made in the above testimony by my mother concerning my healings, and also to express my gratitude for all the good that Christian Science has done and is doing all over the world.

Marguerite Goodsell.

Eleven years ago I was a physical wreck. I was sent to the Southwest, a victim of Bright's disease with no hope of recovery. A heavy bandage was worn around my waist all the time, and I never ventured outdoors in rainy, cold, or even chilly weather. Six months after arriving in the Southwest I had twenty-four chills inside of thirty days, and the last of these I thought would be my last, and it was; but in a far different way than I supposed, for Christian Science was brought to my notice by my landlady, who said that if it did not do me any good, it could do me no harm. A practitioner was called and with one treatment I was healed. That was over eleven years ago, and no symptom of the disease has appeared since. For one so young I had acquired an unusual taste for liquor and tobacco, which seemed to annul the pain. Nearly two months after the above healing, while diligently studying the Bible together with "Science and Health with Key to the Scriptures" by Mrs. Eddy, the tobacco habit left me completely overnight, and in nine days the liquor habit followed the same course.

Two months later, while I was working one night in a

Digitized by Google

railroad yard, one of my fingers was caught in a train of gears operated by a one horse power motor and smashed up to the second joint. The injury was so serious that my assistants suggested amputation, but my faith in the power of Truth held me steadfast, and in ten days, through reading and knowing the truth, the finger was completely restored. Only the slightest scar remains. Thus in less than six months I had had the proof of the healing of so-called incurable disease and supposedly incurable habits, also of mental surgery. Could one ask for more?

During this period my family and some friends brought pressure on me to return to the religion of my forefathers, until finally, six months after my first healing, I went home for a four days' visit. When I was leaving for the West again, my dear mother in bidding me good-by said that she did not know what had made this change in my life, but if Christian Science had done it, to stick to it, as it was the greatest thing in the world for me. Never since have I doubted the efficacy of divine Love in the overcoming of all discordant conditions.

Words fail to express my thankfulness to God for these wonderful blessings, and my gratitude to our beloved Leader, Mrs. Eddy, and all who have helped me; but I am still more grateful for the spiritual uplift, the peace and happiness that has come into my life through the study and application of the truth as taught in Christian Science. I am also grateful for the privilege of class instruction.

JOHN M. WALSHE, Chicago, Ill.

For over nine years Christian Science has been my only help. I have been healed of rheumatism of long standing, catarrh of the head, and neuralgia. I used to be subject to severe colds, though I was careful to guard against contracting them, and the doctors said I would always have this trouble. Christian Science has also healed me of diseased feet and of very painful corns and bunions. I was a wreck physically and mentally before I came into Science, but have had a practitioner only once for physical help. What little understanding I have of the truth has enabled me to overcome many discordant conditions. Christian Science has taught me to know God and my relation to Him and to my fellow men. Although advanced in years I can work better than in my young days, thanks to Christian Science.

HARRIET M. FECHNER, South Bend, Ind.

For the many blessings that have come to me through Christian Science I am very grateful. After having been a semiinvalid for ten years and having undergone three surgical operations for abdominal troubles during that time, I was indeed a wreck both mentally and physically when Christian Science healed me. For the past four years Truth has met my every need, and it has comforted by enabling me to know that our God is good and steadfast.

I am grateful for our literature, which comes to us with its message of love and peace, and for all the help that has been given me on the journey from sense to Soul. I am striving to learn more and more of this beautiful truth that has been so lovingly given us by our Leader, Mrs. Eddy.

CORINE NYE, Dallas, Texas.

Whenever in humility is born
Within thy heart a thought of Truth and Love,
To thee has dawned once more a Christmas morn,
And heavenly hosts repeat their song above.

CLINTON BURGESS.

From Our Exchanges

[The Christian Register]

Virtue and vice are separated by habit. One who has practised continence and temperance on all occasions, great and small, is armed against all forms of temptation. Men and women who are trustworthy and secure in their virtue are so not because, as foolish people think, they have none of the impulses and passions which in other men and women expose themselves to view in outbreaking sins; because these powerful impulses furnish the motive power of high-minded activity, they may even be exceptionally endowed with such human attributes. Many good people, good so far as intention goes, are caught in some whirlwind of sudden temptation and give way to that which in their saner moments they despise, simply because they have practised no vigorous self-discipline.

[The Christian Intelligencer]

The miseries of our modern world are the harvest of the denial of God and the rejection of Christ in daily life. If enough individuals had exemplified the spirit of Christ and shown unyielding devotion to the will of God, a time spirit would have prevailed in which resort to war for commercial and territorial aggression would have been impossible. The atmosphere in which wars are born results from men in sufficient numbers being actuated by motives of material self-interest. The world's mischief has been wrought by the want of personal consecration. A measure of guilt attaches to every Christian who has failed to live wholly in the will of God. How is the mischief to be undone? How shall the world extricate itself from the tangle? Relief lies along the path of obedience to the will of God. The call is to get back to Christ, to learn once more his secret of the true life, to associate ourselves with him in his redemptive work by translating his spirit into life and embodying his teachings in character. The time spirit will thus be transformed, and each life of devotion will contribute to the forces which are making for righteousness.

[The Dean of Canterbury in *The Record*]

People are in danger of acquiescing in the conception of a world and state of society in which a certain average human standard of morality is accepted, and of living in disregard of higher and deeper demands. It must accordingly be the first step in a Christian message to a nation, and to the individuals who compose a nation, to proclaim the truth that God Himself will, in one way or another, enforce those deeper and sterner laws, and that so far as they are neglected men are in imminent danger of some terrible judgment. That is the lesson which ought to be learned from such an awful experience as the present war. Of course war is unchristian, in the sense of being contrary to the purpose and the ideal of Christianity and of the laws which God has laid down for human life. But it follows from this very truth that war can only arise out of the failure of men to live in obedience to those laws, and that it is the natural consequence which God has attached to their violation on a large scale.

[Rt. Rev. Charles Gore, D.D., Bishop of Oxford, in *The Church Times*]

There is such a thing in the church as the common sense. When is the common sense of our old Church of England going to express itself and say: These are plain abuses: they shall be reformed; here are plain necessities: they shall be provided for? That will never happen unless the multitude of professing churchmen are prepared to inform themselves and take an interest.

[*The Christian Work*]

We are persuaded that we face a trying era, in which the church must "fill up that which is behind of the afflictions of Christ." What sufferings she has endured! Yet have they not strengthened her in all her borders? The days of weakness and lassitude first came—and have always come since—when she forsook the crucified one, and submitted to the patronage of the wealthy and the great. She will escape from this bondage; she will leave the dead to bury their dead; she will cast away the grave clothes of an extinct past and move forward in the power of the resurrection to proclaim the gospel of a new humanity in a reunited church and in the world. But before she can attain these functions she must repent, and be baptized with the baptism of the garden and the hill called Calvary.

[*The Biblical World*]

The teaching of Jesus is Christianity's great unworked asset. It has been neglected by theologians and misunderstood by radicals. It forms little or no part of orthodox doctrine, although it has been the basis of many a heresy. Our creeds never mention the ethical ideals of Jesus and our confessions are all but wholly concerned with matters over which Protestants have disputed. The church has debated for centuries the person and nature of its Lord, but his words have been forgotten in the search for metaphysical precision and the selection of shibboleths.

[*Northwestern Christian Advocate*]

A theory of the redemption in Christ once popular was that of saving men from punishment in hell by assent to a form of belief. Such a theory is too restricted in its scope. What is needed is a theory of redemption which will save a man from sin now and always. Paul preached such a gospel in pagan Rome—the new life in Christ; and the Christian church of today is urging the same gospel upon Christian and pagan cities the world over. Ours is a new day, and Paul's is an old gospel, but it is just the old gospel which, after all, is best fitted for the wants and needs of the new day.

[Dr. J. D. Jones in *The Christian World*]

The mischief with so many people, the reason for the restlessness and weariness which mark the lives of so many, is just this: they live among the superficialities. The streams at which they seek to quench their thirst run dry; the cisterns to which they betake themselves turn out to be broken cisterns which hold no water. It is one of God's eternal and immutable laws that the deep soul of man can find no satisfaction in surface things. The well—the real source of satisfaction, the real answer to our nature's thirst—is always deep.

[*The Christian*]

We must translate our faith into works. We must give moral expression to our mental apprehension of Truth. We must live so as to bring a consciousness of God into our immediate circle. In the discharge of our duty as citizens and soldiers we must seek "first the kingdom of God, and his righteousness;" and we must dedicate our energy to the stupendous task of bringing the life of our nation under the re-creating rule of God.

[*The Guardian*]

One result of the war which may be whole-heartedly welcomed is that it has set us all reading our Bibles much more than we did. Of the neglect into which the greatest of books had fallen, toward the close of the nineteenth and during the first years of the present century, among classes which deemed themselves preeminently intellectual, there can be little doubt.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new catalogue of selected Bibles is now being printed by the Publishing Society and will be mailed to Christian Science organizations with card in the *Journal* about Jan. 1, 1917. This catalogue will announce new prices for Bibles, Bible Cases, and *Quarterly* Covers. The Publishing Society has found it necessary to make these changes, owing to the manufacturers' increased cost of labor and materials and their advanced prices to the Publishing Society.

As the advertising pages of the *Journal* and *Herold* go to press the 20th of the month, to insure publication in a desired number requests for changes in a church or practitioner's card should reach the Publishing Society at least six weeks previous to the actual date of issue.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, Suite 550, 236 Huntington Avenue, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, Suite 500, 236 Huntington Avenue, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study. Also printed in Dutch and German.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents, three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $1.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under those titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

One of the greatest reservoir and stream regulating projects in the eastern states is now under consideration by New York State authorities. The project is for the construction of two dams, one at Conklingville on the Sacandaga River and the other at Tumblehead Falls on the Schroon River, both in the Adirondack Mountains. The purpose of the two reservoirs is to regulate the flow of the upper Hudson River so that the owners of water power on that stream shall have a steadier flow during the summer season. It is estimated that the power for private owners from the Conklingville dam will be increased from a minimum of about thirty thousand in the summer at developed sites to nearly one hundred and forty thousand. The reservoir here would be a body of water about thirty miles long and in its widest parts five or six miles wide. In the Schroon River the reservoir would be about fifteen miles long and two miles wide. Sixteen villages now in the valleys of the two rivers would be submerged, while forty miles of state highway and eight miles of railroad would have to be relocated.

A conference was held lately in Glasgow under the auspices of the Scottish League for the Taxation of Land Values. A resolution was proposed condemning the waste of parliamentary time on futile measures like the small holdings colonies act, and repudiating experimenting with holdings on barren and remote land when thousands of acres of fertile and convenient land were practically idle. The resolution further declared that, as an essential precedent condition of success for any scheme of land settlement, Parliament must impose a tax on land values, and thus give practical expression to a policy which would open up land freely to agricultural production in all its branches, assuring greatly widened opportunities of employment, higher wages, and reduced cost of living. The taxation of land values would put an end to the dog in the manger system under which a man held land that he would not use and would not permit others to use.

Many applications have already been filed with the Agricultural Credit Commission by the farmers of British Columbia for loans to make improvements on their farms, such as clearing, draining, the erection of buildings, and the purchase of stock all calculated to increase the agricultural production. The agricultural act was placed upon the statutes of British Columbia in March, 1915, and authorized the borrowing of $15,000,000 to be administered by a commission. Long term loans for twenty, thirty, and thirty-six and one half years may be made on the amortization plan, interest and principal payable half yearly. Short term loans may be made from three to ten years, and need not be amortizable.

Boston Elevated officials are pleased with the results of a test of what is known as an "emergency track," a simple derailing device to stop cars at open drawbridges. The device itself consists of a piece of road about four hundred feet long. There is a heavy ballast of crushed stone between an outer higher rail and an inner rail, laid about eight inches apart and covering the rails themselves. When the train is derailed the wheels find their way between the rails and ride on the crushed stone filling, unable to veer to either side, as the instant the crushed stone is reached the power gives out. A semiconvertible car entered at a twenty-five mile rate and stopped within 113 feet.

Attorney-General Gregory in submitting his annual report says, regarding the subject of neutrality during the European war: "It has become clear that there is urgent need of a revision of the statute law bearing on our international relations. Many acts committed in the United States in serious violation of its sovereignty and against its peace and the safety of its citizens are not now punishable by any Federal criminal law; others are punishable only under unsatisfactory statutes passed in relation to conditions altogether different from those now prevailing. The present laws relating to neutrality are clearly defective."

Five big game preserves and sixty-seven bird reservations are maintained by the Biological Survey, United States Department of Agriculture. The mammal reservations include the Montana Bison Range, the Wind Game Preserve in South Dakota, the Niobrara Reservation in Nebraska, the Elk Refuge in Wyoming, and the Sullys Hill Game Preserve in North Dakota. The Niobrara Reservation was intended as a bird reserve, but has been stocked with big game and is at present maintained chiefly for buffalo and elk.

The impression in commercial circles that the Chinese language is unnecessary for merchants and too difficult for the average Occidental to acquire, has been somewhat shaken, and many persons capable of deciding have concluded that some knowledge of the language is desirable. The British Chamber of Commerce has been considering for some time the formation of a class to study Chinese, and on Oct. 2, 1916, it became a reality, with a class of forty pupils. The course is to cover three years, and is open to students of the British, allied, and neutral nations.

A plan to control the flood waters in the Red River Valley and the Minnesota River Valley by a system of dikes and dams that will create a tremendous storage basin out of Lake Traverse and Big Stone Lake, lying between South Dakota and Minnesota, was approved at the Tri-State Flood Control Congress held at Fargo, N. Dak. Joint legislation in the states of Minnesota, North Dakota, and South Dakota, looking to the creation of a single commission to carry out the project, was approved, and will go before the legislative assemblies in each state this winter.

President Wilson has signed an executive order excluding about 19,850 acres from the Routt National Forest in Colorado. Of this area about 11,220 acres will be subject to settlement only, under the homestead laws, from nine o'clock in the morning, Jan. 23, 1917, until and including Feb. 19, 1917. The excluded lands are in northern Colorado in Routt County, and are mountainous and chiefly valuable for grazing. The high elevation and climatic conditions are against successful agricultural use.

The most successful shipment of lobsters across the continent that has ever been made was completed by the United States Bureau of Fisheries on Nov. 24, when 5400 of the crustaceans were liberated off Orcas Island in the state of Washington. The car left Boothbay Harbor, Maine, on Nov. 18 and arrived at Anacortes, Wash., Nov. 23. The attempt is being made to establish eastern lobsters on the Pacific Coast.

Shipments of Portuguese dried figs to the United States this year, to Nov. 15, amount to 19,670,888 pounds, valued at $481,288. The United States is about the only market still open to these figs, the greater part of which were shipped in former years to Germany and Russia by way of Holland. Most of the fruit is raised in the southern province, the Algarve.

The Federal investigation into the high cost of living in the United States will develop along three lines, the determination of the causes of soaring prices of necessities, the prosecution of persons found to be violating existing laws in making agreements to raise prices, and the passing of legislation to prevent a recurrence of similar conditions.

Officials of the Farm Loan Board announce that more than fifty thousand farmers have applied for mortgage loans aggregating approximately one hundred and fifty million dollars, or more than seventeen times the amount of money which will be immediately available for loans by its banks. Most applications have come from the South and West.

Ratifications of the treaty between Great Britain and the United States for the protection of insectivorous birds on both sides of the Canadian boundary, which was signed Aug. 16, were exchanged at the state department, Dec. 7, by Ambassador Spring-Rice and Secretary Lansing. So far as is known, it is the first treaty of the kind ever negotiated.

New Jersey automobile license laws, which raise revenue for road maintenance by taxing motor cars using New Jersey roads, are declared constitutional by the United States Supreme Court.

The report of the Government mining engineer for the Union of South Africa for the year 1915 shows that the total mineral output for that year is estimated at £48,531,000.

Approximately thirty million dollars is invested in the black fox industry in Prince Edward Island, Canada. Values up to $1500 have been placed on single skins.

The canning business of Norway was started in 1870. In 1890 exports of canned fish amounted to only 333 tons, while in 1915 they amounted to 51,773 tons.

The total area sown to the indigo plant in the Madras Presidency, India, for the current year is 314,300 acres.

Estimates of the expense of all branches of the United States Government for the fiscal year 1917-18 total $1,268,715,834.

The New Tongue

ROBERT NALL

"Did not our heart burn within us, while he talked with us by the way, and while he opened to us the scriptures?" The two disciples on the way to Emmaus had heard the new tongue, that "spiritual sense of the Scriptures" which "brings out the scientific sense," as Mrs. Eddy explains on page 272 of our text-book, "Science and Health with Key to the Scriptures." It was a revelation to them; they understood the truth as never before. Their experience was not unique, however, although to them it may have seemed to be, for the new tongue is the spiritual tongue of all ages. The pure truth that it speaks is heard more clearly and in more certain tones when materialism is hushed. It has never been quite silent, though sensualism has sought to stifle it and the old dragon would have silenced it. With many of the household of faith in all time it has been vocal in power, in illumination, in unfoldment. To all such it is articulate with joy and praise and encouragement. To the weary it is rest; to the despondent a stimulus; to the sorrowing comfort; to the sinner pardon and transformation.

The vibrant tones of the new tongue may be heard in every page of the Bible. It has been echoed and reechoed in the writings of many saints in the church universal, but its consummation in spiritual efficacy, as the voice of God speaking to men, is found in the words and the works of Christ Jesus. With him the new tongue revealed that life which all his followers may have "more abundantly;" it was the language, the spirit, the presence of the Father, of whom he was the perfect manifestation and reflection. Now it was in seeking to explain the "miracle" of her healing that our Leader, divinely guided to search the Scriptures, there found, as she relates, that they had to her "a new meaning, a new tongue. Their spiritual signification appeared." Thence came her discovery of the "absolute Science of Mind-healing" (Retrospection and Introspection, pp. 25, 27). Thence too she learned to indite the words of Life, to expound the truth in language that is clarifying human thought, and to teach mankind that the "signs" which follow "them that believe" (understand) Christ are the tangible, demonstrable evidence of a spiritual power which not only heals the sick, but attests that "the tabernacle of God is with men." For, indeed, is it not true now, as ever, that no one can gain spiritual knowledge and do the works which Jesus and his disciples did, except God be with him? Therefore with this revival and reinstatement of the new tongue of the gospel we are assured that God dwells with men, and they are His people; that the realization of the at-one-ment between God and man breaks the fetters of false sense, and confers the power to go from strength to strength in the destruction of error and the attainment of physical and spiritual freedom.

Do we know the new tongue when we hear it? Are we making it an integral part of our spiritual curriculum? Can we interpret its meaning so that it becomes to us as the "Verily, verily, I say unto you" of the Master? It should breathe to us of unity of faith and of fidelity to Principle. Because its origin is divine, its credentials impeccable, it should satisfy every troubled heart. It is God's first and last message of love, and if in quiet moments, when material sense has ceased to clamor, one listens attentively, he will hear it saying to a sin-tossed, weary world, "Peace, be still."

Because the new tongue is clothed with plenary powers, it speaks with authority. Sometimes it woos, as in the loving invitation, "Come unto me, all ye that labor and are heavy laden." Sometimes it unfolds the way of salvation, as in the Master's declaration, "Except a man be born again, he cannot see the kingdom of God;" sometimes it warns, as in the command, "Judge not according to the appearance, but judge righteous judgment;" sometimes it comforts, as in the tender message, "Let not your heart be troubled;" sometimes it speaks in accents severe and reproving, when denouncing sin. But always it is the call of Love to God's children to turn from the "beggarly elements" of the world to a living, demonstrable, purifying faith in Him who is Spirit, Truth, infinite Mind.

We may have only lisped the new tongue in faltering, diffident whispers, but has it not already brought peace and assurance? What has it said to multitudes who are now rejoicing in a more spiritual knowledge of God than ever before? Has it not declared that God not only loves but is Love; that as infinite incorporeal being He is both immanent and transcendent; that His universe is absolutely spiritual and perfect; and that man, His creation, is in harmony with the divine nature, and not subject to the corruption of the flesh, but indestructible and eternal. These are scientific postulates upon which we may rest confidently, and from which we learn how to prove that the Science of Christianity is the revelation of Truth which has been for all ages and will be for all time.

Human hypotheses, as the world is now beginning to admit, have beclouded and enshrouded the divine way out of the night of materiality and the fogginess of superstition. Here the new tongue comes with its simple gospel. It tells how to overcome evil, that falsity of mortal sense, by knowing that it is not a quality of Mind and therefore has no real existence. It classifies sickness and pain in the same way. It deals trenchantly with the scholastic teaching which has made mental slaves of mankind by crediting God with permitting, if not creating, all the evils that are ravaging humanity, thus distorting the spiritual truth relating to God's plan of salvation, written in letters of gold throughout the divine Word.

Thus we may come to understand the greatness of the utterance to be found on page 174 of Science and Health: "Truth is revealed. It needs only to be practised." What is demonstration but speaking the new tongue to error in its multifarious forms and living it in daily life? But who can thus speak it and live it? It is the prayer of faith and understanding. It may reach the very heart of Love and touch the infinite. It discerns between the spiritual and the material. It separates the wheat of pure thought from the

Copyright, 1916, by The Christian Science Publishing Society.

Digitized by Google

tares of sense-domination. Therefore dwellers in the mortal dream of life and intelligence in matter can have no part or lot here until they are awakened from their false consciousness. "How shall we sing the Lord's song in a strange land?" was the plaintive cry of the captives in Babylon.

Separateness from the subtle delusions and illusions of materiality is an indispensable condition to voicing the truth scientifically. When "the cloven tongues like as of fire" come; when, because we are seeking for redemption through the majesty and power of a living faith in God, we know something of the baptism of Spirit, then we shall hear the new tongue: "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." Thus hearing, we shall be conscious that as sons of God we are heirs of that power to reflect Love which is the sum and substance of all redemptive work.

Would we be faithful, loyal, obedient, unswerving in our devotion to our high calling? Then we shall resolutely bar the door of our mental home to the old tongue of mortal sense and keep that home a fit place for Spirit to dwell in and Soul to reign supreme. Thus Christ will be ever speaking to us, as to the disciples on the way to Emmaus.

On the Mountain Top

MABEL CONE BUSHNELL

Recently the writer experienced what was to her a most wonderful trip to the summit of one of the mountains of southern California, and as the impressions gained on that trip have many times since helped in the solving of her problems, they are now passed along in the hope of assisting some one else. In the first place it seemed a demonstration to make the trip, for years of illness had brought a vivid sense of inability either to undertake it or to stand the altitude; but the knowledge gained in the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, of the ever-presence of omnipotent Love, upheld and guided her all the way. All sense of fear was eliminated, and replacing it was a feeling of mental freedom, of exaltation at leaving behind the seeming pettiness of material life and coming out into a new sense of the bigness and grandeur of God's universe. There came also the thought of the promise, "Nor height, nor depth, . . . shall be able to separate us from the love of God, which is in Christ Jesus our Lord."

Taking time, as they desired to see the beauties of the scenery as they climbed, the travelers reached the summit at about four o'clock in the afternoon of a sunny October day, and an hour later they wended their way to a seat on the edge of a jutting rock to watch the sunset. During the preceding hour a heavy fog had arisen in the valley below, so that when they were seated in their little nook the rock at their feet seemed to melt off into an ocean of fog, which completely obscured the valley but left the tops of higher surrounding mountains as well as themselves seemingly silhouetted against a vividly clear blue sky. In its brilliant crimson garb, the sun reminded one of nothing so much as a ball of molten metal, and in almost breathless silence they watched it sink into the depths below. As it became more and more submerged in the fog, it seemed to assume fantastic forms. One moment a beautifully shaped Japanese lantern delighted their fancy; the next, the oddest formed vase came into view; and so on, while they gazed in wonder, until finally the last little rim of red disappeared into the grayness and only the faintest tinge of rose remained to show where it had been. With one instinctive accord and saying not a word, the two watchers turned to look in the opposite direction, to see the first glimpse of a glorious moon rising above the mountain beyond into the ever deepening but still clear sky above, reminding them of that wonderful promise of "the lesser light to rule the night . . . and to give light upon the earth."

The wondrous lesson learned kept the two watchers silent for a long time; words were inadequate to express the message of Truth revealed in these types and symbols. The apparent distortion of the brilliant sun by the filmy fog pointed so clearly to the seeming distortion of the perfect man by the mist of mortal mind, that it was a never to be forgotten lesson. We knew the sun had not changed one iota, and yet how real the distorted shapes had seemed,—but no one could convince us that the sun had changed its form even in the slightest degree. We knew it was there, round and brilliant and shining as before, despite the evidence of the material senses which would try to tell us it was a sadly distorted sun. And just so mortal mind would make us think God's perfect image and likeness can be distorted or changed in one way or another. Could we but always see that, regardless of the evidence of the senses, man is forever the image and likeness of his Maker! The misapprehension of mortal mind may seem to spread a veil which distorts, but back of that is the perfect man, the image and likeness of God. On page 190 of Science and Health Mrs. Eddy says, "This mortal seeming is temporal; it never merges into immortal being, but finally disappears, and immortal man, spiritual and eternal, is found to be the real man." And when we hold to this great truth we come into the realization of the nothingness of the fogs and shadows of mortal sense.

The tip of the clear, bright moon, following close on the retreating sun, brought an added clearness of perception, and illuminated for the writer the promise in the first account of creation in Genesis, of the "lights in the firmament of the heaven to give light upon the earth," for even in our seeming material darkness we have the "lesser light" to guide our way. As we acknowledge and seek honestly for even a ray of the omnipresent light of Truth, we come into its fuller radiance. And so on a mountain height, far above the sea level, the writer gave thanks not only for new lessons learned, but beyond and above all for the steadfast purity of Mrs. Eddy's life, which gave us the understanding whereby we might apply the wonder of God's word and gain a glimpse now and then into the spiritual kingdom for which we are all striving.

The Bad Little Sheep

JOHN RANDALL DUNN

Above my desk hangs a picture which I desire to keep ever near. It shows a shepherd leaning over a jagged precipice and stretching forth a saving arm to a helpless sheep. It must have been a bad little sheep to have so wandered from the quiet pastures and the careful shepherd. It must have been a wilful, disobedient, headstrong little creature, for not otherwise could it be found in this distressing situation. A great chasm yawns beneath; ominously circling above moves a waiting vulture. Yet to this hapless animal, this wilful, disobedient, and headstrong animal, perchance, is stretched out the hand of compassion. Through heedlessness or deliberate contumacy it has become separated from its brothers of the flock and their kindly shepherd. Should not such grievous dereliction be strongly censured? Would it be a Christian act to allow such grievous wrong doing to pass uncondemned?

At this point the picture furnishes interesting food for thought, illustrating as it does human experience. Apparently the shepherd in the picture feels that the greatest need of the erring sheep is not condemnation, but saving compas-

Digitized by Google

sion. So far as can be determined, no stern rebuke has been administered, no reminder of the depth of wickedness into which it has been plunged. There has been no need for this. The erring one knows all about hell, for he has been there. He knows now the joy of trusting in a faithful shepherd, and how sore is the penalty of wandering therefrom. He knows this—ah, how deeply he knows all this! Perchance condemnation and remorse have already caused the feet to be less firm in clinging to the ragged edge of hope. Yes, there is but one need, and divine Love is meeting it. Down comes the tender hand, gently sounds the cheering voice, and out of yawning depths there rises a sense redeemed.

Let those who are confronted with the problem of a straying sheep, an unloving and unlovely sheep, a malicious or even a seemingly incorrigible sheep, ponder the lesson of this picture. Possibly the sheep is still lingering on the hazardous steeps of malice, or misunderstanding, or sickness, or sin. Should a friend then stand above him, delivering silently or audibly his opinion as to one who could bring himself to such a pass, and so-called righteous condemnation of his course? Or should the Christ-mind, that knows neither sin, frailty, nor blemish, be allowed to reach out in daily, hourly compassion through a brother's consciousness to wrest a precious thought from the nightmare of materiality and to bring it, unsullied and undefiled, to the sheepfold of the Father? As a loved hymn runs (Hymnal, p. 8):—

Not by the harsh or scornful word,
  Should we our brother seek to gain;
Not by the prison or the sword,
  The shackle, or the clanking chain.

But from our hearts must ever flow
  A love that will his wrong outweigh;
Our lips must only blessings know,
  And wrath, and sin shall die away.

✧

Love Universal

MILLIE F. YOUNG

THE world at large, with its turmoil and unrest, is going through one of the greatest upheavals that humanity has ever known. This is bringing the errors of mortal mind—such as hatred, malice, and jealousy—to the surface, whereby they may be recognized as errors and overcome by the truth, which is ever at hand, showing us that universal salvation is the only way by which the problems of mortal mind can be solved.

Christian Science comes more forcibly to us at this time, with its healing balm of Truth and Love, pointing us upward and away from material sense to "the glorious liberty of the children of God," when all wrongs will be righted and Christ's kingdom be established on earth. When we can know the truth about ourselves more clearly, understand that man is spiritual and not material, we shall then be better able to see the truth about our brother man by realizing that as God's idea he also is spiritual and perfect, because made in the image and likeness of the one infinite, loving Father and Mother of all.

It is through the study and practice of Christian Science that we are able to understand the meaning of Jesus' words, "A new commandment I give unto you, That ye love one another; as I have loved you, that ye also love one another." Only through the struggles and self-denials of human sense do we learn how to love according to this new commandment, showing us that divine Love transforms human affection, but is itself always perfect and always the same, "yesterday, and today, and forever." Love thus transformed is indestructible and inseparable from its divine source. As we grow into the stature of manhood in Christ Jesus, we reflect and show forth the love which heals and saves us from the material so-called law of sin, sickness, and death.

On page 225 of Science and Health Mrs. Eddy says, "Love is the liberator," and St. Paul taught that "love is the fulfilling of the law,"—the law of divine Mind; but unless we are loving others according to our highest understanding of Principle, we are not fulfilling the law and our works are dead, for they lack the inspiration of Truth which gives life and peace. It is the daily striving for the Mind which was in Christ Jesus that brings us into a conscious realization of the kingdom of heaven, the reign of harmony within. As did our Leader (Science and Health, p. 226), we should press steadily forward "into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged."

✧

Right Education

GRACE B. POTTER

ONE night as I was reading the passage in Science and Health (p. 235) where Mrs. Eddy says, "It is not so much academic education, as a moral and spiritual culture, which lifts one higher," the word education specially impressed me. As I was thinking about it, I began to realize how many people wanted education, how many needed it although they did not want it, and how many thought they had it yet were so far from it; in fact, how twisted and warped its meaning had become from a mortal standpoint.

Then I went back to Jesus and his life, and thought of how he inspired others to learn of him while they were journeying from sense to Soul. His life was a perpetual education to all with whom he came in contact. Whatever he did, he lifted the situation out of matter into Mind, for the basis of his work was inspiration. Jesus educated the sick out of their false belief that they lived in a discordant body, to the facts of Mind, the truth of being. He fed the multitude, educating them out of their belief of poverty and lack. Those burdened with the cares of this world eagerly heard the call, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Learned philosophers, filled with a false sense of learning, with the pride of intellectuality based on human opinions, were taught the greatness of meekness and simplicity. Himself filled with wisdom, he inspired all mankind, even from the little children to the wise men in the temple, with a willingness to receive the truth. Jesus was the greatest educator in his age, and Christian Science is today carrying forward this education, because it is the "Spirit of truth" which he prophesied should come.

From this my thought turned to the Educational Building I visited while at the recent San Francisco exposition. We had searched for some time, looking for the booth where Christian Science literature was displayed, when my eyes fell upon the different surrounding names under the head of "Education;" but upon examination these names all stood for systems which would turn one to matter instead of to Spirit, God. Finally we came to the section where Christian Science literature was displayed, and where every passer-by who willingly stopped might inquire, and also learn something of God, good. In a case was the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the Bible, and the *Quarterly*, the latter being opened to a section of the Lesson-Sermon for the week.

As we reflect upon this view of education, can we not be even more grateful to our Leader, Mrs. Eddy, who has so lovingly unfolded in this age the true meaning of the teaching and practice of Jesus, the great educator? As Christian

Digitized by Google

Scientists we have the opportunity to be the best informed people in the world. Mrs. Eddy has so wisely provided in her works the way to obtain the higher education. How much better the universe will be with good, well ordered, well educated workers! Such education is a bulwark to our country, an armament for the future.

When one is inspired to activity rather than compelled to education, this produces the quality of being mindful; one well might say, "full of mind," radiating light now and through all time and eternity. In Science and Health (p. 195) Mrs. Eddy says, "It is the tangled barbarisms of learning which we deplore,—the mere dogma, the speculative theory, the nauseous fiction;" and she adds, "Incorrect views lower the standard of truth."

✧

Rejecting the Lie

CLAUDE W. WOODRUFF

CHRISTIAN SCIENCE resolves matter with its innumerable conditions, many of which are seemingly unbearable, into an error of statement. Reduced to a statement, and that erroneous, a condition called physical disease or poverty is not difficult to remove, and its destruction is compassed when it is displaced in consciousness with the full opposing truth. Discord is mental darkness, and as the never failing eliminator of darkness is light, so the annihilator of an erroneous condition, under whatever name, is the truth, the scientific reversal of the erroneous statement.

It is true that man is the image of Spirit, God, hence is spiritual and perfect. Such a state of being does not admit of sin or suffering. On page 357 of Science and Health our Leader has said, "We sustain Truth, not by accepting, but by rejecting a lie." Sickness is a statement of error based upon false belief. It is clear that a statement of error is a lie, and Jesus called the devil a lie, or liar. The lie states that man is not the perfect child of Spirit, but that he is a sinful and diseased mortal. If we sustain Truth by rejecting a lie, we sustain by this process man's perfection, his health and happiness; hence we sustain health not by admitting the divine origin or sanction, the power or reality of matter and its numerous discordant conditions, but by rejecting such falsities and adhering consciously to the opposite facts. James wrote, "Resist the devil, and he will flee from you."

We learn in Christian Science that truth, reality, substance, life, intelligence, and power belong to God. They are not then qualities of matter, and when we stop agreeing with the lie, when we continually align ourselves with Truth, refusing to be deceived by the evidence which matter seems to present, we shall break the yoke of sin and suffering and shall enter into freedom, joy, health, holiness. This latter state is the kingdom of heaven.

To illustrate: The carnal mind, after educating mortals to believe that matter is stubbornly real and that it is endowed with power and intelligence, states that a man may take cold, contract lung disease, and possibly die, as the result of exposure to the elements; and in human experience this frequently seems to be the case. When, however, Truth comes to the rescue, no such results are seen. Christian Science says, If "power belongeth unto God," as the Scriptures declare, then inclement weather, drafts, or damp feet have not the ability to cause a cold or lung troubles, nor has this lie the power to deprive man of his life, which is God. Christian Science further teaches that to state this fact understandingly, to adhere to it, to know that it is true, overcomes disease and defeats death. But if we agree with the lie, in season or out of season, we shall sooner or later suffer in accordance with our conclusions, not because of any conditions but because we took sides with error. Mrs. Eddy says (Science and Health, p. 392): "If you decide that climate or atmosphere is unhealthy, it will be so to you. Your decisions will master you, whichever direction they take."

When we are in agreement with Truth we are disagreeing with error, and *vice versa*. To be in harmony with Truth implies health. To be swayed by universal or individual error of thought is discord. We are properly attuned to divine Science when all our concepts of life and reality are based on the supremacy, the allness, of Spirit. This position excludes the possibility of belief in material life, intelligence, substance, power, or reality. When we consciously or unconsciously agree with the common statement that a blow on the head can deprive one of life, we have aligned ourselves with the erroneous statement that life and intelligence are in matter and can be taken from matter. If this belief is unrebuked, hence not destroyed, the lie will to mortal sense fulfil its own conditions, and the lie called accident will ultimate in the lie called death. But to know sufficiently well that God is man's life, hence that the real man is not subject to death; to concede not an inch of ground to error in the face of seemingly overwhelming evidence of its reality,—scientifically to reject the lie,—would avert so-called death. Such is the power of the Word, which, according to Revelation, goes forth "conquering, and to conquer."

✧

Teaching the Child

KATHERINE E. VARGA

To the young mother who is a student of Christian Science the thought often comes, and always accompanied by a heart overflowing with gratitude, that through her study of this truth she knows definitely what she should teach her child about God and the child's relation to our heavenly Father. For us to realize what this will mean to the child in future years, it is only necessary to think back on our own lives and recall incidents which, had they been explained scientifically, would have corrected then and there the erroneous impression that most of us held of God.

The writer remembers several incidents of this sort in her own life, and in thinking of them recently in relation to questions which her little girl might some time ask, she was deeply thankful that they could be clearly and helpfully explained in the light of Christian Science. One of these occurred when the writer was about the age of four. She was staying in the country with her grandmother when one day there came to the door a pack-peddler who had only one leg, the other having been amputated. The child was silent as she stood at the door, but when the peddler started away she turned to her grandmother, her eyes filled with sorrow and pity, and said, "God forgot to finish him, didn't He?"

Should this same question come to a mother enlightened by the truth as taught in Christian Science, she would gladly take the opportunity to unfold to the inquiring little mind some facts concerning God's spiritual creation,—that God made all and that all of His creation is forever perfect; that whatever seems imperfect is only a belief of mortal mind, and that in proportion as we understand and know the truth clearly the imperfections will vanish. The little one can be told that it has its share to do in bringing this realization of heaven on earth to pass.

Prayer is another subject which gives the Christian Science mother so much joy, when she remembers that she has learned how to teach the child so to pray that the greatest good, not only to the child but also to all the world, may be realized. What a wonderful privilege to be taught early in life the Lord's Prayer with its spiritual interpretation, as given on

Digitized by Google

page 16 of Science and Health. We cannot be too grateful for the light that is thrown on God's precious Word by our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which enables us to teach so that the knowledge imparted to the wee ones may stand not only for time but for eternity.

✧

"Reserved in heaven"

AVERY BROWN

ONE of the first truths grasped by the beginner in Christian Science is that heaven is not a place or locality. For many years scholastic theology made the attempt to teach the fallacy of a localized heaven, attainable only in the hereafter; but today it is not so insistent. The churches are slowly but surely adopting the scientifically Christian explanation,—which indeed merely repeats what Christ Jesus taught centuries ago on the shores of Galilee,—that heaven is a divine state of consciousness, the spiritual harmony which is the direct resultant of the government of God. God being infinite and All-in-all, as the Scriptures declare, there is no place where He is not; therefore the divine consciousness which is heaven is really ever present. It is an eternally existent fact, the true state of being now and forever, here and everywhere, and is inseparable from man as the image and likeness of God.

A mortal, not being the image and likeness of God, is not able unaided to perceive the ever present divine consciousness which is heaven, but this spiritual perception is possible as the belief in matter and mortality is put off and the Mind of Christ is understood. The dulness of mortals to spiritual, eternal facts is no proof that heaven is not a present reality; rather is it evidence that men are looking "with observation," though Jesus warned them not to do so. This is evidence that they are seeking the kingdom of heaven which to sense is "here" or "there," when the Master said, "Behold, the kingdom of God is within you." On page 576 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "This kingdom of God 'is within you,'—is within reach of man's consciousness here, and the spiritual idea reveals it. In divine Science, man possesses this recognition of harmony consciously in proportion to his understanding of God."

In his first epistle Peter declares that God has "begotten us again, . . . to an inheritance incorruptible, and undefiled, and that fadeth not away, reserved in heaven for you." Thousands of Bible students have read and reread this statement through the veil of the old belief that heaven was a place, and thereby postponed in their own experience the present benefit to be derived from the apostle's promise. But, in the new understanding of Christian Science, how perfectly clear it is that man's true inheritance, incorruptible and undefiled, is reserved for a state or condition of harmony in the divine consciousness where nothing can enter that would impair or destroy!

Not in a far away place and a far distant time is this reservation of man's harmony and perfection to be claimed, but in the forever present. It is attainable by the human consciousness now, yet reserved inviolate from the least contact with carnal and mortal beliefs. Reading in this light the Scripture references pertaining to heaven, mortals can learn to be thankful that man's inheritance of good is reserved forever from the depredations of all beliefs of time and sense; that the kingdom of heaven is, indeed, that which Mrs. Eddy has defined it to be (Science and Health, p. 590), "The reign of harmony in divine Science; the realm of unerring, eternal, and omnipotent Mind; the atmosphere of Spirit, where Soul is supreme."

Selected Articles

[Editorial in *New York* (N. Y.) *Telegraph*]

Vital statistics just published by the Census Bureau show that the death rate in America is 13.5 per thousand, as against 16.2 in the years 1901-6. The death rate in America is the lowest it has been in the history of the country. Americans are healthier than they have ever been.

The decrease in the death rate in the United States began when Christian Scientists started their uplifting work. Christian Scientists have made this a nation of optimists. Men and women have "got into the habit of being well," as Oliver Wendell Holmes said. Christian Scientists have worked without ceasing to show their fellow men that sin, sickness, and death are abnormal conditions of mortal mind. And they have succeeded. No group of religionists in America has ever had such an effect on the people—an effect for good spiritually and bodily—as have the Christian Scientists. Doctors may rail and attempt to prosecute, but the work begun by Mrs. Eddy still goes on. The good health of the country shows the result of that work. Figures prove it.

✧

[Carl E. Herring in *Fremont* (Neb.) *Tribune*]

In common with an increasing number of denominational leaders our clerical critic has learned that the "church has all the sources of healing power." Christian Scientists rejoice that this first step has been taken, and hope that it will lead to a spiritual understanding and consecration that will vastly enlarge the healing work now carried on through the instrumentalities inaugurated by Mrs. Eddy, the discoverer of this fact.

It is something more than a coincidence that this finding out as announced by our friend has lain dormant since the second century and is now tardily brought forward when Christian Science bids fair to accomplish the work of unification of the churches by the individual acceptance of the teachings of Christ Jesus in their entirety, which includes the healing of the sick as well as the preaching of the gospel. The work is so great and the laborers are so few, that one who is sincerely turning his thoughts toward the vast possibilities for the regeneration of humanity as contained in the Scriptures, should receive every encouragement, although he may not yet have awakened to the fact that the Christian Science movement is the propelling force.

Great religious leaders who have caught the larger inspiration, freely accord to Mrs. Eddy the honor justly her due and acknowledge that she found the pearl which the churches threw away. It may not be out of place to recall that Mrs. Eddy had no thought in the beginning of founding a church, but with a heart overflowing with love for humanity she took her discovery to the churches and only in sorrow turned away when they rejected it. This was fifty years ago, and the churches have passed through the stages of ridicule, denial, admission, quandary, and are now entering the era of having known all the time that the church could heal.

Christian Science has no monopoly of the healing power of Almighty God, or this revelation contained in the Scriptures, and the teachings, life, and works of Christ Jesus. Inasmuch, however, as the early Christian church possessed this knowledge and it was lost through a material interpretation of the Bible which replaced the spiritual, it is of vast importance that the integrity of the Christian Science teachings be preserved, to the end that history be not repeated and the crowning purpose of Jesus' mission again lost. So long as mankind indulges in the delusion that God is the author of sin, sickness, and death, these will of necessity seem to be as

Digitized by Google

real as holiness, health, and life, and our prayers for relief will consciously or unconsciously be thwarting the will of God. If on the other hand we accept the Scriptural statement that "God saw every thing that he had made, and, behold, it was very good," and with the apostle James know that "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning," our prayers of "Thy will be done" will be the turning of the understanding heart to the source of all reality and perfection.

Jesus said, "By their fruits ye shall know them;" and while much might be said in answer to the objection made against the use of Science and Health as a "Key to the Scriptures," by comparing it with the tomes of theological commentaries under which the shelves of our libraries groan, to say nothing of the countless sermons and lectures which are offered to supplement and explain the Bible, it is only fair to recall that Mrs. Eddy in the sanctuary of the closet demonstrated the truth of what she taught in the healing of sickness and sin, before she announced her discovery from the rostrum. It will be agreed that the step from speculative theology—no matter how glowingly presented—to actual demonstration is a highly important one, and until this second step is taken, the world will reserve its approval.

✧

[Samuel Greenwood in *Nanaimo* (British Columbia) *Free Press*]

A lecture recently delivered in your city was ostensibly upon the subject of Christian Science, but judging by your report the lecturer must have had something else in mind, as it contains no true statement concerning this subject.

Christian Science has so many times been utterly demolished by its critics and its Discoverer and Founder declared unworthy of support, that it must seem strange to these critics to find it continuing to prosper and to afford unspeakable comfort and help to an ever increasing number of beneficiaries, just as if nothing had happened. The impartial observer will be pardoned for concluding that these same critics have expended their blows upon men of straw, images of their own creating, and have left Christian Science to go on its way untouched.

The lecturer stated that he had known Mrs. Eddy from childhood and that she was "poor and illiterate." Poor she may have been, in the sense that she was not a wealthy woman; but illiterate, no. The fact that she derived a comfortable income from her literary work, even before her discovery of Christian Science, entirely disproves the latter claim, for newspapers and magazines do not pay illiterate people to write for their columns. In this connection let me quote from a letter by H. H. Smith, the father of Senator Hoke Smith, formerly governor of Georgia, who wrote: "I have known the Rev. Mary Baker Eddy from childhood. She is my first cousin. . . . She was always a beloved visitor in our home. . . . Her brother Albert was one of the ablest lawyers of New Hampshire; but Mary [Mrs. Eddy] was deemed the most scholarly member of her family" (The Life of Mary Baker Eddy, by Sibyl Wilbur, p. 7).

The lecturer's statement that Christian Science had never healed organic disease, is disproved by the experience of many thousands who have been healed of diseases that medical physicians had diagnosed and doctored as organic; and even one person's experience is more convincing than this worthy doctor's denials. If all these cases were wrongly diagnosed as he implied, there must be something radically wrong with the medical profession, and our critic should in all mercy warn his hearers against relying upon a system that is confessedly liable to fool them into dying on account of an imaginary ailment. It is astonishing how quickly a trouble which a physician diagnoses as organic, becomes imaginary when it is healed by Christian Science. Does our friend look upon organic disease as such an unpardonable sin that even God can not or will not help a mortal under that affliction, but that perchance a physician might?

This critic's statement that the devil can both cause and cure disease, is directly at variance with the Master's teaching that good and evil do not come from the same source. That the devil is doing the healing work in order to bolster up Christian Science is a most remarkable argument, since it is being demonstrated daily that Christian Science is lessening the influence of evil in men's lives. This lecturer should know that men are not made better by evil efforts, but by the power of good; hence the beneficent influence of Christian Science upon the lives of mortals attests its divine origin. It is well to remember that the danger of fighting against God is as great today as it was when Gamaliel uttered his excellent counsel.

✧

[H. R. Colborne in *The Sun*, Sydney, New South Wales, Australia]

An article in *The Sun* contains a reference to Christian Science which shows that the writer, if he has ever read any authorized Christian Science literature, has failed to grasp its teaching. Christian Science does not teach that mortal man has nothing the matter with him, nor does it endeavor to "kid people" that such is the case, but it goes to the root of matters. It begins with the foundational premise that a good God, the divine Principle of the universe, created all, and that there are not two creators, but one. It teaches that the creation can but express the attributes of its creator, such as justice, mercy, goodness, and that evil, sin, disease, and death have no foundation in absolute truth, but are the results of false belief. They are merely negations of the truth about God and His creation, including man made in His image and likeness.

In the text-book of Christian Science, "Science and Health with Key to the Scriptures" (p. 518), Mrs. Eddy says, "All the varied expressions of God reflect health, holiness, immortality—infinite Life, Truth, and Love." Again, on page 460 she says: "Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." On page 218 we read, "When we wake to the truth of being, all disease, pain, weakness, weariness, sorrow, sin, death, will be unknown, and the mortal dream will forever cease."

This is in accordance with the statement of Jesus as recorded in John, "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." Our Master not merely said these words, but put them into practice. The freedom he brought to those who came to him, and who were receptive to spiritual truth, was freedom from all manner of disease; and surely it is reasonable to acknowledge that the spiritual law of Truth which was then operative, and of which he availed himself, is still operative, just as certainly as the mathematical law that one and one are two has been, is, and always will be operative. A real basic truth and law can never be anything but active and operative.

✧

[S. T. Downs in *Booneville* (Ind.) *Enquirer*]

It seems somewhat difficult to determine just the definition that our critic would give to the word "proselyte" as used in his statement, "The Christian Scientists get their adherents by proselyting, but they never succeed in getting good church-members who are familiar with the Word of God." The first part of the statement evidences a desire to deny Christian

Digitized by Google

Scientists the right to give the world their message, but most people will undoubtedly regard Christian Scientists as in the right in their intention to continue spreading this great gospel of love and healing to all the world. Christian Science is a feast of spiritual truths of which mankind may partake if they desire, but there never has been and there never will be any urging, coaxing, condemning, denouncing, or criticizing to get them to do so.

The statement about active members in the older churches not becoming Christian Scientists, simply shows how unreliable are our critic's sources of information. There is probably no remark heard more often in public testimony meetings and among Christian Scientists—with the exception of expressions of gratitude for the healing of sin and sickness—than that after studying the Bible for many years during membership in the so-called orthodox churches, it remained for Christian Science to unfold the spiritual treasures of God's Word. The first religious tenet of Christian Science reads, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497).

In a spirit of opposition to what he thinks Christian Science teaches, our critic denounced it as unchristian and unscientific. Christian Science is Christian, however, because its teachings are based entirely on the words and works of Christ Jesus as recorded in the New Testament. It disagrees, it is true, with many creeds, but this disagreement is supported by the teachings of the Master. For instance, Jesus never taught that he was God, and the New Testament when understood in the light that Christian Science throws on the subject shows that he did not. Then again, Christian Science is Christian because it is preaching the gospel and healing the sick—both preaching and healing—exactly as Jesus commanded, and it has restored primitive Christianity to humanity.

Christian Science is scientific because it reveals the spiritual laws by and through which Christ Jesus performed his work, and thus it shows to mankind how the wonderful promise of the Master, "He that believeth on me, the works that I do shall he do also," may be realized. Christian Scientists do not claim to have attained the perfection of the Master, but present proofs, found in the healing of all manner of sin and disease, show that through constant striving to be more godlike we shall finally reach perfection.

✧

[Henry Deutsch in *Duluth* (Minn.) *Herald*]

Christian Science is not a mere philosophy, but a revival of the religious teachings of Jesus the Christ in their original interpretation and demonstration. So far from being at all related to pantheism, it is the absolute antipode.

Whether Christian Science or any other religion is true or false, is not a mere matter of statement, but one of proof. Truth is demonstrable, and demonstration proves it true. Christian Science in the short period of fifty years has shown to the world that the works of the Master can be performed now even as they were in early Christian history, and that his teachings are life and truth, as shown in the healing of disease, the destruction of sin, and even in his ultimate demonstration, the resurrection from the dead. He indicated that all his followers might perform the same mighty works that he did, and the rule which he gave for measuring a Christian was indicated in his statement: "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

We may not be able to meet the test in all directions with one bound, but he who cannot yet fully do so is in no position to judge others who are similarly striving; and when he shall have attained, he will also have reached that height of humility possessed by the Master, which sought not the occasion to judge and to condemn but rather to have compassion and to commend.

Followers of Christian Science are for the most part those who have traveled through the deep waters; who have sought relief and comfort in all directions without avail until, cheered by the promise of its teachings and the example and fruit of the life of Mrs. Eddy, they have turned as a last resort to Christian Science and found in its healing waters not only the sought for relief but also that knowledge of the truth which gives the freedom promised by the Master. They know that sin, disease, and death seem to be very real experiences of mortal existence, but they know also that they do not constitute a part of the reality of God's spiritual kingdom, and that as human consciousness lays off "the old man with his deeds," it also lays off his attributes of mortality, evil, and suffering, and puts on "the new man, which after God is created in righteousness and true holiness." Thus through Christian Science man obtains the true concept of that which is real, and is enabled to judge truly of that which is false.

✧

[John Rendall in *The Eldon* (Iowa) *Forum and Register*]

In my experience of twenty-one years as a Christian Scientist I have never seen a correct statement of Christian Science emanating from one who thought himself opposed to it. I have therefore come to the conclusion that one who knows enough of Christian Science to state its teachings correctly, knows too much about it to oppose it.

When one presumes to state of Christian Science that it is "neither Christian nor scientific," he arrogates to himself a right which he does not lawfully possess. Christianity is a religion of works, not of words. It is to be judged, not by what some one may say about it, but by what it is accomplishing. On this basis of judgment Christian Science is found to be both Christian and scientific, because its teachings and practices are in accord with those of Christ Jesus, the Wayshower for humanity; and again, because it presents an orderly arrangement of ascertained facts about God, man, and the universe.

The teachings of Christian Science are positive and demonstrable, and are gratefully acknowledged and followed by hundreds of thousands of people who have experienced the beneficial results from them. In the face of such evidence it is presumptuous for any one to advertise himself as lecturing on "Christian Science *v.* Common Sense," unless "common sense" is susceptible of some definitions which are not ordinarily accepted.

✧

[Charles W. J. Tennant in *Finchley* (England) *Press*]

A correspondent says that the spiritual discernment of Christian Scientists is purely imaginary and arises from egotism. He evidently is not speaking from the standpoint of personal knowledge of this subject; hence he is not in a position to judge of it. All truth must come to one as a revelation, and it must be spiritually discerned, since all absolute truth is Spirit and its spiritual manifestation. A child has to learn that twice two is four. It is a revelation to him. One would not say that his discernment of this eternal fact was "pure imagination" or the result of egotism. Christian Science reveals God as divine Principle, and the discernment of this must come as a revelation to those prepared to receive it. The next step is to prove it by demonstration.

Editorial

Taking Stock

In commercial life it is customary for every business man or firm at some time during the year to "take stock." With most concerns this stock taking time comes at the end of the calendar year, and is coincident with a general balancing of accounts. The object is to end all guessing and uncertainty as to the assets and liabilities of the concern, and to obtain definite information as to its gains or losses for the year. The good merchant at such a time does not try to deceive himself into the belief that every piece of goods on his shelves is worth what he paid for it, but relentlessly marks down whatever undesirable stock is on hand and charges off every uncollectable account, thus commencing the new year with his books showing no fictitious values and no inflated assets. He knows that if he were to withdraw from his business the profits shown by his books before this readjustment of values had been made, he would in all probability seriously impair his capital and it would be only a question of time until failure would result.

Every Christian Scientist "has enlisted to lessen evil, disease, and death" (Science and Health, p. 450),—a mighty undertaking and one that demands his highest powers of achievement. If, as was the Master, he is diligently about his "Father's business," can he afford to do less in the way of ascertaining his actual standing, his gains and losses, than is done by the prudent business man? Can he afford to go on from year to year without a careful analysis of his spiritual, mental, and moral condition, a scrutiny of his thoughts, his habits, and his desires, an appraisal of their value, a sacrifice of all of these that may be termed "dead stock"? Surely it is only when this has been conscientiously accomplished that he is in a position to know his true standing as a Christian Scientist; whether he is adding to his store of blessings, or whether he is simply storing up a lot of beliefs of life and pleasure in matter which will in time absorb all his capital and result in failure, as surely as the accumulation of "dead stock" and bad debts will result in the failure of the merchant.

Furthermore, the Christian Scientist's stock taking, instead of being confined to an annual accounting, needs to be a daily and hourly process, since the "judgment day of wisdom," Mrs. Eddy tells us on page 291 of Science and Health, "comes hourly and continually, even the judgment by which mortal man is divested of all material error." Then his accounting should be not an irksome duty, but a pleasure, a time of refreshing, a counting of blessings as well as a condemnation of misspent opportunities. And still further, his valuable accumulations must not be merely for himself, but rather as held in trust for all mankind. To be of value to himself, his thoughts and desires must include his brother man; they must, in fact, bring peace and happiness, health and surcease from sorrow to all upon whom they rest. His acts must be as carefully designed for general or universal benefit as they are for personal or individual gain. He must recognize that he cannot sweep evil from his own door and leave it for the torment of his brother. His work is not the sweeping of evil from place to place, but its destruction.

The Christian Scientist's ability to help himself is not based upon a selfish individuality; rather is it the fruition of unselfishness, goodness, righteousness, and based upon the fatherhood of God and the brotherhood of man. He cannot demonstrate that the Lord is his refuge and his fortress, unless he demonstrates that divine Love is also the refuge and fortress of all; that evil is not unreal in one instance and real in another. Only by knowing the universality of good and the consequent unreality of all evil, can any evil be destroyed. Mrs. Eddy writes on page 9 of "Unity of Good," "*By knowing the unreality of disease, sin, and death*, you demonstrate the allness of God." This, let it be remembered, is the business we have entered upon, and if daily and hourly we are alert to wipe out error's every claim to reality and power with an unfaltering declaration of Truth's omnipotence and ever-presence, we need have no fear but that our stock taking will show a goodly balance on the right side.

Archibald McLellan.

The Model Home

It is agreed by most people that the word home is one of the dearest in the English language, which means of course the spiritual idea back of the word; for until human thought is lifted above materiality, the ideal home is not realized,—indeed, it is hardly even perceived. At the present time we hear a good deal about model cities,—and in fact models of every kind, including homes,— but no one claims that they have yet been realized to any extent. It is, however, very encouraging to find that the desire for better things, nobler things, is growing at the heart of humanity; and because the desire is a righteous one, it will be expressed as humanity advances in spiritual understanding.

Mrs. Eddy says (Science and Health, p. 58), "Home is the dearest spot on earth, and it should be the center, though not the boundary, of the affections." Too many people think of a home as necessarily a place where one's own family lives, when under present conditions people often have to seek and find home elsewhere; and this is undoubtedly the right thing to do, for the real light of the home is the radiance and warmth of Truth and Love which may be found wherever there is one who loves God and his fellow man.

At the present time, as never before perhaps, it is admitted that purity is the first requisite in the home, although to the one outside of Christian Science this might be named cleanliness. The Scientist, however, would say that genuine and abiding cleanliness must spring from the spiritual quality known to us as purity. The Master said that it was not enough to make clean the outside of the "cup and platter," and he added that when the inside was cleansed the outside would be "clean also." No one would deny that cleanliness is essential to health; and the Christian Scientist would hold to this most firmly, only the cleanliness must spring from within and reach out to the very limits of human thought and its expression. Then we have something which is worth while in the way of health, that which was promised of old when God said through the prophet Jeremiah, "I will restore health unto thee."

In this age, as never before, light is demanded in the home, and for this the Christian Scientist is thankful; yet he remembers that in the wilderness wanderings of the children of Israel, when they had to find each day a new place whereon to pitch their tents, the light went with them as a pillar of fire by night, which protected them from all their enemies. However wonderful modern inventions may seem, the Christian Scientist looks for and desires above all else to have this light in his home; nor is his desire vain, for in the prophecy of Isaiah we read that God will create this upon "every dwelling place" of His people, when the filthiness of mortal and material belief shall be purged away from their midst.

We are often reminded that "order is heaven's first law;" and so it should be the law of the home, else we shall have disorder and no true success in anything. The spiritual

Digitized by Google

order demands of us that we shall seek first "the kingdom of God, and his righteousness," that we shall begin and end the day with the things of God, with spiritual reality; and when we do this as we ought, the truest order will prevail in everything we undertake, and our home and our work will express it no less than do the stars in their courses.

The Christian Scientist knows that he must himself strive to have all good things for his home, whether that home be represented by a single room or a stately mansion; and he would readily admit that without gladness there could be no true home, but happily we find promise of it all through the Scriptures. God never meant that any of His children should miss this good thing, or any other, for there is no power in mortal mind to take away God's rich gifts from the one who has made the most High his refuge. These should all be sought after and expressed, so that the light of the home—which means its gladness, its joy—will shine out into the world's darkness and tell others how they too may gain and retain the model home in Mind and work it out from the pattern shown in the mount.

ANNIE M. KNOTT.

Improving by Proving

THERE are few words which occur as frequently in the Christian Science text-book as the words proof and demonstration. Proof sets the seal on faith and illustrates the only possible means by which the Christian Scientist can improve himself and others in health, happiness, or morals. Without demonstration's stamp of approval who will say that there is any day of salvation, here or hereafter? Many Scientists recall that in previous religious experiences the question most frequently asked was, What do you believe about God? Today Christian Science asks, What do you understand about God, Truth, and how much of Truth can you prove? Mrs. Eddy writes on page viii of the Preface to Science and Health: "The question, What is Truth, is answered by demonstration,—by healing both disease and sin; and this demonstration shows that Christian healing confers the most health and makes the best men. On this basis Christian Science will have a fair fight."

It is true that in God's eternal creation no improvement is necessary, or possible. His work is done, and abides forever. God's man need not be saved or healed; he does not begin in suffering or go out in fear,—the suffering and the fear being one in the unity of evil; nor does he need to keep on proving the power of God, for his very existence and every gleam of his intelligence denote God's ever-presence and omnipotence. Mankind, however, does need to be improved out of itself, and this process involves proof, or, to use the term so fully explained in Christian Science, demonstration.

In defining the name of Benjamin in the Glossary of Science and Health (p. 582), Mrs. Eddy first sets forth the viewpoint of mortal mind concerning him, and then in phrases instinct with love and beauty she reveals his transformation of character under spiritual illumination. Among these latter descriptive phrases we find "an improved state of mortal mind." A seeming duality was very noticeable in Benjamin's life. At the birth of this her last born, Rachel called him Ben-oni, meaning "son of my sorrow," but Jacob called him Benjamin, "son of the right hand." When Jacob was prophesying concerning his sons, as he prepared to leave them, he seemed to revert wholly to the carnal view of Benjamin and likened him to "a wolf: in the morning he shall devour the prey, and at night he shall divide the spoil." When Moses, just prior to his death, was blessing the twelve tribes of Israel, he said of Benjamin, "The beloved of the Lord shall dwell in safety by him; and the Lord shall cover him all the day long." The psalmist sang lovingly of "little Benjamin," and one of the most tender episodes in Bible history is the pleading of Judah with Joseph for the safety of his youngest brother, beloved of Jacob, lest his absence "shall bring down the gray hairs of thy servant our father with sorrow to the grave." Every individual human being can be changed by Christian Science from a Ben-oni into a Benjamin, from "a wolf" into one with whom dwells in safety "the beloved of the Lord,"—but how? Evidently there is only one possible way, and that is by doing the works enjoined by the Master in demonstration of Immanuel, or "God with us."

Proving one's way day by day and precept upon precept helps to make the arid desert of duty for duty's sake blossom into a garden of roses, each flower of which denotes joy and spiritual satisfaction. All the pitiful failures of ecclesiasticism past and present, the dry-as-dust academics of religion, the dregs of the *odium theologicum*, are traceable to the attempt to improve humanity without requiring it to furnish proof of the power of Principle to override and blot out mortality's enactments. Facing every Christian Scientist is the question which will not down, Are you healing? It is not possible to carry on the simplest of the necessary activities of the Christian Science movement while remaining apart from the doing of its works or the cultivation of its fruits. Then let the song of Christian Science, as found on page 2 of Mrs. Eddy's Message for 1900, be heard above the lethargy induced by intentional evil, and ring out over men and nations: "Work—work—work—watch and pray."

WILLIAM D. MCCRACKAN.

Among the Churches

Current Notes

BERLIN, GERMANY.—Our literature distribution committee, through the generous gifts of the Trustees under the Will of Mary Baker Eddy, has been enabled to bring the truth to thousands of soldiers. The letters of thanks which are being received give testimony of the glad welcome the literature has received in the field and the interest with which it was read, and state that in many instances the men sent the literature to their wives at home. There were sent to the front 1688 *Heralds*, 5029 copies of various pamphlets, as well as 19,688 copies of "Peace on Earth," and 8239 of "Man's Unity with God," together with 2467 reprints.

Correspondence.

WATERBURY, CONN.—The members of First Church of Christ, Scientist, have purchased the property at the corner of Mitchell and Holmes Avenues and plan to erect an edifice there. The church was founded in this city in 1898, but previous to that there had been meetings in 1894 in Odd Fellows' Hall. From there the members moved to the annex of the old Bronson Library; from there successively to the Friendly League Hall, to the corner of West Main and South Willow Streets, to the Platt Building, to Jones Morgan Building, and to Buckingham Building, where the services are now held.—*Waterbury American.*

WHITE PLAINS, N. Y.—Work has been under way for some time on the foundation of the new structure being erected on the sightly northeast corner of Mamaroneck and Maple Avenues for First Church of Christ, Scientist. The auditorium will seat three hundred and fifty or more people, and the gallery will provide accommodation for one hundred and fifty. It is hoped that the building will be ready for occupancy early next March.—*The White Plains Argus.*

Digitized by Google

CHICAGO, ILL.—At the South Shore Country Club's annual event, the county fair, in September, our local distribution committee maintained a free literature booth in cooperation with the joint literature distribution committee. There were given away daily about 250 *Sentinels*, 125 *Journals*, 25 *Heralds*, 400 *Monitors*, 250 pamphlets, and 250 circular letters, making a total of 5200 pieces during the four days of the fair. The literature was lovingly offered, and in a vast majority of cases was eagerly accepted. Many indeed asked for the *Monitor*.—*Correspondence.*

KLAMATH FALLS, ORE.—For some time the room in which the followers of the teachings of Mrs. Eddy have been conducting their services has been too small to accommodate comfortably the attending congregations, and a new place of worship has been considered. New quarters have been found on Fourth Street, opposite the Court House, in the Withrow-Melhase Building, adjoining the Hall Hotel.

Klamath Falls Herald.

PORTLAND, ORE.—Plans for the construction of the new building of Fifth Church of Christ, Scientist, have been completed, and actual construction on the edifice at Laurelwood, on the Mount Scott line, will begin without delay. The new structure will cost approximately seventy-five hundred dollars.—*Portland Telegram.*

HONOLULU, HAWAIIAN ISLANDS.—An architect has been employed by First Church of Christ, Scientist, to draw plans for its church edifice, which is to be built on the lot at the corner of Wilder Avenue and Kewalo Street.

Honolulu Star-Bulletin.

MIDDLETOWN, CONN.—First Church of Christ, Scientist, is planning to make alterations at an expenditure of between ten and fifteen thousand dollars on the property recently purchased by it at the corner of College and Broad Streets.

Hartford Courant.

PARIS, TEXAS.—Christian Scientists here are preparing plans for a church costing twelve thousand dollars, to be erected at the corner of Seventeenth and Kaufman Streets.

Dallas Journal.

The Lectures

Billings, Mont.

Bliss Knapp delivered a lecture on Christian Science at the local church. Thomas J. Bouton, second reader, in introducing the lecturer said:—

Whenever a new and novel discovery of consequence is presented to human thought, it is immediately subjected to the acid test of scientific research. The greater the importance of the subject, the more pitiless and uncompromising is the scrutiny. In short, the world's inevitable query, "Is it practical; will it work?" cannot be satisfied with argument or fine spun theory; it must be met by evidence susceptible of demonstration.

Divine wisdom restrained the Man of Nazareth from engaging in argument as he went about his Father's business, as is clearly set forth in the seventh chapter of Luke, which relates the experience of two disciples of John the Baptist who were sent to Jesus with the question, "Art thou he that should come? or look we for another?" For reply, "in that same hour"—evidently in the presence of these messengers—it is further related that "he cured many of their infirmities and plagues, and of evil spirits; and unto many that were blind he gave sight. Then Jesus answering said unto them, Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised." The answer admitted of no argument, no questioning. The works demonstrated the truth of his professions.

Emulating the example of the Nazarene, Mrs. Eddy was prepared to defend the claims of Christian Science with proofs which have withstood the most searching inquiry of eminent authorities; proofs which have conferred untold benefits upon unnumbered thousands, and planted the seeds of hope in the hearts of despairing mankind.

Billings Gazette.

✧

Cleveland, Ohio

The introductory remarks of Warren L. Morris to a lecture on Christian Science given in First Church of Christ, Scientist, by Edward A. Merritt, were as follows:—

To have a Christianity that is scientific and a science that is a religion is something that has been desired by the greatest in all generations. When Christian Science was discovered by Mrs. Eddy, she gave to the world a religion that is as scientifically demonstrable as is the science of mathematics. The fact that this religion scientifically demonstrated the healing of disease as well as the healing of sin, made it seem for the moment almost beyond our conception; but in the comparatively few years since this truth was revealed to the world, there has been a wonderful growth in its comprehension by all peoples of the earth.—*Correspondence.*

✧

Bournemouth, England

John W. Doorly, who lectured on Christian Science, was introduced by J. W. Harwood of Liverpool, who said:—

It was not many years ago when there was but one Christian Scientist, the Discoverer and Founder of Christian Science. If since that time Christian Science has encircled the globe and is growing at its present rate, which is a wonder to this age, it is not because its teaching agrees with the evidence of the physical senses, nor because it accords with the prevailing opinions of mankind. In fact, Mrs. Eddy says in the Christian Science text-book, "Science and Health with Key to the Scriptures," that she has not "compromised conscience to suit the general drift of thought, but has bluntly and honestly given the text of Truth" (Pref., p. x). Then what is it in Christian Science which is attracting mankind? It will be found in the fact that Christian Science is just a scientific reiteration of Christ's teachings, and that the signs are following which he said would follow the understanding of his teachings.—*Correspondence.*

✧

Norway, Maine

The lecture on Christian Science given in the Grange Hall was very well attended. The lecturer, Prof. Hermann S. Hering, was introduced by Freeland Howe, Jr., who said:—

As many of you know, I have had a considerable interest and experience in the natural sciences, so called,—physics, chemistry, geology, botany, and zoology. The natural scientist seeks to discover and correlate facts so as to derive laws which will reveal the great scheme of the universe; my interest was the result of a desire to gain knowledge the better to live. I was so eager to learn that I spent years and much money in college, university, and business study. I have been on what is called the borderland of science, where the knowledge of the so-called known stops.

Some of my friends have wondered why my interest in

Digitized by Google

natural science has waned and why instead I have become interested in Christian Science, so I will give you the reason. I have come to see, as have many others, that where we have been seeking law in the realm of science there is no law; that in the physical sciences the conditions surrounding experiments are limited to human ingenuity, and that in the study of life we are limited and handicapped by our physical senses. I have further come to see that when with the help of "Science and Health with Key to the Scriptures" by Mrs. Eddy we study the story of creation as told in the Bible, we learn that the realities of life are those things which in human existence seem unreal, and that the only real laws and realities are in the realm of the metaphysical,—above the physical.

This is what recently I and many others by the study of Christian Science have come to understand to some extent, namely, that realities are not perceptible to the physical senses, and that the only satisfaction in life comes from studying and applying God's laws as revealed to us in the Bible, demonstrated by Christ Jesus, and explained by Mrs. Eddy in the Christian Science text-book.—*The Norway Advertiser.*

✧

Washington, D. C.

Twenty-five hundred persons heard George Shaw Cook deliver a lecture on Christian Science at Poli's Theater. In introducing him W. S. Campbell, first reader of First Church of Christ, Scientist, said:—

There is probably no better authenticated fact in religious history than that the beginning of the Christian era was marked by a marvelous manifestation of divine power in the healing of sickness and sin. If the succeeding centuries have formed part of that same Christian era, the question may well be asked, Why should not that healing work have continued to our time and to all time? If the healing power was the power of the Christ, and the Christ is "the same yesterday, and today, and forever," why should not that power be in evidence today? The answer seems to be, It should. The reason that it has not been in evidence seems to be that those works came to be regarded as miraculous, or as contravening law.

There is today a large and constantly growing body of people who are learning that the power which brought health and harmony in the first century is with us in the twentieth century,—Immanuel, or "God with us." They are proving the words of the Christ, "Lo, I am with you alway, even unto the end of the world." These people are students of Christian Science, and Christian Science is defined on page 1 of "Rudimental Divine Science" by Mrs. Eddy as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony."

Correspondence.

✧

Wellington, New Zealand

In introducing Clarence W. Chadwick, who lectured on Christian Science, the chairman, A. W. Saxton, said:—

The Christian Science movement has not been established in this city very long, but it has done good work, and has proved its worth to the community both in healing the sick and in teaching the truth,—the truth which is rightly claimed to be the teaching of Christ Jesus. Humanity is bearing today untold suffering because of its belief in material things and suppositions based upon material beliefs, and in this respect unfortunately Christendom still adheres to methods based on these assumptions. I venture to say that it will awaken some day to find this is the reason it has lost the power to perform the healing enjoined by the Master as one important part of its mission on earth, and which was actually in vogue for the first three centuries after the resurrection.

I take it that many of you feel what I profoundly feel, a marked dissatisfaction with much of the religious teaching of the day, which has allowed religion very largely to develop into mere scholasticism and formality. We want something real, and if in anything at all we want reality in our religion; and any system that claims and professes to enable us to live stronger, purer, and more helpful lives, in harmony with the true Science of being, demands the attention of every thoughtful man and woman. This, I understand, is the claim made by Christian Science.—*Correspondence.*

Lectures to be Delivered

[By Members of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.]

CALIFORNIA—Los Angeles (Second Church): Prof. Hermann S. Hering, Shrine Auditorium, 3 p.m., Jan. 7.

CANADA—Brantford, Ontario: Virgil O. Strickler, Society Hall, Temple Building, Dalhousie Street, 8:15 p.m., Jan. 8.
Calgary, Alberta: Dr. Walton Hubbard, Alhazer Temple, Seventeenth Avenue and Fourth Street West, 8:30 p.m., Jan. 18.
Vancouver, British Columbia (First Church): Paul Stark Seeley, The Empress Theater, 3 p.m., Jan. 7.

ILLINOIS—Cairo: John Randall Dunn, The Kimmel Theater, 8 p.m., Jan. 9.
Chicago (Seventh Church): Ezra W. Palmer, Church Edifice, 5318 Kenmore Avenue, 3:30 p.m., Jan. 7, and 8 p.m., Jan. 8.
Chicago (Eleventh Church): William R. Rathvon, Logan Square Auditorium, 8 p.m., Jan. 8 and 9.
Chicago (Fifteenth Church): William R. Rathvon, Masonic Temple of Austin, Central Avenue and Fulton Street, 2:30 and 4:30 p.m., Jan. 7.
Oak Park: Dr. Walton Hubbard, Church Edifice, Oak Park Avenue and Ontario Street, 8 p.m., Jan. 9.
Urbana: Dr. Walton Hubbard, Universalist Church, Birch and Green Streets, 8 p.m., Jan. 4.

KANSAS—Wichita: Ezra W. Palmer, Crawford Theater, 8:15 p.m., Jan. 12.

MASSACHUSETTS—Malden: Edward A. Merritt, The Mystic Theater, Pleasant Street, 8 p.m., Jan. 7.
Winchester: Edward A. Merritt, Town Hall, 3:30 p.m., Jan. 7.

MICHIGAN—St. Clair: Virgil O. Strickler, City Hall, 8:15 p.m., Jan. 9.
Sturgis: Virgil O. Strickler, Strand Theater, 8 p.m., Jan. 11.

MINNESOTA—Minneapolis (First Church): George Shaw Cook, Church Edifice, Twenty-fourth Street and Nicollet Avenue, 8 p.m., Jan. 11 and 12.

MISSOURI—Farmington: John Randall Dunn, Monarch Theater, 3 p.m., Jan. 7.
Kansas City (Second Church): Frank Bell, Church Edifice, Thirty-first Street and Troost Avenue, 3 p.m., Jan. 7.
St. Louis (Fifth Church): Dr. Walton Hubbard, Princess Building, Recital Hall, Grand Avenue and Olive Street, 8 p.m., Jan. 11.

NEW YORK—New York (Second Church): Dr. Walton Hubbard, Church Edifice, Central Park West and Sixty-eighth Street, 3:30 p.m., Jan. 7.
New York (Society of Columbia University): John W. Doorly, Milbank Chapel, Teachers College, 8 p.m., Jan. 8.

OHIO—Cincinnati (First Church): Virgil O. Strickler, Keith's Theater, 12.30 p.m., Jan. 12.
Dayton (Second Church): Virgil O. Strickler, Memorial Hall, 8 p.m., Jan. 12.
New Philadelphia: Edward A. Merritt, Union Opera House, 8:15 p.m., Jan. 11.
Sandusky: Edward A. Merritt, Carnegie Library Auditorium, 8 p.m., Jan. 12.

RHODE ISLAND—Providence: Virgil O. Strickler, Providence Opera House, 4 p.m., Jan. 7.

WASHINGTON—Montesano: Paul Stark Seeley, Gem Theater, 8 p.m., Jan. 8.

Testimonies of Healing

With heartfelt gratitude I send my testimony of what Christian Science has done for me in the six years I have been studying it. I became interested in this teaching through the healing of a brother. It appealed to me most because of the concept of God it taught,—a God who truly is Love, who does not send sickness or sin, but is an ever present help in trouble. I have had many opportunities to prove that divine Love is indeed ever at hand, and when the truth has been honestly applied, my needs have been quickly met.

My first healing was quite a surprise to me. I was not thinking of physical benefits, but after studying for a short time was relieved of intense headache and backache from which I had suffered a great deal, and they have never returned. The greater good that has come to me, however, is the spiritual uplift,—the different outlook on life, the faults overcome, such as quick temper, sarcastic tongue, proneness to criticize and say unkind things, a feeling of discontent, and an unsatisfied longing for peace and happiness. My heart overflows today because this longing for peace and joy has been satisfied and happiness realized through the teachings of Mrs. Eddy. Nothing can long disturb me, for I know that God, good, is all there really is. The daily study of the Lesson-Sermon keeps me mentally awake and ready to overcome the many annoyances which come to tempt mankind.

The Christian Science publications are a great help. Many times I have been helped over difficulties at a needed time through the reading of some article. The privilege of using a reading-room where all the writings of Mrs. Eddy and other Christian Science literature is available, has meant much to me. Many business, financial, and family problems have been solved in the peace and quiet of the reading-room. With but two or three exceptions I have been able to work out my problems without the help of a practitioner. At one time, however, the mental suffering was such that I could not see the light clearly myself and had to call on a practitioner, whereupon harmony was quickly restored. I am indeed grateful for all the good that has come into my life, and my daily prayer is that my life may attest my sincerity as well as my thankfulness to God and my gratitude to Mrs. Eddy.—Bertha C. Schulte, Toledo, Ohio.

✧

The testimonies in our periodicals have always meant much to me, and that fact, together with sincere gratitude to God for the many blessings received since I first learned of Christian Science nine years ago, leads me to write of some of the benefits which have come to me and mine during these years. We did not come into Science for physical healing, although the one through whom we became interested in it was healed of a sickness of long standing. Strangely enough, this did not impress me at the time, but the transformation in disposition was to me a marvel. Many times prior to her healing I had gone away from her thinking I could never be in her presence again to endure the criticism and fault-finding with which I was nearly overwhelmed.

My first physical help came some three months after beginning to study the Christian Science literature, when a most aggravated attack of a chronic trouble from which I had suffered for eighteen years set in. It did not occur to me to apply this healing truth which I had been studying; it remained for my husband to recommend it to me, and my feeling of despair when he did so will never be forgotten. After absent treatment had been given me for two weeks, the practitioner wrote that the healing was accomplished, but she was requested to keep on treating me, as I wanted to know more of all the good that was coming to me; so she gave me another week's treatment. What she had written at the end of the two weeks, however, proved to be true, for not only was I healed of my immediate illness, but never since then has there been any suffering from severe backache, which had been a source of misery to me for many years. Physicians had said it resulted from an unusually severe attack of spinal meningitis in my girlhood and would never leave me. At the same time our entire family were healed of throat trouble, attacks of which had occurred regularly every spring and fall.

During the years of freedom from the above mentioned conditions many other discomforting things have come into our family, but every one of them has been overcome with the understanding given us in "Science and Health with Key to the Scriptures" by Mrs. Eddy. No words can express my gratitude for the enlightenment which has come to me through the study of this book, and every day I love more and more to study it. It certainly contains the "pearl of great price" which a man seeing will go and sell all that he has to purchase it. Mrs. Eddy says on page 1 of our text-book, "No loss can occur from trusting God with our desires," and more clearly each day the truth of these words comes to me. I know that as I trust God with my desire to know more of Him and of His reflection, man, I shall give the best expression of my gratitude for all that Christian Science has brought into my life and the life of the whole world. I would not like to think what our home would be without this "light" which has come and which shines through all the dark places, so that we are seeing more clearly the path which is leading us "unto the perfect day."

I want also to express here my thankfulness to the inspired writer of our text-book, Mrs. Eddy, for all her writings, and for our daily, weekly, and monthly periodicals, not forgetting our *Quarterly*, which is continually unfolding the wealth of the Bible.—Lena D. Childs, Malden, Mass.

✧

Since I am a living witness to the healing power of Truth as taught in Christian Science, and my heart is filled with gratitude to God, I write this testimony. My home circle consists of my father, my mother, and two brothers. My brothers and I are grown up, and we have never taken medicine or had a doctor. Christian Science has been our only remedy for over twenty-three years.

A few years ago some work had to be done on my teeth, but somehow I always had a little fear, so the first day I went to the dentist's office a Christian Science practitioner accompanied me. She gave me one treatment and I got along finely. Later on, two teeth had to be crowned, so the practitioner gave me another treatment, and this was all the help I had until the work was finished. There was no pain to speak of, and I am very thankful for this experience. One Christmas I caught cold and to mortal sense it seemed to become a bad case of mumps. I tried to treat myself, and my mother helped me, too, but as I appeared to get worse she went to see a practitioner who lives about seven miles away. It was late in the afternoon before she got to the Scientist's home, but about midnight I began to feel better and went to sleep and slept until morning. I felt better that day, though still very weak; but I soon gained strength and could eat anything. This healing was effected through absent treatment, and I am deeply grateful for it.

My eldest brother had what is called a felon on one of his fingers. A practitioner treated him and in about a week it

Digitized by Google

was all gone. The old nail gave place to a new one and his finger looks the same as ever. He worked every day cutting wood and never felt any pain.

These are only a few of the many blessings which we have received, and we wish to express our thankfulness to God for Christian Science. My testimony would not be complete without a thought of appreciation for that dear woman, Mrs. Eddy, whose beautiful life and work continue to brighten the way.—ELSIE HARSIN, Spokane, Wash.

✧

In March, 1913, through the silent example of a friend, I was led to attend Christian Science services regularly. This turning toward Truth at once effected two demonstrations of healing, though they were not then recognized as such. First, it made clear to me that to be sincere I should abandon material medicines on turning to Christian Science; second, it healed me of a lifelong habit of self-indulgence in lying abed late, for to my amazement it got me out of bed Sunday morning at seven o'clock.

After attending church for a few weeks I suddenly discovered that another lifelong habit, profanity, had left me. Also every one remarked upon my improved physical appearance, and one daily associate informed me that my irritability of temper had disappeared. I said to myself that surely there must be truth in Christian Science, so began to study it in earnest. Very soon I was able to demonstrate the healing of attacks of dizzy headache, toothache, influenza, pleurisy, coughs, and various other physical ailments. Indeed, the first two years I was kept busy overcoming repeated attacks of various sorts, and in gradually correcting errors of belief and learning to think rightly. There was far more to do than I had any conception of in my former self-complacent life.

Christian Science has healed me of agnosticism, self-complacency, slavery to medicine, self-indulgence, nervousness, drinking, smoking, profanity, gambling, stomach disorder, sleeplessness, chronic bowel trouble, hemorrhoids, kidney disease, liver disease, hay fever, eye trouble, and worry. This seems like a formidable array of ailments, but their absolute nothingness and want of power have been fully demonstrated through Christian Science.

I am learning the meaning of obedience, love, and gratitude, also am following on to know the great joy of becoming a channel of good to my neighbor.

SAMUEL JOHNSTONE MACDONALD, Newark, N. J.

✧

In September, 1914, I first experienced the healing power of Christian Science, and as my healing has stood the test of time and I have not had the slightest recurrence of my former ill health, I am most anxious to express my gratitude. For two years I had been under the constant care of various physicians, including my uncle, for what was diagnosed by them as neurasthenia, a condition of constant morbidness and melancholy. I rapidly grew worse and was finally told they could do nothing for me, that unless I pulled myself together I would lose my reason. Shortly afterward a friend recommended that I try Christian Science. At first I was too skeptical and biased to consider it, but finally decided that although it probably would not do me any good, at least it could not harm me. I visited a practitioner the next day, and am unspeakably grateful for the help received, as I was completely healed in seven or eight treatments.

I have heard several people express the belief that Christian Science may be efficacious in cases of nervous diseases but they doubted its power to heal physical troubles. I should therefore like to tell of two physical healings. For three years I had suffered from what is known as fallen arches and had worn a specially made braced shoe. I had often tried during that time to wear an ordinary shoe, but was seemingly unsuccessful. Since trying Christian Science I can wear any kind of shoe, and walk as far as I wish, without experiencing discomfort. A throat affection was overcome in twenty-four hours.

I am most thankful for these healings, as well as for the many other blessings experienced through Christian Science, but my deepest gratitude is for the peace and harmony which has come into my life and thought and for the knowledge that the divine Principle is always available to help and sustain us.—ETHEL N. POGGENBURG, New York, N. Y.

✧

[Translated from the German]

Deep gratitude impels me to give this testimony in recognition of all the good which I have received through Christian Science. About two and a half years ago I became acquainted with its teachings. Although I had faith in God, it at first seemed almost unbelievable to me that divine Truth should be adequate to the healing of all disease; but after attending Christian Science services twice, it became clear to me that the truth as presented there led one closer unto God and to the understanding of His Christ. Then was also revealed to me the meaning of the Scriptural passage: "Ye shall seek me, and find me, when ye shall search for me with all your heart. And I will be found of you, saith the Lord." There was a swelling on my head about the size of a walnut and it was as hard as a stone. I attended the services regularly, in the firm belief that if all disease could be healed through the power of divine Truth and Love, I too could be healed of the trouble with which I was afflicted. In about three months' time the swelling became soft, and one morning it broke. Three months later it had completely disappeared.

In the winter of 1914 I contracted a severe cold and cough with distress in the chest and shoulders. My husband was rather insistent and telephoned to a physician, who came at once and diagnosed the case as an attack of acute lung trouble. He prescribed medicine, and said that I should stay in bed in a heated room and have warm applications. I took the medicine that evening and was unable to sleep the following night on account of the pain. The next morning, however, I got up and read both the *Herold* and the Bible. Although I had made up my mind not to use any material means, I could not resist the temptation to take medicine once more. About two hours later everything seemed to grow dark before my eyes, and I felt that I must lie down. This was not possible, however, on account of the severe vomiting which had set in. I now threw away the medicine, sat down, and continued reading Christian Science literature. When the physician came again two days later, I had already done all the cleaning in my flat and I opened the door for him. He was very much surprised and said, "You certainly got quick help." I did not get the drug which he again prescribed, but relied solely on divine help, and it proved efficacious.

In the autumn of 1915 I suffered the greatest pain and was unable to sleep at night for three weeks as a result of severe internal inflammation. Being unable to overcome the error alone, I asked a practitioner in Hannover for treatment. The pain ceased after a few days, and a week later I was completely free from any trouble. I had always greatly dreaded childbirth, and being unable to overcome my sense of fear and anxiety, it seemed that possibly I might have a recurrence of a past experience and I therefore asked for treatment. I certainly did get help, for I was freed from

Digitized by Google

any sense of fear. On Dec. 16 I rejoiced over the arrival of a little girl, though previous to the birth, as things did not seem to progress, the midwife urged that medical help be secured immediately; but I asked for treatment in Christian Science. This was at nine o'clock, and about an hour later I became aware of divine help, for the birth then went on normally.

For all the great benefits and the help which I have experienced in times of need through Christian Science and the power of God which never faileth, if we but abide in Him, I wish to give heartfelt thanks.

Frau Emma Wegener, Hannover, Germany.

✧

I have often wanted to express my gratitude for Christian Science and what it has done for me. Some five or six years ago I underwent two operations, the last one being the only hope left me, according to the doctor, who said that the hemorrhages would be fatal. The surgeon did all he could for me and was kindness itself, but during the following year I was most miserable, mentally and physically, and suffered terribly.

One day, while in a little store near where I was staying, a lady spoke to me of Christian Science, and two weeks later I went to a practitioner. In three weeks I was healed, so that I was able to go home and take up my work again, much to the surprise of all my friends. I am a stronger woman now than ever in my life, and have lost only one day from business in a year. Since then I have had many other healings, some slower than others, but the truth has never failed. I have solved many problems to my own satisfaction and rejoice to say other members of the family have been helped. My brother has been healed of stomach and bowel troubles, supposedly inherited.

I feel most grateful to our Leader for the Wednesday evening meetings, for the provision of the reading-room, for all the literature; and to every one who has helped me along this journey from sense to Soul I am indeed thankful.

Maria Johnston, Detroit, Mich.

✧

We have, perhaps, had more blessings than the average family. Obstacles have been overcome, harmony brought into the home, and demonstrations made in healing which should convince the most skeptical of the healing power of God when understood in Christian Science.

We were asked by friends to try this treatment for the healing of our little boy, who had been stricken with what was diagnosed as infantile paralysis and was helpless from the neck down. We tried many doctors and specialists, used electricity and massage, and submitted to numerous operations, but could not bring ourselves to agree to six more operations asked for by the last specialist. We knew nothing of Christian Science and were very skeptical, I myself even ridiculing the thought that it could help the child. I consented, however, to my wife's attendance at a Sunday service, and she persuaded me to accompany her the following week. I was so impressed with the service that we called on a practitioner, who accepted the case.

The legs and arms, which the doctor said had dead muscles and would grow thin, filled out to normal. The child's general health is perfect; he is growing fast and equally in every part, is able to run his little automobile along the sidewalk, and has started in school, passing the physical examination required at this time. Since that time the boy has been healed of attacks of bronchial pneumonia, which he had with unusual severity every winter, and which the doctor informed us he would have to outgrow.

On returning from work one day, about a year ago, I found the boy in bed and unable to retain anything on his stomach, not even water. We called the practitioner, with the result that he retained everything he drank after midnight, but a condition presented itself in the morning even more alarming than the nausea, as he was in a stupor or delirious all that day. In the afternoon we informed the practitioner of our fears, and she said she would give treatment at once. The boy fell into a quiet sleep, the fever lessened, and before eight in the evening he awakened in his right mind and said he was well. I thought if we older ones would make the kind of declaration this little five year old boy made, instead of allowing fear to creep in, there would be much less sickness.

There have been other demonstrations in the family, too numerous to mention. The moral atmosphere has been cleared, and we are very grateful for the many blessings and the happiness Christian Science has brought to us.

Harry N. Beach, Chicago, Ill.

✧

I am deeply grateful for what Christian Science has done for me and mine. I was receiving very unpleasant treatment from a doctor, who after a time told me my only recourse would be an operation. My husband was much opposed to this, and on speaking about it to a friend I was advised to try Christian Science. Being a little in doubt, as I had not until that time heard of this teaching, I postponed my visit to the practitioner, although knowing that when with this friend I was relieved through her loving thought.

Finally, however, I visited the practitioner and received treatment. Relief was immediately experienced and I have felt better ever since. Also through the patient work of the same practitioner an obstinate case of whooping-cough was overcome in two weeks. For these and other blessings received almost daily I am deeply grateful to those who have helped me to understand the love of our dear Father, and to Mrs. Eddy for the wonderful part she has taken in revealing the truth in such a beautiful way. Since coming into Christian Science all thought of taking medicine has been entirely removed. I am perfectly healed, and Christian Science is all the world to me.—Rose Woods, Montreal, Canada.

✧

A few years ago, while living in Terre Haute, Ind., my little daughter fell from a ladder and was hurt, but not knowing the extent of the injury we paid little attention to it. In a short while, however, we noticed that when the child walked her legs seemed stiff, and a few days later she lost control of them entirely; then it was observed that she had curvature of the spine. We called a Christian Science practitioner at once, and after the third treatment the spine became straight and natural. It was some time before she regained the use of her legs, and she was unable to move without assistance; but the practitioner continued treatment, and gradually the legs became natural so that with our help she was able to walk, and at the end of three months she was well and happy. She was healed of a structural defect of the eyes in five treatments. These were certainly very beautiful demonstrations of the power of Truth.

In the early fall of the same year I nursed a very bad case of tuberculosis, and before long that dread disease was manifested on my body. While in this condition a great sorrow came into my life, my beloved husband passing on suddenly. My home was broken up and my little daughter (not at that time fully recovered) and I were left almost penniless to struggle on alone. It seemed as if I had more than I could

Digitized by Google

bear, but through the power of Truth I was healed in a short time. That was over six years ago.

My constant prayer is that I may follow the leadings of Truth, so as to be able to do for others what has been done for me. I am truly thankful to God for all the blessings that are so richly showered upon me and mine.

OLIVE LACKEY, Los Angeles, Cal.

✧

It is with rejoicing that I thank God that the way is still open to follow Jesus' teachings as set forth in the Bible, and that through the study of Christian Science, as given in "Science and Health with Key to the Scriptures," man can be and is being released from bondage to so-called man made laws. I am grateful for the physical healings received, but still more for the spiritual uplift and the understanding in a degree of what Love means. When a small child I asked my mother, "What is God?" and was told that "God is love," but I never saw this statement proven until after taking up the study of Christian Science, about forty years later.

For several years before coming to Christian Science I desired a pure life and tried everything I could find to lift me up and set me free. Finally I walked into a church, the services of which seemed different from any I had noticed before, and learned afterward that it was a Christian Science church. I saw that these people had something, and promised myself to find out what it was; but after the service I hurried away, not feeling fit to be in their presence. Later I learned that there were practitioners, so called on one and asked for moral healing. When the gentleman said my lameness would also be healed, I became inwardly resentful. Nevertheless, I had the treatment, paid for it, and left with the belief that I had not found what I sought, for how could I be healed of lameness after having been on crutches three times from three different accidents. However, a few mornings later I arose from bed and walked without hobbling. I had been used to climbing out of bed and off street-cars; now it seemed as if I could jump from the top of a car if necessary.

When about twelve years of age I had fallen through a barn, alighting on my head, and was unconscious for twelve hours. As a result of this fall I was left deaf in one ear, and after being in a serious railway accident, my hearing was much worse. A specialist said the hearing in one ear was all gone and in the other partially so. Some months after being healed in Christian Science of lameness, I went to a practitioner to have help for this trouble. About a week later I discovered that I was hearing through the right ear,—the one which had been deaf,—while holding a telephone receiver to my left ear.

About thirteen years ago I left North Carolina to go to the Pacific Northwest for my health, having what was called malarial fever, and was doctored for it during eight years. I had worn glasses for several years for a structural defect of the eyes. The fever left me during my study of the Bible together with Science and Health, and my eyes were healed while hearing a man give his testimony at a Wednesday evening meeting about the healing of his eyes. Since coming into Christian Science I have ceased to worry. For forty years I was ready to take offense at anything which came up and thought I enjoyed doing so, but am very thankful that I have been healed of this trait.

I am indeed grateful to find that God is Love, and am so glad to express my gratitude to Mrs. Eddy for showing us the way in Christian Science to prove this by healing the sick.—T. E. COMLY, Aberdeen, Wash.

From Our Exchanges

[The Homiletic Review]

Real morality is a spirit, not a mere performance, the spirit whose ceaseless pursuit of an ever flying goal by the forward looking few has gradually lifted the morals of the many, stage by stage, from their lowest to their present level. When preachers teach that "morality is not enough without religion," they run off the track laid down by Christ and raise a false issue. They rouse a combative spirit in men who need to be rid of the delusion that their good morals are real morality. They also foster a deplorable proneness in the church to rely on "the merits of Jesus Christ" to atone for their moral neglect to work out their own salvation by loyal imitation of him.

The current popular distinction between religion and morality as differing in value is as mischievous a delusion as any that has obsessed the world. It afflicts the church with such moral anemia that ethical culture societies rise to teach that "religion is fervent devotion to the highest moral ends." Yet Christ taught by precept and example that real morality is religion at work for advancement, personal and social, toward goodness like that of our Father in heaven, and that real religion is morality aspiring toward that divine ideal. In the life of Christ we see these two fused together, inseparably one.

[The Christian Work]

Does not all our wretchedness come from fear? Does not all our profoundest joy come from courage? Why are we unjust? Because we fear to be just. We shrink from the brightness of righteousness, and find the twilight glooms of compromise and custom more bearable. We love to sit in the cool shadows of old institutions, rather than walk forth into the glaring sunlight of reason. Two thousand years ago the Prophet of Galilee announced the most daring spiritual program ever conceived. It involved utter reliance upon the certainties of spiritual law, an utter confidence in goodness, a belief in the truth as being able, willing, and sure to care for and reward them that put their destiny in its hands and doubted not. We have never dared to act upon his program. We have praised it, wondered at it, lauded its majesty and beauty, but to live it has been too much for our cowardly souls.

[The Watchman-Examiner]

For the wide awake, genuine Christian man or woman the giving of thanks to God for His goodness is not an occasional act, prompted by impulse. It is still less the discharge of a duty in formal and perfunctory fashion. It is rather the response of life to life, the steady outrush of the joy of a grateful heart. It is a habit of the soul. Thanksgiving day becomes thus but a large and enthusiastic expression of that spirit which is the habitual answering attitude of the entire being, in view of the gracious work of redemption wrought by Jesus Christ. "In every thing give thanks."

[The Christian]

The servants of Christ must be ready to meet either the inquirer or the scoffer with appropriate spiritual weapons. Yet none can doubt it was far more congenial to the Master to proclaim his Father's will to mankind and to instruct his followers in the precepts of the kingdom. That, surely, was ever his main occupation. And how often he would turn aside an attack with a single sentence that laid bare the secrets of the heart, when we would have wasted an hour in futile controversy! Again, what was the tenor of his instruc-

Digitized by Google

tions to his messengers? "As ye go, preach, saying, The kingdom of heaven is at hand." And if they were not received in their healing and preaching work, they were to go elsewhere, wiping the dust from their feet, with the solemn warning added in one passage: "Notwithstanding be ye sure of this, that the kingdom of God is come nigh unto you."

[Rev. Joseph Fort Newton, D.Litt., in *The Christian Commonwealth*]

Never were human bodies so jostled; never were human souls so much alone. Not only alone, but timid, shy, reticent, restless,—seeking a vision, a loyalty, a power in common; seeking, but *finding* not. Who does not feel the passion and the pathos of it? Of old it was said, "Then they that feared the Lord spake often one to another," but it is not so among us. Men meet as neighbors, as associates or friends, in business or in play, and even in works of public welfare, but as sons of the highest, as comrades in the spiritual life with needs and aspirations which the ordinary intercourse does not satisfy, how seldom! Bunyan tells of seeing a group of poor women sitting at a door in the sun, talking of divine things, happy in their heavenly gossip. How strange such a group would seem today! It may be true, as Stevenson said, that in a world of imperfection we must gladly welcome even partial intimacies, but in these high matters we have almost none at all. Even in church life there is little genuine religious fellowship, such as men enjoyed in other days. Concerning our deepest life we are strangely silent, as if smitten mute. No doubt there are many reasons why this is so. Our uncertainty and unsettlement of faith makes us less sure than our fathers were, and less talkative. There is also a fineness of feeling which dreads cant and unreality, a sense of things ineffable of which we may not speak above a whisper; and such a reverence is a sign of hope.

[Pres. Carl G. Doney in *Pacific Christian Advocate*]

Nature has a thousand messages for those who will listen. Sun and soil and mineral and unseen force are almost vocal with promises; and year after year they are fulfilled. The testimony of men is different in the particular that they are under the temptation to promise more than they can perform or to testify of what they do not know. And before any testimony can have lasting value there is a condition precedent: it must be based on truth. It does not matter what one says he is or what one says he does, if his words and deeds are not square with the facts. A life not founded upon the truth is a miserable structure of pretense and weakness. Some day a storm will blow against it which will cast the ruins of deceit to the winds of heaven like whirling chaff.

[*The Christian Intelligencer*]

The church is passing through the fire of chastening. Everywhere Christians are catching a new vision and coming to a new understanding of the radical significance of the claims of Christ. They are meeting the call of God with new consecration. They realize that they cannot face both ways. They have been startled into a new soberness by the collapse of a godless civilization, and they see that their own worldliness has helped to precipitate the crisis. They have been shocked to find that their nominal Christianity meant compromise, moving on to complete surrender of the Lord's cause. They have made a new surrender of themselves to Christ, they abhor their past blindness and folly, they are out in the open now as soldiers of Christ. And so the church is gathering new strength. If this spiritual movement grows to be coextensive with the membership of the church, the world shall yet see that Christianity is the dynamic of a redeemed humanity.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new catalogue of selected Bibles is now being printed by the Publishing Society and will be mailed to Christian Science organizations with card in the *Journal* about Jan. 1, 1917. This catalogue will announce new prices for Bibles, Bible Cases, and *Quarterly* Covers. The Publishing Society has found it necessary to make these changes, owing to the manufacturers' increased cost of labor and materials and their advanced prices to the Publishing Society.

As the advertising pages of the *Journal* and *Herold* go to press the 20th of the month, to insure publication in a desired number requests for changes in a church or practitioner's card should reach the Publishing Society at least six weeks previous to the actual date of issue.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 236 Huntington Avenue, Back Bay, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study. Also printed in Dutch and German.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents, three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Miscellaneous

A Catalogue of Selected Bibles will be furnished upon application, and quantity rates on other items specified below will be found in the current catalogue in *The Christian Science Journal*.

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $3.50.

Morocco slip case to hold pocket edition of Science and Health, *Quarterly*, and Bible, $1.25.

Two other sizes of slip case listed in the current issue of the *Journal*.

Covered morocco case with handle and purse on outside, $3.50; without purse, $2.25.

01683 x. Large type Bible, 10⅝ x 8 inches, bound in Alaska seal. Specially adapted for use of second readers, $9.25.

The improved Index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 22 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated, 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco, $1.40; full morocco, $2.50; levant, $3.50; pocket edition, size 4⅝ x 6⅝, $3

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ, My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Photogravure postcards, reproduction of the picture of the Church Edifice and Publishing House, 5 cents.

QUARTERLY COVERS in black morocco, $1.15; with purse, $1.40.

ALUMINUM LESSON MARKERS. Set of thirty, with paper shields, 50 cents. Extra paper shields, one hundred, 15 cents.

PRICE LIST OF BIBLE CONCORDANCES and DICTIONARIES OF THE ENGLISH LANGUAGE supplied on request. Express charges collect on delivery.

REPRINTS (not printed in English). Two-page leaflets, 14 subjects in French and Swedish; 19 subjects in German. Ten copies to one address, 10 cents.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Send all orders for the works of Mrs. Eddy, with remittance by New York or Boston draft or money order, direct to Allison V. Stewart
For literature listed above address orders and make remittances payable to

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

In the fiscal year 1916 there became operative twenty new water power projects which utilize national forest land. The Forest Service figures show that 42 per cent of the total developed water power of the United States utilize this forest land. The development of relatively small projects is particularly in evidence in the Rocky Mountain states, while California leads in the amount of power under permit and in operation. Mr. Graves, chief of the Forest Service of the United States, in his report on the ownership and control of water power sites, says that there is shown "a marked concentration of definite and complete control of a large percentage of developed water power by a very few companies. Data presented regarding interrelationships through common directors and principal officers indicated a marked tendency toward association or community of interests, particularly between the principal holding companies. The movement toward concentration in commercial central stations of all the primary power employed in the electrical industries and in manufactures was found in all sections of the United States, the rate of concentration during the period of 1902-12 being highest in the south Atlantic states and the extent of concentration greatest in the western states." He also says, "The report showed a considerable overdevelopment in nearly all the power centers of the western states,—California, Oregon, and Washington in particular showing installations far in excess of maximum demands."

Achievements of importance to navigation interests are recorded as a result of the wire-drag work of the past season by the United States Coast and Geodetic Survey. Attention has been given to surveys of harbors and their approaches on both the Atlantic and Pacific Coasts, and especially valuable work has been done in Alaska. The two wire-drag parties engaged in surveys of Alaskan waters have completed their work for the season. They began field operations during the latter part of April, 1916, and continued until about the middle of October. Both of them had a very satisfactory season. In addition to the wire-drag work, these parties have carried out an extensive scheme of triangulation and topography and have obtained valuable current and tidal observations. The total area examined by one party covers about three hundred and twenty-five square miles. In this area were found more than seventy changes from the charted depths, not a few of which constitute serious dangers to navigation. The other party dragged an area of about two hundred and fifty square miles during the season, and about one hundred and fifteen changes from the charted depths were found.

The plebiscite held in Denmark, Dec. 15, on the question of the sale of the Danish West Indies to the United States, resulted in 283,000 votes being cast in favor of the sale and 157,000 against it. Both branches of the legislative body have since voted in favor of the sale. A treaty for the sale of the islands was concluded between the United States and Denmark in New York on Aug. 5, 1916, the purchase price being fixed at $25,000,000. The treaty was ratified by the United States Senate on Sept. 7. The Danish archipelago includes three islands. St. Thomas is thirty-eight miles east of Porto Rico and directly in the line of Panama Canal traffic. It has an area of thirty-three square miles and a population of about eleven thousand. St. Croix has an area of eighty five square miles and a population of about eighteen thousand. St. John has an area of twenty-one square miles and a population of nine hundred.

The cultivation of cacao is becoming an important industry in Costa Rica. During the ten year period from 1904 to 1913 Costa Rica exported 6,004,911 pounds of cacao beans valued at $739,436 in official statistics. For 1915 the figures were 1,272,905 pounds, valued at $174,809. The beans are grown by farmers on banana farms that have ceased to produce fruit, as well as on new land. The product is much more stable than bananas, and if necessary can be kept for a considerable time awaiting advantageous prices. Costa Rican cacao is generally of a very fine quality.

The manufacture of Panama hats occupies many individuals and families in the small communities in the interior of Colombia. The production in 1915 was valued at about one million dollars. The wages paid male laborers in Colombian factories are from fifty cents to a dollar a day, the average being about sixty cents. Women receive from twenty-five to thirty-five cents a day. In the coast towns most factories work only eight hours, but in the interior ten hours is the rule.

Rejoicing in the distinction of being the first savings bank incorporated in the United States, and the second one established, the "Provident Institution for Savings in the Town of Boston" has recently celebrated its one hundredth birthday. It was incorporated Dec. 13, 1816, and began business Feb. 19, 1817.

In 1910 California bonded itself for $18,000,000 for good roads. Most of this money having been spent, at the recent election the question was put before the voters as to whether they would authorize $15,000,000 more indebtedness for the same purpose, and they voted in favor of the proposal, 512,239 to 137,107. When the issue of $18,000,000 was before the people six years ago, they voted for it 93,297 to 80,509.

The fishing fleet which landed fishery products at Boston and Gloucester, Mass., and Portland, Maine, during the month of November, 1916, included 200 steam and sail vessels. The total for the three ports during the month amounted to 858 trips, aggregating 13,050,285 pounds of fresh and salted fish, having a value to the fishermen of $476,637.

With the efficient cooperation of a prominent Washington newspaper the school children in that city have saved over one hundred and fifty tons of old newspapers since the fall term began. The money that has been realized on these papers—over two thousand dollars—will be devoted to the children's playgrounds.

The extensive waste lands now found in most parts of the mountain province of the Philippine Islands, especially in the districts of Apayao and Kalinga, will soon be transformed into valuable lands if the irrigation projects now in contemplation by authorities of the Bureau of Public Works materialize.

Out of two hundred and twelve applications to the commission under the Canadian industrial disputes act for investigation, all except twenty-one threatened strikes were averted. The disputes affected mines and public utility corporations.

The total foreign trade of Nicaragua for the calendar year 1915 amounted to $7,726,420. Coffee, gold, hides and skins, bananas, and cabinet woods are the principal articles exported. Formerly rubber was an important export.

Crop returns just made public give Italy's wheat harvest for 1916 as 4,804,400 metric tons (of 2204.62 pounds). The production of rye was 135,700 tons, barley 224,100, oats 387,500, corn 2,000,000, rice 531,100, and grapes 5,924,600.

The cargo carried through the Panama Canal, in both directions, in October, amounted to 647,893 tons. The number of ships passing through in seagoing or commercial service was 158, and the tolls earned amounted to $465,949.

The division of rural economy and agricultural statistics of the Department of Agriculture in Argentina, in its forecast just issued gives the acreage of wheat as 16,088,963, of linseed as 3,207,411, and of oats as 2,525,102.

In 1914 there were imported into Norway 17,211,089 pounds of oranges, lemons, and other citrus fruit. The quantity of apples and pears imported during the same year was 3,964,197 pounds.

At the recent election the law providing for total prohibition in Arizona was adopted by a majority of nearly twelve thousand, and capital punishment was abolished by a majority of 152 votes.

Figures showing the amount of wood used in the United States for making pulp will be obtained by the Forest Service in connection with its 1916 census of the lumber industry.

The silk cocoon harvest of 1916 in France, as estimated by the Lyons Union of Silk Merchants, is 6,147,100 pounds, an increase of 61.42 per cent over 1915.

At the recent election in California, according to the final count, there were 260,332 votes cast for the single tax amendment and 576,588 against it.

The area in India devoted to cotton growing, according to reports thus far, amounts to 18,169,000 acres, an increase of 12 per cent over last year.

Arguments on the constitutionality of the Adamson eight hour law have been set by the Supreme Court for Jan. 8, 1917.

The plan for the establishment of a school of mining at Antofagasta has passed one house of the Chilean Congress.

Vol. XIX January 6, 1917 No. 19

Growth in Christian Science

FRANK BELL

As humanity turns in greater numbers to Christian Science, the need increases for watchfulness against the temptation to regard numbers as essential indications of growth. In Section 28 of Article VIII of the Manual of The Mother Church, Christian Scientists are admonished not to "report for publication the number of the members of The Mother Church, nor that of the branch churches," but rather to "turn away from personality and numbering the people." This by-law is placed in the chapter entitled Discipline. It is therefore not suppressive, as might at first appear, but corrective. It meets fairly and squarely a marked tendency of the human mind to rely on unstable evidence and false standards. In case one is tempted to say or think Christian Science has had "wonderful growth" in such and such a city or country,—the necessary inference being that it has not so grown somewhere else,—may not he find helpful "discipline" in contemplating the spirit as well as the letter of the by-law above quoted?

On page 68 of Science and Health Mrs. Eddy says, "Christian Science presents unfoldment, not accretion." Growth in Christian Science, therefore, cannot be measured in numbers of church organizations or edifices or in numbers of persons identified with such churches. If it were true that the great throngs attending services in certain communities constitute an accurate register of the growth of Christian Science there, it would logically follow that proportionately less growth, or none at all, has taken place in those communities where the attendance is smaller; consequently a sense of elation in the one instance would be offset in some degree by a feeling of discouragement in the other.

The real activity of Christian Science is discerned in that leavening of human consciousness by which error gives way to an enlarging apprehension of Truth. This universal evangelization is the direct fruit of the right thinking of those to whom and through whom right thinking is a demonstrable science. It is of course inconceivable that a right thought, an emanation of divine Mind, could be limited in the quality or scope of its effect to any city or country.

Growth in Christian Science, therefore, can be measured only by that beneficent thought-force which is steadily reducing the sum total of human belief in the reality and power of evil. One who did not look beyond church walls for evidence of growth would disregard, for instance, the tremendous mental transformation which is finding expression in the changed attitude of public opinion toward Christian Science, especially as reflected through the press; nor would he take cognizance of the considerable and increasing element in every community that, while as yet not ready to be openly identified with Christian Science, is regularly studying its literature and in some degree practising its teachings. Besides this, the alert worker sees many other equally convincing evidences of growth.

Neither vain satisfaction in numbers nor equally vain regret in an apparent lack of numbers can find lodgment in the heart of the Christian Scientist who is awake to the transcendent fact that, wherever he be or whatever the material circumstances, he may contribute his full share to the flood-tide of right thinking, as a result of which every man, woman, and child on earth is each day nearer than the day before to a realization of the truth that makes free.

Analysis of growth in Christian Science to be correct must take fully into account that "Love is impartial and universal in its adaptation and bestowals," and that "whatever blesses one blesses all" (Science and Health, pp. 13, 206). There are no favored communities!

The Child in the Midst

MARY I. MESECHRE

On page 323 of Science and Health Mrs. Eddy declares, "Willingness to become as a little child and to leave the old for the new, renders thought receptive of the advanced idea." What unspeakable comfort to the weary struggler toward a hitherto distant and seemingly unattainable goal, to learn that simply willingness to become as a little child enables him to be as a little child, and ushers him into the freedom and gladness of conscious filial relation with our Father-Mother God.

When our Master would offer to his disciples a merited rebuke of their self-seeking and worldly ambition, he did not voice his reprimand directly, as was and is the usual method of those who recognize the necessity of warning a wrong-doer from his mistaken course, but, as was his custom, he spoke in parables, departing therefrom only to the extent of using an animate illustration. He called a little child and set him in the midst.

We can easily imagine this child, leaning in happy confidence against the Master's knee, looking lovingly into his face or glancing wonderingly at the changing expressions on the weather-beaten countenances of the men who circled them. We can readily conceive that Jesus may have questioned the little one, eliciting replies so artless, loving, and unselfish that they disclosed to the listeners the intent of the colloquy and enabled them to hear understandingly the later message to be uttered for their benefit. With a little imagination we may picture the scene when at length, dismissed with a loving smile, the child bounded away to rejoin his playmates, turning now and again for another glimpse of the new friend, while the Master said, "Whosoever shall not receive the kingdom of God as a little child shall in no wise enter therein."

How that lesson must have gone home to the hearts of the disciples! How the gentle rebuke must have penetrated their inmost nature, revealing the ugly lurking thoughts of envy, jealousy, greed, selfish ambition, until they may have trembled at the sight and again renewed their determination to withstand the tempter and prove themselves faithful and worthy followers of him who has long been rightly termed the great Exemplar. Is it too much to imagine that the wondrous

Copyright, 1917, by The Christian Science Publishing Society.

Digitized by Google

lesson of that hour was present in the memory of Peter when he was preparing his admonition to those who had purified their hearts unto unfeigned love, that they should look to it that their love remained pure and fervent; or that it formed the unannounced text of the beloved disciple when he unfolded to the world that matchless delineation of "Jesus Christ the righteous," the "advocate with the Father," and "the propitiation . . . for the sins of the whole world."

