The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue

Terms of Sale

	United States, Mexico, and Cuba	Canada	All Other Countries
Single copy	$ .05	$ .06	$ .07
Twenty-five copies	1.00	1.15	1.30
Fifty copies	1.80	2.05	2.40
One hundred copies	3.00	3.50	4.25

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numerals XIII indicate the year 1913; XIIII, 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription. A numeral "I" is added to the notation for each annual renewal.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Equivalents of United States money:

Items of Interest

NATIONAL

During the last quarter of the fiscal year the federal government entered into cooperative fire-protection agreements with the states of Maine, New York, Minnesota, Montana, Washington, and Oregon. These six agreements contemplate the protection from fire of approximately eighty-seven million acres of land on the forested watersheds of navigable streams, for which purpose fifty-one thousand five hundred dollars of federal funds have been made available. There are at the present time fourteen states which are engaged in active cooperation of this kind, and it is possible that three new states, Kentucky, South Dakota, and West Virginia, will be added by early fall. Through this arrangement the cooperating states will expend an aggregate of three dollars for every dollar which the federal government spends, to which may be added about two dollars more from private sources. The railroads, lumber companies, municipalities, and private landowners throughout the country are growing more and more alive to the needs of better forest fire protection and are devoting an increased sum to this work each year.

Extension of the area of forest reserves in the Appalachian mountains, inclusive of those in the White mountains, is progressing steadily. This work is being done under the Weeks law which appropriates two million dollars a year for this purpose. All told, about eight million dollars has so far been spent, and during the next year about twelve hundred thousand more acres will be acquired at an expense of two million dollars. In the last fiscal year, closed in June, 1913, forest lands amounting to 711,415 acres were examined and appraised by the forest service and approved for purchase by the national forest reservation commission. The area was for the most part in Virginia, West Virginia, North Carolina, Tennessee, and Georgia, but one hundred thousand acres were contained in New Hampshire.

Postmaster-General Burleson has signed an order which provides that pre-canceled postage stamps may be sold to the public on and after Sept. 16. Pre-canceled stamps have printed upon them the name of the post-office where they are sold. Such stamps will be valid for postage on second, third, and fourth class mail, —newspapers and magazines mailed by the public, books and other printed matter, and merchandise or parcel-post matter. The stamps will be recognized only at the office named on them. By the use of pre-canceled stamps, not only will the transportation and delivery of mail bearing them be greatly expedited, but it is estimated that the government will save two hundred and fifty thousand dollars a year on expense of labor in cancelation. Pre-canceled stamps, however, may not be used on letters or other sealed mail matter, which, under the law, must bear the date of mailing.

President Wilson, having received no word from Provisional President Huerta of Mexico up to the time appointed, delivered his message on Mexico before a joint session of Congress on Aug. 27, and in it he advised that all Americans be earnestly urged to leave Mexico at once; that Mexico be informed summary punishment will be made if American lives are outraged; that he deems it his duty to let the various Mexican factions fight out their troubles; that he must prohibit shipment of arms to both federals and rebels, to insure strict neutrality by the United States. Failure of the negotiations of Special Envoy John Lind was reported by the President, but the door was not closed, and peace overtures have again been resumed on the initiative of the Mexican government.

Slavery, in the full meaning of the word, exists throughout the Philippines, even in the city of Manila, and peonage is general in the islands, according to a special report made to the insular government by Commissioner Dean C. Worcester. This report is the outcome of a request for information made to the war department by the Senate on May 1, when Senator Borah read a letter from Commissioner Worcester stating in a general way that slavery existed on such a scale as to make it one of the most serious problems confronting the government.

An amended resolution calling for an investigation of the anthracite coal business has been introduced in the House of Representatives. The department of the interior is added to the sources of information, 1915 is set as the date of beginning, and a paragraph is added seeking information as to safety equipment installed in the mines.

A bill to appropriate one million dollars for the improvement of the Connecticut river between Long Island sound and Hartford, with a view to securing a channel of width and depth possible to accommodate present and future demands of commerce, has been introduced in Congress.

That states shall regulate nominations as well as elections, and give more attention and liberality to primary selection of candidates, was the proposal put before the governors' conference at Colorado Springs, Col., by Gov. Simeon E. Baldwin of Connecticut.

During the two "good roads" days of Governor Major of Missouri it is estimated that the work accomplished by the three hundred thousand business men and farmers would have cost, if paid for in wages, fifteen hundred thousand dollars.

INTERNATIONAL

The Palace of Peace, the gift of Andrew Carnegie, who in 1903 placed at the disposal of the Dutch government the sum of fifteen hundred thousand dollars for the purpose, as expressed in his offer, "of erecting and maintaining at The Hague a court-house and library for the Permanent Court of Arbitration established by the treaty of the 29th of July, 1899," was dedicated last week. To provide a site for the structure the Dutch government appropriated two hundred and seventy-five thousand dollars. The site selected is in a section of wooded and hilly park stretching from The Hague to Scheveningen. The corner-stone was laid July 30, 1907. A world-wide competition for plans and designs for the Peace Palace was established, and the first prize was awarded to M. Cordonnière, a Brussels architect.

In a speech delivered at Avignon recently by M. Thierry, minister of public works, he gave an account of the schemes which the new tourist department of his ministry are considering to secure the improvement of conditions of the roads and hotels for the convenience of tourists in France. The food provided in French inns was excellent, the minister said, but unlike Switzerland and Germany and Austria, there was a lack of clean and comfortable hotels. With regard to the roads, M. Thierry proposes to spend the sum of two hundred and fifty million francs during the next ten years in tarring six thousand miles of the highroads.

From Jan. 1, 1901, to Dec. 31, 1912, there were 1,319 labor strikes in Canada, in which 319,880 men figured at a cost to the country of eighteen million dollars, based on the estimate that the average value of a working day is two dollars. During the twelve years nine million working days were lost owing to strikes, or an average of seven hundred and fifty thousand days per year for the period taken.

Last week the peace conference at The Hague discussed at length the proposition of Professor Van Vollenhoven on the enforcement of the sanctions in international law by means of the international police system. The discussion was lengthy, and ended in no conclusion being reached, the conference simply passing the subject as one demanding further consideration.

The treaty of Bucharest was ratified Aug. 26 in Bucharest by representatives of Bulgaria, Greece, Roumania, and Servia. Montenegro was not officially represented, but the King sent a telegram announcing he had ratified the treaty at Cettinje.

INDUSTRIAL AND COMMERCIAL

In the presence of over fifteen thousand persons the Keokuk (Ill.) water-power dam on the Mississippi river was dedicated Aug. 26. The plant, built at a cost of twenty-seven million dollars, is to develop three hundred thousand horse-power. Stretching nine tenths of a mile across the river, where the states of Iowa, Illinois, and Missouri join, the dam is 53 feet high, 42 feet wide on the bottom, and 29 feet wide at the top. The water-power, converted into electricity, is for use in the new power zone along the Mississippi from Burlington, Iowa, to St. Louis, the latter city taking sixty thousand horse-power of current. The power company has built a lock, to be the property of the United States, which has the same width as the Panama canal locks and a lift one third higher than any lock on the isthmus. Deep-water navigation now is made possible for sixty-five miles up the Mississippi, including a stretch of river hitherto impassable except through a government canal with three locks, which cost fifty thousand dollars to operate and is rendered unnecessary by the lock and the lake above the dam. The plant comprises thirty turbines and electric generators.

All indications would seem to point to the biggest cranberry crop on record at Cape Cod this year. Last year's crop amounted to over one hundred and twenty-five thousand barrels, a considerable increase over the previous year, and required one thousand freight cars. Probably fifteen hundred cars will be needed to move this year's crop, and its value should run well over one million dollars. The berry bogs now cover over six thousand acres. New Jersey's crop last year amounted to about one hundred and forty thousand barrels, while Wisconsin's was forty-five thousand barrels.

The Missouri, Kansas & Texas railroad proposes to spend about a million and a half dollars in improving its lines in Texas.

Unity in Happiness

WILLIAM D. MC CRACKAN, M.A.

IN every gathering of people, though there may be many differences of opinion, of temperament, of inherited tastes and aptitudes, yet there is a certain surprising unanimity as well. We would be astonished, could we in a moment of time dissipate these differences, to find that all men are in reality striving for the same end, reaching out for the same ideal, hoping for the same final goal. This goal may be described in a number of different ways, but no one will dispute the statement that happiness is that which every one in every gathering of people is desirous of attaining.

There may be people who in a momentary exasperation of misfortune or sorrow are not quite sure whether they desire happiness. There may be others who temporarily doubt whether happiness is really attainable, or who may be for the time being passing through a period of disillusionment or despair. But even such people are nevertheless weighing in their minds the desirability of this or that line of action, and in so doing are really weighing the probabilities of a happy outcome. As for the generality of people, they are frankly in favor of the immortal statement of the Declaration of Independence of the United States of America, that among the inalienable rights with which men are endowed by their creator is the right to the pursuit of happiness. Referring to this declaration, Mrs. Eddy says (Science and Health, p. 106), "Man is properly self-governed only when he is guided rightly and governed by his Maker, divine Truth and Love." It is a comfort to recognize that no matter what may be the diversity of human traits and qualities, no matter what any one may think about religion or politics, business or philosophy, yet all are united in the endeavor to be happy, and as far as in them lies to make others happy. This unity appears to be a discovery of great moment, because it proves that it is possible to find a common basis for all men to stand upon. It is something gained to start together in the consideration of subjects which are important to the common welfare. The great underlying basis of unity turns the faces of all men toward the dawn, toward the great effulgent light of hope and happiness.

The question then presents itself, How is genuine happiness to be attained? Here an apparently wide difference of opinion exists. One man seeks happiness in the accumulation of money, another in the exercise of power, yet another in the expression of talent or in the gratification of the senses. We are sufficiently familiar with the efforts made by mankind to find happiness through amusements and distractions. This very word distractions, and that other one frequently used to denote much the same effort on the part of mankind, namely, the word pastimes, reveal clearly enough the effort of mankind in seeking happiness to distract itself, to turn its attention away from itself, or merely to pass the time, to get rid of time in one way or another. There is an obvious futility about all these efforts. They may seem temporarily to prevent mankind from thinking about themselves, their miseries, pains, disappointments, but they leave a void which must be filled from some other source; they do not satisfy or feed the longing for that which is beyond mortal ken, happiness which is true, substantial, eternal, and indestructible.

And here it is possible to point out the fact that, as all men are united in their search for happiness, so they must all be really united in their search for the ultimate cause of all happiness, even though they may not be aware of this. Christian Science reveals God as the source of all happiness, as Principle, underlying all that really is, as the Life of all being, as fundamental and absolute Truth, the infinite and eternal "I AM," the Father-Mother of us all. While we may differ in our ways of seeking happiness, we are at one in God, for there is but one First Cause, one Father of us all, one divine Mind, one Spirit, one Soul, one Life eternal, and one unlimited and inexhaustible divine Love. Blessed will be the hour in which men shall awaken to know themselves as the sons of a common parent, and learn to love Him with all their heart, and strength, and understanding! This love includes as a necessary consequence the love for our neighbor, and thus the brotherhood of man is to be established in the recognition or understanding of our unity with God. Today it is cause for rejoicing that the happiness and welfare of others is being more clearly recognized as an essential factor of our own weal, and that the world's advanced thinkers are finding this to be an indisputable fact as they devote themselves to the uplift of all mankind in this direction. From the Christian Science view-point, true progress can only be made as man is seen to be a spiritual being, and his infinite capacities as a child of God are given opportunity for unfoldment.

Well has the psalmist sung, "Happy is that people, whose God is the Lord." As David neared the end of his earthly career and presented Solomon, his son, as his successor before the congregation of Israel, there dawned upon him a superb vision of the omnipotence of this First Cause, and he exclaimed, "Thine, O Lord, is the greatness, and the power, and the glory, and the victory, and the majesty: for all that is in the heaven and in the earth is thine; thine is the kingdom, O Lord, and thou art exalted as head above all."

One of the most impressive statements of the risen Jesus was made to Mary at the sepulcher. It was the same Jesus who had proved his victory over every form of evil, who had healed all manner of disease, blotted out all manner of sin, stilled the storm, walked the waves, fed the multitude, and had now conquered death itself. Yet this glorious personage, fresh from his victory over the grave, was so permeated with the understanding that God is the Father of all, that he could say to Mary, "Go to my brethren, and say unto them, I ascend unto my Father, and your Father; and to my God, and your God." Humility and spiritual perception had brought him an abiding joy, and he wished that all who were seeking happiness might share it.

The unity of all men in the desire for happiness leads to eventual unity in the search for God, the source of all happiness. The ultimate of this spiritual process is the understanding of God and man, and this crown is reserved for all who are willing to take what Mrs. Eddy has denominated "the footsteps of Truth" (Science and Health, p. 241).

Sacrifice

KENNETH B. ELLIMAN

THE word "sacrifice" is derived from two Latin words: *sacer*, meaning holy, and *facere*, to make. Throughout all the varying forms used to accomplish or symbolize this purpose, the underlying desire is to attain a more perfect union (at-one-ment) or communion with the one to whom the thing sacrificed is offered. All primitive peoples seem to have practised some form of sacrificial ceremony. As the human race in its lowest states believed in both good and bad deities, savage tribes sometimes offered human beings to ward off evil from the clan, while with the less savage tribes it was the custom to kill only animals. If the tutelary deity was regarded as an ancestor or member of the clan, a sin, according to the standards of conduct then prevailing, was supposed to break the alliance with him; hence the kinship must be reestablished through a sacrificial offering of some kind.

The substitution of animal for human sacrifices showed that mankind had gained a higher idea of Deity, and the story of Abraham and Isaac probably symbolizes this transition. Abraham was also the first monotheist of whom we have record. Many early peoples had been accustomed to drink the blood of their sacrifices, so Moses showed the Hebrews a higher idea when he forbade this, as we read in the seventeenth chapter of Leviticus. However, even the early Hebrews regarded their God, Jehovah, as a corporeal being, so most of their sacrifices were for the purpose of pacifying His supposed anger at their sins; in other words, to propitiate Him. A marked exception to this was the Passover, which was a eucharistic ceremony,—one of thanksgiving. We can see in all these primitive methods that the form of sacrifice was determined by the concept of Deity entertained by the worshipers; and that so long as God was believed to be a person, subject to anger, jealousy, and revenge, or as a stern though just judge, a sort of taskmaster, the motive for the sacrifice was fear. And this view has led many good Christian people to regard Jesus' crucifixion as a merely expiatory and vicarious sacrifice for the human race.

When we gain the higher understanding of God which is taught in Christian Science, we learn to take a loftier and more practical view of sacrifice and are freed from the harmful effects of fear. Jesus said, "God is a Spirit," while his disciple John wrote that "God is love;" and it is thus that God is regarded in Christian Science. In the chapter entitled Atonement and Eucharist in Science and Health, Mrs. Eddy has set forth an explanation of Jesus' life and crucifixion which is consistent with this Scriptural idea of God. In it she has shown how Jesus' whole life was a sacrifice of the material for the spiritual, lived in a spirit of love; that his crucifixion was only the climax of his sacrifice, not the whole of it; that his crucifixion and ascension were the final proof that God is Love. Moreover, Jesus was the Wayshower for us all.

The highest conception of sacrifice in the Old Testament is stated in the fifty-first psalm, where David says: "Thou delightest not in burnt offering. The sacrifices of God are a broken spirit: a broken and a contrite heart, O God, thou wilt not despise." This stage in the progress of a Christian Scientist is reached when he begins to understand God and discovers some of the mistakes he has been making in his thought and conduct. He is supplied with a motive for giving up or sacrificing these mistakes. Sacrifice would thus cease to be the killing of useful, innocent animals, and become the destruction only of evil. And whereas the individual's motive for forsaking sin may at first be only fear of consequences, when he gains, through Christian Science, an understanding of God as infinite good, he loses fear and begins to abandon his false beliefs and sinful acts thankfully and from love of good. Although at first some of his sins may seem to give pleasure and so to be good, thus inducing fear of loss if they be given up, he soon learns that all that prevents a perfect understanding of God with its consequent perfect peace and harmony, is his false conception of what good is, and that a sacrifice of this is not loss, but gain. In Christian Science we have an exact Principle by which we can test every thought and know whether or not it is correct.

The slaughter of animals by uncivilized tribes in order to remove their sense of separation from good, was their highest concept of sacrifice. The Christian Scientist's abandonment of false beliefs in order to come into at-one-ment with God, is the highest type of sacrifice. Good is always present, and we only need to make room for it in our consciousness by putting out whatever is unspiritual. An illustration of this higher understanding of sacrifice occurs in Jesus' answer to the disciples when they asked him why they had been unable to heal the epileptic boy. Said he, "This kind goeth not out but by prayer and fasting."

In speaking of holiness, Mrs. Eddy writes, "A great sacrifice of material things must precede this advanced spiritual understanding" (Science and Health, p. 16). So if we continue to destroy all belief in powers and existences apart from perfect Love, we manifest the metaphysical understanding of sacrifice, rise into higher planes of consciousness and greater likeness to God, and eventually a perfect understanding of Spirit will make the sacrifice of materiality simple and easy.

✧

Reflection

MARY TRAMMELL SCOTT

ST. JOHN wrote, "God is light, and in him is no darkness at all," and Jesus startled humanity with the declaration, "Ye are the light of the world," while we read in Science and Health that "the Ego-man is the reflection of the Ego-God" (p. 281).

Prior to Mrs. Eddy's discovery that life, intelligence, and substance do not exist in matter, the Scriptural teaching that man is God's image, that he lives, and moves, and has his being in God, must have been treated as a metaphor, or figure of speech, not as a statement of fact. Students of Christian Science, however, are confronted not only with the fact of this statement of the relation between God and man, but with the responsibility of proving that what God is, man must be, by reflection. There was never a problem more important to prove; it is our life problem.

In the material state in which human sense finds itself, the very opposite of God, or good, appears. This sense will be found to be false, and through human desire, hope, faith, understanding, and demonstration, it will finally be seen that man is the reflection or image of Deity,—like expressing like. It is written that "God is light," and man's sense of being began with, "Let there be light." Through this creative demand for light, thought is destined to become more and more spiritual, until the mist of materiality is dispersed and that man is revealed of whom Mrs. Eddy says, "Man is the idea of Spirit; he reflects the beatific presence, illuming the universe with light" (Science and Health, p. 266).

Man, as God's reflection, was made beautifully apprehensible to me on one occasion when the sun was in eclipse. Just before starting to church on Sunday morning, I had

Digitized by Google

looked through smoked glass at the large, red crescent, and while walking in the subdued, almost weird light, I was surprised to see on the ground where the sun's rays penetrated the leafy trees, that every reflection was a crescent. The whole way was strewn with half-moons. Startled, I exclaimed, "If the sun is eclipsed, every reflection of the sun presents an eclipsed appearance!" Remembering that "the Revelator symbolizes Spirit by the sun" (Science and Health, p. 561), I thought, If God were imperfect, His every idea would necessarily manifest imperfection. The science of astronomy teaches that the sun is untouched by an eclipse, and its light is as perfect as before; that the moon has passed between the earth and the sun, and the earth for the time being seems to have lost its pure light.

Material sense, clouded by the shadows of false belief, sees God in eclipse, and the result appears to be sinning, sick, and dying man. As the science of astronomy destroys the ignorance regarding the sun, so Christian Science is correcting the mortal misconception of Deity. God is no longer supposed to send sickness, sin, and disaster upon the inhabitants of earth. When thought becomes sufficiently spiritualized to dispel material mists, that which was from "the beginning, is now, and ever shall be," becomes apparent, God and His perfect idea, man. The divine beauty of the creator will be expressed in a universe of beauty.

Students of Christian Science have the greatest privilege that has been afforded the world since the disciples of the Master followed their inspired Teacher. They are learning the same idea of God that Jesus taught, the God whose presence, realized, heals the sick and reforms the sinner, the God whom to know aright is eternal life, who destroys all evil "with the brightness of his coming." Therefore, what God is, becomes the one important lesson, because as He is known, it is clear that man and the universe image perfect being; that in man, as in God, there is no darkness at all.

✧

"Lazarus, come forth"

ROBERT ELLIS KEY

He who comes to a Christian Scientist in trouble, in sickness, or in doubt, who makes a personal appeal for sympathy, does not go away with the "cold assertion, 'Nothing ails you'" (Science and Health, p. 460). As the divine idea becomes more beautifully apparent to the human consciousness, the human heart responds with increasing tenderness,—not with the sympathy of mutual suffering, where sorrow shared is only partly borne, but with the inspiration of loving sympathy, which, discerning another's need, is able to supply it from the inexhaustible source of divine Love.

In the eleventh chapter of St. John's gospel we are told that Jesus wept, but surely the tears he shed were not for Lazarus, who had seemingly passed away from mortal consciousness. Our Lord knew too well the life eternal, the dominion of Spirit. He knew that darkness and oblivion are not for him whose Life is God. His tears were surely tears of pity and disappointment that so many of those about him had doubting hearts and helpless hands. The disciples had imbibed his teaching, and through the understanding of divine Love were privileged to heal the sick, comfort the sorrowing, raise the dead, and yet here among them he found sorrow uncomforted, decay discussed, death meekly submitted to!

"Thou hast delivered my soul from the grave," sang the psalmist, and it is from the tomb of earthly hopes that the human sense emerges at the call of the divine idea. As we stand aside and watch the ebb and flow of human fears and fancies, we shall see more clearly the nothingness of evil and the all-inclusiveness of good, God. We are thereby enabled to help those who, believing in a power opposed to God, are groping "in the dark recesses of mortal thought" (Science and Health, p. 102), unable to roll away the stone which false belief has placed there.

It was neither matter nor mortal mind which made the dead come forth at that day. It is neither you nor I that heals the sick and the sorrowful. The divine power, when called upon by the purified consciousness, needs no second appeal, but presents man to man as a divine idea emanating from no lesser father than God.

✧

Good Infinite

JOAN HUDGENS ROME

Numberless honest, upright people are burdened with the argument that God creates evil, or else works through evil, and in "Bitter-Sweet," by Holland, Ruth says,—

> If evil reigns against God's will,
> Then evil is king of all,
> And they do well who worship him.

In the prophecy of Isaiah it is said, "I make peace, and create evil: I the Lord do all these things." Christian Science, however, emphasizes the fact that God is good, that He is the one infinite, indivisible Mind; infinite, eternal Life. Every element of this one Mind must therefore be in harmony with its every other element. Every quality or manifestation of God must be of the same nature as its source, infinite good, for God could not create the opposite of Himself, neither could infinite Life create a destructive element, else Life would contain within itself, as cause, its own destruction, thus ceasing to be infinite.

Through all the periods of Bible history, man's concept of God was being elevated and purified so that it was possible for Mary to appear with enough purity and spirituality of thought to bring forth Jesus, who was the mediator between the human sense and a perfect spiritual understanding of God,—knowing evil only to destroy it as illegitimate to man and unknown to God. In our present stage of growth we can know that God did not create evil; but this knowledge comes only through our understanding of divine Science, and through "internal evidence," by standing in thought as subject to the logic of Science and submitting our offerings of faith to the fire of demonstration. We read that God said to Moses, "Thou canst not see my face: for there shall no man see me, and live." Material sense cannot look on absolute Spirit. If such a thing were possible, that instant human sense would disappear and spiritual being would consciously appear. We must stand as Moses did at that time, and take the steps of obedience to our highest concept of Spirit, till at last we shall know ourselves spiritually, see God face to face, and so see Spirit.

In Science and Health (p. 207) Mrs. Eddy says, "Evil becomes more apparent and obnoxious proportionately as we advance spiritually." As we love good more, we see evil to be evil, and it becomes more obnoxious. This is a satisfying proof that evil is not created by good. If God, Spirit, created evil, then as humanity advanced it would love evil because of the belief that God made it; but Jesus rebuked every suggestion of evil, and it is impossible that he, the exponent of God, should advise men to be free from that which God created. If the infinite created evil, then evil is infinitely existent, and

Digitized by Google

man could never be free from it; yet Jesus said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." God made all that was made, and called it good; and the so-called mortal mind that disputes and opposes the allness of good, argues only with itself, and the conscious individual intelligence is satisfied to awake in His likeness, resting now in "green pastures: . . . beside the still waters."

✧

Man and His Dominion

ALBERT L. MC BRIDE

THE first Bible statement about man is not qualified or uncertain, but definite. Man is created in the image and likeness of God. The purpose of his being is also stated as definitely. He shall have dominion over all animality and over all the earth. This is an eternal truth about God's man and his estate. The New Testament names him heir, describes him in unmistakable terms, and leaves no doubt as to his heritage. "Inherit the kingdom prepared for you from the foundation of the world," said Jesus, whose words and works were of practical application to immediate needs. Saith the Scriptures, "Beloved, now are we the sons of God." Paul tells us that we are "heirs of God, and joint-heirs with Christ." Isaiah refers to man's dominion over animality and to the terms of its accomplishment, when he writes, "The wolf . . . shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them." He perceived that this would be established when the earth shall be filled with "the knowledge of the Lord, as the waters cover the sea." The knowing of this as true here and now, of man and for each individual, because it is an eternal, unchanging truth of universal application, is the Christian Scientist's view. When it is so accepted, in the innocency and purity of the child-thought, man's possession of his divine heritage is no longer a mythical promise of uncertain fulfilment; it becomes to him an actual possession.

The study of the Christian Science text-book is leading men up to the knowledge of God, and through that right knowing, to conscious possession of man's divine heritage. Mrs. Eddy perceived mankind's need of the knowledge of God which brings to men this consciousness of possession. It is the truth about Truth that characterizes her work as Science, and which, understood, brings the consciousness of dominion to man. The unfolding of Scripture as the study proceeds, gives the student the key to its treasures. The health, the harmonious sense of dominion over animality of thought, within and without, adds aptness to the title of her great work, "Science and Health with Key to the Scriptures."

Increasing knowledge of God gives a clearer perception of the unity of God. We read that "the Lord our God is one Lord;" also, "Thou shalt have no other gods before me." The image of God must bear likeness to God in its oneness. There is no duplicity in the nature of this image and likeness of God. Man is not in bondage to animality, the slave of sensuousness, over which he shall sometime gain dominion. He is now what God creates him, and in possession of his kingdom of dominion. Centuries of ignorant belief that the earth was flat and stationary did not make it that shape or interfere with its regularity of rotation and revolution, nor did the change of belief change its shape or alter its motions. Principle is not altered by any change of belief. So the mortal belief that man is less than God makes him to be, in nature and in the scope of his heritage, can never change the immutable, scientific truth. Man is the likeness of God, created to exercise dominion over all the earth. There are no other gods after whom another man could have been likened, hence confusion upon this subject is not possible. "Fear not, little flock; for it is the Father's good pleasure to give you the kingdom," said Jesus. The prayer he gave affirms God's kingdom come; His will done. Human will is powerless to obstruct or pervert the divine will. A little child shall lead to the peaceful perception that there shall nothing hurt or destroy.

In Revelation, John saw the whole of depravity and diabolism with which mortal belief of that day battled in all the departments of human activity and selfish endeavor. It passed in review before him and seemed to be too monstrous in its beastliness to be represented by any known animal. It represented only such animal viciousness as Isaiah saw yielding to the leading of the little child and, with the earth filled with "the knowledge of the Lord," shorn of all that would hurt or destroy. John's view led up to a new perception of heaven and earth. He saw life as a pure stream flowing from the throne of God. This view of life corresponds with man in the likeness of God. His living is a river of pure thought manifesting infinite Mind, and we are told that "there shall in no wise enter into it any thing that defileth, neither whatsoever worketh abomination, or maketh a lie." Science and Health brings this exalted view and its spiritual idealism into practical application today, and in so doing, is giving to men a new view of heaven and earth. This new view is like that of Isaiah, in that there is nothing left that hurts or destroys. It is like that of John in its crystal purity and the directness with which it proceeds from God. It no longer has for us that far-away mysteriousness with which we once regarded these Scriptural portrayals, and it is because they have been brought near enough to these truths to trust them, and to solve their problems thereby, that Christian Scientists feel so grateful to Mrs. Eddy.

[Written for the *Sentinel*]

Creation

MARY JAMES ARNOLD

DARKNESS upon the deep,—bowed down with sorrow,
Discouragement, and grief, and bitter tears
For all that seemed to be. No new tomorrow
Shed ray of hope, of help adown the years.

But hush, a breath, a whisper, 'tis the Spirit!
Spirit of God, shine thou my heart within;
Move thou upon this deep; thy tender brooding
Shall heal my grief and banish all my sin!

"Let there be light"! The word of God's perfection
Dark chaos hears, and swift the law of Love
Unfolds Life's plan, and under His direction
All bitterness, all doubt and fear remove.

"And there was light,"—a gentle radiance stealing
Like dawn's first gleam above the horizon's rim;
Then wave on wave of wonderful revealing,—
The light which error's lie can never dim.

Creation still unfolds, when weary mortals
Cry out for help and seek the way aright;
God's healing touch opes wide Truth's shining portals,
Then sin and pain are not, for all is light!

[Frederick Dixon in *Kentish Express*, Ashford, England]

A recent critic asks, "Could anything be found more preposterous than to seek to pervert the teachings of the Bible to that of a cast-iron science?" This inquiry is an excellent text on which to base an explanation of Christian Science. All science is cast iron in just so far as it is scientific. To put it quite simply, law is that in which no variation ever has been or ever can be.

A broken law, says Huxley, never was a law. The more absolute, then, from a relative standard, any observed fact becomes, the more scientific it appears to be; but it is only if it is entirely absolute that it is absolutely scientific. This is, of course, what the deepest of medieval thinkers, the Franciscan, Thomas Aquinas, meant when he insisted that the only absolute science was the science of theology, or the Word of God; every other so-called science being based on human knowledge, and therefore relative. Science, wrote Huxley five centuries later, is the answer a man makes to the question, What do I know? Now the most absolute, and consequently the most scientific, knowledge a man can obtain is a knowledge of absolute truth. Jesus of Nazareth put this with scientific exactness when he said, "Ye shall know the truth, and the truth shall make you free;" free, that is to say, from ignorance of every kind. A knowledge of absolute truth, then, is a knowledge of the gospel, and it is the most scientific, or, to use the critic's word, "cast-iron" knowledge conceivable, for the truth about God is the spiritual fact in which there is "no variableness," and the law of God that in which is no "shadow of turning."

This teaching of Jesus is, of course, emphasized all through the New Testament. Greek is not the language of "the old homeland," to which the critic so feelingly alludes, in spite of the fact that he will find no support for sentiment of that nature in the gospel. It was, however, as his "reading and study" may have convinced him, the colloquial tongue of the Mediterranean basin in the first century, and so naturally the tongue in which Christianity was spread. It may possibly shock the critic to hear it, but there is a word in the Greek language, quite commonly used by New Testament writers, which is instinct with this very "cast-iron" scientific sense that so revolts him. The word is *epignosis*, and, in contrast to *gnosis*, means a full, an exact, and so scientific knowledge, as opposed to ordinary knowledge. It occurs in the phrase in Romans, "a zeal of God, but not according to knowledge," and again in Colossians, in the phrase, "knowledge of his will;" and worst of all, in both Colossians and the epistles of Peter, it is used in conjunction with the word *theos*, in the phrase *epignosis tou theou*, a scientific knowledge of God.

It was Socrates who said that sin was ignorance, and that, though not quite in the Socratic sense, is the teaching of Christian Science. Sin is ignorance of the truth which is to make the world free, for any one who acts in ignorance of the absolute truth may, in a relative sense, break God's law, though in an absolute sense this is impossible. A child, for instance, who imagines that two times two make five, breaks, in a relative sense, the law of the multiplication table, and suffers the inevitable penalty in a sum done wrong. At the same time, the absolute law or scientific fact that two times two make four remains unbroken and unbreakable. The ordinary human definitions of sin are as futile as they are unscientific. They make the reign of law, God's law, dependent on a temporal or geographical custom. It was a capital offense four or five hundred years ago, a sin against the law of God, and one for which the church was liable to burn you, to say the earth was round; today, you are only liable to be thought a fool for saying anything else. It is a punishable offense in the West today, a sin against the law of God, to commit bigamy, but in the East, polygamy is still considered obedience to divine law. Sin, then, Christian Science teaches, is ignorance of Truth, of God.

It is the question of reality and unreality, of the absolute and the relative, which constitutes the stock in trade of those critics who attempt to expound Christian Science without having mastered its definitions. Picture the mental confusion of the man who attempted to teach geometry in the belief that Euclid has defined a circle as a square, and a square as a triangle, and you may form some conception of our critic as a critic. Though this is no reason why, having been detected in misrepresenting Mrs. Eddy by stopping his quotation at the necessary point, he should facetiously ask if he should have quoted the whole book. It is obvious that the end of the passage would have been sufficient. No man, says he, can be "a follower of Christ and a Christian Scientist." Defining "a follower of Christ" in the critic's terms, I am glad to admit this is true. He is satisfied with a purely relative view of truth; Mrs. Eddy insists on the absolute. The relative is defined by James in the words, "Faith without works is dead;" the absolute by Jesus Christ in the declaration, "He that believeth on me, the works that I do shall he do also." In those words Jesus Christ, and none other than he, made the measure of a man's ability to repeat his miracles, the measure of his right to the title of Christian.

What is a miracle? Huxley would have termed it the scientific answer a man makes to the question, What do I know about God? It is, in short, the object-lesson by which the Christian illustrates his scientific knowledge of God. There are in the Greek Testament two words translated miracle, and neither of them has, or ever has had, any supernatural significance. The one means simply an act of power, the other a sign. Now, what to a Jewish fisherman, brought up to believe in material law, would the miracle be but an act of power; and what to a more educated man, faced suddenly by a new science of theology, would it be but a sign? When Jerome was making his great translation known as the Vulgate, he showed his appreciation of this by adopting the exact Latin equivalents for the Greek words. Later on, it is true, he adopted the word *miraculum*, or wonder, but that word was then still the pagan term for a philosophic speculation, and had no affinity with anything supernatural. The supernatural *Aberglaube* came later, when the church, having divorced the command to heal from the command to preach, had to account for the separation. Curiously enough, this definition found a supporter in the rationalist Hume, who defined a miracle as a violation of a law of nature by a special interposition of the Deity. It was this *faux pas* which drew from Huxley the amused retort that a violated law never had been a law, and the explanation that if a lump of lead was seen hanging without support in the atmosphere, the phenomenon was not a violation of law, but the discovery of an unsuspected law, and that the only intelligible course was to discover that law.

It was thus that her own healing, from the results of an accident medically diagnosed as fatal, struck Mrs. Eddy. "I knew," she writes, on page 109 of Science and Health, "the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration." That was nearly half a century ago, and the result has been the reestablishment of the test, instituted by Jesus of Nazareth, of works instead

Digitized by Google

of words as a proof of man's Christianity. It may be that the test is a cast-iron one. That is the nature of Science, and truth which is not scientific is a house divided against itself. Still, next time the critic desires to quote from Timothy, let him remember that the word translated science is simply *gnosis*, or knowledge, and then it may dawn upon him that knowledge which cannot be demonstrated in any degree in practise is unscientific, or knowledge falsely so called, and peradventure he will hesitate before he again calls Mrs. Eddy names.

✧

[Silas A. Payne in *The Chattanooga* (Tenn.) *Times*]

It is altogether out of place to mention Christian Science in connection with spiritualism, evolutionism, and new thought, as our critic has presumed to do, since Christian Science has nothing in common with these systems either in theory or in practise. The assertion, "These teachings are sweeping away the faith of the people in the Bible as the inspired Word of God," cannot be truly applied to Christian Science, the first important point or religious tenet of its teachings being: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). And thousands of Christian Scientists all over the globe testify that they never understood the Bible so well, or loved its teachings so much, as they have since they took up the study of Christian Science. In refutation of the statement, "One of the fundamental principles which is the most frequently denied by the higher critics is the doctrine of the divinity of Christ," so far as its application to Christian Science is concerned, the following quotation from page 497 of Science and Health is given: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; . . . We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Wayshower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death." As to "theories of self-salvation," these have nothing to do with Christian Science, unless indeed it be that Christian Science, properly understood and applied, must inevitably destroy all such theories.

Far from being a "poisonous evil," Christian Science is the "law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1). Being the law of God, Christian Science is coexistent and coeternal with God, and thus God Himself precludes its legitimate classification as a "man-made theology." Mrs. Eddy did not invent Christian Science, she discovered it. St. Paul beheld this same law as the "law of the Spirit of life in Christ Jesus," and demonstrated to a remarkable degree its benign influence in human experience. The proof that this Science is not a "poisonous evil" is seen in the good that it does. "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit. . . . Wherefore by their fruits ye shall know them."

✧

[David Anderson in *The Age*, Melbourne, Australia]

In his introductory address last week, the Moorhouse lecturer defined Christian Science as a latter-day agnosticism, which denied the spiritual possibility of the material world, and also its reality as an object of experience. The Gnostics propounded a problem to the primitive church in asking how evil could originate from a wholly good cause, and how Spirit could be confined in matter, and so-called orthodox theology has not yet solved it. But thousands of thinkers have found satisfactory answers to these awkward questions in Christian Science, which affirms that God, Spirit, is the only cause and creator, and that the creations of Spirit are necessarily spiritual, and denies the actual verity or lasting continuance of anything which conflicts therewith. This is the antithesis of agnosticism. Christian Science nowhere denies matter as an object of experience; it does deny that there is or can be life in matter. All search by physical scientists for life in that direction has proved futile. The physical scientist of today has reduced matter to force. The step from that to mental activity is not a long one.

A noticeable feature in the Sunday sermon which followed the week-night lecture is the marked modification of the learned preacher's attitude toward Christian Science as expressed in his previous criticisms. There is a freer admission of the facts of Christian Science, and a reduction of its "heresy" to the thought that disease is non-existent. The existence of disease is recognized in Christian Science as a condition of every-day mortal experience. The Christian Science view of the unreality of sickness, sin, and death, is not as represented by the lecturer. This can be learned through a careful study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Christian Science claims no monopoly of Christianity or of Christian healing. It asks that Christian Science healing should not be represented for what it is not, or mixed up with modes of mental and "faith" healing from which it differs in Principle and application. The preacher referred, as he has done before, to asserted difficulty in getting precise and definite instances of Christian Science healing. Quite recently it was pointed out to him that this difficulty does not exist, and that if he would earmark any one or any number of the instances of healing which appear in every issue of the official organs of the Christian Science church in Boston, the full postal addresses of the parties concerned would be furnished. At the same time he was invited to specify a few of the cases respecting which, in his previous attack, he declared he could not forget, that the neglect of medical aid had cost the lives of patients.

"The final answer to Christian Science is Christian experience." Here the lecturer and the Christian Scientist are at one. Christ Jesus made Christian healing the test of Christian faith, and there is no getting away from it.

✧

[Willis D. McKinstry in *The Solomon* (Kan.) *Tribune*]

Some forty years ago Mrs. Eddy established the Christian Science movement, which has steadily increased in its influence and power notwithstanding the violent attacks that have been made upon it. Christian Science is founded upon a divine basis; it adheres faithfully to the command, "Thou shalt have no other gods before me," and through demonstration its followers prove that God is omnipotent, omnipresent Life and Love, and that man created in His image and likeness is not subject to the evils of human belief.

Jesus proved by his works that the Christ had come, and he said, "He that believeth on me, the works that I do shall he do also." Through the teachings of Christian Science the human concept of existence gives place to the true, and in the degree mankind understands the spiritual facts of being, possessing the Mind that was in Christ Jesus, he is able to free himself from the evils of the flesh. The Scriptures declare, "Faith without works is dead."

✧

[H. Farmer Hall in *Eastbourne* (England) *Gazette*]

I have read the ministerial attack on Christian Science in a recent issue. Its method is conventional. Having gained misconceptions of the teachings of Christian Science, the

Digitized by Google

critic proceeds to state these misconceptions in the first part of his letter, and then to occupy the remaining space in showing the foolishness of these views. I do not for one moment doubt his sincerity in doing what he believes to be a public service, when exposing such blasphemous statements as he attributes to Christian Science; but as no Christian Scientist ever for one instant believed any such thing, his letter simply demonstrates the fact that what needs correction is the view of the reverend critic and not the views of Christian Scientists.

To begin with, the critic declares that Mrs. Eddy tells us that "God is not a person, but a principle." Now let us turn to page 116 of "Science and Health with Key to the Scriptures" and see what Mrs. Eddy really does say. There we read as follows: "As the words *person* and *personal* are commonly and ignorantly employed, they often lead, when applied to Deity, to confused and erroneous conceptions of divinity and its distinction from humanity. If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense." Such a statement as the foregoing should make it impossible for those who earnestly desire to gain Mrs. Eddy's meaning, to fall into any such misconception as that of which this gentleman has become the victim.

The critic further says, that Mrs. Eddy tells us God is "a principle." What Mrs. Eddy does say is, that God is Principle, which is an altogether different proposition. If our critic will look up the word principle in his dictionary, he will find the following definition (I quote from Webster): "a source or origin; that from which anything proceeds; fundamental substance or energy," etc.; so that, when speaking of God as divine Principle, Christian Scientists declare that God is the divine source or origin from which everything proceeds in the divine creation; and I do not think that the critic should have any difficulty in accepting such a view of the one and only God.

I think I need hardly say that such an assertion as that Jesus' "birth, life, death, and resurrection are inventions," is nowhere stated in any of Mrs. Eddy's writings. The fact is, that Christian Scientists accept the Bible teachings on these subjects, without reserve. Before leaving this part of our critic's letter, lest any one should be misled by the statements there thrown out, I desire to say that Mrs. Eddy never claimed for herself anything more than that she was the Discoverer and Founder of Christian Science; and she requests Christian Scientists to follow her "only so far as she follows Christ" (Message to The Mother Church for 1901, p. 34).

To conclude: I see that this gentleman proposes, at some later date, to write further on the subject of Christian Science healing. Whatever any one may write on this subject, it will have to be considered in the light of the fact that there are today unnumbered thousands of those who are rejoicing in and witnessing to the saving and healing power of the Christ as revealed in this teaching.

✧

[John L. Rendall in *Toledo* (Iowa) *Democrat*]

Our clerical critic repudiates and disparages Christian healing in the following words: "Christ never specifically commanded us to heal the sick." This must be between him and his God. Christian Scientists insist that Christ's command to "heal the sick" was for all time, everywhere, and is now binding upon all Christians. As a matter of history, Jesus' disciples were healers, and the early Christians for three hundred years after Jesus' time practised Christian healing as an essential, integral part of their religion. If Christian healing is not essential to Christianity, the burden of proof must be upon its opponents, for the Bible is full of it, and not one Scriptural command in this respect can be said to have ever been rightfully abrogated.

It must be remembered that Christian Scientists do not claim to be able to heal sickness or disease because of any supposed power within themselves. They stand squarely upon the promises of the manifestation of God's healing power as given in the Bible. Either these promises are true and verifiable, or they are not. Christian Scientists contend for and are daily proving their verity. Our critic states that certain forms of disease are not cured by Christian Science, or, in other words, God is unable to heal. This is simply an ignorant statement based upon insufficient knowledge of facts. It can be and has been irrefutably established in proof, that the power of God through Christian Science treatment has healed every phase of disease known to *materia medica*, including leprosy. This does not mean that every Christian Science practitioner has healed every sort of disease, but that within the scope of the entire practise of Christian Science such diseases have all been cured. And why not, since the Bible says of God that He "healeth all thy diseases"? I will call our critic's attention to the fact that a surgeon does not heal a broken bone; he simply sets it. Christian Scientists sometimes employ a surgeon to set a bone because he is supposed to know how to do it properly. There are, however, many well-authenticated cases of the restoration of broken bones by mental and spiritual means alone.

Our critic makes a great ado over the supposition that Christian Scientists deny that "Jesus is the Christ." If he will read "Science and Health with Key to the Scriptures" by Mrs. Eddy, the text-book of Christian Science, he will find Christ Jesus, or Jesus the Christ, referred to five hundred and sixty-two times, and always in terms of greatest reverence and appreciation. I will cite one instance from the tenets of Christian Science (p. 497): "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." Mrs. Eddy's statements respecting Jesus Christ and his relation to God, the Father, are the most reasonable, practical, and satisfactory ever given to humanity, and they accord absolutely with the teachings of Scripture. Our critic should not be surprised because Christian Science differs from him in its interpretations of what constitute correct Scriptural teachings, for there are about one hundred and fifty or more Christian denominations which differ in a greater or less degree.

When our critic cites alleged cases where people have died under Christian Science treatment, he forgets that hearsay is not evidence. It has been my privilege during the past twelve years to investigate many of the cases mentioned in the newspapers as having died under Christian Science treatment, and in a large majority of cases I found that Christian Science had absolutely nothing to do with the case. In other instances, I found that every other means known for healing had been used and exhausted, and that the patient had tried Christian Science only as a "last resort." Many "last resort" cases have been healed by Christian Science, and some others have not been healed. We regret the few failures, but rejoice over the manifestation of God's power in the healing of the many.

✧ ✧ ✧

Let us say to ourselves that among all the possibilities which the universe still hides from us, one of the easiest to realize, one of the most probable, . . . is certainly the possibility of enjoying an existence much more spacious, lofty, perfect, durable, and secure than that which is offered to us by our actual consciousness.—MAETERLINCK.

Editorial

Progression

WHEN some seven years ago the *Sentinel* enlarged its borders, four pages of reading matter being added and a new cover design adopted, it seemed as if the acme of excellence in service to the field had been reached, but it will be noticed that with this first issue of its sixteenth year our weekly paper has taken on a typographical appearance somewhat changed for the better we believe, and one which it is hoped will be even more satisfactory to its steadily enlarging circle of readers, as we have adopted the same face of type for this paper as that used in the *Journal*, beginning with the April, 1912, number. This style of type has been selected for both *Sentinel* and *Journal*, not only because it is considered one of the most beautiful employed in the printing art, but also because it is the most distinct and readable of any of those adapted to modern magazine printing. A further advantage is that its more compact face makes possible an appreciable percentage of increase in the amount of reading matter printed in each issue of the *Sentinel*, an addition which we think the readers of this paper will be quick to approve as a step in the right direction, as is also the simplified style selected for the department headings and captions.

As to the cover design, practically no change has been made, although a certain amount of refinement and architectural correctness in execution will doubtless be noted with approval. Beyond this there can be neither desire nor occasion for change in the *Sentinel*, from the fact that at the time this weekly publication was instituted our revered and beloved Leader, Mrs. Eddy, named it "Christian Science Sentinel," and selected for its motto these words of Jesus: "What I say unto you, I say unto all—Watch." Mrs. Eddy likewise gave instructions, at the time the new cover of the *Sentinel* was under consideration in 1906, that it should be light blue in color, that the design should include the figures of two women, each holding a lamp, and that the inscription on the pedestals should be Longfellow's significant lines,—

A lady with a lamp shall stand
In the great history of the land,
A noble type of good,
Heroic womanhood.

These particular features of the cover have therefore been preserved as expressive of our Leader's thought of the purpose this paper was intended to fulfil.

There has, of course, been no change made in the character and arrangement of the reading matter, these details also having been approved by Mrs. Eddy. We feel, therefore, that inasmuch as we have held fast to what our Leader regarded as the distinctive and essential characteristics of the *Sentinel*, we have, in making the typographical and mechanical changes above noted, not only kept strictly within our province, but we have, so far as the benefit accruing to the field is concerned, taken a forward step in that spirit of thoroughness and progressiveness which was ever the dominant note in Mrs. Eddy's own work and in her plans for the advancement of the cause of Christian Science in its mission to mankind.

Defining, in the initial number of the *Monitor*, the scope of the various Christian Science periodicals which in response to the demands of the times she had instituted, Mrs. Eddy said of the *Sentinel* that it was "intended to hold guard over Truth, Life, and Love." It is with this purpose ever in view that with loving watch-care the editors endeavor to fulfil their trust, guarding the citadel of Truth that no phase of error shall enter its portals, but that the truth which our Master taught and lived may go forth in all its purity and power to heal and to bless those in need. "Hold fast," wrote the great apostle to one who was dear to him, "the form of sound words, which thou hast heard of me, in faith and love which is in Christ Jesus. That good thing which was committed unto thee keep by the Holy Ghost which dwelleth in us." It was through years of faithful, prayerful study of the Word of God that our revered Leader was enabled to give to the world her wonderful discovery of the present-day efficacy of the Christ-healing which is embodied in Christian Science, and it was through her constant recourse to the great truths of the Bible as the foundational source of her inspiration, that we have today the fruits of the Spirit which she garnered up for us in her writings.

"As adherents of Truth," Mrs. Eddy writes, "we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). She has constituted the Bible and our text-book the authorized exponents of her teachings, and so long as Christian Scientists continue to be faithful in their study and demonstration of the great truths set forth in these books, the one corroborating and explaining the other, so long will they continue to receive the blessings so richly poured out upon the children of an ever-loving Father.

ARCHIBALD MCLELLAN.

Prejudice

ALL who betake themselves to meditation upon human affairs will find occasion to note how much of crude misjudgment is born of the careless assumption which presumptuously leaps to conclusions that, perchance, result in a cruel injury. With loving urgency the Master said, "Judge not according to the appearance, but judge righteous judgment;" and yet, how illy have his disciples remembered these words "to do them"! Though the seeds of unfair criticism which men have sown may not be gathered up, the offense may be greatly reduced by that increase of knowledge which in the commerce of life is sure to come to all inquiring thought. When, however, ignorance assumes that wilful phase which is known as prejudice, misjudgment seems to fatten upon experience, and, sad to say, its rankest growths have always appeared in the fallow ground of religious belief. How gladly would one forget the persecutions and pain with which pharisaism has marred every page of Christian history since the day when it adjudged humanity's noblest and best friend worthy of death and stood by to taunt the sufferer while its behests were brutally fulfilled!

Prejudice once meant and may still be made to mean foresight, the expression of that intuitive right judgment which gets at the truth of things without logical process and without delay. As such it has the highest value and is greatly to be desired. The word as now generally understood, however, expresses the mental bias of education, environment, and selfish interest, that obdurate solicitude lest some honored belief or established order be disturbed, some present possession be imperiled. It is an advocate of the past, and commits to it the mace of authority. This has often led men to think of it as a real conservator of values, as the necessary ballast of progressive thought. Even so great a man as Burke argued that prejudice "previously engages the mind in a steady course of wisdom and virtue;" that it does not leave one hesitating, skeptical, and unresolved, but "renders his virtue his habit, and not a series of unconnected acts."

It is to be noted, however, that mortal prejudice opposes itself to independent thought, that it is forever binding men with ancestral fetters, and that it is responsible for all the devastations of bigotry. It is subtle in its influence, and is often found in control of even the radicalism which de-

Digitized by Google

nounces reaction! We must be loyal to convictions, but there must be no zeal of self-interest, no content with ignorance in our stand. Sane judgment is impossible to him who is not dominated by the love of Truth.

Here, as everywhere, Christian Science asserts itself to save. It is manifest that, in so far as we become truly scientific and Christian, every evil of prejudice is cast out. The recognition of truth's supreme value and of our relation to it in Christian Science,—this, and this alone, supplies the sure foundation of right judgment. Says our Leader, "The admission to one's self that man is God's own likeness sets man free to master the infinite idea" (Science and Health, p. 90). *Right vision means right* mental attitude, and hence right determinations. The entire philosophy and explanation of human redemption was expressed in a single line, when the Master said, "Ye shall know the truth, and the truth shall make you free."

Love for Truth and love for our fellow men at once begets a predisposition which is always broad-minded, charitable, and expectant of good. This expresses the Mind that was in Christ Jesus, the Mind of the true Christian Scientist. Then prejudice is redeemed; it has become an intuitive and beneficent foresight.

JOHN B. WILLIS.

Letter and Spirit

THERE are very few Christian people who have a clear sense of the relation between the letter and the spirit of Christianity, and many are apt to speak of the former in a rather derogatory way as if it were something to be avoided. This is probably due to the fact that the great Teacher often rebuked the doctors of the law, who prided themselves upon a wide acquaintance with its letter; but Jesus could not have meant to censure them for their knowledge of God's law when he himself declared that not "one jot or one tittle" should pass from it "till all be fulfilled." Rather did his stern rebuke mean that they had substituted "the doctrines and traditions of men" for even the letter of divine law, and that its spirit had been wholly ignored by them,—as when he said, "Woe unto you, . . . for ye tithe mint and rue and all manner of herbs, and pass over judgment and the love of God." They kept external cleanliness well to the fore, but the inward purification which their own prophets had urged they had largely ignored; hence his merited censure.

In one of Mrs. Eddy's classes the question was asked why the Christian church should have lost the understanding of Truth necessary to heal the sick as in the time of the Master and his early followers. A student ventured the opinion that it was because the letter had been substituted for the spirit. Mrs. Eddy, however, explained that this was not correct; that throughout the Christian centuries many had been deeply imbued by the spirit of Jesus' teachings, and that wherever this spirit had prevailed noble Christian characters were found who at any cost to themselves strove to give the word of God its rightful place in the world. She further explained that the letter of the Master's teachings had been largely lost or neglected; hence the almost universal failure to apply them as he had taught his disciples to do. It is also possible that the Science of Christianity was not given to the world in its fulness at that time, since, as Christ Jesus said, "I have yet many things to say unto you, but ye cannot bear them now." It seems quite certain, however, that if the Christian church had continued to practise faithfully the rules given for the healing of sin and disease, a fuller understanding would have come, instead of a receding tide of spiritual truth, until professed Christians came to rely almost wholly upon material means for relief from suffering, and in a measure for the suppression of sin.

With the coming of Christian Science we have again the mighty activities of both the letter and the spirit of Christ's Christianity, and in answer to the question, "How can I progress most rapidly in the understanding of Christian Science?" we have this answer: "Study thoroughly the letter and imbibe the spirit. Adhere to the divine Principle of Christian Science and follow the behests of God, abiding steadfastly in wisdom, Truth, and Love" (Science and Health, p. 495). On page 330 we read that "when the letter and the spirit bear witness, the infallibility of divine metaphysics will be demonstrated." Here it may be observed that a wide general acquaintance with the literature of Christian Science, and our Leader's writings in particular, does not constitute the grasp of the letter and spirit which is needed in order to prove the power of divine Truth.

It is simply astonishing how few there are who quote Scripture correctly, or rather how many there are who persistently misquote it, and this is even more true in respect to the published statements of Christian Science, showing that the human mind still shirks the task of going deep down into the inspired word as those who seek for "hid treasures," and who are careful that not a grain of the precious gold shall be lost. Such should be the endeavor of all students of Christian Science, yet this does not mean that adherence to the letter alone is all that is needed in giving out the truth,—far from it; but at least one proof of faithful work is the same exactness of statement which is demanded from students of applied natural science. Before giving out any statements of Christian Science, either audibly or in writing, we should compare them with the statements of our text-book and the other writings of our Leader, a practise which will do much to advance us both spiritually and intellectually. The other proof is that diligence and persistency in the application of the rules of Christian Science which shows a profound acquaintance with this life-giving truth, and above all else the spirit of Truth and Love made manifest in purity, justice, and self-sacrifice.

ANNIE M. KNOTT.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

HUTCHINSON, KAN.—So much appreciated was the tent maintained by the local Christian Science church at the Kansas state fair last year, that arrangements have been made by this organization to supply it again. Plans are now being made for the locating of a tent 35 by 50 feet in size. Last year the tent was not so large, and its location was not so convenient as it will be this year.—*The Hutchinson News.*

NEW YORK, N. Y.—Fourth Church of Christ, Scientist, now meeting at 600 West 181st street, has taken title to a site at the northeast corner of Fort Washington avenue and 178th street, a plot 92½ by 128 feet.

New York Evening Mail.

The Lectures

Canton, Ohio

Clarence C. Eaton lectured on Christian Science at the Auditorium. He was introduced by ex-Mayor James A. Rice, who said in part,—

By asking one not allied with them to preside at this gathering, the members of the Christian Science church give additional evidence of their freedom from prejudice against those who are members of other religious organizations, or are members of no church at all. I am of the latter, but not because I have no religion or believe in no church. My conception of a true religion is one ever to live by, not merely to die by; and my conception of a church is an institution that develops our higher understanding and does not seek to prey upon our ignorance or instil fear within us.

I regard it as fundamental that man's highest possible achievement in this earthly life lies in his own development, and that true development consists of his gaining wider and more perfect knowledge and understanding of God's immutable laws and the conformity of His actions and His will to those laws. The world is fast coming to know that everything in God's universe goes by law; that things do not happen; that everything that is, is a result of something that has been, and will prove a cause for something that will be; and that God's laws are immutable and eternal. Also, that these laws govern in everything that pertains to man's individual and social welfare and existence, and that just as no law can be violated without consequent penalty, so no law can be observed without just recompense being awarded.

Every advance made by the human race toward higher and better religious and social conditions was made difficult by the selfish and undeveloped. At every stage of its progress men high in governmental authority, founders and preachers of religious creeds and doctrines, scientists and leaders in the various schools and professions, have waged bitter and oft-times cruel warfare against the making of any change in the existing order of things. But with each succeeding advance opposition has lessened and prejudice diminished, until today no person of real learning declares anything to be impossible. Men's vision of life, its possibilities and responsibilities, has broadened, and with this broadened vision has come greater desire for knowledge, which in turn makes men ever more ready to hear the propounding of laws and doctrines, notwithstanding they were unknown and untried by their fathers.

To many persons present the things which will be said and urged by the speaker this afternoon are not new or untried. From those to whom they are new and untried, and those who may have heretofore heard only to doubt, I bespeak such consideration of the words of the speaker as is in keeping with the higher intelligence of the present day.—*Correspondence.*

Frankfurt a. M., Germany

The lecture on Christian Science by Prof. Hermann S. Hering, read in the Frankfurt Lodge, served to differentiate clearly between this wide-spread denomination and the faith-healing sects with which it is commonly confounded here. To the lecturer himself, the misleading term, faith-healing, for Christian Science may be unknown, for though of German origin, Professor Hering is American born and bred. But his lecture, the subject of which was Christian Science Healing, elaborated the fact that humanity's burning demand for health can never be reached by faith alone, but requires the attainment of the understanding, or science, possessed by Christ Jesus. It was further shown that Christian Science justifies its existence, not only by its transforming action on the physical organism, but also by its reforming effects on individual character and human life.

The lecturer especially defined the contrast between Christian Science and will-power, and laid stress on the fact that its operations or methods are exclusive of all mediumship, hypnotism, or suggestion. The healing of Christian Science is spiritual; not a new invention, but a rediscovery of Truth, and coeval with the creator. Detailed information on the subject will be found in Mrs. Eddy's book, "Science and Health with Key to the Scriptures," now translated into German, and thus made available to every seeker after Christian Science.—Translated from *Kleine Presse.*

Bartlesville, Okla.

Before an audience estimated at from five to seven hundred men and women in the Oklah opera house, Bliss Knapp delivered an address on Christian Science that is still being discussed by those who heard it. The Hon. James T. Shipman, judge of the county court, in introducing the speaker, said:—

I am glad to be here on this occasion to introduce the speaker of the evening, not because I am a Christian Scientist, but in spite of the fact that I am not. A great many of those present are no doubt in the same position,—not adherents of the faith, but nevertheless glad of an opportunity to hear an authoritative exposition of it. Our presence here argues not necessarily that we are not satisfied with our own religious views, but rather that we have the same respect and consideration for yours that we expect you to have for ours. Religious toleration is the spirit which recognizes that the truth may be absolute; yet it is utter folly for one person or set of persons to assume that they know all there is of ultimate truth and have a perpetual monopoly on it. This is the age where science in every direction is seeking the truth as its single object. Whatever of truth has been discovered and brought to light in this age, as well as in the past ages, is and should be the common heritage of us all. And if we deliberately decline to hear what is seriously propounded as truth, backed up by intelligent study and research, then we are building a wall of ignorance and prejudice about our minds which shuts out the light of truth that makes us free. We simply refuse to partake of our heritage. It is sheer bigotry to say there is nothing good in a new school of religion or thought, without taking the pains to find out what its teachings are. The person who thinks his religion is the only true one, superior to all others and therefore above criticism or improvement, may have a very good religion indeed, but personally I have very little respect for his estimate of it if he fears to have it tried in the crucible of logic and reason. I take it that our presence here this evening is an expression of our willingness to learn, of our desire to know what Christian Science is and what it stands for. It is for this purpose that we have come, and I feel certain we shall not go away unrewarded.

The Morning Examiner.

Winnemucca, Nev.

A large crowd assembled at the Nixon opera house to listen to an address on Christian Science by Judge Clifford P. Smith. The meeting was presided over by M. Reinhart, president of the Winnemucca State Bank and Trust Company, who preceded the introduction of the speaker with the following remarks:—

I assure you that it is with a great deal of pleasure I have accepted the kindly invitation to preside at this meeting to-

Digitized by Google

night. I am not a member of the organization myself; but one who is awake to what is going on around him must recognize the fact that Christian Science is fast becoming a potent factor in the religious and social life of the world. When new ideas are put forward, ideas which are not in line with what is generally considered orthodox, we are likely to form a wrong impression and do not give them the proper reception. We seem to be too willing to exaggerate and attack any supposed weakness, instead of accepting the best there is in them as another force for the betterment of the human race. I am satisfied that after listening to the lecture this evening many of you will carry away a different impression of Christian Science from that formerly entertained.—*The Silver State.*

Junction City, Kan.

Frank H. Leonard delivered a lecture on Christian Science to an attentive audience at the opera house. He was introduced by Senator Loring Trott, who spoke in part as follows:—

During the past few decades there has been a decided change in the attitude of men toward the church. There is a longing for a more practical interpretation of religion, dealing not so much with the past, nor yet with the future, but which treats with the actual daily problems of life and existence. Old theories are being laid aside, new schemes advanced; religious research is becoming more general, fewer men are blindly following inherited creeds, and mankind is coming into its own with the realization that the mind is created for religious investigation as well as for intellectual and material advancement. These are not evidences of sacrilege; they are manifestations of the truth that the Christian religion is the most real, the most potent civilizing force known to man.

For two thousand years, the character and teachings of the lowly Nazarene have steadily wrought an ever-increasing, all-powerful, and beneficent influence upon the life and character of passing generations. It is but natural that these conditions should tend to eliminate the imperfect conceptions of men of former days, that a better and more perfect Christianity might be evolved. The Christian Science church is helping to make the larger life more accessible, not by creating a new religion, but rather by more literally following the example and precepts of Christ Jesus.—*Correspondence.*

St. George, Staten Island, N. Y.

An address on Christian Science by Virgil O. Strickler was delivered at the Curtis Lyceum, St. George, in the presence of many people. The lecturer was introduced by Frederick W. Janvrin of New Brighton, who said in part,—

During the past forty years the world has witnessed the most wonderful growth in the way of a religious movement, of the Christian era, and this has resulted in a chain of Christian Science churches encircling the globe, with hundreds of thousands of followers, many of whom have experienced healings through the application of the truth taught in Christian Science; and thousands of these healings, both mental and physical, have been effected after all hope for relief had been abandoned by eminent members of the medical profession. The scoffer has become more respectful; opposition has grown more tolerant; intelligent people, even though they may not have investigated the teachings of Christian Science, agree that its study and application bring happiness to its followers.—*Staten Islander.*

Lectures to be Delivered

Boulder, Col.—Bicknell Young, Curran opera house, 8 p.m., Sept. 15.

Chicago, Ill. (Third Church).—Bicknell Young, Church edifice, Washington boulevard and Leavitt street, 8 p.m., Sept. 18 and 19.

Colorado Springs, Col.—Bicknell Young, Burns theater, 8 p.m., Sept. 14.

Denison, Iowa.—Judge Clifford P. Smith, 8 p.m., Sept. 9.

Fairmont, Minn.—Virgil O. Strickler, Opera house, 8 p.m., Sept. 14.

Fort Dodge, Iowa.—Virgil O. Strickler, Armory, 8:15 p.m., Sept. 18.

Fremont, Neb.—Virgil O. Strickler, Larson theater, 8 p.m., Sept. 16.

Fresno, Cal.—Judge Clifford P. Smith, Barton opera house, 8:15 p.m., Sept. 22.

Huron, S. Dak.—Francis J. Fluno, M.D., Grand opera house, 8 p.m., Sept. 19.

Hutchinson, Kan.—Judge Clifford P. Smith, Convention hall, 8:30 p.m., Sept. 16.

Lancaster, Ohio.—Judge Clifford P. Smith, Sept. 7.

Milford, N. H.—Prof. Hermann S. Hering, Town hall, 8 p.m., Sept. 16.

Neligh, Neb.—Virgil O. Strickler, Sept. 22.

Port Angeles, Wash.—Francis J. Fluno, M.D., Opera house, 3 p.m., Sept. 14.

Pueblo, Col.—Bicknell Young, Grand opera house, 8 p.m., Sept. 16.

Rapid City, S. Dak.—Virgil O. Strickler, Elks theater, 3 p.m., Sept. 21.

Redfield, S. Dak.—Francis J. Fluno, M.D., Opera house, 8 p.m., Sept. 18.

Saratoga Springs, N. Y.—Prof. Hermann S. Hering, Casino, 8 p.m., Sept. 19.

Sioux Falls, S. Dak.—Virgil O. Strickler, New theater, 8 p.m., Sept. 15.

Stillwater, Okla.—Judge Clifford P. Smith, Stillwater opera house, 3 p.m., Sept. 14.

Trinidad, Col.—Clarence W. Chadwick, Armory hall, 8.15 p.m., Sept. 19.

Vancouver, Wash.—Clarence W. Chadwick, Riggs hall, Main, between Sixth and Seventh streets, 8 p.m., Sept. 13.

Walla Walla, Wash.—Clarence W. Chadwick, Keelor Grand theater, 8 p.m., Sept. 15.

Webb City, Mo.—Judge Clifford P. Smith, Blake theater, 8 p.m., Sept. 11.

Webster City, Iowa.—Virgil O. Strickler, Armory theater, 8 p.m., Sept. 19.

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 7, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 22, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 30, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

Testimonies of Healing

My first knowledge of Christian Science was gained several years ago, at the time of the healing of my wife. She had suffered long from chronic stomach trouble, had been told by physicians that she was slowly starving, and indeed was able to take only "predigested" foods. In this state she visited a Christian Science practitioner and was completely healed by one treatment. Later, one of her eyes was seriously injured by contact with a sharp twig. The eye became acutely painful, inflamed and swollen, and the other eye was quickly affected. Again she was almost instantly healed in Christian Science, the second healing following the reading of a paper concerning Mrs. Eddy and her work.

After these beautiful demonstrations we still regarded Christian Science treatment as a thing to be purchased when there was need of it, and we gave no serious study to the subject for some time. Finally, however, when need for help led us to study man's relation to God and His laws, we began to feel a spiritual uplift and were able successfully to meet and overcome some slight attacks of illness. Then, in December, 1911, I fought a sense of inaction of the kidneys. On the morning of the 8th, after having arranged for the removal of our household goods, I started for my office, stopping to make a business call on the way. At the conclusion of this call I was suffering intensely, and made the serious mistake of believing that I had not strength to reach a Christian Science practitioner and that surgical treatment was necessary. The surgeon I visited did his best to relieve me. After certain unsuccessful attempts he made an incision through the abdomen and into the bladder with no better result. When he considered that I had reached the limit of endurance, he called an ambulance and sent me to a hospital for a further operation.

While in the ambulance I declared the truth, and knew that God alone could and would make me free, and gave myself to His care. At the hospital my body was again in the surgeon's hands, but I had no fear. Directly after the operation my wife was advised of my state. She at once asked help of a Christian Science practitioner. Cheerfully and earnestly he began his work. My wife then talked with the surgeon, who told her that I could not live beyond forty-eight hours at the utmost, that I would presently sink into a stupor, to fall later into terrible suffering, and so pass away. He counseled her to send at once for our daughter, and any others whom she wished to have with her when the end came. My wife reported all my symptoms and every change to the faithful practitioner. Within a short time the doctor announced that a curious exception to the general order of such cases existed with me, that I was perspiring and had no fever; "but," said he, "it will come, for nothing known to medicine can save his life." Upon regaining consciousness I felt refreshed as after a restful sleep, and my wife told me what had been done for me in Science. I could see God's work already done, but I submitted to the ministrations of the surgeons without protest, knowing that no one, no thing, could hurt me.

At six in the evening I was subjected to a rigorous examination. Four physicians pounded and squeezed me in a determined effort to find sore spots which did not exist. The doctors were puzzled by the entire absence of fever, and I felt so well that I desired to go home that night. This my wife felt to be unwise, as I could not be made comfortable there because of the unsettled state of the house, and I therefore remained in the hospital four days. I had promised the doctor to go to his office for a thorough examination upon leaving the hospital, and I felt that such an examination would but prove the faithfulness of the work done for me in Christian Science. When I saw him, he pronounced me physically perfect and a desirable subject for life insurance. (Life insurance had been denied me for thirty-two years, since my early youth, because of a "bad heart.")

My body bears no mark of my experience, and I am freed from a fear of lack by the knowledge that God, Truth and Love, is the only power, and that He in His wisdom has furnished abundance for all. For these blessings I glorify God. I am grateful to Christ Jesus the Wayshower, and also thankful to our beloved Leader, who rediscovered this healing truth.

EDWIN JOHN ROBERTS, Lakewood, Ohio.

✧

For over two years I suffered intensely with hemorrhoids, the pain often being so severe that I was compelled to *lie in* bed for days at a time; but I have been perfectly healed by treatment in Christian Science. This healing took place at a time when a physician of high standing, who had been attending me, said that there was absolutely no relief for me unless I went into a hospital and had an operation. I went instead to a Christian Science practitioner, and in two or three treatments I was healed. Some time later, the disease again presented itself, but I had grown so in the understanding of the nothingness of error that I was able to handle the problem myself without even mentioning the attack to any one. That was quite a while ago, and I feel that all fear of the ailment is now entirely obliterated from my consciousness; nevertheless I am grateful for the opportunity thus afforded me of knowing the truth for myself. The healing occurred in 1911, and there has not been the slightest return of the trouble.

I become more and more interested in Christian Science each day. The journey out of mortal sense is being lighted by the daily study of the Bible, with its spiritual interpretation as given through Science and Health by Mrs. Eddy. I have placed my three and a half year old son in a Christian Science Sunday school, and hope soon to become a member of this church. I may add that this little boy had seemed to be quite seriously ill for more than a week, the attack being a heavy cold, with its accompanying ill effects. I called upon a practitioner, who talked to me a little while and said that he would treat the child. When I reached home that night (I am engaged in an office during the day), the little fellow had eaten heartily during the day and was running around at his play. He has been in better health ever since this healing than he was before the illness, although his general health has usually been good.

I would add that the physical relief I have experienced is not to be compared with the spiritual uplift that has come to me through Christian Science, for all of which I am deeply grateful.—MRS. LIDA H. SPENCE, South Berkeley, Cal.

✧

In early girlhood I became a member of a Christian church, having been led through family influence and educational training to accept its teaching. Later in life, when Christian Science was brought to my notice, I found that the dual command, to preach the gospel and heal the sick, had a value, a meaning, hitherto unknown; that there was no authority in Scripture for separating these, and that obedience to the second clause, as well as the first, was the practical test of faith in God and our understanding of the Master's teachings.

During my earlier years I often had to be taken out of school for sickness, and afterward as a teacher had to give up that profession altogether, because of ill health. Some years later, in married life, when the heavy clouds of sorrow were about us in experiencing the loss of a beloved child, an

Digitized by Google

only son, Christian Science came as a rift in the cloud, and said that "joy cannot be turned into sorrow, for sorrow is not the master of joy" (Science and Health, p. 304).

When I was stricken down on a bed of sickness with a fever, away from home, a telegram from a dear friend came with the message, "No evil shall befall thee;" and I was forthwith healed, though the attending physician (whom I had called, in my helplessness to do otherwise) could not understand the fact that my temperature remained normal, although he came several times to test it, expecting a return of fever. In the mean time my husband had seen the Science friend all unknown to me, and credit for the cure had to be placed where it belonged, namely, with Christian Science. That was fifteen years ago, and it was my last experience with *materia medica.* In the years since then every attack of sickness which I or other members of the family have experienced, has been taken care of through Christian Science treatment. I have been healed of what is called typhoid pneumonia, and also of serious female troubles, not to mention some lesser ills; and in my family critical sicknesses have yielded to the power of Truth over error as realized in Christian Science. Surely, we have reason to be thankful for this truth.

I am very grateful for having had the privilege of an early Christian training, thankful for all the blessings which have come from it, and for a Christian home and parents; but when I began to investigate Christian Science, I found that the Bible, always a precious book to me, became more precious as it was read and studied in connection with that priceless Bible commentary, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Her inspired thought has brought to a sick and sinful world her discovery of that truth which Jesus said would make us free. This is the undivided garment, the healing of sickness as well as sin. "The stone which the builders rejected, the same is become the head of the corner," and on this rock is built the Christian Science church. To give up my earlier church for this Christ-idea means to me spiritual progress. It means to work out my own salvation in the light of Truth and to walk in that light so far as I receive it.—Mrs. Nellie S. Prescott, Newtonville, Mass.

✧

I write this in the hope that it may help some one as I have been helped by reading testimonies given in the *Sentinel.* In February, 1911, I left Asheville, where I had been for nearly two years in a sanitarium, for tuberculosis, and went to the home of my uncle in Fayetteville, N. C. He and his two daughters and a son were Scientists. The first night I was surprised that I was not tired out from the trip, and although we sat up and talked until twelve o'clock, I felt refreshed next day.

For eight years I had suffered from stomach trouble, and had to be very particular as to what I ate, but my cousins told me to eat anything I wanted, that it would not hurt me. I did try it, and there was no ill effect. When they told me that I could be healed in Christian Science, I thought that sounded very good, but I had not faith enough in it to send for a practitioner. However, I began to read in one of their books to see what was in it, and the more I read the more convinced I was that Christian Science is the right way. I began to improve, and this raised my hopes. I ate anything I wanted and it did not hurt me, and I began to grow stronger, so that I could walk with them through town. When I went to my uncle's home, I lay in bed part of the day, but I soon gave this up and went on long rides, sixteen miles in the country, without being fatigued.

After this, I took a severe cold, and fear entered my thought; so I sent for a practitioner, and with the first treatment I was better. I read in Science and Health, "Become conscious for a single moment that Life and intelligence are purely spiritual,—neither in nor of matter" (Science and Health, p. 14), and the longing came to me to feel the presence of God. I began to pray silently that I might understand Him and feel His presence. Soon I had a happy realization of God's presence, and when I thought of myself I was better in every way,—the cold gone, the soreness and pain which I had had up to that time, all gone; and other ailments were made better. I was so happy that for nearly one entire night I rejoiced. It meant, "Glory to God in the highest, and on earth peace, good will toward men." I could begin to understand Jesus' saying, "I tell you that, if these should hold their peace, the stones would immediately cry out." I knew then that I would not go back to the sanitarium, —and I have not taken any medicine since I left there.

I left my uncle's and went to Washington, D. C., and while there fear came to me again, and the stomach trouble was in evidence; but it was healed, also an attack of pleurisy. For all of this healing I am very grateful to God, and also to Mrs. Eddy for Science and Health, which shows us the way. I thank God for the spiritual uplift, and the illumination of the Scriptures. I have been doing the household work, also sewing, and walking any distance, and this without being tired. I hope some day to be worthy of being known as a Christian Scientist.—Lena McGeachy, Chipley, Fla.

✧

Having received so much help from the testimonies in the *Sentinel* each week, I would like to tell of an experience in the hope that I may help some other in the journey from sense to Soul. Recently I had an attack of stomach and bowel trouble, accompanied with severe pain, chills, and cramps in my legs. My husband and self are students of Christian Science, so we thought to solve the problem ourselves, but as I received no relief after several hours' work, we decided to telephone to a practitioner. My husband sent a man to a neighbor's for some one to care for me, as we were alone, and also to get our neighbor to telephone to a practitioner. After his wife left home for our place, it occurred to this neighbor that he could help me, as he also is studying Christian Science; so instead of driving a distance of over four miles to telephone, he immediately gave me a treatment, and I received relief at once. By night I was resting quietly, and next day at noon I was up and ate lunch with the family. We are very grateful for this proof of God's care for His little ones.

Annie M. King, Dubois, Md.

It would take much time and space to tell of all the help that Christian Science has been to me, but with the hope that it may be the means of bringing some brother to see the light that shines for all, I will relate one or two demonstrations made for me by a faithful friend who is a practitioner. About five years ago I was stricken with severe pains in the muscles of my legs, and these pains became so bad I would often have cramps and fall. Finally I was unable to dress and undress without assistance.

Having studied Christian Science and being able to make some demonstrations, I tried to use what understanding I had to help myself; but fear seemed to have me bound, so I asked for treatment, which was lovingly given, and in four weeks I was perfectly healed. Another proof of the efficacy of Christian Science healing was given to me in the summer of 1911, when I had a lame back. I had become so ill that it was difficult for me to sit up all day, and to do any kind of work was out of the question; but a few weeks' treatment destroyed my fear and the physical manifestation. I can say I am now

Digitized by Google

stronger and better able to do hard work than I have been for many years. I have put in a good part of my time the last winter in cutting wood.

While I feel deeply grateful for the physical healing, it is not to be compared with the knowledge of Truth that is unfolded by the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Where I once read the Bible with eyes that did not see, I now read it understandingly, and am daily and hourly rejoicing in the ever-presence of the one God. I am truly thankful for all the help given me in my journey from sense to Soul, and the only way I can express my gratitude to God, and also to our Leader, is by living up to my highest understanding of Truth each day.

J. W. King, Dubois, Md.

Some years ago, in Chicago, a dear friend took me to see a building then under construction, called First Church of Christ, Scientist. I was accustomed to seeing fine buildings, and rather wondered at my friend's enthusiasm and at the name of the church; but I asked no questions, because some one had told me that this friend was crazy on the subject of religion, and I was glad to avoid the subject lest she should become excited.

Since that time I do not remember of having heard of Christian Science until about three years ago, when another friend, seeing my great need, advised that I investigate this religion. I followed her advice at once, and soon entered upon the most wonderful and interesting period of my life. I had not read three pages of Science and Health before I was convinced that this was what I had been longing for all my mortal days, an intelligible idea of God. I studied constantly, but my progress seemed very slow. I gave physical healing very little thought, as I did not understand that studying Christian Science could help me in that way; but one day I found I could read without my glasses, to which I had been a slave for over five years. Since that time I have felt no need of them.

During the past three years of almost constant study and spiritual growth, I have been healed of so many ailments that I hardly know where to begin or leave off in the telling of them. Having been a graduate nurse from one of the largest training schools in the world, when I speak of being healed of diseases, I speak as one who knows from a medical point of view. I have been healed of lifelong backache, weak eyes, bronchitis, violent headaches, serious burns, pneumonia, morbid fear of personal enemies, melancholy and suicidal desire, and innumerable other ills. Christian Science has brought about a great change in my relation toward others. Where a seemingly insurmountable family difficulty held sway, peace and harmony now abide. In fact, Christian Science has done so much for me and mine, that when I say I am grateful, the words seem poor indeed to express what I mean. We need a new language of gratitude for the use of those who study Christian Science. I marvel when I compare my existence a few years ago with my present state, and wonder if a life of devotion to this cause will in a measure cancel the debt of gratitude I owe to our Leader for placing Christian Science within my reach.—Mrs. Denny Hampson, Omaha, Neb.

Although I knew nothing of Christian Science, I was interested in a testimony I saw in a copy of the *Sentinel* which had been sent to me by a friend, and the many benefits received since that time remind me that some one who is suffering as I was, may be interested in my healing.

Over three years ago I had a very serious inflammation of the right eye. It was the third attack of the kind from which I had suffered, and on each previous occasion I had been confined to a dark room for two months. The last time I spent over two months in the dark room and in the hospital, though I was finally able to get out and return to work, but could use only my left eye, as the right one seemed to continue to be inflamed, and rapidly grew worse if exposed to any light. It was necessary to keep it closed, with all light excluded by bandages; and though I continued treatment with several specialists, there seemed to be no improvement. By removing the bandage a minute at a time, when there was only a little light, I found that with the right eye I could hardly distinguish objects, unless they were very large, and could not read with it, however large the print.

I was told that I could never use this eye again, to amount to anything, if at all, and could get no hope from the physicians as to when I could go without the bandage. In this condition I asked a friend what Christian Science would do for my trouble, thinking there would be no answer. I explained to this friend how the pupil had to be dilated to prevent my becoming blind, and that there was only one remedy known by the doctors which would do this, so it seemed to me that Christian Science could be of no avail in such a case. The reply to my question was, "It would heal you!" No more was said at the time, but later I received copies of the *Sentinel* and the *Journal*, and a testimony regarding a similar case interested me.

About nine months of medical treatment had not given me the use of my eye, and as no hope was held out by the doctors (four or more in number), I finally decided to try Christian Science, and called on a practitioner, with the result that I was able to use both eyes in less than a week, and have used them continually ever since. I did not expect to discontinue the use of glasses, as I had worn them over twenty years, and had been told that I could never see without them; but they have since been laid aside without any ill effect. Many other difficulties have since been healed in the same manner, and my sincere hope is to gain a fuller understanding of Christian Science by studying the writings of Mrs. Eddy in connection with the Bible.

It would be useless to endeavor to express my gratitude in words, either to God or to those whose understanding of Christian Science has helped me, but by trying to put into practise each day what knowledge I have gained, I hope to show a little of the thankfulness I feel for this healing truth.

F. E. Eastman, Tacoma, Wash.

As the benefits of Christian Science multiply daily, the love, peace, and joy that come to us through its study and ministrations, my debt to divine Love becomes increasingly great, and I am sending this testimony as a slight expression of my gratitude.

Eight years ago my physician said that I could never be free from pain unless an operation were performed to remove from the spine a pressure which caused constant pain at the base of the brain. Before this another physician in another city gave the same verdict. Two years more of suffering was endured before I consented to the operation, and then only because the pain had become unbearable and I had given up hope of relief from medical treatment.

While waiting for my husband's return from a business trip, after which the operation was to be performed, I decided to try Christian Science treatment, although up to this time we had been very much opposed to Christian Science and never lost an opportunity to ridicule it. My husband being in the drug business, we thought our opposition justifiable. I had little faith in the power of Christian Science to heal, perhaps just enough to know that at least it could do me no

Digitized by Google

harm. I recognized this fact because I had seen the harmony expressed in one Christian Science family, so I humbly went to a member of this family and asked for treatment. I was completely healed in five days, and from that day in April, 1906, to the present time, I have had no return of either the severe backache or headache with which I had suffered for thirteen years. With this healing came a spiritual awakening which was only perceptible at first in a happier and more tranquil condition of thought and an overwhelming desire to know more about God and more about Christian Science.

Since 1906 our two children have had only Christian Science treatment, and measles, mumps, croup, and the usual symptoms of scarlet fever have been quickly destroyed. On examining my thought recently, with a desire to know just where I stood after six years' study of Christian Science, I found that my uppermost desire is still to know more about God. Among my greatest blessings are the privileges of church-membership, both in the branch church here and in The Mother Church, also class instruction, which has been the means of enlarging my understanding and faith in God and deepening my appreciation of our beloved Leader's life and writings. Only by purity of thought, loyalty to the cause of Christian Science, and an honest, humble endeavor to express in my life the good that has come to me, can I hope to show my gratitude for Christian Science.

MRS. JESSIE WIDNER COLTON, Detroit, Mich.

During the illness mentioned in the above testimony, I was present at a consultation between Mrs. Colton and her family physician and heard him say to her, "You will never be better until you have an operation."

ANNA H. MERRIAM, Detroit, Mich.

✧

In gratitude to God, and in the sincere hope that this may help others, I send my testimony. Some time ago I had occasion to clean the inside of a sewing machine, which was of copper. It was covered with verdigris, and I got this all over my hands. I was not feeling very well then, and before night I was very ill, and decided to send for a Christian Science practitioner. I did so, but my daughter and husband insisted on calling a doctor, so I had to yield to them. By the third day my hands presented a dreadful appearance, and I suffered greatly. The doctor told me what to use, and said I should be careful to follow directions, but I replied that I should continue to trust God and that He would heal me. He then said, "Woman, have you no sense, old as you are?" But I replied that Christian Science can and does heal, and that I would prove that it does. He said, "You will surely die." I then sent for a Christian Science practitioner, and in a few days was healed of the poisoning, and also of an acute lung trouble which had developed. I trusted God through it all, and am very grateful for what was done for me. I hope that some day I shall be able to do for others what has been done for me in the truth.

MRS. MINA HALE, Eau Claire, Wis.

✧

[Translated from the German]

In February, 1911, my daughter was taken with scarlet fever in a severe form, and also with a serious throat trouble. As we had experienced the workings of Christian Science in several instances, I applied to a practitioner for treatment, which was taken up lovingly. After the first treatment the high fever abated, and in two weeks' time the severe illness was overcome without the after effects usually manifested in such cases. For this I thank God, and am grateful to our beloved Leader, Mrs. Eddy, for showing us the way of Truth.

FR. CH. HELMANZIK, Borsigwalde near Berlin, Germany.

From Our Exchanges

[The Universalist Leader]

The vision of federation has taken hold upon the whole Protestant church, and the time of its fulfilment is not far away. It may not be in this present generation in its fulness, but in some measure we are to enter into its glory. And it is a curious thing that this spiritual vision should have been revealed to the church by the commercial world! And yet the thought of cooperation which is coming to be the law of business, is a Christian thought and had its origin in Christ, and business with its keen practical talent took the word out of the mouth of the church and said this is a good thing, the only sensible thing, and proceeded to put it in practise while the church was still talking about it! And now comes the reflex action, and the churches are seeing their vision realized in business and questioning, Why not in our work as well? Why should we exhaust ourselves in administration and get nothing done, when we have but to come together and multiply our efficiency? Why should there be a great many societies in competition over the thing one society can do so much better? Why should we not put our doctrine of brotherhood to the test of practical application? Can we expect the world to follow our direction when we ourselves are violating it? And so we look forward to the time when there may be one society which shall be an irresistible force for temperance, and another which shall be an irresistible force for purity, and another for civic honesty; but back of all these societies there will be, making them irresistible, the omnipotent power of a united Christian church. We may never come together as one on a statement of dogma, but the way is not far when, seeking to serve, our hands touch and clasp in fellowship.

[The Continent]

A real virtue has a mighty hard time maintaining itself in an unreal man. Insincerity "will eat as doth a gangrene." If the cancer has begun anywhere in a man's thinking or his actions or his words, it is almost certain to spread till it involves all of him. The only sure defense from forfeiting all genuineness is to watch with fear and trembling against the intrusion of the least spot of ungenuineness into any phase of living. The only safe reality is the realness which is real all the way through. The man of real reality pretends to nothing which he is not, affirms nothing that he does not believe, professes nothing that he does not feel, assumes nothing for the sake of appearances, claims nothing as due his own merits, yields nothing demanded by his own conscience, undertakes nothing half-heartedly, does nothing triflingly, and withal in the whole of life, day after day, lives up to the watchword "Thorough!"—giving a hand of honest brotherhood meanwhile to all who live by the same rule.