The child in the midst holds for us today a far deeper significance than that of merely serving as an illustration to the Master's admonitory rebuke to his immediate followers. Pondering the incident and glimpsing somewhat of its fuller meanings, one is led to make an application of the teachings of this parable differing widely from that commonly ascribed thereto. We have all striven zealously to analyze the childlike qualities of thought which we believe the Master intended to cite to his disciples, and we have all earnestly endeavored to compass and manifest such qualities in our daily lives, in order to win for ourselves abundant entrance into the kingdom of God. And we have all come sadly short of our desire, have tasted the bitterness of frustrated effort, and the acrid dregs of discouragement have lingered on our palates for long, filling us with sorrow and self-loathing because of repeated failures.

From such an experience the writer was roused one day by the sudden recollection of the words before quoted, "Whosoever shall not receive the kingdom of God as a little child shall in no wise enter therein." In reality there was nothing to strive for, but everything to receive; nothing to do, but only to be "as a little child." Further meditation brought the conviction that entrance to the kingdom was measurable only by one's receptivity of being, and that to receive as a little child one must become and be as a little child. Childishness was not the right quality; child-being was requisite.

Almost instantly came the startling thought that perhaps the Master set the child in the midst of his disciples not as a rebuke to them, but as a recognition of the child in the midst of each one of them, and that this was the true lesson of the beautiful story. Then came the memory of his tender words uttered on the shore of Galilee, just before that last precious morning meal: "Children," he called to those weary and weather-worn fishermen, "Children, have ye any meat?" And the child in the midst, instantly obedient and trustful, heeded the word of counsel and realized the abundance which had been hidden to the adult belief. Could one have a clearer corroboration of the true meaning so long obscured and so radiantly revealed? Again, we know how frequently and how tenderly John addressed the early Christians as "little children," and how his loving thought overcame the unchildlike manifestations that often grieved his gentle heart, and held steadfastly to the one thing needful, so fully expressed in his words, "Love one another," thus indicating the key to the kingdom which has in our age been so clearly revealed in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

But what of those from whom the vision is yet holden, who still toil all night and take nothing, who have not yet penetrated the secret of receiving? Even for them shall dawn the morning, and to their famishing sense shall sound the Master's word, "Children, have ye any meat?" And because they are children at heart, despite the blinding veils of time and sense, the child in the midst of each consciousness shall ultimately respond in full obedience and trust, and in the undimmed radiance of the risen morning shall always behold the face of the Father which is in heaven.

Reflecting the omnipresence of God, the child in the midst is also ever present, perhaps hidden by unlovely traits of mortal mind's producing, and it may be deeply obscured by successive layers of selfishness, envy, greed, ingratitude, ambitious desire, ignorance of God and man and of man's inalienable birthright, and all too frequently unrecognized by those to whom has been vouchsafed a glimpse of the revealing Truth. But no phase of mortal belief can forever hold in bondage the child in the midst, to whom the divine call sounds out across the sea of mortal thought, and for whom, as we read on page 454 of Science and Health, our Father's changeless love "inspires, illumines, designates, and leads the way" to the kingdom.

"Christian sermons"

GEORGE W. FOSTER

On page 345 of Science and Health Mrs. Eddy writes, "When the omnipotence of God is preached and His absoluteness is set forth, Christian sermons will heal the sick." The fact that Christian Science churches are usually so well attended each Sunday is an occasion for frequent and somewhat surprised comment on the part of casual observers. Often the comment takes some such form as this: "Christian Scientists have no ritualistic ceremony, no elaborate musical program, no regular sermon. What do they get from their Sunday services that they are found so persistently in their places Sunday after Sunday?" The query is a natural and pertinent one. May not the answer be found in the sermon itself, even if at first glance it does not seem to be a "regular" sermon?

Philology teaches that words are the signs for ideas. The word sermon undoubtedly suggests widely differing ideas to various people. Webster's dictionary defines sermon as "a discourse delivered in public for the purpose of religious instruction, and grounded on a passage of Scripture." Mrs. Eddy, in the Explanatory Note prefacing the Christian Science Bible Lessons, states succinctly some essential characteristics of "a sermon undivorced from truth, uncontaminated and unfettered by human hypotheses." In accordance with her instructions this note is read at the Sunday services in every Church of Christ, Scientist, throughout the world, before the beginning of the Lesson-Sermon. In the opening sentence attention is called to the fact that, as Christian Scientists, "the Bible and the Christian Science text-book are our only preachers." To one who has been, perhaps for many years, accustomed to attach to the word sermon the conventional idea of a set discourse, based on a single text and depending largely on the personality of the speaker to give it force, the presentation of truth through the reading of correlated passages from the Bible and Science and Health doubtless seems a radical innovation.

Whether we are regular attendants or are listening for the first time to a Christian Science service, it is our privilege and duty to ask ourselves: "Why are we here? Is it good to be here?" Our Master gave one unfailing criterion, one exact standard, by which to judge of these things. In that wonderful discourse which the Christian world has come to know as the Sermon on the Mount, Jesus taught his followers how to distinguish between false and true prophets in these pregnant words: "Ye shall know them by their fruits." Must we not then decide what are Christian sermons by the results obtained?

The Christian Science Bible Lessons, which have been studied by Christian Scientists throughout the week and are then attentively listened to as read at the public services each Sunday, show how closely our Leader held to the ideal of what constitutes a Christian sermon. The subjects for these Lesson-Sermons were selected by Mrs. Eddy, and their pres-

Digitized by Google

entation covers a period of six months, so that they occur twice in each year. The thoughtful student of these Lessons will gain increased illumination by carefully noting the sequence in which the various topics are taken up. Beginning each half year with a sermon on "God," the earnest listener or student finds himself led during the next few weeks to know God better as Life, Truth, Love, Spirit, Soul, Mind. These synonymous terms refer to the one God revealed to the children of Israel through Moses. Through the copious use of citations from the Bible, and lucid explanations of their spiritual import by means of selections from the Christian Science text-book, these sermons do preach His omnipotence and set forth His absoluteness. These seven sermons on Deity are followed by one on His highest earthly representative—Christ Jesus.

Next is taken up "Man,"—man made in the image and likeness of God,—and this is followed by the study of man's true relationship to such important subjects as substance and matter, by inquiry into the nature of reality and unreality, thereby arriving at a true solution of the question, "Are Sin, Disease, and Death Real?" To this question no other answer than a negative one is now possible, for this natural and logical unfoldment of the allness of God (His omnipotence, absoluteness), and the consequent nothingness of evil, leads the human mind to relinquish all faith in any power opposed to God, good. Thus the receptive hearer is healed of his deep-seated belief in the real and lasting nature of sickness and sin. Freed from many of his physical and moral disabilities, he next enters gladly and intelligently upon the study of some hitherto perplexing theological problems, discussed in the following sermons, until, awakened from his mesmeric dream of life and intelligence in matter, he joyfully acknowledges God as the only cause and creator, the sole preserver of man and the universe, and finds himself in the land of Christian Science, where, as we read on page 227 of Science and Health, "fetters fall and the rights of man are fully known and acknowledged."

The Lesson-Sermon entitled "Christian Science" fittingly rounds out and closes the series. Christian Scientists have many things for which to be grateful, and not the least of these is what Mrs. Eddy calls the "transit . . . from fragmentary discourses to one eternal sermon" (Miscellaneous Writings, p. 125). To thousands who, like the writer, have experienced the healing power of these "Christian sermons," it is no longer a source of surprise that Christian Science churches are filled at every service.

✧

Man as Idea

KATE W. BUCK

In seeking to know more clearly man's existence as an idea of God, practical help has been found through a personal experience, which the writer ventures to pass on in the hope that it may be useful to others.

At the solicitation of a literary friend I once started to write a book, and after completing eight chapters took it to a well known publisher for criticism. When told that if the rest of the book proved as good as these first chapters he would bring it out, I went home filled with ambition to complete it. Finding myself with more characters than could comfortably be handled, I deemed it advisable to drop one of them. Now these people were living and vital to me,—I felt a genuine affection for them; they were veritably "bone of my bones, and flesh of my flesh." When finally one was chosen for sacrifice, the one who had least to do with the purpose of the story, it seemed quite impossible to let her go. Several attempts were made, but they always brought such a sense of depression and grief that it was at length decided, after another futile effort of this kind, that the book must either go on with this character or not at all.

This experience occurred some years ago; but recently, in trying to give a lucid explanation of man's coexistence with God as idea, the desk-drawer people suddenly came to mind, and they were used as an illustration with such effectual results that great good was accomplished. It was agreed that these characters were simply ideas in the mentality producing them; that they were dependent upon me for the seeming existence they had, and that I knew them exactly because I had made them and was responsible for them.

This may serve in a small way as an illustration of how we exist as ideas in the parent Mind, "in whose hand is the soul of every living thing, and the breath of all mankind." This Mind, "the *alone* God," as Mrs. Eddy so wonderfully phrases it (Miscellaneous Writings, p. 250), being infinite and inexhaustible, is continually expressing itself in ideas, and these ideas partake of that Mind and cannot do otherwise. Because He lives they live; in Him they do actually live and move and have their being, and nowhere else; and each idea has his individual place and work and cannot be thrown out of it. This great creative Mind is all good, perfect and unchanging; and His ideas must necessarily be like Himself, because no element of error, not even a supposition of it, is in the divine Mind. In the case of a human author his concepts partake of his belief in the actuality of matter, sin, sorrow, and death, and on this basis they appeal to mortal thought. Contrariwise, God's ideas are spiritual, mental, and exist as ideas, not as matter. Belief in matter and its claims to place and power is the only thing that seems to separate man from the author of his being. This belief must needs be overcome, and it is destroyed permanently in the consciousness of one who has grown to know his mental oneness with God, serenely confident that absolute Truth is the only reality.

God, infinite Mind, thinks, speaks, acts, moves, loves, sees, hears, and knows, manifesting and expressing through His ideas-His own qualities and attributes. That is what His ideas are for,—to represent Him and carry out His plans and purposes. "It is he that hath made us," as the psalmist declares, "and not we ourselves." When mankind realize this, knowing that God is indeed All, there is harmony and peace. It is only through mistakenly trying to be something of themselves, apart from God, that there comes unavoidable confusion, because they never are anything alone by themselves and never can be; there is no real self but God. There is no other existence than this; what seems to be is just a make-believe, and never leads to anything, because it has no foundation.

How wearily people go round and round in their false sense of material living and its actuality, never arriving anywhere,—like a lot of leaves blown about by a blustering autumn wind. When, however, man is known to be spiritual, and is consciously in the employ and under the control of what our Indian brethren so beautifully call the "Great Spirit," one's life is purposeful and rich in its opportunities for service in God's name and to His glory. There is no other efficiency; no other life is worth while.

The truth of being is, as Mrs. Eddy succinctly puts it, that "God is the parent Mind, and man is God's spiritual offspring" (Science and Health, p. 336). Springing from Him, we can joyously reflect whatever we know to be good and therefore godlike; we can deny any suggestions unworthy of God the Father as only a part of the mortal dream and hence impossible as a part of God's creation, since all of God's ideas are real and enduring.

Digitized by Google

A student of Christian Science, soon after taking up the study of it, was earnestly striving to grasp the exact meaning of the word reflection as used so frequently and potently in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. She took her stand one day in front of a mirror, as a practical way in which to work it out. Noting that in every minutest detail the reflection was like the original, she found herself trying, foolish as it seems, to crowd in some back-hand motion which the image in the mirror could not accomplish; but of course the attempt was a failure. It is the business of the reflection to reflect, and that is the only work it has to do and the only thing it can do. The original and its reflection are one, but the life is all in the original, the reflection being wholly dependent upon it and exactly like it in every particular. This helps to a realization of the actual creation of ideas and their relation to their creator.

When we claim this as our only birthright and inheritance and disclaim any counter-suggestions, all sense of personal responsibility rolls away forever. The outward manifestation is gradually made over to correspond to the inward or mental quickening, till the supremacy of Spirit is fully demonstrated. A splendid summing up of all this is found on page 5 of "The First Church of Christ, Scientist, and Miscellany," where our Leader says, "Wholly apart from this mortal dream, this illusion and delusion of sense, Christian Science comes to reveal man as God's image, His idea, coexistent with Him—God giving all and man having all that God gives."

The Emmaus Road

CHESTER A. NEWHALL

"Did not our heart burn within us, while he talked with us by the way, and while he opened to us the scriptures?" These words from the twenty-fourth chapter of Luke's gospel bring to us the picture of a quiet country road and of two men walking sorrowfully along, reasoning together over some subject seemingly hard to be explained, and of one who, coming upon them thus and noting their sad demeanor, asks the cause. We picture their surprise as they say, "Art thou only a stranger in Jerusalem, and hast not known the things which are come to pass there in these days? . . . But we trusted that it had been he which should have redeemed Israel." We seem to hear the Master's voice as, "beginning at Moses and all the prophets," he expounds unto them "in all the scriptures the things concerning himself."

We follow them as they walk to the town of Emmaus, where the two men urge their unknown companion to sup with them. He complies with their request, and on breaking the bread, blesses it. Their eyes are then opened to know him; and as they perceive him, he passes from their sight. Then they in gladness speak the questioning words of wonder quoted above.

What a lesson this picture brings to us when viewed in the light of Christian Science. How many of us have found ourselves on this same road, looking only at the evidence of the material senses, discouraged, and perhaps saying, as the two men did, that we had hoped for this or that, and had felt that all our work was wasted and of no avail; and as we went along, perhaps nursing our sorrow, Truth came to us and turned our thought from the temporal and unreal, revealing the eternal and real verities of being. As we continued to take in the truth and apply it to our own experience, we found our false beliefs going, and realized that we were communing with the ever present Christ, Truth. How grateful we were that we had been met in the way, and that this truth made our hearts burn within us,—filled our consciousness with the presence of infinite Love, healing our sorrow and giving great peace.

Perhaps the Christ-idea has come to us on the bed of pain, when material methods have failed to help and we have cried out for freedom. Gently showing us the spiritual man as God's idea, reflecting only harmony and love, the Christ, Truth, has brought physical healing also; for with our perception of the spiritual truth, the physical sense of suffering gives place to harmony. Or perchance we have not found in our religious life the peace we sought, and we have turned sorrowfully away, feeling that our efforts were in vain; that he whom we expected to deliver us had gone, never to return. Then perhaps some one handed us a message of Truth, showing us the spiritual interpretation of the Scriptures which we were trying vainly to assimilate, and at once our eyes were opened and we listened eagerly to the voice of Truth, and reaching our Emmaus, found ourselves actually breaking bread with the loved Master who we had thought was lost to us forever.

This was the writer's personal experience. I had not found peace, and upon hearing of Christian Science I inquired how it might be understood and from what viewpoint, as it seemed so beautiful in theory, yet so far away. Then a friend came and told me that God is Spirit, and that the real man made in the image of Spirit is spiritual, not material; and that as God made all things, only the good can be real. I immediately applied this truth in my thought, and found a new world opened to me. The unsatisfied longing was gone, and in place of it came a yearning to know more and more of the truth and to understand how to apply it. What once had seemed a gloomy, dusty road was transfigured, radiant with Truth and Love, making the heart rejoice in very gladness.

Thus does the Christ, Truth, come to us in our need, revealing to our understanding the eternal truths of the Christ Science, leading us to turn away from the seeming reality of evil, from that which in reality has no existence or power, to the grand verities of being as found in God's plan. What a debt of gratitude and love we owe our beloved Leader, Mrs. Eddy, for revealing to us the way; for showing us how to see that it is Christ, Truth, which meets us in the way, which makes our hearts burn within us, and which leads us on to greater knowledge and fuller lives.

"Every good gift"

BERTHA BARKER

In the epistle of James we read: "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." As students of divine Science how alert we should be to heed this clear statement of truth, and promptly refer every good quality of thought, every desirable attribute, back to God, who is the source thereof.

If the belief in heredity would bind us with an appetite for drink or with an uncontrollable temper, we should earnestly go to work to know that, since God is the only creator, man as His likeness never had any material ancestry from which to inherit evil propensities; that God being the only Mind, there never was a mortal mind to transmit or reproduce its unholy attributes. But do we not sometimes allow personal sense to view with pride and complacency this same lie about creation, when it softly whispers to us that a good memory or a happy disposition is ours because it was "a family trait"? Not long ago the writer had occasion to learn

Digitized by Google

that it is a mistake to claim too much even for the good qualities which we believe we may have derived from human ancestors. An apparently innocent statement of this sort is nevertheless an admission of the whole of evil's claim, namely, that there is intelligence and existence apart from God.

Should we not be as insistent in our rejection of this false sense of creator and creation in the one case as in the other, and unceasingly acknowledge God alone as the source of "every good gift"? In this way we shall recognize and consistently prove in our practice the truth expressed in Mrs. Eddy's wonderful "scientific statement of being" (Science and Health, p. 468): "All is infinite Mind and its infinite manifestation, for God is All-in-all."

✧

Growth and Environment

NELLIE H. MATTHEWS

In the spring the writer bought and planted in a flower bed several dahlia bulbs. The season was late and the dahlias seemed slow in starting, but one day she saw that one of the bulbs had put up a shoot, though a careless foot had stepped upon it and broken it off at the ground. She decided that the bulbs must have been defective in some way and paid no more attention to them. One morning a little later she noticed that tiny morning-glory vines had covered the bed, and soon each morning with the rising sun the blossoms were radiant in their robes of blue, white, and red.

In the early fall as she looked out of the window she thought she saw a stranger among the blossoms and went to investigate. To her surprise she found a pink dahlia lifting its head just above the vines. A few days later another one appeared, a red one this time. The vines had formed a network over the bed, but on pushing them away she found that the dahlias had grown for about two feet lying on the ground, and then had lifted their heads and grown above the vines out into the sunlight. When a dahlia was picked a morning-glory was found twined around it, looking as though they had both grown on one stem.

This gave the writer such a beautiful lesson that she wanted to pass it on to others. It spoke to her of the experience of some students who seem to be longer than others in getting into the light of Truth, but who work on, knowing that "progress is the law of God" and that "growth is the eternal mandate of Mind" (Science and Health, pp. 233, 520); who are willing to let others reap the reward of their own labor and growth, and like the dahlia grow unnoticed until the time of fruitage comes, when their thoughts are lifted above their environment and they push outward and upward. They have gained humility through overcoming, and have a beauty unknown to mortals but recognized by our heavenly Father, divine Love.

The courage they manifest is the result of steady work in their own consciousness, which has made them strong enough to stand the storms of adversity and be a support to those whose work seemed to be rewarded sooner. Each worker has his place in God's vineyard, and if faithful is filling it. The dahlia did not cease to grow when stepped upon; it was not envious of the morning-glory's beauty, but waited patiently for its own to appear. So, whether our work is in the sunlight or in the shadow, we can always trust God with the results and abide by the truth expressed by our revered Leader, Mrs. Eddy (Poems, p. 69):—

Father-Mother good, lovingly
Thee I seek,—
Patient, meek,
In the way Thou hast,—
Be it slow or fast,
Up to Thee.

Selected Articles

[Judge Clifford P. Smith in *Indianapolis* (Ind.) *Star*]

A short time ago representatives of fifteen churches met at Alliance, Ohio, and listened to an address against Christian Science by a doctor of divinity who had been brought from a distant city for what was announced as "a joint movement against the inroads of Christian Science in this community." The term "inroads" alluded, of course, to the fact that some of the members of these fifteen churches had found a more satisfying religion in Christian Science.

The address delivered on this occasion was reported by a person appointed to furnish it to the periodicals of the various denominations represented at this meeting, and it has now appeared in several of them, including one in which the official or regular report was changed to suit the editor's hostility to Christian Science. Like all addresses of its kind, the one thus delivered and reported recalls what the Jews at Rome said to Paul when he offered to tell them of Christianity: "As concerning this sect, we know that everywhere it is spoken against." And again, like most of its kind, the address in question recalls the fact that the witnesses against Jesus spoke volubly, "but their witness agreed not together." Indeed this particular address instanced in a typical manner the utterly mistaken and contradictory nature of the opposition which Christian Science has been obliged to overcome.

The gist of the address delivered on this occasion was summed up in two statements. In one of them the speaker declared: "Christian Science opposes the Bible in denying the reality of matter, the reality of sin in the sense in which the Bible speaks of it, the existence of Satan, the personality of God, the personality of our Redeemer, Jesus Christ, the reality of prayer, and especially does it oppose the Bible in its insane interpretation of its texts." On the other hand, the same speaker said: "There are many things the church might learn from Christian Science, including greater loyalty to the Bible, more faithful testimony to the power and grace of Jesus Christ, the value and privilege of prayer, and last but not least, the potency of a holy life."

The contradictory nature of such assertions is evident. Since Christian Science is an example to other denominations of loyalty to the Bible, they are in no position to assert that it opposes the Bible. Likewise this teaching cannot both deny Christ Jesus and bear faithful testimony to his power and grace. So, also, it is not possible for Christian Science at once to show forth the value of prayer and deny its reality. And finally, since this religion makes manifest the potency of a holy life, its knowledge of God and its views of sin and Satan cannot be essentially wrong. As for the matter of textual interpretations, the denominations represented at this meeting have differed between themselves as much as did the Herodians and the Pharisees, or the Pharisees and the Sadducees, before these parties united in opposition to original Christianity.

Christian Science does deny the reality of matter, but whether this denial opposes the Bible is quite another topic. To deny the reality of matter is the only course open to people who acknowledge one God and accept the Master's teaching, "That which is born of the Spirit is spirit." This fact is beginning to gain general recognition. Thus, in "Naturalism and Agnosticism," by James Ward, professor of mental philosophy and logic in the University of Cambridge, we read (p. 140): "Extended, solid, indestructible atoms have always been the stronghold of materialistic views of the universe. But, unhappily for such views, the hard, extended atom was not equal to the demands which increasing

Digitized by Google

knowledge made upon it. The old atom shrank up gradually, surrendering all its extension, rigidity, and elasticity till it became identical with the entirely formal conception of analytical mechanics, that, viz., of a mass-point as a center of force. But this later analysis, though still hypothetical, had no longer any conceivable physical counterpart. The supposition that it had was due solely to that failure to realize the purely descriptive character of mechanics which its increasing mathematical formulation and its liberation from the categories of substance and cause have now made clear. It fell to Pere Boscovich decently to inter the genuinely mechanical theory as an explanation of physical phenomena. There was no rest for the old atom till it took this ghostly form of a mass-point, and thenceforward it was a dynamical fiction, pure and simple."

The same author after quoting from the writings of several physicists continued (p. 141): "These remarks are most opportune. If we consider them for a moment, they ought to satisfy us that we are not penetrating beyond what we see and feel to anything that actually goes on behind the too coarse-grained veil of sense." On page 564 Professor Ward declared the logical necessity of genuine monotheism as follows: "If we allow the conception of a supreme mind and first cause to be valid at all, we shall not have God and interminable mechanism as His medium and instrument: really fundamentally, ultimately we shall have God only and no mechanism. It is verily a case of all or none."

In short, the author from whose writings these quotations have been taken confirms Mrs. Eddy's definition of matter as "another name for mortal mind; . . . that which mortal mind sees, feels, hears, tastes, and smells only in belief" (Science and Health, p. 591). The following quotation from her "Miscellaneous Writings" at once explains the illusion of matter and furnishes the remedy for it: "To the material sense, everything is matter; but spiritualize human thought, and our convictions change: for spiritual sense takes in new views, in which nature becomes Spirit; and Spirit is God, and God is good" (p. 217).

Christian Science, however, does not need to depend upon scholastic confirmation. The most cogent proof of its verity is furnished by the results of its practice. It has brought to its adherents an increased measure of dominion over evil; and its redemption is applicable to everything that is not absolutely good. That this is the test of true religion will be hardly questioned by any one who is capable of considering this subject in an unbiased manner. Such being the case, Christian Science is opposed only for the reason that original Christianity was opposed. In short, no one has any good reason for speaking against this religion, since it is good in Principle and in practice, in basis and in results.

✧

[Lloyd B. Coate in *Salem* (Ohio) *News*]

Some recent statements in regard to Christian Science need correction, if our critic has been correctly reported. Different denominations have their Bible helps or commentaries as an aid in studying the Scriptures. "Science and Health with Key to the Scriptures" by Mrs. Eddy is a Christian Science commentary. That it is truly a "key" has been proven in the experience of thousands of people in gaining a better understanding of the Scriptures. It has made the Bible promises more precious to them than before they knew of Christian Science. It has been a boon to multiplied thousands who were sick and diseased, for it has shown them that God's promises are available today; and as a result, many have been restored to health when hope had failed after the use of material remedies.

Not only have the sick been healed through Christian Science, but it has been the means of leading many out of infidelity and atheism into the light of God and to an acceptance of Jesus' teachings, thus proving the accusation of our critics to be without actual foundation. Jesus taught that judgment should be made according to the fruit. When Christian Science is correctly understood, it can have no other effect than to increase one's faith and reliance in the true and living God. It awakens a greater love for the Bible and a greater desire to strive to follow in the footsteps of Christ Jesus. The wisdom of Gamaliel is still appropriate: "And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

Would it not be far better if these critics who go about condemning Christian Science would seek to follow Jesus in healing the sick through an understanding of his teachings, instead of wasting their time in attacking Christian Scientists who are striving to do so?

✧

[S. T. Downs in *The Courier*, Evansville, Ind.]

A recent issue gave a report of a so-called Anti-Infidel League and stated that a convention would be held in the near future to perfect an organization, the object being to oppose the progress of a number of movements, including Christian Science. To the average person the word infidel conveys the thought of "rejecting the Christian . . . religion;" "disbelief in God;" "disbelief in the Bible;" and this is evidently the meaning intended in the use of the word in the title of the new organization. A great many people who are still members of the older churches know from personal investigation that such a charge against Christian Science is absurd, and under any circumstances the activities of the league can but stimulate an investigation on the part of large numbers who want to know the truth, and who will test for themselves and learn: first, that Christian Science iterates and reiterates in countless ways the allness and oneness of God; second, that Christian Science is based on the teachings and works of Christ Jesus; and third, that the first religious tenet of Christian Science reads, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). It will be seen that, so far as Christian Science is concerned, such an organization as the proposed Anti-Infidel League must in the end defeat itself.

The great Master gave very definite instructions as to what his followers should do in the way of preaching the gospel and healing the sick, and these are clearly set forth in the New Testament. It is noteworthy that he laid no more stress on preaching than he did on healing, and he gave this unfailing test of discipleship: "By their fruits ye shall know them." I want to apply this test given by the Master to the charges of "fraud," "deception," "cunning devices to obtain money under false pretense," "secret attack," and the like, that the promoters of the League make in their announcement, by pointing to the fact that through the works of Mary Baker Eddy, the Discoverer and Founder of Christian Science, thousands, yes hundreds of thousands, have been led to a systematic, diligent study of the Bible, and practically every disease known to humanity has been healed. These healings include such diseases as cancer and tumor, after skilled physicians said they could do no more. There have been large numbers of people healed of tuberculosis in its last stages. Indisputable evidence is to be had of the healing of epilepsy after physicians had diagnosed the disease as hereditary and beyond all help. There have been almost countless numbers

Digitized by Google

of healings of drunkenness, poverty, discordant homes, dishonesty, dementia, and the like. These healings have been accomplished among people in all walks of life, including physicians, attorneys, ministers, capitalists, bankers, manufacturers, merchants, salespeople, clerks, and laborers. It is significant that Christ Jesus not only gave the test of discipleship already referred to, but he asked this question: "Do men gather grapes of thorns, or figs of thistles?"

✧

[Editorial in *New York* (N. Y.) *Telegraph*]

A coroner is "investigating" the death of an Erasmus high school student, because, as the newspapers say, the only treatment she received during her illness was by a Christian Science practitioner. One newspaper goes so far as to refer to the unhappy fate of the girl as "a Christian Science death." The mortuary statistics for the current week will doubtless show a number of deaths of persons who received no other attention than that given by allopathic physicians, and a number of deaths of persons who pinned their faith to homeopaths. The eclectic school will be represented, and perhaps osteopathy. No paper will refer to any one of these unfortunates as dying an "allopathic death," or a "homeopathic death." It will be assumed, and with reason, that the physicians in attendance did all in their power to ward off death, and that they were unfortunate either from lack of skill or because of the weakened condition of their patients.

The number of persons who die under Christian Science treatment is negligible almost, compared with the number "lost" by regular practising physicians, and yet the coroner, who generally is a "regular" himself, does not become excited when these occur.

✧

[Robert S. Ross in the *Spencer* (N. Y.) *Needle*]

The father of persecution is fear; the basis of fear is belief in evil, in a power and intelligence apart from God, good; and the parent of this belief is a lie, for God is the only Mind, or Principle, the one source and cause of all that is real and eternal. Real Christians cannot entertain thoughts of evil, because only Christian thoughts are derived from God, who knows no evil. If professed Christians entertain thoughts of evil and hate, and voice unkind utterances toward others, they are not thinking God's thoughts; they are admitting the presence and power of more than one God or intelligence, thereby forfeiting their right to be called Christians.

Christian Science is the Christianity taught and practised by Jesus of Nazareth two thousand years ago and established in this age through the book "Science and Health with Key to the Scriptures" by Mrs. Eddy, Discoverer and Founder of Christian Science. This is the Christianity which was attacked in a recent sermon in a building dedicated to the cause of "on earth peace, good will toward men"!

The world will some day admit that Christianity is a thing of the heart as well as of the head. It will see that he is the best Christian who understands God, Spirit, to be the Father of all, and who does the most good in the world, irrespective of creed or dogma. Jesus did not point out that true discipleship would be measured by the tenacity of one's belief about his teachings, but by one's ability to put these teachings into practice. Hear these words: "He that believeth on me, the works that I do shall he do also;" and again, "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

If the critic had studied the Christian Science text-book instead of the writings of those aiming to disprove its merit, I am sure he would have found in it only that which is in harmony with the Sermon on the Mount. At the present time he is not in fact attacking Christian Science, but that which he believes Christian Science to be. The writer submits that it is the sacred duty of a minister of the gospel to turn his flock into the path of truth, not out of it.

✧

[H. S. Hughes, Jr., in *Superior* (Wis.) *Telegram*]

As reported, a lecturer at the High School stated among other things that the "regulars" appropriated everything valuable in all other systems of healing, including Christian Science, and therefore should have the support of the people in their legislative work. I therefore beg space to correct any misapprehension existing in the minds of his hearers, as to the possibility of Christian Science being appropriated by the medical practitioners. While Mrs. Eddy in speaking of the mission of Christian Science states that through it "religion and medicine are inspired with a diviner nature and essence," she further states that "as readily can you mingle fire and frost as Spirit and matter" (Science and Health, pp. 107, 72).

Christian Science takes the healing of sin and sickness out of the realm of matter—speculation and experimentation—and places it, as the master Metaphysician taught and practised, in the realm of Spirit, or right thinking. This right thinking is based on God as Spirit,—all powerful, all knowing, ever present. Is this omnipotent, omniscient, omnipresent good in need of or dependent upon a lesser power to make that which He originally made in His image and likeness well and happy? Can there be a lesser power than all-powerful good? No; not in the realm of the real. Therefore, with all honor to the noble, unselfish men in the profession of the regulars, who have devoted their lives in the tireless effort to ameliorate human suffering, we do aver that medical science, so called, is as a system speculative and conjectural, lacking a right foundation, and that nothing in its history merits the support of the people in securing for it special class legislation.

What the citizen of the world needs, is to harken to God's law which He has placed in their hearts and which gives them dominion over all the earth, and to know that "if they drink any deadly thing, it shall not hurt them." This glad day has already dawned in Christian Science, and through the study of its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, man is awakening to and actively appropriating his birthright of health and happiness; of Mind as medicine; of allegiance and reliance on no lesser power than God.

The New Year's Advice

WARWICK JAMES PRICE

CLEAR-EYED prophet, what do you see
In the weeks of the opening year for me?

Shall I add to my store of worldly pelf?
Shall my horizon extend its span?
Shall I think of others instead of self?
Shall I know more love for my fellow man?
Shall I do with joy what there comes to do?
Shall I put my heart into every task?
Shall I better divide the false from true?
Please read me the riddle; that's all I ask.

And the New Year answered: "Why wonder, pray?
Why question tomorrow? Live today!"

Editorial

Practice and Profession

PUTTING into practice the sublime truth of Christian Science, rather than merely assenting to this truth as an abstract proposition, is the primary need, as Mrs. Eddy so clearly points out on page 24 of "No and Yes," when she writes: "There was never a moment in which evil was real. This great fact concerning all error brings with it another and more glorious truth, that good is supreme. As there is none beside Him, and He is all good, there can be no evil. Simply uttering this great thought is not enough! We must live it, until God becomes the All and Only of our being." Mrs. Eddy's statement is clearly in line with the Master's admonition to his followers, when he said, "Seek ye first the kingdom of God, and his righteousness;" and these two sayings, taken together, give food for thought to every sincere seeker after truth in Christian Science.

One's quest must, however, follow a logical sequence. Seeking for the material things of earth—health, wealth, ease—will not lead us to that which alone can satisfy, namely, "the kingdom of God, and his righteousness." The Master's promise that "all these things shall be added unto you" was contingent upon a pure desire for good, an unselfish seeking for righteousness, a willingness to leave all for Christ, an understanding faith in God which illumines the pathway of the saint and brightens the lives of all with whom he is brought into contact. This must be the mental state of the Christian Science practitioner if he is to do those mighty works which Christ Jesus said should follow them that believe, and it should also be the mental state of the patient if he is to receive that instantaneous and permanent healing desired by both practitioner and patient.

This does not mean that Christian Scientists should refuse to treat patients unless they first profess faith in the power of Truth to heal and a willingness to give up all their erroneous beliefs and practices. It was after the healing work had been wrought that Jesus, finding the erstwhile impotent man in the temple, said unto him, "Sin no more, lest a worse thing come unto thee." It is in fact an important part of the practitioner's work gently, helpfully, and compassionately to direct and encourage his patients to help themselves to live Christian Science, and because through the power of God they have been "made whole," to accept Him as "the All and Only" of their being.

The practice of Christian Science, let it be remembered, is not a perfunctory reiteration of dogma or platitude, but a live, virile, insistent, and intelligent declaration of the allness of God, good, and the consequent nothingness of evil. Mrs. Eddy emphasizes this point in Christian Science practice, and indicates the manner of its administering, when she says: "The tender word and Christian encouragement of an invalid, pitiful patience with his fears and the removal of them, are better than hecatombs of gushing theories, stereotyped borrowed speeches, and the doling of arguments, which are but so many parodies on legitimate Christian Science, aflame with divine Love" (Science and Health, p. 367). When through this gentle leading both practitioner and patient are seeking first the kingdom of God, and have reached "the understanding of Christian Science in its proper signification," then will come "the sudden cures of which it is capable," because they will be "taking up the cross and following Christ in the daily life." (See Science and Health, p. 178.)

Mrs. Eddy has cautioned Christian Scientists against the belief that the mere repetition of her words will heal the sick, and in Section 9 of Article VIII of the Church Manual she has specifically forbidden the use of formulas in teaching or healing; thus indicating that the letter without the spirit is but a poor substitute for the glowing fire of consecrated understanding. Nothing, indeed, can take the place of that understanding which results from the endeavor personally to apprehend and apply the teachings of Christian Science in their pristine purity as Mrs. Eddy has given them to us in her writings,—the understanding which alone can give lasting peace. "Vain repetitions" avail nothing.

ARCHIBALD MCLELLAN.

"Awake thou that sleepest"

IN addressing the Ephesians Paul uncovered a general human weakness when he wrote, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light." The stupor of self-ease and the slumber of self-satisfaction may be reckoned among the sicknesses hard to heal. The sleeper does not even recognize that he is asleep. He who while asleep believes himself to be awake, does not cooperate with the one who seeks to awaken him. If disturbed, he is apt to repeat the words of the insane man: "What have I to do with thee, Jesus, thou Son of God most high? I beseech thee, torment me not." Such an evil state of thought is only fit to return to its original affiliation with the herd of swine.

Under the lethal influence of self-complacency men and nations can be turned against their best friends, perhaps their only friends, and made to welcome their worst enemies with open arms. While they sleep, their cupidities, held in check during their waking moments, are aroused to magnify trifling losses into disasters, and unintentional elbowings into monstrous wrongs. While under the influence of this stupefying mental drug, they may be made to acquiesce in palpable injuries to others, to indulge sudden incomprehensible hatred, and to become parties to crime while glossing it over as an unavoidable occurrence. Such somnambulists among men and nations utterly lose the sense of proportion, minimizing outrages, making mountains out of mole-hills, and reversing the gradations of evil from middling, bad, worst, into worst, bad, middling. Under the repeated strokes of unresisted mental suggestion men and nations lose their mental integrity and lapse into the coma of moral idiocy.

What must the end be? An awakening must sometime, somehow break the spell of esoteric magic, and this awakening is terrible in its grotesque features. Then arises the cry, Why did not some one warn us? Why were we left to sleep while the enemy was preparing our destruction? Pitiable beyond words is the recognition that while we were held in a state of arrested development, others grew to maturity, others fought and won, others kept themselves provided with oil and were ready to meet the bridegroom with lighted lamps.

Warnings without number have been uttered in the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures," the two preachers of modern times, against the dangers of self-complacency in the hour of material prosperity. Moses sang of Jeshurun, the symbolical name of Israel, "Thou art waxen fat, thou art grown thick, thou art covered with fatness; then he forsook God which made him, and lightly esteemed the Rock of his salvation." The psalmist said of his enemies, "They are enclosed in their own fat: with their mouth they speak proudly." Paul, in writing to the Romans and describing the condition of those Israelites who would not believe, quoted Isaiah's severe arraignment of those who submit to "the spirit of slumber."

Digitized by Google

Christian Science teaches that sleep, apathy, mesmerism, the Adam-dream, darkness, disease, death, hypnotism, and illusion are all phases of the belief in another life than God. The sleep in the garden of Gethsemane was the prelude to the crucifixion on Calvary. One of the shortest sentences in Science and Health, and in this hour one of the most pregnant with self-questionings for Christian Scientists, is this, on page 48, "His students slept." Many years ago Mrs. Eddy also wrote, on page 95, "Lulled by stupefying illusions, the world is asleep in the cradle of infancy, dreaming away the hours."

Can it be that the world is not yet awake after fifty years of Christian Science activity? The dawn of a new day came in 1866. Now is the hour of high noon. Christian Scientists who are reading the signs of the times do not permit the enemy to sow tares while they sleep; they are conscious of the suppositious activities which intoxicate one individual or one nation with aggressive mental suggestion, stupefy another with the fumes of intemperance, and fatten still others for a future sacrifice. They rejoice in the protection and power which spiritual understanding brings to those who follow loyally the teachings of Mrs. Eddy.

WILLIAM D. MCCRACKAN.

✧

The Divine Idea

THOSE unacquainted with Christian Science are sometimes at a loss to grasp the meaning of such phrases as "the divine idea" and "the Christ-idea." They have been accustomed to a large extent to think of the humanity of Jesus as confined to a certain epoch in human history, whereas students of Christian Science are taught to think of the Christ-idea that has been more or less clearly perceived by the spiritually minded in all ages. When the Christian Scientist speaks of the divine idea, his thought instinctively turns to the manifestation of this idea through Christ Jesus, who was, as Mrs. Eddy tells us on page 589 of Science and Health, "the highest human corporeal concept of the divine idea, rebuking and destroying error and bringing to light man's immortality." He would also know that this idea must be actually demonstrated by himself, for in this way alone could he furnish proof that he had grasped the intent of the apostle's inspired words, "Christ in you, the hope of glory."

It goes without saying that all Christian sects express belief in the human personality of Christ Jesus, but if their views respecting the nature and mission of the Christ are to be judged by their literature, these differ very widely; which would not be possible if all understood God and what St. John calls "his Christ." When Jesus came to the world the Hebrew people had long been looking for the promised Messiah, but their views were to a large extent material and they consequently expected one who would drive out the Roman power and establish a new and earthly kingdom after their own hearts. Their concept of a Messiah or Christ was therefore very far from being the divine idea, although Isaiah had in marvelous terms presented this idea to those of his day—only to be misunderstood by them, however.

Jesus' idea of the Christ was not a human concept. It was the reflection of the divine nature which was continually manifested by him. So far as we can judge by reading the gospels, the Master's disciples came very slowly to the understanding of the divine idea expressed by the great Teacher, and although Peter was quick to see and acknowledge the Christ as expressed through Jesus, even he more than once lost sight of this idea, until after the crucifixion, when there was no longer any wavering or uncertainty, but that sublime loyalty to Principle which knows no fear because it knows so well the inseparability of God and His idea.

When we come down to modern times we find many deeply spiritual writers giving us, ofttimes in beautiful language, their own conceptions of the Christ; and in most cases the gentleness, meekness, and unselfishness of Jesus are greatly emphasized. Apart from Mrs. Eddy's teachings, however, in no case do we find the presentation of the divine idea which made Jesus the conqueror of sin, disease, and death through all his earthly ministry, and which impelled him to say, "I am come that they might have life, and that they might have it more abundantly."

When we come to Christian Science we find that we must get rid of our mortal concept of the Christ before we can lay hold upon the strength which the true understanding of God's idea bestows, and thus be able to follow the Master in the work which he required, namely, the healing of the sick and the overcoming of sin both in ourselves and others. If we are honest with ourselves, we shall sometimes find a tendency to hold the opinion that Jesus made easy concessions to sin, which is a great mistake; and so far as we entertain this belief, we are not rising to the altitude of the divine idea but are substituting for it a limited human concept.

At this point it is well for us to remember that when human sense made its strongest appeal to Jesus in the garden of Gethsemane, he prayed, "Not my will, but thine, be done." This meant that the human concept, even though pure and beautiful beyond anything which had ever appeared to human consciousness, must yield to God's idea of what His Son must be. After this brief struggle, with its glorious results, the Master was ready to prove the nothingness of death and the grave, and to bring, as St. Paul says, "life and immortality to light."

ANNIE M. KNOTT.

Lectures in Suburbs of Boston

The Mother Church announces the following lectures in the Boston suburbs to be delivered by William R. Rathvon:—

East Boston: Maverick Square Congregational Church, Maverick Square, 8 p.m., Jan. 11.

Watertown: Town Hall, Main Street, 8 p.m., Jan. 12.

Allston: Allston Theater, 128 Brighton Avenue, 3 p.m., Jan. 14.

Roslindale: Unitarian Parish House, 852 South Street, 8 p.m., Jan. 15.

Waltham: Asbury Temple, Main and Moody Streets, 8 p.m., Jan. 16.

Revere: Revere City Hall, Broadway, 8 p.m., Jan. 18.

West Roxbury: Highland Club Hall, Center and Corey Streets, 8 p.m., Jan. 20.

Everett: Crown Theater, Chelsea Street, Everett Square, 3:30 p.m., Jan. 21.

Brookline: Beacon Universalist Church, Harvard Street, near Coolidge Corner, 8 p.m., Jan. 22 and 23.

✧ ✧ ✧

Among the Churches

Current Notes

BUTLER, MO.—The Christian Science Society of Butler, consisting of fifteen members, who until the present time have held services in the probate court room, have just completed their church at the corner of Fort Scott and Delaware Streets, and they held Sunday services there for the first time on Sunday, Nov. 12. The church is the old Atkeson property remodeled.—*Butler Democrat.*

Digitized by Google

Milwaukee, Wis.—On Saturday afternoon, Nov. 25, Virgil O. Strickler spoke to the inmates of the House of Correction in this city. About two hundred and fifty prisoners were present and listened to the lecture with very close attention; especially was their attention marked after the first few minutes of the address. Christian Science services have been held every two weeks since Jan. 1, 1916, alternating between the women and the men.—*Correspondence.*

Hood River, Ore.—The edifice of First Church of Christ, Scientist, will be formally opened tomorrow [Oct. 15]. The event will commemorate the freedom from debt of the church organization. The structure, which is 50 by 60 feet and was completed the past summer at a total cost of approximately seven thousand dollars, is on a sightly promontory on the Columbia Gorge on which Hood River is built.

Portland Oregonian.

Palo Alto, Cal.—The Christian Science church edifice, work on which was begun the middle of the summer, will be ready for occupancy about the last of November. The building, with the furnishings and the lot, will cost approximately twenty-seven thousand dollars.—*Stanford Palo Alto News.*

Las Animas, Col.—A deed was filed Saturday [Nov. 18] conveying to the Christian Science Society lots 4 and 5 in block 97. The society is remodeling the building for church purposes and a reading-room.—*Bent County Democrat.*

Woodburn, Ore.—The new home of the Christian Science Society of Woodburn, at the northeast corner of Second and Garfield Streets, was dedicated last Sunday morning [Nov. 19].—*The Woodburn Independent.*

Niagara Falls, N. Y.—First Church of Christ, Scientist, has purchased a site for an edifice on Ashland Avenue. The site has a frontage of 66 feet and a depth of 120 feet.

Niagara Falls Gazette.

Jefferson City, Mo.—John Randall Dunn delivered a lecture at the penitentiary on Sunday morning, Nov. 26, to which twelve hundred prisoners listened.—*Correspondence.*

✧ ✧ ✧

The Lectures

Boston, Mass.

John W. Doorly of Leeds, England, a member of the Christian Science board of lectureship, delivered a lecture on Christian Science Friday evening [Dec. 29] under the auspices of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., in the church edifice, Falmouth, Norway, and St. Paul Streets. He was introduced by John C. Lathrop, temporary first reader of The Mother Church, who said:—

The Mother Church welcomes to this lecture this large gathering of people who are interested in gaining a better knowledge of Christian Science and its spiritual viewpoint of God, man, and the universe. A material, limited outlook must of necessity be dissatisfying to good and upright people. Material theories and their discordant effects will finally cause mankind to turn away from human self and human will, to discover in the one divine Mind the true Principle and rule of life with its sequence of health, happiness, and peace. Christian Science, when correctly understood, reveals this spiritual rule of freedom, which is a priceless blessing within reach of all who are ready to partake thereof.

The Christian Science Monitor.

Chicago, Ill.

At a lecture on Christian Science in Second Church of Christ, Scientist, the lecturer, John Randall Dunn, was introduced by James A. Hemingway as follows:—

No man can live intelligently, successfully, or harmoniously unless he understands, at least in part, what life is. Jesus defined life correctly and scientifically when he said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Our chief duty, therefore, is to gain a demonstrable understanding of God,—the understanding of Him that will enable us to live rightly and to follow the example of the Master by doing the works which he did.

But how is this understanding to be gained? Christian Scientists are proving daily and hourly that they are gaining it through the study and practice of Christian Science as taught in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The Bible tells us that "God is no respecter of persons;" hence it follows that this understanding of Him is not given to a select or favored few, but may be acquired by each and every man, woman, and child who honestly and sincerely seeks for it. And in this quest humanity may safely rely on the Master's promise, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you."—*Correspondence.*

✧

Meadville, Pa.

Dr. Walton Hubbard, who lectured on the subject of Christian Science, was introduced by Mrs. Myrtle S. Rice, who said in part:—

Christian Science appeals to men, women, and children of every class and condition. Thus we have among us some who are doctors, but who have given up their method of healing for a better one,—the healing of sickness and sin by the understanding of God, the God who, the psalmist says, "forgiveth all thine iniquities; who healeth all thy diseases." We have among us some who are ministers, but who have learned of a higher ministry and are making the teachings of our Saviour practical by healing the sick and sinning, saving from discord and disease of every name and nature. Also, like the disciples of old, we have the fishermen, and they too are doing the same works, proving that Jesus' words have not passed away, and that the sick are healed as a part of the practice of the Christian religion. All these see that Christian Science is a message from God to this age, and today there are more hearts grateful for its healing and regeneration than ever before.—*Correspondence.*

✧

New York, N. Y.

The introductory words of William Belknap, first reader of Fourth Church of Christ, Scientist, on the occasion of the lecture on Christian Science by Edward A. Merritt in the church edifice, were as follows:—

Never in the history of religion has there been growth so phenomenal as that of Christian Science. Fifty years ago there was but one Christian Scientist; today there are hundreds of thousands who are demonstrating its teachings in their daily lives, and millions who have benefited by it. Yet the great majority of the people of the world know very little if anything about this wonderful panacea. The works that Jesus did in casting out devils and healing the sick are as familiar to most people today as they were shortly after they took place, although it is nearly nineteen centuries since he trod the shores of the Galilean sea. Few, if any, doubt that Jesus did the works ascribed to him, and he said, "He that

Digitized by Google

believeth on me, the works that I do shall he do also; and greater works than these shall he do."

Through the understanding of Christian Science, men, women, and children are now doing the same kind of healing works that Jesus did, by the same metaphysical process, by the same spirit,—the Christ-spirit.—*Correspondence.*

✧

Battle Creek, Mich.

In introducing Paul Stark Seeley, who lectured on Christian Science in the Post Theater, Ferd DeForest Ernst, first reader, said:—

Nearly two thousand years ago Jesus came to bring "good tidings of great joy" to all people and for all time; and he said, "I am come that they might have life, and that they might have it more abundantly." About fifty years ago a pure New England woman, Mrs. Eddy, proved Christ Jesus' words, "If ye continue in my word, . . . ye shall know the truth, and the truth shall make you free," and a few years later heralded the "good tidings of great joy" to all peoples and named her discovery Christian Science. The spiritual awakening came to Mrs. Eddy after her instantaneous healing from what seemed a serious accident, for she had proven that the law of divine Mind which heals had remained unchanged throughout all ages. This revelation created in her a desire to reestablish Jesus' words and works in human consciousness and give to suffering humanity that promised Life, God, more abundantly. Christian Science is a religion based on divine law, and Christian Scientists worship God only.

Correspondence.

✧

Pittsburg, Kan.

In introducing Frank Bell at the lecture on Christian Science, Mrs. J. P. Curran said:—

Adown the ages since the time of Job echoes the cry, "Where shall wisdom be found? and where is the place of understanding? . . . The depth saith, It is not in me: and the sea saith, It is not with me. It cannot be gotten for gold, neither shall silver be weighed for the price thereof. . . . Behold, the fear of the Lord, that is wisdom; and to depart from evil is understanding." Jesus said to the believing Jews, "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." Our great Exemplar also said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." This knowledge is the light which "shineth in darkness." This knowledge liberated at the brink of the pool of Bethesda a man thirty-eight years in bondage, and at the gate Beautiful changed a crippled beggar to a man "walking, and leaping, and praising God." This same knowledge asserted in the stricken and sorrowing home of Jairus, "The maid is not dead, but sleepeth."

This is the exact and demonstrable knowledge of the words and works of Christ Jesus, and is today called Christian Science. Christian Scientists the world over can give answer to the hope that is within them; they have tasted and seen that God is good. And they "love to tell the story," because they "know 'tis true." Through the years theology has preached to man the coercion of Golgotha. Christian Science discerns the angel in the tomb. Theology points to a hope of deliverance beyond the grave. Christian Science cries, "Now is the accepted time; behold, now is the day of salvation." Theology, bending beneath the burdens of earth, whispers, "Thy will be done." Christian Science prays, "Enable us to know,—as in heaven, so on earth,—God is omnipotent, supreme" (Science and Health, p. 17).—*The Sun.*

Lectures to be Delivered

[By Members of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.]

ARKANSAS—Fort Smith: George Shaw Cook, Church Edifice, North Seventh and C Streets, 8:15 p.m., Jan. 19.

CALIFORNIA—Long Beach: Frank Bell, Auditorium on the Pier, 8 p.m., Jan. 15.

San Francisco (First Church): Prof. Hermann S. Hering, Dreamland Rink, Steiner, near Sutter Street, 3 p.m., Jan. 14; Palace Hotel, Market Street, 12:20 p.m., Jan. 15; and Church Edifice, California and Franklin Streets, 8 p.m., Jan. 15.

ENGLAND—Southport, Lancashire: John Sidney Braithwaite, Cambridge Hall, 3 p.m., Jan. 28.

FLORIDA—St. Petersburg: Willis F. Gross, Church Edifice, 224 Second Avenue, N., 8 p.m., Jan. 18.

Tampa (Society): Willis F. Gross, Pythian Castle Hall, Lafayette and Morgan Streets, 8 p.m., Jan. 19.

West Palm Beach: Willis F. Gross, Rialto Theater, Narcissus Street, 3 p.m., Jan. 14.

ILLINOIS—Chicago (Fourteenth Church): Edward A. Merritt, Constellation Masonic Temple, Byron and North Robey Streets, 8 p.m., Jan. 15.

Chicago (Society of University of Chicago): John Randall Dunn, Harper Assembly Hall, 4:30 p.m., Jan. 18 (the University public only is invited).

IOWA—Fairfield: Virgil O. Strickler, High School Auditorium, 8 p.m., Jan. 15.

MAINE—Bangor: Charles I. Ohrenstein, City Hall, 3 p.m., Jan. 14.

Bath: Charles I. Ohrenstein, Columbia Theater, 8 p.m., Jan. 15.

MASSACHUSETTS—Boston Suburbs, auspices The Mother Church, William R. Rathvon:

East Boston: Maverick Square Congregational Church, Maverick Square, 8 p.m., Jan. 11.

Watertown: Town Hall, Main Street, 8 p.m., Jan. 12.

Allston: Allston Theater, 128 Brighton Avenue, 3 p.m., Jan. 14.

Roslindale: Unitarian Parish House, 852 South Street, 8 p.m., Jan. 15.

Waltham: Asbury Temple, Main and Moody Streets, 8 p.m., Jan. 16.

Revere: Revere City Hall, Broadway, 8 p.m., Jan. 18.

West Roxbury: Highland Club Hall, Center and Corey Streets, 8 p.m., Jan. 20.

Everett: Crown Theater, Chelsea Street, Everett Square, 3:30 p.m., Jan. 21.

Brookline: Beacon Universalist Church, Harvard Street, near Coolidge Corner, 8 p.m., Jan. 22 and 23.

MICHIGAN—Flint: George Shaw Cook, Masonic Temple, 3 p.m., Jan. 14.

MINNESOTA—Duluth: John Randall Dunn, Church Edifice, Ninth Avenue, E., and First Street, 8 p.m., Jan. 16.

MISSOURI—St. Louis (First Church): Ezra W. Palmer, Church Edifice, Kingshighway and Westminster Place, 8 p.m., Jan. 16.

MONTANA—Great Falls: Dr. Walton Hubbard, Pantages Theater, 8 p.m., Jan. 16.

NEW YORK—Buffalo (First Church): Dr. Walton Hubbard, Church Edifice, North Street and Elmwood Avenue, 8:15 p.m., Jan. 5 and 6.

Ithaca: Charles I. Ohrenstein, Lyceum Theater, 3:30 p.m., Jan. 7.

OHIO—Alliance: Edward A. Merritt, The New Columbia Theater, 3:15 p.m., Jan. 14.

Cincinnati (joint lecture, Cincinnati and Norwood, Ohio, and Newport, Ky.): Virgil O. Strickler, Music Hall, 3 p.m., Jan. 14.

OKLAHOMA—Altus: Ezra W. Palmer, Empire Theater, 3 p.m., Jan. 14.

Hugo: Virgil O. Strickler, County Court House, 8 p.m., Jan. 18.

OREGON—Portland (Third Church): William W. Porter, First Church Edifice, Nineteenth and Everett Streets, 8 p.m., Jan. 11 and 12.

WASHINGTON—Seattle (Society, University District): Paul Stark Seeley, University State Bank Building, 8 p.m., Jan. 9.

Testimonies of Healing

Seven years ago, while living in Portland, Ore., I was suffering great pain from an organic disorder which medical treatment had not been able to alleviate, and my husband urged me to try Christian Science, as he had himself been having this help for about a week with favorable results. As he was a Gentile I thought it might be all right for him; but I myself was a Jewess.

On the anniversary of the Jewish new year I was unusually ill, and as "man's extremity is God's opportunity" I reluctantly consented to call on a Christian Science practitioner. To reach her home I had to pass the synagogue, and for the first time in my life I walked past the door, not in. When I reached the practitioner my heart was heavy, for I felt I was about to tear out of it that which was most sacred to me. The practitioner was very patient and kind; but when she handed me the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I rejected it; I simply could not read about Christ Jesus. Then she said, "Hear, O Israel: The Lord our God is one Lord." I told her that was "ours." She merely smiled and remarked that we would prove it true. How those words burned in me,—that she, a Gentile, would prove this sacred saying; and she did. I was healed in three treatments and there has never been the slightest return of the ailment. Since then we have proven many times the truth of the inspired declaration, "Hear, O Israel: The Lord our God is one Lord."

Gratefully I admitted that Christian Science had healed me, and I wanted to know how. I read Science and Health assiduously, but every time I came to the words "Jesus" and "Christ," I looked over them. Then I substituted "God," until my growing understanding made me admit that the author knew the proper word to express her idea. My next step was to use a dictionary, and I found the definition of "Christ" to be the "Messiah," and of "Jesus" to be "the son of Mary." Then with the aid of the Concordance to Science and Health, I studied every reference to "Jesus" and "Christ," and in fulfilment of our dear Leader's statement that "desire is prayer" (Science and Health, p. 1), the truth of this revelation was unfolded to me.

Joy unspeakable filled my heart as I realized the coalescence of Jew and Gentile, all brothers in the unity and understanding of Life, Truth, and Love; for, as Paul says, "there is no difference between the Jew and the Greek: for the same Lord over all is rich unto all that call upon him."

EUGENIA M. JELLISON, Cincinnati, Ohio.

✧

With humility and love I write this testimony to tell others a few of the many blessings I have received since coming into Christian Science. In November, 1908, I was suffering from many physical ills. A dear friend asked me to try Christian Science, and I gladly consented. I did not expect to get well, but wanted to find God. I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and started to study very earnestly. In two weeks some of the worst ailments had disappeared, but the complete healing was slow. For this I am now grateful, as I knew the healing would come when I gained sufficient understanding of the truth. For more than three years I could not demonstrate much of this beautiful truth, and when anything was the matter with the children or myself I would call a Christian Science practitioner. I was invited to attend church, but it had no attraction for me at that time.

In 1912 I decided to send the children to the Christian Science Sunday school, and I also started to attend the Sunday services and the Wednesday evening meetings. Later I began to study the Lesson-Sermons, and I have been richly rewarded with spiritual blessings, for great changes have taken place in my consciousness, and I can now demonstrate what I understand and apply it to my daily needs. I have been healed of difficulty in breathing, of heart trouble, chronic cough, asthma, stomach and bowel trouble, also extreme nervousness. It is nearly seven years since the children or myself used material remedies, for we have found a God that is ever present in time of need. I now have the peace of mind that "passeth all understanding," for Christ is indeed "the way, the truth, and the life."

My daily effort shall be to live this truth, so as to be worthy to be called a Christian Scientist. I have the privilege of membership in a Church of Christ, Scientist, in this city. I am grateful for the *Sentinel*, *Journal*, and *Monitor*, also for the *Quarterly* with the Lesson-Sermons, and my heart is filled with gratitude to our beloved Leader, Mrs. Eddy.

HANNAH PANY, Seattle, Wash.

✧

In February, 1914, I became ill and bloating began. By the middle of March I could hardly lie down, and in addition I had high fever. I was taken to a hospital and treated eight weeks for typhoid fever, but instead of gaining became weaker all the time. Another physician was called in, and as he said there was an abnormal growth, I was taken to another hospital and operated on, but instead of there being a growth, the stomach, bowels, and bladder were all pronounced tuberculous. My loved ones were told that nothing more could be done and I could live only a few days.

I was then taken to my mother's home, where I was expected to pass away, but a Christian Science friend had been there and asked that Christian Science be given a trial. This was Sunday evening. On Monday morning a practitioner was called in, and he repeated the call Tuesday. At noon on Wednesday I dressed and went to the table, and ate just what I wanted. The practitioner continued absent treatments the rest of that week, and on Saturday I told my mother to dismiss him. My health is perfect, and words fail to express my thankfulness to God that I have been spared to my family. We have had several demonstrations and enjoy all the Christian Science literature. I hope my testimony may help some one.—EPSY MCSPADDEN, Strong City, Kan.

✧

When I became interested in the study of Christian Science I was not in search of physical healing, though I had long been afflicted with catarrh, stomach disorder, skin trouble, and a structural defect of the eyes for which glasses had been worn for some time. Friends who were students of Christian Science sometimes lovingly spoke to me of their religion when I seemed in need of its healing influence, but without arousing any apparent interest on my part. Upon one occasion, out of curiosity and regard for my employer's feelings I went with him to a Christian Science lecture, and at another time to a Wednesday evening meeting. While I was not impressed by anything that was said by the lecturer or at the meeting, there was present an atmosphere of spirituality and love that made itself felt, as well as a manifestation of dominion on the part of those present that I had never recognized in any other church.

Afterward I attended another Christian Science lecture, this time of my own accord, for I was in search of Truth, and I was so illumined by the reflection of Love on the part of the lecturer and the Christian Science friends who greeted me there, that I became eager to learn more about this new-

Digitized by Google

old religion. Since then, like our Leader, I have been "a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. ix). A friend upon whom I subsequently called presented me with a copy of this book, which I began to study in connection with the Bible.

I went to a practitioner a few times for help in a business matter, which was handled satisfactorily, and to my astonishment and great delight discovered that my physical condition was undergoing a change. The catarrh and stomach disorder from which I had suffered for years disappeared; my eyes were healed, so that glasses were no longer needed, and subsequently the skin disease was entirely overcome.

My wife was also healed of many physical ills through the study of the text-book and other works by Mrs. Eddy. Through our own understanding of the truth our young son was freed from the same trouble with his eyes, and was able to dispense with glasses which he had worn for several years. We have had many wonderful demonstrations of the power of Love to heal, for all of which I am unable to frame words to express my gratitude; especially for the spiritual understanding of the Scriptures, which not only has been a blessing to me but has enabled me to be of greater service in the Master's vineyard.

When the time shall have come which is spoken of by the prophet, when "the earth shall be full of the knowledge of the Lord," then will it be apprehended fully how wonderfully good God is to those who put their trust in Him, and what a blessing was conferred upon mankind by our patient, tender, and loving Leader, Mrs. Eddy, who discovered and gave Christian Science to the world in such a form that even a little child can apprehend its teaching.

Frank A. Updegraff, Kansas City, Mo.

✧

I wish to add my testimony of the ever present help of divine Love. In June, 1915, a dentist who was trying to extract a wisdom tooth for me manifested some fear, as the tooth was quite difficult to pull and the instrument would slip from it. Finally, when his wrist gave out, I suggested that he wait a moment. I then telephoned to a Christian Science practitioner and she went to work for me. I returned to the chair, and the tooth was removed. At five o'clock in the afternoon I took my place as a long distance telephone operator and worked steadily until nine at night. The gum healed beautifully.

I am very thankful to God for all the blessings which have come to me through the understanding of the teaching of our beloved Leader, Mrs. Eddy, during the past seven years.

Nelle Simmons, Los Angeles, Cal.

✧

I wish to express my gratitude to God for Christian Science, of which I first heard five or six years ago through a lady staying in my house, who very kindly lent me some of the literature. For some time I had been searching for the truth, and this teaching seemed to be just what I needed. As far back as I could remember I had been a very despondent person, always suffering from some ailment, more especially severe headaches. I eagerly read the Christian Science literature, and gradually came out of bondage to those conditions and am now quite well. In numerous other ways help has been received, and I could not get along without Christian Science. My great desire is to understand more of the truth.

In January, 1915, I went to meet a friend who was coming by boat. Some trucks were being shunted, and as we were standing near the gangway, I with others had to move to one side. In doing so I somehow tripped over an iron bolt and fell between the ship and the jetty, striking some heavy piling. I have been told it was a fall of nearly twenty feet before I reached the water. I was quite conscious all the time going down, when suddenly these words came to me: "O Lord, my strength, and my redeemer." The next thing I remember was a hand somewhere near me. A brave man had dived from the jetty and caught me as I came up the first time. I was taken on board the vessel and the ship's doctor after examining me said there were no bones broken, though I was terribly bruised. I was then removed to a friend's house and put to bed. My friends could not understand why I would not call a doctor or use any material remedy, but I felt sure divine Love could heal as well as save me, and in less than a fortnight every trace of the accident had gone. I stayed in bed only a part of two days.

Mrs. A. Fowler, Albany, West Australia.

✧

In first turning to Christian Science I did not reach out for the physical healing; it was the religion that appealed to me most strongly. The teachings I had been trying to follow did not satisfy me. I was unwilling to believe that God would rob us of our dear ones and make us suffer; therefore when Christian Science found me I knew instantly that it was the truth, and the religion I had been seeking. Although in coming into a better understanding of it the way has been very rough at times, still I have tried to heed Mrs. Eddy's admonition to rejoice "all the rugged way" (Poems, p. 14). I know full well that to yield to discouragement or seek any material remedy for relief is not following our Master's demonstration so far as we are able. In my experience material means do not even temporarily relieve, but they do temporarily deceive.

I am thankful to God for having led me to Christian Science, whereby I have been helped both physically and mentally, having been healed of stomach disorder and of grief. I have proven that "weeping may endure for a night, but joy cometh in the morning," and certainly have received "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." I realize so clearly that it is only the false sense of man's being that can be destroyed.

I will endeavor to express my gratitude by gaining a better understanding of God, by becoming a better reflector of His love, and by being more active in serving the cause of Christian Science.—Mary A. Bally, Elmira, N. Y.

✧

From early childhood I was never strong, but when my mother, after having exhausted every material means, was healed in Christian Science, I was placed in the Christian Science Sunday school and gradually grew stronger.

About four years ago I was raised from an almost fatal illness through the power of Truth. In June, 1915, when in New Orleans, I was taken quite unexpectedly ill from overexertion and heat. The attack was what is known as bloody flux. I was first troubled on a Monday and that night I did not sleep except in broken snatches, probably not more than an hour in all, and was in a good deal of pain. Early Tuesday morning I called a practitioner and asked for help. The condition grew steadily worse and the pain became so intense that I could find only occasional relief, and the slightest movement brought almost unbearable suffering. This continued until Wednesday night, when the practitioner was preparing to leave, after spending three hours at my side, during which I had gained considerable relief although the fever was very high. As she reached the door she was stopped by the

Digitized by Google

gentleman at whose home I was staying, who told her that since I was in his house and under his care, I must have a physician. As he remained firm, I decided that I would leave the house and go to some place else, though to material sense this seemed impossible. Almost in that instant the fever lessened, and when a few minutes later this gentleman came to my room to take my temperature, the fever had subsided to such a degree that he decided I would not need a doctor.

For this demonstration and for the help and understanding of Truth which it brought to me I am very grateful.

MYRTLE L. ARMITAGE, Chicago, Ill.

✧

For all the blessings received through Christian Science I wish to thank God. I came into Science after seeing a wonderful demonstration of healing in the case of my father-in-law. At the time I was suffering untold agony from boils, having in all over thirty. Several doctors told me an operation would have to be performed, as I had a fistula, but on taking Christian Science treatment I met with instantaneous relief. That was four years ago, and I have never had a return of the trouble. I was also healed of quinsy and of various other ailments very quickly; but I think I am more grateful for the fact that my two children have the opportunity to attend the Christian Science Sunday school and be benefited by the teaching given there.

As a result of the instruction received, my daughter, nine years of age, by applying her knowledge of the truth healed me instantly of a very sudden and severe attack of biliousness. I did not even know she was helping me, only that all at once I was feeling fine; then she told me she had worked for me by realizing the definition of the kingdom of heaven.

I am grateful to Mrs. Eddy for her discovery of this great Science. Our entire family look to it for straightening out all the so-called troubles, and never ask in vain.

STANLEY G. LODGE, Milwaukee, Wis.

✧

I am sending this testimony for those who are searching after health and happiness. When I was a child our family physician told my parents to take me out of school, as my heart was very weak. I was never able to do any hard work. Then about five years ago I was taken with inflammatory rheumatism, which made the heart much weaker. I was at a hospital three times and had one operation, but finally became so much worse the end was expected at any moment. I did not dare do any work at all. I always had a dread of leaving my children, but supposed if I were to be taken from them it would be God's will. Imagine, then, my happiness when I found that such things are not God's will and that He would make me well. I took two treatments in Christian Science, came home, and went to doing all my housework, including the washing.

I am very grateful to the doctors for doing what they could for me, but "man's extremity is God's opportunity."

DELLA BARNER, Masten, Pa.

✧

The gratitude and encouragement which fill my heart whenever I read some of the loving testimonies published in the Christian Science periodicals make me long to swell their pæans of praise. On Feb. 7, 1909, I went into a rest-cure with little or no hope in my heart, or in the thought of my physicians, that I would come out for many months. I had tried all kinds of doctors and specialists, but a long continued nervous breakdown had finally resulted in extreme exhaustion with some serious complications, including a severe intestinal trouble. A friend asked me why I did not try Christian Science, and I sent for a practitioner. I had absolutely no understanding and no belief whatever in Christian Science, but, as Mrs. Eddy tells us in Science and Health (p. 13), "Love is impartial and universal in its adaptation and bestowals," and I was healed instantaneously of all the diseased conditions. A sense of fatigue remained for some weeks, and I was obliged to begin the study of Christian Science and to learn for myself what had healed me.

I had given up all belief in God; in fact, when the practitioner referred to God I requested her not to mention that name to me, for I did not believe in Him. Then she asked me if I believed in love; and upon being assured that I *did*, she gently told me that God is Love. That dissipated in my thought the old belief in a God who sends evil as well as good. The revelation which came in that one treatment has never left me, and whenever I have turned to God and loved more, all discordant conditions have disappeared. Two things cannot occupy the same space at the same time, and where God—Love—is, there is no room for evil of any kind.

My gratitude for Christian Science is overflowing, and my prayer is that I may give and love more.

GRACE CHADBOURNE, New York, N. Y.

✧

I wish to express my gratitude for the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. It is helping me to know God and teaching me how to live in harmony with His divine laws. For many years I suffered from chronic stomach trouble, which held me in bondage until Truth healed me. This is one of the many blessings I have received and am receiving daily through the study of Christian Science. I have had ample proof of the healing power of divine Love, and shall strive earnestly to gain a better understanding of this truth which sets us free.

MATILDA HELLERICH, Davenport, Iowa.

✧

[Translated from the French]

I feel that I should not delay any longer to testify publicly to all the good that has come to me since I have been endeavoring to walk in the way of Truth. I had been suffering for several years with neurasthenia, gloomy thoughts bordering on mental derangement, lack of energy, distrust of my ability to do things, and this condition became aggravated as a result of overwork; so I took a two months' leave from my work and put myself under Christian Science treatment.

This Science, which I had never heard mentioned up to that day, was presented to me by a relative. At first it seemed especially difficult to understand, and at times I almost despaired of ever doing so. Everything was, however, explained to me with such unremitting patience and with so much kindness that my doubts and objections were gradually dispelled, and I was led eventually to apprehend a new sense of life. At the end of my leave of absence I was enabled to resume the direction of a class of boys and girls in the country. During the last quarter of the school year I worked strenuously, but seemed to require the constant help of Christian Science.

I now feel that I am gaining more and more in the right understanding of God as taught by Mrs. Eddy in her admirable book, "Science and Health with Key to the Scriptures." It rests entirely with us to be happy, since God is Love and never created evil. I read Science and Health daily and as much as I can, and both my joy and my facility in reading are increasing. I never fail to attend the Sunday services and Wednesday evening meetings, from which I derive much good. I would express deep felt thanks to God for all He has bestowed on me and mine.

CLARA LANG, Geneva, Switzerland.

Digitized by Google

I gladly give the following experience of help received in Christian Science. One day about noon, while engaged in household duties, I was attacked by acute stomach trouble. Between that time and four o'clock the following morning it was thought three times that I would pass on, but through the faithful work of a Christian Science practitioner, who was hurriedly called to my bedside for the third time during the fourteen hours of my severe illness, the difficulty was overcome and speedy recovery resulted, for which I am exceedingly grateful. Since coming into Science, six years ago, I have been able to solve many problems through the understanding of Truth.

ARABELLA BENNETT WATSON, Malden, Mass.

Sometimes the question is asked if Christian Science can heal quickly where there is a vital necessity for help. With gratitude which cannot be expressed in words I submit this testimony.

Several years ago my little girl, then two and a half years old, went across the street to play with some other children. About twenty minutes later the father of one of her playmates brought her to me covered from head to toe with Paris green. My child had found it and played with it, getting some into her mouth and nostrils. When brought to me she was groaning, and the gentleman told me what the trouble was, saying the stuff was poison and I had better clean her up quickly. My son, who was standing near me, turned faint, but I reassured him by repeating Jesus' words, "If they drink any deadly thing, it shall not hurt them." This was about half past eleven in the morning. I worked mentally every minute to realize the truth. About an hour later the child began to vomit, and continued to do so every few minutes. It was six o'clock when I asked a Christian Science practitioner to help me, and the child continued to vomit until about four o'clock in the morning, when she fell asleep, exhausted. She awoke feeling perfectly fresh, had a light breakfast, then a hearty dinner at noon, and was completely healed.

This healing was a wonderful revelation to us all, and we feel it would be hard for us to be grateful enough for this proof of the power of divine Love. Every day brings more and more blessings, and we know that only in deeds can we prove our thankfulness. I want to express my gratitude for our authorized literature, which is a constant help in our journey from sense to Soul. I am indeed grateful to our revered Leader, Mrs. Eddy, through whose unselfed labor we may now prove for ourselves the Christ, Truth, which does indeed make free.—ANNIE J. LIPPMAN, Hibbing, Minn.

With sincere gratitude I testify to the healing efficacy of Christian Science, which has indeed lifted me from deepest darkness into glorious light. For the past five years the truth as taught us in "Science and Health with Key to the Scriptures" by Mrs. Eddy has been my only help.

I have been healed of many ills and discords. One of the greatest of these healings was that of sick headache, supposed to have been inherited. I struggled along, trying to get relief from this trouble through material means, but instead it only grew worse until it was overcome through Christian Science. It was a slow healing, and I had to study earnestly and apply my understanding, but I was thus enabled to prove many things. I have not had a headache of any kind for over a year. I am indeed grateful to Mrs. Eddy for giving to the world this great help to mankind, and also to all who have aided me along the way.—LIZZIE FORCE, Piru, Cal.

From Our Exchanges

[The Congregationalist and Christian World]

The spirit of Christmas adopted everywhere would make the earth a place of Christ's victory, for it would bring in the triumph of good will. There would be need of patience, and room for troubles still, but we should be so far along the road toward happiness that it would seem that heaven had come on earth. The difficulty of the problem of good will for each of us really begins in his own heart. We know that we are capable of good will, because we are made in the image of God and He has called us to grow more and more into His likeness. But what a difference between that good will of heart of which in our highest thoughts we know as privilege and duty, and that tainted lumber of dislikes, cherished misunderstandings, prejudices, and even hatreds which God discovers in some neglected ill will corner of our souls! Our individual problem of good will by the grace of God is soluble. It must be solved if we are to spend our Christmas time in the clear air of fellowship with God.

[The Christian Work]

I think it is only simple people who enjoy Christmas thoroughly, just as I think that it is only simple people who are religious. Some of us are too clever and know too much to be religious. We have turned Jesus into a problem, and ask whether he was born in Bethlehem or in Nazareth. Some there be who ask whether he was ever born at all; others, whether he was really man, or perhaps God, and they use big words about him, like "incarnation" and "atonement." I sometimes wish we could wipe out the history of the last two thousand years and just get back to that manger and see the babe at its mother's breast and feel the wonder-glow in the mother's heart. I would sooner see Jesus in those swaddling clothes than decked out in all the trappings of theology the world has ever known.

[The Jewish Chronicle]

Abraham hears the divine command telling him to leave his native country and go out into the larger world. The call of Abraham is an oriental figure of speech. We ourselves are in the habit of speaking of a call from God or a warning from heaven. In this sense people today are conscious of a call to uproot themselves from the home in which they have been nurtured and to pitch their tents in new and strange surroundings. Most insistent this call has been to the patriarch's descendants, to the wandering Jew; so that we may read into the Scriptural narrative a sort of allegory of the pilgrim life of Israel. What was the purpose of Abraham's wanderings? Clearly a spiritual one. He was to become a blessing to mankind. "In thee shall all families of the earth be blessed."

[The Methodist Recorder]

The kingdom of God was the supreme concern of Christ's life, the all-prevailing topic of his ministry. He commenced his public work by proclaiming its advent. He finished it by the anticipation of reunion with his disciples in the Father's kingdom. The kingdom of God was to be the primary quest of Christ's disciples. "Seek ye first the kingdom of God," was Christ's command. Would Christendom today be so rent and torn and distracted, if the ideal of the kingdom had been kept in mind? The ideal of the church has taken precedence of the ideal of the kingdom.

In order to win the masses who are outside the churches, we must uplift Christ's ideal of the kingdom. They will

Digitized by Google

respond to that! The church which does not exist for the kingdom will find itself powerless to work the miracles of the kingdom. The church which exists solely for itself becomes paralyzed. The church is not an end in itself, but the means to an end. The end it has to keep in view is the advancement of God's kingdom.

[*American Lutheran Survey*]

Not money, but the love of money, destroys a man's soul and lowers his ideals. Rather is it commendable that men labor industriously for the acquirement of that which, after all, is but a medium of exchange by which to secure the food, shelter, clothing, and other necessities of life. There are, to be sure, those who love money for its own sake, and whether rich or poor, minions or millionaires, they worship a false god and lose their true life in consequence. "Whosoever shall seek to save his life shall lose it," is an axiom uttered by our Lord himself. But we are not ready to believe that the great mass of laboring, struggling humanity is so enamored of that which is material and physical as to worship money as the highest good.

[*The Christian Register*]

Given an assembly devoid of religious forms and usages, it would be difficult for the majority of laymen, and for some ministers, to pick themselves out and assign themselves to their proper denominations. This inchoate condition of the majority is not wholly an evil. It marks the decline of creedal statements as tests of right thinking, and an increase of fellowship in the things that pertain to our common welfare.

Great forces are afoot in the fields where the fortunes of all men and all nations are at stake; and the good and great in all churches are coming out of their little enclosures and seeking fellowship with all who are like-minded, to take service in the company of the world's servants and benefactors.

[*The Independent*]

There has been, in fact, only one genuine Thanksgiving day. That was held in 1621, when an unhoped for harvest saved the lives of the Massachusetts colony. All the other Thanksgiving days have been imitations of this original and spontaneous outpouring of public gratitude, and the imitations get poorer and poorer year by year, until now it is a question whether the day has a right to the name. If we have lost the power or the right to give God thanks for national blessings, let us be honest and say so, not call a season of faultfinding and repentance a "thanksgiving."

[From *The Frederick* (Okla.) *Leader*]

Jesus found the Jews setting great store on "vain repetitions," on forms and ceremonies. They had forgotten the words of the wise man, "Keep thy heart with all diligence; for out of it are the issues of life." Therefore he spoke to them the Sermon on the Mount, wherein he told them truths which must have set them thinking as they had never thought before—among them, that sin was in the human mind, that the sinful act was but the expression of the sinful desire, and that the desire constituted the sin, whether the act was ever committed or not. He taught them that the inner life, the thoughts, must be purified, the aspirations must be directed heavenward, the spiritual life must be cultivated, if man was to attain to righteousness. He taught also that the things that we long for, and set great store upon, are the things that we really pray for, saying, "Where your treasure is, there will your heart be also."

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new catalogue of selected Bibles is now being printed by the Publishing Society and will be mailed to Christian Science organizations listed in the *Journal* early in January.

Owing to the increased cost of labor and materials the Oxford Press of England has twice found it necessary to advance the prices of Bibles to the Publishing Society during the past year. The Publishing Society now finds it necessary to make a corresponding change in its prices to the field, announcement of which will appear in the forthcoming catalogue.

The cost of manufacturing Bible Cases and *Quarterly* Covers has also increased, and the new catalogue will give the change in prices for these articles.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 236 Huntington Avenue, Back Bay, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1888 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

By the formation of the National Dunes Park Association the first steps have been taken toward preserving a part of the thirty mile stretch of virgin wilderness at the foot of Lake Michigan for a national park. The association has bound itself to acquire and hold some part of the stretch of dunes between Gary and Michigan City, and to ward off encroaching industries. The United States Senate passed by unanimous vote a resolution instructing Secretary of the Interior Lane to report as to the advisability of converting this tract into a national park.

Jens Jensen, the Chicago park director, says of it: "The wonderful development of Gary will soon encroach upon this beautiful region. It is true that there are no lofty mountains here, not even the giant forests of the West, yet the beauty is here, and here are found the rare things of the entire continent. The fact that people come from foreign lands to this spot to observe the interesting vegetation and formations is sufficient tribute to the Indiana dunes. The dunes are the theme of authors, poets, and painters. They encourage a love for the soil, the thing that has made great nations of the European countries. Let us save them, and save them now while we have the opportunity."

A former mayor of Gary has proved the leader in arousing genuine enthusiasm for the project. Describing the region, some one says: "The wandering dunes are constantly on the move. Shimmering veils of powdered sand sweep over the gleaming mounds and drop gently to the lee side. Soft clouds swirl to the summits and day by day subdue the junipers and oaks and pines that struggle so bravely for their existence. Strange forms are fashioned in the passing of the years. Bold fortresses are slowly reared. Grim turrets are outlined against the sky. The bird and animal life of the dunes is always interesting. Even one who is a novice as a naturalist can read what is written on the sands by the prowlers of the night. Here a sly raccoon has moved cautiously along. Farther down a couple of muskrats have been prowling, but have scampered back at the approach of a fox. Down along the beach the herons stalk in silent dignity. Balanced on set wings, the gulls hang aloft, while the more venturous terns skim along the wave crests."

More than eight million acres were eliminated from the national forests, and over eleven hundred individual tracts within the forest were made available for homestead entry in the last fiscal year. The annual report of the Forest Service says in part: "The national forests are gaining in stability through the land classification work. It is important for the general public to know what lands will be available for agricultural settlement. The whole forest enterprise is based on the assumption of permanence. All the work is conducted with a view to constructive development of the property and its constantly increasing usefulness. Every timber sale is made with a view to future consequences. The work of protection from fire is not only to prevent the destruction of standing timber, but to save young growth and encourage the natural reproduction on lands which have been injured by previous abuse. A regulated system of grazing looks to the upbuilding of the forest range, as well as to its present use; and the investment of public funds in extensive improvements, is predicated on the permanence of the Government enterprise." Congress at its last session appropriated $10,000,000 for the construction of roads within the forests and $3,000,000 to extend the national forests in the eastern mountains at the headwaters of important streams.

The state of New York, after litigation in both the state and Federal courts, has succeeded in conserving to itself the immensely valuable water power site on the St. Lawrence River at the Long Sault rapids. Engineers estimate that these rapids are capable of developing 1,000,000 horse-power of electricity worth about two hundred million dollars in round numbers. Nearly ten years ago the state gave to a company desiring to develop this site a charter in which the principle of compensation for this valuable franchise was embodied. The project was not at once developed. When later a method was being sought to subject the power companies at Niagara Falls to some payment to the state, this charter was investigated as being ideal. It was found, however, upon close inspection, that the charter was practically perpetual, instead of for fifty years, and that the compensation was almost nominal. Constitutional flaws were found and the state repealed the charter. The matter was then taken into the courts and the state has been successful in its contention.

The United States Department of Agriculture is erecting at Summerland, Cal., a plant costing about one hundred and fifty thousand dollars for recovering potash from seaweed. It will probably begin operations some time during the winter, and will have a capacity of 200 tons of kelp a day. One big kelp reaper will be operated and about twenty men employed. Santa Barbara County officials have granted the Department of Agriculture the right to harvest extensive kelp beds off the coast in the vicinity of Summerland. The county has also given two private companies similar privileges, but their operations are to be supervised by Government officials. The two private companies will have a combined capacity of about five hundred tons of kelp daily.

Mauritius is a prosperous British colony in the south Indian Ocean situated about five hundred miles east of Madagascar. The area of the mainland is about seven hundred and sixteen square miles, and that of the small neighboring islets about four square miles. At the end of 1915 there were 382,740 inhabitants, 261,093 of whom were Indians. These make up the laboring element. The industrial and commercial activities of the colony are controlled by the Mauritian descendants of the former French and Dutch settlers and Indian and British merchants. Most of the commerce is carried on at Port Louis, the capital and principal town, on the northwest coast. The population of this place is about forty-two thousand. The island has 120 miles of railway, owned and operated by the Government, and 132 miles of main public roads.

Forty-five thousand acres of swamp land near Belhaven in the eastern part of North Carolina have been purchased by an incorporated body. It is proposed to reclaim the land by drainage and fit it for colonization. The company will operate and manage farms for purchasers of small tracts, which will be sold after the land is thoroughly developed. The drainage will involve the digging of 175 miles of ditches. The land is in the famous "Black Belt," with its rich black soil from three to seven feet deep.

The secretary of war recently had a conference with the Senate commerce committee relative to the proposal to appropriate more than fifty million dollars for controlling the waters of the Mississippi and Sacramento Rivers, as well as the comprehensive plan for a Federal river regulation commission to develop the waterways of the United States "for every useful purpose." The secretary is ambitious that the Government shall undertake a vast and comprehensive development of all the water sources of the nation.

Exports of paper and paper manufactures from the United States during 1916 will reach a value of $40,000,000, doubling those of any previous year. The largest purchaser was Argentina, which took $905,000 worth; Cuba was second, with $365,000; Australia third with $302,000, and the United Kingdom fourth with $233,000.

On Nov. 27 the Interstate Commerce Commission reported on the valuation of the Kansas City Southern Railway. The road is capitalized at $99,052,000, of which $51,000,000 is in stocks and $48,052,000 in bonds. The commission finds that the road can be reproduced for $46,274,368.

The first extensive wireless telephone system in the world is now being put into use in southern California on the large reserves of the Forest Department of the United States, where the inventor will be at work on the perfection of the system during the winter.

The value of the important farm crops of the United States in 1916 is placed by the Department of Agriculture at $7,641,609,000. The corn, cotton, wheat, and hay crops are each estimated above a billion dollars.

The total area sown to the indigo plant during the year 1916 in British India was estimated at 625,900 acres, an increase of 142 per cent over 1915. The yield is placed at 75,200 hundredweight (of 112 pounds).

The aggregate value of exports from the Gold Coast, British West Africa, during 1915, was nearly twenty-nine million dollars, and imports were valued at nearly twenty-two million dollars.

Over two million acres were sown to groundnuts (peanuts) in India during 1916, and over seventy-six million acres to rice.

Both houses of the Danish Parliament have approved the sale of the Danish West Indies to the United States for $25,000,000.

Rhodesia's yield of gold for the first eight months of 1916 totaled $12,771,292.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XIX | January 13, 1917 | No. 20

Brotherhood

BERTHA V. ZEREGA

UNIVERSAL brotherhood based on spiritual understanding is fundamentally one of the teachings of Jesus, echoing as it does the prophet's cry, "Ho, every one that thirsteth, come ye to the waters," for none are excluded from this spiritual drink. The Master classified as his brethren and sisters and mother all who did the will of his Father—lived the Christ-life. We read in the gospels that Jesus at one time withheld his doctrine from certain ones, having instructed his disciples to "go not into the way of the Gentiles;" also saying, "Into any city of the Samaritans enter ye not." This was no doubt because his disciples did not then possess the understanding needed to overcome their own prejudices as well as those of other nationalities. We must also remember that these classes of people represented the pagan, unprepared thought, that swinish phase of the carnal mind which, because of its hatred of the truth, turns and rends the distributer of the priceless pearls of spiritual wisdom.

May not this admonition of the Master have betokened a tender care on his part for his beloved disciples, that they might be protected from going among those who would thus rudely despoil them of their spiritual treasures? He told them to "go rather to the lost sheep of the house of Israel," those dissatisfied with an unspiritual, ritualistic religion, who had wandered in thought from the fold, and who therefore were ready meekly and joyfully to accept the simple teachings of the Christ. His advice to his disciples, moreover, warned them of the danger of attempting more than they could demonstrate.

In his parable of the good Samaritan, however, Jesus pointed in illustration of neighborliness to a loving, receptive thought, and used this apt comparison of operative Christianity expressed through the medium of despised heterodoxy versus self-righteous heathenism manifested through the channel of accepted orthodoxy, as an example of reproof to his sanctimonious hearers. Though there were many unbelievers who rejected his doctrine and followed him only for the loaves and the fishes, who demanded of him a sign, and accused him of breaking the law by healing on the Sabbath day, nevertheless his teachings were for all—Jew and Gentile, Sadducee, Pharisee, Samaritan, and Levite. Lack of individual responsiveness erected the only barrier that existed between him, the Christ, and any man. He said, "I am the door: by me if any man enter in, he shall be saved, and shall go in and out, and find pasture . . . and there shall be one fold, and one shepherd."

That Christian Scientists should unite in the consecrated purpose actively to aid in and to speed the accomplishment of this grand prophecy by their lives of Christlikeness and obedience to Principle, without doubt was the dearest hope of our Leader. On page 22 of "Pulpit and Press" she says: "If the lives of Christian Scientists attest their fidelity to Truth, I predict that in the twentieth century every Christian church in our land, and a few in far-off lands, will approximate the understanding of Christian Science sufficiently to heal the sick in his name. Christ will give to Christianity his new name, and Christendom will be classified as Christian Scientists. . . . Then shall Zion have put on her most beautiful garments, and her waste places budded and blossomed as the rose."

Since the responsibility of this tremendous achievement rests largely with "the lives of Christian Scientists," it is well to consider what really attests "their fidelity to Truth," and to what extent we each are endeavoring to measure up to this high standard of Christian living. A careful study of the article entitled "Fidelity" in "Miscellaneous Writings" reveals the fact that this spiritual attribute is gained only by the most active and persistent cultivation of an "exalted purpose" (p. 341). Our lives then can be tested at all times by the quality of the purposes which animate them. We may think that we are faithful because we have as our object one exalted purpose, which if formulated might read: To be obedient to the teachings of our Leader and to demonstrate Christian Science to the world. That is a very comprehensive statement, and if our lives seriously maintained this high intent, and displayed consistent evidence that such was our uppermost aspiration, we might reasonably justify ourselves in the conviction that we were faithful. But when we consider that the complexities of our daily living involve many trying situations, each of which tests our fidelity to Principle, our love for God and for our neighbor, we can see that as every decision, every event, embodies within itself a purpose, we cannot shield ourselves under the heading of so general a classification of motive, but must come face to face with an honest investigation of many "secret faults," to use the psalmist's phrase.

If a purpose is truly exalted, it has for its inspiration and fulfilment the spirit of the first and second commandments which Jesus pointed out,—the desire to have one God, divine Love, and to love one's neighbor as one's self; it is necessarily unselfish, free from duplicity, strife, or vainglory. Can we then say that we are obedient to the teachings of our Leader if we do unto others as we would under no circumstances have them do unto us? Can we say that we are demonstrating Christian Science to the world if we have respect of persons, work for the accomplishment of personal aims in ourselves or in others, judge another, or indulge in controversies which lead only to self-justification and to a sense of alienation from our brother? A purpose which has as its aim the control of another's point of view in the solution of a problem, even if the direction seems to be a good one, instead of leaving him free to think for himself and to work out his own salvation through reliance on Principle, is by no means "exalted," but is consciously or unconsciously an attempt to stand between the individual and the divine leading,—thus shutting out the light of Truth from a brother.

Let us see to it that we further no purpose which would directly or indirectly hold another in bondage to human opinion, ecclesiastical forms, or bigoted traditional law; rather let us "loose him, and let him go" through the open door of Truth and Love, where no creed, race, language, or power exists but that which is "ordained of God." It is well

Digitized by Google

to remember in all our dealings with our fellow men, that individual rights are never to be overlooked. Let us also hold to the higher viewpoint that our brother—no matter what his creed, race, or language has been or may be in belief—is in reality a citizen of the kingdom of heaven, "of the household of God," and is therefore under the government of the impartial law of divine Love. It is for us who realize this truth to free him from the enslaving limitations of the carnal mind—the bias of prejudice and the tyranny of human verdicts.

Jesus said, "Blessed are the pure in heart: for they shall see God." This purity, which alone gains the serene consciousness of God's presence, becomes ours in the ratio of our victory over self and the daily pursuit of more wisdom and humility. As we seek to exalt every purpose to the height of the Christ-ideal by making the first commandment and the golden rule predominant factors in our daily living, we prove by our fruits to what extent our lives are attesting our "fidelity to Truth." Purified through "the washing of regeneration" and enlightened by the "renewing of the Holy Ghost," we gradually attain the spiritual vision which brings healing and peace as the reward of faithful labor. Only as we consistently live the Christ-life, striving to express love in every thought and act, can we hope to promote the reign of Truth on earth, when all men, born again "of water and of the Spirit," shall enter into the unbroken consciousness of the kingdom of heaven, universally saved from the delusions of material sense and unitedly rejoicing in "the glorious liberty of the children of God."

"Trust in the Lord"

COL. H. G. KENNARD

That wonderful portion of the Bible known as the book of Proverbs seems so filled with wisdom and good advice that many of its verses are regarded as specially applicable to mundane affairs, and are often quoted as trite sayings. There are, however, two short verses which are of such importance to mankind that if they were more generally observed and put into practice the lesson they contain would save us much trouble and anxious thought. One reads, "Trust in the Lord with all thine heart; and lean not unto thine own understanding;" and the other goes on, "In all thy ways acknowledge him, and he shall direct thy paths."

Here we have in these two verses the secret of true success; and when we fail to remember them and to carry out their teaching we have an explanation of all our failures. On looking up the word "trust" in the dictionary, we find these meanings given: "Firm belief in the honesty, veracity, justice, strength, etc., of a person;" "To place reliance on the truth of a statement without examination." What more beautiful and comforting knowledge can we ask for than this, that when any doubt or fear assails us, it is not left to us to battle it out on our own plane, but we are specifically told not to lean upon our own understanding, however competent we may think we are to deal with any question, for we are told by Paul that the wisdom of mortal man is "foolishness with God."

Now this does not mean that when discord of any kind assails us we are to sit down and wait for an inspiration to come to us as a sort of miracle. A successful issue from any problem is not gained without the earnest knowing that, as Jesus declared, "with God all things are possible." We have also to remember that if the promise is a great one, and if we really wish to be directed in all our paths, our own part in the matter has to be carried out. Half and half measures are not likely to bring a full reward, and we can hardly be surprised if results do not seem to work out correctly when we have let even a little undercurrent of our own understanding creep in to mar our sense of God's work.

The meaning of the word "outline" is frequently explained in Christian Science, and we learn that outlining is nothing more or less than that leaning away from confidence in God and toward our own understanding against which the wise man warns us. In Science and Health our Leader, in alluding to Christ Jesus, says that even when the scourge and cross awaited him, "he swerved not, well knowing that to obey the divine order and trust God, saves retracing and traversing anew the path from sin to holiness" (p. 20). We can well surmise that had he who was one with the Father leaned to his own understanding in times of stress, we should not have known him as the perfect Wayshower, the record of whose words and works are as firm and life giving today as they were nearly twenty centuries ago.

"Seek ye first"

AMY C. FARISS

It would seem impossible that a student of Christian Science could read and reread Mrs. Eddy's admonitions and inspired instructions in regard to the source of supply, and still go blindly on seeking to find daily provision through material means or human personalities. Yet so obstinate is mortal mind in letting go its grip on matter, that many trials may have to be borne before its hold is loosened and the real provider of all needs is seen to be God only.

Nothing could be more beautifully clear on this subject than our Leader's words in reference to the "fundamental error of faith in things material" (Retrospection and Introspection, p. 31), where she also says, "For this trust is the unseen sin, the unknown foe,—the heart's untamed desire which breaketh the divine commandments." Still with tenacious persistency the human mind tends to cling with its baneful grip to just this one thing,—faith in matter, belief that some person or some material circumstance must be depended upon, if relief is to be had from the strained condition which the human mind's own fear has brought about. Again and again the folly of this course may have been proven, and the needed help may have come from a few moments of uplifted thought, yet the lesson must needs be learned over, at least in some cases. One instance in particular the writer will venture to relate, in the hope that it may be of help to others who are finding trouble with their financial problems.

In this instance the student of Christian Science had experienced many proofs of God's unfailing care. Health and joy had beamed into her heart much as the sunshine penetrates the branches of some drooping plant and lights up its every leaf; wonderful protection had been vouchsafed her in cases of accident and in many other ways, yet the torment of worry cried aloud until lack threatened to be one of the difficulties to be overcome. The times in the past, when, after much unnecessary struggle, pure uplifted thought and simple trust had gained the ground, when gaunt dread had been dissolved and glad plenty was found to be the only fact, —these splendid victories were unavailing this time to keep eyes bright and lips smiling. At the first approach of the enemy, cowardly dismay seemed to creep closer and closer behind the trembling footsteps. Then an incident occurred which should have forever silenced doubt and blazed a path across all the stretch of shadows which the future might hold, —a path in which ever after her feet might tread securely.

Mortal mind is very apt to focus attention upon some specific material object as being of vital and immediate

Digitized by Google

importance; and so insistent are its arguments that the unreasonableness or absurdity of a situation seldom is seen till after the race is run. In the case at hand, pride and self-will were found easy accomplices to worry, that fretting offspring of fear. Food from day to day was being provided, so this did not push itself into the foreground, but lacking anything more important the unceasing urge of worry seized upon the need for new clothes, and with that argument uppermost dogged at the student's thought. Where were the clothes to come from, when each week spoke of greater need? The Master's words, "If God so clothe the grass of the field, . . . shall he not much more clothe you, O ye of little faith?" should have been grasped and held at their full value; but alas, they were not.

At this point impatience was given full sway, and it swept aside all thought of quietly waiting. As for the student herself, so deft were her fingers that no lurking fear could entirely rob her of her woman's right to be gowned neatly, but no such ruse as the retouch of color here and there would answer in the case of another member of the family, whose need of clothing became worry's specific excuse for daily adding to the writer's unhappiness; yet the more she thought and planned, the farther the day of its possession was postponed.

About this time a special business meeting of the church was called. The writer cast away her petty troubles and rose bravely and faithfully to the call upon her. Her one hope and thought for the next few days was that she might reflect enough of wisdom and love to be of service at this time to our beloved cause. The day of the meeting came, and hardly an hour or minute was given to aught else but the mental preparation for the work ahead. Over and over she read certain passages from our text-book, "Science and Health with Key to the Scriptures," or from some of Mrs. Eddy's other writings which would help to purify and elevate consciousness. The prayer in her heart was that her every thought might be "undivorced from truth, uncontaminated and unfettered by human hypotheses" (Explanatory Note in the *Quarterly*), and long before the day ended she felt that she was indeed, with all of God's children, "divinely authorized" to take part in this work for our cause.

Whether or not the grinding human need still loomed in her pathway, the writer did not know,—she did not care. Her work now was to reflect true wisdom, to be at her post, to be alert, active, a soldier in line. And what a glorious day it was! There was no lack of bright eyes now, no lurking fear; only a joyful certainty of God's allness, of His dearness and His nearness. All the next day the halo of peace rested on her happy head. The church meeting had been most wonderfully harmonious and helpful. The right work had been accomplished, and the "still small voice" of Truth assured her that she had been faithful and true.

The day sang itself into evening, and lo!—the Scientist had almost to rub her eyes to believe her senses—from an entirely unexpected source, but in a businesslike way, had come a goodly sum of money, enough for all present needs. Here then was swift proof that her only need all along had been to seek "the kingdom of God, and his righteousness," for as soon as she had done so with all her heart, "all these things" were "added." It was a humble woman that sat a while in the twilight, almost in awe, contemplating the graciousness and gentle activity of the divine Mind in contrast with the poor, futile, laboring effort of the human will; contemplating, as Jesus advised, the lilies, their beauty and perfection, their regal clothing, their purity and joyous beauty, and the miracle of ease with which they obtain more than a king's splendor.

Presently, as the twilight deepened and earth grew soft and dim in the new night, from out the chamber of memory came one of the many of our beloved Leader's prophetic utterances, found on page 62 of Science and Health, "The divine Mind, which forms the bud and blossom, will care for the human body, even as it clothes the lily; but let no mortal interfere with God's government by thrusting in the laws of erring, human concepts."

Mental Preparation

ALBERT FIELD GILMORE, M.A.

THE master mariner about to voyage over the trackless seas is a true exponent of right preparation up to his highest understanding. He takes all wise precautions as to the perfection of his equipment, the better to meet whatever adverse conditions may arise, whatever vicissitudes of wind and weather. Not the least important of his preparations is the procuring of an authentic chart of the course to be traversed and the testing of the ship's compass to insure its absolute accuracy. Thus equipped, he embarks with full confidence that if he sail by chart and compass, no matter how lowering the skies, how dense the mist, how fierce the gale, his arrival at the haven where he would be is reasonably assured. In fact, without even a glimpse of sun or moon or stars many an ocean voyage is successfully made by what the sailor terms "dead reckoning;" that is, by faithfully following the course prescribed by the chart and measured by the log.

To a rapidly increasing number of persons it is becoming apparent that the practical wisdom displayed by the mariner finds its parallel in the mental preparation necessary to meet the varying conditions of mortal mind which may be encountered in that round of human affairs termed daily life. As with the follower of the sea, the more carefully one's course is charted and followed, the surer is he to withstand successfully the cross-currents and counter-winds, to avoid the rocks and shallows of human belief, and to anchor safely in that desired haven, the mental peace that passeth understanding.

As it is more clearly understood that all causation is mental, that life is consciousness, that right action is always and invariably consequent upon right thinking, will the real significance of this mental preparation be seen, its true value recognized. On page 24 of Science and Health Mrs. Eddy speaks of making the Bible "the chart of life." In this Book of books are found the great fundamental truths which must be known and followed faithfully if the daily living is to be harmonious and really successful. This is indeed the chart, but the text-book of Christian Science, "Science and Health with Key to the Scriptures," may be described as the compass which points with unerring precision to the divine Principle of all real being.

To realize the allness of God, good, and the consequent nothingness of His unlikeness; to understand God as infinite, eternal Mind, and man as the perfect idea and expression of Mind; to know the all-presence of infinite Love, of our "Father-Mother God, all-harmonious" (Science and Health, p. 16), into whose kingdom no element of discord, disease, or death ever has entered or ever can enter, is such a charting of the course and pointing of the way as will shield and protect one amidst the most discordant conditions of the physical senses. This realization, removing as it invariably does, if the work is well done, all sense of fear and doubt, immediately lifts thought into the atmosphere of Truth, and thus becomes a most practical protection against all the assaults of evil.

Digitized by Google

One who is earnestly striving to know and to do the will of the Father is not consciously engaged in any activity that is not beneficial for mankind. As right thinking results in right action, and as spiritual sense unfolds, the true mariner will steer his course more and more closely to his chart of Truth; and consequently the seeming efforts of evil to distract and divert him will diminish until he comes into the full realization that his only work is the Father's business, that is, the expression of good.

Provided it is honest, it matters not what occupation one pursues, or how humble it may be or how exalted in the eyes of mankind, this mental preparation for the day's work is the one assurance of happy, holy living. The adverse currents, the buffeting winds of mortal mind in the form of manifold temptations, may seem to strike from many quarters, but all have the same purport, and all are met and destroyed by one and the same process,—by following in letter and in spirit the chart of Truth. Out of nothing do evil suggestions come, and into nothingness must they go. In field or factory, in mine or mart, in counting-house or council-chamber, in shop and store and home, the problem is the same and is solved by the one rule. The realization of God's allness and goodness precludes the possibility of successful attacks by error so long as our chart and compass are our sure guides.

With the great majority of Christian Scientists an important part of the daily preparation is reading the Lesson-Sermon of the current week. This is probably for many the most profitable form of studying the Bible and the text-book, as it is the most convenient. The citations have been chosen with the exercise of great wisdom and understanding, that they may develop in a logical way some important phase of the truth about God and man, His idea. Careful study of the Lesson-Sermon, together with the realization of the cardinal points of being,—all this constitutes a preparation so complete and practical as to enable the student to set out upon the affairs of the day as the mariner does upon his voyage, with the calm assurance that he will be able to accomplish to the glory of God that to which his hand may be set. As the lines of the hymn have it (Hymnal, p. 293):—

Though dark and heavy shadows
Enshroud the way with gloom,
We know that Love will guide us,
And safely lead us home.

Patience

FLORENCE DAVIS KELLER

History supplies innumerable examples of patience with its splendid achievements, but none more sublimely beautiful than that expressed by the Founder of Christianity. The patience which was an inherent quality of the Christ-nature was not a passive waiting for events, nor an inactive submission to adverse circumstances, but rather an absolute trust in the wisdom of the Father. He said, "I and my Father are one," thus declaring the ever-presence of spiritual reality. It is truly a marvel that the best man who ever lived should have been condemned as an impostor by the very ones he came to bless. Nevertheless his experiences enabled him to say, with that sublime assurance which won for him the title of Master, "In the world ye shall have tribulation: but be of good cheer; I have overcome the world." This preeminent overcoming, accomplished through his endurance and patience and his complete acquiescence in the will of the Father, was the crowning quality of his career.

Experience, spiritually understood, is ever victorious even in the trials of our every-day life. On page 339 of "Miscellaneous Writings" Mrs. Eddy says, "Experience is victor, never the vanquished; and out of defeat comes the secret of victory." This calls for a close acquaintance with the rule which proves the divine Principle, Love, since in reality it governs all, and we learn to trust more and more as we are witnesses to the proofs of Love's ever-presence. This trust includes the patience which has her perfect work. It is the trust which is willing to wait, yet eager to be led; willing to "restrain untempered zeal" (Retrospection and Introspection, p. 79), yet ready for immediate action. It is, in a word, wisdom, the concomitant of spiritual understanding.

Numerous are the instances that we know which illustrate the value of an understanding of patience. How it must have surprised the children of Israel in their flight from Egyptian bondage and from the relentless Pharaoh, to have their God-sent leader call out, even when the Red Sea was before them, "Stand still"! What could it mean? the wondering people must have questioned each other ere the way of wisdom unfolded. "Stand,"—that is, occupy or hold a place; maintain an invincible attitude. "Still" means at rest, quiet, undisturbed, calm. Then the message continues, "and see the salvation of the Lord, which he will show you today." Then came the proof of God's unfailing care: while darkness enshrouded the Egyptians, a strong wind divided the waters so that the children of Israel went across on dry ground between the walls of the sea. This story is truly symbolic of the Father's loving care and His ever-presence and all-power; symbolic of divine Love's government, guidance, and protection.

On page 566 of Science and Health our Leader has beautifully illumined this Scriptural narrative, pointing out its spiritual significance and promise. She says: "As the children of Israel were guided triumphantly through the Red Sea, the dark ebbing and flowing tides of human fear,—as they were led through the wilderness, walking wearily through the great desert of human hopes, and anticipating the promised joy,—so shall the spiritual idea guide all right desires in their passage from sense to Soul."

So in the healing work true patience has an important part, and oftentimes in the face of the advancing foe we hear the clarion call, "Stand still,"—maintain an invincible attitude in the truth of God's allness,—and "the Egyptians whom ye have seen today, ye shall see them again no more forever." Fear of any seeming foe vanishes before this message from divine Love; then the patience which knows and trusts God's omnipotence unfailingly has its perfect work. This does not mean that a length of time is needed for the manifestation of good; it signifies that trust in divine Love's government which casts out all fear. Fear is but an element of ignorance, and it is cast out by knowledge just as darkness is cast out by light; while patience, dwelling not in darkness but in the light, is forever allied to spiritual Love.

Patience characterizes the knowledge that in God's perfect creation each idea has its rightful place at all times. This fact is symbolized in the starry tapestry above our heads. Ages of material beliefs could not alter the beauty, the stillness, the purity, or the order of the celestial bodies, nor could any belief in a power apart from God change one fraction of an astronomical truth any more than the Pleiades could change places with the constellation of Orion. Law, order, and harmony prevail in the universe of God's creating, and each idea, therefore, has not only its rightful place but its normal activity. Patience knows that right activity, which springs from understanding, includes orderly unfoldment and wisdom as well as inspiration.

The Christian Science Monitor, the swift winged messenger which spreads "undivided the Science that operates un-

Digitized by Google

spent" (The First Church of Christ, Scientist, and Miscellany, p. 353), is an answer to prayer, a monument to a sublime patience. When a great unfolding of good appears, it comes not as an entirely new thing, startling the world by its revelations, but the way is prepared. The way was prepared for the Founder of Christianity. The interpretations of the Old Testament indicate the steps of preparation for the coming of the Messiah. And when the Messiah came, he came in the fulness of time. Now when the *Monitor* came, it too came in the fulness of time. The world was ready, and the path had been prepared by the *Journal*, the *Sentinel*, and *Der Herold der Christian Science*, when the *Monitor* went forth in the wilderness of sensational journalism with its purifying message. The twenty-five years that our Leader cherished the idea of the Christian Science periodicals, prayerfully guarding each one until the way was prepared and "the fulness of the time" for its manifestation should come, is an inspiring example of a sublime and steadfast patience which unfailingly has its perfect work.

Error Corrected by Truth

HON. FRANCES PORTER

On page 259 of Science and Health Mrs. Eddy says that divine Mind "corrects error with truth and demands spiritual thoughts, divine concepts, to the end that they may produce harmonious results." This lesson was brought home to me one evening when I was watching my two children playing with picture blocks, of which they had four complete sets, also eight extra blocks belonging to other sets. The children were finding some difficulty in piecing together their pictures, so to simplify matters I removed the eight odd blocks. They managed to make three complete pictures, but after some unsuccessful efforts to make the fourth one the little boy looked up and said, "Mama, I cannot make this picture; give me the wrong bricks, that will make it easier." I explained to him that if I gave him what he called the "wrong bricks," it would add to his difficulties just eight times; that what he needed was more patience and thought. The children then persevered faithfully a little longer, and were rewarded by seeing the blocks placed right.

I could not help thinking how like this is to our human problems. A difficulty arises; perhaps we do not meet it as quickly as we would like, and in our impatience we think this or that material remedy would be a help, whereas really it only adds to our confusion. If we are sick, it is because we still believe that matter has the power and intelligence to be sick; if we take medicine to alleviate our sufferings, we are further believing that matter has even greater intelligence to cure that sickness, but we have gained nothing toward the correct solution of the problem of health.

If an individual when in sorrow or trouble turns to drink or drugs for consolation, he is forgetting that the "Spirit of truth," the Comforter promised by our Master, is always at hand to comfort and save to the uttermost. By turning to material means for help, the individual has in reality but added to his discomfort, and to his own sorrow perchance has added the sorrow of loved ones. If we are angry and try to appease our wrath by revenge instead of annihilating it by love, have we in any way lessened the sense of anger? No, in all these byways of error, even as the baby boy with his "wrong bricks," we have added by just so much to our own difficulties. There is always the right way, God's way; and again, just as working with the right blocks alone was the easiest way for the children, so to work out our problems in God's way alone is the quickest, easiest way to reach the peace "which passeth all understanding."

Selected Articles

[Charles M. Shaw in *Blackpool* (England) *Gazette-News*]

Our critic agrees with Mrs. Eddy's fundamental teaching, namely, the oneness of the universe, but he objects to the deductions drawn therefrom. One objection he states as follows: "She advanced the idea, which certainly had not the charm of novelty, that material things have no existence;" but this is not a correct statement of Mrs. Eddy's teaching. What she declares is, that the material sense of things is a false sense of spiritual realities, a declaration warranted by such a passage as this from Hebrews: "Through faith we understand that the worlds were framed by the word of God, so that things which are seen were not made of things which do appear." St. Paul sets forth the transcendence of material sense by spiritual as a Christian duty, when he says, "While we look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal."

Again, our critic objects to what he describes as Mrs. Eddy's "laboring under the idea that between spirit and matter there must be antagonism." She seems, nevertheless, to have excellent authority. Jesus said, "It is the spirit that quickeneth; the flesh profiteth nothing." Paul said in his epistle to the Galatians: "Walk in the Spirit, and ye shall not fulfil the lust of the flesh. For the flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other: so that ye cannot do the things that ye would."

The unreality of matter is a fundamental doctrine of Christian Science, and is a logical deduction from the existence of an infinite God, who is perfect being, Spirit, Love. Mrs. Eddy teaches that matter is a sense-phenomenon, the acceptance of which, with all it involves, leads to the debasement and destruction of human life, manifesting the carnal mind which is "enmity against God." Christian Science teaches that in the degree in which one transcends the belief in the reality of matter, in that degree can one heal the sick; and this is demonstrated in the experience of every true Christian Science practitioner.

But does Christian Science heal? Our critic admits that it does in some cases, and he describes them as chiefly cases of persons of excitable and neurotic temperament. Moreover, he describes how such cases are healed, and he quotes in support a great psychologist. If the thing is so easily understood, what a great opportunity for him to lead the way in restoring the lost function of the Christian church, namely, healing the sick, for thousands of such people would accept the ministration of his church who are prejudiced against Christian Science! Our critic remarks, "Christian Science was powerless to deal with the subtler forms of organic disease such as ophthalmia, malignant disease, tubercular meningitis, and locomotor ataxia." This statement is easily refuted by facts.

In the course of a discussion in the United States Senate a year or more ago, on proposals which would have the effect of forcing a certain system of medical practice on citizens of the states, Senator Works, in countering those proposals, presented the case for Christian Science. He described fifty-seven cases of the healing through Christian Science treatment of thirty-six distinct diseases, including seven of tuberculosis, ten of cancer, three of locomotor ataxia, and one of organic heart disease. As might be expected on such an occasion and in such a place, names and other details proving authenticity were given. But it is

Digitized by Google

unnecessary to go to America for evidence of Christian Science healing, for an honest investigator could find this in almost any Christian Science church or society. Our critic speaks with skepticism of the power of Christian Science to lengthen shortened limbs. I can personally vouch for a case in which a leg rendered three inches shorter as the result of an accident, and declared to be permanently so by expert surgical opinion, was almost instantaneously restored to normal length under Christian Science treatment.

The reverend gentleman reserves his severest condemnation for what he conceives to be the Christian Science doctrine of sin, and he seems to characterize the results of that doctrine by describing what a Christian Science judge would say to a man convicted of murder, "My good man, you are the victim of an illusion. Evil is not. Good is. Evil is only its negation. Condemn yourself no longer. Remit your sin and it is remitted. The prisoner is discharged." If he really means to imply that this represents the attitude of Christian Science to human sin and crime, then he is guilty of an inexcusable inability to comprehend the English language, for the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is full of passages which have a direct bearing upon the obligations arising out of the acceptance of its teaching.