[Zion's Herald]

The raw material of the doctrines is the experience of the human soul in its enjoyment of God, and this experience is something that is constantly expanding and becoming more perfect. The doctrine that is based upon today's experience will very likely be transcended tomorrow. It will not have become essentially untrue, but it will have grown radically inadequate. That fact need shake the faith of no timid soul. Nothing has been really lost because the old form has been found to be imperfect. The ancient words still deserve our love and honor. They were fully true once; they are partly true now.. The fact that a doctrine is discovered to be inadequate ought to cause us to rejoice rather than to fear. What has caused the discovery? It is the breaking of the fuller

Digitized by Google

light and the birth of the more perfect experience. God is revealing Himself in the life of man in many ways and at sundry times. Not even yet have we learned fully what He spoke unto us in His Son. The eclipse of a creed, therefore, is not a tragedy when the form of words has been transcended by the new experience which demands the new form. The only tragedy would be to have the forms abide forever without change, and no growing experience available out of which they could be renewed. The individual Christian and the church must both be loyal to the demands of a growing experience, and ready to accept its issues in the terms of new propositions. There is nothing to be feared and there is everything to be gained from this.

[*The Outlook*]

More and more the thoughts of men turn to the future of the race; more and more they realize that they have only a life interest in the treasures of civilization which God has placed in their hands, and that these things must be used not selfishly, but passed on to those who are to come after them; more and more they realize their duty to children; more and more they see that the earth ought not to be primarily a workshop and incidentally a home, but primarily a home and incidentally a workshop. They believe in the upward movement of the race, and they stand ready to help it. The modern mind is dominated by the thought of life; and the inspiration of the modern world is its faith in progress, which is the social application and expression of the thought of life.

[*The Christian Work and Evangelist*]

The calendar of saints is not nearly filled. From the worldly point of view some men are born to greatness, some attain greatness, and some have greatness thrust upon them. But here all were born to be great, born to stand erect before God; and yet the greatness cannot be thrust upon us, because it is a vital thing to be wrought out in the heart and character and life between a man and God. It is not what a man has, but what he is. It is not his possessions, his reputation, his position,—it is himself. There is a chief end for every man as well as for man in the mass. God has made it possible for every man to fufil the end of his being, to be great, not as the world counts great, but as He counts great.

[Rev. Charles F. Dole, D.D., in *The Christian Commonwealth*]

It is wholesome that we are coming to see that there is a grand spiritual structure in which every splendid word which has ever been sounded by the prophetic soul of man has corresponding reality in fact. We are coming to see, sometimes by direct vision, and again by the roundabout path of doubt and denial, that the great facts and thoughts—God, the soul or the moral integrity, duty, conscience, truth, progress, the immortal life—all go together, and constitute the reality by virtue of which our own reality consists, the reality of God, in whom the reality of man inheres.

[*The Standard*]

The unity of the church which our Lord prayed for in his priestly intercession will not come the sooner by disregarding the facts as they are. In the mean time, we suggest the wisdom of spending less time in getting other denominations to consider the question of church unity and of using more time in getting the members of one's own denomination to the point where they are willing to enter upon practical measures of cooperation with other denominations. Most families have little time to spare in teaching their neighbors' children how to behave,—they need all there is for the training of their own.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is *specially* bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by **Mary Baker Eddy**, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder
of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies, inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

MISCELLANEOUS WRITINGS. 1883 1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

CHURCH MANUAL. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

CHRIST AND CHRISTMAS. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

UNITY OF GOOD AND OTHER WRITINGS. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

CHRISTIAN HEALING AND OTHER WRITINGS. One volume containing: Christian Healing. The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more copies to one address, 40 cents each.

NO AND YES. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

MESSAGES TO THE MOTHER CHURCH. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 25 cents; twelve or more copies, 20 cents each.

MESSAGE TO THE MOTHER CHURCH. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

OUR LEADER'S MESSAGE. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

COMMUNION MESSAGE, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

TWO SERMONS. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. In one volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

CHRISTIAN HEALING. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

THE PEOPLE'S IDEA OF GOD. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

FEED MY SHEEP. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

POEMS. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

NATIONAL

Attorney-General McReynolds' first and most important attack on the "hard coal trust" was begun last week in Philadelphia with the filing of the civil suit for the dissolution of the Reading company's control of coal mining and coal-carrying railroads. The Reading company with its subsidiary and allied corporations, including the Central railroad of New Jersey and certain of their officers and directors, are charged by the federal government with violating both the Sherman anti-trust law and the commodities clause of the interstate commerce act, in an attempt to monopolize the production and transportation of anthracite. This combination, controlling at the present time 63 per cent of the entire unmined deposits of anthracite and marketing about 30 per cent of the annual supply, will own or control in time, if not dissolved, the attorney-general warns, "every ton of commercially available anthracite known to exist." The suit is the second step of the department of justice to solve the "hard coal trust" situation since the decision of the supreme court last December canceling the so-called 65 per cent contracts and ordering the dissolution of the Temple Iron Company.

The federal court at New York city has been notified that the so-called coal-tar trust has complied with the court's decree in the government dissolution suit, and the combine is now considered legally dissolved. The dissolution decree ordered that contracts entered into by members of the combine be re-formed and the sale of stock completed within six months. The government alleged that the defendants attempted to monopolize the trade by obtaining control of a substantial part of the supply of coal-tar in the United States and of large productions of coal-tar from coke ovens, and by controlling competing companies and firms doing the business of purchasing coal-tar and manufacturing and marketing tarred felt, roofing and paving pitch, and other products of coal-tar.

Six million acres of withdrawn public lands were restored to entry during the months of May and June upon approval by the secretary of the interior of the recommendations of the United States geological survey. This action was the result of examination and classification of the lands by the survey, those restored either having been found not to be valuable for power sites, reservoirs, coal, phosphate, or potash deposits, or having been definitely valued as coal lands and rendered available for purchase under the coal land law.

The old trails committee of the Daughters of the American Revolution is placing the stakes to mark the old trail from St. Louis to Kansas City. This trail was traveled by pioneers who went overland to Independence, Mo., near Kansas City, and there joined the great caravans of home-seekers that followed the Oregon trail to the Northwest, or the Santa Fé to the Southwest. In October the stakes are to be replaced with concrete markers.

Thirty-two persons met with fatal injuries in Fourth of July celebrations this year, fewer than in any year since statisticians began recording the toll of fireworks. There were 466 in 1903, the first year the association counted the victims. The non-fatal injuries this year were 1,131, as against 947 in 1912 and 3,983 in 1903.

Waters of the Pacific now flow through the Panama canal as far as the Miraflores locks. The last barrier at the Pacific end was destroyed by dynamite at half past nine Sunday morning, Aug. 31. Fifteen hundred spectators were present.

By a vote of 183 to 43 the House passed the Hetch Hetchy bill, which provides a right of way for the San Francisco seventy-seven million-dollar water supply project. The bill has yet to go to the Senate and the President.

INTERNATIONAL

The United Shoe Machinery Company of Canada, a subsidiary of the Massachusetts company, which was declared last October to be a "combine" within the meaning of the combines investigation act, was given six months' grace to get within the law, and has taken steps in that direction, according to a statement issued by the department of labor. The company, under the finding of the board of investigation, was subject to a revocation of its Canadian patents and a fine of one thousand dollars a day.

Germany, which already possesses eight thousand miles of waterway, is constantly extending it. The latest scheme is to connect Berlin with Leipzig by this means. The authorities of both Prussia and Saxony are favorable, so that the work will soon be begun. Freight vessels of six hundred tons and more will be able to pass through the canal, and touch at important garrison towns.

Canada's plans for participation in the Panama-Pacific exposition at San Francisco will be on much the same lines as at similar exhibitions elsewhere. The natural resources of the country will be the basis. A year ago a site for the Canadian building was selected. It is the intention to start construction work this autumn. The structure and the arrangement and transportation of exhibits will cost five hundred thousand dollars.

Good progress is being made with the drainage works now being carried out by the government in the southeastern portion of South Australia. The present works, which form only a portion of a large scheme, will involve an expenditure of over three hundred thousand pounds, and will, when completed, render available for intensive culture thousands of acres of exceedingly fertile land.

Three new and distinct herds of buffaloes have been located west of the Slave river, on the extreme northern boundary of Alberta, Canada, by a party of timber cruisers. The government will take steps to prevent the extermination of the herds by hunters, and will further protect the animals by increasing the wolf bounty. An American explorer discovered a herd in the north two years ago.

The question of Germany's representation at the Panama-Pacific exhibition at San Francisco will be reopened. This is due to the exertions of the German ambassador to the United States, Count von Bernstorff, and Frederick J. V. Skiff, director-in-chief of the exposition.

The American Bar Association met this year in Montreal, Canada. Ex-President Taft was elected president of the association for the ensuing term. The Rt. Hon. Richard Burdon Haldane, Lord Chancellor of England, who was the guest of the association, spoke on "Higher Nationality, a Study in Law and Ethics."

INDUSTRIAL AND COMMERCIAL

An effort to divert the seal fur trade from London to the United States is being made by Acting Secretary Sweet of the department of commerce. Mr. Sweet has ordered sent to a leading fur company of St. Louis twenty-two hundred sealskins from the output of the Pribilof islands for the past season. Hitherto the skins have always been sent to London, which is regarded as the seal fur center of the world.

The first of the five largest locomotives in the world has been completed, and is being given its final test at the plant of the Lima Locomotive Works, Lima, Ohio, before being formally turned over to the Erie railroad to be used for passenger service between Jersey City and Susquehanna. The locomotive was built at a cost of forty thousand dollars. It is of the Pacific type, and is scheduled for a speed of one hundred miles an hour.

For the first time in the history of the rice industry the farmers of Texas are to launch into the milling business themselves. A two million-dollar corporation has been organized and Houston selected as the location of the central office and distributing point. Stockholders of the corporation will be solely farmers who are members of the Southern Rice Growers' Association.

The value of the "secondary metals," exclusive of gold, silver, platinum, iron, and aluminum, recovered in 1912, reached the enormous total of $77,395,843, compared with $52,585,390 in 1911, according to the United States geological survey *Press Bulletin*. "Secondary metals" are those recovered from scrap metal, sweepings, skimmings, and drosses.

The value of the stone produced in the United States in 1912 reached the total of $78,284,572. The large stone-producing states, named in order of output, are Pennsylvania, Vermont, New York, Ohio, Indiana, California, Illinois, Massachusetts, Missouri, and Wisconsin, the production of each of which was valued at more than two million dollars.

With twenty-four hundred sealskins and one thousand skins of the rare blue fox aboard, the steamer Homer has returned from the Pribilof islands. The furs and sealskins were gathered from the United States government stations on St. George and St. Paul islands and are worth about one million dollars.

Bids for bulkheading about twenty acres of the South Boston flats, filling in, dredging approaches and a turning basin, have been opened by the directors of the port of Boston, preliminary to the building of a large dry-dock at South Boston.

The gem imports into the United States in August reached a total of $3,781,975, of which pearls and cut precious stones are valued at $2,951,635, and the uncut stones at $830,340.

Exports from the United States to Japan in the fiscal year just ended were $57,741,815; those to all other parts of Asia were $57,314,805.

A crop expert announces that the potato crop this year in the United States will be one hundred million bushels short of last year.

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI September 13, 1913 No. 2

The Right Side

SAMUEL GREENWOOD

THE *right side to any question* is the only side that can honorably be taken. The wrong side in its very wrongness condemns itself as unworthy and untrue, and honesty forbids that any one should champion it. In her sermon entitled "Christian Healing" (p. 10), Mrs. Eddy points out that "there is but one side to reality, and that is the good side." The good side is God's side, and is the only right side in any case, and there can be no reasonable excuse for not taking it. There is certainly no warrant for talking on the wrong side after one has been sufficiently enlightened to know where the truth lies. Mistaught as to the nature of Life, the origin of man, and the laws of God, mortals usually, and in a sense naturally, take the wrong side of things, and so come under the influence of what they would be glad to avoid. Even Christians are sometimes led to argue on the side of evil instead of on the side of good, for error rather than against it, and then perhaps wonder why they are not more successful in overcoming it.

Christian Science is teaching humanity the better way. It places man always on the side of God, which, in relation to human experience, means that man is rightly on the side of health, happiness, and success, on the side of holiness and everlasting life. It means that we should never in word or thought take the opposite side to what is good and perfect. Despite the accumulation of false testimony, we should not plead guilty to error except in the case of wilful and conscious wrong-doing, and then only long enough for repentance and reformation. Evil has neither authority nor power to command our allegiance or our fear. It cannot compel us to honor its claims or come under its yoke. It would be considered poor policy in worldly matters to argue on the side of one's opponent, and it is even poorer policy in spiritual things, for it confers a sense of power where we least want it to be. If we are convinced that man is the child of God, hence good and perfect, we can at least remain faithful to that conviction in what we think and say.

If we fully realized that our own thought or belief is largely responsible for our discordant experiences, we should be more careful to think or affirm only what we desire to have true. We should remember that God never places man on the side of evil. God does not say that His children are poor or sick or sinful, or that they must suffer and die. It is only a sense of evil that suggests these things, and knowing this, we should not accept or repeat them. We should never be willing to declare for man's incapacity or inharmony in any direction, even though the individual concerned may be one's self. What right have we to say or think unworthy things of ourselves, while in the same breath we may declare that God is the only creator? Did not Jesus say that his Father was ours also, and do we not dishonor the Father in dishonoring the son? Is it not plain that what is true in man must first have been true of God, else it could not appear in His likeness?

It is true that material evidence does not corroborate the statement that man is the son of God, but we have no precedent as Christians for accepting this evidence, since the Master did not. It is through faith in the spiritual reality of being, not through any physical sense, that we can recognize man as the son of God; and it is this spiritual faith or understanding, not material sense, that makes it possible for mankind to demonstrate this truth. We cannot see God, Spirit, with the human eye, nor can we see His image and likeness by such means; yet the whole structure of Christianity is based on the fact of God's infinite fatherhood and man's spiritual sonship, unseen to the material senses but a present and eternal reality. The spirituality of being cannot be cognized through material sense, for this so-called sense is evil, not good, and hence can bear only evil or false testimony concerning man. Why, then, if we know these things, do we ever permit this false sense to deceive us into thinking or saying what we know is not true of God's children, and consequently not true of ourselves?

In meeting one's difficulties the first step should be to discover which is God's side of the case, and then take our stand steadfastly on that side, though there may be nothing apparent on the surface to encourage us in that position. Which side, one may well ask himself, does God take when the human sense declares for sickness or other phases of discord? Does God see His children in the clutches of material law? Does He think of them as enslaved to the power of sin or under the doom of decay? Is it possible for the omnipotent divine Principle of the universe to take the side of disorder, even for one moment? Are we not satisfied that "the Judge of all the earth" thinks rightly concerning every one, and can we do better or should we do less than think these God-thoughts about ourselves and others, and give utterance only to these right thoughts?

It cannot be Christlike in any sense to talk for, that is to take the side of, a power which is not God. Do we think one can work out his salvation the sooner by taking the side of error part of the time, rather than by taking the side of Truth all the time? A good soldier does not desert his colors and fight against his own country because the foe may for a time be in possession of the field, or because he may present a formidable appearance; and neither should we, as Christians or as Christian Scientists, who have enlisted as soldiers of Christ, ever be led into shouting for the enemy. "A Christian Scientist," Mrs. Eddy writes, "never takes the side, mentally or audibly, of sin, disease, or death; that is only done ignorantly or maliciously. The Christian Scientist voices the harmonious and eternal, nothing else. He lays the whole weight of thought, tongue, and pen in the divine scale of being—health and holiness" (*Christian Science Journal*, March, 1898). The harmonious and eternal, according to the Scriptures, is all that is really true, and one clearly is not practising Christian Science, but its opposite, if he thinks or declares for anything else.

If we have no faith in God as the creator and governor of the universe, if we do not believe that in Him alone is man's health and life, his strength and supply, we are indeed without hope; but if we do believe this, if He is everything to us, why desert this position whenever we may be called upon to fight for it? If we would win in our conflict with error, with a false sense of life, substance, and intelligence, we should not

Copyright, 1913, by The Christian Science Publishing Society

Digitized by Google

be continually running over to the enemy or following his banners or repeating his war-cries. It is in the face of error's onslaughts, not marching in the ranks in time of peace, that our loyalty to Truth is tested. Saying Amen to evil, whatever phase it may assume, is not overcoming but yielding to it, and is equivalent to the soldier's surrender of his arms when he stands in most need of them.

Students who desire to progress in the understanding and demonstration of Christian Science should not declare against their ability in that direction. God only is man's intelligence, and this intelligence is always capable of understanding and applying the truth of the allness of good. No doubt we once had full confidence in our ability to bring evil to pass, so that if we set out to be angry or revengeful we could do it and do it well. We believed the whole force of evil influence would help us on in any wrong course. Then why doubt our capacity to be good and loving and pure, since we believe God to be all-power? Why not have equal confidence that the whole power of good, all the power there is, is on our side to help us? Then let us think and talk and act that way, if that is the way we believe.

Success in Christian Science demands that we think on the right side, on the side of health and prosperity, of love, purity, and holiness, the kingdom of heaven, for this is God's side. To base our thinking on material evidence is to think on the side of evil, and in the end can bring only evil results. The right side is summed up in the well-known words of St. John: "Now are we the sons of God;" and although the full meaning of that inspired statement may not yet appear to the human sense, there is never any other right side to take.

Wells of Elim

J. MORLEY WYARD

In their long years of wandering from the serfdom of Egypt to the fruition of bright hopes, the experience of glorious realities in the promised land, the children of Israel were often reminded by the inexorable logic of events that they carried with them a sense of enslavement which was as grievous to be borne as were the pains and penalties inflicted by Pharaoh. A threatening sea, frowning mountains, burning sands, hostile peoples, bitter waters, consuming thirst, poisonous serpents, endless weariness, distressing homesickness, were only the outward and visible manifestations of the conflict of mortal mind which unceasingly waged within. But there were also gracious reminders that there really was ample provision for all their needs if they would only subdue the dominating rebellious thought, the tenacious belief of life in matter, which constituted their bondage.

The waters of Marah, which were almost undrinkable for their bitterness, had aggravated their tormenting thirst, and the dreary wilderness of Sin was stretched out before them; but they made their early halting-place by the springs of Elim, where, as the record states, there were twelve wells of water and seventy palm-trees. All thirst and weariness were for the time being forgotten, as the full-dowered date-palm, with its frond-like foliage, waved its welcome, and with its wealth of fruitage satisfied their hunger to the limit. It is worthy of note that a modern traveler, who has identified this oasis, says that of the twelve wells there are still open nine springs of living water, and that the "threescore and ten palm-trees" have multiplied to at least two thousand.

Without forcing any parallel for this historic incident, Christian Scientists may rejoice that they have always near and always available the wells of Elim, in the Bible and in their text-book, "Science and Health with Key to the Scriptures," together with the various other writings of their beloved Leader, in the church services, the Christian Science periodicals, the public lectures, and in the many wise and helpful teachers and practitioners. The Christian Science church services are distinguished for their extreme simplicity, their deeply devotional character, their freedom from all intrusive personal presence or opinion, all distracting and oppressive machinery, and for their abounding testimony to the power of Truth.

The Bible, as the great parent spring of all spiritual life and health and satisfaction, complemented by Science and Health, by which its treasures have been made more available in their entirety to all the needy children of men, is become indeed a well of healing. Its teachings spiritually understood are palm-trees of exhaustless fertility for the supply of every material need. "Miscellaneous Writings," and the other published works of Mrs. Eddy, are also wells and palm-trees that will afford refreshment and recuperation to countless thousands of those yet unborn.

We are especially fortunate in the conduct of our church periodicals, the *Journal*, the *Sentinel*, *Der Herold der Christian Science*, and the *Monitor*, carefully guarded as they are under the control of our Publishing Society. They bring to us the best thought of our world-wide membership, and they would be unique in character if for no other reason than that there are no obtrusive advertisements clamoring for a distraction of our thoughts and limiting the profitableness of our study. The testimonies of healing which appear in such numbers, liberate men in mind, body, and estate, and supply proofs of the value and integrity of Christian Science teaching which are simply incontrovertible.

This demonstration is exactly that to which Christ Jesus appealed when the messengers of John came to him. He wasted no time or effort in the enunciation of creed or doctrine, but appealed to facts which could be verified by the disciples of John themselves: "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached. And blessed is he, whosoever shall not be offended in me." When confronted by the hostile ecclesiasticism of his countrymen, Jesus said: "If I do not the works of my Father, believe me not. But if I do, though ye believe me not, believe the works: that ye may know, and believe, that the Father is in me, and I in him."

Our public lectures bring to us no waters of Marah, no trace of controversial bitterness or of denominational proselytizing; and here again, in the presentation of a Scriptural full salvation, the wells of healing and the palm-trees of Elim are paralleled. So, also, wherever teachers and practitioners are faithful to the teachings of Christian Science and to the counsels of our Leader as they are expressed in the Manual, Christian Science vindicates its claim to be the good news of God—"a well of water springing up into everlasting life."

Jeremiah represents God as saying: "My people have committed two evils; they have forsaken me the fountain of living waters, and hewed them out cisterns, broken cisterns, that can hold no water." The caution is timely, that Christian Scientists, and those who may be sufficiently interested in Christian Science to inquire into it, should come to the real source of all illumination on the subject, namely, the authorized publications of our church. The wise Christian Scientist and the wise investigator of Christian Science will do well to remember that "Science and Health with Key to the Scriptures" by Mrs. Eddy, and her other writings,

Digitized by Google

are the reliable sources of instruction, and that these are supplemented by the Christian Science periodicals and the authorized lecturers. Those who look to these for light and guidance in Christian Science, will find that the palm-trees of Elim are still burgeoning with unfading beauty, its wells still flowing and fruitful, for all who have in real earnest entered upon the exodus "from sense to Soul" (Science and Health, p. 566).

Correction

MARY CHRISTINE SCHMIDT

SOME time ago I was beset by a sense of forgetfulness, which resulted in a neglect of duty toward a certain person, and as a result of this neglect I was led to expect a financial loss. This fact, together with feelings of self-reproach, worry, and discomfort, seemed to darken my joys and cloud my consciousness, so that for a whole day I struggled, using the mortal mind method of enlarging the error until I saw it out of all proportion and then tried to argue with it. All at once, however, my heart was turned to God as a flower turns to the light, and in the calm of an uplifted consciousness I read these words in the Christian Science text-book (p. 453): "Honesty is spiritual power." The meaning of these simple words came with a healing certainty to me, and I realized that the only cause for unhappiness is wrong thinking, and that right thinking must reestablish my happiness. Wrong thinking, material reasoning, means separation from God, whom only spiritual sense can find and feel. I felt as if I were sitting at the feet of the great Teacher, and a sweet sense of gratitude crept into my heart.

The desire to be honest led me bravely and squarely to face the mistake I had made as such, and then it was shown to me that the nature of God is perfection and eternal goodness, and I saw at once that my mistake would have to be corrected, for the law of perfection never sleepeth, and it impels us ever to follow and to be perfect, even as the Father in heaven is perfect. A sense of great sureness and joy, a willingness "to suffer patiently for error until all error is destroyed" (Miscellaneous Writings, p. 118), came to my heart. I learned to look upon the material loss facing me as a very small price to be paid for a pearl of such great value,—even wisdom, right thinking,—for it is life to those that find it, and health to all their flesh.

With the Christian Science method of right thinking at hand, I could clearly see that forgetfulness has its source in mental disorder, and I was quite ready to admit that order is a divine law, needed by all, that we may establish that heaven within for which we are striving, the heaven of harmony, peace, and perpetual joy. And had not this law of perfection reproved me before, and had not the "still small voice" spoken within me and I would not heed? Little experiences, little troubles, had tried to remind me gently of God's law, but I was not ready to bow in joyous willingness to do what was right, but rather busied myself in justifying what I thought right. This yielding to the spiritual brought me close to the living God, in whom "we live, and move, and have our being," the divine Principle of all being, forever at work building up our spiritual selfhood and establishing the kingdom of God on earth.

I then saw clearly that I could have saved myself the present unpleasant experience if I had obeyed the law of perfection, which is the law of true happiness, instead of closing my ears with personal pride and self-love. Despite all our stumblings, however, the future belongs to us, and is the more surely ours the more we are willing to learn from the past and discern the spiritual laws which judge the past; this is our comfort. As Christian Scientists it is given into our own hands to diminish the unpleasant experiences of life in so far as we are willing to bring self into harmony with divine Principle, so far as we believe God to be All-in-all. Today there is no need for us to repeat Job's experience if we discern the thought that kept him so long in the dark (outside of harmony and true wisdom); but if we keep arguing with God in our pride, seeking to justify ourselves rather than God, we will have to suffer; but we are assured that God "will not lay upon man more than right." "Behold, God is great, and we know him not."

How happy I then became! I knew that trials, rightly understood, become corrections; they come neither from God nor from a person, but simply as a result of wrong thinking, wrong reasoning. I even felt keenly that the material punishment for this my mistake could be eliminated if the correction were complete enough to uncover and destroy the underlying wrong thought; for the only purpose of the outward punishment is mental, and there is no occasion to believe in its final necessity. Thought can avoid painful consequences if the healing from sin has been complete. This conclusion added to my happiness. The cloud had passed, and in its stead I saw an abundance of blue sky. Its glorious light was focused in my heart and made it glow with joy and hope and true love.

The whole experience has been of the deepest significance to me. Not only did the material consequences of the error never come to pass, but I was able to mark a change of my whole thinking from that hour. A door has been opened to a new joy, a richer satisfaction, a more spiritual thinking, a clearer realization of freedom and power, a purer and truer love toward my friends and all mankind. I find myself more willing to be taught, and I see no end to the blessings which will come from this true insight. Mrs. Eddy tells us that "all power and happiness are spiritual, and proceed from goodness." She also says, "God only waits for man's worthiness to enhance the means and measure of His grace" (Miscellaneous Writings, pp. 155, 154).

Apathy

SARAH MC BRIDE

WEBSTER defines apathy as a calmness, an indifference, a want of energy or activity. The awakening of the intelligence, and the realization of the one Mind, God, with perfect submission to that Mind, overcomes the mental condition of apathy. In the atmosphere of Spirit there is no deadness or lack of activity; for, as the psalmist says, "he that keepeth Israel shall neither slumber nor sleep."

Before the light of Christian Science dawned upon us, when we were governed by the belief in material laws, we were wont to think that while we were doing nothing we were not committing any sin; but according to the teaching of the Master, we must be ever active in good works. The most humble person may be active in the service of God by holding good thoughts, thoughts of love to God for His tender care and compassion toward man, and thoughts of love and good will toward our brother man. We are sometimes burdened with the cares and trials of material existence, but we can lessen our own and our brother's burden by reflecting a beam of light from the lamp of Truth upon the seeming shadow. Many a weary wanderer needs only a word of kindness, of helpful encouragement, to turn his thought "into new and healthy channels" (Science and Health, p. 276). There is no limit to the power of thought when governed by the divine Mind, for good actions are the natural product of good

Digitized by Google

thoughts. It has been said by some one that more people starve for the want of love than for the want of food.

Christ Jesus the Wayshower was ever active in doing good, in teaching his disciples how to work out their salvation. His teaching was for man's example in all ages of the world, and he taught both by example and precept. He never gave a command that it is impossible for us to obey. His activity and obedience to the Father's will began in his early childhood. When his mother and Joseph sought him at Jerusalem, and found him in the temple questioning the doctors, his answer to their inquiry was, "Wist ye not that I must be about my Father's business?" What was his Father's business, which he came into the world to do? Was it not to lift mankind out of their sense of material bondage into the spiritual understanding of freedom? He took upon himself the belief of the flesh, that he might demonstrate to men how to overcome the errors of mortality. He said, "My doctrine is not mine, but his that sent me." He early realized his divine mission to mankind, and through the activity of Mind he worked to awaken his followers from material apathy to the understanding of the allness of Spirit, God.

The apostle Paul says, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light." The dawning of the light of Truth arouses the dormant consciousness, for, as the apostle says, "whatsoever doth make manifest is light." As we are led by this light, the understanding of God, the one Mind, the spiritual creation unfolds to us. This light, the spiritual interpretation of the Scriptures, as taught by Mrs. Eddy in Science and Health, dispels the gloom of materiality, and we walk in the light of divine Love, in the liberty of the children of God. Then we realize that it is our privilege as children of God to have dominion over all error, to rise in newness of life by the understanding of divine Science, and thus escape from the deadening dominion of apathy.

✧

Light Within

BERTHA STEVENS

THE suburban cars find their way through the dark country roads because of their search-light, which illumines the surrounding objects, and especially the car's own pathway, which is made clear and bright before it. If the car should become disconnected from the source of its light, there would be darkness within, and consequently darkness without; but while it remains connected with this source, all the darkness of chaos itself cannot darken the car's path.

What an object-lesson is this to us who are Christian Scientists! We know full well that when our consciousness is filled with the light of Truth, all the darkness of erring human belief is powerless to cast the least shadow over our Love-protected path; but when our thoughts cease to radiate the light of Truth, then the beliefs of fear, sickness, and sin beset us upon every side. Truly, it is the darkness within, and not the darkness from without, which hinders us from dwelling in eternal light, the kingdom of heaven. This thought is expressed by our Leader when she says, "Keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them" (Pamphlet, What Our Leader Says).

This illustration further shows how good cannot be conscious of evil. Manifestly, the light cannot be conscious of the dark, for when the light reaches its hiding-place, the darkness is not there,—it never was, to the light. Moreover, all things are made clear by the light. When our brother is touched by the thought of Truth, a ray of Love, he will be illumined, be seen as he really is,—God's own perfect child. Bathed in the brightness of Love's light, each is given opportunity to see himself, and the true selfhood of others, as entirely apart from the grotesque forms which they have assumed in the darkness. Mrs. Eddy writes: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476).

If any are unwilling to leave the shadows, we can only let our light shine just the same, and follow the call of progress, which leads us onward. He who is not yet ready, must be left in darkness, his own chosen estate; but our own path should grow brighter and clearer every day.

✧

Efficient Readers

ELIZABETH W. WATTS

THERE is no place in Science where absolute self-effacement is more to be desired than in the reading of the Lesson-Sermons. So wisely and so insistently has our Leader instilled the impersonal element into our service, that any tendency toward a method of reading which might possibly turn one's attention from the subject-matter to the reader, is to be studiously avoided. This error may appear in various guises, sometimes in an ecclesiasticism which through old habits of worship would preach; sometimes in an elocutionary effort, which through former training would manifest itself in a style too studied or too dramatic for the voicing of the simple truth; sometimes in an overemphasis, which instead of gently feeding the eager listeners with the bread of Life, would address them in a way which implies a fear that they may not understand; and sometimes in a mannerism, not yet outgrown, which would draw attention to self and thereby rob the reader of the elements of spiritual poise, harmony, and quiet dignity.

Our Leader's requirements in the selection of readers, as found in Article 3 of the Church Manual, are simple yet sufficient. She demands that they be exemplary Christians, well educated, and members of The Mother Church. She does not require that they preach, teach, or that they shall have been trained in some school of dramatic expression. The texts of truth in our service, scientifically thought as they are read, and launched on pinions of spiritual inspiration and understanding, embody all of the essential characteristics of good reading. Let the reader's thought be meek though not servile, active and authoritative though not aggressive, joyful and loving though not emotional, cultured though not pedantic, and these mental qualities will assert themselves in effective reading through no self-conscious process on the part of the reader and through no uncompromising concession to material rote or rule. Our Lesson-Sermons best explain themselves.

Today

MARIE RUSSELL

TODAY the gentle violet
A soft assurance bears,
Because the morning sun arose,
And dried her dewy tears.

Today this grateful heart of mine
Enfolds a joy supreme,
Because the truth has come to me,
And swept away the dream.

Selected Articles

[Frederick Dixon in *London Budget*, London, England]

In a recent issue there are two references to Christian Science, one in the shape of a cable from New York and the other in an article by the Rev. A. J. Waldron. With respect to the New York cable, permit me to point out that to claim divinity for Mrs. Eddy is to contradict every word Mrs. Eddy has ever taught. If there is one thing made more clear than another in Mrs. Eddy's works, it is that no human being can possibly be termed divine. Mr. Waldron, on the other hand, always speaks sympathetically of Christian Science, and he is perfectly right in maintaining that Christian Science denounces hypnotism. The mere fact that the power claimed by the hypnotist can be used for doing evil as easily as for doing good, should be a sufficient criticism of its acceptance by the Christian church. Hypnotism was nothing new to the world, though it was called by a different name in the time of Jesus of Nazareth, and certainly it has never been denounced more thoroughly than by him. On the face of it, it is the claim of the power of the human mind to do both good and evil, and so it can be nothing but the fruit of "the tree of the knowledge of good and evil," which, according to the book of Genesis, ultimates in death.

The wonder-workers of the East were well known in Palestine, with the result that for centuries the best of the kings and the prophets had carried on a war of extermination against them. As a result, when the high priests and the Pharisees were looking about them for any accusation to bring against Jesus, to discount the healing done by him, they could think of nothing better than to declare that he cast out devils through Beelzebub; in plain English, that he used the arts of the exorcists and the necromancers. Jesus, however, who knew perfectly well that his accusers had winked at exorcism when it suited them, silenced them by his barbed question as to whom their children cast out devils by, if he cast them out by Beelzebub, adding that they should be their judges. It was not his method, however, to be satisfied with a mere negation, and picking up the metaphor of "the tree of the knowledge of good and evil," he pointed out that a house divided against itself could not stand. He could hardly have said more clearly that the claim of the human mind, itself conscious of good and evil, to cast out evil was an impossible one.

Jesus did not, of course, leave the matter here. He went on to explain to his listeners what true Christian healing was. "If," he said, "I cast out devils by the Spirit of God, then the kingdom of God is come unto you." It is quite manifest that the kingdom of God never came to any one by mental suggestion from a mind conscious of good and evil, and so divided against itself. The history of suggestion, in all ages, has shown that this so-called power is much more likely to be abused than anything else, seeing that the human mind is torn with all the passions and desires of evil. What Mrs. Eddy did do, and what has distinguished her from all the religious teachers from the days of primitive Christianity, was to show that it is an entire mistake to suppose that there is any reality or power in evil; and that the attempt to claim power for the suggestions of the human mind is paralyzed and rendered impotent the moment the recognition of the fact takes place that the only power is good.

Jesus himself put this as clearly as it is possible to put it when, in the figurative language of the day and country in which he lived, he declared, "Ye are of your father the devil, and the lusts of your father ye will do," a sentence which meant, as clearly as anything could, that the suggestions of the human mind, coming from a mind believing in good and evil, and probably with a strong bias toward evil, were bound to work out in abuse of this so-called mental power. The origin of this so-called power, he went on to say, was a liar and a murderer from the beginning. A liar surely, as it falsely claimed the power of evil; a murderer surely, as the one law it made any pretense of enforcing was its own suppositious law that all things come to an end through death. Then, with one of those declarations of the nothingness of evil with which he suddenly illuminated a subject, he declared that he "abode not in the truth, because there is no truth in him." Recognize the Eastern metaphor of the speaker and reduce his words to the plain, matter-of-fact idiom of the West, and what does this mean but the fact insisted on in Christian Science as his teaching, that evil has no reality and can have no abiding-place in Truth?

Of course if Christian Science had satisfied itself with a mere dogmatic statement to this effect, it would never have succeeded in influencing the world to any serious extent. Instead of this, however, it accepts the burden of proof in the way demanded by Jesus himself when he said that those who believed on him would be able to do the works he did, the works of destroying all the manifestations of evil and proving its powerlessness and nothingness. "Ye shall know the truth," he said, "and the truth shall make you free," free from that ignorance which believes that there is power in one human mind to dominate another human mind, power in the so-called forces of suggestion to control the thoughts of others.

The truth is, that man is the image and likeness of God, and the image and likeness of God is controlled only by the forces of infinite good resident in divine Mind. This image and likeness of God is, of course, not the sin-laden human being with a mind convulsed with material passions and alternating between visions of good and evil, but the man who reflects only the vision of the Christ, a vision which becomes permanent only as a carnal mind gives place to the Mind which was in Christ Jesus.

✧

[H. Cornell Wilson in *Journal and Republican*, Lowville, N. Y.]

After reading in the *Journal and Republican* the report from the Watertown *Times* concerning a recent death, one might conclude, if the coroner's views in the matter could be accepted, that death was due to failure to have medical treatment, instead of to the disease named by the physicians who performed the autopsy. The coroner seems to imply a well-nigh unfailing medical system, while at the same time denouncing Christian Science in unmeasured terms, although it is evident that he knows nothing about it.

The contention for medical treatment as being in any sense a guarantee against death, or even in favor of continued health, is wholly unjustifiable. This fact becomes apparent the moment the results of medical practise are investigated. The state department of health makes known in its reports, for instance, that eighty-eight persons died during April in Watertown and the rest of the county. In the year 1912, there were 1,039 deaths in the same territory. Since the coroner failed to notify the papers that any of these were Christian Scientists, it may be assumed that they all died under medical treatment. Nor were all these fatalities the result of so-called incurable diseases. The most simple ailments were given many times as the cause. It is noticed, moreover, that 328 persons of the 1,039 who died last year in Watertown, were under forty years of age.

With these figures in mind, but slight credit can be given to the statement that medical treatment would have proved salutary. The conclusion is untrustworthy, and is not supported by general results. The constantly growing list of

Digitized by Google

disappointments and mistakes, both medical and surgical, does not warrant advocates of these systems in giving a guarantee either of life or health. There are many people, thousands of them, who take the position that their chance for continued life and health is quite as safe when trusted to different hands. The Christian Scientists, to cite a concrete instance, have proved beyond all question, to themselves at least, that a consistent trust in God, based upon the spiritual understanding which Christian Science inculcates, will do more for them in their need than anything else can do. They know, both individually and collectively, that their condition, physical as well as moral and spiritual, has been greatly improved since Christian Science became an active influence in their lives. This is a fact universally remarked by others. It accounts in large measure for the rapid and steady growth of the Christian Science movement.

There are over eighty Christian Science churches in this state, eighty-nine to be exact. The number of these has steadily increased, and their success has been apparent for no other reason than that Christian Scientists are proving, year in and year out, not only from the standpoint of mortality figures, but on the basis of general health conditions as well, that they are better off under Christian Science care than ever they were without it.

✧

[David Anderson in *The Weekly Times*, Melbourne, Australia]

In more than a decade of close observation of the progress of Christian Science the writer has read many pulpit and sectarian attacks on the personality of Mrs. Eddy and on the religion she founded, as these have from time to time been reported in this and other lands. Usually these attacks have been marked by bitterness of tone and a remarkable similarity of inaccurate assertion, but so far as their ultimate effect could be traced it has always been to advertise the good of Christian Science in the very circles where the opposite end was sought. Quite recently, under the egis of different denominations, addresses have been delivered to suburban audiences which have not been striking manifestations of the love which "thinketh no evil," and one is constrained to ask, *Cui bono?* Can it be that, where but yesterday there was praiseworthy and concerted effort to stimulate city men to practical religion of recognizable vitality, there is now a starring of the suburbs on a mission to becloud the memory of one who did more in forty years to restore the practical Christianity of the early church than any evangelist of the subsequent centuries; a woman venerated and beloved by thousands of intelligent people who have abundant knowledge of her character and history; a woman of stainless reputation, on which not even emissaries sent out in search of copy for "biography" could find a shadow of reflection.

The maxim, *De mortuis nil nisi bonum*, is so universally respected that public utterance of contrary taint requires amplest justification if it is to be regarded as other than unseemly. In these attacks there is usually much said in attempted disparagement of Mrs. Eddy, and no word of recognition of the supremacy of omnipotent Spirit which her writings consistently uphold, and by the realization of which the works of the flesh, including the devils of malice, envy, and hatred, can be overcome and destroyed.

To deny the Christian Science healing of organic disease is only to confess one's eyes blind to common occurrences which are open to the investigation of all. The platform sneer of one minister at personal testimonies heard by him in a Christian Science mid-week congregation numbering several thousands, may be set in the scale with the published testimony of another who, in the course of an active Australian ministry, had been led to the investigation of Christian Science, and who had subsequent proof of its practical utility in the speedy and permanent healing of his son, who had sustained concussion of the brain and was not recovering under medical treatment. A grain of proof is worth bushels of opinion.

It may well be wondered whether the object of such criticism is to further the kingdom of heaven, the reign of universal harmony on earth, or to quarrel with the Christianity which Jesus taught and practised, or merely to besmirch an honored memory. It is criticism of a nature which invites reference to a Scriptural injunction and advice. "Judge not" is a command of the Master, who gave a reason for it. In the fifth chapter of Acts, verses 38, 39, may be found the advice of a wise old lawyer of the first century.

✧

[Editorial in *X-Ray Bulletin*, Fort Smith, Ark.]

The *X-Ray Bulletin* stands for "religious liberty," and that degree of "individual rights" attested by both the state and the federal constitutions. A Mrs. Edna Henson, who is a Christian Scientist, healed a man of paralysis in a little town (Canyon City) in Texas. The records show that she used no medicine; she just prayed that the sick man should get well, and he did. Last week she was arrested, and tried for practising medicine; not because she had practised medicine, but because she had prayed for a sick man. All honor to the Texas court and jury that acquitted her!

Within a year, one Robert Henderson was arrested in New Orleans, La., and given a trial for the same thing; because he had prayed for a sick somebody, he was compelled to stand trial under the same general conditions. At the conclusion of a careful summing up, the judge said in this case: "The accused has not violated any of the terms of the statute; he practised the religious tenets of his church, and such practise is under the very sanction of this law. He is entitled to respect rather than prosecution." It may be an aid to doctors, in the practise of medicine, to know how to pray; but we fail to understand how a license to practise medicine could be of benefit to any one in the matter of prayer. No recognized doctor wants to assume the right to do both and to give the Christian Scientists the right to do neither. The doctor may pray if he likes, when he gives his drugs, strong or weak, or uses lancet or ligature; but let the Christian Scientist pray, if he likes, undisturbed. There is no danger of his practising medicine; that is farthest from his thoughts. He will do no harm, and it appears that he has done good. While doctors disagree, people will choose for themselves how best to be healed of disease, and justly so.

✧

[John W. Harwood in *City News*, Manchester, England]

I am glad that "Medicus" refers to the "art and practise of medicine," not "science." It is this practise of medicine which, not being science, is so experimental, so changeable, and so disappointing that it is turning people away from it. "Medicus" acknowledges the healing done in Christian Science,—indeed, it would be idle to deny it, so numerous are the proofs. But why should he refute the teaching which explains the healing? Our critic infers that the works of healing, etc., termed miracles or marvels, were simply to prove Christ to be the divine Son of God; but Jesus did not intimate this. The critic asks, "What connection has Christian Science methods with the healing, through the destruction of sin, of the man sick of the palsy?" Why, every connection. Christian Science shows that the Christ who nineteen hundred years ago forgave by destroying sin and its effects, is the same Christ that was before Abraham, that always existed, and that exists and is able to forgive now,—today, and for all

Digitized by Google

time. Christ says, "Lo, I am with you alway;" and Christian Science is demonstrating this great truth. "Medicus" says he believes that sin, disease, and suffering had their origin in the evil one, and this is just what Christian Science teaches. But then comes the question, Where did the evil one originate? Well might our critic leave such a "problem of God's omnipotence which permits evil as unrevealed," according to the teachings of scholastic theology. But not so with Christian Science. This teaching shows that sin, disease, and death have their origin in the devil, or evil one, which Jesus defined as a lie. He said, "He is a liar, and the father of it." This lie, with its false evidence, as seen in disease, suffering, etc., *is destroyed through Christ, Truth.*

✧

[John H. Wheeler in *The Daily Republican*, Cape Girardeau, Mo.]

Christian Science has given to mankind the spiritual explanation of how to grasp intelligently the truth about sin's false claim of power in mortal thought. It has proved that God's law is easily made superior to evil, by right thinking and unity with God, as David sang: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; . . . who crowneth thee with loving-kindness and tender mercies." Yet there are those who say that Christian Science is not a religion of the soul, but caters to the human body and its sinful desires, when really the whole purport of Christian Science is to encourage mankind "to be absent from the body, and to be present with the Lord;" as Paul taught that they may mentally direct their daily life so as successfully to put "off . . . the old man," with his sinful deeds and carnal nature, and "put on the new man, . . . created in righteousness." This old man with his deeds is really the only known devil in human life, and it is only an evil sense of things; so it can be easily seen that Christian Science teaches that evil, or devil, is to be destroyed by each individual becoming spiritually-minded enough to recognize the ever-presence of God's law. This will enable us "to be pure in heart," in spite of the testimonies of our physical senses with their law of mortal experience. Thus to him who loves only God, good, above all earthly desires, and refuses to sin or express evil in his life,—to such a one, we say, evil becomes nothing, for God is found to be to him All-in-all. The great motive of all religious teaching is the exclusion of evil, or devil, from human life, if possible.

The revelation of Christian Science, therefore, comes forward with the proof that evil in a mortal is really but his evil mental sense of things, whether it be an ignorant or a wilful inclination entertained to violate the spiritual law contained in the thou-shalt-nots taught by Moses.

✧

[Algernon Hervey Bathurst in *Newspaper Owner and World*, London, England]

I have read with considerable interest, and if I may say so, no little satisfaction, the kindly reference to *The Christian Science Monitor* in a recent issue of your paper. There is, however, just one point mentioned to which I will ask you to allow me to refer, and in so doing I shall hope to supply the information asked for. *The Christian Science Monitor*, "that excellent paper," has not "outlived its original title," and will never be able to do so; indeed, it has been said that Christian Science is to be found in every line of the paper, and therein lies the secret of its success. The fact is, that Christian Science is the biggest thing the world has witnessed since the dawn of the Christian era. Its teachings are applicable to every situation, and with a knowledge of these the student is able to overcome, to some extent at any rate, evil and discord in its various forms, whether in connection with one's health, his business, engineering, the stage, or any of the numerous occupations with which mankind is concerned. In short, Christian Science teaches the all-power or omnipotence of good, and proves that the best alone is good enough in all circumstances and under all conditions.

It is a great fallacy to believe that Christian Science applies merely to the healing of physical troubles. Referring to this point, Mrs. Eddy writes on page 2 of "Rudimental Divine Science": "Healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action, in the higher range of infinite goodness." Nevertheless, while the physical healing will remain the basis of Christian Science practise, the fact that the movement has been able to publish an ordinary daily newspaper, affords proof of the fact that the teachings contained in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, are gaining world-wide recognition. *The Christian Science Monitor* is in many respects unique, and without some understanding of Christian Science it would be impossible to manage and edit that paper, which was started on its mission "to injure no man, but to bless all mankind," by Mrs. Eddy. Now it is obvious that only that which is accurate, just, honest, and true will ever accomplish that great mission.

I think from the above it will be seen that *The Christian Science Monitor* can never outlive its title, but that, on the contrary, the more the paper improves, the more world-wide its scope, the better its news items, and the more comprehensive its editorials, the more completely will it be fulfilling its great mission, which it has already accomplished in so great a measure during the few years of its existence.

[Written for the *Sentinel*]

God is All

MIRTIE E. ROBERTSON

LIFE has become so sweet,
Each day with joy I greet,—
God is my all.
To me each passing hour
Is like an opening flower
Unfolding Spirit's power,
For God is All.

My feet no more can stray;
Spirit now leads the way,
And God is All.
Mine eyes now see the light;
Truth leads me in the right;
I know there is no night,
For God is All.

The truth has made me free;
With undimmed eyes I see
That God is All.
From this exalted view
The skies are always blue,
All things are good and true,
Since God is All.

Love with its "still small voice"
Now makes my heart rejoice
That God is All.
I now am satisfied;
I know, whate'er betide,
That Love is by my side,
And God is All.

Editorial

Not Death, but Life

QUITE recently the attention of passers-by was attracted by the announcement, on a bulletin board at a church door, of a sermon about to be preached, under this title, "Death, God's Gift to Man." What arguments were brought forward to sustain this proposition we do not know, but the fact that Christ Jesus, who came to do "the will of the Father," devoted so much of his time and ministry to the work of preventing and overcoming death, that by far the largest part of the four gospels is given over to an account of the wonderful works of this kind which he performed, rather negatives the theory that God is the author of death and that it is His gift to man.

Jesus' own utterance on this subject to the people at Capernaum is significant of his views on what really constituted God's gift to man. He said, "My Father giveth you the true bread from heaven, for the bread of God is he which cometh down from heaven, and giveth life unto the world." Paul also had something very definite to say on this subject, and he certainly did not hold the same views as apparently does the clergyman whose subject was announced on the bulletin board. This great apostle of Christ, in writing to the Romans, said, "For the wages of sin is death; but the gift of God is eternal life through Jesus Christ our Lord;" and again he declared, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." To the Corinthians he wrote, "The last enemy that shall be destroyed is death," and he was no less certain of his ground when he wrote to Timothy, "Our Saviour Jesus Christ, . . . hath abolished death, and hath brought life and immortality to light through the gospel."

It would be difficult to conceive of a more discouraging and hopeless proposition than that God is the author of sin and death, because, if this were true, all hope of overcoming these enemies would have to be abandoned, unless there is somewhere a power greater than God. To believe that God finds it necessary to use sin and death in order that He may harmoniously govern His universe is equally discouraging, and Christian Science, in controverting this fallacious belief, thus giving courage to those who through the acceptance and demonstration of its teachings have been awakened to its falsity, is doing more for the salvation of humanity than has been done otherwise from Jesus' time to the present. That mankind has not really assented to the proposition that death is a gift from God, although it has largely subscribed to it as a matter of theology, is proved by the efforts which men have made in all ages to defeat this "last enemy," even though it makes its approach in the guise of "the will of divine Providence."

Christian Scientists are very grateful that they have been relieved from the fear of sickness and death which has so long fettered mankind, and in their progress from sense to Soul they have become assured that God is not the creator of evil. Mrs. Eddy's work in making known the truth about God and man, and in declaring His infinity and omnipotence, has likewise given courage to many who have not yet declared themselves to be Christian Scientists, and for this she is honored today. To Christian Scientists who are familiar with her teachings there is healing and inspiration in her words: "Mortals can no more receive everlasting life by believing in death, than they can become perfect by believing in imperfection and living imperfectly." "We shall go to the Father, not through death, but through Life; not through error, but through Truth." "I urge Christians to have more faith in living than in dying. I exhort them to accept Christ's promise, and unite the influence of their own thoughts with the power of his teachings, in the Science of being. This will interpret the divine power to human capacity, and enable us to *apprehend*, or lay hold upon, 'that for which,' as Paul says in the third chapter of Philippians, we are also 'apprehended of [or grasped by] Christ Jesus,'—the ever-present Life which knows no death, the omnipresent Spirit which knows no matter" (Unity of Good, pp. 40, 41, 43).

In claiming daily their liberty as children of God, Christian Scientists are not only liberating themselves but others as well from the belief that death is a friend who opens wide the doors of immortality, and it is but a question of time until Christian ministers will no more think of preaching that death is a beneficent gift of God, than they would think of preaching that witchcraft and sorcery are of divine origin.

ARCHIBALD MCLELLAN.

Neglect Inadmissible

A GREAT deal is said at the present time respecting the wrongfulness of neglect, especially of one's health. It is argued, and with good reasoning, too, that if it were not for the neglect of certain things we should never have accidents, misfortunes, and sicknesses come upon us. There is, however, another kind of neglect of which we hear little or nothing in the world's busy marts, and yet it deals with a subject so vital and all-inclusive that we could well afford to forget other things in order to give it due consideration.

This subject is strikingly set forth in the epistle to the Hebrews, where the writer reminds us that God has "at sundry times and in divers manners" made known to mankind the divine will, the highest manifestation being through Christ Jesus, who was willing to forego the glory of spiritual being while he was making known to mortals the truth which sets free from all evil. The second chapter begins with a solemn warning against any neglect of the truth which had thus in the goodness of God been sent forth to bless mankind, especially the revelation of Truth and Love given by Christ Jesus and his apostles, which was characterized by "signs and wonders, and with divers miracles, and gifts of the Holy Ghost." This revelation includes perfect salvation from all the ills of mortal experience, salvation which is thus described by our revered Leader on page 593 of Science and Health: "Life, Truth, and Love understood and demonstrated as supreme over all; sin, sickness, and death destroyed."

The writer of this epistle keeps well before us the real man who is God's likeness,—the man who has dominion over all things,—but he adds that "we see not yet all things put under him." He explains how Jesus taught the way of salvation by entering into the bitterest human experiences, and that he was "crowned with glory and honor" because at every step of the way he overcame evil with good, up to the victory over death and the grave. Here it is important to note that he did this, not by admitting that God is in any wise responsible for sin, disease, or death, for we have the unequivocal statement that Christ Jesus took part in the human belief of flesh and blood "that through death he might destroy him that had the power of death, that is, the devil [not God]; and deliver them who through fear of death were all their lifetime subject to bondage."

It would thus seem as if none could afford to "neglect so great salvation" as that which was so lovingly wrought out by our Master, and which is again offered to humanity in

Digitized by Google

its fulness through the healing ministry of Christian Science. Our brethren who are not Christian Scientists tell us that we must not neglect to observe the laws of health, and to this we assent most cheerfully, only reserving the right to differ from them as to what constitutes these laws. The Bible tells us, among other things, that those who would live long and well must keep the tongue from evil (which includes the discussion of sin and disease), and that they must "depart from evil, and do good." To this must be added the faith that God is ever ready to deliver them out of all their troubles. Then our friends would say that we cannot afford to neglect the laws of cleanliness, and to this also we readily assent, only insisting that the cleanliness go deep enough,—that it begin in the depths of thought and destroy every last germ of mental and moral impurity, for if any such remain they are apt to "eat as doth a canker," until consumed by Truth and Love. Then, too, we agree with the good doctors who say that we must abstain from anxiety and worry, an impossible thing, by the way, until we cast all our care upon a loving Father and trust omnipotent wisdom to guide us at every step of the way.

Above all, we need to face fearlessly the belief that man is born to die, for, as the apostle says, such a belief will keep us all our lifetime in bondage to fear and disease; and the health law which most avails here is to know that God is the only Life, and to apply as best we can this truth. As we ponder this great law of health, we should daily remind ourselves that we cannot afford to neglect it, for God on His part is ever ready to witness to the saving power of Truth, even as of old.

ANNIE M. KNOTT.

✧

"The sea is his"

UNNUMBERED people, these home-coming days, are bringing back to the "trivial round, the common task," abiding memories of the vacation's indulgence of what they would call a "passion for the sea," and the weariness and possible pain of the months to come will be lessened as winged remembrance bears them again and again to the sunny sand or the pine-clad promontory where they lounged and looked for many a long hour upon that ever-changing, ever-beautiful expanse,—heaven's floor of answering blue.

No object of nature, perhaps, has been more frequently associated with the thought of God by the Scripture poets than has the sea, a fact which is easily explained as one meditates upon its world embrace, its teeming life, its unceasing movement, its irresistible might, and its awful depth of calm and mystery. Many aspects of it thus serve to lift and improve our thought of Him whom no scale can measure but whose glory may be revealed to awakening human sense, and one can therefore say with the poet,—

> Broken symbols shall be dear
> If they point us through the dark.

In their intimations of spiritual reality, the beauties and sublimities of nature precipitate that spirit of inquiry and contemplation which has led even so-called heathen sages, like Socrates and Cicero, to entertain assurances of spiritual being and immortality; and in speaking of this universal appeal of color and form, Mrs. Eddy has said, "I love your promise; and shall know, some time, the spiritual reality . . . of what I now through you discern dimly" (Miscellaneous Writings, p. 87).

Under the impulsion of material sense, however, men have fallen into the stupendously tragic error of attributing to God those destructive phenomena which have made the sea an object of terror as well as of wonder, and which make it a fit symbol of surging falsity. When one thinks of the cruelty which has strewn its shores with human wreckage and converted its depths into a vast charnel-house, he gains a point of view from which it presents the greatest possible contradiction to every thought of the beneficence of divine law. He sees, too, that the confusions of both natural and scholastic theology are directly traceable to the world's acceptance of a material reality, a belief which, in its inherent violation of the first commandment, vitiates every human conclusion based thereon, and which can be escaped from only as one is instructed in the Science of Christ.

The spiritual facts of being which some material phenomena may symbolize or suggest, belong indeed to God, and hence to us; but materiality itself, the source and occasion of all injustice and affliction, has no place in God's kingdom, and it is recognized in Christian Science only to be interpreted, known for what it is, and controlled. "The earnest expectation of the creature," writes Paul, "waiteth for the manifestation of the sons of God. . . . Because the creature itself also shall be delivered from the bondage of corruption." This points to the redemption, the displacement by the right idea, of every material phase of human consciousness. Then the command of the sea will be ours as it was the Master's, when he spoke to the threatening waves of Galilee and "there was a great calm."

When we have gained the psalmist's practical realization of the omnipresence of the spiritual, of God, we can say with him, "If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me, and thy right hand shall hold me." Having escaped, through the apprehension of Christian Science, from that material obsession to which every lover of the sublime and the beautiful in nature is likely to become a prey, it will be ours, as it was the Master's, to walk "upon the sea," to exercise authority over all the tides and turmoils of mortal sense, and thus be able to heal the sick as was he.

JOHN B. WILLIS.

Among the Churches

Current Notes

LOS ANGELES, CAL.—Interior finish is now being given to the handsome new building being erected for First Church of Christ, Scientist, at Alvarado terrace and Alvarado street, and in about two months it is expected to be ready for occupancy. Services are now conducted in the Sunday school room in the basement. The auditorium has a seating capacity of 1,125, but this can be increased to 1,300 by opening the foyer into it. The Sunday school room will seat 900.

Los Angeles Examiner.

ABERDEEN, WASH.—Improvements to cost between ten and twelve hundred dollars are being made to the Christian Science edifice on West First street. The changes include several additional windows, the taking out of partitions, an attractive front entrance, and redecoration. The Christian Science people have a sinking fund for building, and they anticipate erecting a beautiful structure at some future time.

Aberdeen World.

ANN ARBOR, MICH.—The new building of First Church of Christ, Scientist, on Division street, is complete, and the builders have turned it over to the committee in charge. The auditorium will seat three hundred. In the basement is a large Sunday school room 40 by 50 feet, as well as other rooms for various purposes. Work on the building was begun a year ago, and now the opening is set for June 29.

The Lectures

Paris, France

Prof. Hermann S. Hering, lecturing on Christian Science at the *Salle des Sociétés Savantes*, was introduced in the following words by Prof. Alfred Goodrich:—

We are assembled here this evening for the purpose of hearing an explanation of a great moral subject which is attracting the attention of thoughtful people in every civilized land. If Christian Science is what its followers believe it to be, then it is the greatest and most important subject before the world today, because it deals with the living present and with the everlasting future life of man. With the errors and discords of the past it has nothing to do,—they are dead. But to our present and future problems Christian Science makes a direct and practical appeal, and it points the way to their successful solution.

It may be taken for granted that every one here present desires to know the truth, because what is not true is false, and everything that is false is profitless. In all our acts and dealings, whether social, domestic, political, artistic, or commercial, we wish to know the truth, for truth is always right. The Saviour said, "Ye shall know the truth, and the truth shall make you free." In other words, when we know the truth about social and business affairs, the truth about life and health, we will no longer suffer from the fruits of error, which are sickness, pain, sorrow, discord, and, worst of all, the pangs of conscience.

Christian Scientists deny the verity of evil because they fully accept the Bible statement that God is infinite good, that everything He made is good, and that He is All-in-all. Hence they deny that good created evil, for that were logically impossible. Evil is the absence of good, as error is the absence of truth; and as darkness is merely the want of light, darkness disappears in the presence of light, and the question, Where goeth the darkness? answers itself. Evil is mental darkness, and it disappears in the presence of good. Christian Scientists are fully assured that the truth of being has been revealed in this age to all who sincerely seek it, because they can prove by actual demonstration that the guiding Principle of Christian Science is true, and therefore infallible.

Correspondence.

✧

Winchester, Ky.

The Rev. William P. McKenzie delivered a lecture at the opera house to an audience of about one hundred and seventy-five persons. He was introduced by Attorney B. A. Crutcher, who said in part:—

The study of religion has always been one of vital interest and importance to the human race. The religion which commands our attention today, and the one which we deem the most powerful in the amelioration of suffering and the uplift of humanity, is the religion introduced by the lowly Galilean, communicated by him to his followers, and known as the Christian religion.

So inseparable is Christianity from the life and teachings of Christ Jesus that our conception of its teachings depends largely upon our answer to the question propounded by Jesus himself to his disciples, "Whom do men say that I the Son of man am?" The answer to this question has given rise to almost numberless interpretations of the term, and we have come this evening to hear the subject discussed from the standpoint of Christian Science.

I am not familiar with all the Christian Science teachings, nor do I fully understand all its followers claim for their religion. Their fundamental belief includes all the essentials of Christianity, while they claim that the chief work of Christian Science is to destroy all evil, which will eventually pass away, and to reform mankind. That Christian Science is a great power in the world for good today, none should deny.

Christian Science is regarded by its followers as the triumph of truth over all error, sin, sickness, and death. Surely their declaration that God is a present help in time of trouble, ought to find an answering chord in every believing heart; and if Christian Science resolves sin, sickness, and death into illusion, why should "the heathen rage, and the people imagine a vain thing?"

They advocate the betterment of mankind, righteousness, and justness, and give all honor and power to God. What they claim is, that they lay hold on the premises made by Christ when on earth, and that we, as we dwell more in the Spirit, are beginning to comprehend the great things prepared for us. If it is true that "there is no darkness but ignorance," it may be that by careful attention to the speaker the darkness will be dispelled.—*Correspondence.*

✧

San Diego, Cal.

A large audience was present at First Church of Christ, Scientist, to listen to a lecture by Judge Clifford P. Smith. The lecturer was introduced by Walter E. Williams, first reader of the church, who said:—

This is an investigating age. People in all walks of life are seeking to know the truth about whatever is set before them, and nothing short of demonstrable proof satisfies the honest investigator. Christian Science is not exempt from this requirement; indeed, it invites it, and when honestly investigated and put to the proof in accordance with its divine Principle, it will never be found wanting. Abundant evidence is at hand to prove its claim that sin, sickness, all evils, are destroyed by an understanding of Christian Science.—*San Diego Union.*

✧

Manchester, N. H.

William R. Rathvon, lecturing on Christian Science, was introduced as follows by Judge George A. Wagner:—

A wise man once said, "There is no new thing under the sun." There are many who doubt this truism when applied to Christian Science; yet those who teach it, preach it, and believe in it, contend that their faith is but the affirmation of tenets as old as the Christian religion itself—the Science of healing based upon a divine Principle. In the face of rebuff, ridicule, resistance, and persecution, they have stood their ground. Like all pioneers who break paths through territory that is virgin to the many, their experiences have not been entirely happy; but antagonism, though it may dismay, has never overwhelmed them. Whether we accept or reject the doctrine upon which they rest their faith, their stanchest opponents must admit that they fight fairly for the belief that is in them.

This church makes no canvass for converts; there is little or no active proselyting. It expounds the truths of Science, leaving it to the hearer to follow his own will; yet it shows a steady growth in strength and numbers and influence which marks an epoch in recent history,—this, too, against a powerful and well-organized opposition. United to a faith that is unwavering is a spirit of modern enterprise which finds expression in *The Christian Science Monitor*. Here is a news journal conducted on radically different lines from its contemporaries, yet it was a success from the start, and made good within a year of its first issue.

Scientists are often criticized for their seeming indifference to personal suffering and misfortune. If human sympathy is summed up in mere lip service, if the measured phrase of condolence is the test of fellow feeling for pain and sorrow, then the criticism is merited. Even a casual study of Christian Science, however, exposes the error of this assertion. Science runs counter to the proposition that sufferers should revel in the exploitation of their physical infirmities, which wearies the hearer and harms the sufferer. The splendid response of Christian Science churches whenever great crises demand a public appeal for help, and the individual aid freely given by Scientists when needed, is the best refutation of this unfounded and unjust charge.—*Correspondence.*

✧

Reno, Nev.

An audience which filled the Majestic theater auditorium and overflowed into the balcony and gallery, listened to a lecture on Christian Science delivered by Clarence C. Eaton. The speaker was introduced by Sol Levy, who said in part:—

I have frequently been asked if I had become interested in Christian Science. I have said, "Why not?" I have in my time read the Bible. I have read of the ancient sages and of the ancient and modern philosophers, and being of an inquiring turn of mind I also read the words of a well-known agnostic; but out of it all, Deity remained to me a mystery. I could not conceive the possibility that Deity, to whom we look for everything that is to be admired, could also afflict us with cyclones, floods, fire, earthquakes, war, sickness, and suffering. I could never amalgamate the two. In your assembly hall I read the motto, "God is Love." You teach that we are to love our neighbors as ourselves, also that we are to love our enemies. If we adhere to this beautiful understanding, then divine Love is God. Being imbued with this spirit, we must become better and better. I am one of probably many in this large audience who is feeling the way toward the light, which should, and which I believe does, shine for all.

The Reno Evening Gazette.

✧

Superior, Wis.

Recounting the numerous good deeds of Christian Science, Virgil O. Strickler, at the Grand opera house, delivered a strong appeal which was listened to by an attentive audience. The speaker was introduced by Prof. A. D. S. Gillett of the Normal school, who spoke as follows:—

I feel that the committee in charge of these lectures acts wisely in selecting those who are not Christian Scientists to introduce their speakers, as they, perhaps, are best prepared to express the attitude that non-Christian Scientists should assume toward this far-reaching movement. There are three classes of people. One class is ever on the lookout for the novel, and each fad or fancy, grotesque and bizarre though it be, is eagerly embraced. The second class resolutely clings to the past, steadfastly refusing to give fair consideration to any new or supposedly new expression of truth. The third class is open-minded—sanely progressive; building upon the past, it nevertheless realizes that mankind has as yet grasped but feebly and inadequately the great truths of the universe. Education is a struggle to convert the members of the first and second classes to the position of the third. With the relative increase in the strength of the third class, civilization advances. That Christian Science has been of untold benefit to countless thousands, no open-minded person can deny; and it is the open-minded attitude, the willingness to accept a new expression of truth as it may be revealed, that Christian Science invites you to assume with regard to this important subject.

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 7, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 22, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 30, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

Testimonies of Healing

I feel that it is high time for me to take my pen and enumerate a few of the blessings which have come to me through Christian Science, for if I were to continue to withhold my acknowledgment longer, I should be unfit to receive more. I have had many a beneficial thought from the testimonies, so if these lines prove helpful to some weary wanderer, I shall repay in a small degree my debt of gratitude to others.

It is a little over two years since "Science and Health with Key to the Scriptures" was handed me by a neighbor, and it came at just the right time, for I then felt that I was going to pieces mentally and physically; but that inspired book has taught me the way out of many ills. In Science we begin to understand that trouble of every name and nature is unreal. Mrs. Eddy's book is indeed a "Key to the Scriptures" in that it enables one to say with the conviction of Job, "I know that my redeemer liveth." I was reared in an orthodox church, but was dissatisfied with its teachings for years, because it failed to show me how to demonstrate what it taught; so I began to visit other denominations beside my own. In that way I have received many good thoughts, but none that were altogether satisfying; and this fact brings to mind most vividly the Scriptural prophecy, "Behold, the days come, saith the Lord God, that I will send a famine in the land, not a famine of bread, nor a thirst for water, but of hearing the words of the Lord: and they shall wander from sea to sea, and from the north even to the east, they shall run to and fro to seek the word of the Lord, and shall not find it."

I am truly grateful that this condition has been changed. There is no need of seeking and running to and fro any more, for I had not read many pages of Science and Health before I instinctively knew that I had found God's truth unadulterated; and the more I understand this blessed truth, through faithful study, the more I am able to put it into practise. It has enabled me to lay aside glasses which I had worn for eight years, after I had been told that I would always have to use them, and I can see just as well without them and do not experience the least discomfort.

One incident which occurred soon after I had taken up the reading of Science and Health is worthy of mention. I had suffered for several years, off and on, with a physical disorder, concerning which our family physician had informed me that nothing but an operation would give me permanent relief; but I would not consent to that, so he gave me a remedy to use whenever the trouble occurred. I had gotten nearly half through the text-book for the first time, when the trouble seemed to be aggravated into its worst form; but somehow I felt that I must fight this out myself, that divine Love would help me through. Nevertheless, that last day before the change set in for the better was a trying one. The pain and discomfort were so severe that it drew me up-stairs to the medicine cabinet at least a dozen times, but each time an inner voice would compel me to withdraw, and the thought would come, that if I was faithful, God would help me. That day drew to a close, and with the next, improvement set in. I have been thankful many times that I remained faithful to the little understanding I then had. It made other temptations less difficult to overcome, and gradually the trouble disappeared.

Our Father is indeed a "present help in trouble," and His Truth is our "shield and buckler." It is daily helping me to overcome false physical beliefs. Best of all, however, is the spiritual help and understanding, through which I am more and more able to put into practise a better love for my neighbor; for it has brought home to me with convincing force St. Paul's statement in the epistle to the Romans, "Therefore thou art inexcusable, O man, whosoever thou art that judgest: for wherein thou judgest another, thou condemnest thyself; for thou that judgest doest the same things." These words are sharp and exacting, but they are needed. Through Christian Science God's word is indeed becoming "a lamp unto my feet, and a light unto my path." I am not able to express in words my unbounded gratitude for this saving truth, but my daily prayer and hope is, that as the days go by I may more and more obey the Scriptural command to be charitable and loving toward all, for only in that way will I be able to show my gratitude to our heavenly Father for His undaunted and courageous messenger, Mrs. Eddy, who has again pointed out the way for us.—Mrs. Emma Giertz, Elgin, Ill.

Over four years ago I suffered a breakdown in health, losing in flesh and strength. I became alarmed about my condition, and consulted the family physician in the suburban town in which I then lived. At the time of this crisis in my health there came also a crisis in my business, which eventuated in my losing my position as manager of one of its branches. This loss aggravated my physical condition and left me utterly wretched and miserable. I continued treatment with the local doctor for about a year, and finding myself no better at the end of this period, I determined to try a New York city physician who had been highly recommended to me. The New York doctor's diagnosis was that I had heart disease, and he told me that he might be able to cure me in two or three years, but gave me no positive assurance that such would be the case.

I took treatment from this doctor about a year, when Christian Science was brought to my attention and I attended my first Wednesday evening meeting. I listened intently to the testimonies given and became interested. I continued to attend the meetings, although still taking medicine, but finally made up my mind to try Christian Science and was taken to a practitioner, through whose clear spiritual thought I was healed by the power of Truth. Along with this physical healing I received a great spiritual uplift and moral regeneration. Since that time I have had class instruction, and through the understanding thus gained I have been able to find relief from severe rheumatic trouble, as well as from colds and minor ailments. I am very grateful for these, to me, wonderful healings, and I send this testimony hoping that it will bring a message to some sick and wretched mortal not to despair, but to come unto the Father as a little child, and receive health and happiness through this great truth.

I am thankful to God, and grateful to that inspired woman, Mrs. Eddy. It was my wife who first led me to the light.

J. F. Thomas, New York, N. Y.

I hope that this testimony may express, as nearly as possible, my sincere gratitude for the help and guidance I have received, and am receiving, both physically and spiritually, from the study of Christian Science. It has been proved to me that God is the only source of lasting help, and that we need no other guidance. It has made the study of the Bible and the practise of religion an actual pleasure to me, as well as an inspiration every day, in everything I do. Before I studied Christian Science, God seemed a stranger to me, far off; but now I know He is my best friend, my Father-Mother, for my prayers are answered whenever I am guided by the teaching of Christian Science, which is the way that Jesus taught, and Mrs. Eddy tells us to follow her only in so far as she follows Christ.

Some years ago I was healed of appendicitis. At that

Digitized by Google

time I knew almost nothing about Christian Science, but took is up as a last resource before submitting to an operation. A friend, not a Scientist, had given me a *Journal* and some *Sentinels* to read, and being favorably impressed with the testimonies there given, I wrote to a practitioner whose name I found in the *Journal*, and I am very thankful to say I was healed in one week's absent treatment. I had one slight attack shortly after, but I telephoned to the same practitioner, and it was overcome immediately. I had also been troubled with stomach disorders, which disappeared at the same time. Since then, and for about seven years, I have not taken any medicine, but have been enabled to dispel all discordant conditions by following the teachings given us in "Science and *Health with Key to the Scriptures*" by Mrs. Eddy. Even at first, when my understanding was small, I had become so convinced of God's goodness and care by my healing, and other healings of which I had heard, that I did not hesitate to apply the same remedy whenever I was in need of help, and I never sought in vain. God is no respecter of persons, so I rejoice to know that all may avail themselves of the same precious privilege that I have had, with the same results.

Christ Jesus said, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." It is generally conceded that the best way to help others is to show them how to help themselves, and this is truly what Mrs. Eddy has done through her works, and what loyal Christian Scientists and practitioners are doing right along. My heart overflows with gratitude to God for this great truth which has so wonderfully opened the Scriptures to me and revealed the strength and beauty of holiness.

INGE ASMUSSEN, Hayward, Cal.

[Translated from the German]

To the praise of God, and out of gratitude to Christian Science, I wish to give the following account of my experience since accepting its teachings one year ago. I suffered with a serious trouble in the left foot, designated by the physicians, tuberculosis of the leg. This disease seemed to have fastened itself upon me, for three years before it had manifested itself in the other foot. I was laid up for fifteen months in a surgical institution at the time, and was in the hands of the best physicians. All that medical skill could offer was resorted to, but without success. After five very painful operations the foot was amputated, in order, as the physicians said, to save my life, if nothing else. One may imagine how hopeless I felt when indications of the trouble then became evident in the other foot. There was practically no hope of my recovery, as the physicians (this I knew for a certainty) were unable to help me. The thought that my husband would be confronted with difficulties and that my children might soon lose their mother, added to the depression and sadness of my condition. I often prayed to God to save me for my children's sake. My prayer was answered when some time after I was led to Christian Science.

I had told my sorrows by letter to an old-time friend, and she wrote me that I could be healed through Christian Science, and sent me several copies of *Der Herold der Christian Science*. I read this literature with the keenest interest, and a sense of peace soon came to me. My thoughts drifted into other channels, and although I could not grasp all that was presented to me at first, still I trusted that I would be able to effect my own healing. The sense of fear, however, which seemed hardest to overcome, made progress impossible. The trouble increased, and there were alarming conditions, while dreadful pain kept me from maintaining the right mental attitude. Though entreated by my relatives to call a physician, I emphatically declined to do so. However, when I saw that my understanding was not yet adequate to meet the conditions, I asked a Christian Science practitioner for help. Present treatment was given during the first ten days, followed by absent treatment. After the first three days the pain had almost entirely disappeared, and I seemed to suffer only when walking. I looked into the future with a sense of new hope and was very grateful for this ray of divine light.

It seems, however, that I did not guard my thought sufficiently, for a couple of weeks later I suffered a relapse. Still, the conviction was with me that God's truth is more powerful than all error. I made an earnest use of the thoughts which the practitioner conveyed through her letters and continuously declared God's omnipotence and the nothingness of matter. A struggle began, error being confronted with Truth. The more I relied upon the truth, the more severe was the form assumed by error. During these days the words of Isaiah proved a source of strength to me: "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness." The struggle did not prove in vain, for God was the victor. In about a week's time the pain left, never to return, but the wounds were not yet healed. This gave no rise to fear on my part, as I knew that with increasing understanding these erroneous symptoms would also vanish.

I now attended to my household duties in a joyful frame of mind, and when on July 1 we moved to Stuttgart, I made all the preparations myself. In cases where error would suggest that this or that work was too hard for me, I held fast to the thought that I had the ability to fill perfectly the place assigned to me by God. This thought inspired me with strength for the performance of many a seemingly strenuous task, and the removal took place harmoniously and without the least unfavorable effect with regard to my foot. After five months had elapsed I was completely healed. The bone was in its normal position, and the wounds had closed; there was not even a scar or the slightest sensitiveness left, and I was able to walk any distance without difficulty.

The experience I have just related often seems to me like a terrifying dream that I am trying to erase more and more from my thought. My gratitude to God, and my thankfulness to the dear people who have made plain to me the way of Truth, is boundless. In order to pay my debt of gratitude in some measure, I am trying to assimilate more and more of the nature of Spirit, to lay mortal sense upon the altar, and to conform to the Saviour's call: "If any man will come after me, let him deny himself, and take up his cross, and follow me."—FRAU LUISE BERTSCH, Stuttgart, Germany.

✧

It is with greater gratitude than words can express that I give this testimony, trusting it may be of benefit to some one who is searching for the truth that makes free. In the fall of 1910, while driving from my home to the state fair with some concrete fence-posts to put on exhibit, my wagon was struck by a rapidly moving street-car on a down grade. My son and myself were both thrown from the wagon on to the paved street, and I was struck in the side with one of the concrete posts as it was thrown from the wagon. Several of my ribs were badly injured, and I was unconscious for a short time. When I regained consciousness, however, I told everybody to let me alone. I then got up and walked to a near-by porch. In the mean time I told my son to go home and tell my wife to treat me. I was taken home, and when I reached there, to my surprise my wife did not seem to have the slightest fear about my condition, but said it would be all right. I called

Digitized by Google

a surgeon, who bandaged me, and my wife continued the treatment for about two hours. By this time the railroad physician came, and he pronounced the condition the same as the surgeon had done.

The accident took place about nine o'clock on Saturday morning. After a season I got up, ate dinner at six in the afternoon, and rested well that night. Sunday I arose, dressed, went to Sunday school, and taught my class as usual. After the church service I returned home and rested that afternoon. Monday I went to the fair ground, and took charge of my business from that time on. Tuesday I made a run of fifty yards to catch a street-car, unmindful of my condition. I met the surgeon on Thursday, and he said he would be over to examine the bandage. I told him I had taken it off on Wednesday. My wife treated me about five days, although I was practically well after three days.

This is only one of the many healings which have been experienced in our family, and these are nothing in comparison with the healing from sin. I have no words to express my gratitude to God, and also my thankfulness to our dear Leader, Mrs. Eddy, for this spiritual light and truth that has come to me through the study of Christian Science.

WILLIAM G. MAHAFFY, Oklahoma City, Okla.

It is with pleasure that I testify to the truth of my husband's statement in regard to the accident and his healing in Christian Science. The incident occurred just as he has said.

MRS. NORA MAHAFFY, Oklahoma City, Okla.

✦

I have long desired to add my testimony to those given, for benefits received in Christian Science, and they are many, both spiritual and physical. I had been a church-member for years, had always known that there were greater blessings in store for God's children here and now than was realized in the church teaching, and my joy and thankfulness for the truth as revealed through Mrs. Eddy may be imagined. While it means work to take up the cross and deny self, the results are peace, and growth in the knowledge of God and His Christ.

I wish to express gratitude to the Publishing Society, and all who contribute to the *Sentinel*, *Journal*, and *Monitor*. The help given in these publications is immeasurable! I would also say, God bless the Christian Science practitioners, who are so faithful, patient, and true, especially those who have done so much for me and my family. It is my daily prayer that I may be enabled to manifest the Mind "which was also in Christ Jesus."—SARAH E. HENDERSON, Wallace, N. Y.

✦

When I first called upon a Christian Science practitioner for help, I was suffering from backache, inflamed bladder, and extreme weakness, while the fear of becoming a victim of so-called Bright's disease was great, as a doctor had informed me of this tendency, and my mother soon after this passed on from it. Kindly and tactfully the Scientist taught me to rest my faith upon the Supreme Being, and relief came quickly. Our little girl was to be operated upon for an abnormal growth, but this also was beautifully dispelled through the understanding of divine Truth. Later the child returned from school one day with a high temperature, and after having passed a bad night, she was able to attend school next morning, while other children with the same symptoms had to remain at home for weeks.

Two attacks of poisoning were overcome also; then a baby was born to us under Christian Science treatment, and the nothingness of the many material laws attending such a case was proved. There was much fear prior to this birth, as instruments had to be resorted to on two previous occasions. A few days before confinement I sustained a fall, which for a brief moment seemed to shock my whole system; but when the birth took place, the attending physician pronounced it the most harmonious he had ever witnessed, and the whole experience surprised him and all my friends. The baby was strong and good-natured, while the other two had reflected my irritability. The kind practitioner had to exercise much patience in showing me that to love more is to gain health of body and peace of mind, while to cease loving is to be in bondage.

MRS. IVAN PHIPPS, Corfu, Wash.

✦

Jesus said, "I can of mine own self do nothing." He also said, "My Father worketh hitherto, and I work." I rejoice and am "exceeding glad" that in "Science and Health with Key to the Scriptures" by Mrs. Eddy I have found a spiritual and practical interpretation of the divine writings which has brought health, peace of mind, and priceless blessings. It has been an unfailing help at all times and under all conditions. One of its greatest blessings to me has been the overcoming of many worldly desires, for I had been very worldly-minded. After having read Science and Health for some two or three weeks, I went on a visit to a friend, who was as worldly in thought as I had been. After five or six days of most unpleasant experience, which was brought about by my habit of incessantly talking Science and acting inconsistently with what I said, I came home physically ill. For the first time I called for help from a practitioner, and was healed in one treatment.

At this time my husband was in a business which led the public to the pursuit of pleasure. I had taken part in this excitement for some time and had enjoyed it, but after reading Science and Health for a few weeks longer I did not care to go to this place of amusement. I, however, thought it right to go with my husband, even though I no longer cared to participate, so I continued to attend. This brought me an early and profitable experience. As I watched those taking part in this amusement, which had so lately seemed to bring me much pleasure, there came a revelation that I believe could have come to me in no other way. I was able to see myself as others had seen me, and to recognize the tendency of the human mind to criticize, judge, and condemn. It seemed as though a search-light had been turned on my past experience, which lay spread out like a panorama before me. It grew more and more distasteful to me, until I could say from my heart, concerning this phase of worldliness, "The prince of this world cometh, and hath nothing in me."

After this revelation and others of like kind, I began to look a little closer into my home life, into my relation to my neighbors, and to mankind in general. The work to be done within seemed appalling, but God's grace was sufficient for me, and I was given courage to begin to solve my problems. Each day I have been given strength to work patiently with myself in overcoming all that is unlike God. While I am deeply grateful for all that has been done in purifying my thought, I realize that much yet remains to be done. I know that it can and will be done through the application of Christian Science. I am working joyously each day, never looking back except to gather evidence for more gratitude and love for our cause, and for our dear Leader who so nobly labored to bring this truth to our benighted understanding.

I did not come to Science for the physical healing, but because, as I see it now, I was utterly tired of the husks of materiality on which I had been feeding. I have indeed found rest unto my soul. Only those who have experienced some of the healing influence of divine Love can appreciate that it is impossible for me to express in words the joy and peace that

Digitized by Google

have come into my life through Christian Science. We are told in the Bible, "Freely ye have received, freely give." I therefore trust that this testimony will find a response in some human hearts and encourage them to seek and find.

My heart is full of thankfulness to God, and of love for all Christian Scientists, more especially for those who have helped me to solve my problems. In proof of this I shall endeavor to live faithful to the teachings of our text-book.

Mrs. Fannie M. Jones, Dallas, Texas.

✧

[Translated from the German]

I found the way to Truth as the result of the healing of my daughter of a severe nervous trouble through Christian Science, and would like to state that I myself have experienced its healing ministration in the instance of a very serious trouble.

Five years ago I became afflicted with an abscess on the tongue, and the throat and palate, in fact the whole body, seemed to become affected. I suffered intense pain and did not know how to take nourishment. In order to ascertain the nature of the trouble, I asked a physician to make an examination. He diagnosed the case as a malignant growth, and informed me that it was a serious difficulty, stating furthermore, that my recovery depended upon proper medical treatment. Hereupon I told him of my decision to take Christian Science treatment, as God was my only physician and we had already had many proofs of the divine power as revealed through Christian Science. I then applied to a Christian Science practitioner for treatment, and with her loving and patient assistance, together with my firm trust in God, the healing was accomplished through Truth. During that time I did not have to stop my work a single day, though error often asserted itself in a most trying way; yet I felt that divine Love was giving me the strength required for the performance of my daily tasks.

Thus in the course of a year I was able to show myself to the physician. After a thorough examination he asked me whether I really had not resorted to medical treatment, and I could answer in good conscience that my recovery was solely due to Christian Science treatment. To this he said, "It is wonderful that you should have been so fortunate as to be healed of such a disease." Four years have elapsed since, and I have been perfectly well during that time. My weight, which decreased perceptibly while the trouble lasted, became normal as soon as I was restored to health.

I am infinitely grateful for this great proof of the power of divine Love, and I am thankful not only for having been restored physically, but also for the spiritual progress I have been able to make, for I learned many things during my experience. Christian Science is to me a practical religion and a help in every need. I have known its teachings for nine years and have been benefited in innumerable ways. Next to God, I thank Mrs. Eddy for pointing out the way of Truth which maketh free. I shall strive to prove my gratitude in my daily life, through right thinking and acting.

Frau Selma Graf, Berlin, Germany.

✧ ✧ ✧

The worm that clothes the monarch spins no flaw,
The coral builder works by heavenly law.
Who would to conscience rear a temple pure,
Must prove each stone and seal it, sound and sure.

Upon one steadfast base of truth we stand,
Love lifts her sheltering walls on either hand;
Arched o'er our head is hope's transcended dome,
And in the Father's heart of hearts our home.

Julia Ward Howe.

From Our Exchanges

[*The Congregationalist and Christian World*]

Men are beginning, both in and out of the churches, to take seriously the relation of Christ's teaching to our human fellowship and to insist upon the validity and authority of the second of the great commandments. That has always been the call of the gospel and the occupation of soul for earnest followers of the Christ who gave himself for men. It is to be the test and controlling principle of the life of the church that is to be. We believe this reconstruction will sooner or later lead men back to all the essential and once familiar usages of the church, but it will fill them with richer content and glorify them with new charm. The new faith which these prophets and seekers have seen at the dawn, will be the faith of our Lord Jesus Christ conformable to his life and death for men.

All these discoveries of new content and satisfaction for the hunger of the heart in Christianity are warnings to us that we of the churches have not yet filled our religious customs and observances up to the brim with the spirit of Christ. Our Lord's day has not become sufficiently the Lord's. Our homes have not always been places where he was a resident, continually acknowledged and delighted in. When we are more Christlike in our thoughts and ways, we shall have more power for Christ.