[Carl E. Herring in *State Journal*, Lincoln, Neb.]

A lecturer, as reported in the *Journal*, grants the efficacy of Christian Science in the cure of disease, but unfortunately classifies it as due to suggestion. He divides all healing into six methods, and each method into two parts. Part one is the "momentum" which varies, but part two in each is "suggestion." These lectures were delivered in one of the principal churches, and it is presumed that the good people of that church paid to be told that their religion of faith and prayer was potentially the same as hypnotism, mesmerism, spiritualism, and mind in matter. The fact that the speaker utterly misrepresented Christian Science is not of major importance. The significant fact is that the people of a religious community are so indifferent, and religion bears so little relation to daily life, that they not only permit their neighbor's belief to be misrepresented without resentment, but in the confusion of words do not know that their own religion is being maligned and every spark of spiritual life taken out of it.

The result is, that after a pastor has spent years of honest endeavor in anchoring a moral center in a community, he and his congregation are swept off their feet by the claim of some peripatetic expounder that he can, if given free rein, destroy the religious organization of some other citizens, equally sincere, who are in their own way unobtrusively endeavoring to strengthen the moral fiber of the city. The final outcome of a campaign of this kind is to humiliate and belittle the work of the pastor, commit religion to an endorsement of methods, phrases, and doctrines totally foreign to anything the Master taught or did, shocking to the ideals of the church-membership, and a joke to the unthinking or vulgar.

So far as Christian Science is concerned, a campaign of this kind is without effect, unless it is to increase the interest and attendance at our church services; but the establishment of the kingdom of God, under whatever banner we march, is the goal toward which we are striving, and Christian Scientists cannot but deplore any movement which arrays brother against brother, makes religion a byword, and makes arrogance plethoric at the expense of the faithful servants of God who labor in humility and love for the upbuilding of His kingdom.

[Paul Stark Seeley in *The Lower Columbian*, Astoria, Ore.]

To say that the method of Christian Science healing includes an attempt to inculcate in the patient's mind "confidence in the skill of the healer," or "in the efficacy of his method," or "in the ardent desire of the healer to give relief," is to express a total misconception of the way in which Christian Science heals. In words which are unequivocal and form the recipe for all true healing, Jesus the master Metaphysician said, "Ye shall know the truth, and the truth shall make you free." As explained in Christian Science this statement means that the understanding of God, man, and spiritual law is the truth that man must know and realize as a prerequisite to his freedom or healing.

Undoubtedly the great majority of those healed in Christian Science have in the first instance little faith in the practitioner or the method he employs. They come not because of faith, but because of desperation. The basis of all Christian Science healing is entirely apart from faith in persons or personal methods. It goes to the very root of creation, is based on the one primal cause, God, and man's relation to Him. Christian healing is accomplished only through the understanding of spiritual truth and the realization of the facts of spiritual creation. As Mrs. Eddy has well stated, "The Christlike understanding of scientific being and divine healing includes a perfect Principle and idea,—perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259).

Christian Science does not claim that its healing method is something new, but rather that it is as old as Truth itself, for it is Truth's own. Discerned in some measure by the prophets, it was more fully understood and demonstrated by Jesus and the apostles. It fell into disuse with the rise of materialism, dating from the time of Constantine, and has again come to light and been made practicable through the teachings of Christian Science, which enable all who will to reap the benefits of a demonstrable Christianity.

Christian Science differs from all other forms of mental healing in that the basis of its healing method is God, divine Mind, whereas it is the human mind which is relied upon by other systems. One may perhaps secure temporary relief from a bodily disorder by trying to minimize it in his thought through hoping for and wishing for health, but he can never be permanently healed until God does the work. In the first instance a belief of health may for the moment take the place of a belief of sickness, but there is nothing to prevent the sickness from returning at any time. In the latter case the physical disorder is reached at its root cause, wrong thinking, and is permanently eradicated by spiritual truth. No system that relies wholly or in part upon material methods can practise Christian Science, which is the direct antithesis of material theories and physical laws. It is altogether spiritual, and requires complete reliance upon God by the one who would practise it.

The critic is willing to admit that Christian Science heals. That he is in doubt about its ability to heal organic disease and so-called incurable maladies, does not alter the fact that Christian Science has healed and is healing every disease known to medical science. Its work is limited only to the power of God, who is omnipotent good, for it is His law in operation, His word in action. The critic erroneously states that the philosophy of Christian Science is related to ancient and contemporary systems of human thought. In fact speculative human opinions, past or present, have no place in its teaching. Mrs. Eddy has spoken definitely upon this point: "I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets

Digitized by Google

and apostles" (Science and Health, p. 126). Man-made systems of philosophical conjecture, human opinions shifting and changing, without fixity, stability, or law, have perhaps served a few as pleasant intellectual pastimes, but they have at the same time proven their complete inability to meet humanity's need for better health and for better men. Mrs. Eddy says, "A philosophy which cannot heal the sick has little resemblance to Science" (No and Yes, p. 21).

Your contributor would qualify the teachings of Christian Science that matter does not have a real existence, but his qualification is no part of the teachings of this religion. Matter, as Christian Science teaches, has no real existence, because it is totally unlike the only real cause, which is God, divine Mind, and that one and only cause could not create its opposite, unintelligent matter. Christian Scientists do not deny that matter appears to exist to physical or mortal sense, which is but the negative and temporal sense of being, the opposite of the true and spiritual sense, which cognizes all things as mental and spiritual, like God in nature and quality. Christian Science does not teach that God is in matter, or Soul in the material body, but rather that God, who is Spirit, Life, Soul, is never in His opposite, matter. The immortal never mingles with or enters into the mortal. In I Corinthians we read, "Flesh and blood cannot inherit the kingdom of God."

Nor does Christian Science teach that God, Spirit, is nature in the mortal, material sense of that word. Mrs. Eddy declares, "In one sense God is identical with nature, but this nature is spiritual and is not expressed in matter" (Science and Health, p. 119). God, eternal and imperishable good, cannot be and is not expressed in materiality and mortality with its ever attendant round of decay and dissolution. Christian Science shows mortals how to begin by godly thinking to lay off the mortal for the immortal, as the Scriptures command. Its Principle is God, infinite good; its Wayshower the man Christ Jesus, who through spiritual understanding rent mortality's veil and demonstrated man's oneness with divine Mind, showing to all mankind that it is the privilege and duty of each and every one to subjugate, master, overcome, and destroy the belief in the reality of matter, mortality, evil, and physical law.

✧

[John M. Tutt in *The Kansas City* (Mo.) *Times*]

It is not enough for one to read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to qualify as a righteous critic; he must understand it. A man may read the Bible and declare it to be a hopeless jumble of inconsistencies, but such a critic does not understand the Bible. No man can understand the Bible and fail to love it. No man can understand Science and Health and fail to love both it and the Bible. When one understands the teaching of Christian Science, he finds it to be identical with Christ Jesus' doctrine, and that it varies from other Christian sects mainly in its greater degree of spirituality. Christian Science does not accept the materialistic explanation of God, of man, or of the universe, and hence emphasizes the spiritual import of the Bible. But this does not mean that Christian Science repudiates any part of God's scheme of salvation; far from that, Christian Science insists upon an understanding of every essential of Christianity.

Where does Christian Science place Christ Jesus in the scheme of salvation? In the words of St. Peter, "There is none other name under heaven given among men, whereby we must be saved." Christian Scientists believe in the immaculate conception, in Jesus' supreme and selfless sacrifice, in the example his life furnished for all mankind, in his own designation of himself as "the way." They believe in the divinity of Christ, the humanity of Jesus, the atonement, the crucifixion, the resurrection, the ascension. They believe in repentance, forgiveness of sins, reformation. They believe in prayer. They believe in Christian healing. They believe in the golden rule. Above all, they believe the essentials of Christianity involve individual practice more than profession.

To be sure Christian Science does not agree fully with other Christian denominations in the interpretation of the Bible, but let it be reiterated that Christian Science accepts the Bible in its spiritual import unreservedly. When the other Christian sects subordinate the material to the spiritual, they will comprehend how it was possible that Mrs. Eddy, although maligned and persecuted, reviled not again, but wrote instead, "I love the orthodox church; and, in time, that church will love Christian Science" (Miscellaneous Writings, p. 111). Christian Science is the revival of primitive Christianity; it casts out sin and heals the sick. In fifty years it has encompassed the earth with the gospel of salvation from sin, disease, and death. It has brought to millions the evangelic message, "Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people."

✧

[Lloyd B. Coate in *Columbus* (Ohio) *Dispatch*]

In an article signed "Hopeful" a writer seems to think that if Christian Scientists can do the healing work which they are doing, they should emigrate *en masse* to Europe to aid the wounded. Perhaps no better reply could be given than these words of Jesus, when he was criticized for not doing the same healing work in Nazareth that he did in Capernaum: "But I tell you of a truth, many widows were in Israel in the days of Elias, when the heaven was shut up three years and six months, when great famine was throughout all the land; but unto none of them was Elias sent, save unto Sarepta, a city of Sidon, unto a woman that was a widow. And many lepers were in Israel in the time of Eliseus the prophet; and none of them was cleansed, saving Naaman the Syrian."

The narrative says that when those that were in the synagogue heard these words of Jesus they "were filled with wrath" and ready to cast him down headlong over the brow of the hill. Until people were ready for the truth, even Jesus could not force them to accept it. Mrs. Eddy says in "Science and Health with Key to the Scriptures" (p. 238): "Truth often remains unsought, until we seek this remedy for human woe because we suffer severely from error."

In almost every city and town in our own country, and in many places in other lands, living witnesses of the healing efficacy of Christian Science may be found by any sincere seeker after truth. Through Christian Science many have been rescued from lives of sin and vice, and some have been lifted from the very depths of degradation and depravity and have become useful members of society.

While Christian Science is growing rapidly, yet its followers are not seeking to force individuals and nations to accept its teachings. The growth of Christian Science is due to the fact that the sick are being healed and sinners reformed, and mankind is gaining a more intelligent idea of God. Jesus taught that judgment should be made according to the fruit the tree bears. Instead of criticizing and ridiculing Christian Science, would it not be far better to seek to gain an understanding of the divine Principle of its teachings and thus help to demonstrate Jesus' promise to a waiting world, "These signs shall follow them that believe," healing the sick as well as reforming the sinner through spiritual and not material means?

The Sunday Schools

[THE following letter from Mrs. Eddy's associate secretary is of importance not only to the officials and teachers in the Christian Science Sunday schools, but also to the pupils and all others who are interested. It gives information for which many have inquired, and will help all in their work.—EDITOR.]

Pleasant View, Concord, N. H., Feb. 23, 1906.

Mr. George H. Lounsbery,
154 E. 50th Street, Chicago, Ill.

Dear Brother:—At the request of our beloved Leader, I am writing you in reply to your letter of Feb. 18. The gift of two hundred dollars to the building fund of The Mother Church by the children of Fifth Church of Christ, Scientist, Chicago, is a splendid indication of their loving interest in the cause of Truth.

You say in your letter:—

"We recently organized our work into four groups of classes, one for the study of the Commandments, one for the Lord's Prayer and its Spiritual Interpretation, one for the Beatitudes, and one for the Lesson work."

Our Leader bids me ask you this question: Would you feed a babe on milk or on meat? Of course you will answer milk. Our Leader would have the Sunday school officials and teachers in all fields keep this necessity constantly before them in their work with the children. She would have them wise, for wisdom is essential in every line of Christian Science endeavor.

When our Leader gave the by-law on "Subjects for Lessons" in the Sunday school, it was not her intention to limit Sunday school instruction to the routine of memorizing the letter of the designated portions of the Scripture. She meant that the children should be taught the *meaning* of the Ten Commandments, the Lord's Prayer and its Spiritual Interpretation, and the Beatitudes. These spiritual fundamentals should be so set forth by means of practical illustrations and every-day examples of love, obedience, and good, that the child will catch their spirit, understand them, and as a result be interested in them.

This work, you will readily perceive, requires consecrated and intelligent effort on the part of all connected with the Sunday school. It means the demonstration of that love which does things. To teach a child the words, "Thou shalt have no other gods before me," is a comparatively easy task. To teach a child the meaning of that commandment so thoroughly that he can and will prove in his living that he actually has no other gods before good, is the grand privilege of the Christian Science Sunday school teacher.

Yours in Truth,
LEWIS C. STRANG, *Associate Secretary.*

Intelligence Infinite and Divine

ON page 469 of Science and Health and the two following pages Mrs. Eddy asks and answers the question "What is Mind?" The substance of her answer is contained in its first three words, namely, "Mind is God." On page 469 she also says of intelligence, "It is the primal and eternal quality of infinite Mind, of the triune Principle,—Life, Truth, and Love,—named God."

It is clear, therefore, that to be truly intelligent one must be animated by and reflect this one "primal and eternal quality" of God; and *per contra*, whoever or whatever does not reflect Mind, God, in at least some degree, is not intelligent, no matter what grade of intellectuality, or even excess of intellectuality, may be manifested. Mrs. Eddy tells us on page 109 of Science and Health that she has demonstrated "the proposition that Mind is All and matter is naught." This must lead to the conclusion that the so-called mortal intelligence, which is the product of mortal mind or materiality, is naught, or of no avail in dealing with the real problems of existence, because these problems are primarily the war of non-intelligence upon intelligence, of mortal mind upon divine Mind, the effort of materiality to overthrow spirituality, of error to supplant Truth.

In defining God our Leader uses the word Principle as a synonym for Deity, and as she also uses Life in the same relationship, we realize that by the word Principle she does not mean a dead or material mathematical rule, but infinite, divine Principle, the cause or creator of all true being; that which is not only alive, but that which also is infinite Life, without beginning of years or end of days. If Mrs. Eddy had left humanity to infer that by her use of the word Principle she meant merely a cold, abstract proposition, which could be worked out in a methodical manner by a purely intellectual system, she would have failed of her mission; but this she did not do. She elevated this word, as she elevated other words, far above and beyond the merely material or intellectual meaning by which it is commonly supposed to be circumscribed, and carried its true meaning to an ultimate and spiritual signification.

In going beyond or transcending the merely intellectual belief that intelligence is a product of brain, Christian Science distinctly and definitely takes issue with mortal mind and shows how this mind is of no avail in human affairs. If intelligence were the product of brain, it would result in a perpetual balancing of good and evil, in which evil would be as real as good and as powerful,—possibly more powerful at times. Reckoning intelligence as "the primal and eternal quality" of God, there can be no intelligent evil, and with God, Mind, as the only creator there can be no evil whatever. This precludes the eternal warfare which a material belief of intelligence would foist upon humanity, a belief which real intelligence destroys, thereby bringing to light the reality of goodness and the kingdom of heaven,—harmony.

That humanity is capable of understanding and demonstrating the unity or at-one-ment of God, good, and man in His image and likeness, and that divine Principle is the starting point of all intelligence, is fundamental in Christian Science, and Mrs. Eddy sounds the call of immortality when she says on page 49 of "Unity of Good," "The more I understand true humanhood, the more I see it to be sinless,—as ignorant of sin as is the perfect Maker."

ARCHIBALD MCLELLAN.

Decrees and Declarations

FROM the standpoint of Christian Science, decrees and declarations are very closely related. The dictionaries define decree as "an order from one having authority; a decision," while to declare is "to proclaim; to affirm; to announce." This is illustrated in a most interesting way in the second psalm, where we read, "I will declare the decree: the Lord hath said unto me, Thou art my Son; this day have I begotten thee." This statement may be said to be the basis of all treatment in Christian Science, which recognizes the divine decree of man's spiritual sonship and then declares it with such effect that the delusions of mortal mind—whether manifested as sin, disease, or death—are broken as with "a rod of iron," to use the psalmist's words.

A good many persons are ready to admit that it is right

Digitized by Google

and proper to appeal to God for relief from suffering of any sort, but they start with the assumption that the discordant conditions from which they suffer are in some way a manifestation of divine law, and on this basis it would be impossible to free one's self from their power. This is explained by Mrs. Eddy on page 381 of Science and Health, where she says, "Ignorant of our God-given rights, we submit to unjust decrees, and the bias of education enforces this slavery." The trouble with all mankind is the fact that beliefs which have been accepted for ages and which are merely outgrowths of human opinion, are taken to be divine laws or decrees, and a great spiritual illumination is necessary in order to make the distinction between God's law and mortal belief, thus to gain one's freedom in the way pointed out by Christ Jesus.

Now the divine decree has been established throughout eternity; and though earthly kingdoms may disappear in the vortex of mortal discord, the law of God, unlike the vaunted law of the Medes and Persians, can never be set aside. We should, however, understand clearly that the law must first of all be understood, then declared. Even on the human plane law may be said to be inoperative until it is recognized and declared. If we turn to the demonstrations of Christ Jesus as found in the gospels, we shall see that he was continually giving out decisions based upon the divine decrees. When he said to the man with the withered hand, "Stretch forth thine hand," it was an order based upon the highest authority; and the same applies to all healing work done through the understanding of Christ, Truth.

This is very wonderfully presented in the book of Job, where we read: "Thou shalt make thy prayer unto him [God], and he shall hear thee . . . Thou shalt also decree a thing, and it shall be established unto thee: and the light shall shine upon thy ways. When men are cast down, then thou shalt say, There is lifting up." The student of Christian Science will naturally identify this with the work of the practitioner; and these statements of Holy Writ are wonderful in their assurance that when we decree a thing in accordance with the divine law, it will without fail "be established." In studying the gospels we find that Christ Jesus' teachings were always along this line, and he invariably insisted that our declarations of Truth's power must be made in faith and without any fear of the result.

As we study the Scriptures we learn that the divine protection does not rest upon those "that decree unrighteous decrees;" and when we know this we are inspired with new confidence in declaring the divine decree. Delays in the administration of justice on the plane of human experience are only too well known; but when we make our appeal to infinite wisdom and Love, we should at the same time understand that divine justice is all power, and that the divine decrees have never ceased to be operative. If one is not himself able to realize this great truth, the work of the Christian Science practitioner is to hand down, as it were, the decision based upon the divine authority, which can never be disputed, and to prove this authority as Christ Jesus did, in the healing of the sick and the sinful.

ANNIE M. KNOTT.

✧

"The healing of the nations"

DIVINE Love alone can water the tree which bears the leaves for "the healing of the nations." Love alone is sufficient for this task,—deep enough, constant and courageous enough, to speak with authority and command peace. But divine Love also fulfils the law and forgives sin by destroying it. Divine Love initiates the process in the human heart which makes good attractive and evil repellent, which by its unwavering compassion separates personal sense from person, and so saves men and nations, but does not destroy them. Nations, which are but manifest states of human consciousness, have individual characteristics imposed upon them by tradition, experience, or unresisted mental suggestion; therefore they need to be awakened to realize their real selfhood as truly as individual human beings need this awakening.

For the vigilant Christian Scientist, watching the course of daily events, every nation becomes a patient to be healed, whose diseases must be unseen, whose sins must be forgiven, and whose harmony must be established in Truth. Nations need to be freed from misconception, condemnation, delusion, sense-intoxication, stagnation, and unjust tyrannies inherited from the past. How then shall the nations be saved if not in the way of God's appointing, through prayer and spiritual understanding? The prayer that saves the sick and the sinning human being by the destruction of error, is also applicable to a nation distraught or to a whole people momentarily hypnotized.

The very Paul of Tarsus who had once been of the strictest sect of the Pharisees, who had been hardened by so-called spiritual pride, and while under the influence of the merciless scholastic theology of his day went about "breathing out threatenings and slaughter against the disciples of the Lord," was also the very man who out of the ripeness of his spiritual experience could finally write the thirteenth chapter of I Corinthians and declare, "Though I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass, or a tinkling cymbal." Mere strictness of belief, mere elaboration of rewards and punishments, or mere conformity to the enactments of human righteousness, lead to the martyrdom of a Stephen rather than to the healing of the nations. On the other hand, the illumination of truth which may temporarily blind the material sight of a Paul, also prepares him to be an apostle to the Gentiles, even to the nations of the whole world.

Christian Scientists have been given *The Christian Science Monitor* as an aid in their work of healing the nations. Day by day the condition of these patients is revealed to them in the pages of their newspaper, and national shortcomings as well as virtues are duly set forth. Cain's excuse, "Am I my brother's keeper?" is just as invalid with regard to nations as it is to individuals. The enlightenment which comes through Christian Science is a trust to be exercised in behalf of all, else it loses its broad effulgence and its beams become restricted and perhaps deflected. The little places, the little people, the little nations, as well as the great, are all protected by the thought of the scientific reader of *The Christian Science Monitor*. World events can thus be made to take their proper places and maintain their just proportions; the simplest seeker after righteousness may exercise a world wide benevolent and reformative influence.

Christian Science points its followers to an ever expanding sphere of usefulness: first in the immediate circle of family and friends, then among the hungering multitudes demanding to be fed with the bread of heaven, and eventually among the nations of the earth, extending to the utmost bounds of human habitation. No legitimate human interest is too remote for the compassionate appeal of Christian Science. Mrs. Eddy writes on page 565 of Science and Health: "The impersonation of the spiritual idea had a brief history in the earthly life of our Master; but 'of his kingdom there shall be no end,' for Christ, God's idea, will eventually rule all nations and peoples—imperatively, absolutely, finally—with divine Science."

WILLIAM D. MCCRACKAN.

Lectures in Suburbs of Boston

The Mother Church announces the following lectures in the Boston suburbs to be delivered by William R. Rathvon:—

Allston: Allston Theater, 128 Brighton Avenue, 3 p.m., Jan. 14.

Roslindale: Unitarian Parish House, 852 South Street, 8 p.m., Jan. 15.

Waltham: Asbury Temple, Main and Moody Streets, 8 p.m., Jan. 16.

Revere: Revere City Hall, Broadway, 8 p.m., Jan. 18.

West Roxbury: Highland Club Hall, Center and Corey Streets, 8 p.m., Jan. 20.

Everett: Crown Theater, Chelsea Street, Everett Square, 3:30 p.m., Jan. 21.

Brookline: Beacon Universalist Church, Harvard Street, near Coolidge Corner, 8 p.m., Jan. 22 and 23.

✧ ✧ ✧

Among the Churches

Current Notes

Boston, Mass.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday School, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), 45 Milk Street, near Devonshire, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

New Britain, Conn.—Sunday, Dec. 3, First Church of Christ, Scientist, on West Main Street, will be dedicated with fitting ceremony. Following the customs of the denomination, dedication was delayed until the building was free of encumbrances. Final payment on the indebtedness will be made this week. The society was organized Thanksgiving eve, 1905. In October, 1906, the church organization was completed and work on the new building commenced. The first services were conducted in the new building on June 2, 1907. At present the membership of the church is about one hundred.—*New Britain Herald.*

Oakland, Cal.—An additional frontage of 40 feet has been purchased by the congregation of Third Church of Christ, Scientist, for the building site which is owned by the organization. The lot now has a frontage of 120 feet on Fruitvale Avenue and a depth of 103 feet on East Seventeenth Street. The site is considered one of the most desirable in the section east of Lake Merritt.—*Oakland Tribune.*

Oskaloosa, Iowa.—Nov. 19, 1916, marks an important epoch in the history of First Church of Christ, Scientist,—the culmination of years of faithful and untiring labor by the members in the working out of many and various problems which have led up to the dedicatory services that occurred yesterday in their beautiful church edifice.

Oskaloosa Herald.

Nashua, N. H. —Papers were passed Saturday afternoon [Nov. 4] conveying the Laton lot on Laton Street to First Church of Christ, Scientist, for the erection there of a church edifice. The lot has a frontage of 78 feet, with a depth of 110 feet.—*Nashua Telegraph.*

Fargo, N. Dak.—The dedication of the edifice of First Church of Christ, Scientist, of Fargo on Sunday [Oct. 22] was a happy and memorable event. The regular order of services was carried out, with the addition of a brief history of the organization and growth of the church.

Fargo Courier-News.

Berkeley, Cal.—Yesterday [Nov. 26] the attractive edifice of First Church of Christ, Scientist, at the corner of Dwight Way and Bowditch Street, was filled three times with congregations gathered together to participate in the formal dedication of the building to the cause of Christian Science.

Berkeley Gazette.

Bucyrus, Ohio.—The members of First Church of Christ, Scientist, dedicated their new church home on Sunday, Dec. 5. The corner-stone was laid on the tenth of December, 1915, and the total cost of the structure was in the neighborhood of seventy-five hundred dollars.—*The Bucyrus Telegraph.*

Columbia City, Ind.—The Christian Scientists in this city dedicated their church edifice Sunday morning [Dec. 3], holding appropriate services. The total cost of the property was approximately five thousand dollars.—*The Post.*

Charles City, Iowa.—Yesterday [Nov. 30] the Christian Scientists held their first service in the new church at the corner of Hulin and Milwaukee Streets.—*Charles City Press.*

Glens Falls, N. Y.—First Church of Christ, Scientist, at the corner of Lincoln Avenue and Davis Street, was dedicated during the Thanksgiving services. The church was built in 1911.—*The Post-Star.*

✧ ✧ ✧

The Lectures

Crawfordsville, Ind.

Henry D. Van Cleave, attorney, in introducing Clarence C. Eaton, who lectured on Christian Science, said:—

Permit me to say to you, in all candor, that it is my opinion that the greatest mystery of Christian Science is the unerring simplicity of its truth. It is true that every line of scientific thought, to be demonstrated, must have as its basis a fixed, unchangeable law. To prove a particular truth the demonstrator must keep his conclusions in absolute accord with the fundamental laws governing the demonstration. Christian Science, being based upon the unchangeable laws of God, has such a fixed basis that it never fails when rightfully tested by man. It was Christ Jesus' knowledge of the fixed laws of God which enabled him to make the demonstrations that he made while here upon earth. He knew God as an all-wise, all-good, all-loving Father; that God is all Life, Truth, and Love; that He is omnipotent, omniscient, omnipresent, omniactive. Christian Scientists are striving to know God as Christ Jesus knew Him, to have the same Mind in them that was in Christ Jesus, to be just, merciful, and pure. [See Science and Health, p. 497.]

Crawfordsville Journal.

✧

Grand Forks, N. Dak.

Bliss Knapp outlined the fundamentals of Christian Science before a large audience at the local church. He was introduced by Mrs. Frank Tibbals, first reader, who said:—

A Christian Science lecture is one of the means which Mrs. Eddy, the Discoverer and Founder of Christian Science, established to make known its teachings. Christ Jesus said: "I am the way, the truth, and the life," showing the work to

Digitized by Google

be individual and not to relieve us of a single responsibility. He also said, "I am not come to destroy, but to fulfil," proof that the destruction of sin, disease, and death is the fulfilling of God's law. This was the life work of Christ Jesus.

"By their fruits"—not by creed or profession, but by their God-inspired deeds—"ye shall know them." Christian Science is correct thinking and correct living. It comforts, it heals, it gives peace of mind, it reveals the teachings of Jesus as practical, demonstrable truth, and all mankind want the truth.—*Grand Forks Herald.*

✧

Needham, Mass.

Edward A. Merritt delivered a lecture on Christian Science before a good sized audience in the Town Hall. He was introduced by Arthur H. Keyes, Ph.D., former superintendent of schools, who said:—

Every Christian student is giving larger thought and greater attention to the study of the Bible. It is the great text-book of life and the best living. I will ask you to recall with me one incident in our Saviour's life. You will remember that at one time he left the territory of the Gergesenes, crossed the Sea of Galilee, came into the town of Capernaum, and went into a house followed by the crowd. The throng was so great that it completely filled the house. A man sick of the palsy had been put upon a stretcher and was being brought by his friends to Jesus to be cured. They could not enter the house because of the crowd, so they raised the stretcher upon the flat roof and lowered the sick man to the feet of Jesus. Our Master, seeing the great faith of the man and his friends, said, "Son, thy sins be forgiven thee." At that moment with the forgiveness of sins his cure was being effected, and doubtless had it not been for the questioning of the scribes who sat near by, he would immediately have been made whole. But these scribes were reasoning in their hearts, saying: "Why doth this man thus speak blasphemies? who can forgive sins but God only?" And Christ seeing their thoughts said unto them: "Wherefore think ye evil in your hearts? For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk? But that ye may know that the Son of man hath power on earth to forgive sins, (then saith he to the sick of the palsy,) Arise, take up thy bed, and go unto thine house." And the young man did so. By this incident we learn that Christ's forgiveness of sin cured the body.

The question now comes, Is all disease caused by sin, either that of the sick man or the sin of his ancestors? Many believe that there would be no disease, no physical or mental suffering, if nature's laws were obeyed and sin could be banished.

Another important thought that should be considered is whether the age of spiritual healing has passed away. We know that Christ gave to his disciples the power to cast out devils, heal the sick, and raise the dead, and these duties were a part of their ministry. Some have claimed that this power ended with the lives of the twelve apostles; but this is not so, for the early Christians of the first two centuries still exercised this power. St. Paul is a glowing example. It does not seem to have been the intention of Christ to limit this power, for he says: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." This prophecy has been fulfilled in every particular. A notable example is that of St. Paul at Malta, who was attacked by a viper and received no injury.—*Needham Chronicle.*

Lectures to be Delivered

ARKANSAS—Hot Springs: George Shaw Cook, Auditorium Theater, 3 p.m., Jan. 21.

CALIFORNIA—Huntington Beach: Frank Bell, Princess Theater, Main Street, 3 p.m., Jan. 21.

Testimonies of Healing

For a number of years I have wanted to tell the world of my wonderful healing in Christian Science. In July, 1903, I was suddenly taken very ill while on a train which was going to New York. On arriving in that city I at once consulted a physician, who declared that nothing could save my life but a surgical operation, and that at once. As I came from a family of doctors I was familiar with the details of surgical operations and had many times affirmed that under no conditions would I ever submit to one. I therefore begged a little time to consider the matter, but my physical suffering was so intense and increasing so rapidly that I realized it could not be endured very long.

Then in my extremity I remembered that a friend of my childhood, living in New York, had been healed in Christian Science. I sent for him and found his trouble had been nervous breakdown, which seemed but trivial in comparison with the affliction that had come to me. When I asked him if he thought Christian Science could help me, he assured me without any hesitancy that it could heal me. Though resenting his assurance, I decided to try it, although with no confidence that it could really heal me. I was quite indignant when my friend advised my walking several blocks to the practitioner's office, as I had not dared to leave my room for fear of being seized with the paroxysms of pain which came on at intervals. I however reached the office, although in great agony, but in the one treatment all pain left me, and from that day until my complete healing, which required several weeks, I was able to go about as usual.

I did not want to be a Christian Scientist, but only to be well, and I know now that this rebellion on my part delayed the healing. It was several years before I really began the earnest study of Christian Science. I was grateful for health and willingly paid the practitioner for her services, but some time elapsed before the real gratitude came. There was much resentment toward Mrs. Eddy to be overcome in my thought, and also in regard to church organization, but when I finally realized what Christian Science is, and the only kind of woman that could discover it, my healing was completed. I was then so grateful that I felt the only way to express my gratitude was to try to heal others, and this I have been able to do through my understanding of the truth, although constantly engaged in business.

For twelve years I have never been absent from business an hour on account of illness. Many forms of disease and discord have appeared from time to time, but they have all been overcome quickly, and usually without the aid of a practitioner. I realize that Christian Science is the Science of Life, and that one cannot live harmoniously without it. It teaches me that God is Life, and man being the expression of God must manifest Life, with all that it implies. My gratefulness for Christian Science and Mrs. Eddy increases each day as I learn more of this wonderful revelation of Truth.—Marie J. Adams, Cincinnati, Ohio.

I feel it a duty to tell of some of the great benefits I have received through Christian Science. From childhood I was always sick and ailing and under some doctor's care. Earache and catarrh seemed to be chronic afflictions. When thirteen years old I had a severe attack of typhoid fever, and it left me with a skin disease, which first appeared on my head and afterward spread all over the body. This, with catarrh, made life a burden to me for many years. As I grew older other diseases set in, among them stomach disorder, liver complaint, a bowel difficulty, kidney trouble, neuralgia, and rheumatism; then in middle age my eyesight failed and expensive glasses had to be worn. One winter I contracted a severe cold and an abscess formed in my right ear. I was living in an eastern city, and was obliged to be out much of the time, although the weather was unusually cold and wet. I tried to doctor myself, but continually grew worse. I would work during the day and walk the floor distracted by pain half the night, but finally gave up and went to a doctor, who examined the ear and said the case had gone too far. He gave me a card to a noted specialist, and after an examination this doctor promptly sent me to the hospital, where I remained a week or ten days. I came out relieved of the pain but entirely deaf in that ear. On being asked if he thought my hearing would ever improve, the doctor said the ulcers had destroyed the ear-drum and I would never hear again with that ear.

Friends advised me to try a warmer climate, so I came to California in the spring of 1900; but most of the old troubles soon began to manifest themselves in one form or another. After a few months I became acquainted with a lady who proved to be about the best friend I ever had, for she interested me in Christian Science. To my thought it was all humbug, but a healing brought about through her earnest work waked me up. I knew if Christian Science could cure a case like that it was far ahead of medicine, so decided to investigate. I borrowed the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it through three times within a week, reading night and day and hardly stopping to eat or sleep. At the end of the week several of the ailments had vanished. A few weeks more, and upon arising one morning everything looked bright and clear, and I found I could read fine print without glasses. A month after this experience I waked up one night and could hear the clock tick with the deaf ear. It startled me so that I sat up in bed, and holding my watch first to one ear, then to the other, found I could hear better with the supposedly deaf ear than with the other. That was fourteen years ago and it is still all right; in fact, both sight and hearing are excellent, and I have not an ache or a pain to trouble me.

The spiritual uplift is, however, more than the physical healing. Fear, worry, and anxiety have vanished, and I am free from all those old errors that held me in bondage so many years. I have taken the *Sentinel* for fourteen years and would feel lost without it. There are no words in the English language adequate to express my thankfulness to God, and my gratitude to Mrs. Eddy for all the blessings I have received through Christian Science as explained in "Science and Health with Key to the Scriptures," for it reveals the healing Christ that makes us free.

Mrs. B. A. Haines, Seaside, Cal.

Gratefully I acknowledge the untold benefits of Christian Science, and deeply I appreciate the blessings that Mrs. Eddy's life work has brought to me and mine. My first knowledge of this teaching came through the healing of an elder brother, many years ago, of what was pronounced by several physicians to be the last stages of lung trouble. I did not, however, become a student of this Science until about nine years ago, when I had convincing evidence of its efficacy in the healing of my little daughter of spasms after all other means had failed.

Three more children have come to our home, and we have depended on Science in every time of need. It has proved indeed the rod of correction, the supporting staff, and the promised Comforter. Sometimes the way has led through

Digitized by Google

deep waters and fiery trials,—contagious diseases, accidents, temptations, have had to be overcome,—but I have found that while we are not spared these testing times any more than were the followers of old, we are delivered from them, as were they, and "when the smoke of battle clears away," as we read on page 22 of Science and Health, we can discern the good that has been done.

I consider the Christian Science literature to be the "pearl of great price," worthy of the demand "Sell all that thou hast" to secure it, and I know any one can obtain it who desires it sufficiently to strive faithfully for its possession. It has been my great privilege to receive class teaching, and to hear several lectures, also to be able to bring the healing Word to others, for which, in the words of our Leader (Science and Health, p. 568), I "give thanks and magnify the Lord of Hosts."—Esther T. Miller, Greeley, Col.

✧

I am sincerely grateful for all the blessings that my wife and I have received through the teachings of Christian Science, which brought light to us in an hour of darkest distress. I was suffering from what the doctor diagnosed as lung trouble of a quickly developing nature. He said that my only chance was to leave Detroit and go into a warm southern climate, though he did not hold out any great hope even then. Packed in ice and kept under the influence of opiates, with a high fever and constant hemorrhages, to mortal sense I lay between life and death. Christian Science was brought to my notice, but I refused to have anything to do with it, saying I could pray for myself better than any one could pray for me. Under the kindly care of a physician I recovered sufficiently to go back to work, but was very weak and could accomplish little. I applied for a position in the South, but before I could take it up, a second attack, worse than the first, prostrated me.

My wife again begged me to try Science, and being too ill to argue, and believing myself to be about to pass on, I allowed her to bring the lady who first told us of this teaching. As she sat by my bed the fever left me, the restless coughing was quieted, and in an hour I was sleeping peacefully. This was at nine o'clock in the morning; at noon I ate for lunch all that was brought to me and asked for more. In the previous attack, which lasted six weeks, I was able to take only iced milk and cream. I went to sleep again and did not wake until five o'clock in the afternoon, when I got up and dressed for supper, feeling strong and well. I was absolutely healed in that one treatment. There has never been the slightest return of any of the old symptoms, although the doctor had declared that the attacks would recur every few months or weeks.

We went South, thinking the climate might help me gain flesh and lose my delicate appearance; but at the end of four months I weighed and looked the same, although I had been able to work more hours a day without the slightest fatigue than ever before. We studied the Lesson-Sermon each day, and gradually, as we learned more of this great truth, there came to us the realization that climate has no power over man created in God's image; and we proved it by going to Chicago in midwinter. The doctor had said that it would mean certain death if I stayed anywhere near the Great Lakes, but in a few weeks I began to look strong and to take on flesh. This happened five years ago and I have never had a sick day since. No words can express my thankfulness to God and my gratitude to Mrs. Eddy for her devoted self-sacrifice.

George W. Carrington, Wilmette, Ill.

I began the study of Christian Science through the healing of my husband. Being the daughter of a physician and having at one time served in a big London hospital as a probationer, I knew that his condition was hopeless as far as medicine was concerned.

The first time Christian Science was brought to my notice I refused to have anything to do with it, but as I listened to more of its teaching I was convinced that at least it was not of the devil as I had supposed, and when in my extremity I asked for help, I found it to be of God. The study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has brought a wonderful sense of power and harmony, and my concept of a mystical, changeable, corporeal God has been replaced by a knowledge of changeless Principle, Love, the Father-Mother God. In the past five years Christian Science has been put to many tests in our home and has been proved to be absolutely demonstrable. A badly injured arm was healed in thirty-six hours, whereas a similar injury under medical treatment took six weeks to heal. I was brought out of discordant conditions in childbirth so quickly that the doctor permitted me to be up in five days. The state law of Illinois requires the presence of a medical practitioner in such cases, but no medicine of any kind was used. A sense of very bitter disappointment was overcome.

Words are inadequate to express my gratitude to Mrs. Eddy, our beloved Leader, who stood alone facing the world's ridicule, seeking only to free her fellow man from the false bondage of sin, sickness, and death; and I am thankful to God, who through this channel of virtuous womanhood made us know our birthright as His children.

Marjorie A. Carrington.

✧

I am thankful to God for the blessings received in Christian Science. I have been healed of severe headaches and vomiting spells, which sometimes lasted for three days, also of night sweats, fatigue, and nervousness. For almost seven years I wore glasses. When having Christian Science treatment for the other ailments, I did not think of my eyes, but the second day found that my glasses were not needed, and they have not been used since. That was in August, 1913. I had a fear of insanity, but this has likewise been overcome.

There have been wonderful demonstrations in my family through Christian Science treatment, and I am indeed grateful for them. I could never understand the Bible, but after studying it together with "Science and Health with Key to the Scriptures" by Mrs. Eddy, the Scriptures began to be revealed to me in their spiritual meaning. I am most grateful to our Leader for this revelation of Life, Truth, and Love.

Anna Roschè, Binghamton, N. Y.

✧

[Translated from the German]

I wish to express my profound gratitude for healing, as well as for many other blessings which I have received through Christian Science. I am especially grateful that through it the way to Truth was shown me. Over three years ago I became afflicted with a very serious kidney trouble and was bedridden for a year and a half. In trying to get cured I turned from one material system to another, but was made to believe that this illness was incurable and that I was doomed to die. The attendant mental suffering made me feel that the best thing for me to do might be to end my life with all its misery. To make the measure full, my supply, as I then understood it, failed as a result of the war breaking out, and I was left without income. My wife, who had always cheered me up, now became discouraged, while my physician spoke of the kidney trouble in terms which did not contribute to a better sense of things. He said

Digitized by Google

that the trouble was chronic and had become incurable, though my life might be prolonged somewhat by observing a rigid diet; and this I did.

In the spring of 1915, when things looked darkest around me, I became acquainted with a Christian Science practitioner and decided to make a start on this new road to health. In the course of the first week I relinquished the dieting and ate according to appetite, which seemed a great step, as I ate the things I liked best and they seemed to agree with me. I was soon able to walk without a stick, also to stay up longer than before; though still not entirely healed, for the swelling of the legs returned. My trust was great, however, and I denied all inharmonious sense-evidence. Last Christmas there was much that had to be overcome; in fact it seemed the severest test yet, as my feet were so swollen that I could hardly walk. I spent all my time reading and working in Christian Science, and to my great joy these endeavors were crowned with success, for about the New Year the swelling disappeared almost overnight. According to the physicians this swelling could only be expelled through sweating; but I was shown that healing is possible without such a process, and today I consider myself a well man.

I have also learned to put myself under God's protection. I used to believe that I had to shape my own destiny, but I am now most deeply grateful to know that I can leave everything in God's hands. I praise Him and give thanks for Christian Science.—Joh. E. Book, Dresden, Germany.

✧

I wish to express my gratitude for the blessings received through Christian Science. For many years I was a great sufferer, and after I had undergone two operations in one year, the doctors said there was no help for me. Then Christian Science was brought to my attention and I was healed through reading Science and Health. That was four years ago, and since then my daughter and I have had many beautiful healings; not only sickness but sorrow has been overcome, and I am very grateful for the peace and joy Christian Science has brought to my home. All I am and have I owe to it. I am indeed grateful to Mrs. Eddy for giving to the world this wonderful truth.

Augusta C. Whitman, Detroit, Mich.

✧

When I recall the proofs of God's power as demonstrated in Christian Science which it has been my privilege to witness, my heart is filled with joy. When I first came to Christian Science for the healing six years ago, I was a physical and nervous wreck, without hope or happiness, for sickness was considered more real than anything else. I had lived from childhood under the belief of not being strong, and rejoice today that I have learned the unreality of sickness, for it has been proven to me that God is man's Life. I have passed through some severe tests, but Truth has been my only physician.

One experience I wish to mention in particular,—the healing of ptomaine poisoning. The general appearance seemed alarming to mortal sense. I however mastered fear and clung to God as my life, and in spite of all evidence to the contrary boldly and fearlessly declared the power of Truth. Instead of the disease finishing its course, as it seemed fairly started to do, the alarming symptoms gave way and vanished. I seemed to be prostrated with great weakness, but declared the all-power and ever-presence of God, good, and while doing so fell asleep. That was at five o'clock in the morning, and I had been taken ill immediately after dinner the evening before. When I awoke, the sense of weakness had vanished.

This testimony is written with the desire that it may be helpful at least to some poor sufferer who may be hesitating and in doubt as to what Christian Science has for the earnest seeker, and also as a tribute of gratitude for help received in our home. I am most grateful to kind friends who have so lovingly helped me on in my journey from sense to Soul, and I rejoice today that I am able to help others in this healing ministry. What a debt of gratitude we owe to our beloved Leader, Mrs. Eddy!

Mrs. R. Clare Maynard, Moscow, Idaho.

✧

During the early spring of 1912, after passing through the various stages of cough, cold, and influenza, my case was finally diagnosed as mastoiditis. After being under the care of one of our best specialists for about two weeks, I was told that longer delay would be fatal, and that an immediate operation was necessary, as I was on the verge of meningitis, for which there was no remedy. Arrangements were made for the operation, and I returned home and told my wife of the trouble which had come to us.

After talking the matter over she spoke of Christian Science treatment. As we neither of us had had any experience in Christian Science and knew very little about it, I at first objected, but finally decided to try it. The first treatment brought such improvement that the operation was postponed for a few days, and finally was abandoned altogether. I placed myself under the care of the practitioner entirely, and after two weeks' treatment returned to work completely healed. The ear is normal and the hearing perfect. Many other discordant conditions have been overcome since then, and words can never express our thankfulness to God, and our gratitude to Mrs. Eddy, who gave us this truth. All desire for tobacco has left me, after having been an inveterate user of the weed for thirty-five years.

Clinton E. Bell, Newark, N. J.

✧

In April, 1915, an ankle which had troubled me occasionally for a number of years began to be inflamed again, and words cannot describe what I suffered in the next three months. Part of the time I was under the care of a physician, having the leg lanced in over thirty different places.

Previous to and during this time I had read the Christian Science periodicals, which were frequently mailed to me by true friends, and for which I am very grateful. One dear friend sent me some names of practitioners in an adjoining town and advised me to have treatment. I told my friends that if I was ever healed God would do it. Soon after this my husband took me to the adjoining town and a loyal worker in Christian Science was sent for. She treated me for one week and I was healed,—brought out of darkness into light, out of error into truth, thus proving again the promise of the Scripture, "Ye shall know the truth, and the truth shall make you free." There has been no return of the affliction, but I am well and able to do my own housework, thanks to Mrs. Eddy, who so lovingly brought to us all this understanding of divine Truth.

Sarah A. Toombs, Coudersport, Pa.

✧

The sense of peace and love that came to me on my first attendance at a Christian Science church service can never be described. One Sunday morning I had a severe pain in the head and thought I could not go to church, but I went,

Digitized by Google

and when the soloist had finished singing "Behold, the tabernacle of God is with men," I was healed.

Sciatica was overcome in two treatments, and chronic bowel difficulty, severe headache, and numerous other ailments have disappeared. I have also been helped in many other ways. Before coming into Christian Science I thought it a duty to go to church, but now it is considered a privilege. Words fail to express my gratitude for our services, for the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and our periodicals. I am grateful for our Bible Lessons, and also for the Sunday school, which teaches our children how to help themselves by looking to God in their need. My son was healed of asthma, from which he had suffered for six years. Christian Science was a great help to him in his school work.

My thankfulness to God knows no bounds. I have recently had the privilege of class instruction, which has been an added blessing. My heart goes out in unbounded thankfulness to God for sending to us in this age one brave and true enough to stand in the face of the world's scorn and hatred that she might make clear again to burdened humanity the straight path to that peace "which passeth all understanding."—SADIE L. GENUNG, Chicago, Ill.

✧

Christian Science came to me when I was in the depth of despair, after being an invalid for fourteen years and suffering from what was pronounced locomotor ataxia and weak spine. During that time ten doctors had attended me, medicine was constantly being taken, and massage and electrical treatment were resorted to; but only temporary relief resulted.

I thought it impossible for Christian Science to do anything for me, but it has done everything. After studying the Bible and Science and Health for about three weeks and having some Christian Science treatment, I awoke one morning with a great sense of joy and uplift. Usually one of my first duties is to attend to my bird, and on doing so that morning the sudden realization came to me that I had walked across the room unaided, carrying the bird cage. Since then I have been able to do everything needful indoors in the way of walking, including going up and down stairs, and am now able to take long walks. To me this demonstration was wonderful, but the spiritual uplift is a thousand times more so. Ailments from which I had suffered since childhood have likewise disappeared into nothingness.

Words cannot express my gratitude to Mrs. Eddy for showing us the way. I am indeed thankful for all our literature, and for the better understanding of the Bible which I have gained through the daily study of the Lesson-Sermon. Christian Science has brought great joy and happiness into my life.

CHARLOTTE E. TELLING, Horfield, Bristol, England.

✧

This testimony is written in the spirit of gratitude for what Christian Science has done for me. I have been healed of noises in one ear, after being troubled in this way for many months, also of what is called broken arches, and of the seeming necessity of wearing glasses for near-sightedness. This healing was experienced about seven years ago. Blood-poisoning, which started in one finger and reached the elbow, has also been overcome. Some of these healings came to me through the study of the Bible and Science and Health, and some through the loving help of a practitioner. May this testimony be a help to some seeker after truth.

ELIZABETH A. WING, Alameda, Cal.

From Our Exchanges

[*Zion's Herald*]

We shall see things as God sees them, and sympathize wholly with Him, when we see Him distinctly all the time and know Him completely. How shall this be brought about? How shall we know Him? Obedience is the organ of spiritual knowledge. "If any man willeth to do his will, he shall know." By faith we behold the things which are not seen with the physical eye. "Trust and obey" seems to include the main essentials. But ordinarily we do not carry either one of them far enough to produce the best results.

What we need, then, is not so much anything especially new in theory, as the intensification of the old. If the trust and faith are perfected, if they become measureless and unfaltering, then we shall be delivered from those views of things that disturb us; we shall either get a glimpse of God's far reaching plans which are being so slowly worked out, or we shall be entirely willing to await with equanimity their gradual unfoldment.

[Rev. R. J. Campbell, M.A., in *The Church Family Newspaper*]

It is precisely because of what the war has taught us that we seek to turn to God with renewed heart and will, to learn if we can wherein we have transgressed, and how it comes to pass that after nineteen centuries of the gospel of Christ the nations that profess his holy name should be locked in the most terrific struggle to destroy each other that history records, and in their common life should have deviated so far from the standard of conduct which he revealed once for all. Is it not that civilization itself has ceased to be God-conscious? We have forgotten how to worship. We have left God out of account, or almost so, in our schemes for betterment, individual and social. We have been feverishly engaged in exploiting the resources of the natural world and covetously competing with each other in so doing, while forgetting our prior allegiance to the spiritual. We have been so busy, so preoccupied with the external things of life, that we have forgotten to ask what life itself is for and to what end it should be lived.

[*The Sunday School Times*]

Many lives there are that seem to be always in a state of disturbance, and with such the temptation is strong to believe that God has departed. Not so with the psalmists. Trouble was upon them, trouble most times perhaps of their own making, but they have cheered the heart of mankind by their confidence that somehow God was present and His holy purpose and love were operative even in times when everything went wrong with them. They did not sigh or pine because they did not have worthier experiences over which to commune with God, but took what they possessed of present experience and communed over that. "Out of the depths have I cried unto thee, O Lord." Pride sometimes kept them long from speaking, and they hoped that as the years went by they could be occupied with fairer themes, but at last they spoke and God heard them.

[*The Biblical World*]

Is then Christianity dead? It is not dead, but too self-protecting from the miseries of life. Already we begin to be flooded with pamphlets insisting that instead of Christians uniting to serve the world, they should get together and develop a confederacy based upon some doctrine of uniformity. The faith in God and the sensitive regard for others' rights which real Christianity engenders are being

Digitized by Google

incased in denominational and ecclesiastical machinery. With the whole world at war, Christians debate niceties in organization. Organization and the pressure of daily duties are slowly coming in between the Christian conscience and the horrors of the hour. We grow detached, academic, given to compromising with hatred as a possible necessary virtue, considering national rights as superior to human weal.

[*The Living Church*]

The great danger in a life like ours today is that it leaves no time or place for companionship with God. In the nervous haste that characterizes our work, we even reach a point where it would seem sometimes that we are actually afraid of being alone. The power of a man is in proportion to the depth of his life, and depth can come only through concentration. In the religious life it comes only as we make our "wilderness" where God becomes real, and create a silence in which His voice can be heard.

[*The Christian*]

The first disciples were Christians not because they were agreed on certain formularies or practised certain rites, but because they had experienced the powers of the world to come. For them the curtain of sense had been rent from top to bottom, and they had already come to the heavenly Jerusalem, to an innumerable company of angels, to the spirits of the perfected just, to God the judge of all, and to Jesus the mediator of a new covenant. They envisaged things not seen, and esteemed them to be the only realities.

[Rev. Joseph Fort Newton, D.Litt., in *The Christian Commonwealth*]

God be thanked for seers who can bring high truth within our ken, teaching us that religion and life are one, or neither is of any worth. God is here; eternity is now. Who loves the truth loves God. Who goes in quest of beauty is seeking Him whose is the strange and solemn loveliness of the world. Who plights his vows with the ideal, yielding obedience to its high behest, is keeping tryst with the infinite idealist in whom our visions find reality and fulfilment.

[*The Congregationalist and Christian World*]

In the incompletion of the work at which we toil, in the disappointments of experience, in the postponements of hope, we may remember that here is a perfect and completed work for man. One divine and human life has brought its task to completion. That life work was for every one of us. Why not seek to bring back in our own souls more of that early Christian delight and enthusiasm which made Paul cry: "For to me to live is Christ."

[*Western Christian Advocate*]

The activity of criticism cannot despoil the beauty of the Christ character. Indeed, at the present time every touch of criticism upon that marvelous personality has been like the clearing of the daylight through the mist, enlivening the domains of current thought and fancy, kindling enterprise and faith, claiming them one and all as organs to express its own beauty and power.

[*The Christian Advocate*]

We are ever at the crossroads, choosing paths, friends, goods, principles, methods. And decision making is a serious business. The issues of life are involved in it, and life issues are always important. Life has eternal values. Decisions made today reach into the centuries, the infinite, the eternal. Destiny is making today.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new catalogue of selected Bibles is now being printed by the Publishing Society and will be mailed to Christian Science organizations listed in the *Journal* early in January.

Owing to the increased cost of labor and materials the Oxford Press of England has twice found it necessary to advance the prices of Bibles to the Publishing Society during the past year. The Publishing Society now finds it necessary to make a corresponding change in its prices to the field, announcement of which will appear in the forthcoming catalogue.

The cost of manufacturing Bible Cases and *Quarterly* Covers has also increased, and the new catalogue will give the change in prices for these articles.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 236 Huntington Avenue, Back Bay, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study. Also printed in Dutch and German.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents, three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

Abandonment of the conflicting water power bills now before Congress, and the creation of an ex officio commission with power to grant leases for the use of all public lands and streams, is suggested by Secretary of the Interior Lane as a solution of the water power question. Secretary Lane proposes that the secretary of war, the secretary of the interior, and the secretary of agriculture shall compose a water power commission, which shall have power to make leases, under such terms and conditions as they shall prescribe, for not longer than fifty years. By this plan the administration would be held responsible for whatever terms and conditions were made as to such leases; the terms and conditions would be known and fixed before the lease was made; and they could be made so as to draw a distinction between the use of navigable waters and others, so that controversies in Congress over details would be eliminated.

Before the labor committee of the United States House of Representatives recently Prof. Elwood Mead spoke in favor of the Crosser colonization bill, which he characterizes as "representing great economic advance" and which its friends are confident of having favorably reported by the committee. A basic feature of the bill is a provision that all Government owned land may be leased to farmers, giving them perpetual right to its use at an annual rental not to exceed 3 per cent of the cost of the land to the Government.

The bill is practically a reproduction of the system adopted in Australia under circumstances very similar to those now obtaining in great agricultural areas of the United States. Professor Mead formerly was chairman of the State Rivers and Water Supply Commission of Australia. As carried out in Australia the plan included fitting the land by the Government for immediate use by the new settler, the appointment of an expert buyer and an inspector for consultation and advice and for reporting improper use of the land. The system stopped the drift away from the farm and attracted men from the city farmward. Professor Mead says that "under its operations more than four thousand farmers, all starting with limited capital, now live in their own houses and are landed proprietors. It has given the people better houses at less cost, better live stock, and better tools than they could have obtained without financial aid and the expert knowledge and advice that went with the system."

Of all the striking exhibits of the industrial exposition recently held at Santiago, Chile, the display of chemical and pharmaceutical products manufactured in the country is the most remarkable. The *Diario Ilustrado* of Santiago, for Sept. 30, stated in part: "Chile now has one hundred factories of more or less importance in this branch of industry. Formerly we imported nearly two million dollars' worth of chemical and pharmaceutical products; now we import less than half of this amount, as the country supplies a large share of the local demands. Not only is this the case, but we are also showing quite satisfactory figures in the export field. On account of the fact that many of these products are labeled with North American and European trade-marks, people have not realized how great the growth of this industry has been in Chile."

Increasing needs of the Navy Department for supplies of oil for the oil burning vessels constantly being added to the naval fleet of the United States, caused the department to oppose remedial legislation for claimants in naval oil reserves in California, as contemplated in the Phelan so-called oil lands leasing bill now before Congress. Conferences between a joint subcommittee of Congress and representatives of the Navy and Interior Departments and the Department of Justice, in an effort to compromise the differences, have ended, it is understood, with prospects appearing slight for the enactment of the legislation at this session. The Phelan bill provides for the leasing of certain withdrawn Government lands containing phosphate, oil, gas, potassium, or sodium, and would protect those who located claims in the naval oil reserves prior to their withdrawal.

The great engineering feat of rolling an old bridge aside and swinging a new 11,000,000 pound bridge into its place, was accomplished successfully on Dec. 23 at Omaha, Neb., by the Union Pacific Railway. At 11 a.m. traffic was closed and work began, and it was completed in fourteen minutes. The work started on the new spans in May and the entire contract cost the Union Pacific more than one million dollars. The bridge is used by lines which handle the bulk of transcontinental traffic for the United States. The old bridge was built in 1887 and has been in constant use, an average of 225 trains crossing each twenty-four hours, and as many as 300 trains have used it in a single day.

The population of the island of Madagascar in the Indian Ocean on Dec. 31, 1915, was officially estimated at 3,512,690, of which 14,890 were French and 2710 foreigners. The number of official schools for natives on the island was 687, and of private schools for natives, chiefly missionary, 418, with an attendance in all of 105,108. The French Government spent $258,899 for education last year. A commission has recently been appointed to study a plan of agricultural and industrial training to be added to the course of study in the Government schools.

In the fiscal year 1916 a little over six hundred million board feet of timber were cut from the national forests of the United States. Of this amount about one fifth was cut under free use privilege by 42,055 individuals. In all there were 10,840 sales of timber, of which 97 per cent were under one hundred dollars in value. This indicates the extent to which the homesteader, rancher, miner, small mill-man, and others in need of a limited quantity of timber draw upon the forests.

The twelve cities in which loan banks are to be located were announced Dec. 27 by the Federal Farm Loan Board, and it is expected that within sixty days the new system will be in operation, ready to make the loans for which applications already are pouring in from every section of the country. The cities are: Springfield, Mass.; Baltimore, Md.; Columbia, S. C.; Louisville, Ky.; New Orleans, La.; St. Louis, Mo.; St. Paul, Minn.; Omaha, Neb.; Wichita, Kan.; Houston, Texas, Berkeley, Cal., and Spokane, Wash.

Federal appropriation of $7,076,600 to provide a channel 18 feet deep and 200 feet wide in the Merrimac River in Massachusetts from Black Rocks Beacon to Hunts Falls, conditioned upon state or local cooperation, is recommended to Congress by the War Department. The department also recommends provision for a channel 1000 feet wide and not less than 28 feet deep, across the bar at the mouth of the river.

That the Grand Cañon of Arizona will probably be made into a national park by act of Congress at its present session, and that the Greater Sequoia Park in California will probably be purchased by Congress and made a national reserve, were statements made by Stephen D. Mather, assistant secretary of the interior, in a recent address. He says that by 1917 the Yosemite Park will be accessible throughout the year.

The total sea borne trade of the Madras Presidency with foreign countries and with ports in other presidencies of India during the six months ended Sept. 30, 1916, amounted to over sixty-six million dollars in value, of which over forty-four million dollars represents the value of exports.

The state of Indiana has acquired Turkey Run. This region, known as the beauty spot of Parke County, was desired as the chief if not the first unit in a system of state parks to be established as a permanent memorial of the centennial celebration of Indiana's admission in 1816 to statehood.

Two power companies using water diverted from Niagara Falls without legal rights, failed to get through the House of Representatives, during the last hours before the holiday recess, the bill to give them legal authority to divert all they are now taking illegally and some 20 per cent besides.

Investigations by the Forest Products Laboratory at Madison, Wis., have resulted in the use of spent tan-bark in the manufacture of asphalt shingles to the extent of 160 tons a week. The value of the bark has been thereby increased from 60 cents to $2.50 a ton.

The import and export trade of Manchuria for 1914 and 1915, according to the returns of the maritime customs, amounted in value to $120,994,486 and $118,661,878, respectively, a decrease of over 6 per cent.

It is estimated that the Victoria Falls of the Zambesi River in Africa, if harnessed, would provide 85,000,000 horse-power, or more than is derived from coal and oil in the world today.

It is expected that Cuba's sugar yield for 1916-17 will be a record breaking one. The current crop will amount to 3,466,000 tons, as compared with 2,582,245 in 1914-15.

During September the customs revenues at the eight maritime custom-houses of Peru amounted to $500,087.

Prayer That Is Scientific

DUNCAN SINCLAIR

PRAYER is the greatest agency for good in all the world. Human sympathy may seek to reach us and to help and succor us in many a trying position, but it cannot compare with the power of prayer any more than the floating straws men clutch at as the current carries them downward can compare with the strong rope which would bear them to safety. Prayer is the ladder which unites earth with heaven, by which men reach the angels and are inspired thereby for the pursuit of the ideal. Saints have striven to tell humanity something of its true nature, and poets have praised it in numbers which are imperishable. These lines of Coleridge, for example,—

> He prayeth best who loveth best
> All things both great and small,—

are engraven indelibly on Christian thought. One of the most instructive passages ever written on the subject of prayer is to be found on page 39 of "No and Yes," where Mrs. Eddy says: "True prayer is not asking God for love; it is learning to love, and to include all mankind in one affection. Prayer is the utilization of the love wherewith He loves us. Prayer begets an awakened desire to be and do good."

What do men pray for? What causes them to pray? It is hardly necessary to ask such questions as these, for humanity well knows that it is their sorrows and woes, their sufferings, griefs, and diseases which bring mortals to their knees and force them, out of their feebleness, to pray to God. The sense of imperfection, the sense of being in need of the happiness which is ideal, the sense of human weakness and impotency in the face of difficulties and trials, compel the sons and daughters of men to utter their cry for succor to the heavens, —and happy is that one who prays the prayer not of mere entreaty but of spiritual understanding. If one were to ask the bulk of humanity what it most craved, probably the answer would be peace and love. The best among men do not yearn after the overflowing material barns; their aspirations are far loftier; their hopes are centered on spiritual riches, on those things which pass not away, and which bring to the human consciousness the repose which is utterly beyond the worldly mind to comprehend.

Human beings know well how they are cabined and confined by the materialism which seems to have engrained itself into their lives; and to them there is only one way out of the prison house of the carnal mind, and that way is the way of prayer. It was the way that Christ Jesus taught the world. How often he went out by himself, after the day's work was over, to pray to God! These prayers may well have been for strength for the morrow's service, for the purity which knows no evil, and for the scientific knowledge of Truth which could heal the sick and awaken those who had fallen into the trance of death. Was it not Jesus the Christ who bestowed the gift of the Lord's Prayer on the world, the prayer which in its comprehensiveness overlooks no single human need?

Before one can understand what true prayer is, he must obtain some knowledge of reality as distinguished from unreality. A man is praying in the dark, as it were, unless he can distinguish between the real and the unreal. Now, as Christian Science teaches, reality is the expression of God. Since God is infinite Spirit, reality is the expression of infinite Spirit. Whatever is not spiritual, or not of God, is not real. Thus matter, that which is cognized by the physical senses of men, is not of God, is not real by nature. Again, God is infinite good; hence good is reality. Since evil does not exist in infinite good, evil is not of God, is no part of reality. These are fundamental propositions. They must be apprehended to some extent before one can pray correctly and "with signs following." It is apparent that to pray for anything material is nothing short of the sheerest ignorance. How could God, who is infinite Spirit, bestow aught but that which is spiritual? Yet, notwithstanding the impossibility, it has to be admitted that human beings are constantly beseeching God for some material endowment. In their vain repetitions after so-called material things they are the veriest children with regard to the meaning and purpose of prayer. God is Truth, infinite Truth, and nothing can ever change Truth.

Truth is omnipresent, omnipotent, absolutely perfect. No matter what the material senses may report to men, no matter what men may seem to suffer, no matter how much they may seem to be disturbed, the spiritual fact remains that God, Truth, is eternally the same perfect One. He who would enter into the stillness of true prayer to God must ever keep this before him. Indeed such a recognition is in a degree prayer itself. Prayer cannot alter the unalterable, or change any phase of God's being, but by its affirmative nature it establishes good in the human consciousness, and as a result the belief in evil which has seemed to be there is destroyed, and no longer gives rise to the impressions of unrest or dis-ease. On page 11 of Science and Health Mrs. Eddy writes, "Prayer cannot change the unalterable Truth, nor can prayer alone give us an understanding of Truth; but prayer, coupled with a fervent habitual desire to know and do the will of God, will bring us into all Truth."

Are we not often apt to think that something good is being withheld from us? How happy we should be, we think, if people only loved us more; if they would think good thoughts more frequently about us and fewer evil ones! Does it not strike us that neither love nor goodness is man-originated? God is Love, and Love is omnipresent; and whatever love may seem to be possessed by human beings is no more theirs than ours, for they are only reflecting the Love that is omnipresent,—and why should not we also? Prayer, as has been quoted above, "is learning to love;" it is "the utilization of the love wherewith He loves us."

What wonders would happen on earth if mankind realized that the loftiest prayer is the life that is utilizing to the greatest extent the omnipresent power of Love. But this cannot be scientifically done until mortals have awakened to understand somewhat the unreality of evil, the impotence of evil, the stupidity of evil, in the light of the allness of God, good.

The struggle lies in the human mind and nowhere else. It is not between one person and another, between one nation and another; it is first and last a struggle for the supremacy of good over the belief in the reality and power of evil in the human consciousness. How does every disagreement between men and nations originate? The one or the other believes in some form of evil, is taken in by some passion, such as jealousy, envy, anger, hatred, or revenge; the belief in evil gains the temporary mastery, and the outcome is a struggle which may end in physical destruction.

There is one way, and only one way, by which material sense can be destroyed, and that way is by prayer. Prayer is the affirmation and realization of the truth about God, about spiritual man, and about all that is real; prayer is the denial of the reality or power of evil; prayer is the constant spiritual discernment of omnipresent Love, and the reflection of Love in human affection and uprightness. Our Leader says: "To enter into the heart of prayer, the door of the erring senses must be closed. Lips must be mute and materialism silent, that man may have audience with Spirit, the divine Principle, Love, which destroys all error" (Science and Health, p. 15). Prayer, like faith, is "the substance of things hoped for, the evidence of things not seen."

Health Revealed

FRANCES THURBER SEAL

Mrs. Eddy has declared that the Sermon on the Mount is the essence of Christian Science (see Science and Health, p. 271), and the Master's first declaration in this marvelous discourse is that the "poor in spirit" are blessed because "theirs is the kingdom of heaven." He goes on to tell his followers of the blessings which are realized in Truth by the meek, the merciful, the pure in heart, and others, and ends this list of blessings by repeating "for theirs is the kingdom of heaven." This was the Master's earliest message to the children of men and is the foundation of the gospel teaching. The last message in the New Testament is given in the twenty-first and twenty-second chapters of Revelation, and is a description of the new heaven and the new earth which constitute the kingdom of heaven.

The phrase "kingdom of heaven" signifies the Messianic government on earth, or the reign of Truth in human consciousness. It is the kingdom which John the Baptist foresaw and which he told the people of his day was at hand. It is the kingdom which John the revelator saw would be established after the great chemicalization described by him as the battle of Armageddon, when the beast was taken, and with him the false prophet that wrought miracles with which those who had received the mark of the beast and those who worshiped his image were deceived. Mrs. Eddy says, "The beast and the false prophets are lust and hypocrisy" (Science and Health, p. 567). Lust here signifies material sense and its supposititious activity in all its forms.

As "Jesus was the highest human concept of the perfect man" (Science and Health, p. 482), so the kingdom of heaven is the highest human concept of the kingdom of God. A modern commentator who has perceived this writes: "Since the kingdom of heaven is the earthly sphere of the universal kingdom of God, the two have almost all things in common. For this reason many parables and other teachings are spoken of the kingdom of heaven in the gospel of Matthew and of the kingdom of God in the writings of Mark and Luke. It is the omissions which are significant. The parables of the wheat and the tares, and of the net, are not spoken of the kingdom of God. In that kingdom there are neither tares nor bad fish."

The time has surely come for the establishment of the kingdom of heaven in human consciousness, and to this work Christian Scientists are devoting their time and energies. Christian Science is not merely for the purpose of enabling us to heal the sick or to bring out success in business; rather does it reveal to us, even as to St. John, the new heaven and the new earth where there shall be no more death, no sorrow or crying, no more pain, no envy, hatred, or jealousy, and no more war.

Is there not danger that as Christian Scientists we may be so intent upon working out the lesser problems, those we call our personal problems, that we will lose sight of the real mission entrusted to us? We are indeed appointed of God to do the greater works. We should heal the sick and overcome every form of error, but only as the result of the Christ, Truth, coming to the individual consciousness. Christian Science is not a profession. It is a ministry. We should be in the business of healing, but only as Jesus was about his Father's business. It is our business to acknowledge God in all our ways, to acknowledge that His kingdom is established here and now, that His will is done; and there is no other method of true healing than this recognition of the presence of heavenly perfection. This consciousness of God with man, of the presence and activity of the government of Christ, Truth, is all that overcomes error. Then let us be satisfied with nothing less.

The question is frequently asked how a person may know when he is ready to go into the practice of Christian Science healing. To this it may be answered that he is ready when his consciousness is so filled with the truth that the sick and the sinning come to him and make such insistent demands upon his time that he is compelled to give up all else for this glorious work. Many desire to alleviate suffering, but the only real Christian Science practitioners are those who recognize that man lives, moves, and has his being in the kingdom of God now. These know that Christian Science treatment does not produce health. It reveals health! Jesus' mission was to reveal what the Son of man is; also what the Son of God is, and to prove that the latter is always at-one with the Father. He did not heal the sick simply to relieve their suffering. He was compassionate always, but with a higher sense of love than mortal mind could cognize. When asked why the man blind from his birth should suffer thus, and whose sin had caused the blindness, he did not dally with a material sense of causation. His reply indicated that there was no other reason for healing this man than that the works of God should be made manifest, and he opened the man's eyes with the declaration, "I am the light of the world."

In the incident of changing the water into wine at the marriage at Cana, the apostle John writes that in so doing he "manifested forth his glory,"—the glory of the Son of God who is in heaven, even though the Son of man walks upon the earth among men. He raised Lazarus for the glory of God, and that the Son of God might be glorified. Respecting Lazarus he said to his disciples, "I am glad for your sakes that I was not there, to the intent ye may believe," that is, believe through seeing the demonstration of the dominion of the Son of God. When he stood at the tomb he did not strive to raise a dead man; he lifted his thought in a prayer of thanksgiving because he knew that the Father heard him always. This was true acknowledgment, true communion. His calm could not be disturbed, for it was the peace which is the fruition of acquaintance with God. He did not falter in the storm at sea, in the presence of disease, at the tomb of his friend, or in overcoming the belief of death in his own tomb. In the marginal note at the commencement of the first chapter of John's gospel (Rev. Ver.)

Digitized by Google

it is written: "That which hath been made was life in him; and the life was the light of men. And the light shineth in the darkness; and the darkness overcame it not." Could there be a more beautiful description of healing, or a more simple one?

Life, immortality, and infinite Love, the kingdom of God, seem very far off, very unreal, in the experience of mortals today. One's eyes and ears and thoughts are constantly receiving intimations that hatred and its effects, death and destruction, are the rule; that instead of the "last enemy" being overcome, death is the means through which men are to overcome their enemies and gain safety and dominion. But in the midst of this seeming confusion and carnage he whose ear is attuned to Truth hears the loving admonition: "Acquaint now thyself with him, and be at peace: thereby good shall come unto thee. Receive, I pray thee, the law from his mouth, and lay up his words in thine heart . . . then shalt thou have thy delight in the Almighty . . . Thou shalt also decree a thing, and it shall be established unto thee . . . When men are cast down, then thou shalt say, There is lifting up; and he shall save."

The world needs Christian Science today; but it will not be found by those who are seeking only surcease from physical pain or the solution of personal problems, and who are adulterating the declarations of Truth with the beliefs of "mine" and "thine," the beliefs of mortal sense which are the progenitors of fear and its cohorts. The only thing that will ever demonstrate the kingdom of heaven in our midst is for each member of the human family to be transformed by the renewing of his mind, transformed into the image of God's dear Son. Our Leader epitomizes the process when she tells us it must be "by the translation of man and the universe back into Spirit" (Science and Health, p. 209). Christian Scientists know what it means to be transformed by the renewing of the mind; they understand the possibility of being translated into the kingdom of God, where health and harmony are realized as the normal state of man as God's likeness.

✧

One Common Foe

NATHANIEL J. BUSKIRK

Mortal mind's tendency to personify both good and evil, shows itself in the prevalent habit of humanity to conceive of its friends and enemies as certain individuals, sects, or races. From the perspective of a material viewpoint it often becomes an absolute conviction that individuals or groups of persons have the inherent power either to confer happiness upon us, or to deny us the conditions which would make for the enjoyment of life's good things. The degree in which this factor holds good, however, is determined by the attitude of the individual consciousness toward it. In other words, the effect of others' actions on each person's happiness is supposed to be governed by the law of mortal mind, and the influence of immortal Mind upon the situation is overlooked. The perfect spiritual consciousness contains within itself all that is requisite for its peace and contentment, and by reason of this is undisturbed by the manifestation of any form of error on the part of another.

It should not be so construed, however, that the need for an impersonal sense of good and evil should make us shun the company of our friends and associates as useless factors in the working out of the various problems of life. Through social intercourse and the intermingling of people much good comes to mankind. An instance of this is found in the church service. Christian Scientists recognize that while good manifests itself through persons, yet the cause for the manifestation lies wholly with divine Principle; and similarly, while evil shows itself in the thoughts and actions of individuals, its nature is found in the last analysis to be impersonal. In confirmation of this Mrs. Eddy states concerning evil, "It is neither person, place, nor thing, but is simply a belief, an illusion of material sense" (Science and Health, p. 71). This falsity originated in the carnal mind, which St. Paul tells us is "enmity against God."

No one person or group of persons originated evil, for it is essentially impersonal in its nature. To use a mathematical illustration, let us figuratively place all the different ideas of God, or good, as numbers in the science of mathematics, and analyze the mode of procedure of the operation of that science and the relation of the numbers to the underlying principle of mathematics. By the proper grouping of certain numbers in different relations to one another, valuable and various problems are solved correctly and good results follow.

The mathematician fully understands, however, that the solution of problems does not originate within the numbers themselves, nor is it contained within them, but that the result is obtained by the application of the principle of mathematics through its numbers. In a similar manner mankind should interpret the good things which come to them continually as coming from divine Principle, and so should seek to appropriate more of the understanding of this primal, absolute, and final cause of existence, in order that more abundant blessings may be bestowed on humanity. By thus gaining and applying the understanding of God as our provider and friend, the pitfalls of personal contagion are evaded. Nothing is more pernicious to spiritual growth than personal contagion, and so important is it that mankind should be warned against it, that Mrs. Eddy has written a pamphlet entitled "Personal Contagion," of which the keynote is the admonition to place reliance upon Principle and not upon human personality.

Ever since mortal man ate of the tree of the knowledge of good and evil, material sense has in belief been operating in the mortal thought of all peoples. It is the arch-enemy of all nations as well as individuals, and is the obstructer of that which abundantly blesses mankind, namely, spiritual sense. Concerning the deceitful nature of material sense Jesus has said, "He is a liar, and the father of it." Indeed, this enemy's supposed powers of deceit are so skilfully constructed that the majority of people do not even recognize the adversary, but believe it to be a friend. Thus, by being ignorant of the identity and nature of their one and only enemy, mortals imagine that they have enemies many, and continue to fight the false conceptions of their supposed adversaries.

One of the clearest and most forceful portrayals of the complete refutation of this arch-enemy's claims, is to be found in the Biblical story of Joseph during the time of his servitude under Pharaoh in Egypt. All Bible students are familiar with this story, and seen in the light of the metaphysical fact involved, its significance is one of far reaching and deep importance to mankind in the working out of the inharmonious conditions due to mortal thought.

It will be recalled that Joseph was deprived of his inheritance by his jealous brothers and sold into captivity. From the outset of his experience the boy was indeed a true soldier of God, for he wrought out in his own consciousness the problem of existence, and by clinging steadfastly to the idea of God, good, as his only life, gained the victory over the material senses. That no person or persons, or combination of circumstances, could deprive him of his God-given heritage,

Digitized by Google

namely, spiritual sense, was the substance of his demonstration. No action of his brothers could rob him of his priceless heritage, the abiding consciousness of God, good, which he retained under all conditions. Even while living in the position of a servant in the house of Potiphar he did not need to think of himself as serving Potiphar, but as directly serving God, and so his work took on the inspiration of spiritual service. Let others believe, if they chose to do so, that matter and its possession, that place and power constituted happiness; for himself he would prove by his service that God is the real life of man.

What a priceless gem of thought is this which we as Christian Scientists have for our heritage! The crowning climax of Joseph's demonstration comes when Pharaoh, having found his material so-called intelligence of no avail, called in Joseph to interpret his dream of the famine. Is not this incident prophetic of the ultimate triumph of divine Mind over mortal mind? By clinging steadfastly to God, all obstructions of mortal thought were destroyed for Joseph, as they must be for all who follow the example of his courage in denying the one common enemy, material sense, and in continually affirming God's allness.

Heavenly Harmony

MAY POMEROY GRAVES

On page 304 of Science and Health Mrs. Eddy says, "Harmony in man is as beautiful as in music, and discord is unnatural, unreal." The work of a great orchestra has always been to me deeply impressive and uplifting. I was taken to concerts of this character when too young to analyze the effect of the music upon myself, but I always felt that it was some beautiful and holy influence, and sometimes in childish fancy I used to think that the music was a message from another world, a world wholly apart from material associations.

As I grew older I was taught to listen to the different themes and motives, so closely interwoven and yet so distinct, brought out first by one set of instruments and then by another, and to watch closely the harmonious construction of the whole from these various parts. After a while it was no longer a mysterious language, but one with as distinct a message as any words could have. It is sometimes said that only songs are helpful because of the beautiful words, but I feel sure that all those who truly listen will hear the message of harmony in instrumental music as well.

At a recent concert I was impressed with the fact that in such a perfect organization each member was necessarily so trained that he was or could be a soloist, and yet he was willing to subordinate personal achievement to the harmonious working out of the whole. Each man too might easily have his own conception of how a certain thing should be interpreted, but imagine for one moment the chaos resulting from independent action in such a case. Suppose, for instance, that sixty or seventy men were following the baton, and one should not approve the special interpretation being given a Beethoven symphony but insist upon giving expression to his own views: we can readily see that the harmonious concerted action of the others would be greatly marred, if not entirely lost. I have closely watched the men of a great orchestra subordinating personal opinion that the work of the whole might be perfect; playing conscientiously as it had been interpreted for them, even when they might not quite understand, but always following the conductor that they might not miss any fine points, and I have thought how many lessons the Christian Scientist might learn from such concerted action and subordination of self.

Our dear Leader, Mrs. Eddy, conducting us away from personal views and human opinions, has interpreted for us the way of life, beautifully, harmoniously, in accord with divine Principle, and yet are we not sometimes tempted by personal sense to think we know a better way? Are we always willing to keep our eyes on the baton, to subordinate self and work together in perfect accord, that the symphonies of divine Mind may be made clear to human consciousness? Should personal sense undertake to tell us that one was no longer willing to work quietly in a humble place with no "solo parts," we can remember that there is in Christian Science no place for self-aggrandizement, but an unceasing demand for purity of thought and unselfish devotion, even if it can only be expressed by regular church attendance and daily living. No matter how humble a position one may fill, if he is playing his part in loving obedience he is helping to bring out the spiritual harmony which will eventually need no mere words to interpret it.

In "The First Church of Christ, Scientist, and Miscellany" (p. 189) Mrs. Eddy says: "The silent prayers of our churches, resounding through the dim corridors of time, go forth in waves of sound, a diapason of heart-beats, vibrating from one pulpit to another and from one heart to another, till truth and love, commingling in one righteous prayer, shall encircle and cement the human race."

Waters from a Rock

R. STANHOPE EASTERDAY

One of the fundamentals of Christian Science, namely, the fact that Spirit and not matter is substantial, came very vividly to the thought of the writer while he was sitting one summer day in the shadow of a great rock on the Massachusetts coast. The rock was so hard and enduring that it has effectually withstood the stupendous pounding of the forces of the deep during perchance thousands of centuries. This recalled an incident of healing which it was the great privilege of the writer to experience a few years ago while in the midst of the surroundings of our Leader's home on Chestnut Hill.

Just prior to a meeting of the state committees on publication in Boston at the time, he was suffering from a physical condition that was extremely distressing and that was of such a nature as to induce harassing fears of malignant development. Throughout the inspiring period of the sessions there was, despite his humble hopes to the contrary, no perceptible manifestation of relief. Finally, on the concluding day of the meeting he was invited by a local member of the Christian Science church to ride with him to Mrs. Eddy's home, and on arriving there was accorded the privilege of a stroll in the gardens while awaiting the time for returning.

Approaching one of the gigantic boulders that dotted the grounds, the writer gave it an inquisitive prod with his cane and bethought him as usual of the interesting evidence in such formations of the apparent stability of "mother earth," and of their mute record of the ponderous unfolding of the cycles of time. Almost instantly, however, there came the thought that the woman who was in the house on that hill had revealed to us the astonishing but incontrovertible fact that this seeming matter is not substance at all; that Spirit is the only real substance and the only causation. With this thought there came immediately an unspeakable sense of peace, which in the course of an hour unfolded into the realization of complete freedom from suffering. Like the woman who had "touched the hem" of the Master's garment, he too was healed.

Slowly the fact has since unfolded that this was none other

Digitized by Google

than a veritable "wilderness" experience; that again God had turned "the flint into a fountain of waters," bringing cleansing and healing. Furthermore, in this experience there had been again established for him, beyond all contravention, the affirmative answer to the age-long and well-nigh universal doubt, "Can God furnish a table in the wilderness?" Thus the comforting assurance has unfolded to consciousness that the real significance of the term "wilderness," as we find on page 597 of Science and Health, is not alone "loneliness; doubt; darkness," but that this term implies as well, to every honest heart, "the vestibule in which a material sense of things disappears, and spiritual sense unfolds the great facts of existence."

In thus sharing this quickening experience with others, the writer is reminded of the fact that such spiritual compass of the divine possibilities is, like true worship, confined to no time and to no spot. The invitation is, "Ho, every one that thirsteth," and our Leader's benign affirmation in corroboration thereof (Science and Health, p. 13) is a clarion note of hope to all humanity: "Love is impartial and universal in its adaptation and bestowals."

Law Understood

ELLA C. WILTSHIRE

WHILE visiting a town thousands of miles from my native home, I became ill. The symptoms which appeared were those generally due to change of climate, food, and living, and the trouble seemed obstinate and unwilling to yield to the understanding of Truth which had been gained through the study of Christian Science. One afternoon, when I was feeling very ill and rather despondent, a friend came to visit me. The remark that I wished I could uncover the error which seemed to be making me ill and weak, brought forth the reply that there was a so-called law which said it always took a year for strangers to become acclimated. Later in the evening, when alone, I took the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, and started to know the truth about law. The subject was an intensely interesting one, and time and place were forgotten as I read and pondered the wonders of God's laws as revealed to humanity in Christian Science.

When I arose to go to bed every symptom of illness had entirely vanished, and in the place of erroneous thinking was a deeper understanding of spiritual law, a fuller realization of God's infinite love to man, and sincere gratitude and thankfulness for the freedom which always comes when rightly sought. Joy had taken the place of discouragement, because I had proved that a knowledge of divine law, which is universal and ever present, had completely annihilated the false sense of law, which has no power to harm God's child when seen in the right light. I am very grateful for every manifestation of good, for every expression of divine Love to man, and as I grow in the knowledge of that Love which knows no evil, I find there is no limitation to the activity of Love, and no resistance to the operation of that law which blesses all who come within its divine influence.

Words seem inadequate to express my deep gratitude for our beloved Leader, Mrs. Eddy, whose pure and unselfish life was an emblem of sacrifice to the good of humanity. While giving us the opportunity to express publicly our thanks, she at the same time insisted that right thinking and right living alone are proof of the sincerity of our words. And so I pray that each day may be lived in closer communion with God, and every hour be more consecrated to active service in divine Love.

Selected Articles

[Editorial in *Cedar Rapids* (Iowa) *Republican*]

Our good friends the Presbyterians want one afternoon a week of public school time to be devoted to religion. Each denomination is to teach its own creed, including, we take it, Mohammedanism, if there are any of that faith living in a community, or voodooism,—anything that any one may call his religion. Just so a man believes it, that is the thing that is going to "save" him. Well, the rest of us have no quarrels with them on this, but we may be permitted to suggest that the more the churches leave the public schools alone the better it will be for the schools. Too many cooks are apt to spoil even that broth, popular as it is and well as it has supplied the needs of the dissemination of universal education. We all realize the need of good, even stern, moral training, and the public schools are hardly deficient in that now; and in the schools generally even the spirit of religiousness, without reference to any particular brand of belief, is more or less imparted and inculcated.

But we would be inclined to be afraid of the consequences if each denomination is given an afternoon to work on its section of pupils in the school hours of the week. Even the little boys and girls may be struck with the incongruity of the situation, and in that way the effort may do more harm than good. We should also bear in mind that religion nowadays, at least among the Protestant peoples, has become largely an elective system, each one taking what seems to suit his choice—and let us hope that by whatever road they elect to travel they will reach the home of the blessed at last.

[Judge Clifford P. Smith in *Urbana* (Ohio) *Citizen*]

The attempt of a certain minister to separate Christian Science from Christianity, as reported in the *Citizen*, was necessarily a failure, because it consisted mainly of misrepresentations. Indeed, Christian Science cannot by any means be separated from the religion of Christ Jesus, for they are substantially identical. No matter what conflict there may be between Christian Science and any sect or creed, there is a complete consistency between Christian Science and the divine teaching recorded in the four gospels.

The statement of this preacher that Christian Science discards a divine Christ, has no basis in fact. This religion is thoroughly Christian, and it teaches that the Christ is divine. To quote Mrs. Eddy's words on page 26 of Science and Health: "This Christ, or divinity of the man Jesus, was his divine nature, the godliness which animated him." In this connection I am reminded that Paul spoke of the "meekness and gentleness of Christ." When an avowedly Christian minister speaks disrespectfully of Mrs. Eddy, the honored Leader of a world wide religious movement, he does not prove anything against her, but he does cast a severe reflection on his own credentials. The fact that Mrs. Eddy is loved and revered by a great company of grateful people who are no less sincere than he is, should give this gentleman pause, and it should move him to consider whether they do not have ample reasons for their gratitude. While he is taking a second thought (or possibly a first one) on this subject, he would do well to consider whether Christian Scientists have not the same right to their religion as he has to his, and whether their rights as well as his do not include the right to freedom from such an attack as he has made and caused to be reported.

Another reference to Christian Scientists in this reverend gentleman's discourse was as follows: "If they claim that there is no sin, then there is no need of a Saviour." The

Digitized by Google

attitude of Christian Scientists toward sin is the same as that of him who spoke of evil as a lie and overcame it accordingly (see John viii. 44, 46). But since, as John said, this lie "deceiveth the whole world," a savior from it is evidently needed, and in Christian Science Jesus is regarded as the only person who should be called our Saviour. Mrs. Eddy has not in any wise offered herself as a substitute for Jesus.

The teaching of Christian Science that God is All, does not make Him responsible for evil; on the contrary, it excludes evil from any claim to reality. If the teaching of Christian Science that God is All makes Him responsible for evil, as this gentleman has asserted, so does the declaration, "All things were made by him; and without him was not any thing made that was made," and other Scriptural passages to the same effect. Truly considered, however, the Christian deduction from the Scriptural premise thus quoted is not that God is responsible for evil, but that evil is a lie, an error or illusion, and therefore can be destroyed. The practice of Christian Science is proving daily that such is really the case. In this situation the ministers of other churches, instead of firing at Christian Scientists, would better join them in overcoming the common enemy.

✧

[Samuel Greenwood in *Nanaimo* (British Columbia) *Free Press*]

If your correspondent in his recent lecture said anything that is true about Christian Science, I am glad of it. Certainly what the public needs is to be told the truth about this subject, but this is not likely to be had from its opponents.

The lecturer declares the source of his information to be a book written by "a distinguished member of the Boston bar," and upon this person's shoulders he lays the responsibility for his false utterances concerning Christian Science and Mrs. Eddy. That this author is a distinguished lawyer is evidently supposed to settle the question, but it is well to know that other distinguished lawyers have spoken and written from the opposite point of view; so there you are. It will be remembered that a much more distinguished member of the American bar than the one your correspondent refers to, lectured throughout the country a number of years ago, his published lectures comprising many volumes, and all in the endeavor to prove the Bible a mistake and Christianity a failure; yet the sale of the Bible has gone on increasing ever since. The effect of the present lawyer's utterances is likewise lost in the fact that the demand for the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, increases every year.

The chief claim to distinction for the author whom your correspondent takes as his authority, would appear to rest upon two noted lawsuits that he conducted against Mrs. Eddy, and in both of which he was badly defeated. Since that time he has devoted much of his attention to a campaign of misrepresentation and abuse directed against Mrs. Eddy, and against the Christian Science movement, which she founded. His statements have precisely the same value regarding Christian Science that the statements of Colonel Ingersoll had regarding the Bible and the Christian religion, —just that much and no more.

Your correspondent seems to be unduly exercised because Christian Scientists sometimes receive payment for their services. Such criticism comes with poor grace from one who receives a salary for preaching and praying, with the ostensible object of healing sinners. He scouts the idea that God will heal the sick through the prayers of a Christian Scientist, because the latter is worldly enough to accept remuneration for his time; but how, indeed, does he think that God will heal the sinner through his own prayers when he is guilty of precisely the same thing? It will surely be soon enough to rail against Christian Science practitioners for receiving fees for their services, when he and other clergymen are spiritual enough to preach and pray gratuitously.

Your correspondent acknowledges that it is "a blemish on modern Christianity" that it does not accomplish more healing in answer to prayer. What then is the animus of his attacks on Christian Science, which is earnestly laboring, and with some measure of success, to restore this healing element? His attitude is strongly suggestive of the Master's words to the scribes and Pharisees, "For ye neither go in yourselves, neither suffer ye them that are entering to go in." Instead of this, he should in all honesty be thanking God that there is a church in this age which is at least striving to obey the Lord's command to heal the sick.

✧

[Robert C. Love in *Jennings* (La.) *Times-Record*]

That Christian Science is both Christian and scientific is amply attested by reason of the fact that it is a revival of primitive Christianity. Its doctrines are based upon the teachings and works of Jesus the Wayshower as recorded in the Bible. That it is Christian is borne out by the fact that it is proving to the unbiased investigator that Jesus' promises are capable of present-day demonstration, are true, practical, and afford physical and moral healing in precisely the same way it was accomplished in the first three centuries of the Christian era. Whatever is scientific, as pertaining to God, must necessarily be invariable, orderly, and operate in accordance with law.

The healing of sickness, sin, and death by Jesus was in strict accord with the law of God and entirely divorced from human effort or means, for he declared that he came to do the will of the Father, and promised benighted humanity, "He that believeth on me, the works that I do shall he do also." That this was possible is attested by the healing of sickness and sin, and even the raising of the dead, for three hundred years following the crucifixion. Then, as the history of the world reads, this part of Jesus' ministry was no longer practised until Mrs. Eddy discovered the way in 1866.

The first four gospels of the New Testament set forth the life and works of Jesus. More space is devoted to his healing work than to any other thing, and even a casual reading of Mrs. Eddy's writings will show that the teachings of Christian Science are in strict accord with the Scriptures, and demand absolute and radical reliance thereon. Christian Science differs from other religious teachings because of its acceptance of the literal and whole commands of the Master to "preach the gospel" and "heal the sick."

In arriving at a definite understanding of God, Christian Science interprets and applies the first commandment to mean that God is infinite, supreme, the creative Principle or intelligence of the universe, which forms, governs, and protects all within the realm of existence. In order to be eternal His very nature and law must be harmonious. In the order of like producing like, everything goes forth after its kind. Thus it will be seen that Love could only produce the effects of love, and operate as protection, guidance, and helpfulness. Truth could only impart infinite knowledge, correct, adjust, and rectify. Life could only be expressed in activity, energy, existence, and so on. God to be Spirit could not be corporeal, or dimensional, or humanly outlined; therefore in differing with our critic on the question of God as a person, Christian Science adheres to the individual nature, the oneness of God, which contrasts with the human sense of personality and enlarges our conception of the Supreme Being. Now if God is accepted as wholly good,

Digitized by Google

and the first chapter of Genesis informs us that everything that He has made is "very good," it must be the human concept of God which is changeable, and not God. This is precisely what Christian Science teaches, and whatever of discord is experienced by mankind is a direct result of ignorance or intentional disregard of His commands.

In the course of human events it is recognized that enlightenment based upon the proper diffusion of knowledge elevates society. To assume that one must gain a knowledge of evil in order to appreciate good, is as inconsistent as to contend that it is necessary to wade through mud and then clean it off to appreciate clean shoes. It is a familiar axiom that "cleanliness is next to godliness." The way to obtain freedom from sin is to cease sinning. Salvation means freedom from evil, and is essentially a gaining process,—the acquiring of good, the giving up of evil. To indulge sin to any extent incurs the penalty for wrong doing. As sin and righteousness are opposite in every way, it requires no argument to understand that immorality never touches the hem of the garment of divine Love, and to assume that Christian Science encourages or permits the slightest departure from the highest standard of right living, both with regard to human relationship or wedlock, is to be guilty of the grossest disregard of facts. Christian Science inculcates the highest ideals of morality and right living. It demands purity of thought, elevates mankind, and is destined to make them too good to be sinful or sick.

There is nothing new in the stock argument advanced by our critic regarding what Mrs. Eddy has written on the subject of matter. According to natural scientists, matter has been explained by explaining it away. Christian Science does not deny that matter is something which the human mind calls substance, and which it theoretically endows with intelligence and power. In denying the reality of matter Mrs. Eddy has shown that all there is of matter is the human concept of it. In an absolute sense (that is, from the basis of reality, or whatever is imperishable, indestructible, and permanent), matter is unreal. Relatively speaking (that is, from the testimony of the human sense of things), matter seems real. The human sense, or carnal mind, Paul declared, "is enmity against God." Recognizing the deceptive nature of the material senses, he declared that "to be carnally minded is death," but, he added, "to be spiritually minded is life and peace." He further admonished, "Walk in the Spirit, and ye shall not fulfil the lust of the flesh," for one is contrary to the other.

✧

[Thorwald Siegfried in *The Spokesman-Review*, Spokane, Wash.]

A recent issue reported the establishment by a clergyman of a movement "involving mind control over body," known as a school of "Applied Truth Science." In the preface to the interview you say that it "is in line with the Christian Science movement." The endeavor to control affairs by exercising the human will is as old as the necromancers denounced in the Old Testament. Hence it may not safely be assumed that any new movement for "mind control" is a departure from well known hypnotic processes, even though the purpose may be to use them for benevolent ends. Benevolent purposes cannot bring healing or peace by using the mind of mortal man, of whom the Bible says, "Every imagination of the thoughts of his heart was only evil continually."

To be "in line with the Christian Science movement" means to coincide and be identified with it, for no other reason than that Christian Science is what the definition of its name implies, accurate knowledge of absolute truth; hence it cannot be diluted, subdivided, imitated, or compromised. And because true Christian Scientists are intent on achieving knowledge of the truth, there is no good reason why any one having a similar desire should not work with them; indeed his progress is accelerated by doing so. That is a reason for the Christian Science church being and remaining as unique and distinct from other organizations as Christian Science itself is different from any humanized concept of truth.

✧

[H. S. Hughes, Jr., in *Madison* (Wis.) *Democrat*]

Jesus made much more of his works than does our critic, for when John sent unto him asking, "Art thou he that should come, or do we look for another?" Jesus replied by recounting his works; and again, after his resurrection, he defined what it was to believe by stating: "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

There was a time, happily fading into distance, when a confession of faith or belief was practically all religion had to offer, until Mrs. Eddy discovered the spiritual thought actuating Christ Jesus, named her discovery "Christian Science," and in her divinely inspired text-book, "Science and Health with Key to the Scriptures," elucidated step by step the life and works of him who said, "I am the resurrection, and the life: he that believeth in me, though he were dead, yet shall he live." He who has turned from doctrines unfed, from material means unhealed, he who was "dead in trespasses and sins," finds in Mrs. Eddy's writings spiritual illumination which nourishes, renews, and heals both mind and body, making religion a matter of practice, not profession, as attested by thousands the world over. As Mrs. Eddy has said (Science and Health, p. 81), "It is the living Christ, the practical Truth, which makes Jesus 'the resurrection and the life' to all who follow him in deed."

SAMUEL JOHNSTONE MACDONALD

THE burghers of the town today
Choose one their civic mace to sway;
And more than one believes that he
Himself the favored one shall be.
Yussuf Ben Orem too has bowed
To this belief, and hopes the crowd
May favor him, that he may grace
With leadership discreet the place.

The poll is closed, the choice is made,
And many fond ambitions fade.
Yussuf Ben Orem wakes to find
The people to his merits blind;
And that he knew but little skill
To mold his fellows to his will,
To blazon high his beaming name,
And win the victor's proud acclaim.

What then, he asked, has been my aim?
Self-seeking, power, pride, and fame?
If so, there's blessing in defeat,
And open-eyed the truth I'll meet.
Instead of power for self, or place,
I'll strive self-seeking to erase,
And leave to Love alone to say
When growth my labors shall repay.

Editorial

To the Glory of the Father

In the seventh chapter of John's gospel our Master is quoted as saying to the Jews who sought him at the feast in Jerusalem: "My doctrine is not mine, but his that sent me. If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself. He that speaketh of himself seeketh his own glory: but he that seeketh his glory that sent him, the same is true, and no unrighteousness is in him."

It must have been evident to those who were in close touch with Christ Jesus, as well as to those of his hearers who while in less intimate relationship nevertheless heard him and understood him, that it was not his aim to accentuate or exalt his own personality. On the contrary, he took great care to tell them that it was the Father who did the works, and that he himself was worthy of belief only as he reflected God. It was not his purpose to exalt himself, but rather to exalt the message which he bore to the world, and to prove by his works that this message was the revelation of God to humanity. What he practised and preached was the "Science of God and man;" and of this Science our Leader has written on page 52 of "Unity of Good": "This Science of God and man is the Holy Ghost, which reveals and sustains the unbroken and eternal harmony of both God and the universe. It is the kingdom of heaven, the ever-present reign of harmony, already with us. Hence the need that human consciousness should become divine, in the coincidence of God and man, in contradistinction to the false consciousness of both good and evil, God and devil,—of man separated from his Maker. This is the precious redemption of soul, as mortal sense, through Christ's immortal sense of Truth, which presents Truth's spiritual idea, *man* and *woman*."

So, too, the Christian Scientist who is giving out the message he has received through the teachings of Mrs. Eddy, is not exalting himself, is not claiming anything by reason of his own person or his own accomplishments, but is gently, wisely, and meekly regulating his conduct by the words and the works of Christ Jesus, works which were always done to the glory of the Father. The healing work which the Christian Scientist is doing is recognized by him to be the demonstration of the "Science of God and man," which is common to all and not confined to himself or to any other person. He is inspired by the knowledge that God is All, that He is the only creator and protector of man; and to the extent that personal sense is destroyed and the fatherhood and motherhood of God is demonstrated, to that extent is the brotherhood and equality of man brought to light and he is blessed. "Hear, O Israel: The Lord our God is one Lord."

Archibald McLellan.

Compulsory Health Insurance

What a word wherewith to rejoice mankind—this word health, intimately associated with its kindred words hale and whole! What buoyancy and beauty, what symmetry and wholesome peace lie enfolded in this word, and yet how little it is generally understood! Every one wants health, therefore no one should need be compelled to seek it; but, unfortunately, while everybody believes in health, all are not agreed as to its real meaning.

Trying to make people healthy is like trying to make them happy. The compelling force is quite superfluous, for literally all mankind are only too willing to be both healthy and happy, if they only knew how. Not wilful compulsion but divine impulsion is destined to bring health to humanity, and the way to this appears through Christian Science. Therefore compulsory health presents a curious paradox, for it implies an attempt to force people to be that which they are already eager to become. Obviously a misunderstanding of some sort intervenes, and Christian Science shows this clearly to be the popular misconception as to what actually constitutes health.

It is no exaggeration to say that health is quite generally regarded as a purely physical condition, to be maintained or restored by material means,—possibly by dieting, or bodily exercise, or change of environment, or the administration of remedies which in most instances are recognized poisons. It would be a surprise to the proverbial average person to be informed that in establishing health the very last thing to be considered is the material body itself; that the more we can be absent from the body, the surer we are to cure it of its various maladies or to keep it wholesome and active. Yet Christianity through Paul has been speaking to its followers for centuries of the benefits of being "absent from the body" and simultaneously "present with the Lord," and the Science of Christianity proves such absence to be beneficial to both morals and bodily health. Mrs. Eddy writes on page 478 of Science and Health: "That body is most harmonious in which the discharge of the natural functions is least noticeable. How can intelligence dwell in matter when matter is non-intelligent and brain-lobes cannot think?"

It is evident, therefore, that the problem of compulsory health insurance is fundamentally a religious question, not to be settled offhand by boards of physicians using material remedies, but by the humble followers of the lowly Nazarene demonstrating the correctness of his teachings when scientifically understood. The sooner the good people who desire to introduce compulsory health insurance into national legislation arrive at the fundamental conclusion that only an understanding of God, the First Cause, can provide this much desired insurance, the sooner will public health become a fixed and blessed fact. Moreover, this same spiritual understanding will automatically prevent disease, and thus do away with the supposed need of elaborate researches into what are regarded as preventive methods. Public opinion is quick to believe in the power of disease over a community through the agency of contagion or so-called germ activity. It has yet to learn the limitless power of prevention and protection resident in right ideas. When the only cause is recognized as Mind and as good, then good ideas are seen to be the natural messengers of health to a community, the angels of heaven, or harmony.

For what in reality is health? Mrs. Eddy answers this question in a way to startle the careless thinker along materialistic lines. On page 339 of Science and Health she writes, "The basis of all health, sinlessness, and immortality is the great fact that God is the only Mind; and this Mind must be not merely believed, but it must be understood." From this statement we may draw the conclusion that the whole process of acquiring, maintaining, or restoring health, and eventually insuring it, is based upon the divine Mind; hence that health insurance is to be established by spiritual and not material means. The reply of Christian Science to those who are agitating the question of compulsory health insurance may be put in the words of the Master, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." To the extent that we breathe the atmosphere of "the kingdom of heaven" our health is insured without compulsion.

William D. McCrackan.

The Fruitless Fig Tree

BIBLE students are sometimes puzzled by the account of the barren fig tree which was withered by Jesus' rebuke, but Jesus rebuked error in whatever guise it presented itself to him. We read that in some cases he rebuked fevers and thus brought freedom to the sufferers; but in the case of the fruitless tree we find a remarkable object lesson, and before considering this, it may be well to look into the parable of a barren fig tree given in the thirteenth chapter of Luke.

The record says that the owner of the vineyard "came and sought fruit thereon, and found none." Then we read that he said to the vine-dresser, "Cut it down; why cumbereth it the ground?" Immediately following this teaching, which was given on the Sabbath day in one of the synagogues, Jesus saw before him a woman who "was bowed together, and could in no wise lift up herself." We read that Jesus called her to him and declared the truth for her, and that she was immediately "made straight, and glorified God." We are also told that the ruler of the synagogue was very indignant because Jesus had healed the woman on the Sabbath day, for he was evidently keen witted enough to see that such healing discredited a merely formal service. On page 151 of "Miscellaneous Writings" Mrs. Eddy says, "God is a consuming fire," and to this she adds: "Through the sacred law, He speaketh to the unfruitful in tones of Sinai: and, in the gospel, He saith of the barren fig tree, 'Cut it down.'"

This brings us to the consideration of the incident which is often referred to as the cursing of the barren fig tree. If we compare the account found in Matthew xxi, verses 12-22, with that in the eleventh chapter of Mark's gospel, we shall see that after the Master's triumphal entry into Jerusalem he went up to the temple looking for the spiritual fruit with which he had been feeding the hungry sense of humanity. But he failed to find it there, and so he drove out of the temple the representatives of mortal mind, after declaring it to be the house of prayer; then we are told that "the blind and the lame came to him in the temple; and he healed them." We then read that he left the city, but on his way back in the morning he was hungry, and seeing a fig tree near the wayside, he went to it and found only leaves thereon. It was then that he pronounced its doom by saying, "No man eat fruit of thee hereafter forever."

Those who are unacquainted with the fig tree, especially as grown in the Orient, are unaware that in its proper order the fruit is developed before the leaves; so that when Jesus saw the tree covered with leaves he had every reason to expect the ripened fruit, although it was early in the season; but as in the case of the temple at Jerusalem, which had forms and ceremonies enough, there was none. There can be no question that Jesus regarded this barren fig tree merely as a type of materialistic religion, which he had condemned when he said, almost at the beginning of his ministry, that the true worshipers must worship God "in spirit and in truth." When he declared against the barren fig tree, therefore, he really pronounced sentence upon all that fails to respond to the spiritual law of growth and bring forth fruit.

This lesson is incomplete for us unless we read the Master's words to Peter on the day following the episode of the fig tree. It was Peter who called attention to the withering away of the tree, and Jesus went direct from this to that which is so vital for every one of us at the present time. He said: "Have faith in God. For verily I say unto you, That whosoever shall say unto this mountain, Be thou removed, and be thou cast into the sea; and shall not doubt in his heart, but shall believe that those things which he saith shall come to pass; he shall have whatsoever he saith." To the Christian Scientist this means that whatever manifestation of error may seem to hinder the full expression of harmony, it must be rebuked with the understanding which our Master possessed and which is revealed in Christian Science; and as this is done we have the assurance that every mountain of error will vanish before the divine word.

ANNIE M. KNOTT.

Notice

AFTER eighteen years of faithful service as a member of the board of trustees of The Christian Science Publishing Society, Mr. Thomas W. Hatten has asked to be relieved of this duty, that he may devote all of his time to Christian Science practice. Mr. Edward A. Merritt has been elected as Mr. Hatten's successor.

Excerpts from Letters Received

"IN grateful appreciation of the many benefits received from Christian Science, as taught by and exemplified in the life of our Leader, Mrs. Eddy, the board of directors of First Church of Christ, Scientist, of Tallahassee, Florida, encloses herewith a check for five hundred dollars ($500). The board desires to leave the choice of the two movements, recently set forth in the article 'Looking Forward,' to which this money shall be applied, to the discretion of your body."

"At a recent meeting of the members of Tenth Church of Christ, Scientist, of Chicago, it was unanimously voted to devote the collections of Sunday, Dec. 31, 1916, to the Christian Science Benevolent Association, said collection to be expended as the Association sees fit; and many were the expressions of gratitude for the splendid opportunity afforded to the field in such a demonstration of universal cooperation.

"We are sending this initial contribution of eighteen hundred and four dollars and twenty-six cents ($1804.26), of which sum the Sunday school contributed two hundred and twenty-six dollars ($226), as a symbol of the deep welling joy which is filling the hearts of Tenth Church at being thus privileged to assist in the great work."

"At the annual meeting of First Church of Christ, Scientist, of Lynn, Massachusetts, it was voted that the entire building fund of this church be sent to the Board of Directors of The Mother Church, in response to the call appearing in the *Christian Science Sentinel* of Dec. 2, 1916, to be used as they see fit; and that a letter be sent expressing the loyalty of First Church of Christ, Scientist, Lynn, Massachusetts, to the Board of Directors of The Mother Church and to the cause of Christian Science.

"In accordance with this vote, I enclose herewith check for four thousand nine hundred seventy-six dollars and forty-six cents ($4976.46), which is lovingly sent you to be used as you deem wise.

"I hereby convey the loyalty of the members of this church to the Board of Directors of The Mother Church, and to the cause of Christian Science, and express their sincere gratitude for the privilege which has been afforded them."

"At the semiannual business meeting of First Church of Christ, Scientist, Pittsburgh, Pa., it was unanimously decided by this church, that in accordance with the opportunity given by The Christian Science Board of Directors of The Mother Church, a sum of not less than ten thousand dollars ($10,000) be pledged for the Christian Science Benevolent Association and the purchase of real estate for The Mother Church, such sum to be sent to The Christian Science Board of Directors to be used by them at their discretion for these two purposes. Contributions will be forwarded as received."

Among the Churches

Current Notes

HARVEY, ILL.—The Christian Science Society of Harvey held its first meeting in its new building at the corner of 153d Street and Center Avenue on Wednesday evening [Nov. 1]. This society was organized in February, 1909, and its meetings were held in a small room on the second floor of the Harvey Land Association Building until the summer of 1910, when larger quarters, including a reading-room, were secured on the first floor of the same building. In December, 1914, it was again found necessary to seek other rooms, and the first floor of the new telephone building on Center Avenue was rented. Here the society remained for about a year, when it was obliged to vacate because the telephone company required its entire building. Rooms were then procured in the Masonic Building. At a meeting held in May, 1916, it was thought best to purchase a lot and erect a building to meet present needs. The structure is now completed.—*The Tribune.*

SASKATOON, SASKATCHEWAN, CANADA.—For some time increasing activity in the reading-room has necessitated the Christian Science Society of the city finding more adequate apartments for this department of its work. Quarters have been secured in room 301 of the Standard Trusts Building, corner of Third Avenue and Twenty-second Street.

Saskatoon Star.

ATHOL, MASS.—Members of First Church of Christ, Scientist, announced today [Nov. 15] that they have planned to build a church in Athol. It will be on the corner of Beacon and Taylor Streets, the front part of the structure facing Beacon Street. The lot was bought for four hundred dollars.

Worcester Telegram.

WARRENSBURG, MO.—The Warrensburg Home Telephone Company has sold to the local Christian Science Society a lot 50 by 100 feet at the northwest corner of Culton and Miller Streets for two thousand dollars. The *Star-Journal* is informed that the church expects to erect a handsome edifice on the corner north of the government building, to cost about twenty thousand dollars, but work on the structure will probably not start until next spring. Meantime the stone residence on the property will be utilized as a reading-room and gathering place.

Warrensburg Star-Journal.

ST. LOUIS, MO.—Fourth Church of Christ, Scientist, 5569 Page Boulevard, was dedicated yesterday [Dec. 24], though the building, which cost one hundred and twenty-five thousand dollars, was erected in 1910. The congregation was organized Jan. 29, 1908, with one hundred and twenty-seven charter members. Its present membership is three hundred and fifty. The church lot is 140 by 175 feet. The auditorium seats one thousand and the Sunday school room an additional seven hundred.—*St. Louis Globe-Democrat.*

LIMA, OHIO.—First Church of Christ, Scientist, was formally dedicated last night [Nov. 5]. The dedication signifies entire freedom from debt on the new structure, which has been remodeled at a cost of fifteen thousand dollars.

Lima News.

LA JUNTA, COL.—Plans are now being considered for the erection in this city in the near future of a permanent home for the Christian Science organization. The local society owns the vacant lot on the southeast corner of Santa Fe Avenue and Seventh Street, on which the building will be located.—*La Junta Tribune.*

CHAMPAIGN, ILL.—Because of the need of a larger Sunday school room, it has become necessary for First Church of Christ, Scientist, to take further steps toward the completion of its edifice at the corner of Elm Street and University Avenue.—*Champaign News.*

The Lectures

St. Louis, Mo.

The introductory remarks of August Schaper, first reader of Second Church of Christ, Scientist, in presenting John Randall Dunn, who lectured on Christian Science, were as follows:—

Throughout the ages all mankind has sought health, happiness, and peace. There is a conviction in every human heart that to find God would be to gain them. Centuries ago Job said, "Oh that I knew where I might find him!" This longing cry has echoed down the ages, and throughout the world there has been a yearning to know more of God. The students of Christian Science feel that they have found the answer to this momentous question through the truth as revealed in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Correspondence.

Grafton, N. Dak.

A lecture on Christian Science was delivered by Bliss Knapp in the Strand Theater. He was introduced by Mayor Levi Blades, who said:—

Religious thought and conception at the present time are more unsettled than they have been for several centuries. People are not satisfied with old creeds and doctrines. They are afraid of higher criticism, fear landing in infidelity, and in their confusion and uncertainty are in danger of giving up every belief. On the other side there are those who reject everything that seems new, and say and sing, "The religion of my father is good enough for me," not seeing the logical end of this would-be paganism. It would be as reasonable, if they were going on a journey, to go in a Red River cart instead of going by auto or train. If we want the best in material things, is it not as important that we have the best in spiritual? Pilate asked nineteen centuries ago, "What is truth?" and all through the ages men have been asking this question. We have with us today a man who is an expert in these matters, and we shall be glad to listen to his message.—*Correspondence.*

Decatur, Ill.

A lecture on Christian Science was delivered by John W. Doorly. He was introduced by Judge Frederick C. Hill of Clinton, who said:—

It is highly important that right conclusions regarding God, existence, life, eternity, should be entertained by every human being. To the individual unfamiliar with spiritual facts God becomes an externalized being. Existence presents a mystery. Life is limited to the lapse of time between birth and physical dissolution. Eternity is a speculative uncertainty of hope and fear, with the preponderance of thought largely on the side of fear. To the Christian

Digitized by Google

Scientist, God is Love, not merely in theory but in practice; existence is coextensive with Him; Life is unlimited, infinite, eternal, and eternity presents the unfoldment of man in God's image,—eternal unity with Him.

Fifty years ago Mrs. Eddy discovered the eternal facts of being. She proved that man was created, governed, and sustained by divine law; that this law is immutable, available, and can be apprehended and applied by mankind. Her observations and conclusions were based solely upon the omnipotence, omniscience, and omnipresence of God, and her fidelity thereto is fully attested by her life, and is thus expressed to her followers: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought. Let neither fear nor doubt overshadow your clear sense and calm trust, that the recognition of life harmonious—as Life eternally is—can destroy any painful sense of, or belief in, that which Life is not" (Science and Health, p. 495). Through her untiring efforts in behalf of humanity the proof of Jesus' words has been verified: the blind see, the lame walk, the deaf hear, devils are cast out, and the sick recover.

Correspondence.