[*The Christian World*]

In the production of our perfections, of our virtues, we act too much in the way of the old unscientific manufacturers, whose processes left an enormous amount of ugly waste material,—slag-heaps which made the landscape hideous. In these matters science is reaching a better method, where nothing is regarded as waste; where the whole material is brought into useful, beautiful service. And that is what, in man's spiritual culture, we have to aim at, and which in the end will be attained. We have to learn to achieve success without pride; we have to achieve a civilization where the prosperity, the joy of life, shall be the privilege, not of one class, but of all. We have to learn that our gifts, however brilliant, are nothing in the scale against character, against goodness. We have to reach a theory and practise of social intercourse where all the freshness, the generosity of it, is to be guarded in our earnest thought as a precious mixture, to be soiled by no malign admixture. Our aim must be for a spiritual influence which helps but never seeks to dominate, which respects the freedom of the will as God's greatest gift to the soul. And all this and more will yet be accomplished. This, because God is at work in His world, visibly, before our eyes, moving toward His great purpose.

[*The Christian Work and Evangelist*]

Religion is expressed in life, and its language is human conduct. Declarations of faith and promulgations of dogmas may serve as evolutions of thought, but I prefer my brother's prayers as evidences of living faith,—real prayer from the toilsome, weary, and burdened heart, that tells the story of a life broken and imperfect, but still seeks to conform to the model of Christ.

[Rev. T. Rhondda Williams in *The Christian Commonwealth*]

The man who is in this body will be the same man when he has left this body behind; and as all men are partly good and partly bad, the next life will not be all of a uniform experience. The best state we can hope for is a state of gradual perfecting and growth. Probably enough, for the best there will be some cleansing fires needed. The doctrine of purga-

Digitized by Google

tory has no doubt been elaborated in many unwarrantable ways, but, like most old doctrines, it had a soul of truth. The purgatorial fire is a reality in every life that is rising toward God, and no high heaven is ever reached without climbing the purgatorial mountain. You may be sure that you begin life on the next plane in the same spiritual state in which you leave this plane. The faults of character unconquered here will have to be fought out there. Do not expect to be able to drop your imperfections into a magic sea at death. Life is a continuous progression. Let us learn, each one, to take life seriously, and to remember that we are every day building for eternity. No plan of salvation must be conceived that wipes out these facts of the Spirit-life.

[*The Continent*]

It cannot be an indifferent thing for men to drop God out of account, to deny His fellowship and go their own paths alone, deeming His guidance no asset in doing what they call His pleasure. Yet that is what is too generally happening where social service is treated as the characteristic twentieth-century version of the gospel. Normal Christianity for today is assumed to be an abundance of good works going forward on a principle of service without necessity or care for any personal spiritual experience validating God's approbation or transmitting His influence. But God's church positively cannot admit any such thing. The Christian's experience of God in his own soul is real. God does come into a man and dwell there. And the man is conscious of it,—purified, directed, enabled by the mysterious and awful reality. And being real, the fact cannot be ignored. It is the Sun that rises, not a Druid fire on the far mount.

[*The Universalist Leader*]

Life is a good deal bigger than the conception of a few men's minds. It is the gospel which one man is preaching which calls for clothes for the naked and food for the hungry, but it is no less the gospel which meets the call of the Spirit, and gives satisfaction to the ideals and aspirations of the soul. The gospel is big enough to include every experience which can come to man, and preaching the gospel can never be fully accomplished by the preaching of any one man. The gospel is inclusive, not exclusive. It takes a whole lot of angels to make the chorus of "good tidings of great joy" to all people.

[*The Outlook*]

A good for which we must scheme and strive, over the precariousness of which we must hold our breath, is not solidly good at all; it is a transient vexation. The real goods of life are as surely ours as the dawn; there is no escaping them. Therefore, from all this it follows that the one thing needful for any human being to know is the will of God. There lies our duty and deep content. There lies our only chance of making our existence at all worth while; there lies the significance and salvation of the universe. The kingdom will come as soon as the will is done. Let us not thwart it.

[*The Christian Register*]

A real unity in diversity might be established, and ought to be. The churches do not know one another. Every movement that tends to make them better acquainted, to wake them up to common aims and impulses, is admirable. The cold indifference and critical isolation of churches of different name, though all profess to follow the same Master and worship the same God, is one of the things most astonishing, painful, and inexplicable to the non-believer. Jealousy separates oftentimes where a common faith is powerless to unite.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal*, printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by **Mary Baker Eddy**, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies, inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

Miscellaneous Writings—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

Church Manual. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Christ and Christmas. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

Unity of Good and Other Writings. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Christian Healing and Other Writings. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform with the pocket edition of Science and Health. Bound in Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Retrospection and Introspection. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Unity of Good. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Pulpit and Press. A unique work, important to the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more, 75 cents each.

Rudimental Divine Science. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

Rudimental Divine Science. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more to one address, 40 cents each.

No and Yes. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

Messages to the Mother Church. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Message to The Mother Church. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges, 15 pages. Price, single copy, 26 cents; twelve or more 20 cents each.

Our Leader's Message. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Communion Message, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Two Sermons. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. One volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more, 45 cents each.

Christian Healing. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

The People's Idea of God. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

Feed My Sheep. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Items of Interest

NATIONAL

The Amazon exploration expedition sent out by the University of Pennsylvania several months ago has just reported reaching Caracari, a small settlement at the headwaters of navigation on the Rio Branco and near the borders of the Guianas, in South America. It is about two thousand miles from the mouth of the Amazon, and is a spot almost unknown to civilization. From Caracari the scientists will proceed to the headwaters of the Branco in small boats to reach the habitat of the Caribs and Arewak Indians, which, so far as is known, has never been visited by white men. The expedition has met nothing but friendliness from the natives. It is now ahead of schedule time.

Chicago is soon to have a large new hotel for honest men out of work or working for low wages. It is being built as a memorial and will accommodate in emergency a total of five hundred men. The charge for a night's lodging will not be more than five or ten cents, while meals will cost even less. A manager, formerly connected with the municipal lodging-house, has been secured to superintend the plant, which will cost one hundred thousand dollars. If the institution proves as successful as is hoped, another will be built for women.

In a petition to Attorney-General McReynolds, the Baltimore Merchants and Manufacturers' Association asks federal proceedings to dissolve the alliance between the New York, New Haven & Hartford railroad and the Merchants and Miners Steamship line, and the relations of the Pennsylvania railroad with various other steamship companies. It charges that the alliances complained of are unlawful and inimical to the interests of shippers.

To obtain a supply of pine seed sufficient for its reforesting operations the United States has found it necessary to collect, through its forest service, hundreds of thousands of pine cones from which the needed seed may be extracted. Last year the forest service collected from six selected districts in the national forests 75,139 pounds of forest tree seed, valued at $83,326.24, with which it is hoped to restore the protective forest covering to some thirty thousand acres of national forest land.

A one-chamber state Legislature consisting of sixteen members was advocated by Gov. George H. Hodges of Kansas at the recent conference of governors at Colorado Springs. Practically speaking, this method would give states a commission form of government, as it would centralize the law-making functions and make the commissioners directly responsible to the people.

The treasury department has deposited about five million dollars of the fifty million dollars of government funds to be distributed to assist in moving crops, principally in Washington, Baltimore, and southern cities. Delay in getting the money out, it is said, is due entirely to the banks, many of them erroneously filling out the form designed to protect the government.

The route of the Lincoln highway is practically settled, according to officers of the Lincoln Highway Association who attended the conference of governors at Colorado Springs and presented the plans for this great transcontinental route. An official statement has been issued to the thousands of subscribers to the ten million-dollar fund now being raised.

A towering shaft of white marble, erected at Cedar Point, Ohio, on the shores of Put-in-Bay, in commemoration of Commodore Oliver Hazard Perry's victory in the battle of Lake Erie and the one hundred years of peace between the United States and Great Britain, was formally dedicated Sept. 10 by former President William Howard Taft.

The Democratic tariff revision bill as it passed the Senate, changed in many particulars from the form in which it left the House over four months ago, went back to that body Sept. 10, and into joint conference committee the following day.

With the tariff bill practically out of the way, President Wilson has taken up the currency situation and insists that it be disposed of as soon as possible.

INTERNATIONAL

The general result of the proceedings under the English land purchase acts, 1881 to 1896, is that 72,932 advances have been made to tenants, the amounts issued making a total of £23,380,000. Since the act of 1903 came into force, 12,943 applications, representing £2,245,000, have been received; and in the case of 12,425 of these applications, advances amounting to £2,143,000 have been provisionally sanctioned. During the same period 12,047 loans for £2,073,000 have been made. From the time when the act of 1909 came into force up to March 31 last, 428 applications, representing £111,000, were received; of these, 386, for £93,000, have been provisionally sanctioned, and 350 loans for £85,000 in guaranteed 3 per cent stock have been made.

The review of irrigation in India during the year 1911-12 contains a brief note of the results of irrigation in the several provinces. In the Punjab, insufficient rainfall necessitated recourse to canal water, which was taken to mature a large area which had been sown with the help of rain. The large increase of irrigation in the Sirhind canal from 843,476 acres to 1,609,459 acres is stated to be undoubted testimony to the efficiency of the remodeling of the distributing systems carried out in the years 1906-08. The lower Chenab canal continued to show remarkable progress, having irrigated an area of 2,334,090 acres—an area exceeding the combined irrigation of the productive systems in the United Provinces—and earned a gross revenue of about £940,000.

The contract for dredging the harbor of Toronto, Ontario, has been awarded by the harbor commissioners. The bid approximates five and a half million dollars. It is understood that the Dominion government has assumed the responsibility for the construction of the sea walls and other cooperative works of a federal character at an estimated cost of $5,250,000. The entire amount to be spent on the development of Toronto's harbor and waterfront is between nineteen and twenty million dollars, and the whole work will occupy ten years.

During the past twenty years the Belgian government has disbursed four hundred million francs for the maintenance and improvement of the ports of Antwerp, Ostend, Brussels, Bruges, and Zeebrugge. For Antwerp alone between the years 1880 and 1908 a sum of two hundred and twenty-five million francs was spent by the government in port works. As a result, the port of Antwerp stands among the most important of Europe, the Scheldt river being now navigable for a distance of one hundred kilometers from its mouth in the North sea.

The recent contract entered into by S. Pearson & Son and the Ecuadorean government, giving the company concessions for the development of oil lands, was made in the face of strong American competition, and probably will involve the expending of fifty million dollars in opening up the country by means of railroads.

The number of wells in the city of London, which have been sunk because of the high charges for water under the Metropolitan Water Board, is likely to increase in the future. At present the number of wells is fifty-two.

INDUSTRIAL AND COMMERCIAL

Eight million dollars a week for five years—two billion dollars in all—can profitably be invested in developing the electrical industry in this country, in the opinion of Frank A. Vanderlip, president of the National City Bank of New York, who addressed representatives of the electrical industry in the United States at Sacketts Harbor. "When we think," he said, "what is certain to be done in the way of electrification of steam railroad terminals and heavy mountain grades, when we reflect on the larger use of electrical energy for industrial power, in agricultural uses, and in the continued growth of necessary interurban lines, we do not need to look further into the possible development of the industry to see a requirement for four hundred million dollars a year of new capital."

An electrolytic process has now been put into operation that turns the sewage waste of a city to potential wealth. The process consists of deodorizing sewage and destroying all organic life in it, rendering the liquid absolutely innocuous and odorless. A current of low voltage and high amperage is the purifying agency. The apparatus is simple and inexpensive to install and operate. It consists of troughs through which the sewage flows, in which are set a large number of iron plates, the electrodes. The effect of the electric current between these plates is instantaneous. The outflow of this plant would be available for irrigation, as its fertilizing value is not diminished by the treatment. Three such plants are in operation at present: in Santa Monica, Cal., Oklahoma City, and Santos, Brazil.

Smoke costs the residents of Pittsburgh, Pa., nearly ten million dollars a year, or about twenty dollars per capita per annum. The smoke nuisance costs Chicago seventeen million six hundred thousand dollars, or eight dollars per capita, and Cleveland six million dollars, or eight dollars per capita.

Despite a decrease of nearly two million bales as compared with last year's crop, the South received for its 1912-13 commercial crop of cotton, including seed, nearly one billion dollars, or more than sixty-one million dollars above the value of the 1911-12 crop.

Ohio coal production in 1912 reached the record-breaking figure of 84,524,727 short tons, valued at the mines at $87,079,578, increases of 8,764,741 tons and $5,269,450 over the figures for 1911.

Vol. XVI September 20, 1913 No. 3

Hindrances to Healing Overcome

ROBERT NALL

UNLESS we understand what true healing is, we are liable to err grievously. If in its application Christian Science had been limited to giving relief from physical troubles, it might have been more popular, but it would have belied its name; it would not have been the Christ-healing that the world needs. In the question, "Wilt thou be made whole?" Jesus expounded his mission. To him true healing meant complete wholeness: disease and sin were invariably coupled, and the healing of the one implied the destruction of the other. No scholastic commentator has been bold enough to deny this interpretation of the term "made whole," and it will be remembered that Mrs. Eddy emphasizes this truth throughout the text-book. She thus showed her fidelity to the full-orbed Christianity exemplified by Jesus and his disciples, and we do well, therefore, to study, as she did, what this means. If health were merely a condition of matter, there would be less necessity of study.

Many of those who flee to Christian Science simply to be freed from pain, would be content if they attained this result, though they might not be assured of any exemption from relapse; but that would not be spiritual healing. It would be only the substitution of one belief for another, and if dependence upon the physical were persisted in, the last state of such a one would be worse than the first. No, we must go much deeper than this if we are to apprehend thoroughly what Christian Science stands for and what it is doing for humanity. If we want the whole matter put concretely, here it is: "Entirely separate from the belief and dream of material living, is the Life divine, revealing spiritual understanding and the consciousness of man's dominion over the whole earth" (Science and Health, p. 14). This consciousness of spiritual power, and of being linked to the one omnipotent Mind, is what every man needs.

The patient in quest of health, who is slow to find it, sometimes gets into a mental tangle, and is always looking around for the cause of his delayed recovery. Very often that is why he is making little or no progress. It is because he is "looking around" that he is missing what he wants. He is searching everywhere but in the right place. He pictures all sorts of material causes, not one of which has any relation to the truth of being. The hindrances seem to be many, yet it is possible to sum them up in a very few words. In this respect Science and Health is a most valuable *vade mecum*. With its clear spiritual interpretation of Scripture, it so unfolds the truth that the wayfaring man who studies it will not err. We find there quite a list of conditions and false beliefs to which mortal mind clings with the tenacity of a limpet. When once we begin a mental diagnosis, we are somewhat appalled at the picture of what unregenerate mortal man is; but what is learned in this mental analysis should have a practical effect.

Without attempting the complete catalogue, it will be observed that among the weights which impede progress are these: Fear, ignorance, false belief and unbelief; more consciousness of error than of truth; belief in life and intelligence in matter; failure to acknowledge the one God, infinite Mind, as the only cause and creator; regarding the human mind as a healing agent; mistrust of God; looking for freedom from pain only that the pleasures of sense may be enjoyed; holding diseased and sinful thoughts; refusal to abide by the strict rules of Christian Science; disobedience to the promptings of "the Spirit of truth;" failure to acknowledge, frankly and honestly, Truth as revealed in Christian Science. One might add to this list, but there is enough here to cause every one to think deeply. In so doing, we must see that our thought is in the line of righteousness, otherwise we shall be dwelling in a mental realm where the conditions are alien to a victory through Truth.

Now, while it is just as true today as it was when Jesus was on earth, that "the power of the Lord" is "present to heal," there is, as there was then, a sense in which the power is unapplied. Jesus could not heal at Nazareth; even a very orthodox writer admits that there "his power was rendered powerless by the unbelief of those he could and would have healed." This unbelief was an absolute denial that Jesus was able to do mighty works. But there is an unbelief which may be classed as a dependence rather upon matter than upon Spirit. It is clothed in mortal vesture. The unbeliever will see and hear only materially. There is lurking error here that must be uncovered and destroyed before the light of Truth can penetrate the darkened mentality. This is a case where an awakening from false consciousness is imperative. By humility of spirit, penitence, a simple childlike faith, the unbelief must yield to belief, and belief to understanding; and as thought is spiritualized, there is a full acceptance of the divine conditions for complete victory.

When we recognize that true healing can only be synonymous with spiritual wholeness, we shall get some faint idea of the great work before us. Whether it be sin or sickness, makes no difference in one sense; they are both healed in the same way, that is, by divine Principle, as Mrs. Eddy tells us over and over again. As to physical healing, she puts the matter with her characteristic plainness when she says on page 230 of the text-book, that "we think that we are healed when the disease disappears, though it is liable to reappear; but we are never thoroughly healed until the liability to be ill is removed," and the final demonstration, whenever it is made, will be the victory over every sin. Then we shall be conscious of perfect spiritual reflection of immortal Mind, cognizant only as God is of sinless purity, harmony, and bliss.

No Christian Scientist, whatever stage of progress he has reached, can afford to stand idle. He knows where he is in truth, how far he has come, and the distance he has to go. It is not necessary to be unduly introspective to detect hindrances, and in proportion to his knowledge is his responsibility to the divine demand. Young students may not have reached this; but even they, if they are disciples in the truest sense, will find wonderful help as they seek to examine themselves. The searchlight of Truth may be de-

Copyright, 1913, by The Christian Science Publishing Society

Digitized by Google

pended upon to uncover every error and expose every hindrance. Nothing is more subtle than the material claim of sense enjoyment. Once awakened to the truth, we know that there is no pleasure in sin. Further than that, there is no rest and no true healing in sin. Material belief is reluctant to acknowledge this; but the law of Life is explicit. While we are cherishing even a thought of sin, and while there is no repentance for sin, we are obstructing our spiritual progress; hence the call for purity of thinking. And is not this just? If we believe that God is too pure to behold iniquity; if we believe that He is the very essence of holiness; if we believe (as we must, if we would be healed and saved) that He is always and everywhere present to answer our prayers and bless us, what is there more reasonable than that we should surrender ourselves to Him and do as He wishes?

Those who hesitate about meeting the absolute requirements of divine Truth should consider what they are likely to lose in comparison with what they will gain. Let them think of the unnumbered thousands who today can testify that they have received ten times more than full compensation for all that has been given up; and who are always ready to add that, as they have risen into purer consciousness, the healing power of Truth has been manifested much more quickly and effectively, and many errors of mortal sense have been destroyed. There is never any uncertainty as to what God will do. All the promises will be fulfilled. The word of Truth never faileth, and the psalmist tells us that it "runneth very swiftly."

We may learn many lessons from our Leader's experiences, and none more than that of her wonderful "patient continuance in well doing." Even in the darkest moments, she never lost faith in God as infinite good. Of her it may be said that "in quietness and confidence" was her strength, and her submissiveness to the divine will is one of the keys that opened to her the door of the kingdom of heaven, for submissiveness lets in the light; it reveals the impotence of error, it unfolds the power that comes from a pure knowledge of God.

One of the things which Mrs. Eddy learned very early she has recorded on page 31 of "Retrospection and Introspection" in these words: "The first spontaneous motion of Truth and Love, acting through Christian Science on my roused consciousness, banished at once and forever the fundamental error of faith in things material; for this trust is the unseen sin, the unknown foe,—the heart's untamed desire which breaketh the divine commandments." Is not a great secret revealed here? When faith in the material is conquered, faith in God becomes the dominant force in our lives. Hindrances will then vanish, because they are in fact of mortal origin, and therefore have no existence or power beyond the faith that mortals have in them.

"Out of the mouth of babes"

LOUISE KNIGHT WHEATLEY

It was the morning before Christmas, and presents had already begun to arrive. Although nothing had come as yet addressed to the little five-year-old Christian Scientist, with the arrival of each new package the child's excitement increased, and it was quite evident to the lookers-on that the little fellow's cup of bliss would not hold very much more. Then he suddenly astonished them all. "Mama," he said, "I'm so happy! I think I'll go down-stairs and talk to God a little bit." Down the stairs he went, entered the empty living-room, and climbed up into the big chair where he had so often seen his father sit to study the Lesson-Sermon and then silently "talk to God." Up went the little hand over his eyes, and for several minutes he sat perfectly still. At length those watching from the hall heard the baby voice softly repeating the Lord's prayer, and then he jumped down, his face beaming. He had talked to God and was satisfied.

Truly, "out of the mouth of babes . . . thou hast perfected praise." How simply and naturally that pure child-thought turned to God in its moment of extreme happiness! Quite different was the early training of those who witnessed the little scene, and of some, perhaps, who may read this story. In our early days, if we remember rightly, except for the nightly prayer at our mother's knee, we seldom talked to God unless we were in trouble. The appearance of the Bible on a week-day was generally the harbinger of something wrong in the household, and we regarded it with the same uncomfortable feeling as if we heard the call, "Icebergs ahead!" We talked to God only when we wanted something or when things somehow went wrong and we were sad, afraid, or discouraged. When baby was sick, mother read the Bible and prayed a good deal, and even father picked the book up once in a while, which made us very uneasy; but as soon as baby was well, the Bible went back to its old place in the bookcase, and the whole family cheered up.

But to this little Christian Scientist, untrammeled by false education, knowing nothing from his babyhood but "the simple verities" which Mrs. Eddy says make children "happy and good" (Science and Health, p. 236), it was a perfectly natural thing to want to "talk to God" just because he was so happy. And if we had been privileged to hear that baby prayer, we might have bowed our heads in reverent humility and learned much; for crude though its phrasing must have been, it surely found its way to the great listening heart of the all-Father, for it was winged with the vital essence of true prayer,—gratitude, sincerity, and love.

With all due respect to the church of our childhood, to the beloved father and mother who so faithfully practised its teachings, and to the many good and honest persons who may yet believe in it, this article is written. As Christian Scientists we have no quarrel with any system of religion, or with those who follow it. It is only that we believe we have found that which the apostle describes as "a more excellent way," and can do no less than walk therein. We might do well to ask ourselves, however, we who feel that we have journeyed so far from the church of our fathers, if we have really gone as far as we have fancied, or whether some threads of the old ways of thinking may, perchance unknown to us, be yet clinging to our garments. Let us honestly ask ourselves if even now we turn to God as quickly in times of joy as in times of sorrow.

In times of unusual happiness, when the birds are singing and the way seems carpeted with roses, do we always remember who is really the giver of all goodness, and stop long enough to thank Him? Or, in times like these, when our cup seems full to overflowing, do we sometimes become so absorbed in contemplating satisfied self that we get just a little lazy mentally, and continue to tread "the primrose path of dalliance" with careless and unthinking footsteps? Then suddenly, perhaps, the scene changes; those temporal and evanescent joys fade away, even as the dropping of the summer rose-leaves, the birds cease to sing, clouds gather threateningly on the horizon, and we hurry back to our books, and begin to "talk to God" as we have not done in quite a long time. What occasion have we to smile because mother gets out the Bible while waiting for the doctor to arrive? She is honestly living up to the best she knows, while we— Oh, patient One, whose love is infinite, why does it seem so

Digitized by Google

easy to forget? It was to Thee we turned in that darkest hour of our lives; and now that we have found Thee, and been healed and blessed, shall we not remember that Thou art also a God who in the brightest hours of our lives can make them yet more radiant?

Most of us have had our vacation, and as we look back upon the many experiences which made our holiday so beautiful and fair, it is well for us if we can remember with rejoicing that in the midst of all our innocent pleasures and distractions we were never too busy to stop now and then and, like the little boy, "talk to God" just because we were having such a happy time. The sweetest part of our sweet memories is this, that we took God with us up the mountain trail, across the moonlit lake, along the shell-strewn beach. We love to remember how the mountain trail was traversed easily and without accident or delay; how the moonlit lake sparkled with a new beauty not of earth; and how the lapping waves sang us to sleep with softer lullaby because we had first talked to God "a little bit," communed with Him in our joy.

Once, in a western city, a little girl of twelve applied for membership in a Christian Science church. Like all the other candidates, she was called before the board of the church alone, and asked some questions. Among them was this: "What do you understand by prayer?" The child looked at her older and presumably wiser questioners, and then she smiled. "Prayer?" she repeated softly. "Why, prayer is just an expression of gratitude for the good already received." It was almost as if she were wondering why they should ask a question whose answer was so palpably evident; yet among that little group of listeners there were few eyes not suddenly wet with tears.

Truly, it is the child-thought for which we need to pray, the simple child-thought which Jesus loved, and which, while we older ones are toiling slowly and laboriously along the road from sense to Soul, may run joyously past us, and enter first the kingdom.

Childhood and Christian Science

HARMON I. LEE

As one who was grown up before he embraced Christian Science, and who has experienced the severe mental conflicts which accompany the overthrow of stubborn false beliefs and habits, I was pleased to observe, while engaged in Christian Science Sunday school work, the ease with which the children grasp the deeper meanings of spiritual truth. Those with similar experiences will appreciate what Mrs. Eddy says on pages 236, 237, and 130 of Science and Health; and I am of the opinion that in no better way can we as Christian Scientists aid in bringing to pass those "greater works" mentioned by Christ Jesus, than by training the children how to apply his teachings, logically, practically, and scientifically, to their daily needs.

This work is being done in Christian Science Sunday schools all over the world, by those who are endeavoring to implant in the child consciousness the Bible truths which the great Wayshower came to teach. Jesus said, "I am come that they might have life, and that they might have it more abundantly." It is not fair and reasonable, however, to expect that the Sunday school will accomplish in one hour, once a week, the work that it should be the duty and privilege of all Christian Scientists to have a part in, particularly those who have children under their care. Too many ignore their duty by thinking that they do not know how to do this work. It would seem that no better rule could apply than that each individual should study the Ten Commandments, the Sermon on the Mount, the Lord's Prayer, and the Lesson-Sermons from *The Christian Science Quarterly* in such manner as will enable him to impart their spiritual meanings in a simple and practical way to the little ones.

Now that Mrs. Eddy has awakened the spiritual apprehension by which the promises of the Bible are being fulfilled, shall we be satisfied to leave its attainment to the future, and thus incur Christ Jesus' rebuke to the men of Sychar, "Say not ye, There are yet four months, and then cometh harvest? behold, I say unto you, Lift up your eyes, and look on the fields; for they are white already to harvest." Indeed, the fields are white for the harvest, and nowhere in his teachings does Jesus more clearly point out this fact, and show us where to reap, than when he says, "Suffer little children to come unto me, and forbid them not: for of such is the kingdom of God." Are we not forbidding the little ones when we fail to teach them how to apply the truth logically and practically to aid them in making their demonstrations? Do we not rather interpose doubt and fear, and place limitations on their faith and understanding? Do we not leave to the Sunday school exclusively the work in which we should share?

Many beautiful demonstrations could be given as a result of Sunday school teaching, but a single instance will illustrate the far-reaching influence of one child well taught. At a recent Wednesday evening meeting a gentleman stated that he was formerly the one doubting, opposing member of a Christian Science family; that his baby, two and a half years old, had attended Christian Science Sunday school; that she had learned to recognize the word God when she saw it printed, and that she used to take the *Quarterly*, Bible, and Science and Health, and hunt through them to see how often she could find the word. He concluded that if all his family, even the baby, were turning to Science, he would see for himself what there was in it. He began to read, secretly at first, and then openly, and through this reading of the text-book, "Science and Health with Key to the Scriptures," he was awakened to the realization that he had been healed of the tobacco habit of twenty years' standing, during which time he had been smoking from fifteen to twenty cigars a day. Surely a little child shall lead them. Here certainly is an illustration of a child's faith bringing logical and practical results from Sunday school work and home teaching.

As each individual is more and more endued with the desire so to learn the truth as to be enabled to impart his understanding to the child consciousness, not only will the individual rejoice in a higher spiritual understanding, but through this application and method of studying the truth as Jesus taught, the world will acknowledge the "greater works" which are now at hand, and which come through the recognition of the ever-presence of God.

"Follow me"

HORACE A. PULLAR

When our Master was asked by the rich young man what he should do to inherit eternal life, it is noteworthy that Jesus first referred him to those commandments which relate to man's duty to his neighbor. Upon receiving the assurance that these had been kept, and in answer to the question, "What lack I yet?" the test of self-denial was required of him. Jesus said, "If thou wilt be perfect, go and sell that thou hast, . . . and come and follow me."

In all probability this inquirer after Truth was sincere, and was living in obedience to the commandments as far as he understood them; but his unwillingness to part with his material possessions showed that he was worshiping the false

Digitized by Google

gods of belief in life and substance in matter, that belief which is rebuked in the commandment: "Thou shalt have no other gods before me." Mrs. Eddy says: "This *me* is Spirit. Therefore the command means this: Thou shalt have no intelligence, no life, no substance, no truth, no love, but that which is spiritual" (Science and Health, p. 467).

Many of the disciples forsook family and friends to serve the Master, but this was only the initial step; and every faithful follower has had to learn the necessity of breaking away from all belief in the reality of material life with its seeming attractions, "even the surrender of all merely material sensation, affection, and worship" (Science and Health, p. 9). Only in this way is it possible to gain, in a sufficient degree to heal those in bondage to sickness, sorrow, and sin, that impersonal love for all mankind expressed by Jesus in the words, "For whosoever shall do the will of my Father which is in heaven, the same is my brother, and sister, and mother."

The pathway of true discipleship is indeed straight and narrow,—straight, for it leads direct to God, Spirit; and narrow, inasmuch as it admits of no compromise with matter. When at times the hill before us seems steep, let us remember the words of our beautiful hymn:—

By the thorn-road, and none other,
Is the mount of vision won;

. . . . . .

Earth-bound hearts thou shalt deliver;
Oh, for their sake,—press thou on!

Our Highest Concept

MYRTLE B. S. JACKSON

SCIENCE AND HEALTH speaks of Jesus as "the highest human corporeal concept of the divine idea" (p. 589). Jesus knew himself, and knew that humanity cannot come into the presence of the all-knowing, all-loving Father except by way of its highest concept of divinity, and that there is positively no other means of receiving more of the knowledge and presence of God; hence the Master repeatedly invited mankind to come unto him, saying, "Come unto me, all ye that labor and are heavy laden, and I will give you rest;" "Him that cometh to me I will in no wise cast out;" "I am the bread of life: he that cometh to me shall never hunger." It is significant that Jesus did not say in the first instance, Come unto God, but "Come unto me," and in this surely is shown his loving-kindness and tender mercy toward imperfect, struggling mortal thought, so fearful because so ignorant of the deep things of man's infinite Principle.

The Saviour knew that he stood at that point of experience and demonstration where he represented as much of the Christ, or divine idea, as the world could perceive and understand. When men and women did answer the call, and did come unto him, he had more beauty and blessedness to unfold, even the teaching contained in the words, "I can of mine own self do nothing;" "the Father that dwelleth in me, he doeth the works." And today, and through all ages, we shall gain the true spirit and knowledge of divine healing, the true understanding of our Father-Mother God, only as we study our Lord's life and example. But though we are not among those privileged thousands who came into his personal presence, have we therefore lost any of that which we so much need to steady and strengthen our footsteps? No, for our highest human concept of a divine idea is always with us, in our most individual and peculiar problems. We may still arise and follow this path to the sure acquisition of the spiritual consciousness which is our actual need.

Often in our every-day life we want certain things for ourselves and those dear to us, and we fret ourselves and are troubled with fear because we feel that our most sincere desires may be unworthy or unwise, or that in some way the good we long for may not be good for us to have. We struggle to get an idea of God's will toward us, which may seem so far away and intangible that we cannot lay hold of it with any sense of relief and comfort; whereas, if we would only rejoice in such spiritual concepts of the true, beautiful, and good things as we are able to perceive, if we would trustfully come unto our highest human concept of good, would accept it, and know that we do in very deed experience the Christ-coming because we welcome the best and purest ideals that we can grasp, such confidence would remove our ignorance and uncertainty, and we should then be able to perceive those still better things "which God hath prepared for them that love him." It may be only the desire for better health, more happiness, or the success of some legitimate undertaking, but if it represents our present highest sense of good, we have a right to know that it is already ours, since divine perfection must at least include all that is good in our faint picture of goodness, and nothing less than perfection and the abundance of love is ever God's will toward man.

It is certain that we shall never gain more of the heritage of Love except as we are loyal to the highest spiritual ideals. The infinity, eternality, and perfection of good belongs to every child of God in unlimited measure, and to this end, its full realization and consummation, "Christian Science lights the torch of spiritual understanding" (Science and Health, p. 202). The knowledge of God, the Christ-idea, will ever be the Wayshower, "till all be fulfilled." In this manner can we prove the sustaining and continuing inspiration of Jesus' precious message, "Lo, I am with you alway, even unto the end of the world."

[Written for the *Sentinel*]

The Awakening

NANCY H. BUSKETT

AND can it be but yesterday the Magdalene was I?
How came I so it were not good to tell;
Sufficeth it that now I know full well
'Twas but an empty life of shame I led
When daily on men's wiles and smiles I fed;
A nightmare in earth's short and transient dream.

How different was the smile of him at meat
When, trembling sore, I stood me at his feet,
Shrinking from the pure gaze that read my past,
But drawn by love so great it held me fast!
Fearful of Pharisee, my foe 'mongst men,
I only gathered faltering courage when
The Christ to me in tender accents spoke,
And o'er his feet the alabaster broke.

He bade me go in peace, the peace of heaven.
And so, tho' down the ages I am read
As Mary Magdalene, who blindly led
An earthly life unworthy of her best,
And bartered virtue, but could find no rest,
This comfort mine: where'er the tale is told
The radiance of the Christ-smile will enfold;
And in that smile lies buried all the past,—
The truth I claim, for this I know at last.

Selected Articles

[Frederick Dixon in *Evangelisches Schulblatt*, Bern, Switzerland]

The reference to Christian Science by Pastor Modersohn, in your issue of the 28th of June, contains a misconception of Christian Science so common that I hope you will permit me to correct it. The pastor states that Christian Scientists maintain that sin and disease have no real existence, but being only imaginary, can be dismissed by thought. His mistake lies in his failure to have mastered Mrs. Eddy's definition of the word reality. By reality, Mrs. Eddy means the spiritual creation, as opposed to the material concept of creation. Hence sin and disease, in her teaching, are not absolutely real, inasmuch as they are not God created. That they have a relative reality in human consciousness, she not only does not deny, but insists upon. It would be easy to produce innumerable quotations from her writings to this effect, but they are so numerous that a single one will probably be sufficient. On page 447 of Science and Health she writes: "To assume that there are no claims of evil and yet to indulge them, is a moral offense. Blindness and self-righteousness cling fast to iniquity. When the Publican's wail went out to the great heart of Love, it won his humble desire. Evil which obtains in the bodily senses, but which the heart condemns, has no foundation; but if evil is uncondemned, it is undenied and nurtured. Under such circumstances, to say that there is no evil, is an evil in itself."

Neither does Mrs. Eddy teach that evil can be thought away. That would constitute a process of mental suggestion to which Christian Science is entirely opposed. What she does say, and this is the teaching of the great natural science idealists of the day, is that sin and disease are produced mentally, and therefore must be mentally destroyed. Inasmuch, however, as the mind which produces evil is conscious of evil, the belief in evil can only be destroyed as men let that Mind be in them which was also in Christ Jesus. In the exact proportion in which this is done, the habit of thinking evil is destroyed, and the sin and sickness which result from these thoughts are destroyed with it. In a word, the carnal mind has given place to the Mind of Christ.

✧

[W. C. Williams in *Baltimore* (Md.) *American*]

In a recent article upholding Dr. Osler's position on the inefficiency of the saints in curing human ills, a certain reverend gentleman referred to Christian Scientists as representing the extreme form of trust in miracles. He stated that it is just beginning to be seen that this is the wrong kind of trust in God.

Christian Scientists do not believe in miracles, if by miracles is meant something which is accomplished contrary to law; nor did Jesus, for he said that he came to fulfil the law, not to destroy it. He also said that as the Father did the works, all who believed him and trusted in God would do even greater things than he did; and most of his work was the healing of "all manner" of diseases. He did not advise people to go to medical men or to study medicine, but proved to them that it was their God-given privilege to be filled with health and holiness, and that through obedience to God's law,—seeking the kingdom of heaven, loving their neighbor, and overcoming sin,—health of mind and body would result.

Either sickness and disease are in the divine order of things or they are not; either God afflicts His children with suffering or He has nothing to do with it. If the Father visited disease on His children, we would have no right to try to overcome it, and we could not overcome it if sent by an all-powerful God. Jesus showed that it was not through God that we were made sick, but that through the understanding of Him and man's relation to Him, sickness and all other discords can be overcome, since they are unreal. A human father would not inflict suffering on his children for the benefit they might derive from the patience gained in fighting for their health, and would we attribute to a loving heavenly Father that which we would condemn in a human one? The command, "Seek ye first the kingdom of God and his righteousness; and all these things shall be added unto you," will keep one busy enough without wasting his energy during the whole of his mortal existence in struggling for freedom from the nightmare of disease, and the promise is there which makes such a waste unnecessary.

If God does not inflict disease, it is one's duty to reach upward for the truth that makes free, and not delve in materiality for something to make him a further slave to it. Jesus believed, with our critic, that "all God's creatures will be happy;" but as he knew that happiness would be unknown so long as the creature was disease-bound, he went about teaching and proving that God's law made men free. Our reverend friend, a minister of the gospel, says that it is our duty "to discourage reliance upon any spiritual efforts to take the place of necessary material medicines and treatment, though giving due weight to the aid of God . . . in seconding . . . every effort;" and yet the Bible states that God is Spirit, and Jesus encouraged us to put our whole trust in God. Paul said that the "flesh profiteth nothing." This does not look as if an omnipotent, omnipresent God was intended to take second place in His universe.

✧

[H. Farmer Hall in *Bexhill* (England) *Observer*]

After reading Dr. Atkinson's letter in a recent issue, it seems that his interpretation of Christian Science and its teachings has developed into a personal attack, interspersed with dogmatic assertions with regard to the motives and aims which actuated the healing work performed by Jesus and his disciples. These assertions are given without any substantiation, so that our critic must forgive us if, in the face of Scriptural records which are opposed to his conclusions, we find them a little difficult to accept.

This critic would try to impress us with the statement that miracles of healing were confined to the disciples and to the immediate followers of Jesus. In the "Decline and Fall of the Roman Empire," Gibbon bears witness to the fact that for two hundred years after the inauguration of the Christian era, healing the sick without material remedies was practised by the early Christians. This is corroborated by many other historians of undoubted authenticity. Apart from these facts, however, it does not seem that the critic's assertions are borne out by what we know of the teachings of the Master. That Jesus considered the healing of the sick a necessary expression of the Christ-power is evident, not only in his own ministry, but also in the instructions he gave the twelve, in his commission to the seventy, and in his final commands just previous to his ascension. Certainly Jesus presented the never-changing, ever-present Christ to humanity as the healer of both sin and sickness. If his last comforting assurance, "Lo, I am with you alway, even unto the end of the world," means anything, it certainly means this: that this same Christ, endowed with all the powers which Jesus manifested to a suffering world, is veritably here today; and it would be interesting to know where our critic, in his interpretation of the Scriptures, finds his authority for eliminating the healing of the sick and retaining the forgiveness of sins.

Perhaps, however, our critic would reply that it is through the use of drugs and material remedies that we should look

Digitized by Google

for the Christ-healing. In answer to this we would point out that in all the healings that Jesus performed he did not in any instance use or recommend drugs. It is useless so to misinterpret the lesson of the clay placed on the eyes of the blind man, and quote this as an instance of material methods. If clay and spittle is the divine prescription for blindness, it is quite certain that it cannot be improved upon, and it is unexplainable that the medical methods of today do not continue its use.

Mrs. Eddy, in presenting her rediscovery of the Christ-healing to the world, realized that it was entirely apart from material methods. She realized also, that it must be in accordance with and in fulfilment of divine law, as Jesus himself asserted. In "Science and Health with Key to the Scriptures," on page 109, she writes: "I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration. The revelation of Truth in the understanding came to me gradually and apparently through divine power." Unnumbered people have, through the teaching of Christian Science, found health and happiness, and a more inclusive and practical idea of the mission of Christianity. Those who feel called upon to criticize rather than to learn, continue to hurl their misconceptions at the ever-increasing company of Christian Scientists, but wholly without avail. Perhaps some day these individuals will awake to this fact and turn their attention to the Science of Christianity, which has everything to offer them in the art of healing.

✧

[Renata Hermes King in *Nachrichten*, Portland, Ore. (Translation)]

"When the fulness of the time was come, God sent forth his Son," the Bible tells us. When the realization of the insufficiency of Jewish rites and statutes dawned upon the Hebrew people, and a yearning after the consciousness of God's child and his all-loving, all-powerful Principle, Love, reached its culmination, there was found an instrument prepared by the all-loving Father, which in purity received the thought emanating from Him and was fitted to bring it into expression. Jesus was born of a virgin, and thus the way to the Father opened up to humanity.

This most significant word of Paul has been fulfilled time and again in the destiny of nations. The appearing of great, regenerating ideas has always taken place "when the fulness of the time was come." God's hour and His ways are not to be measured according to small human standards, neither has God's instrument ever been chosen in accordance with human prudence. "When the fulness of the time was come," Luther appeared,—the simple, meek, God-reliant miner's son from Thuringia, and brought religious freedom to thought constrained by priestly garments. The Bible was given to the German people with all its wealth of truth and inspiration, and the Reformation advanced through the lands where thought had matured and consequently there was readiness to receive it.

Again: "When the fulness of the time was come,"—when the time of seeking and yearning after full, complete consecration to God was fulfilled,—there was once more an instrument prepared by Him. The treasures which Jesus brought to men, and which through human opinions, church domination, worldly wisdom, and mental sluggishness had, so to speak, been buried under dust and rubbish, were once more brought to light. It was shown that Christianity is not like a garment which has become worn during the centuries, but that the realization of Jesus' command, "Heal the sick, cleanse the lepers, raise the dead, cast out devils," with which the disciples and early Christians complied and which they carried out with God-given authority, is not a lost power but a very present fact, as present as God and His living Word. Christian Science has come to prove that the eternal Christ, immortal Truth, heals, cleanses, and liberates today as in Jesus' time, and in this instance again God chose His instrument, though not according to the ways of the world. A loving, pure woman was illumined by God. Mary Baker Eddy was a seeker after God from earliest childhood, but it was not until she grew into mature womanhood, when prostrated by an accident and considered by family and physicians to be on the brink of the grave, that through the reading of the Bible she awoke to the fact that God was her life, the healing Christ her present Redeemer. Impelled by love for all mankind, she did not keep this experience to herself, but turned it into a source of blessings for humanity.

How bountiful, how loving and wonderful are God's ways! It was not from Europe with its many Bible students, scholars, and evangelists, not from scholastic theology nor from any state church with its rigid organization, including church committees and consistories—no, from America, from the liberated religious thought of a free country did the Christ-idea come, and this through a woman.

How many were the prejudices to be overcome in other countries, including our good German fatherland; how much apprehension on the part of the authorities, how much official churchdom and individual know-all-ism had to be overthrown through facts, for Christian Science to be established in Germany! But quiet work divinely directed, indisputable proofs of the healing power of Truth, and a growing understanding of its means and method gradually prepared the good soil in Germany. Christian Science has grown steadily in spite of difficulties. In Berlin, in Stuttgart, Dresden, Frankfort-on-the-Main, Braunschweig, in Switzerland, and everywhere in remote country places, the sown fields of the Christ Science grew and ripened for harvest; and although Mrs. Eddy herself had not deemed it wise at first to have the text-book translated, still "when the fulness of the time was come," the "Key to the Scriptures" was given to the German-speaking people in their own tongue according to Mrs. Eddy's instructions.

The rich blessings which will accrue to the German people through Mrs. Eddy's directions regarding a translation of "Science and Health with Key to the Scriptures" can hardly be anticipated at the present hour. A nation of thinkers is learning to think in God's way. They are awakening from the ephemeral wisdom of human science, which forever calls forth the sigh, "And here, poor fool! with all my lore I stand! no wiser than before!" (Goethe, in Faust), to the knowledge of God, the Science of sciences. The simple and devout German mind is yielding obeisance to the all-loving, creative divine Mind. It is coming into the understanding of its spiritual freedom and is thus learning to grasp and utilize the spiritual truths which men like Lessing, Kant, Schleiermacher, and other deep thinkers and poets, have barely touched upon. This truly means a measure of blessing which is beyond our present estimate.

The world-wide thought of freedom, unity, and brotherhood is expressed again in Science and Health. On page 340 Mrs. Eddy says: "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

Digitized by Google

[Herbert M. Beck in *Arkansas Democrat*, Little Rock, Ark.]

I note in a recent issue the report of the trial of a Christian Science practitioner of Canyon City, Texas, for healing a man by prayer without a license to practise medicine. The further fact that the lady was acquitted, according to later press despatches, seems to have been overlooked; at least, I have not seen it mentioned in the *Democrat*. One is forced to wonder what manner of laws some one supposed Texas to have, and what kind of purpose there is in trying to prove a woman guilty of having practised medicine without a license just because she healed a man of paralysis by prayer to God. Christian Scientists maintain that it is in no way fair for certain doctors, who make no pretense of depending on prayer for healing, to claim the sole and only right to use prayer in healing, and to say that Christian Scientists, who make no pretense of using medicine, shall not be allowed to heal the sick by prayer unless they have a license to practise medicine. This, however, was the recent contention of a high medical authority in Arkansas, and such has been the contention in every Legislature and in Congress, and before the courts, in all too many cases.

It should be appreciated that in Arkansas a broader policy has prevailed among the doctors, and they have not undertaken to prosecute Christian Scientists, but have said that sick people should be allowed to call whom they pleased to treat them. A representative of the medical fraternity said last spring, and repeated it openly in the public hearings on the Hughes bill, that Christian Scientists could not and ought not to be interfered with by law, and that so far as he was concerned they would not be. But why all this undercurrent, Mr. Editor? Why must Christian Scientists always be on the defense? They do good and not evil; they are a self-sustaining people, live moderately, pay their debts, build their own churches, and dispense charity rather than receive it; they mind their own business; they are law-abiding; and last, but not least, they heal the sick and the sinner through prayer alone, to God, as taught in the Bible and in "Science and Health with Key to the Scriptures" by Mrs. Eddy, the Discoverer and Founder of Christian Science.

✧

[Editorial in *Motordom*, Albany, N. Y.]

The statement that environment is thought manifested, may sound too transcendental and impractical for many motorists to accept; nevertheless, the statement is true. The conditions under which we individually and collectively live are the direct reflection of our mental condition. There was a time when this was an almost universally scouted theory; but a few thinkers in every age have grasped its reality, and by demonstration have proved its truth for all time. It is being proved more generally today than at any period in the world's history. Few thinkers now deny that exact thinking about one's self produces health, and that, when applied to other conditions generally considered intolerable, it brings about right conditions.

History's pages are full of the records of the experiences of those who by right thinking have triumphed over seemingly insurmountable obstacles. The world has in the past been taught to view these demonstrations as miraculous or supernatural, as violations of the laws of nature, etc. But today we are learning that these experiences were neither supernatural nor preternatural, but supremely natural. Should not success seem more real than failure, peace more real than discord, health more real than sickness, and life more real than death? There are not two causes—good and evil—warring against each other for supremacy. Cause is one, and that one is good. If we will accept this fact and hold to it in the face of all that would tempt us to deny it, we shall invariably triumph. But, you ask, what has all this to do with motor cars and motoring? Just this: If motorists would give as much time to thinking along positive, constructive lines as they now give to thinking and talking negatively about "tire trouble," "engine trouble," and other kinds of trouble, they would have little difficulty with their cars, and tours would seldom be marred by interruptions or accidents. Thousands of years ago a patriarch, when overwhelmed by a sense of care and trouble, cried, "The thing which I greatly feared is come upon me, and that which I was afraid of has come unto me." Therefore, unless we would have these conditions, let us stop worrying about our tires and our engines; let us stop predicting trouble, disappointment, and possible disaster for our motor trips. The discords that are now being accepted as inevitable accompaniments of motoring, can be prevented proportionably as we exclude them from our thoughts and instead insist upon right and good as the only realities.

✧

[John W. Harwood in *Gazette-News*, Blackpool, England]

No one can deny that for everything which exists, including both man and the universe, there is a cause or creator. This cause, which is the source of all present existence, must have been the cause of all existence in the past, and therefore must be eternal. That which is eternal must be good, for it is evident that evil is self-destructive; so the one great cause or creator is good, and that which causes or creates must be power, and palpably such a power could only operate as intelligence or Mind.

Jesus defined this cause as Spirit; John said that "God is love." Summing up, we conclude that this cause or creator which is Mind, Spirit, or Love, and which is wholly good, which must be eternal, could not be less than infinite, perfect, immutable, immortal. It is generally agreed that like produces like. A cause which is good, must have a like effect. A creator who is Spirit, must have a spiritual creation. We read in Genesis, that "God saw every thing that he had made, and, behold, it was very good." Also, that "God created man in his own image," so that man must be an expression of Mind, hence spiritual, eternal, immortal.

Recognizing the foregoing self-evident truths, we can see what Paul meant when he said, "For in him [Mind] we live, and move, and have our being." Man's life consists of spiritual consciousness; "to be spiritually minded is life." Jesus showed that life is mental or spiritual when he said, "This is life eternal, that they might know thee the only true God."

✧

["A Looker On" in *City News*, Manchester, England]

The critics might be able to tell us whether God made evil and sickness, since according to John, God made every thing that was made, "and without him was not any thing made that was made;" and whether it would be right to call them good, seeing that "God saw every thing that he had made, and, behold, it was very good." Also, they might have some satisfying theory which would make plain the reason for the existence of matter in face of the fact that Jesus said, "That which is born of the Spirit is spirit." I have read the Christian Science text-book and argued with many Christian Scientists, and have found that in Christian Science, Truth and reality are synonymous terms, which signify that which is eternal and unalterable; so that when Christian Scientists say that sin and disease are unreal, they have a clear understanding that if they were real, nothing could change or destroy them.

Editorial

"Deliver us from evil"

ANSWERING the questions, "What is error?" and "Is there no sin?" Mrs. Eddy on page 472 of Science and Health exposes the nature of evil and how it masquerades in the main in the vestments of truth. She also points a remedy for these illusions by which mankind is deceived, and she reduces evil to its native nothingness when she defines error as "a supposition that pleasure and pain, that intelligence, substance, life, are existent in matter."

The first appeal of evil to mankind was based upon the illusion that God had kept back something which He feared to let man have, because man would with this knowledge become equal with Himself. "Ye shall be as gods," was the alluring argument of the tempter. Thus evil represented to mankind that it was good, and that it had the power to confer a gift which God had withheld from them. So it has been in all ages, mortal man ever believing that something of value, in pleasure or in power, could be obtained through the good which evil falsely represented itself to be. Some one has said that evil is never a temptation when it bears its own name and frankly makes its appeal in its own character, and this is a truism which Christian Science makes more true by exposing the nature of evil. When evil is seen for what it is, it cannot be anything but revolting to those who are honestly trying to be good and do good, for they recognize it as the lie and the liar it has always been from the very beginning, and as did the Master, bid it depart, for they would serve the only true God.

Our Master taught his disciples to pray: "Lead us not into temptation, but deliver us from evil." The chief obstacle to the fulfilment of this petition seems to be the proneness of mankind thus to pray and then deliberately to put themselves in the position of least resistance by leaving unguarded the portal at which evil is ever waiting to find entrance. Men take the first step in wrong-doing, and often unwittingly, when they permit themselves to harbor an evil thought, a thought of envy, condemnation, malice, hatred, which once admitted thrives like the proverbial weed, for there was never yet an evil deed which was not the outcome of a wrong thought, nurtured until it burst the bounds to overwhelm with shame and horror those who beheld it.

Jesus went even farther in his unsparing condemnation of wrong thinking, declaring that he who permitted himself to violate the commandments in his thoughts had already committed those sins in his heart; thus confirming the wise man's saying that as a man "thinketh in his heart, so is he." We must take care, then, that our inner thinking be always such as would acquit us at the bar of Truth. It will not do to plead that it does no harm to indulge a thought of envy, or criticism, or hatred, when no one knows it. That very argument should warn us that evil is plying us with its specious representations, and that we should respect our own consciousness enough not to offend it with that which we would hesitate to lay bare to our neighbor. Evil can do no harm to the consciousness panoplied with good, but its reaction on the thinker of wrong is inevitable and to the extreme of penalty.

How rigidly, then, should we question our every thought, and bar the entrance to every least intimation of evil, lest it plant a barbed arrow that shall rankle and fester to our undoing. One cannot be truly happy unless he is thinking good, and therefore living good. Evil may clothe itself never so enticingly, it may dangle before our vision the baubles of place and power, the gratifications of sense, but not one or all of its promises should shake our steadfast adherence to the good and the true, for in them alone is "fulness of joy."

And we have but to speak the word of truth to unmask the pretender and prove its powerlessness to fulfil its promises, either for good or evil. Did not the Master say: "Fear them not therefore: for there is nothing covered; that shall not be revealed; and hid, that shall not be known"? And again he said: "Behold, I give unto you power . . . over all the power of the enemy: and nothing shall by any means hurt you." Thus armored, we shall not only know evil for what it is, but we shall cease to fear it, for our Leader has taught us (Miscellaneous Writings, p. 210) that "error, when found out, is two-thirds destroyed, and the remaining third kills itself." And we may spare ourselves even this conflict if we but effectually guard our mental citadel.

ARCHIBALD MCLELLAN.

Our Larger Privilege

MRS. EDDY gives a startling intimation of the all-inclusiveness of the place and privilege of the true Christian Scientist when she says that "God expresses in man the infinite idea forever developing itself, broadening and rising higher and higher from a boundless basis" (Science and Health, p. 258). Christ Jesus realized this ideal of an ever expanding spiritual consciousness and efficiency, and if, as we all affirm, it is ours to do his works, it is certainly ours to gain his grasp of divine Truth. Cause always precedes effect. God is light, and as He rules in us it is manifest that our mortal sense darkness must disappear, and that our power to dispel darkness must correspondingly increase. Said the Master, "If therefore thine eye be single, thy whole body shall be full of light."

It is further apparent that thoughtful and thankful recognition of this wondrous fact of our "high calling of God" has directly to do with its demonstration. Spiritual power is definitely related to spiritual intelligence, and this knows no limit. Christ Jesus respected both the local sentiment and the local need when he counseled his disciples to go first to "the lost sheep of the house of Israel;" but when in due time he commanded them that they go and preach the gospel to all nations, he quite ignored the racial pride and exclusiveness of his people, and declared for the unlimited arena of Truth's redemptive compassion. Of us, as of all true disciples, it is to be said, "Their line is gone out through all the earth, and their words to the end of the world," and our inspiration and joy should correspond to this tremendous orbit of privilege. To be sure that through our Christlike knowing and living Jesus' Messianic work is to be continued in the illumination and healing of those immediately about us, our family, neighbors, and friends, is to gain an abiding sense of the sacredness of life and duty, and yet how inadequately does this measure the extent of the vital interest and effective activity to which we are called.

Writing to Timothy, Paul reminded him that prayer was to be offered daily "for all men; for kings, and for all that are in authority;" and this may have inspired Pym when he wrote that "a man's religion should show itself in having the country well governed." Mrs. Eddy has rephrased Paul's injunction in her expressed desire that every Christian Scientist should daily pray, "May Thy Word enrich the affections of all mankind, and govern them" (Manual, Art. VIII, Sect. 4). Christian Scientists are not only to be alert to human problems and meet all the demands of good citizenship, but they are to have immediately to do with the final

Digitized by Google

solution of these problems by their conscious and purposeful radiation of the truth of being respecting them. Our responsibility thus articulates itself with every great issue and with all mankind; we are to live, to love, and to labor for all, as did the Master, and every true life is thus to become a great event; our daily prayer, "Thy kingdom come," is to be divinely determinative in the lift of the whole world into light.

No man can attain to the fulness of his stature in Christ whose vision does not compass his capabilities as well as his responsibilities. If we are given to self-depreciation, and are content with meager achievements, it is in evidence that we have not been thinking in the larger unit of life's privilege. Inspiration does not express itself in a dwarfed and stunted growth. It either dwindles and dies, or it becomes a very cedar of Lebanon. Looking out upon human conditions in this twentieth century, one's heart is touched with the tragedies of material sense,—with the injustice and wretchedness which still attend so-called Christian civilization; and under these circumstances professed Christians, and more especially Christian Scientists, have a part assigned them which includes very much more than effort in the interest of their personal salvation. It is theirs to prove, in convincing demonstration, that the "prayer of a righteous man availeth much." They are to be undisturbed by the great world-sicknesses, while knowing the truth which alone can heal them.

The seeming greatness of this task discourages those only who are unmindful that God is "able to do exceeding abundantly above all that we ask or think, according to the power that worketh in us," a truth which makes it true that to be a Christian Scientist is the greatest, the grandest, the most gladdening thing in the world. It is to be a "man of God," an inestimable power for good.

JOHN B. WILLIS.

✧

Mastery

MOST Christian people are familiar with Paul's statement, "Every man that striveth for the mastery is temperate in all things;" to which he adds that those to whom he chiefly referred, the Roman soldiers with whom he had been so closely associated during his two years' imprisonment in the fortress at Caesarea, did this "to obtain a corruptible crown; but we an incorruptible." He also tells us that there is no uncertainty as to the result of this spiritual striving. His further statement, "I keep under my body, and bring it into subjection," has been taken by some to mean his approval of physical training, but this is offset by his words to Timothy: "Exercise thyself rather unto godliness. For bodily exercise profiteth little: but godliness is profitable unto all things." Paul also says that because of his "trust in the living God" he had to "suffer reproach," yet he does not hesitate to commend to others this trust in God, who is Spirit, and in spiritual ways and means.

This question of mastery is surely a most important one to mankind, who, according to material sense, begin their days in entire helplessness, and, if they live to a great age, end them in a similar condition. Yet we read in the Bible that throughout all the ages God changes not, and that man reflects God. It is true that early in their lives mortals begin to reach out for the mastery of many things, and in a certain way to the control of their own bodies. Mrs. Eddy refers to this when she says (Science and Health, p. 199): "The feats of the gymnast prove that latent mental fears are subdued by him. The devotion of thought to an honest achievement makes the achievement possible." Even a little child must overcome fear before he can learn to walk—his own fear, possibly, less than that of those who watch his first steps, and this is even more true as he takes his forward steps on life's long journey. The baby forgets his fear about falling when he attempts to walk, but until he knows why he should not fear anything, he merely transfers the fear to some other line of endeavor. So long as one believes that he is material and governed by material law, he is practically a prisoner to the belief that his body can control him and dictate to him as to what he may or may not do.

Now it is true that the soldiers from whose discipline Paul learned such valuable lessons did much in the way of controlling their own bodies, so that they could, as he tells us, endure hardship, but their sense of mastery undoubtedly meant to them the power to outstrip others or to crush them, even where these men were not foes but of their own race. They were therefore, whether consciously or otherwise, using fear as a weapon which sooner or later would be turned against themselves. Here the one who would know and demonstrate the truth of being must part company with all material ways and means of gaining the mastery to which the Bible and Science and Health point.

The student of Christian Science soon finds that from this standpoint his past training has been woefully neglected, even if he were a skilled athlete. Christian Science "urges the government of the body both in health and in sickness" (Science and Health, p. 462), and this it does by showing that every thought should be obedient to divine Mind. Mastery really begins with one's self, and when one can positively control his own thoughts, in accordance with the demands of Truth, he has gone a long way toward the only mastery that is worth while, and the body will respond in health and harmony. Of course a soldier would know better than to admit a single foe to the fortress on the chance of expelling him later, but are we as wise? If we think and talk about disease and sin, except it be to declare their powerlessness, is not a secret foe seeking an unguarded portal by which to enter our citadel? On the other hand, if we fail to exercise ourselves in the "godliness" which Paul insisted upon, and lay down our arms to indulge self and sense, we shall miss the mastery over both which really is the incorruptible crown of the true victor.

When the call to service sounds, the ready response should ever be, "I can do all things through Christ which strengtheneth me."

ANNIE M. KNOTT.

✧ ✧ ✧

Among the Churches

Current Notes

MELBOURNE, AUSTRALIA.—A progressive step taken this year was the opening of a reading tent at the agricultural show last September. Science and Health has been accepted by the Balaclava, the South Yarra, the Malvern, and George Robertson's lending libraries, the Violet Town Mechanics' Institute, and the women's ward at Pentrige jail. The "Life of Mary Baker Eddy," by Sibyl Wilbur, has been accepted by the Toorak, the Balaclava, the Malvern, the Elsternwick, the South Yarra, the Austral (Collins street), and George Robertson's (Elizabeth street) lending libraries, and the Violet Town, Caramut, and Kynton public libraries. The *Monitor* has been accepted at the Salvation Army Men's Farm, Pakenham; Heatherston Sanitarium, Cheltenham; Excelsior Boys Reformatory, Brighton; Eye and Ear Hospital; Queen Victoria Hospital; Infectious Disease Hospital; Epileptic Colony, Clayton (all papers); Kynton, Upper Macedon, Heidelberg, Dandenong, Coleraine, and Violet Town public libraries; Salvation Army Boys Home, Bayswater; Malvern Electric Tramway Library; Neumurka Butter Factory; Colonial Sugar Refinery, and the Salvation Army Girls

Digitized by Google

Reformatory, Riddle's Creek. Science and Health is now at one hundred and seven places, *Sentinels*, *Journals*, etc., are sent to sixty-two places, and *Monitors* to one hundred and fourteen places.

At the Salvation Army Men's farm at Pakenham the superintendent wrote, thanking us on behalf of himself and the men for the *Monitors*, and said that both he and the men had read and enjoyed them. At the Boys Reformatory, Brighton, the superintendent said that there was much in the paper to interest the boys, and that he would be very grateful for it; also the Girls Reformatory at Riddle's Creek expressed appreciation for this paper. We are constantly hearing from various places of people who have read the literature and have received help. About four hundred and fifty *Journals*, thirty-one hundred *Sentinels*, fifty-five hundred *Monitors*, and three hundred specially marked *Monitors*, with articles of interest to individual people, have been distributed this year.

Report of the Distribution of Literature Committee.

UTAH.—In preparing for the joint lecture in Salt Lake City on May 4, the directors felt it would be well to circulate copies of the *Monitor* just prior to the lecture, and in considering a topic for publication at that time it was decided that inasmuch as the National Education Association was to have its convention in Salt Lake City later in the year, it would be well to have an article dealing with education in Utah. To this end Prof. Joseph E. McKnight, of the training school of the University of Utah, kindly consented to write such an article. When it was known that it would appear in the *Monitor*, representatives from the boards of the churches and your committee waited on the secretary of the Salt Lake Commercial Club, suggesting that this article would be good for circulation by the club in large quantities. After consideration, the club ordered three thousand marked copies to be mailed to the members of the National Education Association throughout the country. The churches in Salt Lake City mailed fifteen hundred to Salt Lake teachers, and your committee mailed one thousand to school trustees and teachers throughout the state.

Correspondence.

AUCKLAND, NEW ZEALAND.—Since the fire occurred, about six months ago, we have taken a hall, which in time will be our own. Being a public place, it is already drawing many to the services; last Sunday [July 13] there must have been fifty present. Thus, in three short years have we seen the work grow from the few who used to gather in this room. Our hearts are filled with gratitude to our Father-Mother God for all His love.—*Correspondence.*

CHICAGO, ILL.—Twelfth Church of Christ, Scientist, was organized last evening [July 17]. About one hundred and fifty members of the new body attended the meeting, and the indications are that the new church will have a membership of more than two hundred. Twelfth Church was organized because of the overcrowded condition of Second Church, and all of its charter members were formerly members of the latter church.—*Chicago Journal.*

MT. VERNON, N. Y.—On New Year's day last, First Church of Christ, Scientist, of Mt. Vernon, was burned to the foundations. On the 7th day of September a new edifice, which has been erected at a cost of in the neighborhood of ten thousand dollars, was opened to the members of the Christian Science church of this city on the very grounds upon which the original building was burned.—*Evening News.*

The Lectures

Darlington, England

At a lecture on Christian Science delivered in Mechanics hall by Prof. Hermann S. Hering, the introductory words of Dr. R. B. Reed were as follows:—

This evening we are to hear a lecture on Christian Science, a subject which is occupying the attention of thinking men and women more and more every day, and of which no one at this time can afford to be ignorant. Some five years ago it came to my knowledge that a very great friend of mine, who had been ill for some months and who had tried nearly all of the usually accepted methods of treatment without receiving benefit, had turned as a last resort to Christian Science.

Though I knew nothing of the teachings of Christian Science beyond what I had read in several disparaging newspaper articles, I deemed it my duty to go to my friend and to try to persuade him that if he could not be healed by more orthodox methods, he had no right to be healed at all. I well remember the kindly way in which he received my abusive and unwarranted attack upon Christian Science. So much was I impressed with the change in his mentality and the improvement in health that I determined to borrow from him a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. This I studied for some months, but without making much progress, for I always tackled the subject in a faultfinding and critical frame of mind. At last, however, I saw that in my folly I was trying to cast away what has since proved to be the greatest blessing which has ever come into my life. This evening we are to hear something of this practical, liberty-bringing religion.

Correspondence.

✧

Eureka Springs, Ark.

Judge Clifford P. Smith, at his lecture on Christian Science in the Eureka opera house, was introduced by L. E. Baird, second reader, who said in part:—

Christian Science has been called by some a "new religion;" but it is not new in fundamentals, since its tenets and teachings are founded purely and absolutely on the words and practises of Christ Jesus. You will not hear anything this evening which conflicts with the teachings and the deeds of the lowly Nazarene. These lectures are not instituted with the expectation of adding to the membership of the Christian Science church; rather are they the result of the ardent desire on the part of Christian Scientists, grateful for benefits received, to bring the truth to others. At the same time opportunity is furnished for the correction of erroneous impressions of Christian Science which may have gone abroad.

Correspondence.

✧

Pacific Grove, Cal.

The lecture on Christian Science by Bliss Knapp, which was given in the T. A. Work hall, was largely attended, nearly three hundred being present. The speaker was introduced by Mayor J. P. Pryor, who said in part:—

As most of you know, I have not embraced Christian Science, though I have sought relief from bodily ailments, not only for myself but for members of my family, through those who practise it and know its powers for good. One naturally holds to the religion of his childhood, that religion indeed to which he has been born and reared; yet I count as among my best and warmest friends those who are Christian Scientists, and they all have been attracted to Science from other forms

Digitized by Google

of worship, believing they have found the truth. I think it has fallen to the lot of most of us to witness the great benefit, comfort, and uplift that the teachings of Christian Science have wrought in the lives of some within our personal acquaintance. Somehow, I always regard my Christian Science friends as neighbors, for they always seek to do good, and to speak only good of others. They truly exemplify the golden rule: Do unto others as you would have others do unto you.

Pacific Grove Review.

✧

Edinburgh, Scotland

Bicknell Young, lecturing on Christian Science, was introduced by Wallace Smith, second reader of First Church, who said in part:—

I should like to say that I have found Christian Science to be a thoroughly practical religion, and I know that it heals, because I was healed over seven years ago. For twenty-two years previously, I had suffered from a malady which in my case was pronounced incurable. Every available means was tried, but all to no purpose. In my extremity I called for Christian Science treatment, and was instantaneously healed in the spring of 1906. It is difficult to express in words the profound gratitude that one feels for the sense of freedom and peace which Christian Science brings.—*Correspondence.*

✧

Austin, Texas

The Hancock opera house was comfortably filled with an audience of several hundred representative people on the occasion of the lecture on Christian Science by Judge Clifford P. Smith. The lecturer was introduced by J. Bouldin Rector, city attorney, who said:—

Conflicting theologies have for a thousand years obscured and confused the truth. Doctrine and church dogma have shackled human thought and aspiration since man began to worship; have built around the God-thought the limitations of human minds, often the reflection of a present exigency and to serve the hour. The church that the speaker of the evening represents, has prospered under the criticism of conventional denominations, and this is an argument for its need and a foreshadow of its stability and future usefulness. It preaches no new and strange creed; it bears the faith and works of the Galilean. It applies the truth in a simple and direct way as taught by the Master, and is sustained by the wisdom and wealth of his words when he dwelt among us.

The Austin Daily Statesman.

Lectures to be Delivered

Aberdeen, S. Dak.—Francis J. Fluno, M.D., Idle Hour theater, 3 p.m., Sept. 28.

Aberdeen, Wash.—Prof. Hermann S. Hering, Grand theater, 8 p.m., Sept. 25.

Atlantic, Iowa.—Clarence W. Chadwick, Masonic hall, 8 p.m., Sept. 29.

Bristol, England.—William D. McCrackan, M.A., Colston hall, 8 p.m., Oct. 9.

Burlington, Iowa.—Virgil O. Strickler, Grand opera house, 3 p.m., Sept. 28.

Butte, Mont.—Prof. Hermann S. Hering, Auditorium, 8 p.m., Sept. 23.

Camden, N. J.—Hon. Clarence A. Buskirk, Temple theater building, 415 Market street, 3:30 p.m., Sept. 28.

Chicago, Ill. (First Church).—Clarence W. Chadwick, Church edifice, 4017 Drexel boulevard, 8 p.m., Sept. 26 and 27; 3:30 p.m., Sept. 28.

Cobourg, Ontario.—Bliss Knapp, Opera house, 8 p.m., Sept. 29.

Des Moines, Iowa.—Clarence W. Chadwick, Church edifice, 923 Eighth street, 8 p.m., Oct. 2 and 3.

Emporia, Kan.—Virgil O. Strickler, Church edifice, 8 p.m., Sept. 29 and 30.

Galesburg, Ill.—Virgil O. Strickler, Beecher chapel, 8 p.m., Sept. 25.

Geneva, Ill.—Virgil O. Strickler, Sept. 27.

Grafton, N. Dak.—Willis F. Gross, Opera house, 8 p.m., Oct. 2.

Grand Forks, N. Dak.—Willis F. Gross, Church edifice, Belmont and Fourth avenues South, 8 p.m., Sept. 30.

Great Falls, Mont.—Judge Clifford P. Smith, Elks' hall, 8:30 p.m., Oct. 3.

Ironwood, Mich.—Bicknell Young, Pierce's opera house, 8:30 p.m., Sept. 25.

Kalamazoo, Mich.—Willis F. Gross, Academy of Music, 8:15 p.m., Sept. 25.

Kalispell, Mont.—Judge Clifford P. Smith, McIntosh opera house, 8 p.m., Oct. 2.

Kansas City, Kan.—Virgil O. Strickler, Masonic temple, 8 p.m., Oct. 3.

Kent, Wash.—Judge Clifford P. Smith, I. O. O. F. hall, 8 p.m., Sept. 30.

Lincoln, Neb.—Clarence W. Chadwick, Church edifice, 12th and L streets, 8 p.m., Sept. 30.

Litchfield, Minn. (auspices Willmar).—Bicknell Young, Litchfield opera house, 8:15 p.m., Sept. 28.

Manchester, England (First Church).—William D. McCrackan, M.A., Town hall, 7:30 p.m., Oct. 7.

Marshfield, Ore.—Clarence C. Eaton, Masonic opera house, 8 p.m., Sept. 25.

Oconomowoc, Wis.—Bicknell Young, Auditorium, 8 p.m., Sept. 29.

Portland, Ore. (Fourth Church).—Prof. Hermann S. Hering, edifice First Church, 18th and Everett streets, 8 p.m., Oct. 2; (four churches jointly), same place, 8 p.m., Oct. 3.

Sault Ste. Marie, Mich.—Bliss Knapp, Soo opera house, 8 p.m., Oct. 2.

Schenectady, N. Y.—Bliss Knapp, Mohawk theater, 3:30 p.m., Sept. 28.

Seattle, Wash. (First Church).—Prof. Hermann S. Hering, Moore theater, 2:30 p.m., Sept. 28.

Tacoma, Wash.—Judge Clifford P. Smith, Tacoma theater, 3 p.m., Sept. 28.

Victoria, British Columbia.—Prof. Hermann S. Hering, Drill hall, Menzies street, 8:30 p.m., Sept. 29.

Wheaton, Ill.—Bicknell Young, Masonic hall, 8 p.m., Sept. 30.

Wichita, Kan.—Virgil O. Strickler, New Cranford, 8 p.m., Oct. 2.

Willmar, Minn.—Bicknell Young, Willmar opera house, 3 p.m., Sept. 28. (See also Litchfield.)

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 7, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 22, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 30, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

Testimonies of Healing

It is with the deepest thankfulness that I acknowledge the many blessings which Christian Science has brought into my life. I therefore add my testimony with the sincere hope that it may encourage others to take up the study of this glorious truth which brings us out of bondage. When I first had Christian Science brought to my notice, I was a practising physician in a large city, with a family of four dependent upon me. I saw the power of Truth to heal in Christian Science, but I put it aside, as when Agrippa said unto Paul, "Almost thou persuadest me to be a Christian." I would not heed the call, but continued until death took out of mortal sight my eldest daughter. I then mourned bitterly, for I had no God. I had lost the only concept of God I ever had when our minister came and, kneeling at the bedside, prayed we might be resigned to the will of God. I ended his prayer with a protest that I could not love a God who would take so bright and happy a young woman out of a home that needed her, and my old religion was gone. For six years I would not be comforted, and *materia medica* had put upon me the law that I would go insane if I did not take up some line of active work.

I went South to save the youngest daughter from tubercular disease, and while there, and far enough away from those who knew me,—for I had scoffed at what I thought to be Christian Science, and also at Mrs. Eddy,—I wanted to prove the truth of the healing, then like Thomas of old I would believe. Oh, the joy when I had the proof in the healing of a loved one! Then my own healing followed, and with it a longing for the book, "Science and Health with Key to the Scriptures." It is now over four years since this truth came to me, during which time God has been our only physician for every ill. In these years, blindness, typhoid fever, abscess of long standing, neuralgia, bronchial trouble, and many minor ailments, have been overcome with the application and understanding of divine Truth; but the spiritual uplift and peace with God is beyond what mortal tongue or pen can express. It was a bright and happy day for me when I could realize the truth of these words from Revelation: "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

Before I understood that God is Love, and the kingdom of heaven within, I thought I would have to die before reaching the state where my tears would be dried. But thanks to our dear Leader, who was pure enough to discern the truths of the Bible and give them to us in Science and Health, all who "hunger and thirst after righteousness" can through her teachings know God aright; and Jesus has said that the knowing of God is life. We know that if we are in His image and likeness there can be no death for His child; the belief of mortal sense is all that dies. There can be no more tears for loved ones gone before, when we realize this truth as revealed in Christian Science; and now I know what Jesus meant when he called to him all such as feel the burden of their sins, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." I felt the sorrow and burden of belief in matter, but when my eyes were open to the true state of the child of God, not forsaken and alone, but ever in the embrace of the heavenly Father, who blesses even those who know Him not, and is calling, ever calling us to repentance, yes, it was a happy day when Christ, Truth, set me free! I found God, not afar off, but Immanuel, "God with us," and with this assurance and constant effort I am finding my way from sense to Soul, putting off the "old man with his deeds," and putting on the "new man" after Christ Jesus, who has shown us this way to our Father's house, the true consciousness of the children of God.

We are not to be weary in well-doing, now that we have been born again, but to be ever going out into the vineyard of our God, sowing the precious seeds of truth, lifting up the fallen, strengthening the weak, with loving counsel pointing ever to "the Lamb of God, which taketh away the sin of the world." Let us follow our Leader as she has followed Christ. In this way alone can we prove to the world that we have been born again. And may we say with the apostle, "Let us offer the sacrifice of praise to God continually, that is, the fruit of our lips giving thanks to his name."

MRS. MABEL L. SMITH, Davenport, Iowa.

I desire to tell my first experience in Christian Science, with the hope of helping some one as the testimonies of others have helped me. On Dec. 2, 1910, I was a complete wreck, having lived a number of years in the tropics and contracted what was termed a complication of diseases. As I had tried many doctors without any permanent benefit, I had completely lost faith in *materia medica* and expected my time had come, for I felt certain I could not last many days; then a friend, who had never talked Christian Science to me before, said that if I had lost faith in medicine, I had better try Christian Science. My reply was, that I knew nothing about it. He then told me that Christian Science had helped him and his wife, and knowing it could do me no harm, I consented to take treatment. He recommended a practitioner who was about four hundred miles away, and wrote to her asking that she treat me at once, as I was suffering greatly.

In about three days I received a letter from the practitioner, but the suffering had ceased before the letter reached me, and I was feeling more cheerful than I had felt for months. I continued treatment for three weeks, when I decided to stop, as I was feeling so well. The healing seemed wonderful, but the spiritual uplift was even more wonderful. In my younger days I was a Bible student, but from all I learned it led me to believe, after attending nearly all the different religious denominations in my search for an understanding which I failed to find, that I must wait for death to solve the problem. I stopped going to church, and the Bible was a closed book for years, as I did not again resume my study of it until I began to read it in connection with "Science and Health with Key to the Scriptures" by Mrs. Eddy. Through the understanding thus gained I have overcome every ill, also some bad habits, such as an ungovernable temper, which besides being very unpleasant for my friends, would sometimes leave me prostrated for hours. Profanity and the tobacco habit of at least twenty years were also overcome.

These are only a few of the many benefits I have received in Christian Science, and I have gained sufficient understanding to enable me to help others. My wife and mother, neither of whom had any previous knowledge of Christian Science, have also gained an understanding of the truth and can help themselves. This has all been done by reading the Christian Science literature, as none of us have ever been to a church service or to a Christian Science gathering of any kind.

Words are inadequate to express the deep gratitude I feel to that dear good woman who so faithfully followed Jesus that she saw and understood his teachings sufficiently to interpret them and give us a rule so plain that all who will may avail themselves of God's blessings here and now.

EDWARD F. GIBSON, Gatun, Canal Zone.

Digitized by Google

The Lord "is my refuge and my fortress: . . . in him will I trust;" and though I have found myself disheartened, discouraged, and full of fear, time and time again, these words of the psalmist have invariably lifted me up, and I have found consolation and peace to the degree in which I learned to trust. It was very hard for me to lay aside all my old beliefs and fears, my own wishes and desires, but when I finally learned in Christian Science that "thy will be done" did not mean that I must learn to be glad for physical or mental miseries, or that I had to sit patiently under affliction, the burden left my heart, and I began to grow in truth. I learned that only good can come, only good does come, from God, and that "all things work together for good" to those that love Him.

My heart yearns to the young student just coming into the truth, trying to reconcile what seem bad conditions to the new-old thought, trying to shut out false beliefs in a moment and growing weary at seemingly slow progress. To these I would say that I have found much encouragement in reading the testimonies of others, and I have always looked upon the *Sentinel* as a beacon of light, opening up for me the way each week, breaking the road that I might walk a little farther on.

I did not come into Christian Science for physical healing, but through a great trouble which involved human love; and fear mastered me utterly, for though I had heard of Christian Science, I had only ridicule for it, and it had been years since I had even thought of it. But when this great blow fell on me, I called up some Christian Science people whom I knew very slightly, and asked if they would help me. They were not practitioners, but through their understanding of the truth, conditions were bettered. The next day and that night I slept soundly for the first time in ten days.

Since that time I have met much and overcome much, and though still confronted with many problems, I have learned that fear and trouble and worry are of themselves nothing, and must and do vanish into nothingness. Our dear Leader's life has taught me how much we can overcome if we trust in God and know Him aright, and that no struggle is too great for us if we trust in divine Truth.

Mrs. Eddy achieved a stupendous work, and my heart is full of gratitude to God that I could live in this age and get the benefits of her wonderful attainments. My husband is also a student of Science and Health, and I am so thankful for this great blessing, and also for the Christian Science literature,—thankful to God, and grateful to Mrs. Eddy. I trust this will help some one along the way who, though recognizing the truth, yet finds it hard to reconcile it with present experience. The "rough ways shall be made smooth," and "green pastures" will be ever before us, if we follow the way of Truth.—Mrs. Elmere Brown, Pacific Beach, Cal.

✧

[Translated from the German]

The following testimony of healing is given with a feeling of sincere gratitude for Christian Science. In May, 1912, I was suddenly taken ill with appendicitis and went to a Christian Science practitioner, who immediately gave me a treatment, whereupon I went to church. There, however, I was overcome by a sense of terrible fear, accompanied by symptoms which necessitated my going to bed at once upon my return home. After a fairly good afternoon the condition grew worse in the evening, but I could see God's omnipresent love in that help came through the unexpected visit of my practitioner. The truth had such a wonderful effect upon me that I was able to call upon the practitioner on the following day. I would like to say that Christian Science healed me twice of such attacks inside of a year, and within twenty-four hours. I was stopping at a seaside resort when the first attack occurred, and the healing was accomplished by two absent treatments by a faithful practitioner, the cure being so thorough that at noon of the second day I was able to eat and relish my food. This, according to the material view of things, would have been deemed an impossibility in the nature of the case.

My dear wife as well as my son have been greatly blessed through Christian Science. She was cured within a very short time of catarrh of the bladder and varicose veins, while my son was healed of severe inflammation of the throat. I have been benefited in every respect through Christian Science,—in a business way, physically, morally, and spiritually,—and for this I am indeed grateful to God, and thankful to our noble Leader, Mrs. Eddy.

Hermann Lange, Berlin, Germany.

✧

It was through reading the testimonies in the *Sentinel* sent me by a Scientist who heard of my condition, that I was encouraged to try Christian Science, and a desire to help others prompts me to acknowledge through its pages my healing, which occurred nine years ago. I had the best medical attention which could be secured, for an internal trouble, with untiring love and care from relatives, and I appreciate the efforts and kindness of the physicians; but I only recovered sufficiently to be up, and on days when I felt my best could go driving, but was unable to care for my room or to exert myself in any way. If I walked two blocks, I would be completely exhausted. After beginning to take treatment in Christian Science I gradually came to act more naturally, and was so much improved in a few months that I appeared well, although I did not experience complete healing for a year. After two operations had failed to cure me, and the physicians had suggested a third with slight encouragement that I would experience much benefit, I feel very grateful indeed to God, also thankful to Mrs. Eddy and all who have ever helped me along the way, for the healing and happiness I have enjoyed since learning of this truth. The literature has been a great help to me. I have had many proofs of God's power and loving care since gaining some understanding of His law.—Mrs. Blanche Austin Wharton, Springfield, Mo.

✧

Having suffered from nervous and stomach trouble, with its attendant ills, since my earliest recollection, and not receiving even temporary help from *materia medica*, change of climate, etc., I was surprised to find that I had been completely healed, and lifted into a sense of freedom of which I had never conceived, after being with some Christian Science friends one day. A few weeks later I was driving one morning with one of these same friends, a young girl, who asked me why I wore glasses. I replied that it was because my eyes did not focus and I suffered from headache if I left them off. She asked, "Where do you get your sight?" to which I answered, "From God." The friend then quoted the Scripture words, "Every good gift and every perfect gift is from above." Two weeks later I realized that I had not worn glasses from that day, and I have felt no need of them since, although I have used my eyes to do the most trying needlework.

It would seem that these proofs of the efficacy of Christian Science to meet my needs should have been sufficient to impel me to accept its teachings at once; but a false sense of God and His law had to be dethroned before I was ready to turn to divine Truth, though I gave the glory of my healing to Christian Science and urged others to try it. Two years later, when I had been very ill for two months and was greatly reduced, my faithful family physician said he was not able to diagnose my case and honestly admitted he could do nothing

Digitized by Google

more for me. I was brought from my home in the South to a Hudson river town, where the physician who was called in said he knew of nothing more to do for me than had been done, and he did not come again.

Several days after this, when my family were expecting my death at any moment, believing I could not live more than a few hours at the most, a Christian Scientist came to me, and after talking with me a few minutes, I arose from my bed and sat by an open window for two hours. I slept sweetly all night, breakfasted with my family, took a drive, and spent the remainder of the day with my Christian Science friend. An acquaintance who had been told the afternoon previous that I could not live through the night, was surprised to find me standing on the front piazza when she called at nine o'clock to inquire if I were still alive. I had been absolutely healed in one treatment!

Christian Science has done far more for me than the healing of my physical body, since it is also healing me of sin, and has given me a peace which indeed "passeth all understanding." For all of these blessings I am deeply grateful to God, also thankful to our revered Leader for her life of purity, and for the truth which makes the healing of every ill possible to all who turn to Christian Science for help.

BESSIE DOWN PATTERSON, Nyack, N. Y.

✧

I came into Science about one year ago. I was said to have been born with weak eyes, and according to medical direction, had to wear glasses. I had worn them since I was five years of age, when I first began school, and had become so accustomed to them that I wore them constantly. At the time above mentioned I had an uncle and aunt who had been healed in Christian Science, and of course they were very enthusiastic over their recovery, which was truly wonderful. They had sent literature to my home, though it had not been read, except by my sister, who was very ill at that time and who has since been completely healed through Science. Like most other non-Scientists, we regarded Christian Science as some kind of heresy, and ridiculed it to a high degree. This is frequently the case, I think, with outsiders who do not understand the truth.

Upon the healing of my sister, I was naturally interested, so after a short visit to my uncle, I decided to try it, as it couldn't do me any harm. I laid aside the glasses of my own accord and began to read "Science and Health with Key to the Scriptures." At first, mortal sense told me my eyes were inflamed, but I declared the truth, and since that time have never put on glasses again, though I have school and office work requiring much reading and writing. My eyes are now all right, and each day I feel more and more thankful to God, as well as grateful to Mrs. Eddy, and hope that many others may come, as I have, to know the truth. I want to be an example which others will do well to follow, and hope that the day is not far distant when Christian Science will be more widely known here.—DAVID GIBSON, New Decatur, Ala.

✧

Christian Science came to me at a time when I was greatly in need of help, and in my case man's extremity was truly God's opportunity. It was not for physical healing, however, that I took up the study of Christian Science, but the time had come when my faith in God no longer helped me to overcome worry, fear, and despondency, and I searched for a more practical, more helpful religion. This I truly found in Christian Science.

After studying the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, for a time, I soon found that all our troubles, whether physical or other, came from wrong thinking and a lack of understanding of man's relation to God. Many Bible passages which had lost their meaning for me, gained a new light through the understanding of Christian Science, and became a great help to me in my every-day life. In Proverbs we read, "In all thy ways acknowledge him, and he shall direct thy path." I realized that I had not acknowledged God in all my ways, for when we are filled with fear and anxiety we are not doing this. The Bible further says that we should seek "first the kingdom of God," and that all needed things shall be added unto us. Not understanding the true meaning of the term "kingdom of God," I received no help from this. The kingdom of God, or kingdom of heaven, meant to me a place that we were to reach after death, but on page 590 of Science and Health it is defined as "the reign of harmony in divine Science." This statement enabled me to understand more fully Jesus' words, "The kingdom of God is within you."