✧

Cleveland, Ohio

A lecture on Christian Science was given by Edward A. Merritt for Fifth Church of Christ, Scientist. The introduction by Wayne C. Jones was as follows:—

The Scriptures say, "Acquaint now thyself with him [God], and be at peace." The question naturally arises, How can one become acquainted with God? Christian Science is today answering this question by giving us an understanding of the true nature of God and of man's relation to Him, and through this understanding is bringing to humanity the only solution of the problems that have always confronted it. Christian Science, as discovered by Mrs. Eddy, is nothing more or less than the practical application of the Science of Christianity given to the world by Christ Jesus.

Our Master's teaching, when applied according to the rule of Christian Science, heals the sick and reforms the sinner; and through this proof of the healing power of the gospel of Christ Jesus the world will learn that this gospel is as applicable today to meet the needs of mankind as it was two thousand years ago. To gain the true understanding of Jesus' life work, the truths that he taught must be spiritually discerned, for therein lies their only true value. This spiritual understanding is unfolded to us through the teachings of Christian Science, the Scriptures are illumined, and man's birthright as the son of God is revealed, giving him dominion over sin, sickness, and inharmony of every kind.

Correspondence.

✧

Kingston-on-Thames, England

Under the auspices of First Church of Christ, Scientist, a lecture on Christian Science was delivered in the Surbiton Assembly Rooms by John Sidney Braithwaite. Mrs. Thompson, who presided, in introducing the lecturer said that sometimes people had been discouraged, when they began to look into Christian Science, to find the word Science attached to the word Christian. They had been accustomed to think of science as something that was rather cold and technical, and it seemed strange and perhaps a little repellent at first to find they had to attach that idea to their sense of religion. But if they took their ordinary daily life, they would find that their lives were really made easy and comfortable because there were certain rules and forces of natural science brought to bear upon the very simplest things. Now Christian Science came in and said there was a science which would deal with the greatest and most vital part of man's life, and which could reduce these things to the same orderly and harmonious process as they were accustomed to look for in the ordinary material things she had spoken of and many others of like nature. Christian Science not only said but proved by demonstration that that was the real meaning and interpretation of the work and teaching of Jesus the Christ.

The Surrey Comet.

Testimonies of Healing

It was about two years ago that I became interested in Christian Science. Since early childhood I had been an earnest seeker after truth, but although a member of two different churches and the wife of a minister, my experiences were never satisfactory to me. I could not make the things which were designated Christian activities seem real Christian work to me, nor could I be satisfied with the explanations of the passages in Scripture regarding Christian healing. After listening to long and seemingly learned discourses upon such texts, I would find myself more confused and dissatisfied than before; hence it was not to obtain physical healing, but to "know the things that are freely given to us of God," that I took up the study of Christian Science. I knew little concerning its works, and the criticisms heard from the pulpits had been very unkind, but they led me to the determination to find out for myself about this teaching. I brought to the investigation an earnest desire to know the truth, and thank God that in Christian Science it was revealed to me.

I have passed through many seeming trials while endeavoring to follow this straight and narrow way, but divine Love has led me ever onward, and the loving assurance, "Fear thou not; for I am with thee: be not dismayed; for I am thy God," has caused me to see in them only new opportunities to grow in grace and in the knowledge of God, good. They are no longer looked forward to with dread, for "perfect love casteth out fear," and I realize more each day the truth of our beloved Leader's words (Science and Health, p. 494), "Divine Love always has met and always will meet every human need."

Since we have learned to depend upon God alone, we have had many beautiful healings. My eldest daughter, who had suffered much from severe headaches, was permanently relieved through the understanding of another young student of Christian Science. This same daughter had had two attacks of acute lung trouble when a child, and every winter since then had witnessed a struggle with material means against this, to us, dread disease. After we came into Science one absent treatment wrought a complete cure, and there has been no symptom of the trouble since. She has also been healed of a throat affection, an abscess, and a seemingly bad case of sties.

One of my sons had an embedded wisdom tooth. Both dentist and doctor said they could do nothing until the case was more fully developed, yet the boy seemed nearly frantic with pain. A Christian Science practitioner was called, and a few minutes' treatment brought relief. There has been no recurrence of the trouble. My youngest daughter ran a rusty nail into her foot while working in her school garden; but a knowledge of the truth saved her from all discomfort, so that she went about her work and play as usual, greatly to the surprise of her teacher and schoolmates.

I have been healed of blood-poison, rheumatism, neuralgia, cold, and several other ailments. For all these physical healings I am indeed thankful, but they are not to be compared with the spiritual uplift which has accompanied them. I have no words to express my gratitude, and can only say that I desire no greater blessing for my friends, for all mankind, than a knowledge and understanding of the truth that makes us free. I am now sure that Christian Science has come to reveal to us anew this glorious truth.

I used to wonder why people so often expressed their gratitude to Mrs. Eddy, but since reading her biography by Sibyl Wilbur, committing to memory several of her beautiful poems, and studying the Christian Science text-book, "Science and Health with Key to the Scriptures," and some of her other wonderful books, also reading from the periodicals and other literature she has caused to be published, I too am happy to express my gratitude for one so pure and noble. Mrs. Eddy's teachings are leading us back to him who came that we might have life, and that we might have it more abundantly.—Marie Wade, Tillamook, Ore.

About five years ago, when the outlook on life seemed darkest, I took up the study of Christian Science for the second time. I was in bondage to fear, jealousy, sickness, and worry of all sorts. Turning to the twenty-seventh psalm I read, "Wait on the Lord: be of good courage, and he shall strengthen thine heart: wait, I say, on the Lord." I indeed waited with patience for that peace which passeth all human understanding, and can truthfully say I am receiving my reward and feel I have fought a good fight. I never knew God as I do now, for I had other gods; but Christian Science has taught me how to give up all and worship and serve the only true God. The realization of His omnipresence and ever-presence lifted me out of darkness into light. When a dear sister passed on, in a little while the understanding that there is no sorrow in God's kingdom and no separation in Love comforted me.

I am indeed thankful to God, "from whom all blessings flow," and grateful to Mrs. Eddy for showing us the way to work out our salvation,— to live in Life, Truth, and Love. I earnestly hope to understand and live her teachings better from day to day, and to be worthy to be called a real Christian Scientist.— Mrs. G. F. Fuller, Indianapolis, Ind.

I have long wished to avail myself of the privilege of expressing heartfelt gratitude for the sense of protection and peace which Christian Science has enabled me to realize, and therefore have great pleasure in sending this testimony from that part of the field which is at present the scene of "conflicting forces" (Science and Health, p. 96), and wherein I have enjoyed the most wonderful demonstrations.

To mortal sense and from a material standpoint my surroundings could hardly seem more dangerous or inharmonious. During the past ten months I have been engaged as an infantry officer, and for the greater part of this time have been domiciled in the front line fire trenches of the British forces. In the course of my duties I have had to live for several days and nights in some of the most exposed and unpleasant corners, where I and my men were constantly exposed to shell and rifle fire and continued bombardment.

In the worst of these times I have never yet failed to enjoy perfect poise and harmony, and to realize in great measure something of that peace "which passeth all understanding." This I have accomplished through having learned in Christian Science the truth of the psalmist's words, "Power belongeth unto God," also Mrs. Eddy's statement that "to acknowledge any other power is to dishonor God" (Science and Health, p. 228). When my need for peace and harmony has been greatest, I have turned at once in thought to God, divine Principle, and thereby entered through silent prayer and communion with Spirit into "the secret place of the most High."

Thus abiding under the almighty power of God, Life, Love, and Truth, I have been able thoroughly to demonstrate that neither strife nor turmoil can enter that secret place. This has indeed been to me a wonderful blessing. In my daily exercise of knowing the truth I have received never failing help

Digitized by Google

from the ninety-first psalm and from our beloved Leader's exhortation commencing: "Beloved Christian Scientists, keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them. It is plain that nothing can be added to the mind already full. There is no door through which evil can enter, and no space for evil to fill in a mind filled with goodness. Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort. And not only yourselves are safe, but all whom your thoughts rest upon are thereby benefited" (The First Church of Christ, Scientist, and Miscellany, p. 210). "Good thoughts" have indeed shielded me "from the attacks of error of every sort," and all my men, upon whom my thoughts continually rest in these times and places, have been benefited thereby.

Though constantly in the midst of strife (seemingly), I was able to read the Lesson-Sermon daily. I had also continually with me Science and Health, and received the *Journal* and other literature, all of which I was able to enjoy when back in rest billets behind "the lines." For all these privileges I am most deeply grateful. Fear has been entirely banished from my consciousness, and naught remains but an ever abiding peace, for I have learned of the omnipotence, omnipresence, and omniscience of God,—and what is more, have been able to demonstrate them in actual experience.

I look forward to the day when I can express in public speech that which I now do in writing,—namely, my deep thankfulness to Almighty God for His loving protection and care, and my gratitude to Mrs. Eddy for her discovery of the truth which makes us free from the bondage of fear, disease, sin, and death.

Lieut. F. H. Howard Buchanan, Norwich, England.

✧

In 1905, after suffering intensely for three weeks, I was persuaded by my brother to try Christian Science, and was healed in one treatment of what two doctors had pronounced quinsy. One of the tonsils was said to be so badly diseased that it would have to be removed or I would always suffer with my throat; but I have never had any return of the trouble, and did not have the tonsil removed. I have also been healed of severe headaches, bad colds, heart trouble, and many other ailments.

I am grateful for every thought, word, and deed that has helped me to an understanding of the truth as it is taught in our text-book, "Science and Health with Key to the Scriptures;" and ever grateful to Mrs. Eddy, who so wisely provided for us our literature, which is a constant help.

Annie L. Casey, Denver, Col.

✧

I was brought up in the Jewish faith, but had no definite concept of God and His creation until it was revealed to me in Christian Science. With this new understanding all traditional prejudices, all ritualistic customs, all man-made theories were eliminated; yet all that is true in the Old Testament was preserved to me, as well as the one God, the God of Abraham, although my concept of Him has been changed from a God to be feared to a God who is Love.

Nineteen hundred years ago Jesus preached the truth to the Jews as Christian Science is doing today. In John's gospel we read: "Then said Jesus to those Jews which believed on him, If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." For the past five years I have proved that this true understanding of God does free one from all manner of discord. I was able to apply it when my son, four and a half years old, playfully applied some potash to his face and burned it severely. I was not at home at the time, but telephoned shortly afterward and was told about it. With a proper realization of the truth as we are taught in Christian Science, I continued what I was doing, knowing that as a child of God he was governed by spiritual law, and that there are no accidents in divine Mind. On my arrival home, several hours later, the child came running to the door and greeted me with the joyous exclamation, "It doesn't hurt a bit." In two days all signs of the burn and a swelling of the mouth were gone, leaving no blemish.

To say I am thankful to God is to express my feelings very mildly.—Hulda B. Abrahams, New York, N. Y.

✧

The beautiful prophecy of Isaiah, "A little child shall lead them," was brought to my thought very forcefully a few days ago when my daughter interrupted the reading of our Lesson-Sermon to ask: "Mother, why don't you write of my wonderful healing, so that other little children will hear about it?" In gratitude too deep for adequate expression I am therefore sending this testimony, hoping that other mothers who are perhaps facing discouragement, as I was, may read it and turn trustingly to the truth, whose healing waters flow freely for all.

From infancy my little girl suffered with most unusual attacks of illness, which left her weak and frail. By the time she had reached her fifth year these attacks became so frequent and, because of the high temperature and the delirium which accompanied them, so alarming, that we tried one doctor after another, but without apparent relief. Just after her sixth birthday a much interested physician assured us that the child was a victim of a certain form of poisoning and that we could not look for a cessation of the attacks of illness, which always came very suddenly. In despair we took her to a noted specialist, who examined her most carefully and then told us that she was suffering from acute kidney disease. Naturally we carried out every direction in regard to medicine and diet, but before long a most alarming illness left us without a shred of hope.

It was at this time that I began to listen to a dear friend who had long been trying to offer me Christian Science. Through the dark clouds of fear that struck terror to my heart, the rays of Truth came like a burst of light. Every material means tried had failed, doctor after doctor had contradicted his predecessor, so in my hour of need I turned with a weary hope to God. The trouble was conquered almost at once through the wise and loving guidance of a Christian Science practitioner. That was over two years ago. In the time that I have been studying Christian Science we have never thought of resorting to medicine, although minor ailments have tried to tempt us frequently. Today our little girl is rosy and well and happy, reminding us hourly that there is no power but God, good, and no reality in evil. Where at one time despair sat heavy on my heart, I now know no fear, for, as Mrs. Eddy lovingly assures us (Science and Health, p. 494), "divine Love always has met and always will meet every human need."

For this perfect healing of our daughter, for the many healings that have come to us, for the blessed peace and the new understanding of God we are daily gaining, I am most deeply grateful. With a full, humble heart I pray so to live Christian Science in my daily life that others, through me, may be lifted from despair into the radiant light "of his coming."—Eleanor G. R. Young, Philadelphia, Pa.

About eleven years ago my wife was informed by our family physician that troubles from which she suffered were caused by an internal growth. For some time she had been subject to increasing physical ailments, and finally an operation was declared necessary. Both of us had repeatedly observed cases where operations, although pronounced brilliantly successful, had to be repeated, and for one cause or another left behind them a lifetime of invalidism, so we were much disheartened at this outlook.

Then my wife hesitatingly mentioned the healing of one of her friends through Christian Science, and asked my opinion as to the wisdom of trying the same means. I replied that I could see no harm in doing so, though I had no faith in the system or in any good results from it; but she said she would make no such trial unless I would join her in a serious attempt to follow the practitioner's directions, and this I finally promised to do. Treatment was asked for, and within a few weeks her healing was complete. The most pronounced evidence of the presence of the growth existed before that time, but has since then entirely disappeared.

It was only natural that I should take up the study of Science and Health with an altered feeling after this experience. When I came to read it without prejudice I was at once impressed with the beauty and logic of its teachings. Lingering causes of doubt concerning my Christian faith have been resolved and explained by this "Key to the Scriptures." This Science of Christianity does what my old church through all the years has nobly but vainly attempted, —to show that the spiritual is actually supreme over the material, and that it can meet all our human needs.

Since that first healing we have required no other remedies to preserve our own health and that of our three active boys, and it gives us the greatest pleasure always to testify to the constant joy and aid which we have derived from the interpretation of God, Life, which we have found in Christian Science.—Henry R. Corbett, Kenilworth, Ill.

✧

I have unbounded gratitude for Christian Science, and know that it heals physically, mentally, and morally, having witnessed and experienced many proofs of God's healing power. I have been cured of stomach trouble, extreme nervousness, sleeplessness, and colds, and on several occasions headache, burns, and other ills have been instantaneously overcome.

In the overcoming step by step of many forms of fear I have even greater cause for gratitude. From childhood I had been haunted by an almost constant sense of apprehension. I was never quite free from a depressing dread of the future, anxiety for loved ones, and foreboding fancies,—all based upon a doubt of God's goodness and allness. Being unusually sensitive and shy, I either feared or disliked a great many people, and when circumstances forced me into almost continual contact with an unsympathetic world I was filled with dread. Away from home, a stranger in a great city, weakened by illness and heartsick with fear, I learned in a crucial moment that God was my salvation, and was literally delivered from my distresses through an awakened perception of God's immanence and power. Later I learned the scientific reason for this experience in the study of Science and Health together with the Bible, which had previously been uninteresting and unprofitable to me. In these books I am learning that there is nothing to fear in all God's universe; that tomorrow holds no danger and the yesterdays no regret. The terrors of limitation and lack are gone, and in their stead is a calm certainty of God's abundant good in every direction. Hate and fear of others have been overcome on the basis of one Mind which knows only love.

The intimate relationship between thought and human activity was illustrated with special force on one occasion. I had been cherishing a feeling of injury toward another, and it was rankling during the process of painting a picture. My work was unsatisfactory, below my usual standard. I tried hard for better results but without success; the desired beauty and freshness of color were absent. Then I began to apply my knowledge of Christian Science, and it was revealed to me how dark and unlovely my thoughts had been. Self-righteousness and self-pity had been coloring my consciousness and the picture had symbolized their nature. I changed my thinking, illumined my heart with loving compassion for the one whom I had been seeing as enemy, and as I painted in this spirit I gained a better picture and a better friend through the exalting influence of Love; and best of all, a better understanding of the meaning of Christian Science.

I have found that gratitude is a great healing agency. Ofttimes when the way seemed very dark, the opening of my heart in gratitude has been the only avenue through which light could enter. I am grateful beyond measure for Mrs. Eddy's revelation to us of these wonderful truths.

Kathryn Leone Wood, Kalamazoo, Mich.

✧

[Translated from the German]

If we are ready to subordinate the human will to the divine, our healing in Christian Science may be instantaneous. This was experienced about three years ago, when to sense I became very ill. I had violent pains in the chest and back, also a severe cough, attended by general exhaustion; in short, all the symptoms of an attack of lung trouble.

I earnestly endeavored to deny sense-testimony and relied on the power of omnipotent and omnipresent good. As I failed to experience any improvement, but had to lie down on account of the pain, the thought came that I should ask for help. Just at that time something occupied my thought with regard to which I could not see my way clearly, but there was the belief that I must persistently oppose or evade the question. This course, however, was not attended by peace and calm. While lying still, with the sincere desire to do the right thing in this matter, it became clear to me that nothing could be accomplished through my own will; on the other hand, it was evident there was nothing to fear if I remained conscious of the one source from which cometh good only, and that from this source would be forthcoming the strength needed to do right. On arising at noon I realized that I was entirely free from pain. I felt well and strong and needed no further help. This was three years ago, and the symptoms have not manifested themselves again.

This experience has shown me very plainly how Truth uncovers error before casting it out, and that when we have seen the error and are willing to relinquish it, we get rid of the discordant manifestation. I am very grateful for this lesson and thank God that Christian Science has come into my life. I also lovingly remember Mrs. Eddy, whose labors have made it possible for us to work out our salvation.

Johanna Hanke, Neukölln-Berlin, Germany.

✧

I was an invalid from birth and suffered dreadfully from organic heart disease. In my last sickness I was confined to bed for eight months, although all was done for me through material means that a loving husband and fond parents could do. We had five physicians, but at last they said I was dying, and it was published in the paper that they did not think I could last the day out. Then a friend who was a Christian

Digitized by Google

Scientist came to me and said I could be healed through Christian Science treatment. I consented to try it for a week, saying that if there was no improvement I would go back to the doctors (I did not know they had said I could not live). In three days I was able to go to the dining room and eat dinner with the family. For three months I had been kept alive on malted food and had slept two hours out of the twenty-four under the influence of an opiate, but the Christ, Truth, the spirit of Life and Love, opened the prison doors and set me free.

That was twenty years ago; today I am a strong, well woman, absolutely healed through Christian Science, and able to demonstrate for myself and others this blessed truth. I am deeply grateful for what Christian Science has done for me; and whether in sunshine or in shadow I will have no fear, for God is able to guide me safely into the harbor where the storms of life's raging sea cannot harm me. I thank God that this wonderful truth has come into my life, and am so glad I am living in this age when it was given to the world by our beloved Leader, Mrs. Eddy.

VIRGINIA DAVIS, Spokane, Wash.

✧

Several years ago I began the study of Christian Science because I had no faith in medical science as a curative agent for nervous breakdown. Sleeplessness and headaches soon disappeared, but other phases of the trouble did not leave until I began to apply my understanding of the truth. Spiritual thinking soon replaced in consciousness the false beliefs in sickness, and then I found myself entirely free and well. Since that time I have had many healings, often instantaneous. The suffering caused by a fall down a flight of steps quickly disappeared when I knew that God is my life. While on a trip Christian Science was a constant preventive of sickness, weariness, and fear. Recently I have had a wonderful healing of heart and stomach trouble.

Although I am very grateful for the physical healing, the greatest blessing Christian Science has given me is the spiritual understanding of the Bible as explained in our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The daily study of these books in connection with our Lesson-Sermons is indeed "a lamp unto my feet, and a light unto my path." I am striving to show my gratitude for all these benefits by putting the truth into practice as Mrs. Eddy admonishes us on page 174 of Science and Health: "Truth is revealed. It needs only to be practised."

MARY E. HEIZER, Norwood, Ohio.

Largess

MARION CRAMPTON JONES

To loose the bands of wickedness, that bow
The pilgrim, heavy eyed, nigh to the ground,
Until he clings to shackles as his heritage,
And knows not where Truth's shining towers are found—
What greater gift!

The heavy burdens to undo, the load
The pilgrim bears—to lift him to his feet;
To point the untrammeled way that knows no grievous care,
Where Truth's towers gleam afar, and day is sweet—
What greater gift!

To let the oppressed go free from pain, disease;
The pilgrim's eyes, to Truth's bright towers upturned,
Reflect their glow. His journey's goal is certainty,
Dearer than ease from pain, for which he yearned—
What greater gift!

From Our Exchanges

[Pacific Christian Advocate]

When Peter and John, plain and simple men, stood before the Sanhedrin, learned and grave, they were not fearful, or cowed, or moved to apology: they were mighty men. They were not such by birth or training. . . . "Peter, filled with the Holy Ghost, said unto them." It was not the denying Peter, the man trembling and afraid; it was a man so filled with a new devotion that fear and untruth were crowded from his being. It was the tender and affectionate John, now endowed with a passion for one so absolutely complete that he too had but the single fear that he might not love enough. They were filled with God, and henceforth were to be naught but the exponents of the divine. Need we wonder that God is bold for His truth? Need we wonder that a man should be bold who is wholly filled with God?

Why are we not bold today? Because we have given to God only a fragmentary possession of ourselves. We have many sides; one touches God. We have many thoughts; some touch God. We have many actions; a few are guided by God.

[The Universalist Leader]

Living up to it, is what all of our professions must come to. We may have the very best form of Christian faith in existence, a faith clearly supported by intelligence and acceptable to our feelings, but it will be of little use unless we live up to it. If we did, if all the Christians in the world today would just live up to the faith they hold, even though it be imperfect, the kingdom of heaven would be at hand. We are preaching the noblest program of life, but with too much abstraction. As some one says: "If our sermons were fully backed up by our lives, how much more powerful and effective they would be! If the average church member would only live up to the religion of Christ which he professes, in his daily intercourse and dealings with his neighbors, how catching Christianity would become! Men would say, The religion that can drive selfishness, and narrowness, and all uncleanness out of a man's life like that, and make him kind and helpful as a neighbor and citizen, is worth having."

[The Christian Intelligencer]

The way of the world is competitive and selective. But in the Christian life the democracy of character puts the highest prizes within the reach of the lowliest. Each individual soul enters into personal relationship with God, and his life is energized for glorious conquests. What is promised to all is promised to each. The humblest may be exalted, if he will but walk in the way of the cross. It is an inspiration to reflect that in the realm of character and spiritual life we are all lured without distinction to press on for "the prize of the upward calling of God in Christ Jesus."

[The Continent]

As a matter of reason and experience, there is no hope of adjusting the social world to the will of God except as individual souls are by their own choice adjusted to His will. And the very process of social regeneration which agitators talk of is only to be accomplished by convincing individual men of the wrong involved in the abuses they support, and persuading them through repentance to change to nobler courses. So far, then, from surrendering to those who proclaim incompatible the social and the evangelistic interpretations of Christianity, it is the urgent business of the church to unite the two and complete each with the mutual enrichment of the other.

Digitized by Google

Instead, therefore, of a church tending—it has tended of late years—to cleave in two sections, representing on the one hand the social interest and on the other the evangelistic interest, statesmanship and common sense alike demand the unified advance of the whole church along the line of social Christianity ratified and made potent by evangelistic Christianity—a power competent to renovate the world by renovating the men in it, and to purify all the world's actions and relationships by purifying the innermost purposes of the human actors in its age long drama.

[*The Sunday School Times*]

Sharp opposition opens up blessings to many a man. An easy time has kept him weak and impoverished; trouble and persecution lead him out into strength and riches. "We have an altogether too easy time of it," says one of the lesson writers in *The Sunday School Times*, referring to Christians of today; "perhaps if we had more opposition, we should have more zeal." It is true. But do we realize that if we Christians had more zeal, we should have more opposition? The fact that we have little or no opposition from the Christ-rejecting world about us is our shame, and testifies eloquently to our failure. "Because ye are not of the world," said Jesus to his disciples, "therefore the world hateth you." If the world does not hate Christians, it is simply because Christians are, in many vital matters, of the world,—the Christian's life shows no such marked difference from that of worldly persons that it exasperates or condemns them. But the moment any Christian accepts the duty of living according to the teachings of Christ to the uttermost, empowered to do this by receiving Christ to the uttermost as the fulness of his life, then the opposition and the persecution begin—promptly and hard. Dare we put it to the test?

[*The Living Church*]

The command to "serve the Lord with gladness" does not stand alone in Holy Writ. Those who deemed smiles and laughter sinful, the people who "always sigh in naming God," certainly found no warrant for such ideas in the Scriptures. In the Old Testament and the New, sadness and sighing are always mentioned as caused by sin. Once the real, repentant sorrow for misdoing was felt and the assurance of divine forgiveness received, there was room only for joy and thanksgiving. Over and over again the righteous—those who truly serve God to the best of their ability—are exhorted to rejoice and be glad.

[Samuel Zane Batten, D.D., in *The Biblical World*]

If one were asked to name one of the greatest needs of our time, he would say that it is a true and Christian conception of the kingdom of God. We must reconceive Christ's great conception and must make it central in our thought and effort; then we must have a theology that is construed in the categories of the kingdom of God and its coming that shall interpret life and sin and salvation in terms of the kingdom, and shall show how man can serve the kingdom and its uses.

[*The Christian*]

Mr. J. H. Oldham, in his recent volume, "The World and the Gospel," says: "The church has been too much inclined to stand on the defensive. There is indeed an apologetic task of the first magnitude to be undertaken in working out the far reaching implications of the Christian faith. . . . But Christianity is not primarily a philosophy. It is a gospel for those who are simple and childlike in heart. The one indispensable argument is that it should be exhibited as it really is."

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new catalogue of selected Bibles is now being printed by the Publishing Society and will be mailed to Christian Science organizations listed in the *Journal* early in January.

Owing to the increased cost of labor and materials the Oxford Press of England has twice found it necessary to advance the prices of Bibles to the Publishing Society during the past year. The Publishing Society now finds it necessary to make a corresponding change in its prices to the field, announcement of which will appear in the forthcoming catalogue.

The cost of manufacturing Bible Cases and *Quarterly* Covers has also increased, and the new catalogue will give the change in prices for these articles.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 236 Huntington Avenue, Back Bay, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study. Also printed in Dutch and German.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents, three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1887 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Subscription Price

Payable in advance

Annual subscription price, postpaid, in the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL will begin with the current issue unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVII indicates the year 1917; XVIII is used for the year 1918. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Lord Carmichael, soon to retire as Governor of Bengal, India, was presented with a farewell address recently by the municipal body of Darjeeling, the beautiful hill station to which official Bengal is accustomed to retire between March and November. In the course of his reply he made the following notable admission: "I am afraid I cannot agree with those who profess to think more work is done in the hills than in the plains. In Bengal, at any rate, that is certainly not the case. . . . I know that if I had been in the plains I could have done more work. I know too that many of my friends, especially of those who seem to me to work hardest, think the same thing, and I cannot see why we should not say so."

This system, notwithstanding repeated protests against its extravagance, has now continued for some fifty years. So far, attempts to bring about a reform have been fruitless. In a country like India, where there is no public opinion, the severest criticism has not the effect which it has in European countries, and the strength of vested interests grows with the years.

A bulletin sent out by the Chamber of Commerce of the United States, treating of irrigation, says: "The committee [appointed by this chamber] is of the opinion that the most far reaching, scientific, and comprehensive method of irrigation is that undertaken by the Federal Government under the authority of the reclamation act of 1902. The Salt River project near Phoenix, Ariz., may be taken as typical of these enterprises. The lands under irrigation have an annual rainfall of from three to ten inches, but the sources of the Salt and Verde Rivers are in the surrounding high altitudes where the precipitation ranges from ten to twenty inches.

"As a consequence of this great engineering accomplishment the former desert valley of the Salt River has become a local agricultural center, producing all manner of fruit and garden truck, as well as the great agricultural staples, and especially long fiber Egyptian cotton, for the latter is being cultivated under climate and soil conditions similar to those prevailing in the valley of the Nile. The stored waters in these dams are used to develop electric power, which is sold to the surrounding country for commercial and industrial purposes. In 1915 the total value of the agricultural products on the land irrigated by this project was $3,700,000. Recently there was completed an even larger dam at Elephant Butte, near Engle, N. Mex. It impounds the flood waters of the Rio Grande and has greater storage capacity than the great Assuan Dam on the Nile. The actual application of water to the land is usually done by means of main canals or ditches, which convey the principal source of supply to the growing crops through smaller lateral ditches. In some cases the land is completely flooded; in others the water is distributed by means of furrows."

Eleven years ago consumers of electricity in Winnipeg, Manitoba, were paying at a scale of rates that netted from twelve to fifteen cents a kilowatt hour. At the present time this service is being supplied at a scale that nets from three cents to half a cent. This reduction represents the difference between a steam generated service supplied by a private company and that supplied by a municipal hydro-electric generating plant. The municipal system consists of a hydro-generating plant located at a point on the Winnipeg River seventy-eight miles from the city, transmission lines into the city to a terminal and transforming station, a feeder system to substations, and a distributing system from substations to consumers throughout the city. The generating plant has a capacity of 50,000 horse-power, of which 30,000 is in active service. Preparation has been made also for a further expansion up to 100,000 horse-power. The capital expenditure on the whole system to date has been about seven million five hundred thousand dollars.

The Los Angeles Chamber of Commerce, the southern California branches of the Native Sons of the Golden West, the California Art Club, and other organizations, are uniting in an effort to move the eastern boundary of the Yosemite National Park six miles farther to the east, in order to bring within the borders of the park Silver Lake Falls on Rush Creek. The action is taken with a view to preserving these falls, said to be the most beautiful on the eastern slope of the Sierra Nevadas. The organizations also aim to save the falls of Leeving Creek in the cañon of that name and visible from the Tioga Pass Road leading into the Yosemite. The scenic beauty of both these falls is threatened with destruction as the result of the action of a water power corporation, which has been given permission from the United States Government to dam the streams tributary to these falls for irrigation purposes.

An intracoastal canal, skirting the Pacific coast of Guatemala and extending eighty miles from San José to the Esclaves River, is proposed by a company now in process of formation, which has just been granted a concession by the Guatemalan Government. It is claimed that the canal will afford transportation facilities to a rich and productive region of the republic, now without either rail or water transportation. Sugar, rice, and hides will be the principal tonnage producers.

Officers of the Minnesota Editorial Association, consisting of owners of country newspapers, have laid before state officers a plan for a state owned paper-mill in Minnesota, not only to meet their needs but to become a revenue producer for the commonwealth and provide another outlet for the employment of prison labor. The state now owns large tracts of timber land, including pulpwood, and more acreage which by reforestation could produce pulpwood.

Abandoning hope of overcoming opposition of the navy to pending legislation to relieve California and Wyoming oil land claimants, the Senate lands committee has eliminated the so-called Phelan amendment from the mineral land leasing bill and substituted for it a relief provision suggested by the Interior Department. The department's amendment would provide that claimants on oil lands prior to the withdrawal in 1910, who had entered in good faith into the prosecution of development, shall have preference to leases.

Simplifying and expediting litigation in Federal courts by giving the United States Supreme Court full authority to promulgate a new code of pleading and practice, are the objects of a judicial reform bill favorably reported by the Senate judiciary committee. It has been indorsed by the American Bar Association and forty state bar associations.

Hell Gate bridge, between Wards Island and Astoria, Long Island, N. Y., is nearing completion, and will probably be opened this month. Construction was started in November, 1914, by the New York Connecting Railroad, and the bridge will connect the Pennsylvania and New York, New Haven & Hartford systems. Its completion will open a continuous all rail route from Nova Scotia via New York to the South and West.

Some time ago the city council of Baltimore, Md., passed an ordinance authorizing the condemnation of all property in the area bounded by Holliday, Lexington, and Fayette Streets and the Failsway, to be used as a civic center. The administration hopes to have the improvements necessary for the first unit completed during 1917. The plans for the final unit include a large municipal auditorium on the Failsway side.

In a new phase of the old "Danbury Hatters" case the United States Supreme Court decided that Dietrich E. Lowe, a Danbury, Conn., hat manufacturer, and not the United Hatters' Union, is entitled to the $20,000 of accrued interest on their savings bank deposits attached toward satisfying Lowe's $353,000 judgment secured under the Sherman law for union boycotting in 1903.

An appropriation of $3,000,000 for the purchase of lands under the Weeks forestry act is incorporated in the agriculture appropriation bill reported in the national House of Representatives. Of this sum $2,000,000 will be available for expenditure during the fiscal year 1918. The total sum carried in the bill is $25,694,685.

Secretary McAdoo of the United States Department of the Treasury, has addressed a letter to the governors of all states urging that they recommend to their respective legislatures the enactment of laws to make the bonds of the Farm Loan Banks legal investments for trust funds and savings banks where such laws are necessary.

Although the Chinese paper industry is probably the oldest in the world, the methods used are very crude. Only three mills in the country are equipped to produce paper similar to the imported article. Two of them belong to the Chinese Government, and are situated in the adjacent cities of Hankow and Wuchang, on the Yangtze; the third is at Shanghai.

Of every one hundred dollars' worth of foreign trade of the United States in 1916, fifty-two dollars' worth was transacted in New York City. The foreign trade of the port during the past calendar year was valued at $4,069,000,000, and the customs duties collected amounted to $153,211,989.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XIX January 27, 1917 No. 22

Praising God

ERNEST C. MOSES

MUCH is written in the Bible and much is voiced in religious procedure about praising God. To many students of the Scriptures the act of praise by song or sermon has a very indefinite meaning, because the common interpretation of the word rests on customary usage rather than on its spiritual significance.

To praise means to approve, to eulogize, or even to flatter; and the word may therefore mean an honest recognition of truth and virtue, or it may mean a mode of mesmerism. Praise in the latter sense may mean an attempt to please a person for the purpose of bringing out a statement or action advantageous to personal ambition, or it may be used in an attempt to propitiate God or mortal man. John said that this counterfeit praise was indulged in by the Pharisees, who "loved the praise of men more than the praise of God." In all ages it has been a common sin among mortals to work for the favorable opinion of men rather than to win the praise of God. Such aspirants, Jesus said, "love salutations in the marketplaces, and the chief seats in the synagogues, and the uppermost rooms at feasts,"—objects which misguided mortals still seek, because they fancy that in these ways they may receive the praise of men.

Understood in Christian Science, the word praise signifies a sentiment which is the very opposite of the counterfeit sense of the word, and we see this quite clearly when it is applied to God. In the light of this Science, to praise God means to acknowledge His allness and perfection. This recognition confers nothing whatever on the infinite Father and creator of all, but it does elevate the thought of those who praise God with faith and understanding.

Praising God according to the spiritual rule of Christian Science gives man genuine power, and in his ability to reflect divine Love he becomes conscious of an influence which heals and blesses. In "Unity of Good" Mrs. Eddy writes, "An acknowledgment of the perfection of the infinite Unseen confers a power nothing else can" (p. 7). We certainly are far from praising God when we give power to evil; we do praise God when we affirm His allness as infinite good and deny the reality, power, or existence of evil.

In the religious observances of many people, praising God is a mere voicing of words having no spiritual animus and designed to please or propitiate an unseen and unknown deity. In Christian Science, praising God is a humble, sincere realization of His allness, power, and perfection,—a realization of the ever-presence, omnipotence, and all-intelligence of good, and the consequent nothingness of all that is not godlike, that is unlike good. Such an acknowledgment of Truth heals the sick, reforms the sinner, and casts out the beams and the motes of wrong thinking. This genuine praise brings the kingdom of heaven to earth, giving to all people an increasing measure of "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." In this sense man clothed in a constant recognition of divine Love is never cast down or melancholy, but may be said to radiate health and good cheer. Spiritual understanding heals the sick and saves the sinning, and thus glorifies God in bringing out success as the result of every rightly directed endeavor.

This conquest of error by truth is illustrated in the twentieth chapter of II Chronicles, when King Jehoshaphat was besieged by a great army of Ammon, Moab, and mount Seir. Jahaziel addressed the king, saying: "Be not afraid nor dismayed by reason of this great multitude; for the battle is not yours, but God's . . . stand ye still, and see the salvation of the Lord with you." So the king "appointed singers unto the Lord, and that should praise the beauty of holiness, as they went out before the army, and to say, Praise the Lord; for his mercy endureth forever." It was then stated that his joyful realization of the perfection, power, and presence of God was so complete that the Ammonites and Moabites turned on their allies, the inhabitants of mount Seir, and after annihilating them, they turned on themselves —"every one helped to destroy another." In Christian Science we understand that the real man is never engaged in mortal strife, but that erroneous beliefs—mortal illusions—are self-destroyed when God's children acknowledge Him as ever present and sufficient to protect them.

In Christian Science perfection is an absolute divine reality, and a possible attainment for all. In this respect, as in all others, the Science of Christianity coincides with the Bible, the writers of which from Moses to John were inspired through divine Science by perfect ideals. The Scriptures constantly refer to the perfection of the ways and works of God, and to the possibilities of perfection for those who understand and obey one infinite God. The scientific inference from these statements would be that God Himself is perfect; but only once is it definitely declared in the sacred writings that the creator is perfect—in the rule of truth and possibility which Jesus set before all men for all time: "Be ye therefore perfect, even as your Father which is in heaven is perfect."

Uttered by the purest man who ever lived, by the one whose life conformed without one failure to the high ideal, the Master's praise of the Father of all was the praise or realization of perfection, the demonstration of divine Love which healed the sick and the sinner. The praise of Jesus was a constant realization of the tender, compassionate divine Love which gave abundantly life and good cheer to all who would accept these gracious gifts.

This being the truth about praise, should not every follower of the Master be willing to cease from every method of praising God which indulges a meaningless eulogy of Him, and to substitute the loving, humble realization of the perfection and allness of God, and of man in His likeness? If this is done according to the teachings of Christ Jesus and Christian Science, each one of the followers of the Master shall "have praise of God," because his fruits in overcoming sin and sickness will prove that he loves God supremely, and his neighbor as himself. Man receives praise of God only by identifying himself spiritually with God through the demonstration of divine Science, which brings perfection and im-

mortality to light. A right sense of praise is experienced when the false testimony of corporeal sense is being destroyed by spiritual understanding, bringing out "the fruits of righteousness, which are by Jesus Christ, unto the glory and praise of God." Men, women, and children then become witnesses to the truth and its wonderful healing works, gladly acknowledging that God, divine Love, is All and does all.

Rising Above Popular Opinion

LUCY HAYS REYNOLDS

THERE is in the human heart a secret desire for popular commendation which ofttimes is productive of either a fear or a defiant indifference of what others may say. How often, when about to decide upon an important step, we let ourselves speculate as to what others will think of it, and let our actions be governed by the doubt or fear which naturally follows. Even a worthy aim may be smothered with the cowardly warning, "Look out, or you will have every one talking."

The Master, Mrs. Eddy tells us, "never weakened in his own personal sense of righteousness because of another's wickedness or because of the minifying of his own goodness by another" (Miscellany, p. 227). Then why, if we too are seeking to be governed by the one Mind, should there be any fear on our part of what men may say? Popular opinion is but a will-o'-the-wisp, partial and unstable. It judges according to personal sense, and its praise or censure is generally based upon hearsay or its own misconceptions. If we feel worthy because mortals are thinking well of us, our reputation is built upon sand. Tomorrow they may think otherwise, and then we shall be left in midair with only a vain belief in self-justification to uphold us. To desire popular favor is to desire the favor of mortal mind; and since mortal mind is always wrong, we should neither fear its criticism nor desire its praise. Prestige and name have nothing to do with divine favor.

To let "they say" influence our motives and acts is a dangerous thing. It has made cowards and hypocrites of most people at one time or another. Wisdom has said, "Death and life are in the power of the tongue: and they that love it shall eat the fruit thereof." Fear of popular opinion leads to self-consciousness, mental penury, duplicity, and binds us fast with chains of conservatism. So long as we wonder what others are thinking about us, or whether we have behaved in a way that will cause them to speak well of us, we are standing for self rather than for Principle, and are wandering in the maze of personal suggestion, where spiritual vision is beclouded. A look, a word, a gesture, and we interpret it according to our own sensitive fears, jumping to the conclusion that false report has been spread, when it may not have been so at all.

Suppose a lie is told about one and that it goes out into general consciousness: since it is not true, the mental picture outlined in the minds of the believers is wholly a fictitious character and not the one spoken of at all. The truth is towering above the real self. A lie cannot change it. How then can it injure one who loves Truth? A falsehood can no more keep us out of the kingdom of heaven than it can help us into it. Why then fear it? If we are to be concerned at all, it is for those who believe the untruth. Slander and gossip may cause self-love and guilt to tremble, but true worth and high motives never. He who is the world's friend is afraid of "they say," but he who does right is unmoved by either good or evil report. Slander can never injure the character that is governed by Principle. The shadows of idle gossip flee before the white glow of humility. Conscious worth is the healer of slander. Committing our way unto the Lord, He will, as the psalmist declares, "bring forth thy righteousness as the light, and thy judgment as the noonday." A good life is its own defense.

Ofttimes the praise of men is more injurious than their dispraise. Not whether our friends are thinking well or our enemies ill of us, but what God is thinking about us, is the question of vital consequence. Looking to Truth for the answer, we shall behold our spiritual selfhood, which is neither praised nor condemned by the world, for the world knows it not. Can the true idea be touched by personal prattle? No; nor can he who is striving to represent it, so long as he is true to himself.

The carnal mind which called Christ Jesus a blasphemer is just as eager today to misrepresent the spiritual hero. It perverts his nature, reverses his motives, and misrepresents what he says and does. The Master prophesied that the world would hate his followers as it had hated him, and this without cause. Mrs. Eddy's experience illustrated this. Many who neither knew her nor understood what she taught have yet hated her. Did she complain or revile again? These are her words: "To be a great man or woman . . . is to bear with patience the buffetings of envy or malice" (Miscellaneous Writings, p. 228). When all manner of evil is said against him, "falsely, for my sake,"—the Scientist learns to rejoice, with the prophets of old, and thus gains the great reward of peace and harmony as promised in the beatitudes. Earnestly he prays, "Father, forgive them; for they know not what they do."

High above the idle chatter of "they say," that consciousness which seeks the grand facts of its being dwells peacefully in the quiet of meditation. With the light of infinity and eternity resting upon him, the scientific Christian has no time or desire to justify his life's incentives or to counteract popular opinion with personal effort. Instead, he faithfully overcomes sensitiveness with unselfishness, resentment with magnanimity, until "they say," like "the prince of this world," hath nothing in him. So does he march steadfastly onward through good or evil report, proving, as Solomon said, that "the lip of truth shall be established forever: but a lying tongue is but for a moment."

✧

"Thou art the man"

CAROLINE A. BALY

To all who have accepted Science and Health as the "Key to the Scriptures" and pledged themselves to be loyal followers of the truth therein unveiled, the demand, "Physician, heal thyself," becomes a moral obligation. From the standpoint of mere belief the saving of a brother was considered a holier—if somewhat easier—task than one's own redemption. Precept often took precedence of practice, and religion became, often quite unconsciously, a cloak worn chiefly on Sundays with one's best clothes and largely apart from the counting-house, the factory, or the daily drudgery. Consequently, when that disturbing inward monitor rapped occasionally at our mental door, it was quieted by reference to an erring brother; a telling indictment from an "eloquent discourse" would be unctuously applied to brother So-and-so, and mentally bottled and labeled for his redemption at the earliest opportunity.

That to purify our own thought is the surest way to help our brother was not recognized, so intent is mortal mind upon exposing the mote in another's eye, seen—as we soon learn in Christian Science—through a vision blurred by the

Digitized by Google

beam in our own. It is significant that the "mote" is a mere speck, the "beam" a sizeable bit of wood, so ready is the carnal mind, blind to its own larger delinquency, to exaggerate another's weakness. That persistent "Thou art the man" is so comfortably silenced by a righteous concern on our part regarding a brother, while possibly some good sister is with similar urbanity allotting that same human frailty to us.

When, however, after careful and prayerful study, we begin to realize the responsibility we assume in adopting Christian Science as the way to eternal life, we also realize that a drastic readjustment of "mine" and "thine" becomes imperative. Standing always before the jealous and merciless tribunal of mortal judgment, how incumbent it becomes for us to keep upon our mental threshold the watchful sentinels of vigilance, prayer, and humility. The critical element in human nature is ever on the alert; thus we need to utilize unceasingly the preventive power of this revealed truth, if we would avoid the forcible retort of Nathan to David when the latter so glibly pronounced judgment upon a supposedly defaulting neighbor. We need to see ourselves in the same light as we see others. The serpent, mortal mind, is cunning and tireless in laying snares for the self-righteous, the weary, or the discouraged.

The responsibility of Christian Scientists is clearly stated on page 148 of "The First Church of Christ, Scientist, and Miscellany," where our Leader says: "Faithfully and more than ever persistently, you are now, through the providence of God, called to do your part wisely and to let your faith be known by your works. All that we ask of any people is to judge our doctrine by its fruits." These fruits are not limited to the physical healing; and when malice, lust, appetite, envy, hate, are cast out by love, purity, forbearance, meekness, patience, then indeed may our doctrine be judged by its fruits and the harvest be in sight.

The modern Thomas demands tangible proof, and justly so, for faith without works is as dead today as in the time of the apostle James. That these proofs are sometimes rejected in no way lessens our responsibility, for if there were skeptics in Jesus' time, how much more today when our demonstrations are comparatively small. And why are they so sparse? The answer is given on page 3 of Science and Health, where Mrs. Eddy says, "To understand God is the work of eternity, and demands absolute consecration of thought, energy, and desire." This high ultimate may not be attained by us today, but we are assuredly capable of attaining greater heights than those with which we are at present content. In following carefully the ministry of Jesus, we cannot fail to note how undeviatingly he traversed the straight and narrow path of spiritual ascension, from the day when at Jerusalem he stayed back to hear and question the wise men, up to that day—so big with blessings to all mankind—when he walked in serene confidence to give, in the crucifixion of the flesh, that final and transcendent proof of his loving obedience to the law of Spirit.

Students often miss the mark by scattering their fire. They lose sight of the ultimate amid a labyrinth of objectives, aspiring to build churches before having firmly laid the foundation of that inner temple of Love which must precede every material structure and in which alone we can worship "in spirit and in truth." Jesus' desire was to return intact those who had been entrusted to him of the Father. He spoke little, and the majesty of his silence was fully exemplified in the irrefutable and manifold witnesses of his works, as ours will assuredly be when we, like him, are obedient even unto death. This absolute consecration means much truly, but "unto whomsoever much is given, of him shall be much required." The cross is at this juncture the only pathway to the crown, and our wide responsibility lies in the worth of that which has been entrusted to us. Still we have the joy of knowing that when the uttermost farthing has been paid into the eternal treasury, there will be poured out a blessing so great that, as the promise reads, "there shall not be room enough to receive it."

Let us then watch, work, and wait so patiently, and seek Truth so righteously, that in the fulness of time our Leader too may say of her followers, "Of them which thou gavest me have I lost none." Could there be greater joy for us than to bear witness for that pure, selfless consecration of thought, word, and deed which was so radiantly exemplified in the life of this nineteenth century follower of Christ, Truth, and revealed to this age through her untiring devotion to omnipotent good, infinite Love?

Mortal Dream

MAUD MACRAE

WHEN I first read the text-book, the statement that "mortal existence is a dream of pain and pleasure in matter, . . . like the dream we have in sleep" (Science and Health, p. 188), seemed difficult to grasp. Nevertheless, as I gained a clearer understanding of Christian Science the truth of this statement dawned upon my consciousness, and I realized that unless we are fully awake to this fact, and know that God made man in His image and likeness,—of like kind or like nature, spiritual and not material,—our progress heavenward will be retarded.

One of the definitions for dream is "to think idly," and the definitions for sleep are "to think thoughtlessly . . . to rest in the grave." When one accepts the belief that he lives in his body and is controlled by it, is he not resting in the grave of material beliefs, resting in the thoughtless acceptance of that which has no foundation in fact? Is he not believing in the incongruous theory that both good and evil dwell together, and that if there be a preponderance of power at all, it is on the side of matter and evil? St. Paul's clarion call, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light," must arouse the slumbering senses, and should be sufficient to turn us from thinking idly and resting in the grave of material sense to a right rule of thinking and consequent acting that will effectually keep us from dreaming, or thinking thoughtlessly, whether we are asleep or awake.

Right thinking is always harmonious, alert, always expressing the presence and power of good. It is the reflection of the one Mind, "a divine influence ever present in human consciousness" (Science and Health, Pref., p. xi), and is always responsive when called upon, whether the senses say we are asleep or awake. To illustrate: One night I dreamed that I entered a motor car driven by an inexperienced chauffeur, and my first thought upon entering seemed to be one of fear, which was checked until we came to a steep hill, when it returned with redoubled force, for I seemed to feel certain that under the control of a novice the car would not ascend such a precipitous slope. However, the car climbed the hill quickly and smoothly until we neared the summit, when it first showed signs of stopping, then apparently began to run backward. I seemed to become terrified, feeling sure we would be thrown over the embankment.

Christian Scientists know by experience that Truth can come to them in a night as well as in a day dream, and so it was in this case; for at this point in the dream Truth came as a spiritual influence, penetrating the cloud of my evil thinking and showing me clearly the ever-presence and

Digitized by Google

power of God to save from all harm, assuring me that no accident could really happen to any of His children, for they are safe in His loving care. Immediately conditions changed in the dream; instead of continuing to go backward, the car went forward, and in a moment or two we were safe on level ground at the top of the hill. I then awakened to the knowledge that I had been dreaming, and consequently had not been in danger at all.

So it is always; in reality we are never the victims of chance or change, for "we live, and move, and have our being" in God, good, and this fact understood and realized is an ever present protection from the evils of the day dreams as well as the night ones. As one can readily see, the seeming change in the direction of the car was not due to the regulation of a lever, but to the overcoming of a sense of fear and accident by the understanding of the protecting presence and power of God. To the dream sense the car was a solid material fact, as were also the other objects, yet the most pronounced materialist must acknowledge their unreal nature.

Why then does it seem so difficult to recognize all beliefs of life in matter as dreams, or mental illusions, which can be corrected through right or godlike thinking and living? Simply because human sense is always at enmity with Truth, and is ever trying to keep mortals from accepting the statements of the Bible as elucidated in "Science and Health with Key to the Scriptures" by Mrs. Eddy. False belief endeavors in every way imaginable to prevent us from turning unreservedly, as little children, to God, the one Mind, and in humility saying and realizing, "Not my will, but thine, be done." There need be no fear attached to this prayer, for God's will is always good; it is the human will which so often brings disaster and trouble. Therefore let us resist the temptation to believe that life in matter is anything but a mortal dream from which Truth can and will awaken us.

Ability versus Distrust

PEARLE M. WARREN

So long as we believe that some one else can do things a little better than we can, we shall not be able to get very far along the road to perfection in any line of work. We all have aspirations to do that which is worth while and to do it well; but many of us listen to the low depressing prelude, "This is not for you." The moment we yield to this personal sense, we have allowed discouragement, self-pity, or resignation to evil to enter our consciousness; in other words, we have accepted the thought of inability or distrust of God, which is the greatest barrier to human progress.

Now on page 233 of Science and Health Mrs. Eddy writes, "Progress is the law of God, whose law demands of us only what we can certainly fulfil." And again on page 260 we read: "Science reveals the possibility of achieving all good, and sets mortals at work to discover what God has already done; but distrust of one's ability to gain the goodness desired and to bring out better and higher results, often hampers the trial of one's wings and ensures failure at the outset." We must awaken to the fact that because some one else has attained desired results, this very fact is proof positive that we also can attain, because God is "no respecter of persons."

It is plain that to arrive at any desired result necessitates at least one very important step, namely, that of beginning. We must learn to walk before we can run; we must learn to climb before we can reach the heights, and this we can accomplish only through persistent effort. We cannot afford to trust our welfare entirely to others; we must work out our own salvation, remembering that God works with us. It is also well to remember that we are all confronted with much the same obstacles on the upward road, but that though each day presents its duties, we have the right to know that we also have the ability to perform these duties. This sense of individual ability is brought out in the following lines of Henry van Dyke:—

> This is my work; my blessing not my doom.
> Of all who live I am the one by whom
> This work can best be done in the right way.

We see that there is no one in the world so well fitted to do our work as we are, and we should remember that our work as well as our ability comes to us from God.

Most of us are able to do well what we really enjoy doing. This would seem to necessitate the frequent affirmation of our desire to work, and this desire to be of service would form "a low sweet prelude" in our song of life; then would come the interlude,—the enjoyment of work,—and the postlude of genuine success and full fruition of our endeavors would be sure to follow. We can learn to know that distrust has no place in the consciousness of the real man, for in the practice of Christian Science this false belief is displaced by the recognition of man's ability to do all things through the understanding of divine power.

Straight Lines and Plumb Lines

EDWARD A. STRONG

In all time the plumb line has been used as the symbol of rectitude, uprightness, and spiritual understanding. We read in the book of Amos, "Behold, I will set a plumbline in the midst of my people Israel: I will not again pass by them any more." This prophecy foretells the coming of the final revelation and unfoldment of the spiritual relationship and inseparable connection which exists between God and man, of "perfect Principle and idea,—perfect God and perfect man" (Science and Health, p. 259). This has now come to all of God's children, to remain forever and never again to be lost or to be obscured,—the Comforter which was to make manifest the Christ, Truth, as taught in Christian Science.

A straight line is never less than a straight line. What is spoken of as its movement is always straight forward, never deviating or turning to the right or to the left, but proceeding in an unvarying direction to the point of its ultimate destination. A straight line may be wholly mental and not dependent upon or limited by its material representation, and although some material object may seem to interfere with or to intercept its action, still nothing can prevent its operation, which is always in a straight line. Thus it is with the spiritual consciousness which is the realization of the true relation of God and man; though it may seem for a time that the material senses are obliterating the spiritual understanding, still through the Principle of its unvarying activity it is always and continually operative.

The plumb line is constantly pointing upward in agreement with a perfect perpendicular and never varies to one side or the other, for should it deviate in the least from the perpendicular, it would at once cease to be a plumb line. So spiritual understanding always points upward and always reflects and is coincident with the one perfect Principle. As the plumb line indicates and is always parallel to the exact perpendicular, and is not in any way dependent upon any material representation to make it a plumb line, but solely on its agreement with the perpendicular, which is always perfectly plumb, so the real man, the reflection of infinite Mind, apart from any mortal sense of man, is and always has been in perfect accord with his divine Principle, God.

Digitized by Google

The perfect perpendicular has always and eternally existed and is indicated only by the plumb line. The spiritual real man has always existed in infinite Mind, the reflection and manifestation of His likeness, and expresses all the perfection of his infinite creator. The realization of this grand truth brings out harmony and answers the question as to what mankind shall do to be rid of sickness and sorrow.

Mrs. Eddy's discovery proves that as mankind begins to realize and to put into practice the understanding of the harmony which exists between God and man, there comes a consciousness of freedom from the ills to which flesh is heir. The sense of separation from God being thus destroyed, discord and disease give place to the manifestation of peace, health, and happiness. As the builder in raising his building in accord with the plumb line brings out the expression of stability and beauty in outline and form, so mortal man in regulating his life in accord with perfect Principle also brings out the expression of harmony, beauty, and prosperity.

God has in our day set a plumb line in the midst of His people, and through Christian Science is revealing the unity which exists between man and his eternal Principle, Love. In our day the sick are healed, the sinning reformed, and the kingdom of God is being manifested on earth.

Literature Distribution

C. A. CARR

WHILE traveling recently by steamer from Calcutta to Colombo, it was brought home to me very forcibly how far reaching is the work of the Christian Science literature distribution committees. One day, during a conversation with the ship's surgeon, he offered me a *Journal* and half a dozen pamphlets which he said had been handed to him when the steamer was last in Boston. He informed me that two or three members of the ship's crew had received Christian Science literature and that it had been read and appreciated.

I was able to pass on this literature to others before leaving the ship, and it is good to know on such occasions that the truth as presented in the Christian Science periodicals and pamphlets may be the means of bringing nearer to the readers the realization of the kingdom of heaven here and now. In any case, the literature thus distributed undoubtedly tends to acquaint those in the desert of human beliefs with what Christian Science is and does, and at the same time helps to break down the prejudice of ignorance on the subject. To know that a constant stream of the authorized periodicals is being systematically disseminated throughout the world by devoted workers in the cause, and not only so but that every piece of literature thus sent out breathes the omnipotence of the Word that is again preaching the unadulterated gospel to all who have ears to hear, indeed fills one with gratitude for our Leader's far-sightedness, since it reaches high and low, rich and poor alike.

When one realizes with Isaiah the force of this statement: "My word . . . shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it," one may appreciate in a degree what a wonderful missionary work the various literature distribution committees are doing. In addition to the committees, however, each individual worker in Christian Science has the privilege of passing on his own copies of the periodicals; and how important a matter it is that each copy should be passed on to do its work, instead of being laid aside, only those may tell who have been led through this means to the "land of Christian Science, where," as our Leader tells us (Science and Health, p. 226), "fetters fall and the rights of man are fully known and acknowledged."

Selected Articles

[From *The Christian Science Monitor*]

The opinion of the United States Supreme Court in the case of Crane against Johnson and others, decided last week, has been filed, and it clears away the somewhat self-conflicting report by which the decision was first announced. It shows that the highest American court squarely held that it was competent for the state of California to recognize a distinction in its legislation between the use of suggestion and the use of prayer.

This was an action brought by P. L. Crane, a chiropracter or drugless practitioner, against the governor, the attorney-general, and a district attorney of California, to enjoin them from enforcing a statute of that state which provides for examining and licensing drugless practitioners as well as physicians and surgeons, but contains this provision: "Nor shall this act be construed so as to discriminate against any particular school of medicine or surgery, or any other treatment, nor to regulate, prohibit, or apply to any kind of treatment by prayer, nor to interfere in any way with the practice of religion." His contention was that this statute is unconstitutional and void because the distinction it makes between prayer and other drugless practices, including his own practice, is arbitrary and does not constitute a reasonable classification of subjects for different statutory provisions. His own practice he described as the use of faith, hope, and the processes of mental suggestion and mental adaptation.

The court in which the action was commenced, the United States District Court for the southern district of California, Judges Ross, Trippitt, and Cushman sitting, denied the plaintiff's application for an interlocutory injunction. Thereupon he took an appeal directly to the Supreme Court by reason of the constitutional question which the case presented. In the court of last resort the opinion was written by Mr. Justice McKenna, who by the way is a Californian, the chief justice and the other justices concurring. The opinion is a short one, considering the importance of the issues involved, but it plainly holds that a distinction for the purpose of legislation between the complainant's drugless practice and the use of prayer is not arbitrary but is constitutional.

The full text of the opinion follows:—

Supreme Court of the United States.

No. 493. October Term, 1916.—P. L. Crane, Appellant, vs. Hiram Johnson, Governor of the State of California, et al.—Appeal from the District Court of the United States for the southern district of California. Jan. 8, 1917.

Mr. Justice McKenna delivered the opinion of the court.

Appeal from an order denying an interlocutory injunction, three judges sitting. The court took jurisdiction of the action, citing Raich vs. Truax, 219 Fed. 273, 283, but denied the injunction on the ground that the averments of the complaint did not justify it.

Complainant is a drugless practitioner, he avers (we state the facts averred narratively), and has practised his profession in the city and county of Los Angeles for the last seven years and is dependent upon it for making a living. He does not employ either medicine, drugs, or surgery in his practice, nor is there anything harmful in it to the individual or dangerous to society; but he does employ in practice faith, hope, and the processes of mental suggestion and mental adaptation.

Under a statute of the state that went into effect Aug. 10, 1913, amended in 1915, a board of medical examiners was created which was empowered to prescribe a course of study

Digitized by Google

and examination for those practising medicine (using this word in a broad sense for convenience) and to issue certificates of qualifications and licenses.

Three forms of certificates were required to be issued: First, a certificate authorizing the holder thereof to use drugs or what are known as medicinal preparations in or upon human beings and to perform surgical operations, which certificate shall be designated "physician and surgeon certificate." Second, a certificate authorizing an opposite treatment to that which the first certificate authorized (we are using general descriptions), which certificate shall be designated "drugless practitioner certificate." Third, a certificate authorizing the holder to practise chiropody. And the statute also provides for the issuance of what it designates as a "reciprocity certificate." Any of these certificates, on being recorded in the office of the county clerk, as provided in the act, shall constitute the holder thereof a duly licensed practitioner in accordance with the provisions of his certificate.

Applicants must file with the board testimonials of good moral character and diplomas of a school or schools, and, in addition, each applicant for a "physician and surgeon certificate" must show that he has attended four courses of study, each to have been of not less than thirty-two weeks' duration, with some other additions; and each applicant for a "drugless practitioner certificate" must show that he has attended two courses of study, each of such courses to have been of not less than thirty-two weeks' duration, but not necessarily pursued continuously or consecutively, and at least ten months shall have intervened between the beginning of any course and the beginning of the preceding course; and the course in chiropody is to be of not less than thirty-nine weeks' duration consisting of not less than six hundred and sixty-four hours. There is a provision that, in lieu of a diploma or diplomas and preliminary requirements in the other courses, if the applicant can show to the board that he has taken the courses required by the statute in a school or schools approved by the board, totaling not less than sixty-four weeks' study of not less than two thousand hours for a "drugless practitioner certificate" or one hundred and twenty-eight weeks' study of not less than four thousand hours for a "physician and surgeon certificate," he shall be admitted to examination for his form of certificate.

The statute sets out the course of instruction which the respective applicants must have pursued, giving the course that is necessary for a "physician and surgeon certificate" and the course for a "drugless practitioner certificate." The descriptions are very elaborate and technical. The statute also prescribes the manner of examination, states the exemptions from its provisions, the penalties for its violation, and for what conduct and upon what conditions the certificates may be revoked. Among the latter is the following:—

"Ninth. The use, by the holder of 'drugless practitioner certificate,' of drugs or what are known as medicinal preparations in or upon any human being, or the severing or penetrating by the holder of said 'drugless practitioner certificate' of the tissues of any human being in the treatment of any disease, injury, deformity, or other physical or mental condition of such human being, excepting the severing of the umbilical cord."

By section 22 of the original act (unaffected by the act of 1915) it is provided: "Nor shall this act be construed so as to discriminate against any particular school of medicine or surgery, or any other treatment, nor to regulate, prohibit, or apply to, any kind of treatment by prayer, nor to interfere in any way with the practice of religion."

It is alleged that the statute violates the fourteenth amendment of the Constitution of the United States, especially the equal protection clause thereof, in that it imposes greater burdens upon complainant than upon others in the same calling and position; that it discriminates in favor of the Christian Science drugless practitioner,—distinguishes between the treatment of the sick by prayer, the treatment of the sick by faith, mental suggestion and mental adaptation, and treatment by laying on of hands, anointing with holy oil or other kindred treatment.

Complainant does not employ prayer in the treatment of disease, and is therefore not exempt from examination by the medical board, and is subject therefore to the penalties of the act if he practises his profession for which he has fitted himself by study and practice, and upon which he is dependent, and by reason of his age he is in large measure unable to take up any new branch of work; that defendants, appellees here, are threatening prosecutions under the act and he is without remedy at law.

There is an allegation that the supreme court of the state of California has decided that the statute is not offensive to the fourteenth amendment in habeas corpus proceedings prosecuted by one Chow Juyan, who was convicted of practising some form of Chinese healing which was adjudged a violation of the act.

The allegations of the bill set forth complainant's particular grievance to be that the statute discriminates between forms of healing the sick and the use of prayer and other drugless methods, and invoke the equal protection clause of the fourteenth amendment of the Constitution of the United States. In other words, he attacks the classification of the statute as having no relation to the purpose of the legislation. Of course complainant is confined to the special discrimination against him; he cannot get assistance from the discrimination, if any exist, against other drugless practitioners. The case, therefore, is brought to the short point of the distinction made between his practice and certain forms of practice, or, more specifically, between his practice of drugless healing and the use of prayer.

The principle of decision needs no exposition, and the only question is whether it was competent for the state to recognize a distinction in its legislation between drugless healing as practised by complainant and such healing by prayer. That there is a distinction between his practice and that of prayer, complainant himself, it seems to us, has charged in his bill. He has not only charged that he does not employ either medicine, drugs, or surgery in his practice, but that he does employ faith, hope, and the processes of mental suggestion and mental adaptation. These processes he does not describe. Presumably they are different from healing by prayer, different from the treatment by Christian Science. But he alleges that for his practice he has become "particularly fitted by many years of study and practice therein." In other words, the treatment is one in which skill is to be exercised and the skill can be enhanced by practice, and the objects of the treatment are diseased human beings whose condition is to be diagnosed. To treat a disease there must be an appreciation of it, a distinction between it and other diseases, and special knowledge is therefore required. And this was the determination of the state; but it determined otherwise as to prayer, the use of which, it decided, was a practice of religion. We cannot say that the state's estimate of the practices and of their differences is arbitrary and therefore beyond the power of government. And this we should have to say to sustain the contentions of complainant, and say besides, possibly against the judgment of

Digitized by Google

the state, that there was not greater opportunity for deception in complainant's practice than in other forms of drugless healing.

Because of our very recent opinions we omit extended reply to the argument of counsel and the cases cited by him, not only of the general scope of the police power of the state but also of the distinctions which may be made in classifying the objects of legislation. And for like reason we do not review or comment upon the cases cited in opposition to complainant's contentions.

It is to be observed that the order of the court was put upon the narrow ground of the averments of the complaint, no opinion beyond such averments being expressed.

Decree affirmed.

✧

[Judge Clifford P. Smith in *Winchester* (Ky.) *Democrat*]

The author of an article relating to Christian Science, after quoting the signs which Christ Jesus said should evidence the understanding of his teaching (see Mark xvi. 17, 18), continued as follows: "I am curious to know why Mrs. Eddy and others have selected the fifth of the above named signs to the exclusion of the other four."

In reply to this query I would say that Mrs. Eddy accepted all of the verses in question and that she did not exclude any part of them. They read as follows: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

It is to be observed that four of the signs here specified are within the scope of Christian Science healing, for it includes moral as well as physical discord, and prevention as well as cure. Even the promise, "They shall speak with new tongues," has its fulfilment in Christian Science, for this teaching interprets to human understanding everything that relates to human welfare. The following quotation from page 248 of Mrs. Eddy's "Miscellaneous Writings" will serve by way of illustration: "The literal meaning of the passage 'lay hands on the sick' would be manipulation; its moral meaning, found in the 'new tongue,' is spiritual power—as, in another Scripture, 'I will triumph in the works of Thy hands.'"

Another part of the article in question has attracted my attention and appealed to my sympathy. It was this: "In a ministry of forty-nine years I have often prayed the Lord to bless the means that were being put forth by eminent physicians for the recovery of the sick, and yet they died." People who have looked to ministers for the explanation of such occurrences, as well as the ministers themselves, have been puzzled by such experiences as these. The question, Why does not recovery follow prayer for the sick in the twentieth century as it did in the first? is one which must arise in the thought of every person who notices the certainty of the Scriptural promises and the prevalent uncertainty of their fulfilment.

In this connection your contributor has quoted the following promise from the epistle of James: "The prayer of faith shall save the sick, and the Lord shall raise him up." Seeing that our brother has not found a satisfactory explanation for the seeming non-fulfilment of this promise in the common experience of Christendom, I would offer as an explanation the following quotations from one of Mrs. Eddy's books: "The restoration of pure Christianity rests solely on spiritual understanding, spiritual worship, spiritual power;" "The scientific healing faith is a saving faith; it keeps steadfastly the great and first commandment, 'Thou shalt have no other gods before me'—no other than the spiritual help of divine Love. Faith in aught else misguides the understanding, ignores the power of God, and, in the words of St. Paul, appeals to an unknown power 'whom therefore ye ignorantly worship'" (The First Church of Christ, Scientist, and Miscellany, pp. 152, 153).

Whether this comment or some other furnishes the true explanation of success or failure in praying for the sick, should be tested in the first place by comparing it with the Bible, but in the second place, or finally, by putting it into practice; and it can be said in this connection that the adherents of Christian Science have accepted its teachings on the basis of Scriptural authority and its actual results.

✧

[Henry Deutsch in *Duluth* (Minn.) *News Tribune*]

No one who has ever studied Mrs. Eddy's works could arrive at any conclusion beyond the one that Christian Science is the extreme opposite of any form of pantheistic theology. Christian Science exemplifies the Master's promise, "Ye shall know the truth, and the truth shall make you free." This is the truth about God and man's relation to Him, and is taught in Christian Science with the primitive simplicity which was characteristic of the teachings of the Master. Christian Science does not deny the existence of pain, sin, and death as mortal experiences, but it does show, even as the Master taught, that by imbibing his precepts and bringing them out in daily practice, even as he overcame and destroyed those conditions, so we today accept of and receive the fulfilment of his promise, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also."

Christian Science service is work in the cause of Truth, effort in the direction of the establishment of the kingdom of heaven here and now, and those who perhaps were indifferently interested in other forms of religion change their attitude through Christian Science because it presents to them that which is both practical and demonstrable, and thus becomes a part of their daily lives. Men's views of religion differ in greatly varying degrees, and instead of ridiculing or condemning we should be grateful for any change in a man's religious attitude which indicates that he has cast his net on the side of God—however feeble his efforts—instead of drifting on the side of infidelity, atheism, or agnosticism.

There is only one thing true and that is the truth. Everything must be tested by it, and the result, if correct, must be demonstrated. Christian Science furnishes this in every instance where honestly and conscientiously applied, and, as the Master said, "by their fruits ye shall know them."

✧

[Editorial in *Prosser* (Wash.) *Bulletin*]

A traveling evangelist was here last week lecturing on various subjects and making an effort to sell some of his booklets. On Friday night the title of his lecture was "Christian Problem of Sorrow and Suffering," in which he exalted sorrow and suffering to the dignity of a virtue and pronounced a panegyric upon them. In doing so he made an uncalled for and wholly unjustifiable attack on Christian Science, stating that there was nothing whatever to it except bodily healing, and intimating that sorrow and suffering should not be healed; that they are a good thing for the world and bring us most of our blessings. He said that he did not know much about Christian Science, and we agree with him. It is almost inconceivable that in this age of optimism a man, calling himself a servant of God and claiming that his mission is to uplift humanity, should travel about and preach against those who do not believe as he does and exalt sorrow and suffering into virtues that we must possess if we would be happy.

Editorial

"Fear made manifest"

EXPLAINING her contention that all disease is mental in origin, Mrs. Eddy says: "Faith in rules of health or in drugs begets and fosters disease by attracting the mind to the subject of sickness, by exciting fear of disease, and by dosing the body in order to avoid it. The faith reposed in these things should find stronger supports and a higher home. If we understood the control of Mind over body, we should put no faith in material means" (Science and Health, p. 169). This also sustains her definition of disease as "fear made manifest on the body" (p. 493).

That the doctors are, to a certain extent at least, in agreement with these teachings, is indicated in an article in a recent issue of the *Medical Record*, in which the part that the fears of the patient play in the diseases of certain organs of the body is explained from the medical standpoint. Of these fears and the persons who entertain them the writer says: "The cases in question are those in which the patient, always normal and well, seems suddenly to have become obsessed with the idea that he is the possessor of some kind of a pathological process. . . . The patient who acquires such a phobia is often of an intelligent type, one who more than the average individual is conversant with medical terms and phrases. As a rule it is an individual who, either through the perusal of medical literature or in the course of conversation, becomes acquainted with the symptoms characteristic of organic conditions. It is the case of a little knowledge producing considerable harm."

Notwithstanding these admissions, the writer believes that "the greater publicity given by hygienists and public health officials to the preventable diseases" has been "of inestimable value and has been the means of decreasing the death rate in several of the infectious diseases;" although he also believes that "with the repeated precautions to watch out for certain symptoms there has been aroused in many an overcautiousness, with the result that some of the ordinary minor ailments are often magnified to unusual proportions and interpreted wrongly by the person possessing them." The treatment for such conditions is based, he says, "first of all on the absolute proof that the condition is a phobia and not a true pathological condition;" and his conclusion is that when the patient is convinced that there is no ground for the fear, he will be relieved from the belief in the disease.

Webster's dictionary defines the word phobia as meaning in the general sense fear, dislike, or aversion, but in a medical sense, morbid fear. It is undoubtedly morbid fear that is referred to by this writer as the basis of the belief of the patient in the cases which he describes, even though he predicates this fear or phobia upon some minor ailment. This means, of course, that the principal trouble with the patient is mental, and that after the mental state is corrected the small physical disarrangement will easily be taken care of; in other words, that disease being from the medical standpoint both real and unreal, actual and imaginary, the physician's problem is to find the dividing line between the two and treat each from a different basis.

Christian Science, however, takes its stand on the fundamental truth that in the last analysis all disease is unreal. Consequently the Christian Science practitioner does not have to search for an imaginary line from which he will be compelled to work in different directions and by different methods to accomplish the healing. The basis of demonstration in Christian Science is that God, the only creator, never created anything unlike Himself; that disease was not created by Him and has no real basis; that in every case there is nothing but a false belief to be destroyed, and that through the destruction of this belief the patient is healed. The success of Christian Science practice is the proof of its Principle. On page 339 of Science and Health Mrs. Eddy says: "The basis of all health, sinlessness, and immortality is the great fact that God is the only Mind; and this Mind must be not merely believed, but it must be understood. . . . Our various theories will never lose their imaginary power for good or evil, until we lose our faith in them and make life its own proof of harmony and God."

ARCHIBALD MCLELLAN.

Guidance

THERE is a very beautiful passage in the twenty-fourth chapter of Genesis which tells how Abraham sent away from the land of Canaan a trusted servant to find a wife for his beloved son Isaac. When the servant expressed a doubt as to the outcome of his quest, Abraham responded: "The Lord, before whom I walk, will send his angel with thee, and prosper thy way." These words take on a wonderful meaning in the light of Christian Science, where we are taught to look constantly for divine guidance and to know that angels, God's thoughts, are as truly with us today as they were with the ancient worthies. Here it should be said that Abraham's chief desire was to find a companion for his son who knew something about the God he himself worshiped,—the one Mind of whose guidance he was more and more certain as he advanced in spiritual understanding. It is also deeply interesting to see that the various members of his large household were all taught to look for this guidance in the least things as well as in the greatest, and that they expected a response to the uplifted desires which went out to divine Love and wisdom.

While from the human standpoint this whole story might be called a beautiful idyll, the spiritual lesson it conveys may well be deeply pondered by all students of Christian Science. Strange to say, they are often censured for doing the very thing that Abraham taught his servant to do, namely, to seek divine guidance and reverently acknowledge this before all who are willing to listen. Popular belief shows that humanity has to a large extent arrogated to itself the power to work out its own destiny, and would say that if certain things are done, certain results will necessarily follow, and that one need not call upon God for guidance when human reason may be trusted to do all that is required.

It is to offset this materialistic tendency that Christian Science calls upon humanity to turn again to God, not only with the faith of the old patriarchs but with the added understanding gained from the spiritual sense of our Master's teachings. Of old the wise man said: "In all thy ways acknowledge him, and he shall direct thy paths;" but how many are there today who do this thing,—who seek divine guidance not only when they fail to find help elsewhere, but at all times and under all circumstances?

Christian Scientists usually first learn the tremendous value of divine guidance when they seek healing for some ailment which is pressing heavily upon them; and here too is an important consideration. If, as in the case of Abraham, they seek this guidance, they will undoubtedly be led to the one who is best prepared to help them. On page 443 of Science and Health we find wise counsel from our revered Leader with respect to those who do not quickly realize from Christian Science treatment the healing which they need.

Digitized by Google

She clearly points to mental freedom as necessary in such cases; but she unmistakably directs thought away from materiality to unfailing spiritual means when on the following page she says, "If Christian Scientists ever fail to receive aid from other Scientists,—their brethren upon whom they may call,—God will still guide them into the right use of temporary and eternal means." The fact should not be overlooked that through the earnest study of the Bible and Science and Health divine guidance will be made increasingly apparent; and whether the urgent need be for health and strength, or for a home, employment, or anything which will enable them to prove the ever-presence of God's kingdom with its perfect and harmonious activities,—this good, all good, God has for them.

It should never be forgotten that the more we are conscious of divine guidance, the better prepared we are to take all the needed steps on the human plane, instead of waiting idly for something to happen before we can take the next step. The most important thing which can happen at any part of our journey is the clear, unclouded realization of the truth so beautifully expressed in the assurance given on page 566 of Science and Health, that as the children of Israel were led through the wilderness "so shall the spiritual idea guide all right desires in their passage from sense to Soul, from a material sense of existence to the spiritual, up to the glory prepared for them who love God."

ANNIE M. KNOTT.

✧

The Lamb and the Wolf

IT need not shock the working Christian Scientist to be told that the carnal mind will probably offer him the choice of becoming either a wolf preying upon the lambs or a good shepherd feeding his flock "in green pastures" and leading it "beside the still waters." Such an offer involves no discredit to the spiritually minded, since Jesus was similarly tempted in the wilderness by the same supposititious mind. Perhaps, indeed, it was this very temptation which permitted the Master in commissioning his disciples to say to them plainly, "Behold, I send you forth as lambs among wolves;" and certainly their subsequent experiences confirmed this prediction.

Obviously Jesus had in mind certain mental states characteristic of mortals but portrayed by the lamb and the wolf, and so his language points to metaphysics rather than to the physics of the animal kingdom. From this point of view the struggle between the lamb and the wolf seems ever going on in human affairs, and is still writing the greater part of what is called the history of mankind. Saul seems always to be pursuing David; Jezebel, Elijah; the dragon, "the woman;" and Babylon is ever trying to substitute itself for the New Jerusalem. In Æsop's fable the hungry wolf was determined to find a good reason for eating the lamb, and the lamb could only gasp out at last, "Any excuse will serve a tyrant." The wolf in one nation preys upon the lamb in another. The same persecution is witnessed within governments, churches, schools, and homes, within each individual consciousness,—but in the domain of spiritual warfare eventually the lamb always wins.

Mrs. Eddy makes this very plain when she states on page 567 of Science and Health: "Divine Science shows how the Lamb slays the wolf. Innocence and Truth overcome guilt and error. Ever since the foundation of the world, ever since error would establish material belief, evil has tried to slay the Lamb; but Science is able to destroy this lie, called evil." Strangely enough the lamb, which physically considered seems the most helpless of animals, typifies the strongest of spiritual states, the inoffensive innocence which loves and hates not.

Before a counterfeit Adam gave the animals fictitious natures, the lamb and the wolf dwelt in friendship, and Isaiah's vision prophesies that they will do so again. "The wolf also shall dwell with the lamb," he declares. But how does the lamb tame the wolf, deprive him of his wolfishness, strip him of his false name, and convert him back again from an enemy into a friend? This is the secret of Christian Science, but it is an open secret which all who choose may learn. The lamb conquers through the understanding that evil is unreal. God's creation is innocent. The sly cunning and the savage disposition associated with the name of wolf are falsities. The attempt to fight wolf with wolf leaves the greater ferocity master of the field and merely tends to exterminate the wolf rather than prepare him to "dwell with the lamb." Christian Science teaches mortals to save their fellow mortals by letting truth uncover evil as unreal.

Ah, but here arises an aggravated case of wolfishness, some one may think,—a wolf in sheep's clothing. Can the lamb be victorious over even such as he? The Discoverer and Founder of Christian Science proved that even this deceptively dangerous phase of mental perversion can be successfully met and mastered with truth, no matter how far it may have insinuated itself into the flock of sheep. Then there is the false shepherd, the hireling who "seeth the wolf coming, and leaveth the sheep, and fleeth,"—can he be redeemed from his treachery, from exploiting innocence, and can he become in very truth a good shepherd? Science is sufficient even for this, through the channel of repentance opened by the spiritual understanding that evil is unreal.

When the advancing Christian Scientist makes the right choice between the lamb and the wolf, he listens to that most tender and holy charge of the Master, uttered so many centuries ago to an impulsive disciple, "Feed my lambs," and he is blessed accordingly.

WILLIAM D. MCCRACKAN.

Among the Churches

Current Notes

MONTANA.—During the past year this office has doubled the circulation of Christian Science literature in this state, having distributed 16,664 pieces. We received permission to place a complete set of Mrs. Eddy's writings, "The Life of Mary Baker Eddy" by Sibyl Wilbur, and one subscription each to the *Sentinel*, the *Journal*, and the *Monitor* on the United States steamship "Montana." Permission was received to place free subscriptions to the *Monitor* in five hotels in Glacier National Park during the park season. It is reported that much good is done in the state penitentiary by the *Monitor*, eight subscriptions being donated to that institution by this office and the Trustees under the Will of Mary Baker Eddy. The Trustees also donated ten copies daily to the Montana National Guard while they were stationed at Fort Douglas, Ariz., and in this state have placed the works of Mrs. Eddy, "The Life of Mary Baker Eddy" by Sibyl Wilbur, and subscriptions to the periodicals published by The Christian Science Publishing Society, in the libraries at Fort Benton, Miles City, and Valier. Twenty-nine copies of the book by Sibyl Wilbur have been distributed to ministers in the various cities. The newspapers of this state, as a whole, continue to be well disposed toward Christian Science, and nearly all of the leading ones have published the full text of Christian Science lectures.

DAYTON, OHIO.—The following letter has been received from the librarian of the Dayton State Hospital: "The Trustees under the Will of Mrs. Eddy placed with us 12 copies of Science and Health, 12 of 'Miscellaneous Writings,' 8 subscriptions to the *Monitor* and *Sentinel*, and we receive 6 *Journals*. The books are placed in the little cases which we transfer from ward to ward, also to the farm, and are accessible to all patients in such wards. They are read more or less, several patients showing considerable interest and asking me questions. The papers and other literature I distribute on arrival, a copy of each going to the table of the employees' reading-room. As to the rest I try to place them in the hands of those who are interested, asking them to leave them in their ward when they have finished reading. As to our medical staff, three of our physicians have asked me why I am a Christian Scientist, and some general questions. One reads the literature to some extent. I may state their attitude as one of kindly tolerance and curiosity. We have three or four Scientists among our employees. Our superintendent requests me to thank the Scientists for the books and the literature."—*Committee on Publication.*

WALLA WALLA, WASH.—We cannot too cordially express our appreciation of the interest displayed in our behalf by the members of First Church of Christ, Scientist, of Walla Walla, who have been conducting regular services in the Washington State Penitentiary for so many years. They hold meetings in the auditorium every Sunday. Each week they distribute Christian Science literature to the members of the class, which now numbers more than two hundred. In addition to this they have presented to the institution fifty-six subscriptions to *The Christian Science Monitor*, and these are distributed, through the library department, to those desiring them. This publication is more in demand than any other daily newspaper entering the institution, and is eagerly sought after and read by over two hundred inmates. Several subscriptions to the *Sentinel* and the *Journal* are also received.—*Our View Point.*

FORT ATKINSON, WIS.—The Christian Science Society of this city recently purchased a part of the Porter property on Whitewater Avenue, near South Main Street. The lot has a frontage on Whitewater Avenue of 99 feet and is 75 feet deep. It is centrally located and will make a very desirable site for the church edifice that they hope to erect.

Fort Atkinson Union.

The Lectures

London, England

A lecture on Christian Science was delivered at Fulham Town Hall by John Sidney Braithwaite. He was introduced by F. Lovell Lee, who said in part:—

It would seem on the face of things that there must be something in Christianity of which the peoples generally have not known how to avail themselves, or such conditions as those now prevailing could not have arisen. Christian Scientists believe that the wider and deeper understanding of Jesus' teachings which was revealed to their Leader, Mrs. Eddy, and given by her to the world in its hour of need, is now a demonstrable Science, and is truly Christian. In its application to the healing of sin and disease it has been most gratefully received, and carefully tested and proved.

In the eighth chapter of St. John's gospel it is recorded that Jesus in addressing his followers said: "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." It is the truth as understood and demonstrated in Christian Science that enables mankind to obtain freedom from disease and sin. Christian Science is daily giving to its students a broader, better, and more spiritual outlook on life and its activities and a greater love for their fellow man, and the consciousness of these improved conditions fills us with gratitude and a great desire that others may obtain the same benefits.

Kensington News.

Kansas City, Mo.

Virgil O. Strickler, who lectured on Christian Science at the Willis Wood Theater, was introduced by John M. Tutt, who said:—

What message has Christian Science for business people? My friends, do you know that since the world began Christian Science is the only system which has intelligibly related religion to business? To the Christian Scientist it may no longer be argued that business and religion will not mix, that a man cannot be successful in business and yet be a true Christian, for the Christian Scientist is daily proving that all business, if without sin, is good and is therefore God's business. Christian Science shows that the truth about any such activity, however material it may seem to be, is the right idea of it, and since all ideas belong to Mind, God, therefore all real business belongs to Him. This intelligent relationship between God and man, the relationship of employer and employee, develops the highest order of service and accomplishment. No efficiency expert has ever offered anything so inspiring, so productive of results, as this statement from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 199): "The devotion of thought to an honest achievement makes the achievement possible."—*Correspondence.*

Detroit, Mich.

The introductory remarks of Vernon J. Lilly, first reader, at the Christian Science lecture given by William R. Rathvon under the auspices of Third Church of Christ, Scientist, were as follows:—

We have come here to listen to a message which is full of good cheer. When the subject of Christian Science is correctly and clearly explained it brings joy and peace, because the simple truth of Christian Science, when understood, reveals in clear contrast the utter nothingness of sin, sickness, and discord. Then fear is broken and the God-given freedom comes naturally. The great hunger in the world today for a better understanding of God, shows that the husks of materialism do not satisfy or save mankind. The instinctive turning to God in times of trouble has always been a characteristic of the human consciousness, but there seems to be a sad misunderstanding as to what God really is. Christian Science shows that God cannot be found in matter.

Correspondence.

Wilkinsburg, Pa.

Harold L. Ireland, first reader, in introducing Edward A. Merritt, who lectured on Christian Science in Rowland Theater, said:—

Christian Science makes its appeal to humanity on account of its healing. It offers freedom from the bondage of sickness and disease. The method, however, by which this is done is not understood by all. Those who have given the matter study soon find out that it is founded entirely on the

Digitized by Google

Bible. Another thing that impresses the beginner in Christian Science is the earnestness and insistence with which Christian Science holds to the truths of the Bible both in letter and in spirit. Christ Jesus says in the Scriptures that he who believes on him shall do the same works he did. He also says, "These signs shall follow them that believe; . . . they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Accepting these statements as the truth,—and we must do so if we believe in the Bible,—there is the greatest justification for believing that the same power which Jesus employed is available today for the healing of sickness and disease. It remained, however, for Mrs. Eddy to discover this method of healing which had lain dormant for centuries, and it is fully explained in her text-book, "Science and Health with Key to the Scriptures." Christian Science, therefore, comes to this age offering full salvation for every ill in the name of the master Christian. It does not picture a beautiful far off heaven reached only through sorrow and death, but it offers peace and freedom, and all that heaven stands for, to each of us here and now. It does not ignore the pitiful appeal of the sick nor the hunger of the starved, but it shows how through a proper understanding of God and His laws humanity can rise out of these sordid conditions into the sunshine of health and abundance.—*Correspondence.*

✧

Beloit, Wis.

John Randall Dunn, a Christian Science lecturer, was introduced at the Wilson Theater by Dean Collie of Beloit College, who said:—

Three hundred and ninety-nine years ago today Luther nailed his famous theses to the church door of Wittemberg. In a sense this had only local importance; in another and more important sense it was world wide in its effects. It was the act of a man who stepped from the conservatism of the past out into a new future. All men are by nature either conservatives or liberals. Luther did his great work because he belonged to the latter group. I understand that Christian Science represents the movement which breaks away from the conservatism of the past and endeavors to set forth new and important truths which may help us to a truer life.

I am not a Christian Scientist, but the fact that you have asked me to present the speaker indicates that your society is large minded enough to desire cooperation with those outside your church. One pitiful thing in life is the fact that though we are all neighbors and friends, we do not appreciate one another's thoughts and life. Tremendous results would take place if we could all get together. Now, when we are all Christians, if we could enter into one common purpose we could bring the kingdom of heaven to pass in a brief while.

Lectures to be Delivered

[By Members of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.]

ALABAMA—Selma: George Shaw Cook, Walton Theater, 3 p.m., Feb. 4.

CALIFORNIA—Berkeley (Second Church): Ezra W. Palmer, High School Auditorium, 8 p.m., Feb. 6.
Huntington Park: Bicknell Young, Women's Improvement Club, 8 p.m., Feb. 9.
Los Angeles (First Church): Bicknell Young, Church Edifice, 1366 South Alvarado Street, 8 p.m., Feb. 3, and 3 p.m., Feb. 4.
Los Angeles (Fourth Church): Bicknell Young, Highland Park Ebell Club House, 131 East Avenue 57, 8 p.m., Feb. 5.
Los Angeles (Ninth Church): Bicknell Young, Church Edifice, 430 South New Hampshire Avenue, 8 p.m., Feb. 6.
Petaluma: Ezra W. Palmer, Hill Opera House, 8:15 p.m., Feb. 8.
Venice: Bicknell Young, Church Edifice, Second and Brooks Avenues, 8 p.m., Feb. 8.

DELAWARE—Wilmington: John Randall Dunn, Church Edifice, Park Place and Van Buren Street, 8 p.m., Feb. 6.

DISTRICT OF COLUMBIA—Washington (First and Second Churches): William R. Rathvon, Poli's Theater, 3 p.m., Feb. 4.

FLORIDA—Bradentown: Edward A. Merritt, Warren Opera House, 8 p.m., Feb. 5.
Fort Lauderdale: George Shaw Cook, Rex Theater, Wall Street, 8 p.m., Feb. 9.

GEORGIA—Savannah: George Shaw Cook, Lawton Memorial, 8:30 p.m., Feb. 6.

ILLINOIS—Brookfield (auspices Riverside and La Grange): Virgil O. Strickler, Strand Theater, 7:15 p.m., Feb. 6.
Edwardsville: Virgil O. Strickler, Coliseum, 8 p.m., Jan. 30.
Peoria (Second Church): Virgil O. Strickler, Mohammed Temple, 207 North Monroe Street, 8 p.m., Jan. 29.

MICHIGAN—Mt. Pleasant: Virgil O. Strickler, Mt. Pleasant Opera House, 8 p.m., Feb. 2.

MISSOURI—St. Louis (Third Church): William R. Rathvon, Church Edifice, 3524 Russell Avenue, 8 p.m., Feb. 8.
St. Louis (Fourth Church): William R. Rathvon, Church Edifice, 5569 Page Boulevard, 8 p.m., Feb. 6.

MONTANA—Stevensville: Clarence C. Eaton, Empress Theater, 8:30 p.m., Feb. 9.

NEW JERSEY—Dover: Charles I. Ohrenstein, Baker Theater, Blackwell Street, 3:30 p.m., Feb. 4.
Madison: Bliss Knapp, James Building, 8:15 p.m., Jan. 29.

NEW YORK—Brooklyn (First Church): William W. Porter, Church Edifice, New York Avenue and Dean Street, 8:15 p.m., Feb. 5 and 6.
Far Rockaway, Long Island: John Randall Dunn, Masonic Temple, Mott Avenue, 8:15 p.m., Feb. 3.
New York (Third Church): William W. Porter, Church Edifice, 35 East 125th Street, 8 p.m., Feb. 8.
Silver Creek: John Randall Dunn, Park Theater, 8 p.m., Jan. 30.

NORTH DAKOTA—Bismarck: Virgil O. Strickler, Auditorium, 8 p.m., Feb. 8.
Jamestown: Virgil O. Strickler, Orlady Hall, 8:30 p.m., Feb. 9.

OHIO—Athens: Virgil O. Strickler, Ohio University Auditorium, 2:30 p.m., Feb. 4.
Elyria: Charles I. Ohrenstein, Church Edifice, 309 East Avenue, 8 p.m., Feb. 9.
Port Clinton: Virgil O. Strickler, Lion Theater, West Second Street, 7:30 p.m., Feb. 5.

OKLAHOMA—Tulsa: John W. Doorly, Grand Opera House, 8:30 p.m., Feb. 6.

OREGON—Dayton: Dr. Walton Hubbard, Opera, 8 p.m., Feb. 8.

PENNSYLVANIA—Corry: John Randall Dunn, Rex Theater, 8 p.m., Feb. 8.
Easton: William W. Porter, Hay School of Music, 451 Northampton Street, 3 p.m., Feb. 4.
Johnstown (First Church): John Randall Dunn, Cambria Library Hall, Washington and Walnut Streets, 8:15 p.m., Feb. 9.
Philadelphia (First Church): John Randall Dunn, Broadway Theater, Broad and Snyder Avenue, 3:30 p.m., Feb. 4.

WASHINGTON—Bremerton: Dr. Walton Hubbard, Eagles Hall, 2:30 p.m., Feb. 4.
Tacoma: Dr. Walton Hubbard, Church Edifice, Division Avenue and I Street, 8 p.m., Feb. 5 and 6.
Walla Walla (auspices Christian Science churches and societies of state): Paul Stark Seeley, State Penitentiary Chapel, 7 p.m., Feb. 9.

Testimonies of Healing

We did not come to Christian Science for any special physical healing, but having heard of the teaching through friends who had been healed, we became very much interested in the literature because it was so satisfying in every way. During the past seven years it has been found that when we faithfully apply our knowledge of God, inharmonies of every nature are overcome. For all the discordant conditions which may arise in our family we use Christian Science.

I have been healed of a severe cold accompanied by a bad cough. Both lungs were affected, and the head and nose also were in bad condition. The senses of smell and taste were completely gone. With the help of a Christian Science practitioner I was entirely healed, but earnest study was necessary on my part. While I was being treated for this trouble a very sore neck, caused by misplaced vertebræ, was healed. I had suffered about eight years from this difficulty, as physicians could only temporarily relieve me, so I felt overwhelmed with gratitude for this beautiful healing.

I wish to tell of another experience which meant so much to me. We subscribed for the *Sentinel* for three months, and at the expiration of that time could not renew the subscription for financial reasons. A letter was finally received from The Christian Science Publishing Society relative to the matter, so I answered, stating the truth,—that it was due to financial stress. Just at this time some erroneous conditions had come up and my husband was away from us, so that I could not have his help. I studied Christian Science as best I could, but still things seemed very dark. One morning as I lingered at the breakfast table with a sense of deep depression, a neighbor brought our mail. It was unlooked for, as our mail is usually received at evening. There was a letter from The Christian Science Publishing Society in which were loving words of comfort, referring me to the Bible and Science and Health, words which were just what was needed to give hope, and were certainly a balm to a weary heart. It was such a revelation to me, as I had before thought of the Publishing Society as merely a business concern; but this letter of love, also a booklet sent to me, demonstrated how near and helpful it is to us as Christian Scientists.

I feel so grateful for Christian Science, and thankful for Mrs. Eddy, through whose untiring efforts we are enabled to know God and to rely upon Him as an ever present help.

ELSIE FISHER, Hemet, Cal.

✧

Several years ago Christian Science was presented to me in an hour of need, and through the reading of an article in the *Sentinel* the new birth was begun and my sorrow turned into joy. Rheumatism disappeared after one visit to a Christian Science practitioner, and an inward trouble of years' standing soon followed it. It was the latter experience which convinced me of the efficacy of spiritual healing. Two years later, when an illness so serious as to make dissolution seem imminent laid me low and mental work for myself was impossible, treatment by a faithful practitioner again proved that it is God "who healeth all thy diseases." I had, however, been a student of Christian Science four years before I was awakened from the mesmeric sleep of looking to personality instead of to God as our source of supply.

This awakening came when I was suddenly brought face to face with the fact that instead of my future being amply provided for materially, a grave sense of financial lack had to be overcome. The healing of self-pity, resentment, hate, and pride that accompanied the working out of this problem, brought the kingdom of God nigh unto me; and as love filled my consciousness, each day has unfolded the fuller meaning of the words of our revered Leader, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494).

I am not only deeply grateful for the joy, peace, happiness, and health which Christian Science has brought to me, but rejoice that these blessings are the rightful heritage of every one of God's children.

MATTIE BECKENBACH, Philadelphia, Pa.

✧

I often wonder if we realize how much our periodicals are helping us. Some time ago I read an article in a *Sentinel* which came right home to me, as it expressed exactly my own experience. It was to the effect that we sometimes become somewhat overconfident that we never can be sick any more, having received so many proofs of how a perfect reliance on divine Love has helped us to keep well, perhaps for years. Then if some discordant condition suddenly manifests itself which we seemingly are unable to overcome, we are apt to grow discouraged.

After having studied Christian Science for about six years I am grateful to say that I have been healed of deafness in one ear, stomach disorders of various kinds, influenza, to which I seemed to be subject, and other ailments. For five years I was not ill for one whole day, as any symptoms of illness were overcome at the start. Then I was suddenly attacked by a painful form of rheumatism, and although I did not think of anything but turning to God and applying my understanding of divine Principle, I remained helpless until relief was secured through treatment from a practitioner living three hundred miles away.

I learned from that *Sentinel* article that instead of giving in to discouragement, such experiences should encourage us to prove to ourselves whether we have built our house on a rock, so that it will stand when the rains descend and the winds blow and beat upon it. I am indeed thankful to God for the understanding I have of Christian Science.

SOPHIE VOIGT, Spokane, Wash.

✧

[Translated from the German]

This testimony is given with a heart full of gratitude and love to God, also thankfulness to our Leader, Mrs. Eddy. Four years ago a trouble developed which was pronounced curvature of the spine with attendant inflammation. The physician did his best, but his efforts remained unavailing. A year later I went to a specialist in Chicago and was made to wear a plaster cast; but when it was removed nine weeks later my back showed no change. I went to various other physicians in the hope of being cured, but it all proved in vain. Finally I applied to a Christian Science practitioner and was healed in one treatment. It is nearly a year since this wonderful experience.

Would that many might feel induced by this testimony to turn to the great Physician, whose power is present to heal us of sin, disease, and pain. I am most deeply grateful for this healing, as well as for the spiritual understanding gained through Christian Science.

MRS. AUGUSTE PFAENDER, Shiner, Texas.

✧

It is a duty as well as a blessed privilege to join the countless numbers who have testified to their wonderful healing through Christian Science. When I was two years old one of my arms was broken, and many years after this a spinal trouble developed, so that the spine became very much curved. Then at the age of sixteen I lost all use of my legs. Two specialists examined me, and both declared that I would

Digitized by Google

never be any better, although the curvature would not cause me any more trouble. Some time afterward I underwent an examination, and the attending physician gave me but a few years to live. Several months later I got a brace, but nevertheless grew weaker from day to day, and finally was entirely helpless.

This was my condition for two years, and then I heard of Christian Science. I took treatment, and while not much benefit was received the first year, later there was a noticeable improvement. Although the spine is not yet perfectly straight, I can walk as normally as any other person. The healing has been gradual, but this fact has made me more earnest in the study of Christian Science.

I am thankful to God for sending us one who strove to see that light which she did not hide under a bushel. I also thank God for all the friends who have helped me on my path of healing.—EDNA E. GALE, Walsenburg, Col.

✧

The Scriptural passage, "God is light, and in him is no darkness at all," fitly describes my experience in Christian Science, which has led me from the darkness of chance and change to a larger realization of the permanence and brightness of life. In a study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, there has been unfolded not a contradiction of any real "good the past hath had," but an unfoldment and larger fulfilment of early hope. The mist that seemed to becloud the understanding has been dispersed by a study of this book, which has indeed proven a "key" to the Word of Life. Prejudice against this truth, which had seemed so real, disappeared as a clearer understanding of it was gained and results were experienced through spiritual uplift and physical healing.

Many discords were overcome in the early study alone, among them a bad disposition, inflammatory rheumatism, and numerous other troubles attendant upon fear and hate. While I was healed of many minor ills, the greatest joy was found in the spiritual uplift. Every one is hungry for good, although he may not have rightly understood the demand, and like me may have stumbled much in fruitless search. It was because I found an explanation of this instinctive desire and an accurate law by which it might be satisfied, that I followed like a child waking from a long, tiresome dream.

Some time after beginning the study of Christian Science I was healed in one treatment of a malignant growth, after more than a year's effort battling with my own fears. I am thankful to God, the giver of all good, and grateful to Mrs. Eddy as the human channel through whom this truth was expressed. I would gladly encourage every seeker after light and liberty to try an honest investigation of Christian Science.—ROBERT L. SAWYER, Chicago, Ill.

✧

God's protecting love and ever-presence have been manifested to me. While I was feeding clothes into the wringer one day, the cog wheels caught my sleeve, drawing in the arm. I immediately declared the truth, and can honestly say that no pain or soreness was felt and the arm was used right away the same as ever. The bleeding soon ceased, and although the big lump which formed lasted about two weeks, no soreness manifested itself. That same night our little dog was bitten by a snake, and he was seemingly in great pain. I instantly began to treat him and in a few minutes he became quiet. The next morning he was apparently all right, except that one of his hind legs was greatly swollen, and in another day or two the swelling had gone down. Two painful corns have disappeared, throat trouble yielded to the power of Truth in one treatment, and burns have been healed instantly. One of my arms from elbow to hand was rough and unsightly, as it had been for several years, but the condition simply disappeared.

For all these experiences of Truth's healing power I am thankful to God. I am also grateful to Mrs. Eddy, His faithful servant, who was inspired by Him to make Life, Truth, and Love so plain that all who will may learn the way. There are no Scientists in this place, and there is no church nearer than Mobile, which is thirty miles away; but we have all the Christian Science books to read and the Lesson-Sermons to study, and I feel that we are not alone on our little farm, for God is here as well as elsewhere.

ELIZA FRYANT, Agricola, Miss.

✧

I wish to express my thankfulness to God for what Christian Science has done and is doing for me. I have been healed of rheumatism, headaches, nervous depression, and a serious affection of the knee joint. My eyesight is wonderfully improved, inasmuch as I can now read without glasses, which were laid aside during class instruction in 1907. Perhaps the most important healing of all has been deliverance from the tendency to hug my grief for the passing on of my husband. Mentally, morally, physically, and financially I have been uplifted and healed. Nothing but God's power could have destroyed the error that bound me. I am a living witness to the power of Truth.

Deep gratitude is felt for the illumination thrown on the Bible since the daily study of that precious volume, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The Concordance to this book is very helpful to me, and the Concordance to all our dear Leader's other works is a most loving proof of the unselfed love and devotion of the workers at headquarters in Boston. I am grateful for this opportunity of thanking them. Christian Science has brought to light the true God, who is All-in-all, and I am daily proving that He is Love.

ELIZA H. WADESON, Green Bank, Bexhill, England.

✧

I have received so much good from the testimonies in the *Sentinel* that I appreciate the privilege of writing of some of the blessings which have come into my life through Christian Science, hoping that others may be encouraged as I have been. For a long time I had been having medical treatment for a form of diabetes which seemed to cause pain in the joints, weak heart, inflamed eyes, physical weakness, and such confusion of thought that it was difficult to carry on a conversation. Christian Science was brought to my notice, and by a careful study of Science and Health I gained health and strength rapidly, and can now say that the trouble has been overcome.

Through the understanding of Christian Science it has been my privilege to overcome numerous ailments for our children, many times very quickly. When our twelve year old daughter was two years old, she had an attack of scarlet fever, which seemed to leave her with ear trouble. Both ears had discharged for five years, and for five years afterward she was not able to hear with one ear and had only partial use of the other. I asked for treatment in Christian Science for her hearing, and the next day an obstruction thicker than a lead pencil and three fourths of an inch long came from the ear and the hearing in both ears was perfect. Only when she has an attack of cold has her hearing been affected since, and through the study of the Lesson-Sermon I have been able to overcome any fear of poor hearing for her.

For years I had prayed that I might be permitted to live

Digitized by Google

to see our family of small children grown up, and now am finding an answer to my prayer. I was very glad to learn that it is not God's will for a mother to be taken from her family. Words fail to express the gratitude I feel that Mrs. Eddy lived such a pure life that she was able to discover this truth which makes men free today as it did nineteen centuries ago.—Mrs. A. L. Hincks, Sebewaing, Mich.

✧

Until a few years ago I was afflicted with a chronic bowel trouble. My father, who lived until I was seventeen years old and who was an unusually successful physician, could not permanently help the condition; in fact he told me, as have several physicians since, that it was something which drugs cannot cure. For nearly thirty-two years I was a victim to this disorder, which seemed so much a part of my life that I did not worry about it, although I could not possess the general health of those who were normal in this respect.

I took up the study of Christian Science, but not for physical healing; it appealed to me as the truth. I however decided to have treatment, although I did not expect to be healed, not having grasped the Principle of the healing power and being quite satisfied with Science as a religion only. Faith, therefore, was not a factor in my subsequent healing, but I knew drugs could not heal me. When I was completely healed in one week's treatment by a Christian Science practitioner, I was as surprised as I was grateful. It was the beginning of a new physical life for me, as automatically every other organ and function of the body became normal; it was more than this, however,—it was the beginning of a spiritual life. The spiritual healing received through the study of Christian Science is the greatest thing which has ever come into my experience.

To say I am grateful does not express my feelings. I praise God with all my heart for Jesus, the master Physician, and for the dear woman, Mrs. Eddy, who gave us an interpretation of his works whereby we can more nearly follow his commandments.

Flora Stewart McGraw, New York, N. Y.

✧

Recently I was asked by a friend to give an instance of healing in Christian Science,—not one of which I had read or heard, but one which had come under my personal observation. The first one which occurred to me was the healing of my mother, who had long been a sufferer from severe attacks of sciatic rheumatism. Physicians had never been able to cure her, although on occasions, which had become more frequent as time passed, she had gained temporary relief through hypodermic injections. She lived in a state of constant fear and dread lest this painful malady should seize her. After the study of Christian Science was taken up, these attacks were overcome, at first through the help of practitioners and later through the application of her own understanding of this healing truth.

I was about to tell my friend that I had no big or wonderful healing to relate from my own experience, when I remembered that a few years ago Christian Science had lifted me from the very depths of despair and discouragement. For some time I had been following a line of work which I loved, but a point had been reached where I must choose whether to go on struggling to gratify personal ambition, or to take what seemed a humbler path where work meant true service. The mental struggle had been severe, and I was at last reduced to a state of utter exhaustion.

For about two weeks I was practically unable to walk and manifested every symptom of what is called typhoid pneumonia. I was treated by a practitioner, but was vaguely wondering if I would ever be able to walk or do things again, when the healing came. During the last treatment I fell asleep, to awake a few hours later with a new sense of peace and happiness and security. On opening the Bible which lay beside me, the first words I saw were those in Isaiah: "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness."

At that moment came the realization that the healing had been accomplished, and I dressed and went for a walk. Every trace of weakness and fever and cough left me, and in the months that followed, the problem which had troubled me was solved. This does not mean that everything was immediately made smooth and easy. Far from that, for every step of the way has had to be proved, and there have been many difficulties and discouragements, but I am learning day by day that when we are about the Father's business there can be no fear, no selfish anxiety as to the ultimate outcome.

Experiences like these are not wonderful to the Christian Scientist; they are divinely natural, the manifestation of Immanuel, or "God with us," coming now, as to the prophets and disciples of old, to all those who are ready and willing to receive. All benefits received by me in Christian Science have been permanent. Whatever the healing, whether physical, mental, or moral in its nature, the result has remained, each one better than the last, a step mounting upward in the journey from sense to Soul. I thank God for Christian Science daily, and lovingly acknowledge my debt to Mrs. Eddy, whose purity, devotion, and sincerity enabled her to explore the way and discover for us the Christ, Truth.

Annice Campbell, Los Angeles, Cal.

✧

The healing of a poisoned finger through the realization of the truth expressed in an article on the Home Forum page of the *Monitor* some time ago is only one of many proofs of the healing and regenerating power of Truth as taught us in Christian Science. I have been healed of chronic stomach disorder, and of eye trouble on account of which glasses had been worn for eleven years. Though my eyes are used more than formerly, my sight is better than ever. At the time of our marriage my wife was antagonistic to Science and a great scoffer. For several years after our little girl was born my wife was constantly ailing. One physician said he could find nothing wrong, another declared she would have to undergo an operation; but in her case it was again proved that "man's extremity is God's opportunity." She asked for and received Christian Science treatment and was perfectly healed.

In January, 1914, we had the blessed privilege of joining the church. I owe all this to the self-sacrifice of our Leader, Mrs. Eddy, who so lovingly gave this blessed truth to the world that all mankind might know the truth that makes free.—Darwin H. Goldsmith, Cleveland, Ohio.

✧

[Translated from the German]

I am deeply grateful to be able to testify herewith to the blessings which I have received through Christian Science. In June, 1915, I became afflicted with an eruption on the left arm. It extended down to the hand, and I suffered greatly. As we had known of Christian Science for quite a while and were diligent readers of the *Herold*, my mother communicated with a Christian Science practitioner in Hannover, and absent treatment was taken up at once. The pain soon subsided, and a few days later I was free from the trouble. When shortly after this my little sister was taken ill with measles, we again notified the practitioner. After absent

Digitized by Google

treatment had been given her for a few days, she was able to get up, the fever having left her.

In February, 1915, I was taken ill. We thought it was a cold, but as my condition grew worse my mother wired to the practitioner, who began treatment the same day. Being reproached by our relatives, however, for not having a physician, my mother asked one to call. He at once pronounced the disease pleurisy; also remarked that a fluid had gathered under the ribs. He said that if this condition did not disappear by the next morning I would have to go to the hospital for an operation. We held to the truth, however, that God is the only power and our only helper. When the physician came the next morning (I had been under Christian Science treatment only two days) the accumulation had disappeared and no operation was necessary, but he said that inflammation of the lungs had developed. This trouble disappeared inside of four days. In about two weeks, during which time I had treatment from the practitioner, I was completely restored to health, for which I am very thankful to God, and grateful to our beloved Leader. I am a young girl and shall strive to conform to these beautiful teachings, with God's help.

MARGARETE PAETZ, Bockenem (Harz), Germany.

✧

I had treatment once or twice and had heard much of Christian Science before I ever thought more than casually about it. Then, although I read the literature obediently for many weeks, it was nearly always with doubt and a dread of a certain change which I feared it would bring about in me. It seemed as if there was everything the matter with me, but what tortured me most was a strange depression. Good physicians treated me, but I experienced no permanent relief and was always in a state of fear. They pronounced the trouble a complete breakdown. I had headache, stomach disorder, and exhaustion to the extent that my eyelids would close while walking or riding or eating, and I have awakened once or twice wondering if I were already dead.

I was almost desperate at the time Christian Science was recommended to me, and Science and Health was read purely because there was nothing else to do and always it was with tears of self-pity or doubt. I do not believe any one ever approached Christian Science—so gentle and so full of love as it is—in a frame of mind so peculiar and unreasonable as was mine. The healing was slow, but with the loving help of a practitioner the many ills have one by one slipped away into nothingness.

I am more grateful every day for what Christian Science is teaching me, and above all for the goodness of Him from whom we receive not "the spirit of bondage again to fear," but "the Spirit of adoption," by which we cry, "Father."

KATE HYMAS, San Antonio, Texas.

[Written for the *Sentinel*]

Rest

EDITH L. PERKINS

No sweeter words than these were e'er addressed
To thee and all by mortal sense oppressed,—
"Come unto me, and I will give thee rest."

'Tis Christ that calls,—nor knows the ages' flight,—
In tones of tenderness and lowly might:
"My yoke is easy, and my burden light.

"My yoke upon you take, and learn of me.
Then, struggling heart, wherever thou mayst be,
The peace that passeth knowledge is for thee."

From Our Exchanges

[Canon J. H. B. Masterman in *The Church Family Newspaper*]

Every age has its own golden image,—the popular idol of the moment,—and it is easy to persuade ourselves that we shall lose influence by dissociating ourselves from other men. The temptation to compromise is so strong that few of us are able to resist. Yet the secret of the failure of the church (in so far as it has failed) is really the unwillingness of Christian men to refuse to conform to the standards of the world. The Chaldeans were watching to see whether the three men would be true to their religion. They hated them because they were faithful, but they would have merely despised them if they had joined in the worship of the multitude. Better incur the hatred of men than betray the cause of God. The fact that these men held high office in the kingdom made it all the more important that they should show themselves faithful. They had much to lose; it was only more vital that they should make no compromise.

[*The Jewish Chronicle*]

Already in the psalmist's time it was said that the name of God is praised from the rising of the sun to the setting thereof. Since then centuries of enlightenment have rolled over the world. Yet the need of proclaiming the laws of righteousness which Abraham was the first to make known to a depraved world was never more urgent than it is today, when the ordered system of moral ideas built up by centuries of painful evolution seems to be falling into chaos, and men are flinging defiance at the distinctions between right and wrong which mankind have venerated for countless generations. Abraham feared not to shed the illumination of his genius on a benighted world. We, his descendants, the people who have seen a great light, have need of similar courage, when all around us is plunged in the depths of moral darkness.

[*Zion's Herald*]

The Emmaus walk remains the symbol in history for the access of the divine to the human, when the latter is found pressing on in the path of duty. God knows that His servants cannot stand too much of the treadmill and commonplace, and so to the Elijahs, the Elishas, the Daniels, the Pauls, and the Johns, and a whole host of lesser folk, He grants every now and then some unusual experience, some entrancing vision, some seraphic communication, some visitation of blessing, which "cheers it after rain," and sets the once depressed soul to singing again.

[*Pacific Christian Advocate*]

Jesus always found a point of contact with every earnest, honest man he met, whatever may have been his previous training, and if the church of our day is to be like him, she too must find a point of contact for herself and her message with all classes of men.

[*The Methodist Times*]

The unity of the church is not merely external; it consists in truth and love. Where truth is obscured and love fails the ground of unity gives way, and the vital purpose of unity, which is to manifest the divine, is injured and possibly destroyed. When such a calamity takes place the claims of truth and love have to be reasserted, even though unity be for the time imperiled or destroyed. Yet the reassertion of the essentials, upon which any truly divine and spiritual unity must rest, is not intended to be for the final breaking up of unity. On the contrary, it is in order that the true

Digitized by Google

foundations of unity may be so effectively revealed that it may ultimately be restored and fulfilled on a higher plane and in a larger way than on the level of mere uniformity, which has lost its true significance.

[*The Christian*]

It has been well said that if you smash the mirror of the divine Word into a thousand pieces, each tiniest fragment will still reflect something of the living Word. Who has not been arrested by the light and fire which flashed from some familiar expression to brighten the gloom of a sorrowful day, and to bring a steadying consciousness of God to a heart that was well-nigh slipping its moorings? And who has not unexpectedly heard deep answering to deep in words almost worn smooth by frequent reading? It is thus we come to know that it is verily the Word that liveth and abideth forever with which we have to do. The fact of its inspiration is neither helped nor hindered by argument. It is constantly demonstrated by its aptness to meet every situation, and its power to find us when we have wandered too far to find our own way back to paths of peace.

[*The Church Times*]

One objection to putting morals first and considering religion merely as a help to them is, that goodness is seldom gained by aiming at it. Very often when a man succeeds in casting out the ugly demons of lust or intemperance he only installs in their room the no less formidable devil of spiritual pride. And freedom from lust or intemperance is dearly bought at the expense of humility. The truth is that man becomes possessed of goodness indirectly, as it were. He aims at some other thing, and when he has obtained it he finds he has obtained much else as well. "Seek ye first the kingdom of God, . . . and all these things shall be added unto you." If you aim at goodness apart from God you will probably fail, but if you aim at God, you will attain both God and goodness.

[*Northwestern Christian Advocate*]

Heaven is a state as well as a place. And the writer of the book of Revelation, like his Master, is not content that Christian disciples should comfort themselves merely by waiting for death in the rapturous expectation of the glory which is to be. This hope which is set before us is given that we may be heartened for the work of making heavenly conditions obtain on earth. This is what the writer means by "a new heaven and a new earth." It is not another heaven and another earth created out of hand by divine omnipotence. It is the present heaven and the present earth transfigured by the redemption of the human race. A hint of this transfiguring change is found in "the new heavens and the new earth" as they appear to the newly converted soul.

[*The Continent*]

Even in apostolic times, and always since, there have been unhappy souls who could not see that God's truth must be told to each generation and to every people in fresh terms, suited to whatever modes of thought and manners of speaking might be characteristic of its immediate hearers. Worse still, these timid spirits have failed to realize that the very bigness of God's truth requires various statement—that no one immutable human formula will show every side of it. Changing emphasis, new language, novel interpretations, unfamiliar perspectives, employed to enforce Bible teachings, are not then, as some suppose, signs of departure from well loved truth, but rather evidence that truth is growing greater, is being apprehended in new relations to human souls, and is coming to knock at more gateways of men's understanding.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Publishing Society

A new catalogue of selected Bibles has been printed by the Publishing Society and mailed to Christian Science organizations listed in the *Journal*. Reading-rooms not receiving copies will please notify the Society.

Owing to the increased cost of labor and materials the Oxford Press of England has twice found it necessary to advance the prices of Bibles to the Publishing Society during the past year. The Publishing Society now finds it necessary to make a corresponding change in its prices to the field.

The cost of manufacturing Bible Cases and *Quarterly* Covers has also increased, and the changes in prices for these articles are listed in the new catalogue No. 23.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 236 Huntington Avenue, Back Bay, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study. Also printed in Dutch and German.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local newsdealer, 12 cents a week, payable to the newsdealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents, three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

In the most sweeping of all decisions upholding prohibition laws, the Supreme Court of the United States has just upheld as constitutional and valid the Webb-Kenyon law prohibiting shipments of liquor from "wet" to "dry" states. It also sustained West Virginia's recent amendment to her law prohibiting importation in interstate commerce of liquor for personal use. Chief Justice White announced the majority opinion, Justices Holmes and Vandevanter dissented. An official digest of the majority opinion, prepared by the court, says: "Considering the Webb-Kenyon act, the court holds that there is no foundation for the contention that the act only applies to shipments from one state into another for a use prohibited by the state to which the liquor is shipped. On the contrary it is decided that the Webb-Kenyon act, to use the words of the act, applies to shipments of liquor 'intended to be received, possessed, sold, or in any manner used' in violation of the laws of the state. As this conclusion causes every prohibition of the West Virginia law to be embraced and come under the right conferred by Congress by the Webb-Kenyon act, it is decided that the West Virginia law was not in conflict with the commerce clause of the Constitution and the power of Congress to regulate commerce if Congress had power to enact the Webb-Kenyon law."

A review accompanied by statistical tables of the water power available in Italy for the generation of electrical force has been issued by the Ministry of Agriculture. For the last thirty years data as to the hydraulic force available in Italy have been collected methodically. The average driving power has been estimated at 123,200 horse-power for the water courses along the Ligurian coast, 926,900 horse-power for the rivers flowing into the Tyrrhenian Sea, 45,000 horse-power for the Sicilian water courses, 195,500 horse-power for the rivers flowing into the Ionian Sea, 553,100 horse-power for those flowing into the Adriatic, and 320,000 horse-power for the southern tributaries of the Po, making a total of 2,163,700 horse-power. The tributaries flowing into the left bank of the Po have not yet been accurately studied, but the driving force obtainable from them is roughly estimated at 774,000 horse-power, and 2,052,000 horse-power is attributed to the remainder of the unstudied water-courses, bringing the grand total up to approximately 5,000,000 horse-power.

Debate has begun in the Senate on the so-called Myers water-power development bill, which is characterized by some senators as the most important measure now pending in Congress. The bill, which relates to "the construction of dams across navigable waters," in its present form authorizes the Secretary of the Interior to lease the public lands for fifty-year periods for hydro-electric power purposes. On three years' notice it would enable the Federal Government at the expiration of any lease to take over such developed properties, paying the owners a fair physical valuation.

During private operation of such water-powers the lessee would be charged rental based on the value of the land and determined by the horse-power developed, not to exceed twenty-five cents for each developed horse-power a year for the actual power distributed. Half of the rental would revert to the state in which the power was generated, the balance going into the reclamation fund created by act of Congress approved June 17, 1902.

General Chittenden, a retired member of the United States Engineer Corps, and now chairman of the Port Commission of Seattle, Wash., has projected a plan to drive a thirty mile tunnel under the Cascade Mountains to improve traffic facilities between ports on Puget Sound and the interior of the state. Such a project might cost $50,000,000. It would save forty-eight miles, reduce the summit elevation of the Great Northern Railroad 2166 feet, shorten the schedule time of passenger trains between the present corresponding eastern and western points from three hours to forty minutes, of freight trains from ten hours to one and one half hours, reduce the maximum grade from 2.2 per cent to 0.6 per cent, and eliminate 6885 degrees of curvature.

The coconut industry is already one of the main resources of Panama and is likely to become the object of much more attention soon. The Joint Land Commission recently awarded $120,000 for a tract of about three hundred acres planted in coconuts five years ago. Expert opinion is that coconut trees ought to be planted at the rate of about seventy to the acre. These trees may be depended upon, when fully mature, for an average of one hundred cocoanuts a year. They begin to bear about the fifth year, and may continue actively productive for twenty years, sometimes more. There are 2500 square miles of good coconut land close to the coasts of Panama, besides interior lands.

The electrolysis survey of the city of Omaha, Neb., by the United States Bureau of Standards was completed a few weeks ago, and a report is being prepared to show the measures that must be taken to remove the difficulty. The engineers of the bureau are also examining the installation at Springfield, Mass., to see how nearly the results agree with predictions made for the system they designed. If everything is satisfactory, the same system will be installed throughout a large part of the city of Springfield.

On Jan. 1, 1917, a new insolvency law, applicable to the whole of the Union of South Africa, came into force. The provisions of the act are very stringent as compared with those of the acts at present in force in the different provinces of the Union, and must effect a great change in trading in general in South Africa, as well as tend very largely to the protection of merchants who supply small traders with goods on credit and to the restriction of reckless trading on every hand.

Of a recently placed order for forty heavy locomotives for the freight services of the Canadian Government railways, ten are of the type known as the "Santa Fé" and thirty of the "Mikado" type. Prior to the introduction of these new engines the heaviest locomotives in use on the Canadian Government railways weighed 232,000 pounds. The "Mikado" engines weigh 283,000 pounds, and the "Santa Fé" 514,000 pounds.

A creosoting plant has been constructed at North Vancouver, British Columbia, at a cost of $300,000. The property covers a total of twenty-eight acres. The main storage tank has a capacity of 750,000 gallons, and three other tanks bring the total capacity up to 1,000,000 gallons. The main treating plant consists of two of the largest creosoting retorts on the continent. They are 7 feet inside diameter and 132 feet in length.

In the Sequoia National Park, on the upper slopes of the Sierra Nevadas in central California, and in the little General Grant National Park near by, grow 1,166,000 sequoia trees, of which more than twelve thousand are over ten feet in diameter. Seven of the largest have been named, and they range in diameter from 27 to 36.5 feet, in height from 255 to 292 feet, and in circumference from 81 to 109 feet. "General Sherman" is the largest in girth and "Dalton" in height.

The report of the state conference on the water problems of California, which was called for the purpose of recommending to the legislature a unified policy with reference to irrigation, reclamation, water storage, flood control, and drainage, has just been made. It is recommended that control of all water matters be placed under three commissions,—a water commission, an irrigation board, and a flood control board.

The International Harvester Company, the Plymouth Cordage Company, and five other American manufacturers are absolved in a report of the Senate Committee on Agriculture of the charge brought against some of them that they have raised unwarrantably the price of binder twine to the American farmer, and the blame is placed upon the Comision Reguladora of Yucatan.

Australia's woods, their protection; replacement, and value were the main topics dealt with at an important conference on forestry and reafforestation held in Melbourne at the end of November, 1916. The conference was under the auspices of the Australian Forest League and the Royal Victorian Institute of Architects.

The number of people employed in Swiss watch factories and in the so-called "home" industry in 1915 is estimated at sixty thousand, but it is claimed that over three hundred thousand persons, or one twelfth of the total population of the Confederation, are directly affected by the industry.

Two fish banks, abounding in millions of sea bass, have been discovered by the schooner "Grampus" of the United States Department of Commerce, Bureau of Fisheries, off Cape Fear Bar on the North Carolina coast. The larger bank is 3½ miles wide and 2½ miles long.

Experiments by the county agricultural agent of Dona Ana County, N. Mex., indicating that the soil is good for the sugar beet, have resulted in the building of a $1,500,000 sugar factory and contracts for 7000 acres to grow beets on next year.

Vol. XIX | February 3, 1917 | No. 23

Tilling the Ground

CALVIN A. FRYE

In the first chapter of Genesis we read, "And God said, Let us make man in our image, after our likeness: and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth." Who has ever beheld the man thus described, even the divine ideal? This man is not formed of the dust of the ground, a lump of clay, for that is far from being the image and likeness of God, Spirit. The likeness of Spirit must be spiritual, not material. Isaiah represents God as saying to mortals: "My thoughts are not your thoughts, neither are your ways my ways . . . For as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts."

In the second chapter of Genesis we are told of a suppositional creation of man and woman made from a material basis, who soon developed propensities antagonistic to the divine Mind, the only creator. Having listened to another voice than that of God, they wanted to know more than He; they wanted to know both good and evil; so, as we are told, they yielded to the persuasions of the tempter, tasted of the forbidden fruit, and were led to believe that mind was matter, that is, not Spirit. Thus they were ensnared by the testimony of the material senses, the belief of intelligence in brain and nerves. Then God's voice was heard in the garden of Eden calling to Adam, "Where art thou?" But as his newly acquired intelligence informed him that he was naked, he ran away and hid himself, instead of welcoming the loving call of divine Truth, acknowledging his sin, and correcting it. This story may be a myth, but the writer has yet to read a better explanation of that which claims to be man and woman, and at the same time which seems so demoralized and so constantly in need of help to fight against sickness, sin, and death. Surely the man whom God made in His image, after His likeness, and whom He pronounced "very good," is not this kind of man.

Jesus, whom our Leader has called "the highest earthly representative of God" (Science and Health, p. 52), said, "Blessed are the pure in heart: for they shall see God." This explains why mortals do not see God,—their impure thoughts so obscure their vision that they do not discern spiritual thoughts and things. They believe themselves to be free moral agents, having minds independent of God, free to indulge their own inclinations, be they either good or evil. When, however, they awaken to the true sense of being, the true sense of man as spiritual and at-one with the divine Mind, they begin to "till the ground" in order to win their way back into Eden. They set to work pulling out the noxious weeds and throwing away the stones which obstruct the path into the garden; they cultivate the seeds of health, purity, and spirituality. On page 545 of our text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "The condemnation of mortals to till the ground means this,—that mortals should so improve material belief by thought tending spiritually upward as to destroy materiality. Man, created by God, was given dominion over the whole earth."

Luke, telling us of the time when Jesus was born, said that an angel, a message from divine Love, appeared to the shepherds and announced "good tidings of great joy, which shall be to all people." He further states, "And suddenly there was with the angel a multitude of the heavenly host praising God, and saying, Glory to God in the highest, and on earth peace, good will toward men." This message was received by the shepherds who were awake through the night hours, but we are not told that any less watchful people than they either heard or saw this remarkable manifestation of divine Love in their midst.

The advent of Christ Jesus started from a higher and more spiritual concept than that of mortals,—from Mary's recognition of divine Love with us, even of God as the Principle of man. This clearer concept of the God-created man also enabled Jesus to dominate fleshly and sinful temptations and to overcome the sense of the material world, the flesh, and evil. This natural inclination to heavenly desires and pure thoughts furnished his replies to Satan in the wilderness as given by Matthew and Luke. He said of himself, according to John, "The prince of this world cometh, and hath nothing in me." In other words, there was nothing in the consciousness of Jesus through which the adversary could tempt him to think or to do wrong. So, as it is written in the epistle to the Hebrews, he "was in all points tempted like as we are, yet without sin."

Those who accept the Adam-dream are cheating themselves out of the privilege of sonship with divine Love, the great joy and blessing which is within their reach. The apostle says, "Awake thou that sleepest, and arise from the dead," the stupefied sense of life in matter, "and Christ shall give thee light,"—Truth gives us life; gives an abiding sense of heaven here and now. Paul exhorts us to work out our own salvation with fear and trembling, but at the same time he assures us that God worketh in us "both to will and to do of his good pleasure." This is an assurance that if we strive to gain the goal of dominion over the temptations of evil,—over sick and sinful thoughts,—then will divine Love furnish us with thoughts of health and purity, whereby we shall be enabled to gain a realization of the divine presence with us. We shall then have that Mind which was in Christ Jesus, the divine consciousness which heals the sick and comforts the sorrowing.

The apostle Paul asks, "Who is sufficient for these things?" Who has the wisdom and strength of purpose to cleanse and purify himself from evil habits? When the prodigal spoken of by Jesus in the parable awoke to a sense of his great mistake in demanding his share of the inheritance and leaving his father's house to enjoy himself with "riotous living," which he foolishly counted as freedom,—when he was ready to confess his sin and ingratitude and was willing to return even as a hired servant,—then he found the father-love yearning toward him and ready to receive him. Our revered Leader has given us as one name for God, divine Principle. Although

Digitized by Google

we have yet to learn the full import of this term, we know it was Principle who caused the prodigal to come to himself, and it was Principle who welcomed him while "he was yet a great way off."

Divine Principle is but another name for our Father-Mother God, and this Principle is just as applicable to human need as is the principle of mathematics or of music. As in music we seek to understand and comply with the principle and rules which govern the production of harmony, so must we conform our thoughts and actions to the divine Principle and rules of Christian Science in order to correct the discords of mortal sense, that we may enter into the joy of heaven, harmony. In our text-book we read (p. 312), "How true it is that whatever is learned through material sense must be lost because such so-called knowledge is reversed by the spiritual facts of being in Science."

Christian Science teaches that all things are mental. Let us then turn our steps back to Eden by overcoming the allurements of mortal pleasures and pains, which are the fruit of trying to know more than God knows, by believing both good and evil,—and let us strive to know only good. We shall then be attuned to the divine voice and heaven will be within our consciousness; and when we hear this voice call to us, we shall not hide in shame and fear, as did Adam, but conscious of work well done we shall welcome the voice of divine Love and enter into "the joy of our Lord."

Woman's Rights

SADIE KIEKINTVELD

We hear much discussion nowadays of the question of woman's rights. This is a hopeful sign of an awakening sense of justice and of that recognition of the equality of the sexes which is taught in Christian Science. The rapid acquisition by women of the political and economical rights hitherto denied them, is an outward expression of the fact that the world is awaking from the needless restrictions of the Adam-dream into the untrammeled liberty of the children of God. This higher sense of justice goes beyond the political and economical aspects of existence and is permeating all the affairs of life, removing the limitations not only on woman but on man as well, for it is undoubtedly true, as the poet has said, that "the woman's cause is man's: they rise or sink together."

In "Miscellaneous Writings" (p. 287) Mrs. Eddy tells us that home is "woman's world," and it is no less true that the world is today becoming woman's home; therefore it behooves her to carry into this larger home all the qualities which that word connotes,—the affection, the purity, the patience, the unselfishness, which make up a true home. Christian Science offers to all the widest opportunity to work out their salvation in the way that seems best fitted to their individual needs, and Christian Scientists should beware lest they cramp the individual effort to attain this liberty by their narrowness and suspicion of unworthy motives. The old view which compelled a woman either to marry and bring up a family, or become a burden to others and an object for coarse ridicule, has happily passed away. Once motherhood was the only profession open to woman, and into it she walked, regardless either of her fitness or of her liking for it.

It is beginning to be seen that gifts differ, and Christian Science is showing how each woman may find the work for which she is best fitted and in which she can be most useful and happy. The artist, the teacher, the factory employee, the musician, the clerk, the writer, the stenographer, the household helper who aids directly in making a home for others, and the Christian Science practitioner whose right thinking brings purity and harmony to countless homes,—these are all entitled to harmonious surroundings and loving appreciation. Best of all, the one with the two talents or the five talents need no longer be prevented by public opinion or human limitations from developing all of her gifts for the use of humanity and her own happiness.

The woman with home duties need not chafe over the thought that her talents are being wasted. If she really has them, they will find a chance for expression through her application of the teachings of Christian Science, and household tasks afford a splendid opportunity for developing the patience and perseverance necessary for the carrying out of any kind of work. As her understanding grows she will find that while keeping the joys of her home she will be able to eliminate many forms of drudgery, thus giving her time for more congenial pursuits. On the other hand, the woman with a talent for business need not be shut out from developing her home making instincts or any other right impulse. The suggestion of lack of time or strength is but one of the errors which Truth destroys. When we recognize God's government in our affairs, we learn that there is time for every right occupation.

Whatever work a woman chooses, she has a right to just compensation and reasonable leisure. Many thoughtful people believe that the financial recompense for all kinds of work should be practically the same, and that the specific reward for higher forms of service should come in the greater happiness they bring the worker. There is much reason in this point of view, for the actual material needs of all mortals are the same, though there may be a great divergence of opinion on the subject. Christian Scientists can render practical help in the bringing about of better conditions by willingly paying the best wages themselves, by thoughtful care not to be directly or indirectly the cause of needless labor, and by refraining from unreasonable bargain hunting, not only at the stores, but in all the every-day relations, which are too frequently affected by this pernicious practice.

"Make channels for the streams of love," we sing. When we make generous channels for our love and good deeds to flow outward, we are at the same time providing a means for good to come to us. "With what measure ye mete, it shall be measured to you again," we read in Matthew. If we would not be hurried and worried by selfish demands upon ourselves, we must look carefully to see whether our thoughtlessness is not causing others suffering or inconvenience. We should grant to others the same rights that we demand for ourselves. Whatever differences the world may make, Christian Science recognizes the equality of all of God's children, and its followers should be obedient to its teachings.

In considering woman's place in her larger home of the world, we must not neglect that spot which Mrs. Eddy says should be the dearest on earth, "the center, though not the boundary, of the affections" (Science and Health, p. 58). What is our duty as Christian Scientists toward preserving the integrity and purity of the home? In an age when marriage is too often cynically regarded, we need to guard against letting any of this cynicism into our consciousness. To allow even in our own thought any suspicion as to the honesty and purity of the motives of others, is to make a reality of evil and to hold humanity down in the dust. To gossip about others is inexcusable. Suppose we do occasionally give people credit for being better than they are,—that is, better than they are to mortal sense, for we never see God's children with the glory that they have in the Father's eyes,—speaking in the relative sense, is not this the best way of bringing mankind up to a higher standard of conduct?

Digitized by Google

Let us magnify the good and see that the pure gold of human affection will lift all who seek divine aid safely above the rocks and pitfalls in the way. The woman who finds her highest joy in the love of little children, does not need to be disillusioned by selfishness and sensualism. She has the high and noble task of helping to bring up a generation which is to demonstrate a better understanding of divine Science. The great profession of motherhood surely demands the best that the world can give. The woman who does not, however, feel herself fitted for the task of caring for children, has no less her place in the world and has equally the right to home love and happy companionship; and God, who "setteth the solitary in families," will show the wisest and happiest method for the outward manifestation of the ideal. Whichever way the choice is made, let us credit our fellow workers with purity of motive. Let us be helpful workers together, and not critics of one another. Above all, let us shun suspicion and innuendo, with their blighting influence on our own characters and those of others.

Mrs. Eddy gives us her clear and loving conception of the rights of woman when she says (Poems, p. 21):—

> Grave on her monumental pile:
> She won from vice, by virtue's smile,
> Her dazzling crown, her sceptered throne,
> Affection's wreath, a happy home.

✧

Readiness

WARREN C. KLEIN

On page 458 of "Science and Health with Key to the Scriptures" our Leader writes: "Divinity is always ready. *Semper paratus* is Truth's motto." Thousands of human beings are proving this truism every day, and each one has the opportunity to gain many blessings because of the readiness of divinity to help us in the minutiæ of our human affairs.

A short time ago a young man came to a Christian Science practitioner and asked for help for both a physical and a financial need. The young man was bright, and had taken a partial course in secretarial work, which would afford him good remuneration; but he claimed that he could not find work of this kind, and to supply his present needs had accepted a position as a painter in the new subway. This occupation was not very congenial to him, inasmuch as it was underground and he was in darkness all day long. He did not complain, however, but trusted Truth to guide him into a better position.

The second day after Christian Science treatment had been taken up, he called the practitioner and told him that he was feeling much better physically, but that he had to report a change to a lower position and a reduction in pay, for he was no longer a painter, but a painter's helper. He expressed great surprise when the practitioner told him not to be discouraged at this seeming loss and referred him to the statement on page 3 of Science and Health: "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more." So the young man, instead of being sorry for himself, went on with his work, rejoicing.

The third day thereafter he telephoned the practitioner that he had lost his position as painter's helper. He added that although he was much chagrined, he was at the same time very grateful for the realization of splendid physical health. When the practitioner asked him what kind of work he was capable of doing, he explained that while he had always entertained a desire to be a secretary, so that he could learn a business and step by step become of use in an executive capacity, he felt he was not competent to take a position at that time, for he was out of practice in his shorthand, typewriting, and general office knowledge. He was told that if he would get ready for a place, the place would be made manifest. The importance of being prepared was so impressed on him that he began to brush up his knowledge of the essential subjects. Within two weeks two positions as stenographer and secretary were offered him, and though he was not proficient, one of his prospective employers informed him that his place was there when he was ready to take it. It is perhaps needless to say that the young man made an extra effort to assume the responsibilities connected with his promised position, and in a short time he was active and happy in his right place, enjoying not only mental and physical well-being, but the satisfaction of knowing that divine Love had brought him out of sickness into health, out of darkness into light, and had shown him the way whereby his human requirements were being supplied.

Now the benefit to the young man and to the practitioner was not only in the demonstration of physical healing and financial supply, but the experience proved the truth as taught in Christian Science,—that God is always ready to help us when we are prepared to receive that help. In the clamor of daily life, in business and in the home, mortals are asking and seeking for blessings in the form of positions, clothes, houses, and innumerable other things. We are apt to forget that God has already supplied all our needs and that all we are called upon to do is to seek "first the kingdom,"—become truly prepared and really ready to receive. Then, as we are sincere in our desire, faithful to human relationships, and truly honest in our preparation for the blessing we hope for, the answer to our prayer is manifest. Mrs. Eddy says, "Science reveals the possibility of achieving all good, and sets mortals at work to discover what God has already done" (Science and Health, p. 260).

All good is here and now. Divine Love is giving all good to man and is constantly bestowing upon him more than he is ready to accept. The individual who is ready for a blessing is the one who is called to receive it; it remains with him to prove his fitness, and to give thanks.

✧

From Medicine to Mind-healing

CAROLINE BONNEKAMP

It was a longing to be of service to suffering humanity which made me become a nurse in a large hospital in Europe; but as years went by and experiences accumulated, the conviction grew stronger that salvation from suffering and death could not be expected from any of the prevailing systems of medicine. As knowledge of human character increased, I became more and more persuaded that the living of a better life was the only means of securing enduring health and happiness.

Not knowing a better way, I continued the search in different training schools and medical institutions for such a healing system as was gradually formulating itself in my mind, and was at last led to cross the ocean to the United States, having been told I would find there exactly what I was looking for. Along material lines the institution to which I went was certainly interesting and progressive, one of its distinguishing features being the education of the patients to a better understanding of the care of the body; but in a little while it became plain to me that this kind of education was doing the very opposite of what I had hoped it would do. Centering their thoughts on the body filled the patients with fears innumerable, and the results were what might have been expected.

Always driven on by the conviction that a better way

Digitized by Google

could be found, I entered a medical course, solely in order to obtain the degree which would open the way for independent work and investigation. During all these years of hopeful search I enjoyed the privilege of association with several of the best representatives of the medical profession, who always encouraged me and helped me with their wide knowledge and well meaning advice; yet at the end of the third year the work in the clinics and the study of the medical text-books had become so irksome that I decided to "stay out" for at least a year, hoping in this way to gain new ambition and courage to continue my studies, after a short period of rest spent far away from all abnormal conditions and close to nature.

It was at this point that Christian Science was presented to me, and although strongly prejudiced by what I had heard about it in the medical world, I accepted its text-book and agreed to read it. How well do I remember that first reading of "Science and Health with Key to the Scriptures." Its teaching seemed so wonderful that I could hardly believe it to be more than an ideal,—a wondrous vision indeed, but not practical. It was then pointed out to me that the truth as revealed in Christian Science had been proven and was being demonstrated daily, hourly, all over the world. Several conversations with some of its kind and patient practitioners gave me the assurance that this blessed healing work had been carried on quietly and successfully ever since its inauguration by its Discoverer and Founder, Mrs. Eddy. Needless to say, I did not return to college, but giving all my books and instruments to my former fellow students, I began life over again with the Christian Science text-book as my guide and teacher.

In the more than five years of my experience with Christian Science I have found it to be demonstrable to the degree of one's understanding, honesty of motive, and faithfulness in the application of its Principle. When accepting Christian Science as a better healing system, in fact the only reliable one, I little knew of the greater blessings it bestows by its spiritually regenerative power.

As a child I had a sincere desire to know God and to be good, but refused to accept any of the prevailing creeds about God and man, and was called "a heathenish child." The Bible I could not understand, but I longed to know more about Jesus and to live according to his teachings. One Sunday the preacher in the church which I was compelled to attend, gave as the leading text for his sermon, "Be ye therefore perfect, even as your Father which is in heaven is perfect," and then proceeded to argue that Jesus gave that command only as an ideal to strive after, but never to be reached, for this was beyond human possibility. This sermon was a great shock to my faith, and from that time I became so skeptical that I would have nothing to do with any church or creed, or even with the Bible.

In later years, when some of the most tragic experiences in my medical work led me to seek for spiritual support, some light to lead me out of all this mental darkness and ignorance, I again visited in turn churches of different denominations, attended Bible classes and mission meetings, but apparently without receiving any benefit. At last I took up the study of German and Oriental philosophies, but they only served as a temporary means of distracting thought. They threw no light whatever upon the great questions that more and more were calling for a definite answer: "Is there a God?" "What is life?" and "What am I?" These questions and many more have found a satisfying answer in the teachings of Christian Science, the very keynote of which is the command of Christ Jesus to be perfect, and which bring to one the practical knowledge of his life and words in such an illuminating way as may not be found in any other religious teaching.

As to its efficacy in the way of physical healing, I would say that on one occasion, while suffering from a violent attack of ptomaine poisoning, by faithfully clinging to the truth the illness was overcome in less than ten minutes, the poison being thrown off and leaving me with a sense of unusual energy and exuberance. On another occasion a severe attack of catarrh lasted over a week before I was able to prove its unreality. Before I had any knowledge of Christian Science this ailment used to last all winter, and often reappeared in the summer as hay-fever, causing great distress and suffering; while since then, whatever has been the seeming illness and however severe the symptoms may have appeared to others, I have always been able to attend to my duties as usual.

In my experience with others I have seen very much the same results. Two cases of typhoid fever come to mind, the one being healed in the second week, the other requiring over four weeks; but whether slow or fast, the method of Christian Science healing is always superior to all others, in that it eliminates all hampering fears from the consciousness of the patient, bringing glad hope and peace in their stead, with a new sense of life and love; whereas medical science has nothing to offer but caution and fearful predictions, leaving in the patient's thought as a result, increased fear of sickness and death.

Words are inadequate to express one's gratitude to God for this great gift to humanity of the healing truth, neither is it possible to express sufficient appreciation of His messenger, Mrs. Eddy, whose pure life and faithful devotion to the Master's teachings had prepared her to receive this great revelation. That she has laid down in her inspired book, Science and Health, the definite rules of that system of spiritual healing which will finally free all mankind from sin, disease, and death itself, is special cause for gratitude.

"What ye shall speak"

CHARLES F. SOUTHWORTH

STUDENTS of Christian Science do well to remember that one Mind or infinite intelligence governs all, and that when the occasion arises for giving expression to their gratitude for healing and for blessings received, they are but the channel for voicing good and will be guided in their utterances by Spirit. We need no further assurance of this than is contained in the instruction of Jesus to his disciples when he said, "Take no thought beforehand what ye shall speak, neither do ye premeditate: but whatsoever shall be given you in that hour, that speak ye: for it is not ye that speak, but the Holy Ghost."

It is well known that many public speakers in the presence of an audience are seemingly rendered temporarily incapable of speech or action. Many of the most famous actors and singers have suffered greatly on the first night of an important production from this mental agony of fear. In fact, most men and women can recall a time in their lives when they suffered from this form of fear; yet, as Byron says,—

> How odd a single hobgoblin's nonentity
> Should cause more fear than a whole host's identity.

It is this self-conscious fear which often prevents people from giving testimony at the Wednesday evening meetings concerning benefits received in Christian Science. They come to the meeting perhaps with a mind fully made up to give their testimony, for they may have heard the "still small voice" whispering to consciousness that a grateful acknowledgment

Digitized by Google

of blessings received is essential to growth. The opportunity to rise and testify presents itself. "Now," prompts the voice of Truth softly, but the individual experiences the sensation of being literally chained to the seat. Then is the moment to break forever the mesmerism that produces this seeming condition and to remember what Mrs. Eddy writes on page 372 of Science and Health: "In Christian Science, a denial of Truth is fatal, while a just acknowledgment of Truth and of what it has done for us is an effectual help. If pride, superstition, or any error prevents the honest recognition of benefits received, this will be a hindrance to the recovery of the sick and the success of the student." Once on his feet, the man who has succeeded in shaking off this false sense which would trammel and hold, finds that he can speak without difficulty, and he rejoices in a subsequent sense of freedom which causes him to regard as a great privilege the opportunity to testify and to look forward in joyful anticipation to such opportunity.

In giving testimony it is well to bear in mind a few simple points which contribute toward the satisfaction of all concerned. A testimony, stereotyped, lacking in simplicity and spontaneity, or full of superfluous detail, should be avoided. It is better to state concisely the simple facts concerning personal healing or the healing of others. A short, well directed statement of facts, presented earnestly and without elaboration of detail or attempt at eloquence, is more effective and more convincing to those just seeking to know something of Christian Science, than is an effort at dramatic effect or a long, rambling, wordy repetition of non-essentials. As some one has said, "Where words are scarce, they're seldom spent in vain."

In avoiding the temptation to hide in a multitude of words the helpful thought, we more nearly follow the advice contained in Jesus' saying, "Neither do men light a candle, and put it under a bushel, but on a candlestick; and it giveth light unto all that are in the house." A tiny gleam of light in a testimony, meant for some wayfarer, may possibly be hidden under a bushel of words, but the unselfed motive will be at no loss for the right quality and quantity of words.

A Wider View

MARY VICTORIA CLARK

No longer seek I for some peak in Darien
Whereon to stand and view a wide expanse,
For my heart knows an ocean deeply blue,
Far broader, deeper than the western sea
Balboa gazed upon, and seeing it
So still and calm,
Called it the Pacific.

So sunny and serene its waters lie,
Mirroring heaven's blue; while all night long
The everlasting stars look down to view
Their burnished loveliness in its clear depths.
I stand and gaze upon this wide domain,
So still and calm,
This wondrous sea of Truth.

Go, little ships that sail Truth's shining sea,
Freighted with heaven's cargo,—hope and love;
Sail safely to your harbor homes, nor fear
The shock of sudden storm or hidden reef.
Securely as you ride the waters deep,
Safe, still, and calm,
So do I journey on!

Selected Articles

[C. Henry Brown, M. D., in *The Keystone Magazine of Optometry*]

Mrs. M. L. P., aged forty-eight years, first applied to me in March, 1900. I found her wearing + .5 cylinders with the addition of + 1 D for presbyopia. Her acuteness of vision was O. D. 20/40 and O. S. 20/60, which was raised to normal by + .75 cylinders. She was able to read with some effort, but the near point had receded to ten inches. This was restored to the normal distance and reading made comfortable by the addition of + 1.25 spheres.

Something more than two years later, in June, 1902, she returned for a change of glasses. I found that all that was necessary was a slight increase in the cylinders and spheres to afford normal vision and supplement the impaired accommodation. This is nothing more or less than a case of hypermetropic astigmatism complicated with presbyopia, such as we meet with every day. It differs in no respect from similar cases.

When we meet with cases of this kind at this age we feel that such persons will be dependent upon glasses for the rest of their lives. The cylinders are required to be worn constantly for the correction of the astigmatism, which as a rule never grows less, but tends to increase somewhat as the person grows older, while the spheres are necessary for the correction of the presbyopia, and must be made stronger from time to time to keep pace with the failing accommodation, which is a natural accompaniment of age.

In the usual course of events this lady was due to return for a reexamination of her eyes about 1905. Imagine my surprise, therefore, instead of coming back, to pass her on the street, and see her pursuing her business, that of a purchasing agent in large department stores, without any glasses. On account of her failure to consult me at the customary time, there was no other inference in my mind than that she had drifted off to some one else, as patients sometimes will do in spite of the fact that the glasses may have been entirely satisfactory.

When I saw her without glasses there was some satisfaction to see that my inference was incorrect and that she had not really deserted me for another. Time passed and I occasionally saw her on the street or in the store, and always without glasses, and I confess I was mystified, and still the wonder grew that in spite of the fact that she was growing older she was still independent of artificial assistance to her sight. I did not presume to speak to her about the matter or to question her in regard to it. It seemed to me her eyes looked heavy and lusterless and expressionless, but perhaps that was due to my imagination and dependent upon the thought uppermost in my mind that this woman needed glasses and needed them badly.

Years rolled around and another surprise came when Mrs. P. walked into my office in February, 1915, a lapse of nearly thirteen years since her previous visit. The story she told me was that she had taken up Christian Science and this had enabled her to discard her glasses, and that she had not worn any for the last ten years until the previous summer, when she procured glasses for reading, which I found to be + 3 D spheres combined with cylinders. On examination I found her acuteness of vision as follows: O. D. 20/20; O. S. 20/30. A + .5 sphere accepted for right eye and + .5 cylinder axis 90° for the left.

This shows the acuteness of vision to be nearly normal and much better than on the occasion of her first visit fifteen years previously, and this in spite of the fact that the refraction of the eyes lessens after fifty years of age, with

Digitized by Google

a consequent impairment of vision and a need for stronger glasses. On examination of near vision she seemed to be able to read in some fashion the larger sized print, but it really required + 3.5 D spheres combined with cylinders to enable her to read clearly and comfortably.

The first point to which I wish to call attention, and which is contrary to the usual conditions, is that in hypermetropic eyes the acuteness of vision at the age of sixty-three should be so much better than at the age of forty-eight. The second point is that she is able to stimulate her accommodation to such an extent as to read for the moment, but this is offset to some extent by the fact that she requires + 3.5 D spheres for reading, which is just about normal for a person of this age. She prides herself on this apparent return to juvenility of sight. She refuses to wear glasses for distance, nor can I insist that she really needs them. She dislikes to acknowledge that she needs glasses even for reading, but she is a sensible woman and is willing to submit to wearing them for that purpose.

This patient seems very happy in her Christian Science belief, and attributes her improved vision entirely to this cause. I have no theory of explanation to offer in this case, except that it seems to be another illustration of the predominance of mind over matter.

✧

[F. Elmo Robinson in *Portland* (Ore.) *Telegram*]

In introducing his attack our critic intimates that Christian Science is a religion, but that there is no salvation in it. The fact that multitudes have been healed of the love and practice of sin, that atheists have become devout students of the Bible, and that hopeless invalids have been restored to health through the ministrations of Christian Science, would certainly indicate that it is not only a religion but the religion of Christ,—the religion which effects a full salvation from both sin and disease.

One of the means of presenting to the public this new-old way of salvation through Christ is the free public lectures on Christian Science. It is quite true that the demand for such lectures is growing very rapidly. It is also true that the attendance upon these lectures is so large, and the public interest in them so great, that newspaper men throughout the country are coming to consider lectures on Christian Science good news, and freely give space to them as such. The insinuation on the part of our critic, therefore, that the publication of these lectures is liberally paid for, seems merely an attempt to belittle the great public interest in Christian Science.

Our critic concludes his introductory remarks by asserting that "Mrs. Eddy eliminates fully one half of the Scriptures." On page 58 of the Church Manual, pertaining to the Lesson-Sermons which are read at the Sunday services in Christian Science churches throughout the world, Mrs. Eddy says, "The correlative Biblical texts in the Lesson-Sermon shall extend from Genesis to Revelation." Probably no other denomination in the world gives so conspicuous a place in its services to the Scriptures as is given them by the Christian Science church.

Mrs. Eddy does not destroy the personality of God, as our critic affirms, but rather explains the sense in which God is, and is not, personal. On page 116 of Science and Health she says, "If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense." A careful study of Mrs. Eddy's writings discloses the fact that her teachings destroy nothing but evil.

Perhaps at no point in this clergyman's attack did he more completely misrepresent the teachings of Christian Science than in the statement that "Mrs. Eddy destroys human sympathy and natural affection." Every comment the critic made following this charge indicates an utter failure to understand her teachings. Christian Science teaches the sympathy that heals and saves. It is true that its students do not dwell upon sin, disease, disaster, and death, and thereby magnify these conditions; they endeavor rather to lift thought to God and to the things which are real and eternal, thereby bringing about an elimination of discordant conditions from human experience. By magnifying God in their own thought and helping others to do likewise, Christian Scientists believe they are manifesting true sympathy.

Christian Science churches do not make a practice of advertising their contribution for charitable purposes, but inasmuch as our critic has endeavored to impress the public with the thought that Christian Scientists ignore calls for aid for the poor and distressed, it may not be out of place to inform your readers that twice since the beginning of the great European war large contributions have been made by Christian Science churches for the sufferers in the war zone. Christian Scientists, far from ignoring discordant conditions, are usually among the first in every community to respond to calls to meet the temporal needs of mankind. They believe, however, that true charity consists in helping people to such a position that they do not need charity, and that by teaching them the truth about God and man in His image and likeness an invaluable service is rendered in this direction.

That profanity, drunkenness, and evil habits of all sorts are being overcome, and dishonesty, selfishness, and greed are being eliminated from the business world through the application of Christian Science, is a well established fact. Our critic's assertion, therefore, that "Mrs. Eddy undermines fundamental morality by inspiring self-deception in her followers" is wholly unwarranted by the facts. In view of what has already been said concerning the purpose and results of Christian Science teaching, it seems hardly necessary that more than a passing comment be made upon the gentleman's assertion that "Christian Science is a delusion predicted in the Bible." The Scriptural query, "Doth a fountain send forth at the same place sweet water and bitter?" might well be borne in mind in this connection.

✧

[S. T. Downs in *The Plymouth* (Ind.) *Democrat*]

Fair-minded persons will see upon a moment's reflection that disconnected sentences from Science and Health, separated from their context and presented in a setting of an antagonist's own language, do not form an argument. The statement "Christian Science is not Christian, and to adopt it is to commit intellectual and moral suicide," is not only incapable of proof, but there are many of your readers, no doubt, who know it to be positively absurd. Many who have observed Christian Science and Christian Scientists, even though they disagree with Mrs. Eddy's teachings, acknowledge that Christian Science has proved to be a mental and spiritual uplift to the rank and file of its followers, and that the intellectual and moral standards of Christian Scientists will not suffer by comparison with those of any other Christian denomination or religion.

If some branch of material means for treating disease should attack Christian Science for denying the reality of matter, it would not excite much wonder; but when a Christian minister declares that "the Bible is based on the philosophy of the reality of the material world," as does our brother, it is enough to tax one's credulity. Christian Science is based directly on the teachings of Christ Jesus, and he taught,

Digitized by Google

as we read in the fourth chapter of John's gospel, that "God is a Spirit: and they that worship him must worship him in spirit and in truth." Now, in the first chapter of Genesis we learn that man was created in the image and likeness of God, and if what the Master taught about God as Spirit is true, as it certainly is, man as created by God must be spiritual. It is an utter impossibility for man to be both material and spiritual, and the reader can see very clearly that to proclaim the reality of matter and a material creation is to deny the plain teachings of the Bible, which is the very thing our critic accuses Christian Science of doing.

Christian Science teaches that sin is not a spiritual fact and is therefore not real, and the same applies to matter; but Christian Science does not say that sin and matter do not seem real to human consciousness. Mrs. Eddy's writings iterate and reiterate the necessity for humanity's confession and repentance of sin, and that sin is not forgiven until forsaken. The third religious tenet of Christian Science reads: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts" (Science and Health, p. 497).

Instead of unscriptural teaching about God, Christ Jesus, man, and the universe, Christian Science emphasizes the spiritual import of the Scriptures and adheres closely and rigidly to the Master's teaching. The Bible thus illumined has emancipated many thousands from the bondage of sin and sickness, and these works are of such common knowledge that even our critic admits "genuine cases of healing." The Master stated very clearly that these works would follow "them that believe," and declared, "By their fruits ye shall know them." Pointing to the past and present fruitage of its teaching and ministry, Christian Science says to its critics, in the language of a New Testament writer, "Show me thy faith without thy works, and I will show thee my faith by my works."

✧

[Thorwald Siegfried in *Winlock* (Wash.) *Live Wire*]

After listening for a month to the denunciations uttered by a visiting evangelist in his references to Christian Science and Mrs. Eddy, it may be fairly presumed that some constructive information will be welcomed by your readers.

First it will be helpful to note the difference between the methods by which Christian Science is propagated among people, and those of other religions. If we consider the means by which a knowledge of mathematics is spread, we will find them quite similar to the means for making Christian Science known. Thus mathematicians, however willing they may be to communicate their knowledge, are not particularly anxious about those who prefer to remain in ignorance. One could hardly imagine an unwilling disciple coaxed or forced into union with a mathematical society; this is so because knowledge of numbers depends not upon opinion but upon understanding. The same is true of Christian Science. A most loving invitation to study Christian Science and to benefit by it is constantly extended by Scientists to all the world, but when the world accepts the invitation it will be of its own free will and not through subtle or bald coercion.

Again, with respect to Bible study Christian Science occupies a unique position. It neither indulges in fine-spun human theories that seek to limit the metaphors of the Bible to particular people and human events, nor does it accept mere opinion about the Bible,—opinion which is often as erroneous with an open as with a closed Bible. It does, however, take the Bible itself in the spirit in which it was written; and it may be safely asserted that no people are more rationally familiar with the Bible today than Christian Scientists. In the Sunday services of all Christian Science churches and societies about half of the words spoken are read from the ordinary King James Version of the Bible. The citations for these Lesson-Sermons are printed months in advance in *The Christian Science Quarterly* and are studied by Christian Scientists during the week before they are read in church, so that the inspired meaning of the passages may dawn upon their thought like Malachi's "Sun of righteousness . . . with healing in his wings." This practice harmonizes with Mrs. Eddy's reference to the Bible as "the chart of life" (Science and Health, p. 24).

Finally, Christian Science eliminates that sense of personal importance which has obscured the truth innumerable times in human history. Its message, though quiet, is representative of infinite power, of God Himself. Its healing efficacy does not depend on the clamorous self-assertion of any conceited or dejected mortal; on the contrary, a prayerful recognition of man's abiding dependence upon God, infinite Life, is sufficient to bring its harmonies into consciousness. Communities, as well as individuals, feel the effects of God's brooding care for their welfare, as Christian Science attunes human thought to recognize His presence; and even those who imagine that they have no liking for Christian Science, are only making themselves the instruments for an antagonism against Truth which does not originate with them. This impersonal antagonism is that "spirit of error" which John designates as the hallmark of those who do not give credence to God's messengers.

Christian Science is that "Spirit of truth" which Jesus foretold as coming to lead us "into all truth." Any one can prove this to be true by experiencing the healing influence of a faithful application of its teachings, the results of which are uniformly beneficent. Complete directions for such application are to be found in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, a copy of which can be borrowed or bought through any Christian Science reading-room, and most public libraries are able to supply copies of it.

✧

[Robert S. Ross in *The Herald,* Gloversville, N. Y.]

In his sermon an evangelist is quoted as saying, "Sin is here, and there is only one class of people that deny it—the Christian Scientists." Replying thereto, permit me to ask the good preacher how evil can really be anywhere if God, good, is everywhere present? This is a question worthy to be pondered by those who profess to worship one omnipresent and omnipotent God.

Christian Science certainly does not deny that both sin and sickness seem real to erring human experience, but it does deny the reality of sin and sickness in the sense that God is not the author of these errors. If sin and sickness are real, —that is, eternal,—they are as indestructible as God. All attempts to overcome them would therefore be not only unavailing, but actually contrary to God's will. Christ Jesus came to do the will of God; he overcame all manner of sin and sickness through his understanding of God's allness.

On page 230 of Science and Health Mrs. Eddy writes: "Good is not, cannot be, the author of experimental sins. God, good, can no more produce sickness than goodness can cause evil and health occasion disease." Does not the Bible tell us that God is "of purer eyes than to behold evil" and that He cannot "look on iniquity"? Surely the creator is ready to recognize that which He creates! Mortals are attracted by sin and are subject to sickness because of their belief in the reality of a power apart from God, good; and both sin and sickness will diminish in the exact proportion that this false belief diminishes.

Editorial

The Kingdom Within

THROUGHOUT Jesus' ministry he spoke of the kingdom of God as a reality, and of the immanent possibility of its realization in the affairs of men. To the Pharisees he declared, "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you." When he sent forth the twelve disciples with "power and authority," he commissioned them to "preach the kingdom of God, and to heal the sick." To these same disciples he said, "Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein." Paul in his epistle to the Romans said, "For the kingdom of God is not meat and drink; but righteousness, and peace, and joy in the Holy Ghost;" and it was preaching of this kind, "with signs following," that animated the early Christians.

Mrs. Eddy has defined the kingdom of heaven as "the reign of harmony in divine Science; the realm of unerring, eternal, and omnipotent Mind; the atmosphere of Spirit, where Soul is supreme" (Science and Health, p. 590). On page 281 of the same book she writes, "When we put off the false sense for the true, and see that sin and mortality have neither Principle nor permanency, we shall learn that sin and mortality are without actual origin or rightful existence." From this we learn that in Christian Science the kingdom of God is not a place which can be located geographically, or in a mortal, sensuous way, but that it is a state of spiritual understanding, which encompasses the reality of all being and discloses man to be the image and likeness of God, dwelling with the Father in righteousness and peace, guided and governed by that Mind "which was also in Christ Jesus."

When we sincerely pray, "Thy kingdom come. Thy will be done in earth, as it is in heaven," which Mrs. Eddy has interpreted as, "Thy kingdom is come; Thou art ever-present. Enable us to know,—as in heaven, so on earth,—God is omnipotent, supreme" (Science and Health, p. 16), we realize that the kingdom is indeed not far from us, and will in fact be found to be within us as we conform our thoughts, desires, and actions to the words of our prayer. Through this affirmative petition, prayed with understanding and sincerity, we are putting off the false sense for the true, and as we are able to demonstrate "that sin and mortality are without actual origin or rightful existence," we rise into that "realm of unerring, eternal, and omnipotent Mind," where God is supreme and man is found to be at peace, because he is seen to be what he in fact is, namely, the image and likeness of God, not controlled by mortal, finite passions and ambitions, but doing the will of the Father because that will is known and acknowledged as the only power, and the kingdom of God as the only kingdom.

The rise and fall of the kingdoms of this world are but the rise and fall of human aspirations, and the beneficence of these kingdoms can be measured only by the righteousness which they represent and the ideals of God to which they aspire; and likewise their harmfulness by their lack of these things. The peace the world so greatly desires must be found, and can be found, only in the kingdom of God; and as this kingdom is an individual experience, so will universal peace be attained only through universal individual experience. Allegiance to the kingdom of God, in preference to allegiance to the kingdoms of this world, is the road to world peace, and as this road is diligently followed harmony will be as manifest on earth as it is in heaven, and sick nations will be healed through the understanding of God just as surely and permanently as individual sick men and sick women have been healed.

Then shall we be privileged to see the establishment of the kingdom of heaven in the hearts of men visioned by Mrs. Eddy when she wrote (Science and Health, p. 340): "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

ARCHIBALD MCLELLAN.

✧

Wise Discrimination

STUDENTS of Christian Science are all acquainted with Jesus' Sermon on the Mount, and also know the high estimate put upon it by Mrs. Eddy. They do not, however, always remember that its sublime teachings can be understood only in the ratio of their own spiritual growth. It is true that certain parts of this wonderful sermon make their appeal to us at certain stages of our unfoldment, and it is quite proper for us to work along the lines therein pointed out, both for ourselves and for those who may seek help from us in Christian Science, but sooner or later we must come to understand this great sermon as a perfect whole.

In the fifth chapter of Matthew, Christ Jesus lifts thought above the outward acts which are a violation of divine law, and goes direct to the lust or hate which precedes and impels the act. In the seventh chapter of this gospel the tendency to pass judgment upon others is briefly but effectively dealt with, and appeals very strongly to students of Christian Science who perhaps were wont in the past to criticize harshly and heedlessly those who in their judgment were not living up to the divine requirements. Very few persons, however, receive treatment in Christian Science for physical ailments, without having their attention called to the greater need for spiritualization of thought and for obedience to all and not merely some of the teachings of our Master.

At this point it is well to remember that we must avoid extremes; and, while we are forbidden to judge or pass sentence upon others, clear spiritual discernment and consequent discrimination are undoubtedly required of us. In the prophecy of Malachi we are told that God, divine Mind, will be "a swift witness" against all evil doers, and with this comes the tender plea, "Return unto me, and I will return unto you." To this mortal mind responds, "Wherein shall we return?" It is then shown that material sense robs God, and in so doing becomes itself the prey of the "devourer." The way of righteousness is however clearly pointed out, and after this we read: "Then shall ye return, and discern between the righteous and the wicked, between him that serveth God and him that serveth him not." This is immediately followed by a declaration that the time is approaching when all wickedness shall be consumed as stubble, and then "shall the Sun of righteousness arise with healing in his wings." Two of our Leader's statements on page 542 of Science and Health may here be recalled: "Though error hides behind a lie and excuses guilt, error cannot forever be concealed. Truth, through her eternal laws, unveils error;" and, "Sin will receive its full penalty, both for what it is and for what it does."

In the experience of some workers in Christian Science it

Digitized by Google

has been found that the voicing of judgment based upon personal sense tends to throw error upon the defensive and prolongs the struggle on the plane of mortal sense; whereas the action of divine Truth, if not interfered with, speedily restores the balance in human consciousness and reveals the fact that neither lust, nor hate, nor any other phase of error can have a place in the kingdom of God. Our Master said, "Judge not according to the appearance, but judge righteous judgment." It may sometimes seem difficult to know how to do this, but we shall be helped in our honest efforts to obey this command by scrupulously guarding our own consciousness against the intrusion of the errors which we condemn; and not only so, but we should make the Master's words a demand upon ourselves for absolute righteousness in thought, word, and deed. Then the truth which we reflect will be a constant rebuke to error, and will aid in its destruction.

When the adulterous woman was brought to Christ Jesus that he might pass sentence upon her, he was silent; then he made the demand for absolute sinlessness upon all who were present. After this he did not hesitate to say, "I am the light of the world;" but he also said to his disciples, "Ye are the light of the world," and it therefore rests with us to make this high behest our individual standard at all times and under all circumstances.

ANNIE M. KNOTT.

Christian Unity

HOWEVER desirable Christian uniformity and conformity may seem as a matter of expediency, it has no real value unless it be the expression of spiritual unity. Outward and visible agreement must be the result of an inward and unseen at-one-ment,—and where can such union have its origin except in a common understanding of God? Individuals holding diverse views about the source of all being cannot possibly unite in their religious faith. To force a fictitious agreement by artificial means can only lead to mock measures of concord, which crumble into discord at the first shock of clashing opinions.

What says the apostle Paul on this point, in exhorting the Ephesians to unity? He plunges at once to the root of the subject when he writes, "There is . . . one God and Father of all, who is above all, and through all, and in you all . . . till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ." This "unity of the faith" is unity of spiritual understanding, and how shall they who have not the understanding of the same God be unified? On page 340 of Science and Health Mrs. Eddy has laid down what is virtually a spiritual ultimatum concerning this whole question, when she bases unity in human affairs upon obedience to the first commandment.

Sham unity can indeed be brought about, sometimes by force of fear, sometimes by trickery. In the first case superstition and bigotry play the principal part; in the second, a subtler form of personal tyranny, familiar to all working Christian Scientists, argues naively, Let us all be of one mind, and I will be that mind. But how quickly these pitiful failures disclose themselves, and the need for real union through the operation of the divine Mind urges itself upon human consciousness! A practical instance of Christian unity is afforded today by the reconciliation of Jew and Christian on the basis of Christian Science, as outlined on pages 360 and 361 of Science and Health. "Of old," writes Mrs. Eddy, "the Jews put to death the Galilean Prophet, the best Christian on earth, for the truth he spoke and demonstrated, while today, Jew and Christian can unite in doctrine and denomination on the very basis of Jesus' words and works." The fact that this reunion of the true spiritual Israel is going forward in all parts of the world where Christian Science has penetrated, is the clearest augury for the future brotherhood of man under the one God.

But there is a higher union yet to be worked out in human consciousness before real Christian unity can be said to be accomplished. This step is prefigured in the Apocalypse by "the marriage of the Lamb" and by "a bride adorned for her husband." On page 561 of Science and Health Mrs. Eddy writes, "To John, 'the bride' and 'the Lamb' represented the correlation of divine Principle and spiritual idea, God and His Christ, bringing harmony to earth." This Christian unity excludes any pretended unity between good and evil, Spirit and matter, Christian Science and hypnotism, or any attempt to coerce circles into straight lines, or to enclose the infinite in the finite. Moreover, this Christian unity demands a far clearer perception of Paul's "perfect man" and of "the fulness of Christ" than conventional theology can possibly furnish.

Far beyond the reach of the letter that killeth is the concept, presented by Christian Science, of the complete man as the reflection of Father-Mother God, unifying in intimate cooperation both understanding and love, wisdom and compassion, activity and peace. From the consciousness of this spiritually scientific man fear and suffering are forever excluded. God's man is as fully endowed with the qualities generally called feminine as with the masculine. The real man cannot present a one-sided or incomplete image of the parent Mind,—but if the Christ, the real man, be not understood, wherewith shall Christian unity be established upon earth? Happily the spiritual understanding of God and man as taught by Christian Science is doing so already.

WILLIAM D. MCCRACKAN.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday School, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), 45 Milk Street, near Devonshire, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

CHICAGO, ILL.—At the Home Exposition Show, Oct. 18 to 31, the following pieces of Christian Science literature were distributed: 6286 *Sentinels*, 1059 *Journals*, 367 *Herolds*, 5926 *Monitors*, and 2561 pamphlets. All but two of the pamphlets in the foreign languages found a place. The great change that has taken place during the past year in the attitude of the general public toward our literature was very marked. Nearly every one was eager for the literature.

Joint Literature Distribution Committee.

WASHINGTON.—Literature distributed for the year ended Oct. 31 was as follows: 5254 *Sentinels*, 110 *Journals*, 50 *Herolds*, 18,983 *Monitors*, 122 *Quarterlies*, 2267 pamphlets, 11,885 newspapers containing Christian Science lectures, 2056 newspapers containing letters from the committee, and 92 other pieces. In addition to the full lecture reports

Digitized by Google

printed in Washington newspapers during the year ending June 30, 1916, there were six such full publications during the four months ending Oct. 31, 1916; of these five were in daily newspapers.—*Committee on Publication.*

ALTOONA, PA.—The work of putting on the finishing touches to the interior of First Church of Christ, Scientist, at 1418 Eighth Avenue has been practically completed. The new house of worship was occupied for the first time several months ago by the local congregation. The building was remodeled from the old Christy property, the front being changed considerably and a main auditorium and reading-room constructed on the first floor. The second floor has been remodeled for the Sunday school room and another reading-room. The main auditorium has a seating capacity of almost two hundred persons.—*The Altoona Times.*

INDIANA.—Quite a number of newspapers in this state have reported Christian Science lectures in full during the year, and rather extensive reports have been printed as a rule wherever lectures were given. A large number of newspapers have reprinted articles from our own and other periodicals that have been offered through the assistants and correspondents, also through firms handling newspaper plate matter. Another evidence of the greater friendliness of the press is to be found in the increasing sentiment among newspapers against publishing reports of attacks on Christian Science. In a number of instances where attacks have been made the newspapers have refused to print anything about them. This office has prepared fifty-two corrections of attacks on Christian Science, of which forty-three were printed in fifty-one periodicals. Judge Clifford P. Smith prepared one correction and one special article, which were printed in eight newspapers; and he also prepared two corrections in German, one of which was published. At the present time one hundred and thirty-six of the one hundred and eighty public libraries in Indiana have received donations of our literature from the Trustees under the Will of Mary Baker Eddy.

The distribution work of this office has been confined almost entirely to places where we do not have churches, societies, or groups of Christian Scientists that carry on distribution work. In a few instances we have given assistance to organizations in the distribution of literature, when conditions indicated a necessity for it. Our distribution has been as follows: 18,875 *Sentinels*, 24,309 *Monitors*, 2732 pamphlets, 12,100 newspapers containing reports of lectures and special articles, 20,557 reprints of newspaper editorials and of special articles (pamphlet form), and 350 copies of Senator Works' speech.—*Committee on Publication.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 1, 1917. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 9, 1917.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 8, 1916, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
236 Huntington Avenue, Back Bay, Boston, Mass.

The Lectures

HIGHLAND PARK, ILL. (First Church).—Prof. Hermann S. Hering, lecturer; introduced by Robert P. Walker, who said in part:—

A very natural question for you to ask would be, What has Christian Science to offer that I do not already possess? In answer I will say that Christian Science does not offer you any new religion or new science, but it does offer the same scientific doctrine that Jesus taught and practised on the hills of Judæa and throughout all Galilee. It also shows you that Jesus' commands, "Go ye into all the world, and preach the gospel to every creature," and "He that believeth on me, the works that I do shall he do also," were meant not only for his immediate followers and the people living at that time, but for all generations. These commands of our Master are being obeyed today right here in your midst, and in all civilized parts of the entire world, through a knowledge and right application of divine Principle as set forth in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

SCRANTON, PA. (First Church).—Clarence C. Eaton, lecturer; introduced by Mrs. Hazel Strang Keller, who said in part:—

One of the most beautiful words in any language is the word truth, and whenever we have had occasion to think of it at all, it has been associated in our minds with such sister words as freedom and love. We have always found it something greatly to be desired in human experience,—the truth about anything immediately destroying everything that is false. We want the truth about men, about ourselves; and every one, whether he knows it or not, wants the truth about God.

In the ninety-first psalm we read, "His truth shall be thy shield and buckler," and in the one hundredth, "His truth endureth to all generations," while our Master, Jesus the Christ, said to those who believed on him, "If ye continue in my word, . . . ye shall know the truth, and the truth shall make you free." There is an increasing desire among thinking people to know this truth of God which is to make us free. There is a growing demand for such proofs of our understanding as shall preclude any possibility of arriving at an incorrect conclusion. Hundreds of thousands of men and women all over the world are finding today in Christian Science the answer to Pilate's question, "What is truth?" The results of their scientific, demonstrable knowledge of God are health and happiness which exceed anything in their former experience.

WAKEFIELD, ENGLAND (First Church).—John Sidney Braithwaite, lecturer; introduced by Mrs. F. R. Rhodes of Leeds, who said in part:—

This age is one of progress, and progress in things material is the outcome of thought progression. No one will deny that a great advance is being made spiritually throughout the world today. People are no longer satisfied with worn out theories, lifeless creeds, and impractical teachings,—teachings that are largely if not wholly responsible for the chaotic condition made manifest among the nations of Europe at this present moment. The world sorely needs, is ready for, and demands a religion that is practical, provable, and demonstrable, that will comfort the sorrowing and heal the sick as well as the sinner. Christian Science is the outcome of this demand. Those of us who have experienced Christian Science healing find it to be the Comforter, or "Spirit of truth," promised by the Master and

Digitized by Google

referred to constantly in the fourteenth and sixteenth chapters of St. John's gospel. One of the most noteworthy things about Truth is that it is always available for every human need. Truth was available to heal sickness and sin before Jesus' time as it was in his own day, and Truth is equally as powerful to heal now as it ever was. Is not this the Comforter?

We of the present age owe this recognition of Truth to the unselfed love and labor of the Discoverer and Founder of Christian Science, Mrs. Eddy, who after her own healing devoted her life to the study and demonstration of the truth which had been revealed to her, in order that she might give this comfort to suffering humanity. So divinely directed and blessed have been her efforts that today unnumbered thousands are proving the Master's promise, "Ye shall know the truth, and the truth shall make you free."

KANSAS CITY, Mo. (Second Church).—Virgil O. Strickler, lecturer; introduced by Andrew G. Bodwell, Jr., who said in part:—

Christian Science comes to you teaching no new doctrine, for in the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says, "I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets and apostles" (p. 126). Therefore a Christian Scientist can truly say in the language of our Master: "My doctrine is not mine, but his that sent me. If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself."

PORTLAND, ORE. (First Church).—George Shaw Cook, lecturer; introduced by Joseph W. Reynolds, who said in part:—

History informs us of a man who destroyed every phase of disease and evil, who broke every bond of limitation with spiritual power. This power used by Jesus has been discovered and made available in our time by a woman, and in presenting her discovery to mankind Mrs. Eddy named it Christian Science. To many it has seemed strange that spiritual laws could be understood and practically applied for the healing of disease as well as sin. Yet these laws are available and true, as Christian Science is proving in the same manner as did the Master.—*Oregonian.*

ST. JOSEPH, Mo. (First Church).—William R. Rathvon, lecturer; introduced by A. B. Pickell, who said in part:—

The mission of Christianity has always been peaceful and blessed, expressed in holy, healing faith. The prophets manifested this in great degree, and the mighty works and wonderful words of Jesus remain a hope and inspiration to every age. Indeed, there are many today wondering why, if those good things were once true, they should not be true now. In answer to this longing, through the work of a noble woman, Mrs. Eddy, Christian Science has come to this age, reinstating primitive Christian healing and by its works reassuring humanity that the Bible is true, that spiritual healing is a present fact, and that the promises are for all time.—*St. Joseph Gazette.*

Testimonies of Healing

Many years prior to taking up the study of Christian Science I searched long and earnestly for light upon the Scriptures, and for an explanation of Jesus' sayings, which I thoroughly believed must be true. All the learned discourses on the Bible and endeavors to make the way plain, however, gave only occasional gleams of light with slight comfort, and so I turned from the ordinary method of preaching the gospel, to the Word alone, secretly believing that at some time and in some way the promises would be fulfilled and the ability to know God aright realized, as Jesus declared. Little did I think that the light was already shining in the darkness,—that the Comforter was already come through the teaching of a book called "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Today I rejoice exceedingly in the light that has come through the clearer understanding of the Word as explained by our text-book; and for the many victories gained over mental, moral, and physical discords through the application of this spiritual interpretation of the Scriptures. I find a new heaven and a new earth opening up to me in the overcoming of tendencies which caused me to view life from a material standpoint, thus making it most miserable. Old things are beginning to pass away. Chronic stomach disorder, severe headaches, and throat trouble are as a dream that is past, while pride, resentment, and criticism are to a great degree vanishing from my experience.

My gratitude extends not only to our dear Leader, Mrs. Eddy, whose labor for us all was so untiring, but to the faithful ones at headquarters who are continuing to guide and guard and to see that we receive the food which is good for us. I cannot be grateful enough for our periodicals, which so often come as angels of light to dispel the clouds that seem to gather, and so I join with the host who thank God for Christian Science.

ALTHEA J. TRUEX, Trenton, N. J.

✧

Before becoming interested in Christian Science I suffered from nervous breakdowns every year, was continually taking medicine, and hardly knew what it meant to be really well. Almost six years ago, while suffering from the worst breakdown I had ever experienced and daily going down under the doctor's care, I consented to investigate Christian Science. A copy of Science and Health was loaned me, and after reading it for two weeks the realization came that I had been perfectly healed, and with it came a great desire to know just what had accomplished this healing.

Four years ago, while on my way to church one Wednesday evening, I fell, badly bruising my right hand. At the time I gave it no thought beyond simply endeavoring to wipe the dirt away with a handkerchief. The next morning I was compelled to use the hand a great deal, and during the afternoon a sense of soreness seemed to extend all the way up my arm to the shoulder. By Friday evening I had what appeared to be a serious case of blood poisoning. When the sense of illness and pain seemed unbearable, I telephoned to a Christian Science practitioner and asked for help. Obeying her instructions, I went to bed, and in about twenty minutes had fallen asleep. The next morning every symptom of the poisoning was gone. Shortly after this healing I was able to lay aside glasses, which had been worn for five years. At times I have had a little trouble with my eyes, but it has always been overcome as quickly as it appeared, and I have never felt the least necessity for resuming glasses.

Another healing which I should like to mention is that of an attack of measles. The metaphysical work was commenced for me as soon as this so-called disease appeared, and was so perfectly done that I was not ill for an instant, but ate heartily, drank all the water I desired, and suffered only a sense of irritation. The third day all manifestation of the disease entirely disappeared, but as we desired to conform with the law, it was several days later before either my mother or I went out of the house. I have also been healed of severe attacks of throat trouble, a sprained ankle, and other ills.

Last spring, while endeavoring to remove some paint from the floor by using lye, the knife I was using to scrape with slipped, splashing the lye and ammonia into one of my eyes. I instantly declared the truth, but at the same time I realized the necessity for a perfect demonstration, as I was the organist at the church at that time. This happened on a Tuesday evening, and I asked my mother to help me, as the eye seemed greatly inflamed. By the following morning there was only the slightest sense of irritation, and by afternoon the eye was perfectly normal.

I am grateful for these physical healings, but they sink into the background when I think of the spiritual understanding which has come to me. Whereas formerly I worshiped in a way a corporeal being, now I know God to be infinite Love, Truth, Life, and am able to recognize man as made in His image and likeness, reflecting all the qualities of eternal good. It is also with deep thankfulness to our dear Leader, who was strong and courageous enough to give to the world this knowledge of the truth, that I give this testimony, in the hope that through it some one who is perhaps weary and heavy laden will be led to seek the truth.

VERA BERNICE CHESLEY, Philadelphia, Pa.

✧

[Translated from the German]

Deep gratitude impels me to testify to the blessings which my family and I have received through Christian Science. For years I suffered with headaches of almost daily recurrence, also with pain in the back and a most distressing stomach trouble. Everything I ate seemed to cause me great pain, and during 1911 and 1912 complications were added which made conditions almost unbearable. The physicians were unable to help me, and my dear ones thought that I was rapidly nearing the end.

Things were, however, to take another turn, proving that "man's extremity" is indeed "God's opportunity." A friend called my attention to Christian Science. I wrote to a practitioner and asked for help, which was readily given. In one treatment my condition improved, and I had my first night's sleep in a long while. After the fourth treatment I was able to eat anything—something which had been impossible for a long time—and was in a fit condition to attend to my household duties. A son also has been healed of bronchial and lung trouble. Two years ago my little daughter had high fever, but she was healed after the first treatment.

With my family I am grateful for having been led to Christian Science. As for the wonderful healings which we have experienced through this glorious truth, we give thanks to God, and regard our dear Leader, Mrs. Eddy, who prepared the way for us, with loving gratitude.

SUSANNA RUBIN, Lütschental, Ct. Bern, Switzerland.

After having been silent so long I feel impelled to testify to the many benefits I have received through Christian Science. For many years I was afflicted with a stubborn skin disease. All medical treatment remained unsuccessful,

Digitized by Google

and I felt quite discouraged at times. Finally, upon hearing of Christian Science, I decided to write to a practitioner. The result of the treatment was, that the trouble disappeared in a surprisingly short time and it has not manifested itself again. For this I am deeply thankful to God and most grateful to our revered Leader, Mrs. Eddy.—E. RUBIN.

✧

In love to God and gratitude to Mrs. Eddy I wish to tell of some of the blessings that have come to me through Christian Science. It is now over nine years since my first healing in Science, and in these years Truth has been my only physician. I was healed of a serious condition of the blood and of almost total blindness after physicians and specialists had given up the case, their verdict being that I had but three months to live. From this deplorable state I have been raised to health and happiness.

I am deeply grateful for all the help I have received through the changed concept of God which Christian Science has given me.—EDITH LOY COUDEN, Chicago, Ill.

✧

It is about eight years since I began the study of Christian Science, and I have had great cause to be thankful for this wonderful truth. I did not come to it for physical healing, but the teaching appealed to me from the first. Gradually I began to prove the Principle of Christian Science in overcoming temper and other mental imperfections. The realization that each and every one of us is able to demonstrate the unreality of discord, physical as well as mental, came to me more slowly, but I have commenced to make demonstrations along this line, and know that nothing is impossible to God; that the desired result will be obtained when we efface ourselves and understand that it is His power, not ours, which does the work.

Not long ago an attack of headache came on during office hours. At first I felt that if I only had a little time the demonstration might be made. Then the thought came that time was not needed; that I did not do the work myself, and that all that was required of me was just to hold steadfastly to the consciousness of good instead of error, and to have faith in divine Love. With this thought I turned to my desk and attended to my duties, with the result that soon the difficulty had been overcome.

I am indeed most grateful for Christian Science, for our church services, our literature, and that Mrs. Eddy again brought practical Christianity to light in an age when I might know and demonstrate it for myself and others.

HENRIETTA R. LEVY, Grand Rapids, Mich.

✧

About twenty-three years ago I first heard of Christian Science, but like many others was too prejudiced to investigate the subject, and even objected to hearing it talked about, although I knew people who claimed to have been healed by it. I now see how unjust it was to condemn something of which I knew nothing. Before coming into Christian Science I was sick a great deal,—had a nervous breakdown, and for years had to be careful of my eyes, as close work with artificial light showed its effects on them the next day. I was fretful and nervous, and seldom went out for pleasure or recreation; indeed, there seemed to be no comfort or enjoyment left for me.

Six years ago, while in this dejected mood, I met a young lady who told me there was life, hope, friendship, and food for the hungry heart, and I, like a little child, was led by her to an understanding of Christian Science. I have indeed found health, happiness, friends, and now know what it means to be God's child. No time has been lost from the office for four years, my eyes are used evenings as late as necessary, and I go out whenever I wish to do so, taking trips which require three to four days and nights of continuous traveling, besides being ready for anything at the journey's end. My work was never harder than it has been during the last few years, but instead of fatigue I have felt the happiness of a well spent day.

When getting off a street car one evening about the middle of December, 1915, I fell, receiving a blow on the head which rendered me unconscious. I was rushed to the hospital, where it was found that my right wrist was broken, and the doctors said I would never have the use of that arm again. A Christian Science practitioner had been notified, so that I had treatment from the first. Although the doctors said it was unusual for any one with such a fracture to leave the hospital in less than four weeks, they let me go with the practitioner and her sister the fifth day, saying that as my general health was perfect and my arm was not stiff,—which they could not understand,—there was no reason why I should be detained any longer. I left the hospital in the morning and took the midnight train for Cleveland on the way to my sister's home to spend Christmas with her, as had been planned. I remained with her until after New Year's day, then went home with another sister, staying there three weeks.

Little or no pain was felt in the arm from the first. I had no thought of or desire at any time for any help but that of Christian Science. Since my healing a promotion to a more responsible position has come to me, and the new work keeps the arm in constant use; but although I have worked harder during the last six months than ever before, I never felt so well and happy.

"Science and Health with Key to the Scriptures" by Mrs. Eddy has unfolded and made plain to me the Bible, and for this I am very grateful. The best way to prove my love and gratitude for all the help received is earnestly to strive each day and hour for more of the Mind which was in Christ Jesus.

JESSIE M. THOMPSON, Walnut Hills, Cincinnati, Ohio.

✧

Looking back over the years of suffering and distress due to physical ills, I rejoice in having been freed from bondage through a knowledge of God's goodness. I was always considered a frail child, and womanhood brought most of the ills that flesh is heir to. From my earliest recollection I had throat and lung trouble, and when tired would lose my voice. Severe attacks of acute stomach disorder developed into chronic trouble, and for years I lived in constant dread. I also had curvature of the spine, and headaches so bad that for days at a time I could not raise my head from the pillow. For four years I could not read, and for twelve years glasses were worn, but eye specialists all agreed that they could afford me no relief, as the trouble was due to the spinal condition.

An internal growth developed, and I underwent an operation for its removal; but the growth came again. For five years I had heart trouble and labored under the law that I must not be left alone at any time. For twenty-five years hay fever and asthma in its worst form beset me; indeed, like the woman of old, I "suffered many things of many physicians," finally collapsing entirely, and for a year sleeping only about two hours out of the twenty-four. I was then told nothing more could be done for me, as I could not rally from another operation.

Many of my relatives were ministers, and I had been brought up in a home where only the highest ideals were

Digitized by Google

taught and where daily family prayer was the rule, but I was not healed. Just then a copy of Science and Health came to me, and little dreaming that it contained the key to the healing truth which Jesus taught and practised, I tried to read the book, but could not seem to comprehend the import of the words. Finally I laid it aside for a time, and devoted my study wholly to the Bible. Knowing my point of view was wrong, I prayed for light, and at last my prayers were answered. Gradually the healing of all the above named ills was accomplished, and with the healing came a most profound awe at what had been revealed to Mrs. Eddy, and how she had pressed on to give it to mankind.

It is now ten years since I first began to study Christian Science, and I have had the great privilege of class instruction. My healing has been permanent, and Christian Science is the only remedy in our home. Four years ago a cannon cracker exploded in my son's hand, lacerating every finger and filling the palm with powder. The arm was numb to the shoulder and he was faint and ill when he was laid on the grass at my feet. Kneeling beside him there, I realized only the light of Truth, in which there is no darkness at all. The effect of the shock passed away, and he was carried into the house. After the hand was bathed he went to sleep, to waken free from pain and numbness. In less than a week all evidence of the accident had disappeared. A similar case that proved fatal under medical treatment came to our attention at the time, but I knew that God is a shield and buckler to those who trust Him.

A few years ago, while on my way to take a car down town, I fell, injuring one knee severely. It pained me greatly, but I managed to go in town and do my errand. I held fast to the truth as taught in Science and Health, and in a few days the pain had left me; not for one day even was I unable to go about my duties. There is no better way to express our gratitude than in carrying this healing truth to others, and my prayer is that I may always be found following in the footsteps of the Master.

M. Henrietta Smith, West Somerville, Mass.

✧

About nine years ago I was completely healed of rheumatism through Christian Science. The practitioner had told me that I must learn to love everybody and to know that everybody loved me. Though I did not quite understand this, I kept on reading the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and finally comprehended that we should love good only. Then I knew that I loved the good and true in everybody and everybody loved the good and true in me. My sister and I have both had many beautiful experiences through the understanding of Christian Science, and we are most sincerely grateful.—Emma A. Lindstedt, Denver, Col.

✧

When I think back over the past few years, my gratitude goes out to Mrs. Eddy for what Christian Science has done for me. For three months I struggled wth a problem which generally leaves its victims in the path of destruction, and was then taken to a hospital, a physical, mental, and financial wreck. There Christian Science found me suffering untold agonies, but I was resentful and unwilling to receive it, simply because its discoverer was a woman. The only god I had was gold, for the God I had learned of I could not accept, believing that He sent sin, sickness, and distress upon men, women, and children.

Finally, after a battle with pride and self, I promised a friend to try Christian Science, and as a result was healed of my afflictions. A serious eye difficulty of twelve years' standing was instantaneously overcome, and acute stomach trouble has also been healed. I found God to be divine Principle, ever operative, and began to understand my relationship to the creator; also to know that strict adherence to this one infinite divine Principle must bring harmony. I learned the meaning of humility, and found out what it meant to be alone, struggling with error; but this all led to greater progress.

My blessings have been many, but I am most thankful for the spiritual healing and for my improved thought about men and women. For four years I have depended absolutely upon Christian Science. Discouragement has often come to me, but it always led to the discovery that I had been disobedient. My debt of gratitude to God can only be paid by doing my part in helping to free those now in bondage.

George J. Schantz, Chicago, Ill.

✧

[Translated from the German]

Deep gratitude impels me to tell of one of my latest experiences in Christian Science. One morning I awoke with severe spasms of the chest. I tried to overcome the ailment, but it rapidly became aggravated, and I soon had to ask for help. Then fever and pain set in, as well as all the symptoms of inflammation of the lungs; still I attended to my occupation, although this seemed to cause me great distress. A friend was treating me, but instead of improving, my condition seemed to grow more serious, so that hope of getting quick relief was almost abandoned. On the second day, however, having once more asked for treatment, after supper I went to sleep, and upon awaking two hours later found myself free from pain, fever, and oppression. Whatever was left of the cough disappeared within a few days. My joy over this sudden healing was so great that I could hardly find words to express it.

This wonderful experience has brought me one step nearer to God in that it has proven to me anew His presence and power. I have often experienced help from divine power through Christian Science, for which I am most deeply grateful. I am equally thankful for the recognition of the truth as applied in human affairs, which Christian Science brings to its students and which enables them to follow in an increasing measure the glorious command, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

Erika Hagen, Honolulu, Hawaiian Islands.

✧

With gratitude I testify to my various healings through Christian Science. I attended a Christian Science church for the first time nearly five years ago, and was deeply impressed by the reading of the Lord's Prayer with its spiritual interpretation, as found on page 16 of Science and Health. I came away with the firm conviction that this was the truth and with the desire to learn more about it. Accordingly I bought a copy of Science and Health and began to read.

Shortly after this my parents brought me to California for my health, as I had been forced to leave school on account of nervousness, chronic heart trouble, and other ailments. Soon after arriving in Los Angeles I threw away my medicine and began to have Christian Science treatment. After eight treatments I laid aside glasses which had been worn over three years on account of a structural defect. I became far less nervous and the other ailments disappeared. Since then my healings have been too numerous to mention, but I am most grateful for the spiritual truth that is being revealed to me as I continue this study.

Eva Stuart, San Diego, Cal.

Digitized by Google

About nine years ago I began the study of Christian Science, but while truly grateful for the many benefits that have come to me, I have never made acknowledgment of them through our publications. From the reading of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed of severe chronic headaches, which often kept me delirious for days. After suffering for nearly thirty-five years and being dosed with an opiate much of the time, mere words can never express my gratitude for this freedom. I have also been healed of three attacks of peritonitis, only suffering for a few hours each time, instead of being confined in a hospital for months with the fear of an operation held over me. Numerous minor ailments have quickly yielded to the application of the truth.

I am very grateful for the loving help experienced, but am also thankful to be able to demonstrate the healing Principle for myself, one of the proofs of this being the overcoming of a bad disposition. I was inclined always to be critical and unfair in my attitude to others. To be able to demonstrate this truth, even in a small degree, gives me joy and peace unspeakable and the desire for more understanding so as to help others.—IDENE M. WHITING, Akron, Ohio.

✧

Almost four years ago I welcomed Christian Science with a thought hungry for righteousness. Sickness and discouragement seemed to hold me in chains, for I was suffering from stomach trouble which had become so serious that my heart was affected, and I could not eat enough to satisfy my appetite without experiencing dizziness, followed by a sense of numbness. I could not express my thoughts, and would forget even the names of my nearest friends. This would be my condition for an hour or longer, and there was a constant fear that the sensation would return at any moment. I could do no active work without becoming faint. Since childhood I had suffered from frequent headaches, which became so severe that I was compelled to leave school. I was very unhappy and felt isolated from my young friends.

All these ailments have, however, been entirely overcome through the faithful aid of a Christian Science friend. After the first treatment I was able to read Science and Health without glasses, while before this I could read only a few lines at a time. There has been no return of these complaints in almost four years. For these and many other benefits received I am indeed grateful.

Greatest of all blessings is the broader, happier outlook on life. I hope to live each day more of this beautiful truth, purifying my consciousness, and thereby gaining a clearer understanding of God as unchanging Love, omnipresent and omnipotent. I wish to express my gratitude to our dear Leader, Mrs. Eddy, for bringing this demonstrable truth within reach of all.—MABEL MINGLE, Kalispell, Mont.

About four years ago my health was very poor, owing to severe headache, shortness of breath, stomach trouble, and nervousness. My mother had been helped so much through Christian Science treatment that I decided to give it a trial, though I knew nothing more of it. I called on a practitioner, and also purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. In a few weeks the healing was complete, and to me it was wonderful, as I was healed at the same time of an internal growth. Since then Christian Science has been our only remedy. My health is better now than ever before.

While I am grateful for the healing, I am more so for the spiritual uplift which came with it. My thankfulness goes out to God for all the blessings I have received through this healing truth.—BERTHA MINGLE.

From Our Exchanges

[*Western Christian Advocate*]

The age is thinking about religion. It is feeling after God because it wants a moral dynamic. It is in the midst of great confusion of mind; moral distress is intensifying, and a feeling of insecurity settles heavily on the spirit of man. Christianity has been splendidly audacious. The world in distress wants to know if she is to be looked upon as the department of social mechanics in modern society, or the power house in the department of moral dynamics. The age demands that the audacious one shall be given the acid test,—that of ability to execute her claims, to fall back on performance and find the solid ground of leverage and power. Is Christianity a religion of power? Are Christian ideas a means to an end? Have they creative energy? These carry the test of religion. To this the religion of Christ readily submits, and comes forth tested as by fire.

[*The Christian Work*]

One is deeply aware that the wholesomeness and sanity of the gospel have been perverted by extremists of every sort; that its grace and loveliness have been marred by amateurs and bigots. Nevertheless, it could not be silenced, nor its original sources so depleted as to prevent their resumption of life giving power. Their resistless tides ebb but to flow, and when they come to fulness in some ordained prophet they sweep away the accretions which have hindered our growth in the true knowledge of God. For life, wherever found, will secure what it must have. This is its finest quality, and both authority and freedom are safe in its keeping. Yet we must understand that spiritual life and freedom are attached to our zeal for purity and righteousness, for justice and peace. The inward fortifyings of a consuming passion for the kingdom of heaven, the reachings out of the finite into the infinitude of that kingdom, are the occupations of strong and practised saints.

[E. Albert Cook, Ph.D., in *The Biblical World*]

The religion which will make a person out of an assembly of stubborn, headstrong instincts, a brotherhood out of a billion and a half of germinating and imperfect persons, and a family out of humanity and the rest of the universe, must be at the same time simple enough to be grasped and practised by the unlearned, and so reasonable as to meet the needs of the highest intellect and the severest science. It must be suited to the temperaments of the Oriental and the Occidental, the phlegmatic and the impulsive, the philosopher, the artist, and the business man. It must embody the principles which will solve all the great difficulties of mankind,—racial, social, industrial, political. For, although we commonly think of these difficulties as ultimately ethical problems, yet ethical maxims, if they are ever to have any logical justification or permanent value, must be based on some religious principle and find their power of enforcement in religion.

[Rev. E. W. Barnes, Sc.D., F.R.S., in *The Guardian*]

No man can sincerely analyze any phase of his experience and fail to see the significant greatness of the life work of Jesus Christ. The intellectual man must, I am convinced, find in the incarnation the central fact of human metaphysical speculation. The humane man will ever derive from Jesus, with his message of love, the ideal which uplifts his heart. The reformer will cling to Jesus as the most sane and saintly reformer that the world has ever known. Those who sorrow or mourn will always be drawn to him who said, "Come unto

Digitized by Google

me, all ye that travail and are heavy laden, and I will refresh you."

Those who seek to escape the burden of sin will win salvation as they go to one who was the friend of publicans and sinners. The mystic, struggling for a clearer vision of the glory of God, will find that the indwelling Comforter can teach him all things. To the hopeless, Christ can give an undying hope; to the weak, spiritual strength; to the fallen, newness of life. The strong he can direct so that their strength uplifts humanity. The wise will discover that their wisdom is confirmed and strengthened by his knowledge of God. The conqueror by his grace can achieve self-conquest. In Jesus all men can still find the way, the truth, the life. It is because Christ's life was great and beautiful, and because his teaching can uplift men as of old, that we acclaim him as our Lord and Master. Because his cross has still its ancient power, and because he still has the words of eternal life, he is our Saviour and Redeemer.

[*Zion's Herald*]

When we are able to see things as God sees them, we see them as they are, and they make the right impression on us. It is our partial, one-sided, distorted, low-thoughted views that bring us into trouble. Our views are out of proportion and out of perspective, badly biased by selfishness, discolored and perverted by personal interest and ambition. All depends on our getting above the world and beyond time. We must take our observations from the stars in laying out our course or deciding on the relative values of events. If we can rise high enough to escape the influences that so fatally disturb our judgment on ordinary occasions, we shall be all right; we shall be continually praiseful and happy.

[*The Watchman-Examiner*]

What you can do may be limited and trivial when viewed in itself; but it can never be viewed in itself. It is more than itself, just as a thread in a web is more than a thread, and a link in a chain is more than a link. It is a bit of the whole, and the whole is immense, glorious, eternal.

[Andrew Gillies, D.D., in *The Homiletic Review*]

Our changed interpretation of and approach to truth may have made sad havoc of our theology, but we are slowly coming to see that they have greatly clarified and enlarged our knowledge of the eternal verities. The immanence of God; the all pervading and orderly presence of the infinite intelligence, and the eternity of the moral processes, have vastly enriched and gloriously dignified that term "God." Our Father, who through all His laws maintains His personal relation to us, is unbounded and never ending love, is more than the King of kings venting His royal wrath upon delinquent subjects.

[Right Rev. Theodore Woods, D.D., Bishop of Peterborough, in *The Church Family Newspaper*]

By the very force of their anxiety, by the very pressure of their sorrow, men and women have been forced back upon the things which matter most. Far and wide there has been a growing, a silent, and in many cases an articulate longing for a closer knowledge of Him whom truly to know is everlasting life. Men want some foundation which will bear the strain of life at a time like this. They know instinctively that what they want is an experience of God.

[*The Christian*]

No man ever yet overcame his personal weaknesses, or conquered his moral antagonisms, or imposed upon himself any refining self-discipline, or strove with successful energy after heavenly ideals, by mere contemplation of the divine majesty.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy, $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new catalogue of selected Bibles has been printed by the Publishing Society and mailed to Christian Science organizations listed in the *Journal*. Reading-rooms not receiving copies will please notify the Society.

Owing to the increased cost of labor and materials the Oxford Press of England has twice found it necessary to advance the prices of Bibles to the Publishing Society during the past year. The Publishing Society now finds it necessary to make a corresponding change in its prices to the field.

The cost of manufacturing Bible Cases and *Quarterly* Covers has also increased, and the changes in prices for these articles are listed in the new Catalogue No. 23.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 236 Huntington Avenue, Back Bay, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study. Also printed in Dutch and German.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. In all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $5; six months $2.50. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also as a supplement the Lesson-Sermons of the following month which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $1; six months 50 cents; three months 25 cents. In all other countries, one year $1.25; six months 63 cents, three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

For table of English, German, Swiss, and French money equivalents, see inside front cover page.

Miscellaneous

A Catalogue of Selected Bibles will be furnished upon application, and quantity rates on other items specified below will be found in the current catalogue in *The Christian Science Journal.*

BIBLES. 01483 x. Clarendon Brevier, heavy-faced, distinct type; Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $4.75.

01440 x. Brevier, light-faced type; self-pronouncing, Turkey morocco, corresponding in size and binding to pocket edition of Science and Health, $4.50.

01683 x. Large type Bible, 10¾ x 8 inches, bound in Alaska seal. Specially adapted for use of second readers, $12.50.

Black morocco open case to hold pocket edition of Science and Health, *Quarterly*, and Bible, $1.40.

Two other sizes of open case listed in the current issue of the *Journal.*

Black morocco closed case with handle and purse on outside, $3.75; without purse, $3.50.

The improved index will be added to any Bible listed in our catalogue for an additional charge of 35 cents. Catalogue No. 23 of selected Bibles will be mailed free upon application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Paper covered, 15 cents; cloth binding, 85 cents.

THE LIFE OF MARY BAKER EDDY. By Sibyl Wilbur. 424 pages. Cloth, $2. Edition de luxe, $5.

"PERSONAL CONTAGION" and "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Paper cover, 10 cents.

THE MOTHER CHURCH. By Joseph Armstrong. A history of the building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated, 107 pages. Cloth, $1.50.

CHRISTIAN SCIENCE: ITS LEGAL STATUS. By Judge Clifford P. Smith. 128 pages, paper covered, 10 cents.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, $1.15; half morocco, $1.40; full morocco, $2.50; levant, $3.50; pocket edition, size 4⅝ x 6⅝, $3

SHEET MUSIC. Poems written by Mary Baker Eddy and used by special permission, have been set to music as follows: "The Mother's Evening Prayer," 75 cents; "Christ, My Refuge," 75 cents; "Love," 40 cents; Communion Hymn—"Saw Ye My Saviour?" (Johnson), 50 cents; "Blest Christmas Morn," 27 cents; "O'er Waiting Harpstrings of the Mind," 27 cents; "Shepherd, Show Me How to Go," 27 cents; "Saw Ye My Saviour?" (Root), 27 cents. The first three hymns are arranged for high and low voice in the same copy. The last five hymns are published separately in high and low keys. When ordering state key desired.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing. 8-inch (mount 12 x 16), $1; 12-inch (mount 15 x 20), $2; 16-inch (mount 21 x 29), $3.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, IN BOSTON, MASS., AND THE PUBLISHING HOUSE. Artist's proof with remarque on Japanese vellum, size 18 x 24 inches, $5; on India paper without remarque, $3. Smaller reproduction, size 11 x 14 inches, on Japanese vellum, $1. Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

One of the principal measures taken by the Japanese Government authorities for the improvement of the agricultural returns of Korea has been the work of afforestation. An extract from "Economic Chosen" says: "Those who have known Chosen as a treeless country will be pleasantly surprised to find that many of the hills and mountains once bare and barren now present a refreshing greenness. Since the establishment of the protectorate régime in 1906 much has been done for the conservation and extension of forests. Young trees have been planted on various hills and mountains at Government expense, while seedlings have been supplied gratis to people engaged in afforestation. For these purposes nurseries have been established in order to meet the increased demand for seedlings. Provisions have also been made in the forestry law by which Government forest lands, lying idle, may be rented or sold at a nominal price on condition that they are turned into forests. Every possible opportunity is taken by the Government to arouse the interest of the people in afforestation and a liking for trees, as in this the native people seem to be singularly lacking. The full number of trees planted in the spring of 1914 by the Government and people is estimated at 40,200,000."

The first large scheme for water conservation purposes in New South Wales is now nearing completion. Burrinjuck Dam, as it is named, is being placed in a narrow rocky gorge between hills 2000 feet high. It will hold up the Murrumbidgee River for forty-one miles and the Goodradigbee and Yass Rivers for fifteen and twenty-five miles, respectively. All these rivers were subject to floods and running dry previously. The catchment area is 5000 square miles in extent. Some of the peaks in the mountain ranges are 5000 feet high and are covered with snow in winter. The average rainfall is sixty to seventy inches. The dam will be 240 feet high and the length across at the crest 780 feet. It will be possible to store 33,380,000,000 gallons of water. It is already being used to irrigate an area 200 miles away.

The Forest Service finds that the main problem of the lumber industry has grown out of the hundreds of billions of feet of timber acquired at a low cost a few years ago from the public domain. A national mistake was made in such rapid and wholesale passing of title to timberlands in the public domain, beyond all immediate needs for local or industrial development. Private ownership, hard pressed to carry these staggering quantities of timber during the long periods which must necessarily elapse before they can be converted into lumber, is now sacrificing them in part by wasteful use because of its own financial exigencies. The report urges that this situation be faced frankly and the obvious remedy applied, that of taking back part of the western timberlands.

The Forest Service disagrees radically with the idea now mooted in many quarters that forest conservation should be sought through permitting industrial combinations for the regulation of lumber production or control of lumber prices. It regards such developments as involving dangers to the public interests through restraint of trade so serious as to offset any possible advantages to the public from such forms of conservation as they might foster.

The chairman of the Kansas State Board of Corrections says: "Merely as a matter of economy it would be good business for the state to provide, as Professor Blackmar has proposed, four 'farm colonies,' as he calls them, to take care of all city and county jail prisoners. At these colonies it would be possible to separate the youths and novices from the hardened criminals among the undergraduates of our present system, put all of them at some useful occupation, teach them trades,—farming, shop work, carpentry, blacksmithing, and so forth,—and graduate them as useful citizens instead of future inmates of our penitentiary.

"I have talked with men and boys at Lansing and Hutchinson, and almost without exception they confess that graduation from the jail schools makes for crime. They learned from older men there, in the days of enforced idleness and unclean surroundings, how to rob and steal and commit other crimes. When they were released they put their schooling into practice."

The exports of forest products from Finland now constitute 70 per cent of the total exports, and the income from the forests is estimated at 500,000,000 Finnish marks ($96,500,000). A Finnish timber trade committee has proposed that the following measures be taken to increase the yield of the forests: the selection of trees suitable to the district in which they are to be grown and the increasing of the proportion of leaf bearing trees in south Finland at least; the introduction of selective felling, and improvement in the drainage of the forests.

The Danish West Indies have passed under the sovereignty of the United States. Negotiations undertaken at various times for over half a century came to a conclusion Jan. 17 with the exchange of ratifications of the treaty of cession between Secretary Lansing and Danish Minister Brun. The formal transfer of the islands, with the raising of the American flag, will take place as soon as the $25,000,000 purchase price is paid over, some time within the next ninety days.

A six months' term of school with a professionally trained teacher at a salary of $100 a month is a longer term and a better and cheaper school than a twelve months' term with a teacher of poor scholarship and no professional training at a salary of $50 a month; we need enough state normal schools to provide a professionally trained teacher for every rural school in America,—is in brief the opinion of Dr. P. P. Claxton, United States Commissioner of Education.

The growth of the rubber industry in the Malay Peninsula has seriously affected the cultivation of most of the other agricultural products of the country. The cultivation of rice was first supplanted in large areas by coconuts and later by rubber. From the cultivation of rice the native was able to work out a bare livelihood, but with a small rubber plantation he may become in a few years a comparatively rich man.

The first "Swiss Sample Fair" will be held from April 15 to 29 in Basle, the center of the Swiss dyestuffs industry, situated on the Rhine, near the French and German borders. The exhibits comprise particularly products of the textile industry, toys, watches, and jewelry, machinery and electrical articles, chemical products, canned goods, chocolate, and dairy products. All exhibits must have been manufactured in Switzerland. The Swiss Government patronizes the fair.

Chicago's bill-board regulation of 1911, prohibiting bill-boards on residence streets without the consent of more than half of the property owners, has been upheld as constitutional by the Illinois supreme court in the Thomas Cusack Company's suit against the city. The ordinance was the first of its kind to be passed upon by the court.

During the past fiscal year there were constructed in the United States national forests 227 miles of new road, 1975 miles of trails, 2124 miles of telephone line, 89 miles of fire lines, 81 lookout structures, 40 bridges, 222 miles of fence, 545 dwellings, barns, and other structures, 17 corrals, and 202 water improvements.

A new industry, the manufacture of fuel alcohol from pine sawdust, is springing up in connection with the sawmill industry in eastern Texas and Louisiana. At Fullerton, La., is a plant costing $750,000 which is turning out more than five thousand gallons of fuel alcohol a day.

Twenty railway locomotives of American make have been delivered at Wuchang, China, for the use of Chinese railways, ten for the railway from Wuchang to Changsha, and ten for the Peking-Hankow Railway line.

It is estimated that in 1915 about forty thousand forest fires occurred in the United States. These burned over about five million nine hundred thousand acres, and caused a damage of approximately seven million dollars.

The trade of Colombia for 1915 shows exports valued at $31,579,172 and imports at $17,840,350. The trade of Costa Rica for the same period reached the total of $4,478,782 for imports and $9,971,582 for exports.

Tests at the Forest Products Laboratory at Madison, Wis., indicate that by the use of four additional nails in each end of canned food boxes an increase of 300 per cent in their strength is secured.

Approximately ten thousand three hundred and ninety acres of denuded lands within the national forests were reforested in the fiscal year 1916. The total number of trees planted was 6,146,637.

During the calendar year 1916 private American shipyards built 1168 merchant vessels of 520,847 gross tons for American shipowners, and fifty vessels of 39,392 gross tons for foreign owners.

Legislation establishing the Torrens system of land title registration in Texas will be advocated in the coming session of the Texas legislature.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XIX February 10, 1917 No. 24

Friends of Jesus

CLARENCE W. CHADWICK

PROFESSING Christians give free expression to their love for Jesus. Were he corporeally on earth today, they are quite sure that their friendship for him would know no taint of selfishness. Nothing that he might require of them would they fail to perform; they would do anything to please him. So thought the Jews of old before the coming of the promised Messiah. But what actually occurred when Jesus finally appeared among men as Teacher and Wayshower? The very moment he touched upon the subject of his divine origin they were ready to disclaim him as their Saviour, and whenever he demonstrated to them the healing power of divine Love in confirmation of his teaching, they were ready to crucify him. He was indeed "despised and rejected of men."

Any one who has proved the Principle of Christian Science knows that the same reception would await the great Teacher today were he personally on earth, and that it would be meted out by the very ones who profess to be his friends and to love him. Why is this so? Paul tells us that "the carnal mind is enmity against God." To believe, and to understand what one believes, are two different things. One who does not understand the dual nature of Christ Jesus, who cannot distinguish between the human and the incorporeal concept of the spiritual idea of God, may call himself a friend of Jesus and yet be one of his worst enemies. The most materially minded person on earth can believe that he loves the Master and yet not be able to offer any practical proof of what he professes. He may attend church, give liberally toward its support, may read the Bible and Science and Health every day, and yet fail to prove that he is a friend of Jesus.

To hold in highest esteem the humanity of Jesus is most commendable, and essential to one's growth in grace, especially when one realizes that through this pure humanity the Christ is made manifest. A most fatal mistake for any human being would be to lose sight of the great work of the Master in his behalf, and thereby fail to do what Jesus demands of him. Right here is the test of discipleship. "If ye love me, keep my commandments," the Master said to all believers. He never even intimated that there was any class of believers who could believe on him without doing the works which he did. He emphatically indicated that such so-called believers were not even his friends; and they are not. He said, "Ye are my friends, if ye do whatsoever I command you." It is not through profession, however sincere it may be, that we glorify the Father, but through works.

The Christian Scientist does not try to evade this teaching, but rather tries to make his own life conform to it by doing practically what the Master commanded. He understands why no one can ever enter the kingdom of heaven, the realm of harmony, without being able to demonstrate the healing power of divine Love, because he knows that only through this demonstration is thought purified and uplifted to see the spiritual idea or Christ, the real man.

One who starts out to become a Christian must begin the work in his own mentality. If he would emulate the example of the Master he must purify his thinking; and in order to do this he must first ascertain the kind of thinking in which Jesus must have engaged. When he finds out that the great Teacher never deviated from the ideal of spiritual perfection, he will see the vast difference between his own thinking and that of the Master. To rule out all materiality, all thoughts of sin, disease, and mortality, and to admit only those thoughts which God inspires, may seem at first to be a herculean task, but he has only to begin to reason from the standpoint of the supremacy of Spirit and its perfect creation and he will find himself conscious of living in a new world of thought.

To claim friendship for Jesus, to say that we love and adore him, before we have made any intelligent effort to think only such thoughts as he expressed, would offer no proof of discipleship. It is character that we love, and character is not a condition or quality of matter. Jesus lifted the thought of his friendship above the plane of human personality, beyond the danger point of human likes and dislikes, up to the point of spiritual discernment. For emotional protestations of love he cared little. He knew that obedience to spiritual law was the only salvation for all his followers. Without this obedience he knew there could be no genuine friendship or love.

The more intelligently and easily one works out mathematical problems the more is one apt to like mathematics. Just so in religion, the more one is enabled to demonstrate the power of divine Truth and Love in the healing of disease and sin, the more one loves and reveres the name of the great Wayshower. In no other way, in fact, can one approach the standard of right thinking and living enjoined by the Master. The whole mental journey from matter to Mind is one of demonstration, not profession. "Doers of the word" are alone competent to honor and revere aright the name of Christ Jesus.

A most vital point for the would-be Christian to consider is Jesus' concept of matter, or the flesh. Until he is willing to admit that matter is a synonym for evil, and that being evil his sense of it must undergo a most thorough transformation before he can think accurately and scientifically, he cannot be said to be on very friendly terms with the great exponent and demonstrator of Spirit and spiritual law. One cannot believe in both matter and Spirit, in both evil and good, and at the same time love the one who proved the absolute nothingness of evil. One cannot believe in the actuality of both human hate and love and at the same time be convinced that his feeble sense of love can appreciate the sinless character and mission of Jesus the Christ. He can be on intimate terms with such a character only as he purifies his own consciousness to conform to it. This work is not done through profession, but through overcoming evil with good.

The promises of Scripture are "to him that overcometh," and this thought appeals most keenly to the student of Christian Science, who knows that he has a work to perform, rather than a belief to entertain about God, man, and salva-

tion. The more earnestly he strives to live and demonstrate the healing power of Love, the more he learns to honor, revere, and love the character of the man who came, not to theorize about the kingdom of heaven, but to do the will of the Father. In Science and Health (p. 241) our Leader says: "The error of the ages is preaching without practice. The substance of all devotion is the reflection and demonstration of divine Love, healing sickness and destroying sin. Our Master said, 'If ye love me, keep my commandments.'"

No Contagion in Evil

GERTRUDE SUTTON

On page 226 of Science and Health Mrs. Eddy says, "I saw before me the sick, wearing out years of servitude to an unreal master in the belief that the body governed them, rather than Mind." When we who have been healed in this wonderful truth, and who have gained a faint understanding of the unreality of that one-time master, the error which held us in bondage, look about us and see our brothers still in that sad but needless condition, how we long to save them from the misery which all false belief entails.

Of all the taxes which the children of men today contribute to the support of that cruel taskmaster, the belief of life and intelligence in matter, none is more pathetic, more needless, more exacting, than submission to the asserted law of contagion. The writer remembers that years ago she visited a lady who refused to eat strawberries because of a belief that they caused hives. She had never heard of such a thing and asked her hostess to describe the condition. The description was obligingly given, and until the writer became a student of Christian Science and learned the falsity of all such beliefs, the eating of this fruit was always followed by the appearance of the unpleasant eruption which had been described.

Mrs. Eddy says (Science and Health, p. 376), "Because the so-called material body is a mental concept and governed by mortal mind, it manifests only what that so-called mind expresses." Nothing can be manifested on the body which is not first accepted mentally. If one takes cold while sitting in a draft, it is because it is believed that this could give one a cold. If he manifests this ailment, he has merely brought a belief into visibility. When he learns in Christian Science that God is divine Principle and that he need not suffer for anything but his own sins, and that this suffering should cease when the sin ceases, he need no longer have colds from drafts or from any other material circumstance.

The earnest student of Science and Health knows that if one comes in contact with a case of so-called contagious disease, he does not have to suffer from it, does not have to manifest it in the time prescribed by material belief for its development or at any other time. He has recourse to the spiritual law which saith, "Surely he shall deliver thee from the snare of the fowler, and from the noisome pestilence." Divine Mind is all, and the seeming material world around us is human thought objectified. Even if we come under the supposed law of contagion, we have power through divine Mind to destroy it at any minute. Disease does not have to run its course; it has no creator, no life, no intelligence, no reality. We no more have to accept or abide by the so-called law of contagion or its effects than we have to submit to years of misfortune if we break a mirror.

Every Wednesday evening a chain of grateful testimony goes around the world from mothers whose little ones have been protected from belief in this counterfeit law through the understanding of the real law of God, good, which they have gained through the study of our text-book. On page 379 of Science and Health we read, "Unless the fever-picture, drawn by millions of mortals and imaged on the body through the belief that mind is in matter and discord is as real as harmony, is destroyed through Science, it may rest at length on some receptive thought, and become a fever case." We must not acknowledge disease as a reality for ourselves or others. It is wiser not to discuss it or even name it. Every one of us can help in freeing our brothers, for it is written, "One thousand shall flee at the rebuke of one,"—a thousand shadows can be dispelled at the shining of one ray of light.

Every time we deny error and declare the truth, every time we meekly pray for the Mind to be in us "which was also in Christ Jesus," every time we destroy an ugly little nettle of hatred and plant a flower of love in our thought, we are helping to bring about universal salvation, helping to break the bondage for some brother, helping to prove through our understanding of spiritual law that good alone can be transmitted from one to another.

Testimony Giving

COL. FREDERICK H. MATURIN

All over the world Wednesday evening meetings are held by Christian Science churches and societies for the purpose of hearing and giving testimonies to the healing and regenerating power of Christian Science. In Section 24 of Article VIII of the Manual we read: "Testimony in regard to the healing of the sick is highly important. More than a mere rehearsal of blessings, it scales the pinnacle of praise and illustrates the demonstration of Christ, 'who healeth all thy diseases.'" Such are Mrs. Eddy's far-sighted reasons for establishing these meetings, and her citation of Paul's command to "glorify God in your body, and in your spirit, which are God's," is a further injunction to her followers which is all too insufficiently heeded.

We attend these meetings with the desire and expectation of hearing testimonies, but do we sufficiently realize that we cannot hear them unless we are ourselves contributing? We are all willing to bear testimony to the power of Truth, yet often we sit silent. Why? There are various reasons, perhaps the two most prevalent being diffidence and nervousness, although we know these conditions should not exist in Christian Science. Another reason, especially in a small church, is that existing in the thought of one who is ever ready to give testimony, but who says, "What is the use of my getting up and saying the same thing over and over again?" Yet this very one will be the first to admit such a reason to be quite invalid. Another reason often adduced is an inherent dislike to speak about one's self,—a sense of self-depreciation which out of Science is very praiseworthy, and in Science equally blameworthy. Let us never forget that the relation of an actual personal experience is far more helpful to those listening to a testimony than the recounting of cases in one's own practice or of what one has seen or heard. As in law hearsay evidence is of no value, so it is of no importance and has no place at our meetings.

We find so often, however, that after the reader has declared the meeting open for the giving of testimony, there is a long and, viewing the object of the meeting, somewhat painful silence. This should not be. Surely here is a case where anything is better than nothing, if that anything is to be the voicing of the truth. If we cannot speak of any remarkable physical healing, then let us, even if beginners, say a few words on some phase of Christian Science which interests or has been helpful to us. There is no day in our journey from sense to Soul in which opportunity does not

Digitized by Google

arise to put to the proof our understanding of Christian Science, some occasion, however slight it may seem in itself, in which the power of Truth is demonstrated. Then there can never be a lack of testimonies at these meetings if we are willing to give God the glory in the overcoming of the lesser as well as the greater errors.

On page 372 of Science and Health Mrs. Eddy says, "In Christian Science, a denial of Truth is fatal, while a just acknowledgment of Truth and of what it has done for us is an effectual help." To be able to stand up in a church and tell, however briefly, what divine Love has done for us, is in itself a testimony to the regenerating and inspiring power of Christian Science.

Figuring It Out

MARY P. BELLINGER

WITH a wilful toss of her head the child dropped her hands in her lap. "I don't know how to do it, and I can't do it!" she said. The teacher glanced at the measure which had proved the stumbling-block,—one not nearly so difficult as some that had preceded it,—and then at the child. "Why, my dear, you have not even tried!" she said reproachfully. After a period of waiting, in which the little girl stubbornly refused to make any effort to count out the measure, the lesson time was over and the teacher rose sadly from the piano.

Many things had been happening to make the teacher herself feel "unscientific," and the child's apparent perversity added to the feeling of depression. However, the loving little heart proved her repentance by bringing a correct lesson next time, and then the teacher gave her the Beethoven Sonata Pathétique. The child had never had anything so difficult to read, and the teacher said: "Now, I am not going to tell you anything about it, except what unit to count. I will see how you use your understanding."

The little girl, delighted with her new piece, went home. At the following lesson both were expectant as the pupil sat down and with absorbed interest played the first page, which has proved a snare to many beginners. As she went confidently on,—correctly, clearly, counting accurately,—astonishment, pleasure, and pride swept over the silent watcher, till finally with a kiss of congratulation she told the pupil that many grown persons had not done so well. "Wasn't that nice?" returned the child with satisfaction. "I took a pencil and paper and figured it out." That was her way of solving the problem.

The next morning, as the teacher sat studying the Lesson-Sermon in an endeavor to work out a personal problem, the child's words came back to her, and she exclaimed, "I too will figure it out!" The thought came to her that to musicians the Beethoven Sonata has stood for generations, and will stand for generations more, as difficult perhaps, yet perfectly capable of being solved by the earnest student, and she saw that even so one's life problems may be solved in Christian Science by a perfect fixed rule. As a Christian Scientist she asked herself: "What then is the first point to be gained? Either there is a God, or there is not. Truth assures us that there is, and that He is Love." Then followed more questioning. "Do you believe God is all-power?" and the response was, "I do." "Do you consider Him wholly reliable?" followed, and the student replied, "Wholly." "Do you not think He would respond to your need as quickly as you would to that of one you loved?" "Yes," was the answer.

The Scientist went on with her mental figuring, growing happier every moment, while the same morning, unknown to her, in another city a beloved relative was writing a letter which contained the answer to her problem. When it came a few days later, like manna from the sky, astonishment and gratitude overwhelmed the one who received it. She asked herself why Christian Scientists do not sit down oftener and just figure things out. They know how and they think they are trying, but sometimes they make complicated work of it, or else go about carrying the load a long while before they start figuring.

Even those who have been in Christian Science many years may sometimes grow discouraged, and if this ever happens, the only solution is to sit down as simply as did the child to what seemed to her a stupendous task, and figure it out. Mortal mind always takes the attitude the child held when she said, "I don't know how to do it, and I can't do it." But the real child thought, fearless and loving, faces the problem, applies the rules of Science, and leaves the rest to God, knowing that He who directs "the stars in their courses," and blesses with sunshine the tiniest flower, is available in all the experiences of His children.

The Refining Fire

W. K. PRIMROSE

IN these days when so many people are finding themselves face to face with what appears the total loss of all they possess; when men are leaving their homes and giving up their profession or business to join the army or navy or otherwise serve their country, it is not to be wondered at that almost every one is asking the why and the wherefore and the meaning of it all. Never before perhaps have men thought and questioned and reasoned so deeply, and as the rude awakening goes on old standards and household gods are proved valueless.

Amid this cataclysm the Christian Scientist can stand calm and undismayed, and prove to the world that he has a reason for the faith that is in him; and that such proof is not wanting is evidenced by the vast number of people who today are in consequence turning to Christian Science in their extremity. There are few, if any, who have been left untouched by the vast tidal wave that is at present surging over more than half the world, and it is interesting to note how varied are the problems which confront the individual and how differently they are regarded. Yet are they fundamentally so varied after all? Are they not all fruit of "the tree of the knowledge of good and evil"? and despite the variety of kinds of fruit, does not the problem which confronts the individual in each case resolve itself into that of proving the unreality of evil?

Sometimes, when a person is going through what seems to be a very trying experience, one hears surprise expressed that such a person had to do so. Surely, it is said, his understanding of Christian Science was sufficient to have saved him from it. In answer to this, we gladly pause to consider the character of Jesus of Nazareth, of whom we read that he "was the most scientific man that ever trod the globe" (Science and Health, p. 313). He is also admitted by all professed Christians to be our Exemplar. If we turn to the Bible we find that Jesus himself declared that "the foxes have holes, and the birds of the air have nests; but the Son of man hath not where to lay his head." Yet Jesus never lacked. On the contrary, he fed the multitude and found the tribute money in the fish's mouth. Consequently, when we come to regard these trials or experiences not as failures or as causes of discouragement, but simply as opportunities to prove that "the prince of this world" can come and find nothing in us, then shall we know that we are doing what we as Christian Scientists have undertaken to do, namely, to overcome sin, disease, and death. Every time we break and prove unreal one of these asserted laws which today hold

Digitized by Google

suffering humanity in bondage, by that much do we help to set ourselves and our brothers free. The more opportunities we have of proving this, or rather the more conscious we are that divine Love is omnipresent and omnipotent, the more fearless we become, thus proving, as the apostle John wrote, that "perfect love casteth out fear."

On page 201 of Science and Health Mrs. Eddy writes, "The best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death." To limited mortal sense it may seem purposeless and even unfair that while one is called upon to go through certain experiences, another similarly situated is not required to do so; yet if one ever feels tempted to be envious or aggrieved, let him remember the answer our Master gave to Peter on a somewhat similar occasion, "What is that to thee? follow thou me."