There was no change in my surroundings or work after I took up the study of Christian Science, but with a changed thought and a clearer understanding of my relation to God, peace and happiness came to me. It takes time to gain spiritual understanding, but if we are faithful to divine Principle as taught in our text-book, we shall reach the promised land of health and peace.

I am deeply grateful for the many benefits I have received through Christian Science.

MISS ROSA HILTBRAND, Colorado Springs, Col.

✧

Christian Science has opened for me the door to a spiritual understanding of Life, Truth, and Love. I had no church, no God, so no peace. No amount of materiality, or the seeking of happiness in what the world offers in the way of pleasures, can satisfy the hunger which human consciousness experiences. We try to satisfy this yearning, which we do not recognize as a longing for Truth, with all manner of things which the world offers until, as often occurs, we are divinely driven to seek God. Mrs. Eddy tells us, in her spiritual interpretation of the Lord's Prayer, "God is infinite, all-power, all Life, Truth, Love, over all, and All" (Science and Health, p. 17). This showed me that man is never separate from God. It met my own thought concerning the supreme power as infinite, which I never understood or tried to analyze, thus leaving me, to sense, without God. Through the study and application of the teachings of Christian Science, I have been healed of severe sick headaches and extreme nervousness. My eyesight suddenly failed to such an extent, that for one week I could not read or study, but through the help of a practitioner this was entirely overcome. I have since read as much as I wished without any discomfort.

Words cannot express the gratitude I feel for the many blessings which have come to me and mine. From discontent I have been lifted into harmony and peace,—that peace "which passeth all understanding." All earnest Christian Scientists have the same gift from God. Can any one wonder that we are filled with an overwhelming sense of gratitude?

MRS. ESTELLE M. GESHWIND, Chicago, Ill.

✧

[Translated from the German]

It is a pleasant duty devolving upon me to testify to the blessings received through Christian Science. Since earliest childhood I was afflicted with an eruption of the skin and attacks of inflammation. All the remedies applied proved a failure. For seven years I suffered with inflammation in the armpits, and despite continuous medical treatment there was no lasting improvement. I had hoped that baths in the North sea would be conducive to recovery, but they intensified the

Digitized by Google

trouble to such a degree that I had to stay in bed for quite a period. The physicians pronounced my case to be chronic. In my greatest need I became acquainted with the teachings of Christian Science and applied for treatment, which was taken up lovingly. The healing which followed soon after the first treatments did not prove permanent, probably owing to my fear and lack of understanding.

In the summer of 1910 I had a more severe attack of the trouble than ever before. During the hours of worry and sorrow which followed, things which I had been unable to grasp heretofore became clear to me, and my healing then made rapid strides. A specialist who was instructed to inquire into my case, told me that I would be unfit for work for weeks to come, as my condition was very serious. A week after this examination I was entirely well, and have remained so till this day. The blessing which has been mine in this instance is immeasurably great, and for this, as well as for the spiritual uplift which I have experienced, I am unspeakably grateful. I thank God from the depths of my heart for having led me to find the peace which passeth understanding, and I am also grateful to Mrs. Eddy.

FRAU EMMA DUCHOW, Berlin, Germany.

✧

For the sake of suffering humanity, I desire to submit this testimony to the *Sentinel* for publication. I was healed through Christian Science after suffering for three years with serious stomach and bowel trouble. I had been treated by five of Chattanooga's best physicians, but I at last resorted to Christian Science and was cured with only eight treatments, and am now enjoying every minute of my life. I am grateful to God, and thankful to Mrs. Eddy for the blessings I have received through Christian Science.

MRS. E. F. SHACKLEFORD, Chattanooga, Tenn.

✧ ✧ ✧

[Written for the *Sentinel*]

Sand, or Rock?

MARY I. MESECHRE

A CERTAIN house was builded fair to see,
With massive walls and stately towers,
Which through the passing sunlit hours
Echoed the sound of joyous minstrelsy.

Another building, full as fair, stood near;
Twin structures seemed they. Storms arose,
And raged, and passed. Dawn did disclose
Two houses? Nay! One only did appear.

The vehement rain of fear descended fast
'Gainst walls that stood all fair to see
In their apparent symmetry;
Somewhere unseen the deluge inly passed.

The flood of sorrow came with furious tide,
Surmounting highest turret stone,
Whelming the fortress in its moan,
And in its wake the fear-forced rift yawned wide.

The winds of doubt blew with benumbing power,
Charged with the force of sudden fear
And surging sorrow, chill and drear:
The yielding walls fell prone that wasting hour.

And why? Each house seemed strong to stand the shock
Of wind and wave on every hand.
Ah, but one rested on the sand
And crumbled. Hast thou builded on the rock?

From Our Exchanges

[*The Continent*]

If all followers of Jesus Christ from the time of the apostles until now had understood his message in perfect simplicity and had followed his will with perfect devotion, there would still today be just one undivided Christian church in the world, as there was on the day of Pentecost. Denominational differences and distinctions are badges of human frailty, always signifying somebody's fault somewhere, of either insufficient understanding or insufficient consecration; and therefore as the church goes on to perfection in knowledge and grace, these badges of frailty must gradually disappear. If they are not disappearing, the church is not progressing. A church not wanting them to disappear is far from its Lord.

Getting these recognitions into the prevalent Christian mind puts the church in the right attitude toward church union. It makes denominationalism, however needful in "times of this present distress," a thing to be outgrown. It prepares the whole church to lament it as a heritage of the flesh and to long for its ultimate disappearance. And with that attitude established, all church union movements may be watched without anxiety. They will then advance neither by compromise on the one hand, nor by constraint on the other, but by prayerful effort on the part of all Christians to understand and appreciate one another's tenets, while all labor together to enlarge the bounds of Christian liberty and reduce the exactions of ecclesiastical law.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

Has Christianity proved itself able to do what St. Paul says it has done? Has it initiated its adherents into any experience which enables us in any degree to get behind the great mystery of life? Has the hidden wisdom, the ultimate secret of things, been made manifest in any real and satisfying way through the mysteries, the great profundities, of the Christian revelation? To these questions we reply in the affirmative. There is such an experience, there is such a revealing, but it is only given to a certain quality of heart, not to a certain order of mind. "I thank thee, O Father, Lord of heaven and earth," said Jesus, "that thou hast hid these things from the wise and prudent, and hast revealed them unto babes." What I most want to insist upon is that Christian experience is indeed of the nature of a mystery, a thing which the secular mind cannot understand, and which can only be apprehended by those who are spiritually prepared for it. I say apprehended rather than understood. We can feel a truth we cannot demonstrate.

All the theologies that have ever been framed have just been so many efforts to express in terms of the mind what the humblest servant of Christ already knows quite well with the heart; namely, that it is right and inevitable that by the cross should the Saviour enter into his glory. And we are still at it. On we go with our theologizing, and we cannot help it; we must keep on trying to express this august truth of the soul in terms of our ever-changing earthly experience. Hence the multitude of doctrines, but hence likewise the invincible reality of Christian experience of the Saviour's redeeming work.

[*The Universalist Leader*]

While ecclesiastics split hairs, and while the priests cry, "Impossible, Impossible!" out there on the firing line, where the battle for civilization and for virtue is hottest, the soldiers are lying in common trenches, are eating together at the mess-table, and are marching together, under one banner, up

Digitized by Google

the heights. In this, as in most of the other great problems of history, the solution lies not with those who theorize and speculate, but with those who, out in the open, under God's sky, beat upon by the tempests of the world, build a common shield from the storm, and plan together in the night how they can take another citadel of sin. In the morning you will find them there, facing the dawn and the day's work in a great comradeship of soul, the petty distinctions all lost sight of in a great consecration.

[*The Congregationalist and Christian World*]

We need to be taught the true regions in which the springs of rest and healing are to be sought. It is the paradox of so much of the life of our own time that men excuse their want of interest in religion by their search for what only religion can give them. The true cure for weariness is in vision, the heartening consciousness of an enduring strength to be had for the seeking, the undergirding of the everlasting arms. To be truly happy and effective, we need, then, to reverse many of our attitudes. What multitudes of men and women are needing is not recreation. They need re-creation, new spiritual impulses, new interpretations of life; they need such heartening as can come only from the sense of God and a great quiet confidence in His love, His reenforcing and conquering purposes. The search for pleasure is, after all, the search for life. And the pity of it all is that we are seeking life through pleasure, when we ought to seek pleasure through life. The true road to happiness is toward God—"Thou wilt show me the path of life: in thy presence is fulness of joy."

[*The British Congregationalist*]

Jesus Christ himself set the seal upon what few people will dissent from regarding as the greatest profession in the world. It is true that our Lord did not use material methods, and the clay and the spittle, by means of which he restored sight to the blind man in the street at Jerusalem, were simply symbols for which there was, of course, no necessity. The gift of healing was in Christ himself, and in the faith of those upon whom he laid his beneficent touch. Since the days when our Lord walked the streets of Jerusalem, wandered in Galilee, and went about doing good, nearly twenty centuries have sped, and today we have still to combat disease and death, notwithstanding all that science and discovery have done toward solving the problems which are bound up indissolubly with both these things.

[*The Outlook*]

Heaven is beyond our power of imagination, not because it is unreal, but because it is a higher reality not yet grasped by the mind. All life predicts it; punishment and purification foretell and affirm it; but it waits on our fuller experience to reveal it. Mr. Beecher has somewhere said that knowledge is given us in this life, not to satisfy intellectual curiosity, but to aid in the development of character; and heaven, which rests immovable on character, both divine and human, comes at the end of a process, not of thinking, but of living; that is what makes it more real than the things we know, more substantial and enduring than the things we paint and carve and describe.

[*The Christian Work and Evangelist*]

Christianity is a new attitude toward everything, a new philosophy of life; it is viewing the world through Christ's eyes; it is judging it in his presence; it is putting worths and values where he placed them; it is having the mind of Christ as over against the mind of the world.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal*, printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies, inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

Miscellaneous Writings—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

Church Manual. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Christ and Christmas. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

Unity of Good and Other Writings. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Christian Healing and Other Writings. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform with the pocket edition of Science and Health. Bound in Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Retrospection and Introspection. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Unity of Good. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Pulpit and Press. A unique work, important to the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more, 75 cents each.

Rudimental Divine Science. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

Rudimental Divine Science. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more to one address, 40 cents each.

No and Yes. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

Messages to the Mother Church. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Message to The Mother Church. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Our Leader's Message. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Communion Message, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Two Sermons. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. One volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more, 45 cents each.

Christian Healing. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

The People's Idea of God. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

Feed My Sheep. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

NATIONAL

According to the announcement recently made, the Lincoln highway, which is designed to be a memorial to the martyred President, will pass through thirteen states. Where there are good roads they are included in the route, but where good roads are lacking, as in sections of the West, a first-class road for motoring purposes will be built. For this purpose the Lincoln Highway Association has already raised five million dollars, largely through contributions by manufacturers of motor cars and others associated with the industry. An effort is now being made to obtain a large sum through popular subscriptions among motorists throughout the country.

The states through which the highway is to pass are New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Iowa, Nebraska, Wyoming, Colorado, Utah, Nevada, and California. The route will start in Jersey City, following well-known roads through Newark and Trenton over the customary route to Philadelphia. From that city it will run west to Pittsburgh, thence through the north central part of Ohio to Fort Wayne and South Bend, Ind. The route will skirt Chicago, pass through Joliet, Rochelle, Sterling, and other Illinois cities, to Iowa at Clinton. Traversing Iowa the road will leave that state at Council Bluffs. Omaha, Neb., is the next large city that will be touched. From there the route is westward through Denver, north to Cheyenne, west again through Green River and Evanston to Salt Lake City. Entering Nevada by way of Tippet's Ranch, the highway will go to Reno, Lake Tahoe, Cal., and down the Pacific slope to Oakland and San Francisco. In plotting this route the Lincoln Highway Association has had in mind the desirability of easy grades and of reaching some of the most interesting scenic points in the country.

In its fight to compel domestic steel manufacturers to lower their prices, the navy department has accepted a bid of Cammell Laird & Co., Ltd., of Sheffield, England, for furnishing turbine drums for the battleship No. 39. The bid of the British concern was less than one third of that submitted by the Bethlehem and Midvale steel companies, and in addition included the payment of the duty by the manufacturers. The agent of the British company offered to furnish the drums for $57,436. While the officials of the navy department would prefer to let contracts to American concerns, they felt that the domestic bids were so excessive that in fairness to the department the lowest proposal should be accepted.

Piling which will occupy an estimated area of one mile and a quarter in circumference and extend half a mile on the esplanade will be required for the foundation of the new buildings of the Massachusetts Institute of Technology on the Cambridge side of the Charles river. Ground has been broken for the first of the new structures. Members of the corporation hope that the buildings may be ready for occupancy in 1915.

At the national conservation congress to be held in Washington, Nov. 18-20, the subject of forestry will be handled by a main committee, with subcommittees which will report on federal and state forest policies, forest taxation, fires, lumbering, planting, utilization, forest schools, and scientific forest investigations.

The Senate is at present seriously considering the proposition of having decisions of the United States Supreme Court printed at the government printing office instead of being let out by contract. Senator Overman is of the opinion that one hundred thousand dollars a year could be saved by this change.

The belief that more ponds on every Kansas farm would have a permanent value and be especially useful in seasons like the present when local water shortage forces thousands of cattle to market, has prompted Gov. George H. Hodges to urge the people of his state to build ponds everywhere.

From January until July, 18,792 visitors inspected the great work on the Panama Canal Zone. In the past four years 68,024 tourists have landed in Colon on the Atlantic side, while only a few hundred arrived in Panama city at the Pacific entrance.

By a vote of 286 to 84, the House of Representatives passed the administration currency measure last week. The bill now goes to the Senate for action, and after following the usual course, it is expected to become a law about the middle of October.

The estimated population of Chicago is 2,388,500, according to the city directory for 1913.

INTERNATIONAL

As all vacant land in Bolivia belongs to the republic it can be acquired by purchase or lease, subject to special regulations. The unit of measure is a hectare, which is 2.47 acres. Any one may acquire as many as twenty thousand hectares, paying cash at the rate of ten cents the hectare for farming and grazing lands. If the land has rubber trees the price is one boliviano (forty cents gold) the hectare.

The Spanish government has not yet reached a decision with reference to participation in the Panama-Pacific exposition at San Francisco. Lack of funds through the drain on the treasury caused by the African war is the chief obstacle, but the government is still considering the report drawn up by Marquez de la Viga Inclan, who has strongly urged that Spain be adequately represented.

The third annual observance of Pilgrim day took place at Southampton, England, Aug. 15, when the American ambassador unveiled the memorial to the Pilgrim fathers, which has recently been erected near the west gate, looking down Southampton water. Many visitors from all parts of the world took part in the proceedings.

On Sept. 17 the new treaty of Constantinople was signed between the Bulgarians and the Turks. This absolutely abrogates the Enos-Midia line settled upon in London, and substitutes for it a new line including Adrianople and Kirk Kilisse, giving the Turks an area more than twice as large as that fixed in London.

The railways of New South Wales, which are state-controlled, show a remarkable growth in late years. The number of passengers carried for the six years ending June 30, 1913, was three hundred and sixty-three million, an increase of 72 per cent compared with the previous six years.

The various technical difficulties which were met with in running trains on the Loetschberg line, and which obliged the government railway department of Switzerland to forbid trains to travel over the line by night, have been overcome, and a full service is now possible.

INDUSTRIAL AND COMMERCIAL

"The Flying Fisherman" is the name given to a freight train which runs from Boston to New York on the New York, New Haven & Hartford railway. It covers the two hundred and thirty-four miles in eight hours and five minutes, including the time taken in making four stops. This is believed to be the fastest freight train in this country. It makes a mile in sixty-nine seconds on some parts of the run. While it does not carry fish exclusively, its schedule has been arranged mainly with a view of handling this business, and hence it has been given the name of "The Flying Fisherman." Every day from fifty to three hundred tons of fish leave the South Boston terminal on this train bound to New York fish-dealers.

Depression in the world's rubber trade has caused an economic crisis at Antwerp. Many rubber companies in the Congo have discharged their European agents and large bodies of native rubber collectors. It is said that overproduction has caused prices on the international markets to be reduced below the cost of gathering and transporting the rubber.

The importation of foreign meat during June, July, and August approximated three million pounds. Most of this came from Australia and Argentina. This nearly equals in the three months the amount brought into the United States during the entire fiscal year ended May 31, last.

The United States produced pottery during 1912 to the value of $36,504,164. Ohio was by far the largest producer of all the states during the year 1912, her production being valued at $15,508,735. New Jersey was second with pottery valued at $8,000,000.

The Alberta Farmers Elevator Company, authorized under the farmer elevator bill passed at the last session of the Alberta Legislature, will construct forty-six line elevators in Alberta, Canada, in time to handle this season's grain crop.

Two million two hundred thousand dollars will be spent for permanent road construction in Illinois within the next two years.

Sovereignty of Good

GEORGE H. MOORE

THE teachings of Christian Science are establishing an entirely new concept of universal good. No one who knows of the new fields of thought and action into which this Science has introduced Christian practise, and of its ever-widening range of demonstration, can question this achievement. Its great significance appears in the fact that no religious teaching can be fundamentally true which is not absolutely universal in application. Universal truth alone is imperative, alone is final, for it alone is scientific. Divine Science knows no exceptions to the operation of its law. To conceive of truth as tentative, or of religion as mere reverence for truth, without participation in its practical workings, is to rob them of all semblance of divine authority.

The church, the sect, the religious theory of the past, each has vaunted with considerable freedom its claim to finality merely as a matter of dogmatic theory void of proof. Great religious organizations have been built up around some one minor phase of fundamental truth, as that divine Love is universal in the sense that it shall in some remote day be able to vindicate itself as embracing all humanity as well as to lift the race out of its rebellious plight, and so restore God's authority over His creation. Insistence on this conception of the universal may have done much to broaden religious thought and mitigate the influence of selective and exclusive creeds. The church has failed, however, to make even this teaching practical, because it has failed to see that divine Love embraces every instant of time and every detail of human need, as well as every item of creation; that Love knows neither check nor interference in its designs, and needs no vindication through human acceptance of its purposes.

Many earnest students in these churches have made the grave mistake of identifying religious study with antiquarian research, of looking to the roots of its tree of sacred theology for validation of their claims, rather than to the fruitage of its growing branches. Jesus said, "By their fruits ye shall know them." The hopes of humanity are not buried in the graves of our forefathers. Hope is alive to the hungry present and to the opening of a better future. The truth revealed to our fathers is our heritage only as it fruits in the present. An inactive, complacent present is but so much dead timber, a slur over the past as well as a blur over our glimpses of the future.

The vision of Christian Science is not that Truth will some day be universally operative, but that it is so now; not that God will some day vindicate His ability to meet every human need, but that His law is universally applicable to every conceivable need of every human being, whenever put to the test. The Christian Science hope of heaven is not directed toward some celestial haven in which God will some day segregate His chosen and satisfy their longings, while His enemies, thrust out from His presence, continue to gnash their teeth in impotent hate or unavailing grief. Its hope is rather fixed on a better understanding of that "law of Love, in which nature and God are one and the natural order of heaven comes down to earth" (Science and Health, p. 118). Why else does Christendom cling to the petition which was given us by Christ Jesus, "Thy will be done in earth, as it is in heaven"?

Truth does not do things by halves, does not postpone its victories, does not await the consent of an ignorant or unwilling adversary that it may become supreme. Truth's applicability is universal in the infinitesimals of life as well as in its tremendous totality. Understood and practised, Truth redeems men from the annoyances and frets, the wicked or silly fancies of the moment, and the physical discords which result from them, as surely as it does from the cumulative torments of a dreaded future. Put to the test, the Principle of harmony is as self-evident and as imperative of acceptance as the axiom of mathematics that "things equal to the same thing are equal to each other."

It has been said that the development of the race is repeated in the history of the individual, that the life of the race is simply the life of the individual "writ large." If this be true, then the law of mental unfoldment, which proves to be without exception, that is universal, in the life of the individual, must hold true in the life of the race. Verify the workings of this law with many individuals by many varieties of test, and we may accept its operation as fundamental, as surely as we do that of the mathematical equation or the development of harmony in music by adherence to its rules. The needs of humanity are infinite in variety, the phrasings of its problem are multiform, but their solution is one,—to understand and be able to prove the all-inclusive sovereignty of good throughout the range of individual experience.

The divine comprehensiveness of Christian Science is further seen in its history. The recognition of its divine nature has forged ahead quite regardless of opposition by its enemies or hesitancy by its beneficiaries. Christian Science appeals to men of many races, many creeds. It leads to one standard, one way of thinking, one rule of practise, individuals of utterly diverse training and instinct, and it compels fidelity not by strength of its promises, but by virtue of its deliverances, its fruits. Our cause has no valuation, no identity as property, as a personal or institutional privilege or prerogative. It presents the activity of divine Mind and is addressed to universal humanity. A cause is fundamentally a way of thinking. If it be a revelation of divine Mind, it is a divine cause, and its imperative nature rests in the fact that it is a right way of thinking, which cannot be gainsaid and therefore must prevail. The organization which rallies around such a cause is a human necessity. Mrs. Eddy makes this clear in her definition of church (Science and Health, p. 583), in which she speaks both of the spiritual structure and of the institution best qualified to proclaim spiritual truth.

No church body as an organization has any authority over the minds of men beyond the safeguarding of its own membership from infidelity to the highest moral standard. The only power of compulsion that the church may legitimately acquire is embraced in the convincing nature of the combined experiences of its members in verification of the truth which called it into being. "Not by might, nor by power, but by my spirit" alone can its word prevail in the minds of men. By reversal, loyalty to a cause means primarily loyalty to a

Copyright, 1913, by The Christian Science Publishing Society

Digitized by Google

way of thinking, fidelity in thinking according to the standards which it proclaims. But as John said, "He that loveth not his brother whom he hath seen, how can he love God [the Principle of man] whom he hath not seen?" Loyalty to a cause means also mental cooperation with those who do its work in safeguarding its propaganda. If a man be not faithful to the lesser, how can he serve the greater? If he cannot forget self in the interests of humanity, how can he serve the divine, which is making itself so apparent in our broadening ideas of Christian brotherhood and unity with God?

To speak or think of the church as a thing apart from ourselves, as a "powerful organization," or to take pride in the mere externals of its history, is a misunderstanding of its purposes which is animated by the mesmerism of the serpent; and Christian Scientists cannot afford to lose sight of this fact. Religious history is strewn thick with broken church idols, fallen because their worshipers were betrayed into glorifying the human institution rather than the spirit of Truth which should have animated it; were betrayed into complacent acceptance of that which had been done as a true measure and definition of what should be done in demonstration of Immanuel, or God manifest in man. Mrs. Eddy has said that "the pride of priesthood is the prince of this world" (Science and Health, p. 270).

Our battle is not won merely because the world at last recognizes the stability of our cause. We may be glad for the breathing space which their concessions grant us, and bend the more eagerly to the contests which await us. The truth made manifest in Christian Science is axiomatic, universal, imperative. Mankind only needs that this truth be universally understood and practised. The bed-rock of our conviction is that the supremacy of good is here and now demonstrable, that spiritual law can do for us now what humanity has so eagerly hoped for in its dreams of heaven.

Our Leader says she "finds the path less difficult when she has the high goal always before her thoughts, than when she counts her footsteps in endeavoring to reach it" (Science and Health, p. 426). Our past demonstration of Christian Science should not in any degree circumscribe our mental pursuit of the absolute sovereignty of good, which grows daily more apparent in a larger freedom from old mental entanglements and greater working familiarity with the new order of things which Christian Science has uncovered to our vision.

"Judge not"

STOKES ANTHONY BENNETT

Every loyal student of Christian Science is called on to ponder carefully and prayerfully the first five verses of the seventh chapter of Matthew. Beginning with "Judge not, that ye be not judged," these verses lay down a rule which is absolutely indispensable in the solution of human problems, a rule which must be honestly and sincerely obeyed, not occasionally, but all the time, if men and women would come to know and reflect true harmony, happiness, and freedom. The habit of judging (and the word judging is here used in its popular sense of forming unfavorable opinions about, of criticizing or censuring, either persons themselves or things in direct connection with persons) is one which should be seen for what it is, and should be broken. It is a habit which, probably more than any other, leads one away from God, good, and so keeps one from seeing man and the universe as the image and handiwork of God, sustained, preserved, and governed by Him. Of course, the whole difficulty lies in following the dictates of so-called mortal mind, and in judging "according to the appearance," according to the material seeming, and not according to the spiritual reality.

This fact was most strongly emphasized when, as Christ Jesus was teaching in the temple, the "scribes and Pharisees brought unto him a woman taken in adultery," which was to them an unpardonable offense. Considering only the error into which the woman had unfortunately drifted, beholding her only as a fallen, despicable creature of the flesh, entirely divorced from divine Spirit and its holy, transforming power, her self-righteous accusers and tormentors, in their usual tempting way, insisted that the Master should give permission to have her stoned, in keeping with the stern religious law of the day. But what was the Master's attitude? Did he give the desired permission? No. Instead, he drove the lesson straight home by declaring in words that at once convicted each accuser and tormentor himself, "He that is without sin among you, let him first cast a stone at her." Then, turning to the one seemingly in error, but absolutely refusing to know man save as the spiritual, perfect child of God, separate and apart from so-called evil and its effects, matter and its laws, the Master did not spurn or condemn the woman, but gently enjoined, "Go, and sin no more."

Immediately after, as he was endeavoring to make plain to those about him his saving mission to the world, and thus was dwelling upon the illuminating and eternal verities of Spirit in contradistinction to the dark and temporal falsities of mortal sense and its material inventions, the Pharisees again interrupted and sought to discredit the Master by affirming that what he said about himself and his record was not true. In answer to them, the great Teacher and Wayshower then and for all time uncovered and disposed of the whole mortal, material situation by saying, "Ye [prompted and swayed by mortal mind] judge after the flesh; I [inspired and governed by divine Mind] judge no man [after the flesh]."

The chief function of so-called mortal mind seems to be that of laying stress upon the bad in human nature rather than upon the good. This mind would indeed seem to be quite satisfied with such a method of doing, but it is this very method, this very practise, which is the foundation of all discord and suffering, and which must first be analyzed, then annihilated, before there can be any lasting progress or success. Individuals must come to see and understand that God is good; that Love is All-in-all; that man is God's image and likeness, coexistent and coeternal with Him, hence subject only to good, to Love, and that all things which truly exist are the spiritual creation or expression of God. Then and not until then will they be able to understand and demonstrate what Mrs. Eddy has written upon page 71 of the Christian Science text-book, "Science and Health with Key to the Scriptures": "Evil has no reality. It is neither person, place, nor thing, but is simply a belief, an illusion of material sense."

To think about, gaze upon, and talk about the manifestation of error in another, in his habits, actions, or ways, indicates the mortal mind channel through which one's own thoughts are working. It also plainly shows that there is a beam in one's own eye which needs to be cast out before any attempt is made to dislodge the mote in a brother's or sister's eye; and it will often be found that as the beam is cast out and destroyed, the mote goes with it. To think of some personality or personalities as particularly dominated by error, to stand aloof and point the finger at them, all the while looking for opportunities openly to discuss the situation, and finally to try to convince others that it would be very wrong and dangerous to have anything whatever to do with them, is nothing but a most deceptive and most subtle error itself. Such methods are but the fruit of an illusive belief in animal magnetism or hypnotism, "the specific term for error, or mortal mind" (Science and Health, p. 103), and

Digitized by Google

this belief is always accompanied by that other insidious belief in mental malpractise, the false concept of minds many in contradistinction to the true reflections of the one perfect, divine Mind; a concept which would first separate man from his Maker, and then attach suppositional evil to him, thus making evil more pronounced and more powerful than good.

Let it be understood that there is no disposition in Christian Science either to ignore or lightly to dismiss so-called evil and the part it appears to play in the world. The Christian Science text-book shows on its every page that evil or error is not to be overlooked; it is to be overcome; but this, it says, must always be done with good, even as the Bible commands. By a logical and sane method of reasoning, by beginning with First Cause, God, Spirit, and by making our deductions therefrom, we readily see that good is the only remedy to be applied to whatever would seem to be unlike good, and also that evil should never under any circumstances be returned for evil, or be used in the attempt to destroy evil. In proportion as one learns that good is but another name for God, who is omnipotent and omnipresent, he understands that in reality there is nothing but good and its manifestations, and that evil is simply the result of false thinking, the work of the devil which Christ Jesus called "a liar, and the father of it." This is knowing the truth which makes free.

As Christian Scientists, let us awake more and more to our great privileges and responsibilities. By seeking the help of God and His Christ, and by following the example of our patient and loving Leader, let us realize that good is the master of evil and love the master of hate, and that there is not a single condition or problem in human experience which cannot be met and solved through a wise and an impersonal application of divine Truth, an application which always destroys the error involved by revealing its falsity or nothingness, thus demonstrating conclusively that error never was, is not, and never can be, a part of any individual or of any thing. Let us labor to bring upon earth the kingdom of heaven, harmony, in which there is no unkind or unjust judgment, no criticizing, no censuring, no discord, dissension, division, backbiting, or strife, nothing "that defileth, neither whatsoever worketh abomination, or maketh a lie."

✧

Instruction

SADIE L. KELLER

Little incidents in daily life that go to make up purpose and achievement, often point a helpful moral, which, if heeded, opens the way for greater good. In learning to operate an automobile the writer was impressed by two points of instruction. Whenever the question was asked, "Do you think I can do this?" the reply was always, "Of course you can," and following this assurance, which tended to banish a sense of fear and limitation, came the alert thought and ready hand to steady the wheel and see that the car was guided safely. Thus was developed courage, which brought to light latent ability that makes for quick comprehension of whatever demands may be made upon one. This was made possible through confidence in the instructor, who was known to be expert in this line.

The other point was this: whenever danger seemed to loom ahead, or untried conditions, the question arose, "What shall I do when I reach that place?" The reproof came quickly, "Wait until you get there." Almost invariably when the dreaded point was reached, the path was clear, and if perchance it was not, the wisdom born of experience came to the rescue and showed how to steer safely through. This attitude of thought excluded worry, anxiety, foreboding, and taught the lesson that the same wisdom was operative at the end of the block as in the middle; that the future holds no less of good than the present. These points were of value when the car was taken out alone, for "Wait until you get there," or "Of course you can," would come to thought in time of need and save the situation.

Learning to achieve in problems of spiritual being is very like the experience above outlined. A student of Christian Science, convinced that in its teaching lies the whole truth of being, and setting out to prove it for himself, places his thought in a receptive state, and presently hears the still, small voice of Truth say, "Take your place wherever duty calls. Guide thought along the paths of spiritual discernment —steady, true, leaning ever on divine wisdom and intelligence." When mortal doubt whispers, "Can I do it?" the answer comes clearly, "You have no kinship with mortality. The strength of omniscience is yours. Use it." Then fear melts away, humility and quietness possess the thought, and joyously the student goes forward, strong in God's great might to break each fetter that hinders, to rise in the consciousness of a child of God.

Then, too, when thought habits of years lead unawares toward worry for tomorrow, and far or near, some task seems too great, again Truth comes to rebuke mortal sense and bid one live in the present, and know that all is now, and good, and ever. Tomorrow holds nothing unlike today in the eternal now and here of spiritual being.

The wise man tells us: "Hear, ye children, the instruction of a father, and attend to know understanding. . . . Hear, O my son, and receive my sayings; and the years of thy life shall be many. When thou goest, thy steps shall not be straitened; and when thou runnest, thou shalt not stumble."

✧

Destroying Evil

ARCHIE E. VAN OSTRAND

When Jesus was accused by the Pharisees of casting out devils through Beelzebub, he replied, "Every kingdom divided against itself is brought to desolation; and every city or house divided against itself shall not stand." His reply indicated that every attempt of the human or carnal mind to cast out the errors of its own creating would be futile and would end in defeat and disaster, and he further illustrated the point by declaring that, if the evils were cast out by that method, and the individual's mind were left empty, then the evils would return, and the last state of that man would be worse than the first.

So long as mortals believe that evil is real, their only hope of freedom from it lies in the possibility of casting it out, thus leaving it, in belief, an entity which they fear may attack them again whenever, perchance, they may be exposed to it. But when they come into a true understanding of Christian Science, then the unreality of evil appears, and their belief in it, and fear of it, is scientifically destroyed. This point must be clear to every one who would be free from the great delusion that holds mankind in bondage.

The question is often asked, "What part of a Christian Science treatment should be devoted to the denial of error, and what part to the affirmation of good?" No better answer could be given than to refer one to the "scientific statement of being," which may be found on page 468 of "Science and Health with Key to the Scriptures" by Mrs. Eddy. We should bear in mind, however, that a Christian Science treatment is not merely a formula of words to be repeated, but is the realization of the ever-presence, omnipotent power, and all-harmonious action of God, divine Mind. It is to "let the

Digitized by Google

harmonious and true sense of Life and being take possession of human consciousness" (Science and Health, p. 355). The denial of error, therefore, is preliminary and incidental to the major part of the treatment, and should not occupy thought to the exclusion of the more important work of knowing God's allness.

To illustrate: Suppose an individual who was not acquainted with the science of mathematics should be led to believe that two times two are seven, and a mathematician should attempt to correct him by denying it, and calling the mistake a lie. It might have the effect of making him more confused and uncertain than he was before, unless the mathematician should explain to him the basis of his denial, and illustrate the fact that two times two are four, thus destroying his erroneous belief about the problem and establishing the truth in his consciousness. A patient is not healed until the error is uncovered, denied, and destroyed, and the truth has taken its place. No mental vacuums are left when the patient is healed by Christian Science treatment.

Our revered Leader, Mrs. Eddy, has said in "Miscellaneous Writings," "The student who heals by teaching and teaches by healing, will graduate under divine honors, which are the only appropriate seals for Christian Science" (p. 358). She thus indicates the only proper way of healing, and Jesus declared to the Pharisees, "If I with the finger [word] of God cast out [destroy] devils, no doubt the kingdom of God [the power and consciousness of good] is come upon you."

✧

Protection in Truth

BERTHA V. ZEREGA

"THE steps of a good man are ordered by the Lord: . . . Though he fall, he shall not be utterly cast down: for the Lord upholdeth him with his hand." So we read in Psalms. The writer remembers that she learned this passage in a Christian Sunday school at the age of seven years, but not until Christian Science had changed her thought from uncertainty and inquiry in religion, to faith and understanding, did the power and consolation of this as well as many other Bible texts become her possession. Christian Science brings to the student of its teachings not only the joyful assurance of God's ever-readiness to sustain us, to be our guide and counsellor, if we will but seek Him with unqualified confidence, but it also accurately shows the way, points us unswervingly to the straight and narrow path of divine Principle.

"First purify thought, then put thought into words, and words into deeds," is the instruction given us by Mrs. Eddy (Miscellaneous Writings, p. 341). Pure, loving thoughts are spontaneously manifested in scientific healing, and until vigilance of self-examination and discipline becomes habitual in the Christian Scientist, he will look in vain for results of value either to himself or others. Our forward steps, being the direct outcome of right thinking, are "ordered by the Lord." Though we fall, as the psalmist says, be tempted to credit the counterfeit, or lie, as the truth, we "shall not be utterly cast down," for divine Love is ready to meet our every need.

In a recent experience the truth of the above quotation was beautifully unfolded to me. On my way to assist in the reading-room work, one afternoon, I slipped and fell with considerable force on one knee, and in an effort to catch myself, gave my wrist a severe wrench. Clinging to the fact that under divine guidance there can be no accidents, I found that the pain and stiffness left my knee almost immediately, and I was able to walk freely. All the sensations and indications of a badly injured wrist, however, kept clamoring for recognition, and when I arrived at the reading-room, I was about to sit down and quietly work for myself, when a visitor came in who was anxious to talk of Christian Science. While answering her questions, I found it somewhat difficult to keep my thought clear in regard to what seemed the injury, and the thought kept recurring, "Oh, if I only had the chance now to treat myself, instead of conversing in this way!" Suddenly she remarked, "I hear so many people say at the Wednesday evening meetings that they 'declare the truth;' now what do they mean by that, and how do they 'declare the truth'?"

Seeing that a practical illustration was what she wanted, and feeling my own need for immediate help, I said, "Well, suppose that I had fallen and injured my wrist. The material evidence would be that the injury was real, that I must suffer from it; that pain is real and is in matter; and that certain conditions of swelling, inflammation, etc., are the necessary accompaniments of such an accident. That is the general belief about it, is it not? Now if I agree with that argument, I am putting all the weight into the material scale, and I shall have to suffer it out, because, as Mrs. Eddy tells us in Science and Health, 'mortal mind sees what it believes as certainly as it believes what it sees' [p. 86]. But if I instantly apply what I have learned in Christian Science, and refuse to accept the testimony of the material senses, knowing it to be a lie, I must look away from the body or matter, and declare the truth about myself,—that man is an indestructible, eternal idea of God, the expression of good, that he is governed exclusively by spiritual law, the law of harmony. It then follows that I must not allow any intimation of error about pain, inflammation, etc., to take possession of my thought. These conditions are unreal because they are unknown to God; hence I cannot know or experience them, for as His reflection I can know only what God knows."

Just here there was a moment's silence, after which my companion said, "Why, I see that, and I never saw it clearly before. So that is how you declare the truth!" The inspired teaching of our Leader, as given in Science and Health, was again proved true, for all sense of pain vanished, being replaced by a feeling of peace, and courage was given me to use my hand in addressing some literature that I had planned to send out, knowing that in thus being "about my Father's business" I could suffer no harm. The demonstration was complete by noon the next day, and the incident forgotten, except for its lesson of loving protection.

How important for us to be faithful workers in tending our gardens of thought, that no weeds of error be permitted to grow and interfere with the stately unfoldment of the divine ideas, and so convincingly prove that "the kingdom of heaven is at hand"!

✧

[Written for the *Sentinel*]

Our Harvest

CARLETON EVERETT KNOX

THIS little thought I'd give to you,
If you would to yourself be true:
If love you crave, then love bestow,
And love you'll find where'er you go.

For we shall reap of what we sow,
Of joy or gladness, pain or woe.
If love we sow, our harvest's sure,
If thoughts be right and motives pure.

Selected Articles

[*The Daily Mirror*, London, England]

What is Christian Science? Who knows? The man in the street certainly does not. Half a dozen selected at random were asked the question by *The Daily Mirror* yesterday in Fleet street and the Strand, and in not a single instance was anything other than a blank stare given to the inquirer. Then four avowed Christian Scientists were asked: "What is Christian Science, and why do you believe in it?" One only —Frederick Dixon, a representative of the Christian Science movement in England—gave a reply:—

Christian Science healing is the attempt to make practical today the teaching of Jesus of Nazareth, that those who believed in him would be able to repeat his miracles. The Greek words translated "miracle" mean either an act of power or a sign; and Christian Science teaches that, in the exact proportion in which any person understands the theology or teaching of Jesus, it can be demonstrated in practise. Christian Science practise is the attempt to demonstrate the fact that sickness is the result of thought, though the actual healing of sickness is only a very small part of the work of Christian Science.

The Christian Science practitioner endeavors to destroy the cause of disease by altering the thought of the patient from which the disease proceeds. Jesus said, "Repent: for the kingdom of heaven is at hand." The word "repent" in the Greek text means, of course, a change of mind, and when a man changes his mind from a belief in the dominion of matter to an understanding of the dominion of divine Mind, he repents, and finds that the kingdom of heaven—the peace of God, that is to say, "which passeth all understanding"—is at hand. In doing this he learns the truth, the absolute spiritual fact, the knowledge of which makes him free by destroying the material ignorance which previously held him in bondage.

There are times when Christian Science treatment is, of course, unsuccessful, but these times, Christian Scientists maintain, are infinitesimal compared with the enormous volume of its practise, while the average of its successes is far in advance, in their experience, of any school of material healing with which they have ever been brought in contact.

✧

[Charles D. Reynolds in *The Union*, Manchester, N. H.]

The vision that lighted up the consciousness of the patriarchs of old, the psalmists and prophets, and that culminated in Jesus' life and teachings, and gave to the world Christianity, a religion of healing, is, according to our reverend critic, the vision needed today, not by a few, but by all. This vision that he says "lights up the splendor of the soul" and "gives quietus to the fetish of materialism," which the Christian church has lacked during most of its history, and now lacks, is being restored by Christian Science—an admission so frank that no one could ask for more. For this reason we are not wholly prepared to hear the statement that this lack which Christian Science is supplying is, after all, but a manifestation of "falsehood" and "excess," being "based on errors" which the critic discards, because they are not needed to light up "the splendor of the soul" and to give a healing "quietus to the fetish of materialism," for that is what it amounts to.

If we venture to ask what the error is which he would discard, we find it is the very thing which does the healing work that he says the churches have lacked. The thing he would discard from Christian Science is its primitive essential feature,—man's present ability to demonstrate God's omnipotence, omnipresence, and omniscience, through Mind, not matter. Throw out that fundamental feature, and what remains to light up the soul and impel the vision that brings the healing to mind and body? Take this away from Christian Science and you reduce it to the kind of Christianity that cannot heal the sick, and has not healed them, as the critic regretfully admits. His difficulty plainly lies in his failure to distinguish between Christian healing, the works and teachings of Jesus, and its sporadic counterfeits sailing under various *aliases*. Our critic would hardly admit that superstitious incantation, or blind faith, if it results in physical healing, is just as worthy and as much to be commended as the healing performed by Jesus. If that were true, it is in order to ask if there is any difference, after all, between Christianity and paganism; whether, after all, it is not just as good to bow down to an image of wood or stone as to the living and only true God.

Jesus had this issue to meet at every point of his career. The Old Testament contained prohibitions against Jews practising the superstitious rites observed by the other nations of ancient times (see Deut. xviii. 9-14), so when the Pharisees and priests wished to entrap him, they brought up the question of the method by which he did his healing works, very much as men are doing today in regard to Christian Science. They came with the charge, "This fellow doth not cast out devils, but by Beelzebub the prince of the devils." That is to say, they accused him of practising the methods of, as we should say, the hypnotist, who employs the human mind and manipulates it by means of superstitious credulity, as sorcerers and magicians and exorcists of that day did. Jesus did not claim for his method that it was the same or at all similar to that of the world. He positively denied that his method of healing sickness had anything to do with human systems. He said: "My doctrine is not mine, but his that sent me;" "As my Father hath taught me, I speak these things;" "Not as the world giveth, give I unto you;" "My kingdom is not of this world." And on this point it is well that we have so great a modern authority as Professor Harnack, who says that when Luke the physician became a follower of Christ he gave up medical science and adopted the practise of Christian Science.

The method by which Jesus did his works ought not to be an open question at this late date among his followers. Anciently it was not his friends, but his enemies, that raised the accusation, "By what authority doest thou these things?" That his professed followers should now so misunderstand his system as to identify it with human systems, with the superstitious and material practises of the world, is to be regretted. The kingdom of God can come to us only by casting out evil, as Jesus declared, "by the Spirit of God." If the healings of the middle ages, frequently wrought by veneration of the bone or bones of a saint, or the cures of suggestive therapeutics and hypnotism, as now "practised in hospitals," are to be confused with Christian healing and placed along with the works of Jesus, are not Christian Scientists justified in their position of defending the Founder of Christianity from the charge of teaching and practising suggestion and hypnotism? For through the loss of just this distinction primitive Christianity was lost, and failed longer to light up "the splendor of the soul." With such a view, no wonder it is argued by theologians today that Jesus could not, hence did not, heal organic disease. He may have healed a few chronic and functional diseases, but not organic! Corrupt Christianity, strip it of its uniqueness, and you appeal to it in vain. It still may seem like a plausible theory, good for the world to come,

Digitized by Google

but its vitality and regenerative power for men in this world is gone.

Having admitted that Christian Science is no longer an innovation, and that never again can it be said that the Christian religion has nothing to do with health, and that the subject is "full of interest" for us, we may take the critic's precipitancy as the honest present conviction of a sincere and searching heart.

✧

[P. H. Carman in *The Atlanta Georgian*, Atlanta, Ga.]

In *The Georgian* of recent date Mrs. Wilcox has an article, "Live First, Talk Afterward," in which she classes Vibration, Mental Science, New Thought, and Christian Science as kindred subjects. The writer, being a student of Christian Science, desires to dissociate Christian Science from these theories by showing that it has nothing in common with any of them. In Science and Health (p. 111) Mrs. Eddy says, "The Principle of divine metaphysics is God; the practise of divine metaphysics is the utilization of the power of Truth over error; its rules demonstrate its Science." The method of applying this rule in Christian Science is to yield thought to the divine will or influence, in trust and confidence. This is the faith or understanding which the apostle Paul designates as "the substance of things hoped for, the evidence of things not seen." Jesus proved this rule in all of his wonderful works. He said: "I do nothing of myself;" "Not my will, but thine, be done."

The various theories above mentioned, and kindred subjects, confuse the action of the human will or carnal mind with the divine will or law, hence their failure. Out of this confusion, or lack of understanding, comes the inability of certain types to illustrate by their faces, their manner, their work, that they have found a panacea for human ills. "How to Control Destiny," "How to Grow Success," "How to Attain Self mastery," "How to be Well and Prosperous," are subjects not one of which appears in any of Mrs. Eddy's writings or in any of the periodicals issued by The Christian Science Publishing Society. These subjects indicate and intimate the effort of the human will. Christian Science follows the admonition of Jesus: "Seek ye first the kingdom of God, . . . and all these things shall be added unto you."

The human will, impelled by its own force or volition, consumes its vitality and is self destructive. Christian Science relies on its divine Principle, speaks the word as Jesus did, and trusts this word to accomplish fully that whereunto it is sent. "The word of God is quick, and powerful." It demonstrates itself in health, harmony, joy, peace, love, and good will to those who rely on it. On page 446 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, are these words: "The exercise of will brings on a hypnotic state, detrimental to health and integrity of thought." The article in The Georgian says, "Wait until you succeed before preaching success." If those who have achieved great success in any department of life had followed this line of thinking, the world would have known little success. "Seek, and ye shall find, knock, and it shall be opened unto you," are spiritual admonitions coming down the ages from him whom the world recognizes as the greatest success. Seek under divine guidance and the way to success is already open.

Christian Science opens wide its arms of love to all "diseased souls" and they come to it from all classes of society, seeking solace for their wounds, heartaches, and disappointments. Some are "burdened, nervous, and erratic;" for this reason they need the tender sympathy, the patient instruction, and the love of men by those who have passed through this great revelation some understanding of how to love our neighbor as ourself.

[John W. Harwood in *Oldham* (England) *Chronicle*]

I notice in a recent issue, under "Talks for a Quiet Hour," by the Rev. A. J. Waldron, on trouble and worry, that Christian Science is mentioned. The reverend gentleman says he is compelled to admit that there is much truth in Christian Science. It is an admission that every one is being compelled to make, for there is abundant evidence to prove that it is lifting mankind out of all manner of evil, trouble and worry included; but perhaps you will permit me to say that the method whereby these results are obtained is not anything like that outlined in the article named above. There it is stated that we exaggerate the power of trouble, although it is admitted that we cannot escape from it, for it is in the plan of the universe.

Is it reasonable to think that what is in God's plan can be removed by any means? It is certainly strange for a minister to say that "whether you depend on reliance in the power of prayer or will, it works miracles," and further on he says, "Test this for yourselves—believe." That the teaching of Christian Science differs from this may be seen in the following statement from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy: "If God were understood instead of being merely believed, this understanding would establish health" (p. 203).

How necessary it is to understand God is shown in Jesus' words: "This is life eternal, that they might know thee the only true God." The Christian Science teaching of the infinitude, omnipotence, omnipresence, and omniscience of God, good, and the logical deduction therefrom of the impotence, the nothingness of evil, removes any seeming necessity for trouble and worry. It is the false belief in evil which causes all the trouble and worry in the world. We read in the Scriptures that all things were made by God, "and without him was not any thing made that was made," and that "God saw every thing that he had made, and, behold, it was very good."

In this plan of God there is no provision for worry or trouble. Instead of looking for evil, fearing evil, and suffering as a result, Christian Scientists are knowing more and more that only good can happen, because good, God, is All-in-all. It is proverbial that Christian Scientists express in their lives joy, happiness, and harmony, and no wonder, when they realize the great redemption that is going on through Christian Science!

✧

[H. Farmer Hall in *Birkill* (England) *Observer*]

In replying to Dr. Atkinson, allow me to thank him for the kindly tone of his last letter, which I am sure he will not feel we deserve the less when I assure him that Christian Science teaches the strictest attention to cleanliness and proper sanitary surroundings, together with absolute compliance with the demands of the law with regard to infectious diseases, etc. Christian Science does more than this, however; it not only requires a clean exterior and surroundings, but requires that thought shall also come under this strict surveillance.

On page 419 of "Science and Health with Key to the Scriptures," Mrs. Eddy wrote, nearly forty years ago, "Lurking error, lust, envy, revenge, malice, or hate will perpetuate or even create the belief in disease." To this fact the scientific world is gradually awakening; but I would point out to our critic that until the importance of mental regeneration is seen in the prophylactic and therapeutic arts, the arrangements that are made for the public safety do not begin to be complete; and further, any system that does not recognize this in its activities, falls far short of its object. It is evident that our critic has failed to perceive that Christian Science

Digitized by Google

and faith-healing are not by any stretch of imagination synonymous. Faith-healing is built upon that reliance in God which confidently trusts that God will come to the aid of the sufferer without the perception on the part of the suppliant of the laws and means already provided for the salvation of mankind from sin and sickness. Christian Science, on the contrary, recognizes in the procedure of Jesus, the great Physician, an understanding and fulfilment of the divine laws of healing, which unchangeable laws are applicable to the needs of today and must be recognized and employed.

The discarding of drugs and material remedies by Christian Scientists does not mean, as our critic seems to think, an apathetic or inactive condition which allows disease to take its course, but it means the attacking and overcoming of disease from an entirely different point of view, a method the marvelous success of which is witnessed to by millions of its adherents. These healings cannot be looked upon in any sense as miracles. Certainly they do so appear to the uninitiated thought, but when the divine law of health and its application is perceived, then the miraculous disappears and healing is found to be the natural outcome of a divinely scientific procedure.

If our critic will allow me to emphasize my statement by making use of his own quotation, I am prepared to acknowledge that the late Frederick W. Robertson was not so very far from the truth when he said: "Further still, this unlimited extension of miracles would annihilate miracles themselves. For suppose that miracles were universal and that prayer was directly followed by a reply, that we could all heal the sick and raise the dead, that this would become the common order of things. It would be what we now call nature. It would cease to be extraordinary, and the infidel would be as unsatisfied as ever." There is just one thing, however, that Mr. Robertson forgot; that is, that under such circumstances there would be no infidel, for he would have been healed of his unbelief.

✧

[Herbert M. Beck in *Southwest American*, Fort Smith, Ark.]

"A generous dose of Christian Science would be good for even the most rigid opponents of that faith," you say in an interesting editorial in the *Southwest American;* and you refer to the "mental healing industry" this morning in an article showing that bad temper injures the system with poisonous secretions,—as much so as if the poisons were taken into the body in any other way. It would be interesting to hear something more about the effect of the mental attitude upon the material conditions of sickness and health. It may be that popular methods of healing and sanitation are in more or less the attitude of one pouring antiseptics over a broken sewer rather than repairing the break and preventing the wrongful course of that which is offensive and poisonous. But the question is, Why "opponents" of Christian Science, "rigid" or otherwise? and the phrase "mental healing industry,"—does it imply that it is being conducted as are such industries as manufacturing, merchandizing, and the like, solely for personal gain? Then it does not refer to Christian Science. If Christian Science were doing evil in the world, the efforts to oppose it and discredit it could be understood and explained. But Christian Science does not do evil; it does good; and its ministrations are being received around the world, and perhaps by the thinking classes rather than by the sentimentalists or the impassioned.

Perhaps the position of the Christian Scientist can be better understood by the critical individual if he will first remember that Christian Science is not a more or less ingenious something invented or created by mortals, but a discovery of a something that exists and has existed since before the world was, that is, one universal cause operating over all and in all, in one universal effect. This universal cause is that which universally makes good, and therefore it is God. To deny that there is such a cause is to deny the omnipotence and omnipresence of God. The universal effect is spiritual creation; and universal harmony follows its infinite ramifications and expression, in every walk and all walks of life or forms of thought. Unenlightened people have beat upon tom-toms for music, perhaps counted stone hatchets, built homes for themselves, while a little leaven continued to leaven the whole lump, and "the morning stars sang together" for generations and ages before supersensuous laws were discovered to have always been in positive and changeless control of these simple activities, which men have later chosen to denominate as the science of music, mathematics, architecture, chemistry, and astronomy. Can it be said, in the light of all this, that a science of good should not be discovered? or that being discovered, it should not be Christian Science, since it is the mission of the Christ, the one and only Saviour, to bring all good to mankind?

The proud may rage, the mighty fall, the timorous wound himself, and the jealous accomplish his own undoing, but the Word of God, the Word of good, shall stand forever, and the stately Science of the eternal Christ "pauses not, but moves before them [that truly love God], a pillar of cloud by day and of fire by night, leading to divine heights" (Science and Health, p. 566).

✧

[*Boston Times*]

From a purely medical view-point, appendicitis, due alone to grouchiness, may seem absurd, but every sane member of our modern medical fraternity knows that quietness, peace, and personal evenness of temper save many a doctor's fee and prevent the overfilling of many sanitariums. Anger, the uncontrolled vehement action when a man actually gets his so-called "mad" up, is bound to radiate a poison through a man's system. "Brain storm" has been rightly named, and it does the usual great storm damage. "Getting a grouch on" is a part of the life plan of most of us. Getting this same grouch off may be equally well planned for, but once harbored it is not easily shifted from our overweighted shoulders. A good disposition covers a multitude of sins. It also saves a man from multiple troubles, and those American "nerves," which are often nothing more or less than the after effects of allowing the angry passion to rise.

Prophecy

W. EDSON SMITH

In God's good time the sunlight clear
Will flood our paths with gleaming gold,
And all the griefs of yester-year
In gladness and great joy unfold:
White blooms will spread their fragrance far
O'er wide, wide fields of wrong,
And sober woodland silences
Break into silver song.

In God's good time it will be well
With us, forever and for aye;
Grim winds of winter no more dwell
Upon the meadows of the May.
O heart, have hope of happiness!
From countless bells there chime
Soft pæans of the perfect peace
Which comes in God's good time.

Editorial

"Radical reliance on Truth"

CHRISTIAN SCIENTISTS rightfully complain of those critics of Mrs. Eddy's teachings who, starting with a misconception of these teachings, attempt to read into them something which is not there. Is there not even greater reason for complaint when Christian Scientists themselves read into Mrs. Eddy's writings something which they wish to see there? A case very much in point is Section 23 of Article VIII of the Church Manual, which reads as follows:—

"If a member of this church has a patient whom he does not heal, and whose case he cannot fully diagnose, he may consult with an M. D. on the anatomy involved. And it shall be the privilege of a Christian Scientist to confer with an M. D. on Ontology, or the Science of being."

The wording of this by-law is so positive, and the condition which must first have arisen is so definitely stated, that one is always amazed to hear a Christian Scientist referring to it as an authorization for the mistaken practise which some practitioners have fallen into, namely, that of insisting upon having a physician's diagnosis of practically every case they attempt to heal, notwithstanding that to do this is to ignore the very definite statement on page 370 of Science and Health, that "a physical diagnosis of disease—since mortal mind must be the cause of disease—tends to induce disease;" and on page 198, where Mrs. Eddy points out that "a patient's belief is more or less molded and formed by his doctor's belief in the case, even though the doctor says nothing to support his theory. His thoughts and his patient's commingle, and the stronger thoughts rule the weaker." Again, on page 898, she says: "Sometimes Jesus called a disease by name. . . . These instances show the concessions which Jesus was willing to make to the popular ignorance of spiritual Life-laws."

Christian Science is very plain and very simple to those who come to it with open-mindedness and without a desire to bend its teachings to fit the old beliefs in which mankind have so long been educated. While it is true that Jesus made concessions to "the popular ignorance of spiritual Life-laws," it is also true that he did not confuse truth with error; and so it must be with Christian Scientists. Mrs. Eddy's teachings are based upon unvarying Principle, and are the revelation to humanity of "the Father of lights, with whom is no variableness, neither shadow of turning." To make the practise of Christian Science dependent upon a material system is so to fetter it with material beliefs about sickness as to make it secondary to these beliefs, and to bring about that wavering between Spirit and matter which is equivalent to a house divided against itself. This course either results in the absurdity of making spiritual healing impossible unless initiated and supported by a material system, or else it becomes a sop to Cerberus, which is uncalled for and humiliating.

Long ago the great Teacher exposed the fallacy that a man can serve two masters, and as Christian Scientists we must cast out once and for all the belief that medical practise is a necessity. Mrs. Eddy has said, "The flesh and Spirit can no more unite in action, than good can coincide with evil;" and, "Only through radical reliance on Truth can scientific healing power be realized" (Science and Health, p. 167). Herein is stated the same truth which Jesus promulgated in the words, "I am the way, the truth, and the life: no man cometh unto the Father, but by me." The concessions which our Master made were "to the popular ignorance of spiritual Life-laws," and the concession which a member of The Mother Church may make through the by-law quoted is but a concession of the same kind, and is to be made only when the practitioner has failed, through inability to demonstrate "the spiritual Life-laws" which would heal his patient.

We have behind us a glorious record of the healing of diseases of every name and nature in Christian Science, and it is our privilege to press on toward a higher understanding of spiritual law, ever mindful of the significance of the Master's warning, "Remember Lot's wife,"—a warning to be remembered whenever we are tempted to look back to materiality. Nor is there any element of uncertainty in the words with which the Master followed up this warning, namely, that he alone who was willing to give up a false sense of life, should preserve his life.

ARCHIBALD MCLELLAN.

Who Shall Stand?

IT is said that the twenty-fourth psalm was written to celebrate the triumphal entry of David and his followers into Jerusalem, the last stronghold of the Jebusites to be given up. It seems that their citadel was on mount Zion, and as they were not only a warlike tribe, but also more highly developed intellectually than any of the other dwellers in Canaan, the taking of this city was in a sense the crowning event of David's career. This psalm opens with the statement that "the earth is the Lord's, and the fulness thereof;" but we know the whole of Canaan had been occupied by those who knew not God nor obeyed His laws, by people whose concepts of God and man were grossly material, hence cruel and oppressive. It was therefore the mission of Israel to establish the true religion which would bless all mankind.

The Israelites were taught that only as they did that which was right would they gain possession of the promised land; that their enemies would be driven out before them as darkness flees before light, and we find in Exodus this command: "Ye shall serve the Lord your God, and he shall bless thy bread, and thy water; and I will take sickness away from the midst of thee." That the Israelites to a large extent held a purer concept of God and man than those about them, and that they were influenced by it, is very evident; but the demand was for fuller obedience to divine law, in order that greater victories should be won and the kingdom of God, with all that this implies, universally established. We thus come to a question which should mean so much to the student of Christian Science: "Who shall ascend into the hill of the Lord? or who shall stand in his holy place?" The answer is: "He that hath clean hands, and a pure heart,"—he is fitted to receive the blessing, even "righteousness from the God of his salvation."

In the fifteenth psalm, the question is asked: "Who shall abide in thy tabernacle?" and the answer begins: "He that walketh uprightly, and worketh righteousness, and speaketh the truth in his heart." Such a one is ready to go forward against the most fearsome foes, and to challenge, in the name of omnipotent Mind, all their arrogant but baseless claims to place and power. In the light of Christian Science we no longer think of driving out persons or peoples, but the entrenched beliefs of life, substance, and intelligence separate from God, which for long centuries have seemed to dominate the race of mortals and to decide the issues of life and death, claiming to govern men by material law while utterly ignoring the spiritual. To challenge these beliefs which falsely claim authority, we must "ascend into the hill of the Lord," or, as Mrs. Eddy so finely gives it, "rise in the strength of Spirit to resist all that is unlike good" (Science and Health, p. 393).

Digitized by Google

The next thing to do is to "stand" in the holy place of Spirit, until the might and majesty of divine Truth is fully acknowledged. All that would seem to bar our entrance will yield to the spiritual declaration of the one who has clean hands and a pure heart, who refuses to admit for a moment that any other than the "King of glory" is strong or mighty.

It sometimes seems strange that the ages have waited so long for the spiritual purity and strength which alone can ascend above earth and earthliness and stand in the holy place, safe and secure, especially as Christ Jesus "the forerunner" has gone before us and made the way so plain. But Christian Science has now come to restore his teachings in their pristine power, and to show that his humblest follower who accepts the truth may, yes, must, leave behind him the barren belief in "repentance from dead works," and press on unto perfection. A young student of Christian Science was once called to heal one who to sense was very ill and where intense fear seemed to bar the approach to the patient's thought. Then came to the student the majestic words of the psalmist, "Lift up your heads, O ye gates; . . . and the King of glory shall come in." More than once this demand was repeated, and the long-closed gates of human consciousness opened to let in the divine idea that ever comes, as did Christ Jesus, with life abundant, and sickness quickly gave place to health and harmony. Who would not stand forever in this holy place?

ANNIE M. KNOTT.

The Vision of Man

NOTHING more surely determines what we are than an impelling sense of what we may become. It is the perception of our possibilities which brings inspiration to the heart and strength to the limbs of the otherwise weary aspirant, and it is just here that "Christ's Christianity" (Science and Health, p. 271) becomes a very godsend to every one who receives it.

Christ Jesus assigned a distinction to every son of man, of which in all the achievements of his own life he became the prototype and example. His appeal was no less universal than confident, even as he said, "And I, if I be lifted up . . . will draw all men unto me." Next to his recognition of the nature of God, one may say that the most wonderful, most far-reaching fact about him was his vision of the nature of man in God's image. His incomparable influence over men is explicable only in the light of this fact of his knowledge of the truth of being as to man, and the further fact that to rare winsomeness of character he added a profound wisdom of address. He not only knew and personally conformed to the requirements of the divine ideal, but he knew human nature, its best possible line of advance, and his appeal was considerate for conditions, wisely opportune; in a word, his apprehension was practical. He knew that moral progress is not amenable to attempted compulsion, but that men are to be won away from their weakness by the irresistible attraction of an ideal which answers to their deeper, truer nature.

The great Wayshower therefore kept this vision of God's man constantly before them, not only in the information he gave them respecting man's origin and endowment, character and call, but in his own every-day exhibitions of godlike manliness. He was forever declaring for man's spiritual sonship, and that to manifest the divine is humanity's one great mission. He thus made men acquainted with their spiritual selfhood, stimulated their nobler ambitions, lured them into largeness, by quickening their every least love for beauty or goodness. His method was philosophic, incisive, stimulating. He was the ideal teacher because he not only elucidated the human problem, but he solved it for himself day by day before their eyes. This constituted the completeness of his ministry, as Mrs. Eddy has so finely and forcefully expressed it on page 54 of Science and Health: "Through the magnitude of his human life, he demonstrated the divine Life. Out of the amplitude of his pure affection, he defined Love. With the affluence of Truth, he vanquished error."

That the splendor of this vision so speedily became obscured and was finally lost to the church, is by far the greatest tragedy of Christian history. For centuries Christian theologians and teachers have been declaring for man, not as sovereign but as subservient to material law. Human sense has thus been handicapped, in well-nigh universal belief, from its conception. It has been denied the power to "tread on serpents and scorpions," and held as normally subject to sin, disease, and death, while the solution of this life-problem has been remanded to the indefinite futurity of a hope of heaven.

Today Christian Science is again declaring for and demonstrating the eternal rule of the ideal, it is restoring man to the exalted place which Christ Jesus assigned him. It is insisting upon the unfallen immaculateness of the divine manifestation, and thus investing discipleship, the realization of the divine promise and plan, with a present potency. The heartbreaking struggle attending human belief in the reality and power of evil, is replaced by that perception of man as godlike and free which impels us to think upon and realize our great possibilities when "endued with divine Science" (Science and Health, p. 445). This is one of the great conquering things of Christian Science, that it brings into the outlook of even the humblest the saving sense of a splendid to be, the vision of true selfhood, God's man.

JOHN B. WILLIS.

Lecture in The Mother Church

The First Church of Christ, Scientist, in Boston, Mass., announces a free public lecture on Christian Science, by the Rev. William P. McKenzie, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Boston, Friday evening, Oct. 10, at eight o'clock. The public is cordially invited.

Among the Churches

Current Notes

MAINE.—Among the agencies working for good at the Maine state prison at Thomaston is the literature on Christian Science provided by those of that faith living in Knox county. Since last December this literature has been liberally introduced there, and is generally read and apparently much appreciated by the prisoners. Each Saturday, seventy-five *Christian Science Monitors*, a dozen or more *Christian Science Sentinels*, and occasionally a *Journal* from the same publishing house are distributed, besides a daily copy of the *Monitor*. Clean journalism and a wholesome and helpful philosophy of life should not go amiss even in a prison.

Daily Eastern Argus.

ST. PAUL, MINN.—The new home of First Church of Christ, Scientist, to be built on Summit avenue, between St. Albans street and Portland avenue, will be two stories high, with outside dimensions of sixty-eight by one hundred and six feet. The total cost of the structure will be seventy thousand dollars, exclusive of the foundation.—*Pioneer Press.*

HOLLYWOOD, CAL.—The members of Fifth Church of Christ, Scientist, have bought a lot 134 by 204 at the northwest corner of Hollywood boulevard and La Brea avenue for ten thousand dollars, and they hope to erect a beautiful edifice early in the fall. The new church will be large and

Digitized by Google

roomy, and will have a seating capacity of nearly a thousand. Growth in the membership of the church in Hollywood has rapidly increased in the past few years. Four years ago a small congregation outgrew their quarters in Masonic hall, and they removed to Toberman hall, which soon became inadequate for the large crowds which came each Sunday. Since last winter they have held their meetings in Wilcox auditorium, and are working hard to erect a church early in the fall.—*Hollywood Citizen.*

DOVER, N. H.—The owners of the Brown-Shackley estate, No. 604 Central avenue, have sold to First Church of Christ, Scientist, the entire property, which consists of a large two-story house with Mansard roof, a stable, and a lot of land having a frontage of one hundred and seventy-five feet on Central avenue and extending back to Mount Vernon street, a distance of two hundred and ninety feet. While no definite plans are announced by the church directors, it is understood that this property will be the home of the church and its public reading-room. It is a beautiful spot on the main car line, is centrally located, and is surrounded by some of the best of Dover's residences.—*Foster's Daily Democrat.*

UPLAND AND ONTARIO, CAL.—At the semiannual meeting of Society of Upland it was decided by unanimous vote to discontinue the society meetings being held in the Woman's club rooms, Upland, and join with the Ontario society in forming a regular Church of Christ, Scientist, at Ontario, and thereby be affiliated more actively with The Mother Church, The First Church of Christ, Scientist, of Boston, Mass.—*Upland News.*

LEWISTON, MAINE.—Preparatory to the occupancy of the former Friends' church on College street, Lewiston, by the Christian Scientists, extensive renovations are now in progress. It is hoped that all will be completed so that the Scientists can hold their first service in their new church home Sunday, Sept. 7.—*Lewiston Evening Journal.*

ELGIN, ILL.—First Church of Christ, Scientist, has purchased a full lot at the southeast corner of Division and Geneva streets as the site for a church, which they plan to build at an early date. The price paid was $2,649.40, and a paving assessment of about three hundred dollars was assumed.—*The Elgin Daily Courier.*

GORGONA, CANAL ZONE.—We have purchased a building for the accommodation of our church, and at a recent service eleven hundred dollars was subscribed for the reconstruction, which assures us a church home in a short time.

Correspondence.

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 7, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 22, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 30, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

The Lectures

San Antonio, Texas

Judge Clifford P. Smith delivered a lecture on Christian Science at Beethoven hall, where a complimentary audience packed the auditorium. In introducing Judge Smith, the Rev. A. N. Badger, pastor of the Unitarian church of San Antonio, said in part:—

I rejoice in my pleasant privilege of this afternoon for two reasons. First, I find it very congenial to be permitted to introduce to the people of San Antonio a man who hails from my own home city,—dear, quaint, notional Boston. Boston has its peculiarities, its notions; no doubt it has its faults, though I cannot think of any just now. But Boston has always been hospitable to ideas; it gives a new way of thinking about things a fair and square chance of proving itself out; and surely the proving out of Christian Science in Boston has been very satisfactory to Christian Scientists. Without knowing in the least what our speaker is going to say this afternoon, I know that all that this man from Boston has to say will be thoughtful, high-minded, and full of the spirit of the ideal.

Then there is another reason. Of course you understand that I am not a Christian Scientist. Some things about Christian Science I do not understand, and therefore do not assent to; but its fundamental faith I assent to mightily. Because it comes bringing its eager message of universal good will and cheerfulness, sunshine and joy, because it teaches people to put emphasis on the things that make for beauty and health and happiness, and to trust the divine fact of love,—that it is all-conquering and all-progressing,—I believe that the Christian Science movement is a great enterprise for progress. And the message which we came to hear today, while it doubtless will contain some things with which we will not agree, I am sure is one which in its fundamental burden will be for the strengthening of the cause of the religion, not of one church alone, but the cause of all the religion of all the churches in this city; and so I am glad to give him welcome, and to introduce to you the speaker of the afternoon.—*Correspondence.*

St. Paul, Minn.

The remarks made by Albert E. Greaza, in introducing William R. Rathvon, who delivered a lecture on Christian Science at the Auditorium, were in part as follows:—

Nineteen hundred years ago Jesus of Nazareth revealed to a sin-darkened age the light of immortal Truth. He brought to an oppressed people a message of deliverance from evil; a gospel of uplifting faith, abiding divine Love, and eternal Life. He preached this gospel of the kingdom of God to all mankind, for all generations, and by his works proved the existence of a spiritual law, a law which when called into operation annulled the so-called material law. Christian Science affirms that God's law is unchanging; that it is never held in suspension, but is "the same yesterday, and today, and forever;" that God is, as the Bible declares, the Father above, "with whom is no variableness, neither shadow of turning;" and that, therefore, the divine Principle which centuries ago operated in these healing works, exists today just the same as then, its operation being limited for us only by the degree of our spiritual understanding.

There is abundant proof that Christian Scientists in their humble endeavor to do all things the Master commanded, are demonstrating in no small degree this divine Principle of healing, for throughout the world, in constantly increasing num-

Digitized by Google

bers, grateful men and women are testifying to having found in Christian Science not only physical healing, but a moral awakening, a spiritual uplift, an impulse heavenward.

Correspondence.

✣

Youngstown, Ohio

In introducing Virgil O. Strickler, who lectured on Christian Science, John P. Young, first reader, spoke as follows:—

The object of the Christian Science church is the establishment in the minds of men of the truth about God and His creation. The work is one of demonstration rather than profession, and therefore much weight is given to good works and no importance is attached to proselyting. The normal man loves and desires the truth. This statement needs no proof when we bear in mind the high standard of honesty in the average man. The student of secular history might be tempted to think that there have been times in the past when the desire for good was a negligible quantity, but it is nevertheless true that in all ages there has been a strong leaning toward good. The Bible traces the development of this idea through many centuries up to the time of Jesus.

The coming of Jesus as the representative of Truth was deemed by mankind of such importance that our calendar dates from his birth. It is the desire for truth which has brought humanity to its present state of development. It is the search for Truth which brings us here tonight.

Correspondence.

✣

St. Joseph, Mo.

Christian Science was explained to an interested audience at First Church of Christ, Scientist, by Francis J. Fluno, M.D. In introducing the speaker, A. D. Aiken of St. Joseph said:—

I am not a Christian Scientist, consequently have but a limited knowledge of the doctrines of Christian Science. I am, however, in hearty sympathy with its teachings, which I know to be practical and demonstrable.

Christian Science, as I understand it, explains the workings of spiritual laws, spiritual truths correlative between God and man. Thousands all over this broad land today are anxious to carry this truth to their brethren and eager to proclaim the efficiency and potency of this science, or truth, which, clearly understood and properly applied, has released them from the bondage of sin, sickness, and sorrow, and has brought to their homes gladness and joy.

St. Joseph Gazette.

✣

Lectures to be Delivered

Ames, Iowa.—Virgil O. Strickler, High School auditorium, 8 p.m., Oct. 6.

Aurora, Ill.—Bicknell Young, East High school, 8 p.m., Oct. 2.

Baker, Ore.—Prof. Hermann S. Hering, Elks auditorium, 8 p.m., Oct. 5.

Battle Creek, Mich.—Bicknell Young, Independent Congregational church, Maple street, 8 p.m., Oct. 9.

Bremerton, Wash.—Clarence C. Eaton, Eagle hall, Sixth and Pacific avenue, 8:30 p.m., Sept. 28.

Clinton, Iowa.—Virgil O. Strickler, The Clinton, 8 p.m., Oct. 7.

Delavan, Wis.—Judge Clifford P. Smith, opera house, 8 p.m., Oct. 9.

Testimonies of Healing

[Translated from the German]

About six years ago an acquaintance led me to look into Christian Science. At that time I was extremely nervous, and hardly able to walk for fifteen minutes without a sense of failing strength. For sixteen years I experienced pain and discomfort and sought help from the physicians, who prescribed change of air, baths, and medicines, none of which, however, brought me relief. Seeing that it all remained unavailing, I turned to Christian Science, and when I realized what might be accomplished through its ministration, I clung to that wonderful teaching with every assertion of my being. Very soon I began to feel relief, and today I am made over new. God has granted me grace upon grace; everywhere, in my daily occupations, in my household work, I feel that the arms of the Almighty are beneath me. I will forever thank Him, and publish the tidings of His glory evermore, for He hath led me out of the wilderness and set my feet upon the way to the promised land. God hath comforted me, and hath caused His face to shine upon me.

The little understanding of Christian Science to which I had attained, enabled me last year to bring help in the case of an eight months' old child which since birth had been afflicted with an eruption of the head; it was completely healed, through the power of Truth, within eight weeks. May all my efforts be spent in fitting myself to help my fellow beings who are in distress, since "the harvest truly is great, but the laborers are few." I am thankful to God, and grateful to our faithful Leader, Mrs. Eddy, from the depths of my heart for Christian Science.

KATHARINE PAULI, Frankfurt a. M., Bockenheim, Germany.

✧

I would like to express my gratitude to God for Christian Science and what it has done for me. I was laid up with rheumatism over two years ago. I was in bed five months, and had different doctors but got no lasting help. While still in a poor condition I had a very bad fall, and injured my head. I was brought home unconscious; doctors and a specialist were called, and they said the injury was very serious, and did not give much hope for my recovery. While my family was in a terrible state of fear, a good neighbor who had heard what the doctors had said, proposed Christian Science; so my wife asked for Science help, which was given immediately. In ten days I was up and walking around out of doors. Although my condition was to mortal sense very severe, I constantly improved under Christian Science treatment and lost every trace of rheumatism and other ailments.

For my physical healing and many other blessings I am deeply grateful to God. Christian Science has changed my thought and made me happier and better. I am more careful to do God's will and to learn what it is.

JOHN KLETTENBERG, Minneapolis, Minn.

Mr. Klettenberg is of German birth and finds it hard to express himself in English. During ten days he had only a very few moments of consciousness, although the bodily functions were carried on. He took food and drink when presented to his lips. On awakening he gladly accepted the fact that Christian Science had healed him, and began to order his life in keeping with a new sense of things. All spirituous drinks were discarded, and in a few days his taste for tobacco left him. It is a great joy to note the blessings which the word of Truth, the message given us in "Science and Health with Key to the Scriptures" by Mrs. Eddy, is bringing to those who are willing to receive them.

ANNA M. KRUDOP, Minneapolis, Minn.

Having long enjoyed the testimonies of healing in the Christian Science publications, and been helped in many ways, I am glad to give my own experience, hoping it may cheer and encourage others in the path that leads to God and that gives the peace that passeth understanding. In October, 1904, I decided to take up the study of Christian Science and find out for myself what it was that gave so many of my friends peace, courage, and the unexplainable something which I did not have; so I began seeking, and I found it.

I had been an active member of a church for over fifteen years, but although I worked hard and tried faithfully to understand the Bible and to enjoy the blessings therein promised us, I neither realized nor understood its truth clearly enough to demonstrate my problems. As soon as I took up the study of Christian Science I found I must demonstrate the healing Principle therein taught. One morning I awoke and found myself suffering severely from neuralgia of the face. My suffering was terrible, but I silently declared that God is All-in-all, and after several hours' work the demonstration was made, and I was very grateful that the little crumb of truth I had gained gave me sufficient strength to conquer the foe. I knew I had the right thing with which to go forth to battle, no matter in what form error attacked me or mine; that when I put on the whole armor of God and was obedient to Principle, I was absolutely safe.

For this and other demonstrations too numerous to mention I am truly thankful to God, and grateful to our dear Leader, Mrs. Eddy, as well as appreciative of all the loving, thoughtful help of friends. I deem it a privilege to be a member of the Christian Science church and to take part in its work of complete salvation,—the healing of sickness as well as sin.—MRS. NELLIE H. NELSON, Minneapolis, Minn.

✧

I am deeply grateful for the help that Christian Science has been in our home. About four and a half years ago we were fortunate in coming to live near one who had experienced its benefits and was happy to offer the truth to others. This lady soon saw how badly we needed the truth, as my little boy was under hospital treatment when we came here. He was more than a year old when the doctor said he had not a normal bone in his body, and though he had gained a little strength under medical treatment, his legs were still badly deformed. After a few months' treatment in Christian Science, however, he became quite straight, and from being a delicate little creature he has for a long time now been one of the healthiest and happiest of children.

I also had been an out-patient at one of the hospitals for several months, for in addition to other ailments I was said to have had a misplaced kidney, which was not only painful but it prevented me from doing many duties, as I was quite unable to get through a day without lying down. The last time I saw the doctor he said I might need an operation at any time; but I did not fear that, as I would rather die than go on living as I was, a burden and worry to all concerned. Thanks to Christian Science, that trouble has long been a thing of the past. It always seemed so strange to me that the best people I knew were as a rule the greatest sufferers.

I am very grateful to Mrs. Eddy for the beautiful way in which she shows us that "God is Love," and that He is not responsible for the ills that come to mortals. Words cannot express our thanks for the numerous blessings we have received.—MRS. A. LOWTH, Mansfield, England.

✧

I am grateful for the many proofs I have had of the healing power of Christian Science, but I am more grateful for the knowledge that there is a divine Principle by the light of

Digitized by Google

which we can work out every problem that presents itself, and get nothing but good results. Christian Science has been our only physician for five years; it has healed every ill, and sustained and strengthened us through times of great sorrow, while without the support of Truth we would have been unable to stand. It is a blessing to know that if we keep close to Principle and live our lives accordingly, everything we undertake will result harmoniously.

Mrs. Eddy tells us on page 180 of Science and Health, "When man is governed by God, the ever-present Mind who understands all things, man knows that with God all things are possible." I have had many, many proofs of the truth of these words, and I am deeply grateful that this knowledge has been revealed to me.—THELMA DYER, Pittsburgh, Pa.

✧

I gladly give my testimony, with the hope that it may reach some one who is weary and athirst, as I was when I found Christian Science. I did not seek it for physical healing, as I did not believe I could be healed in this way. I had suffered with asthma for twenty years, and had tried everything, but any resulting relief was for only a short time. My physician told me the sole cure would be a change of climate; so I went West, but on my return was even worse than before. I could never go out when it was cold or damp, and could never sweep unless my nose and mouth were covered. When the severe attacks came on, the doctor would give me an opiate, and that meant several days in bed. I also had neuralgia in my head very badly, as well as heart trouble and rheumatism. It seemed to me that life was only a burden, with never a well day, and I wanted to die; but I found that "man's extremity is God's opportunity."

I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, to see what it taught, and I had read only a few minutes when it seemed as though God said to me that this was what I needed; and I have indeed found it so, for this is the blessed truth that makes us free. The Bible had been a closed book to me, but now it is my daily study with Science and Health, and I can say I am perfectly well and happy.

I feel very thankful to God, and grateful to our dear Leader, Mrs. Eddy, for showing us the way of Life; and my constant prayer is so to live that I may be worthy of the name Christian Scientist.

MRS. ALICE M. STEVENS, Leominster, Mass.

✧

I have freely received the benefits of Christian Science for over three years without having voiced a word of appreciation, but I am indeed grateful, and grow more so as I understand better the allness of God and His love. I hardly know where to begin to count my many blessings, as Christian Science is a constant help to me. I have been healed of rheumatism, which I had for over twenty years, and have been cured of catarrh of long standing. I was always subject to colds and sore throat, but now I seldom ever have a cold. All these ills have been overcome by the understanding of the truth and knowing that divine Mind supplies our every need. I have also been healed of the need for glasses, since I can now see better without them than when I used them, though they were to correct near-sightedness. My healings have been slow, but I am thankful for this, as I have studied earnestly, and it has given me a better understanding of the power of Truth. I find I can do all my work very much easier now than formerly, and it is a pleasure instead of a burden. I live in the country, where I cannot go to church, and there are no Scientists around me, but I know that God is with me, and I find in divine Truth an ever-present help.

I love the *Sentinel*, it is such a help to me, and I greatly enjoy the reading of the testimonies, as they come from all over the world and are given by those who have experienced the healing power of Truth. I also enjoy the weekly study of the Lesson-Sermons. How grateful we all ought to be to Mrs. Eddy, who has rediscovered this glorious truth that the world might partake of its blessings, so free to all!

MRS. BINA EMMETT, Everett, Wash.

✧

I feel that in gratitude to God I ought to acknowledge what the study of the Bible as explained in "Science and Health with Key to the Scriptures" by Mrs. Eddy, with all her other writings, has done and is doing for me. One night my dear son, a boy fifteen years old, went out alone, and he never came back to me again. My darling was found dead at a railroad crossing; and as I did not then have a religion to support me, I was like one without feeling, my heart like a stone, until one night I met an acquaintance who called to me, and I was so bewildered that it seemed like a voice from another world. And so it was, a world different from any I had ever known. He talked of Christian Science, of which I had never heard, and invited me to attend a meeting at the church. I went, and then, and not till then, did I learn what it means to live, because from that night of my first attendance at a testimonial meeting I found God, and have spent the happiest hours of my life in reading Mrs. Eddy's book, "Science and Health with Key to the Scriptures." I still wonder how I ever lived without this truth.

I have a son twenty-five years old who was so astonished at the change brought about in me that he began to study Science and Health also, and has become a Christian Scientist. I had never met such people as the Scientists I know; they have each and every one done me some kindness. Mrs. Eddy has brought blessings to so many poor bruised hearts like mine that my pen and voice seem too weak to express my love for her. I hope my experience will do some one good, and bring to others the knowledge it has brought to me and mine of the great power of Truth and Love.

MRS. CATHERINE J. JOHNSON, East Orange, N. J.

✧

I wish to express my gratitude for the quick healing of my little boy through Christian Science. About five years ago he was attacked with a serious throat affection, and had to be removed to a hospital, where he was detained for nearly six weeks. This was before I heard of Christian Science. In August, 1911, all of the former symptoms again appeared,—high fever, delirium, etc., with great weakness,—and although I had been studying Science and Health, and attending the Christian Science services for about a year and a half, and knew Christian Science to be the Comforter promised by Jesus, yet when I saw my boy so ill to mortal sense I was in great fear. I went to a Christian Science practitioner, however, and asked her to give him absent treatment, and immediately my fears disappeared. This was about eight o'clock in the evening, and by next morning all was well. He was quite bright, asked for breakfast, and was down-stairs that afternoon. Except for a sense of weakness for a few days, he was as well as ever. This was a great proof to me of the healing power of divine Truth as demonstrated in Christian Science.

MRS. MARGARET CROZIER, Ranelagh, Dublin, Ireland.

✧

I wish to express my gratitude for what Christian Science has done for me. In March, 1912, I was taken with severe chills and fever. Besides this, an eruptive disease in its worst

Digitized by Google

form came on, affecting my face. I was totally blind for several days, my eyes being completely covered. I certainly felt very ill and had no strength, but I was perfectly healed of that disease through Christian Science, and I am very thankful to God for this great blessing.

Mrs. Carrie Hooper, Chicago, Ill.

✧

[Translated from the German]

For many years I suffered with attacks of rheumatism, which grew more severe with every year, although I would secure medical help at once in every instance. The medicines used had a detrimental effect upon the heart action, and in June, 1910, the last attack, which was the severest, resulted in a paralysis that it seemed impossible to overcome. My attention was then called to the beneficent work accomplished through Christian Science, and I applied to a faithful practitioner with the request to take up treatment. I found loving assistance, and in a comparatively short time I was well, and am so today. A stomach and bowel trouble, which had caused me great inconvenience since childhood, has also completely disappeared.

Since my healing, my husband, my children, and myself have turned to God for help in cases of physical as well as of business disturbance, and we have always experienced help through God's great love. When bereft of very dear relatives through death, it was the knowledge of God's infinite love which comforted me and lifted me up. We will gratefully endeavor to act according to Jesus' teachings, and by reading diligently the Bible and our text-book, "Science and Health with Key to the Scriptures," to enlarge and deepen our sense of God's goodness and love. Sincere thanks are due our revered Leader, Mrs. Eddy, and also those who with loving patience have led us upon the right path.

Frau Elisabeth Ganss, Einbeck, Braunschweig, Germany.

✧

Several months ago we had a wonderful proof of the power of Christian Science in the case of a contagious disease, so called. At that time I happened to be the only Christian Scientist in our family, although both my stepmother and her mother are now earnest students. I have two little brothers, one of them six years old, and the other a baby of two. The older boy was taken suddenly ill, and the symptoms were so alarming that a doctor was called. A day or two later, during which time he grew worse, the case was diagnosed as a serious condition of the throat. We were immediately placed in quarantine and a trained nurse arrived. It was afternoon when she came, and by this time great fear had taken possession of the household. From the first, the two children had been together, and the usual remedy was given to the sick child at once, and it seemed for a while that the same treatment might be forced upon the others.

At this point I became frightened, and telephoned for help in Christian Science. My stepmother, too, in her anxiety for both the children, asked for help from the same source. It was six o'clock that same evening, however, before we were able to talk with the practitioner over the telephone, but her words were so strong and full of love that the sense of fear was lifted. The sick child, as well as the other one, was helped, and at four o'clock the following morning a decided change took place in the little brother's condition. The fever went down, and from then on he improved rapidly. The doctor said that he would watch the baby, as well as the others, very closely, and that the minute any symptoms of the disease appeared he would give antitoxin.

We were in quarantine almost three weeks, and during that time no one else in the family came down with the disease; while, on the contrary, the trained nurse, after leaving the house, was sick for over a week with what at first was feared to be the same trouble. Afterward the doctor told us that he considered the boy's case remarkable, and he cited an instance similar to this where, for six weeks afterward, he had to use drastic measures. It was remarkable, too, he thought, that no one else contracted the disease.