✧

Building a Church

WARWICK A. TYLER

On page 269 of Science and Health we are taught that "metaphysics resolves things into thoughts, and exchanges the objects of sense for the ideas of Soul." As one ponders this statement in relation to church building, he is impressed with the fulness and thoroughness with which Mrs. Eddy has dealt with this subject in her writings, and the following thoughts are lovingly presented with the hope that the metaphysical aspect of building may receive growing attention from us all. The writer, however, has no intention of attempting to prescribe for others a fixed method of procedure in church building.

In examining a building it is found to consist of many parts. The first requisite is a lot upon which to build. Now a plot of ground, mentally considered, may be said to be that state of consciousness in which one dwells and works. What then shall we do with this mental plot of ours? First of all, it needs to be cleared; that is, we must remove from its surface all the accumulated rubbish and débris of careless and incorrect thinking. Then we must carefully examine our consciousness and frankly and fearlessly uncover and cast out every thought which is not pure and godlike; we must root out and exterminate all the foul brood of envy, jealousy, hatred, malice, fear, anger, and pride; we must dig deep and clear away everything which would prevent our building from being founded on the rock.

Paul writes, "Other foundation can no man lay than that is laid, which is Jesus Christ." The foundation of all right thinking and living is undoubtedly the teaching and works of Jesus the Christ. His teaching may be briefly summarized in his own words: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. . . . Thou shalt love thy neighbor as thyself." His healing works were the proof of his knowledge and love of God and of his fellow man. In Science and Health Mrs. Eddy says, "Jesus established his church and maintained his mission on a spiritual foundation of Christ-healing" (p. 136). To build as Jesus built, we too must lay our foundation by emulating all the works of the Master; we must love God supremely, and our neighbor as ourselves; we must cast out devils (evils) and heal the sick, remembering always, as our Leader says, that "the corner-stone of all spiritual building is purity" (p. 241). Upon such a foundation it should not be difficult to erect the walls and bulwarks of salvation which the prophet Isaiah said God will appoint.

It becomes apparent, then, that the walls of our structure cannot really be of stone, brick, or other material elements, but must be the demonstration of the knowledge of the allness of Principle, which proof is evidenced by the destruction in consciousness of the beliefs in and fears of a power or presence which can control man injuriously, and the consequent manifestation of buoyancy and wholesomeness of mind and body. May we not say, then, that every erroneous belief destroyed and replaced with the understanding of the supremacy of divine Principle, every case of healing, is adding a stone to the walls of our structure, and are not these walls supported by the "signs following"?

To roof is to shelter; hence a roof is a shelter for, or a sheltering of, that which it covers. In that wonderful song of confidence in God, the ninety-first psalm, the psalmist shows us how perfectly sheltered we are when we realize that the children of God are forever dwelling with the Most High and entirely protected at all times from the supposititious attacks of evil. This roof is upheld by pillars of truth; the walls of salvation are the understanding and demonstration of the supremacy of Life, Truth, and Love.

Provision has to be made in our structure for ingress and egress, for light and heat. Surely this must all be mental too! Shall we not open the doors and windows of our consciousness to the light and warmth of the love of God; shall we not allow the "glory of God" to lighten it, and the Lamb to be "the light thereof"? It is not, however, sufficient to let in the light; we must make provision for letting it out too, and there can be no better way than by seeing our fellow man as God sees him and loving him as God loves him. The light of God's love must shine so clearly in our consciousness that it may purify it from all false beliefs about mankind and enable us tenderly and compassionately to help them free themselves from all that is unlike God.

Every building has approach, exterior, furnishing, and occupants. We approach the erection of the dwelling place of the knowledge of God—the purification of consciousness—with humility, with unselfishness, with self-forgetfulness; we find the exterior totals the complete apprehension of the qualities and attributes of Principle, and the interior is the comprehension of the omnipotence, omnipresence, and omniscience of God and His relation to man and the universe, furnished to do His will, and occupied or peopled with God's children, reflecting the perfect Father, infinite Mind.

In the definition of church given on page 583 of our textbook we find that we can only have a church building in the true sense in so far as we realize that its structure has its basis and foundation in Principle and is erected in Truth and Love. We must never lose sight of the fact that the whole work, so far as each one is concerned, is in the individual consciousness, and that this must be roused from accepting as true the beliefs of a material God, man, and the universe, to a clear and demonstrable understanding of the spiritual and eternal facts of being, which results in the destruction of sin, disease, and death, and leaves man in the full recognition of his being as the image and likeness of God, exercising complete dominion over all the earth.

✧

Great Discoveries

MARY R. CHAMPLIN

THE analogy between the discovery of America and that of Christian Science has been so strikingly impressed on the thought of the writer, and has brought such helpful comparisons into view, illuminating many a dull and seemingly dreary stretch in the journey from sense to Soul, that she hopes it may be of benefit to others.

Columbus evolved his vision of a "new world" through many years of study and pondering. He dreamed his dream

Digitized by Google

and pondered its meaning when, even as a boy in the streets of Genoa, he saw beneath the surface of what to others were insignificant phenomena,—the horizon's circle, the incoming ships from a distance, the bit of driftwood or other trophy washed in by the waves. These brought to him a message that spoke of other lands. As the perfect concept evolved in his consciousness, he became more and more the "madman" to his townspeople. He talked of his dream to all who would listen, and finally it took possession of him and became the ruling motive of his life.

Columbus waited many years for an opportunity, and pleaded his cause before the rulers of different nations, till at length his faith in his vision overcame all obstacles and at last reached its fulfilment in the discovery of the New World. In the Tate art galleries in London hangs a picture whose message will never be forgotten by one who has seen it. It is Turner's famous masterpiece, "The Discovery of Land," and represents Columbus, a watchful, alert figure on the deck of his flagship in the early dawn—at last face to face with the fulfilment of his dream.

All through the ages there have been those who desired what the writer of the epistle to the Hebrews calls "a better country." Mrs. Eddy has not been the only one in history to experience physical healing through reading the Scriptures, but she is the only one who glimpsed the vision of the truth of being contained in them, and worked on to the unfolding of the demonstrable knowledge of this discovery. On page 107 of Science and Health she writes: "In the year 1866, I discovered the Christ Science or divine laws of Life, Truth, and Love, and named my discovery Christian Science. God had been graciously preparing me during many years for the reception of this final revelation of the absolute divine Principle of scientific mental healing."

It is well known that Mrs. Eddy stood alone for many years with this precious revelation, the discovered truth of the Christ-healing, in much the same position as Columbus found himself before the doctors of Salamanca. On page 226 of Science and Health she writes: "I saw before me the awful conflict, the Red Sea and the wilderness; but I pressed on through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science, where fetters fall and the rights of man are fully known and acknowledged."

Today the fruit of this endeavor is known and felt throughout the whole world, and has resulted in a spiritual awakening whose import is opening the dull ears to hear again the angels' song of "on earth peace, good will toward men." Few students of Christian Science, however, have been able to set forth in their bark of faith without encountering storms, obstacles of sense, which prevented their launching out into the deep at once. To one at least the journey has been fraught with many difficulties; indeed the way seemed to be endless, but not even mutiny within can stay the progress of one determined to press onward, and when signs of "a new heaven and a new earth" began to mark the night with hues of dawn, the joy of actual demonstration presaged a sure haven, an abiding country, even "a city which hath foundations, whose builder and maker is God."

Today one can scarcely comprehend that the belief that the earth was flat could ever have been entertained; and in closing the analogy may not prophecy foretell the day when, even as every schoolboy knows the truth of Columbus' vision, so the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, will find their rightful place in the schools, and every child will be as certain of the truth of being as of the fact that the earth is a sphere.

Selected Articles

[Hector Wallace Smith in *The Shetland Times*, Lerwick, Scotland]

Certain statements concerning Mrs. Eddy, published under "Current Topics" and alleged to be facts, could not be farther from the truth. Our critic admits that he knows nothing about Christian Science, but thinks he knows something about Mrs. Eddy. Now the actual fact is, that it is well-nigh impossible to obtain authentic information concerning the life and works of Mrs. Eddy without really knowing something of the genuineness of Christian Science and the truth of its teachings, because in no other way can one arrive at a due estimate of the lasting service which Mrs. Eddy has so unselfishly rendered to generations of mankind.

"Science and Health with Key to the Scriptures" is an unfoldment of more truth to this material age, and this wonderful text-book is supplying what is sorely and sadly needed in many homes throughout the world in these times. It is no wonder the so-called orthodox of today cannot understand this book; but the reason is to be found in the fact that the orthodox of yesterday is the heterodox of today, and vice versa. On page 109 of Science and Health Mrs. Eddy writes these words: "I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration."

In the fifth paragraph of our critic's remarks there appears a quotation of some twelve lines which he alleges was a notice issued by Mrs. Eddy in regard to Science and Health. It would indeed be interesting to know the source from which he has borrowed such phrases. The first sentence of the quotation is evidently taken from page 39 of "Retrospection and Introspection" by Mrs. Eddy, but is inaccurately quoted. The second sentence is to be found on page 130 of "The First Church of Christ, Scientist, and Miscellany," also written by Mrs. Eddy; while strange to say, the last two sentences are to be found nowhere, except as mere fictitious fabrications, because they were never issued by Mrs. Eddy and are not her words at all. So much, then, for this alleged notice.

The critic proceeds to attempt to find fault with Mrs. Eddy because her writings were successful and her books sold well. When one comes to consider the tremendous amount of good that has resulted from reading Mrs. Eddy's works, it is no marvel at all that there has been and still exists a constantly increasing demand for them. The premises of the publishing house in Boston have been enlarged and added to again and again so as to be able to supply the great demand for Christian Science literature. There are hosts of people today who were once in the habit of paying every year considerable fees for medical attendance, and also large accounts incurred for drugs and medicines, but since they purchased the Christian Science text-book they have ceased entirely to do so, because they have learned that the possession of Mrs. Eddy's works is one of the best possible forms of investment to be had anywhere.

There is not and never was a rule of the Christian Science church compelling Christian Scientists to buy or to sell Christian Science books, and no one is compelled to have or to sell the Christian Science text-book. For forty years of her life Mrs. Eddy made great sacrifices in many ways; foregoing leisure, freedom, travel, self-gratification, and hosts of other material things, in order to devote her energies to the advancement and thorough organization of the great cause of Christian Science. Her friends are well aware that she gave

Digitized by Google

largely of her fortune to public and private charities and bequeathed the remainder for the extension of the religion which she had founded. As a striking instance of how much Mrs. Eddy was valued as a good citizen, the City Council of Concord, N. H., passed a special resolution on the occasion of her departure for Boston, and the following is an extract from the remarks made by the alderman who introduced the resolution: "It is quite unnecessary for me to prompt your memory of the countless deeds of charity and her endless gifts. Neither is it necessary for me to call to your attention her innumerable donations to the more unfortunate ones in our midst."

The greatest amount Mrs. Eddy ever asked for teaching a course was three hundred dollars, and there is not a student today who paid this fee who does not say that he received more than value for his money. In these classes there were often as many as seventeen charity students. Practically every cent she took from her teaching, and more too, was given to various charities. The only means she had at the time of her demise was what she had saved from the sale of her books in late years.

Christian Science is not a money making concern, as our critic alleges; and let me say at this point that he has evidently been very much misled as to the trustworthiness and correctness of his sources of information. The Christian Science movement has no dividends to earn for any shareholders, for there are none, nor does there happen to be any financial syndicate or capitalist clique at the head of the movement. The cause is unique, because it exists first and foremost to do good. It does not believe it to be right that people should get something for nothing, therefore it always pays its expenses, and in every other respect is law abiding. Mrs. Eddy firmly believed in the truth of that saying of our Lord's in his Sermon on the Mount, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." She invariably put this scientific and spiritual statement into practice, and having proved the absolute truth of it in her daily life, thus gave to the world an asset of priceless value, which may likewise be proved by any one who honestly endeavors to follow her example and study her teachings.

✧

[Avery Coonley in *The Beacon*, Paris, Ill.]

All devout Christians are agreed that the secret of happiness and salvation is contained in the Bible and in the words and works of the Founder of Christianity as set forth therein and therein only. Most Christians would also concede, particularly in the face of a world war among Christian nations, that Christendom has not so far given convincing evidence of having discovered the complete lesson the Bible contains and made its application to daily life.

One might therefore expect that a new interpretation, which through its practical application over a period of nearly half a century has given increasing and very definite evidence of being a valuable key to the secret of the Book of books, by reproducing in surprising degree the works of the master Christian, would be welcomed by all mankind. Particularly should it be welcomed by those who devote their lives to an endeavor to deliver to the world a practical message from the Bible, but unfortunately the very opposite has been consistently true in human history. In fact, the value of a religious movement might almost be measured by the volume of misrepresentation it calls forth. Every religious pioneer has been the subject of the most unmerited and vicious attacks, and Mary Baker Eddy was no exception. The most conspicuous example in the world's history is furnished by the Founder of Christianity himself. The purest individual that ever lived was charged with being a glutton and a winebibber upon "evidence" satisfactory to those disposed to believe the charge.

Our critic's excuse for assailing Mrs. Eddy is that she was not a private character, but "the most conspicuous woman who has come before the world in centuries." For what was she conspicuous? For restoring to belief in God thousands upon thousands who had cast aside religion as inoperative; for turning to the daily study of the Bible a multitude of people who had never read it or who had ceased to read it, and leading them to apply its teachings to their daily lives; for bringing hope and happiness to countless numbers of human beings and making them better, kindlier, and purer than they were before; for restoring to health and usefulness thousands of despairing invalids who had been pronounced incurable; for proving that cancer, tumor, tuberculosis, palsy, and all the dread diseases can be cured today by the same process which Jesus employed centuries ago; for showing mankind how to love their neighbor as themselves, and for proving that it is here and now possible to have that Mind "which was also in Christ Jesus."

This is the woman that the critic tries to convict of selfishness, insincerity, cupidity, and dishonesty. The greatest benefactor of modern times is beyond the reach of such charges. Her unselfishness and charity have been eulogized by the press of the entire country, and such recognition is not accorded to charlatans.

✧

[Carl E. Herring in *Kearney* (Neb.) *Times*]

A communication raises the primary question as to whether we shall endeavor to ascertain the spiritual meaning of the Bible, be content with its literal meaning, or try to harmonize the literal and the spiritual meaning and use them both. The last two methods have been the cause of the failure of the church to reach the great mass of the people, and of the disfavor in which the Bible is held by many outside of the church, as well as for the apologies of those within.

A purely literal interpretation of the Bible compels conclusions repugnant to every normal mind, and invites criticisms of Christian teachings which are directly opposed to the spirit of Christianity. A literal interpretation of the Bible has been used to bolster up polygamy, slavery, and the liquor business. A literal reading of the Bible would permit us to sell a tithe of the increase, "and bestow that money for whatsoever thy soul lusteth after, for oxen, or for sheep, or for wine, or for strong drink." Yet no one preaches that we must sell a tithe of our corn or our flocks and buy strong drink. Why? Because it calls for a literal meaning abhorrent to our spiritual sense of the teachings of the Bible.

Nor are we less involved in difficulty if we attempt to combine the two and give full force to both the spiritual and the literal interpretation of the Scriptures. In the communication under discussion this method is used in considering the origin of man, and it may be used here to illustrate the entanglement which arises under this dual process. Reference is made to the first chapter of Genesis as "the brief fact of man's existence," and to the second chapter as the "detailed account." Let us analyze these two accounts of creation and see where it leads us.

In the first chapter of Genesis we are told that God created man in His own image and likeness, while in the second it is said that the Lord God made man from the dust of the ground. Both accounts cannot be true. A dust man is not the image and likeness of God. The first is the spiritual, the second the material. It is the antithesis of the true and the false, the good and the evil. To use both as the true is to lead

Digitized by Google

to confusion, apathy in the church, and disbelief among the masses of the people. Christian Science rests entirely upon the spiritual interpretation of the Bible, and its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is simply an aid to arrive at this spiritual meaning of the Bible—nothing more. Christian Science has for its purpose only, as St. Paul says, "that the righteousness of the law might be fulfilled in us, who walk not after the flesh, but after the Spirit."

✧

[Thomas F. Watson in *The Pacific*, San Francisco, Cal.]

To most people a fair way by which to judge any system of religion would be by the results it brings or the effect it has on the lives of its adherents; but not so with our critic, for he concludes that the vast throng of people benefited by Christian Science improved "in spite of its shortcomings."

The Master said, however, "Every tree is known by his own fruit;" and when one considers the overwhelming proof Christian Science furnishes, not only of the healing of physical disease but of the redemption from sin as well, one marvels that our friend the minister should fail to see that a system based on "absurdities," whose language is a "jargon," whose method of Scriptural exegesis is incorrect, could not possibly heal the sick and sinful as Christian Science is doing, for as the Bible says in the seventh chapter of Matthew, "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." He attributes this healing to "the laws of suggestion," which he says are also "the laws of God." That which can be used for an evil purpose, as suggestion has been known to be used, cannot be classed as the law of God, and Christian Science is diametrically opposed to all forms of mental suggestion, hypnotism, and mesmerism.

It is easy to ridicule that which one does not understand, and our critic acknowledges that he finds "Science and Health with Key to the Scriptures" "exceedingly grotesque and humorous," yet he admits that Christian Science (to use his own words) "teaches people to live above fear and worry; . . . banishes hatred, and enables one to live in the present peace and joy;" and he sums it all up by declaring that "Christian Science has, to thousands of men and women, made God for the first time a present reality, a source of comfort, peace, and power." Truly this book Science and Health, which our critic pronounces "naive and crude," whose "jargon" he cannot speak, is admittedly accomplishing results, but he tells us this is "in spite of all its absurdities." Christian Science does more than heal certain "temperamental types;" it heals all manner of disease and sin.

Our critic refers to a case of cancer which he says "cannot be restored by mental treatment," yet Christian Science has many well authenticated cases of the healing of cancer,—and why not, since "with God all things are possible," and the law of God which enabled Jesus to heal the ten lepers is as available today as it was then. In regard to the story of a Christian Science reader having gone to the hospital to have a cataract removed from her eye, upon investigation it is found that it was not a reader or a practitioner who was operated on, but one who, though interested in Christian Science, went to the hospital at the earnest solicitation of her family, who were not Christian Scientists.

Again, this critic tells us that Christian Science teaches that if you were "perfect in Science you would not die; but," he continues, "no practitioner has been able to demonstrate this." Christian Scientists do not claim to have reached perfection, nor do they claim any monopoly of Jesus' teachings, which were given for all his followers, namely, "If a man keep my saying, he shall never see death." The Bible teaches that death is the "last enemy" to be destroyed, and Jesus overcame death at the last of his ministry, after having accomplished all the lesser works. Mrs. Eddy states in Science and Health (p. 426): "Sin brought death, and death will disappear with the disappearance of sin." Our friend's explanation of death as a "part of God's plan," or as only a "new birth," is not borne out by Scripture, which calls death an "enemy" to be "overcome;" and Jesus, who came to "destroy the works of the devil," healed the sick and raised the dead. The Scriptures also declare that he "hath abolished death, and hath brought life and immortality to light through the gospel."

Mrs. Eddy does not claim that "she has the sole remedy" for evil; she only claims God as our only refuge from sin, sickness, and death. Her discovery of the law of God has restored primitive Christianity, and many thousands are today rejoicing in this new-old gospel as restated in Science and Health.

✧

[From an editorial in *Sherman* (Texas) *Courier*]

It is not our purpose to defend Christian Science in this editorial. Christian Science needs no defense from us, neither can Christian Science be traduced or the "bottom knocked out of it" by any single-handed preacher, newspaper, or anybody else. Christian Science of its own momentum has in a very brief period carried itself around the world. There are today Christian Science churches in every civilized country on this globe, and its followers and adherents are more than a million people, among whom are many of the strongest, best, and most influential men and women in the world. Many of the best citizens in Sherman know that Christian Science makes better men and women out of those who follow its teachings than they were before they began the study of Christian Science, and among the people who know this fact are many good men and women who are not members of the Christian Science church and do not subscribe to its tenets. For any man to come into this community, posing as a Christian minister, and assail any body of people who are trying as best they know how to follow the same Christ, or teachings, that he professes to follow, is thereby to lower himself in the minds of many good people, and in our judgment he does no credit either to the works or teachings of Jesus of Nazareth.

Now just a word to the public in conclusion. If you wanted to learn about mathematics, would you go to a man who "read" an arithmetic and who was traveling over the country in some other line of work, or would you go to a mathematician,—a man who had studied and mastered and was able to demonstrate mathematics? Or, if you wanted to learn about music, would you come to the *Courier* office and hear the noise and rattle of our presses and listen to our talk, or would you go to a master musician? The proper place to learn the facts about Christian Science is from the Christian Science text-book, just as you would go to the text-books on mathematics or music to learn of them.

Christian Science purports to be the Science of life, the Science or truth about man's relation to his creator, God. It purports to reform the sinner and heal the sick, and to be the same thing that Jesus of Nazareth taught and demonstrated. It may not be or do that, but inasmuch as it today carries a world wide interest and relates to a matter of such vital importance to you and to the world, you cannot afford to take the word of any preacher or any newspaper man or anybody else about it, but the thing to do is to investigate for yourself. If Mr. ——'s attack on Christian Science shall result in even one individual's investigating Christian Science for himself and finding out the facts, let the facts be what they may, then his attack will not have been without good results.

Editorial

"Suffer it to be so now"

In March, 1898, just previous to the declaration of war by Spain upon the United States, Mrs. Eddy wrote as follows: "Whatever weighs in the eternal scale of equity and mercy tips the beam on the right side, where the immortal words and deeds of men alone can settle all questions amicably and satisfactorily. But if our nation's rights or honor were seized, every citizen would be a soldier and woman would be armed with power girt for the hour" (Miscellany, p. 277).

Ten years later she published in *The Christian Science Journal* this intimate glimpse of her daily practice: "For many years I have prayed daily that there be no more war, no more barbarous slaughtering of our fellow beings; prayed that all the peoples on earth and the islands of the sea have one God, one Mind; love God supremely, and love their neighbor as themselves. National disagreements can be, and should be, arbitrated wisely, fairly; and fully settled. It is unquestionable, however, that at this hour the armament of navies is necessary, for the purpose of preventing war and preserving peace among nations" (Miscellany, p. 286).

In the mean time there had been war between Spain and the United States, during which period Mrs. Eddy, like other patriotic citizens, displayed her country's flag at full mast on her spacious grounds in Concord, N. H.; and when the New Hampshire troops returned from service she fed them and comforted them. Seemingly it had been impossible in this instance to "settle all questions amicably and satisfactorily," and Mrs. Eddy's attitude during the war, and after it closed, fully indicated her approval of the course of the United States Government in its resort to arms as the only humanly possible means whereby to maintain national rights and in the name of righteousness and humanity give freedom and peace to the weak and oppressed.

It is quite evident from Mrs. Eddy's words and acts that it was not war in the abstract which she approved, but rather her approval was directed to the doing of those things which seemed to the world necessary to be done in order that humanity should make progress toward righteousness and peace. "Suffer it to be so now: for thus it becometh us to fulfil all righteousness," was the Master's reply to John's protest against baptizing him. In the same sense our Leader must have regarded the war with Spain as a concession to the general belief that only through physical force, applied at that time, could liberty and justice be advanced.

Today the United States Government is again confronted with a situation in which national rights and honor are assailed, when notwithstanding every appeal that could be made and has been made for a peaceful settlement, there seems to be no other alternative than one that may lead to war, or else a shameful submission to a definite lowering of that standard of international righteousness and humanity which this country has already paid so great a price to establish and maintain.

Whatever the outcome of the present situation may be, Christian Scientists will not be unmindful of our Leader's declaration that "the history of our country, like all history, illustrates the might of Mind, and shows human power to be proportionate to its embodiment of right thinking;" and that it is still necessary to take "further steps toward the banishment of a world-wide slavery, found on higher planes of existence and under more subtle and depraving forms" than was African slavery; also that "the voice of the herald of this new crusade sounded the keynote of universal freedom, asking a fuller acknowledgment of the rights of man as a Son of God, demanding that the fetters of sin, sickness, and death be stricken from the human mind and that its freedom be won, not through human warfare, not with bayonet and blood, but through Christ's divine Science" (Science and Health, pp. 225, 226).

Until humanity has fully grasped the truth of this universal proclamation it will be necessary for Christian Scientists, as well as for all others, to do whatever the world's highest sense of human rights demands of them; not forgetting, however, as Mrs. Eddy again reminds us on page 226 of the text-book, that "God has built a higher platform of human rights, and He has built it on diviner claims. These claims are not made through code or creed, but in demonstration of 'on earth peace, good will toward men.'"

ARCHIBALD MCLELLAN.

The Freedom of the Sea

EVERY human right has its counterfeit in some human abuse. Thus the phrase "the freedom of the sea" when rightly understood spells sea safety for men, women, and children of all nations, but when perverted it would legalize the pirate, the gun runner, and the slave ship. A catch phrase of this kind must therefore be closely scrutinized, and the only safe procedure for a Christian Scientist in weighing the value of such a phrase is to turn from matter to Mind, from physics to metaphysics. What in reality is freedom and what is the sea?

In accordance with the teaching of Christ Jesus, Christian Science admits of no real freedom except that which is associated with Truth. While mortals are recognized to be free moral agents, capable of mixing what seems to be good with what seems to be evil, of being sick and of sinning, the real man of God's creation is incapable of evil and therefore cannot be said to possess the right or the freedom to sin. Spiritually considered, therefore, freedom is inseparable from Truth, and cannot be connected even remotely with error of any sort.

And what of the sea, as interpreted metaphysically by Christian Science? Mrs. Eddy, recognizing the need for an interpretation of words according to both divine truth and human error, has given us the two explanations of the sea in Science and Health. Thus on page 559 she refers to the sea as "elementary, latent error, the source of all error's visible forms;" and on page 536, as "a symbol of tempest-tossed human concepts advancing and receding." These definitions obviously refer to the beliefs of mortal mind and present a suppositional and human concept of the sea.

On the other hand, on page 575 of Science and Health Mrs. Eddy supplies the final and absolute sense of the sea, when in describing the New Jerusalem she pictures the spiritual city as opening "westward, to the grand realization of the Golden Shore of Love and the Peaceful Sea of Harmony." Here we have a concept of the sea which is free to all of God's ideas, because they reflect perfection and are consequently incapable of abusing or perverting the freedom of the sea. But humanly considered, what is known as the freedom of the sea must be earned and won before it can be safely enjoyed.

If some of the denizens of the deep be taken symbolically to represent certain qualities of thought, then it may be stated unequivocally that the freedom of the sea cannot be safely entrusted to the jellyfish floating helplessly upon the tide of human belief, negative and neutral, tossed hither and yon by fear or fancy. Nor is this freedom safe in

Digitized by Google

the keeping of the ruthless shark driving unseen through the dark depths at his prey. Rather can we turn with greater confidence to the type represented by the kindly whale, suckling its young and sheltering a Jonah hard pressed by his enemies, till after three days he could rise again and prove his conquest over "the last enemy that shall be destroyed." This great mammal, expressing qualities both strong and humane, was mentioned by the Master to certain of the scribes and of the Pharisees who asked for a sign, when he declared, "An evil and adulterous generation seeketh after a sign; and there shall no sign be given to it, but the sign of the prophet Jonas: for as Jonas was three days and three nights in the whale's belly; so shall the Son of man be three days and three nights in the heart of the earth."

If then the question is asked to what nation or nations can the freedom of the sea be safely entrusted, the answer must be that it cannot possibly fall to the heritage of the weak, or of the fearful, or of those who hate. It belongs to the quality of thought which established the rule "Women and children first," which broke the power of the pirates in the Mediterranean, and which stopped the slave traffic in the Red Sea. The freedom of the sea is safe only with those who through much tribulation have grown to a diviner sense both of freedom itself and of the "Peaceful Sea of Harmony."

WILLIAM D. MCCRACKAN.

Giving and Receiving

THROUGHOUT the Scriptures much is said about the divine bestowals, so much indeed that we might naturally look all about us to see humanity in possession of every good thing. Since, however, the very opposite seems to be the case, and since we as professing Christians cannot deny that God gives all good, the question becomes one of receptivity on our part. Here it must be admitted that only through spiritual sense can we perceive or appropriate the good so freely offered us, for what promise could be plainer than this: "No good thing will he [God] withhold from them that walk uprightly"? In Christian Science it is impossible to doubt that God is ready to "bestow all good, since He is unchanging wisdom and Love," as Mrs. Eddy tells us on page 2 of Science and Health. In view of this assurance it rests with us to discover wherein we fail to receive the good we desire and need.

At this hour no thoughtful man or woman would deny that the world's greatest need is peace, whether this be taken individually or collectively. Here it is well to remember that when the clouds were heaviest and darkest, when his remorseless enemies were pressing hard upon him, led on by a traitor in his own ranks, Christ Jesus undoubtedly gained his highest realization of peace. It was then that he could offer to his followers—to all the world in fact, if they would only accept it—the richest, rarest bequest which could come from Love's idea and manifestation. He said, "My peace I give unto you." Let us here pause a moment and lay the emphasis upon the "my" and "you" in order to see that no other kind of peace than the Master's peace is of any avail. This is made clear in the words which immediately follow: "Not as the world giveth, give I unto you;" and then came this added assurance, "Let not your heart be troubled, neither let it be afraid."

It is quite possible that most of us have greatly desired "my peace," that is, our own limited mortal concept of peace, whether the questions involved related to our personal affairs, to church problems, or to the great world issues which can only be rightly dealt with by the Christ-love and Christ-wisdom. For this reason we need to probe deeply our own thought, in order to learn whether we really desire what our Master offered when he said, "My peace I give unto you." If we desire this above all else we shall have it, and each day will bring it in fuller measure, but it will not be what our Leader characterizes as "a false, convenient peace" (Miscellany, p. 211); it will mean the sure triumph of good over evil, of the spiritual over the material, wrought out in the human consciousness of each one who claims to be a follower of Christ.

In the epistle of James we read that "wars and fightings" come from the lusts of the flesh, which surely implies that if we would realize and reflect peace we must rise above all such, and thus gain the clearness of vision which sees the Christ-peace and knows how to work, watch, and pray for its universal manifestation. We must remember that our Master's salutation to his followers was ofttimes, "Peace be unto you." It was his greeting, more than once, after the resurrection, and if we are "risen with Christ" it should be the spirit of our silent mental greeting under all conditions and circumstances.

Longfellow tells of the passing of mortal strife in these beautiful lines:—

> Down the dark future, through long generations,
> The echoing sounds grow fainter and then cease;
> And like a bell, with solemn, sweet vibrations,
> I hear once more the voice of Christ say, Peace.

These words were written before the clear light of Christian Science had dispelled much of the world's mental darkness, but now the day of Spirit draws on apace, and we begin to hear the voice of the angel saying "that there should be time no longer,"—time no longer an element in the world's redemption, but Truth and Love giving peace "from him which is, and which was, and which is to come."

ANNIE M. KNOTT.

Among the Churches

Current Notes

BELLINGHAM, WASH.—After more than ten years without a real church home, First Church of Christ, Scientist, is now holding services in an attractive building at the corner of Maple and Forest Streets. The congregation moved into its new home the first of October from the Aftermath Club House, which had served as a place of worship for several years. The plans call for a building much larger than the present unit, which is so constructed that the second unit can be built on, making a completely appointed church. It will cost approximately twenty-five thousand dollars. The unit just completed cost about seventy-five hundred dollars, and will seat three hundred and fifty persons.

The Sunday American-Reveille.

VINELAND, N. J.—Services of dedication for the new edifice of First Church of Christ, Scientist, were held yesterday afternoon [Dec. 3] at the building recently completed on Wood Street, almost opposite the new Vocational High School. A lot was purchased in the early spring of 1915, and the following June saw ground broken for the structure, the corner-stone being laid on July 17. The work progressed so satisfactorily that the building was completed and ready for occupancy, with the auditorium and reading-room furnished, Nov. 21 the same year. The approximate cost was fifty-one hundred dollars.—*Vineland Republican.*

MARTINEZ, CAL.—The Christian Science chapel on Mellus Street, which was opened on July 30, was formally dedicated on Thanksgiving day.—*Martinez Gazette.*

Digitized by Google

ROCKY FORD, COL.—Members of the Christian Science Society will hold special services Sunday morning [Dec. 17] in their new building recently completed at the corner of Maple Avenue and Eleventh Street, opposite Library Park. The completion of this church edifice marks an epoch in the history of the Christian Science organization in the Arkansas Valley of Colorado. The structure is the first completed church of this denomination in the valley, although organizations in La Junta, Pueblo, and Trinidad have buildings under construction. The Rocky Ford organization has steadily increased in membership since interest was first aroused in Christian Science about sixteen years ago through the healing of several persons living in this community. In 1910 members of the local society decided to erect a church in this city, and accordingly the site of the present structure was purchased at a cost of one thousand dollars. Soon after this the question of a building was taken up, and on Dec. 6, 1915, a resolution was adopted appointing a building committee and authorizing them to erect a church. The entire cost of the property is approximately nine thousand dollars. The auditorium has a seating capacity of two hundred persons.—*Rocky Ford Tribune.*

WARRENSBURG, MO.—On Thanksgiving day the members of First Church of Christ, Scientist, met for the first time under their own vine and fig tree. This little congregation a short time ago purchased the northwest corner of Culton and Miller Streets from the Home Telephone Company, with the intention of erecting a handsome church thereon as soon as possible. Until the new structure is built they will utilize the old stone residence as a place of worship and a reading-room.—*Daily Star-Journal.*

NEEDHAM, MASS.—Papers were passed Friday, Dec. 15, by which First Church of Christ, Scientist, takes title for a church site to a parcel of land on Great Plain Avenue, adjoining the residence of Clifford M. Locke, and opposite Greene's Field. The church plans to build an edifice within a year to cost approximately eight thousand dollars.

The Needham Chronicle.

Admission to Membership in The Mother Church

The next admission of candidates will be June 1, 1917. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 9, 1917.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1916, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
236 Huntington Avenue, Back Bay, Boston, Mass.

The Lectures

BLOOMFIELD, NEB. (Society).—Ezra W. Palmer, lecturer; introduced by Paul A. Tulleys, who said in part:—

The healing work of Christian Science is important, but its scope is much broader than the mere treatment of physical ailments. In fact, it is a system of thought and living presented to the world nineteen centuries ago by the great master Physician, Jesus the Christ, and applicable today, through the operation of immutable divine law, to all problems of human experience. Christian Science brings to us the sunlight of truth, the truth regarding God as ever present and unchangeable good, and the truth regarding man, the real man, as God's image or expression. It gives us freedom in large measure from bondage to fear and belief in the necessity of disease and other inharmonious conditions. Its practical appeal has gone out to all parts of the world, and today thousands of adherents are testifying to its healing efficacy.

ST. JOHN, N. B., CANADA (First Church).—Edward A. Merritt, lecturer; introduced by Ralph H. Watts, who said in part:—

Christian Science as presented to the world by Mrs. Eddy insists that there can be no divisional line separating the preaching of the gospel from the healing of the sick; that the one must always accompany the other, as Jesus instructed. To assume that the time for divine healing is past and that the words of the Nazarene were intended only for those who heard the oral message nineteen hundred years ago is to go contrary to the Bible and to place upon the words of the Saviour an interpretation which does not exist. Paul tells us that "now is the day of salvation,"—now, not tomorrow or next week,—indicating the ever-presence of divine Love to deliver from sickness and cleanse from sin. Christian Science maintains that the words and works of the Master are not merely details of historical interest, but a living program to which we are to conform our lives, and as a natural consequence of which the works that he did will surely follow.

KANSAS CITY, MO. (Third Church).—John Randall Dunn, lecturer; introduced by Clarence Layton, who said in part:—

For hundreds of years varying suggestions and theories have been advanced for the relief of human problems, both mental and physical, and yet satisfactory results have not been attained. In an attempt to explain the failure of sincere efforts in such directions, it has been said that the dim and uncertain tomorrow contains the "pearl of great price." Tomorrow never comes, and people are beginning to realize this. It is therefore quite evident that the rules of salvation shall be applicable to the problems of today, and unless they are susceptible of such application the failures of humanity will continue to present themselves.

Jesus of Nazareth, the greatest teacher the world has ever known, said, "If ye continue in my word, . . . ye shall know the truth, and the truth shall make you free." We also have Paul's words, "Now is the accepted time; behold, now is the day of salvation." If we combine these statements we have the following: The knowing of the truth now will bring freedom and salvation. Christian Science teaches us of this truth, the truth about God and man's relationship to Him.

WALTHAM, MASS. (auspices of The Mother Church).—William R. Rathvon, lecturer; introduced by Hiram E. Tuttle, who said in part:—

Truth and a scientific understanding of Principle is the basis on which all things are brought to light, controlled, and developed. Irrespective of the helpful discoveries in the various walks of life, mankind is still subjected to the bondage of sin, sickness, and sorrow, and is still groping about in darkness for relief. There are many who honestly think that it makes no difference what religious beliefs they entertain, provided they are sincere in them. This thought is pernicious and destructive, for it is clear that if a thing is not true in fact, no amount of sincerity on the part of the believer can

Digitized by Google

make it so. The constant cry of mankind is for health, happiness, and progress. Christian Science supplies this need. All that is required of us is sufficient humility to learn and a receptive spirit. No worldly wisdom or scholastic learning is required to find this Christ-healing,—merely a readiness to accept the truth as clearly stated by Mrs. Eddy. She has elevated religious understanding from a theoretical to a practical basis. She has proven beyond question that a clear understanding of Christianity meets every human need. There is no mystery involved, and when one does his or her work faithfully, healing and regeneration must follow.

Free Press-Tribune.

PRESCOTT, ARIZ. (Society).—Prof. Hermann S. Hering, lecturer; introduced by Judge Frank O. Smith, who said in part:—

Dominated by the wonderful spirit of faith and hope, Christianity has advanced through nineteen centuries. The term covers a wide variety of creeds, but all recognize the force of light and truth and bow to the same God. The organization known as the Christian Science church is practically fifty years old. In this short space of time it has grown until it numbers its members by the hundreds of thousands. Its churches and societies are found throughout the civilized world. Remarkable as its growth has been and is, the critical historian of the future may well record that its great influence has been outside its own organization, in arousing thinking men and women in every denomination to a renewed interest in the vital forces of the Christian religion, in the power of light over darkness, of good over evil, and in the almighty force of love and truth as taught by Christ Jesus.—*Prescott Courier.*

BROOKLYN, N. Y. (First Church).—John W. Doorly, lecturer; introduced by Warren C. Klein, who said in part:—

The "signs of the times" indicate that Christian Science is fulfilling its destiny. Men, women, and children everywhere are declaring that through the teachings of Christian Science they are learning the true nature of God and what constitutes man as His image and likeness. People in every land are giving verbal and written testimony that their lives have been made holier, happier, and healthier through the ministrations of this Science and its correct educational influence. If one were to characterize the difference between their former views and their present Christianly scientific views, one might say that in other years they believed in God and His Christ, and now they understand God and His Christ. This understanding is spiritual, permanent, benevolent, the result of study and experience. It is not the result of supposition or blind faith.

Lectures to be Delivered

[By Members of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.]

ARIZONA—Phoenix: Bicknell Young, Elks Theater, 3 p.m., Feb. 18.

CALIFORNIA—Fresno: John Randall Dunn, Fresno Auditorium, Kern and L Streets, 8:15 p.m., Feb. 23.
Grass Valley: John Randall Dunn, Auditorium Theater, 8 p.m., Feb. 19.
Los Angeles (Third Church): Bicknell Young, Church Edifice, 734 South Hope Street, 8 p.m., Feb. 19 and 20.
Pasadena: Bicknell Young, Church Edifice, Oakland Avenue, near Colorado Street, 8 p.m., Feb. 23.
Placerville: John Randall Dunn, Elite Theater, 3 p.m., Feb. 18.
Sacramento (First Church): John Randall Dunn, Tuesday Club House, Twenty-eighth and L Streets, 8 p.m., Feb. 20.
San Diego (Second Church): Bicknell Young, First Church Edifice, Second and Laurel Streets, 3 p.m., Feb. 21, and 8 p.m., Feb. 22.
Stanford University: John Randall Dunn, Little Theater, 8 p.m., Feb. 22 (open to present and former members of the University).

CANADA—Woodstock, Ontario: Dr. Walton Hubbard, City Hall, 8 p.m., Feb. 23.

COLORADO—Denver (Fourth Church): Virgil O. Strickler, Denver City Auditorium, 8 p.m., Feb. 19 and 20.
Fort Collins: Virgil O. Strickler, Empress Theater, 3 p.m., Feb. 18.

ENGLAND—London (First Church): William R. Rathvon, Queen's Hall, Langham Place, W., 8 p.m., March 3.
London (Third Church): William R. Rathvon, Church Edifice, Curzon Street, Piccadilly, W., 8 p.m., March 1.
London (Seventh Church): William R. Rathvon, Hammersmith Baths, 8 p.m., March 2.

FLORIDA—Jacksonville: George Shaw Cook, Duval Theater, 8 p.m., Feb. 19.
Ocala: George Shaw Cook, Temple Theater, 3 p.m., Feb. 18.

FRANCE—Paris (First Church): John Sidney Braithwaite, Washington Palace, 14 rue Magellan, 3 p.m., Feb. 25.

HAWAII—Honolulu: Clarence W. Chadwick, Opera House, Feb. 11.

ILLINOIS—Chicago (Fourth Church): Dr. Walton Hubbard, Church Edifice, Harvard Avenue and West Marquette Road, 3:30 p.m., Feb. 18, and 8 p.m., Feb. 19.
Chicago (Fifth Church): Paul Stark Seeley, Church Edifice, 4840 Dorchester Avenue, 3:30 p.m., Feb. 18, and 8 p.m., Feb. 19.
St. Charles: Charles I. Ohrenstein, Library Hall, 8:15 p.m., Feb. 19.
Wilmette: Bliss Knapp, Church Edifice, Central Avenue and Tenth Street, 8 p.m., Feb. 19.

INDIANA—Gary: John W. Doorly, Gary Theater, 8 p.m., Feb. 16.

IOWA—Oskaloosa: Bliss Knapp, 406 High Avenue, E., 8 p.m., Feb. 20.

IRELAND—Dublin: William R. Rathvon, Abbey Theater, 8 p.m., March 6.

MARYLAND—Baltimore (First and Second Churches): William R. Rathvon, The Garden Theater, Lexington Street, near Liberty, 3:30 p.m., Feb. 11.

MICHIGAN—Muskegon: Clarence C. Eaton, Woman's Club Building, 8 p.m., Feb. 15.
Pontiac: Dr. Walton Hubbard, Armory, 8:15 p.m., Feb. 22.

MINNESOTA—Willmar: Virgil O. Strickler, Willmar Opera House, 3:15 p.m., Feb. 15.

MISSOURI—Kansas City (First Church): Clarence C. Eaton, Church Edifice, Ninth Street and Forest Avenue, 8 p.m., Feb. 12, and Globe Theater, Thirteenth and Walnut Streets, 12:15 (noonday), Feb. 13.

Testimonies of Healing

While it has not been long since my wife and I began the study of Christian Science, the time has been full of great joy and many glorious experiences. According to our belief there was a sad need of something better than any mortal could do to relieve us of our many ailments. I had been under the care of doctors for three or four years. Each diagnosed the trouble as some form of rheumatism, but was able to give only temporary relief. For almost seven years I had been wearing a support on account of a rupture. I also had stomach trouble, and one whole winter everything I ate seemed to distress me, so that the thought would come that anything that meant relief would be acceptable. I prayed God to bless the means employed for my recovery, for I always knew that if ever healing came it would be through the love of our heavenly Father; but I then believed that He required us to use material remedies and would bless them to our good. Now,—all glory be to His holy name and all reverence to our dear Leader, Mrs. Eddy,—the guiding light of Christian Science has shown me plainly that God does not expect us to come to Him in this way, but rather to accept Him as the only power in heaven and earth.

My wife had chronic stomach disorder for years, and on several occasions nothing but opiates seemed to quiet her. Doctors put her on a diet, the result being that she was reduced in strength and could scarcely get around. At last one physician was afraid her illness was due to gall-stones, and that nothing could relieve her except an operation. Space will not allow of my giving further details as to the many discordant conditions besides those mentioned which have been banished through the better knowledge of divine Truth. Suffice it to say that Christian Science found us in a sad condition, and today we are enjoying good health and are happy. I have discarded the support, having no further need of it, as I was healed of the rupture while studying Science and Health.

Not only are we thankful beyond degree for the healing which has been ours to enjoy, and the positive knowledge of God's response to our feeble efforts to know Him better, but for the glorious spiritual uplift which has been brought into our experience. We are only a short distance on the highway of our God, but we find that just so far as we understand His allness and demonstrate what has already been revealed to us, the way is made clear, and each day brings great blessings.—W. S. Ferguson, Gates, Texas.

It is with a heart full of gratitude for the benefits received through Christian Science that I submit this testimony. On Sept. 9, 1911, one of my ankles was injured. As it was thought to be only an ordinary sprain, the usual material remedies were applied, and after two days of rest I began to teach, though walking on crutches. I continued my work four weeks, then was given three weeks' vacation; but being unable to walk without crutches at the end of that time, I taught until a teacher could be found to take my place.

Upon the advice of two doctors I was then removed to a hospital for an X-ray examination. The case was pronounced tuberculosis of the ankle and toe joints. I was very much discouraged, and the fear of losing the foot was constantly before me. After the foot was placed in a plaster cast, I was sent home. A serum was used hypodermically by the home physician to heal the bone, but it had exactly the opposite effect, for in a few weeks the ankle became much worse. I was accordingly removed to the hospital for another X-ray photograph, which disclosed a worse condition than had existed before.

The treatment was continued two months longer, when the other ankle became so badly affected that I was again taken to the hospital and the X-ray used on both ankles. Before I reached there, however, the pain had spread over my entire body. This was followed by hemorrhages, numbness, and other alarming symptoms, so the doctors decided they could do no more for me. After five weeks I returned home worse than before, and none can picture my despair and discouragement, for I soon lost the power of speech and suffered intensely night and day.

When there seemed to be not a ray of light in my future outlook, a letter was received from a lady in a distant city, saying that I could be cured by Christian Science. I knew nothing of this teaching, but had heard it ridiculed many times and so had little faith in it. I thought the lady could not have known how sick I was, but nevertheless I followed her advice and communicated with a practitioner. Relief came very slowly, in fact I often became impatient; but knowing that nothing else could help me, I persevered in Christian Science treatment. I am indeed thankful that I did so, for after more than a year in bed and over two years spent in a wheel chair, I was again able to walk and talk. During that time many proofs of the healing power of Christian Science were received by other members of the family.

As I look back I can see how Truth has led me every step of the way in proportion as I have trusted. Before I was able to walk, the way was opened for me to earn enough for my needs by doing fancy work. In the summer of 1915 I received a teacher's certificate and am now teaching. Not only has my healing been permanent, but I am daily receiving new benefits from Christian Science. To those whose healing seems slow I would say, "Be not discouraged, for it will surely come if we faint not." My earnest hope is that I may daily learn more of this beautiful truth and be enabled to help others.—Orie V. Thompson, Morley, Mich.

I am unspeakably grateful for Christian Science. While playing on the back porch our son, eight years of age, fell through the railing of the third floor into the yard below, a distance of thirty-five or forty feet. I immediately declared that God, divine Mind, is All, and that God's idea could not be hurt. The neighbors wanted to send for a doctor immediately, but I told them I would get help for the child. When the boy heard them talking about getting a doctor, he said he was all right, and immediately got up and walked around to prove to them that a doctor was not needed.

In about half an hour, as soon as the neighbors had gone, I called up a Christian Science practitioner and asked for treatment, then read aloud from Science and Health, and in a little while the boy fell asleep. When he awoke two hours later he was bright, cheerful, and happy. He went to bed at nine o'clock that evening and slept until six o'clock the next morning, when he was able to walk as usual. There was not the slightest discoloration or a bruise on his body, with the exception of a few scratches on his face, which disappeared within two or three days.

During the forenoon one of the neighbors called to inquire about the boy, and was even more surprised than she was the day before to see him so free and happy. She said that nothing but the power of God had saved his life, and that she wished they had had that kind of help for their boy, who just a few days before had fallen about six feet and had passed on within a few hours. Our experience shows the

Digitized by Google

difference between Christian Science healing and the material method, and the great cause for gratitude which Christian Scientists have for the glorious revelation of the allness of Spirit and the nothingness of matter. On Monday the boy went back to school, having missed just one half day on account of this experience. There were no bad after effects, and he is a perfectly healthy child.

We have had Christian Science in our home for about ten years, during which time we have relied entirely upon spiritual help to solve every problem. I am indeed thankful to God for His omnipotent care, and am also grateful to Mrs. Eddy, who labored so faithfully and unselfishly to bring to light again Truth's healing power.

MARGARET W. DUNK, Chicago, Ill.

✧

I often felt the need of a better understanding of the Bible and longed for sufficient faith to believe and trust in God's promises, but seeing so little practical use made of the teachings of Christ Jesus, I gradually ceased to read the Bible. When I began to read "Science and Health with Key to the Scriptures," it was a great joy to find that it does indeed unlock the Scriptures and make reasonable and practical all the teachings of the Master. My beliefs in regard to God were vague and unsatisfying, but gradually, through attendance at church services and constant study of the text-book, I began to know God. After reading but a few pages of Science and Health I could read easily without glasses, although they had been worn for over five years. The understanding gained through studying the Bible and Mrs. Eddy's writings has given me strength to meet each day's demands and has kept me well.

I am deeply thankful for the discernment which led Mrs. Eddy to give to the world a daily newspaper, thus abundantly supplying Christian Scientists with authorized literature, so that the desire for unprofitable and even dangerous reading is destroyed. In subscribing for all the literature I find myself protected from many temptations to squander time. During these eight years there have been many opportunities to prove that man is never separated, even for an instant, from divine Love, and that when we are obedient to our highest understanding our prayers are answered, and our needs, both spiritual and physical, are supplied.

My daily prayer is for greater consecration and increased activity, so that I may be worthy to be called a Christian Scientist.—ALICE L. MERRILL, Los Angeles, Cal.

✧

Nine years ago I began the study of Christian Science, when many disappointing experiences had led me to see the utter frailty of all material things. I had been a church member, but in times of great need found I had nothing to depend upon. God seemed so far off—some one to be prayed to, but for what? This question was answered in my study of Science and Health, for it soon became clear to me that God is not "afar off," but that He is Love and is ever present.

After studying this book for two weeks I was able to heal myself of a sick headache almost instantaneously, thus proving that Christian Science really works. It has done much for me and for my family, but the overcoming of qualities and tendencies which are not good has meant far more to me than the physical healing. Christian Science has taught me that whatever is not good is not real, and does not belong to God's children, made in His image and likeness. The realization of this truth has healed me to a great extent of extreme sensitiveness, bashfulness, insincerity, lack of confidence, jealousy, and envy.

More and more I am learning the meaning of power. I used to think it consisted of so much human will, so much ability to dominate and govern others. As these faculties seemed lacking in me I felt greatly handicapped, but Christian Science has cleared away this mistaken sense. Mrs. Eddy says in Science and Health (p. 514), "Tenderness accompanies all the might imparted by Spirit."

I am indeed grateful for the good that has come to me through the study and practice of Christian Science.

SALLIE B. TANNAHILL, New York, N. Y.

✧

Quite recently, when error presented itself to me in the very disagreeable form of a seeming tightness across the chest, Mrs. Eddy's words as recorded in Science and Health (p. 392) came to me: "Stand porter at the door of thought. Admitting only such conclusions as you wish realized in bodily results, you will control yourself harmoniously." I found I had not been heeding this injunction, but had admitted thoughts of disease, and the physical inharmony was the result of this neglect. I then took my stand as "porter" and was soon relieved of the discordant manifestation.

I was but twelve years old when my parents became interested in Christian Science. For six years I had worn glasses, but through the understanding and application of the teachings of Christian Science that annoyance was soon overcome, and I have had no trouble with my eyes since. I have also been healed of rheumatism. We have had many other cases of healing in our home,—stomach trouble, blood-poisoning, ulcerated teeth, and numerous other manifestations of error have readily yielded to the power of Truth.

I am very thankful for what God has done and is doing for me and mine.—GEORGA L. SLUPE, Columbus, Ohio.

✧

I wish to express my gratitude for the many blessings that have come to us through the teachings of Christian Science. My two children have been completely healed of kidney trouble in an aggravated form. My husband has been healed of the liquor habit; also of chronic bowel disorder of twenty-five years' standing, after having doctored with several physicians, among them one of the most noted in Chicago. Many minor ailments have been quickly overcome.

I would also like to tell of help received while having dental work done. I was in the chair for about three hours, having one tooth extracted and the nerve taken out of another, but there was scarcely any pain. This to me seemed beautiful, as on previous occasions I had suffered very much. The dentist himself thought it was wonderful, and made the remark that he had noticed in his practice that Christian Scientists got through with a great deal less suffering than other people.

For five years Christian Science has been our only physician, but it would take too much space to tell of all the benefits we have received. Suffice it to say that we have proven God available in every emergency. We can never be grateful enough to Mrs. Eddy for making known to us God's "wonderful works to the children of men."

MRS. JOHN POWERS, Postville, Iowa.

✧

Nearly four years ago Christian Science found me in such a condition that life seemed hardly worth living. Since earliest childhood I had suffered from chronic disorder of the bowels. I could scarcely remember a day without headache, and was never able to walk like others of my age; indeed, I was always considered delicate. After my marriage rheumatism was added to my ills, also sleeplessness, and a greater

Digitized by Google

part of each day was spent in resting on a sofa. Everything was tried for me,—medicine, baths, massage; but these brought only temporary relief.

At last my one desire was that if I was to go on living, God would bring me out of all this misery; and He heard my prayer. A faithful friend told me of how she had been brought to Christian Science, and after a month's study of Science and Health I felt that divine Truth had begun its mighty work in me,—that all the error was being driven out. My friend continued to help me, and after two years I could say, "All is well." I am now quite healthy.

I know that God is the only power, that no evil can harm those who look to Him for protection; and the peace and joy that this consciousness has given me far surpasses the physical healing. The conviction that Truth does make us free has helped me to think rightly with regard to my children, who have been healthy and strong during these years, whereas before they like myself almost lived on medicine. My gratitude is great for all the help that Christian Science has given, and it goes out also to Mrs. Eddy, who has shown us the Christ, Truth, and taught us to read the Bible rightly. My desire is to become more and more filled with Truth and Love, so that I in my turn may be able to help others find him who is "the way, the truth, and the life."

Mrs. Gunhild Hullstrom, Djursholm, near Stockholm, Sweden.

✧

In September, 1914, while working on a barn, I was injured by a heavy timber, which hit me on the head and rendered me unconscious for some time. I suffered from nervous shock until February, 1915, when what is called depressed melancholy developed, together with loss of mind. I had no appetite, could get no sleep without taking the most powerful opiates, and had to be watched by some one continually.

Several different physicians were tried, also another kind of treatment, and finally my wife resolved to try Christian Science, as some of her relatives had been helped by it in various ways. A practitioner was asked to take the case, and in three days I was calling people by their names and began to realize where I was. In two weeks I attended the Wednesday evening meeting with the practitioner, and in three weeks was so improved physically and normal mentally, that I dismissed the practitioner, and have since studied Science and Health for myself.

I am very grateful for this healing and want to spread the good news.—Charles L. Giles, Marcellus, N. Y.

✧

In February, 1915, while crossing the Atlantic from Liverpool to New York, I was seized with a sudden attack of heart failure. I sent the stewardess to call the friend with whom I was traveling, and when she came I could only whisper, "Treat me; I think I am slipping away." She did so, and also read to me, but as I seemed to grow worse she finally asked me if I would like to have her send a wireless message to a Christian Science practitioner. I was very glad to have her do so, and she went to make arrangements with the operator. She was told that we were too far from land to reach Scotland by wire, but that later in the evening we would be in touch with a vessel which would forward the message.

Although seemingly very low, I got through the night, but only to have another sinking spell in the morning. Near noon, however, I began to improve, and by nightfall not only did I feel well, but all fear had vanished. A few weeks later I learned that, allowing for the difference in time, I must have begun to improve about half an hour after the wireless message reached the practitioner. In all my thankfulness for the healing truth which had raised me up, I was particularly impressed by the wonderful elimination of time and space. Although a thousand miles out at sea and over three days' journey from the nearest land, when my own faith was too feeble to help me I was enabled to reach one whose understanding of the glorious truths of Christian Science caused the seeming illness to dissolve into nothingness. The healing has been permanent, and I am in excellent health.

Julia Brown, London, England.

✧

In the summer of 1914 my little boy, then three years old, was healed of fever in one night through Christian Science treatment. I was away from all Science help when he became suddenly ill, and was therefore very fearful. The neighbors who came in insisted that I call a physician, and I at last consented. When the doctor came he diagnosed the case as fever, and stated that medicine should be given at once. After I was told what the child's temperature was, fear seemed to grasp me so that I trembled almost as much as he did. The physician said he would come again in the morning.

I knew something must be done. Before this, croup in its worst stage had been overcome through Christian Science, also earache and numerous other ills, and I felt it would be wrong to give medicine. My husband was away, but I telephoned for him and he came home two hours later. On seeing the conditions he said he would not risk having a doctor, but would call my mother over the long distance telephone and ask her to come on the first train. When she arrived at ten o'clock that night, the child was the same as he had been all day, the fever rising if I ceased bathing him; but I can never forget the relief experienced when my mother came in. My fear was gone. She sat up with the child all night alone, and he slept soundly, although she did not bathe him as I had been doing, but just held to the truth of God's perfect child. At daylight he rose perfectly normal, ate a hearty breakfast, and went about playing as though nothing had happened. Later, when the physician called, my little boy went with me to the door, and I was so thankful to be able to present the child himself in answer to the inquiry. The physician was astonished, and made a remark to the effect that he never had seen such a quick healing.

Christian Science has been in our home since I was ten years old, but I never took it up as a study till about four years ago. Words cannot express my thankfulness to God for the spiritual uplift and the good, the peace, and the love it has brought to my consciousness. As a girl I never cared to read the Bible, as I could not understand it, but the spiritual interpretation of "Science and Health with Key to the Scriptures" has made it so plain that it has become a great pleasure to read the Lesson-Sermons. My love and gratitude to Mrs. Eddy for bringing this new-old religion to the world is very great, and for all the blessings we have received we shall never cease to be thankful to God.

Grace Platt Berry, Homestead, Fla.

✧

Christian Science has indeed been to me the "pearl of great price," because it has taught me to know God. I attended many different churches in search of the straight and narrow path which leads to the "secret place of the most High," but after many weary years there came a time when in my hour of greatest need—unhappiness, discouragement, discontent, and other trials—I prayed fervently for light, some support outside of myself. Our heavenly Father heard my cry and lovingly guided me to Christian Science.

Digitized by Google

Since then many blessings have been received. An advanced case of pyorrhea of the teeth, which was considered hereditary, was overcome in one week by the reading of Science and Health, and the diseased condition has never in any way manifested itself again. I have been healed of a malignant growth of some years' standing, also of chronic catarrh of the head and throat that had been with me from childhood. For these healings I am indeed grateful, but more so for the spiritual exaltation which words are inadequate to describe. I am in perfect health and depend on Christian Science for every need.

All that I am, all that I have, all that I hope to be, I owe to this teaching. For me its blessings have been as multitudinous as the sands of the sea. It has meant a change from misery to happiness, from sorrow to joy, from doubt to understanding,—a journey out of darkness into light.

FLORENCE A. HOYT, Seattle, Wash. .

✧

In February, 1911, I was healed through Christian Science, after having been in bed for five weeks, unable to retain either food or drink. Four doctors had attended me at different times, but none of them gave me any relief. I suffered from what was called strangulation of the bowels, and the last doctor said I would have to stay in bed for another month, or even longer, but refused to give me medicine, as he said it could do me no good. He left on Saturday, and on Monday a Christian Science practitioner was called. She came again on Tuesday, and on Wednesday morning I went out to the dining room and ate and drank all I wanted.

The doctor heard I was up and well, and asked permission to call. When he saw me he was very much surprised, but said I was doing all right. During my illness I became very thin, but now my weight is even more than it was before I was taken sick. I am seventy-four years old, but feel young and well all the time, and have never been troubled in any way since my healing.

I had been a church member since the age of fourteen, and after my healing in Christian Science went to the minister of the local church and told him of my experience. He said that Science and Health had cured lots of people. I am studying and trying to gain a demonstrable understanding of the truth as taught by our Leader, Mrs. Eddy.

SUSAN PHILLIPS, Kalispell, Mont.

[Written for the *Sentinel*]

Truth's Gloria

KATE MILLS FARGO

THE powers of darkness hold no further sway,
For Truth has brought to light the eternal day,
And o'er the wreckage of false human will
Love builds new mansions fair by waters still.

Forgetting all those things that are behind,
Life ever new and beautiful we find;
Still more abundant as we forward press,
Life, Truth, and Love forever wait to bless.

Remembering not the shadowy paths of old,
We walk the streets celestial bright with gold,
As safely guided by the Father's hand
We pass the portals of the promised land.

And list! the chorus that glad voices sing,
As through both earth and heaven loud echoes ring:
Gone is the cross, gone dark Gethsemane,
All glory to the Christ forever be!

From Our Exchanges

[Western Christian Advocate]

The birth of Christ in a man's life is preceded by a period of soul distress, brought about by the overshadowing and ministry of the Holy Spirit. The spirit of man descends to the depths, the darkness of hell settles about him, and in the travail of despair the new life that is "hid with Christ in God" is born in him. Then follows an ineffable joy, which enlists the angels in lifting up a glad song with the refrain of the soul redeemed. It is again the angels of Bethlehem. It is again peace on earth and good will to men. It is all joy in the night. It is gladness throughout the day. It is a birth begotten of the Holy Ghost. It is a miracle. We do not seek to explain it; we live it. We do not pray to understand it; we enjoy it. We prove our spiritual birth by living a robust, active life that does not need to be explained. We vindicate our spiritual birth by a temper pure as the air, by a steadfastness royal as the stars, and by a love as noble as fervent fire. Every man "born of the Spirit" has his Christmas on that day when Christ is born in him, "the hope of glory." That is Christ's birthday to him.

[Prin. D. L. Ritchie in *The Christian World*]

What truth there is in history declares that war seldom makes the world better. It always makes it poorer; it usually makes it worse. In itself war is the brew of hell, and not "the medicine of God." Those who speak otherwise usually have purposes of their own to serve, or they live in a fool's paradise. The world can be made better only by the liberation of moral and spiritual forces. These may sometimes accompany war, but it has also and always its own pack of hell-hounds which it soon lets slip from the leash. Reactionaries always find in it their great opportunity. Everywhere they are ravening now, and it is clear, if deadly blows are not to be struck at dearly won liberties and the gaping wounds left unstanched, that the church must at once set free the spiritual forces which alone can deal death to tyranny and preserve liberty unhurt. Meanwhile, liberty is God's white dove among the hooded crows of war.

[The Watchman-Examiner]

Those see most clearly who are nearest to the temple and the throne. . . . None trust so perfectly the ultimate victory of the King of kings. They know that God causeth the wrath of men to praise Him. They see already the dawning of the day of spiritual triumph. They believe that the kingdoms of this world shall belong to God and to His Son, Jesus Christ. They are filled with joy in their firm faith that the nations shall "cast their crowns before him, lost in wonder, love, and praise."

The wise, the humble, and the saintly; the thinkers, the workers, and the watchers, are surely not misled, nor are they cherishing a childish dream. Christmastides of holy joy and radiant hope will glorify the coming years.

[The Christian Intelligencer]

Settled as the custom is, we may well pause to question how much thanksgiving is a habit of our people. The evidence is not convincing that we are inclined to keep any of our holidays true to the purpose for which they are established. It is doubtful that we can be fairly judged a people given to the true observance of our holidays. The significance of even this day so emphatically set aside to mark the spiritual meaning of our national blessings is often lost sight of in our feasting and social enjoyment. The habit of thanks-

Digitized by Google

giving is not strong upon us. Gratitude is scarcely a fixed attitude of mind with us. And what cause there is for the exercise of this fine grace in the things we have been spared and those we have enjoyed!

[*The Congregationalist and Christian World*]

All wholesome progress toward perfection rises from discontent. But there are noble and ignoble dissatisfactions, as far apart in their nature as light from darkness. The hopeful and progressive discontent concerns itself with our own failures and our hopes of overcoming. The deadening and hindering discontent busies itself with the failures of others toward ourself—failures of recognition, gift, or deference. The helpful discontent finds its standard for self outside of self. The harmful discontent finds the measure of the whole world in the desire of our own heart.

[Rev. Joseph Fort Newton, D.Litt., in *The Christian Commonwealth*]

Of all pages in the Bible whose leaves are for the healing of the nations, none is more fascinating to me, none more revealing, than the story of the walk to Emmaus. It is an epitome of Christian history and experience. There we have the three things that make our life worth while: "the divine companion, the sufficient interpretation, and the mighty answer of the heart." Nowhere else do we see more plainly the sundering difference between the Bible and all other books that speak to man about things eternal. Rich, warm, ineffably beautiful, the Bible is the book of the Presence.

This is clear whatever else be dim: since Jesus lived, our human life has been a walk to Emmaus, often lonely and sad but haunted by a high and tender Presence. Since that day one has walked with us whom we knew not, prophecies have had new and deeper meanings, and the eventide has been full of serenity and light. Since then the heart of man has burned within him along the old hard, human way, touched with strange stirrings of beauty and of love.

[*The Christian*]

Any man who thinks that God ceases to care, is in danger of realizing that he himself ceases to count. Everything depends upon our unalterable certainty that He takes pleasure in His people and is never insensible of their state. Only when we instinctively cry, "My Lord and my God," in reply to the challenge of life, are we safe. This assurance lies at the heart of all believing prayer. Unless we are convinced that God really cares, we do not really pray, for we do not really believe in prayer.

[*American Lutheran Survey*]

The church can hardly begin its great work of spiritual regeneration without extending its interest and activity clear through the whole realm of human interests. Recognizing that such an extension of interest and activity is not only logical, but that it is right and necessary, the question is not whether the church should make such an extension or not, but the question is how the church can so extend its interest and activity as to keep the spiritual supreme, and yet be effective in its service all the way through to the civic interests of men.

[*The Christian Register*]

Truly, toleration is a queer business. Why should two persons who find each other socially eligible and personally agreeable refuse to tolerate each other as fellow Christians because of a difference of opinion as to the nature of the Godhead, a subject about which both are profoundly ignorant?

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy, $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new catalogue of selected Bibles has been printed by the Publishing Society and mailed to Christian Science organizations listed in the *Journal*. Reading-rooms not receiving copies will please notify the Society.

Owing to the increased cost of labor and materials the Oxford Press of England has twice found it necessary to advance the prices of Bibles to the Publishing Society during the past year. The Publishing Society now finds it necessary to make a corresponding change in its prices to the field.

The cost of manufacturing Bible Cases and *Quarterly* Covers has also increased, and the changes in prices for these articles are listed in the new Catalogue No. 23.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 236 Huntington Avenue, Back Bay, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study. Also printed in Dutch and German.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. For all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

An international daily newspaper. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions to the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The Spanish Government has enacted a law, published on Dec. 8, 1916, providing for the creation of national parks. All exceptionally picturesque regions, forests, or lands that the state may select for this purpose are to be considered part of the park system, and access to them will be facilitated by suitable means of communication. The natural beauty of the parks, their fauna and flora, as well as geological or water features of interest, will be protected from destruction, deterioration, or defacement. The idea of providing for national parks in Spain originated with the reigning king, who noticed the rapid disappearance of certain national fauna. A commission has also been established to interest tourists by protecting the artistic, monumental, and picturesque features of Spain, and by bringing such features to the notice of the public. As a result a museum of tourism now exists, and an official catalogue of the attractions which Spain has to offer has been prepared.

Over a million and a half people use the national forests as playgrounds each year, according to a statement made before the recent meeting of the American Forestry Association at Washington, D. C., by the chief of the United States Forest Service. The nineteenth century land system, he said, was one wholly of land distribution, which was successful as applied to agricultural lands but unsuccessful as applied to non-agricultural lands chiefly valuable for growing timber. The keynote of the present-day policy is to secure such a disposition, use, and development of the public lands as will render a maximum service to the public. "The country has recognized," he said, "that public lands of chief value for forest purposes and essential to protect water resources should remain under public control. The struggle is now on as to who shall own and control the public water power sites, the coal, oil, phosphate, and potassium deposits, and the common grazing lands that are not suited to development by individuals under any of the homestead laws."

"Australia is the most isolated of all inhabited continents and is remote from the center of all of the world's activities," says the *National Geographic Magazine*. "Northward the sailing distance to Japan is approximately 3000 nautical miles; to India, 2500 miles. South America is 7000 miles to the east, and Africa an equal distance west. From London to the capital of Australia ships by the Suez route traverse approximately 11,000 miles of water, and by the Panama Canal 12,734 miles. From California ports the routes via Samoa, or Fiji, or Tahiti, cover a quarter of the circumference of the earth. Australia's only large civilized neighbor within a radius of 1000 miles is Java.

"One of the first surprises awaiting the tourist from the northern hemisphere is to find that Australia and New Zealand may not be grouped as two islands of like appearance, differing mainly in size, near neighbors which may be treated as a unit. New Zealand is nearly twice as far from Australia as Bermuda is from New York, and is not only east, but also south. Four days' travel across a chilly sea is required for the traverse from Wellington to Sydney, and after exchanging the chill midsummer climate of the New Zealand lake region for the heat of Adelaide, one readily accepts the evidence of the map that the southern coast of the Australian mainland has the latitude of central New Jersey, while the southernmost of the three islands which comprise the dominion of New Zealand occupies the position of southern Newfoundland."

Steel merchant vessels building or under contract to be built in private American shipyards on Jan. 1, according to builders' returns, numbered 403, of 1,495,601 gross tons, the largest tonnage in the history of American ship-building. Wooden merchant vessels of 500 gross tons or over, building or under contract to be built, numbered 161, of 207,623 gross tons. The Bureau of Navigation, Department of Commerce, from various unofficial sources entitled to credence, estimates that the merchant shipping built in the world during the calendar year 1916 numbered 2505 vessels, of 1,899,943 gross tons, while during the same period 1149 vessels, of 2,082,683 gross tons, were lost through war causes.

The "blue sky" laws of three states, Ohio, South Dakota, and Michigan,—designed to curb the sale of fraudulent securities, were upheld as constitutional by the Supreme Court of the United States. The court held that the authority exercised is not in excess of the states' "police powers," and that the laws are not a burden upon interstate commerce in the sale of stocks and bonds. "Blue sky" laws, enacted first in Kansas in 1911 with the purpose of protecting credulous investors against sales of worthless stocks and bonds, have been copied in some measure in more than half the states of the Union.

A bill is before the House of Representatives to authorize the secretary of war to issue fifty-year permits to power companies to divert water from Niagara Falls. This subject has already been up in the House twice this session, when the bill authorizing temporary diversion of 20,000 cubic feet of water a second, the full amount allowed to the United States under the treaty with Great Britain until July 1, was considered and passed. The bill now before the House attacks the problem of whether, and on what terms, to allow water to be diverted for a fifty-year term. Concessions to the conservationists were made in compensations to the United States for valuable resources turned over to private enterprise, control of the rates which shall be charged the people thereunder, and a "recapture" clause to enable the Government to regain control.

Approximately five hundred and seventy kindergartens were opened last year in public schools of the United States that never before had had them, according to the annual report of the National Kindergarten Association for 1916. This increase means one extra year of education for about twenty-five thousand more children, and as the boys and girls in this country average only a little over five years in school, this additional training is of very practical value to every one for whom it is provided.

Preliminary work costing $175,000 has been completed in the Pend Oreille River, at a point about 125 miles north of Spokane, Wash., preparatory to a hydro-electrical development that will include the highest dam in the world. This dam will be 375 feet high above the bed of the river, and will have an extreme length of about 250 feet at the crest. It will be twenty-five feet taller than the Arrow Rock dam, which is now the highest in the world. The only site available is in a cañon where the river runs 100 feet deep at low water and over 150 feet in time of flood.

The work of the committee to organize the sample fair held at Bordeaux, France, last fall was started only three months before the date set for its opening. The fair was a success, and the organizers express the belief that it will take on greater importance in 1917, when more time will be available for preparations. It was held from Sept. 5 to 20 in the heart of the city, on a large public square overlooking the Garonne River and the quays of the port.

The Society Islands of the Pacific Ocean comprise some two hundred islands and islets belonging to France. The total population is estimated at 33,000, and includes some three thousand Chinese and about four thousand of other nationalities. The inhabitants are unevenly distributed throughout the various groups, leaving many of the islands uninhabited. The chief products are coconuts and vanilla beans.

Figures of the recent census taken in the Argentine Republic place the native population at 5,527,285 and the foreign at 2,357,952. The Italians are first in numbers of foreigners, the Spaniards second, and the Russians third. Altogether there are fifty-six other nations represented in the foreign population.

All the railways in Chosen, Korea, are state owned and are controlled by the Railway Bureau of the Government General of Chosen. The total length of Chosen railways now open to traffic is 1006 miles, of which 366 miles have been constructed since the annexation by Japan. The railways are of standard gage.

Steps are being taken by the administration toward the establishment of a temporary form of government for the Danish West Indies, and also toward providing the purchase funds, amounting to $25,000,000. Payment of the purchase price must be made not later than April 17.

Over twenty-five hundred persons were in attendance at the fourteenth annual convention of the American Road Builders Association, the eighth National Good Roads Show, and the seventh American Good Roads Congress, held in Boston Feb. 5 to 9.

It is estimated that there are 150,000 persons and firms in Japan awaiting the installation of telephones on their premises, the Government being unable to keep abreast of the demand for appliances.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XIX | February 17, 1917 | No. 25

[*The London Chronicle*]

Greeting from England

AMERICA! dear brother land!
While yet the shotted guns are mute,
Accept a brotherly salute,
A hearty grip of England's hand.

Tomorrow, when the sulphurous glow
Of war shall dim the stars above,
Be sure the star of England's love
Is over you, come weal or woe.

Go forth in hope! Go forth in might!
To all your nobler self be true,
That coming times may see in you
The vanguard of the hosts of light.

Though wrathful justice load and train
Your guns, be ev'ry breach they make
A gateway pierced for mercy's sake
That peace may enter in and reign.

Then, should the hosts of darkness band
Against you, lowering thund'rously,
Flash the word, Brother, o'er the sea
And England at your side shall stand

Exulting! For though dark the night
And sinister with scud and rack,
The hour that brings us back to back
But harbingers the larger light.

[*Boston Herald*, Sunday, May 15, 1898]

The United States to Great Britain

HAIL, brother! fling thy banner
To the billows and the breeze;
We proffer thee warm welcome
With our hand, though not our knees.

Lord of the main and manor!
Thy palm, in ancient day,
Didst rock the country's cradle
That wakes thy laureate's lay.

The hoar fight is forgotten;
Our eagle, like the dove,
Returns to bless a bridal
Betokened from above.

List, brother! angels whisper
To Judah's sceptered race,—
"Thou of the self-same spirit,
Allied by nations' grace,

"Wouldst cheer the hosts of heaven;
For Anglo-Israel, lo!
Is marching under orders;
His hand averts the blow."

Brave Britain, blest America!
Unite your battle-plan;
Victorious, all who live it,—
The love for God and man.

MARY BAKER EDDY.

NOTE.—In the year 1898, following the formal declaration of war between the United States and Spain, *The London Chronicle* published a poem entitled "Greeting from England." This poem came to Mrs. Eddy's attention and was made the occasion by her for a prophetic utterance in reply to the sentiments therein expressed. Her reply, entitled "The United States to Great Britain," was published in *The Christian Science Journal* of June, 1898, and with the poem to which it was the reply it appeared in other publications. We are glad to republish both of these poems in order that Christian Scientists may have opportunity to ponder the metaphysical significance of Mrs. Eddy's words.

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.

The Seed and the Soil

REV. WILLIAM P. MCKENZIE

AN earnest and successful practitioner put a question like this: How is it that in some cases there will be great improvement, and the patient will be a wonder to friends and acquaintances, and then sometimes he will apparently forget what has been gained, allow his enthusiasm to cease, or perhaps turn aside into worldly involvements, until it seems to the practitioner as if his work must begin all over again? Now the answer apparently involves some knowledge of husbandry, and consideration of the parable of the sower will make this clear.

The old theological teaching made the parable of the wheat and the tares refer to persons. A certain group of persons, those inside the fold of the creed believed in, were the wheat to be garnered; and the unbelievers not knowing the creed, or the disbelievers rejecting it, were the tares which were to be delivered to the fire. And yet the parable referred to one field, and to good seed lovingly sown in that field in sunny days; and then to a deed of darkness, when in the night the slinking enemy came and with subtle diabolism cast into the soil the evil seed. Clearly the illustration refers to human consciousness when unguarded, showing how that which is to man always "enemy" will inoculate thought with arguments adverse to the rule of the kingdom of heaven. On page 72 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says, "Mortal belief (the

Copyright, 1917, by The Christian Science Publishing Society.

Digitized by Google

material sense of life) and immortal Truth (the spiritual sense) are the tares and the wheat, which are not united by progress, but separated."

With similar misunderstanding the beautiful parable of the sower has been interpreted as if it referred to persons, and many a sermon has been preached in which an attempt has been made to divide mankind into classes, three of which classes were slated for destruction, and only one was assured of eternal blessedness. Even the disciples to whom the parable was spoken failed to understand it; hence the Master's remark, "Know ye not this parable? and how then will ye know all parables?"

The faithful practitioner working kindly with mankind through a long course of years comes to know what Christ Jesus intended to convey to his disciples when he said, "Unto you it is given to know the mystery of the kingdom of God: but unto them that are without, all these things are done in parables." And seemingly this is what he learns regarding human experiences: Generally the first mention of Christian Science is only half heard. It is precisely like the kernels of the grain that fall on the path beaten by the fall of many feet, the path that in the East was the dividing line between farms or fields in lieu of fences. Hardly has the sower with swinging stride passed onward when there is the whir of wings, and the "sparrows" come to glean. So is the first word gone from the mind, as if the fowls of the air had devoured it.

Then comes a time when the word is heard once again, and the hearer says, This is something new; let me take it up! So with the enthusiasm of the neophyte he becomes a patron of the new thing, and blossoms into a show of activity and argument. The parable describes the process: "Immediately it sprang up, because it had no depth of earth: but when the sun was up, it was scorched; and because it had no root, it withered away." This is the case where as yet the seeker has no root in himself, "but dureth for a while: for when tribulation or persecution ariseth because of the word, by and by he is offended."

Yet again the word may come, and the intention be strong to hear and to heed it. The blessing of healing may be experienced, and complacently accepted as one of the comforts of life. A place is made for Christian Science in the plan of life, as in a garden overgrown with weeds one might make a place for another plant. Of the seed the parable says, "Some fell among thorns; and the thorns sprang up with it, and choked it." This is the experience of any one of us when we take up Christian Science as a remedial convenience and try to make this new aid associate with former beliefs which are as the thorns and thistles of the earth. As Jesus so graphically said, "The cares of this world, and the deceitfulness of riches, and the lusts of other things entering in, choke the word, and it becometh unfruitful."

But at last to all mankind will come the final choice of the good part. Weary of excuses and subterfuge, disappointed in worldly wisdoms and philosophies, disillusioned regarding the high flown promises of the kingdoms of this world which have no fulfilment, men at last long for religion itself, for the real word of Truth. When it is then received, it is into the good ground, the innermost of faith and right desire. Think of the faith of the Discoverer and Founder of Christian Science when she could calmly say, "It is undoubtedly true that Christian Science is destined to become the one and the only religion and therapeutics on this planet" (Miscellany, p. 266); thus recognizing that the good seed should not fail of finding the good soil in human consciousness. Our parable says, "But that on the good ground are they, which in an honest and good heart, having heard the word, keep it, and bring forth fruit with patience."

In his great work of declaring the word of Truth the practitioner finds comfort first from understanding the value and power of the Word. There is encouragement from that fifty-fifth chapter of Isaiah all through, especially where the cycle of the rain is referred to, watering the earth, making bud and blossom appear, bringing back "seed to the sower, and bread to the eater;" then declaring, "So shall my word be that goeth forth out of my mouth: it shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it."

It is true enough, maybe, that many a worker thinks of hundreds of times when the word of Truth was spoken as he thought unavailingly, but there is comfort to be gained from the explanation given by Jesus. He said, "When any one heareth the word of the kingdom, and understandeth it not, then cometh the wicked one, and catcheth away that which was sown in his heart." Since the work of the practitioner is the daily proving of the futility and falsity of the claim of evil, he well knows that it is only a question of time, or work, or experience, but that inevitably the hearing ear and the understanding heart will appear. It is not any settled original sin, not a preordained destiny, that prevents men from hearing, but only a temporary influence of animal magnetism, which has no real intelligence or power and which is certain to disappear like the mist before the rising sun. Furthermore, all good work which is being done is proving ineffective the claim that evil has any power, and by multiplied cases of healing is establishing in human conditions the assurance that good is the only power.

The worker need not be discouraged over the apparent falling back of one who at first with joy received the word, for this hearer may be at the stage when any new thing is taken up as a fad, or a new fashion is followed regardless of its fitness. He grasps the truth by intellectual perception, agrees with it as once he may have agreed with a creed, but as yet he has no rooted sense of it. When trouble comes his enthusiasm dies out, his joy seems to wither. One has to wait on, with faith and patience, expecting to see salvation worked out. Perhaps later this same enthusiast returns and becomes an applicant for healing, perceiving now more possibilities of good in Christian Science than formerly. By the experience of healing a new vision of peace and harmony will be opened out. And yet it may be observed that some old views remain, and that the comfort of healing is taken with a selfish sense, as if it could be added to beliefs and desires of an opposite nature. If a man learned to like the Bible, and on his journeys should place it in his handbag along with a whisky flask, a box of cigars, and a package of drugs, thinking to find blessing from them all, he would be like those who think to retain the benefit of Christian Science while they through self-ignorance abide in old habits of self-righteousness, governing themselves by self-will instead of Principle, or who make continual place for the "cares and riches and pleasures of this life, and bring no fruit to perfection."

Have we not all heard and not heeded? Have we not perhaps experimented with Science as if it were a cult? Have we not tried to get its benefit, trying to patch an old garment with the new cloth? But at last, with deep satisfaction, have we not found the word of Truth to be veritable salvation, delivering us from the influences of the evil one, clearing our minds of condescending pride, saving us from the deceitfulness of materiality? Then it will be so with all mankind. The good seed will fall on good soil "and bring forth fruit, some thirtyfold, some sixty, and some an hundred."

The Mission of Joy

HELEN WARD BANKS

Long years ago the Spartans were led to a great victory by a schoolmaster whose only weapon was his lute, which put into men's hearts the inspiration of song; and history records many other instances which go to prove that oftentimes it is joy which inspires the world to its heroic deeds. Still farther back we find the Scriptural precedent for this use of music as an inspiration in battle, for we read of a king of Judah who, terrified before the overwhelming armies of Ammon and Moab, obeyed the word of the Lord, "Be not afraid nor dismayed by reason of this great multitude; for the battle is not yours, but God's," by placing in the forefront of his army singers that chanted, "Praise the Lord; for his mercy endureth for ever," until Ammon and Moab fled before them.

Through the ages mankind have been seeking much joy and finding little. Conventional religion has not given it. When the religion which Jesus had preached was made ritualistic by those who came after him, it lost its vitality so far as human need was concerned. When the simple fact of God as Father and all men as brothers gave way to ceremonials, to what purported to be glorious buildings and beautiful services, then hierarchical priests, intolerance, and long faces gradually took the place of simple, spontaneous joy. Even while believing in a God in heaven, mortal man was seemingly at the mercy of worldly circumstances for his happiness. Mournfulness became a virtue, until even Jesus was portrayed as "a man of sorrows," instead of one anointed with "the oil of gladness" above his fellows.

It is Mrs. Eddy who has brought back to the world its heritage of joy, teaching us that instead of original sin it is original goodness which man in God's likeness must inherit; instead of a trembling, uncertain claim to a far off heaven, we have present joy bestowed by "the Father of lights, with whom is no variableness, neither shadow of turning;" a gift which is therefore perfect and permanent, which never depends on circumstances or environment, but is in every situation man's priceless possession. Christian Science has placed in the van of the army that is fighting for Truth the singers who in clear tones "praise the beauty of holiness."

Thus following the singers with fearless hearts we may march to victory. The confident trumpet tones will be as disconcerting to the foe as they are inspiring to the army of Truth, for whatever form error takes, it always hates cheerfulness. When our mouths droop with discouragement and our hearts with apathy, the devil, evil, creeps close and lingers. When our lips smile and our glad hearts sing God's praises, the devil flees. If we could always remember this! Too often we make our own battlefield in the valley and go down and fight in it till we sink with discouragement and weariness, when all we need to do is to go up on the hilltop and sing praises to our God, to Truth and Love.

There was a testimony given in a Wednesday evening meeting by one who had suffered from severe headaches. She began a day with a headache that seemed unendurable, but by herself she went up to a hilltop where she could see a broad expanse of wood and meadow and sea. As she sat overlooking it and doing her mental work, she thought, "What have I done that God should show me such fulness of beauty?" Her heart was filled with gratitude and joy, and she sat for an hour praising God for His goodness. When finally she rose to go home every vestige of the bad feeling was gone. No one can hold a sense of pain in a mind crowded with joy. She had found the truth of the psalmist's words, as spiritually interpreted on page 578 of Science and Health, namely, that it is Love that "prepareth a table before me," even "in the presence of mine enemies." This sustenance was real and the enemies were unreal.

Unswerving Principle, Love,—"the Father of lights,"—gives us unchanging and unending joy as a permanent possession. Let us hold it with grateful, clinging hands. We cannot let it go either for our own sake or for the sake of all around us. For centuries men have tried with scant success to save the world by barren theology and by material methods, while it can only be saved by the "peace of God, which passeth all understanding." Christian Science has proved anew Jesus' words to his disciples, "Your joy no man taketh from you;" and it is for us to see to it that no man does. When our joy goes we may be sure that the tempter is near. We are letting apathy or self-pity or discouragement or cowardice get close enough to whisper that joy is perhaps not a genuine gift from "the Father of lights." But he who knows even a little of Christian Science knows that joy is man's heritage, and that no person, place, time, or thing can take it from him. God is good. God rules the world, and there is no other power, even for an infinitesimal fraction of time. Then what can hinder our joy?

Isaiah tells us that the Christ comes to give a place in Zion to those who mourn,—"to give unto them beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness." Is it, perhaps, that this spirit of praise is the "wedding garment" mentioned in the parable in the twenty-second chapter of Matthew, without which no one was allowed to come to the wedding? It was provided for all the guests, but one refused to put it on. Can we, any of us, really enter the kingdom of heaven without this "garment of praise"?

"Gashmu saith it"

GUSTAVUS S. PAINE

One of the many attempts to hinder Nehemiah in his great work of rebuilding the walls of Jerusalem was an open letter to him in which was written, "It is reported among the heathen, and Gashmu saith it, that thou and the Jews think to rebel: for which cause thou buildest the wall, that thou mayest be their king." In other words, general belief backed by accepted authority was trying to mesmerize the servant of God into doubting the rightness of his endeavors and believing a lie. All this energy, rumor argued, could not be honestly intended, nor could it really serve to prove that the hand of God was good upon the one so striving, but must be merely a reprehensible attack upon vested interests. After ridicule, scorn, indignation, wrath, conspiracy, and preparation for a secret onslaught had all failed to check the righteous and alert activity of Nehemiah, this, one of the subtlest weapons of the adversary, was directed against him; but instantly, instead of wondering if perhaps there might not be some truth in the accusation, some reason for self-reproach and for cessation of his trust in God, he saw the argument for what it was and continued fearlessly in his dependence on divine power.

Today, as in the time of Nehemiah, when one begins to turn wholly to God to work out what may seem a big problem, is it not frequently brought to one's attention that "they say," and Gashmu says it too, "that this really is an incurable disease;" or again that "Christian Science may be all right for some troubles, but certainly not in cases of this particular sort"? "And Gashmu saith it,"—but who is this modern Gashmu that we should meekly and unquestioningly accept him as authority? Just because Gashmu says it, must it

Digitized by Google

necessarily be so? Even though medical investigation and experiment have never been able to find a cure for some disease which seems so real, may there not still be some law, some truth, which medical research from its very nature can neither discover nor comprehend? Christian Science emphatically declares that there is a law which is eternally operative, though the "wisdom of this world" knows it not.

When the Gashmu of today questions the sincerity and effectiveness of Christian Science practice, one needs to turn the more unreservedly to Principle in order to prove, like Nehemiah, that the work is indeed "wrought of our God," in conformity with His healing law, which nullifies all merely human hypotheses. In Science and Health (p. 341) we read, "The facts are so absolute and numerous in support of Christian Science, that misrepresentation and denunciation cannot overthrow it." Steadfastness in consenting to only the one demonstrable authority, no matter what rumor, material dogma, or empirical considerations may suggest, is a sure defense against discouragement or mesmerism of any sort.

Echegaray, the Spanish dramatist, has based one of his plays on the thought of gossip, which begins with falsity and ends by bringing about the conditions rumored. Christian Science, however, shows us how to protect ourselves against such mental suggestion. The fact that a dozen people see a mirage does not make the mirage any more real. Our protection lies in our acceptance of what God knows rather than of what human opinion says, and in our vigorous activity in accordance with divine intelligence. As we turn our thought to the present allness of divine intelligence and its manifestation, we find the suggestion of the necessity for any opposite subsiding into its original nothingness.

Let us therefore by all means refuse our consent or aid to rumor, even when backed by a Gashmu, remembering of course that the gossip which would attach disease to some one and doubt the effectualness of reliance upon God's healing power, is as erroneous as any other calumny. Mrs. Eddy sums up the whole matter for us on page 6 of "Christian Science *versus* Pantheism": "Finally, brethren, let us continue to denounce evil as the illusive claim that God is not supreme, and continue to fight it until it disappears,—but not as one that beateth the mist, but lifteth his head above it and putteth his foot upon a lie."

Our Father

INEZ KOCH

To the student of Christian Science fundamental truths contained in the Bible seem to unfold in limitless ways, thus proving the infinitude of the one Mind. It is the nature of truth to unfold itself, because it is infinite. The Lord's Prayer, simple and short as it is, has been unfolding to human consciousness for centuries, and is doing so now in an ever more enlightening way. Mrs. Eddy, with her clear spiritual understanding of the Scriptures, interprets the opening words of this prayer, "Our Father which art in heaven," as meaning "Our Father-Mother God, all-harmonious" (Science and Health, p. 16). The completeness of man's parentage is here indicated.

When told by his disciples that his mother and brothers were waiting to see him, Jesus replied, "Who is my mother? and who are my brethren?" To this he added, "Whosoever shall do the will of my Father which is in heaven, the same is my brother, and sister, and mother." He similarly instructed his disciples to call no man father upon the earth. This should surely lift the load from many a weary heart, anxious or troubled for one near and dear, burdened with a sense of responsibility which is wholly false,—for can we not leave God's children to His omnipotent care?

It may be that there is in some cases a sense of resentment harbored at relationships which seem to have brought little sweetness into our lives. The realization that no tie holds man but the tie to the one "Father-Mother God, all-harmonious," will serve to destroy resentment and replace it with the loving compassion which sees man as the idea of the one Father, and refuses to see him as sinful or sick. Children can hardly be taught too soon to look up to their true parent, "our Father-Mother God," for in loving obedience to His law there will be found loving obedience to every right demand made upon them.

Pride of family, pride of children, pride of kinship, will be seen as an illusion, which becomes the more unreal as mankind is found to be one big family, governed by the one Mind, infinite good. Full freedom from all merely human ties is gained only as the reality of the spiritual creation unfolds and the consequent unreality of a material universe becomes apparent. This may take time, but the Scientist works on joyfully, knowing that, as our Leader says (Science and Health, p. 469), "with one Father, even God, the whole family of man would be brethren; and with one Mind and that God, or good, the brotherhood of man would consist of Love and Truth, and have unity of Principle and spiritual power which constitute divine Science."

"Work out your own salvation"

MARION E. TWICHELL

RECENTLY the writer was told by a lady who had been under Christian Science treatment for some time, of the different practitioners who had treated her and the lines along which they had worked. Then she said, "Why am I not healed; can you tell me?" At once the answer came: "It looks as though you had been using Christian Science treatment exactly as you would use medical treatment. When a pain or an ache comes to you, at once you turn to a practitioner for help, instead of to God, divine Truth and Love." Was it mortal mind, ever ready to justify itself, which prompted the reply, "But I thought that was what practitioners were for!" The writer then reminded her of Mrs. Eddy's counsel: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea. Allow nothing but His likeness to abide in your thought" (Science and Health, p. 495). Clearly this is the first thing to do in any case, and if it be done faithfully and persistently, the work of the practitioner, if this be needed, will be effective in a way not realized by the one who fails to turn to God in the first place.

This incident brought to the writer a clearer sense of the responsibility vested in the Christian Science practitioner. Many, perhaps the majority, of the people who appeal to Christian Science practitioners for treatment, are those who have been educated from childhood to call upon a doctor whenever they were in physical need. It rests with the practitioner, then, first of all to awaken such seekers to realize that the great Physician, who heals all manner of disease, is ever present and ever ready to respond to their call. It also rests with the practitioner to give his patients "divine and wholesome understanding, with which to combat their erroneous sense" (Science and Health, p. 396). Freely and lovingly he should give his patients the simplest truths of Christian Science, to be used in hours of trial, and he should inspire and encourage them to use these truths.

Digitized by Google

No wise teacher would expect a third grade child to solve a ninth grade problem, but she has a right to expect a third grade child to solve all third grade problems. If in the progress of the work a problem comes up which seems a little more intricate, the wise teacher does not solve it for the child, but lovingly leads him into a clearer understanding of the principle involved, and almost before the pupil knows it he has solved his own problem. As it is with the child at school, so it is with the young student of divine Science. Each time he goes to a practitioner for help he should come away not only with the seeming difficulty cleared up, but better still, with enough more understanding of Principle to give him courage to take up the cross daily from a higher standpoint.

All must realize at some period, either here or hereafter, that if the command "Work out your own salvation" is meant for one, it is meant for every one. Practitioners can lead patients to the very door of the kingdom, but the last remaining step must be taken alone with God. As an excuse for failing early to apply this Science, which is as simple as it is wonderful, mortal mind pleads lack of growth. Does it require years of growth to mature fitness to approach the God who is Love,—Love so tender that not even a sparrow falls unheeded to the ground? This Love assures us by saying, as did the Master, "Him that cometh to me I will in no wise cast out;" the same Love that blessed even the publican when he cried, "God be merciful to me a sinner."

Shall we longer listen to mortal mind's plea of "so little understanding" as a reason for mental inactivity, when our Leader has assured us that even "a grain of Christian Science does wonders for mortals, so omnipotent is Truth" (Science and Health, p. 449)? The beginner in the study of Christian Science who can declare that evil is not power, since God is the only power, and who clings to this truth, will find in it the solution to his problems. Christian Science will cease to be to him merely a remedial agent, upon which he calls in times of need. It will be instead the promised "Comforter;" and the voice which says, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," will become for him a living reality,—his help, his support, his strength,—giving to him daily a clearer understanding of Him who is our life, our all.

[Written for the *Sentinel*]

Apocalypse

RUTH INGRAHAM

We long have dwelt in twilight dim,
Like children half afraid;
In lights and shadows of a dream
Together we have played,
Or, holding each the other's hand,
Forward a little strayed.

Mount up, mount up! See how the cloud
Is melting into light!
Oh, hasten, comrade, up the path,
And from this splendid height
See the glad tidings reach a world
Redeemed from its long night!

The time-world is a shadow grown,
The light of Truth floods in:
Oh, watch with me this growing dawn
And see God's day begin,—
The glory of eternal "now,"
The end of death and sin!

Selected Articles

[Charles W. J. Tennant in *Richmond and Twickenham* (England) *Times*]

A clergyman is reported to have warned his hearers, in an address, against the attack that rationalism in the form of Christian Science was making on Christianity. If by rationalism he means the doctrine or system of those who deduce their religious opinions from reason or the understanding, as distinct from or opposed to revelation, then the term does not apply to Christian Science. Writing of her discovery of Christian Science, Mrs. Eddy says: "I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration" (Science and Health, p. 109). And she continues (p. 110): "In following these leadings of scientific revelation, the Bible was my only text-book. The Scriptures were illumined; reason and revelation were reconciled, and afterward the truth of Christian Science was demonstrated."

Christianity bore certain fruits in the first centuries of the Christian era. The same fruits are required of it today. At present these fruits are being brought forth by the practice of Christian Science throughout the civilized world.

[S. T. Downs in *Plymouth* (Ind.) *Republican*]

I am told that in the sermon reported in your paper recently, this statement was made: "Christian Science claims to be based solely on the Bible, and to be in harmony with the gospel of Jesus. A very superficial investigation will convince most people that it is the opposite of the truth." "A very superficial investigation" of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, cannot possibly fit one to expound its teachings or to criticize them justly.

Christian Science accepts the whole of the Scriptures from Genesis to Revelation, no matter if our reverend critic did attempt to prove the contrary, and there are many thousands of representative substantial people who are giving testimony that the Christian Science text-book unlocks the spiritual treasures of the Scriptures. As any one who goes beneath the mere surface of things will learn, Christian Science accepts and uses the Old Testament, but is founded directly on the teachings and works of Christ Jesus.

Mrs. Eddy did not lay stress on one Bible teaching at the expense of another, and it is just as imperative that the followers of the Master obey his command, "Heal the sick," as it is to obey his other command, "Preach the gospel." The New Testament records that Paul and the other apostles healed the sick through prayer and spiritual understanding, and that they preached the gospel. Secular history shows that the early Christians did the same until the close of the third century; but from that time until 1866, when Mrs. Eddy discovered Christian Science, Christianity was chiefly engaged in preaching. In restoring the works of primitive Christianity by healing every kind of sin and all manner of diseases,—of which indisputable evidence may be had for the asking,—Christian Science furnishes proof of its Scriptural authority.

Every Bible student knows that while the healing of the sick was not the primary object of the Master's earthly mission, it was nevertheless a very important and inalienable part of it. Jesus healed multitudes of the sick and the sinning, and he sent forth his disciples to do the same. There is

Digitized by Google

nothing in the record of his instructions to his followers then, or to his followers now, with reference to hygiene, germs, or the methods of medical science and other material means of treating sickness. He did say a great deal about love for God and man, however, and showed that through obedience to the commandments we would be able to do the works that he did. Mrs. Eddy may have dishonored many human theories about matter in her statement of spiritual law and its operation, but she declared and proved the allness of God, as did the great Master. This, we must insist, is scientific, and it is Christian.

One who makes a careful study of Christian Science and its practice learns that the healing of sickness is only an incidental, although a very necessary part of its ministry, just as it was with Jesus. The healing of sickness follows the healing of sin, and it can be just as truly stated that the healing of sin accompanies the healing of sickness. In order to determine the efficacy of Christian Science, and whether or not the teachings of Mrs. Eddy are true, one must go farther than "a very superficial investigation" will take him; he must test them impartially, honestly, and diligently.

[Thorwald Siegfried in *The Tacoma* (Wash.) *News*]

The *News* recently gave notice of a series of sermons to be delivered in one of the local churches, and in it linked the names Christian Science, Theosophy, Spiritualism, New Thought, and Unity in a way likely to leave the impression that these movements have much in common, which is not the case.

Christian Science claims uniqueness for itself in the same way and for the same reasons that Christ Jesus claimed it for his teachings. When speaking of the Christ as "the door of the sheep," Jesus said, "All that ever came before me are thieves and robbers: but the sheep did not hear them." He honored the teachings of the ancient prophets and repeatedly quoted from them, so the statement just given must mean that some vital element was lacking in their work. That vital element is found not only in his statement, "It is the spirit that quickeneth," but also in the immediate context, "the flesh profiteth nothing."

Mrs. Eddy discovered the scientific basis of Christian teaching and works; but this does not mean that she claims to have understood more of Christianity than Jesus himself, for she writes: "Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause" (Science and Health, p. 313). Neither does it mean that Christian Scientists have any monopoly on truth. On the contrary, truth is everywhere expressed, of which only that thought can be conscious which in greater or less degree is willing and able to plunge "beneath the material surface." Of the ancient prophets Mrs. Eddy says that they "caught glorious glimpses of the Messiah, or Christ, which baptized these seers in the divine nature, the essence of Love;" but she says of modern systems of human philosophy that they are "mainly predicated of matter, and afford faint gleams of God, or Truth" (pp. 333, 144).

Honestly crediting speculative creeds with "faint gleams" of infinite Truth, Mrs. Eddy accurately traces their limitations and weakness to their compromise with matter. It is readily seen that any system in order to be a complete statement of truth must include a comprehensive denial of all error. Thus the science of mathematics excludes any possibility of the product of twice two being anything but four, and that of astronomy denies any solar relationship to the earth except that of satellite. Similarly, Christian Science teaches that "there is no life, truth, intelligence, nor substance in matter," in the same breath with the statement that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468).

The adherents of Theosophy, Spiritualism, New Thought, and Unity are entitled to their preferences, therefore it is not at all in the spirit of criticism that the vital difference between Christian Science and these teachings is pointed out. Unlike any other teaching, Christian Science follows in the footsteps of primitive Christianity and proves the unreality of material phenomena by overcoming sickness, poverty, and discord of all kinds by wholly spiritual means, and without recourse to will-power, hypnotism, or other so-called forces of that carnal mind which depends on a material brain for its ability to think. Even though some of the other systems of thought named may make statements which sound similar to those of Christian Science, it is not to the form but to the spirit of their teaching that Christian Science is to be compared. Thus one who believes in the allness of God must necessarily admit the non-existence of matter, because Spirit and matter are opposites, and if matter exists then God is not infinite; if one avows his belief in both the allness of God and the reality of matter, it simply means that he does not in truth believe his profession as to God's infinity.

The Christian Science church organization is as unique as its teaching. It is a voluntary association of people having the cohesiveness that accompanies united endeavor toward a well defined goal. It is neither dominated by a hierarchy nor supported on the fears of its adherents. These factors have nullified the beneficent purposes of many religious movements of past centuries, but they are left out of the Manual of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., by which the Christian Science church organization is guided. Having but the one object, that of proving the real man's unity with God, this church is both the simplest and the most effective means for spiritual growth available. Therefore, now and in the future, those who are striving to exemplify the teachings of Christian Science will be found working in and with the church, and not wasting their efforts in the wide but barren fields of human speculation.

For these reasons seekers after a knowledge of Christian Science take the most direct course when they conform to the provisions of the Manual of The Mother Church in their reading, thus excluding counterfeit literature which adopts the letter but rejects the spirit. Experience reveals the divergent tendencies of Christian Science and other movements. Spiritual healing is an essential prerequisite for and concomitant of authorized teaching of Christian Science.

From the facts given it should be clear that Christian Science is distinct from any movement except Christianity, of which it is the continuance.

[L. W. Goben in *Town Topics*, Edmonton, Alberta, Canada]

In a recent issue there appeared an article entitled "Evangelism Every Christian's Business," copied from one of the church magazines. The writer of the article, in referring to the rapid growth of the Christian Science church, takes occasion to class it with Russellism, and goes on to say: "The secret of its success is to be attributed largely to the fact that every one of its members is a propagandist. False faiths will flourish by the zeal of those who hold them, while proved truths lie dormant in the minds of the orthodox who feel themselves under no compulsion to spread them."

Many opponents of Christian Science are constantly striving to confuse the public mind by trying to associate Christian Science with other movements, while as a matter of

Digitized by Google

fact Christian Science has nothing in common with any of these. We offer no criticism of other religious beliefs, but we ask for ourselves the same right that we unreservedly grant to others,—the right to worship God in our own way,—and are perfectly willing for the public to judge Christian Science on its own merits. We are propagandists in the sense that we are always ready to explain the reasons for our faith to any who are seeking for the truth; our propagational methods are dignified and unobtrusive. Our church is not urgent with respect to members, nor do we seek to force our opinions or beliefs on our neighbors.

As to the implication that Christian Science is a "false faith," and that certain sects have a monopoly on "proved truths," Christ Jesus himself left an infallible rule for proving the truth or falsity of any doctrine or belief when he said, "By their fruits ye shall know them." Christian Science owes its wonderful growth to the fact that its adherents are today proving their faith by their works, and bringing health and happiness to thousands who have sought in vain for relief through material means.

The following statement appears on page 476 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick." Christian Science is a practical, demonstrable religion, founded on the same Principle which Jesus employed in healing sickness and casting out sin. Through the understanding of this divine Principle every statement in Science and Health has been proven true countless times; every truth in the Bible, from cover to cover, has become an available help and comfort to mankind under all conditions.

✧

[H. S. Hughes, Jr., in *Rhinelander* (Wis.) *News*]

Nowhere in Mrs. Eddy's teachings can be found the statement or deduction that "Jesus Christ did not live a real life, that he was just an illusion." On the contrary, it was the reality and practicality of his perfect life that inspired Mrs. Eddy in her research which culminated in the discovery of how he did his "mighty works" and restored to this age primitive Christianity. Every page of Science and Health expounds and elucidates this revelation.

The Christian Science ranks are made up of those who have been healed of disease, misery, sin, and unrest after other modes of healing have failed, and who have searched in vain elsewhere for a practical understanding of God, "who healeth all thy diseases." For this Christian Scientists feel and express heartfelt gratitude to Mrs. Eddy; but any one with even a superficial knowledge of Christian Science knows that they "worship" the God of Moses and of the prophets, the God whom Christ Jesus came to reveal and whom he declared to be Spirit, the God whom Mrs. Eddy with spiritual insistence declares to be All-in-all.

It is a well known and highly commendable fact that Christian Science has made more Bible students than any other movement of modern times, and had our critic based his research of the subject of Christian Science on its text-book, in connection with the Bible, his second discussion, if presented at all, would have hinged constructively on his first. Christian Science is right thinking, based on God as infinite, ever present Mind, applied to every human activity; it is constructive, because it recognizes good as ever present and the only reality. It quickens the moral sensibilities, enlarges and increases the intellectual capacities, makes for health, joy, and peace, for better homes, better citizenship. Through a comprehension of Love divine, it makes man tender and compassionate with his brother man.

It is not the beneficiaries of Christian Science who object to the charges for class instruction, treatments, or the literature. They are obedient to the Master's injunction that the "laborer is worthy of his hire," and feel that the monetary consideration is as nothing compared with the inestimable good received; therefore friendly commiseration is misplaced. Christian Science in its teaching and practice is doing more to alleviate want and woe than any other form of charity. Why? Because it is correcting the causes that produce want and woe, as well as tenderly caring for every legitimate human need that presents itself for assistance.

Mrs. Eddy's accumulation of a comfortable fortune was both legitimate and commendable, and this fortune is being disbursed for the purpose set forth by her in her will, namely, "of more effectually promoting and extending the religion of Christian Science as taught by me." This is being done in part by supplying public libraries the world over with the authorized Christian Science literature, as well as providing free loan libraries of the same in the Christian Science reading-rooms, and aiding the Christian Science lecture work. "History repeats itself," for the critic of yesterday is he who today is taking advantage of this beneficent provision, and is intelligently informing himself at first hand of that upon which he would speak.

✧

[James D. Sherwood in *Dallas* (Texas) *Dispatch*]

In the opening sermon of a revival meeting a bishop is reported to have said, "Christian Scientists do not pray; they merely practise autosuggestion and self-hypnotism." When reading this statement I wondered where he got his information, since there is nothing printed in any authorized Christian Science literature or said by Christian Scientists themselves that would justify any such conclusion. The fact is, Christian Scientists pray continually, and their prayers are answered. In Christian Science practice it is through prayer that the sick are healed and sinners reformed; but the use of hypnotism or a resort to mental suggestion is the very opposite of Christian Science practice.

The Christian Scientist avails himself of the divine Mind in his ministry, and through prayer he demonstrates that God is a very present help in times of trouble. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, begins with the chapter on Prayer, and the first few lines read as follows: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love." In the Preface of the same work, on page xi, Mrs. Eddy writes: "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation. Now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us,'—a divine influence ever present in human consciousness and repeating itself, coming now as was promised aforetime, 'To preach deliverance to the captives [of sense], and recovering of sight to the blind, to set at liberty them that are bruised.' "

There is an entire chapter in Science and Health that is devoted to showing the baneful effects of hypnotism upon the victim and upon the perpetrator, and there is absolutely no point of agreement between Christian Science practice and the use of mesmerism.

Editorial

"Rightful King of the world"

THERE can be no doubt that at the end of two and a half years the world is heartily tired of war's hatreds, barbarities, and sufferings, and that there is today a genuine desire for peace. Whether it is to be peace within a short time, or peace only after months or years more of fighting, is something which even the wisest cannot say at this moment, but there is little question about the kind of peace desired.

From every side comes a demand that the present war shall be followed by such arrangements between the nations as will ensure the impossibility of war in the future. Each side professes to believe that this result can be obtained only by the complete defeat or exhaustion of the other side, and each also professes to believe that it has the physical power which will enable it to defeat the other. That there should be some within the belligerent and the neutral nations who deny both of these propositions is not surprising. Neither is it surprising that those who believe the present war must end in a decisive victory, and those who think this impossible, should now look forward to the time when not only the present war shall terminate, but also the peace of the world shall be rendered secure forever.

What human means are necessary to be established in the working out of these problems is still uncertain, so uncertain in fact that those who really are looking for results are beginning to turn away from human will with its alleged power, and are looking to God, who is divine power. If a precedent for this course of action is needed, we have but to turn to that challenge to obedience to divine law promulgated centuries ago: "Look unto me, and be ye saved, all the ends of the earth: for I am God, and there is none else." A striking example of this turning of thought to the one and only power is before us in the words of the well known writer, H. G. Wells, who in his recent article in the *Saturday Evening Post*, dealing with the possibility of a peace which shall lead to the end of all war, writes as follows:—

> All the great religions assert the same truth—that there is but one God for all men, and that He alone is King of the world.
>
> Yet, forthwith they set about hiding and smothering Him and forgetting their own mission in sectarian and national wrappings. But God is indeed the rightful King of the world; He is the God of the Englishman and the Frenchman, the Turk and the German, the Hindu and the American; He calls them all to serve Him and one another. They have but to look up, and they will see Him. And until they do look up and see Him this world is no better than a rat pit—a place slippery and disgusting and wearisome with the tormented stuff of furious and aimless lives.
>
> And if you lack the living imagination to accept God thus—as a fact—then I ask you to accept Him as the only possible formula for the reconciliation and salvation of mankind.

Here indeed is a great saying, and it sets forth a great truth, for until peace is established on the basis of the fatherhood of God and the brotherhood of man, there can be no real and lasting peace. To the world in general these views may seem chimerical, but this should not be so, and especially to the Christian Scientist, who has accepted the fundamental postulate of that teaching which declares for the omnipotence of good, namely, that "all is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468).

How long it will be before such a peace is possible—what time will be necessary for the beliefs of mortal mind to be destroyed, its beliefs of greed, hatred, and inhumanity—no man can say, but it is not beyond belief that real peace is both possible and inevitable when humanity shall have accepted God not only as a fact, but as the only great fact of the universe. This is set forth by Mrs. Eddy on page 340 of Science and Health in no unmistakable terms, and we again call our readers' attention to this most important statement, which, though it has been before the world for many years, has never been more than partially understood and is but now, as it were, being apprehended in its wonderful predication of the only lasting peace,—that peace which will follow the acknowledgment by mankind of God as the supreme ruler of the universe, the King of kings.

ARCHIBALD MCLELLAN.

Faith and Understanding

OWING to the obscuring influences of material belief the word faith has to a large extent lost its original meaning,—that which is given to it in the Scriptures, especially in our Master's teachings. Those outside of Christian Science have, sad to say, associated it in large measure with mere credulity; and those who were wont to believe that they had faith in divine power—locked away in the casket where they kept their sacred things—very often found, when they attempted to make use of it in some distressing experience, that the thing they called faith could do little or nothing for them. In other words, they had not at all what the apostle calls "the faith of our Lord Jesus Christ," but a valueless counterfeit which they themselves were ready to throw away when it was put to the test.

For the reasons here given, students of Christian Science have been rather wary in saying much about faith, and have preferred to speak of the understanding of God and His law which is given so much prominence in Christian Science. It is, however, well worth knowing that the word faith and its derivatives are used hundreds of times in the Scriptures, and that the spiritual idea which they represent is given great prominence in the teachings of Christ Jesus. In addition to this it is very interesting to know that they occur in Science and Health nearly two hundred times, and in Mrs. Eddy's other writings between three and four hundred times, as we discover through the use of the Concordances. It is therefore of the utmost importance that we should not only seek constantly the understanding of which so much is said in the Bible, and which our Master brought in its fulness to some of his disciples on that never to be forgotten walk to Emmaus, but we should realize that in the truest sense faith and understanding are inseparable. We shall begin to appreciate more deeply the teachings of Christ Jesus respecting faith, if we follow our Leader's counsel as given on page 430 of Science and Health, where she says, "Faith should enlarge its borders and strengthen its base by resting upon Spirit instead of matter."

The trouble with so many has been that what they called faith was dependent almost entirely upon material evidence, and the great Teacher sorrowfully rebuked his students for this in saying to them, "Where is your faith?" In the case of the storm on the Sea of Galilee, when Peter was encouraged to go to his Lord who was walking upon the water, he was able to take the first few steps successfully; but when he looked away from the Christ-idea as represented by his Master and took the material evidence of wind and waves, he at once began to sink. Christ Jesus was not, however, in the least influenced by this evidence, nor by the fact that an experienced swimmer was going down into the depths, for we are told that he calmly took Peter's hand and that they went into the boat together.

Digitized by Google

It is beautiful to trace the close relation between the Scripture statements regarding faith and our Leader's teachings along this line, and then to trace the working out of the truth therein gained in our own daily experiences. As we reach out toward spiritual things with the vital faith which is life giving, we at the same moment detach our faith from materiality and all its sorrow-bestowing beliefs. The world is waking up and is beginning to admit that all things are possible; but this is not enough for the Christian Scientist, who must know that it is only "with God" that all things are possible. His faith will then relate itself inseparably to that which Christ Jesus demanded of all his followers when he said that if they had faith even in the measure of a grain of mustard seed, they would be able to remove mountains.

We have sometimes thought that St. Paul did not put a large estimate upon faith in that wonderful thirteenth chapter of I Corinthians; but if we read again we shall see that he says, "Now abideth faith, hope, charity," and while he adds that charity is the greatest of these, nevertheless we see that faith abides and must abide, and, as Mrs. Eddy tells us, be enlarged as we advance in spiritual understanding.

ANNIE M. KNOTT.

✧

The Two Witnesses

THE explanatory note to be found in *The Christian Science Quarterly* contains the phrase, "The Bible and the Christian Science text-book are our only preachers." On the cover of this same *Quarterly* an artist has drawn, in the conventional lines of a pattern, two olive branches or trees, associated with lamps of oil. Are the Bible and Science and Health the two olive trees or branches of Zechariah's vision, "which through the two golden pipes empty the golden oil out of themselves . . . the two anointed ones, that stand by the Lord of the whole earth"? Are they the revelator's "two olive trees, and the two candlesticks standing before the God of the earth," described in the eleventh chapter of the Apocalypse? If this interpretation be accepted by Christian Scientists, then it becomes apparent to them that Christian unity and continuity is dependent upon an unbroken connection being maintained between these two preachers.

When the Puritan Pilgrims reached the shores of the American continent, they brought with them the first of these witnesses or preachers; and the second arose from their very midst, through the revelation of Truth which came to a daughter of their own people,—to Mary Baker Eddy. The Bible which they brought with them had first been completely translated into the English of his day by one Wyclif in the year 1380, about one hundred and fifty years before Luther's translation made its appearance. It is spiritually significant that this same Wyclif used the very words, science and health, which as the title of Mrs. Eddy's epoch-making book were destined to circle the earth in the fulfilment of prophecy, and so to stand for the second great witness or preacher in the complete scheme of Christian salvation.

It is obvious, then, that any estrangement between the state founded by the Puritan Pilgrims and the land of their origin, would have religious as well as political significance. Equally clear must it be to the working Christian Scientist that any attempt to interfere with the orderly expansion around the globe of the English language, in which the revelation of Christian Science was set down for humanity's acceptance, must emanate from the desire to break the continuity of Christian endeavor which reaches from Wyclif to Mrs. Eddy, and so to sever the link between the Bible and Science and Health, the two preachers, the witnesses of God's choosing. "What . . . God hath joined together, let not man put asunder."

But the call of spiritual understanding does not leave the subject at this point. It demands still deeper metaphysical interpretation before full justice can be done to this momentous theme. Since the Bible may be described as standing for Christ Jesus, the Old Testament foretelling his appearance and the New Testament setting forth his words and works, it is permissible to speak of the two witnesses as Christ Jesus and Christian Science. Moreover, since the revelation of Christian Science came by a woman, it follows necessarily that while the first witness expressed manhood, the second witness must be associated with womanhood.

This is evidently the meaning of the revelator's vision of "a woman clothed with the sun." The spiritual idea, or the Christ, Truth, which appeared to human apprehension first as man, in the second and last instance is represented by woman. In this connection it is impressive to read the by-law (Art. II, Sect. 1) of the Manual of The Mother Church, written by Mrs. Eddy: "The Readers for The Mother Church shall be a man and a woman, one to read the Bible, and one to read Science and Health with Key to the Scriptures." A study of the illustration entitled "Christian Unity" in Mrs. Eddy's "Christ and Christmas" further elucidates the subject of the two witnesses.

In explaining to questioners what she meant by her successor, Mrs. Eddy was led to place before the world a most profound statement about the two witnesses, which is to be found on pages 346 and 347 of "The First Church of Christ, Scientist, and Miscellany." "Science and Health," she writes, "makes it plain to all Christian Scientists that the manhood and womanhood of God have already been revealed in a degree through Christ Jesus and Christian Science, His two witnesses."

WILLIAM D. MCCRACKAN.

Lecture in The Mother Church

The First Church of Christ, Scientist, Boston, Massachusetts, announces a free public lecture on Christian Science by Charles I. Ohrenstein, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul Streets, Back Bay, Monday evening, Feb. 26, 1917, at 8 o'clock. The public is cordially invited.

✧ ✧ ✧

Among the Churches

Current Notes

MANITOWOC, WIS.—In the new Christian Science church edifice in which the first services will be held tomorrow [Dec. 31], the choicest residence section of our city has received a notable addition to its beauty, and our Christian Science friends are, and may be, justly proud of their achievement. In April of this year, after having disposed of its lots on Eighth Street, First Church of Christ, Scientist, purchased the H. C. Richards residence at the northeast corner of Park and Seventh Streets, the consideration being seven thousand dollars. The building, 32 by 40 feet, of two and a half stories, seemed one readily convertible to church purposes, and the lot, with a depth of 120 feet on Seventh Street and 72 on Park, left nothing to be desired in the way of location. About five thousand dollars has been spent in remodeling and improvements. The auditorium will seat a congregation of one hundred and eighty.—*Manitowoc Herald.*

Digitized by Google

Sing Sing, N. Y.—Virgil O. Strickler delivered a lecture on Christian Science under the auspices of Second Church of Christ, Scientist, of New York, N. Y., to the inmates of Sing Sing Prison on Tuesday evening, Dec. 26. This is the third lecture that has been given there. Heretofore it was found necessary to use the time allotted for the Sunday service in order to obtain the chapel, but the committee were able this time to secure it for an evening during the week. They were glad and grateful upon reaching the chapel to find from twelve hundred to fourteen hundred of the inmates assembled,—practically all who were free to come. The attention which was given and the interest with which the lecture was received were inspiring.

Rockville, Ind.—The assistance of the Trustees under the Will of Mary Baker Eddy was accepted by the local Christian Science Society in the building and furnishing of a church edifice. In June the local church was completed, and its share of the funds was then paid, amounting to something over nine hundred dollars. Last Friday, Dec. 29, a draft for $1519 was received from the above named trustees, which entirely frees the church from indebtedness. The fact that so small a society was able to avail itself of this assistance and that the first service of the new year finds the church free from all indebtedness, will cause that service to be an occasion of special gratitude.—*Parke County Times.*

Elkhart, Ind.—The corner-stone of the new edifice of First Church of Christ, Scientist, was laid on Sept. 26, last. The structure is to cost about thirty-five thousand dollars and will have a seating capacity of about five hundred and fifty. When it is necessary this capacity will be increased by the addition of a balcony. The building will probably be ready for occupancy about June 1.

Rochester, N. Y.—The edifice of First Church of Christ, Scientist, Prince Street and East Avenue, was formally opened yesterday [Dec. 10]. The new home has a seating capacity of about twelve hundred, or double that of the old building in Alexander Street, and cost approximately one hundred and fifty thousand dollars.

Democrat and Chronicle.

Owensboro, Ky.—The members of First Church of Christ, Scientist, will hold their initial service in their new home Sunday [Dec. 24]. The residence of W. F. Reinhardt, 602 Daviess Street, which was purchased by the organization several months ago, has been remodeled inside and will provide a commodious place of worship until some time in the future, when a handsome church will be built on the lot.

Owensboro Inquirer.

Admission to Membership in The Mother Church

The next admission of candidates will be June 1, 1917. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 9, 1917.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1916, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

John V. Dittemore, *Clerk*,
236 Huntington Avenue, Back Bay, Boston, Mass.

The Lectures

Allston, Mass. (auspices of The Mother Church).—William R. Rathvon, lecturer; introduced by Leon M. Abbott, who said in part:—

There is today among thinking men and women a general and growing recognition that the world's feverish and never ceasing pursuit of health and happiness has been in ways that are devious, vain, and profitless. It is becoming more and more apparent that the craving and intense striving for material wealth and gain and worldly power has only resulted in shattered hopes or fleeting joys. The terrible tragedy of war, reckoning its successes on the one side or the other by the number of human beings who are killed or the destruction accomplished, is bringing home to us all a quickened sense of how utterly futile and worse than worthless are such means for securing abiding peace or righteous determination of the differences between men and nations.

The constantly shifting sands of medical theories and practice have weakened the hope or destroyed the confidence of unnumbered thousands struggling for release from the bondage of sickness. The poor sinner tries in vain to break his shackles in a world where evil seems an eternal reality and good to have no transcendent power. Encompassing doubts and fears attest a lack of faith and trust in God even on the part of those who profess to be His servants and followers.

These are some of the confronting conditions of the hour. To those of little faith, to the tired searchers after health and happiness, to those with whom carnal weapons have not availed, to all who would know the truth that makes men free, Christian Science bears a message of vital and practical import. It tells us not of a man-made God, but of a God-made man, perfect in health and holiness and knowing no other sovereignty than that of Love.

Webster Groves, Mo. (Society).—Virgil O. Strickler, lecturer; introduced by John Porter Henry, who said in part:—

When Jesus went about Galilee and Judæa he showed the people that his religion would cast out devils and heal all manner of diseases. Wherever he went his chief ministry was healing the sick, showing the value of his teachings in solving the problems of life; and it is plain from the gospels that he fully expected his followers to do likewise. This is evidenced, for example, by his rebuke to his disciples, his students, when a certain man brought a sick son to him for healing and advised him that the disciples had failed to effect a cure. Jesus called them a "faithless and perverse generation" for not having done the work, and told them that their failure was caused by their unbelief, their lack of faith.

It is this same religion of Jesus that the churches of today are laboring earnestly and sincerely to perpetuate; but if the Master characterized his students as a "faithless and perverse generation" for not applying their religion to the healing of a so-called incurable disease, what would he say today of a generation which had entirely ruled out of his religion the healing of the sick? Christian Science claims that the Christianity of Jesus is necessarily as sound and unimpaired, and as available today for every human need, as it was when he went about all Galilee.

Manchester, N. H. (First Church).—William W. Porter, lecturer; introduced by Edmund Bremen Gearhart, Ph.D., pastor First Unitarian Church, who said in part:—

Go with me for a moment into the remote past. There is great excitement in Jerusalem. A lame man, known to all the

Digitized by Google

city because he had been begging at one of the most frequented entrances to the temple, had suddenly been healed by Peter and John, disciples of the Jesus whom the hierarchy had recently crucified. The marvel is in every one's mouth. Hastily the Sanhedrin, the highest court in Judæa, is called together, and Peter and John are summoned to make their defense concerning "the good deed done to the impotent man." Such is the boldness and sincerity of these two that the council can say nothing against them, especially as they see the man who was healed standing there, so after a brief executive session they discharge the disciples with the warning "not to speak at all nor teach in the name of Jesus." But they, declaring that they cannot but speak the things which they have seen and heard, go forth to proclaim their message as earnestly as ever. Again they are summoned before the tribunal; again they must defend themselves. But this time their life is at stake, since the council was minded to slay them, until one, Gamaliel by name, offered the memorable advice, "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

Such I believe is the attitude of the progressive modern world, of whatever creed, toward Christian Science. Certainly it is as true today as in the days of Jesus, that men do not "gather grapes of thorns, or figs of thistles," and that "by their fruits ye shall know them."

BROOKLYN, N. Y. (First Church).—John W. Doorly, lecturer; introduced by Campbell MacCulloch, who said in part:—

No problem confronting humanity has bulked so large in the minds of men as that of the escape from evil. All are vitally concerned with the discovery of some way to offset the attacks of poverty, sin, and disease. Christianity as it exists today is based upon the conviction that God can rescue the unfortunate; yet Christian people assert that the greatest rarity of their orthodox religions is answered prayer, and confess that the man who rests his hopes upon God's actual answer to prayer is looked upon as a fanatic. God is in heaven, say these religionists, but man is here upon the earth, and there seems no certain method of establishing the connection between them.

At the lowest ebb of the spiritual life, when gross materialism was threatening to swamp humanity, at the shortest span of human existence, came Mrs. Eddy with the discovery that the spiritual laws employed by Jesus are available today and can be directed toward the salvation of men from the ills that have beset them. For fifty years Christian Science has been proving its words by its works.

Lectures to be Delivered

[By Members of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.]

ALABAMA—Birmingham (Second Church): George Shaw Cook, Lyric Theater, 3:30 p.m., Feb. 25.

ARKANSAS—Fayetteville: Bliss Knapp, Ozark Theater, 3 p.m., Feb. 25.

CALIFORNIA—Bishop: John Randall Dunn, Bishop Opera House, 8 p.m., Feb. 27.
Hermosa Beach: John Randall Dunn, Bank Building, Pier and Hermosa Avenue, 8 p.m., March 1.
Lompoc: John Randall Dunn, Lompoc Opera House, 8:15 p.m., March 2.
Los Angeles (Second Church): Paul Stark Seeley, Church Edifice, 948 West Adams Street, 8 p.m., March 1.
Los Angeles (Third Church): Paul Stark Seeley, Church Edifice, 734 South Hope Street, 8 p.m., March 2 and 3.
Oakland (First Church): Clarence W. Chadwick, Auditorium Theater, 8 p.m., March 1.
Pomona: Paul Stark Seeley, Belvedere Theater, 8 p.m., Feb. 27.
Redlands: John Randall Dunn, Contemporary Club House, 3 p.m., Feb. 25.
San Francisco (community lectures, seven churches): Bicknell Young, Second Church, 1975 Mission Street, 3 p.m., Feb. 25; Seventh Church, 540 Powell Street, 8 p.m., Feb. 26; Fourth Church, 450 Arguello Boulevard, 8 p.m., Feb. 27; Third Church, 1250 Haight Street, 8 p.m., March 1; Sixth Church, 2137 Sutter Street, 8 p.m., March 2; First Church, Franklin and California Streets, 8 p.m., March 3; Fifth Church, 430 Mason Street, 3 p.m., March 4.
Santa Cruz: Clarence W. Chadwick, Congregational Church, Lincoln and Center Streets, 8 p.m., Feb. 27.

ENGLAND—Derby: William R. Rathvon, Temperance Hall, Curzon Street, 8 p.m., March 13.
Leytonstone, Essex: John Sidney Braithwaite, Leyton Public Baths, Cathall Road, 8 p.m., March 5.
London (Third Church): William R. Rathvon, Church Edifice, Curzon Street, Piccadilly, W., 8 p.m., March 1.
London (Fourth Church and Finsbury Park Society): William R. Rathvon, Holloway Empire, Holloway Road, 3:30 p.m., March 4.
London (Seventh Church): Lecture, March 2, canceled.
Wakefield: William R. Rathvon, Play House, Westgate, 3:30 p.m., March 11.

FLORIDA—Daytona: Virgil O. Strickler, Church Edifice, Palmetto and Live Oak Avenues, 8 p.m., Feb. 26.
Pensacola: Virgil O. Strickler, Universalist Church, 3 p.m., Feb. 25.
St. Cloud: Virgil O. Strickler, Church Edifice, Eleventh and Minnesota Avenue, 7:30 p.m., Feb. 27.

ILLINOIS—Chicago (Thirteenth Church): Clarence C. Eaton, 8 p.m., Feb. 27.
Decatur: Clarence C. Eaton, Lincoln Square Theater, 8:15 p.m., March 2.
Urbana (Society University of Illinois): William W. Porter, University Auditorium, 8 p.m., Feb. 27.

IOWA—Ames: Dr. Walton Hubbard, High School Auditorium, 8 p.m., March 2.
Cedar Rapids: Dr. Walton Hubbard, Church Edifice, 1242 Second Avenue, 8 p.m., March 1.

IRELAND—Dublin: William R. Rathvon, Aberdeen Hall, Gresham Hotel (note change), 8 p.m., March 6.

KENTUCKY—Louisville (Second Church): Dr. Walton Hubbard, Macauley's Theater, 3 p.m., Feb. 25.

MASSACHUSETTS—Boston (The Mother Church): Charles I. Ohrenstein, Church Edifice, Falmouth, Norway, and St. Paul Streets, 8 p.m., Feb. 26.
Lexington: William W. Porter, Lexington Theater, Massachusetts Avenue, Lexington Center, 3:30 p.m., Feb. 25.
Newton: Charles I. Ohrenstein, Lincoln Hall, Newton Highlands, 8 p.m., Feb. 27.
Quincy: Charles I. Ohrenstein, Music Hall, 3:30 p.m., Feb. 25.
Worcester (First Church): Charles I. Ohrenstein, Mechanics Hall, 8 p.m., March 2.

NEW YORK—Rochester: Bliss Knapp, Temple Theater, 3:30 p.m., Feb. 18.

OKLAHOMA—Stillwater: Bliss Knapp, Opera House, 8 p.m., March 1.

PENNSYLVANIA—Chester: Clarence C. Eaton, I. O. O. F. Hall, 3:30 p.m., Feb. 25.
Pittsburgh (Second Church): Dr. Walton Hubbard, Carnegie Library Hall, 8:15 p.m., Feb. 26 and 27.

SCOTLAND—Edinburgh: William R. Rathvon, Synod Hall, 3 p.m., March 10.
Glasgow: William R. Rathvon, Queen's Rooms, Clifton Street, 8 p.m., March 8.

TEXAS—Beaumont: Bliss Knapp, Church Edifice, Main Street and Calder Avenue, 8:15 p.m., Feb. 27.

UTAH—Salt Lake City (First Church): Paul Stark Seeley, Auditorium, 3 p.m., Feb. 25.

Testimonies of Healing

Christian Science has done so much for me and for members of my family that I wish to acknowledge it and to express my gratitude. For about seven years I was a sufferer from rheumatism, and the last year my heart was so affected that the doctor gave no hope of recovery. I was practically confined to the bed and almost helpless.

When I heard for the first time of "Science and Health with Key to the Scriptures" by Mrs. Eddy and that people were often healed by reading the book, I could not rest until my father brought me a copy, and as soon as I began to read I knew Christian Science was the truth. While reading I was attacked by the most intense pain, but I had learned that God did not send this, and that if I turned to Him, He would take care of me. For two days the suffering was intense, but through it all I clung to the truth just learned. After a very bad night, I lost consciousness while declaring that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). When I again became conscious, two hours later, there was not a single pain, but instead the conviction that I was healed. I dressed and walked out to breakfast, and from that day to this have never had an attack of rheumatism.

I was fearful of the heart trouble, but was healed of it in two weeks through Christian Science treatment, and for six years have been free from it. My husband was healed in one treatment of neuralgia affecting the bladder, from which two of our physicians said there was no relief. All they would do for him was to administer an opiate when the pain became too severe. Many other ailments have been overcome, and I have never ceased to be grateful for Christian Science.

Each day I am learning more about God and how to rely on Him. Through the study of Science and Health the Bible has become a new book to me.

BLANCHE HERST, Marshalltown, Iowa.

✧

In August, 1861, I enlisted in the Federal army for the civil war, and served about four years, many times suffering from lung and stomach troubles brought on by the exposure in all kinds of weather to which a cavalryman must submit if he would do his full duty. A physical weakness followed, and surgeons gave medicines to ward off malaria and other ailments, but at the close of the war they told me that whisky and quinine were the only medicines they could recommend to prolong my days on earth. Thus a habit was formed that apparently nothing could shake off, and attacks of illness came so often as almost to discourage me.

After enduring this condition for about forty years Christian Science was brought to my notice, and in 1903 a paragraph in "Science and Health with Key to the Scriptures" by Mrs. Eddy caught my attention. I read the book until late that night, and then slept as I had not done for months. Up to that time rheumatism had followed other weaknesses until I was almost a cripple, but in a few days my knee and shoulder joints were as supple as in youth. Before Science and Health was read through, all my physical weaknesses had been forgotten and I became happy in the thought that I was no longer the slave of tobacco or strong drink.

Since coming into Science I have had many proofs of God's love and ever-presence, for hardly a day has passed that has not brought a blessing in some form. On one occasion I stepped on a nail and it went nearly through my foot. It was hard to pull the nail out, but by the next morning I could scarcely find the place where it had pierced the flesh and there was no soreness or swelling. Though the nail was rusty I had no fear of the result.

I will not attempt to tell of all the blessings, spiritual as well as physical, that are being added to my comfort and happiness; I only hope that my testimony may catch the eye of some plodding person who is looking for peace, health, and happiness, for "divine Love always has met and always will meet every human need," as we read on page 494 of Science and Health. I am convinced that it is only a matter of a few years when the present critics of Christian Science will take up the cross and follow Christ Jesus in the narrow way.—MARSHALL P. THATCHER, Oxnard, Cal.

✧

On page 350 of Science and Health Mrs. Eddy says, "Truth casts out error and heals the sick," and I am extremely grateful for having had this fact demonstrated to me in the healing of our three year old daughter. One morning when being dressed she began to cry and to complain of pain, so I telephoned to a Christian Science practitioner, who gave her absent treatment. By half past ten the child was playing around and continually asking to go out. So we went out, but as it was intensely cold we remained only about an hour. After lunch she slept for a while, and then awoke refreshed and had a good afternoon, but she passed a rather restless night, complaining of pain in the ear.

In the morning she could not raise her head from the bed without crying with pain, and for a few moments I felt fearful, but immediately telephoned the practitioner and asked for help. I then declared the truth audibly to my daughter, who listened attentively. In a short time she had conquered her fear of sitting up, the color began to come back to her cheeks, and the heaviness departed from her eyes. By half past nine she was almost herself again and wanted to get out of bed. She was allowed to do so and played around as usual, showing no ill effects. When the practitioner arrived she was overjoyed to find the child so much improved, and gave her another treatment. That was the end of the ailment; the child was completely healed.

I send this testimony with the hope that some one who reads it may feel more confidence in the efficacy of Christian Science in the healing of children. When I think of the glory and wonder of these speedy healings, of which we have had other than this one proof, and compare them with the length of time which similar conditions have required for relief under medical treatment, words fail to express my love and thankfulness. May my daily life and steadfast reliance on Truth prove my sincerity and love to God.

ETHEL M. SEIXAS, Far Rockaway, N. Y.

✧

We have been interested in Christian Science for about ten years, and during that time our household, consisting of four members, has had many opportunities of proving the practicability of God's laws in healing "all manner of disease." My sister had suffered for years with chronic bowel disorder, and not until after a physician had exhausted his efforts and recommended an operation, and after a minister had prayed that only if it were God's will could we look for relief, were we finally interested in Christian Science sufficiently to ask for help in that direction. The operation was not performed, but instead we were shown how to accept the power of God, and my sister was healed.

This healing, the first in our home brought about through Christian Science treatment, was wonderful to us, but it seemed that each one must have individual experience and proof. I was suffering from hives and had been "grievously

Digitized by Google

tormented" with them for about three years. Physicians did their utmost for me, but I steadily grew worse and was compelled to give up my position. As a last resort and with little faith I turned to Christian Science, and was healed in two treatments.

Later we were again witnesses of the power of divine Love in the healing of my mother. She was seized with hemorrhage, and it seemed that dissolution was inevitable; but the understanding and application of God's law again made null and void man-made or material laws, and she has enjoyed as never before health, happiness, and in a measure that peace "which passeth all understanding." We are all deeply thankful for this healing—more than words can express.

Blood-poison, biliousness, and many other ailments have been overcome through the understanding of God and of our relation to Him. While we are grateful for these physical healings, it is for the spiritual uplift we especially rejoice, and our desire is to know more of this wonderful truth. Since the way has been pointed out to us and our proofs have been so numerous, surely we should not waver, but with rejoicing take up the cross and press onward, following the trail that was so completely, courageously, and lovingly blazed for us by our revered Leader, Mrs. Eddy.

ELIZABETH TIFFANY, East Cleveland, Ohio.

✧

I did not come into Christian Science for physical healing, but because I believed that if we call ourselves Christians we are bound to heal the sick and the sinning. While reading Mrs. Eddy's book "Science and Health with Key to the Scriptures" for the first time, I saw that its logic is flawless, and that if true the putting into practice of its teachings would heal every discordant condition on earth. In the quiet communion with God which followed this revelation I knew that here at last was a practical religion.

One day when I was reading Mrs. Eddy's poem "Christ and Christmas," something of what the immeasurable purity of the Christ really means was realized,—purity in which not a single element of human belief is expressed. I can never express my gratitude for the light which flowed into consciousness. I had caught a glimpse of what the real man is, made in God's own image and likeness, and with this came such a spiritual illumination as cannot be put into words. Later I came to see, in the light of divine Love, that all the high ideals which to me were the only things that made life worth living, up to which I had tried to live and for which I would have given my life rather than be untrue to them, were to a great extent a cloak for self-righteousness and self-love, and I was humbled to the very dust. Yet Jesus said, "Be ye therefore perfect," and he meant all he said. A sense of utter helplessness overpowered me as I realized that of myself I could do nothing, but with that came also the consciousness of a divine tenderness penetrating the human sense, and the absolute certainty that by the power of the Christ the whole human nature could be overcome.

I had practically given up reading the Bible, because I could not understand it. It seemed full of contradictions, but Science and Health has thrown such a light on it that now it is illumined with wonderful meaning. Through Mrs. Eddy's writings we gain an understanding of the divine Principle which enables us to heal ourselves and others of sin and sickness. On one occasion my throat had been very painful all day, and when I awoke next morning the condition seemed even worse. I was entirely healed in less than ten minutes, however, by the understanding that in divine Mind there are no false mental images. Another time a severe and very painful attack of poisoning, lasting three days and nights, suddenly left me when I realized the omnipotence of good. Every discordant condition disappeared instantly. An injured ankle was also quickly healed.

My gratitude is so great for the peace, the spontaneous joy, and the freedom from anxious care and worry which Christian Science has brought me, that I do not know how to express it,—first of all to God, then to Jesus of Nazareth for the consecration which enabled him to demonstrate the Christ in overcoming all the ills of the flesh, thus being the Wayshower to all mankind, and then to Mrs. Eddy, for whose spirituality and selfless life one feels the deepest reverence and love, which always increases as one realizes more and more what it means.

BLANCHE ETHEL HUTCHINSON, Clifton, Bristol, England.

✧

About eight years ago, while searching for a Sunday school home for my little daughter, I was led to read Science and Health. There had been a great deal of discord in my life for a number of years, with so-called grief and sorrow, but where once the waves of error seemed to overwhelm me, there is now great peace and happiness. At that time the Scriptural passage, "Before they call, I will answer; and while they are yet speaking, I will hear," was proven true. Through Christian Science I have been healed to a great extent of fear, self-pity, resentment, and discouragement; in fact the truth has never failed to meet our need when faithfully applied. There are some problems yet to be solved, but I know that as I strive for and attain a clearer understanding all will be well.

I want to express my thankfulness to God for all that Christian Science has been to me and mine, also my gratitude to our revered Leader and to all who have helped me in any way on my journey to Truth. I am very grateful for our literature, and my desire is so to live that I may glorify our Father which is in heaven.

ANNIE M. BROWNE, Philadelphia, Pa.

✧

Christian Science was first presented to me eleven years ago. I had worn glasses for more than twelve years, but one morning while on the way to my office the bows broke, and before noon a violent headache set in as a result of using my eyes without glasses. It was then that I was persuaded to try Christian Science, and at noon a practitioner gave me treatment. To my surprise the headache vanished and my sight was greatly improved, so that I have never needed glasses since and have had no further trouble with my eyes.

By persistently studying our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible, and having the occasional help of a practitioner, I have been loosed from the bondage of profanity, stomach and bowel trouble, the liquor and tobacco habits, and undesirable traits of character; also have been greatly benefited in other ways, physically, mentally, morally, and financially. The physical manifestations of harmony are greatly valued, but they are as nothing when compared to the spiritual uplift and peace of mind that have come to me as a result of obedience to the teachings of our revered Leader. Words are inadequate to express my gratitude for the blessings received, and I am trying to make my daily life a testimonial to the efficacy of Christian Science to meet every need.—CHARLES W. SHELDON, Sheridan, Wyo.

I am glad to certify to the truth of the testimony by my son. Several oculists said it was only a question of time before he would be blind, as material means could help him only temporarily. It was through his healing that I was led to take up the study of Christian Science.

MARY F. SHELDON, Lincoln, Neb.

Digitized by Google

In October, 1910, in my extremity I turned to Christian Science for help and was healed. I was benefited at once, but one ailment was not overcome instantaneously, and for this I am now grateful because I was thereby led by divine wisdom to work harder in my study of the Bible and of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The understanding which I gained was worth all the effort it cost.

When I first asked for help, I was very weak. It was said that I had heart trouble, also an abnormal growth, and that this might necessitate an operation. I was suffering from a chronic stiff neck, for which I had been receiving treatments nearly every week for six years from the best osteopathic physicians in Chicago. They diagnosed the ailment as a misplacement of the bone on which the head rested, and said I was threatened with a crooked neck. I was seldom free from neuralgia and was always afraid of drafts. From childhood I had suffered from liver and bowel trouble, believed to be hereditary, severe headaches, and a throat affection for which surgeons had twice wished to operate. Of all these, as well as other ills, including pyorrhœa (loosening of sound teeth), burns, and a dislocated wrist and side, I have been absolutely healed in Christian Science. For this I am deeply thankful to God and grateful to our beloved Leader, Mrs. Eddy. I am grateful also for the Christian Science literature.

Alice A. Freund, Chicago, Ill.

✧

With deepest gratitude and love this testimony is given in the hope that some one thirsting for the truth may be benefited. For about a year I had been in very poor health, and in January, 1915, my condition became so alarming a physician was called in. After a thorough examination he pronounced my case hopeless, but conscientiously did all he could to make me comfortable. He said I might get out of bed again, but would be practically an invalid for the rest of my life, which would probably not be long.

When my daughter was convinced that the doctor could do nothing more for me, she consented to my having Christian Science treatment. On the night the practitioner was called, about nine o'clock, I was to mortal sense worse, but in less than an hour I went to sleep. For the first time during my illness I slept peacefully the whole night, not even awaking to take nourishment. Previous to this an opiate had been necessary to induce sleep. The next afternoon when the practitioner came I was sitting in a chair, and the third evening I ate dinner with my family. From then on my condition continued to improve. I was able to put up all my fruit the following summer without help, and am now doing my own housework. Except for a slight asthmatic cough I feel better than for years. I know that I am resting on the all sustaining truth of being, and that complete healing will be manifested.

Words cannot express my thankfulness to God, and my gratitude to our dear Leader, Mrs. Eddy, for showing me the way. My daily prayer is that I may grow to know more and more of this glorious truth which makes men free.

Kathryn A. Sweasey, Talmage, Cal.

✧

Christian Science has brought me health, a true viewpoint of life, and a love for the Scriptures. In January, 1904, I became sick while at work, and was assisted to my home. A physician quickly diagnosed the trouble as appendicitis, and stated that I should go at once to a hospital for an operation, but as I refused to do so, he said all he could do would be to lessen the pain. At this crisis I asked for help from a Christian Science practitioner, and in two weeks went to work entirely healed. For many years I had used tobacco, both chewing and smoking it, but am glad to say that freedom from this habit came at once. For five years I wore glasses, but six months after my healing they were laid aside and have never been worn since.

For all the physical healings I am indeed grateful, but more so for my mental and spiritual progress. My home is now a Christian Science one. Our ability to live healthy, happy, and pure lives is most certainly in proportion to our knowledge of the true God, who is omniscient, omnipresent, and omnipotent.—C. L. B. Anderson, Dayton, Ohio.

✧

I have often had a desire to make public what Christian Science has done for me. From childhood I never knew what it was to go through a winter without a hard cold or cough. My people did everything they could think of for me, and doctors passed their opinions upon me, some calling it lung trouble, others catarrh, but only temporary relief was given me. At last one physician said the less medicine they gave me the better off I would be. Then I was taken to a near-by city to see a so-called "mental healer" and seemed to get help, so for a time I studied along those lines.

Four years ago my husband passed on with what the doctors called diphtheria, and while yet in quarantine I became ill myself. On the advice of a friend I then asked for help from a Christian Science practitioner and stopped taking what the doctor had left for me. I began to improve, though for eight months I lost flesh. I found that I must study Christian Science and strive to get well, so I did. As a result, I have been better and healthier ever since. Many ailments have been overcome with the help of practitioners.

Words fail to express what Christian Science has done for me in various ways, for my children, and for my home. The physical healing is but a small part; the spiritual unfolding and uplift is the "pearl of great price." I hope Science may be accepted by more of my people, that it may do for them what it has done for me.

Inez Davis Preston, Battle Creek, Mich.

✧

Sixteen years ago a sister was healed through Christian Science of what to human sense was an incurable disease. I could not understand how treating mentally could heal a physical disorder, and could not accept the teaching of Christian Science; but God's ways are higher than our ways. Occasionally I would read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the beauty of its language attracted my attention. Thus two years passed by, during which time I attended the Christian Science services frequently.

For several years previous to the healing of my sister I had attacks of inflammation of the kidneys and would be confined to the bed for several days. I had not suffered from any disorder for upward of a year, so had come to the conclusion that this sickness would never trouble me again; but in the fall of 1902 it suddenly returned in what seemed a more acute form, as the suffering was more intense. Finally a doctor was called, and the ailment was diagnosed as acute inflammation of the kidneys and bladder. For three weeks I was under his care, but at last told him I was not improving as I should. He said there was nothing more he could do for me, as the medicines prescribed did not have the results he had expected. Then came weeks of despondency. Finally bloating set in, but I kept this from my husband, so as not to alarm him; my eyesight also began to fail, and I could not walk upright any more.

Digitized by Google

One day, when I seemed to feel worse than usual, the question came to me, "Can God heal the sick?" but I turned from the truth, firmly believing I would have to die. So the struggle went on in my consciousness between Truth and error. Again the thought came to me that Truth heals all manner of sickness, and I spoke aloud, saying: "Yes, I will turn to Christian Science. God can and does heal, and God is All-in-all." In that instant all pain disappeared and I stood erect, something that had not been possible for weeks on account of the suffering it caused. Then came the desire to understand something of the Principle which had healed me, so a conscientious study of the text-book followed, and for weeks I read nothing else. This disorder has never again manifested itself.

Rheumatism, sprained ankle, severe burns, ptomaine poisoning, headaches, grief,—all these were quickly and some instantaneously overcome through Christian Science. I am filled with gratitude for being able to understand the Bible through the light of Christian Science as taught by our beloved Leader, Mrs. Eddy, and am also deeply grateful for our literature, which has taught me how to give to others "a cup of cold water in Christ's name" (Science and Health, p. 570).—Emily Smith, Mankato, Minn.

✧

Divine Love led me into Christian Science for the healing of an injury to the spine caused by a fall. I had tried material means without experiencing relief, and when the doctor recommended an operation I rebelled. I now realize that my extremity was God's opportunity, for at this time Christian Science was brought to my attention, and I was healed through the power of Truth.

I am grateful for the understanding of the unity of God and man that has come to me, and am also thankful to God for making the power of Truth and Love manifest in Mrs. Eddy, the Discoverer and Founder of Christian Science.

Henrietta B. Rothwell, Brooklyn, N. Y.

[Written for the *Sentinel*]

The Refining

HENRIETTA A. FIELD

I am just a bit of shining gold,
Born of the mountains, rugged and old,
That gird the western sea.
Yet to those whose feet through the flames have trod
As they traveled the path from self to God,
A message do I bear.

In my rock-bound home, untouched by fears,
I waited with joy the coming years
When men my wealth would own.
But little I guessed what must lie between
That bed of ease and the goal of my dream,—
For in self did I trust.

Through purgings many, and ofttimes sore,
By pains that I never knew before,
The dross was cast aside,—
Till at length, through the fire and God's good grace,
There was graven deeply upon my face
These words: "In God we trust."

* * * * * * * *

We grieve no more o'er suffering past,—
The truth that has filled our lives at last
By far outweighs it all.
Enriched by the loss, made meet for His will,
We may share with others the balm for all ill,—
In God alone to trust.

From Our Exchanges

[Bishop Ryle, Dean of Westminster, in *The Guardian*]

The hope of the Christian church depends upon the hope of a great number of Christian individuals. I believe a new hope is entering into their souls; and the hopeful will sweep along with them the hesitating. As has been truly said of the state of things before the war, "The modern world had, frankly and increasingly, left God out." The world which leaves God out of the reckoning quickly finds itself devoid of hope. Our solid ground of hope lies in this,—that we are beginning to seek God again; and they that seek shall find. The materialistic philosophy of life has received a fatal blow. The only working alternative is that spiritual philosophy of life which in the faith of Jesus Christ makes its supreme claim upon men's conscience, and in the experience of the ages of the Christian church has received a continually recurring justification.

[*The Living Church*]

The psalmist sings to us, "The Lord is my shepherd." That was first-hand knowledge, resting on personal experience and not on authority. We want to be able to have the same experience—personally to realize that God is our shepherd. In silence we may have the testimony of the Spirit—the Spirit itself immediately (and not merely through tradition or external cult) bearing witness with our spirit that we are the children of God. In silence our soul may seek the Soul of the universe until it grips and is gripped by the Holy Spirit of God. Go into the silence—shut the world of ordinary life out—and listen. Make the adventure, the experiment of the closet. Submit yourself to the discipline of aloneness with the great Alone. Celebrate the sacrament of silence and you will find a thrill of the divine more intense than any thrill of intense strenuous external activity. The inner light will stream through the east window of divine surprise and the inner life will be energized in conscious contact with the dynamo of the great Holy Spirit of God.

[*The Methodist Recorder*]

The best, so Christ assures us, will arrive. They will climb to control, they will glide to the seats of the mighty. There will be a great transfer of power, for "the meek"—inconceivable as it may seem—"shall inherit the earth." So, until a quiet voice with one sentence transforms the situation, "learn of me; for I am meek." The world has evidently blundered; it must remint the word, and stamp it again with transcendent values. For the meek are the Christlike, bearing a new dynamic. "The meek will he guide in judgment: and the meek will he teach his way." They therefore brim with divine ideas and passion, and show facility in divine methods. They are characterized by a gracious strength, blended of truth and pity. They live and serve and strike without fear, for they never cease to look on God, the consuming fire. Such men cannot be hid, nor held back. Their rôle is to beautify and beatify life.

[*The Christian Intelligencer*]

The war is but a symptom of the unspiritual attitude and ideals of the modern world, which are inevitably bound in the very nature of things to bring great miseries upon us. We shall all have to come around to the Bible view of Christ and to accept God's estimate of His Son. We shall have to enthrone him in individual life and in our national counsels if we are to have deliverance from the curse of war. Events are moving on toward the subjection of all things to Christ.

Digitized by Google

Those who refuse a seat in his triumphant chariot will be crushed under the wheels of his sovereignty. We cannot escape Christ. If we reject him, we court inevitable disaster. If we crown him king, we shall share the joys of his kingdom.

[Rev. G. W. Briggs in *The Record*]

"The kingdom of heaven is at hand." What does the Baptist mean? Obviously he does not mean that the world is coming to an end; it is the King who is coming to the world. But what is this kingdom that it demands repentance? The kingdom of God, we read, is "righteousness, and peace, and joy in the Holy Ghost." That is St. Paul's picture; and it is our Saviour's picture also. The poor in spirit—"theirs is the kingdom of heaven." The little children—"of such is the kingdom of heaven." The scribe who saw that the love of God was more than all burnt offerings—to him the Saviour said, "Thou art not far from the kingdom of God." "Thy kingdom come. Thy will be done"—the Saviour bracketed them together; the kingdom of heaven is where God's will is perfectly obeyed.

[The Rev. the Hon. James Adderley in *The Church Family Newspaper*]

A religious community in the very nature of things imagines that it knows the truth and has nothing more to learn. Is not the church the pillar and ground of the truth? What have we to learn? That is what the Pharisees felt in the presence of Christ. What right had this young man from Galilee to dictate to the doctors of the law? Yet it was God their judge speaking to them. In order to confess as a church we must be prepared to hear the voice of God in very unlikely quarters. In our Lord's great parable of the judgment the nations are surprised to hear that they have failed and deserved condemnation. "When saw we thee an hungred, and fed thee?"

[Rev. James Muir in *The Christian*]

So long as God remains nebulous to any man—a traditionally holy name that does not stand for much; a person who, though necessarily figuring prominently in religious worship, is not felt to be a power and an actuality in every-day life—He cannot be said with any truth to be a known God. And the consequences of such comparative atheism—for that is the right name for it—will manifest themselves, are manifesting themselves, in many directions. A known God is a force that compels to reverence and righteousness, to love and brotherliness, to worship and effort and self-sacrifice.

[John Reid Shannon, D.D., in *Zion's Herald*]

Salvation means coming into the likeness of God; a man is saved in the degree that he is like God; God being love, he that loveth is saved, for he that loveth is like God; and he that loveth the most is likest God and is saved the most. Take the practice and the force of love out of Christianity, and we take the water out of the ocean, the warmth out of the sun. According to Christ's teaching, as our love really manifests itself toward God it will in a corresponding degree manifest itself toward man. We show our love for God only as we show our love for man; we serve God only through service to man.

[*The Methodist Times*]

We are coming to see that the spiritual unity of a common faith and experience of the gospel contains within itself the promise of a catholicity which is not merely spiritual and intangible, but brings all who share it into such intimate fellowship that they must needs give effect to it by means of a visible organization.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy, $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new catalogue of selected Bibles has been printed by the Publishing Society and mailed to Christian Science organizations listed in the *Journal*. Reading-rooms not receiving copies will please notify the Society.

Owing to the increased cost of labor and materials the Oxford Press of England has twice found it necessary to advance the prices of Bibles to the Publishing Society during the past year. The Publishing Society now finds it necessary to make a corresponding change in its prices to the field.

The cost of manufacturing Bible Cases and *Quarterly* Covers has also increased, and the changes in prices for these articles are listed in the new Catalogue No. 23.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 236 Huntington Avenue, Back Bay, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Address all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

The United States fish hatchery at Havre de Grace, Md., has been closed. The report of the commissioner in reference to the situation said in part: "In annual reports, in special reports to members of the legislature, in communications to the governor, in press notices to the fishermen and the general public, and in personal statements and appeals, we have shown the necessity for a radical change of policy on the part of the state of Maryland in order that the further depletion of once valuable fisheries might be arrested and the abundance of important food fishes might be restored and maintained. Nothing has been done to improve the situation. The state continues to permit practices known to be inimical to the best interests of the fisheries and directly antagonistic to the efforts of the Bureau of Fisheries in behalf of the people of the state. The future expenditure of effort and money under the circumstances not only is inadvisable and unjustified, but is clearly forbidden by stipulations which Congress has wisely placed on our annual appropriations for the propagation of food fishes."

According to the plan announced by Secretary Houston, an increase of 25 per cent in the grazing fees on all national forests will be made for the season of 1917. Subsequent increases will be based on a study of the local conditions on the individual forests. "The timber, grazing, water power, and other resources of the national forests which are used for commercial purposes should be charged for at a rate which represents their fair value," said Secretary Houston. "If a charge only sufficient to cover the cost of administration were made, all of the profit from the commercial use of the national forests would go to a comparatively few individuals instead of to all the people to whom they belong and who are entitled to share their benefits. The charge for grazing should be based upon the real value of the forage on the national forest ranges, as determined by a careful survey of all the facts and not by competitive bids, as required in timber sales."

The Argentine administration has presented to Congress for consideration at a special session a colonization or land settlement law which embraces some of the most progressive features of the colonization plans followed in New Zealand and Australia. Under the proposed law the Argentine Government would offer colonists special facilities for acquiring land (up to 494 acres) and restricted cash advances to permit the building of houses and the purchase of animals and implements. The funds advanced would be secured by the property, and the property would be exempt from attachment by other creditors. Applicants for land would be required to work the land and to reside on it for at least five years, making payments from their annual profits in accordance with an equitable plan. This project calls for the expenditure of about thirty million dollars.

Massachusetts has been partly surveyed by agricultural experts, and an inventory has been made of her inaccessible soil wealth. The 700,000 acres of cultivated soil, good, bad, and indifferent, yield approximately thirty million dollars. The survey has disclosed the existence of at least three hundred thousand acres of wet land that is virtually non-productive today, and worth no more than five dollars an acre, which might be reclaimed by drainage and made to yield more than the entire area at present being tilled. This land is worth little or nothing to the owners in its present condition, and to the commonwealth or to the communities in which it is located it yields little or nothing in the shape of taxes.

A report of the American Industrial Commission to France says in part: "Even before the war many of the ports of France had prepared plans for harbor development and harbor extension. These plans have been carried forward in spite of the war, and in fact have in many instances been materially enlarged in scope on account of the tremendous overseas traffic resulting from the war, so that by the time peace is declared, modern, up-to-date ports will be found at Bordeaux, Marseilles, Havre, Rouen, and great port extensions near the city of Paris itself."

When Bulgaria was separated from Turkey, the dense forests that formerly covered the country had nearly disappeared. In 1878, soon after the establishment of the principality of Bulgaria, one of the reforms instituted by the new Government was the issuance of conservation regulations and the appointment of overseers and keepers charged with the duty of protecting the forests. In the year 1908 the forest area of Bulgaria comprised 7,086,232 acres, about 30 per cent of the total area of the country, and was valued at $125,000,000.

The joint commission of the United States and Panama in session in Panama City, is considering the question whether the United States Government shall pay for lands expropriated in the Canal Zone at prices prevailing in 1903, when the treaty by which the Zone was acquired was signed, or at those current now and in the future. The difference is a matter of millions. There are some suburban lands now selling at from one to two thousand dollars an acre which changed hands at a fiftieth of that price fourteen years ago.

Assurance is given that everything will be ready for the opening of the sample fair at Lyons, France, on March 1. The fair will continue through the first two weeks of March. This year a special endeavor has been made by the promoters to have the fair mark an epoch in the business life of France. The French Government has decreed that the Lyons fair shall be the only one held under the auspices and patronage of the national Government.

Congress, overriding a veto by President Wilson, has enacted into law the immigration bill with its long fought literacy test provision. The Senate voted, 62 to 19, to pass the measure. The House of Representatives had previously overturned the veto by a vote of 287 to 106. The Senate's action ends the contest of twenty years' standing, in which three Presidents have repudiated similar bills passed by Congress.

Boston will have its first outdoor flower exhibition since 1873 on the grounds of the Wentworth Institute on Huntington Avenue next June, under the auspices of the Massachusetts Horticultural Society. Growers from practically every part of the state will exhibit orchids, roses, rhododendrons, rock plants, aquatic growths, and azaleas. The exhibition will be open for two weeks.

Steam navigation on the Upper Yangtze, China,—that is, above Ichang,—is attracting attention and proving very profitable to the operating companies. For last year the Szechuan Steam Navigation Company, the oldest firm now operating steamers on this section of the river, paid a dividend of 40 per cent to shareholders, and this on an operating year of seven months.

The proposed Castleton cut-off on the Hudson River, which is to be constructed by the New York Central Railroad at a cost of $5,000,000, promises a reduction of two to five days on freight shipments between New York, New England, and the West, together with relief of freight congestion at various points and provision for growth of commerce for many years.

Exports from Japan to the United States during 1915 of Renaissance work or Battenbergs, including drawn work, scarfs, table covers, and cheap laces and embroidery, amounted to $1,412,976. Thousands of Japanese girls are making these goods in their homes in the country districts during their spare time.

The gross value of farm production in the United States in 1916 established a new high record, according to estimates made by the United States Department of Agriculture. The total of crops and animal products was $13,419,000,000. Four crops have each exceeded a billion dollars in value at the farm in 1916,—corn, cotton, hay, and wheat.

Water power legislation, intended to permit leasing of water power sites on public domains, will probably receive no further consideration during this session of Congress, since the Senate voted 55 to 11 to replace the Myers water power bill with the agricultural appropriation bill.

The New England states will receive $417,796 from the Federal appropriation of $10,000,000 for the fiscal year ending June 30, 1918, to aid in constructing Federal post roads throughout the country.

The total cost of the improvements being made in the harbor facilities of Amsterdam, The Netherlands, is estimated at $1,608,000.

American exports for 1916 reached the unprecedented total of $5,481,000,000. Imports aggregated $2,392,000,000.

The United States postal savings banks have on deposit more than one hundred and fifteen million dollars.

The Alaska salmon pack of 1916 reached a total of 4,916,690 cases, of an estimated value of $23,803,399.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XIX February 24, 1917 No. 26

"The spirit giveth life"

WILLIS F. GROSS

IN his present state of moral and spiritual development the Christian Scientist has need of both the spirit and the letter of this Science. In Paul's second epistle to the Corinthians we read, "The letter killeth, but the spirit giveth life." We are not to understand from this that the letter has no rightful place in Christian teaching and experience, but one must not be deceived by the belief that he has done all which is necessary when he has acquired the letter. The letter understood and rightly used is a means to an end, but it is not the end. "The spirit giveth life," and it is for the spirit that one must strive if he would accomplish any lasting good for himself and others.

The young student of Christian Science is frequently inclined to one of two extremes: either he is impatient of his progress or else he believes he has already attained that which he has in reality but faintly perceived, and that afar off. In either case he must be awakened to a realization of just how much has been accomplished and to a clear sense of what remains to be done. Without a just appreciation of what he has gained and some definite idea as to what is required of him, his progress must of necessity be slow and uncertain.

In reply to the question as to what the student must do in order to progress as rapidly as possible, the Discoverer and Founder of Christian Science writes, "Study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495). There can be no question as to the meaning of her words, but the student may not always realize the great importance of giving equal consideration to both these requirements. Elsewhere in the same work Mrs. Eddy writes: "The letter of Science plentifully reaches humanity today, but its spirit comes only in small degrees. The vital part, the heart and soul of Christian Science, is Love" (p. 113).

If the student attaches too much importance to the letter he may yield to the temptation to be content with what he has accomplished in this direction. Right here is where a fatal mistake is made. It is not possible fully to comprehend the teachings of Christian Science intellectually; spiritual teachings can only be understood spiritually. If one expects to gain the understanding of Christian Science in the same way that he would master a text-book on mathematics, he will be disappointed, for this is not possible. There have been critics who rejected the Bible because it did not agree with the prevailing theories of human intelligence. For the same reason the teachings of Christian Science have been rejected by those who would accept nothing that did not conform to their materialistic beliefs.

The concept of Christian Science which is purely intellectual is lacking in vitality, and may be far from correct; hence the danger of attaching too much importance to the theories and opinions which spring from human belief. At best these can serve only as stepping-stones to something higher. It is well always to give earnest heed to the wise counsel of John, "Beloved, believe not every spirit, but try the spirits whether they are of God." One does not do this if he is so satisfied with the letter that he fails to gain the spirit which quickeneth.

The letter, when correctly stated, must of necessity be in accord with the spirit of Christianity, but it is only as one is possessed of the spirit that he is able to present the letter in such a manner as will convey to the seeker for truth something definite and practical. If the spirit is wanting, the letter of Christian Science may be as faith that is dead, because it is without works. It came to pass that when men attached more importance to the letter than to the spirit of Christianity, the healing of sickness through an enlightened faith in God was no longer regarded as an essential part of man's salvation from evil. When this backward step was taken it seemed easy and natural to conclude that the healing of sickness was not only unnecessary but impossible. This paved the way for the subtle and pernicious belief that one must find a material remedy for sickness or submit to the inevitable.

Christian Science has restored Christian healing, and men are learning that they need no other remedy for sickness than that which is acknowledged to be the only effectual remedy for sin, namely, the power of divine Love. If this scientific method of healing sickness and sin is to remain to bless humanity in the future as in the past, those who gain the letter must understand that nothing can take the place of the spirit and the demonstration which accompanies it.

No intellectual process of the human mind discovered the demonstrable truths of Christian Science, and it is not possible for the learning of the schools to interpret these teachings correctly. Some may have thought to make the way easier or more popular by adopting those methods of interpretation which appeal to the human mind, but the belief in Christian Science which is gained in this way is not equal to the demonstration of its truth in healing the sick. When all is going well the intellectual grasp of the letter may seem to suffice, but when the testing time comes it is found that the letter without the spirit is but as a house built on the sand; and the one who may have thought he had accomplished much, learns from bitter experience that all his labor was in vain.

If one would succeed in demonstrating Christian Science he must be as wise as the serpent. The effort of error to hinder his progress by openly opposing spiritual teachings is so easily detected that disastrous results are averted; but the more subtle method of substituting mere intellectual beliefs and interpretation for the spirit is not so readily recognized, and it may not be detected before serious harm is done, especially to the beginner in Christian Science.

Every student of Christian Science should be a healer. It is not necessary that he be an advertised practitioner, but he should apply the teachings of Christian Science in working out the problems of daily life, thereby healing many ills that would otherwise cause discord and suffering. If he is obedient to the requirements of the letter he cannot fail to

imbibe the spirit. The one who is a doer as well as a hearer of the word will gain in understanding daily, and "the spirit that quickeneth" will give him the victory over evil which it is impossible to gain in any other way. He will be able to demonstrate the reality of good, and this will make life what it should be,—the reflection of the Life that is God.

Spiritual Resistance

NINA V. WRIGHT

MANY times I have been most grateful for the help derived from the privilege of teaching in the Christian Science Sunday school. In one instance a demonstration related by one of my little pupils was particularly helpful to me, and with the thought that perhaps it may be of service to others I will repeat her demonstration in my own words.

During her sleep, the child said, she had been troubled more or less with unhappy dreams, in which she had been under the delusion that a wicked appearing man, carrying a gun, had stealthily opened the door and entered her room. In the dream her first thought as he approached was one of terror; then, still asleep, she remembered the truth and said, "No; God loves me, and the ugly man has no power to harm me." Immediately on declaring her safety in God's protection she became fearless and calm. In spite of her realization of the truth, however, the man seemed to approach until he came to the foot of her bed, when he glowered at her with an expression of hatred in his eyes. She again declared God's allness, and dreamed that she arose from her bed, asserting again and again her safety in God's love; but in spite of her continued declarations the man still seemed determined to proceed with his wicked intent.

One would think, as a natural course of events, that the seeming error could go no farther, but would be obliterated right there, under the face of the positive, consistent declarations of the child. But no; error sometimes seems most persistent. The man aimed the gun at her, with slow and careful deliberation. Then he pulled the trigger, and a loud explosion followed. But, lo! instead of striking her the shot had struck the wall beside her. Seeing that his attempt had failed, the visionary villain immediately threw down his weapon, turned, and ran away through the open door as if he were the frightened one. Whereupon the little girl awakened to find herself snugly tucked in bed, quiet and unafraid, and with a prayer of thanks in her heart that even in her sleep God was ever present in a time of seeming need. This recalls our Leader's counsel on page 442 of Science and Health: "Christian Scientists, be a law to yourselves that mental malpractice cannot harm you either when asleep or when awake."

The child's experience was a valued lesson to her teacher. She began to recall the many times in what Mrs. Eddy calls "the waking dream of mortal existence" (Science and Health, p. 250), that she had declared the truth in the face of seeming danger; but when in what mortal mind suggested was a reasonable length of time the error did not relent, she had become temporarily frightened and discouraged, instead of persistently and trustingly working on to the end, as the little girl had done. If only we were as faithful in our waking experiences as this child was in her sleep, how much sooner would the error which at times seems to confront us,—yet never any more real than the "ugly man" of the child's dream,—be baffled, throw down its weapons, and retreat. If only we too would refuse to look on helplessly and fearfully, but instead take our stand and look the situation squarely in the face, then would we not, when the smoke of the seeming explosion has cleared away, find ourselves unharmed?

In the epistle of James is the counsel, "Resist the devil, and he will flee from you." To resist at times of seeming trials demands much, but it likewise means much in the outcome. It demands absolute confidence in the power of Truth to deliver from evil of every sort, coupled with courage and persistence in its declaration; but it also means final victory, and the "running away" of error after it recognizes that its efforts to terrify and destroy are vain. What if evil does seem to raise its imaginary weapons to destroy? During such times let us be faithful in mentally seeing its powerlessness, and sooner or later, if we are but patient and persevering, the dream-thing must flee. It may seem to raise its arm against us; it may aim its blow, but it cannot harm us while we are realizing our protection in God's presence as the only presence and the only power, and that we are the children of the Life which is eternal and intact.

Resting upon Principle

FREDERICK R. RHODES

To the earnest student of Christian Science a deep significance attaches to the words "rests upon," in the second clause of Mrs. Eddy's primary definition of church on page 583 of Science and Health, and their importance can hardly be overestimated. When first commencing the study of the Bible in conjunction with the Christian Science text-book, "Science and Health with Key to the Scriptures," we are brought face to face with what is perhaps the greatest difficulty we have to encounter,—that of learning the deeper meaning of words which for years we have limited to our own personal interpretation or to their generally accepted meaning. In view of the fact that with many words the original meanings have in course of time been gradually changed, the primary sense is in grave danger of being either misrepresented or altogether lost. Again, only through spiritual intuition can we discern the underlying thought contained in the Word, because there is no language with which such thoughts can be rightly clothed.

Mrs. Eddy also tells us that "God rests in action" (Science and Health, p. 519). Here is a deep metaphysical statement, which has to be given through what at first glance seems a contradiction of terms, but which on prayerful and careful consideration reveals quite a new and uplifting definition of the verb to rest. The student who believes that he can successfully study the Bible and the Christian Science text-book without reaching out for a deeper sense than is conveyed by the superficial study of the letter of these works, is doomed from the outset to disappointment. It is only through spiritual discernment that the letter becomes pregnant with meaning and rises from the undemonstrable realm of material belief to the ever available and demonstrable understanding of Christian Science. Love for God, together with the earnest desire to bring an exact knowledge of His healing presence to suffering and sinning humanity, alone can inspire us with the ability to stand up successfully before the many and varied oppositions of the adversary.

Through this process of reasoning we begin to discern faintly the absolute necessity of watching carefully that our every thought "rests upon" the Principle which alone can give it real dynamic power and enable it successfully to meet and master every adverse human experience. It will be clearly seen that we can become acquainted with the real sense of restfulness only as we gain a higher recognition of spiritual activity and are able to recognize as well as obey the divine injunction, "Be still, and know that I am God."

The demonstration of unity in our church organization is entirely dependent upon the individual recognition of the

Digitized by Google

importance of resting upon divine Principle, for only in this way are we able to keep out the question of personal considerations and bring out the foundational truth that the church is "the structure of Truth and Love" (Science and Health, p. 583). It is therefore the duty of all loyal Christian Scientists to watch their thoughts and see that whatever is put forward as an advisable mode of procedure rests not on mere personal opinion, but on Principle.

To illustrate: The science of numbers is responsible for the appearance of various units in human experience, and each unit therefore may be said to proceed from that science; but suppose we take the figure six and endeavor to use it as an expression of twice four. It would cease to rest upon the science of numbers, although proceeding from it, and would at that point become numerically unscientific or untrue. Again, if the figure was used in order to defraud a fellow man by means of forging, it would cease from the moral standpoint to rest upon the principle from which it emanated, and in consequence would produce a sense of inharmony.

The law of harmony, as understood in the teachings of Christian Science, demands unswerving allegiance to the spiritual meaning of both the Bible and the writings of Mrs. Eddy, and it is the bounden duty of every one who has become associated with the Church of Christ, Scientist, not only to pray daily for the coming of God's kingdom on earth (see Manual, Sect. 4, Art. VIII), but also to see to it that every thought and action is closely watched, so that at all times and under every circumstance they may be found to rest upon divine Principle, which alone can emancipate the world from all its troubles and establish the reign of Truth and Love in the hearts of mankind here and now.

Rabbinical Error Rebuked

JULIA WARNER MICHAEL

On page 30 of Science and Health Mrs. Eddy writes that "Christ Jesus came to rebuke rabbinical error." This statement opens a profoundly interesting view of Jesus' mission, for the Jewish rabbis were priests, lawyers, and doctors whose jurisdiction through ritualistic worship covered every phase of Jewish life. Because the people unquestioningly obeyed their instructions as the word of God, any error in these teachings had a far reaching effect, and unfortunately bore the semblance of truth. The mistake of these masters was the promulgation of the false doctrine of materialistic theology. They preached a God and man compounded of spirit and matter, good and evil, and the necessity of laws whereby to govern an evil state of existence. From this followed their petitions, sacrifices, atonements, pardons, and all the complicated systems of entrance into sin, disease, and death, and emergence therefrom either here or hereafter.

The very zeal of priests and people for centuries to obey these laws had brought no surcease from evil, but had established the belief in it more firmly in human consciousness, thus removing mortals farther and farther from the true understanding of God as Love and of man as His image and likeness. Hence arose the necessity for the deliverance of men from such self-made bondage, and this evidently could be accomplished only through the denial of these teachings as God's word. This was the work, with the attendant proof of physical healing, that Jesus the Christ undertook.

When only twelve years old Jesus began to question the rabbis' doctrines, and distinctly affirmed that in so doing he was about his Father's business. From this time on the gospels give accounts of his open denunciations of rabbinical error. He completely disproved, in the healing of leprosy, the ceremonial laws outlined in the fourteenth chapter of Leviticus, by instantly healing ten cases of it. He discountenanced the rabbis' way of dealing with sin, by healing and saving the adulterous woman instead of consenting to her being stoned to death, and he rebuked their false interpretation of charity by restoring sight to blind Bartimæus rather than by giving him alms. He denied the rabbis' teaching that divine wisdom and progress were evidenced through death, by recalling Lazarus from the grave. His whole ministry was a successful refutation of enthroned materialism.

In "Unity of Good" (p. 46) our Leader writes that his teaching "incensed the rabbins against Jesus, because it was an indignity to their personality; and this personality they regarded as both good and evil, as is still claimed by the worldly-wise. To them evil was even more the ego than was the good. Sin, sickness, and death were evil's concomitants. This evil ego they believed must extend throughout the universe, as being equally identical and self-conscious with God. This ego was in the earthquake, thunderbolt, and tempest. The Pharisees fought Jesus on this issue. It furnished the battleground of the past, as it does of the present."

The carnal mind, enraged at Jesus' success and the loss of its own prestige, reached the culmination of its resistance to spiritual authority by accusing him thus in its judgment hall: "We have a law, and by our law he ought to die, because he made himself the Son of God." What a frantic but futile effort of error to save its pretense of authority! Jesus' annulment of such an unjust decree by his resurrection from death forever abrogated matter's condemnation of God's man.

The scientific Christian is an intelligent follower of Jesus in proportion to his use of the Wayshower's divine insight. Today, as of yore, such vision reveals rabbinical error as masterful materialism, ruling in the temple or body, its elaborate religious, medical, and ethical systems still claiming the right to outline every step of human experience. Who in this present time has not dutifully attended its temple service (body worship) only to remain sick, poor, sinning, and dying at its gates? Who has not felt the burden of matter's ceaseless "Thou shalt not" and "Thou shalt," obedience to which has led no nearer God? And how many have submitted to its verdict of so-called incurable disease—"We have a law, and by our law he ought to die." But to these very ones the Christ comes to repeat the old-time denial of the right of evil to condemn man, and to prove again the authority of Truth by healing all manner of disease. God's everlasting reign of harmony was and is in operation on earth as it is in heaven. Truth still makes man "every whit whole" in the temple or body, in defiance of established doctrines, thus interpreting aright the law of Life.

Law, justice, and power are concomitants of good alone. Therefore it is humanity's divine prerogative to dare to disobey material authority, so called, in connection with all continuance of sin, disease, and death. Such mental daring annihilates the would-be mastery of mortality and leads to the spiritual conviction which "shuts the door on death, and opens it wide toward immortality" (Science and Health, p. 90). The Nazarene's unswerving allegiance to spiritual supremacy finally converted the great apostle Paul, and as we have reason to believe even Nicodemus and Joseph of Arimathea, all renowned rabbis of Israel.

Deep gratitude wells from the hearts of Christian Scientists today for Mrs. Eddy's discovery of Jesus' method of rebuking dominant error and revealing lawful good. It enables them to repeat, to the extent of their spiritual understanding, his dominion over matter. As the work of Christian Science healing spreads over the earth, a gentle but

Digitized by Google

unyielding ministry of divine authority, the title of Rabbi, Master, will proportionately cease to be rendered to mortal mind, and the "Rabboni" of spiritual discernment will again acknowledge, as on the resurrection morn, the presence of God's perfect law and man.

Appeal to Divine Justice

W. STUART BOOTH

Our mental attitude toward the varied problems arising in daily experience, our thought regarding their apparent causes and probable effects, determine the results. Our happiness depends not so much upon what does or does not come in the way of trial and temptation, as upon our attitude toward these experiences; and it is for each one to decide whether they shall be stumbling-blocks or stepping-stones. Jesus was "in all points tempted like as we are, yet without sin," owing to his correct attitude toward these temptations.

Prior to the entrance of Christian Science into one's thought there is usually a firm belief in the reality and inevitableness of evil, manifest as sin and sickness, want and woe, separation and sorrow. This disheartening belief presents what seem to be strong credentials in support of its claims, which are based always upon the evidence of the so-called material senses. The universal hope of deliverance from discord and evil has been directed to material medicine on the one hand and scholastic theology on the other, receiving from the one such meager encouragement as the constantly shifting medical theories have to offer, and from the other a promise of a problematical post mortem heaven.

This surely is not in accord with God's will, if we are to take the master Christian at his word and judge his teaching by his works; for he not only healed all manner of sickness, set free those bound by the belief in sin and fear of it, and raised the dead to life, all by spiritual means alone, but said emphatically that this fruitage should be the reward of all who believed on him,—who understood his teachings. He overcame sin and sickness by recognizing their unreal origin.

The disciples had progressed far beyond the general thought of the world when they perceived disease to be a resultant of sin. The Master endeavored always to lift their thought above all material evidence into the realm of spiritual perfection, as when the man blind from birth came before the little band of Christian workers. The disciples' question, "Who did sin, this man, or his parents, that he was born blind?" elicited the apparently paradoxical reply which, because it was based upon absolute truth, healed the condition. In saying "Neither hath this man sinned, nor his parents," the great Metaphysician pointed away from the erroneous belief in material birth and living to the realm of the real, where all men have one parent, even God; and as John said, "Whosoever is born of God sinneth not."

There is of course but one sinless parentage, even the one Father-Mother Mind; and there is likewise but one sinless man, who is the reflection of Spirit, and hence is spiritual. What Jesus saw was not the man blind from birth, but, as Mrs. Eddy so clearly states on page 476 of Science and Health, "the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick."

The following illustration, though limited in its application as are all illustrations, especially when applied to spiritual teachings, may serve to bring the lesson home and render it practical. Suppose an honest man should be thrust into prison charged with stealing. Would he plead guilty simply because he was imprisoned? Would he beat frantically against the bars with the thought of thereby gaining his freedom? If he were wise and conversant with law he would send for an attorney, who through his knowledge of law would invoke the law of justice, to the end of freeing the prisoner and exonerating him from the untrue charge. This common sense procedure is just the method offered, explained, and demonstrated by Christian Science to those charged with having broken some so-called health law and to those who for this reason have been condemned to suffer.

On page 391 of Science and Health Mrs. Eddy advises: "When the body is supposed to say, 'I am sick,' never plead guilty. Since matter cannot talk, it must be mortal mind which speaks; therefore meet the intimation with a protest." Such a protest must however be based upon the clear understanding of the same unerring premise of the allness of God, good, which assured and wrought Jesus' marvelous victory. Having divine authority for pleading not guilty to every charge of sickness and fear, and having the inestimable privilege of constant consultation with and advice from his counsel, Christian Science, by means of the Bible and the writings of our Leader, the Christian Scientist can and must think, speak, and act as "one having authority."

Christian Science Messengers

MARY BEECHER LONGYEAR

On page 149 of "The First Church of Christ, Scientist, and Miscellany" by Mrs. Eddy, we read: "More than regal is the majesty of the meekness of the Christ-principle; and its might is the ever-flowing tides of truth that sweep the universe, create and govern it; and its radiant stores of knowledge are the mysteries of exhaustless being. Seek ye these till you make their treasures yours."

We are indeed a happy people to have flowing into our homes and thoughts every week-day through *The Christian Science Monitor* a current of good concerning the whole of mortal thought. Although originating from the pure source of divine inspiration, to mortal sense it sometimes seems an interloper, making demands on time that one wishes for amusement or to lessen burdensome cares; but let us once realize its mission and its originator's concept and command regarding it, and one loses a sense of self and gazes with St. John upon a new universe. The débris of mortal sense upon the shores of time is swept away, and countless vessels of pure thought, treasures of the ever present beauty and the joy of art, literature, and music, of sports and so on, are borne in on the peaceful waves to refresh the dulled mortal consciousness. Christian Science is not a cult to be sheltered in a cloistered sanctuary, but it fills the world and directs its activities while correcting its misconceptions.

The *Monitor* brings the only real news the world receives, for it is based on spiritual sense. The manifestations of Mind, of the one intelligence, are its true editor and staff, and in order to have the paper attain the perfection which is its rightful status and which Christian Scientists desire, we must clearly see the truth about that statement, which is, that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468). Is it not the worst of errors, then, to permit thoughts of any kind to rob us of our rightful nourishment from that heaven sent source? How many unopened packages lie on our tables weekly? How many who enjoy the sociability of the distributing committee, distribute the contents of the paper daily within their own mentalities?

We would all like to be considered well educated; and no college man has a better opportunity to become broadened in

Digitized by Google

thought, cultured in intercourse, or enlightened in intellect than has a conscientious reader of the *Monitor*. Still another consideration—we always have something interesting to talk about, whether with young people or statesmen, with financiers or politicians, who do not relish "preachy" monologues. The great fact should impress us that we are all sent back to school again by our far seeing Leader. Our intelligence must surely exceed the intelligence of the scribes and Pharisees in order to win them to Truth.

Here some one may say, What do I care about England, Mesopotamia, poetry, or fashions? What have they to do with Christian Science? Well, "the earth is the Lord's, and the fulness thereof," and if we cannot all at once absorb and comprehend its "fulness," let us make a beginning, give half an hour at least to this daily paper, until we find a taste growing for more solid food. We should look with as much eagerness each night for the *Monitor's* arrival as we would for a letter from a loved one, and we should begin, as it were, to write letters back, sharing its activities, leaving the result with Principle.

What a tremendous broadening of our horizon of thought there would be if, instead of confining our efforts to using Science merely to better material conditions or to help us paddle our own canoe through whirlpools, we should rest on our oars occasionally, forget self, and look through the lens of Science upon the emerging spectacle of a world governed by infinite good. Let the good news be proclaimed in every household, in all lands, and be listened to and believed. Should we notice inaccuracies, let us, realizing that it is our paper, kindly call attention to a possible misstatement, and the act will surely be appreciated.

We are one great family in all the world, all of one glorious spiritual country, joined hand in hand and heart to heart to bring the knowledge of the allness of good to those who are asleep. In the thoughts of Christian Scientists the *Monitor* can never usurp the place of *The Christian Science Journal*, *Sentinel*, and *Der Herold*, for they are the undiluted channels for healing, each distinct in its order of conception and mission. The first and second born children of our Leader's loving thought for the healing of mankind do not need to be advertised; they have their homes in the hearts of all the members of The Mother Church, while *Der Herold* carries the same message to those who speak another language. The *Monitor* awakens thought to seek good, and gives a daily foretaste of it in the Christian Science article on its Home Forum page. The *Sentinel* feeds the awakened thought with practical examples of the power of Truth as revealed in Science and Health. The *Journal* goes a step beyond, and adds to that the needed information respecting the activities of the Christian Science movement and the names and addresses of all practitioners.

To the loyal Christian Scientist the *Journal* furnishes the choicest food for thought about the practical use of our text-book. The *Sentinel* reaches an ever widening circle of new members, as it is a more frequent caller and has not the responsibility of its predecessor, while the *Monitor* is the bright friend who taps the whole world on its shoulder daily, saying, "O taste and see that the Lord is good." It teaches the world to see the springing blades of scientific thought; later, when further information is sought, the *Sentinel* uncloses the ear,—the fuller nourishment,—and at last the *Journal* feeds us with the full grain in the ear, and leads to the vast storehouses of scientific thought,—Mrs. Eddy's writings, which universally used will forever destroy the Love-famine of the world. Let us remember then that we are all workers together for the monthly, weekly, and daily reflection of infinite good.

Selected Articles

[Judge Clifford P. Smith in *Lowell* (Mass.) *Courier-Citizen*]

A statement by a minister to which space was given recently, was unfair to Christian Science and offensive to Christian Scientists. Indeed I venture to say that no unbiased person approves war on other people's religion conducted in this manner. Any one can test this proposition for himself by considering whether he would like to have his religion spoken of in the same manner.

The statement to which this letter refers was as follows: "Go find me one truth from spiritualism, Christian Science, theosophy, or materialism, and I will show you that same truth better stated in the Bible." When these words are closely examined it can be seen that they have two designs. In the first place, they suggest that Christian Science is associated with, or is like, spiritualism, theosophy, and materialism. In the second place, the words in question insinuate that Christian Science is not founded on the Bible. Entirely aside from the question whether preaching and practice of any particular religion should include attacks on others, it can be safely said that comment on other religions demands a greater measure of fairness and respect for facts than was exhibited in this instance.

Whatever may be the merits of spiritualism, theosophy, and materialism, they are no more associated with or like Christian Science than they are associated with or like the religion represented by this assailant. It would not be difficult to prove that his religion has much more in common with at least one of these systems than has Christian Science. On this point, however, I only wish to say emphatically that there is no reason in fact why any one should either directly or indirectly charge that Christian Science, spiritualism, theosophy, and materialism are either alike or similar.

As for the other point, the fact is that Christian Science is based on the Bible. Any one can verify this statement by reading the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and this book can be found at almost any public library or borrowed from any Christian Scientist. Speaking of her discovery of Christian Science and the development of this subject with her, Mrs. Eddy writes on page 110 of Science and Health: "In following these leadings of scientific revelation, the Bible was my only text-book. The Scriptures were illumined; reason and revelation were reconciled, and afterward the truth of Christian Science was demonstrated."

Whether the commentary on the Bible used by Christian Scientists is better than any other, should be known by their respective fruits. Reading the Christian Science text-book has healed the sick and reformed the sinner in a great number of instances, and these fruits frequently follow the delivery of authorized lectures on Christian Science. Nevertheless these benefits have not turned people away from the Bible, for it is a well known fact that Christian Scientists buy and read the Bible more than do most Christians.

✧

[Thomas F. Watson in *Overland Monthly*, San Francisco, Cal.]

The *Overland Monthly* has published an article in which the writer gives his opinion of "Christian Science—Viewed in Its Own Light and that of the Bible." His assertion that "Christian Science is an anti-Christian religion, undermining faith in the Bible and in the God of the Bible," is entirely disproved by the fact that thousands have been healed of infidelity and agnosticism as well as of sickness through the ministrations of this Science, and have thereafter become earnest students of the Bible and followers of the teachings

Digitized by Google

of Christ Jesus. This is sufficient proof to any thoughtful person that Christian Science is in harmony with the teachings of the Bible. The first tenet of Christian Science, as given on page 497 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, is as follows: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life;" and it is a noteworthy fact that Christian Scientists are earnest students of the Bible, and that their faith in its teachings has been strengthened by the study of Christian Science.

Our critic complains that Christian Science encourages man to believe that he has "an inherited right to immortality." But this is not said of mortals. Science and Health teaches (p. 262) that "by putting 'off the old man with his deeds,' mortals 'put on immortality.'" The critic asks, "How does 'Christian Science as it is' compare with Jesus' teachings?" Christian Science heals the sick and sinful in obedience to Jesus' command, thus proving its faith by its works. The fact that Truth destroys sin and sickness proves that they are no part of God's creation, which He pronounced "very good."

It is difficult to see why our critic objects to the phrase on page 16 of Science and Health, "Thy kingdom is come," when the Master said, "The kingdom of God is within you;" also, "The kingdom of heaven is at hand." His contention that "if God did not antedate man He could not create him," is answered in that man as the image and likeness of God, or His reflection, has always been with the Father; for as it is impossible to think of the sun without its rays, so we cannot conceive of the infinite intelligence, or Mind, as existing without its representative idea, or man. What often seems to us a new creation of Truth is only a revelation of that which always existed. Jesus said, "Before Abraham was, I am."

Again, the fact that a patient healed by Christian Science increases in weight, does not disprove the teaching of Christian Science concerning God's allness, or the Bible teaching that God, Spirit, is everywhere present, any more than the fact that Jesus brought Lazarus back from the dead in a fleshly body disproves his teaching that "the flesh profiteth nothing." The gentleman says, "When the patient dies, is the allness of Spirit demonstrated?" In the same spirit one might ask, When Paul passed away from this earth did that disprove his statement that Jesus Christ "hath abolished death"?

In Genesis we read that God gave man dominion over all the earth, and the psalmist says, "Thou hast put all things under his feet." Yet we read in Hebrews, "But now we see not yet all things put under him." Nor is this a contradiction, for there are many things, even on a material plane, which our limited vision sees not yet. In answer to the question, "When will 'Christian Science as it is' be demonstrated?" we may say that one can only demonstrate Christian Science in proportion to his understanding of it. Again, our critic says, "If God knows nothing of sickness, sin, and death, what suggested to Him the need of Science and Health?" The Bible says, "Thou art of purer eyes than to behold evil, and canst not look on iniquity," yet we read in John, "God so loved the world, that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life." The sun does not need to know of the darkness it destroys.

The gentleman tells us that he "is not endeavoring to ridicule Mrs. Eddy, for he was at one time in the same confusion." It is quite apparent to any one who understands Christian Science that the critic's ideas of this teaching are still confused. He then wrests a few incomplete sentences from their context, and tells us that "those who accept the Bible as God's Word can see from the following list of quotations that Christian Science is an anti-Christian, ransom-denying doctrine." This unfair proceeding of wresting a few lines from their context would make a mere jargon of any piece of literature. By such a process one might prove by the Bible that "there is no God." Given in its completeness the statement reads, "The fool hath said in his heart, There is no God."

Our friend may also find that Jesus said, "Judge *not*, that ye be not judged;" and that Paul said, "Therefore thou art inexcusable, O man, whosoever thou art that judgest: for wherein thou judgest another, thou condemnest thyself." A religion that heals the sick and reforms the sinner, as Christian Science is doing, cannot be called anti-Christian.

✧

[Lloyd B. Coate in *Steubenville* (Ohio) *Herald*]

There is a vast difference between what critics think Christian Science to be and what it really is. When it is rightly understood it can have no other effect upon one's life than to increase his faith and reliance in the true and living God. It awakens a greater love for the Bible, and a greater desire to strive to follow in the footsteps of Christ Jesus.

Mrs. Eddy never boasted that she would not pass through "the valley of the shadow of death," but she believed in and exhorted and encouraged Christians to accept Christ's promise of eternal life. The unjust and unkind thrust at Mrs. Eddy, who advocated "more faith in living than in dying" (Science and Health, p. 368), when closely analyzed, is not so much an attack on her as it is on the Founder of Christianity, Christ Jesus, who is responsible for this life giving teaching. It was Jesus who said: "I am come that they might have life, and that they might have it more abundantly." "I am the resurrection and the life: he that believeth in me, though he were dead, yet shall he live: and whosoever liveth and believeth in me shall never die. Believest thou this?"

Our critic is reported as saying, "Whenever you find a woman embracing Christian Science you find a woman who never had any regard for his (Jesus') personal honor, if she does not eventually come back to him." Many of the men and women now interested in Christian Science were formerly members of evangelical churches. Instead of Christian Science leading them astray, it has led them to accept more fully Jesus' teaching. Christian Science teaches that mankind can be saved only through Christ, Truth, as taught and demonstrated by Jesus. As a matter of fact, the people who have gained an understanding of Christian Science have more faith in Christ than they had before knowing of Christian Science.

Our critic refers to the material blood of Jesus as though matter or something material is the redeeming power. Jesus said, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." When Simon Peter discerned the Christ, Jesus at once informed him that spiritual discernment was not revealed by flesh or blood, but that God had revealed this understanding to him. Mrs. Eddy's views are in accord with this spiritual thought of the Master. She says that Jesus' "true flesh and blood were his Life; and they truly eat his flesh and drink his blood, who partake of that divine Life" (Science and Health, p. 25). This explains how we are to have redemption through Jesus' blood.

When Christian Science speaks of man as being incapable of sin, it refers to man as the true spiritual idea of God, and not to mortals. If any one will read the Christian Science text-book, "Science and Health with Key to the Scriptures,"

Digitized by Google

from an unprejudiced standpoint he will readily see the distinction Mrs. Eddy makes between man as the true image of God and a sinning mortal man. Christian Science most emphatically condemns and denounces sin. Christian Science bestows no encouragement on the sinner because it classifies sin as an illusion, for it likewise teaches that sin must be grappled with and overcome in Christ's own way,—through understanding that God is omnipotent and beside Him there is no other power. Christian Science teaches that suffering will last as long as the sin lasts, as long as mortals continue to make a reality out of that which is unreal,—having other gods before Spirit. Christian Science teaches that what God has made will abide forever, and that nothing else is eternal. If that which God has made is real, then that which He did not make can only be rightly classified as unreal, even though it may be painfully real to human sense.

Evidence of Christian Science healing can be found in almost every city. Christian Science is leading many people out of the depths of infidelity and atheism into the light of God. If we would obey Jesus' teaching, judgment should be made of Christian Science according to its fruits.

✧

[Robert S. Ross in *Yates County Chronicle*, Penn Yan, N. Y.]

If our critic's theory of the atonement is the correct one, the supreme sacrifice of Christ Jesus absolves us from the responsibility of working out our own salvation; he has worked out the salvation of all mankind for all time, and we have little more to do than to hold to this belief. Christian Science, however, declares that Christ Jesus was the Way-shower, that he set us an example, and that only by overcoming all evil in our lives, as he by triumphing over his stripes or experiences overcame it, can we hope to exchange the cross for a crown. On page 18 of Science and Health Mrs. Eddy writes, "He did life's work aright, not only in justice to himself but in mercy to mortals,—to show them how to do theirs, but not to do it for them nor to relieve them of a single responsibility."

God is Spirit; therefore His creation, including man in His image and likeness, must be spiritual and perfect. The opposite of Spirit is matter; therefore a material universe, including mortal man, involves error; it cannot be spiritual and perfect. As Mrs. Eddy says in Science and Health (p. 29), "Jesus was the offspring of Mary's self-conscious communion with God," but the Christ, Jesus' real being, toward which he was ever striving and which he eventually attained by putting off the material for the spiritual, was and is divine. Jesus certainly did not reach perfection until he rose above imperfect material conditions. On page 313 of the same book Mrs. Eddy writes, "Jesus of Nazareth was the most scientific man that ever trod the globe." This is a tribute that will be appreciated by the world in the proportion that it grasps the real import of Christ Jesus' mission. Neither directly nor indirectly did Mrs. Eddy ever question the superiority of Christ Jesus over other earthly personalities.

If, as the critic admits, suffering is a "stern reality," it is from God; for only that which is eternal is real. Now we know that Jesus came to do the will of God. If sin, disease, and death are from God, it was destroying God's work for Jesus to overcome them. But Jesus was not disobedient. He did not come to destroy anything that God made, but to destroy the works of the devil. If sin, disease, and death are not from God, they are unreal; and if they are unreal they can be destroyed through the understanding of the truth of being. If God were the author of evil, to try to overcome it would be useless.

In order to arrive at the facts about any great career, one should consult those who are in sympathy with that career. Was not John better qualified than a member of the Jewish Sanhedrin to speak authoritatively of the life of Jesus? This being the case, why should not the critic look to "The Life of Mary Baker Eddy" by Sibyl Wilbur, rather than listen to the fulminations of one who has spent the greater part of his life looking for new ways to attack and discredit the gentle woman of whom the late Clara Barton, founder of the American Red Cross, wrote: "She is the one person, regardless of sex, living today, who has done the greatest good for her fellow creatures;" and to whom a former Governor of her native state referred as "New Hampshire's greatest woman."

✧

[Warren O. Evans in *The Providence* (R. I.) *Journal*]

It was with some little surprise and not altogether without amusement that I read the article entitled "Christian Science in Japan." This article was copied from the *Watchman-Examiner*, and from its title one would naturally expect to find an exposition of the progress of Christian Science in Japan. On the contrary, the statement is made that "Tenrikyo in Japan corresponds to Christian Science in America." Then to substantiate this claim the would-be informant goes on to say, "Physical healing is a part of the belief, but not so much emphasis is laid upon it as is done by Christian Science; the special purpose of Tenrikyo being moral rather than physical."

Christian Science is not in any way allied with any sect or belief, but stands firmly upon the teachings of Jesus alone. No special emphasis is laid upon the physical healing other than that such is the fruit or proof of an understanding of divine law as exemplified by Christ Jesus. To prove that one is a true follower of the Christ, one must begin to produce the results of that discipleship. As Jesus says, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

The article further states that "like Mrs. Eddy, Mrs. Nakayama claimed to be the special representative of God." Mrs. Eddy never claimed any such position. What she did claim for herself was that she was the Discoverer and Founder of Christian Science, and "a willing disciple at the heavenly gate, waiting for the Mind of Christ," as we may read on page ix of the Preface to the Christian Science text-book, "Science and Health with Key to the Scriptures."

Again we read, "Like Christian Science, Tenrikyo is pantheistic." This likewise is far from the truth, as any one who has studied Christian Science would easily realize. To show what Mrs. Eddy thought on this particular point, I will quote from her Message to The Mother Church in 1898 (Christian Science *versus* Pantheism, p. 2): "At this period of enlightenment, a declaration from the pulpit that Christian Science is pantheism is anomalous to those who know whereof they speak—who know that Christian Science *is* Science, and therefore is neither hypothetical nor dogmatical, but demonstrable, and looms above the mists of pantheism higher than Mt. Ararat above the deluge."

✧

["The Man on Watch" in *The British Whig*, Kingston, Ontario, Canada]

A minister in a Kingston church declares that Christian Science is neither Christian nor scientific. Highly educated men and women who have benefited by this teaching say it is both, and judging by the type of people who attend the Johnson Street church the Lampman thinks it must be a pretty good kind of religion.

Editorial

The Memorial to Mrs. Eddy

THE Christian Science Board of Directors is pleased to announce that sufficient contributions have been received to complete the memorial to our beloved Leader, Mary Baker Eddy, and that the memorial fund is now closed. The Board has been glad to receive and expend this fund, and thus carry into effect the spontaneous and loving wishes of those who have contributed to it.

A Humanitarian

IN the by-laws of The Mother Church Mrs. Eddy wrote for the guidance of practitioners, "A Christian Scientist is a humanitarian; he is benevolent, forgiving, long-suffering, and seeks to overcome evil with good" (Manual, Art. VIII, Sect. 22). By this description Mrs. Eddy sought to establish an ideal in the thoughts of those who undertake the work of healing the sick which would make them worthy to be known as followers of the great Master,— he who came to "bind up the brokenhearted, to proclaim liberty to the captives, and the opening of the prison to them that are bound." A humanitarian is one actively concerned in promoting the welfare of his kind. To be benevolent is to have a disposition to do good; to possess or manifest love to mankind, and to have a desire to promote men's prosperity and happiness; to be kind and charitable.

Mrs. Eddy's high ideal of a practitioner, which she expressed in the by-law referred to, is one that transcends the common aims and desires of mankind, and would lift its possessor into the realm of the Christlike. Fulfilled in its entirety it would exalt the work of practitioners above and beyond the mere seeking of a livelihood, keep it sacred, as it should be, from the sordid motives of commercialism, and relegate to the rear all thoughts of personal ease and selfishness which would hamper this work and make the practitioner more solicitous about his remuneration and the amount of it than he is about the spiritual content of his treatment and the healing and blessing of his patient.

The ideal of this by-law is the same which Christ Jesus placed before his followers when he said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." It was because they lacked this ideal that our Master rebuked the people who had followed him to Capernaum after he had fed them on the mountain by the Sea of Galilee. To these people who he perceived would "take him by force, to make him a king," his word was: "Verily, verily, I say unto you, Ye seek me, not because ye saw the miracles, but because ye did eat of the loaves, and were filled."

That "the laborer is worthy of his hire" is an axiom both of Scripture and of humanity, but in neither case does it imply that the laborer shall take advantage of the necessities, the fears, or the trust of those who appeal to him in their extremity. He is—if he is a true Christian Scientist—a humanitarian, and he is seeking first the kingdom of heaven. It is not to be inferred that when Mrs. Eddy advised that "Christian Science practitioners should make their charges for treatment equal to those of reputable physicians in their respective localities" (Miscellany, p. 237), she had in mind the excessive fees charged by some physicians, which have not redounded to the credit of their profession. The work of a Christian Science practitioner is not a trade or profession, nor primarily a means for earning a living or of acquiring wealth or social position. It is a sacred ministry to mankind in which none but those who are humanitarians should engage, and because of its sacred character those who do engage in it should be ever on guard against every temptation which would lead them away from the narrow path of consecrated effort into the broad road of what the world adjudges material success.

ARCHIBALD MCLELLAN.

Peace Through Victory Over Evil

THE world is being called upon to win a great victory in order that it may register a lasting and not merely a convenient peace. Not since Jesus uttered his inspired word of supreme forgiveness on the cross, "Father, forgive them; for they know not what they do," have the Christian nations been put to a clearer test of their Christianity than at this hour. But the conventional, hereditary creeds and doctrines of national religions cannot usher in this needed victory; only the spiritual understanding of the truth of being, which is present on earth today as Christian Science, can bring peace through victory over evil.

If the nightmare of the present world chemicalization is real, in the sense that it is part of God's scheme and law, then it can never be obliterated, and the evils perpetuated under its cloak should never be forgiven or forgotten; but the scientific explanation of the unreality of evil taught by Christian Science can bring a righteous peace to the disturbed nations of the earth. This victory, however, must be earned, just as Jesus' supreme utterance on the subject of forgiveness was the result of his gradual conquest over the human belief in the reality of evil. The necessary footsteps must be taken by nations as well as individuals, and in Christian warfare a negative or neutral attitude of mind cannot avail.

Not only must the nightmare itself be seen as unreal, but its supposititious causes and its subtle attempts at perpetuation must also be courageously faced before they can be reduced to nothingness and the victimized nations be freed. In this labor of love, scientific understanding must conquer "spiritual wickedness in high places," else the latter will continue to deceive humanity and at the first unguarded moment will break forth afresh to oppress and devastate. The secret mental manipulation by which the good intentions of nations and rulers are perverted, must be overcome by those who spiritually understand the essential powerlessness of such maneuvers and who have learned to forgive scientifically. Mrs. Eddy described the problem of this hour when she wrote prophetically: "The march of mind and of honest investigation will bring the hour when the people will chain, with fetters of some sort, the growing occultism of this period. The present apathy as to the tendency of certain active yet unseen mental agencies will finally be shocked into another extreme mortal mood,—into human indignation; for one extreme follows another" (Science and Health, p. 570).

This "extreme mortal mood," if it were to take the world wholly by surprise, might prove uncontrollable; but that which is to rob it of its sting and restrain its malice has already been provided by the saving grace of Christian Science. Indeed the hour is at hand when divine compassion, fortified by the realization of the unreality of evil, must rise so high that in its inexhaustible mercy it can compass even the malefactor. Not only must the scientific Christian make unreal to himself the horrors of carnal warfare, but he must learn to enter fearlessly into the secret of the supposed causes of these horrors and read mortal mind's purpose under the rays of truth's illumination. The willingness of the Discoverer of Christian Science to prick the bubble of "spiritual wickedness," set an example which must be followed by every one of her followers.

Digitized by Google

Nations and rulers must follow in the footsteps of truth and separate the criminal from his crime, the producers of wars from the consequences of their own wars, just as the Christian Scientist is learning to save person from personal sense and the mesmerist from his own mesmerism, not by destroying humanity, but by saving it from its sins. This is the victory over evil through which peace is coming to earth. In that hour it shall be said, as was written in II Chronicles: "And Hezekiah sent to all Israel and Judah, and wrote letters also to Ephraim and Manasseh, that they should come to the house of the Lord at Jerusalem, to keep the passover unto the Lord God of Israel. . . . So there was great joy in Jerusalem: for since the time of Solomon the son of David king of Israel there was not the like in Jerusalem."

WILLIAM D. MCCRACKAN.

✧

God as Principle

ONE student of Christian Science recently remarked to another that Christian Scientists sometimes seem to overlook the great importance of understanding divine Principle as the basis of all their work. The speaker added that she had observed in many cases that a lack in this direction on the part of students and workers was responsible for imperfect results, and that we should all be more alive to this vitally important question. The one addressed was led to think upon the statement on page 465 of Science and Health, namely, "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love."

Those unacquainted with Mrs. Eddy's teachings would perhaps readily admit that God is supreme, but they would doubtless pause before giving their assent to the use of the word Principle as applied to Deity. It happens, however, that even some who have been helped in Christian Science at first shrink from the application of the term Principle to God. They have been accustomed to think of principle as an unconscious law operating throughout the universe and affecting man to an unknown extent; but they have also thought of principle as multiplied into principles and have not seen its relation to the divine nature and hence to man as God's likeness.

At the same time it is encouraging to note that, even where Christian Science is not understood, "a man of principle" is placed high above others; and rightly so, because this would hint at a man of unswerving rectitude and purity of character, which all Christian Scientists love to think upon. As students advance in understanding, however, they see more and more the importance of applying their understanding of divine Principle to all they think and say and do, and they soon discover that this calls for mighty efforts toward the spiritualizing of all their concepts of existence.

We occasionally see works outside of Christian Science which refer to the life principle of men and animals, but it is never even hinted that this principle is a moral and spiritual influence, and that it not only is eternal but that whatever expresses it must like itself also be deathless; yet this is what Christian Science teaches us respecting divine Principle as the Life of man and the universe.

A practising physician, who was also the editor of a medical journal, once remarked to a Christian Science practitioner that he understood disease to be a purely negative condition due to the absence of the life principle. The Scientist responded that this was not what Christian Science teaches, because if it were possible for the Principle of the universe to be absent from one point in space for a moment of time, the whole might be resolved into chaos. It was however admitted that a non-recognition of divine Principle as the Life of man, or a failure on the part of humanity to understand this Principle, is made manifest in the admittedly negative conditions of sin, suffering, and death.

Here we need to remind ourselves that there is but one Principle, and our understanding of this Principle spiritualizes and glorifies our concepts of all things, of life, and truth, and love. No one lives who would willingly be thought unloving or who does not desire to be loved, but the human concept of love is so far from measuring up to the standard of divine Principle that it is responsible for much of the misery of mortal existence. A mother's unselfish love often goes out to her child laden with fear, hence her prayers do not rise above the evidence of the senses, and as the child grows (unless he comes to understand love in the light of divine Truth) he misses the joy and radiance which the spiritual sense of it bestows upon humanity. Even those who begin to see their way in Truth sometimes forget the power of Love as divine Principle. Of old Isaiah mournfully declared that "truth is fallen in the street;" but it was only the mortal concept of truth which had fallen, and not Truth as divine Principle; and when we know what Truth means as understood in Christian Science, we shall also know that neither Truth nor its idea can fail or fall.

ANNIE M. KNOTT.

The War Relief Fund

As a means of further relieving the distress due to the war in Europe and to add to its fund for that purpose, The Mother Church will take a collection at both of its services on Sunday, Feb. 25. This fund will remain open until further notice, and mail remittances may be sent to Adam H. Dickey, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

✧ ✧ ✧

Among the Churches

Current Notes

RACINE, WIS.—One of the principal real estate transfers consummated in this city for some time was closed yesterday [Dec. 22], when the property of First Church of Christ, Scientist, was sold to the Standard Oil Company of Indiana for twenty-five thousand dollars. The members of First Church of Christ, Scientist, have not decided what site they will select for a new location, having several favorable places in mind. However, they have felt the need of a more favorable location for some time. In the mean time temporary quarters will be secured, where services will be held and the affairs of the church will go along unbroken.

Racine Times-Call.

FORT LAUDERDALE, FLA.—The corner-stone of the new church edifice of the Christian Science Society of this city was laid on Christmas morning. The church will cost, with the fixtures and lot, slightly over five thousand dollars. The location is one of the most desirable in the city, being the corner lot on South River Street and Osceola Avenue. This location affords a view both up and down New River and can be plainly seen from many parts of the city, being but one short block from the Dixie Highway bridge and three blocks from the business center of the city.

Fort Lauderdale Herald.

GAINESVILLE, TEXAS.—The Christian Science Society took the first step toward purchasing a permanent church home last May, when it secured an option on the Honeycutte residence at the corner of Denton and Elm Streets, a most desirable location. The purchase was made Aug. 4, 1916, and the building was then remodeled, so that the first service

Digitized by Google

was held Aug. 27. The property is free from debt, and the society is grateful for help received from the Trustees under the Will of Mary Baker Eddy.

TOMAH, WIS.—The new house of worship of the Christian Science church of this city, recently completed and occupied, was formally dedicated on Sunday, Dec. 31. The new church edifice stands at the corner of Oak and Milwaukee Streets. Its outside dimensions are 46 by 56 feet and the seating capacity of the auditorium is about two hundred and twenty-five. The edifice complete with the grounds represents a cost of nearly sixteen thousand dollars.—*The Tomah Journal.*

CAMBRIDGE, IDAHO.—The local Christian Science Society was informally organized and held its first meeting Feb. 22, 1903. These meetings have never lapsed since, and new members have been gradually added. On Dec. 5, 1906, a reorganization was made. The meetings were originally held in the homes of members, but later successively in Artisan Hall, I. O. O. F. Hall, and Majestic Theater. In July, 1916, the little mission bungalow type of church building, erected by the members, was finished and occupied. The location is very desirable.—*Weiser Signal.*

WAUKEGAN, ILL.—Sunday [Dec. 31], for the first time since the former edifice underwent repairs, the members of First Church of Christ, Scientist, gathered in their own structure at the corner of Grand Avenue and West Street. The auditorium and balcony have a seating capacity of one hundred and fifty-nine. Dedication of the edifice will take place later.—*Waukegan Gazette.*

GLENDALE, CAL.—Sunday, Dec. 31, 1916, was a happy day for members of First Church of Christ, Scientist, when they dedicated their new church edifice. This means that the building is free from debt, and that it is an expression of love and gratitude for benefits received.—*Glendale News.*

LOS ANGELES, CAL.—Opening and dedicatory services of the new edifice of Fifth Church of Christ, Scientist, were announced for Sunday, Dec. 17, 1916, at 7107 Hollywood Boulevard, corner of La Brae Avenue.—*Hollywood Inquirer.*

PITTSBURG, KAN.—The Christian Scientists of this city will dedicate their new thirty thousand dollar church Sunday [Dec. 31], free from debt. The auditorium seats five hundred persons.—*Kansas City* (Mo.) *Star.*

OCALA, FLA.—The Christian Science Society maintained a public reading-room at the county fair, Nov. 28 to Dec. 1, and the authorized literature was distributed.

Admission to Membership in The Mother Church

The next admission of candidates will be June 1, 1917. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 9, 1917.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1916, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
236 Huntington Avenue, Back Bay, Boston, Mass.

The Lectures

ROSWELL, N. MEX. (First Church).—**Prof. Hermann S. Hering, lecturer; introduced by James M. Hervey, who said in part:—**

We find among the many sayings of the Saviour that to know God is life eternal, and also that man lives not by bread alone, typifying material conditions, but "by every word that proceedeth out of the mouth of God." This is the Scriptural way of stating that man is not the sport of material circumstances; and that, as Mrs. Eddy says, "man, created by God, was given dominion over the whole earth" (Science and Health, p. 545).

We have progressed a long way during the last few years in arriving at the conclusion that for some reason or other we are not exercising this dominion; we have not realized it. We are conscious universally that we do not possess the power that the Saviour possessed, or that the disciples possessed, or that was exercised for several hundred years after the ascension; that is, we have become conscious of a sense of separation from this power. In Luke's gospel we read of the prodigal son who returned to his father, and Christian Science teaches us how we may regain this lost power, how we may return to the source of life,—to our Father. Now, this would appear to be a matter of great interest, as the Saviour said that to know God is life eternal, therefore any religious movement which undertakes to teach us to know God, that is, achieve life eternal, is very important; it deserves close study and scrutiny. Christian Science is a practical, demonstrable religion.

CAMBRIDGE, MASS. (Harvard University, Society).—John Randall Dunn, lecturer; introduced by Luther P. Cudworth, who said:—

Mrs. Eddy, the Discoverer and Founder of Christian Science, has written on page 323 of her text-book, "Willingness to become as a little child and to leave the old for the new, renders thought receptive of the advanced idea." Is this not what we are all desirous of attaining,—"the advanced idea"? The development hoped for and successfully attained in any educational institution is this very thing, in the degree that it gives the student new and better ideals,—the right mental impetus,—and the correct application thereof. With the recognition of the exactness of science as exemplified by mathematics, does it not occur to you that there must be the same exactness of Principle and rule—the same right application of that rule, with the same definite, correct, and therefore agreeable results—in the greatest of all sciences, the Science of Life? Mrs. Eddy has named this Science Christian Science, and has given the world the Christian Science text-book, "Science and Health with Key to the Scriptures."—*Cambridge Chronicle.*

PORTSMOUTH, ENGLAND (First Church).—John Sidney Braithwaite, lecturer; introduced by Algernon Hervey Bathurst, who said in part:—

It will, I think, be made clear to all that people are today searching, in a way they have never before sought, for something which will give them a practical explanation or answer to the innumerable problems with which they are faced. The world is indeed in need of something which will offer comfort in sorrow as well as freedom from the bondage of sickness and sin, and those who turn to Christian Science find that it offers them a magnificent promise of deliverance. It shows that whatever the troubles are they must be healed in one

Digitized by Google

and the same way, namely, by knowing the truth, or by right thinking,—not believing in evil,—just as was taught and proved by Christ Jesus and his disciples.

There can be but few people at this date who do not know something of Mrs. Eddy, the Discoverer and Founder of Christian Science, who fifty years ago revealed to mankind the fact that the teaching of Jesus the Christ is as practical today as it was nineteen hundred years ago, when the sick were healed, sinners reformed, and the dead raised in Palestine. At that time the great Teacher also said, you will remember, "He that believeth on me, the works that I do shall he do also." Plain language is this, clear and definite instruction, yet still unheeded by so many. We are now in the jubilee year of the great Christian Science movement, which in a comparatively short time has encircled the globe, and has done so by reason of the fact that it has proved that the teaching of the Master can be and must be not only preached but practised.

ROCHESTER, N. Y. (First Church).—William W. Porter, lecturer; introduced by Isaac M. Brickner, who said in part:—

Like many here assembled I am not a Christian Scientist, but only a searcher after truth, wherever it may appear and in whatever guise. As a result of my search after religious truth I feel justified in saying that if a belief in the unreality of sin, disease, and death is a comforting and consoling one, then Christian Science is a comforting and consoling religion, because it teaches the unreality of sin, disease, and death. If to be happy, contented, and cheerful is an ideal state, then Christian Science is an ideal religion, because its adherents are happy, contented, and cheerful. If a religion founded upon the eternal verities is a soul-satisfying religion, then Christian Science is soul satisfying, because it is founded upon the eternal verities. If to be spiritually minded is life, then Christian Science is a vital force among the religions of the day, because no one can be true to the tenets of Christian Science without being spiritually minded. If to be in tune with infinite harmony strikes a responsive and harmonious chord in the beautiful and wonderful symphony of life, then Christian Science is the most harmonious religion of the ages, because no one can be a Christian Scientist without being in tune with infinite harmony. If love is the great motive power and well-spring of human action and the fulcrum upon which the earth revolves, then Christian Science is the most virile and dynamic religion the world has ever known, because it is built upon a solid and enduring foundation of ever present, all-pervading, and comprehensive love.

Christian Science is all this and more. It is a sane and sensible religion, because it concerns itself with the solution of the complex and complicated problems of every-day life, rather than with the vexed and abstruse question of existence after death. It therefore combines a rational theology with a practical philosophy; a theology that deals with man in his relation to this universe, and that makes its appeal to reason rather than to fear, combined with a philosophy that vitalizes thought into action and recognizes in every song of joy a psalm of life.

Lectures to be Delivered

[By Members of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.]

CALIFORNIA—Alameda: Paul Stark Seeley, Unitarian Church, Grand Street, near Santa Clara Avenue, 8 p.m., March 9.
Alhambra: Bicknell Young, Superba Theater, 8 p.m., March 5.
Artesia: John Randall Dunn, 8 p.m., March 3.
Berkeley (Second Church): Clarence W. Chadwick, High School Auditorium, 3 p.m., March 4.
Berkeley (Society of University of California): John Randall Dunn, First Church Edifice, Bowditch Street and Dwight Way, 8 p.m., March 8.
Dinuba: John Randall Dunn, Mission Theater, 8 p.m., March 5.
Los Angeles (Fifth Church): John Randall Dunn, Church Edifice, 7107 Hollywood Boulevard, 2 p.m. and 3:15 p.m., March 4.
Modesto: Paul Stark Seeley, Modesto Theater, 3 p.m., March 4.
Napa: Clarence W. Chadwick, Native Sons' Hall, 8 p.m., March 2.
Porterville: John Randall Dunn, Monache Theater, 8 p.m., March 6.
Ukiah: John Randall Dunn, Victory Theater, 8 p.m., March 9.
ENGLAND—Eastbourne: John Sidney Braithwaite, Town Hall, 8 p.m., March 8.
London (Seventh Church): John Sidney Braithwaite, March 30.
Weston-super-Mare, Somersetshire: John Sidney Braithwaite, Town Hall, 8 p.m., March 22.
FLORIDA—Lakeland (auspices Winter Haven): John W. Doorly, Casino Theater, 3 p.m., Feb. 25.
ILLINOIS—Chicago (Third Church): William W. Porter, Church Edifice, Washington Boulevard and Leavitt Street, 8 p.m., March 8 and 9.
Chicago (Seventh Church): Dr. Walton Hubbard, Church Edifice, 5318 Kenmore Avenue, 8 p.m., March 5 and 6.
Chicago (Fifteenth Church): Dr. Walton Hubbard, Masonic Temple of Austin, Central Avenue and Fulton Street, 2:30 and 4:30 p.m., March 4.
Chicago (Sixteenth Church): William W. Porter, Rogers Park Woman's Club, North Ashland and Estes Avenues, 8 p.m., March 5 and 6.
KANSAS—Eureka: Bliss Knapp, Princess Theater, 3 p.m., March 4.
MASSACHUSETTS—Belmont (auspices Cambridge): Charles I. Ohrenstein, Town Hall, 8 p.m., March 6.
Cambridge: Charles I. Ohrenstein, Scenic Temple, Temple Street, Central Square, 3:30 p.m., March 4.
MICHIGAN—Detroit (First Church): Dr. Walton Hubbard, Church Edifice, Cass and Hancock Avenues, 8 p.m., March 8 and 9.
MISSOURI—Sedalia: Clarence C. Eaton, Sedalia Theater, 8 p.m., March 5.
NEBRASKA—York: Clarence C. Eaton, York Opera House, 3 p.m., March 4.
NEW HAMPSHIRE—Concord: Prof. Hermann S. Hering, Church Edifice, State and School Streets, 8 p.m., March 6.
NEW JERSEY—Englewood: Prof. Hermann S. Hering, Englewood Lyceum, Engle Street and Palisade Avenue, 8:15 p.m., March 5.
NEW YORK—Geneva: Prof. Hermann S. Hering, Smith Opera House, 3:30 p.m., March 4.
OHIO—Ashland: Bliss Knapp, Ashland Opera House, 8:15 p.m., March 8.
Dayton (First Church): Charles I. Ohrenstein, Memorial Hall, 8 p.m., March 8.
Toledo (Second Church): William W. Porter, Coliseum Theater, Ashland Avenue and West Bancroft Street, 3:30 p.m., March 4.
OKLAHOMA—Sapulpa: Bliss Knapp, District Court Room, County Court House, 8 p.m., March 2.
PENNSYLVANIA—Titusville: Bliss Knapp, Woman's Club, 8 p.m., March 9.
TEXAS—Anderson: Ezra W. Palmer, Court House, 8 p.m., March 5.
Corpus Christi: Ezra W. Palmer, High School Auditorium, 8 p.m., March 8.
Fort Worth: Ezra W. Palmer, Chamber of Commerce, Fifth and Thorkmorton Streets, 3 p.m., March 4.
Houston: Ezra W. Palmer, Beach Auditorium, 1110 Main Street, 8 p.m., March 6.
VIRGINIA—Hampton: John W. Doorly, Pythian Castle, 8:30 p.m., March 4.

Testimonies of Healing

It is with the deepest love and gratitude to God that I add this testimony to the mighty strain of praise which is ascending to Him daily all over the world. Over seven years ago, when I was in great distress both mentally and physically, a friend loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. During the two weeks that it took me to read the book, for I read very slowly, trying to understand all that it was possible for me to grasp in one reading, I was healed of stomach trouble, neuralgia, a deep sorrow, and the habit of using wine as a stimulant, which had been considered very necessary to help me through the duties of the day.

Since that time Christian Science has met our every need. We have proved that God protects us from harm at all times when we truly turn to Him. One afternoon my little son was run over by a carriage, the wheels passing over the middle of his body. He was picked up, and every one thought he must be seriously injured, but he declared he was not hurt at all, and proved it by walking three squares to his home. I asked him what he thought when the wheels were going over him, and he said, "Yea, though I walk through the valley of the shadow of death, I will fear no evil." That was all he had time to think, for a crowd had gathered and some one wanted to undress him, as they were all sure he must be injured. He insisted he was not, and his sister also declared he was not, and said she knew I would want them to go home. My son played the rest of the afternoon as though nothing had happened, and at no time has he felt the least discomfort from the accident. We were very grateful to be able to prove divine Love's ever-presence.

My earnest desire is to grow in grace, so as to help others to understand this truth that is freeing mankind from all bondage. I have had many more blessings, which have been added proof of God's love and care for His children.

Mary E. Lumsden, Baltimore, Md.

✧

For over four years I suffered from chronic stomach trouble, and eventually was taken so ill that a doctor was called in. Though he put me on a diet, prescribed medicine, and ordered me to rest, I got no better under this treatment, but on the contrary became much worse. A second doctor diagnosed the case as appendicitis and urgently advised an operation. A consultation was held with another medical man, who confirmed this advice and also said I had a gastric ulcer. He agreed that an immediate operation should take place. As I would not consent to go through the ordeal, they advised a change of diet and ordered complete rest. I continued to get worse, however, and was by this time very thin and weak.

We then called in a specialist, who stated that the bowels were displaced, due to starvation and inability to digest food. He ordered me to use an electric battery, and again entirely changed my diet. I was allowed to eat very little; indeed, was fasting most of the time and took more medicine than food. There was always more or less pain, often intense. At first I gained a little under this treatment, but the improvement did not last, for I fell back and was again losing weight. The doctor was at a loss to know what to do with me. Neuralgia also caused me considerable suffering, and abscesses came out on different parts of my body; indeed, I seemed a hopeless wreck. About this time a sister-in-law in England wrote me that I could be healed through Christian Science, and sent the address of a practitioner here. I knew nothing whatever about Christian Science, but decided to try it. I went to the practitioner, who advised me to read Science and Health, saying that just the reading of this book healed some people; but I failed to understand it at first, being in pain and impatient, so asked for treatment. On the fourth day I had a most wonderful experience; the spiritual uplift was beautiful, and my healing was instantaneous. The disease, and every other trouble, vanished like a dream. I have eaten everything I wanted from that day, and have grown quite fleshy. Since gaining some understanding of Science and Health I have treated my husband and little boy with success.

I can read the Bible and understand it now, something I never did before. I feel a deep love for Science and Health, also for our dear Leader, and am so thankful to know God at last, for we had long ago given up what is generally called orthodox religion.

Lillian House, Parnell, Auckland, New Zealand.

✧

I have received many benefits from the study and application of the truths to be found in "Science and Health with Key to the Scriptures" by Mrs. Eddy. During my high school course it was deemed necessary for me to wear glasses for what is called near-sightedness. For nineteen years I depended on them every day, but after taking up the study of Christian Science I soon laid them off, and have not used them for about six years.

My first demonstration was over acute lung trouble. I had had several severe attacks of this disease and at one time had been confined to the bed for nearly eight weeks under medical treatment. On this occasion my wife and I put into practice what little understanding we had of Christian Science, with the result that I was able to be up and out of the house the day after the attack came on, and to run a mowing machine all the following day.

The application of the truth has been of untold help to me in a business way. Christian Science came to us when we were out on a little ranch in almost destitute circumstances; indeed, foreclosure of a mortgage was staring us in the face. This difficulty was however met and the place disposed of without loss. From that time our business affairs changed for the better, and at present I have a good position with prospects of further advancement.

For all these blessings, and many more, I am grateful to God.—I. E. Dennis, Laramie, Wyo.

For years I had a deep longing to know the truth about spiritual things, and for a long time searched through the writings of a great many of the advocates of one cult and another for the light which I felt must be somewhere if only I could find it. At times the different teachings seemed so contradictory that I knew not what to believe; but always through that period of doubt and uncertainty I held to the promise, "If ye continue in my word, . . . ye shall know the truth, and the truth shall make you free." My longing was wonderfully and lovingly answered, for in spite of an intense antagonism to what I supposed Christian Science to be, I was driven to accept its teachings, and learned that I had been entirely mistaken in my conclusions regarding them.

A neighbor loaned me some Christian Science literature, and through reading it I was enabled to lay off glasses. My father had been blind for three years prior to his death, and as I grew older and the pain in my eyes became more severe I was haunted by fear of the same fate. What a joy it is to begin to realize even in a measure that God sends only good to His children. I was also healed of a severe case of stomach

Digitized by Google

disorder which had become chronic, and an incipient attack of blood-poisoning was overcome in a few minutes.

One healing for which I am very grateful was that of headaches, for they had become so frequent and so painful that I was in constant dread of an attack. These were slow in yielding, but have now almost faded from consciousness. Another trouble was constant fear of financial lack, and a chronic sense of limitation which at times amounted to panic. This, while not wholly eradicated, is growing less and less of a terror as we see demonstrated the practical goodness of God to His children. We have had many beautiful proofs of this protecting care, so that we are able to rejoice that God does give to us just as much as we are capable of receiving.

Christian Science has made our lives brighter, happier, and more useful. It has brought a sense of harmony into our home that we could never have known without it, and has helped in the solution of problems that seemed to have grown to dismaying proportions before we knew how to apply this saving truth. It is for such things, for the improvement, for the rigid self-examination which it compels, that we have the greatest cause for gratitude.