Friends expressed surprise upon hearing that antitoxin had not been forced upon all the family. We had surely strong proof of the protection of divine Love. Yes, and the results of this experience have been seen and felt in our family since that time. The atmosphere of our home is a changed one today.—Irene Eckis, Oakland, Cal.

✧

I feel it my duty to write and express my thanks to God for the aid given my dear wife, who through the blessings of Christian Science is now completely recovered from a serious illness. As I look back on those weary months experienced by my poor wife and myself I am unspeakably grateful, for one could not help feeling the seriousness of her illness, when from a healthy young woman she became a physical and mental wreck. She could not eat and would lie awake all night long, until her very existence seemed intolerable to her, in fact she often talked of death and was totally uninterested in her household affairs and her little children. Doctors and medicine were of no avail, and nothing we could do was of any use, until at last I began to despair of her recovery.

Nevertheless, through the dark cloud there came a silver stream of light, for we heard of Christian Science. So I sent my wife to Melbourne, where, through the power of divine Love, she came into Christian Science and is now fully recovered and regenerated. Where material aid and all else failed, Christian Science and divine Love succeeded. I was at first a skeptic, but I am coming to see each day the blessing and health to be gained from Mrs. Eddy's teachings, and if this testimony will be of use to any poor sufferers, I trust they will not fail to read it.

Horace R. Rule, Perth, West Australia.

✧

It is with a heart overflowing with gratitude for what Christian Science has done for me and mine that I add my testimony to those of many others. It is now nearly six years since I was healed through the reading of two copies of the *Christian Science Sentinel*. I was at that time a mental and physical wreck, with three small children and no hope of ever being well, but after reading the *Sentinel* from nine o'clock in the evening until four in the morning, I forgot myself, and drank deep of the spiritual things therein offered, for I was hungering and thirsting for the truth that makes free. I retired knowing that God reigns, and when I awakened in the morning my first thought was that God's presence is everywhere and there was nothing to fear. Then I was suddenly overcome with the thought that I was desperately ill, but made up my mind to resist evil and that it would flee from me. After calling on God many times for help, I was able to walk, and about eleven o'clock these words of the Master came to me: "Blessed are they that have not seen, and yet have believed." I had not seen any of the wonderful things about which I had read in the *Sentinel*, but I knew that with God all things are possible. When these words came to me I was instantaneously healed of what physicians called a malignant disease of the stomach, rheumatic trouble, contraction of muscles, female trouble, and other ills. From that day to this I have never been sick. I have been able since that time, through the daily reading of the Lesson-Sermons

Digitized by Google

and the study of the Bible and Science and Health, to overcome any attacks that have come to me. My three children have had some wonderful healings, one having been healed instantly of a very bad burn. Another was healed quickly of an open wound, the fleshy part of the hand being laid open by falling from a tree on some glass. On this day I had been reading Mrs. Eddy's "Unity of Good," and it was very clear to my thought that God is All; so I washed out the wound, declaring the truth to my boy.

I have seen many cases healed through the application of Christian Science,—many so-called incurable diseases, where the glory of God was manifested. I want to say that I love the Christian Science literature. Many times have I seen my little one healed through the singing of our Leader's hymn, "Shepherd, show me how to go."

For all these blessings I am deeply grateful, and pray that I may live the Science each day and give it out to all who are hungering, as I was, for this truth.

MRS. MARGARET LEONARD, New York, N. Y.

✧

Christian Science found me about a year ago, stumbling in sin and darkness, depending on whisky, tobacco, and opiates for my strength. I had been so long a slave to these habits that any pleasure I seemed to derive, turned into torment. I then believed that God was punishing me for some sin my forefathers had committed, and I had little hope; but when I found God through Christian Science I lost these habits, and regained hearing in one ear, which had been deaf for two years. I was also healed of lung trouble and many other ills.

I am twenty years old, and stay at home nights to study the Bible and "Science and Health with Key to the Scriptures," whereas before I came into Christian Science I was in some saloon paying whisky license. I am indeed thankful to God, and grateful to Mrs. Eddy, for the strength that I have gained to help myself and others.

CHARLES REASONONER, Spokane, Wash.

✧ ✧ ✧

[Written for the *Sentinel*]

Freedom

GEORGE AMBROSE DENNISON

I MET my comrade in the way,
And scarce I knew his face,
So changed it was from grave to gay,
So lit with light of higher day,
So touched to nobler grace.

"Now tell me, comrade, what hath wrought
This wondrous change in thee?"
"My lifelong foe and I have fought;
He's slain, with all the woes he brought,
And now my life is free."

I journeyed on, and saw the ground
Where they had fought; and near,
There rose a newly-fashioned mound,
And o'er its head inscribed I found
The legend, "Here lies fear."

A thousand new-sprung flowers were there,
Where struggling feet had trod.
The breath of freedom stirred the air,
New voices sang a message fair,—
Methought they sang of God.

From Our Exchanges

[The Christian Register]

The new spiritual awakening is on its way, if it has not already arrived. It is sure to flow into many channels that heretofore have been left dry, and to bring with it a kind of rejuvenation and blossom time of humanity that always comes with the opening of a new era of positive faith, following the aridity of periods of negation and denial.

The marvelous material prosperity of the past half century has seemingly made men not happier, but more restless, more greedy, more feverish, and eager for violent sensations and novel excitements. The whirling age is upon us, the time of ever more rapid motion, noise, confusion, and the loud passions of thronging masses of people. But it is impossible to believe that this phase will continue indefinitely. When the pendulum swings back again toward sanity and reason, the acceleration will cease, a sense of exhaustion and weariness will turn men again to the life of contemplation and quiet. New social ideals will bring a happiness perhaps more lasting, more satisfying, than anything the world has known.

We hardly know yet what the spiritual life means, as exemplified in the life of Jesus, so bound up is our religion with extraneous and non-essential things. But, when the pendulum completes its arc, men will undoubtedly live more joyously in the sight of God and in obedience to His laws. The world is tired. It desires to rest from its mad revels. It must turn to God, for there only is rest to be found. The material life has been developed to a very high point, and yet it cannot satisfy. Divorced from love, justice, righteousness, the true perception of moral and spiritual beauty, it becomes gross.

[Zion's Herald]

Doubt appears to be regarded by some people as a luxury—as a kind of flavoring of life, giving it zest in place of insipidity, and lending to it the excitement of an entertainment where something is liable to happen at any moment in the way of comedy or tragedy, no one knows which. But doubt is at best a very expensive luxury. It takes away from life more than it gives, it jeopardizes the highest interests of the individual and of humanity. A temper of doubt may indeed prove to be a protection against superstition, but, if too much indulged, it will at the same time prevent one from attaining the highest heights of philosophic and religious certitude. Some eminent philosophers, and some theological Thomases, have indeed begun in doubt, but, not being made perfect therein, have continued on up to the table-lands of faith. No man is called upon to believe anything without adequate reasons therefor, but just to doubt for the sake of doubting, or because it is the fashion so to do, is to despise one's intellectual birthright, and to turn one's face to the dark, miasmatic valleys, instead of toward the mount of God.

[The Universalist Leader]

What is happiness? Certainly it is not an outward state. It cannot depend upon circumstances, else we would be tossed about by every wind of chance. Happiness, real happiness, must be an inward state of experience. It must be a certain calm, and content, and peace of soul. The trouble is with our definitions, and with our demands on life. He who expects some definite, external reward for doing good or being good is certain to be disappointed. The world is full of ingratitude and heedlessness. If we depend upon appreciation, even for our devotion, we shall often eat the bread of bitterness. Does the statesman expect office as a reward for his virtues? Alas, even the people whom he serves may

Digitized by Google

turn from him and elect another less worthy. So it is with every high endeavor. No man can rely upon any outward return for any sacrifice he may make. Most of the prophets are stoned. Some of them are crucified.

[*The Christian Work and Evangelist*]

For a human being to change his life center, for him to pass from self-consciousness to God-consciousness, is like passing out of his egotistic prison-house into the vast and spacious world of life, where he no longer merely revolves upon his own private axis, but discovers his true orbit about the central life of God and flings himself confidently out upon it, and determines forevermore to fulfil himself in light and law and love. In this supreme experience man says his "everlasting yea" to God, even as he utters his "everlasting nay" to self. It is his great new birth into larger and higher worlds.

Jesus called it a new birth of the Spirit, and what name could be more expressive or fit?—as though, in Jesus' thought, all life grew and unfolded toward that spiritual natal day; as though all creation waited for the revealing of this son of God. Then for the first time he really begins to live. Then for the first time he really discovers the infinite, divine environment to which he belongs. Before, he was like Plato's cave-dweller, living in his narrow house, receiving only fragmentary beams from a mysterious universe of light. Now, he has come forth unto the great world, and his eyes are greeted by the boundless spaces of light, and he stands amazed, but at home, in his Father's house.

[*The Congregationalist and Christian World*]

The world is quite unsatisfied, it longs for something better than it has yet attained. How seldom do we see a man or woman who goes about his work with a triumphant air! How rarely do we meet the reflection of joy in eyes that seem to carry knowledge of good news, the ownership of a hidden treasure! And how infrequent is this air of triumph and heart confidence in those who are endowed with much of this world's goods or powers! If we were judged by the witness of our faces in repose, how many of us would be taken to belong to the conquering race of the sons of God? This discontent of heart is often a sign of our subjection to the powers of the earth. It may, however, be a token of our high expectancy as followers of the risen Lord.

[*The Outlook*]

Heaven is not the backward but the forward look, not skirting the shore in gladness that the perils of the voyage are over, but spreading the sail with confident expectation, entering port after port in the sublime adventure of the spirit seeking God. In that adventure heaven will become an ineffable joy in the fulfilment of the potencies of life; not in rest, but in flight without fatigue; not in folding of the arms, but in tireless growth, will be the bliss which we call heaven.

[*Western Christian Advocate*]

Perhaps something simpler, with less theology and more practical direction and admonition—something in the line of popular Bible instruction—would be more acceptable to tired-out people than too many elaborate sermons.

[*The Living Church*]

Universal peace must be the result of a universal desire for righteousness on the part of the nations. It cannot precede that desire, and it would be misleading to suppose that any treaty could compel it to do so.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

The Publishing Society have published for permanent record purposes a limited number of copies of Vol. 30 (April, 1912 to 1913), *The Christian Science Journal*, printed on "Library Record," an all-rag paper which is guaranteed to last indefinitely and will not turn brown or become brittle with age. This is termed the "Library Edition" and will be furnished in cloth at $4.50 and in half-morocco or half-calf binding at $5.00 a copy.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies, inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

Miscellaneous Writings—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

Church Manual. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Christ and Christmas. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

Unity of Good and Other Writings. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Christian Healing and Other Writings. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform with the pocket edition of Science and Health. Bound in Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Retrospection and Introspection. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Unity of Good. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Pulpit and Press. A unique work, important to the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more, 75 cents each.

Rudimental Divine Science. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

Rudimental Divine Science. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more to one address, 40 cents each.

No and Yes. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

Messages to the Mother Church. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Message to The Mother Church. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Our Leader's Message. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 85 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Communion Message, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Two Sermons. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. One volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more, 45 cents each.

Christian Healing. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

The People's Idea of God. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

Feed My Sheep. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Items of Interest

NATIONAL

Following the interstate commerce commission's scathing denouncement of the New Haven road for the recent North Haven wreck, in which it was held that man failures, beginning with its high officials and ending with its trainmen, were responsible for the loss of lives, sentiment in Congress has begun to crystallize in a movement to take up the whole subject of legislation for train safety at the December session. An effort will be made to empower the commission to deal with such questions as steel cars and modern safety equipment.

Attorney-General McReynolds, in the matter of the Southern Pacific railroad and its oil wells in California, has decided that the government shall institute a suit against the railroad company. The attorney-general will apply also for an injunction to prohibit the company from operating the one hundred and twenty-five thousand acres of petroleum lands from which the Southern Pacific, through the Kern Trading and Oil Company, has been pumping oil night and day at the rate of about two hundred and fifty thousand dollars' worth a month.

A lobby regulation bill has been introduced in the House of Representatives. It requires the registration with the clerk of the House or Senate of every "legislative agent" seeking to influence law-making, and limits the compensation that may be paid to such agents to fifty dollars a day and twenty-five hundred dollars a year. The names of lobbyists kept by the House and Senate clerks are to be erased with each session of Congress, making it necessary for renewal of such registration with a new Congress.

A national highway from Canada through Kansas City to the Gulf of Mexico is the object of the recently organized Canada, Kansas City & Gulf Road Association. The entire route has been selected, but as yet has not been adopted officially. The highway will begin at Duluth, Minn., and end at Galveston, Texas. The construction of the road is being taken up by the National Highways Association and it will be made a part of the scheme for national roads.

Attorney-General McReynolds will soon bring a civil antitrust suit to compel the Southern Pacific railroad to relinquish the Central Pacific. This is in accordance with the announcement he made in connection with the Union Pacific-Southern Pacific dissolution. The entire eighty million dollars of Central Pacific stock is owned by the Southern Pacific and in the opinion of the attorney-general that is a combination of competing lines and a violation of the Sherman law.

Captain Clark, commandant, announces that one of the largest wireless stations in the world will be established at the United States naval training station at North Chicago. He says that one hundred thousand dollars will be expended in its construction.

With local celebrations from coast to coast all along the route of the Lincoln highway, on the night of Friday, Oct. 31, this great transcontinental thoroughfare will be dedicated to the nation's most honored President, Abraham Lincoln.

By unanimous vote the Senate public lands committee decided to report favorably the bill passed by the House of Representatives giving San Francisco the right to establish a water supply system in Hetch Hetchy valley.

The federal government has begun its fight in the United States Supreme Court to establish the constitutionality of the provision of the interstate commerce act making pipe lines common carriers.

President Wilson in his first annual message to Congress will urge consideration of the establishment of a government armor plate factory.

INTERNATIONAL

The importance of the question relating to future timber supply is fully recognized in South Australia, where a large area of crown lands is devoted to the growth of forests and every encouragement is given private persons to plant trees. In addition there is now a stipulation with those who take up land from the crown that five out of every two hundred and fifty acres comprised in their holdings shall be reserved for the growth of timber, and that any timber trees on the area so reserved must not be destroyed.

The Association of Southwestern Manufacturers in Germany recently sent circulars to all its members with reference to participation in the Panama-Pacific exposition at San Francisco. The responses were almost unanimously against exhibiting. The chief reasons assigned are extreme American protection, unfair customs administration, and possible attempts to discover the business secrets of the German manufacturers.

The terms of the new loan arranged by Djavid Pasha with French financiers have now been published. The amount will be seven hundred million francs and is to be applied largely to the payment of Ottoman debts. France obtains special terms for treatment in the ports of Haifa and Tripolis in Syria and in Eregli and Ineboli on the Black sea.

General Huerta has been eliminated from the electoral contest for President in Mexico, according to prominent members of the Catholic party. This party has nominated Frederico Gamboa, Mexican foreign minister, as its candidate. The selection, it is said, was made with the approval of General Huerta.

During the last twelve months Argentina purchased one million dollars' worth of automobiles in Europe, and the United States sold the republic more than eight hundred thousand dollars' worth.

INDUSTRIAL AND COMMERCIAL

With this year's estimated loss of one hundred million bushels of corn staring them in the face, Nebraska farmers have discovered that they must have more water for their crops and have turned their attention to the problem of securing it. In addition to the loss in corn, the failure of the oat, hay, potato, and other crops will this year cost Nebraska a total of at least one hundred million dollars as a conservative estimate. It is conceded that the water for the crops must come from the great underflow which sweeps down from the Rocky mountains in a southeastwardly direction to the Missouri river, and lies just below the surface and in some places can be reached at a depth of four or five feet. It is contained in a stratum of sandy gravel and is thought to be inexhaustible. Formerly this water was not so far beneath the surface but that the roots of corn were sufficiently long to reach the moisture; but since the completion of the big Pathfinder irrigation dam by the government in the Platte river in eastern Wyoming so much water has been impounded that the underflow in the Platte valley has fallen until it is now from ten to fifteen feet below the surface. This is alleged to be the principal reason for the crop failure in the valley this year.

Among the materials derived from seaweed kelp by a system of evaporation, heating, and distillation are sulphate of calcium, sodium, magnesium, and potassium,—all used in making commercial fertilizers. From the base potassium chloride are obtained potassium cyanide, potassium chlorate, and potassium nitrate. The cyanides are used in metallurgy, mining, and electroplating. The chlorates are used in making explosives, soaps, fireworks, and bleaching powders. The nitrates are converted into explosives, acids, and fertilizers. In the treatment of the dry kelp a certain part of the constituents become volatile. From these gaseous products ivory black, varnish gum, creosote, alcohol, acetone, and fuel gas are derived. Crude rubber also may be manufactured from the vine kelp.

Crops in Illinois, Iowa, and Wisconsin suffered to the extent of seven million dollars last year from the attacks of common white grubs, while the damage to corn, timothy, and potatoes in other infested areas of the country north of the Ohio river from the Atlantic ocean to South Dakota was at least five million dollars, so that the total loss last year from this cause was not less than twelve million dollars, according to the United States bureau of entomology.

A total money loss of one hundred and sixty-three million dollars was caused by the floods in the Ohio valley last March. The weather bureau estimates the sum, which includes loss to railroad, telegraph, and telephone lines and to farms and property, including prospective crops. The latter alone amounted to about eleven million dollars.

The total number of passengers in and out of the South station, Boston, in the fiscal year ended June 30, was 38,411,507; the total number passing in or out of the Grand Central station, New York city, was 22,403,295. The number of passengers going through the North station, Boston, for the same period, was 29,510,875.

Happiness

WILLARD S. MATTOX

THE sweetest experience that can come into our lives consists in doing good to others. There is no joy equal to the knowledge that we have helped some faltering step, that we have brought peace to some troubled heart, through our understanding of Christian Science. Now doing good, as we find in Christian Science, means thinking good, so that all the good we are ever able to do to our neighbor is really only a question of what and how we think about him. Right thinking is treatment in Christian Science; and when this is extended and applied to all of our daily affairs, it becomes the most practical kind of social service.

The realization that he is thinking right and doing right becomes the chief joy of the Christian Scientist, and this opens the way for the further metaphysical discovery which all may make, that for genuine and imperishable peace and happiness, we must always look within. The whole habit and tendency of mortal experience, however, is in the opposite direction. Our happiness, we have supposed, depended altogether on externals. The popular teaching is, that environment makes or unmakes the man; that joy consists in something contributed to us from the outside. Persons, the state of the weather, a hundred and one whimsical, ever-changing conditions, are believed to play upon mortal man, as one plays upon the keys of a piano, and this playing is too often in a minor mode. All this is according to the popular theory of existence. It is mortal mind's belief about its own conditions of happiness and misery and their supposed causes.

But this is not the truth of being. The truth, as we are discovering, is that, apart from educated belief, environment or material surroundings do not act or react upon mortals either for better or for worse. Man, on the contrary, under divine guidance, makes his own environment. The divine law of harmonious activity is the law of perpetual happiness to man. The Science of creation shows that what mortal mind calls the outer, has no effect upon the so-called inner, since man is governed solely by God. Consciousness not only "constructs a better body," as we are told in Science and Health (p. 425), but it constructs and determines the nature and character of the body's environment. Infinite good is man's only environment, since he lives and moves and has his being in God, in good.

Satisfaction, then, and happiness, and everything worth while, are not at the mercy of matter, of material place, person, or thing, for they are included in the kingdom of heaven, and that, we are told, is "within you." This knowledge fortunately removes our happiness from the realm of the uncertain and makes it absolutely and safely ours all the time. Bliss is consciousness of good, and God says, "My people shall be satisfied with my goodness." Goodness alone really satisfies, since goodness alone is permanent. It is our good with us, our God with us, which means and is all blessedness and happiness and satisfaction. Our thoughts of God, our good thoughts, bring peace, and without peace there can be no happiness.

Moreover, activity is the only true happiness; not the activity of matter, but the satisfying activity of Mind and its reflection. Stagnation, sleep, apathy, extinction, are the reverse of activity, and they are the conditions which mortals are taught to fear and to avoid. They are the reverse of happiness. The activity of right thinking is pure joy. Supreme happiness is the normal, constant reflection of the harmonious activity of divine Principle. It is, in the words of Mrs. Eddy, "a conscious, constant capacity to understand God" (Science and Health, p. 209). Happiness, in other words, is nothing more nor less than true being.

Further, there can be no real joy where there is not completeness. Mortals' experiences bring to them disappointment, sadness, unhappiness, because something is always lacking; mortal existence is not complete. There are so many things needed, so much desired, that because they are lacking there is no permanent joy. But Christian Science turns our thought hopefully to the contemplation of something more steadfast and consistent than the changing standards of human happiness, and the relative values of those things which make up the temporal affections and desires. Paul says, "All things are for your sakes," and the vision of the complete, the whole man, is unfolding to the student of Christian Science.

One thing we discover at once, viz., that happiness is not selfish. It is as universal and ever present as its divine author. There is no place where it is not, no time when it is not, and it is a free gift to all men. One's success in gaining happiness does not hinge upon the failure or the loss of another. Joy is diffusive, as Mrs. Eddy makes clear in the passage on page 518 of Science and Health, where she says, "Blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good." That is a travesty of spiritual joy which rises from the ashes of another's ruined hopes or is salvaged from the wreck of another's fortune. One can take no true pleasure in evil, in cruelty, nor can he truly profit by means of them. Man rejoices only in thinking and doing good.

The truest happiness is the result of unselfish love. "Bear ye one another's burdens" is a recipe for happiness, because these burdens, like Jesus' yoke, are made easy in the service of love, and they always bring their reward. Too many mortals mistake the pursuit and acquisition of material things for real happiness. The struggle to gain, to accomplish, to lay up for ourselves material treasure of any kind, never ultimates in genuine happiness. If we might paraphrase Jesus' words, they would read, "He that would be happy among you, let him be the servant of all." The joy of giving is incomparably greater than the satisfaction of getting, to all who understand the secret of unselfish living. Working for others is happiness. Working for one's self brings nothing but disappointment and defeat, as the history of the world of mortal mind unquestionably proves. "Antony sought for happiness in love; Brutus in glory; Cæsar in dominion: the first found disgrace, the second disgust, the last ingratitude, and each destruction." This seems to epitomize the misconception of happiness.

When we are tempted to believe we are unhappy, when our pleasure seems to be at the mercy of material happenings, we need to remember Jesus' comforting assurance, "Your joy no

Digitized by Google

man taketh from you," for the reason that our joy is within spiritual consciousness, where it cannot be discovered or disturbed by so-called material cause or material law. By giving to the world a better understanding of God, Mrs. Eddy has shown that in the Science of existence, infinity holds nothing but felicity and blessedness for man, and she has set the thinkers at work to discover a surer source and foundation for happiness than the world has hitherto known.

Distribution of Literature

ALBERT E. MILLER

In considering the distribution of Christian Science literature, there is one point which should be kept constantly before all who engage in this ministry, and that is the important part which this literature has in the healing of mankind. Not only are people healed of their false beliefs concerning this cause through the circulation of its literature, but in having such beliefs corrected, their interest is awakened to receive its appeal, and they learn in reading, that there is a deeper significance in the message which Christian Science brings than they had at first supposed.

It is interesting to consider how well our periodicals fit together in their educational effort. The average man does not know, as a rule, the extent of his real need in the way of healing until the awakening thought discloses certain erroneous mental tendencies which need to be corrected lest they work havoc later, even with physical health. It is the function of Christian Science to heal, to purify, to correct, and it is now generally recognized that Christian Science not only heals the physical ills to which flesh is supposed to be heir, but that it invariably brings out improved conditions when applied to business and to domestic problems.

The recognition that the emancipation of mankind from the bondage of evil can be brought about only through a process of spiritual education, prompted Mrs. Eddy's establishment of each of the Christian Science periodicals and was her motive in founding the *Monitor*. Beginning with the publication of "Science and Health with Key to the Scriptures," her whole effort has been one of loving service to the human race, and in the unfoldment of this work we see the establishment, first, of *The Christian Science Journal;* then, on the ever-broadening horizon appears the weekly paper, called the *Sentinel;* later comes our great daily newspaper, *The Christian Science Monitor*, in the breadth and scope of its service to mankind disseminating more broadly, and therefore making more widely available, this healing message. *Der Herold der Christian Science* has a no less important place in its appointed task of awakening the thought of German-speaking people to the need of a practical Christianity, one which heals all diseases as well as sin, and enables us to overcome all evil with good. Think for a moment, if you will, how this periodical has paved the way for the introduction of the German translation of Science and Health, a book which is destined to become more and more widely known and broadly helpful in all parts of the earth where the German language is used.

Not only the periodicals, but all the pamphlets and booklets issued by our Publishing Society, are maintained with the prime object of the emancipation of the human race from the bondage of false beliefs, manifested as sin, sickness, and death. Most Christian Scientists have no doubt discussed in their committee meetings the ways and means of promoting this work of distribution. In a general way the same rules of operation apply in all localities, and yet each locality has its own individual problems which must be worked out and dealt with intelligently. The broad and indiscriminate circulation of our literature is not half so good as the systematic selection of names of those who have a special need to be met; for example, the plan of marking with blue pencil articles in the *Monitor* which are of particular interest to the intended recipient, prepares for an intelligent approach to the paper by the individual, and insures a cordial reception for it which might not otherwise be extended, particularly if the paper has not adjusted itself to the individual's personal interests.

The chief message which our daily paper brings to humanity is the word of reassurance coming in the form of the article on Christian Science found on the Home Forum page. This article, which is quite sure to be discovered by even the casual reader of the *Monitor*, offers a sip of refreshing water to the "weary wanderers, athirst in the desert" (Science and Health, p. 570). If this taste is acceptable, consciousness is usually awakened to make further inquiry. The *Sentinel*, if it follows such introduction to and inquiry into the subject of Christian Science, furnishes testimony of cures which may awaken in the recipient's thought the memory of physical struggles which he himself may have had, but with which, in the absence of a knowledge of Truth that gives one's efforts assurance and power, he groped in darkness to find a cure or remedy. The articles in the *Sentinel*, which are expressed in a more intimate tone than the message of the daily article in the *Monitor*, show that Christian Science meets the need in every department of human life.

If the *Journal* then falls into the hands of the inquirer, it comes with a message which engages the more profound thought of the seeker after Truth, at the same time giving in its directory columns the location, not only of local churches and practitioners, but of those of the entire world, so that if it is deemed desirable, friends and relatives living at a distance may be directed into the right paths in their search for Truth.

Thus we see that, like the cable which is put into permanent position by first drawing through the conduit a lighter line of wire, which, in turn, leads the heavy cable to find its place, so the thought of the inquirer is led and strengthened until it is enabled to follow the direction of Truth's message, as given in our periodicals, and to work out its own salvation through the application of scientific thinking to earth's problems, the solution of which is found through studying the Christian Science text-book, "Science and Health with Key to the Scriptures," and the Bible.

An Appreciation

CHARLES K. MILLER

The writer has always been an ardent lover of the "great out-of-doors," the mountains and lakes, forests and streams, and all the activities that have come to be associated with them. From early boyhood he has looked forward to every opportunity which he might have to don rough clothing and get away to some "near to nature" spot; and while it always seemed as though love for nature was the moving thought, the zest was always sharpened by the so-called sportsman's desire to "bring down something," whether it were birds, animals, or fish. Fishing, however, was his favorite sport, and as he grew into manhood he took great pride in being considered an ardent and successful follower of Izaak Walton, and few were the vacations planned that had not trout fishing as the first consideration.

Well does he remember that on many an occasion the better man within him came to the front and questioned his motive and desire, showing him the possibility of a better, higher

Digitized by Google

kind of sportsmanship; but this was brushed aside with the thought that so many of the people he admired for their ideals were indulging in the same kind of recreation. Then Christian Science was taken up as a study, and the first season thereafter he went as usual to his favorite spot in the mountains to enjoy a fishing trip. But the clearer thought awakened by this teaching was making it impossible for him to proceed without questioning his motive and analyzing for the rightness of the thing being done, and he came home convinced that the only conquest rightly to be desired is the conquest of evil, and the only necessary struggle is the seeming struggle between good and evil, truth and error. He did not believe that a fish was evil or error, and he saw in some degree the illusory nature of what he believed was a gratification of his desire for conquest,—desire to outwit and get the better of some form of life less intelligent than himself but with determination not to let go without a struggle.

Not long afterward he met a deer in the woods, and through his growing understanding of the harmony existing in God's creation, had the pleasure of seeing the beautiful animal browse for some minutes within a hundred yards and in plain sight, with little fear of molestation. Through this experience and others, thought avenues were opened, and continued study of the Bible and the writings of Mrs. Eddy replaced the old beliefs of pleasure and recreation with more healthful ideas. His recent vacation in the usual spot, amid what had formerly been such tantalizing invitations to "cast the seductive fly," found him with a larger thought of love for all God's creation and little desire to lure a happy creature away from its accustomed haunt. He saw the unworthiness, the absence of every thought of helpfulness or kindness, in thus cruelly entrapping an innocent creature just to be amused. Then there came the joy of a great freedom from the bondage of a false sense of sport.

Surely Christian Science is ushering in that state of being depicted by Isaiah when he said, "The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them."

True Reform

BRIGMAN C. ODOM

A STRONG tendency of the human mind is to justify its own acts. When the average schoolboy under the fire of discipline is asked why he did a given thing, he is quite sure to answer, "Others do it." Adam said, "The woman whom thou gavest to be with me, she gave me of the tree, and I did eat." Mortal mind is the sinner; it believes in other gods and is more or less under the control of them. Left alone, unaided by a better influence, it is tyrannical, selfish, uncharitable. It will cheat and lie and steal. It will violate all the commandments and then undertake to find excuses for so doing.

Such is the conduct of men in the world without God. With God, or with a spiritual understanding of Him, they can improve. With the practical knowledge of God's grace which is attainable through the teaching of Christian Science, some have already made considerable progress, and all who make the effort will find the way out of evil and suffering becoming easier and growing brighter as they advance. Error may seem here and there to score a point, but if the situation be correctly analyzed and the lesson learned from it, a triumph for good is the outcome. The fearless reformer oftentimes shocks and offends the self-satisfied sense of the conformist, but the result of his work means greater freedom and happiness, not only to his contemporaries, but to future generations as well.

It seems easier to condemn one in his weakness and fall than to lend a helping hand or to give a kindly word of encouragement. Jesus said, "He that is without sin among you, let him first cast a stone," or bring an accusation. In this connection these words from our Hymnal (No. 53) are pertinent:—

Help us to help each other, Lord,
Each other's cross to bear;
Let each his friendly aid afford,
And feel his brother's care.

To evangelize the human self, to educate it through right thought-processes out of its unworthiness up to the recognition of ideal manhood, is the problem that confronts every one of us; and he who is working honestly and understandingly in this direction, is making some advancement day by day. Sometimes he may stumble, sometimes he may fall, but in either case there is open to him but one wise course, and that is, not to draw about him too closely the garments either of self-justification or of self-condemnation, but to rise up quickly and go forward again. God is merciful and just, and demands only that one shall bring himself into harmony with the truth and be free. "Thou shalt by no means come out thence, till thou hast paid the uttermost farthing."

Sickness may be overcome and every form of error in the human consciousness may be eliminated through the right knowledge and understanding of God. In the language of the revelator, "To him that overcometh will I grant to sit with me in my throne, even as I also overcame, and am set down with my Father in his throne."

"My burden is light"

MARY THORN

BEFORE studying the teachings of Christian Science, I often wondered what Jesus meant when he said, "Take my yoke upon you, and learn of me; . . . For my yoke is easy, and my burden is light." I had always thought of his ministry as attended with so much labor and persecution that it seemed to me he bore a heavy burden rather than a light one. It was a little experience which led to a demonstration that opened my eyes and revealed the true meaning of this text.

Some work which came to me to do, and which I accepted as a duty, for a time bore heavily upon me. As I continued to seek the scientific and true sense of the problem, it flashed across my thought one day that the only demand made upon me was to reflect Love. I realized that Love is ever present and infinite, and can therefore never be exhausted; also that the ability to reflect Love is part of consciousness itself, and can never be lost or even limited. Thus the duty became an opportunity which I used gratefully, and through which I was blessed. This demonstration opened the way for others, and I am continually blessed in my daily work by accepting every task as an opportunity to serve God by reflecting Truth and Love.

As mankind learns of the infinite resources of divine Mind and of man's oneness with this Mind, the problems which once appeared difficult become simple because of an ever-increasing sense of dominion and power. Instead of accepting the suggestions of evil as true, the Christian Scientist, instructed by Truth, meets them as falsities without power. He is thus redeemed from fear and its torment; and placing his whole reliance upon God, Spirit, he is able to meet the arguments of error with the scientific statements of Truth which reverse the false testimony of sense and reveal the facts of Soul as perfect, harmonious, and eternal. To dwell in the secret

Digitized by Google

place of the most High, demonstrates the fact that heaven is an ever-present reality. It proves that here and now, in doing the work of today, in meeting the present and ofttimes pressing obligation, we have opportunity to prove God. Mortal mind is prone to look far off for heaven and into the distant future. The temptation to postpone the hour of salvation and to limit it to certain material conditions is one of error's most subtle claims.

The opportunity to know and obey the will of God is ever present. This is the foundation of all happiness and prosperity, and is a present possibility to every individual in the universe. Every step of the way forward means more joy and peace, greater freedom and greater power. It is written in the Scripture, "For the Son of man is not come to destroy men's lives, but to save them." Truly the world is being saved by the coming of the Christ-idea into human consciousness through the teachings of Christian Science, and burdens that have grown heavy are being lightened by the inspiration of Truth and Love. Mankind is thus learning to seek and to find its highest happiness in obeying the law of God, which is the law of ever-present good.

✧

Material Thought Silenced

MARY HICKS VAN DER BURGH

EARLY in his career, Jacob by deceit won the coveted birthright, but fear of the brother whom he had thus defrauded made him an exile from the land of his fathers. In the beginning of his travels in the strange country, as he rested for the night in a lonely place, an angel appeared to him, and God talked with him, saying, "I am with thee, and will keep thee in all places whither thou goest." Awaking from his sleep Jacob said, "Surely the Lord is in this place; and I knew it not." It is not probable that after this experience he could ever have repeated the disreputable transaction of the stolen blessing, for the good thought which had come to him had shown him a better way and he was awaking to the demands of the higher ideal.

Thus awaking to a better understanding of God and our relations to Him, we have sometimes expressed a wish that we might have known of Christian Science earlier in order to apply it to some former condition. However, the remembrance that God was even then with us though we knew it not, and in spite of our wrong beliefs was leading us through those very experiences to our Father's house, is so comforting that we can afford to forego the speculation as to what would have been the effect of the better understanding on the past environment, devoutly thankful that we are now awake and alert to our privileges.

From our own experiences with angels, "God's thoughts passing to man" (Science and Health, p. 581), we can judge what a help this visitation was to Jacob and with what courage it inspired him to meet the difficulties which he encountered as a member of Laban's household. Here he was himself treacherously dealt with, and, according to the record, obliged to work overtime, his wages being changed ten times by his father-in-law. We read that after many years of injustice, Jacob made an ineffectual effort to leave Laban, but continuous treachery at last drove him to the final attempt, which seemed to have been successfully accomplished when he was overtaken by Laban, who with alluring words tried to induce him to return. But God, who had been Jacob's counselor and adviser, would not let the mortal thought prevail, and Laban admitted that he had been told by the God of Jacob, "Take heed that thou speak not to Jacob either good or bad."

Is it not true that when we are following the highest thought which comes to us, and take a firm stand in the way of obedience, the mortal thought is silenced for us, as it was for this old-time servant of God? How many questions are settled for the Christian Scientist in the time of silent communion with God, when the door of the senses is shut and material pleadings silenced by the "Peace, be still," with which the Master commanded the wave. Like Jacob we have started on our journey to our Father's country, and there is no obstruction that can stand in the way of him who thus honestly comes out from the material beliefs at God's command; and to us also the angels will come from time to time. Wrestling alone with another problem, Jacob obtained the blessing which gave him power with God and man. This blessing is also for all who go out reflecting the love and humility which has been learned through such an uplifting experience, and on such also will the light shine, the light of "the Sun of righteousness . . . with healing in his wings."

In this spirit of reflected love Jacob was able to meet the brother whom he had injured in his youth in such a manner that the long-standing family feud was healed, and furthermore the rude inhabitants of the land through which he took his journey did not pursue him. For all this good Jacob did not forget to make acknowledgment, and his progress is marked all the way by altars erected to God in memory of deliverances. So it is with Christian Scientists. We are marking the way with acknowledgment of deliverances from pain, lack, inharmony, sin, and every sort of ill, in our Wednesday evening testimonial meetings, and the volume of gratitude is constantly increasing as the deliverances from bondage are multiplying.

The study of Jacob's history is inspiring and encouraging. If from a nature so seemingly material as was his there could evolve the concept of a spiritual Israel, none of us need despair. Let us hear what our revered Leader says: "The infinite Spirit being all, mortal consciousness will at last yield to the scientific fact and disappear, and the real sense of being, perfect and forever intact, will appear" (Science and Health, p. 295). Surely, then, we cannot doubt that God will silence for us the insistent mortal thoughts, and that through the high places of Christian experiences the angel of His presence will lead at last "unto the utmost bound of the everlasting hills."

✧

[Written for the *Sentinel*]

Divine Allness

SIDNEY B. COHEN

O TRUTH divine, descending as a dove,
Thy voice a presence, breathing forth Thy love
In heavenly song, expresseth good from Thee
To all who seeking light find liberty.

Thou ever-present Love, Thy mighty power
Through rays illumed reveals Thee every hour:
God in all glory, wisdom, joy, and bliss,
Is Love enfolding all in blessedness!

O ceaseless Life, abiding 'midst Thine own,
Thou in Thy splendor shineth forth alone,
In wond'rous works that answer to Love's call
And rise in glorious forms that breathe Thine all!

Thou who art All-in-all, thrice blessed One,
Immortal Truth, Life, Love, Thy will be done!
Through changeless days, pervading boundless space,
All good Thou dost express, in heavenly grace!

Selected Articles

[Frederick Dixon in *Kentish Express*, Ashford, Kent, England]

There is a great deal in a point of view. A recent critic is overjoyed because he has found a penny pamphlet which is apparently to prove the small smooth stone to strike the Goliath of Christian Science between the eyes. I, on the other hand, have seen a whole library, and a very large library, of anti-Christian Science literature published, and have never been able to discover that it has had any effect beyond introducing Christian Science to a larger public and creating a more definite interest in it. I remember a delightful instance of this, when Mark Twain published his book. A gentleman came into a Christian Science reading-room and inquired where he could find a practitioner. The librarian asked him what he knew about Christian Science. Nothing whatever, he replied, except what he had picked up from Mark Twain. The pulpit is very useful, too, and it is interesting to hear that, the cloistered seclusion of the *Parish Magazine* not having supplied an arena where a man may deliver an attack without fear of reply, refuge from retort has been found in the parish pulpit at Tenterden. The "no reply permitted" form of argument is not without its value as a demonstration.

The critic is angry with me, not so much for what I have said as for my having emphasized what he has said, and this is distinctly ungrateful. When he talked pathetically of the religion of "the old homeland," I only encouraged him not to be despondent, by pointing out that Christianity was not confined to the British Isles, and had not even originated there. When he grew troubled over the idea that religion could be scientific, or, as he put it, "cast iron," I merely ventured to hint that Truth was after all "cast iron," and that a knowledge of Truth was the most scientific knowledge attainable. When, all unconvinced, he produced that old familiar text, about science falsely so called, I simply pointed out that the Bible was not written in Anglo-Saxon, and endeavored to convince him that Truth is scientific, with the help of the fourth gospel and that great scholar, Dr. Westcott, sometime Bishop of Durham. When the critic, rather irritably, denounced me for trying to frighten him with Greek, I could only explain that if Wyclif, and Tyndale, and Coverdale, and the translators of the King James version had been so contemptuous of Greek, we should never have possessed the Bible of "the old homeland;" but when he went further and threatened me with the devil, I tried, out of the mouth of another orthodox scholar and churchman, almost as famous as Dr. Westcott, to get him to understand what the Bible really does mean by devil, the sole result being that the critic thunders that when a man believes a lie he believes it, a sentiment I am not inclined to question, and that "consequently all who oppose are seen through a glass very darkly," a piece of exegesis from which I entirely dissent.

At the risk of giving further offense to the critic, I am going to quote the translation of this last passage made by yet another great orthodox scholar and teacher, the latest man to do for the text of the Bible what was begun by Bede, continued by Wyclif and Tyndale, and, in the face of every discouragement, has been carried on ever since. The object of making this quotation is to show that the meaning of the great Christian philosopher, preacher, teacher, and, let me add, scientist and healer, was to impel men to take a vastly wider point of view than anything dreamed of in the philosophy of the critic,—"The things we see now are reflections from a mirror that we have to make out as we best can, but then we shall see realities face to face." What, quite obviously, Paul was endeavoring to convey, was the Christian view of the unreality of material phenomena, so unlike, though superficially so similar to, the teaching of the schools from the time of Plato to the day of Berkeley, and from the day of Berkeley down to our own times.

When Christian Science insists that matter is unreal, it does not in the least imply any such unrelated nonsense as is insinuated in the puerile criticism that it says that nothing exists. That is the sort of argument which burned people for saying that the world was round, on the ground that in such a case the coming of the Lord, at the last day, would be invisible at the antipodes; or which, three centuries later, disproved the Berkeleian theory by the amount of force with which the sole of a boot could be brought in contact with a paving-stone. What Christian Science really does teach on this subject is that every material phenomenon is a lie about a true spiritual phenomenon, and consequently that man, made in the image and likeness of God, is spiritual and not material. Human deductions from the book of Genesis, argued out on a purely material basis, have made God in the likeness of sick and sinning humanity. The fourth gospel, however, declares that "no man hath seen God at any time," and what Mrs. Eddy has written, on page 19 of "No and Yes," agrees absolutely with this: "What the person of the infinite is, we know not; but we are gratefully and lovingly conscious of the fatherliness of this Supreme Being." If, then, no man hath seen God, no man, it is tolerably certain, has seen the image and likeness of God, for God, Jesus told the woman of Samaria, is Spirit, and no one except Jesus was ever sufficiently spiritual to see spiritual man, who is as perfect as his Father in heaven. Who, then, created the material, sinning, human being? for God made all that was made and made it good.

This question was answered by Mrs. Eddy in a way which positively alarmed the materialists, striving to believe that God, whom they that are in the flesh cannot please, nevertheless in His omnipotence created that which not only Paul says cannot please Him, but which Jesus himself said "profiteth nothing." Matter, Mrs. Eddy says, is simply what the natural scientists of today claim it to be, the subjective condition of mortal mind, or the manifestation of energy; but that mind or that energy is itself the negation of the divine Mind or activity which has created all that is made, the spiritual universe.

What, then, demands human intelligence, *more suo*, is the origin of matter? To answer this question you must first gain what Paul calls a scientific knowledge of God, since then, and only then, will you be able to grasp the unreality of matter. The only man who ever yet has absolutely possessed this knowledge is Jesus the Christ, and even he could not impart it to those lacking the necessary spiritual perception. For this reason, he fell back on the miracle or sign, declaring that if men could not believe his words, they must believe for the very works' sake. The man who knew the nothingness of matter was the man who fed the multitude, gave sight to the blind and hearing to the deaf, walked on the water, and raised the dead.

This is the significance of the miracle, the sign or object-lesson which Jesus himself demanded as the test of a man's belief. "Faith without works," without those works which Jesus himself demanded in demonstration of a man's faith, "is dead." The night of mere preaching is gone by. The day of demonstration is dawning. For the future, it will not prove sufficient to waste your time in more or less angry insistence on your neighbors' shortcomings; it will be necessary to do better yourself.

[John L. Rendall in *Toledo* (Iowa) *Democrat*]

Lest some one should be misled by our clerical critic's perversion of the Christian Science definition of God, let me here state unequivocally that Christian Science teaches but "one God, the Father, of whom are all things." Our critic states, "According to Mrs. Eddy, God is not a person, but an influence, a principle." This statement betrays the most superficial sort of reasoning. Were he more familiar with Christian Science, he would understand that when Mrs. Eddy defines God as Principle, she clearly and scientifically recognizes Him to be the one Principle, Mind, Spirit by reason of which all things are and have their origin and existence. In her Message of 1901 to The Mother Church, Mrs. Eddy states (p. 4):—

"We understand that God is personal in a scientific sense, but is not corporeal nor anthropomorphic. We understand that God is not finite; He is the infinite Person, but not three persons in one person. Christian Scientists are theists and monotheists. Those who misjudge us because we understand that God is the infinite One instead of three, should be able to explain God's personality rationally. Christian Scientists consistently conceive of God as One because He is infinite; and as triune, because He is Life, Truth, Love, and these three are one in essence and in office.

"If in calling God 'divine Principle,' meaning divine Love, more frequently than Person, we merit the epithet 'godless,' we naturally conclude that he breaks faith with his creed, or has no possible conception of ours, who believes that three persons are defined strictly by the word Person, or as One; for if Person is God, and he believes three persons constitute the Godhead, does not Person here lose the nature of one God, lose monotheism, and become less coherent than the Christian Scientist's sense of Person as one divine infinite triune Principle, named in the Bible Life, Truth, Love?—for each of these possesses the nature of all, and God omnipotent, omnipresent, omniscient."

The statement, "God is All," means simply that God is the one infinite creator and "Principle of all that really exists" (Science and Health, p. 39). St. Paul speaks of the time when "all things shall be . . . subject unto him . . . that God may be all in all." God already is all that He ever can be. There can be no limit for omnipotence, omniscience, and omnipresence. Mortals have not yet fully discovered the fact of God's allness, but this does not in the least infringe upon this forever fact.

✦

[Henry Deutsch in *The Herald*, Duluth, Minn.]

In a report of a sermon in a recent issue is a statement with reference to Christian Science. I desire to say that the teaching of Christian Science is very unlike that of New Thought, spiritualism, or theosophy. Christian Scientists respect the right of other people to believe in their particular faith or doctrine, and do not assume to judge or condemn them therefor. While we may not agree with their views or practises, we concede to them the respect to which they are entitled in their religious beliefs, as guaranteed to all American citizens under the constitution of our country.

So far as the further statement about Christian Science is concerned, I might say that mere words or personal statements are not proof. Our Master said, "Love your enemies," and it is a very simple question to determine which are the greater enemies of the Christ—those who consistently follow and earnestly and sincerely strive to emulate the teachings and works of the Master, or those who profess to do so and spend their time in condemnation and persecution of those who are unfortunate (?) enough to be unable to agree with their particular creed or doctrine. It must be remembered that Christianity derives its name from Jesus the Christ, and a Christian is described as one who follows the teachings of Jesus. He defined what constituted, in his judgment, a true religionist, or one to whom might be guaranteed eternal life, which is the *summum bonum*. When he was asked, "What shall I do to inherit eternal life?" he did not prescribe any creed or doctrine, or a belief, but he referred his questioner to the rule of the older Scripture: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself."

It must be remembered also that when he was asked by the disciples sent by John whether or not he was the Messiah or Christ, he did not formulate a doctrine or creed or make any statement of tenets or belief; his answer indicated the test of the Christian, "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." At another time he exemplified the fact that others besides himself or his followers might also be manifesting the God spirit as shown in the passage in Mark ix. 38-40.

Christian Scientists have neither the time nor the inclination to quibble over words or forms of faith. They are striving to follow both in the letter and in the spirit, both by profession and by works, the injunctions of the Master, and by their fruits to prove the correctness of their faith. That they should bring attack and persecution upon themselves is entirely in keeping with the experience of the Master and the prophecies with respect to his followers that we find throughout the New Testament. Self-constituted critics, and those who in their vanity arrogate to themselves the judgment-seat as to what is not a Christ follower, manifest no originality, but simply repeat in this day the example of the Pharisees and scribes in the time of Jesus. Christian Scientists are faithful, loving, law-abiding citizens and followers of the Master with the best light that they have; and that has been sufficiently illuminating to enable them to repeat the marvelous works of the Master and his apostles; to bring to this age, in a slight degree at least, the healing of the sick and the redemption of the sinning in the manner which the Master prescribed.

The Christian Science religion has one God, who is Love, and therefore there is no room for enmity either against mankind or anything except error and evil, which we seek to destroy by the realization of the allness and omnipotence of God. How much nearer we would come to the millennium if our good friends in the pulpit would refrain from criticism and condemnation, and instead expend their time and assiduously devote their labors to ushering in the demonstration of "on earth peace, good will toward men."

✦

[John W. Doorly in *The Chronicle*, Bolton, England]

In a recent issue I notice with pleasure the Bishop of Manchester's remarks on Christian Science. The kindly spirit displayed by the bishop is undoubtedly worthy of a man in his position. He feels, however, that Christian Scientists should go a step farther, and look not only at the God within them but at the Christ within them. The bishop will undoubtedly be pleased to know that Christian Scientists realize in the fullest sense that God can be understood only through His Christ, or divine manifestation.

The teachings of Christian Science are very explicit on this point, and clearly show that man can be saved only through what St. Paul calls, "Christ in you, the hope of glory;" and they claim and prove that the Christ within conscious-

Digitized by Google

ness is able today to heal the sick and the sinner, just as Jesus did nineteen hundred years ago. In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 496), it is written: "Hold perpetually this thought,—that it is the spiritual idea, the Holy Ghost and Christ, which enables you to demonstrate, with scientific certainty, the rule of healing, based upon its divine Principle, Love, underlying, overlying, and encompassing all true being." Christian Scientists therefore recognize very clearly that Christ is indeed the Way.

The bishop also spoke of a very acute philosopher who had made a great study of Christian Science. As Christian Scientists we have discovered that it does not need a philosopher to understand Christian Science, but a Christian, and he alone, indeed, can understand it. Our Saviour's teachings were most fully understood and demonstrated, not by philosophers of that day but by a few Christly-minded fishermen. Indeed, the philosophers seemed quite unable to comprehend his teachings.

It is the kindly criticism of such men as the Bishop of Manchester which brings out more clearly than ever the points of unity in the various religious bodies, and thus prevents that which we all so deplore, the desire to dwell unnecessarily on points of divergence.

✧

[R. Stanhope Easterday in *Shelbyville* (Ind.) *News*]

Mrs. Eddy does not claim to have originated one iota of Truth, but to have discovered again the Christ-method of healing and regeneration made clear to the world by Jesus and practised by the early church for about three centuries. Jesus himself in turn based his teachings upon the Mosaic dispensation, and claimed only to have come into the world to "show us the Father," and made it clear that this same Father is "the God of Abraham, and the God of Isaac, and the God of Jacob." The God of Christian Science therefore and the human recognition of divine Truth date, the one back prior to time, the other back to the earliest spiritual thinkers. We cannot reasonably doubt that the great reformers and teachers in all ages since the beginning of time have had some glimpses of infinite Truth, and philosophies and religions that have survived have done so solely by reason of this fundamental savoring of truth.

✧

[John H. Wheeler in *Kansas City* (Mo.) *Journal*]

One reason advanced by our critic why he could "not be a Christian Scientist" was that it would require of him to become "intellectually dishonest," a most startling implication of this Christian faith which, if provable, would disrupt its claim to teach Christianity. During Paul's ministry he once said, "Let this mind be in you, which was also in Christ Jesus," which mental attainment, he deeply felt, would be the greatest blessing a mortal could possibly experience, even that spiritual uplift which would in due time immortalize him. Hence, the goal of all Christian faith is to lead mortals to become immortals. None question our Saviour's being intellectually honest, or of not being spiritually consistent with God's law and order. His mental poise was always scientifically correct and concurrently accurate in purpose and result. In other words, Christ Jesus was, mentally and physically, the best balanced of all who dwelt on earth; consequently Christianity's whole text and purpose should teach that our redemption is only possible in being, even as our Saviour was, superior to sin and its results, namely, sickness and death. Paul's views were in perfect accord with those of Jesus, who said, "The Son can do nothing of himself, but what he seeth the Father do." This profound declaration is an example of self-abnegation and absolute human obedience to spiritual law; a sweeping testimony from our Master that there is properly but one supreme Mind in the universe, who is the only guiding intelligence for all men, which fact wholly discredits the human mind's assumptions.

Christ Jesus was a profound thinker, whose sole purpose was to inspire mankind to adopt God's law wholly into their earthly experience in order to realize the omnipotence of Truth in human life. Truth is one of the terms used by our Saviour to designate God's character and being, as he said, "Ye shall know the truth, and the truth shall make you free." This freedom, then, is the possible possession or knowledge of man's true selfhood, a spiritual reality, which would preclude one's being deceived by an erroneous pretense to this reality, namely, being a carnally-minded, helpless victim of ignorant and wilful sin. So while Jesus healed the multitudes of their sinful, fearful, and imperfect human sense of life, he did it through his exalted spiritual knowledge of man's actual life being immortal and not carnal, as it seems to be, thus lifting them heavenward. The physical results were, with the sinner, a repentance, and with the sick, a restoration to health. Our Saviour was the only one who followed the teachings of the holy Word without mistake or counter human opinions. The multitudes saw God acknowledged by him in example and precept, as Jesus once prayerfully said, "He that sent me is with me: the Father hath not left me alone; for I do always those things that please him," which illustrated his secret of being sinless; and the four gospels are a brief exposition of his wonderful ministry of word and act in its effect upon mortals, which was calculated by him to be a sufficient guide for all to reach the plane of his mental and spiritual poise, which attainment would expel from their thoughts all sin as worthless, even in human life.

So our critic's statement concerning Christian Science is true: "Christian Science was born to emphasize a great spiritual truth that the Christian world seemed to forget, namely, the superiority of the spiritual life," but his surmise that in years to come it will change its doctrine will never be realized, for Christian Science now faultlessly teaches mortals how to know the absolute nature of God through the daily spiritualization of their own human consciousness to conform more and more to God's law and order of life, as the psalmist sang, "I shall be satisfied, when I awake, with thy likeness." This is the relative requirement of mortals who seek to approach God in the absolute nature of His being. We cannot change God, nor His spoken word, but we can gradually change our human opinions and conceptions of Him to conform to His divine perfection, and in so doing abide in His eternal infinite nature and spiritual law. Christian Science is wholly concerned in bringing about this change in every experience of human life through the adoption of the example and teaching of Jesus Christ and its application to this life. When this teaching is understood better, the minor objections concerning its treatment of matter and the use of drugs will vanish, for these statements of truth are needed to spiritualize mortal existence, that its every thought and activity may thereby "put off the old man with his deeds," and "put on the new man," "till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Editorial

A Dual Mission

By far the greater part of the unnecessary opposition which attends the demonstration of the healing truth discovered by Mrs. Eddy, is induced by ignorance, or rather a mistaken sense of the mission of Christian Science to mankind,—a failure to apprehend that its ministry is twofold, in that its healing of the sick is the natural concomitant of the overcoming or casting out of the false belief of which the sickness was the tangible manifestation; that it is a new-old religion, so radical in its reliance upon the divine all-power, so wide reaching in its results, that in scarcely more than three decades its churches have girdled the world.

Nor is this opposition surprising in view of the fact that it is through its healing works that Christian Science makes its strongest appeal to suffering humanity. Mrs. Eddy might have expounded the great truth she had discovered, and have won adherents; but if this had been all, Christian Science would today be classed with the hundred other variants of the Christian religion that have their little day and then make way for others just as ephemeral. But the great fact that differentiates Christian Science is the proofs of its verity as the teaching of the Master in the "signs" which he declared should attend the preaching of the gospel by his true followers,—"them that believe,"—in the multitudes who have been healed from sickness and redeemed from sin either by their own study and application of the teachings of its text-book, "Science and Health with Key to the Scriptures," or through the clearer understanding of its divine Principle, God Himself, by one who has been longer in the way.

The great Master came among men, and preached the gospel of the kingdom in all its purity and blessedness. And when his admonitions fell on unheeding ears, then, with a heart overflowing in compassionate yearning for those so markedly in need of the gospel of salvation, the great Teacher began that ministry to the sick and the sinning which proved the verity of his claim as no mere assertions could have done.

Even so was the great truth of the present-day efficacy of the Christ-healing, discovered by Mrs. Eddy, received by the world at large. They laughed her claim to scorn, derided her teachings; but when in the face of their scoffings she healed the sick in proof of the truth of her discovery of "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1), they could but recognize the existence of a Science ignored in the schools of theology, philosophy, and medicine, but nevertheless Science, because demonstrable, capable of proof by those who understood its Principle.

However, these works of healing, although they carried the day for Christian Science, were only a means to an end, for the mission of Christian Science, as Mrs. Eddy explains on page 150 of Science and Health, "is not primarily one of physical healing . . . these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world." Christian Science is essentially a religion of doing—a religion of daily living—and its adherents go out in the world of business and professional life, in the precincts of the home or the wider field of social and industrial endeavor,—each and all invested with the same dual mission on which the disciples fared forth, namely, "to preach the kingdom of God, and to heal the sick."

Such in epitome is the high calling of every Christian Scientist, this the cause in whose defense we have "put on the whole armor of God" to the ultimate overcoming of sin, disease, and death, the destruction of all error. Wherever we are, whatever the special work in which we are engaged, we are to "preach the kingdom of God,"—let our words and our acts attest the truth of our profession that we are striving to order our daily living in accordance with the divine commandment to love God supremely and our neighbor as ourself. So witnessing to the truth, we shall gain that "power over all the power of the enemy" which will enable us to fulfil that further command: "Into whatsoever city ye enter, and they receive you, . . . heal the sick that are therein, and say unto them, The kingdom of God is come nigh unto you." We are not to cast our pearls where they will be trodden under foot, but so long as there are sick and sinning mortals to be healed and regenerated, so long will "he that hath clean hands, and a pure heart," find scope for his fullest endeavor.

ARCHIBALD MCLELLAN.

From the Passing to the Permanent

No thoughtful observer of the marvelously varied tints with which the hedges and hillsides are reporting autumn's advance, these days, can fail to understand the saying of one that he could never look upon the fading of nature's beauty, whether in the heart of a flower or in the face of a child, without a sense of sadness. The lapse of anything chaste and sweet and pure does seem entirely out of keeping, and must bring pain to all who, while sensitive to the integrity of the ideal, fail to distinguish between God's universe and the universe of matter. This pain, moreover, is likely to be greatly intensified as one is compelled to look upon the unseemliness and decay which attend the passing of all material things. An opening rose, which so delights the senses with its form, fragrance, and color, may seem "divine," but tomorrow this same blossom may nourish a ravenous sensuality, and prove an offense to both sight and smell in its hastening decay.

In the order of mortal belief there is no escape from the shock of such an experience, since it insists that the law of death is no less legitimate than the law of life whose manifestations it is ever waiting to fasten upon and destroy. Those, therefore, who are dependent upon and limited to mortal sight for the satisfaction of their love of the beautiful, must accept a full cup of regret with every sip of pleasure. They can indeed treasure the indefinite remembrance of past delights, and this enforced resort to the mental realm may awaken thought to the possibility of possessing that spiritual sense by which St. Paul was manifestly profiting when he said to the Corinthians, "We look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal."

The great apostle never made a statement which more clearly reveals his apprehension of the Science of being. He had not yet fully worked out his problem, was not "already perfect," as he frankly conceded to the Philippians, but his attention was supremely devoted to the minding of spiritual things. His gaze was fixed on the eternal. He was maintaining that mental attitude described by Mrs. Eddy when she says, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, p. 261).

Christian Science saves one from the sadness and pessimism which so often rests like a pall upon those who are predisposed to dwell upon the breakdown and defeat of the mortal sense of goodness and beauty. It establishes the understand-

Digitized by Google

ing that the only real and abiding world is a thought world, and the philosophy of this redemptive idea is expressed by our Leader when she says that "divine Science, rising above physical theories, excludes matter, resolves *things* into *thoughts*, and replaces the objects of material sense with spiritual ideas" (Science and Health, p. 123). The student of mathematics is constantly making queer little pencil marks, and these so-called figures serve him a useful purpose; but he knows full well that the reality with which he has to do is wholly separate from and unaffected by them, and he therefore experiences no sense of loss when in due time his thought-signs are erased. In a kindred way, Christian Science teaches us to identify every truly lovable and worthily longed for thing with Spirit, to realize that it is imperishable in the embrace of Mind; hence there is and can be no occasion for sadness or sense of loss when its symbols disappear.

This explains the awakening and quickening influence of Christian Science. It is leading thought from the surface to the center of things; from the superficial to the vital fact; from the seeming to the real, from darkness and disharmony to light and law, from error to Truth; and its students oft-times find the parting of the ways in so simple an experience as the perception of the delicate tones of an autumn leaf.

JOHN B. WILLIS.

✧

Apparel

THE subject of apparel is often presented in the Scriptures, showing that from the earliest times mankind have considered clothing to be as necessary as food, a fact which Jesus commented upon in his Sermon on the Mount, when he bade his followers to take no thought for either, but to seek "first the kingdom of God, and his righteousness" and that then all these things would be "added." The great Teacher has here no word of condemnation for those who delight in dress, but he does say that "Solomon in all his glory" was not arrayed like one of the lilies of the field.

In seeking "first" the kingdom of God, the subject of apparel is surely made secondary to righteousness, and if one's attire does not represent the mental qualities of honesty, purity, and unselfishness, his or her right to a place in the kingdom may well be questioned. If, for instance, one wears clothing for which the maker has not been paid, or the purchase of which lays a heavy burden upon another, the "righteousness" demanded by Christ Jesus has been made secondary to the plea of personal sense, and we have instead a blind following of those who in all the ages were ready to exchange the things of Soul for the sensuous splendors of the world,—"the lust of the eyes, and the pride of life." In the Bible we read of many who were "gorgeously appareled," and the prophets of the earlier day did not fail to sound their warnings against those who forgot righteousness and wantonly displayed their adornments, and who did not hesitate to "grind the faces of the poor."

While we have no direct statements from Christ Jesus on the subject of apparel, beyond those already noted, we find in Peter's first epistle some vital utterances which should be pondered by all students of Christian Science, especially by those who represent the cause as readers in our churches, and whose example should count for so much to all who attend the services. The apostle speaks against outward adorning, and makes a strong plea for inward and spiritual grace, also "the ornament of a meek and quiet spirit, which is in the sight of God of great price." He adds that "the holy women" of the olden time, "who trusted in God," thus adorned themselves, and shall this be less true of the women who today are "professing godliness with good works," to quote St. Paul?

Our revered Leader, whose attire always betokened propriety, simplicity, fitness, and good taste, says that the home is no longer what it should be "because the education of the higher nature is neglected, and other considerations,—passion, frivolous amusements, personal adornment, display, and pride,—occupy thought" (Science and Health, p. 60). Our Master said we should take no thought for such things, that our actual needs would all be supplied by an infinitely wise and loving Father if only we seek first His kingdom and His righteousness. It will not do to plead thoughtlessness on this vital question, for our own welfare and that of all humanity calls for our obedience.

Here it may be said that fitness in one's apparel is deserving of consideration. The occasion, one's station, and consideration for others, should help us to decide what is best in the matter of attire, but "the higher nature" should never be made subservient to material sense. Many who are not Christian Scientists lament the sensuous tendencies of this period of liberated thought, and appeals are made to thoughtful women to do all in their power to resist these tendencies. Each woman may with profit ponder the question, "Am I my brother's keeper?" and gladly give all the protection of pure and strong womanhood to our younger people especially, for in so doing they will render incalculable service to the cause of righteousness and win the gratitude of all who have the welfare of humanity at heart. This is surely a question of making spiritual things "first" in all our thinking and doing, thus honoring the ideal of the psalmist when he said that "the king's daughter is all glorious within."

ANNIE M. KNOTT.

✧ ✧ ✧

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

MONROVIA, CAL.—The Christian Science Society of Monrovia has purchased two lots, each fifty by one hundred and fifty feet, with a frontage on East Palm avenue, opposite the Greek theater of the high school. The lots are central and on one of the choice residence streets of the city. It is the present intention of the society to build a church of the bungalow type, with space for a reading-room and lecture hall.—*Los Angeles Herald.*

READING, MASS.—The corner-stone of First Church of Christ, Scientist, was laid by the officers of the church at dawn this morning [Aug. 8]. The Scientists are grateful for the kindly feeling and interest which have been manifested, and express their thanks for voluntary gifts received from several Reading people not connected with the organization.—*The Reading Chronicle.*

Digitized by Google

NEVADA.—Inasmuch as health bills directly or indirectly hostile to the practise of Christian Science had been introduced in previous sessions of the Legislature, the committee on publication deemed it wise to appoint, several months before the convening of the 1913 session, an advisory committee composed of seven prominent lawyers and business men interested in Christian Science and living in various parts of the state, to discuss ways and means of opposing any such hostile measures. With these men the committee on publication had frequent discussions, so that by the time the Legislature convened on Jan. 20 a definite course had been planned and was understood by the members of the advisory committee. From the convening of the Legislature until the close of the session two months later, the chairman of the advisory committee was almost constantly in Carson City. It was also arranged that several members of that committee should receive from the state printer all the bills introduced in the Legislature. In these ways it was possible for us to know of proposed legislation without delay.

The committee on publication feels that much of the success in opposing legislation that would have been unjust to Christian Science and Christian Scientists was due to careful preparatory work before the convening of the Legislature, and to the thorough cooperation of the advisory committee and of the assistants throughout the state. It is interesting to note that during the two months that the Legislature was in session, almost as much literature was distributed throughout the state, and fully as many letters were written and received, as during the whole of last year, and more articles mentioning Christian Science appeared in the newspapers of the state than during the previous twelve months. In some of the answers to criticisms of Christian Science it was necessary to point out that the Christian Scientist is not seeking any legislation favorable to Christian Science; he merely opposes antagonistic bills. Thus he is not aggressive, but is defending himself from aggression. He considers it wrong to be compelled to submit either to medical treatment or even to medical examination, except in cases of contagious disease.

During the session of the Legislature the advisory committee and the assistants were called upon not only to send in letters and telegrams to their representatives in the Senate and the Assembly, but to circulate petitions and to bring the matter to the attention of such organizations as school boards, mothers' clubs, women's clubs, and even the Socialist party, all of which passed resolutions protesting against the compulsory bills.—*Report of Committee on Publication.*

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 7, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 22, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 30, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

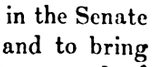
The Lectures

Blackpool, England

Owing to persistent activity on the part of Blackpool Christian Scientists, and to recent controversies on the subject, a very considerable degree of interest is being manifested by Blackpool people in this section of the Christian church. And the lecture of Prof. Hermann S. Hering, delivered at the Grand theater, attracted a very large attendance, the house being filled to its fullest capacity. The chair was taken by John W. Doorly of Manchester, who said he had much pleasure in welcoming the audience to the lecture. Christian Science always came in a quiet, loving way, which was in no degree competitive. It sought and had no quarrels with any other sect or belief, or with anything else. It was not afraid that any other sect or belief would interfere with its activities, for the reason that it knew that it was true, and as it was true, it could never be interfered with or hampered in any way, because, being true, it was the eternal law of God.

Christian Scientists welcomed the good that was accomplished by any one, and were always glad to do so. Mrs. Eddy bestowed wonderful benefit on humanity when she discovered Christian Science; but she bestowed a still more wonderful benefit when she established it and made it so practical that every man and woman could take it into his or her life and utilize it just as they could utilize the multiplication table. There was today no excuse for any one not understanding Christian Science. If they did not understand it, they did not understand the healing and redeeming ministry of Jesus Christ, for to Christian Scientists these were one and the same thing. They were the power of Mind and the power of Spirit made manifest in human affairs. The Christian Science church all over the world was accomplishing much good for humanity, and it was doing that in the simple way of teaching men how to pray correctly. It utterly and absolutely refused to believe that one could pray and change God, but it came teaching the fact that prayer was the true understanding of God and His immutable laws.

The Blackpool Times and Fylde Observer.



Dallas, Texas

Judge Clifford P. Smith delivered a lecture on Christian Science at First Church of Christ, Scientist. The building was filled to its capacity, and very close attention was given the speaker, who lectured again the following evening at the same place. DeWitt McMurray, who introduced the lecturer, said in part,—

Those who have come to Christian Science for relief from physical afflictions after having tried all material remedies without success, have seen demonstrated in their own experiences the truth of the statement by the apostle James, that "the prayer of faith shall save the sick." Thoughtful men have always demanded proof of assertions which claimed to recite facts; they have wanted the truth, and now, as in all ages, they are asking, as did Pilate, the all-important question, "What is truth?" In order to believe on God, they have demanded to see demonstrated the power of God. Paul, in writing to the Corinthians, said: "Your faith should not stand in the wisdom of men, but in the power of God," and those who have been brought up out of the depths of mental and physical despair by Christian Science have founded their faith in the power of God, for they have seen the "signs following." They have realized the beauty and truth of the first

Digitized by Google

sentence of the Preface of the Christian Science text-book, "Science and Health with Key to the Scriptures," which says: "To those leaning on the sustaining infinite, today is big with blessings." They have seen many given "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness."—*The Dallas Morning News.*

Lexington, Ky.

A large and appreciative audience gathered at Woodland Park auditorium to hear a free lecture on Christian Science by the Rev. William P. McKenzie. Attorney Allison G. Holland, in introducing the lecturer, said:—

From the time when the angel of the Lord brought "good tidings of great joy" to the shepherds as they watched their flocks on the Judean hills, when the glory of Life, Truth, and Love was all about them, the world began to be moved by the truth as old as time, but which had been lost since the days of the old prophets. For more than three hundred years truth, as taught and practised by the lowly Nazarene, was proved by his followers, only to be again relegated to apparent oblivion, until its science was discovered by Mrs. Eddy at a time within the memory of many of you. Now we know what Jesus meant when he said, "Ye shall know the truth, and the truth shall make you free." We understand of a verity what the psalmist meant when he said, "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty." He who is to address you this evening will bring a message of health and happiness, recalling the words of Jesus when he said, "He that believeth on me, the works that I do shall he do also."

Correspondence.

Princeton, Ill.

Atty. Cairo Trimble in introducing Virgil O. Strickler, who lectured on Christian Science, said in part:—

Men do not earnestly and persistently advocate any cause which does not in some way appeal to their own experience of life; and the greater the number of men whose experience justifies a cause, the more certain it becomes that there is some underlying element of truth therein. And so with these doctrines of the Christian Science church; in view of the great number of intelligent men and women who find satisfaction therein, and in view of the happy testimony of those who adopt that religion and that philosophy, I am convinced that in those doctrines there is both a "soul of goodness" and a "soul of truth." While I am not a member of this church, I am pleased to assure the speaker that he has an audience here with open minds and open hearts eager to hear his message.

Correspondence.

Lectures to be Delivered

Bay City, Mich.—Francis J. Fluno, M.D., Washington theater, 8 p.m., Oct. 6.

Bloomington, Ill.—Virgil O. Strickler, Church edifice, 8 p.m., Oct. 17.

Brooklyn, N. Y. (First Church).—Clarence W. Chadwick, Church edifice, corner New York avenue and Dean street, 8 p.m., Oct. 16 and 17.

Burlingame, Cal.—Clarence C. Eaton, Masonic temple, 8 p.m., Oct. 16.

Chicago, Ill. (Eighth Church).—Bicknell Young, Church edifice, Michigan boulevard and 44th street, 8 p.m., Oct. 10 and 11.

Calgary, Alberta.—Clarence C. Eaton, Lyric theater, 3 p.m., Oct. 12.

Crawfordsville, Ind.—Virgil O. Strickler, Music hall, 3 p.m., Oct. 12.

Dayton, Ohio (First Church).—Bicknell Young, Memorial hall, 8 p.m., Oct. 14.

Galena, Kan.—Bliss Knapp, Electric theater, 8 p.m., Oct. 17.

Glasgow, Scotland.—William D. McCrackan, M.A., Queens' Rooms, Clifton street, 8 p.m., Oct. 21.

Hongkong, China.—William R. Rathvon, Theater, City hall, 5 p.m., Nov. 10.

Hull, England.—Col. William E. Fell, Royal Institution, Albion street, 8 p.m., Oct. 27.

Independence, Iowa.—Prof. Hermann S. Hering, High School auditorium, 8 p.m., Oct. 14.

Iola, Kan.—Bliss Knapp, Grand theater, 8 p.m., Oct. 16.

Liverpool, England.—Col. William E. Fell, The Picton Lecture Hall, William Brown street, 3 p.m., Oct. 26.

London, England (Third Church).—William D. McCrackan, M.A., Third Church edifice, Curzon street, 8 p.m., Oct. 23; 3:30 p.m., Oct. 24.

Macomb, Ill.—Judge Clifford P. Smith, Chandler opera house, 8 p.m., Oct. 7.

Madison, Wis.—Virgil O. Strickler, Woman's building, 240 W. Gilman street, 8 p.m., Oct. 14.

Marshall, Mich.—Bicknell Young, Empire theater, 8 p.m., Oct. 13.

Michigan City, Ind.—Judge Clifford P. Smith, First Congregational church, 6th and Washington streets, 8:15 p.m., Oct. 14.

Moose Jaw, Saskatchewan.—Willis F. Gross, Majestic theater, Fairford street East, 8:15 p.m., Oct. 6.

New Haven, Conn.—Clarence W. Chadwick, Hyperion theater, 3:30 p.m., Oct. 12.

New York, N. Y. (First Church).—Clarence W. Chadwick, Church edifice, 1 West 96th street, 8 p.m., Oct. 13; 3:30 p.m., Oct. 14.

North Adams, Mass.—Francis J. Fluno, M.D., Richmond theater, 7:30 p.m., Oct. 12.

Oskaloosa, Iowa.—Bliss Knapp, Church edifice, 8 p.m., Oct. 13.

Ottawa, Ontario.—Prof. Hermann S. Hering, Russell theater, 3:30 p.m., Oct. 12.

Palo Alto, Cal.—Willis F. Gross, Armory, 8 p.m., Oct. 13.

Piqua, Ohio.—Hon. Clarence A. Buskirk, May's opera house, 3 p.m., Oct. 12.

Rome, N. Y.—Francis J. Fluno, M.D., Masonic temple, North Washington street, 8:15 p.m., Oct. 13.

Rushville, Ind.—Judge Clifford P. Smith, Court House Assembly hall, 3 p.m., Oct. 12.

Sacramento, Cal.—Willis F. Gross, Tuesday Club house, 8 p.m., Oct. 16.

Saginaw, Mich.—Judge Clifford P. Smith, Academy of Music, 8:15 p.m., Oct. 17.

Santa Rosa, Cal.—Willis F. Gross, Masonic temple, 8:15 p.m., Oct. 14.

South Bend, Ind.—Bicknell Young, Oliver opera house, 8 p.m., Oct. 16.

Toledo, Ohio.—Bicknell Young, Coliseum, 3:30 p.m., Oct. 12.

University of Illinois, Champaign, Ill.—Prof. Hermann S. Hering, University Hall chapel, 8 p.m., Oct. 16.

Wauseon, Ohio.—Prof. Hermann S. Hering, Court house, 8 p.m., Oct. 17.

Whitewater, Wis.—Bliss Knapp, Congregational church, 8 p.m., Oct. 10.

Wilmette, Ill.—Virgil O. Strickler, Woman's Club, Greenleaf avenue and Tenth street, 8 p.m., Oct. 16.

Testimonies of Healing

In the gospel of Luke the Master speaks of the debtor to whom a certain creditor forgave most, and reading this beautiful lesson, I feel that my debt to divine Love is indeed great. In June, 1909, I came through New York city on my way from Baltimore, Md. I had left Boston a few days previously, going to Baltimore for the financial aid that had been promised me to save a corporation of which I was at that time the head, and circumstances were such that it seemed as if, without this help, nothing could save us. All I had in the world was tied up in this company. The aid had been refused me and I was in a desperate state. I stopped at a hotel bar in this city and, after drinking a great deal of whisky, the thought came to me to call my wife on the telephone and ask her to see me. My wife was at that time living in New York city, as we had separated several years before on account of my utter unreliability and love for drink. I had taken the so-called "cures," but to no purpose.

She consented to see me, and was kind to me when I called. I saw that in the few years since I had seen her a great physical and mental change for the better had been wrought in her. She had formerly been an invalid for about ten years. She told me that Christian Science had healed her, and seeing my awful physical and mental condition, as well as knowing my seemingly hopeless financial troubles, she asked why I did not try Christian Science. I told her that I was ready to try anything, but that no power on earth could help me. At this time I was in the advanced stages of an awful disease, and *materia medica* had failed me, as had the so-called healing waters of some noted springs; but "man's extremity is God's opportunity." I took the midnight train to Boston, after promising to meet my wife the following Wednesday and go with her to The Mother Church to hear the testimonies.

I reached Boston saturated with whisky, and stayed so until that Wednesday evening, when I met my wife at the South station and we went to church together for the first time in our lives. I was still under the influence of drink; but one testimony greatly impressed me, and I thank God for that testimony to this day. It was given by a minister who had been healed in Science, and who told how from his pulpit he had often attacked what he thought to be Christian Science, and then stated that if Science could change him, there was hope for any man. After service my wife called a practitioner on the telephone. He came to the hotel and had a talk with her,—I did not see him. He agreed to take my case, making an appointment for the following morning at ten o'clock. I went to him, still under the influence of drink, but he was kind and loving. I told him I was down and out in every way, and also spoke about my physical condition, which was serious. The liquor condition was evident, and needed no telling. I acknowledged that I knew nothing of Christian Science, but that if it could cure me, the days of miracles were not past. I had drunk to excess for years, and whisky had seemed to be the curse of my grandfather and uncles as well as of my brothers.

The practitioner reminded me of the Master's declaration that "with God all things are possible." Then he gave me treatment (I had no money to pay him) and told me to return the next day, which I did. My wife left Saturday for Springfield, and I attended services Sunday at The Mother Church. I think I took my last drink that day. The desire for liquor left me so completely and naturally that I do not recall the last time I drank. Monday I went to my kind friend, the practitioner, and told him there was no use in my going to the office, as the affairs of the company were in such a condition that all I could do was to lock up the offices and tell the employees to go. The practitioner took up "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read aloud to me from page 67, lines 4 to 17; then closing the book he said, "Your place is at your desk; go there, for God can take care of you and the business." At ten o'clock two men whom I had never before met, but of whom I knew through correspondence, came in together, one from New York, the other from Newark, N. J. I told them of our business troubles, and the following day they took the five o'clock boat back to New York, having arranged compromises which took care of the financial problem, so that I received security for the full amount of money I had invested in the company, besides my back salary and an amount which more than met all present needs. That corporation is going on today, and from last accounts is doing well.

Then began my struggle for physical health; so I came to New York, my wife caring for me, and received Christian Science treatment. I was two years getting complete physical healing, and I thank God now that it was so, for I had to read, work, and study day and night to get this truth. Now I have it, and on its sure foundation I am safe for all time. I am completely healed. If any one is interested, I can refer him to the doctors who treated me and were unable to heal me, and show them the old scars that are fast disappearing. I have proved this truth from every standpoint. My wife and I are happy and united again, and all is indeed harmonious. I have even been healed of wearing glasses. I speak in all truth and sincerity when I say that the human being does not exist who is so far gone that Christian Science cannot help and save him. I thank God for dear Mrs. Eddy. I also thank God that she was so brave and true that though mortal error persecuted, slandered, and maligned her, still she guarded this lamp of Truth so that my frail bark was lighted to the safe harbor of divine Love. I pray God that I may live so as to be worthy to be called a Christian Scientist. I am thankful to all those who have helped me on the way.

B. Palmer Lewis, New York, N. Y.

✧

I will try in my simple manner to tell what Christian Science has done for me. If it had not been for this truth I feel that I would have been in my grave today, but thanks to the Giver of all good I am left to tell the blessed news. Twenty-five years ago my left limb commenced to pain me, right in the bone, so severely that I was nearly frantic. My husband tried many doctors but I could get no relief. Everything that could be heard of was turned to with the same result. The limb grew worse all the time, and would swell dreadfully. Finally, in 1909, it grew so bad that I could hardly walk or move without assistance and almost unbearable misery. In 1910, when it turned black and burst in two places, I was all but desperate. I had not been able to wear a shoe for two years. Doctors said the bone was decayed.

I had given up all hope of being able to do anything but die, when a dear friend sent me some Christian Science literature. I read it and took courage. I craved to see and know more about the wonderful work and healing power of Truth. I asked the friend to help me, which she consented to do. The result was that I began to improve, the swelling disappeared, the pain grew less, the discoloration began to disappear.

It has been two years and a half since I was healed through Christian Science. I have not felt a pain or had any swelling in my limb, so feel assured that it is completely cured. I have also been able to help my family in many ways. Everything is much more harmonious than it used to be. I am so

Digitized by Google

thankful to our merciful Father and to Christian Science that I am entirely healed of my trouble and enjoying the best health I have had for thirty years. It would be impossible for me to express in words the gratitude I feel.

MRS. FANNIE FARLEY, Salina, Kan.

✧

I take pleasure in testifying to two instances of the power of Christian Science in the healing of disease. The first was a severe case of illness with the usual symptoms of chills, fever, and headache. After two days my daughter, who was absent at the time, returned, finding me very ill indeed. She treated me at three in the afternoon, after which I began to feel better. A second treatment was given three hours later, so I was enabled to dress and have dinner with the family, and it was two hours past my usual time for retiring when I went up-stairs perfectly normal.

The other experience for which I have still greater cause to be grateful was the quick healing of a badly injured ankle. While alighting from a moving train I was thrown to the ground with such force that I lost consciousness. I was put into a carriage and taken home by some neighbors who were on the same train. When I regained consciousness I was in intense pain and unable to move, but Christian Science treatment was given, and in a few moments I was free from all pain, though still unable to move, as my right side and ankle seemed to be badly bruised. By the next day, however, I was able to stand on that foot, and the third day found me walking around the house with a perceptible limp, which disappeared very quickly. This seemed very wonderful to me in view of the fact that several years ago I had a similar accident, though apparently not nearly so severe, and I was confined to my bed for six weeks under medical treatment. I am glad of this opportunity to express my sincere gratitude for this healing truth.

MRS. EMMA CHAPIN, Claremont Park, Berkeley, Cal.

✧

I am a Norwegian and have been in America a number of years, but never heard of Christian Science until four and a half years ago. I have been a seeker after truth almost from childhood, and went from one church to another before coming to this country, but found nothing to satisfy me. In 1897, after a severe illness, a lady asked me if I had heard of Christian Science, and said that it was not necessary for any one to be sick. I answered in the negative and nothing more was said on the subject.

This was in Portsmouth, N. H., and I thought no more about Christian Science, although my health was continually poor and I was more or less unhappy all the time. I was employed as fitter on ladies' garments and had planned to leave New Hampshire to go to Chicago to seek similar work, as I had some very good friends there, but everything seemed to hinder and I was prevented from going. I did not wish to return to my own country just then, but I finally went, very unwillingly, feeling as if some unseen power compelled me. While at home I searched the library for good books and read the Bible often, but was unable to understand it. For the next three years my only prayer to God was to ask Him to teach me how to pray and to lead me into the truth. I was very down-hearted and unhappy, when one day, all of a sudden, those two words, Christian Science, came to me and I decided to find out what they meant, if I should ever go to America again. I did not know that Christian Science was a religion, but I was determined to find out what it was.

Feeling restless and dissatisfied I went to Christiania to find employment, and one evening while reading *Aftenposten*, I glanced over the notices of the different church meetings. At the end of the column I read the following: "Christian Science meetings at Frogner School." This was a great surprise which made me happy and expectant, and as soon as possible I started out to find the place. It was Sunday, and although I went early in order to have plenty of time, it was half past eleven when I found the place, and the service commenced at twelve. Sweet music greeted me as I stepped inside, but no one had yet arrived except the lady who was playing the organ. I took a seat and she came smilingly toward me and shook hands, asking if I knew anything about Christian Science. She spoke kindly to me about God as Love. The service impressed me very much, as did also the happy expressions of those present, and at last I felt as if I were standing at the door of happiness. My next move was to go to the reading-room for something to read.

This was in the fall of 1907, and up to that time I had neither heard nor read anything about Christian Science except as above stated. At the reading-room I was met with the same love and kindness as at the services. I was given some copies of the *Sentinel* and *Journal* and the evening found me very busy reading, without thinking of any bodily healing; but when I came to the testimonies my joy was beyond description. I soon asked for treatment and was in a short time cured of a stomach disorder of ten years' standing, which a doctor had pronounced incurable. I had already lost all faith in medicine. After reading the *Sentinel* and *Journal* I felt that I must have a copy of the text-book, "Science and Health with Key to the Scriptures," as soon as possible, but at that time I was unable to purchase one. Again I went to the reading-room and asked if it was possible to borrow the book, and to my great joy it was handed me. This I was allowed to keep until I was able to buy one, which I did as soon as possible, and I felt very rich when a copy of Science and Health was my personal possession.

In January, 1908, I was called home on account of my father's illness, but the day previous to my going I injured my ankle seriously. I went to the reading-room to say good-by to the lady in charge and as the ankle pained me greatly, I mentioned it to her. She gave me treatment and I managed to reach the store where I was employed, but when inside I nearly fainted from the pain. I tried my best to keep in thought the truth that God, good, is the only power and that therefore error has no power. I was only beginning to understand Christian Science, but I was very willing to learn. I was tempted to remove my shoe and put my foot in water to cool it, but the thought came to me that God, the all-power, did not need my help, and in about one hour the pain vanished suddenly. This made me very happy, although I could not then step on my foot. I began to wonder how I should get to my room in the evening, but the thought came like a flash of light that God was caring for me, that Truth would finish the cure; and I was not disappointed. When the time arrived for me to go, I was able to walk on my foot as well as ever. This seemed like a miracle to me, and my happiness was great. I went home rejoicing, beginning to know God as I had never known Him before.

It is now nearly six years since my happy entrance into Christian Science, and during that time I have been able to overcome many bodily ills, and also defects in character. I have daily proof of God's loving care and I know that life without the truth would not be worth living. There are no other Christian Scientists here, therefore the Bible and my Christian Science literature are more to me than ever. I would like to tell of one demonstration on a trip from Boston to Norway. Before leaving Boston I asked a friend who is a Christian Scientist to help me, as I had always been seasick

Digitized by Google

when crossing. The demonstration was complete and I enjoyed every minute of the voyage for the first time in my life. My roommate on the ship, a young Swedish woman, became much impressed by it and is now interested in Christian Science.

I am very happy and grateful for the spiritual understanding I have gained, and am continually gaining, through the study of Science and Health and the *Sentinel* and *Journal*. Slowly but surely I am learning to understand the Bible, and it is now a pleasure to read it. When I first read the textbook I was as one in great hunger and every minute I could spare was devoted to its study. I am very glad to say that I never for a moment doubted Christian Science, but embraced it at once. I knew I had found the truth.

Christian Science came as something that belonged to me and I no longer have to look for truth, because I know it is mine forever, and my chief aim is to live it under all circumstances. How happy it makes me to think of that first glad day, when Christian Science came to me like a ray of sunshine, a sublime proof of the great and ever-active all-power of God! Until then I did not know that there existed such a loving and beloved person as Mrs. Eddy, and only through the study of her wonderful book, "Science and Health with Key to the Scriptures," have I learned to know and love her.

I take this opportunity to send many loving thoughts and wishes to the little band of Christian Science workers in Christiania. May Christian Science blossom in my beloved native land!—Miss Marie Eriksen, Tistedalen, Norway.

✧

Christian Science, as presented to the world by Mrs. Eddy in her book "Science and Health with Key to the Scriptures," teaches us how to avail ourselves of the power of Truth in our daily lives, and to the extent that we trust to this power, to that extent are we able to overcome the ills that so easily beset mortals. Something over a year ago I had an experience which proved to me the power of Truth over evil, especially as this was a question purely of right and wrong; it made no difference to me personally one way or the other, and the same could be said of others interested in this matter.

Some twenty-three or twenty-four years ago, my father successfully negotiated a deal for one of the large railroad companies here in Chicago, which resulted in an agreement. In November, 1910, a new schedule was issued by the company, one item of which was contrary to the above-mentioned agreement. My attention was called to this discrepancy, and as my father had passed away some time before this, I was the one to attend to the matter. As business prevented my calling in person at that time, I wrote to one of the officials whom I knew to be familiar with all the details pertaining to this question, asking that the item be changed to accord with the agreement made some twenty years before. He turned the matter over to a minor official who was not familiar with the facts of the case, and after a short correspondence he refused to make the change. I knew that right must prevail, so decided to go to a higher authority. I wrote to the president of the company, and upon receipt of his letter asking for more information and documents, I took the time to call in person, showed him a copy of the agreement, stated all the facts in the case, and left him, knowing he would do what was right. Just one week later a special order was issued making the correction.

While I did not come into Science for physical healing for myself, although I saw the manifestation of the healing power of Truth in my wife's case, I have nevertheless received help in this way. Various experiences have proved to me that Truth is omnipotent and omnipresent, and furthermore showed me that there is but one evil,—though this evil may appear in many different forms,—and that this evil is nothing.

When Christ healed the one possessed of a demon, he asked the latter his name, and was told, "My name is Legion." The answer might have been, "I am evil, but I appear under many names." So we will find when evil comes upon us that the faithful, constant resort to Truth and application of its power, will in the end drive this evil into its native nothingness in spite of its persistence in reappearing under different guises. I am indeed thankful for knowing something of the power of Truth, of God, and I am grateful for Mrs. Eddy's teachings, which enable us to prove in our daily lives *that* Truth is ever present and all powerful.

Wallace H. Brainerd, Chicago, Ill.

I wish to give my testimony to the fact that Christian Science does heal so-called incurable organic disease. In 1909, I came to Christian Science. I had been operated on in July for a growth in the left breast, but in three weeks this growth returned under my left arm and was pronounced malignant by the medical faculty. I had been forbidden by the physician even to dust a chair, but fear had done its work when the verdict was given to me. I could say with Job, "The thing which I greatly feared is come upon me." I had a happy home, my earthly life was very dear to me, and I did not want to die. I had been a church-member all my life, and I wondered why such a trial should come to me. Turning to the Bible I read that God heals all our diseases, but I did not understand how to find the way.

I did not then know anything of Christian Science, but I heard of a lady who had been healed. My husband went to see her and asked if Christian Science would help me, and she said it would. On Thursday night, Sept. 3, I went to see a practitioner. On the way out I think I was the saddest person anywhere, and in coming back I was really healed. The following Tuesday I went into a grocery store and helped my husband every day. I had told the practitioner that I did not want a religion, I wanted to get well; and she lovingly replied that I need not think about that. But I am very grateful to say that we soon learned that the daily living of Christian Science is all that is worth while. I am very thankful to God for my healing and the spiritual uplift; also for the ever-present care that God, good, gives, and the desire to do right on our journey from sense to Soul.

In last November I gave birth to a child. I could not reach my nurse by telephone, so had to get along without her. I had absent treatment from a Christian Science practitioner, and was attended by a physician who is now a Christian Scientist. I was in bed one day and had care for one week from a nurse. Our baby is a little ray of sunshine.

To say we are grateful for Christian Science does not express our heartfelt thanks. I daily realize more and more what our Leader has done and is doing for the world through this teaching. We have had many beautiful demonstrations in our home of the power of Truth, and Christian Science is our only help in daily living. God is our refuge and our help in every time of trouble.

Mrs. Bessie M. Brainerd, Chicago, Ill.

✧

I have promised myself several times that I would publicly express my gratitude to God for His goodness in bringing to me the little understanding of Christian Science that I have. I am pressing onward, and through this truth am certainly a better man in many ways.

Christian Science came to me some six years ago, when to mortal thought I was about to pass on. The medical men

Digitized by Google

who had ministered to me all my life up to the time above mentioned, had reached the limit of their ability, so I declined further assistance from them. Since that time I have had no need of their mortal theories, for through an understanding of God's unlimited goodness to all His children, and with the help of a faithful practitioner, I was restored to health and strength in a short time. Thus stimulated, I took up the study of Christian Science as explained in the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Before Christian Science came to me I was what is called a man of the world; I had no use for the Bible, but now I see it in a far different light and could not get along without it, nor without Christian Science as taught in Mrs. Eddy's works.—*Jos. H. Weeks*, Battle Creek, Mich.

❖

Some eighteen months ago I was taken ill with so-called nervous paralysis, which manifested itself at first in the hands. I underwent medical treatment, but none of the remedies, baths, etc., prescribed, brought any improvement. On the contrary, the vision of one eye became affected by the trouble, which also extended to the feet and the lower portion of the body. I consulted several other physicians, and failing to experience relief, I became more and more despondent, for the terrible thought of eventually becoming completely paralyzed tormented me day and night. I had given up all hope of recovery when my attention was once more called to Christian Science, and with the help of acquaintances treatment was secured from a faithful and loving practitioner. After the first visit I became aware of a transformation taking place within me, physically as well as mentally, and my condition improved with every treatment.

After ten weeks had elapsed I was free from the trouble, for my eyesight had become entirely normal and the feeling in the members and in the lower portion of the body was restored, so that I was like a new person. I would like to mention that before my healing I was unable to walk without somebody in attendance, whereas it now became possible for me to undertake a journey, including mountain tours of from ten to twelve hours' duration, without experiencing the least inconvenience. A sense of contentment and peace has come to me such as I have never known before, not even in times of health, and from the depths of my heart I thank God for all the good He bestows. I am also grateful to Mrs. Eddy for her discovery of Christian Science.

Marta Heitzmann, Gr. Lichterfelde, near Berlin, Germany.

[Written for the *Sentinel*]

Kindness

CHARLES C. SANDELIN

Kindness, a breath of blissful peace,
From heart to heart sped on its way,
Bringeth the joy of heaven today,
And maketh the din of earth to cease.

Of wondrous fragrance, like the breeze
That gently blows o'er flowered fields,
A perfume not of earth it yields,
Borrowed from Spirit's blooming leas.

Oh, blest art thou whose heart doth know
The touch of kindness stirring e'er:
'Tis Love that worketh sweetly there,
And in thy life Love's peace doth glow!

From Our Exchanges

[*The Christian Work and Evangelist*]

A nation's growth to greatness follows, to a marked degree, the same laws as those which make man great. The great man is he who contributes most to the world of truth, or invention, or art, or organization, or blessing of any sort. The great nation is that which contributes most to civilization. The great man is he who is honorable, charitable, clean, heroic, of lofty ideal. The great nation practises justice and stands in honor before the world. The great man is he who rights wrong, stamps out injustices, befriends the weak. Surely this is the test of greatness we are now applying to nations. But beyond this the great man is always the hospitable man. He has kept his mind open to new truth, new ideas, new visions dawning on the world. He has kept in close touch with humanity and enriched his own life from contact with other souls. He has eschewed provinciality and generally has gone far beyond nationality in the enrichment of his life, seeking the gifts of art, literature, ideas, ideals, and religion from every land. It is this that makes large, rich, great manhood. It is this that will also make a nation great.

[*The Christian Register*]

We may ask, What token is there of a new spiritual relation? What new signs have appeared in the heavens, that God is planning a special era of inspiration? From what quarter of the sky is the wind of the spirit to blow? Where and whence will the trumpets of the Lord resound? It requires nothing spectacular to indicate the trend of thought and feeling. The signs are subtle, but they are sure. When the extreme point has been reached in its arc, the pendulum prepares to swing back. Old truths put on a new face, old facts and theories blossom with new significance. The hunger and thirst of humanity cries out for fresh food and drink. Not forever can it be fed on husks and satisfied with hollow shams. All of change and all of hope lies in the fact that man is a spiritual being, responsive to his creator, who must be worshiped "in spirit and in truth." The old world has but to rub bright again the truths it has known for uncounted ages, to bring in a new era.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

The church has been a great disappointment to many. These are the charges they bring against it. It has not proved true to its traditionary trust. It has failed to preserve the gospel in its simplicity. And this has nothing to do with the controversies between orthodoxy and unorthodoxy. The fight still goes on between valiant protagonists on both sides concerning what the gospel actually is, but it is true of both that what they are contending for is powerless to heal and redeem the world. It is a form of words from which the virtue has departed. The church has failed as a prophetic body. It always seems unable to read the signs of the times. It is generally engaged in fighting a rear-guard action with truth, to which it eventually capitulates. It is always coming in at the tail-end of great struggles for freedom, temperance, and social reform. It borrows its systems of philosophy to express its faith just as they are getting outworn.

We are becoming wider in our understanding of Christ, and we can see now that the church will fulfil that ideal only by being itself the incarnation of humility, saving men only by its utmost self-denying love, reigning only from the throne of the cross. The ideal must be high if ever again the church is going to be an inspiration to the thoughts of men, and only an ideal too high for human attainment will keep the church humble. All attempt at coercion, all taint of the military

Digitized by Google

spirit, all imitation of aristocratic institutions, must be purged out and forsworn. It will not be a priests' church, but a people's church, for all the people will be priests; its creed will be simply Christ; its discipline the consuming flame of the Spirit; its polity a waiting upon God.

When this spiritual reformation and revival has been sought and discovered we can be certain of two consequences which will never otherwise be manifested. First, the unity of the church under the sole headship of Christ. The most momentous discovery in the history of the church has yet to be made, namely, that the presence of Christ is capable of all the revelation, guidance, and government which the church needs. This is the only way to union, and the only center of cohesion. Second, the ancient gifts of the church will be recovered: the power to heal the diseases of the heart, the sicknesses of the body, the divisions of the peoples. No lesser thing is worth striving for now.

Such a church will be built upon the impregnable rock. That rock is the spiritual discernment of the significance of Jesus for our race. Its apostolic commission is the task of representing Christ to mankind in a sin-bearing redemptive society, at once the salt of the earth and the light of the world. It will be the body of Christ, because it will be absolutely submissive and subservient to his eternal spirit. Such a church can claim the promise that "the gates of hell shall not prevail." But that promise is only valid for a church that is attacking the gates of hell. Nothing is said about a church that has suffered the forces of evil to give battle, nothing is promised to a beleaguered church, a church defending its property, apologizing for its gospel. The promise avails only for a church militant against all evil, storming the final fortress of wrong, battering down the very gates of hell. To such a church—to such a church only, for no other is a church—shall be given the keys of the kingdom, the power to open wide the gates of God to all seeking, doubting, or despairing sons of men.

[*The Universalist Leader*]

Blessed are they who have learned that in the great crises of life the only refuge of men is their faith in moral good. He who stands on this rock is unconquerable. Fortune may buffet him, sorrow may bring him to his Gethsemane, those whom he has tried to help may revile him, but he will bear his cross with the patience of his Master. Perhaps this path is not for all men to tread. In the crowd are those who have not felt the thrill of the ecstasy of this great exaltation. They will go on wondering why virtue so often wears its crown of thorns. But those who have ascended to the heights of a great ideal and sincere devotion will ask no other compensation than the blessed consciousness of having done their best. This is the victory that overcomes the world. In human experience at its best it is eternally true that holiness and true happiness are inseparable.

[*The Christian World*]

Humanity is getting ready to turn out of itself, as something inferior, the desire for domination; it is beginning to see the absurdity of hate and the common sense of love; it is longing to cut its connection with violence and thievery as, from beginning to end, a bad, unprofitable business. What is coming is a human renunciation, the finest, the most portentous the world has yet seen. So moves in our midst the kingdom of the Spirit.

[*Zion's Herald*]

Religion means the recovery of the lost values of life. Every man realizes more or less clearly that he has somehow passed on and left great possibilities unimproved behind him.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is *specially* bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

Church Manual. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Christ and Christmas. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

Unity of Good and Other Writings. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Christian Healing and Other Writings. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform with the pocket edition of Science and Health. Bound in Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Retrospection and Introspection. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Unity of Good. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Pulpit and Press. A unique work, important to the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more, 75 cents each.

Rudimental Divine Science. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

Rudimental Divine Science. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more to one address, 40 cents each.

No and Yes. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

Messages to the Mother Church. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Message to The Mother Church. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Our Leader's Message. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Communion Message, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Two Sermons. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. One volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more, 45 cents each.

Christian Healing. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

The People's Idea of God. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

Feed My Sheep. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

The retention by the United States government of oil lands in California, Arizona, Wyoming, Utah, and Colorado is involved in the suit of the government against the Midwest Oil Company and others. Technically the suit involves title to only one hundred and sixty acres of land in the Wyoming oil fields, valued at from one million five hundred thousand to four million dollars. In reality it involves the validity of an order issued by the President on Sept. 27, 1909, withdrawing from all forms of entry three million forty-one thousand acres in California and Wyoming. At the original hearing of the suit, in Cheyenne last year, evidence was introduced to show that the amount of oil in the land withdrawn in California alone was four billion barrels, which represents a value of two billion dollars. The suit was brought by the government against the Midwest Oil Company, the Reinvestment Company, and others. Federal Judge Riner of Cheyenne ordered the suit dismissed, and the present hearing is on the government's appeal. Judge Riner held that the President did not have authority to withdraw the lands from entry.

The latest efforts of the government to check the present scarcity of beef consists in enlisting the aid of the Indians to raise cattle for the market. Not only is Commissioner of Indian Affairs Sells stocking the big Indian reservations with large herds of fine breeds of beef cattle, but he is mapping out plans for improving and developing all of the live stock of the Indians. In many instances the Indian has shown considerable aptitude for handling live stock, and in order to encourage him the commissioner has authorized the purchase out of Indian funds of beef cattle herds for a number of reservations. Commissioner Sells has issued advertisements calling for bids on nine thousand head of cattle for the Crow Indian reservation in Montana. He is also increasing the stock of sheep on the reservations in Arizona and New Mexico.

The admission of water for the first time into the locks of the Panama canal was begun Sept. 25 in the upper chamber of the Gatun locks. The filling of the locks was largely in the nature of a test of the lock gates and operating machinery. Water was let into the Culebra cut from Gatun lake through four twenty-four-inch pipes under the Gamboa dike on the following Wednesday morning. Oct. 10 is the date set for the destruction of the Gamboa dike. The current report of the Panama canal commission shows that the grand total of cost down to May 30 is $295,587,518.41. Of this amount there was spent for sanitation in the Canal Zone $16,132,056; for civil administration, $6,370,866; for fortifications, $2,965,939; and for construction and engineering $182,187,886.

Representative Lewis of Maryland will soon introduce a bill in Congress proposing government ownership of all interstate telephone and telegraph lines. He favors the systems in Holland and Germany, where the government controls all lines, but places their operation under the various states. "When it is considered that in Austria and other European countries a three-minute telephone conversation over seven hundred miles of wire costs about sixty cents, and the same service in America approximates four dollars and twenty-five cents, it is obvious," he says, "that a remedy of the situation is necessary. Almost the same comparative ratio applies to telegraph service."

The Pennsylvania railroad has decided to sell its security holdings in the anthracite companies which have been attached to its system for nearly forty years. The Susquehanna Coal Company is the principal operating company and selling agency for these companies. The action of the railway, it is generally understood, has been taken to forestall the possibility of a suit by the government such as that recently instituted against the Reading. When the Supreme Court dismissed the so-called "anthracite trust" suit, it was stated that the judgment held no prejudice against the institution of proceedings against the separate components involved.

INTERNATIONAL

A correspondent of the London *Times*, in an article on "The Pedestrian and Motor Traffic," puts in a plea for more footpaths. The problems of London traffic have been carefully inquired into and reported upon, he says, but those of the country have yet to receive attention. The increase in the number of motor cars has turned the country roadways into speedways and they are now quite unsuited to pedestrian traffic. Three footpath maps are in existence already, brought out by the Commons and Footpaths Preservation Society, and they show in prominent red lines the footpaths in the country north and west of London, including Bushey and Harrow, and the districts round Barnet and Watford. A map of the footpaths of Surrey is being prepared, and the whole country needs mapping in the same way. It may be that the supply of footpaths in some parts of the country is not adequate and that fresh ones are required; but the matter, the *Times* correspondent thinks, may surely be considered important enough to cause even the greatest land lover to spare a few paths to a public purpose, though some public body might have to be empowered to bargain with selfish landowners. Many landowners are themselves motorists, and have every reason to assist the pedestrians to leave the road.

The New South Wales government is rapidly pushing on with the building of new railways as a preliminary to further closer settlement and the opening up of more arable crown lands in various parts of the state. Several new lines have recently been decided upon, which will have the effect of considerably developing the resources of the state. One of these lines, from Craboon to Coolah, will not only traverse exceedingly rich agricultural land now awaiting development, but will greatly enhance mining prospects in the districts about to be linked up. Another line will open up seventy-five thousand acres of good agricultural land, while still another, from Coonabarabran to Burren Junction, will further open up and develop the rich northwestern plains of New South Wales.

Among the most important of the schemes inaugurated by Lord Kitchener since he took up his appointment to Egypt as British agent, consul-general, and minister plenipotentiary, is the drainage scheme, with which considerable progress has already been made. This great undertaking will not only result in improvement to the land already under cultivation, but will make it possible to reclaim much land which cannot at present be worked.

According to a recently issued blue book containing the administration report on the railways of India for 1912, 668 miles of line were opened to traffic during the twelve months, bringing the total mileage opened up to 33,484 miles. At the end of 1912 there were 2,455 miles of line sanctioned or under construction.

INDUSTRIAL AND COMMERCIAL

The Pennsylvania railroad is making some tests of powdered or pulverized fuel for use in locomotives; the Chicago & Northwestern and many other railroads are investigating the same matter; and one of the largest locomotive builders of the present time is spending fifty thousand dollars in the effort to build a locomotive that will successfully use powdered fuel, since its advantages are many. There would be a direct saving of one third of the coal used, through more perfect combustion, and it would be possible to use many grades of coal that cannot now be used on locomotives. Ash-pits would be done away with; also there would be a saving in cleaning costs, and a great saving in property values, paint on rolling stock, and so forth, through the absence of cinders and smoke, for powdered fuel is smokeless.

The enormous growth of the apple industry in Washington, Idaho, and other Northwestern states was demonstrated at the recent convention of the North Pacific Fruit Distributors at Spokane. One thousand cars of apples for future delivery were sold through the association for a total price of approximately four million dollars. The cars approximated one thousand dollars each. One car of Wenatchee apples in New York brought two thousand dollars. It consisted of Winter Bananas, Jonathans, King Davids, and Grimes' Goldens. All the one thousand-dollar cars averaged from $1.35 to $2 a box f. o. b. shipping point. The Northwest apple crop for 1913 is estimated at seventy-five hundred cars, or about four million five hundred thousand boxes.

Four new state forests have recently been added to those in Hawaii, making twenty-seven in all, with an aggregate of 688,101 acres. Of this number sixty-seven per cent belongs to the territory, the rest being private land administered by the territorial forest officers.

Mineral oil exported in the fiscal year 1913 aggregated one hundred and thirty-seven million dollars in value against sixty-seven million in 1908. The quantity exported was 1,990,000,000 gallons against 964,000,000 a decade ago.

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI October 11, 1913 No. 6

Renunciation and Realization

HON. CLARENCE A. BUSKIRK

In numerous religions, ancient and modern, the doctrine of personal renunciation has a conspicuous place. Obeying their sense of religious duty, or their sense of religious fear, multitudes have renounced what they had held close in their affections, hoping thereby to gain heaven or to better their consciences and conduct, and avoid divine punishment. Of these, some have given away their worldly goods, in whole or in part, some have retired into solitary places apart from the activities of every-day life, some have worn hair-shirts and tortured their bodies with whips and otherwise, and even maimed themselves, while others have renounced their scepters as kingly rulers, etc. Many have thus succeeded no doubt in appeasing in part their own outraged consciences. It is probable that they have thus made themselves better persons than otherwise they might have been, but to suppose that they thus canceled any sins they had committed, must be a mistake. Regret for wrong actions and thoughts must always be good for us, but much more than this is needed.

On page 339 of "Science and Health with Key to the Scriptures," Mrs. Eddy declares that "the destruction of sin is the divine method of pardon;" and in many places in her writings she shows why this is true. She says also, "Sorrow is salutary" (p. 66), and quotes the lines of Shakespeare:—

> Sweet are the uses of adversity,
> Which like the toad, ugly and venomous,
> Wears yet a precious jewel in his head.

When Jesus recommended renunciation to the young man, it is manifest that he regarded the latter's possession of the wealth on which he placed his affections as an obstacle to the dominion of Truth in his consciousness; but it surely does not teach us to renounce anything we ought to have. To put on the rags of the beggar will not make one a saint. The pride of riches and power may harden and coarsen, and too frequently does; but hunger and cold cannot be said to be conducive to righteousness. In Proverbs we read: "Give me neither poverty nor riches; feed me with food convenient for me," which is surely the understanding of Truth that strengthens and sustains.

Self-abnegation may be sincerely unselfish; and it may be supremely selfish, as when it is an effort to drive a good bargain with infinite justice. To call every act of renunciation righteous does not make it so. There are some woe-begone faces which mistaken notions about religion have led people to regard as evidence of superior piety, when their possessors need simply to be treated for their lazy beliefs. Positive righteous conduct, not that alone which is negatively blameless, is requisite to the true religionist. In the realm of human progress, the effort to help others is of unspeakable advantage to mankind, whereas many acts of renunciation are merely negligible. The prophet Samuel once asked, "Hath the Lord as great delight in burnt offerings and sacrifices, as in obeying the voice of the Lord? Behold, to obey is better than sacrifice."

The highest kind of religious activity is constructive, dynamic in the manifestation of its energies. Jesus uttered a basic truth when he declared: "Ye shall know the truth, and the truth shall make you free." Free from what? Free from all presentments and beliefs of inharmony, such as sin, sickness, suffering, etc. Hence, we attain the freedom of which Jesus was speaking, and which, as he demonstrated, was possible of achievement, in so far as we realize the eternal, all-present, all-powerful Truth which governs man. To attain such realization as completely as is possible to us, we must understand that the Supreme Being is infinite Mind, is the divine Principle, according to which that only exists which expresses God, the absolute and unchanging good. The more we succeed in this realization the more serene and harmonious and truly successful becomes our earthly experience, and it is well never to forget that if the truth makes us free, as our Wayshower taught, it follows that an untruth, even though it can be existent only in false human belief, can have no other possible effect than to enslave us; and the only way to deliver us from such enslavement and its penalties is by the action of divine Truth.

Realization follows upon understanding, and demonstration assists understanding. When we use the key of realization (and this key is always and everywhere awaiting our use) we unfold the portals of harmony. But we need also to prove that we have gained a right realization of the truth which delivers from error. In Science and Health (p. 323) our Leader says, "In order to apprehend more, we must put into practise what we already know. We must recollect that Truth is demonstrable when understood, and that good is not understood until demonstrated."

Consistency

AGNES MORLEY CLEAVELAND

In the beginning of the writer's experience in Christian Science, she exclaimed to the friend who was gently attempting to lead her thought to an acceptance of a logical conclusion about the nature of God and man, "But if I admit your arguments I will be led into accepting an ultimate absurdity." This ultimate absurdity, as she then conceived it to be, was the unreality of matter. It was only after the throes of a new birth had left her chastened and humble that she came to realize that the ultimate absurdity is belief in the reality of a material universe. This awakening came when she set herself the unfamiliar task of reasoning fearlessly and logically straight through to the end of the argument. Although the epigram, "Consistency, thou art a jewel," had been a favorite one, the realization was now forced home that the whole fabric of her mental existence had been constructed upon the fundamental inconsistency that like could produce unlike, or, that God could create something ungodlike. For the first time the fact was squarely faced that the phrase "inscrutable wisdom" of God had been employed as an excuse for illogical and inconsistent thinking; that one who was loudly espousing consistency was a victim of the fundamental inconsistency of failure to grasp the axiomatic truth that God is Spirit; God is All; therefore all is Spirit.

One definition of the word inconsistency given in the Standard dictionary is, "self-contradictoriness in statement." Obviously, divine Mind cannot be inconsistent or it would be self-contradicted and self-annihilated; hence God, or Mind,

Copyright, 1913, by The Christian Science Publishing Society

Digitized by Google

may properly be called the divine Principle of consistency, agreeing with or conscious of only spiritual facts. Therefore the suppositional opposite of divine Mind, mortal mind, or false belief, is the expression of inconsistency, disagreeing with or unaware of itself; that is, an absurdity or nonentity. The question then arises, How can nonentity—no entity, or nothing—cause trouble,—sin, disease, and death? It is at this point that we must fearlessly follow the argument through to its conclusion and declare that this is an impossibility. And since God, good, cannot cause it, there is no alternative but the admission of the truth that evil does not and can not exist. Its seeming existence is merely the self-assertion of inconsistency, and both the claim and its supposed effects are banished when we hold our thought rigidly to consistent and logical reasoning, and this in entire keeping with Jesus' statement, "Ye shall know the truth, and the truth shall make you free."

So long, however, as we harbor inconsistency in our consciousness, just so long will the brood of evils springing therefrom claim reality in our experience. Our work, therefore, is to turn from the contemplation, the weighing and appraising of material evidence or phenomena, to consistent and logical reasoning about God and His universe. On page 273 of "Science and Health with Key to the Scriptures" Mrs. Eddy says, "Divine Science reverses the false testimony of the material senses, and thus tears away the foundations of error." It is not we who tear away the foundations, but divine Science, or right knowing, and we can only know rightly when we realize that as the image and likeness of divine intelligence we reflect this intelligence, which includes within itself no such thing as inconsistency, for Truth and its idea are always consistent with each other.

Behind the Footlights

CORTLANDT MARSDEN

THE writer is engaged in the theatrical profession; and in traveling about the country, incidentally he has been able to witness or learn personally of many remarkable demonstrations in Christian Science. He always makes it a point to visit the various reading-rooms and churches, and to cultivate the acquaintance of Scientists. In so doing he is frequently asked questions regarding the progress that Science is making among those who are on the stage. This last sentence could be phrased in the past tense; for not only is the most satisfying progress being made, but the progress that has been made is tremendous. There was a time when a religiously inclined individual on the stage was a freak; and even today the performers who frankly though humbly proclaim their creed are the Scientists.

Are there many such on the stage? Yes. It is a very common occurrence to meet them in the profession nowadays, and when one does not meet them, they are conspicuous by their absence. Moreover, they are good, earnest workers. Frequently I have been on a bill of fair size that was composed entirely of students of Christian Science. It is no rare sight to step into a dressing-room and see a copy of "Science and Health with Key to the Scriptures" lying conveniently near on a make-up shelf, side by side with a box of paint; or to see a performer with his face covered with burnt cork busily engaged in studying the Lesson-Sermon. One stage manager is known to have told a Scientist that he could detect Christian Scientists as soon as they entered the theater. Asked how, he replied, "I know them by their smile."

Recently, while playing in a western city, the opening day was particularly trying. A young couple whose acquaintance we had not made, occupied the room next to ours. They were dressing for the street when we returned to our room, and I remarked to my wife, "It isn't very scientific, but I feel tired out." That "scientific" was sufficient. From the other dressing-room came the query in unison, "Are you Scientists?" We replied in a happy affirmative and they echoed it. A charming friendship began right there and still continues. This is not an isolated instance. Around the dressing-rooms or on the stage, some word or expression incident to our faith will not uncommonly be met with the query, "Are you a Scientist?" and pleasant companionship is assured.

This article is being written in Chicago, a city that both temporarily and permanently contains enough theatrical people to start a good-sized town of their own. Work is not over plentiful, but the Scientists are cheerful and happy; among them there is no condemnation of "the powers that be" in the booking offices. They work steadily and persistently against any claim of limitation, and win out! The same thought that they hold before stepping on the stage for their performance they hold before entering those crowded, bustling offices, namely, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). And the more severely that fact is tested and the more strongly they hold to it, the more resoundingly triumphant is the inevitable victory.

Last Thanksgiving eve none of us had work. Were any of the Scientists peevishly complaining? No, indeed! Breasting a frisky little snow-storm we all headed for church. There we sat, a good-sized row, all actors and actresses, earning our living in a most precarious profession, the men and women from behind the footlights, the last people in the world whom many worthy folk would think of as being sincerely religious. Moreover, while the testimonies were being given, other members of the theatrical profession, scattered about the church, rose and told of their experiences. The last half of that week, all of us received contracts!

What, then, is the great appeal that Christian Science makes to the people of the stage, to that widely traveled, skeptical world behind the footlights? Simply this: it is primarily a practical religion. It is an ever-ready help; it is always with us; we are not to put it on merely like a garment Sunday morning to wear it to a church: we must live it every hour; and in so doing we live wholesomely, intelligently, and happily. Furthermore, Christian Science is fundamentally simple. It is like a great masterpiece of art—the more we study it, the more we are impressed with its profound simplicity.

Theatrical people are always supposed to be in "good condition." Once a contract is signed, the work must be performed unless a physical impossibility prevents: hence another powerful appeal that Christian Science makes to the people of the stage. It is a common occurrence for Scientists while working on the stage to whisper to a fellow Scientist, "Help me," and the response is always sure. We have accomplished nothing in our work that we do not unreservedly attribute to divine Love.

Another great appeal that Science makes to theatrical people lies in the fact, that there is a kindly Christian spirit shown them in the Christian Science churches. A performer attending one of our churches is never a stranger. He is warmly welcomed purely for what he is, regardless of rank, profession, or position. He is immediately made to feel at home. There is friendship, trust, and sincere brotherhood!

The Christian Science church may well be proud of its real sons and daughters on the stage. Among them there is no drinking, no profanity, no petty professional jealousy, no dishonesty; their work is clean and their lives are clean.

Digitized by Google

They smile serenely, for they are leaning upon "the sustaining infinite" (Science and Health, Pref., p. vii). They have to meet all kinds of discouragements and hardships, but daily putting into practise the golden rule, they live their part as Christian Scientists. They do their best on the stage of human experience, and are guided on this earthly tour by the teachings of the Master as interpreted in Christian Science by their revered Leader, Mrs. Eddy.

The Manual in Practise

CHARLES A. BLAKE

In speaking of the rules and by-laws in the Manual of *The Mother Church*, Mrs. Eddy says: "They sprang from necessity, the logic of events,—from the immediate demand for them as a help that must be supplied to maintain the dignity and defense of our Cause; hence their simple, scientific basis, and detail so requisite to demonstrate genuine Christian Science" (Miscellaneous Writings, p. 148). The Christian Scientist finds abundant opportunity to prove in his every-day work that these words of our beloved Leader are absolutely true, and the practitioner who makes use of his Manual in bringing the healing truth to suffering humanity, will prove by the fruits of his labor that he is carefully attending to the details "so requisite to demonstrate genuine Christian Science." This, with the other helps that are supplied through the various activities of The Mother Church, the work of The Publishing Society, of the board of lectureship, the committee on publication, the branch churches, reading-rooms, teachers, and practitioners, may be likened to "the leaves of the tree" that "were for the healing of the nations."

An incident that came within the range of the writer's observation may be helpful in illustrating the possibilities for the practitioner in the intelligent use of the Manual as an aid in the healing work. A lady applied to a Christian Science practitioner for help in solving her problem, as she was in great mental distress. For years she had led a care-free life. Supplied as she was with ample means by an indulgent husband, she lived luxuriously and traveled extensively, having no thought but to please herself. After the loss of her husband, having spent all the money left her, and being deserted by former friends and in poverty, she turned to Christian Science for relief. The immediate need was for employment, and the practitioner carefully sought to find what the unused talent was, that she might improve it. To the material senses the prospects were far from encouraging. After finding out what the applicant could do, and deciding upon her skill with the needle as the best means at hand for earning a livelihood, the practitioner advised the use of the free employment advertising columns of *The Christian Science Monitor* as an aid in securing the desired position. At this the pride and sensitiveness of mortal mind was aroused, and burst forth in a violent tirade against the practitioner's suggestion that she should demean herself to accept the charity implied in a free employment advertisement. The Christian Scientist was unable to offer any advice at that time, and realizing that a great deal of love and wisdom must be exercised in order to help the woman, he dismissed her, asking her to call the following day.

According to appointment she appeared, and said she had been for hours answering want advertisements in person, and going about to the dressmaking establishments seeking employment without success. Discouragement and despair were plainly written in her countenance. The Scientist very gently pictured to her how our Leader had given to us first our text-book, "Science and Health with Key to the Scriptures," the *Journal*, The Mother Church, and all the activities conducted by it, including the *Monitor*, and last but not least she had provided the free employment advertising as a means of bringing together those in need of help.

Asking her if she thought she would ever care to be a member of The Mother Church, she replied that she hoped some time to have that privilege. In that case, he said, she would be willing to be governed by the rules and by-laws contained in the Manual; and she stated that such was her desire. The practitioner then read to her from Article VIII, Sect. 15: "God requires our whole heart, and He supplies within the wide channels of The Mother Church dutiful and sufficient occupation for all its members." It was pointed out to her that the *Monitor* was one of the wide channels of The Mother Church, and that if she would avail herself of the opportunity to use the free employment columns, no doubt God would bless the effort and supply her need. The lady was able to see the situation in its true light, and gladly sought through this means the desired employment, and the following morning, in answer to her advertisement, she found sufficient occupation to meet her need through the long winter that followed. Her growth has been steady and continuous, until now she is a member of The Mother Church and is rejoicing in the truth that makes free.

The Manual contains the rules which should govern the daily life and practise of the Christian Scientist, and may be studied constantly with profit, especially the truth expressed in "A Rule for Motives and Acts," "Daily Prayer," and "Alertness to Duty" (Article VIII, Sects. 1, 4, 6).

Advancing in Truth

ALBERT P. TILLMAN

To the lover of Christian Science it is an oft-recurring joy to find that the Bible, "Science and Health with Key to the Scriptures," and individual experience bear consistent witness to the truth of being and to one another, and he frequently quotes that familiar passage in Isaiah, beginning, "They that wait upon the Lord shall renew their strength;" but its very stately rhythm may have been obscured from the unusual order in which the blessings that follow are pronounced. In the natural order of things, we must learn to walk before we can run, and none of us can fly as yet; but in the Scripture the first is last and the last first, constituting an apparent anticlimax: "They shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint."

The writer is glad to testify that on first studying the teachings of our inspired Leader, he was conscious of an exaltation out of the mire of material belief into an ampler, purer air, up beyond the dark and lowering clouds; above the storm, into the serenity of celestial sunshine. "They shall mount up with wings as eagles." Do we not all know something of this sublime experience? Have we not all felt with Peter, "Lord, it is good for us to be here"? Yes, but not to stay. We must go steadily forward if we are to follow the Master. "Where there is no vision, the people perish." But the glorious glimpse of reality will avail us little, and benefit others not at all, if we are "disobedient unto the heavenly vision." We must "follow the gleam."

The next experience of the writer was to come out from servile bondage to physical affliction which for some years had completely laid him aside, and once more participate in normal activities. "They shall run" from the broad by-paths

Digitized by Google

of sickness and sin to "the way of holiness," of wholeness. But we are all called to a more toilsome experience than this, even the patient, persistent clearing away of all those errors of personal sense which selfishly absorb or carelessly dissipate the light of Truth, in order that we may ever more and more fully express grace, wisdom, power, purity, love, all the manifestations of that Mind "which was also in Christ Jesus." This means habitual work, watchful prayer, walking in the light, walking with God, walking "by faith, not by sight." Along this road we can greatly help and cheer one another, cultivating the sweet influences of loving Christian fellowship, so that each one who is found among us may sing "with a pure heart fervently," as in Mrs. Eddy's "Christ our Refuge" (Poems, p. 12),—

Father, where Thine own children are,
I love to be.

But the best of all is, God is with us. We think lovingly of Christ Jesus walking alone in the way of salvation,—yet he declared, "I am not alone, because the Father is with me." We think too with grateful affection of our Leader, buffeting alone the surging waves of mortal belief, yet she could sing, as in the above poem,—

And o'er earth's troubled, angry sea
I see Christ walk,
And come to me, and tenderly,
Divinely talk.

The inspired Word gives us this strong assurance: "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint."

❖

"What lack I yet?"

LENA M. HALL

It is impossible to read the account of the rich young man who came eagerly to Jesus inquiring what he should do to inherit eternal life, without a feeling of great compassion for the keen disappointment which he must have suffered. Confident of his own integrity, he anticipated only the Master's word of approval. That Jesus himself felt a tender compassion for the young man who believed himself rich because he had great material possessions, is evidenced by the statement, "Then Jesus beholding him loved him."

Out of this great love the Master discerned and revealed to the eager questioner the one thing which he still lacked, with the result that he "went away grieved." The disciples' attitude toward this incident, their wonderment that their Master referred to this young man as one belonging to a class which found it hard to "enter into the kingdom of God," is not unlike the attitude of many today who are filled with amazement, because some seemingly worthy and upright people do not receive immediate healing through Christian Science. "Why is it," they will ask, "that some who have so many good qualities, who try so hard to do right and to 'keep the commandments,' have to wait for healing, while others who are confessedly sinful in their tendencies often receive it so quickly?"

To this apparently natural query there can be but one reply, and it is this, that the sum total of all inherited or acquired human goodness is not sufficient to heal a single case of disease, since, as our Leader says, it is "the recognition of infinite Love which alone confers the healing power" (Science and Health, p. 366). Who will be most likely to have this recognition? Will it be the one who, clasping close his "great possessions" of personal goodness, waits for the reward which he believes he justly merits, or he who, turning with utter loathing from the material sense of selfhood, sees his only hope in the infinite goodness of God? Do we not all remember that in the parable of the Pharisee and the publican the latter "went down to his house justified rather than the other"?

Not until we utterly discard the thought that there are either saints or sinners applying to Christian Science for healing, and recognize the fact that "there is none good but one, that is, God," and that there is but one evil, namely, the belief in a power opposed to God,—not until then shall we be ready to understand the method whereby the sick are healed in Christian Science. Not until we see that all sense of material selfhood, whether claiming to be good or evil, "profiteth nothing" to God, will our vision be clear enough to behold the "great possessions" which are really ours, and which belong in equal measure to each and all.

❖

A Messianic Mission

ADA JANE MILLER

In a *Literary Digest* article on "The Function of the Poet in American Life," Edwin Markham says: "But if America has no spacious past, she has a spacious future. She has a Messianic mission to the nations of the earth. What poet's heart can fail to believe that she has been reserved to these later ages by the higher Power for some vast purpose, some transcendent manifestation. Here certainly is to be worked out the highest freedom the world has ever known."

This is a poet's prophecy, a poet's vision, and its fulfilment is not a far-off, future event, but a present realization, for the mission of Christian Science is wholly Messianic: it heals the sick and raises those who are dead to things spiritual to that plane of consciousness in which they can discern the Principle of being—God. It gives to humanity an ever-increasing ability to demonstrate this Principle and to make manifest the regenerating, liberating power of Christ, Truth. To our age and to America was given this revelation, this Science of all science, this solution to the problem of being, this truth which is today working out "the highest freedom the world has ever known." Indisputable proof of this statement is before the world today, and this proof is open to all for investigation. The old-new freedom which divine Truth alone can give, is opening wide the doors to our "spacious future" and is gradually making of one people all the nations of the earth.

❖

[Written for the *Sentinel*]

Prescience

JOSEPH LEWIS FRENCH

The wise men in the East beheld a star,
And journeying onward felt new glory's scope,—
A wisdom, and a mission, and a hope,
Transcending heights whereon time's altars are;
And coming down the years they kenned afar,
As something seen far-off, a mountain-slope,
A risen radiance, as when dawn doth ope,
The vision of a fadeless avatar!

Here, where new faiths arise, where still the beam
Of light ascending thwarts the mortal sphere,
The meaning and the mystery apprise
The waking watcher that the day is here,
That day whose far-off, transcendental gleam
The wise men saw what time the stars sang clear!

Selected Articles

[Frederick Dixon in *Middlesex County Times*, London, England]

In a recent issue, under the heading "Vegetarianism," there is a letter to the editor in which the writer speaks of "so-called Christian Science." I shall be obliged if you will permit me to ask why the term "so-called" should be applied to Christian Science, and if you will let me explain as briefly as possible the claim of Christian Science to the terms Christian and Science.

The term Christian is capable of almost any definition which any sectarian view may endeavor to impose. We all know that during the two thousand years of the Christian era, sect after sect has arisen which has shown how it defines Christianity by murdering and persecuting all who differ from it. The pagan persecuted the early Christian, but the early Christian very soon learned how to persecute the later Christian. There is not a great deal of difference between the torches in the gardens of Nero and the *autos-da-fe* in the towns controlled by the Inquisition. If the test of the pagan in Rome was Christ or Diana, the test of the Christian in Rome very soon was the Vatican or Geneva, or something of the same nature. It has never been heard that the pagans of Rome murdered anybody for translating their sacred books; yet Wyclif, Tyndale, Coverdale, and innumerable others, were persecuted and some of them murdered for the attempt to translate the Latin Vulgate into the tongue of the common people, and to bring the translation within their reach.

The same thing has gone on ever since. The Church of England, having wrenched itself free from Rome, with the bitter jest that the figures of the saints in St. Paul's would make a jolly blaze in Smithfield, proceeded to persecute the Covenanter and the Dissenter generally in its own way. The drowning of Margaret McLachlan and Margaret Wilson may have been more or less isolated facts, but the boot was for a long time in about as common use as the rack had been. These, in short, were the tests for many years as to whether a man was a Christian or a "so-called" Christian.

The Oxford dictionary, the greatest dictionary in the world, has, however, a different definition, namely, that the word Christian applies to all "believing in, professing, or belonging to, the religion of Christ." Anybody who attempts a narrower general definition than this is likely to find that he is not so much engaged in defining a term as in endowing a sect. The best, indeed the only real definition of a Christian which is to be found, is to be found exactly where it might be expected, in the Bible. It occurs in various forms, but the well-known one from the fourth gospel will serve for the present occasion, "He that believeth on me, the works that I do shall he do also." In those words the Founder of the Christian religion, and none other, made a man's claim to be a believer dependent on his ability to demonstrate his faith, and this was undoubtedly exactly what the author of the epistle of James meant when he declared that faith without works, assertion without demonstration, was dead. In plain English, Jesus the Christ made what is commonly known as a miracle the object-lesson, or proof, of the Science of Christianity.

If any doubt that there is a Science of Christianity, they had better turn to the Greek Testament, and there, not once or twice, but again and again, they will find the expression, "a scientific knowledge," though that expression is unfortunately generally translated as knowledge. Perhaps the most interesting of these examples occurs in the epistle of Peter, where the phrase more than once occurs as "a scientific knowledge of God." Now a scientific knowledge of God is necessarily a scientific knowledge of truth, and a scientific knowledge of truth is, equally necessarily, capable of demonstration. Jesus himself said, "Ye shall know the truth, and the truth shall make you free," and this ability to demonstrate the truth is what separates the Science of Christianity from mere blind faith or belief.

The question arises, What is science? You can, of course, get almost as many definitions of science as you can of Christianity, and just as there is an orthodox and an unorthodox definition of Christianity, so there is an orthodox and an unorthodox definition of science. Whether, however, the term to be defined is Christian or science, the heterodoxy of yesterday is always the orthodoxy of today, just as the heresy of tomorrow is always the orthodoxy of the day after. The exponents of science have fought almost as violently as the exponents of Christianity. In its early days science was a literal acceptation of the book of Genesis, and men were burned by the episcopal scientists of the time for declining to believe that the earth was flat or the center of the stellar system, just as the Christian Scientist is attacked today for declaring that Mind, and not matter, is the dominant factor in the healing of disease. The struggle between Newton and Leibnitz was almost as bitter as that between Abélard and Bernard of Clairvaux; and in our own times, the struggle between materialism and idealism has not wanted in severity.

Idealism, as Huxley pointed out, is only the belief that mind creates matter, just as materialism is the belief that matter creates mind. So far as this goes, the idealism of Christian Science coincides with the idealism of the scientific schools. The difference, however, comes when Christian Science demands that the idealism of the New Testament shall be separated from the idealism of the laboratory; and insists that the only power is God, is good, and that this must be demonstrated in the healing of sorrow, and sickness, and sin. This healing Christian Scientists have been attempting, with ever-growing success, for the last forty years. Christian Science demands that Christianity shall be accepted scientifically by what it does, instead of theoretically by what it says. It proves its case both by induction and by deduction, and every day it is becoming more impossible to deny that Mrs. Eddy's teaching is both Christian and scientific. The two terms cannot, indeed, ever properly be separated. Christianity is nothing if it is not truth, and science which is not truth is equally an impossibility.

[From *The Week*, Victoria, British Columbia]

Dr. D. R. Cameron, of the Tabernacle Baptist church, has seen fit to preach a sermon on the subject of Christian Science. The sermon is an out and out denunciation of the Founder. The *Week* is not concerned to defend the character of Mrs. Eddy or the doctrines of Christian Science. A controversialist so unreliable with respect to his facts is not entitled to much respect when one comes to deal with his arguments.

Instead of raking up the alleged private details of Mrs. Eddy's life, Dr. Cameron would do better to address himself to the indisputable fact that Christian Science is making great strides in England, the United States, and Canada; that incidentally it is making serious inroads on the so-called orthodox churches; that whether it be a religion or a science or both, or neither, it is reforming and revolutionizing the lives of hundreds of thousands of people. It is building churches everywhere, and they are filled. It is bringing comfort and hope into lives which have hitherto known nothing but gloom, and it is exercising successfully the most remarkable curative system of modern times. It would be at least as remarkable that such results should follow the teaching of a woman as

Digitized by Google

bad as Dr. Cameron makes out Mrs. Eddy to be, as it is, to quote his own words, "that God should have kept the world in ignorance of this teaching for six thousand years."

Christian Science may not be all that its adherents claim, but it must be something very different from what Dr. Cameron imagines, to have accomplished the "wonderful works" testified to by thousands who have received its benefits. He may shelter himself under the prophecy that "false prophets shall rise," but if he thinks that Mrs. Eddy is one of them he has chosen the worst possible line of argument with which to convince the world. If there is any literal meaning in the words of his Master, "By their fruits ye shall know them," then the fruits of Christian Science bear a testimony which no argument can destroy.

✧

[Willis D. McKinstry in *The Solomon* (Kan.) *Tribune*]

To refer to Science and Health as Mrs. Eddy's Bible is inexcusable, and such a statement is sufficient evidence to convict our critic of having no knowledge of the teaching of Christian Science. "Science and Health with Key to the Scriptures" is just what the name implies. It is a commentary or Bible help, and in no sense has it ever been referred to as a Bible by Mrs. Eddy or her followers. Its teachings are based upon the Scriptures, and they so illumine the spiritual nature and essence of the Holy Bible that it has become the daily companion of hundreds of thousands of persons who at one time looked upon it as a book of mystery. No doubt our friend has in his library many Bible helps, so why should he object because Christian Scientists have a book of this kind?

Mrs. Eddy deals with the question of existence from a spiritual basis, hence the teachings of Christian Science coincide with the spiritual import of the Bible. What she says in regard to food and its effects upon the body is correlative with the words of our Lord and Master, "Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." The Scriptures also record that Daniel and his three companions proved that God, divine Mind, is the life and strength of man, when they refused the king's wine and meat, and after living on pulse and water, "their countenances appeared fairer and fatter in flesh than all the children which did eat the portion of the king's meat."

The following words of Scripture emphasize the declaration that causation is spiritual: "These are the generations of the heavens and of the earth when they were created, in the day that the Lord God made the earth and the heavens, and every plant of the field before it was in the earth, and every herb of the field before it grew: for the Lord God had not caused it to rain upon the earth, and there was not a man to till the ground."

If holy writ is true, may it not be that a want of spiritual living among mortals is responsible for the lack of rain? What say the Scriptures upon this subject? "And it shall come to pass, if ye shall hearken diligently unto my commandments which I command you this day, to love the Lord your God, and to serve him with all your heart and with all your soul, that I will give you the rain of your land in his due season, the first rain and the latter rain, that thou mayest gather in thy corn, and thy wine, and thine oil. And I will send grass in thy fields for thy cattle, that thou mayest eat and be full."

Heat and cold are products of human belief from the fact that they are subject to degrees of change. All that God made is normal in its expression; in His kingdom it is neither hot nor cold. The revelator makes mention of this fact, for he says, "Neither shall the sun light on them, nor any heat." Anything to exist or be in fact must be true. God is—He created the universe and man; hence there must be a truth about God, man, and the universe. It was of this truth Jesus spoke when he said, "Ye shall know the truth, and the truth shall make you free."

In Christian Science man's identity is not disturbed by or absorbed in God, as this critic would have your readers believe. The Scriptures record that man is created in the image and likeness of God, and Christian Science reiterates this coexistence. In Science and Health we read: "This scientific sense of being, forsaking matter for Spirit, by no means suggests man's absorption into Deity and the loss of his identity, but confers upon man enlarged individuality, a wider sphere of thought and action, a more expansive love, a higher and more permanent peace" (p. 265). There is no better way for one to show his followers that he has a true knowledge of God and the Christ than by demonstration. The command to "preach the gospel" and "heal the sick" is continuous.

✧

[John W. Harwood in *Daily Dispatch*, Manchester, England]

In the comments on the essays of the Rev. Mr. Hopkinson, *re* mental healing, I notice a quotation is made intimating that thinking men and women are ready to recognize much truth in Christian Science, but they cannot fall down and worship Mrs. Eddy. May I refute the insinuation contained therein, and say that no Christian Scientist ever thinks of worshiping Mrs. Eddy, neither do the writings of Mrs. Eddy justify such an imputation.

It is futile to remark that Mrs. Eddy as a leader of thought was a "back number," when her teachings as set forth in the text-book of Christian Science, "Science and Health with Key to the Scriptures," have revolutionized the whole world's thinking. The Christian Science movement, which is increasing according to statistics at the rate of one hundred and two churches per annum, is not an indication of any "back number" leader of thought. Thinking men and women are indeed recognizing much truth in Christian Science, and Mrs. Eddy's work for mankind is being appreciated.

✧

[Thomas F. Watson in *San Francisco* (Cal.) *Examiner*]

The gentleman who tells us, in the California *Christian Advocate*, "where Christian Science ends," needs to know that "of his kingdom there shall be no end." The great spiritual truth of the Bible, as understood in Christian Science, is as demonstrable today as it was nineteen hundred years ago, for God is "the same yesterday, and today, and forever." Jesus said, "Heaven and earth shall pass away, but my words shall not pass away;" he also said, "Thy word is truth." This truth is elucidated in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The reason for the establishment of the Christian Science church was to "reinstate primitive Christianity and its lost element of healing" (Manual, p. 17). The first tenet of the Christian Science church reads: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497).

As to the absurd charge that Christian Science is agnosticism, any one who has ever attended a Christian Science service or read a page of the Christian Science text-book, knows that it teaches that God is not unknowable, but that all may comprehend Him. As the Bible states, "All shall know me [God] from the least to the greatest." An agnostic is one who believes it to be impossible to know God, or, according to Webster, he is one professing ignorance; but the Christian Scientist says, with Paul, "I know whom I have believed, and am persuaded that he is able to keep that which I have committed unto him against that day." Jesus said, as re-

Digitized by Google

corded in the gospel of St. John, "And I know that his commandment is life everlasting."

This critic says that "Christian Science is only a hallucination" with a "basis of theosophy," which proves that he has not taken the time to inform himself on either the subject of Christian Science or theosophy. Theosophy, according to Webster, is any system of philosophy or mysticism which proposes to attain intercourse with God and superior spirits, and consequent superhuman knowledge, by physical processes, as by the theurgic operations of some ancient Platonists, or by the chemical processes of the German fire philosophers;" while Christian Science teaches that God is infinite Spirit, or divine Mind, and cannot be understood through the physical senses, for, as the Bible states, "the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

Christian Science is a religion of love, and does not seek to build itself up by tearing another down. It heals the sick, reforms the sinner, and comforts the sorrowing, and does this in obedience to Jesus' command.

Judging from the flourishing condition of the Christian Science churches, and the immense circulation of its literature, as well as by the grateful testimonials at the Wednesday evening meetings, the critic must have been misinformed, for he says, "The healing propaganda is rapidly waning." Let him who criticizes Christian Science remember that Jesus gave us a test whereby his true followers should be known, viz.: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; . . . they shall lay hands on the sick, and they shall recover."

✧

[R. Stanhope Easterday in *Elkhart* (Ind.) *Truth*]

A report in a recent issue alleges that the Rev. R. J. Wade earnestly championed "the ministry of pain" in his Sunday morning sermon. This in itself could not possibly be objectionable to Christian Scientists, if such are his views, had the gentleman not seen fit to depart from his text far enough to become a critic of Christian Science, gravely misrepresenting the true purport of that system of religious teaching.

Incidentally, Christian Science differs from the philosophy of our critic in regard to the office of suffering in the development of human character in this essential point: The gentleman would seem to have argued that suffering and affliction are the necessary steps to the development of the "graces of Spirit," whereas the Christian Scientist contends that if such untoward conditions do by chance befall the individual, they should be made stepping-stones to achievement, instead of stumbling-blocks,—this in conformity with that sublime outline of the divine economy couched in the Scriptural statement, "All things work together for good to them that love God." It would seem, therefore, that the Christian Science view of this questionable "ministry of pain" is more tenable, Scriptural, and far more comforting than that of our critic, so that his allusion to Christian Science as a glaring instance of extreme departure from his own outline of divine discipline was absolutely uncalled for, while at the same time his merciless arraignment of Mrs. Eddy and of her system of religious teaching and of Scriptural interpretation known as Christian Science, was all the more unkind and uncalled for.

Your readers, however, may be interested to know just what Christian Science does teach on the points raised by our critic. Mrs. Eddy, the Discoverer and Founder of Christian Science, after years of Scriptural study, found that the only reasonable basis for true, scientific reasoning would be the undeniable, though perhaps at present uncomprehended, premise of perfect, infinite, spiritual causation, God, upon the basis of which, in the light of the first chapter of Genesis and the opening verses of John's gospel, but one rational deduction was plausible and logical, this inevitable deduction being that man and the universe, resulting from such perfect, spiritual causation, must necessarily be spiritual and perfect, leaving no possibility of imperfection or discord of any nature. Following this deduction there must be another, equally plausible, to the effect that apparent imperfections, discord, disease, death, etc., must be in the last analysis the result of an imperfect conception of this spiritual, perfect, divine creation.

It should be recalled in this connection that human discord is supposed to have had its origin in "a deep sleep," "a dream," and "a mist." We have the Scriptural assurance, furthermore, that "things which are seen were not made of things which do appear," etc., and the revelator foretold the time when "there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain," because "the former things are passed away." It would be a far departure from a logical line of reasoning to infer that the effect of perfect, infinite cause could ever, even in a fractional part, be imperfect or pass away. It is not, however, illogical to infer that that which is changeable or destructible is logically unreal. It is upon the basis of such incontrovertible logic that Christian Science deduces the unreality or destructibility of all that is unlike the infinite first cause, God, good. And it is in the light of such reasoning that the Christian Scientist is able to comprehend and in an increasing degree utilize the Scriptural promises, "Ye shall know the truth, and the truth shall make you free;" "Thou wilt keep him in perfect peace, whose mind is stayed on thee;" "Bless the Lord, . . . who forgiveth all thine iniquities; who healeth all thy diseases," etc.

It will thus be clearly seen that Christian Science does not deny the actually existent, the reality of God's creation, but steadfastly and logically contends for these as the very foundation of health, harmony, and life everlasting. It will be seen also that Christian Science does not merely attempt to evade suffering or pain, but that it scientifically, logically, and in accordance with the Scriptures, proves the illegitimacy of their claim to recognition by steadfastly uncovering and bringing into experience the realities of divine origin, thus dispelling the mere seeming of the carnal or fleshly evidence. As Paul so logically and conclusively put it, "to be carnally minded is death; but to be spiritually minded is life and peace."

Our critic in contending so persistently for calamities does so in open contravention of our Lord's teaching and practise, for he had not one word to say in extenuation of evil in any form, for any purpose whatever, or for one single moment, but summarily destroyed all such manifestation of suffering. He ever advocated health in a most effectual way, and unequivocally declared death an "enemy." In conclusion, he significantly commanded his followers in all ages to do the works that he did, leaving but one course open to the Christian, even the persistent effort to eliminate on every hand one and all of these untoward conditions. If evil were the potent and essential factor for good that our critic implies it to be, it would be wrong to attempt to get well when sick or to attempt to avoid calamity or disease, "lest haply ye be found even to fight against God."

✧ ✧ ✧

I know not where His islands lift
Their fronded palms in air;
I only know I cannot drift
Beyond His love and care.

Editorial

"Wise as serpents"

It would almost seem that Christian Scientists have need to ponder daily the Master's warning to the little band of disciples whom he sent out "to preach the kingdom of God, and to heal the sick," "Behold, I send you forth as sheep in the midst of wolves: be ye therefore wise as serpents, and harmless as doves;" for if one may judge by the letters and circulars received by practitioners whose cards appear in the *Journal*, there is an impression abroad that Christian Scientists are liberally supplied with money. While these solicitations to purchase cover a wide range of "golden opportunities," they are more especially plausible in their offers of shares of stock in mining or other corporations which have not as yet advanced from the stock-selling stage of their career to that more permanent stage which is made significant of success through the payment of dividends. Most of these schemes are heralded as enterprises which are certain to pay large dividends, but it is an axiom of business that safe investments will as a rule pay only a conservative return, while investments (so called) which promise a large and often fabulous return are usually coupled with great risk of loss, not only of the promised returns, but also of the capital invested.

It will be well for prospective investors to remember that the mere fact that the person selling the stock claims to be a Christian Scientist does not insure the safety of the investment, for this person, albeit a good Scientist, may himself have been misled by some one else's exploitation of the brilliant future of the stock in which he is endeavoring to persuade his friends and acquaintances to invest; or, worse still, he may be a wolf in sheep's clothing whose intention is to profit by the lack of business experience among that large class, mostly women, who having a little money to invest are naturally desirous of securing the largest possible returns, a desire which renders them easy victims to the plausible schemes of the wily seller of wildcat stocks. The world is slow to learn the lesson that real bargains in stocks or in any commodity are seldom offered to the promiscuous buyer, and that the man who figures on getting something for little or nothing, sooner or later laments his folly.

It is not words but deeds that prove whether a person is a Christian Scientist; and the person who has something to sell should try to sell it upon the only legitimate basis, namely, its intrinsic merits. The person purchasing should do so only after thorough investigation as to the value of the investment, and a Christian Scientist who is without business experience should invariably take the precaution to obtain advice from some disinterested person or business institution with an established reputation for fair dealing. It will be well also to bear in mind two proverbs, the first of which is applicable to the honest but mistaken promoter, and the second to all who have succumbed to the "get-rich-quick" craze. These proverbs are: "Boast not thyself of tomorrow; for thou knowest not what a day may bring forth;" and, "He that maketh haste to be rich shall not be innocent."

This is not saying that riches are synonymous with dishonest dealings, for many a man has become wealthy through investments which with the courage born of sound business judgment and foresight he has held on to until industry and development brought him a legitimate return on his holdings; the moral of this homily being, Don't dabble with ventures you know nothing about, and in all business dealings endeavor to put into practise the rule laid down by the great Teacher: "Whatsoever ye would that men should do to you, do ye even so to them." The dividends on this investment can be guaranteed.

Why we are writing of this matter is that not only are many of these circulars and letters sent out by persons calling themselves Christian Scientists merely as a cloak to their dealings, but in some instances those who are engaged in the business of selling stocks of this character have even gone so far as to make the corridors of our churches places of merchandise. The Master's sharp rebuke to the money-changers who had desecrated "the house of prayer" is equally applicable in these days, and should remind us of that other saying of the great Teacher: "Lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal: for where your treasure is, there will your heart be also."

One point more. It should be thoroughly understood that Christian Scientists are under no circumstances obligated to buy because the promoters claim the enterprise is under Christian Science auspices, for such auspices are impossible, even if it is urged that Mr. A and Mrs. B and Miss C have purchased stock therein. Christian Science lays no such obligations on its followers, but would endue them with that wisdom which, dealing justly with all, is ever alert to discern the true.

ARCHIBALD MCLELLAN.

Faith and Intelligence

Strangely enough, apart from the teachings of Christian Science, faith and intelligence are not supposed to have any direct relation to each other, and this explains to a large extent the antagonism to Christian Science expressed by many who suppose that the faith which it inculcates is divorced from intelligence. A prominent member of an orthodox church once said that for his part he would much rather trust to a good pair of oars, if out on a storm-tossed lake, than to faith. The Scientist to whom this remark was addressed replied that she would, too, so far as the kind of faith which he evidently meant was concerned; but that Christian Science had an altogether different concept of faith to offer, one which led to the healing of the sick when all material means had failed, and which brought safety and peace to Jesus' terrified disciples when their oars and nautical skill were of no avail.

It can hardly be questioned that those who prove the power of the spiritual over the material would display very little intelligence if they failed to place the deepest reliance upon spiritual ways and means. It is, however, hardly necessary to remind students of Science and Health that blind faith has no place in its teachings, that the understanding of God and of man's relation to Him is insisted upon at every step of the way. Respecting this, Mrs. Eddy says, "Until belief becomes faith, and faith becomes spiritual understanding, human thought has little relation to the actual or divine" (p. 297). It thus becomes clear that we must press on until all our thought and endeavor is related to the actualities of being which express intelligence and power. The student of Christian Science learns that disease has no intelligence. In spite of popular belief it can neither make nor enforce laws of suffering or of death. It is also true that drugs have no intelligence to go of their own volition to the part of the body supposed to be affected, yet mortals in general blindly accept this belief and bow down before a god that cannot save, quite oblivious of the fact that the awakened spiritual sense, through its reflection of divine intelligence, lays hold upon the spiritual law which proves the nothingness of mortal belief and overcomes both sin and suffering.

Digitized by Google

No professed Christian would question that Christ Jesus presented the highest type of manhood, manifested the highest intelligence ever presented to humanity, yet his standards were altogether different from those of mortals either in his day or at the present time. He constantly called for greater faith in God, especially when the more aggressive claims of evil presented themselves, as sin, disease, and death, as storm and tempest, or as a lack of needed supply. Never once did he say that they had too much faith, although he insisted upon demonstration when he said, "Where is your faith?" This was when they had failed to still the storm! They very likely thought they had faith, but they took in the material evidences of impending destruction and then called upon the Master to do their work for them, thus placing the burden of proof upon another.

Now the great Teacher, who always demanded faith, counseled his followers, in all their undertakings, to count the cost. Their faith was to be intelligent. They must find out how much of materiality they were willing to sacrifice, lest outsiders should mock at them when they failed to complete the demonstration, and placed the burden upon the shoulders of some other person, as in the case of those who assume responsibilities which may entail heavy losses upon others. God, the infinite Mind, the only intelligence, never fails to do His part, and the apostle James reminds us that if any man is lacking in wisdom, he should seek it of God, "that giveth to all men liberally, and upbraideth not." But the apostle adds that such a one must ask in faith, and thus we have the happy union of wisdom and faith which exalts even those "of low degree" and enables them to offer the unassailable proof of faith and works.

This kind of faith does not cry out for unearned riches or blessings, but seeks the wisdom that is "pure, then peaceable, gentle," which is "full of mercy and good fruits, without partiality, and without hypocrisy." We have the assurance of him who knew, that the faith which knows God, which reflects divine intelligence, can remove mountains, and that nothing shall be impossible to it.

ANNIE M. KNOTT.

Human Tendency Redeemed

STUDENTS of human nature speedily discover that the conduct of most people is far more frequently determined by a habit or tendency than by a sense of duty or of right. This fact is easily explained. Tendencies call for no effort of assertion or investigation, but only for listless consent to their rule. They control without issuing commands, without compelling thought, or in any way disturbing our peace, and the stupor of indifference is the secret of their sovereignty. The rule of mortal tendency is always the rule of torpidity, of a false sense of ease, and its victim is described in the Scripture as "dead in trespasses and in sins." Let a man be spiritually awakened, however, let him begin to inquire as to whether he is thus subject to inertia, and he is quite sure to be visited by that spirit of wholesome skepticism and analysis which opens the door to a new life. He will have entered the path that leads to the true self-government, namely, responsiveness to Truth.

Obeisance to custom and the dominion of habit always conduces to superficiality, to that substitution of formalism for faith which has proved the bane of Christian history. True progressive living, on the other hand, is not a drift but a climb, it always speaks for devotion to the ideal, for freedom, alertness, and spontaneity. It is always acquiring a broader horizon and a clearer vision, because it is growing, and growth means ascension as well as enlargement. Tendency may thus be redeemed, so that the bias and momentum of habit is no longer a hindrance but a help, and right choice and right doing become natural and instinctive; then the man "not only will be saved, but is saved" (Science and Health, p. 328).

The existence and possibilities of such a right tendency are the better understood when we come to apprehend in Christian Science that rebirth, resurrection, ascension, salvation, etc., are to be thought of, not as the events of a given time and place in human experience, but rather as processes, a going on, as Paul puts it, "unto perfection." Referring to this educational progress in the spiritual life, Mrs. Eddy speaks of the new birth as taking place "hourly" (Science and Health, p. 548). This renders it possible for us to be made glad by a conscious and continuous movement toward a definite spiritual goal, a long time before it is even in sight. Process always points to an end. It gives sure basis for forecast, or prophecy, so that conscious spiritual gain, though slow, furnishes legitimate ground for that rejoicing "in the Lord," regardless of passing circumstances and conditions, upon which St. Paul was ever insisting. When one has instituted a right tendency, he has made an investment on which he can estimate a reliable income, while the outcome of a wrong tendency is no less certainly predicable. Tendency always embraces the vastest issues, and thus renders the answer to the question God addressed to Adam, "Where art thou?" tremendously significant.

Mrs. Eddy's declaration that "the time for thinkers has come" (Science and Health, Pref., p. vii), will prove the more impressive as we meditate upon the fact that tendency is always a registration of experiences, and is wholly explained or originated by them. When one hears a modern Paganini or Liszt, he knows that his masterful technique is the result of patient and purposeful repetitions. Over and over again the fingers have been compelled to follow a series of movements until they are educated to pursue an ideal order at a hint. Then, if the musical sense is also educated and alert, the artist becomes a finished product, and his ease of performance witnesses to the inestimable value of thought-created tendency. Consciously determined activities have become automatic, aggregated experiences have been slowly wrought into capacity, and all in illustration of the normal order of growth in Christian efficiency, that acquisition of spiritual ability and power which is the fruitage of Christlike living, and which places at our practical command all the tendencies which express the activities of Truth.

JOHN B. WILLIS.

Among the Churches

Current Notes

CLEVELAND AND LAKEWOOD, OHIO.—During the past year 37,844 copies of the *Monitor* have been purchased from the Publishing Society. These have been distributed through the street sales, special article, foreign page, and marked copy mailing, and to the interested readers' list. A great many copies received from news-stands, reading-rooms, and individuals, have been distributed in bulk to the Cleveland farm colony at Warrensville, railroad depots, etc. An average of 332 pieces of literature is mailed monthly to the interested readers' list, while an average of 446 *Monitors* a month is mailed in the department of special article and foreign page mailing. One division of our work handles twenty public libraries, nine school libraries, three colleges, three private schools, fourteen charitable homes and institutions, Y. W. C. A., the state hospital, and the Neal insti-

Digitized by Google

tute. It is our aim to place the works of Mrs. Eddy and all authorized Christian Science literature, as well as "The Life of Mary Baker Eddy" by Sibyl Wilbur, wherever there is a need, or an opportunity to benefit mankind.

Department store employees have become interested in Christian Science through the reading of the *Monitors* found in their rest rooms, and have afterward found their way to the reading-rooms and churches. Inmates in the women's department at the county jail have requested literature to take away with them. One woman was found reading Science and Health long after the retiring hour. Another woman, under sentence of one year imprisonment, was suffering intensely one day, and her attention was directed to Christian Science literature. The next morning she was cheerful, happy, and well. She said that she had found in Science and Health the admonition to be patient and trustful, and that she had decided to trust, and that same day she was called to court, where her sentence was reduced to sixty days at Warrensville. She asked for a *Journal*, that she might be able to find a church after her release, expressed a desire for a copy of Science and Health to take with her, and asked that literature be sent to her at the farm. A man at the Warrensville farm attended the Christian Science services held there last summer, became interested, and has since been healed of the liquor habit through reading Science and Health. Another division of the work covers the Chamber of Commerce, Chamber of Industry, Builders' Exchange, Salvation Army, fire stations, police stations, railroad depots, street railway terminals, hotels, barber shops, lighthouses, cribs, boats, army and navy recruiting stations, soldiers and sailors' home, Y. M. C. A. and branches, also manufacturing plants. The Cleveland Cliffs Company, the Pittsburg Steamship Company, Corrigan & McKinney, and M. A. Hanna & Co. have granted the committee permission to send the *Monitor* to their vessels, one hundred and twenty-one in all, thus reaching fifteen hundred to two thousand sailors.—*Report Joint Literature Committee.*

PORTLAND, ORE.—All men who serve time on the Linnton rockpile and have good records there for work and behavior, will be given assistance in securing positions by the Christian Science church. This arrangement has been made between members of the church and the superintendent of the rockpile. The members taking this work upon their shoulders informed the superintendent of the institution that when a man completes his term and leaves with a good record, if sent to the proper official of the church, such man will be given employment. A majority of men sent from the rockpile have no work or money when they leave that place. The first thing for them to do is to obtain employment. It is in seeking it that they get into trouble.—*Portland Journal.*

WINCHESTER, MASS.—For some months First Church of Christ, Scientist, has been looking for a suitable location for a reading-room in the center of the town and outside of the church building, where the room is at present located. An opportunity to obtain such a location has recently presented itself in the Lane building about to be erected on Church and Vine streets, and a room on the second floor of this building, facing the common, has been engaged for this purpose. It is presumed that it will be ready for occupancy about Dec. 1.

Winchester Star.

NEW ROCHELLE, N. Y.—First Church of Christ, Scientist, 19 Locust avenue, has just completed enlarging the seating capacity and has made other improvements to the church building.—*The Evening Standard.*

The Lectures

Corsicana, Texas

A lecture on Christian Science was delivered in the auditorium of Carnegie library by Francis J. Fluno, M.D., to a most attentive and intelligent audience. The speaker was introduced by Judge John H. Rice, who said in part:—

It may be asked why the honor of presenting the speaker of the evening has been conferred on a non-believer in Christian Science. I can only say that I number among the Christian Scientists of Corsicana and elsewhere some of my warmest and dearest friends,—friends who in time of trouble and sorrow came swiftly with tender and loving ministrations, and with cheer and help and hope. What these friends believe in so earnestly I am constrained to treat with profound respect; and as they have deemed me worthy to perform this pleasant duty, I most gratefully accept it.

This religion, if I may so call it, has made a wonderful appeal to humanity. It has made a greater progress in a shorter time than any cult history records. In almost the span of one life it has drawn to it unnumbered adherents. To me there are some very lovely things in its teaching, but perhaps the thing that strikes me most forcibly is its apparent influence on the lives and characters of its believers. I have met and come in contact with not a few, and among them level-headed business men, who have attained prominence and builded fortunes; elegant, cultured, refined, and womanly women, and all I know are gentle, cheerful, happy, and above all helpful. True, they might be all this without Christian Science, or in spite of it, but I hardly think so.

Correspondence.

❖

Sheridan, Wyo.

A lecture on Christian Science was delivered by Willis F. Gross in the Congregational church. He was introduced by the Hon. Fred H. Blume, who said:—

The search for the truth has ever been one of the struggles of humanity. As far back as history takes us, we find a craving of souls to discover the truth; and this has been so particularly in regard to religion. Every race and every nation, in the darkest ages of the past, in the twilight centuries of advancement, and in the golden era of learning of today, has sought to find a solution of the problem of the infinite. We of this generation are apt to think ourselves possessed of wisdom; and yet for those who pretend to learning, and who have not embraced Christian Science, to think that their knowledge is greater than that of the believers therein, means simply that they are deceiving themselves.

A great deal of truth, perhaps more than we suspect, is contained in the teaching of the greatest woman of all ages, Mrs. Eddy. And while we live, as we believe, in the most enlightened century of all ages, yet it needs but a moment's thought to convince us that our learning is, after all, but on the surface; that the field of the known comprises but a small portion of the whole, and is far surpassed by the field of the unknown. We grope, we seek to find, but cannot. It therefore ill behooves us to reject without consideration the teachings of Christian Science. The least that we can do is to seek to learn, and in so seeking open our ears to the teachings of men and women who have done much to gladden hearts, to uplift souls, to banish misery, and to bring happiness and contentment into the homes of thousands. Let us therefore with an open mind and open heart listen to the words of him who is with us today, and who will, if we make it possible, bring home to you and to me truths, the realization and recognition of which cannot but help us.—*Sheridan Post.*

Auburn, Maine

Before a large audience Virgil O. Strickler spoke at Auburn hall on the subject of Christian Science. He was introduced by A. H. Sweetser, first reader, as follows:—

The message which will be presented to you this evening is one that is engaging the attention of thoughtful men and women throughout the whole world; in fact, Christian Science circles the globe. Today there is hardly a village or hamlet into which this new-old truth has not found its way, healing and saving all who will "taste and see that the Lord is good." In the Scriptures we read, "They that be whole need not a physician, but they that are sick." To those who are satisfied with their present concept of God, with their present concept of life and existence, Christian Science says, "Peace be unto you," but to those who are in bondage to sin and suffering, to those who are held in the seeming vise-like grip of sickness, disease, misery, and want, Christian Science says, Come to this fountain of Life and Love. Health, happiness, and joy are for you, for all that the Father hath is thine. There may be those here who have a false impression as to what Christian Science teaches, and to correct these misconceptions is one of the objects of these lectures.—*Lewiston Evening Journal.*

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 7, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 22, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 30, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

Testimonies of Healing

When I stop to realize what Christian Science has done for me and mine, my heart is overwhelmed with love and gratitude to God, and to our beloved Leader, Mrs. Eddy, who has brought to us this healing truth which does indeed make free from sickness and sin. I had been a sufferer for more than twenty years from stomach trouble, and there was scarcely a day that I did not take medicine of some kind. I had undergone two operations in that time, each one leaving me in a worse condition than before. Three years ago the doctors told me that my heart was pushed out of place and that they could do nothing more for me. Later, I found out that the last doctor told my husband I could not live more than a week or ten days.

At that time I expressed a wish to have a friend whom I knew to be a Christian Scientist, call on me. She had never spoken about this teaching to me, and I knew nothing of it, but after she told me what it had done for her and many others of whom she knew, I asked her if she would please leave the room, as I was going to get out of bed; for if God had healed her He could heal me also, since I knew that He is "no respecter of persons." The pain in my heart left me right then and there. That evening, when my husband came home and found me up and dressed, he asked if I had gone crazy, but I told him that I was just becoming sane.

The following day a practitioner came to see me, and I shall never forget the talk we had together. After two or three days she said to me, "It is spiritual healing that you need." I replied, "Yes, that is what I want. I do not care so much about the pain if only I can learn to know God aright." I did not then realize that to know God is to know all, and that to be healed mentally is to be healed physically. I had worn glasses for many years, and at the time of my healing my eyes were in such a condition that I could no longer use them for reading or other work which demanded the least strain, without suffering the most intense pain, but after a week's treatment the glasses were removed and I have never used them since. My sight is now perfect and there is absolutely no pain; I can use my eyes night and day if necessary, without the slightest inconvenience.

From childhood I had suffered from an internal displacement and the doctors could do nothing for this condition. This ailment did not seem to yield to treatment, and it was only by earnestly studying and applying the truth taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy, that the distressing condition was overcome.

I am truly grateful for the physical healing, but words are inadequate to express the gratitude and joy that I feel for the spiritual understanding of the Bible which has come to me as I have studied it in connection with Science and Health. I know that real gratitude can be expressed only by living Christian Science, and my daily prayer is to be more humble, more loving and kind, and thus be a channel for Truth and Love, so that I may bring this truth to others, even as it has been brought to me.—Emma C. Johnson, Chicago, Ill.

My mother's healing as stated in the above testimony occurred just as she has told it. I too wish to express my gratitude for the many, many blessings I have received since Christian Science has come to our home. It has taught me to love and understand the Bible, and also to love my neighbor as myself. I have been healed of many physical ailments, one of which was heart failure. I am certainly very grateful to God, and also to Mrs. Eddy, for Christian Science.

Edna J. Johnson, Chicago, Ill.

Since the question of supply is of interest to all mankind, I write this experience with the thought that it may be helpful to some one else. During the summer a few years ago, there arose a great sense of financial lack, and distressing physical conditions accompanied this experience, while fear argued strongly that there would not be enough to meet the daily needs.

I had engaged to teach in an institute in August of that summer, but it seemed to me that even the compensation received for this work would not be sufficient. I had not been in Christian Science very long when this experience came to me, so I could not do the needed work alone, but had some help from a practitioner. While working on my problem this thought was given me,—to know clearly and steadfastly that God supplied all my needs and that no need could arise which was not already supplied in Mind. I tried to live in the thought that as a child of God my every need was met, that I did not have to know the material ways and means through which the supply would come, that my part was to know the truth about it and look expectantly for its fulfilment. As I did this work through the summer I gained some degree of peace, but the fear was not wholly destroyed and I was still in bondage physically.

As the time drew near for the institute to open, it seemed as though I could not undertake the work, yet I knew there was but one thing to do, and that was to go straight ahead, relying on God's promises. This I did. At the end of the week the gentleman with whom I had made the contract told me that they felt it had been a very successful and happy week, and that they had decided to give me more than I had contracted for in appreciation of the work done. The amount received met every need and even left a surplus.

No words can express the gratitude and joy I have always felt for this demonstration; it made so clear to me in every direction the divine source of supply, and has always been an uplift and help. Perhaps it is needless to say that the disturbing physical conditions vanished when the need was met. Surely, "God is our refuge and strength, a very present help in trouble."—Ethel R. Hulett, Minneapolis, Minn.

It is now six years since I first inquired about Christian Science. I was not practically forced to become a student of Christian Science because of a pressing need of physical healing, nevertheless my life was far from being a happy one. I claimed that I enjoyed good health, but I was in fact always troubled more or less by various annoying physical ills, both chronic and occasional. These I regarded as necessary evils which I must "stick out," disdaining to complain but suffering none the less. I was always so obsessed with anxiety over money matters that enjoyment in work or at play was perpetually overshadowed and spoiled by fear and worry; but, like recurring sickness, chronic limitation and worry appeared to me to be nothing out of the way.

As time passed, however, persistent study of Mrs. Eddy's writings and constant effort to put into practise as much of her teaching as I could understand at the moment, wrought such wonderful changes in me, both physically and morally, that I came *ipso facto* to comprehend by contrast what a miserable counterfeit of true existence my former experience had been. This process of reformation also confirmed for me in the most practical manner the availability of the spiritual law as taught in Christian Science, and also proved for me the scientific truth of the Biblical declaration that God gave man dominion over all the earth, *i.e.*, material sense. Then I saw that I had been the servant of material sense for so many troubled years quite unnecessarily, that it was

Digitized by Google

only ignorance of the truth which had caused me to resign myself without an effort to false and unpleasant conditions which I could have prevented had I only known how. I had learned at last that there was no other reason for my past misfortunes than my lack of true knowledge of God.

This lack of knowledge is best expressed by the term "godlessness," and I suffered from its baneful influence in no small measure. Nominally I belonged to a church, but of late years I had rarely attended it. I had had normal religious instruction in my youth, but mere admonition on moral and ethical questions lacked power to influence me, because it was in my nature to demand a reason for everything before I could believe it. No doctrine that was put before me could stand the searching analysis prompted by the convincing testimony of the physical senses, but Christian Science annihilates it by challenging successfully the very existence of matter. Thus I had nothing to lean upon in my daily life except the inherent sense of right which obtains in all human beings. As is so frequently the case, however, this sense was obscured to such an extent by the imperative demands of the five physical senses for a recognition of matter's claims, which ignorance of Principle made it impossible for me to deny, that it was not strong enough to prevail when material sense and right were pulling in opposite directions. In this condition of mind I became a ready tool of the human will or carnal mind, which is one with these physical senses.

Under the domination of this mind I was often selfish, ambitious, envious, self-opinionated, and I reaped as I sowed,—disappointed hopes, the pangs of resentment and discontent. Looking back, it is now no wonder to me that I never enjoyed a full success in any undertaking; that I was rarely free from physical ailments; and that I experienced difficulty in making both ends meet. The wonder is that I was not worse off; indeed, that I enjoyed the measure of health and success which I did, is only evidence of the eternal omnipresence of the divine Principle which cannot be banished nor even altogether obscured.

Now all is changed or changing, and even as I know that the discords of my past life are to be attributed to faults of character due to ignorance of God, so do I know that the large measure of happiness, health, and harmony, which has already come to me, is to be attributed directly and solely to the influence of the teachings of Christian Science, which have purified my thoughts and actions as I have gained a clearer apprehension of God. Christian Science has given me a God whom I can know, understand, adore, and therefore obey, for it has showed me the perfect Principle of all being, and coincident therewith has given me an inspiring glimpse of my true individuality as an expression of divine Principle. This knowledge can justly be described as priceless, because its effects are beyond compare. Matter and material existence is explained, and though belief in it may continue to hold the field for many a day, its one-time mysteries are now dissipated and can no longer terrify me. I know that material existence from start to finish is a false presentation of being and exists in human imagination alone, and this knowledge has lifted the cloud of fear based on material premises which had for so long made my life a burden. I know that material belief does not constitute law, and that therefore all false belief may be ignored in proportion to individual knowledge of divine law. Thus I am now able to obey man's inborn desire to do right, because my fear of evil consequences is destroyed; and in proportion as I do so, I enjoy the happy sense of freedom and good will to all which accompanies such action.

In conclusion I would like first to echo Paul's disclaimer, "Not as though I had already attained, either were already perfect," and then to express my sense of joy and gratitude for what I have been able to achieve from the standpoint to which Mrs. Eddy's life-work and discovery is raising all humanity. For her life and character I have a reverent admiration which can never be effaced. All humanity owes her an unmeasurable debt which must some day be universally acknowledged, and I am thankful to be able to take this opportunity of thus early expressing my grateful sense of the supreme value of her labors. My hope in writing this testimony is, that it may arrest the attention of some of those who may be in pain, as I was, and still do not know what is hurting them, and that it may help them along the road to heaven even as I have been helped by so many other fellow pilgrims.

MAJ. H. FAITHFULL CUMBERLEGE, Aldershot, England.

✧

When I began the study of Christian Science, nearly fourteen years ago, it was not for physical healing alone, but because I had become convinced that it was the truth I had long been seeking; that the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, contained the secret of life and immortality. Since that time I have had abundant proof of the healing power of Truth and Love in my own family, and have also had opportunities for helping others. Within a few months after I began to read Science and Health and to put into practise the truth so far as I understood it, I was healed of goiter, which was the last physical ailment for which I took medical treatment. Twice I have had an attack of erysipelas to meet, and it has been overcome both times through my own understanding, without help from a practitioner. I was in bed two days each time, and was out on the street in seven days, the first time, and in eight days after the second attack.

Six years ago, my daughter was healed of two felons which appeared simultaneously on one hand. She lost no time from school on account of them, but was excused from written work for a few days, because it was the right hand which was affected. Later in the same year she was taken with rheumatism. Her suffering was so great that through personal sympathy and fear I was unable to meet the case alone; and as there was no practitioner in town on whom to call for help, it seemed advisable, her father not being a Christian Scientist, to call in a homeopathic physician who had given her her last medical treatment, five years before. In less than a week, however, she begged me to dismiss the physician and send for help in Christian Science, which I did. The practitioner came to see her once, and gave her four weeks' absent treatment. She was quickly relieved of the distressing symptoms, in two weeks she was able to come down-stairs and to dispense with the services of the nurse, and from that time improved rapidly.

This is by no means all the healing that has been done in my household; but I think it sufficient to prove to any one my cause for gratitude to God, the giver of every good and perfect gift, and to Mrs. Eddy, through whom the truth was brought to the present generation.

MRS. ADELLA C. SPERRY, Hamilton, N. Y.

✧

It is with a deep sense of gratitude to God, that I submit this testimony to the efficacy of Christian Science to heal and to comfort. This truth has been my unfailing help in times of distress and sorrow for a number of years. It has truly been to me a "sovereign panacea" (Science and Health, p. 407). Errors of all sorts have fled before the light of Truth, and out of the knowledge of what God is, there has grown such a sense of harmony and peace that words fail to express my love and thankfulness.

Digitized by Google

Many physical troubles have been overcome for me, and for my family, through Christian Science. A severe case of so-called ptomaine poisoning was cured in two days; and throat trouble in a malignant form, also rheumatism, yielded almost instantly to the power of divine Love. There have likewise been several speedy and beautiful recoveries from accidents.

During a period of deep disappointment and trouble, Christian Science was indeed my comforter; and after weeks of constant effort to rise above the depression and sense of sadness with which I seemed bound, I suddenly came into the full realization of what Mrs. Eddy means when she says that "sorrow is not the master of joy" (Science and Health, p. 304). Every dark shadow of mental suffering left me. I even came to be glad for trials, because out of them surely come some of our greatest blessings. I am truly grateful for the peace and joy and harmony which surround me, and for the knowledge I have of Truth, which, slight as it may seem, is sufficient to guide me into a fuller realization of my divine inheritance. My gratitude to Mrs. Eddy is boundless, and it is my earnest desire to express this thankfulness in loyalty and obedience to the teachings which she has so lovingly and courageously given us.