I have had the inestimable privilege of class instruction and feel that it is one of the biggest blessings which could have come into my life. Through daily effort to live this truth I hope to prove my worthiness to be called a student of Christian Science.—Ethel W. Dennis.

✧

It is about seven years since my healing in Christian Science. Before that I was in bed almost three months, then improved enough to sit up, but the muscles were so contracted that my legs were bent nearly double and I was unable to walk. For almost six months I tried different medical applications, but to no avail. Then I began to get discouraged, for I was only about sixteen years old, and to see my friends and schoolmates enjoying themselves actively while I could not do so, filled me with hopelessness.

A sister then came to see me and asked me to go to her home for a visit. I felt it would be too much trouble for her to wait on me, but at length was persuaded to go back with her. One day she asked if I would be willing to have Christian Science treatment, and I said I would try anything. We wrote to a practitioner in a neighboring town, and within three weeks I walked into another room for something to use in my sewing. I have had no trouble in walking since, and my legs are now straight and strong. In all I had six weeks' treatment.

I am very grateful for the many blessings that have come to me in Christian Science, and to the dear Leader who gave this teaching to us from God. My father is a veterinary surgeon and believes in medicine, but he has willingly acknowledged that Christian Science has done for me what medicine could not do, and we are all very grateful for the blessings given us because of it.

Mrs. Martin Johnson, Kasson, Minn.

✧

Our baby, who is nearly two years old, has been helped many times through Christian Science treatment, and we have never had any other help for him when he has been ill. When he was about a year old I stepped on one of his fingers and crushed it so that the nail was torn off. After wrapping the finger up I telephoned to a practitioner for help, and in a few minutes the crying ceased and the little one fell asleep. The next morning the finger was not sore or inflamed, and in less than a week the nail had grown out. To look at it one would not know that the finger had been hurt.

When this baby was about sixteen months old I neglected to put away the can of lye after using it, and he came screaming to me, for he had put some of the contents to his mouth. I again telephoned to the practitioner and asked for treatment. This was about two o'clock in the afternoon. The child's lips had swollen a good deal and his tongue was twice its natural size, but he stopped crying in a little while. That night the swelling had all gone down and by the next night the healing was complete. This was a remarkable healing, as there was much fear manifested by other members of the family. I am most grateful for Christian Science.

Elsie J. Eckert, Klein, Mont.

✧

This testimony is sent as a slight expression of gratitude for the help I have received from Christian Science. My first healing was that of a bad cold which came upon me in the night. The attack was very acute and in the nature of croup. I could hardly breathe, or talk audibly. A Christian Science practitioner gave me absent treatment and I was relieved at once. I went to sleep and suffered from the cold no more. Chronic stomach trouble of years' standing has been driven away by the power of Truth, and an injury that assumed all the appearances of blood-poisoning was cured overnight.

Recently I lost my footing and fell backward down a basement stairway of ten steps, striking on my head and shoulders. My daughter-in-law heard me fall and feared I had been killed, as I am over seventy-seven years of age, but I realized while falling that God is all powerful, and centered my thought upon that great fact. Within ten minutes I was at my work as though nothing had happened. I was indeed very grateful for this wonderful example of God's power, and even more so for the spiritual uplift that came at that time. I have learned by ample experience that God is omnipotent, and thank Him with all my being for His goodness in leading me to this wonderful realization through the presentation of the truth by our great Leader and her wonderful book "Science and Health with Key to the Scriptures."

Martha J. Harris, Salem, Ore.

✧

About thirteen years ago I became interested in Christian Science through the healing of my mother of acute stomach trouble for which she had doctored several years without receiving benefit. My first healing was of extreme nervousness and a structural defect of the eyes. I had worn glasses for years and had been told that they would always have to be worn.

The real test of my faith came about a year later, when I was taken with a most acute attack of appendicitis. Even my mother's faith wavered, so intense was my suffering, and she asked if I did not want a physician. I clung to the truth, however, and with the loving help of a Christian Science practitioner I was free by the third day. There was not even any sense of weakness, though nothing had passed my lips during this period. I have never had the slightest return of the disease, though a sister who had medical treatment for the same trouble had recurrences of it every few months until she was finally treated and permanently healed by Christian Science.

Many other ailments, such as biliousness, headache, and colds, have been overcome. One chronic trouble did not yield for a year or more, but it has long since disappeared, and I can now look back with gratitude to every one of these trials, which are seen only as stepping-stones to a larger and broader unfoldment. My great joy is that I have at last found a religion which can be applied to every experience of

Digitized by Google

life. I have been able to help others in my family, and this has given me the greatest happiness of all. It does my heart good to see them one after another accepting this beautiful truth.

I am indeed thankful to God, and grateful to Mrs. Eddy for giving us this truth which is making new creatures of us all. Life to me would indeed be a blank without Christian Science.—JUANITA A. PENNIMAN, Los Angeles, Cal.

✧

A short time after beginning to read Christian Science literature I had some demonstrations over headache, sore throat, and colds, for myself and our children, and was healed by studying the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. In my father's family there was what was considered hereditary lung trouble, and it was such a great blessing to be free from the fear of inheriting it that my tongue cannot tell or my pen write a description of this new found joy. I knew I had something that money could not buy or any one argue me out of.

We started to read the Lesson-Sermons in 1903, and my husband and I and our elder son joined The Mother Church. Our elder daughter was healed of deafness, and when twelve years old had a beautiful demonstration of her own over a snake bite. She had gone to the field to take some water to her father, and when pulling a lily out of a sheaf of grain a snake stung her arm. A blister formed, but she declared that "God is Love," and that His "creatures" are "harmless, useful" (Science and Health, p. 514), for she had learned this in Sunday school, then hastened to her father to tell the experience, saying, "The little snake did not mean to harm me, did it, papa?" At this time there was an angry patch on her arm the size of one's palm. Her father told her to come to me right away, but when I looked at the arm the redness was gone and only a white spot like a mosquito bite was left as evidence.

In 1905 we had the privilege of class instruction by one of Mrs. Eddy's faithful students. I thank God, who has led us "beside the still waters," and who sent Mrs. Eddy to prepare "a table in the wilderness" to make known to us the Christ, Truth, the bread which "cometh down from heaven."

BERTHA L. ROBERTS, Lime Springs, Iowa.

✧

I feel it my duty to write this testimony, and hope I may be accepted as one more witness to the truth. I suffered from varicose veins and enlarged prostate gland, and doctors and specialists told me my case was hopeless. One day after hearing a stranger speak of Christian Science I looked for one of the churches and found it. Then through the help of a loving practitioner and the understanding obtained of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed after having struggled for two years. My daughter, who was ruptured when three years old, was healed through Christian Science in one absent treatment. She is now a young lady.

For these and many other blessings I am thankful to God, and grateful to our Leader, Mrs. Eddy, who was good enough to share this truth with the world.

JOSEPH HRUBY, New York, N. Y.

✧

My desire is to express my thanks for what Christian Science is doing for me. When it first came to my attention I was in the East. A cousin in Boston was a loyal Scientist, and I became interested to know about her religion. She gave me the *Sentinel* and the *Journal* to read, and they told so much about "Science and Health with Key to the Scriptures" that I wanted to read the book. After a few days of reading the literature I was given the text-book, and as I read hour after hour, hungry and thirsty for what the book gave me, the spiritual uplift which I received was wonderful. I saw at once that Christian Science is Jesus' teaching, and words cannot express half of the good it has been to me in the past fourteen years.

I did not know that I needed healing, but found I *did* need to be healed of many things. Headaches that would keep me in bed a week or two have been overcome, also rheumatism, colds, and a tendency to criticize. Sometimes there is a slight headache, but I never have to go to bed on account of it. Christian Science has taught me to think right and to see others as God's children, hence perfect. It has brought to me joy, happiness, and peace.

For all the Christian Science literature I am grateful. The *Monitor* is an ideal daily newspaper; the Christian Science article on the Home Forum page is to me daily spiritual food. I am thankful for having had the privilege of class instruction, and for the ability to help others on the road to Truth. I give all my periodicals to help others, and am watching and praying that I may show my gratitude by letting my light so shine before men that they may see my good works and glorify the Father for all His benefits to mankind.—EMMA A. MILLER, Piedmont, Cal.

✧

Thankfulness to God for Christian Science prompts me to write this testimony, trusting that some one in need may be led to the truth that sets men free. In April, 1910, I was taken with an attack of inflammatory rheumatism which made me entirely helpless. As I knew that if God could not heal me no lesser power could, a Christian Science practitioner was called. After the first treatment to my surprise I was told that I could get up. The fever and severe pain had been overcome, so that I was able to dress and go down stairs. I had been subject to occasional attacks of rheumatism since childhood, at one time having been confined to the bed a week, but this last attack was more severe than any previous one. The work was so thoroughly done, however, that although this healing took place over five years ago, I have not had a rheumatic pain since.

For more than nine years I have not taken any medicine; the truth has been my only physician. I am very grateful for the physical healing, but far more so for "Science and Health with Key to the Scriptures" by Mrs. Eddy, which has illumined the Bible so that all mankind may know that "the leaves of the tree" are for "the healing of the nations." Since taking up the study of Christian Science I have been far happier, healthier, and stronger than at any time in my life. I know that God does not want any one to suffer; He who can create, can He not make whole? There is nothing too hard for God. The power of the Christ, Truth, is "the same yesterday, and today, and forever." I am grateful to Mrs. Eddy for this practical religion.

MINNIE E. PARMELEE, Milford, Conn.

Christian Science has been my only physician for fifteen years, and has healed during that time all the ailments which have come to me. It has also overcome sorrow. One healing in particular stands out among all the rest, that of what is called lockjaw. This condition was first noticed at the breakfast table one morning, and from then on I suffered great pain. It was impossible to force the jaws open, and for several days only liquid nourishment was taken.

At that time I was young in Science and anxious to work this out by myself, but as a day or two went by and there

Digitized by Google

seemed to be no change in my condition, I asked for help. Soon the pain ceased entirely, and in a day's time the jaws began to relax, so that by the end of the week I was able to use them normally. During this period no time was lost from my work. This demonstration was a proof to me that the only operation necessary is that of divine Truth and Love, which leaves us with a higher sense of God and of man's relation to Him; and this is the perfect recuperation.

MARION CARDER, Kalamazoo, Mich.

✧

I wish to express my deepest gratitude for the many blessings that have come to me and mine through the study and application of the teachings of Christian Science. From infancy up to the age of seventeen I was constantly under medical care, being with my grandfather, a physician, most of the time. Christian Science has, however, brought about a complete change, and for the past ten years I have enjoyed splendid health, having been healed of a skin disease in an aggravated form, also of heart and lung trouble. These physical discords disappeared very quickly through the reading of Science and Health.

Christian Science has been a great help to me in a business way. At the time of taking up the study I lacked confidence in myself, believing that every one else was better fitted than I was to earn a good salary. But I soon learned that my concept of confidence was wrong; that I lacked confidence in God, good. I was enabled during my first year of study to double my salary through realizing my true birthright as a child of God, as taught in Christian Science, and applying the Scriptural advice of the wise man: "Trust in the Lord with all thine heart; and lean not unto thine own understanding. In all thy ways acknowledge him, and he shall direct thy paths."

My experience has proved that Science and Health is indeed a "Key to the Scriptures," for it makes the Bible a new book, teeming with practical lessons for every day. Christian Science is a wonderful preventive agency, for just in proportion to our realization of unity with God we are made free. Jesus said, "Ye shall know the truth, and the truth shall make you free." Christian Science is this truth, and it is freeing mankind from every phase of discord. I am indeed grateful for our Leader, Mrs. Eddy, who has demonstrated this truth for the liberation of all mankind.

ETHEL M. MOORE, Cleveland, Ohio.

[Written for the *Sentinel*]

Love's Wondrous Power

LUMAN A. FIELD

A CRY of deep and dire dismay
Was borne on pinions naught could stay,
So great the need that somber day.

Without a single doubt or fear
The child of God, with love sincere,
Quickly obeyed the summons clear.

Walking in wisdom's holy way,
With faith surmounting all delay,
Love's wondrous power was proved that day.

Hushed was the weary cry of pain,
For Love's dear peace fell not in vain,
And Life divine was found to reign.

O Love! Thy healing power and grace
Restore my soul, all pain erase,
As I behold Thy light, Thy face.

From Our Exchanges

[*Northwestern Christian Advocate*]

Why this war? Not because men denied Christ to the individual heart, but because they refused him a voice in the councils of nations and rejected his offer of social reconciliation. But the truth remains: when nations agree to recognize the claims of Christ in the larger social and national units, then will faith in Christ and his power to save be supreme. We may as well face the fact that many today are questioning Christ's sufficiency just here. A Christ, they say, that cannot permeate the social order and make regnant the law of love in the realm of politics and industry, falls short of the supreme demand. Such reason correctly. And it is with the largest optimism we observe the rapidly increasing recognition accorded this fact by the church itself, and the readiness with which denominational councils are accepting the newer program.

[Clarence Augustus Beckwith, D.D., in *The Biblical World*]

A change is necessitated in our conception of the relation of God to sin. The war is not because God willed it, but in spite of His will. It is an imperfect judgment to declare that the war is a punishment of the world for its sins. A previous question would have to be disposed of,—Why sin at all? We seem to suppose that God sustains a different relation to nations from that which He does to individuals; but the time has come when we shall have to disabuse our minds of such a notion. So far as there is jealousy and hatred and wickedness in nations as truly as in individuals, so far God is not in it. There is, therefore, no possible justification for it. So far as war originates in sin, instead of setting up an elaborate defense of it we say that since it has its rise in a spirit hostile to God's will, He is against it. This we should have acknowledged long ago but for our delusions concerning the divine immanence and our eagerness to hold fast a notion of the divine omnipotence according to which God is responsible for everything which takes place, evil as well as good, sin no less than righteousness.

[*Western Christian Advocate*]

The man of great faith will always find others trusting and following him. "Have faith in God" is an admonition which all Christians ought to heed. There are so many walking in the dark. Their souls are slinking in fear of the shadows. They have no inward assurance of the future. They do not know what to believe. God seems so unreal to them. Christ appears so much a man and yet to have so little in common with them. He was so self-mastered; they are so weak and often shamed by their impulses and passions. He was so certain, so self-assured, so confident in God; they are so uncertain, so much in the dark. If he is human, expressing the possibility of the divine in them, then the distance between them and him is almost impassable. To exercise a faith that girdles the soul like a life saver on a tempestuous sea seems almost impossible. When some man therefore appears among them having a strong and positive faith in God, when he speaks forth with strong assurance, they take heart; they feel him drawing them like magic. He brings them inward assurance, and they come to peace of mind, enjoying the warmth of faith. Have a great faith in God if you want men to follow you.

[*The Christian Work*]

What is the function of the church? It is to proclaim unceasingly the foundational truths upon which mankind is slowly building a better world. All men are children of the heavenly Father, and all men are therefore brothers. The

Digitized by Google

church exists to keep alive those ideas, to sensitize the conscience, and to create an atmosphere in which it will be easier to get justice done. The church is working for wage earners all the time. It is proclaiming principles and holding up ideals which render injustice more difficult and social righteousness more inevitable. It is working also for capitalists all the time. It teaches doctrines which, wherever they are accepted, render employers kinder and more sympathetic.

[*The Continent*]

Whatever vital sense of a unity including all the churches exists today in this country, derives not from the characteristic spirit of denominations but from accumulating individual reaction against their selfish and separative temper.

The practical-minded, however, realize that denominations are facts far too strongly entrenched to be quickly abolished, and their favored policy is to foster among religious bodies cooperation which will forestall rivalries and antagonisms. This is the genesis of the manifold efforts to establish church federations and comity agreements.

Speaking relatively, however, little has yet been accomplished to infuse into the religious mind of the country a sense of Christianity as one indivisible fellowship. And that aim is not to be achieved through accommodations and adjustments; it can only be realized when a broader and less stubbornly traditional way of looking at things religious has come to prevail among church men—when direct loyalty to the person of Jesus Christ has completely transcended all prides of ecclesiasticism.

[*The Sunday School Times*]

Perfect surroundings will never make men perfect. A preacher, describing different types of men and women who come to Christ and are disappointed in what they find, has said: "Then came the social reformer, bent on open spaces and wholesome drains and decent dwellings and living wages. But Paul said, 'The kingdom of God is not meat and drink; but righteousness, and peace, and joy.'" Improved social conditions are results of salvation, never the cause of it. We may properly make them introductions to the gospel; unless we do this, they will fail to lift human nature by an inch.

God's own description of the millennium, earth's golden age, when the social conditions will utterly eclipse the best that any modern social reformer hopes for, is the most overwhelming proof of the failure of mere social service. For after a thousand years of an ideal earth and an ideal society, the number of men who follow Satan in open revolt against God is "as the sand of the sea;" and human nature goes down in black catastrophe, under the deserved judgment of God, in the midst of perfect social conditions. God's plan is the only one that works: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

[*Zion's Herald*]

Civilization, it has been said, is but a secular name for Christianity. The word civilization, like charity, covers a multitude of sins, as well as virtues. The truth is that civilization is not an already achieved finality, but is a progressive realization attained precisely in proportion to the amount of vital godliness that prevails in any community. The gospel of Jesus is a true civilizer, inducing a chivalric culture, because it inculcates an unselfish regard of man for man and emphasizes the ideal state where brotherhood will be an international reality and not merely a sentimental dream. Christianity is not a failure. The reason why civilization is as yet so much of it uncivilized is that Christ has not yet fully had his way with men in the mass. But in the end Jesus and his ideals will win.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than *Science and Health*.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy, $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new catalogue of selected Bibles has been printed by the Publishing Society and mailed to Christian Science organizations listed in the *Journal*. Reading-rooms not receiving copies will please notify the Society.

Owing to the increased cost of labor and materials the Oxford Press of England has twice found it necessary to advance the prices of Bibles to the Publishing Society during the past year. The Publishing Society now finds it necessary to make a corresponding change in its prices to the field.

The cost of manufacturing Bible Cases and *Quarterly* Covers has also increased, and the changes in prices for these articles are listed in the new Catalogue No. 23.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 236 Huntington Avenue, Back Bay, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, one to eleven copies inclusive (cloth only), each $3.00; twelve or more, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book) single copy $6.00; twelve or more, each $5.75.

LARGE TYPE EDITION. Designed especially for the use of first readers. Large type (18-point) on Oxford India Bible paper, bound in leather. Size 10¾ inches long by 8 inches wide. Single copy $7.50, with a discount of 25 cents each when included in an order for twelve or more copies of Science and Health, and in any or all of the different bindings.

GERMAN TRANSLATION. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Pocket edition, printed on Oxford India Bible paper. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Subscription Price

Payable in advance

Annual subscription price, postpaid, in the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, $2.00; six months, $1.00; three months, 50 cents. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to page four in THE CHRISTIAN SCIENCE JOURNAL.

Subscriptions to the SENTINEL will begin with the current issue unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XVII indicates the year 1917; XVIII is used for the year 1918. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound Volumes: Current year or two years previous, cloth, $3.25; half calf or half morocco, $4.00. On earlier volumes write for prices.

Items of Interest

The bill authorizing the secretary of war to make contracts for the diversion of water from Niagara Falls for fifty-year periods was passed by voice vote in the House of Representatives. The bill gives the secretary of war large powers in the supervision and termination of contracts made authorizing diversion, and provides that all such contracts are revocable for violation of the act, or when the power companies do not use the water with a satisfactory degree of efficiency, or when the amount of water diverted is considered as interfering with the use of the Niagara River as a navigable stream or with the scenic beauty of the falls. Opposition to the bill was based mainly upon the alleged inadequacy of the "recapture" provisions to enable the Government to take control of the situation at any time. It was also charged that the bill favors the two power companies which are now using all the water diverted from the falls by the United States, and that no adequate provisions for protecting the consumers of the power from exorbitant prices are included in the measure.

That there is a widespread belief among the people of California that private ownership of large holdings of land, unimproved and uncultivated, is against the public interest, and that large holdings of even improved land is to some extent also against the public interest, is the conclusion of the California State Tax Commission, gained by an extensive questionnaire sent to thousands of citizens and property owners throughout the state, and expressed in a report just made public by the commission.

Stating at the outset that it is "unalterably opposed to the destruction of the principle of private ownership in land," and believing that the "land laws should be so shaped that wholesome private ownership in land should be strengthened and protected," the commission says: "The increasing difficulty and hardship attendant upon the attempts of individuals of small means to procure, retain, and develop a reasonable land holding for farm, residential, or business purposes, and the continued holding of land values in large ownerships in this state, indicate that there is something fundamentally wrong with our land economies." The commission proposes that "a maximum tax be imposed upon the future increase in value of all unimproved land or land not put to any beneficial use, and a lesser rate of tax in the case of land improved or being put to any beneficial use."

The honey production of Guatemala for the year 1916 is unofficially estimated at 600,000 pounds, worth $72,000. The industry has developed greatly within the last five years, due to the introduction of modern methods of housing and caring for the bees, with the result that the production has been increased and the quality improved, until the production of each hive or colony now averages one hundred pounds a year. Where old and crude methods are still followed the average is less than fifty pounds a year. Several colonies yield annually three hundred pounds a hive.

Honey, the product of the native stingless bees of Guatemala, is found in every part of the republic. Black German bees are used by most of the bee keepers, but within recent years Italian queens and other varieties of bees have been imported, and they have been an effective agency in increasing the honey production. Bees thrive in every part of the republic, but the very fine grades of honey are produced at an altitude of 6000 feet and over.

Lyons, which lies between the rivers Rhone and Saône, claims the distinction of being the largest manufacturing center in France, having a population of about seven hundred thousand. The city is an important railroad center, as nine lines enter it at nine large and well equipped stations, after crossing the most important parts of France. Itself an inland city, its distance from various seaports is as follows: Two hundred and fifty miles from Bordeaux, five hundred miles from Havre, two hundred and twenty miles from Marseilles. It is three hundred and twenty miles from Paris. Several great enterprises are established at Lyons, the largest of these being the manufacture of silk. This industry employs many thousands of workmen, while its output in silk materials of all sorts runs into millions of dollars annually. Lyons is easily the largest silk manufacturing city in France and one of the world's silk manufacturing centers. It is also the center of the tinsel industry, in which it easily leads the world. Many automobile manufacturers are at Lyons, including the makers of the Berliet.

Secretary Lane of the United States Department of the Interior has designated as actually or prospectively valuable water power lands approximately seven hundred and fifty thousand acres along the Colorado River and other streams in Arizona. Practically all of the land so designated is within the limits of national forests, monuments, or Indian reservations. That part of the public domain designated as water power lands is practically all in deep cañons and worthless for agriculture. This action preserves opportunity for the future development of a large amount of electrical power in the state of Arizona, and the withdrawal is so made as not to interfere with the selection, entry, and use of agricultural areas.

According to the report of the Bureau of Fisheries, over six million dollars worth of fish was brought into New England ports during the calendar year of 1916. The fishing fleet landing fishery products at Boston and Gloucester, Mass., and Portland, Maine, included 512 steam and sail vessels. These vessels landed at Boston 3089 trips aggregating 98,331,038 pounds of fish, valued at $3,702,365; at Gloucester 2864 trips, aggregating 66,680,548 pounds, valued at $2,159,894; and at Portland 2992 trips, amounting to 20,812,839 pounds, valued at $521,647. The total for the three ports amounted to 8945 trips, aggregating 185,824,425 pounds of fresh and salted fish, having a value to the fishermen of $6,383,906.

Approximately fifty thousand acres have been added to the Whitman National Forest in Oregon. The lands involved are situated on the divide between the John Day, Powder, and Burnt Rivers, in east-central Oregon. Over four thousand acres consist of timber lands which were included in patented entries. As the result of suits brought by the United States, the patents for these entries were canceled by the courts because they were acquired through fraud or mistake, and the lands were returned to Government ownership. The canceled claims carry a total estimated stand of nearly forty-six million board feet of timber.

The acreage devoted to the indigo crop of 1916-17 in British India, based on returns from provinces containing practically the whole area under the plant in that country, is estimated at 756,400, an increase of 114 per cent over the figures for 1915-16. The total yield of dye is estimated at 95,500 hundredweight of 112 pounds each, an increase of 78 per cent.

The exports of fruits from the ports of the Canary Islands to England and France for the last few months of 1916 averaged less than 10 per cent of the normal trade. The withdrawal of fruit ships caused a weekly loss of approximately fifty thousand bunches of bananas. The entire winter tomato crop of the islands, valued at $600,000, was allowed to rot in the fields.

The army appropriation bill, carrying just under $250,000,000, has been reported in the House of Representatives. The bill as introduced is about twenty million dollars less than the last army bill as finally passed. It is considered likely that some increases to the bill will be made during its consideration in each branch of Congress.

During the year 1915 nails to the value of $440,994 were imported into the Straits Settlements, on the Malay Peninsula, from the United States, out of a total importation valued at $503,298. For the year 1914, out of total imports valued at $114,330, the United States supplied nails only to the value of $15,222.

It is conservatively estimated that of the total capitalization of railroads in the United States, amounting in round figures to $21,128,000,000, at least $9,000,000,000 represents increases in the value of land over and above what the companies paid therefor, and issues of stock without actual or prudent investment.

Invoices certified at the American Consulate at La Guaira, Venezuela, show that cocoa exported to the United States during 1916 amounted to 8,064,361 pounds, valued at $1,198,900, about one half the amount exported in 1915.

The proposition has been advanced to construct a national transcontinental highway across Canada, to be called the Kitchener Highway, to give employment to returned soldiers after the war who are out of positions.

Bananas represent the principal export from the Port Limon consular district, Costa Rica, for the United States. There were 4,753,898 bunches, valued at $2,281,871, shipped to the American market during 1916.

Copper smelted in the Russian Ural region during the first six months of 1916 amounted to 9074 short tons, a slight decrease as compared with the output in the corresponding period of 1915.

Perception and Impression

NELLIE B. MACE

THE human mind is in a constant state of susceptibility to influences and impressions. Until the advent of Christian Science it had not been conceived possible to distinguish scientifically between impressions that are real and worthy of permanence and those which are unreal and should therefore be discarded as unworthy of retention. Mortal mind, the counterfeit of divine Mind, assumes the existence of five material senses. Material knowledge consists, therefore, of perception based upon these unreal senses, and the receptivity of mortal mind is necessarily limited to impressions within the scope of these senses. This shows that mortal belief is itself the origin of the material impressions which it receives.

It is this metaphysical fact relative to the human mind that reveals its need of redemptive spiritual sense wholly apart from materiality, through which consciousness may receive the revelations of the actual and divine. On page 214 of Science and Health Mrs. Eddy says, "When it is learned that the spiritual sense, and not the material, conveys the impressions of Mind to man, then being will be understood and found to be harmonious."

Material sense sees and feels material phenomena, nothing more. The reflex impressions received from these phenomena are in fact images arising out of the causal belief that man is material and is endowed with physical organs of sense. These delusive effects of sense-perception will be more readily vanquished when one's efforts are more consistently directed to the overcoming of the fundamental error of belief in a material mind. One may not emerge from reliance upon sense-perception with a single effort, but every one may begin his emergence from the illusion by silencing the first lie of material sense which he detects as a lie, and then the next and the next. Persistently to reverse the material presentations of sense-testimony is to foster habitual spiritual perception. This reversal is necessary because, as Paul said, "the natural man receiveth not the things of the Spirit of God: . . . neither can he know them, because they are spiritually discerned."

Spiritual sense, the Soul-derived faculty which understands God, has just one purpose so far as the human mind is concerned; that is, to cause the human mind to give place to the intelligence which reflects God. Mrs. Eddy writes, "This Soul-sense comes to the human mind when the latter yields to the divine Mind" (Science and Health, p. 85). Spiritual perception must become the constant mode of consciousness; for in just the ratio of the constancy of spiritual vision will consciousness arise out of materiality, and so out of sense-perception of discord, into the actual realization of harmonious being.

One not only has to overcome the sense-impressions which come from within one's personal belief of existence in matter, influenced as that belief is by inheritance, educated trends, disposition, but also has to refuse those external impressions which assail him from other mortals' presentation of various phases of the same belief. It is the habitual inclination toward the side of the spiritual or the material which determines for each individual whether, as he looks out upon life, he shall be able spiritually to discern God's reflection everywhere, or whether through failure to subdue his own material sense he shall accept from exterior influences the reflex impressions of imperfection and woe. Not only must one determine to find his own true consciousness as the reflection of Spirit, but he must, because he cannot otherwise attain metaphysical purity, strive just as earnestly to see all other individualities as God sees them, apart from matter and its manifestations of sin and disease.

It requires great candor toward one's self, during this transition from material conception into habitual spiritual perception, to call one's errors of belief by the only name they can rightly bear when they are stripped of excuses; but one endeavors to cultivate spiritual apprehension for no other reason than to come out of an unreal material mentality. A metaphysician must be more interested in overcoming his own belief in a selfhood subject to material cognitions and impulses than he is in the treatment that self receives at the hands of other people; although if he performs his work scientifically, he will succeed in destroying his own belief in sensitiveness to error and also his belief that other mortals' exhibitions of disagreeable traits and ways are real. He will, in other words, see all forms of discord as manifestations of the one general belief of existence in matter, and will understand that these manifestations are at all times illusive, as is the false mentality which projects them.

It was through the agency of spiritual perception that Jesus the Wayshower was able to keep himself separate from and uninfluenced by the sense-evidence of the material world. From the vantage ground of his own spiritual discernment he refuted for others the belief of sensation in matter. He was able to do this for others because in the wilderness he had first settled with finality for himself the entire unreality of any material sense testimony. All who would overcome sin and disease as Jesus did, must work for the same clearness of vision which he possessed.

The delay which Christian Scientists sometimes experience in overcoming disease or discord may arise from a mistaken attempt spiritually to improve the manifestations of material sense. That which has no real existence cannot very well be improved. Demonstration in Christian Science does not depend upon any condition recognized or reported by material sense; it eliminates material sense. Jesus the Christ displaced material sense with spiritual sense, and through the awakening of the dormant spiritual sense the individual invariably perceived harmony where material sense had appeared to leave its evil impression. The man who was healed of supposedly congenital blindness testified, "One thing I know, that, whereas I was blind, now I see."

In not one of the cases of instantaneous healing effected by Jesus was the immediate physical change possible from the standpoint of sense-testimony; but spiritual sense takes no account of mortal time limitations. Jesus showed that time and space and sentient matter are all unreal subjective

Copyright, 1917, by The Christian Science Publishing Society.

Digitized by Google

states of an unreal mortal mind. He proved that instantaneous change from material perception to the spiritual apprehension of Truth is possible. This change of perception is the one thing to be desired and to be labored for. Whether in any given case the material impressions are instantaneously or gradually displaced by the divine impressions of Mind which are conveyed through spiritual sense, it is certain that the discord, which appears only to physical sense, will invariably disappear when that change comes.

Material sense testifies that it sees a maimed or defective or disagreeable man in matter; spiritual sense beholds the image of God. Spiritual sense is the one medium through which consciousness rises into eternal Truth. On page 531 of Science and Health Mrs. Eddy says: "The human mind will sometime rise above all material and physical sense, exchanging it for spiritual perception, and exchanging human concepts for the divine consciousness. Then man will recognize his God-given dominion and being."

Enemies of Progress

BRIGMAN C. ODOM

One tendency of the human mind is to meddle with affairs which are of little or no importance, and which do not in any way promote moral or intellectual development, to allow non-essentials and petty annoyances to engross attention to the neglect of those things which should inspire mankind and lead to spiritual growth and progress. The manifestation or belief of poor health, supposed to result in mental depression and discouragement, may be holding some one in seeming bondage, and he may conclude that if he could only be well and vigorous all his experiences would be characterized by harmony and progress. Another may be struggling with poverty,—a sense of lack in material things,—and it may occur to him that if he could but have an unlimited supply of material substance the rest of life's affairs would be easy. Still another, through wrong indulgence of some sort, loses self-control and is the prey of perverted appetite and ungovernable passion. After these conditions have become more or less established and are attended with correspondingly unpleasant results, the victim may say that if normal physical functions could be established and a serene mental poise obtained, his principal troubles would be over.

Now the question should not be to get rid of physical pain, to regain bodily strength, to conduct a successful business enterprise, merely for the sake of being comfortable; but it should be to find lasting surcease from those things which would interfere with one's real work, by acquainting one's self with the Principle that will save immediately and completely from all apparent ills, including fear, anger, envy, discouragement, depraved human will, and false appetite. To correct these obvious difficulties the admonition given in the book of Job is pertinent,—"Acquaint now thyself with him, and be at peace: thereby good shall come unto thee."

Christian Science reenforces this counsel, and tells the seeker that in order to get away from all self-indulged and self-imposed troubles and to find health, happiness, and success, he must know God as infinite good, infinite Love, infinite Life, and that he must also know God as an ever present help. With the true knowledge and right understanding of God he knows himself; he knows the truth, and the truth destroys error, heals the sick, makes progress possible and easy. Christian Science fortifies him in his stand for the right. It not only indicates the way, but shows him how to walk in it; it is chart and compass daily, hourly, even unceasingly.

All reality is in divine Mind, and Mind is infinite good, perfect Love. In this refuge of real Mind is a mortal's escape from seeming enslavement. In St. John's gospel it is recorded that "the law was given by Moses, but grace and truth came by Jesus Christ." Christian Science emphasizes this declaration; it discloses the unity between the "Thou shalt not" of the Mosaic decalogue and the "Love one another" of the gospel of Christ. It reveals as the *basis* of both the old and the new commandments the true concept of God as divine, infinite Love, and demonstrates that Love is the fulfilling of the law; it teaches that divine law and gospel concur, and that both have their fulfilment through knowing that there is no reality except Love and its perfect manifestation. Through the application of this teaching the enemies of spirituality, and consequently of true progress, are completely destroyed.

The wise man said, "When a man's ways please the Lord, he maketh even his enemies to be at peace with him." This statement is an expression of true healing, real advancement and growth; it rebukes and destroys all that opposes itself to good. It brings harmony to the physical body; it makes necessary material supply abundant; it restores the spiritual sense. In Isaiah's prophecy we read: "The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them." Man, the image and likeness of infinite Love, has no enemies, but is ever in the full consciousness of his God-given powers, expressing peace, joy, spiritual unfoldment,—all good. This is man's "heritage of freedom, his God-given dominion over the material senses" (Science and Health, p. 228). In right consciousness are boundless possibilities and resources; there is nothing to hinder or to make afraid.

Let Thine Eye Be Single

ALICE HALE COHEN

Christian Science lets in the light of divine Mind upon human affairs through correct reasoning based upon divine Principle as underlying all cause and effect, thus bringing out in logical sequence the necessary steps to be taken. Error, on the other hand, through incorrect reasoning based upon the supposition of life, intelligence, and substance in matter, struggles to hold human affairs under the domination and control of the adversary, or that which would hinder and oppose the advance of truth in the human consciousness. The pretentious arguments projected through this false line of reasoning would attempt to lure thought away from the recognition of divine law and order and endeavor to separate man and the universe from right operation in Principle. It therefore follows that if results are to be held in line with the divine process of unfoldment and fulfilment, reasoning must be held unwaveringly in line with divine Mind unobstructed by human opinions and influence.

Experience teaches that in proportion as we look away from God for supply, wisdom, enlightenment, guidance, these are necessarily lost sight of, as they diminish in the ratio of their distance from the divine source. At no time, therefore, should there be a clearer call for vigilance and alertness than in the election of church officers, as many temptations having as their object the enforcement of human methods and the exercise of human rather than divine control are apt to present themselves.

One of the arguments frequently presenting itself at this time is that one has not been a member of the church very long, hence does not know for whom to vote. The correct solution of a mathematical problem involves unhesitating

Digitized by Google

acceptance of the fact that it must be sought according to a rule and order based upon an underlying mathematical law. Even so should the solution of every problem be sought by the Christian Scientist in divine Principle, which reveals the law and order of spiritual reasoning as being intact. This lets in the light, holding results in line with good, whereas the human reason acting through human opinions can yield nothing but its own darkness. God, divine Mind, alone can enlighten ignorance, as God alone is the source of wisdom. In the light of this understanding the one point to be considered in this problem is the protection of man's God-given ability to act in accordance with divine Principle by keeping thought free from everything which would tend to delay the manifestation of God's spiritual government.

A person may think that it is easier and wiser to ask one of experience for whom to vote than to work patiently and persistently under the direction of Principle by holding the problem in line with correct reasoning and under law and order. It is necessary to discern that back of this temptation lies the argument of more faith in man than in God, more faith in the human than in the divine directing. This argument, if listened to, would shut out God's government from consciousness by holding thought in line with human reasoning, which, devoid as it is of a correct premise, holds within itself no correct conclusion. Those inquired of may have worked faithfully, and the conclusion at which they have arrived may be a wise one, but in the ratio of each individual departure from the correct process of unfoldment, every seeking for enlightenment under the human rather than the divine directing is a solution of one's problem which is held out of the line of light and so is open to the attack of the adversary through the door of human influence.

The older members of a branch church may be tempted to think that they know more about a given question than the younger brethren, hence that it is in no wise erroneous for them to give out their opinion and freely share with others the result of a wider experience. It would be well to silence the adversary with the question, "Shall mortal man be more just than God?" and when freedom from the exaltation of mortal selfhood is obtained, to heed the command, "Strengthen thy brethren." In the light of this corrective reasoning we may turn thought to God in quiet humility, silence human will, and abide in consecrated obedience to and gratitude for the clear line of the spiritual deducement of facts revealed through the teaching of Christian Science.

The broader one's experience the wider is the opportunity to look through and reject every temptation to interfere with our brother's God-given privilege to act in line with this revelation. Clearer too is the call to stand as faithful watchers at the posts of the doors, allowing no thought outside of law to register itself without turning the inquirer in the right direction, toward divine Principle, the one and only source of all true enlightenment. Human plans bring human results; divine plans bring divine results. We submit to the first through the influence of person rather than Principle; the latter unfold with the laying aside of sense and self and the endeavor to blend thought with the spiritual.

There is never a need in our work as Christian Scientists which has not its solution clearly stated in the books of the Discoverer and Founder of Christian Science. The Manual of The Mother Church contains instructions for every problem arising in our duty as church members. In the ratio that each member earnestly studies and applies Section 1 of Article VIII at the time of the election of officers, and holds thought unshaken in this line of light, will results be held under the protection of divine law, bringing out the manifestation of the inner glory, imbued with the light of divine Mind. Obedience to the law and order therein contained will bring us nearer to the comprehension and demonstration of democratic government.

True democracy can be gained only as church members turn as one body with one accord to God, seeking wisdom, inspiration, enlightenment, from Him alone. There is no other way by which church affairs may be held in the line of light, giving freedom from human monopoly, self-interest, self-will, ambition, human opinions, human prejudice, and human influence, all of which are erroneous in proportion as they depart from the direct line of Principle.

Let us then heed the Master's injunction, when he says, "If therefore thine eye be single, thy whole body shall be full of light,"—the church animated by a single purpose, having a fervent love for Principle. We shall thus guard against every attempt of the adversary to separate us from Love, who is the source of every right activity, and whose sole demand is faithfulness to law. Entrenched in the recognition of this great fact, "when the winds of God blow," as Mrs. Eddy says (Science and Health, p. 201), "we shall not hug our tatters" of material belief, but we shall be, as Paul exhorts, "perfectly joined together in the same mind and in the same judgment," and the government of Truth and Love shall reign supreme over all the earth.

✧

Ever-presence

ADA JANE MILLER

It matters not where we choose to locate our thought, as the psalmist discerned so clearly, whether in heaven or in hell, for God, divine Love, infinite good, is ever with us. In heaven we are conscious of His presence; in hell we doubt His existence. In heaven we know that He is omnipotent; in hell we are conscious only of a wretched selfhood that knows no God. The psalmist says frankly that he has discovered that even if he makes his bed in hell, God is still with him. If we find ourselves located where David admits he at times placed himself, what is our remedy? Christian Science here proves itself science perhaps as clearly as under any possible circumstance, and it is for us to apply the Principle it reveals or stay in our uncomfortable bed,—just as we choose. After we have tried the "bed" for a time, we usually have the wisdom to stop bemoaning a hard fate and to turn our eyes inward, with the inevitable result that we discover in our own thought that which built the bed on which we find ourselves. If our bed is in hell, we may rest assured that no one but ourselves is responsible for it.

Some may question this and ask, "Do we not suffer through others?" If we continue to suffer through others' sins it is our own fault. If there is aggressive suggestion that we have been wronged, we know what our duty is as Christian Scientists. If this suggestion finds place in thought, it is quite evident that we have failed to be obedient to our Leader's loving advice in regard to our daily work of protecting ourselves (see Manual, Art. VIII, Sect. 4), and we have carelessly or deliberately broken the first commandment. Have we not admitted as real something which claims to be power but is far from being the power of omnipotent good? If we have admitted this, yielded to it, and finally accepted it as real, we have made our bed in hell, and no one is to blame but ourselves. If the argument presents itself that we are discouraged, weary, or anxious, and we accept the suggestion and affirm it as true of ourselves, in this case as in the former we alone are responsible. Again we have been disobedient to the "heavenly vision" that was revealed to us to protect us from these very enemies; again we find ourselves in the uncomfortable place to which the psalmist refers.

Digitized by Google

But, thank God, we know through Christian Science how to take our bed and ourselves out of hell. We know that our first duty is to see that a false sense of self has placed us there, and that this self-mesmerism is not an expression of Mind, has not a vestige of intelligence. On page 266 of Science and Health Mrs. Eddy says, "The sinner makes his own hell by doing evil, and the saint his own heaven by doing right." Then our next step is to recognize the fact that whatever arrogates to itself power apart from God, omnipotent good, is false. We say that we believe in God; we profess to worship Him as supreme; we call ourselves followers of the Master. But what does this saying, professing, calling, profit us if we admit into consciousness as real every vagrant thought which presents an argument that would blind us to the truth that we are at-one with the Father? This at-one-ment is the central fact of existence, and this fact consciously and constantly realized keeps us ever progressive, efficient workers in whatever may be our profession, and earnest, honest followers of the Master along that upward way which leads to life eternal, life harmonious, now!

Teaching the "first lessons"

ROSE A. LILLY

In the Manual of The Mother Church (Art. XX, Sect. 3) we read in regard to teaching in the Sunday school, "The first lessons of the children should be the Ten Commandments (Exodus, 20:3-17), the Lord's Prayer (Matt. 6:9-13), and its Spiritual Interpretation by Mary Baker Eddy, Sermon on the Mount (Matt. 5:3-12)." These first lessons are not only first chronologically in the Sunday school work, but first in importance, for it is apparent that if they are thoroughly understood and lived, man's whole duty to God, and therefore to himself and his fellow men, would be fulfilled.

It was found by one Sunday school teacher that the children were reciting their concept of the spiritual meaning of the commandments and beatitudes very much as they were reciting the commandments and beatitudes themselves, and it became her constant endeavor to make these lessons more practical and vital to each pupil. Among other methods employed, the children were counseled to observe in their study of the Lesson-Sermon the places where the different meanings of the commandments and beatitudes are brought out; for thereby many helpful lights are thrown on these lessons as they are presented from different angles.

One of the first things to be impressed upon the children in the study of the commandments is the fact that they are law and therefore mean protection; that they are not negative, but positive. They are not a list of things which a normal person would like to do but cannot. They are positive statements of law which govern and protect man; and since the real man, or God's idea, is governed by the law of God, it follows that disobedience to God's commandments or laws by the real man is an impossibility. Just as the people of a community are governed and protected by the laws of that community, though they may be more or less ignorant of what those laws are, so are God's children governed and protected by divine law, even though they may not be fully conscious of this law or its operation. It is only the counterfeit, abnormal sense which would break the commandments, and it is the mortal concept of man which suffers therefrom.

Take, for instance, the third commandment, "Thou shalt not take the name of the Lord thy God in vain." In calling one's self a Christian Scientist one may be said to be taking the name of God, that is, allying himself with the nature of God, because Christian Science stands for a demonstrable understanding of God and His Christ, and when the truth about God and man as His idea is understood and applied to individual experience, it destroys in the consciousness and experience of that individual all that is unlike God and the real man. In other words, the law is emphasized that whenever the truth is correctly and understandingly applied the necessary healing, whatever its nature, must positively result. In reality the name of God cannot be taken in vain; name means nature and character, and when the individual takes upon himself the nature and character of God he cannot do less than work the works of God, as Jesus did, and which he taught his followers to do.

In the writer's experience some of the children find it difficult to remember the beatitudes in their regular order, and it was questioned whether or not much importance is attached to this order, until the discovery was made that each beatitude is a definite step in advance of the preceding. The first, "Blessed are the poor in spirit: for theirs is the kingdom of heaven," seemingly presents two directly opposite states, —poor, yet possessing a kingdom. The "poor in spirit" are not necessarily poor from the worldly point of view or lacking most in spiritual blessings, but rather those who from the depths of a humble and contrite heart realize that God is the only power, as did the publican, of whom Jesus said, "He that humbleth himself shall be exalted,"—his "is the kingdom of heaven." The fact is that one could not really be rich in spirit and be lacking in any good thing, and as Mrs. Eddy points out on page 518 of Science and Health, "The rich in spirit help the poor in one grand brotherhood." The verity that every man, consciously or unconsciously, is seeking the kingdom, guarantees him this ultimate goal,—and this is not only a possibility but a necessity. It is not of itself blessed to be poor or lacking in any sense of the word, but even to the poorest man the kingdom of heaven is a present possibility if he but knew it, and the blessing of health, harmony, and immortality comes in attaining an understanding of that kingdom.

To the next state of consciousness, depicted by the second beatitude, those who mourn are promised relief in the form of comfort; not that it is of itself blessed to mourn, but it is a step in advance inasmuch as it is a recognition of lack; and through the acceptance of the spiritual fact the comfort, a positive state, is the blessing, and thus a step toward the kingdom of heaven is taken. The individual consciousness cannot progress thus far without recognizing the insufficiency of mortal man, and thus the sense of meekness is attained. When meekness serves to reveal man's true status to the individual, then it is indeed a blessing. It is not of itself blessed to "hunger and thirst" after anything, but to the consciousness reaching out for the truth, fulfilment must come, which is the blessing.

With the fifth beatitude advancement is made to a more positive state of consciousness. It is of itself blessed to be merciful, and those who are merciful are promised mercy in return, which is an added blessing. The process of elimination and assimilation depicted in these different steps has necessarily purified to some extent the human consciousness, and to the "pure in heart" it is promised that "they shall see God." Seeing God as He really is, the individual cannot help but see man, God's idea, as he really is, and therefore he has advanced another step and becomes a peacemaker. Not only is there peace between himself and God, but between himself and all mankind, because he sees the true creator and His creation in its perfect order and harmony. This state of consciousness is active and is a law unto itself, because it is the reflection of divine law, manifested on the human plane, and it is powerful to destroy any phase of discord which may present itself.

Digitized by Google

Now comes the test—"Blessed are they which are persecuted for righteousness' sake: for theirs is the kingdom of heaven." The blessing here is in being able to negative the so-called persecution and use it as a step in proving one's self a citizen of the kingdom of heaven, in realizing perfect harmony, now and here. Then "blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake." Even this cannot disturb the individual who has proven the steps that have been taken before; and right now, "amid the jarring testimony of the material senses" (Science and Health, p. 306), even though the assaults of evil seem to draw nearer, and it is no longer "they which are persecuted" but "ye,"—it is then that one can most surely "rejoice and be exceeding glad," for at the present moment he finds his reward in heaven.

Obstacles Surmounted

WILLIAM B. HAINES

In dealing with the subject of seeming obstacles to our progress, let us picture to ourselves a mountain stream rippling and singing over its stony bed as, in response to the law of gravitation, it traces its unerring way down to the sea. Let us also suppose that with intent to obstruct its flow a boulder is rolled across its course. At first the object seems to have been accomplished, for the waters below the boulder are no longer flowing, while those above it may seem to stop their singing; but let us wait and watch, and we shall find fresh hope, for we shall soon see the waters rising. The spring in which the stream has its birth is far above the boulder, and it is still pouring forth unstintingly; so a steady accumulation of water goes on, till at last the top of the obstacle is reached and overflowed, and the stream sings once more. Let us note well the result of the seeming check,—the waters have been lifted higher to form a deep pool, a home for fish, a reservoir of refreshment, a still symbol of peace.

We can all gather simple, helpful lessons from this little picture. The light of Christian Science is daily leading more and more lives to yield to the mighty influence of divine Love and so to start them singing on their way Spiritward. If at times a seeming obstacle is thrust in their path,—a difficulty of any nature,—they should learn lessons of patience and hope from this picture and wait and work on. It is also well to look at the rising waters above the boulder rather than at what seems to be a dried up stream below it. They can then reassure themselves that the springs of joy and wisdom have not been sealed, and that the pure water must rise till the barrier is surmounted.

When the experience is interpreted in this way, from above instead of from below, it becomes entirely a matter for rejoicing. Through it we find, possibly for the first time, those deeper waters of Truth from which nourishing and satisfying thoughts may be drawn. Patience has made more room in consciousness to entertain God's ministering ideas; and great is the gain and the joy of finding within one's reach a still, pure reservoir from which many "wanderers, athirst in the desert," may be supplied with "a cup of cold water in Christ's name" (Science and Health, p. 570).

Keeping this lesson before us in a difficult time, we shall the sooner realize the meaning of Mrs. Eddy's words (Miscellaneous Writings, p. 19): "He who has named the name of Christ, who has virtually accepted the divine claims of Truth and Love in divine Science, is daily departing from evil; and all the wicked endeavors of suppositional demons can never change the current of that life from steadfastly flowing on to God, its divine source."

Selected Articles

[Avery Coonley in *Ottawa* (Ill.) *Republican-Times*]

While Christian Science teaches the unreality of sin as it teaches the unreality of disease and disaster, it substantiates the correctness of its teaching by the overcoming of both sin and sickness. Jesus not only indicated that these were related, as when he said to the scribes regarding the sick of the palsy, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Rise up and walk?" but he also indicated the fact that they do not belong to the eternal realities or the legitimate heritage of man, by destroying them both, although he said of himself, "I am not come to destroy, but to fulfil."

To show that Mrs. Eddy's teaching about sin, gleaned from the Bible as were all her teachings, while showing the individual how to overcome and destroy sin, does not at all relieve him from the necessity of overcoming it, let me quote from page 327 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy: "The way to escape the misery of sin is to cease sinning. There is no other way."

✧

[Thorwald Siegfried in *Bothell* (Wash.) *Sentinel*]

Our critic thinks that Christian Science is false and dangerous; but when he attempts to prove his opinion to be true by stating that Christian Science is the foe of the home and of society he asserts that which is not true. Christian Scientists are proud of the fact that the effect of Christian Science is to make its adherents more law abiding, chaste, and affectionate. Many a family owes the preservation of its home to the regeneration of the husband and father in Christian Science, and if all classes of people gave the courts as little trouble as Christian Scientists do, litigation would be decreasing instead of increasing.

The further statement that the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is "the Bible of the Christian Science churches" is utterly false. The fact is, that in the Sunday services in all Christian Science churches probably more than half of the words spoken are from the King James Version of the Bible; the citations to these readings are published months in advance in *The Christian Science Quarterly* and are studied by Christian Scientists during the week before their delivery in church, so that they are thoroughly understood and applied in daily life. Far from making it possible for Christian Scientists to misinterpret the Bible, as your correspondent charges, it enables them to understand the Bible in its primitive simplicity, unencumbered by the mass of superstition which has grown up in the minds of people through accepting ecclesiastical opinion about the Bible, instead of the Bible itself, as law.

A good example of ministers advancing their own opinion and claiming it to be taught by the Bible is this clergyman's statement, "There is nothing that the Bible lays more stress on than the reality of sin, and it was Christ's chief aim in the world to save sinners." Now, of course the work of Christ Jesus was designed to save sinners, and Christian Scientists will agree with that much of the statement. But the reality of sin is not the chief teaching of the Bible; on the contrary, the record is that "God saw every thing that he had made, and, behold, it was very good." Evil to be real must have been created by God, in which case Jesus would be found undoing God's work; whereas in truth Jesus' ability to undo sin grew out of his knowledge that sin is not created by God and therefore is powerful only as it deceives us into believing it to be God-created and real.

Digitized by Google

The claim that Christian Science heals by human will and suggestion repeats what the Jewish hierarchy did to Jesus; they accused him of healing in the same way. It is no more true of Christian Science than it was of Jesus. Nothing could be further from the truth than that Christian Science teaches that men "can sin all they want to; they only have to say to themselves that sin does not exist, and they go free." If that were true the ranks of Christian Science would doubtless be composed of people trying to find a means of perpetuating sin, whereas in truth they are bent on overcoming it. To quote from page 542 of Science and Health: "Sin will receive its full penalty, both for what it is and for what it does. Justice marks the sinner, and teaches mortals not to remove the waymarks of God."

Christian Science is so new that most Scientists have been either agnostics or adherents of some other religious denominations. They came to Science because convinced that it is the primitive Christianity of Christ Jesus, and because it is demonstrable, as Christianity has always been. It holds them because it makes them conscious of God's presence and omnipotence.

[Editorial in *The Brookline* (Mass.) *Townsman*]

We ask the indulgence of our regular subscribers for this one issue [Feb. 3], as we are repeating an article which appeared in our last number, namely, the Rathvon lecture on Christian Science. Anticipating a heavy demand for copies of the *Townsman* containing this lecture, we printed fifteen hundred extra copies, but our estimate was too small and every available copy was sold before Tuesday noon. The demand still continues, and our only chance to supply it is by reprinting the article in full. We offer no apologies, for the lecture is well worth reading a second time.

✧

[Thomas F. Watson in *Selma* (Cal.) *Irrigator*]

It seems that an evangelist in his revival meetings took occasion to criticize Christian Science, declaring that it "denies God, dishonors Christ, and disbelieves the Bible." Yet the throngs who attend the Christian Science services week after week the whole year through will never hear one word against any other church, religion, or preacher. Christian Scientists are too busy studying their Bibles, healing the sick, and seeking to cast sin out of themselves and others even to watch their neighbors. In a word, they are kept so busy casting the "beam" out of their own eyes that they have no time to attend to the "mote" in the eyes of their neighbors. To all who are seeking to turn the thoughts of mankind toward God and His Christ, Christian Science bids a hearty Godspeed.

Jesus made works rather than words a proof of his doctrine. When the disciples of John came asking, "Art thou he that should come? or look we for another?" he did not preach a sermon on the shortcomings of other religious sects, but pointed to the healing works which he had performed, saying: "Go your way, and tell John . . . how that the blind see, the lame walk," and so on, pointing to his works as a test of his Messiahship. So Christian Science is willing to stand on its merits and to be judged by its works, for through its ministrations many thousands have been healed of disease, of the drug habit, the liquor habit, insanity; in fact, all the ills to which flesh is supposed to be heir have been healed by this Science, for it teaches one to understand and avail himself of the law of God, which St. Paul taught makes us "free from the law of sin and death." It can be proved to any unprejudiced person that Christian Science acknowledges God and His omnipotence, honors Christ Jesus and obeys his precepts, and teaches its followers not only to believe but to understand the Word of God sufficiently to demonstrate it.

Christian Science is the restoration of primitive Christianity, and is based on the Bible, especially the teachings of Jesus and the apostles. Its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, so illumines the Scriptures that many thousands who were strangers to its teachings before studying this Science have become earnest students of the Bible. The second tenet of Christian Science, to which all its church members subscribe, is as follows: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness" (Science and Health, p. 497). Christian Science, far from dishonoring the Christ, as the critic charges, honors him in the way which he appointed, namely, by following in his footsteps.

The fundamental teaching, or "cardinal doctrine," of the early Christian church, which the evangelist says Christian Science denies, consisted of preaching the gospel and healing the sick and sinful in accordance with Jesus' commands to his disciples, "Go ye into all the world, and preach the gospel," "Heal the sick," his final instruction being, "Teaching them to observe all things whatsoever I have commanded you." And the early Christians continued this healing work for nearly three hundred years. Christian Science, which has reinstated primitive Christianity, is repeating this healing work; and the Master said, "By their fruits ye shall know them."

✧

[Mrs. Mary A. Fisher in *The Singapore* (Straits Settlements) *Free Press*]

The lecture that was delivered at the Y. M. C. A. on "The Claims of Christian Science," though intended doubtless to be fair, was so far from a correct statement of Christian Science that I beg the privilege to state through your columns some of the fundamental truths of this Science and to correct some of the wrong impressions given in the lecture.

Christian Science rests on the basis that God is All-in-all, and that man is made in God's image and likeness, as recorded in the first chapter of Genesis. Christian Science distinguishes between absolute and relative truth, claiming only that as real which is the perfect creation of God, eternal Mind, and declaring the false beliefs of sin, disease, and death, which obtain in mortal mind, to be unreal. In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, it is stated on page 345 that "anybody, who is able to perceive the incongruity between God's idea and poor humanity, ought to be able to discern the distinction (made by Christian Science) between God's man, made in His image, and the sinning race of Adam."

It is this distinction that is made between the one infinite, eternal Mind, which is God, and the sinning, erring mortal mind. It is not the perfect idea of God that needs to be healed, but the mortal mind that requires to be freed from its false beliefs of sin, sickness, and death. Christian Science is the truth about God and man, understood and demonstrated. It is neither hypnotism nor mental suggestion.

Christian Science must stand or fall on its own merits as a healing and regenerative power in the world. It has stood the test of persecution and ridicule, and affords proof of its utility in the healing of every manner of disease known to medical science, in the overcoming of sin and the establishment of right thinking in the hearts of men. Its blessed ministrations are encircling the globe, for there is hardly a town or hamlet where some witness to its healing power may

Digitized by Google

not be found. Those who follow its teachings are close students of the Bible, and the Scriptures are illumined for them through the light which is thrown upon them by the Christian Science text-book. In the testimonies of the many thousands who have been healed by Christian Science there is gratitude expressed, not only for the physical healing but for the spiritual uplift, which is acknowledged to be more to them than freedom from sickness.

It is only just to correct the impression given during the lecture that Mrs. Eddy was a woman of little education. It is well known that she received more education than was usual for girls in those days. In her younger days she wrote articles on topics of public interest for several periodicals, for which she was regularly paid, and her poetry was sought for publication by newspapers and magazines. Before her discovery of Christian Science she declined an offer to become associate editor of the *Oddfellows Magazine* with the Rev. Albert Case. The Rev. Richard S. Rust, a prominent Methodist clergyman of Northfield, N. H., who during his life held several important positions connected with religious and educational institutions, had an acquaintance with Mrs. Eddy extending over half a century, and he spoke of her as one of the brightest women he ever knew.

✧

[Carl E. Herring in *Lincoln* (Neb.) *Star*]

The writer was for some time unable to understand the objection which our critic seems to have to the Christian Science statement that God is All-in-all, especially in view of the fact that the allness of God is recognized as a basic truth of all religious thought. The fact, however, that the critic charges that Christian Science is pantheism, the very opposite of what it really is, explains the reason for this objection and shows how a wrong start will muddle the entire thinking.

God is "all-knowing, all-seeing, all-acting, all-wise, all-loving," Mrs. Eddy says on page 587 of Science and Health, and when she says that "the Scriptures imply that God is All-in-all" (p. 331), it is in this sense of omnipotence, and not in the pantheistic sense of God being in all, that the expression must be understood. This illustrates how the uprooting of a passage from its context and the placing of a wrong interpretation upon it leads to misunderstanding. The capitalization and the use of hyphens should prevent the mistake, aside from the fact that every Sunday service contains a repetition of the "scientific statement of being," as found on page 468 of Science and Health, which begins, "There is no life, truth, intelligence, nor substance in matter," and it will hardly be assumed that there is anything in the book flatly contradicting this and teaching pantheism, which is a belief of life and intelligence in matter.

There are fundamental differences of doctrine between Methodism and Christian Science, differences of tremendous import to the health, happiness, and longevity of the human race. They are sharply defined, should be clearly stated, and when so stated should preclude the possibility of clouding the issue by reference to the beliefs of others who neither have nor claim any affinity with Christian Science. The trained theologian does not object to the statement that God is All-in-all, but insists upon another power, opposed to God, in the form of a personal devil. While Christian Scientists find more inspiration in thinking of God as Spirit and as Love, as the Bible teaches, than in thinking of Him as a person, the difference becomes hopeless in the face of the prevailing theological dogma of this other power at war with God, in a doubtful issue; and at this point Christian Science speaks in no uncertain terms, and says to sin and disease in the language of St. John, "The Lord God omnipotent reigneth."

God is either good or He is evil, or both good and evil. God is either supreme or in subjection, or supreme with limitations. There is no doubt where Christian Science stands on these questions, and no doubt where Jesus stood. Let every Christian minister state as clearly where his church stands and there will be no necessity for appealing to the public press to correct misrepresentations in regard to Christian Science. The issue will be clearly presented to the public. Jesus did not say, "Lazarus, come forth," with any halting doubt as to the omnipotence or omnipresence of God. If he had, Lazarus would not have come forth.

✧

[Editorial in *The Paterson* (N. J.) *Call*]

One night a lecture on Christian Science was delivered in this city before a large and enlightened audience, and the following morning the *Call* came out with a column excerpt of the lecturer's remarks. Since then we have received a sharp letter rebuking us for giving so much space to the lecture.

The appeal of the Christian Scientists for "religious liberty" seems to be fair enough. They do not seek to thrust their religion down the throat of any one else; they only ask that they be allowed to worship God in their own way, according to the dictates of their own consciences. Their code of morals is as high as the code of morals of other people; they conform to the laws of the land in their daily lives; they do not seek to overthrow our civic institutions. Why, then, should they not be allowed to worship as they please and to believe whatever they desire to believe?

The most that can be said against Christian Scientists is that they place an interpretation upon the Scriptures that is not the same as that placed upon the same writings by the so-called orthodox churches. They have set up no strange gods, however. They are following, in their own way, the teachings of the same Nazarene upon whose teachings the Christian religion is founded. There is nothing in their teachings that is inimical to the republican form of government, to the moral household, to clean living, or to the well-being of the human race.

It is legitimate for those representing all other denominations to seek to lead people to embrace the teachings of their own several creeds or "faiths." Any one has a right to hire a hall or build a church or rent a lot and proclaim the advantages of his religious belief. It is also legitimate for the Christian Scientists to do the same thing, and they ought not to be interfered with in any such mission. They ought not to be hampered by criticism; neither should a newspaper be called to task for printing any of their lectures, any more than such a newspaper would be in publishing remarks of lecturers of any other denominations or religions.

We pride ourselves that America is the land of religious liberty. It was settled by people who sought to escape religious persecution. It has been made great through a broad-minded policy that gave to every one the right to worship God as he saw fit. So if a group of people decide upon a certain line of worship or conduct, they ought to be allowed peacefully to pursue it "without let or hindrance." Christian Science will never be combated by argument nor crushed by criticism; it is too firmly rooted for either.

Editorial

"Omnipotence and omnipresence of God"

A RECENT editorial in the *Sentinel* called attention to the by-law of The Mother Church in which Mrs. Eddy impresses upon Christian Scientists the necessity for practitioners to be humanitarians. Since that editorial was published there has come to us a letter written to one in need of healing, by one the validity of whose claim to be a Christian Science practitioner may be judged from the quotation which follows:—

"The word sin means intentional mental mistake, and in this light, it is a sin to be miserly, or stingy, and while I do not say that these are present in your case, yet they have been present in nearly all the cases of palsy that I have handled, sometimes in a slight degree, but usually in a great degree. If you cannot find any one that can handle your case successfully, you may write me again, and I will take it up, but my price for a case that takes as much time as palsy is one hundred dollars per month, and the time it takes is from three to six months, to teach the patient enough of Science so that he can get rid of the trouble."

Christian Science practice is a demonstration of the omnipotence and ever-presence of infinite Life and Love. It is needless to say, therefore, that Christian Science treatment is not a matter of bargain and sale, and that the above letter does not express either the method of Christian Science practitioners or the humanitarian spirit in which they meet those who apply to them for help. In the first place it is not according to the teachings of Christian Science to posit any particular sin as the foundation of any particular disease. Furthermore, it is not customary, nor is it consistent with the teachings of Christian Science, for a practitioner to enter upon the treatment of a case with the belief that it is going to be one of a certain duration, which will entail weeks or months or years of treatment. Pertinent to such a belief is the statement made by Mrs. Eddy on page 376 of Science and Health, where she writes: "Some people, mistaught as to Mind-science, inquire when it will be safe to check a fever. Know that in Science you cannot check a fever after admitting that it must have its course. To fear and admit the power of disease, is to paralyze mental and scientific demonstration." She also writes on page 365 of the same book, "If the Scientist reaches his patient through divine Love, the healing work will be accomplished at one visit, and the disease will vanish into its native nothingness like dew before the morning sunshine."

While it is true that not all cases are healed at one visit, yet there can be no question that a practitioner who has confidence in the possibility of instantaneous healing, and whose thought is filled with hope and expectation, is far better equipped for such results than is one who believes that months must elapse and many treatments be given before the healing can take place. The Christian Science practitioner who is worthy of the name is always hoping and expecting that in his treatment he has so clearly realized the truth about God, man, and the universe that the beliefs of disease will be immediately reduced to their native nothingness.

It has been the experience of many who have come to Christian Science as a last resort, when all other treatment had failed and they had been condemned by the kindest and most sympathetic of physicians to a long and painful experience, if not to death itself, that but a very few Christian Science treatments, or possibly only one was all that was necessary to restore them to perfect health and usefulness. Had these people fallen into the hands of practitioners whose faith was so small as to lead them to bargain for a long course of treatment, there is no telling what might have happened.

Mrs. Eddy writes on page 9 of "Rudimental Divine Science," "The thoughts of the practitioner should be imbued with a clear conviction of the omnipotence and omnipresence of God; that He is All, and that there can be none *beside* Him; that God is good, and the producer only of good; and hence, that whatever militates against health, harmony, or holiness, is an unjust usurper of the throne of the controller of all mankind." When the thought of a practitioner is really imbued with this truth, he will not bargain in advance for many treatments, nor will he be particularly solicitous about stipulating in advance for his compensation.

ARCHIBALD MCLELLAN.

Spiritual Equipment

IN Paul's epistle to the Ephesians we find sound counsel based upon his experiences while a political prisoner in the garrison at Cæsarea and afterward in Rome. We find here no hint of condemnation of these brave men with whom he was associated; and though there was doubtless much in their lives which needed correction, he chose rather to emphasize their calm courage, endurance, and self-sacrifice, from which standpoint he made his appeal to those who must perforce engage in the more vital warfare against what he calls "the wiles of the devil." In the sixth chapter of this epistle he directs attention first of all to the needed equipment of the Christian soldier,—the "breastplate of righteousness," the "shield of faith," the "helmet of salvation," and the "sword of the Spirit," which, he says, "is the word of God."

Students of Christian Science sometimes think that the demands of Truth are very exacting, even irksome, when they are reminded of the requirement in the Manual of The Mother Church (Art. VIII, Sect. 6), which reads: "It shall be the duty of every member of this Church to defend himself daily against aggressive mental suggestion, and not be made to forget nor to neglect his duty to God, to his Leader, and to mankind. By his works he shall be judged,—and justified or condemned." Here daily duty is pointed out, and St. Paul's counsel, in the chapter already quoted, is no less emphatic. After telling of the spiritual armor required, he says, "Praying always with all prayer and supplication in the Spirit, and watching thereunto with all perseverance and supplication for all saints." This shows that there is really no difference between the instruction given by this great Christian hero and that given in Christian Science.

The essential need for spiritual armor and weapons, also for unceasing watchfulness, is shown to be a constant requirement of humanity at all times, until the belief in a mind separate from God, good, and wholly unlike Truth and Love, is proved powerless. In the gospel records we are often told that the Master spent the night in watchfulness and prayer, in communion with the Mind which knows the nothingness of evil because it is itself the consciousness of omnipotent good. There we read of Jesus' instructions to his students, when he again and again sought to prepare them for the warfare upon which he had entered, in which he was proving the impotence of sin, disease, and death when arrayed against Life, Truth, and Love. He had, however, to speak in terms which his disciples could understand; therefore he found it necessary to warn them of the subtle devices of the carnal mind. In the sixteenth chapter of Matthew's gospel we read that on one occasion when he did this, Peter actually

Digitized by Google

attempted to rebuke him, saying, "Be it far from thee, Lord: this shall not be unto thee." Then Peter was himself rebuked for his presumption and spiritual ignorance, and was told that this false sense of security came not from God, but was "of men."

As we pursue the gospel story we find that even the disciples, who were so often with the Master and seemingly so near to him, had not at that time learned how to defend themselves "against aggressive mental suggestion;" and so they were made to forget, at least temporarily, their duty to God, to their Master, and to mankind. We however rejoice to find that after experiences in which they proved the utter inability of human will-power to protect them, they were "converted," to use the Master's word concerning Peter; and great was their spiritual triumph over all which sought to overthrow them. Judas alone, as far as the record goes, strayed so far from the truth that he could not find his way back on this plane of experience. In the case of the others, they learned the most vital lessons of life by doing in the Christ-way that which their Master had required of them.

As we read the two epistles of Peter and then the revelation by St. John, we are thrilled by their vision of divine Truth, and are inspired to press on, knowing that we are indeed "able to quench all the fiery darts of the wicked" through our understanding of Truth and Love and our obedience to their high demand.

ANNIE M. KNOTT.

Self-government

Two utterly distinct concepts of government make themselves felt among nations, the autocratic and the democratic. The former assumes in a general way that the state exists as a separate entity and that the governed find their places under it according to conditions prescribed by the state itself. Self-government, on the other hand, places man in the forefront and presupposes certain natural rights for him which he learns to safeguard by establishing a suitable form of government to express his thought. In other words, the first school of thought magnifies state and proportionately minimizes man, while the second magnifies man and views government as a convenience which men in cooperation with one another may alter and adjust to suit their needs or to further their progress out of one condition into another. As stated by Lincoln, democracy is a "government of the people, by the people, for the people."

Without in any way undervaluing the great qualities of other branches of the human family, but merely stating an obvious and universally conceded historic fact, self-government thus broadly viewed has been especially characteristic of the English-speaking people in different quarters of the globe. For many centuries their political point of view has largely coincided with their religious development. In general terms and without dogmatizing it may be stated that they have leaned toward an individualistic conception of Christianity and have not laid much stress upon mere church government as a guaranty of salvation. Civil and religious developments tend to follow parallel lines, and as the people of any nation, for example, have become more democratic in their thought they have become freer both in politics and in religion. In other words, self-government and religious liberty have mutually supported each other; or, to paraphrase the psalmist's statement about righteousness and peace, self-government and religious liberty "have kissed each other."

The metaphysics of the situation is worthy of close study at this hour in world history. Mrs. Eddy lays special stress upon the right of self-government, and in her definition of it carries thought back to the source of all power and authority, namely, to God. She states on page 106 of Science and Health: "God has endowed man with inalienable rights, among which are self-government, reason, and conscience. Man is properly self-governed only when he is guided rightly and governed by his Maker, divine Truth and Love." Again on page 125 we read, "Reflecting God's government, man is self-governed." The teaching of Christian Science therefore emphasizes the close, yes, the inseparable connection between divine government and true self-government, and this explains why it was that Christian Science could only be discovered and founded in a national environment enjoying the benefits of self-government.

Autocracy, or the setting of state above the individual, has its counterpart in ecclesiasticism, which assumes a divinely authorized religious state, obedience to which spells salvation to the individual worshiper, thus denying the apostolic injunction, "Work out your own salvation." Therefore history proves that autocracy and ecclesiasticism habitually flourish side by side and conspire to stifle human rights, both civil and religious; whereas democracy and individual spiritual demonstration cooperate to establish and safeguard the rights of man. Under the latter system the saving of the sinner and the healing of the sick go forward more successfully, for this system is better adapted to welcome the coming of the Christ, Truth, the understanding of man's true nature as the image and likeness of God.

On page 254 of "The First Church of Christ, Scientist, and Miscellany" Mrs. Eddy sums up the natural genius of Christian Science for self-government when she writes: "The Magna Charta of Christian Science means much, *multum in parvo*,—all-in-one and one-in-all. It stands for the inalienable, universal rights of men. Essentially democratic, its government is administered by the common consent of the governed, wherein and whereby man governed by his creator is self-governed."

WILLIAM D. MCCRACKAN.

Announcement

IN answer to numerous inquiries it may be said that the two funds to which the field have been invited to contribute, described in the article "Looking Forward," which appeared in the *Sentinel* of Dec. 2, 1916, are separate and distinct in purpose. The "real estate fund" is to secure title to properties in the vicinity of The Mother Church. The "Benevolent Association fund" is to erect and equip the buildings and provide a maintenance fund for that institution. In sending a contribution please specify for which fund it is intended, or if it is to be divided between the two. Remittances should be made to Adam H. Dickey, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

The following excerpts from letters received from branch churches express the thankfulness of Christian Scientists for the opportunity to contribute to these funds:—

"I am directed by my board to send you the following resolutions which were passed by the members of this branch church assembled in annual meeting on Monday, Jan. 15, 1917:—

"Resolution No. 1.—That we, the members of First Church of Christ, Scientist, London, assembled in annual meeting hereby pledge ourselves to contribute a minimum of £5000 to the two funds referred to in the *Sentinel* of Dec. 2, 1916, to be divided between the two funds at the

Digitized by Google

discretion of The Christian Science Board of Directors in Boston.

"Resolution No. 2.—That a fund be opened by this church to be called the 'Looking Forward' fund, the amounts received thereon to be remitted from time to time to the district manager of the Christian Science committees on publication at the discretion of the board.

"I am further desired to inform you that a collection was taken on the same evening in aid of the Christian Science Benevolent Association, which resulted in the sum of £627 3s. 7d. being collected, which will in due course be forwarded to Mr. Tennant, here in London."

"We take pleasure in notifying you that at a meeting of the members of Second Church of Christ, Scientist, of Hartford, Conn., held Jan. 10, it was unanimously voted to pledge the sum of one thousand dollars in response to the call in the *Sentinel* of Dec. 2, 1916, this sum to be provided by the collections taken on the first Sunday of each month until aforesaid amount shall have been raised, the total amount to be divided equally between the fund for the purchase of real estate adjacent to The Mother Church and the fund for the Christian Science Benevolent Association."

"The members of Second Church of Christ, Scientist, Minneapolis, Minn., in annual meeting assembled, appreciating the privilege afforded to assist in carrying out the purposes of the Christian Science Benevolent Association, in the erection and establishment of a Christian Science sanatorium, and The Board of Directors of The Mother Church in acquiring additional property for church purposes, do hereby pledge the sum of twenty-five thousand dollars ($25,000), to be paid from time to time, and to be applied for the respective purposes, in such proportion as your board may deem best.

"We are also taking advantage of this occasion to contribute the sum of two thousand dollars ($2000) to the fund for the relief of the war sufferers in Europe, herewith enclosing a check for that amount.

"We are deeply grateful to your board for the opportunity given us to cooperate with you in these renewed evidences of your efficient labors in carrying forward the plans and purposes of our revered Leader."

"We take pleasure in conveying to you the information that at the regular annual business meeting of First Church of Christ, Scientist, in San Francisco, Cal., held Monday evening, Jan. 8, 1917, the members unanimously pledged the sum of ten thousand dollars ($10,000) to the Christian Science Benevolent Association and the fund for the purchase of additional real estate, with the understanding that the amount on hand at the end of each month should be forwarded to the treasurer of The Mother Church until the entire sum is paid.

"We gratefully avail ourselves at this time of the opportunity to reaffirm our loyalty and obedience to The Board of Directors of The Mother Church, our purpose always to maintain the integrity of our mighty cause, and our joy and gratitude in being afforded this channel for furthering an expressed desire of our beloved Leader."

✧ ✧ ✧

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday School, 10:45 a.m.; Wednesday, 7:30 p.m., in the church edifice, Norway, Falmouth, and St. Paul Streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley Building (suite 306-307), 420 Boylston Street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company Building (second floor), 45 Milk Street, near Devonshire, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner Building, 1316 Beacon Street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

FAIRBANKS, ALASKA.—The Christian Scientists are using the St. James Methodist Church, having rented it for the winter. Their church on Seventh Avenue was found too small, owing to the growing congregation. In all probability the St. James Church will be used by the Scientists until they build a new edifice on the property which they purchased on Cushman Street some time ago.

Fairbanks News-Miner.

JUNCTION CITY, KAN.—The beautiful new building of First Church of Christ, Scientist, was dedicated Sunday [Jan. 14]. The structure and furnishings, without the land, cost fourteen thousand dollars. Two hundred persons can be comfortably seated at a time.—*Junction City Union.*

STOCKTON, CAL.—Dedicatory services were held yesterday [Jan. 7] at First Church of Christ, Scientist. No Christian Science church is ever dedicated until its indebtedness has been raised, and the services yesterday marked the clearing of the debt on the beautiful chapel.—*Stockton Independent.*

DAYTONA, FLA.—The beautiful fourteen thousand dollar Christian Science church building on the corner of Live Oak Street and Palmetto Avenue is now complete except for a few minor details. The first Sunday service will take place tomorrow morning [Jan. 7]. A testimony meeting was held Wednesday evening. The new edifice is the finest place of public worship in Daytona. The capacity of the main auditorium with its gallery is about five hundred people, and two hundred seats are now in place for the regular meetings. The gallery is so arranged that it may be used for a Sunday school room.—*The Daytona Times.*

PIETERMARITZBURG, NATAL, SOUTH AFRICA.—The last ten months (to November, 1916) have shown good progress and more activity in the distribution of literature in this city. The following pieces have been distributed, practically all by hand: 943 *Sentinels*, 133 *Journals*, 34 *Heralds*, 1364 *Monitors*, and 38 pamphlets. Nearly all the principal hotels, railway stations, police and fire stations, prison, and other institutions now get the periodicals regularly, and they are being read more and more.—*Committee on Distribution.*

✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 1, 1917. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 9, 1917.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 3, 1916, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
236 Huntington Avenue, Back Bay, Boston, Mass.

The Lectures

HOT SPRINGS, ARK. (First Church).—George Shaw Cook, lecturer; introduced by James F. Beasley, who said in part:—

Jesus said, "If ye continue in my word, . . . ye shall know the truth, and the truth shall make you free,"—free from self-imposed bondage, from petty cares, from worry and uncertainties in business, and from the fear of sin, sickness, and death. With the present conditions it is not necessary for me to cite the many problems confronting us today in national, international, and social affairs. There are many people now who believe that there is involved in the solution of these problems a law based on truth, a law that is higher and more far reaching than mere human enactments are; in fact, God's law.

The constant cry of mankind is for health, happiness, and progress. Christian Science, discovered and founded by Mrs. Eddy, is restating the message of the Master and is proving to the world, as Jesus did, that perfect health, genuine happiness, and true progress are achieved only through the spiritual understanding of God and the practical daily exercise of faith, hope, and love.—*The Sentinel-Record.*

CHICAGO, ILL. (Fifteenth Church).—William R. Rathvon, lecturer; introduced by Fred A. Bangs, who said in part:—

Love! What a word! What a world of solace it brings to the thought as it is uttered! Mrs. Eddy, who knew better than we do its true meaning, has written, "The vital part, the heart and soul of Christian Science, is Love" (Science and Health, p. 113). The members of this church have invited us here this afternoon to listen to a lecture on Christian Science, "the vital part" of which is Love,—the Love that the apostle spoke of when he said, "Perfect love casteth out fear;" the Love that heals; the Love that comforts; the Love that redeems the sinner; the Love that makes us all brothers; the Love that is life itself; the Love that is God.

JOPLIN, MO. (First Church).—Virgil O. Strickler, lecturer; introduced by Mrs. E. C. Abernethy, who said in part:—

The spiritual understanding of the Bible, which alone makes it a possible guide to eternal Life, is unfolded in the teaching of Christian Science, and by this teaching the words and works of the Master are illumined and man's practical application of them is made possible. Christian Science brings to us a clearer understanding of God as Love, and through His divine love sorrow is annulled, sickness healed, and sin destroyed. The understanding, even in a small degree, of the all-power of divine Love satisfies the earnest seeker of the truth and fulfils the beatitude, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled."—*Joplin News.*

Lectures to be Delivered

[By Members of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.]

ALABAMA—Mobile: Charles I. Ohrenstein, Battle House Auditorium, 8 p.m., March 16.

CALIFORNIA—Arcata: John Randall Dunn, Arcata Woman's Clubhouse, 8 p.m., March 11.
Berkeley (First Church): John Randall Dunn, High School Auditorium, 8 p.m., March 12.
Eureka: John Randall Dunn, Church Edifice, Eleventh and H Streets, 8 p.m., March 10.
Mill Valley: John Randall Dunn, Outdoor Art Club House, 8 p.m., March 13.
San Francisco (Fourth Church): Paul Stark Seeley, Dreamland Rink, 3 p.m., March 11.

CANADA—Toronto, Ontario (First Church): Prof. Hermann S. Hering, Royal Alexandra Theater, 260 King Street West, 3 p.m., March 11, and Church Edifice, St. George Street and Lowther Avenue, 8 p.m., March 12.

ENGLAND—Harrogate, Yorkshire: John Sidney Braithwaite, The Kursaal, 3 p.m., March 11.

FLORIDA—Tallahassee: Frank Bell, Leon High School Auditorium, 8:15 p.m., March 12.

ILLINOIS—Highland Park: George Shaw Cook, Church Edifice, 125 Hazel Avenue, 8 p.m., March 13.

KENTUCKY—Owensboro: Charles I. Ohrenstein, Empress Theater, 3 p.m., March 11.
Paducah: Charles I. Ohrenstein, Three Links Building, 8 p.m., March 12.

LOUISIANA—New Orleans: Charles I. Ohrenstein, Athenæum, St. Charles Avenue and Clio Street, 8 p.m., March 15.

MASSACHUSETTS—New Bedford: Virgil O. Strickler, Church Edifice, County and Mill Streets, 8 p.m., March 12.
Wellesley: John W. Doorly, Town Hall, 8 p.m., March 9.

MINNESOTA—Mankato: William W. Porter, Mankato Theater, 8 p.m., March 12.
Minneapolis (Fifth Church): William W. Porter, Church Edifice, University and Twelfth Avenues, S.E., 3:30 p.m., March 11.
Minneapolis (Society of University of Minnesota): William W. Porter, Chemistry Lecture Room, 4 p.m., March 13.

MISSISSIPPI—Jackson: Charles I. Ohrenstein, Century Theater, 8 p.m., March 13.

MISSOURI—Carthage: George Shaw Cook, High School Auditorium, 8 p.m., March 16.
Kansas City (Second Church): William W. Porter, Church Edifice, Thirty-first Street and Troost Avenue, 8 p.m., March 16.

NEW YORK—Bath: Virgil O. Strickler, Court House, 8 p.m., March 13.
Buffalo (First Church): John W. Doorly, Elmwood Music Hall, 8:15 p.m., March 15.
Gouverneur: Dr. Walton Hubbard, Unitarian Church, 8 p.m., March 16.
Kenmore (auspices First Church, Buffalo): John W. Doorly, Elite Theater, 8:15 p.m., March 16.
Mt. Vernon: Edward A. Merritt, Westchester Theater, 3:30 p.m., March 11.

NEW JERSEY—Ramsey: Virgil O. Strickler, Superba Theater, Main Street, 3:15 p.m., March 11.

NORTH CAROLINA—Kinston: Dr. Walton Hubbard, Court House, 8:30 p.m., March 12.
Newbern: John W. Doorly, Court House, 8:30 p.m., March 6.
Rocky Mount: Dr. Walton Hubbard, Church Edifice, South Church Street, 8 p.m., March 13.

OKLAHOMA—Norman: Ezra W. Palmer, University Theater, 3:30 p.m., March 11.

OREGON—Coquille: Paul Stark Seeley, Masonic Hall, 8 p.m., March 16.
Klamath Falls: Paul Stark Seeley, Houston Opera House, 8:30 p.m., March 12.
Marshfield: Paul Stark Seeley, Noble Theater, 8 p.m., March 15.
The Dalles: John Randall Dunn, Court House, 8 p.m., March 16.

PENNSYLVANIA—Lancaster: Bliss Knapp, Colonial Theater, Queen and Chestnut Streets, 8 p.m., March 11.
Philadelphia (Second Church): Dr. Walton Hubbard, Orpheum Theater, Chelten Avenue, west of Germantown Avenue, Germantown, 3:30 p.m., March 11.
Wilkes-Barre: Virgil O. Strickler, Church Edifice, 185 South Franklin Street, 8 p.m., March 15 and 16.

RHODE ISLAND—Providence: Edward A. Merritt, Church Edifice, Prospect and Meeting Streets, 8 p.m., March 15 and 16.
Woonsocket: John W. Doorly, Eureka Hall, Exchange Building, 8 p.m., March 13.

TENNESSEE—Knoxville: Charles I. Ohrenstein, Church Edifice, 531 West Fifth Avenue, 8 p.m., March 9.

TEXAS—Austin: Ezra W. Palmer, University Y. M. C. A. Hall, 8 p.m., March 9.

Testimonies of Healing

When the message of Christian Science was first presented to me it was not welcomed, for old beliefs seemed so agreeable that I did not carefully investigate the teachings of Mrs. Eddy. In 1908, however, a rapid and decided improvement in the health of one who was studying Christian Science attracted my attention. To that individual there came through this study a healing which the doctors said could be accomplished in no way but through the power of God. Thus God's law was appealing to my thought through proofs afforded by its good works.

That winter, while residing in Michigan City, Ind., I was told by two physicians that I was threatened with diphtheria. Reluctantly I turned from them to accept the assistance of a Christian Science practitioner, and was quickly healed, so that the disease did not run its predicted course. After a second thorough examination I was released from quarantine and allowed to resume my work. There has been no return of the disease, nor have I had any medical attention since.

A few months later, in a city more than a thousand miles distant, I definitely concluded to investigate for myself the teachings of Christian Science. With new found friends I had resumed the long neglected study of the Bible, and one day when discussing the writings of Paul, what was my surprise to hear the unanimous opinion of these friends that some of the apostle's writings were uninspired. The expression of doubt so startled me that I decided to pursue the matter further, and resolved to ascertain what Christian Science had to say about the subject. I attended a service of the local Christian Science Society, and noted that among the readings from Science and Health was one of Mrs. Eddy's expressions of respect and approbation regarding the words of the great apostle. This was reassuring. From that time I studied to widen my knowledge of the Bible, and that unique and convincing commentary, "Science and Health with Key to the Scriptures," soon proved to me that its author had discovered the truth about the Book of books.

As understanding of the truth unfolded, difficulties were more readily overcome, and numerous ailments have been conquered by Christian Science. The physical healing, however, has not seemed so much of a blessing as the liberation of thought from the tyranny of discouragement, self-pity, and irritability. As a business man it is most gratifying to record the fact that business problems are quickly and certainly responsive to the energizing influence of Love, the supporting and protecting power of Truth. I am daily receiving new and powerful evidences of the unlimited healing, cleansing power of God's word as taught in Christian Science.—Harry E. Cartwright, Chicago, Ill.

✧

It is over seven years since I began the study of Christian Science. The way has been rugged at times, and my work has had to be done thoroughly, but this has made me stronger in faith and understanding. Just calling ourselves Christian Scientists and attending the services does not heal us either of sickness or of sin, but if we take up the study of the Bible together with the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and put its teachings into practice, discordant conditions will yield to the power of Truth. I have proven this beyond all doubt.

When I turned to Christian Science I was suffering from a nervous breakdown and other ailments, including stomach and bowel trouble. Three different physicians did all they could for me, still I was a great sufferer both mentally and physically. After a year and a half of dieting and suffering I called on a Christian Scientist and asked for some literature, which she sent me. I read the articles again and again, and received so much help during an attack of heart trouble, supposed to be caused by the disordered stomach, that I wanted to know more of this healing truth. I attended a service in a near-by city, but took my tablets along with me as I dared not leave the house without them. After the service I talked with the reader, who told me I could be healed and offered to lend me Science and Health. After reading the book for two weeks I laid aside all my medicine, as I knew the healing had begun, and went to the dinner table and ate what I wished without experiencing any ill effect. The healing lasted a long time, but the temptation came to be afraid, and I had to ask for help from a practitioner; nevertheless, I have been led all along the way and have been provided for.

Many beautiful demonstrations over error of all kinds have been made for my children and myself. A few years ago there was a disturbance which seemed to upset me very much and the old trouble appeared to have power over me again, but with the aid of a practitioner it was slowly but steadily overcome. The chapter entitled Prayer in Science and Health was most helpful to me.

I am so thankful to God, and grateful to all who have helped me, that I send this testimony, hoping it may benefit some one. I have not taken medicine since making my decision over seven years ago. My earnest desire is to gain more understanding of the truth and to live up to the teachings of Christian Science.—Rovena Stinchfield, Clinton, Maine.

✧

Words cannot tell of the many blessings that have been mine since I commenced to study the Bible in the light of Christian Science. When I was in high school, spinal irritation began to manifest itself, and frequent attacks of illness interfered greatly with what I wanted to accomplish. Later the attacks were much harder and longer. After a protracted illness I went to Chicago, and for many months was treated by one of the best specialists on nervous diseases, but as my health improved I overestimated my strength and had a relapse. Another specialist was consulted, and the trouble was pronounced chronic spinal meningitis. I improved under his treatment, but the trouble again returned and I was confined to my bed for several months.

When Christian Science was called to my attention by a friend who had asked me to try it years before, in my ignorance of its teachings I would have nothing to do with it; but the seed of truth had been sown, and when next it was presented to me I was willing to investigate it. I commenced to read Science and Health in the spring of 1906, and after a short time threw away my medicine and have taken none since. My healing was gradual and perfect. That summer I had an opportunity to go West, but refused it, not wishing to go until my friends knew that I was well and what had healed me. The next spring the invitation was repeated and accepted.

While I was in the West, plans for our public library were under way, and one day I remarked to my sister that I would love to have the position of librarian. Thinking it was too soon to seek it, however, I kept still, knowing that God would give me the work I was to do. I returned home in October, and during the winter the position was offered me without my seeking it. This was one of the many proofs I have had that God does take care of His children; that all we have to do is to realize that there is but one God and to turn to Him for guidance in everything, knowing that He has not asked

Digitized by Google

of us anything that we cannot do, and that as we are obedient the promises are fulfilled.

I wish to express my gratitude to our revered Leader, Mrs. Eddy, who has helped make the way plain. I hope so to live that I may be worthy of the name of Christian Scientist.—SARAH PALMER, Red Oak, Iowa.

✧

It is now several years since I turned to Christian Science for help. Previous to that time I was under medical treatment, but material remedies failed to do me any good, and I was growing worse all the time. According to the statement of physicians my trouble was with the heart and stomach, accompanied by nervous chills. Through Christian Science I have gained in weight, and my general health is so much improved that friends often comment upon it, telling me how well I am looking. My healing seemed to come slowly, the physical conditions improving as my thought improved.

My mother also has been greatly benefited through Christian Science; but while we are very grateful for the physical healing, we are more grateful for the better understanding of Truth and for the illumination of the Scriptures which Christian Science has brought us. Words but feebly express our thankfulness for this revelation of Truth. We realize that the only proper way to prove our gratitude for the blessings received is to strive to live this great Christ-teaching. We are indeed grateful that Mrs. Eddy labored so faithfully and unselfishly to lead mankind to accept the gospel taught by Christ Jesus, which in olden times healed both the sick and the sinful and today is repeating these works.—MARY SHAFER, Covington, Ohio.

✧

When in a condition of mental distress bordering on despair, the evidences of peace and loving-kindness in Christian Scientists whom I knew, caused me to investigate Christian Science. As my father was a minister I was brought up in a religious atmosphere, but even as a child felt the lack of any practical help from these teachings. At an early age I was thrown upon my own resources, and accepting a position away from my home city, drifted apart from the church entirely. From the beginning of my independent career trials multiplied and pressed sorely. I became so harassed, so despondent and broken in health through social, domestic, and financial troubles, that I felt death alone could bring relief, and wished I might die.

A friend spoke to me of Christian Science and persuaded me to procure a copy of Science and Health. What little I could understand of it appealed to me strongly, but like many others I was slow to appreciate its value. Having proven to my satisfaction that neither medicine nor other material methods could help me, I decided to try a change of location and environment, so moved from the city to a remote town. This change brought no physical benefit, but afforded a valuable lesson, as it proved my need to be a change of thought, not of location.

Upon returning to the city I was confronted on all sides with proofs of the healing power of Christian Science, and learned that this healing work was accomplished through a spiritual interpretation and application of the Scriptural teachings. I was indeed happy in the first realization that practical help is available from God through His Word, and the delusion formed by early teaching, that God causes suffering, was gradually dispelled.

This awakening gave me an earnest desire to have the Scriptures opened with the key which the text-book of Christian Science affords, and for nearly five years I have been studying the Word in the new light. It is revealing the allness of good and the nothingness of evil. While the search has been beset with many temptations and obstacles, it has been, as Mrs. Eddy says, "sweet, calm, and buoyant with hope" (Science and Health, p. 109). Ill health, discontent, and fear have given place to health, peace, and loving trust. As I grow in spiritual understanding I realize more fully that the daily problems are not tribulations but blessings, the solving of these problems being lessons necessary to progress.

My heart goes out in unbounded thankfulness to the friends who through their higher understanding have helped me over the rugged places; to those who are contributing through the literature such invaluable help, and above all to our beloved Leader, Mrs. Eddy, who has so clearly presented to this age the true concept of God and man.

MARGARET W. KARPE, Prescott, Ariz.

✧

Christian Science came to me when I was in great need of healing. For two years I had suffered from rheumatism; every joint in my body was affected and my arms were distorted. Hot springs, medical treatment, and other means of relief failed to help me, and I was rapidly growing worse. Christian Science was mentioned to me while at the hot springs, and one week later I returned home and bought the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

From that day my life was changed. All desire for medicine left me from the hour I started reading, and with the help of a practitioner I was healed not only of the rheumatism but of extreme nervousness and chronic bowel trouble. Since then ptomaine poisoning and headaches have been overcome, and an abscess in my ear was healed with one treatment. The physical freedom is something for which to be grateful, but the spiritual understanding of Christian Science means much more to me and meets my every need.

I am indeed thankful to God for the one that was pure enough to give this healing truth to mankind. Never have I enjoyed such good health, such peace of mind, as since I have gained, even in a small way, an understanding of Christian Science.—MAUDE PURCELL, Los Angeles, Cal.

✧

My testimony is given with the desire to encourage those who may have to pass through similar experiences, and openly to glorify the Father. Brought up in a so-called Christian manner, that is, according to the ritual, dogma, and catechism of the worship of an anthropomorphic God, I had abandoned every belief in such a God and become a materialist, even an antireligionist. In the years 1907 and 1908, however, great sorrows, accompanied by loss of fortune, prepared me to receive the Science of Christ. The study of this Science gradually changed my life completely, explaining all that I had never understood and revealing a just God who knows only good.

As I advanced in understanding, the truth delivered me from several forms of bondage. First heart disease disappeared, then the smoking habit of twenty years' standing. Every previous effort to smoke less had grievously failed, but all desire to smoke left me at once, without causing any sense of deprivation. Since that time I have also been able to eat every kind of food which previously made me ill.

In September, 1910, an opportunity presented itself to prove that matter has of itself neither intelligence nor sensation. Some fireworks exploded in my hand and terribly burned it. In the first moment of surprise I suffered, but by turning directly to Truth, with the help of a practitioner who was present, I was able to realize that matter has no

Digitized by Google

sensation. From that instant all suffering ceased to such an extent that I slept calmly, and no swelling or fever was manifested.

The next day, though my arm was in a sling, I climbed a mountain with some friends. In spite of the pessimistic diagnosis given some days later by two doctors of an insurance company to whose examination a contract obliged me to submit, the healing was rapid and no scars remain. This was an occasion for me to leave material insurance and insure myself in truth. It was impossible for me to solicit my neighbor to place his trust where I could no longer place mine, so I resigned from my position as collector for an insurance company; but since leaving my former business I have learned that God, divine Love, never abandons those who put their trust in Him.

Christian Science in giving me the true God, whom I can love above all else, has transformed my mentality and revealed to me the new heavens and the new earth where justice reigns.—Reginald Law, Geneva, Switzerland.

Until I became acquainted with Christian Science I was frequently ill, suffering from dreadful headaches, and nearly every day for twenty years from stomach disorder and other ailments. All these have been completely overcome.

Some time ago I fell from a bicycle, injuring my knee so badly that I was obliged to keep to my room for several weeks. This was an occasion to work seriously for my spiritual advancement, for hitherto my life had been so active, in a material sense, that I was a slave to the belief of being obliged to act like Martha. Until impatience and fear were overcome the healing was slow and the inflammation persistent. I asked help from a friend who is a practitioner, and learned that fear is sin, a lack of confidence in God; that the Bible teaches us that it is "in him we live, and move, and have our being." Finally I could say, in the words of the hymn on page 98 of our Hymnal, that "the longing to be good and true" had "brought the light again." This "longing," lived so faithfully by our dear Leader, Mrs. Eddy, gives her the right to our inexpressible gratitude.

Bertha Law, Geneva, Switzerland.

These lines are written with deep gratitude to those who have contributed articles and testimonies to our periodicals. There has not been one of these which has not contained something that was a godsend at the time. In September, 1915, it seemed best to give up my home in Kansas City, Kan., and go to Shawnee, Kan., to take charge of a grocery store. I managed the store with the help of three men who knew I had no experience and treated me with contempt. Every morning, however, I would rise early, read the Bible and Science and Health, then look over the *Journal* and start about my Father's business.

There were times when the inharmony depressed me greatly, but it only made me realize more clearly the divine ever-presence. Daily I declared that God walked with me; daily and hourly I prayed for help. This lasted until one night in December, when a man who came in inquired if the store was for sale. I told him it was if he made me a good proposition. Two days later I made him the offer to trade the stock and fixtures in exchange for a house and lot, and a few days afterward the deal went through without a drawback.

During those months of trying experience I learned to say, "God's will, not mine, be done;" and in every need I would find somewhere in our literature divine Love speaking a comforting, helpful word. No one can realize my gratitude, for I came out of deep infidelity into this dearly loved Christian Science. I am thankful to God for our dear Leader, whose work lives on.

Mrs. K. C. Roberts, Kansas City, Kan.

It is only right for me to acknowledge to the world through the *Sentinel* the help I have received from the study of Christian Science, and voice my gratitude for it. Christian Science has proved sufficient for every demand made upon it in my personal experience, no other relief for physical ailments having been sought or used for the past four years. I used to be dependent upon my family for support, being considered too weak and frail physically to work, but I have been able to provide for myself ever since coming into Science. It has been a great comfort to know that God cares for all His children. To mortal sense it is not easy for one not trained in any kind of work to find suitable employment, but Christian Science has been of immeasurable benefit to me in this respect.

My greatest joy has been the overcoming for my mother of a painful affliction which had not yielded to other treatment, and from which she had suffered for almost two years. I am sincerely thankful to God, also grateful to Mrs. Eddy and to those of her followers who have so lovingly and willingly assisted me in gaining some understanding of the truth.

Mary Elizabeth Cole, St. Louis, Mo.

It is with a thankful heart that I testify to the healing power of Christian Science. For fourteen years I was kept on a strict diet, being under medical treatment for what was called gastric catarrh. I heard of Christian Science through a friend who had been healed, and so in the autumn of 1910, when medicine failed to bring relief from a severe attack of this trouble, I sought a Christian Science practitioner for treatment. I was told that I might eat anything I wished and it would not harm me. I did so, and was perfectly healed in three weeks. There has never been a return of the trouble. I have also been healed of tuberculosis in its first stage. The doctor said I must go into a sanitarium, and gave me other strict injunctions, but instead I had Christian Science treatment and was healed in a short time. An internal trouble has not been entirely overcome, but it is no longer necessary to wear a support such as had been used for seventeen years.

I am indeed thankful to God, and grateful to Mrs. Eddy for this wonderful truth that makes us free. I am also thankful for the spiritual uplift experienced, and for our literature, which I always enjoy reading.

Mary Jerrard, London, England.

At the age of thirteen I was confirmed in a religious denomination against my own wishes, and for nine years looked in vain for a church that worshiped God "in spirit and in truth." My boyhood concept of true worship is most practically realized in the Christian Science idea of the one eternal God, whom the Hebrew instinctively loves; and because of what has been proven to me I know rather than believe that I have found a sure way to salvation.

In the early fall of 1911 Christian Science found me a wreck physically, and without a position in view for earning a livelihood. The healing was most natural, peaceful, and complete, for not only was I healed of the complications for which treatment was being given, but of other physical disorders, among which was a skin disease of twenty-two years' standing, and catarrh; also of the smoking and drinking

Digitized by Google

habits. The physical ease, however, cannot be compared with the change in my mental condition.

After this glorious proof of God's power I decided to work out my business problem with the aid of Christian Science. Within a week it was necessary to decide upon one of three positions which were offered me. Two were similar in nature to the position I had previously held, while the third was outside my limited scope of activity. Mortal sense argued that I should not consider the third, but earnest desire allowed the truth to be heard, and that position was accepted in spite of the fact that it was new, caused me to live many miles from home, and offered only a meager salary, for it did offer the best opportunity to serve mankind.

Eighteen months later I was promoted to a very responsible position, but even with the added duties I was able to keep up the study and application of Christian Science. Early in January, 1915, it was made clear to me that I would have two or three weeks' time in February to utilize, because of an unavoidable slack season, and divine Mind not only made it known that I could most profitably spend this time receiving class instruction in Christian Science, but also directed me to a teacher, several hundred miles away, who was to conduct a class at that particular time. Class instruction proved to be so uplifting that there was awakened in me a desire to express my gratitude for the good received by devoting all my time to the practice of Christian Science. By March 1, 1915, it became possible for me to do this, and from the first enough was realized to cover all necessary expenses.

These demonstrations could not have been made had I not been "faithful over a few things" and daily increased my capacity to destroy discord (error in any form) by bringing into consciousness more and more of that Mind "which was also in Christ Jesus."—Roland L. Strauss, Cleveland, Ohio.

✧

Before Christian Science was brought to my attention about five years ago I was exceedingly unhappy. I had found myself obliged to earn a livelihood in the business world, which was then extremely distasteful to me. In my ignorance I did not know that all endeavor is glorified by the love with which it is pursued. Cherishing a false sense of my situation, I fretted along from day to day in a hopeless rage against conditions, and so hedged my thought about with resentment that progress in any way was impossible.

In studying Christian Science, however, I early learned that our environment is the expression of our thought. I learned too that an understanding of the Science of Mind shows all of God's ideas to be in their proper places. Naturally and quickly then followed my growth into a situation of greater opportunity and congeniality, with an overwhelming accompaniment of happiness. It is now my inestimable privilege to be associated with the work of one of the branch churches, with constant opportunity for reflecting in my daily occupation divine intelligence and divine Love, and for enjoying sweet and helpful intercourse with those directly engaged in the Father's business.

During these five years a number of physical disturbances have presented themselves, but they have been promptly overcome by the application of the truth. I am exceedingly thankful for the wondrous love of God, and grateful for Christian Science, which reveals this love to our understanding.—Eudora Jandrew, New York, N. Y.

✧ ✧ ✧

It is the abnegation of self which has wrought out all that is noble, all that is good, all that is useful, nearly all that is ornamental in the world.—Whyte-Melville.

From Our Exchanges

[Zion's Herald]

Paul seemed to have in mind in certain of his words a class of men who are out of the way in their opinions, feelings, or choices of life,—awry in their intellectual processes, twisted in judgment, and unduly swayed by prejudice and uncontrolled feeling. This obliquity of mental or moral view easily lends itself to obstinacy and hardness of heart. Nothing is easier than for even a good man to become obsessed by some idea which renders him finally an unreasonable man in the sense above referred to,—crotchety, opinionated, headstrong, unsocial, or untractable, if not positively cynical and misanthropic. Every Christian man or woman would do well, then, especially at the beginning of a new year, to cultivate a "sweet reasonableness," or docility of opinion and gentleness of spirit, which will not indeed suffer them to be led around by the nose by other spirits more masterful and less scrupulous, but will enable them to be politic without sacrificing principle, and to be adaptable to local conditions without becoming imbecile, colorless, and social nonentities.

[Rev. Joseph Fort Newton, D.Litt., in *The Christian Commonwealth*]

The way of Jesus leads from a self-centered life to a God-centered, emancipated life, and those who follow him must yield to the same process of dying to self and living in God. He walked the quiet way of prayer. Morning, noon, and night he sought the fellowship of his Father. Men of our day argue about prayer; Jesus prayed. Why? Ask why a bird sings, why a mother loves her babe, why flowers grow. What is native to the soul is ultimately reasonable, and if we pray first, the reason for it will be revealed. 'Tis no wonder that on the mount of prayer Jesus was clad in shining robes, and talked with the mighty hero souls of ages past. Such a life passes out of the temporal, the mortal, the vanishing, into the sanctuary of the Eternal, and it is to this victory that he calls us, leading the way, lifting those who fall, redeeming those who fail.

[*The Christian Intelligencer*]

God has always had in the world a company of those who feared the Lord and called upon His name, sometimes strong and influential, sometimes weak and despised, but from the days when the Lord God talked with Adam in Eden until this moment, the Almighty has not left Himself without a witness-bearing church among men, whereby the lamp of life has been upheld, and the light of truth, the promise of pardon, and the hope of glory have been offered to a needy world. Thus a "light that never was, on sea or land" has illumined the path of man and given the promise of a morning when God's perfect day of grace and blessing shall break over the earth. While, therefore, the church of God in any of its many forms continues to live and point men to the way of salvation, the gladsome cry of the watchman, "The morning cometh," need never be stilled.

[Clarence Augustus Beckwith, D.D., in *The Biblical World*]

Christianity is not a creed; it is not a dogma, whether of the fourth or of the sixteenth century. Confined in a formula or an institution it proves itself to be other and larger than either. It seeks to incarnate its spirit in every form of social life,—scientific, industrial, commercial, esthetic, literary, political. Just now, however, it is in the field of national and international relations that it finds its supreme opportunity and its most serious task. In the halls of legislation, in the councils of diplomacy, in the competitions of national

Digitized by Google

expansion and trade, in the administration of colonial government, in fostering ideals by which both the efficiency of individual nations and the common good of all are maintained,—here is the new and inviting field which Christianity must enter as the sphere of its enlarging definition and power. And our present-day theology must perforce bring to the front this larger reference in its redefinition of Christianity.

[*The Christian Work*]

We are quite frequently brought into personal and even intimate contact with a number of very estimable but quite misguided people who believe that the promised entrance into the kingdom of the joy of our Lord is something at which we arrive only on the far side of death. Now we are of those who believe that we are intended to enter into that joy here and now. Furthermore, we hold strenuously to the opinion that if a man's religion does not anoint him with the "oil of gladness" above his fellows,—above, that is, those who have it not,—then somebody or other has palmed off on him a spurious brand. "These things," said Jesus, "have I spoken unto you, that my joy might remain in you, and that your joy might be full."

[Francis J. Hall, D.D., in *The Constructive Quarterly*]

It is not the seeking that is primary, so much as the finding of truth, for it is truth possessed and lived by, rather than truth still sought for, that enables us to guide our steps rightly toward God. Mere knowledge of truth, without spiritual application to life, is of course valueless. But ignorance of the truths by which our lives should be guided cannot but interfere with spiritual development. Truth seeking therefore must terminate in truth finding, if its labors are to be fruitful.

[*The Jewish Chronicle*]

The Bible is a guide to conduct which no considerations of historical or scientific authenticity can disparage. All who open this book in a reverential spirit will find therein lessons of priceless value; lessons which bear the unmistakable impress of revealed truth; lessons which, by their inherent adaptability to every stage of mental development, attest the Bible to be God's message to man for all time and in every age.

[W. Quay Roselle, D.D., in *The Homiletic Review*]

The gospel is "good news." Every real prophecy uttered by man must be news. That is to say, it must have in it some element of originality—some information from God that was never uttered before. The most stimulating lesson from the fact that God spoke to holy men of old is this: that holy men may hear God speak in any age. The Bible—the real Bible—is the whole body of truth which has passed out of the mind of God into the mind of man. It is therefore our high privilege not only to read what has been written hitherto, but also to add to it what God may speak to us.

[*The Christian Register*]

The universe has been expanding before the spiritual eyes of this and the last generation of thinkers until it is no longer possible to assign limits to either heaven or hell; but together with escape from the limitations of the old cosmologies there has come to the wise and prudent, to the simple-minded and the trustful, a new and expanding thought of God and human destiny that is like a new revelation; and indeed it is a new and fresh revelation.

[*The Methodist Times*]

The perfecting of unity depends on the acquirement by Christ of complete ascendency over the life of his church through the disciplined obedience of every part to his spirit.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

A NEW CONCORDANCE.—The publication is announced of a Concordance to Mrs. Eddy's published writings other than Science and Health.

The new volume has been compiled with the same comprehensive care and is issued in uniform style with the Concordance to Science and Health. It contains 1103 pages, and is published only in the Oxford India Bible paper edition, with stiff morocco covers. The thumb index will not be used in this Concordance, as it is to be discontinued in future editions of the Concordance to Science and Health. Prices: Single copy, $6.00; in lots of six or more to one address, each $5.50.

Announcement is made of the publication of a German translation of the Manual of The Mother Church. The volume is uniform in size, style, and price with the regular cloth-bound edition, and the publisher is now prepared to fill orders. Single copy $1.00; six or more to one address, each 75 cents.

Orders for the books named above and other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

A new catalogue of selected Bibles has been printed by the Publishing Society and mailed to Christian Science organizations listed in the *Journal*. Reading-rooms not receiving copies will please notify the Society.

Owing to the increased cost of labor and materials the Oxford Press of England has twice found it necessary to advance the prices of Bibles to the Publishing Society during the past year. The Publishing Society now finds it necessary to make a corresponding change in its prices to the field.

The cost of manufacturing Bible Cases and *Quarterly* Covers has also increased, and the changes in prices for these articles are listed in the new Catalogue No. 23.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for printing their authorized forms of application for membership or extracts from their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 236 Huntington Avenue, Back Bay, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 236 Huntington Avenue, Back Bay, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, editorials, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $2; six months $1; three months 50 cents. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 15 cents. For Canada add 25 cents for postage. SALE PRICE: Single copy 20 cents; four or more copies to one address, each 17 cents. In all other countries add 65 cents for postage for each annual subscription. SALE PRICE: Single copy 25 cents; four or more copies to one address, each 20 cents.

BOUND VOLUMES: Current and past year, cloth $3.00; half calf or half morocco $3.75. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study. Also printed in Dutch and German.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year 50 cents; single copy 15 cents; four copies or more to one address, each 12½ cents. For all other countries one year 60 cents; single copy 18 cents; four copies or more, each 15 cents.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Daily, Except Sundays and Legal Holidays

An international daily newspaper. Adequate news service. The various departments of a modern newspaper. Unique Home Forum page. Entire page of editorials dealing with the vital topics of the day. Contributions to the columns of the MONITOR should be addressed: Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $5; six months $2.50; three months $1.25; one month 50 cents. In all other countries additional postage at the rate of $3 yearly is required. By carrier through a local news-dealer, one week 12 cents; one month 50 cents. In the Boston Postal District, by mail, one year $7.25. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, also testimonials of healing.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, Cuba, Porto Rico, Hawaii, the Philippines, Guam, Tutuila, Shanghai, Panama, and the Canal Zone, one year $1; six months 50 cents; three months 25 cents. For other countries, one year $1.25; six months 63 cents; three months 32 cents.

SALE PRICE, DOMESTIC TERRITORY AND CANADA, POSTPAID: Single copy 10 cents; four or more copies to one address, each 8 cents. Foreign rate, single copy 12 cents; four or more copies to one address, each 10 cents.

Bound Volumes in cloth, $2.75 each; half calf or half morocco $3.50 each. Write for list of volumes in stock.

Orders for six or more may include the two styles of binding.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 611 pages, stiff morocco cover, single copy $5.00; six or more, each $4.50.

Concordance to Mrs. Eddy's Published Writings Other Than Science and Health. It contains 1,103 pages, and is published only in Bible paper edition, with stiff morocco cover. Single copy, $6.00; six or more, each, $5.50.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75.

GERMAN TRANSLATION. Cloth, single copy $1.00; six or more, each 75 cents.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.00; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 60 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.00; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 25 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 20 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 20 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address only, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Postage required for remailing this copy: 1 cent domestic and Canada; 2 cents other countries.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

In describing the educational phase of Boy Scout work, the chief scout executive declares: "The Boy Scout movement aims to reinforce all of the agencies which make for right living and character development in the youth of America. It does not seek to supersede the home, the church, or the school, but to supplement these institutions largely in the leisure time of the boy, and to impart by means of its own programs and exercises the virtues of chivalry, honor, and good citizenship. The character building work of the movement is presented to boys in what is meant to be an 'attractive wrapping.' It is based largely on the method of learning by doing, in order that boys may be taught to be resourceful and self-reliant in all situations in which they may be placed.

"The movement is non-sectarian and non-political. Its program offers to the boy a well rounded mental, physical, and moral experience, largely out of doors, and calculated to develop a love of country, God, and neighbor. For its success the movement depends upon the voluntary leadership of men of high ideals, who serve as scout masters and scout commissioners. The educational aspect of the work is emphasized by the fact that of the 7067 men who held commissions as scout masters on Dec. 31 last, about 65 per cent are college men and over 80 per cent have either a high school or a college education; 1655 give their occupation as clergymen, and 790 as public school teachers; others are professional men, journalists, students, or engaged in mechanical or mercantile pursuits."

Commercially, the most important feature of the Danish West Indies is the fine harbor at Charlotte Amalie on the island of St. Thomas, according to a commercial survey of the islands just completed by the United States Department of Commerce. This survey emphasizes the convenience of the harbor as a distributing center for all of the Lesser Antilles. It lies on the direct line of communication between European ports and the entrance of the Panama Canal, as well as in direct line for vessels plying between the Atlantic ports of the two Americas or between the Atlantic and Pacific ports of these continents. It is 1400 miles from New York, 1020 miles from the Atlantic entrance of the Panama Canal, and 480 miles from La Guaira, the chief port of Venezuela. Its location commands the Virgin Passage to the Caribbean Sea, the easternmost gateway to that body of water.