ETHEL HOWARD CLARKE, South Bend, Ind.

It is a pleasure and privilege to tell something of what Christian Science has done for me, and I hope that this statement of facts may be a help to others. Although I had casually heard of Christian Science for some years, I had given it little or no thought excepting as a passing fad, until during the spring and summer of 1909 I received several copies of *The Christian Science Monitor*, sent me by a relative who was interested in the work. I threw aside the first copies received, after opening them, but during the morning one of my associates saw them and asked me what they were. I told him, explaining that some of my relatives who were very much interested in Christian Science had sent them. Then we each picked up a copy and glanced through it, our simultaneous remarks being to the effect that it seemed a good paper, the page on sport receiving especial comment as we had not expected to find a page of this character. From reading the *Monitor*, received from time to time, I gained the feeling that Christian Science was at least rational and that there might possibly be something in it after all, the more so as the Christian Scientists I knew were decidedly level-headed and intelligent.

At this time I was suffering with severe stomach trouble (as a young man I had had a siege of almost a year with gastric disease) and my condition becoming acute my doctor advised my removal from the country to San Francisco for medical treatment. On arriving here he further advised my being taken to a hospital, but my wife objected, as she would not be allowed to nurse me there, and being a trained nurse she naturally wished to look after me herself, so we remained at a hotel.

A relative then recommended Christian Science and left us a copy of "Science and Health with Key to the Scriptures." Four days later I told my wife to send for a practitioner who had been mentioned to us, and he came about four o'clock on Friday afternoon and gave me treatment. At six o'clock I was out of bed, asking for something to eat, and after a good meal I returned to bed and slept well. The next day I was up and around a little, and the following day, Sunday, I attended my first Christian Science service. I was perfectly healed in two treatments, but still somewhat weak. I gained strength rapidly, however, and returned to the country at the end of that week and resumed my work. At this time my enjoyment of tobacco, of which I was an excessive user, also of stimulants in all forms, left me. I did not realize what was the matter and for some days continued trying to smoke and drink, but neither tasted right, so I asked for treatment for the overcoming of these habits and was cured within a week, the desire for them never having returned.

Eleven months later I telephoned to the same practitioner for help to overcome the effects of mosquito bites around one of my eyes. This was overcome in two treatments, so far as the pain was concerned, but the swelling was a few days in disappearing. I may state that when I telephoned for help the eye was quite closed and very much swollen and inflamed. Soon after this, being in San Francisco, I called on the practitioner and we naturally spoke of my eye, which led him to remark that I need not wear glasses. I had been unable to do without them for years, but I told him that I had wished to give them up and had tried several times since studying Christian Science, but so far it had seemed impossible. He then remarked that the healing would come, and nothing more was said on the subject, but within fifteen minutes after leaving I found that I had removed my glasses, a thing I never did except when going to bed and often then forgetting to do so. Finding them in my coat pocket, I at once realized that I was healed and needed glasses no more. I have never worn them since.

Before I came to Christian Science for help I was continually suffering from asthma and rheumatism, but I have been entirely free from both since my first treatment. During the past two and a half years very many other ailments have been overcome as the need has arisen, but my spiritual regeneration has been a great deal more to me than my physical healing. I am gradually gaining a better understanding of God, good, through the study of the Bible, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the Christian Science literature. The *Sentinel*, *Journal*, and especially the *Monitor* have been great helps, isolated as I have usually been and studying alone with my wife, who has also received much benefit physically and spiritually. We have invariably found the daily article on the Home Forum page very helpful, especially when in any doubt or perplexity. My constant prayer is for a fuller knowledge and a more perfect understanding of divine Principle. I daily thank God that Mrs. Eddy was inspired to bring us this demonstrable understanding of the teachings of Christ Jesus, our great Exemplar. I wish that I could more fully express my gratitude for all that Christian Science has done for me and mine, but words are inadequate and the best expression is my endeavor to live the truth it teaches.

E. A. S. WHITTARD, San Francisco, Cal.

I am very glad to acknowledge the quick relief which came when I asked for help in Christian Science. My foot had been painfully injured, and was troublesome at intervals for some days. The night I telephoned a practitioner for help, I found it swollen and inflamed, which caused me to fear that it would prevent my reading at the Wednesday evening meeting. Next morning, however, the swelling had disappeared, and also the fear, and I was able to do everything necessary. I am very thankful for the good work of Christian Science.

LILLIAN F. AIKEN, Greenfield, Mass.

I desire to testify to what Christian Science has done for me. Since taking up the study I have been benefited in many ways, both physically and mentally. It has been proved to me that divine Love does heal. In March, 1911, I was suddenly taken very ill to mortal sense, with a high fever and a

Digitized by Google

bad cough. We called in a doctor, who pronounced it a very bad case of typhoid. I gradually became worse and the medicine failed to bring me any relief, so the family became alarmed. I had given up and had no desire to live, when one of the family mentioned Christian Science. A practitioner was called, and after having treatment four days I was fully restored to health. I owe much gratitude to Christian Science.

MRS. BESSIE COCHRAN SPOTSWOOD, Denver, Col.

✦

It is with deep thankfulness to God, and sincere gratitude to Mrs. Eddy, that I give this testimony. I came to Christian Science in July, 1909, for physical healing. In the summer of 1908 I fell and severely injured both of my ankles, bruising the legs from my knees down. I received the best medical attention, but grew steadily worse, until I was forced through intense suffering to resort to opiates almost constantly. I then decided to turn to Christian Science as a last resort, and a friend kindly loaned me a copy of "Science and Health with Key to the Scriptures." I realized that it had to be spiritually discerned, and I prayed for understanding to read the book.

On the morning that I began to read, I removed the elastic bandages which I had worn for a year, willing to trust to God. I read slowly and carefully, and by the end of ten days I was perfectly and permanently healed of my lameness. The ligaments had all gone back into their proper places, and all pain and discoloration had vanished. I continued to read, and almost before I was aware of it, I had been healed of a chronic bowel difficulty of fourteen years' duration, also of chronic bronchitis, from which I had suffered for about eight years.

A few months after I began to study Christian Science, I suddenly became deaf. There being a belief of inherited deafness in my family, I was so filled with fear that I was unable to help myself; so, after two weeks, I called upon a practitioner for help. He gave me two treatments, after which my hearing was perfectly restored. Through the work of this same practitioner I have since been healed of acute illness, also neuralgia, fever, headache, a skin disease, and other ailments. Almost all of these healings were instantaneous.

Through the slight understanding I have of Truth, I have been able to help others. My mother was taken violently ill one night with so-called ptomaine poisoning. She suffered several hours before calling me. Then I sat by her bed and treated her, and in ten minutes she was in a peaceful sleep which lasted four hours. When she awoke she was perfectly well. She has had no other but this treatment since I have been a student of Christian Science, and has been healed of sciatica, neuralgia, burns, and other ills. Through scientific demonstration our home was saved one night from fire, and with it my mother's life and my own. Every day brings to me some new proof of the power and protection of divine Love. I am more grateful to God than I can express for Christian Science.

MARIE LUCILLE FRY, Chattanooga, Tenn.

I can attest to the truthfulness of the above testimony of my daughter. I am grateful to God for many benefits, both to myself and to members of my family, through Christian Science.—MRS. MARY A. A. FRY, Chattanooga, Tenn.

✦

During many years I had been suffering from an abscess in the ear which no doctor ever cured, but I was healed in 1907 by Christian Science treatment.

E. T. MONNERAT, Geneva, Switzerland.

From Our Exchanges

[*The Christian World*]

The story of Moses dying in view of Canaan without entering it, is not just a piece of individual biography. It is our story, the story of the human heart. We are all of us marching forward toward a paradise more or less in view, a paradise we do not enter. We do not enter our paradise, because as we advance it becomes, by this splendid law of our being, always a better, a higher than the one we set out to secure. We remain unsatisfied with the earlier consummation because we find that the universe contains still better things. We reach our Jerusalem, as some of the Crusaders did, and find it not good enough. That dusty, ill-smelling city on its stony height, will that do? No; and were it a city of golden streets, of marble palaces, still it would not do. The soul leaps at once from the material to the immaterial, to a Jerusalem which is from above, which descends to us out of heaven from God. It is from the infinite expansibility of the human soul, its capacity for the highest there is, that springs its present non-content. And no promise of good that could have been written for us on the heavens were surely comparable, both for its largeness and its sureness, to the sublime hope that our non-content kindles within us.

Meanwhile, as we are thus drawn onward, drawn by the immense demand of the soul, let us not despise or undervalue the paradise we have already reached. Let us be happy in the happiness we have—the happiness that has this desire in it. Let us enjoy our incompleteness, and that because it is incomplete. Do not trouble about the sordidness of your conditions if the soul is not sordid. The great thing is that we are on a journey, the most wonderful journey that ever was. What is behind us is astonishing enough, but that is only a preparation for what is before us. "Here we have no continuing city, but we seek one to come." Forever do we seek and seek; forever does our paradise recede as we advance; and for the reason that we are the children of the infinite, nothing less than the infinite, in its height and depth and fulness, can be our home.

[*The Universalist Leader*]

Mostly we are overburdened, not by the pack upon our back, but by the pack we had there yesterday and the pack we are going to have tomorrow. While we can easily bear the one burden of today, there are very few who can bear the three; and sometimes the same burden would not be hard to carry for just one day, but the thought of the days that have been and the days that are yet to be, robs us of hope. Here is the secret of most of our life's success or failure. We do not take our life as it comes. We can be sweet-tempered and kind and just for a little while, but the thought of keeping it up day after day and month after month and year after year, is what appals us. Yet we have only the present in which to do and speak and think, and there would be fewer overburdened minds and hands and hearts if we would only take things as they come. We can all be good for a day if we try hard enough, and we have only one day at a time; and living one day at a time the best we can, will soon make a year of happiness.

[*The Continent*]

"What do ye more than others?" That question from Christ contains a whole volume of Christian ethics. In our Lord's time, just as today, multitudes regulated their conduct by the standard measurement, "All that's to be expected of an ordinary man." Then as now there prevailed a kind of

Digitized by Google

set tradition as to what consistency demands of a religious person; anybody who kept abreast of that mark felt himself doing well enough, but Jesus always carried a prod to disturb the content of "well enough." He was everlastingly keying up character to a higher plane—the good to the better. The Master could not permit religious people to measure themserves by one another. He knew that meant self-righteousness. Instead, he insisted on having his followers read the measure of their obligations by the deeds of those who do not profess religion.

"What do ye more than others?" To please his Master the Christian disciple dare not stop with doing as well as is to be expected of the average man. He must do a great deal better than the average man dreams of; and as the man of the world improves, it is the business of the Christian to keep improving faster.

[*Western Christian Advance*]

The heart of the world has long been calling unto men in behalf of the interests of brotherhood. The phrase has been sounded forth until it has become hackneyed. It falls upon the ear as a venerable sound signifying but a sentiment. It fails to arouse emotion, start thought, inflame imagination, and call the being of man into action. We cannot understand why this is true. The doctrine of the fatherhood of God has sent a benign influence into human life, but its correlate, the brotherhood of man, remains a theory untried and unaccepted. Men are saying the church has sent the doctrine of fraternity and brotherhood into eclipse. On every hand are organizations calling to the church and her ministry for the reemphasis of the doctrine of brotherhood. She is beginning to listen. The path before her lies in semidarkness, but a new light breaks. She prepares herself and stands on the threshold of a new day.

[*The Advance*]

If Jesus were to come again, a great many excellent people would value his advent in proportion as he increased for them or their neighbors the visible supply of material comforts. But this is one of the minor values of the gospel. It is life itself that counts. Christ came to give life and give it abundantly. The life which he gives us is the abundant life. Every other form of life in comparison is meager and disappointing. Every form of life which depends primarily on the possession of things external is doomed to ultimate disappointment. The life that cannot wholly fail is that which has learned the secret which Jesus knew, taught, and lived. In him was life. In him is life. Slowly but surely the judgment of wise men comes into accord with the estimate of Jesus. A man's life consisteth not in lands or gold or bonds or stocks, but in love and righteous character.

[*The Congregationalist and Christian World*]

If God is not a reality to us, if Christ is not enthroned in our hearts, if our one passion is not the conforming of the world to his standards, of what avail is all our machinery and all our platform talk? The churches of this country have no business in hand that compares in importance with that of making themselves more fit to be channels through which the grace and help of God may flow into needy and sinful lives and into the disordered and corrupt life of the world.

[*The Christian Work and Evangelist*]

The man who is hospitable to truth and ideals from whatever source, is the man who grows. The man who keeps open heart and mind, not the man who hedges himself about with walls and fences, is the man who grows great in culture, resource, and strength. The same is true of nations.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" is specially bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

"Das Heilen der Christlichen Wissenschaft ist geistig und wissenschaftlich" ("The Healing of Christian Science is Spiritual and Scientific"), a lecture by Prof. Hermann S. Hering, is published in German only and is ready for distribution. Forty pages and cover.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been translated into German ("Die Christliche Wissenschaft: Eine Religion der Liebe"), and is now printed in pamphlet form and ready for distribution. Forty pages and cover. This lecture was recently published in English, and both editions are on sale at prices of the regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations *from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.*

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

Church Manual. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Christ and Christmas. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

Unity of Good and Other Writings. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Christian Healing and Other Writings. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform with the pocket edition of Science and Health. Bound in Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Retrospection and Introspection. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Unity of Good. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Pulpit and Press. A unique work, important to the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more, 75 cents each.

Rudimental Divine Science. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

Rudimental Divine Science. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more to one address, 40 cents each.

No and Yes. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

Messages to the Mother Church. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Message to The Mother Church. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Our Leader's Message. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Communion Message, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Two Sermons. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. One volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more, 45 cents each.

Christian Healing. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

The People's Idea of God. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

Feed My Sheep. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Items of Interest

NATIONAL

The fate of the government's regulations for the control of water-power sites was submitted to the United States circuit court of appeals at Denver last week, when arguments were concluded in the case of the United States against the Utah Power & Light Company. The suit involves the whole subject of federal or state control of the public domain. Fees to the government, estimated at from one to two million dollars in the next ten years, are also involved in the case. The Utah Power & Light Company is a forty million-dollar merger. The appeal is from the decision of Judge Marshall of the United States district court of Utah, charging the power corporation with trespass in constructing a flume and reservoir in the Cache national forest, Utah. Hundreds of similar instances in mountain and Pacific coast states are awaiting determination.

Thomas Mott Osborne, chairman of the New York state committee on prison reform, spent a week in Auburn prison as a voluntary inmate, for the purpose of studying the prison system from first-hand sources. He is enthusiastic over the success of his experiment, which included a taste of every experience that is possible for an inmate to undergo aside from electrocution. "I am more than ever confirmed in my previous opinion," he said, "that the prison system is singularly unintelligent, ineffective, and cruel. In many respects the material welfare of the convicts is well looked after, but the prison system is a form of slavery. It takes from the convict his own initiative and freedom of action, and he becomes an irresponsible automaton, unable to guide his own destiny when he returns to the outside world."

A contest in the national Senate on the Hetch-Hetchy project is scheduled, the principal opposition coming from those who object to the provision which gives the federal government the right to regulate the extensive water-power which will be developed when the dam is constructed. The precedent which will be established by the passage of the bill in its present form, will enable the federal government to extend its control in the future over the "white coal" resources of the nation so that they will not pass as gifts to the water-power trust.

A federal permit to develop water-power in the Eldorado national forest, California, for use in Sacramento, Stockton, and other California towns, with a possibility of its extension later to San Francisco, has been granted by Secretary Houston to the Truckee River General Electric Company. About sixteen thousand horse-power will be developed at first, and this will be doubled as the market increases. The water will be from the Rubicon river. A tunnel one and a half miles long is to be built.

The national Senate passed the urgent deficiency appropriation bill carrying the House provision abolishing the commerce court. An amendment retaining the five commerce court judges on the circuit court bench until they resign or retire, was added to the provision. About five million dollars of appropriations are carried by the bill.

Representative Lewis of Maryland, the author of the parcel post act, will prepare the administration bill providing for the government ownership of telephones. Mr. Lewis has been working for nearly a year on the measure. He has had the assistance of the interstate commerce commission and of experts in the post-office department.

Congressman Kinkead of New Jersey, representing the Jersey City district, who recently introduced in the House a resolution for an investigation of the beef trust, has been assured by leading members of the House judiciary committee that a sweeping investigation will be made during the coming winter.

The metropolitan park commission expects to open the stadium bridge over the Charles river at Soldiers Field, between Cambridge and Boston, so that it can be used by the football crowds attending the Harvard-Holy Cross game on Oct. 18.

INTERNATIONAL

Argentina is about to secure the services of two agricultural experts from the United States. They are Dr. A. D. Melvin, who has been chief of the bureau of animal industry since 1905, and Willet M. Hays, former assistant secretary of agriculture. The former's work will be along the same lines as in this country, while Professor Hays will be engaged in the development of rural economics.

The New South Wales government at the beginning of the present year inaugurated special training in home management for schoolgirls in the larger city centers, and the system is now to be extended to the country schools of New South Wales. The government has introduced domestic science schools for girls, and has also extended the scheme of high school education to the country districts.

The Mont Dor tunnel, which will considerably shorten the line between Paris and Lausanne, was successfully pierced last week after just a little over three years' work. The tunnel is slightly under four miles long, and was estimated to cost thirty-seven million five hundred thousand francs.

It is understood that the Chinese government is arranging to borrow one hundred and twenty-five million dollars from the quintuple syndicate, consisting of bankers of France, Germany, Russia, Great Britain, and Japan. The loan will be made on the same terms as the previous one.

The annual report of the metropolitan water board of London shows that the total estimated population supplied by the board at the close of the year was 6,688,555, and the average daily consumption per head was 35.39 gallons.

To make Valparaiso, Chile, as safe a harbor as any in the South American waters, the government is spending ten million dollars in dredging and in the construction of breakwaters and docks.

The appointments to the much-talked-of and long-deferred interstate commission of Australia have been made by the Liberal government.

The Australian financial year, ended June 30, closed the year with a record revenue of £16,075,555.

INDUSTRIAL AND COMMERCIAL

Located in Grant county, W. Va., on the headwaters of Stony river, a tributary of the Potomac, thirty-four hundred feet above sea-level, in the Alleghany mountains, is a new Stony river dam, recently completed by the West Virginia Pulp and Paper Company of Luke. The dam has been built to store water in the rainy season, to be released during the season of low water. It will form a lake three miles long and one mile wide at the widest point, and will hold about one billion five hundred million gallons.

Calgary, Alberta, has spent five million dollars on civic improvements and general expenditure in the first eight months of the year 1913. More than two million dollars has been spent on construction alone. Included in this is the construction work done on Calgary's municipal railway, which returns an annual dividend to the citizens.

Contracts for about 1,064,804,000 feet of timber were made by the United States forest service in California for the fiscal year which ended July 1, 1913. The money involved is $2,324,936. The largest contract was one for eight hundred million feet, and the company buying was given twenty years in which to cut the timber.

The value of the copper produced from the mines of South Australia during the past ten years has aggregated £4,407,206. Last year, owing to the high price ruling, there was an encouraging revival of the industry, and work was resumed in a number of mines which had been shut down for various reasons.

The experiment of bringing reindeer to live in Denmark has succeeded, for they thrive in northern Jutland, where the ground is covered with moss. It is fully expected that the deer will become a new source of revenue to the inhabitants.

Last spring 6,682,068 pounds of maple-sugar and 455,403 gallons of maple-syrup were produced in the state of Vermont. The trees tapped numbered 5,076,375, while nearly as many more were untapped.

In 1912-13 the imports of India were valued at one hundred and seven million pounds and the exports at one hundred and sixty-four million pounds.

Capital amounting to more than one billion dollars is invested in industries depending upon refrigeration.

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI October 18, 1913 No. 7

"Tribute to whom tribute is due"

IRVING C. TOMLINSON, M.A.

JESUS puts an important lesson before those who are earnestly striving to live the true life when, in his picturesque words to the Pharisees and to his disciples, he declares: "Render therefore unto Cæsar the things which are Cæsar's; and unto God the things that are God's." Paul emphasizes the same truth thus: "Render therefore to all their dues: tribute to whom tribute is due." Mrs. Eddy has but restated these commands when she says: "Man is tributary to God, Spirit, and to nothing else" (Science and Health, p. 481).

When his enemies approached Jesus with the question, "Is it lawful to give tribute unto Cæsar, or not?" they were seeking to prove him a traitor to the realm. They dimly apprehended that his kingdom was not of this world, and realized somewhat of his teaching that his followers were citizens of this spiritual realm, and not vassals to a foreign foe. Had he answered, No, it is not lawful to give tribute unto Cæsar, he might have been cast into prison, as an enemy of the state. Instead of an unwise reply, he discreetly called for a coin, and pointing to the superscription, said in effect that they should pay unto Cæsar the tribute which is Cæsar's; and unto God the tribute which is God's. It was true that the Master recognized God alone as his King, and himself as subject only to Spirit and spiritual laws. Environed, however, by those who had no comprehension of the truth so vitally clear to him, he wisely advised that, for the time being, and until a higher state of consciousness should be reached, due respect should be paid to the constituted authorities, while holding fast to the true ideal.

Throughout his earthly life Jesus manifested this same wisdom in dealing with all practical questions. Serving faithfully as a carpenter in Nazareth until his thirtieth year, he recognized the tribute due to earthly conditions. When for three years he stemmed all opposition, even to the facing of death bravely, he was paying tribute to his heavenly parent, overcoming triumphantly every phase of so-called material law by the application of the spiritual. When in later years it was demanded that he pay his taxes, he yielded consent, and Peter procured the necessary coin from the fish's mouth. When he healed the sick, walked on the waves, and raised the dead, he was paying tribute to Spirit. In eating and drinking, in clothing himself with the seamless robe, in accepting the hospitality of his friends, he was characterized by the wisdom which gives due consideration to immediate circumstances and conditions.

In this day the followers of Christ Jesus are called upon to exemplify his wisdom. In dealing with the problem of vaccination, of contagious diseases, and of other health regulations enacted by municipal and state governments, they should act with discretion; but in dealing with their own problems of sickness and sin, the tribute which they render is to God, and God alone. In the question put to Jesus the tribute referred to was a tax, and its payment argued not only citizenship, but obedience to laws of the realm, and willing consent to any effects which came from adherence to those laws.

The spiritual lesson herein involved is plain. The Christian Scientist has taken his stand on the side of Spirit and spiritual laws, knowing that matter and its supposed laws involve all discord, including sin, sickness, and death. Whoever, then, is paying tribute to the material realm by acknowledging it as real and God-given, is making himself subject to the evil consequences which ever follow in the wake of homage rendered to materiality. He who renders "unto God the things that are God's," is in the way of receiving the benefits which divine Mind has for those who obey and love Him. Those dwelling consciously in a spiritual universe, who render tribute faithfully thereto, receive the benefits of the laws of that universe, and the outcome of this obedience is freedom, peace, joy, and health.

This rendering "unto God the things that are God's" involves nothing that is unreasonable or burdensome. To yield absolute allegiance to God, which St. Paul asserts to be our "reasonable service," would lift mankind into that unity with God which alone brings dominion and an abundance of good. Surrounded as we are by the things of Cæsar, it is right that we should have sufficient food and clothing, that we should dress comfortably, sleep normally, and take vigorous means to resist the false physical laws of Cæsar's realm which tend to weariness and weakness and which seek to annul the supremacy of Spirit and the health and joy consequent upon faithful obedience to God.

A tendency of mortals which entails only evil results, is that of rendering unto Cæsar the things that are not Cæsar's. He who believes that there is power in matter, and administers or receives a drug, thinking it contains power to help or heal, is giving tribute where it is not due. God is the only power and the only presence, and to recognize as real any other power or presence is to pay a tax to an unreal master, who will levy (exact by compulsion) the "uttermost farthing." To acknowledge any other power than God, is as great an error as for the musician to think that there is music in the wood or brass of the instrument. Harmony is Mind's expression; it springs neither from matter nor mortal mind. The enlightened musician pays tribute, not to matter, but to musical ideas, and musical harmony follows as a natural sequence. So those who are possessed of the Christ-understanding know that all power and reality are to be found in Mind alone, and rendering to Mind the tribute that is its due, spiritual and physical harmony are the outcome.

The great Master has had no more faithful disciple in obeying his injunction to "render unto God the things that are God's" than was our Leader, Mrs. Eddy. Her fidelity to Truth is manifested on every page of Science and Health and throughout her other writings, and also in a remarkable degree in her daily life, as those who best knew her gladly attest. She not only gave true reverence to God, but wisely and carefully gave Cæsar his proper due. If our textbook renders to "God the things that are God's," it might be said that the Manual of The Mother Church also yields to human relations and conditions their just tribute. Herein is seen the necessity that loyal Christian Scientists be earnest and intelligent readers of the Manual, as well as of Science

Copyright, 1913, by The Christian Science Publishing Society

Digitized by Google

and Health. It is not enough for one to possess the spirit; it is equally important to apply intelligently and obediently the teachings of Christian Science as given in the by-laws of The Mother Church.

Grateful students of Christian Science feel that one way of rendering tribute to God, is in giving to its Discoverer and Founder her proper due. They know that all the revelations of Truth which have come to them through Mrs. Eddy's writings, have their source in infinite Mind, and they therefore give to this Mind, their Father in heaven, the Principle of all that is, the praise which is His and His alone. They are not unmindful, however, of the honor justly due the one whose clear-sighted vision, loyal obedience to Truth, and faithful adherence to the call of heaven, as she heard the divine voice, brought again to hungering humanity the "bread of life," the ever-present Christ. Realizing also that due regard for her is most helpfully expressed in scientific thinking and living, they tenderly recall her urgent behest upon all her followers: "Follow your Leader only so far as she follows Christ" (Message of 1901, p. 34).

No greater help can be gained in daily rendering "unto God the things that are God's," and so being faithful to our cause, than by seeking clearly to understand and live in accordance with the words already quoted, "Man is tributary to God, Spirit, and to nothing else." Adhering to this spiritual axiom, each one in thought and deed will know that he is a citizen of the heavenly realm; that he is subject only to laws of health and life eternal; and that he is to pay tribute only to the good, the beautiful, and the true. Thus he enters into his actual birthright, and all that the Father hath, becomes his everlasting possession.

Forgiveness

GEORGE SILAS HADDOCK

THE gentle word of forgiveness is sweet to human ears. The child is made happy by it, the friend encouraged, and the heart uplifted. It comes as a soothing, quieting influence, awakening hope, and refreshing with its note of cheer. The forgiveness of human sense is beautiful and denotes a loving spirit, but it lacks in that which is most essential; it fails to recognize and prove the unreality of sin, that it is impossible for a child of God to fall, or for evil to appear in the realm of infinite good.

Admitting the fault, giving credence to the error, the forgiveness of the world comes burdened with a sense of sin's reality, even though accompanied with kindly sympathy, but Christian Science has come to bring the glad message that man made in the likeness of infinite good never can fall from harmony, nor swerve one iota from the law of divine reflection. It looks through the formations of a false sense and judges "righteous judgment," holds to the creation of a loving Father, too good and pure to behold iniquity or create a child capable of evil. It says to the troubled sense: Be of good cheer! Man's true individuality never sinned! Now you are free! How uplifting and inspiring is this forgiveness, and how frail and inadequate the other. One brings quickening and inspiration, a consciousness of freedom and of native worth, while the other, failing to erase the belief in sin as an entity, seeks to tranquilize the human sense with soft and tender words.

The psalmist speaks of the one "who forgiveth all thine iniquities." Here the word rendered forgive means, according to Young, "to send away, let go." The divine forgiveness, then, is the sending away or obliteration of the error, the wiping out of the illusion of material sense, together with the realization that the image, or idea, of Mind could never cease to express good or get out of the radiation of Love and Life. In "Miscellaneous Writings" (p. 292) Mrs. Eddy says, "Divine Love eventually causes mortals . . . to forgive and forget whatever is unlike the risen, immortal Love; and to shut out all opposite sense." Is not this the very essence of true forgiveness?

True forgiveness implies infinite compassion and mercy. It is that which reinstates primitive wholeness and goodness of consciousness, and recognizes man's eternal identity as the likeness or idea of Mind, incapable of sin, sickness, or death. Forgiveness is healing. It is as sunshine to the darkened room. It is a great sending away of the illusion that the child of infinite Love can fall. It comes to strengthen the weak hands and confirm the feeble knees. It brings to the heavy heart lightness and peace and a song of hope, courage, and rejoicing.

Jesus knew how to forgive and so knew how to heal. To the man suffering with the palsy he said, "Son, be of good cheer; thy sins be forgiven thee," and perfect healing followed. To those at the tomb of Lazarus he said, "Loose him, and let him go." Again, he said, "Ye can discern the face of the sky; but can ye not discern the signs of the times?" And as a correlative to this passage, Mrs. Eddy has written, "How much more should we seek to apprehend the spiritual ideas of God, than to dwell on the objects of sense!" (Science and Health, p. 510.)

In the recognition of the indestructible man of Mind's creating instead of the illusion of mortal sense, and the scientific reduction of the false claim of evil to its primitive essence, mortal mind, a great healing takes place, a great forgiveness. In this loving work evil is not ignored, but permanently disposed of. It answers to the call, "I charge thee, come out of him, and enter no more into him," and goes into nothingness; while man, the image of his Maker, infinite Love, shines forth pure and perfect. Paul's loving admonition stands out a guide to the workers in truth: "Be ye kind one to another, tender-hearted, forgiving one another, even as God for Christ's sake hath forgiven you."

Healing in Christian Science

ROBERT O. CAMPBELL

ON first coming into contact with Christian Science as a remedial system, some appear to doubt the declaration that a careful study of the text-book, "Science and Health with Key to the Scriptures," will heal diseased physical conditions. The use of material remedies has so generally constituted all practise for the cure of physical ills, in the experience of a majority of the people, that their lack of faith in curative results being obtained from the perusal of a book is not strange. Numerous instances where such cures have been accomplished are becoming so well known, however, that the worth of this healing is now recognized by many who know not how it is done. Those who, having been cured in this manner, wish to share their good fortune with friends, sometimes find the removal of doubt from the consciousness of another very interesting, and also the consequent awakening of appreciation to the truth about Christian Science healing.

That fear and anger affect the physical condition is familiar to all, and they know further that the removal of the exciting cause, in almost every instance, will restore a normal state in a brief time. In Christian Science practise, freedom from the disturbed physical condition and restoration of the normal mental poise can be accomplished by study of truths relative to one's being. Unlike blind faith in personal influence or a senseless drug, these truths operate through the spiritualization of thought, which does not correct discord by

Digitized by Google

changing the sense of disease into another emotional state, but by substituting for every thought of an emotional cast the understanding of Spirit's omnipotence, operating through spiritual law.

The sufferer who has lost hope of a cure by material remedies, or who has at least grown weary waiting for relief from stress by the means employed, is often induced by the pain undergone to turn his thought in prayer to God for respite. Failure to find harmony from the use of human aid, and the consequent disappointment, very frequently cause a humbled mental condition wherein spiritual cures may be quickly wrought. Once let the human thought be awakened to the possibility of healing by the activity of spiritual law in consciousness, and a very limited effort to comprehend the practise will be rewarded by satisfactory results.

That this practise is Christian, no one who has experienced proof of its curative power will doubt. The peaceful assurance that a provable understanding of God and His kingdom on earth is a present possibility, which commonly accompanies the remedial effect of divine law operating in individual consciousness, is ample evidence, in most cases, to convince one that a power transcending the human has been at work. All who are inclined to learn something of this system can readily prove the text-book to be a legitimate and satisfactory interpretation of the spiritual healing practised by Christ Jesus and his disciples—the healing that marked forever the early Christian era, and again given to mankind through the inspired teaching of Christian Science. Those who are most familiar with the results obtained in this way, see in its beneficence the fulfilment of the promise made by the Master, "He that believeth on me, the works that I do shall he do also."

Omnipresence

MARTIN C. EBEL

In a recent sermon a minister asked, "Is it possible for God to be always in our thoughts?" He then pointed out how one can carry in his mind a tune he has heard, and even hum it in the midst of his work, without interfering with the business he may be about. He also portrayed the human lover, who never has the loved one absent from his consciousness, and yet he in no wise allows that to interfere with his toil; never out of mind, and yet not in the way of his mental labor. The preacher said he believed that God can possess our minds unceasingly, and that one can have a godlike sense even if he is engaged in common work.

Shortly after this sermon came to my attention I was able to demonstrate its truth. I was engaged in experimental work in my business, and for a time did not seem to be making any progress in what I was trying to produce. I had previously, by mere chance, developed a chemical process which would prove of value if it could be reproduced, but the more I strove, the farther I seemed to be getting away from what I was pursuing. Anxiety and impatience began to manifest themselves in my mentality, as from day to day I found I was not making any headway; and while in this condition, the minister's question presented itself, and it then occurred to me that if, instead of harboring anxious and impatient thoughts I would make room for God's ideas, something might be accomplished, and if the work was mine to perfect, I would succeed.

With this thought in mind, I continued the experiments for several days, not meeting with immediate success, but no longer discouraged over my unsuccessful efforts. Stopping one day after another futile attempt, and searching my consciousness as to whether what I was about was really my work, my attention was attracted to some refuse matter among the products of my work. I seemed to be directed to use this to solve my problem. I did, and it proved to be the solution I sought. My own ability had failed me, but in relying on God's help my efforts were crowned with success.

This is not the first instance in which the ever-present help of God has been instrumental in overcoming difficulties for me. On another occasion I found myself in a somewhat similar position to a man in a rudderless ship. In financing a business, I was suddenly confronted with the necessity of stepping into a chemistry plant and assuming responsibilities in something entirely foreign to me. It was necessary that the manufacturing should continue without interruption in order to overcome the harm which the business had already sustained; but there I stood, without the slightest knowledge of chemistry, seemingly unable to proceed. After endeavoring for several days to locate the former manager, I suddenly realized that I was not seeking in the right direction for assistance, and that God as the infinite Mind would surely guide me if I sought His aid. Calling on a practitioner for help, I proceeded to work out the problem by clinging steadfastly to the truth, knowing that all is possible with God.

This happened on Friday. On the following Monday I was able to give a successful public demonstration of the merits of a product which had suddenly been condemned by the trade generally, and at once regained for it the reputation which it formerly possessed, having been able to do this solely through divine guidance, performing a chemist's duties in manufacturing without even the formula at hand to work by.

Physically, I have had many beautiful demonstrations of the wonderful healing power which has again been revealed to the world through the teaching of Christian Science, one most marvelous to me happening while I was engaged in my laboratory, attempting to force open a case. In doing so I drove a nail through my finger. I naturally felt the sharp pain, but without stopping to examine how serious the injury was, I immediately began to realize, to the best of my understanding, "the scientific statement of being" as taught in our text-book, "Science and Health with Key to the Scriptures" (p. 468). Continuing at my work for several hours, handling poisonous ingredients, washing my hands as usual at the completion of my day's duties, and finally arriving at home, I did not discover until then that a rusty nail had passed entirely through my third finger. Then I faltered for a moment, but recognizing through the scientific statement the nothingness of matter, I paid no further attention to the injury, and while for some days the marks were distinctly visible, I suffered absolutely no inconvenience from it. The healing was practically instantaneous.

Recently I found myself standing on a street corner of that busy thoroughfare, Broadway, New York, declaring against an ache which to my material senses had become decidedly real. I had just left a restaurant to keep an appointment, when I was seized with severe pain, such as a cavity in a tooth seems to produce. I had lost rather a large filling from a tooth some weeks before, but had so far been able to overcome any annoyance felt from it through my knowledge of Christian Science. My suffering first brought a dentist to mind, but I was away from home and could not hurry to one. While contemplating what to do, the thought came to me that as God is not the creator of discord, it is certainly within His power to destroy a toothache. I had reached the street corner, and stood there for some time unconscious of my surroundings, pondering over that one thought which had come to me. When I became conscious of my environment, I found that the pain had fled, and since that moment I have had no return of it.

Digitized by Google

These two narratives are simply incidents of many wonderful healings I have personally experienced. Two children, a daughter thirteen years of age, and a son eleven years of age, have never tasted medicine, though they have had attacks of illness to which children are believed to be heirs. These attacks were, however, always promptly met through Christian Science. That life is eternal, and that there is no death, I could never clearly perceive until a short time ago, when one very close to me and mine, and very dear to us, passed from this sphere of existence to her "heavenly rest" (Poems, p. 5). Then in hours of sorrow there slowly dawned on me that spiritual truth, that in God alone "we live, and move, and have our being;" that though we pass through the transition called death, our life cannot be taken from us, and that to know God aright is life eternal.

Joyfully do I take this opportunity to acknowledge publicly my infinite debt of gratitude to God for the spiritual understanding that is daily appearing more clearly to me; and likewise my boundless debt of gratitude to our beloved Leader, Mrs. Eddy, for the great wisdom which was imparted to her in unfolding this truth to us, and for that light which never faileth, when at times darkness seemed to be overtaking me.

✧

Unity with God

FLORA R. TSCHOPIK

THE desire of humanity is for peace. General and specific troubles always speak for the mistakes of mortal belief respecting the scheme of life. Consciously or unconsciously the blame for failure is usually placed upon God. The explanation is frequently offered, either that God for some inscrutable reason inflicts punishment, or that some earthly conditions are beyond the divine remedy; that we must pass through the ordeal of death to obtain His help. The covering of our own ignorance or wilfulness does not open the way for a betterment of conditions. In the prophecy of Jeremiah we read: "They have healed also the hurt of the daughter of my people slightly, saying, Peace, peace; when there is no peace." A poet expressed the truth about discord, in his lines:—

Thou great First Cause, least understood!
Who all my sense confined
To know but this, that Thou art good
And that myself am blind.

The best efforts to solve life's problem on a material basis utterly fail. Dependence upon material means for healing may seem to give temporary relief, but it has not and can not lead mankind to God. On the contrary, such procedure produces, apparently, a belief in the non-availability of divine power. Having experienced healing through the prayer of understanding, the earnest seeker finds in the demonstrable apprehension of spiritual healing the peace which is coincident with real trust in God. It is here that Christian Science is meeting the human need. It is proving today the practical nature of the teachings of Jesus that "divine law is the communicator of truth, health, and harmony to earth and humanity" (Science and Health, p. 72). This fact, open for individual proof, establishes that growing faith in and reliance upon God which fills the heart with a sense of obedience and love for the Father, whose healing compassion is ever ready to deliver us from all evil, when we are willing to part with our belief in its reality.

If the composer finds that his written notes fail to express the concord of music, he does not attach the fault to the science of harmony; he seeks, rather, a higher knowledge of music and corrects his own mistakes. Likewise, if disease and discord bear witness to errors in a present mode of living, why not begin to correct one's own daily thoughts and acts and search for an understanding of the Science of Life,—that higher knowledge which is founded upon demonstrable truth? If the corrective work takes place within and not without, deep down in the heart and not upon the surface, peace will soon be manifested. The psalmist has said, "Great peace have they which love thy law: and nothing shall offend them." It is not God's law that the acts and thoughts of others, material circumstances or so-called laws of matter, should deprive man of harmony. The Bible is filled with instructions which point clearly to the fact that unity with God offers a solution for every human problem. The necessity of existence is, therefore, to gain a knowledge and an application of God's law. Christ Jesus possessed the highest understanding of spiritual law, and he was able to say, "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you."

The great Exemplar of all mankind did not live for the gratification of, or in subjection to the senses, nor did he rely upon material means for healing. During the earlier period of his ministry he showed the necessity for working spiritually in the midst of human problems. He was aware of the inability of mortal man to do anything of himself, and as we read in the fifth chapter of John's gospel, he demonstrated the real man's identity as the child of God, here and now. His life was the radiation of Love, the expression of spiritual power to heal, the embodiment of "on earth peace, good will toward men."

If one is desirous of better conditions he should let the search-light of Truth be turned within; then the secret crevices of selfishness, ignorance, doubt, and fear will be laid bare, and the unchanging goodness of God be revealed. Let us draw back the veil of the senses and measure our lives by the standard of the perfect man. Then there will dawn a truer perception of the wisdom of the Almighty, as divine Science calls upon mankind to lay aside all sin—even the sins of ignorance and misapprehension of God and His law—in order to gain entrance into the realm of consciousness where good is all-in-all.

If trust in God, good, and the reflection of divine Love destroy suffering, it is apparent that "too soon we cannot turn from disease in the body to find disease in the mortal mind, and its cure, in working for God," as Mrs. Eddy has pointed out on page 343 of "Miscellaneous Writings." Every moment's delay is lingering in the pit of mistakes, while on the plane of Truth that aid which surpasses our highest hopes is to be had for the seeking. By yielding up material-mindedness and by daily devotion to spiritual thinking, pain and discord are dispelled and are replaced by health and harmony. What excuse can one offer himself for self-exclusion from the joys of rightful activity? The counsel given to Job may well be taken by us, "Acquaint now thyself with him [God], and be at peace."

[Written for the *Sentinel*]

Peace

CHARLES C. SANDELIN

HEED but the voice of Truth—thy peace,
Like the flowing river, shall not cease:
Flowing from God, its endless source;
If through thy consciousness it course,
And thou bar not the channel pure,
Thy peace—Love's peace—shall be secure!

Selected Articles

[Frederick Dixon in *Kentish Express*, Ashford, England]

"Enquirer" wants to know if Christian Science has ever healed a case of leprosy. But why leprosy? Is it that he has been reading and studying, like another critic, and has discovered that leprosy was healed in early days, according to the Bible, without drugs, and has not been very successfully encountered by the Royal College of Physicians in modern days, with drugs? Or is it merely his playful way of attempting to bring Christian Science to a *reductio ad absurdum?* I am not an emporium of all the cases of healing effected in Christian Science, nor would it be proper for me to drag the names and diseases of Christian Science patients into the columns of the press for the satisfaction of a correspondent too coy to sign his or her own letters. However, I have a strong suspicion that I am going to disappoint "Enquirer," by stating that leprosy has been healed more than once by Christian Science, and by citing the case of one patient, well known in his own country, who was healed and has remained healed of leprosy. This is the case referred to by "Another Enquirer" in a recent issue. The details of the case, I regret to say, are too lengthy to be included in this letter, but I am enclosing a copy of them to the editor. What will, I am sure, add considerably to "Enquirer's" satisfaction, is the fact that the patient is able to speak with some authority, being a medical man, G. W. Barrett, M.D., an active practitioner for thirty years.

Your anonymous correspondent also goes on, like jesting Pilate, without staying for an answer, to explain that when Christian Scientists do what he would have them do, that is, go and live among lepers and devote their lives to them, they will convince people of the truth of Christian Science far more than by their controversies. Here, of a surety, is "a Daniel come to judgment," but will the judge very kindly give an example of a single controversy begun by a Christian Scientist? I always imagined that it was precisely the demand that Christianity should be tried by its works and not by its words, which led to so many of the attacks of which the opponents of Christian Science invariably get so much the worst. Christian Scientists always insist that professing Christians should obey the divine command to "heal the sick," and it is precisely because they are systematically doing this, while their opponents are abusing them for it, that Christian Science has spread all over the globe. Finally, it seems a little excessive for a writer whose own standard is veiled behind his anonymity, to require a course of action which, as it was not practised by Jesus or his disciples, may be regarded as having its limitations. When "Enquirer" has read and studied, he will discover that there was something not unlike the leper settlement in the Palestine in which Jesus and his disciples lived and worked, and that they apparently did not settle there, any more than in the country of the Gadarenes. It may then dawn upon the gentleman, whose self-appointed task it is to throw stones at his neighbors for doing their best in their own way, that there was a reason for this.

Let us turn to another critic, who, like his comrade in arms, is more willing to criticize Christian Scientists than to attempt the task Christian Scientists are essaying, of preaching the gospel and healing the sick. First of all, he is bitterly annoyed because Mrs. Eddy was not an Englishwoman, and he talks pathetically of "the old home land." His study and reading do not seem to have taught him that the church of "the old home land," by its persecution, drove those who differed from it across the Atlantic, and that that was how Mrs. Eddy's ancestors came to New England. Neither does it seem to have taught him that Christianity is not a British monopoly. After all, it was the sixth century of the Christian era when Bertha and Liudhard came to Kent. The critic's pathos reminds one instinctively of the village orator, who, after listening to a lecture on the origins of the Bible, declared that the good old English in which John and Paul wrote was good enough for him.

Then, again, he is disturbed because Mrs. Eddy says that all she has learned of God has been attained through the inspiration of reading the Bible. One wonders what he would have found to say if she had claimed the inspiration for herself. The great cause of complaint, in short, which he has against Mrs. Eddy, is that she has given the whole glory to God and claimed nothing for herself. His way of dealing with quotations is indeed rather ingenious. He quotes, for instance, the statement of Mrs. Eddy on page 107 of "Science and Health with Key to the Scriptures": "In the year 1866, I discovered the Christ Science or divine laws of Life, Truth, and Love, and named my discovery Christian Science. God had been graciously preparing me during many years for the reception of this final revelation of the absolute divine Principle of scientific mental healing," but he does not quote the corollary to it, following practically immediately, "Whence came to me this heavenly conviction,—a conviction antagonistic to the testimony of the physical senses? According to St. Paul, it was 'the gift of the grace of God given unto me by the effectual working of His power'" (p. 108). Again, he quotes from the Preface (p. xi), "When God called the author to proclaim His Gospel to this age, there came also the charge to plant and water His vineyard." It would be interesting to know what there is very terrible in this sentence. Most people have heard thousands of times the expression, "the call to the ministry." The exact difference can be apparent only to somebody who wishes to discover it.

Perhaps the triumph of this method of elucidation, however, lies in the quotation from page 457 of Science and Health, to the effect that "this book has done more for teacher and student, for healer and patient, than has been accomplished by other books." The critic does not think that it would be possible for a reader to draw from this any conclusion except that Mrs. Eddy was claiming that the Christian Science text-book had done more for the world than all other books in the world, which would of course include the Bible. Now, what Mrs. Eddy is doing is replying to a question of her own, as to why a Christian Scientist needs the Christian Science text-book, and her third reason is the reason quoted. It is extraordinary what may be done in the way of perverting a writer's meaning by a judicious use of her material.

Next the critic goes on to attack the theology of Christian Science by the simple process of quoting a series of scrappy sentences, torn out of their context. Everybody knows that by such means one can prove anything he likes, and so among serious people the method has always been discredited. In order to enunciate a sound system of criticism, one must begin by accepting the definitions of the book he proposes to criticize. Otherwise, he reduces himself to the ridiculous position of calling an isosceles triangle a square, and then blaming somebody else for saying that its angles are not right angles. This is the exact ditch into which this critic has fallen, and into which he will drag every one else who consents to be led by him. He criticizes, for instance, Mrs. Eddy's declaration of the unreality of sin, in blissful ignorance that Mrs. Eddy has previously defined reality as the creation of God.

The critic's last effort, however, is one of his most pitiable. Without the slightest attempt to elucidate for his readers Mrs. Eddy's meaning, he plunges into her exegesis of the book

Digitized by Google

of Genesis, and quotes a passage with respect to creation which must be absolute gibberish to anybody not acquainted with the argument. He has apparently not discovered in his reading that there are two accounts of creation in the book of Genesis, nor has his study carried him sufficiently far to know what such a brilliant and even orthodox writer as Professor Sayce has had to say on this subject. This, however, is quite unnecessary to his method, as he has as short a way with those who differ from him as Defoe once satirically advised for Dissenters. He is aware, he says, that his objections do not apply to Christian Science only, for in various denominations there is much which goes by the name of Christian teaching but is not. The only remedy for this, he tells us, is "a return to the plain Bible teaching, regardless of conventionalities." It is a pleasing prospect, this with which the critic concludes his letter. For some nineteen centuries, the sects of the world have been murdering and persecuting each other over the question what plain Bible teaching is. This is plain Bible teaching, the Romanist has said; if you do not accept it, we will burn you. This is plain Bible teaching, the Anglican has said; if you do not accept it, we will put you in the pillory, surround you with Test acts and Five Mile acts, imprison you, and possibly execute you. This is plain Bible teaching, the Nonconformist has said; accept it, or we will brand you, imprison you, and perhaps hang you. And now comes this critic, the latest exponent of compulsory conformity, "a Daniel come to judgment." This is plain Bible teaching, he says; accept it, or I will write to the papers.

[Paul Stark Seeley in *The Telegram*, Portland, Ore.]

The writer in a recent issue who is willing to personify "Common Sense" has a quite incorrect view of Christian Science, as evidenced by several of his statements. Let me say first, that it is no part of Christian Science practise to intimate to a patient the reality of health by stating to him that "there is no sickness, sin, or death." From the standpoint of Christian Science such a statement would be like telling the schoolchild that two times two are not five, and leaving him in bewilderment to guess the reason why. What the patient is told by the practitioner and what he will learn to understand from the study of Christian Science, is that the basis of its healing work is the demonstrable, spiritual fact that there is but one God, who is infinite good, and that man made in His likeness expresses in reality His divine nature, perfect and harmonious. Evil, sin, and disease, therefore, cannot be of God, who is good only, and being without God must be unreal, existing only in belief and meeting destruction in proportion as man perceives the facts of spiritual existence, or, in other words, learns the truth of being. Thus the promise of Jesus is fulfilled, "Ye shall know the truth, and the truth shall make you free," that is, free from the bondage of every evil belief.

The critic states that because a practitioner sits in the same room with the patient, that is a "suggestion" that something is being done for him. Perhaps he does not know that fully as many cases are being healed by Christian Science practitioners when the patient is absent, as otherwise.

In insisting on will-power as of divine origin, the writer states that "God works through men and women of will-power," and yet Christ Jesus, the greatest exemplar of scientific living that the world has ever known, said at a moment when his understanding of God was being put to its severest test, "Not my will, but thine, be done," meaning thereby that man should express in thought, purpose, and desire only that which is of God. Emerson says truly, "God will not make Himself manifest through cowards," but the courage that He requires is born not of human ignorance, but of divine understanding. As one comes to realize that his true consciousness is of God, he will not lose, but gain in those qualities of true courage and steadfastness which your correspondent seems to believe depend upon the human will. He will be courageous in the right, because he knows that he has laid hold of the truth that is eternal; steadfast, because he realizes that no power can vary the operation of divine law. His strength will be divine strength and his wisdom divine wisdom, transcending and eclipsing the human will with spiritual understanding.

In examining the parable of the importunate widow referred to, it seems plain from the first verse that the lesson to be learned is "that men ought always to pray, and not to faint," a lesson which the Master then illustrated by the story of the widow who succeeded in her request to the unjust magistrate —if the parable is in point—because of her constant prayer, and not because of will-power or blind perseverance. Neither did Jesus commend the Canaanite woman seeking the healing of her daughter because of her will-power, when he said, "O woman, great is thy faith: be it unto thee even as thou wilt." After first testing the woman's faith and humility, Jesus granted her earnest desire, which sought the operation of God's law for her child. It was not the presence, but the absence of the human, selfish will which led Jesus to help her after she had put aside all pride and personal sense and was willing to place her whole trust and confidence in God.

Because will-power appears to produce effects in our material existence, that is of itself no reason to attribute it to God, unless we are to forsake our belief in one God, who is good, and accept a contrary belief in a God to whom is also attributable all that is evil. It is not our purpose to discuss here the phenomena of evil, save to point out that the teachings of the Bible show us unmistakably that evil is no part of God, who is good only. The human will, blind and vacillating, acting without reason and not subject to God's law of unchangeable good, is but a phase of that carnal or mortal mind which Paul said was at enmity with God. As we lose this false mortal consciousness through a realization of that consciousness which is of God, spiritual and good, the will of mortal man will give way to that Mind "which was also in Christ Jesus," even the Mind of Christ.

✧

[John W. Harwood in *City News*, Manchester, England]

Two correspondents, whose opinions are unfavorable to Christian Science, are united in stating that Christian Science is "neither Christian nor scientific." Now, Jesus made the healing of sin and sickness, of all that is unlike God, the test of Christianity. Those who claimed to be his followers, and yet did not obey his commands, were sternly rebuked in the words, "Why call ye me Lord, Lord, and do not the things which I say?"

The good works being done by Christian Science in all parts of the world are the best proofs which can be given that Christian Scientists are striving earnestly to follow the Master in all his ways, and justify the claim to the term Christian as indicating the method by which these works are wrought. Mrs. Eddy says in the Christian Science textbook, "Science and Health with Key to the Scriptures," "If God, the All-in-all, be the creator of the spiritual universe, including man, then everything entitled to a classification as truth, or Science, must be comprised in a knowledge or understanding of God, for there can be nothing beyond illimitable divinity" (p. 127). A knowledge of God is essentially true Science, and Christian Science reveals the true idea of God as divine Principle, Supreme Being, Mind, and its teaching is

Digitized by Google

being demonstrated, and the signs which Jesus said should follow are being made manifest. Therefore that which is reiterating Jesus' teaching and healing the sick, in proof of its correctness, is surely entitled to its full name, Christian Science.

One of these correspondents refers to several passages in the Scriptures, every one of which may be quoted in support of Christian Science. The warning of St. Paul to Timothy, to beware of science falsely so called, is just the warning repeated in Christian Science regarding so-called physical science, which is based on a false hypothesis of matter being real and its own law-giver. Jesus annulled all the so-called laws of matter, thus proving physical science to be falsely so called, by walking on the water, raising the dead, stilling the tempest, and this proved him to be, as Mrs. Eddy says, "the most scientific man that ever trod the globe" (Science and Health, p. 313).

Although there are no material rites and ceremonies in Christian Science, this does not take away any of the essential religious experiences. Our baptism, although unaccompanied by water, is a continuous spiritualization and purification of thought. Communion is the recognition of man's oneness with God, and is not relegated to certain times and places, but is a daily experience, manifested in the overcoming of evil of every kind.

The critic states that the healing done in Christian Science is no doubt a form of mesmerism. The only person who knows how Christian Science healing is accomplished is the one who is doing it, and this one would tell him that it is wrought by the same method which Jesus used and recommended to his followers. He said, "Ye shall know the truth, and the truth shall make you free." To know the truth about God, which Christian Science teaches, and which reveals the infinitude, omnipotence, omnipresence, and omniscience of God, good, is the way whereby the falsities called evil, disease, etc., are resolved into their native nothingness.

Mrs. Eddy writes: "Christianity as Jesus taught it was not a creed, nor a system of ceremonies, nor a special gift from a ritualistic Jehovah; but it was the demonstration of divine Love casting out error and healing the sick, not merely in the *name* of Christ, or Truth, but in demonstration of Truth, as must be the case in the cycles of divine light. Jesus established his church and maintained his mission to mankind on a spiritual foundation of Christ-healing" (Science and Health, p. 135).

✧

[John W. Doorly in *Southport* (England) *Visiter*]

My attention has been called to the Rev. C. S. Ryder's remarks on Christian Science at the sale of work in aid of the Children's Sanitarium. This critic speaks of Christian Science as a revival of Gnosticism, although admitting that there is an element of truth in it. He evidently has a high opinion of the powers of Gnosticism, or he would never have given it credit for the results of the Christian Science movement. In an age when the critic's own church, in company with every other church, is complaining of the lack of interest in spiritual things, and of difficulty in convincing people of the power and reality of Jesus' teachings, in this same age, Christian Science, which he cheerfully brushes aside as Gnosticism, has succeeded in building up the most remarkable spiritual movement that mankind has ever known, and through its teachings has redeemed unnumbered people from a hell of disease and sin.

The truth is, that Christian Science is revealing to men the power and availability of that "law of the Spirit of life in Christ Jesus" which makes "free from the law of sin and death," and it is proving that this law is the law of God, and is, therefore, as redemptive today as it was nineteen hundred years ago. Does the critic suppose that his friend in Liverpool became a Christian Scientist because he had known nothing better, when he was probably, like most Christian Scientists, brought up in the orthodox faith? Is it not time this dogmatic judging of another religion, of whose real teachings the critic very often knows nothing, should give place to the righteous judgment commanded by our Saviour when he said, "By their fruits ye shall know them"? The critic might have improved the opportunity by dwelling upon the good Christian Science has brought to mankind in causing them to turn more unreservedly to God, and thus have accomplished something toward breaking down the religious intolerance of which we are all so tired.

Humanity is today tired of the husks of mortal belief; it is demanding results and not dogma, and the church which accomplishes such results will inevitably grow in spite of every criticism. Gnosticism is just as much like Christian Science as it is like the teachings of our Saviour; that is, they have absolutely no connection.

[Written for the *Sentinel*]

Our Guest

CASSIUS M. LOOMIS

He came unto our home one eve, alone.
Footsore, but loving all the world, his heart
So full of healing thoughts and deeds that I,
As well as sister Martha, found new strength
To meet the burdens of our daily round.
Could I but sit and listen? Not a word,
Yea, not a murmur of complaint had he.
That day the fury of an angry mob
Had lashed him sore, but not one word of blame
Had he for those who scorned and hated him.
Oh, priceless moments these! 'Twere heaven to know
That he with all his being loved us so.

And Lazarus? Soon we heard his manly tread;
From out yon field of harvest had he come.
A love so pure that angels sang its praise
Had raised our brother from an early grave.
The silent tears our guest had shed that day,
What depths of sorrow must have prompted them!
A happy company of four, we sat around
Our frugal board that night, and he who stilled
The tempest broke the bread of life for us
In simple parables. Like children we,
Our ears were eager bent. I, Mary, heard
With prayer of utter thanks each precious word.

Before the twilight deepened into shade,
And our repast had ended, 'round us came
The halo of a perfect peace. I sat
At Jesus' feet and watched the stars come out,
While Martha, cumbered much with serving, cleared
The board and put her spotless house to rights.
Our Master still talked on; and Lazarus, too,
Paid heed with heart aflame. And when at last
The hour grew late and others were asleep,
I gave to God my thanks with speechless awe.
I could not sleep while sang the stars that night;
With heaven at hand, and Christ our princely guest,
These joys unfathomed gave me fonder rest.

Editorial

Demonstrable Knowledge

A SUBJECT which has been much discussed for years, not only in the secular press but in the religious press as well, is the alleged failure of the Christian church of today to accomplish that for which it stands and for which its various denominations were organized by those whose yearnings Godward made them dissatisfied, or rather unsatisfied, with the practical results already achieved by organized religious effort. For instance, *The British Congregationalist*, in a recent issue, had the following to say on this subject:—

"We have been of late discussing from every point of view the causes of the church's failure to do her full work. Why is her voice so little heeded in the life of today? There are many causes, but is not one—and that a very important one—the fact that in her voice there has been no certain sound? Ask the average Christian worker of today what he is really aiming at in those among whom he works. In his answer you will find a good deal to admire. He wants to brighten the lives of others, or save them from some particular kind of temptation, or alleviate their sufferings, or raise their ideals of life. All these are admirable things, and worthy the service of a Christian man, but they are not the real thing for which the church of Christ exists. In the days of her greatest power men had a very clear and definite word to speak to their fellow men. The creed may have been very imperfect, and mixed with much that was unchristian; but, at any rate, they believed it, and when they spoke to their fellow men it was with the strong voice of a deep conviction. The trouble today is that so many excellent people believe nothing up to the point of strong conviction. There is in their minds a general deposit of Christian sentiment which is very pleasant to see, and which leads them to take a philanthropic view of life; but there is no one thing about which they feel it is a matter of life and death that they should get their brother to believe."

Taking this statement as it stands, a possible and fair interpretation of it is that the church has become more devoted to the material than to the spiritual welfare of men; that the institutional activities of the average church have overshadowed the purely religious trend of thought and activity of its members, and that the insistent preaching and demonstration of the omnipresence and omnipotence of God which characterized early Christianity is lacking. And if we may judge by the views of many who have fallen away from the so-called orthodox churches, the *Congregationalist's* estimate of the cause of their lack of conviction and enthusiasm is very largely correct.

The Christian Science church has been greatly criticized because it has declined to become institutional in its activities, but fortunately for mankind Mrs. Eddy early discerned that the Christianity of Christ Jesus was not institutional, and that all those things which institutionalism is supposed to do for mankind are in fact the "other things" which were to be added to all those who should obey the command, "Seek ye first the kingdom of God, and his righteousness." While Mrs. Eddy was a liberal contributor to charitable and institutional endeavor, she saw that these were but temporary means of uplift, and that what was needed above and beyond all other effort was the impartation of that demonstrable knowledge of God which Christ Jesus and his immediate followers possessed and which made them seekers of the kingdom, preachers of the gospel and healers of the sick. Jesus himself took the initiative in combining faith with works, in other words with demonstrable knowledge; and when he bade the disciples preach and heal he inaugurated a law which has never been annulled. It was on this basis that Mrs. Eddy established her church, and it is upon this basis that it has continued to grow.

The Christian Science church is not in the decadent condition which *The British Congregationalist* describes, and its growth and vigor are due to its insistence upon preaching and practising nothing less than the whole of Christianity. Make men Christians in the sense in which Jesus made them Christians, and make Christianity demonstrably practical as it was made practical by the early Christians, and there will be no complaint of lack of loyalty and lack of enthusiasm in the church.

ARCHIBALD MCLELLAN.

"No man can serve two"

"WHEN I am sick, I take the best remedy I know of, and then get down on my knees and pray God to bless it to my relief; and as I see it, this is the sensible thing to do." It was a good honest-minded man who thus expressed himself, and while his course would be approved no doubt by the great majority of Christian believers, honesty of conviction, in every instance, is surely destined to see things in a truer light at no distant day.

Our friend's familiar point of view seems very commonsenselike on the surface, and the average man has never considered the question as to whether or not it comports with the teaching of the Bible respecting the divine nature, and human privilege; nevertheless one thing is immediately apparent, namely, that our dependence upon material remedies certainly evidences that we are not relying wholly upon the heavenly Father, as did Christ Jesus and as he counseled all his followers to do.

The contrast between the nature and power of spiritual law, and the nature and asserted power of a drug, is manifest to all, and the possibility of the miracle, that God can heal the sick without the use of either pills or poultices is rarely questioned. Though we have been taught to think that God created and uses matter as a means to an end, we have all retained the saving perception that matter is altogether unlike Spirit; that the inert stuff which God is said to have made does not express the nature of the creator, and as soon as we begin to think metaphysically about this fact the entire fallacy of our honest friend's conviction is uncovered.

Christian Science makes it clear that Mind and matter are opposites, hence that they cannot exist, much less work together. Belief in matter is a belief in a power apart from God, it is the essence of idolatry, since it honors and depends upon that which is conceded to be unlike Spirit, and this false material sense is the mammon of unrighteousness which Jesus said we should not serve. All the theologians declare God to be omnipresent Spirit, the only source of being, and this necessitates the recognition of the divine immanence, an explanation of being which, if adhered to, will prove a veritable key to the kingdom.

When through Christian Science we come to see that the activity of Spirit constitutes the substance and reality of all created things, we can but see also that whatever is unlike Spirit cannot be brought into being by Spirit, and hence can have no existence other than as an illusion. The teaching that God has made matter, and that He empowers or works through it to heal the sick, is thus seen to be a part of that "wisdom of this world" which "is foolishness with God." Opposites can never be associated, for the reason that the positive always and instantly dispels the negative. Light cannot use or cooperate with darkness, since in its presence darkness disappears.

Digitized by Google

Moreover, in the event of seeming physical betterment, when material remedies and prayer have been thus unequally "yoked together" in human thought, the experience of relief can but tend to intensify the patient's dependence upon the material, and thus retard spiritual growth, that counting of all things but offal, which St. Paul commends, if one would win Christ. Here some one may say that all the praise belongs to God in any event, since the use of material means is of His appointment. This is of course a bald begging of the question, and it is disallowed both by the Science of being and by the fact that the Master neither used drugs nor commended them to his disciples, their sufficient equipment being faith in God, in the truth to know which is to be free. St. Paul well says, "If we live in the Spirit, let us walk in the Spirit."

JOHN B. WILLIS.

✧

"Many mansions"

IT was the Master, who never disdained to appeal to the human sense by means of some familiar figure, who spoke to his disciples of the "many mansions" of the Father's house. In the thought of many Christian people the Father's house has generally been located in a realm which can only be reached after the change called death, but this does not agree with Jesus' own words in the same chapter (John xiv), where we read: "If a man love me, he will keep my words: and my Father will love him, and we will come unto him, and make our abode with him." This abode, however lowly, would then become one of the mansions where Love and Truth dwell with man and the divine presence constitutes heaven.

Jacob discovered this spiritual fact, when he was an exile from the home of his earthly parents, and when he lay down for the night in a dreary waste, taking a stone for his pillow. In the deep silence of the night hours a vision of angels came to him, and the infinite purpose which far transcends time and space was unfolded to him, with Love's assurance, "Behold, I am with thee, and will keep thee in all places whither thou goest." Need we wonder that when morning came he exclaimed in deepest awe and reverence, "This is none other but the house of God, and this is the gate of heaven"? Here, in this desert wild, he had been, as Mrs. Eddy puts it, "the guest of God," and through the long and lonely night hours had been waited upon by angels, described by her as "God's thoughts passing to man" (Science and Health, pp. 254, 581). Was not this indeed a foretaste of home and heaven as revealed in divine Science?

It is of course possible that some one may say at this point, But Jacob had to die in order to reach the reality foreshadowed in this experience. This would, however, be quite contrary to the teaching of Christ Jesus, who insisted that the one who keeps his saying shall never see death, and who furthermore quoted that splendid passage from the Old Testament, "I am the God of Abraham, and the God of Isaac, and the God of Jacob," the Master's comment being, "He is not a God of the dead, but of the living: for all live unto him," which surely means that to God no one was ever dead, for God is Life. We read that the patriarchs dwelt in tents, but in so far as they there remembered and loved the divine ever-presence, they were each in one of the many mansions as truly as if they had been in Solomon's stately palace or even in the temple at Jerusalem called by his name. In his "Sesame and Lilies," Ruskin says of the true woman, that wherever she may be, even if without shelter, the glowworm her only lamp, yet there is home and peace.

Christian Science has come to emphasize and make practical the great truth that Mind is the builder of all which may worthily be called home or city, and of whatever does not represent divine Mind, Christ Jesus said that there should not be left of it "one stone upon another." The mansion where God's child dwells should be fair, pure, and beautiful, though to mortal sense it may seem to be compassed by the walls of one simple room. But Mind's idea is never confined within material walls, and the Christian Scientist knows that the reflected light of Spirit radiates out into the world's deepest darkness, telling of life, health, happiness; in a word, "the home of the Soul"!

Of the blessed Master who tells us of the many mansions, Mrs. Eddy says that, when he was with his students, "a fishing-boat became a sanctuary, and the solitude was peopled with holy messages from the All-Father. The grove became his class-room, and nature's haunts were the Messiah's university" (Retrospection and Introspection, p. 91). He said, "I go to prepare a place for you." The homes thus prepared are for those who are seeking and finding man's spiritual heritage, complete before the foundation of the world. What matters it, then, that some have, to mortal sense, passed within the shadow! All live unto God, and find home "there," as we should "here," for these are but human distinctions, while the eternal fact is the Father's house.

ANNIE M. KNOTT.

Among the Churches

Current Notes

LONGMONT, COL.—First Church of Christ, Scientist, has moved into its church building on the corner of Pratt street and Fifth avenue. The opening service was held on Sept. 7. This church was organized in October, 1902, and has held services in various halls. In April, 1913, when the last payment was made on the building lot, it was decided to erect a small building to supply the present need. The church is thirty-five by forty-two feet, and very simple in design. It has a possible seating capacity of one hundred and twenty-five. The reading-room is in the church.—*Correspondence.*

MONTE VISTA, COL.—For the comfort of visitors at the Monte Vista carnival, several rest rooms were provided. A large number were entertained by the Christian Scientists at their room, which was very nicely fitted up in the La Veta block. Over five hundred names were registered here during the two days, and appreciation of such quarters has given impetus to the plan that the city maintain a permanent rest room for the convenience of out-of-town visitors.

Monte Vista Journal.

ST. GEORGE, STATEN ISLAND, N. Y.—The commodious and tastefully furnished tent maintained by the Staten Island Christian Science church at the Staten Island county fair, where the public was cordially welcomed and permitted to rest and read uninterrupted, was much appreciated by visitors to the fair. Many wishes have been expressed that it may be repeated next year.—*The Staten Islander.*

DAYTON, OHIO.—For about six weeks after the recent flood the board of education allowed Second Church of Christ, Scientist, the privilege of holding its services in the auditorium of Parker High school, furnishing even the heating and lighting—all free of any charge. This betokened a most kindly spirit, and enabled the church to hold its services regularly.—*Correspondence.*

DETROIT, MICH.—The dedication services of Second Church of Christ, Scientist, were held in the church auditorium on Sunday, Sept. 21.—*Correspondence.*

The Lectures

Fort Worth, Texas

Bliss Knapp, lecturing on Christian Science, was introduced as follows by H. B. Herds:—

That persuasive appeal of the prophet, "Come now, and let us reason together," seems peculiarly applicable to the present time, when the theater is gaining in its appeal to the people and the church is proportionably losing its hold upon them; it seems appropriate also to this age in which the multitudes seem to think that if they can only come into the possession of a big bank account, a palatial residence, and a six-cylinder automobile, they will glide sweetly, serenely, and happily along flowery roads straight into the pearly gates of immortal bliss. What a pitiful delusion; what a colossal mistake; riches in themselves never brought happiness to a single human being. It is only those receiving these things as the reward of right thinking and right doing, who find that riches even faintly typify spiritual blessings. In order to enjoy the so-called good things of this world, something else is necessary than the mere legal title to a certain amount of land or wealth. The prodigal son found his happiness, not in grasping his share of goods, but in partaking of his father's love. Mortals are born into a material world, and look to material things for their support, their pleasure, and their happiness. They "listen with credulity to the whispers of fancy, and pursue with eagerness the phantoms of hope" held out by the material kingdom, until their eyes are blinded to the beauty and the goodness and the power of the spiritual kingdom.

I want to say that Christian Scientists believe in the inspired Word of God, and look to God as omnipotent, omniscient, and omnipresent. The first tenet of Christian Science [Science and Health, p. 497] reads, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." To Christian Scientists the Bible is the Book of books, and they constantly read and study their text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, because it is the Christian Science commentary upon the Bible, and to those in search of spiritual food it wonderfully illumines the Scriptures and makes of the Bible the most interesting, the most practical, the most helpful book in the world. Christian Science impels its adherents to search the Scriptures, and they do this with a joy, a buoyancy, and a pleasure passing that given to the romantic child by its first reading of the "Arabian Nights' Entertainment," for this "Key" opens the spiritual eyes to the inexhaustible treasures of the Bible, and enables the earnest and honest searcher, ever and anon, to pick up and appropriate beautiful and priceless spiritual pearls from the limitless ocean of truth and good that it spreads out before the spiritual vision.

Correspondence.

Eastbourne, England

The spacious assembly room at the Eastbourne Town Hall was well filled when Bicknell Young delivered a lecture on Christian Science. Daniel Mayer, mayor of Bexhill, who presided, in introducing the lecturer, said:—

It is a great pleasure to see so many here assembled with an earnest desire to search for truth, for which the human consciousness is always crying out. There may be many opinions about it, but there can be only one real truth, and that must be demonstrable. Having for reasons of health come to investigate the truth of Christian Science about twelve years ago, the more I studied it the more I was able to prove the truth of its teachings; and, having benefited so much myself, it is a great pleasure tonight to be able to introduce to you one who is so well qualified to speak with authority on this subject.—*Eastbourne Gazette.*

Vancouver, British Columbia

William A. Doctor introduced William R. Rathvon, who delivered a lecture on Christian Science, in Dominion hall. The hall, which seats eleven hundred, was filled and many more were unable to obtain entrance. The introduction was in part as follows:—

For some years I spent my time grinding the drug, wielding the pestle, and rolling the pill, all the while making mental notes of the inefficiency of drugs to relieve the ailments of the body, a condition of thought which made it difficult for me to recommend their use to others. Thinking that a greater knowledge of the material organism and *materia medica* would change my attitude, I attended a medical school, but while there I learned that many of the physicians had less faith than I. It was while I was in this frame of mind and possessing a very frail body that I first learned of Mrs. Eddy's great scientific discovery, which has proved to us that in God we have the most efficient physician always at hand,—a physician that heals the sick, the halt, the lame, and the blind, whose potency is truth and whose attraction is love.

To correct these prevailing mistaken theories of Christian Science and also, as one speaker has aptly put it, to explain something of what Christian Science is and not what some one thinks it is, Mrs. Eddy instituted a Christian Science board of lectureship. One of the representatives of this board is with us tonight, and knowing that you will be well repaid, I ask you to give him your earnest attention.

Correspondence.

Evanston, Ill.

At a lecture on Christian Science in the Evanston theater, William D. McCrackan, M.A., was introduced by Frank C. Hills, first reader, who said:—

I doubt if I can better express the thought uppermost with many of us this afternoon than in the words of a little child which are a treasured Sunday school memory. A class of little nine and ten year old children had been struggling with the word "belief," and to help dispel the mists, the teacher asked, "Why do the birds fear the scarecrow?" A sweet little face looked up with this answer, "Because they believe it's a man; but when they find it isn't true, they light on its shoulders, don't they, and sing, and they sing so loud that the other birds hear them and find it isn't true too, and then they sing."

Friends, this lecture comes to swell the music of the birds, the rejoicings of those who day by day are finding that the scarecrow "isn't true;" and it is given in the hope that the "other birds" may hear the singing and "find it isn't true, too," and then that their song may reach still other birds, until scarecrows cease to scare and the world is filled with music.—*Correspondence.*

Erie, Pa.

Virgil O. Strickler, lecturing on Christian Science, was introduced by Homer H. Allen, who said in part:—

The Bible is and will continue to be the Book of all books, and possibly no movement of modern times gives so much assurance of this fact as the Christian Science cause. No

Digitized by Google

one is more thankful than the Christian Scientist for this inestimable gift from God to man. As stated in the *Christian Science Quarterly*, "The Bible and the Christian Science text-book are our only preachers;" a tenet of our church states that "we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Manual, p. 15), and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, gives an absolutely demonstrable understanding of the Bible, and the fruits of this understanding are now in evidence throughout the world. We know that great and almighty is Truth, and we believe as our text-book (p. 201) says, that "the best sermon ever preached is Truth practised and demonstrated."—*Correspondence.*

✧

Springfield, Mass.

That public interest in Christian Science is not on the wane was amply evidenced by the splendid audience of some three thousand people that gathered in the Springfield Auditorium to hear a lecture on the subject by Judge Clifford P. Smith. Atty. George A. Bacon in introducing the lecturer said:—

All new philosophies, all new ideas, especially if radical and innovations of thought on any subject, incite skepticism, and until understood and the truth becomes known, many erroneous ideas prevail. A science, however, which in a few brief years can attract hundreds of thousands of devoted adherents and cause the erection of houses of worship throughout the civilized world, must be founded on truth, and this generous audience indicates a genuine desire to know the truth about Christian Science.—*The Springfield Union.*

Lectures to be Delivered

Asbury Park, N. J.—Prof. Hermann S. Hering, Library hall, First and Grand avenues, 8 p.m., Oct. 23.

Ashland, Ky.—Bliss Knapp, Opera house, Seventeenth street, 8 p.m., Oct. 28.

Atlantic City, N. J.—Bicknell Young, on The Steel Pier, 8:15 p.m., Oct. 26.

Belfast, Ireland.—Prof. Hermann S. Hering, Ulster Minor Hall, 8 p.m., Nov. 10.

Binghamton, N. Y.—Virgil O. Strickler, Monday Afternoon clubhouse, 8 p.m., Oct. 31.

Birmingham, England.—Prof. Hermann S. Hering, Town Hall, Nov. 6.

Bolton, Lancashire, England.—Col. William E. Fell, Grand theater, Churchgate, 3:30 p.m., Nov. 9.

Bradford, Yorkshire, England.—Col. William E. Fell, Mechanics Hall, 7:30 p.m., Nov. 6.

Buffalo, N. Y.—Bicknell Young, church edifice, North street, corner Elmwood avenue, 8 p.m., Oct. 30 and 31.

Chicago, Ill. (Second Church).—Willis F. Gross, church edifice, Wrightwood and Pine Grove avenues, 8 p.m., Oct. 30 and 31.

Cincinnati, Ohio (First Church).—Bliss Knapp, Music hall, 8:15 p.m., Oct. 30.

Concord, N. H.—Judge Clifford P. Smith, church edifice, 8 p.m., Oct. 28.

Croydon, Surrey, England.—Prof. Hermann S. Hering, Public Hall, George street, East Croydon, 8 p.m., Nov. 7.

Danbury, Conn.—Judge Clifford P. Smith, Odd Fellows hall, 8 p.m., Oct. 31.

Davenport, Iowa.—Clarence W. Chadwick, church edifice, Kirkwood boulevard and Grand ave., 8 p.m., Oct. 30, 31.

Grand Rapids, Mich.—Willis F. Gross, Powers theater, 8 p.m., Oct. 28.

Harrisburg, Pa.—Bicknell Young, Majestic theater, 8:15 p.m., Oct. 28.

Hudson Falls, N. Y.—Clarence W. Chadwick, Courthouse, 8 p.m., Oct. 27.

Indianapolis, Ind. (First and Second churches).—Rev. William P. McKenzie, Murat theater, 3 p.m., Oct. 26; Keller's theater, Mooresville, 8 p.m., Oct. 26; edifice First Church, 2011 North Meridian street, 8 p.m., Oct. 27.

Ithaca, N. Y.—Bicknell Young, Conservatory hall, Dewitt park, 8:15 p.m., Oct. 25.

Jamestown, N. Y.—Bicknell Young, Samuels' opera house, 8 p.m., Oct. 23.

Lawrence, Kan.—Rev. William P. McKenzie, Bowersack theater, 8 p.m., Oct. 31.

Lawrence, Mass.—Judge Clifford P. Smith, City Hall, 3 p.m., Oct. 26.

Littleton, N. H.—Judge Clifford P. Smith, Masonic hall, 8 p.m., Oct. 27.

Ludington, Mich.—Willis F. Gross, church edifice, 8 p.m., Oct. 27.

Muncie, Ind.—Prof. Hermann S. Hering, Wysor Grand opera house, 3 p.m., Oct. 26.

Newark, N. J. (First Church).—Clarence W. Chadwick, Shuberts theater, 3:30 p.m., Oct. 26.

Newburgh, N. Y.—Virgil O. Strickler, Y. W. C. A. building, Liberty street near Broadway, 8 p.m., Oct. 30.

New York, N. Y. (Second Church).—Francis J. Fluno, M.D., church edifice, Central Park West at 68th street, 8 p.m., Oct. 31.

Niagara Falls, N. Y.—Virgil O. Strickler, Lumberg theater, 8 p.m., Oct. 28.

Passaic, N. J.—Judge Clifford P. Smith, Smith's Academy, 8:15 p.m., Oct. 30.

Philadelphia, Pa. (First Church).—Bicknell Young, Forrest theater, 3:30 p.m., Oct. 26; church edifice, Walnut street, west of 40th, 8 p.m., Oct. 27.

Pittsburgh, Pa. (First, Second, Third churches).—Virgil O. Strickler, Exposition hall, Duquesne way, 3 p.m., Oct. 26.

San Francisco, Cal. (Second Church).—Clarence C. Eaton, Dreamland rink, Steiner street near Sutter, 8 p.m., Oct. 28.

Santa Barbara, Cal.—Clarence C. Eaton, Potter theater, 3 p.m., Oct. 26.

Sharon, Pa.—Virgil O. Strickler, Orpheum theater, 8:15 p.m., Oct. 27.

St. Joseph, Mo.—Rev. William P. McKenzie, church edifice, corner Twelfth and Felix streets, 8 p.m., Oct. 30.

St. Louis, Mo. (Fourth Church).—Rev. William P. McKenzie, church edifice, 5569 Page boulevard, 8 p.m., Oct. 28.

Yonkers, N. Y.—Hon. Clarence A. Buskirk, Philipsburgh hall, 3:45 p.m., Oct. 26.

Youngstown, Ohio.—Bliss Knapp, Masonic Temple, 3:15 p.m., Oct. 26.

Zanesville, O.—Bliss Knapp, Memorial hall, 8 p.m., Oct. 27.

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 7, 1913. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 22, 1913.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to May 30, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

Testimonies of Healing

Nearly eight years ago I underwent a severe operation for what was diagnosed as a malignant disease. A year afterward it reappeared, and I was advised by my doctor to be operated upon again, but I refused, having suffered so much before. I continued to get worse until fifteen months ago, when a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy was brought to the house. I at first read it out of curiosity, but I discovered what made the friend who gave me the book so quiet and peaceful, so different from other people,—for during the reading I was healed. At this time the doctor had given me only three months to live. I had never heard that the reading of this book healed people, and my surprise was therefore very great. The doctor examined me a little later at my husband's request, and to his astonishment there was no trace of the disease left.

A few months later I had a severe attack of illness which was overcome with a few treatments, whereas formerly I was in bed a month at a time with similar attacks. On this occasion I had my house full of visitors, and was able to be about all the time, so that no one but the friend who treated me knew anything of the condition.

I had also not been able to read without glasses for forty years, but after about six months in Christian Science I decided that the time had come for me to leave them off. I was able to do so after one treatment, and have never had them on since, now a period of five months, and I can see better than ever before. From childhood I had suffered from very severe headaches, sometimes being in bed for over a week, and no doctor was able to give me relief. It is now a long time since I have had a bad headache; if I wake with the old symptoms I am often able to overcome them myself in a few minutes.

I suffered from babyhood with sleeplessness, and have been for weeks almost entirely without sleep. For three years I never slept without a drug. That also has been met, and now I can sleep all the night through. Many lesser ills have also disappeared, and is it any wonder that I am deeply thankful to God for Christian Science, also grateful to Mrs. Eddy for all these blessings? I am also very grateful that I am able to help others. I am a member of The Mother Church.

AGNES A. GEE, Belstone, England.

❖

Christian Science has brought so many blessings into my life that I feel I must express my gratitude for this great truth, as far as it is possible to do so in words. I hope my testimony may bring help to others who are in trouble, as the reading of testimonies has so often helped me, when facing a difficult problem.

I came to Berlin for the purpose of studying the violin, and after the first year I began to have trouble with one of my arms, and before long the other also gave out. For three years I tried every sort of material means that I thought might help me. I would gain relief for a time and then the trouble would return as serious as ever. The despair and discouragement I went through are impossible to describe. After I had exhausted all material means, the thought came into my mind that Christian Science might help me. I knew very little about the subject, but was in no way prejudiced against it. I applied to a friend who was a Scientist for information, and she kindly lent me the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. After reading it for a few days the trouble in my arms entirely disappeared. This was over two years ago, and I have worked steadily at my instrument without any further interruption.

In the autumn of 1910 I had a return of a very serious and distressing form of goiter, which several physicians had previously told me was quite incurable, saying that only by taking extreme care could I prevent its getting complete hold of me. The attack I mention was in an aggravated form. Slighter returns of the disease that I had had before coming into Christian Science had necessitated weeks of absolute quiet and the giving up of my work. As my fear was very great, I could not do anything for myself, so I applied to a Christian Science practitioner for help. At the end of a week's treatment, and without any relaxing of my work, every sign of the disease had gone, and in its place I experienced that wonderful spiritual uplift and strength which this healing brings with it. These are only two of the many blessings which the study of Christian Science has brought me. Since I began I have had much to meet, and can only say that Christian Science does indeed show one the true way of solving all problems. During a great sorrow it helped me as nothing else could have done.

I wish particularly to express my gratitude for the great devotion and courage that enabled Mrs. Eddy to bring this truth so clearly before us; also for the Publishing Society, which through the periodicals sends such untold help and encouragement all over the world. God is indeed good.

CONSTANCE PINWILL, Berlin, Germany.

❖

I am glad to testify to the regenerative power of Christian Science. When this truth came to me I was mentally, physically, and morally sick. All my ambitions and ideals were material. My views of life were distorted; my spiritual nature, famished. In the state of mind in which I lived, it was inevitable that disasters should overtake me, and when they came the materialism which had brought them offered no relief.

The healing of my brother in Christian Science opened my eyes. I accepted Truth, inspired by reading "Science and Health with Key to the Scriptures," and by several interviews with a faithful practitioner; and I can say that like Mrs. Eddy I am still "a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. ix). I find myself able to demonstrate the truth with increasing assurance, and rejoice to see the shackles of a belief in any power opposed to God continually falling away. Christian Science has indeed made me a new creature.—IRWIN SPEAR, Chicago, Ill.

❖

With heartfelt gratitude to God, and to our revered Leader, Mrs. Eddy, I add my testimony of healing to those already published in the *Sentinel*. I had suffered from my heart and rush of blood to the head ever since childhood. It was thought by most people to have been inherited, as my dear mother had passed on from a disease of the heart. My schoolteachers were therefore cautioned and requested not to allow me to overexert myself on the play-grounds at school. Time passed, and when nineteen I had a severe fall which was said to have caused displacement. I suffered untold agonies with my heart and head and the later trouble, until 1911, when I consulted a Christian Science practitioner. Soon after the treatment began I felt much better, and in a few weeks was perfectly well. I could climb steep hills without suffering from my heart; headaches were gone; and how thankful I am none can realize except those who have gone through similar experiences and come out victorious through Truth. I am progressing daily, with God's help, in the understanding of our text-book, "Science and Health with Key to the Scriptures."—L. B. CLARK, Mena, Ark.

Digitized by Google

It is with a heart full of love and gratitude that I give my testimony, trusting it may benefit some one who is on the verge of becoming discouraged. For nearly four years, while residing in Chicago, I was afflicted with a very severe stomach trouble, not being able to retain any food, besides having a severe pain continually in one side. After taking treatment for a long while from different Christian Science practitioners and getting no results, I was examined by a physician, who said I was recovering from appendicitis. I continued the Science treatment, however, because previous to this I had received help a great many times, and my mother had been healed of a chronic throat trouble a year or so before. Nevertheless, as there seemed to be no change in my condition I became discouraged, and would have given up hope had it not been for my dear mother and the faithful practitioner.

While still suffering from this ailment I was married, and later a child was born to me. A doctor who was present at the birth said the baby would not live until morning. He was, however, under Christian Science treatment, and it is with wonder that I look at him now and see how well and strong he is. I am now a well and happy woman, and I thank God and am grateful to Mrs. Eddy for the truth which has healed my child and myself.

Mrs. John Divoky, Fresno, Texas.

✧

I am very grateful for what Christian Science has done for me and mine. I was brought in touch with it about seven years ago and was healed of many ailments. At that time I sought it only as a means of healing, and made no particular study of it; thus I gradually dropped back into the old way. Later many complications set in, and after two operations and much suffering and trouble I turned again to Christian Science three years ago and began the study of the work with the help of a kind practitioner. The many beautiful proofs of God's omnipotence and omnipresence that have been given us make me very grateful to Mrs. Eddy, and I rejoice greatly in the mental benefit, the glorious spiritual awakening received from the daily study of her inspired writings. Recently a baby came to us; the birth was absolutely painless, and very soon I was again strong and well.

Christian Science has taught us that God is the source of abundant supply, and we are learning to prove it. We find in our home affairs and daily needs that we are protected and governed. With many others I can surely say that I pray every day for that Mind to be in me "which was also in Christ Jesus."—Mrs. T. W. Kesler, Loveland, Col.

✧

It is with a heart full of gratitude that I give my testimony of healing in Christian Science. At the age of sixteen my health failed me and I was taken out West. On my return home I collapsed with nervous exhaustion, and from that time, which was seven years ago, until I became interested in Science, two years since, I sought in every way for health. Having doctored with five of the best physicians here, having spent eight months in a private sanitarium in Indianapolis, and having taken treatments from a magnetic healer for nine months in the same city, with but temporary relief, I turned to Christian Science as a last resort. A practitioner was called in, and after my first week of treatment I found that I had gained greatly in weight. I was healed of severe bowel and stomach trouble, also a bad condition of the eyes. Severe headaches have also been overcome, and many other ailments. In less than two months after coming into Science I gained wonderfully in health.

To say I am thankful to God, and grateful to Mrs. Eddy for this wonderful healing of mind and body, but slightly expresses my gratitude. I believe the only way to show our appreciation is to live this truth, thereby helping others; and my daily prayer is to be a true Christian Scientist.

Miss Tedda Gagen, Lafayette, Ind.

✧

It is with a grateful heart that I give this testimony to what Christian Science has done for me. Over three years ago, my wife began to take Christian Science treatment for rheumatic trouble. Up to that time I had always regarded Christian Science as a freak or worse, but as she had apparently exhausted all material remedies I was willing that she should try it. The practitioner left with us a copy of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," so I began to read it, just to see what it was, and I soon perceived that Christian Science was very different from what I had supposed. I was troubled at the time with a double rupture for which I had worn a truss for years. I had been told by the doctors that I was not safe a minute without this, but one morning, instead of putting it on as usual, I hung it up, and said, without any irreverence, "I am now going to give God a chance." I went about my business and thought no more about the appliance; and I have never worn it since, or felt the need of it. This convinced me, and since then God has been my only physician and Christian Science my only medicine. I am trying to live up to the teaching of Christian Science as well as I can, and am truly grateful for Mrs. Eddy's teachings.

J. C. Praye, Montecito, Cal.

✧

After a long and faithful quest for righteousness, forced to turn away from creeds and dogmas because I found them only spiritual barrenness, fruitless fig-trees, I feel that I was led by a higher power to know and prove the teachings of Christian Science, and I gladly testify to my marvelous awakening.

In May, 1905, I took up my residence in Rome, Ga., thinking to myself, "Well, I won't be annoyed with any Christian Scientists in this town, at any rate, for no one here knows that my people are interested in it." My thought fitly expressed the ingratitude of mortals, for both my parents had been healed of many diseases, my mother having been literally saved from the grave, eighteen years before, through the study of this inexhaustible subject.

All this time I had been making every effort to run away from the only remedy which could afford surcease from my discordant conditions, and their name was "Legion." There came a day, when like Paul I was on the road to Damascus, ready to condemn and persecute any one who mentioned to me a word of true Christianity, or Christian Science. The morning mail brought a letter from my parents in answer to an appeal from me asking for a hint, or even a word, through which I might be lifted out of intense mental suffering, loneliness, and misery. Evidently there was an inherent unconscious desire for a higher attainment of life experience, and it came in God's way, not mine. On opening the letter, I read these brief, disappointing words: " 'One with God is a majority.' Some day you will know this, dear child, and you will never be lonely again." Filled with utter despair over this, to me, meaningless statement, I angrily tossed the letter into the grate, feeling that I had asked for "bread" and had been given a "stone." That day was of all days a most wretched one. Everything went wrong. In my mad human endeavor to get people and things out of my way, I utterly failed to see the wonderful opportunities that were knocking at my door.

Mrs. Eddy's invaluable book, "Science and Health with

Digitized by Google

Key to the Scriptures," had been presented to me five years before, but it was hidden away in the bottom of a trunk. To please members of my family, I had read it at different times; but what was so clear to them seemed Greek to me, and the trunk the most suitable place for it. Little did I realize that the inner man was naked and hungry and longing for spiritual food, and much less did I realize how close God was to me right then, ready and able both to purify and to satisfy my hunger.

In the evening of that most discordant day, I found myself alone, heart-sick and weary; and strange to say, in the midst of my despair, thought was arrested, I suddenly paused, and found myself saying aloud in a most humble attitude of prayer, "Oh, if there is a God, lead me out of this darkness." Almost instantly came the answer to my earnest, honest appeal; for I was reminded by the voice of Truth that "one with God is a majority," and I realized in that one supreme moment the healing influence of the power of God. I had suddenly been lifted from the deepest despair to a mental state of the highest exaltation.

Oh, the joy of it all! I had at last found God. At-one-ment with Him had taken away all nervous excitement and pain. I quietly walked over to the trunk, pulled out my copy of Science and Health, and began to read. What a transformation had taken place! Could this be the same book of which I had once been ashamed, and which I had kept so long under cover? Yes; but I had changed.

For three days and nights the study was continued almost incessantly, when I realized that a wonderful healing had taken place. My left hand and arm, crippled and stiffened from rheumatism, had become absolutely normal; and the healing was permanent. The glorious part of it all, however, is this, that the sunlight of God's love and power keeps on flowing into my consciousness, and the "old man with his deeds" is steadily disappearing.

I would advise any one who is struggling with the same mental condition of discord and unrest to read Science and Health. Its perusal will be sure to bring an unused Bible out of its hiding-place, and the result will be not only a sick body healed, but a sinner reformed. Thank God for Christian Science!—Mrs. Carrie Young, Knoxville, Tenn.

✧

It is with a heart full of gratitude that I write these words of thanks for Christian Science. About five years ago I was healed of headaches, for which I had had medical advice and tried all sorts of remedies without gaining any relief, but after ten days' treatment from a Christian Science practitioner the headaches were quite gone, and have never returned.

For some time previously I had studied so-called mental science, and had looked askance at Christian Science and its followers. I had been to Christian Science services once or twice, and had read some parts of "Science and Health with Key to the Scriptures" by Mrs. Eddy; but my thought was at that time quite unprepared to receive the truth, so I understood little of what I read in the text-book. A year later, through the loving and faithful work of the practitioner from whom I asked treatment for my headaches, the scales fell from my eyes, and I saw that Christian Science is the truth I had been seeking for many years. I was brought up in the evangelical faith, but became dissatisfied with it as I grew up, for I was baffled by the presence of so much suffering and apparent injustice in a world supposed to be ruled by a God of love. I could find no explanation of it all, and gradually gave up trying to have a religion, but I became interested in socialism and humanitarian movements. These too failed to satisfy me, because the work attempted was almost entirely on material lines.

Christian Science has solved all my difficulties. It has given me better health of body and more fitness for life's every-day duties. It is gradually healing me of fear and worry and unkind criticism of others. During the last five years I have taken no drugs nor special diet as I formerly did, and attacks of illness from colds have been met and healed by Christian Science treatment only. Above all, I am grateful for being able to prove through the teaching of Science and Health that God is Love, and that evil has no existence except as a false belief. This destroys the old belief that God is responsible for evil—that He permits it to be. Our text-book says, "The Science of Mind disposes of all evil;" also that "Christ came to destroy the belief of sin" (Science and Health, p. 473).

Of Mrs. Eddy I can only think and speak with the deepest love and reverence, as of God's inspired messenger to this age; and it is a joy and privilege to follow, though it be very imperfectly, in the way she has pointed out.

Jeanie F. Gibb, Kilmacolm, Scotland.

✧

I wish to express my gratitude to God, also to our beloved Leader, Mrs. Eddy, for my healing through Christian Science. Two years ago, I was suffering from what was pronounced an organic condition, which a prominent western physician said would cause me to be an invalid the rest of my life, and that I must undergo an operation, which would temporarily relieve me. He examined my heart, and because of its abnormal action advised me to leave the high altitude at once.

Having passed through a great sorrow and being overcome with fear and discouragement, I gave up all hope, and returned to a lower altitude, near my former home, to be where my mother could help to care for me. Shortly after my return, while looking for a certain location, I was sent to the home of a Christian Science practitioner, and after talking with her, I realized that there was help for me. In a few days I began to take treatment, and in less than three weeks I was healed, and the heart condition soon became normal. I gradually regained strength, and step by step, as I have realized man's relation to God, discordant conditions have been overcome, and peace and harmony have come into my life. I have also learned that nothing satisfies but divine Love.

Every ill has been promptly overcome for my little girl, who loves the truth. I am truly grateful for every channel of good that has helped me in my effort to follow Christ, and it is my earnest desire to be led by divine Mind, and to be called a child of God.—Mrs. Bina M. Harris, Omaha, Neb.

✧

I wish to testify to the many blessings that Christian Science has brought to me. It has given me quiet, peace, sweet assurance, and a freedom from fear, anxiety, and grief, which the world can never give and cannot take away. Some years ago a great sorrow came into my life, on account of which my condition became one of deep melancholy. I did not care to live, feeling there was nothing more in life.

It was at this time Christian Science was brought to my notice by a friend, who sent me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, requesting that I read it, and saying that he knew it would help me. I did read it several times; and through the reading, and help from this friend, I gained a better understanding of the truth and was lifted up and out of darkness into daylight, being completely healed. I was also healed of what *materia medica* called a malignant disease of the skin, of six years' growth, for which all known remedies had been used without any

Digitized by Google

benefit whatever. One treatment in Christian Science was given, and it entirely disappeared.

We have had many demonstrations in our home of the healing power of divine Love. For these and for the spiritual enlightenment and understanding of the omnipotence and omnipresence of God, I am truly grateful.

MRS. FANNIE M. SADLER, Cleveland, Ohio.

✦

As I meditate on the good I have received through Christian Science I feel I should express my gratitude through the *Sentinel*. At one time I was bitterly prejudiced against it, and it was not the desire for physical healing that led me into the truth. I was more in need of mental and spiritual help, for I had been of a nervous temperament and inclined to worry the greater part of my life. These errors are now being overcome to a great extent as I daily study the Lesson-Sermons and apply the truth therein taught. I find these Lessons from the Bible, and "Science and Health with Key to the Scriptures" by Mrs. Eddy, very helpful, for through them we gain a clearer understanding of Truth and Love. I have been healed of a large swelling near the eye which almost closed that organ; after the first treatment in Christian Science the pain ceased entirely.

For the spiritual and physical blessings received I am very grateful to God and thankful to Mrs. Eddy. I also wish to express my gratitude for the loving thought shown in directing me to the divine Principle of all good.

MRS. LULU M. COLE, San Francisco, Cal.

✧

In the fall of 1911 my little son, while at school, was crushed under the weight of many heavier boys in a rough game, and immediately afterward began to complain of pain in the legs and back. Then signs of paralysis manifested themselves, so that he had to lift his legs when he tried to get out of bed, and the pain was constant in his legs, feet, and back. At this juncture I asked for treatment in Christian Science, and immediate relief was experienced. He began to sleep quietly at night, and in a short time he was perfectly healed. He is now well and strong, and actively engaged in all boyish sports. All signs of extreme nervousness were overcome at the same time.

JANE A. WRIGHT, Deerfield, Mass.

[Written for the *Sentinel*]

Loyalty

MARY HORNIBROOK CUMMINS

"AND thou wast also with the Nazarene!"
O word of accusation, richly fraught
With honor! What those loving hands have wrought
Enwraps the servant; sheds o'er life and thought
The halo of that matchless life serene.

And shall my answer be, "I know him not"?
E'en though the loss of friends I may foresee,
E'en though it lead to judgment-hall and tree,
My Lord, I'll fully, closely follow thee
And share the labor of thy earthly lot!

I have thy word—Love's hand shall hold me fast;
And though my feet may stumble in the way,
I know that thou for me, dear Lord, didst pray
That my faith fail not in temptation's day,
But, as a rock, stand firm unto the last.

From Our Exchanges

[*The Christian Advocate*]

The Bible is always on trial for its life. It was born out of great tribulations and its subsequent career has been beset with constant perils. It required many centuries and a host of writers to assemble its parts, and ever since it was compacted into a single library, more centuries and a larger body of men have been involved in the attempt to destroy it. Its gradual emancipation from the ancient languages in which its treasures were originally confined, has been a slow and painful process, which is not even yet finished.

But when it has been liberated from the bondage of unfamiliar tongues, the conflicts of the Bible have only just begun. Every sinner whose life it condemns, every institution of society which it rebukes, every system of philosophy which it antagonizes, every scholar whose boasted erudition it balks, enters a confederation to oppose its progress. Its translators have been persecuted, its readers have been martyred, its teachers have been suppressed by brute force, and its messages have been falsified. Yet it has survived the attacks of its foes and the treason of its avowed friends. If we could believe the claims of its adversaries, nothing has ever been destroyed so frequently, yet nothing has exhibited such invincible vitality. It is the most persistent literary force in the world. In our day the Bible is subjected to a comparatively new and unique trial. It is passing under the scrutiny of a literary and historical criticism of the most scientific and relentless character. It is meeting that severe test in the same triumphant fashion that has marked all its previous trials. To doubt that it will come out of this ordeal unscathed, is to give proof that we have lost faith in the divinity of its origin and character.

[*The Christian Work and Evangelist*]

It is becoming more and more evident to all believers that the union of Christendom is not only in the program of God, but is a necessity for the conquest of the world. There are few of the leaders in any of the communions that dissent from this position, and among the masses there are hosts of believers who boldly affirm it. Fifty years ago, and even twenty-five years ago, it was an exception to hear a minister in any of the communions advocate Christian union. To most believers everywhere it was a chimerical dream, but it is not so today, for now to the majority of believers division is both impracticable and sinful. It is seen as never before that the whole weight of the Scriptures is against strife, faction, and division among brethren. It cannot be justified. The apostle affirmed that those who perpetuate it are "carnal." Strife, faction, and division in a single communion as well as in the church at large are opposed to the spirit and genius of Christianity. Millions are today anxiously and sincerely seeking the way for the real brotherhood of believers.

[*The Advance*]

Religious indifference and a spirit of criticism are not wholly unrelated. They seem at first to be violently opposed, but they are not. It is when people's religion becomes self-seeking, when their aim and end in life is personal enjoyment, that they come to test even the services of God's house as if they were intended to minister to their pleasure. The service is good or not good for them in proportion as the music gives them enjoyment, or the sermon pleases their vanity or fails to rouse them from their lethargy with some call to duty. It is when people are interested and hard at work that they have no time for criticism. It is when they sit back in apathy that they have time to be critical and fault-finding.

Digitized by Google

These are among the sins of our time. To many people they seem so gentle and amiable, such rather pleasant and altogether negligible sins, that they have no inclination to be disturbed concerning them; but the voice of the prophet must always be a voice to his own day and generation, and the sins against which he preaches should be the sins of his own time. These sins are not harmless ones. They are benumbing, deadly sins; they freeze the life out of consecration, they chill joy out of the heart of religion, and unless they are repented of and forsaken, they bring paralysis to the work of the gospel, and crucify our Lord afresh.

[*The Christian World*]

All the external uglinesses of our national life,—its city slums, its prisons, its hideous warships, its embattled armies; all the scowls on human faces; all the slouching, decrepit, rag-clad human forms, are the outcome, the material expression of a primal inward ugliness. And every improvement here begins from within. As our souls grow cleaner, so all our bodies, so all our streets. As the soul reaches toward beauty, our architecture will grow beautiful; a new beauty will come to our countryside. Man cannot get away from his spiritual destiny. His whole problem is spiritual. The New Testament doctrine of heaven and hell means finally this, that inner beauty makes outward beauty, that inner ugliness makes outward ugliness. But heaven is going to conquer hell. If we took our world today as a finished business, we ought all to be pessimists. But so long as we are builders we shall never be pessimists. When we see what can be done, is being done, in ourselves, we are full of hope for the world. The mere scientific thought of the last half century has transformed the earth, and we are going to have still better thoughts. Science is, after all, the mere surface of the soul. It handles matter and force, but humanity means something deeper. As, in its incessant probing, it reaches toward the center, it will discover that cleverness is not comparable with holiness; that matter and force are ever misused except as the instruments of purity and love. To these humanity will finally go as the quarries for its building. From these stores of inner beauty will come our new Jerusalem.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

Some day, please God, we shall have done with the shedding of human blood. The moral consciousness of Christendom has already passed beyond it and is protesting against it. Man will not always be warring against man, either in the battlefield or the counting-house. As Professor Huxley said in his Romanes lecture, the law of the survival of the fittest is giving way before the higher impulse of fitting as many as possible to survive. But we shall not have done with the struggle when war in all its modes has been left behind; we shall still have to fight, but the fighting will be on a higher plane. For the individual it is on a higher plane even now. It is the struggle to conform the soul to Christ, to respond to the call of his spirit, to bring every faculty of our being into captivity to his love. We do not kill men in this fight; we do our best to save them. It is against ourselves that we strive, ourselves that we have to overcome in order to share the glory of the Lord. If there were no struggle, there would be no growth; we should be beating the air.

[*The Congregationalist and Christian World*]

No church can hope to prosper in the measure of its opportunity, no pastor can hope to lead his people forward to the high places, without a vivid and continual sense of the presence and partnership of God. We are engaged in His business, and He has a vital interest in our work.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" *is specially* bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets including Bicknell Young's lecture, "Christian Science: The New Birth," which is now printed in German. The new pamphlets are ready for distribution and are listed as follows:

Dutch: "De Goddelijke Natur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Forty pages.

Norwegian: "Den Guddommelige Natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies, inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

Miscellaneous Writings—1883-1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

Church Manual. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Christ and Christmas. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

Unity of Good and Other Writings. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Christian Healing and Other Writings. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform with the pocket edition of Science and Health. Bound in Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Retrospection and Introspection. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Unity of Good. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Pulpit and Press. A unique work, important to the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more, 75 cents each.

Rudimental Divine Science. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

Rudimental Divine Science. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more to one address, 40 cents each.

No and Yes. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

Messages to the Mother Church. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Message to The Mother Church. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges, 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Our Leader's Message. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Communion Message, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Two Sermons. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. One volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more, 45 cents each.

Christian Healing. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

The People's Idea of God. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

Feed My Sheep. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIII indicates the year 1913: XIIII is used for the year 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

NATIONAL

In the state legislation and road management session of the third annual American road congress at Detroit, Mich., allotted to the American Bar Association, the convention of five thousand delegates pressing for good highways in the United States heard an address on "The Recent International Road Congress in London, and Observations of French and English Road Systems," made by Col. William D. Sohier, chairman of the Massachusetts highway commission. He said in part: "I would not discourage any good road movement in this country, but we must go at it in a proper and equipped manner, and know what our problem is before we tackle it, then proceed in a business-like manner to build our roads. The money cannot be provided nor the roads built at once. If we are to secure good roads, we must all join hands, the town, the city, the county, the state, and possibly the nation also, but it must be upon a carefully prepared plan made by competent engineers, after a full study of the whole problem. Only by cooperation can our country secure any comprehensive highway development within the next twenty-five years."

Progress is being made on the construction of a toll highway that is to run from Fort Worth to Del Rio, Texas, a distance of approximately five hundred miles. The first twenty miles of the new road has been finished. The motorway is being built by a private corporation called the Texas Motorway Company. As an aid to the enterprise the property holders along the route are required to donate two thousand dollars in cash per mile and right of way. Because of the fact that the route of the highway is through a region of the state that is now lacking railroad transportation facilities and that every mile of constructed motorway will greatly add to the value of the abutting land, no difficulty has been experienced in obtaining this support. It is estimated that the motorway will cost an average of about five thousand dollars per mile.

The blowing up of the Gamboa dike in the Culebra cut of the Panama canal, at two o'clock, Oct. 10, released the last artificial barrier that prevented the waters which join ocean and ocean from mingling. The electric circuit which fired the dynamite charges was closed by President Wilson in Washington. The first lockage at the Pacific end of the canal occurred four days later, when the tug Miraflores, three barges, and two other craft were raised together through the west flight of the Miraflores locks from the Pacific entrance of the canal to the surface of the Miraflores lakes, 36.32 feet above sea-level.

By a vote of four to one the public service commission of Massachusetts approves the full issue of $67,552,000 convertible debenture bonds asked for by the New York, New Haven & Hartford railroad. It also approves an issue of stock, into which the bonds may be converted later on; it finds that the purposes for which the proceeds of the bond sale are to be used are "reasonable and proper and lawful;" it finds that sufficient capital stock has been paid in to permit of the new bond issue under the law which authorizes bonds to twice the amount of capital stock.

President Wilson has approved Secretary of Commerce Redfield's plans for investigation of the affairs of manufacturers who may close factories or reduce wages on the excuse that such curtailment is forced by the new tariff. An appropriation for this work will be urged upon Congress. Approval was also given for Mr. Redfield's plan for investigation of cost of production, wages, and living conditions here and abroad. The plan contemplates increases in tariff rates found too low because of foreign manufacturing conditions.

By the terms of Benjamin Altman's will his magnificent collection of paintings, Chinese porcelains, tapestries, rugs, enamels, rock crystals, bronzes, furniture, and other objects of art, are devised to the New York Metropolitan Museum of Art.

INTERNATIONAL

Thirty years ago sixty-six irrigation projects were in operation under the public works department in India, on which the total capital outlay was about thirteen million pounds sterling. Twenty years later the number of irrigation projects had increased to one hundred and twenty-four, with a capital outlay of about twenty-eight million pounds sterling. At the present time there are in operation one hundred and eighty-eight irrigation systems having a capital value of nearly thirty-six million pounds sterling, bringing in a net revenue of nearly two million seven hundred thousand pounds sterling. There are now in operation more than fifty-three thousand miles of canals and distributaries. The present area under irrigation is about twenty-three million acres.

The campaign to "free British land from landlordism and get the people back on it," was opened last week at Bedford by Chancellor of the Exchequer David Lloyd-George. He said in his speech: "Landlordism is the greatest monopoly in this land, and the people are trusting in the government to put forth its strong right hand to lift them from the mire. The authority of the sovereign is not comparable to that of the landlord over his subjects. He could make and maintain a wilderness, and he has legal authority to do more than even a foreign enemy could impose on the country after a conquest. In Ireland millions have been driven away from the land by legal process."

The inauguration of Yuan Shih Kai as first President of the Chinese republic took place Oct. 10. The great powers have now signified their recognition of the republic. The President has agreed that the new government will take over all the responsibilities of the governments which have preceded.

Provisional President Huerta of Mexico last week declared both branches of the Mexican national Congress suspended. The formal proclamation dissolving the legislative branch of the government also gave notice that new senators and deputies would be elected Oct. 26, the day of the presidential election.

The loan which France is to make to Turkey has been arranged. It amounts to seven hundred million francs, and in return the Porte grants concessions for five railway lines in Asia Minor, contracts for all of which have been signed, as well as sundry concessions elsewhere.

It is reported that a Russian expedition has discovered land five hundred miles north of the Asiatic coast.

INDUSTRIAL AND COMMERCIAL

The Journal of Commerce and Commercial Bulletin says: Is cheaper meat actually at hand as a result of the passage of the new tariff act, and are the big packers sincere in their oft-repeated statements that the present high prices are due solely to the workings of the law of supply and demand? These two questions are likely to be answered within the next two or three weeks. Argentine beef is on its way to the United States in large quantities, and is being brought in by the big packers themselves. That which is now en route or about to be shipped will, of course, come in free of duty under the new tariff, and should therefore be sold at a decidedly lower price to the consumer. Just how the importation of the new beef will affect the price of the domestic product remains to be seen. The quantity is estimated to be the equivalent of one hundred to one hundred and fifty cars, such as would be shipped from the West.

The Memphis [Tenn.] Street railway, through improvements to its power plant, costing seventy thousand dollars, hopes to save forty thousand dollars a year. The increased fuel efficiency, meaning the burning of far less fuel and the saving of thousands of dollars, is being brought about through the installation of one thousand square feet of chain grate service and the equipment of forty-eight hundred boiler horse-power.

Dairymen of Canada claim that United States buyers have begun to destroy their source of supply of dairy products by indiscriminately buying up dairy stock all through eastern Ontario and the Province of Quebec since the passage of the tariff act.

The mining industries of India are growing in importance. The aggregate value of the mineral production of the year 1912 reached the total of £9,821,485, which represents an increase of £1,340,818 over the figures of the preceding twelve months.

The Turkish government has definitely decided not to accept the offer of the Standard Oil Company for the acquisition of a petroleum monopoly in Turkey, according to a despatch from Constantinople to the London *Standard*.

Twenty-one million dozen eggs were exported from the United States in the fiscal year 1913, against one and a half million dozen ten years ago. The average price at which these eggs were exported was 21½ cents per dozen.

It is estimated that the California crop of rice will amount to ten million bushels and pay the growers two hundred thousand dollars.

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI October 25, 1913 No. 8

Joyousness

WILLIAM D. MC CRACKAN, M.A.

TRUE joy can come only from the possession or expectation of good. Evil can never enter into lasting joy, for evil is destructive in its nature and would, if it could, shatter the sense of joy and substitute for it the lassitude of satiety and disillusionment. The use of the verb to enjoy as meaning to possess, points to this very sentiment of joy. Real possession is joyous, it is marked by satisfaction and delight, never by regret or disappointment.

We are almost startled by Jesus' statement in the Sermon on the Mount, as given in Luke's gospel: "Blessed are ye that weep now: for ye shall laugh." The promise, "Ye shall laugh," is so unusual, so different from the conventional phrases of stereotyped religion, that it arrests attention. Is it true that the joyousness which bubbles over in laughter can be a spiritual reward for the self-sacrifice and repentance typified by weeping? We are reminded of Mrs. Eddy's agreement with the late Rev. Dr. Talmage, quoted in "Miscellaneous Writings" (p. 117), that "there are wit, humor, and enduring vivacity among God's people."

Is there, indeed, any joyousness comparable to that of knowing evil overcome and good once more in possession? Is there any sunshine like that which bursts through the clouds, or any bird song so sweet as that which comes after "the winter of our discontent"? In the Christian Science textbook, "Science and Health with Key to the Scriptures," Mrs. Eddy points out the secret of happiness, which must underlie true joyousness in these words: "Happiness is spiritual, born of Truth and Love. It is unselfish; therefore it cannot exist alone, but requires all mankind to share it" (p. 57). Joyousness which bursts forth from an inner consciousness of good as ever present and all powerful, comes from a spiritual source. The recognition of God's constant protection, of His guidance by means of the "still small voice," of His beneficent law in adjusting and arranging our difficulties, of the nonentity of evil, the baselessness of fear, and the imperishable nature of man in God's image—this recognition means happiness and is "born of Truth and Love."

True happiness, like every gift of God, is unlimited in its supply. It cannot be monopolized, nor can its quality be adulterated by an admixture of matter, of evil, or of personal sense. The enjoyment of happiness by one person does not shorten the supply for any one else. There are no bounds to the possession, no limits to the availability of happiness for all. Fear is entirely absent from true happiness, for Christ Jesus has given this assurance: "Your joy no man taketh from you." Neither greed nor envy can be roused by its possession, because it is for all. "It cannot exist alone," as Mrs. Eddy has said, "but requires all mankind to share it."

The progress of the Christian Scientist is therefore constantly illumined by bursts of joyousness, of spiritual sunshine. From the first dim perception that perhaps sin and suffering are not inevitable or disease incurable, to the full realization of the omnipotence of good, the way is gladdened by moments of that joyousness which is based upon spiritual realization. After every descent into the valley of contrition comes the ascent into the mount of revelation. After every act of repentance comes the season of renewed consecration, the pouring on of the "oil of gladness," the being clothed upon with the "beauty of holiness," the awakening in the likeness of the Father-Mother God which satisfies.

✧

Overcoming the World

FRANK H. SPRAGUE

MRS. EDDY describes Christian Science as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1). The individual finds his place in this order by laying aside the personal sense of self and becoming a channel for the operation of the law of good. The propensity, however innocently entertained, to exploit or direct the activities of good from the standpoint of self, derives its support from the belief that life is finite, self-centered, self-determinative. This belief extends through all the gradations of material manifestation, from the human type down to the lowest monad or simplest form of atomic and molecular activity.

The pseudo-world, the supposititious kingdom of matter, represents the outgrowth of this erroneous belief multiplied, extended, diversified, divided and subdivided *ad infinitum*, until the actuality of being is lost sight of in a maze of self-deception and self-confusion. Through repeated exercise and gradual dissemination, phases of belief which in their incipient and rudimentary stages would readily be recognized as mere creations of finite fancy, appear clothed more and more with the semblance of reality, genuineness, power, and authority. Lines of experience which conform to well-worn channels of belief come after a time to be accepted as laws; and yet this gradual transition from the unfounded and ephemeral to the estate of seeming authenticity and fixity cannot add one iota of reality to that which in its genesis and constitution does not possess the elements of reality. In short, the tenacity and universal scope of a belief does not constitute it more, or less, than a belief.

It helps to clear up the situation to see that the realm of materiality, imposing and formidable though it may appear to the senses, rests in the final analysis on a basis of abstract falsity. It is not difficult to recognize the abstract and unsubstantial character of a belief which is just taking form in some phase of superstition, misrepresentation, or imposition, and we ought not to be fooled in the case of matter by the circumstance that the belief is so firmly entrenched in human consciousness that it is scarcely challenged by the world at large. Many another deception has held world-wide sway in a similar manner.

Today the lines of scientific and philosophical research are rapidly converging toward the point where the conclusion is inevitable that organized beliefs alone constitute the structural basis of matter, and that it is these beliefs, as they appear outwardly imaged to the senses, which furnish the

Copyright, 1913, by The Christian Science Publishing Society

Digitized by Google

ground of classification in natural history. It is a case in which belief registers the effects of belief. "Vertebrata, articulata, mollusca, and radiata are mortal and material concepts classified, and are supposed to possess life and mind. These false beliefs will disappear, when the radiation of Spirit destroys forever all belief in intelligent matter. Then will the new heaven and new earth appear, for the former things will have passed away" (Science and Health, p. 556).

Keen logical and spiritual insight led Mrs. Eddy long ago to declare that "physical force and mortal mind are one" (Science and Health, p. 484), and now the ripest scholarship of the period, based on methods of inquiry pursued in laboratory and library, points steadily and consistently to a similar conclusion. According to Herbert Spencer, "the power manifested throughout the universe distinguished as material, is the same power which in ourselves wells up under the form of [mortal] consciousness." Up to this point Christian Science and the schools are in virtual agreement. Right here, however, where natural science is confronted by an impassable barrier arising from the limitation of its view-point, the real work which stamps Christian Science as a positive force begins, for it offers substantial evidence that God, Spirit, is the Principle of being, and that only spiritual reflection, the sense which is God-centered instead of finitely centered, has a real and substantial basis. The essence of mortal mind, the "power" manifested in matter, involving the elements of discord, decay, destructiveness, brutality, is anything but a manifestation of godlikeness; and we may therefore ask in all candor whether it is anything short of blasphemous to regard such a display of self-conflicting forces as the work of a Supreme Being who is all wise, all loving, all powerful.

Now if matter, the concrete expression or objective phenomenon of mortal mind, is to be undone, so that the glories of the universe as they exist in immortal Mind shall stand forth, it must be through our victory over false belief, error, at its strategic vantage-point in human consciousness. The fallacy with regard to the basis of selfhood begins to be self-exposed when the belief becomes personalized and takes on the aspect of self-consciousness in mortal man. Here it is ripe for extermination, and not until it is thus disposed of will the externalized aspects of the belief which come to the surface in nature become extinct. Resisting aspects of nature cannot be overcome so long as the element of non-conformity to divine law and order has an abiding-place in human consciousness. The sense of self as a centralizing, interpreting, dominating, administering power must give place to the Mind which was in Christ Jesus.

Christian Scientists are not at present concerned with spiritual problems of the advanced order mentioned in the Biblical account of walking on the water or passing through closed doors. Whatever the nature of the conscious experiences behind the phenomena thus described, such results can be achieved only as thought becomes spiritualized in a superlative degree. Because Christ Jesus rose to the point of proving absolutely the nothingness of the belief of material existence in his own case, he became the means of exposing the baselessness of the whole false claim of finite selfhood as it appeals to the senses in the imagery of the material realm. Had he regarded himself as a personality separate from, even though controlled by another being called God, his ability to become a vehicle for the demonstration of divine law would have been correspondingly curtailed.

The full consciousness that no device of false belief could detach or insulate man from the Principle of his being was the basis of our Lord's conquest of the matter world. Said he: "I and my Father are one;" "I can of mine own self do nothing;" "The Father that dwelleth in me, he doeth the works." The sense of separation which comes over mortals as a consequence of consenting to false beliefs was wholly absent from his consciousness. To him "the flesh," "this world," the mortal mind, matter world, was an enemy, a contradiction of real being, of God and that which emanates from Him. As Jesus' earthly mission was drawing to a close, he exclaimed, "Be of good cheer; I have overcome the world." It seems clear that he was able to master the earthly situation, to take successively the steps in overcoming material beliefs which led up to his ascension out of the so-called matter realm, largely as a result of his utter and complete repudiation of the enticing suggestions of a false sense of selfhood as chronicled in the wilderness drama. After this initial conquest of mortal belief, Spirit was ever in evidence to his vision beyond the screen of material phenomena.

The deceiver, Satan, came then and there to stand in his experience as a false claim. The real victory over matter was sealed in his recognition that its only basis is false sense, and in purging his consciousness of the beliefs which alone give matter its seeming reality or show of authority by linking mortal man to an environing world of materiality. Meager as the present results of Christian Science practise may seem when gaged by the standard of ultimate perfection, they open the way to the salvation of the race, because they demonstrate in a degree what Mrs. Eddy has characterized as "the divine Principle and rule of universal harmony."

Christian Work

FRANK B. HOMANS

Our Master taught us by example that the only true way of living is in doing holy work. At twelve years of age he was "about [his] Father's business." After he took up the active work of preaching the gospel there is no record of his having spent any time in idleness or waiting. During his agony on the cross, he not only lifted his thought above material aid, but regardless of the viciousness and degradation of the thieves, he prepared one of them to receive the truth of "life eternal." He also found time during that trying hour to provide a home for his mother and to forgive all his enemies, while as Mrs. Eddy says, "his three days' work in the sepulcher set the seal of eternity on time" (Science and Health, p. 44). The forty days after his resurrection were spent not in rejoicing over his great victory, in feasting or fasting, or any form of ritualistic worship, but in giving his followers a clearer idea of Life, Truth, and Love.

How well our Leader conformed to his example, every one can know by reading Sibyl Wilbur's true story of her life. When Mrs. Eddy had completed the writing of her book, "Science and Health with Key to the Scriptures," she did not idly wait to watch results, nor did she close her metaphysical college to take a long-needed rest. Each effort she put forth to spread the teaching of Christian Science throughout the world served as an impetus to some greater undertaking. To enumerate the many valuable plans which she formulated and put in operation as the result of her wisdom, foresight, and activity, is not necessary here: suffice it to say she was a tireless worker all the way. And now the question comes, Are we following her as she followed Christ? If so, when we have acquired our own church edifice we shall not be satisfied with this achievement. Every church, even in the smallest hamlet, should realize that it has still more important work to do. As a member of a branch church, the writer feels that contributions of time and money should flow into each church as freely after as before the completion of the building, because the supply is from

Digitized by Google

God, hence unlimited. Nothing is more debilitating to the spiritual life than the loss of desire to give, as the Master said, for only as we give can we receive, and our capacity to receive is measured by our desire to give.

The literature committee of every church should be kept busy sending out our publications, that all may read and learn for themselves what Christian Science is; what it does and what it stands for. Encouragement, moral and financial, should be given to near-by places that are ready to start a church or society, but may need the help of one already established. While the smaller churches may not be able to do as extensive work as those in the larger cities, they can through faithful effort accomplish more and more each year.

There can be no cessation from labor. The only true happiness is found in consecrated work. Heaven should not be regarded as a place of idleness, nor should idleness stand for harmony. The old saying, "He has gone to his final resting place," conveys a false impression. The departed may in a sense be at rest, but not idle. Science and Health tells us that "God rests in action" (p. 519). Nothing could be more dreary or uninviting than a place or condition of inactivity. The most important work to be about at the present time is the healing of the sick, which includes the reclaiming of the sinner. Every true Christian Scientist is a practitioner and should be about his Father's business. To say we are "not good enough," that we "do not understand," or "are too busy," is simply to voice the arguments furnished by the adversary. Every one can tell what he has learned and proved about God, that God is Love, and that He does not send our troubles. Moreover, he can place Science and Health in the hands of the inquirer, with the counsel that he read it carefully and prayerfully, and then he can leave the matter in God's hands. If we do our part to the best of our ability, we may find that we are indeed instruments in His hands for the dissemination of the gospel. Let us start right today and, following the example of our Leader, work, watch, and pray.

If a church's growth has seemed slow, even backward, let us look carefully for the thought which has closed the doors to the needy. The growth of every church should be pronounced, but if there is a divided thought, this in itself may fully explain the lack of increase. All dissatisfaction, criticism, selfish ambition must be put away, the doors thrown wide open by love, and peace and joy be manifest, then the church cannot fail to be filled. If the members are sending out dissatisfied thoughts, how can they expect to draw others about them? We must watch and see that our every thought is right. Earnest and broad-minded Christian Scientists will be very reserved in their approval of any church division which is not necessitated by the growth of the church or the convenience of a large body of members, and even then there should be practically one mind regarding it. Let us remember that Love unites, while error would try to separate. If in doubt about the wisdom of a given action or thought, it is well to submit it to the following simple but effective test: Does God inspire and approve it? If not, then it must be a device of the adversary, and the sincere truth-seeker need not be deceived by it.

Worthy Christian Scientists are worshipers of God, firm believers in the inspired Word of the Bible, and earnest followers of the great Wayshower, Christ Jesus, and their devotion to God and His Christ is not diminished but rather increased because of their love and reverence for the Founder and Discoverer of Christian Science. The Mother Church is the vine to which every branch church is vitally linked. Christ Jesus said, "The branch cannot bear fruit of itself, except it abide in the vine." Every true Christian Scientist should regard The Mother Church as the vine in which he is to abide as a deeply interested member. Any departure from the rules laid down in the Manual, or any disinclination to sustain the general supervision of its Board of Directors, would be entirely out of keeping and discreditable, knowing as we do that this church was founded and built as the result of years of toil by our Leader, that the Manual was prepared under her direction, and that the Directors were selected from the whole field by her wisdom. Even in material affairs the axiom, "Union is strength," is regarded as a great truism, and how much more do we need to hold to this united thought, this oneness of Mind.

The parental arms of The Mother Church are outstretched in love always to receive any weary or lonesome traveler who may be in search of truth and comfort, and countless thousands in all the world rejoice in its ever expanding influence for good, its ever increasing activities for the advancement of a demonstrable knowledge of God and His Christ among men.

✧

Our Responsibility

LUCY HOLTZCLAW MC DONALD

In many a home we find the routine, the machinery of affairs, carried on the shoulders of a few members, perhaps a single person. Oftentimes it is the mother, sometimes an older sister or aunt, who is bearing the burden and heat of the day. The kitchen and house work has to be done, the sewing has to be carried on, shopping must be attended to, servants must be kept at work, complaints heard and remedied, orders given and carried out; and the question arises: Who is responsible for the harmony, the smooth and orderly carrying on of the home, the church, the shop, or the office? From our human standpoint we see that because of some position, or because one seems to be more capable or more willing or has a deeper sense of obligation, or because of a kind of mother-love that under the belief of doing something for her children would "spare" them from work that is theirs to do,—for any or all of these reasons, human sense is likely to look upon certain ones as responsible; and it is through Christian Science only that the balance may be adjusted and the true idea of responsibility gained.

There is work for all God's children, but the adjustment of it so that the sense of responsibilty is fairly distributed, is not to be found on a mortal basis. It is a mistake to suppose that we may go on doing the work that others should do and are able to do, in the belief that it is charity. It is equally wrong to suppose that some one else may do the tasks that belong to us. Nevertheless, many through ignorance or indolence are shifting not only the tasks of every-day life but also the right thinking that belongs to each, shifting responsibilities, neglecting duties and privileges.

It has been said, "Our responsibility is our response to God's ability." As we realize this in Christian Science, we find ourselves doing the work we should do, thinking rightly and acting rightly, while we leave others unhampered to do their mental work and the tasks they find to do, all working together for good, all in their places in the understanding of the oneness and allness of God. We find all harmonious in Mind, and all God's children ever active.

The Bible teems with texts which refer to God as able to do for us: "He is able . . . to save to the uttermost;" "God is able to make all grace abound toward you," etc. God's ability is not limited to any person, place, or time. "The God of Israel is he that giveth strength and power unto his people." Mrs. Eddy says, "We have strength in proportion

Digitized by Google

to our apprehension of the truth" (Science and Health, p. 80). Our ability is thus seen to rest on our understanding of Truth.

In many homes and business places, it has become the custom for the student of Christian Science to take some time each day for quiet reading and work in Science, in order to make progress in the practical understanding of God. As this study is carried on effectively, the routine of the home or office is seen to go forward smoothly without jar or fret; under the system of the Principle that rules harmoniously the universe in its entirety and in its individual expression, the equal right and privilege of all is brought out. We are responsible beings, responsible to the one creator for bringing out through right understanding, perfect man, Mind's idea.

The word "responsible" holds in it the idea of duty. "You will learn that in Christian Science the first duty is to obey God, to have one Mind, and to love another as yourself" (Science and Health, p. 496). As we respond to this thought and bring out the perfection which is our birthright, through love for God and our fellow man, we are rightly shouldering our responsibility and fulfilling our duty.

Importance of the Sunday School

LLOYD B. COATE

To fathers and mothers solicitous for the spiritual welfare of their children, our Leader's gentle admonition, "Parents should teach their children at the earliest possible period the truths of health and holiness. Children are more tractable than adults, and learn more readily to love the simple verities that will make them happy and good" (Science and Health, p. 236), is of deep import. Realizing also the great importance of the Sunday school work as a factor in this moral and spiritual training, our revered Leader wisely provided the course to be pursued in teaching the children.

The first lesson is the ten commandments as found in the twentieth chapter of Exodus, and we cannot speak of the commandments without referring to and giving due credit to the Bible character through whom God gave this statement of His law to the world. The next two lessons are the Lord's Prayer, with its spiritual interpretation, as found on page 16 of Science and Health, and the Sermon on the Mount. It would likewise be impossible to teach correctly the Lord's Prayer and the beatitudes without associating with them the name of the Founder of Christianity. The ten commandments came to mankind through Moses; the Sermon on the Mount through Christ Jesus; and Christian Science, which again teaches men how to apply the great truths of the Mosaic decalogue and the Sermon on the Mount, to the destruction of both sin and sickness, has come through our Leader.

The Manual of The First Church of Christ, Scientist, Boston, Mass. (p. 41), explicitly states that Christ Jesus is the Ensample for Christian Scientists, and that "careless comparison or irreverent reference to Christ Jesus is abnormal in a Christian Scientist, and is prohibited." On page 42 Mrs. Eddy declares that there is but one Christ, "even that Christ whereof the Scripture beareth testimony." It is also noteworthy that "Science and Health with Key to the Scriptures" by the same author contains more than eight hundred references to Jesus the Christ, under various names, such as "Jesus," "Jesus Christ," "Christ Jesus," "Christ," "Lamb," "Master," "Nazarene," "Prince of Peace," "Son," "Teacher," "Wayshower." (See Concordance to Science and Health.)

The Discoverer and Founder of Christian Science so clearly defines the true relation of Jesus to Christianity that the name of Jesus Christ or Christ Jesus cannot be separated from the Christian religion which he founded. Because the teachings of Christian Science are based upon the words and works of the great Master, Christian Science is one with and inseparable from the Christian religion or religion of Jesus Christ. The Church Manual (p. 63) admonishes all Sunday School teachers not to deviate, in the instruction given the children, from "the absolute Christian Science contained in their text-book." It certainly behooves all teachers to be awake to the opportunity of presenting this great truth to the children—the truth which will make them happy and good, in all its purity.

An Obstacle Removed

LUCIA C. COULSON

SELF-PITY is a "slough," and the farther one goes into it, the deeper it grows. One of the first lessons that many of us have to learn in coming to Christian Science is the abandonment of this habit; for since it is need of some sort that drives most of us to Truth, there is often a strong sense of self-pity for the misfortunes which we secretly feel to be so undeserved. Perhaps the first step out of this slough is taken when we realize that the mortal self deserves no good, because, as Mrs. Eddy tells us, mortal mind is "wholly dishonest" (Science and Health, p. 252). Having seen the mortal concept for what it is, one is more ready to give it up and to grasp the idea of man's spiritual selfhood. It is here that self-pity tries to assert itself and hinder us. It argues that our particular trials, temptations, or circumstances are harder than those of others, that we do not have a fair chance, that if we only had some one else's problem it would be all right, etc., till we are deeper than ever in the slough of despond and self-justification, for self-pity and self-justification always go hand in hand.

It is not that there is nothing to pity in the mortal concept; far from it. It is often intensely pitiful and pitiable, but so long as we identify ourselves with it, we cannot get free from it, and so we cannot get rid of those conditions for which we are pitying ourselves. When we begin to understand this, we are ready to shun it as the plague, for we see that it would clog us and drag us down at every step. Its slightest approach is a sign that we have lost sight of man's spiritual selfhood and are identifying ourselves with mortality and its attendant ills; for if once we recognize ourselves as God's reflection, there is nothing left to desire. We dare not pity the child of God, the heir of unending joy and bliss. Exactly in proportion as we see ourselves in this true light, as we rise into the Christ-consciousness, shall we find our places in the Father-Mother's perfect plan, and be blessed abundantly.

Every intimation, therefore, of misfortune, injustice, or unhappy environment must be met with the same prompt denial. They are none of them true of God's image, and so they are none of them true of us. Refusing to see them, and declaring steadfastly for the true self, they will melt into the mist from which they came; the belief that there is anything to be pitied will cease to appear, and we shall prove the glorious promise in Isaiah: "For a small moment have I forsaken thee; but with great mercies will I gather thee. In a little wrath I hid my face from thee for a moment; but with everlasting kindness will I have mercy on thee, saith the Lord thy Redeemer."

Selected Articles

[*The Christian Science Monitor*]

In the court of probate at Concord, N. H., Oct. 18, Judge Charles R. Corning appointed trustees to administer the trust created by the will of the Discoverer and Founder of Christian Science, the Rev. Mary Baker Eddy, in accordance with the decision of the supreme court of New Hampshire on Oct. 7. They are the members of the Board of Directors of The First Church of Christ, Scientist, in Boston, The Mother Church: Archibald McLellan, Allison V. Stewart, John V. Dittemore, Adam H. Dickey, and James A. Neal, *and the administrator de bonis non* of the estate, Josiah E. Fernald. The text of the order follows:—

State of New Hampshire,
Merrimack, SS. Court of Probate.

The judge of probate for said county, to Archibald McLellan, Allison V. Stewart, John V. Dittemore, Adam H. Dickey, and James A. Neal, all of Brookline, in the county of Norfolk and Commonwealth of Massachusetts, and Josiah E. Fernald of Concord, in said county of Merrimack.

Whereas, at a special court of probate holden at Concord, in said county, on the 14th day of December, A.D. 1910, the original instrument was duly proved and allowed as the last will and testament of Mary Baker G. Eddy, late of Concord, in said county, deceased;

And whereas the said Mary Baker G. Eddy, in and by her said will, gave, decreed, and devised to The First Church of Christ, Scientist, in Boston, Massachusetts, certain property and estates in trust for the purpose of more effectually promoting and extending the religion of Christian Science as taught by her, the said Mary Baker G. Eddy, and for other incidental purposes as set forth in said will;

Therefore, I do hereby allow and authorize you to take possession of and hold said trust estate agreeably to the tenor and intent of said will. And you are hereby required to make, or cause to be made, and filed in the probate office for said county, a true inventory of all the real estate, goods, chattels, rights, credits, and effects so derived and bequeathed, within three months from the date hereof; to render annually to said judge an account of the income and profits thereof; and at the expiration of said trust, to adjust and settle your accounts with said judge, and pay and deliver over all balances, money, and property with which you have been intrusted, pursuant to the order and decree of said judge; and in all respects faithfully to execute said trust according to the true intent and meaning of said estate.

In testimony whereof I have hereunto set my hand, and the seal of the court of probate for said county, this sixteenth day of October, A.D. 1913.

CHARLES R. CORNING, Judge of Probate.

A true copy. Attest: Eugene Keeler, Register of Probate.

On Oct. 7 the decision came on an application made to the supreme court of New Hampshire by Mr. Fernald for instructions regarding the action he was to take as administrator *de bonis non* of the estate of Mrs. Eddy, and the court ordered Mr. Fernald to hold the estate until the appointment of a trustee or trustees by the probate court. The appointment of trustees ends the litigation regarding the will of Mrs. Eddy and the disposition of the property left by her to The First Church of Christ, Scientist, The Mother Church in Boston, in trust for the promotion and extension of the religion of Christian Science as taught by her.

It is expected that Mr. Fernald will immediately file his account, and after the formalities, which will take a month or two, the trustees will take possession under the trust provision of the will. The trustees have qualified and have given a bond for one million dollars for the faithful performance of their trust.

[Frederick Dixon in *Popular Science Siftings*, London, England]

Will you permit me to try to clear up a not very easy question in a short letter? I refer to G. W. Leach's criticism of the Christian Science teaching with respect to sin (see No. 1133, "P. S. S."). The Christian Scientist, observes this critic, says that sin is unreal, therefore as it exists, God must have created something unreal. Unfortunately for his argument, he arrives at his deduction in this way, "According to our Scriptures, evil is implied and permitted by the creator as part and portion of His own creation." Now, the Bible distinctly says that God created every thing that was made and created it good. If, then, God created evil, He made evil and made it good. There is no escape whatever from that quandary. It is not a discovery of Christian Science, it was indeed one of the arguments which led to the Gnostic controversy.

It is impossible to go very deeply into the matter in a short space, but what Christian Science teaches is this: God created everything that was made and created it good, therefore God did not create evil. Neither can He be said to permit evil, for if He created all that was made, He must have created evil before He permitted it. The alternative is that there are two creators, which would mean that after all, God did not create everything that was made. Christian Science, therefore, maintains that evil is nothing but a human sense of the absence of good; in other words, that it seems desperately real to the human mind until the gradual realization of absolute Truth exposes it in its original nothingness.

A famous scholar of the Church of England, Dr. Westcott, one of the bishops of Durham, has pointed out that in the fourth gospel, the gospel which declares that God made all that was made, a distinction is drawn, in the Greek text, between "the Truth," meaning the absolute spiritual Truth, and "truth," as a relative sense of truth. What Christian Science says is that sin is no part of absolute Truth, though, relatively speaking, it exists to the human consciousness; consequently, that, in the words of Jesus, when a man knows Truth, absolute Truth, he is freed from the relative ignorance of truth which presents evil to him as a reality.

It is on this basis that the healing in Christian Science is accomplished, and the healing in Christian Science today is the sign or proof to this age of the truth of the theology of Christian Science, as, in the first century, the miracles were no supernatural manifestation, but simply what the Greek text implies, the sign of the truth of the gospel of Jesus the Christ.

✧

[John L. Rendall in *The Toledo* (Iowa) *Chronicle*]

I do not question our critic's superficial acquaintance with Christian Science teachings, but I do emphatically deny that he understands these teachings, for the main reason that he does not correctly state them. Giving him credit for honesty of purpose, there is no other possible conclusion when on the face of his every statement about the fundamentals of Christian Science there is abundant evidence of misunderstanding. I speak from the vantage-point of twenty years' study of the subject and as a graduate of the Massachusetts Metaphysical College founded by Mrs. Eddy. I do not charge the critic with lack of "intelligence;" he simply has not gotten the right view-point. It is as difficult for one steeped in the teachings of what is called "orthodoxy" correctly to view a differing

Digitized by Google

religious teaching, as it is for one wearing green glasses to testify correctly as to the color of objects around him until he takes off his glasses. Therefore, in response to the challenge to "produce a single instance" in which he has "misstated or misrepresented Mrs. Eddy's teachings," I will say, —in a greater or less degree in practically every statement he has made.

If our critic really understood Christian Science, he would not pervert Mrs. Eddy's statement about the marriage relation, as quoted: "Until it is learned that generation rests on no sexual basis, let marriage continue." The invidious inference that this may be construed to mean that marriage may be abolished under present conditions of society, amounts to debauchery of the worst form, implying gross immorality; whereas the plain teaching, as understood by Christian Scientists, accords with Jesus' statement, "But they which shall be accounted worthy to obtain that world, and the resurrection from the dead, neither marry, nor are given in marriage." Christian Science in its every teaching inculcates the highest morality, as attested by its results in the overcoming of former conditions of immorality and sin. A good fountain sendeth not forth both sweet waters and bitter. Quoting from the sixth chapter of Paul's first letter to Timothy, wherein Paul cautioned him to beware of "vain babblings, and oppositions of science falsely so called," our critic ingenuously asks, "I wonder what Paul was referring to?" In this he can only surmise. It is my opinion that Paul referred to those who failed to get the true understanding of Christ's teachings and to the gross materialism of so-called material science. Our critic's thinly veiled inference that St. Paul meant Christian Science is foolish on the face of it.

I am grateful to our critic for commending St. Paul's writings to me. I have studied them for many years. I esteem St. Paul as one of the original Christian Scientists. I wonder if our critic thinks that St. Paul or St. Peter or any other of Jesus' apostles would, if they were here today, refrain from Christian healing under the specious plea that the command to "heal the sick" is not for us. What is he going to do with the statements that Christ is "the same yesterday, and today, and forever," and that God is without "variableness" and with no "shadow of turning"? Christian Scientists scientifically understand that God, that the Christ, Truth, has not changed, and never can change. Neither has human nature changed. The "powers that be," in the church of Jesus' time, rejected Christian healing and crucified its great Exemplar. Modern high priests, scribes, and Pharisees do the same thing today under modern methods.

I do not intend to be inveigled into denunciation of physicians and hospitals, but I do dispute the assertion that the methods employed in the ordinary hospital are Christ's methods. The use of medicines for healing originated not in Christianity but in paganism. I respect and esteem the many noble-minded men and women who are following the profession of medicine, for they are doing the best they know at this time, but it is not God's way. Our critic's evasion of the plain issues in Christ's command to "preach the gospel," "heal the sick," and "raise the dead," offers an insufficient apology for non-conformity. The goal of Christian Science is complete compliance. If we have not fully attained, shall we be subject to criticism from those who not only have attained less but who do not even teach that it can be done? My statement that Christian healing in certain cases of supposedly incurable disease is an accomplished fact, is abundantly sustained by the persons themselves healed. If it was ever possible, it is now too late to dispute the incontestable evidence at our command.

Our critic states, "I defy my critic to make good his charge of perversion." Very well; here it is. He states: "In 'Rudimental Divine Science,' page 2, Mrs. Eddy says, 'God is definitely individual, and not a *person*.'" Note this. The completed statement is: "God is definitely individual, and not a *person*, as that word is used by the best authorities, if our lexicographers are right in defining *person* as especially a finite *human being;* but God is personal, if by *person* is meant infinite Spirit." Other citations are made, giving only part of a sentence, when the completed sentence gives the correct meaning. For instance, our critic quotes Mrs. Eddy as saying, "God is identical with nature." What she says is this (Science and Health, p. 119): "In one sense God is *identical* with nature, but this nature is spiritual, and is *not expressed* in matter."

If our critic means that Christian Science "denies that God is a person" in the same sense that he and I are persons,—that is, in the ordinary acceptance of the term, meaning a human form, something materially outlined and definitely located,—then I will admit that he is correct in his statement. This concept of God is idolatrous, breaking the second commandment! "Thou shalt not make unto thee . . . any likeness of any thing that is in heaven above, or that is in the earth beneath," etc. God being infinite, He can be person only in the infinite sense of His personality, that which cannot be outlined, limited, or humanly circumscribed. In other words, no human concept or image in thought can be adequate to express the nature and character of God, who is infinite Love, infinite Life, the one divine and infinite creator, Mind, and Principle of all that is or ever was real.

Now, in summing up, let me say: Christian Scientists are those who have experienced Christian healing. They, for the most part, were formerly addicted to the use of drugs and medicines and were members of orthodox Christian churches. In thousands of cases their family physicians informed them and their friends that they were incurably sick, and at this point, after proving all things, they turned to God, through Christian Science, for help, and were healed. This is true of ninety per cent of the Christian Science church-membership. Is it any wonder, then, that these people have more faith in God than in medicines, and who, calling himself a Christian, would seek to substitute for this healing faith, recourse to inanimate, non-intelligent drugs, which in the opinion of the best medical authorities are extremely uncertain and often dangerous?

Our contention is, that the Bible plainly teaches Christian healing as a Christian religion, and that to be Christians, we must learn to heal the sick as Jesus healed them, even though at present we are constrained to say with St. Paul, "Not as though I had already attained, either were already perfect; but I follow after."

✥

[D. Sinclair in *Paisley and Renfrewshire* (Scotland) *Gazette*]

In a recent issue some remarks of the Bishop of Carlisle are reported under the caption "Drugs and Faith," which in some respects are so misleading that, if not corrected, they may convey to your readers very erroneous notions about Christian Science.

In the first place, his statement that it is because both Christianity and science have not fulfilled their great mission that "sober and thoughtful as distinct from sensational and shallow persons" had taken up the subject, is interesting, coming as it does from one in his position. It is gratifying to be assured that among the many hundreds of thousands of Christian Scientists all over the world today there are those who are considered by the bishop "sober and thoughtful"! The fact is, that unless a person be both, in the sense that he is disposed to settle calmly and impartially to the study

Digitized by Google

of the subject, his chances of making progress are not very great. It has to be remembered that the bulk of Christian Scientists consists of those who have been healed by this teaching after having done all that lay in their power, often for years, by the use of drugs or other material means to regain normal health.

When the bishop enters upon an explanation of how Christian Science heals, it is obvious that he is not the least little bit on the right track. Christian Science does not say that in a case of healing by its means the health has been restored by "the almost immeasurable influence of mind over matter," but *it affirms that the healing* has come about through the influence *of divine Mind, the* understanding of spiritual truth, upon the *false, inharmonious* consciousness which for the time being seemed to have held the individual in bondage.

Moreover, to say that the matter of the human body is interpenetrable by the mind, as the bishop declares, is indeed a caricature of Christian Science. His method it seems would be to ask God to act, in some occult way, upon the mind, which according to him pervades the body, and the mind in turn will act on the more solid parts, reinvigorating them so that they in turn may react on the invalid consciousness, and thus produce health. This is perilously near mental or hypnotic suggestion; and we fancy that those who practise such would surely never dream of calling it "the practise of prayer." At any rate Christian Science emphatically dissociates itself from it in every way.

On the first page of "Science and Health with Key to the Scriptures," the text-book of Christian Science, Mrs. Eddy says: "The prayer that reforms the sinner and heals the sick *is an absolute* faith that all things are possible to God,—a *spiritual* understanding of Him, an unselfed love." Here is indicated the method of all healing in Christian Science. Prayer to the Christian Scientist is not a mere entreating of the Deity to do this or that either for himself or for another. The Christian Scientist knows that, as God is "the same yesterday, and today, and forever," any desire to alter His purposes would be futility itself. It is the spiritual understanding or knowledge of God, the affirmation of His unalterable nature and that of man made "in his own image," which constitutes the prayer which regenerates and heals.

Will you permit me further to state, with regard to the reference made to Christian Science in a letter which appears in the same issue under "Clergy and Cruelty to Animals," that every Christian Scientist will agree with George Saxon that a religion which does not tend to make people kind and merciful is of no value, and that the kindness it ought to engender should be actively manifested toward every one of the animal creation. One of the tenets of Christian Science, which will be found on page 497 of the Christian Science text-book, contains the words which Christian Scientists are striving to put into practise, namely, "to do unto others as we would have them do unto us; and to be merciful, just, and pure."

✧

["A Disciple" in *The Burlington* (Vt.) *Free Press and Times*]

Referring to the article in a recent issue in reference to Christian Science, please allow me to say that in the Preface of Science and Health (p. x), Mrs. Eddy says: "The divine Principle of healing is proved in the personal experience of any sincere seeker of Truth. Its purpose is good, and its practise is safer and more potent than that of any other sanitary method. . . . Only those quarrel with her method who do not understand her meaning, or discerning the truth, come not to the light lest their works be reproved."

Our Master gave his followers a rule whereby they might know the good from the evil. Jesus said, "Ye shall know them by their fruits. . . . A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." Christian Science may be known by its fruits. Nothing is doing more today to raise the standard of health and morals than Christian Science, for its followers are striving to keep the commandments and to do the works of the founder of Christianity, Jesus Christ; therefore Christian Science is Christian, and is scientific because it is governed by a fixed Principle and a given rule, and provides the proof of its own correctness. I know it is so, for I speak as one who stood and looked into an open grave for months. Four of the leading physicians in my native town and two specialists had declared I had an incurable organic disease, and all medical, hygienic, and other methods had been tried; but they had failed, and so were abandoned, when I was led to Christian Science, and was completely and fully healed, and have had perfect health ever since. It is not so much the physical healing for which Christian Scientists are grateful, however, as for the spiritual uplift, the better knowledge which Christian Science imparts of God and His universe and His love. Christian Scientists are striving to become more Christlike, to have that Mind "which was also in Christ Jesus," and "to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497).

The tree is good and the fruit is good, and the lives of Christian Scientists attest their sincerity. The best evidence of their good works is the wide-spread interest in Christian Science, and its unparalleled growth and marvelous healing. Unnumbered cases of so-called incurable diseases have been healed through Christian Science treatment after all other methods had failed. Christian Science is now accessible to all, and in all parts of the globe is reforming and healing, lifting the burden of sorrow from the desolate, the sense of injustice from the oppressed, rounding out barren lives, straightening out misshapen bodies, purifying diseased organs, strengthening weak limbs, spreading the beauty of holiness over faces distorted by pain, gathering the sheep that have strayed; in a word, Christian Scientists are trying to do the work our Master commanded his followers to do, viz., "to preach the kingdom of God, and to heal the sick," and we have the absolute proof that Christian Science is Christian and scientific, as our Master promised we should, in the signs which follow.

✧ ✧ ✧

[Written for the *Sentinel*]

An Autumn Musing

LAURA E. SARGENT

EACH falling leaf proclaims a resurrection;
The fading flowers immortal blooms declare;
When understood, it is the heart's election
Of higher thought of nature's tints so fair.

The darkling cloud doth hint a bright tomorrow,
Despite of what false sense may seem to say;
The sighing wind that murmurs tones of sorrow
Is harbinger of some glad, holy lay.

And thus from things unseen we draw conclusions
Respecting things which only seem to be,
And turn our hearts away from earth's illusions
To learn life's lessons, blessed Christ, from thee.

O Love divine, our faltering footsteps strengthen
To hasten on from mortal sense to Soul,
Lest, while earth's shadows o'er our pathway lengthen,
We lose the way and miss the promised goal.

Thy word, Continue in my love, we treasure;
No other way Love's radiance will unfold;
But, watching every hour to do His pleasure,
Truth separates in us the dross from gold.

Editorial

"Be strong and of a good courage"

On page 147 of this issue we quote from *The Christian Science Monitor* a report of an important step by which the trust created by Mrs. Eddy, in her will, for the purpose of promoting and extending the religion of Christian Science as taught by her, will become effective. That this stage of the probate of Mrs. Eddy's will was not reached much earlier was due to litigation which was commenced for the purpose of frustrating her desire that her fortune should be devoted to the cause for which she labored so unselfishly and unceasingly during a period of almost half a century, and Christian Scientists everywhere will rejoice that with this final decision of the probate court the last barrier to the fulfilment of Mrs. Eddy's desire, and in the way she wished, has been removed.

To have discussed during its pendency the litigation which has been so persistently maintained, would have been an impropriety, therefore the *Monitor* has simply reported its various phases practically without comment. With so much on our own part for which to be grateful, perhaps the kindest thing that can be done now is to "let the dead past bury its dead" and make no further comment than to say that the courts have not only passed favorable judgment upon the will and the legality of the trust created by it, but that the plaintiffs themselves, as long ago as February, 1912, withdrew the allegations upon which they had tried to support their suits, and judgment was entered against them in every instance.

It is useless to discuss the motives and aims of those who were actually behind the litigation, or of those ostensibly responsible for it; it is sufficient to say that, notwithstanding the efforts of these persons, the philanthropic work for which Mrs. Eddy made provision in her will can now go forward in the way she intended it should. Our revered Leader always regarded her fortune as a trust fund to be used for the promotion of Christian Science. She so used it while she was with us, and her expressed desire was that this fortune, which had come to her solely through her own labors for the good of mankind, should continue to be used to further the cause for which she had worked night and day since her discovery, in 1866, as she writes in Science and Health (p. 107), of "the Christ Science or divine laws of Life, Truth, and Love," which she later named Christian Science. It is needless to say, therefore, that as soon as the formalities attendant upon the closing of the accounts of the administrator and the transfer of the residue of the estate to the trustees appointed by the probate court can be accomplished, active work in the fulfilment of her wishes will commence.

The trustees are, we think, mindful of the responsibility which has been laid upon them, and at the proper time they will enter upon their duties with a sincere intention to put into effect an administration of the trust estate which will accomplish Mrs. Eddy's purpose for the furtherance of a cause whose object is, in each and all of its activities, "to injure no man, but to bless all mankind" (*The Christian Science Monitor*, Vol. I, No. 1). Their duties will be made lighter if they have what they hope to deserve and to receive, namely, the sincere and generous support of all Christian Scientists.

Putting wholly aside any individual reason for gratitude because of what adherence to the teachings of Christian Science has wrought for good in our own consciousness, may we each and all strive to adjust ourselves to the larger view of its mission to mankind which presented itself to the clear vision of our beloved Leader, and let every thought, word, and action witness to our loyalty to the church she founded and the high destiny to which she has committed it. Like Joshua of old, we must "be strong and of a good courage," and to the accomplishment of this end we may well take to ourselves the humble acknowledgment of dependence upon divine Truth which our Leader voiced in her message to The Mother Church in 1898 (Messages, p. 15): "May our Father-Mother God, who in times past hath spread for us a table in the wilderness and 'in the midst of our enemies,' establish us in the most holy faith, plant our feet firmly on Truth, the rock of Christ, the 'substance of things hoped for'—and fill us with the life and understanding of God, and good will toward men."

Archibald McLellan.

Concentration

In Science and Health we are told that as the sun is the center of our planetary system, so God is "the central Life and intelligence around which circle harmoniously all things in the systems of Mind" (p. 310). It is thus made clear that in order to realize harmony all our thoughts, motives, and aims should be directed toward divine Truth and Love with singleness of purpose. To concentrate is, according to Webster, "to bring to, or direct toward, a common center; to unite more closely." It is therefore of the utmost importance that we recognize God, divine Principle, as "the central Life and intelligence" of our being, for without such recognition we are apt to respond to any and every suggestion of mortal sense, even to the extent of being attracted by belief in disease, discord, and sin, until a great struggle is needed to free ourselves from the bondage thus entailed.

It is true that entirely mistaken views of concentration have been given out by some exponents of mental healing, who rely largely if not wholly upon the human mind for the desired results. In some cases it has been taught that the would-be healer should concentrate his thought upon the disease from which his patient was supposed to be suffering, or upon the part of the human organism supposedly affected, a method which Christian Science most emphatically repudiates. The thoughtful student of Mrs. Eddy's writings soon discovers that such practise would tend to fasten the belief of disease upon a sufferer instead of destroying it, and for this reason the word "concentration" has come to be of ill repute among Christian Scientists, because it has been misapplied, as already stated. Now the allness of God is the central point of Christian Science, and this cannot be too closely adhered to at all times, especially as the tendency of the carnal mind is to think so much about sin, disease, and discord that almost unconsciously thought is concentrated upon these errors, and the law of spiritual attraction toward the one Mind, the All-good, is largely disregarded; indeed, to the one who is thus straying it is virtually inoperative, while suffering and apparently ineffective effort to overcome it claim the day.

Here it will be asked, And what is the remedy? The answer is at hand in the words of our inspired Leader: "The rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously, whereas a thousand years of human doctrines, hypotheses, and vague conjectures emit no such effulgence" (Science and Health, p. 504). The healing light of Truth cannot illume our consciousness if we are ever and anon turning away from it and fixing our gaze upon the dark shadows of mortal belief. The discords of materiality should impel us to turn our every thought toward divine Life and

Digitized by Google

Love, and to seek closer union therewith. The counterfeit of true concentration is a vain deceiver, but the spiritual fact is a strong emancipator.

As we think upon this, we may recall Jesus' lowly entry into the village of Nain, with a handful of his disciples, when a widow's only son was being borne to the tomb. The thought of all in that sad procession was doubtless concentrated upon the apparently universal fact of death, but had it been possible to have summoned to the scene the bravest of Roman centurions with a band of his dauntless soldiers, the situation would have remained unchanged. When, however, the Prophet of Nazareth stepped up to the bier, and said to the sorrowing mother, "Weep not," the awed bearers stood still and listened to the command, "Young man, I say unto thee, Arise"! The Master's thought was always centered upon God, divine, ever-present Life, and even the chilling presence of the last enemy had no power to turn it aside. The young man was at once restored to his mother, and we are told that the onlookers glorified God, as well they might.

Oh, the splendor of that demonstration of Truth's power, and the pity of the long centuries of darkness when Jesus' professed followers had well-nigh forgotten what is possible to the one whose every thought turns to God and acknowledges no power save His. But today, thanks to Christian Science, we claim anew these victories of Christ, Truth, and cling to them, knowing that even a faint understanding of the Principle which raised the widow's son will destroy pain and turn "the shadow of death into the morning," if we but keep our thought steadfastly fixed on the central light of all being, for thus we shall have that more abundant life promised by Christ Jesus.

ANNIE M. KNOTT.

"One is your Master"

To hear a great artist is always to experience a great delight, and gain an added sense of that human capacity which, as Christian Science makes clear, is grounded in the divine. Technical proficiency always speaks for patient and prolonged effort, and sometimes for devotion to an ideal which is very much more than mere proficiency. We know that, whatever his faults, an artist can but abound in excellences; he has won, and he is surely worthy in many ways, and for the long-continued application by which alone he has gathered and now gives out the treasures of tone, one often feels a keen and lasting sense of indebtedness. Moreover, as one recalls the thrill and uplift of some great artistic event, his thought of mastery takes on a deeper, richer meaning. It is such a splendid thing to have held on until every difficulty is overcome, every delicacy and refinement of expression attained, and the performance is made to appear so easy and unlabored as to seem just the simple and natural thing which in truth it is.

But to interpret the ideal is to disclose not only the achievements and possibilities of the interpreter, but to reveal something more of the inexhaustible content of that which is interpreted or expressed, the greatness of the source of all beauty and all good. It is to make us understand as not before, perchance, that Jesus' phrase, "One is your Master," was a tribute to his Father, to whom the praise belonged, rather than to himself; that his greatness and all true greatness is the greatness of God, of the Principle whose nature and law, ideality and power, it is ours in Christ to reflect.

Further, great mastery brings to our thought not only the greatness of Mind, but the unity, the oneness in kind of capacity and its source, the gift and the Giver. Only the likeness of truth and goodness and beauty can apprehend and respond to the appeal of truth and goodness and beauty, the divine to the divine alone. St. Paul's phrase, "Christ in you, the hope of glory," thus becomes luminous. Assurance of the salvation of the human is grounded in this fundamental teaching of Christian Science,—that God is expressed in man, and that as human sense is freed from falsity we are conscious that Truth answers to truth in us, and this is the secret of demonstration.

This understanding that the ability to do any right thing well is an incident of one's right relation to God, at once explains Christ Jesus' assurance to his disciples, "He that believeth on me, the works that I do shall he do also;" and St. Paul's declaration to the Corinthians, "All things are yours." He who finds himself as God's child and heir has gained a concept of capacity which forever rebukes the glorification of human personality as well as the spirit of self-depreciation. He has come to understand that the "divine Principle of all expresses Science and art throughout His creation" (Science and Health, p. 507), hence that true artistry is but an echo of the divine; and much that has heretofore proved but a passing pleasure, will begin to minister to his spiritual advance. All art is now interpreted by a more exalted sense. It is no longer thought of as a product of technical skill, it is made vital and real as the ideal to which it gives expression. Thus in every perception of the beautiful it is ours to be taught of God, who is in and behind all true art, especially that of gentle nobility.

This is the impelling thought which in ever-increasing degree animates, strengthens, and rejoices every worthy Christian Scientist. He has entered into that human approximation of the Master's discernment which, as Mrs. Eddy has said, "indicates spiritual growth and union with the infinite capacities of the one Mind" (Science and Health, p. 94). He has heard and responded to Truth's eternal call, "Awake thou that sleepest, and arise from the dead," and he cries out with the great apostle, "I can do all things," all that is good and true and beautiful, "through Christ."

JOHN B. WILLIS.

Among the Churches

Current Notes

CHRISTCHURCH, NEW ZEALAND.—We have happy and profitable remembrances of Mr. Knapp's visit here last year and are looking forward to the coming lecture of Mr. Rathvon with glad anticipation. We rejoice in solid growth here. The healing work has proved to skeptics that Christian Science does heal. The extent of our work is not fully represented by its growth in this city, as we have appeals from all parts for advice and literature,—from the drear stretch of the plains, the rugged coast line, and the verdant land. From every province also comes word of the earnest study of our text-book and a deeper love for the Bible.

Correspondence.

JOHNSTOWN, PA.—The Christian Scientists of Johnstown and vicinity have joined in a movement to organize a new First Church of Christ, Scientist. The original First Church, chartered in 1901, and the Christian Science Society formed two and a half years ago, were dissolved, the members of both organizations joining the new church, together with many persons not affiliated with either former organization. The new church starts out with a most encouraging membership roll and a comfortable balance in the treasury.

The Lectures

Boston, Mass.

The Rev. William P. McKenzie of Cambridge, Mass., delivered a lecture on Christian Science Friday evening [Oct. 10] under the auspices of The Mother Church, The First Church of Christ, Scientist, Boston, Mass., in the church edifice at Falmouth, Norway, and St. Paul streets. Mr. McKenzie was introduced by the first reader of The Mother Church, John C. Lathrop, who said:—

Looking back over the ages, there is seen a steady improvement in the motives, manners, and methods of mortal man. Humanity unquestionably is rising out of the limitations and resultant fears of a less enlightened period, and is casting off the swaddling clothes of ignorance, superstition, and human selfishness. A clearer, saner, and more demonstrable sense of human existence is fast dawning upon the ready consciousness, and is leading it out into a world of calm and harmony, of health and fruition. This new world is found to be simply a changed point of view, and this marvel of transformation of the minds of mortals is what the divine message of Christian Science is accomplishing throughout the universe today. It is well that these thousands have gathered here this evening, that they may better understand the rule and operation of this divine healing Word, and receive more of this spiritual blessing. We are grateful for this opportunity, and I take much pleasure in presenting to you one who is ably qualified to execute his sacred mission.

The Christian Science Monitor.

Dublin, Ireland

Bicknell Young delivered a lecture on Christian Science to an audience of about four hundred. It was the first time that the lecture committee had been able to secure Sackville hall, which belongs to the Presbyterian association. The lecturer was introduced as follows by Alexander E. Hull, president of the board of directors:—

It is now more than fourteen years since the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker Eddy, was given me to read by a friend who brought it from America. The name Christian Science, which is now more or less familiar to many people in this country, was then practically unknown, and it created in my mind that feeling of hostility which I have often observed since in the minds of others when they hear it for the first time. The two words here used as a title in my opinion were names of two branches of knowledge which had little if anything in common with each other, viz., science and Christianity.

I knew nothing about Christian Science, but the name so antagonized me at the time that I would not have taken any further trouble about the matter, except that I was anxious to see a case of physical healing which I learned on reliable testimony had been brought about by its agency. It is sufficient to say here that I am now satisfied that Christian Science is the truth.

I have seen the results of Christian Science teaching in the changed lives of both men and women, sometimes in their restoration to physical health and sometimes in their improved material conditions, but always I have noticed that their lives manifested a better, a higher moral tone. This has also been my personal experience, improved health and a better outlook on life. From being a discontented doubter, I have been changed into a contented and convinced believer in the gospel of Christ Jesus.

I should like here to draw your attention to what has always been a point of interest with regard to the name Mrs. Eddy selected for her text-book, "Science and Health with Key to the Scriptures." In the first chapter of Luke's gospel where Zacharias prophesies of him who was appointed to go before the face of the Lord, concerning the object of his mission, the seventy-seventh verse of the authorized version reads, "To give knowledge of salvation unto his people by the remission of their sins." In John Wyclif's translation, which was published in the year 1380, the same verse reads, "To giue science of helthe to his peeple in to remyssioun of his synnes." Science and Health, the "knowledge of salvation," is surely a suitable name for the "Key to the Scriptures."—*Correspondence.*

Fort Wayne, Ind.

The lecture on Christian Science at Minuet hall was well attended, the lecturer being William D. McCrackan, M.A. James B. Harper introduced the speaker as follows:—

Speaking of the power and benefit of spiritual understanding, Solomon said in his proverbs, "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding." Christian Science comes to the world with this new-old message illuminating the pages of the Bible and revealing the practical truth and reality of its teachings. The Master said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Christian Scientists take the Master at his word, and maintain that we are at liberty, if we follow the rule he has given us, to pass beyond the portals of blind belief and of faith itself and to enter the temple of spiritual understanding, that we may not only believe in God, and have faith in Him, but that we may know Him and begin now to understand Him and have a demonstrable understanding of His law. They teach and prove by demonstration today, as was done in the time when Jesus was here among men, that according to the degree of our understanding we may do the works he did, and that were done by his followers for three hundred years after his crucifixion. Innumerable demonstrations of spiritual healing have been made all over the world for the last forty-seven years, and there are many in our midst who have felt the healing touch of the Christ, and who have been and are beneficiaries of his care. It is with deep gratitude to God and thankfulness to the Discoverer of the Principle of divine healing that I say I am one of this number.

The world has received "Science and Health with Key to the Scriptures" by Mrs. Eddy not only with incredulity, but sometimes with ridicule. Nevertheless the Christ-idea as taught in the Bible and explained in her writings has steadily won its way, and has thousands of adherents all over the world. Mankind is hungry for spiritual knowledge and anxious to know how to acquire it. St. Paul has told us that "the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." The Master, in telling his followers how to acquire this knowledge, said, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you." Mrs. Eddy in speaking on the same subject says, "Prayer, watching, and working, combined with self-immolation, are God's gracious means for accomplishing whatever has been successfully done for the Christianization and health of mankind" (Science and Health, p. 1). There is no royal road to this understanding, but it is indeed possible now to emerge from sense to Soul, and

Digitized by Google

ascend the Horeb height where God is revealed—understood—as infinite, eternal, divine Mind, and have not only health, but that peace which passeth mortal understanding, and to realize with the prophet of old "how beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace." Your presence here indicates your interest in the age-absorbing problem, the truth of being, and you are privileged this afternoon to hear from one who is able to help you.—*The Fort Wayne Sentinel.*

Billings, Mont.

The Babcock theater was comfortably filled by people who were attracted by the announcement that Clarence C. Eaton would deliver a lecture on Christian Science. He was introduced by John H. Park, first reader of the local church, who spoke in part as follows:—

The commonly accepted opinion of mortals is, that God creates and governs man through material law or the laws of the flesh, but at certain times sets aside such laws and performs what are called miracles. On the contrary, Christian Science teaches that healing is wrought in accordance with divine law, and that it is God's intention that man should understand this law and apply it for himself,—a law that is ever available and applicable to every human need. The children of Israel in bondage to the Egyptians, with their burdens constantly increasing, were made free and led out of darkness and far on toward the promised land by Moses' understanding of this higher law of the Spirit. Many others have given to the world glimpses of this power through divine understanding, but to Jesus, "the author and finisher of our faith," was revealed the way in its completeness. Was it possible that Jesus gave this exhibition of divine power and love to mock or tantalize us with something that we could not appropriate for ourselves?

Did God need this example, or did Jesus need it for himself exclusively? Men needed this awakening and example, and "divine Love always has met and always will meet every human need" (Science and Health, p. 494). Did Jesus ever give the command only to preach the gospel, but not to heal the sick? Did he ever say that we were not to do as he did? Did he claim the power to heal to be in him personally? Was not his wonderful career a working out of life's problem for the purpose of showing us how to do our work? That we may follow in his steps and do exactly as he did, so far as we apprehend his instruction, is the only logical way of expressing our gratitude for all that he has done for us. I am thankful that the God of Abraham and Isaac and Jacob, and the God of Paul and Jesus, is my God and your God, my Father and your Father.—*The Billings Daily Gazette.*

Lectures to be Delivered

Baltimore, Md. (Second Church).—Judge Clifford P. Smith, The Lyric, 3:30 p.m., Nov. 2.

Bridgeport, Conn.—Bicknell Young, Universalist church, 8 p.m., Nov. 3.

Bushey, Hertfordshire, England.—Prof. Hermann S. Hering, Clarendon Hall, Watford, 8 p.m., Nov. 15.

Chattanooga, Tenn. (First Church).—Bliss Knapp, Chamber of Commerce, Broad street, 8 p.m., Oct. 31.

Cheyenne, Wyo.—Rev. William P. McKenzie, Elks Hall, 8 p.m., Nov. 4.

Chicago, Ill. (Third Church).—Francis J. Fluno, M.D., church edifice, Washington boulevard and Leavitt street, 8 p.m., Nov. 3 and 4.

Downers Grove, Ill.—Clarence W. Chadwick, Dickie's hall, 8 p.m., Nov. 3.

Durango, Col.—Rev. William P. McKenzie, 8 p.m., Nov. 6.

Elkhart, Ind.—Clarence W. Chadwick, Bucklen opera house, 3:30 p.m., Nov. 2.

Fairfield, Iowa.—Clarence W. Chadwick, High School auditorium, 8 p.m., Nov. 6.

Fort Collins, Col.—Rev. William P. McKenzie, Majestic theater, 3 p.m., Nov. 2.

Fremont, Mich.—Hon. Clarence A. Buskirk, Auditorium, 8 p.m., Nov. 6.

Halifax, Nova Scotia.—8 p.m., Nov. 6.

Holyoke, Mass.—Bicknell Young, Y. W. C. A. hall, 313 Maple street, 8 p.m., Nov. 7.

Iowa City, Iowa.—Francis J. Fluno, M.D., church rooms, 211½ Iowa avenue, 8 p.m., Nov. 7.

La Grange, Ill.—Clarence C. Eaton, church edifice, 8 p.m., Nov. 6.

Leytonstone, Essex, England.—Prof. Hermann S. Hering, Town Hall, Stratford, E., 8 p.m., Nov. 14.

London, England (Second Church).—Col. William E. Fell, Hampstead Conservatoire, Hampstead, N. W., 8:30 p.m., Nov. 13.

Madison, N. J.—Virgil O. Strickler, James' building, 8:15 p.m., Nov. 1.

Mamaroneck, N. Y.—Francis J. Fluno, M.D., Auditorium theater, Mamaroneck avenue, 3:30 p.m., Oct. 26.

Marshalltown, Iowa.—Clarence C. Eaton, Odeon theater, 8 p.m., Nov. 7.

Muskegon, Mich.—Hon. Clarence A. Buskirk, Women's clubhouse, corner Webster avenue and 2d street, 8 p.m., Nov. 7.

Nashua, N. H.—Virgil O. Strickler, City Hall, 8 p.m., Nov. 3.

Newton, Mass.—Bicknell Young, Players Hall, Washington street, West Newton, 8 p.m., Nov. 4.

Northampton, Mass.—Virgil O. Strickler, Academy of Music, 8 p.m., Nov. 2.

Norwalk, Conn.—Virgil O. Strickler, City Hall, South Norwalk, 8 p.m., Nov. 4.

Orange, N. J.—Bicknell Young, church edifice, 8:15 p.m., Nov. 1, and 4 p.m., Nov. 2.

Oshkosh, Wis.—Willis F. Gross, The Century, 8:15 p.m., Nov. 4.

Philadelphia, Pa. (Second Church).—Bliss Knapp, Orpheum theater, Germantown, Chelten avenue, 3:30 p.m., Nov. 2.

Polo, Ill.—Clarence W. Chadwick, Masonic building, 8 p.m., Nov. 4.

Reading, Pa.—Judge Clifford P. Smith, Rajah Temple, 8 p.m., Nov. 3.

Rockford, Ill.—Willis F. Gross, church edifice, 515 North Main street, 8:15 p.m., Nov. 3.

Rutherford, N. J.—Bliss Knapp, church edifice, 8:15 p.m., Nov. 7.

Salt Lake City, Utah (First Church).—Clarence C. Eaton, Salt Lake theater, 3 p.m., Nov. 2.

Sevenoaks, Kent, England.—Col. William E. Fell, Club Hall, 8:30 p.m., Nov. 14.

Sheffield, England.—Col. William E. Fell, Montgomery Hall, Surrey street, 3 p.m., Nov. 16.

Somerville, Mass.—Bicknell Young, Anthoine hall, 136 School street, near City Hall, 8 p.m., Nov. 6.

Springfield, Mass. (First Church and Society).—Virgil O. Strickler, Municipal auditorium, 3:30 p.m., Nov. 2.

Stamford, Conn.—Bliss Knapp, church edifice, Prospect street, 8 p.m., Nov. 6.

Truro, Nova Scotia.—Virgil O. Strickler, Academy hall, Terence street, 8:15 p.m., Nov. 7.

Testimonies of Healing

In January, 1909, while attending the state Legislature in St. Paul, a senator met a grief-stricken man whom he knew, on the street. He asked what the trouble was, and the man explained that he had brought his wife and small baby here and placed them in a sanitarium under the finest nerve specialist in the city, as his wife was mentally and physically unable to care for herself or the child. He had been told by the doctors that it would be from three to five months, at least, before she would recover, and unless she could stay there over a month he might as well take her away that day. It would cost seventy-five dollars a week, however, and as he could not afford that expense he was utterly disheartened.

Later they all removed to the hotel where the senator was stopping, and upon the advice of Christian Science friends they procured a Christian Science practitioner and nurse. In six hours after treatment was given, the wife talked naturally to her husband, saying quietly, "I believe we are going to be happier than we ever have been yet."

The mental and physical tension yielded, she yawned considerably, as if awakening from a disagreeable dream, and resumed the care of her baby. She awakened fully the fourth day and asked the Christian Science nurse what it was that had been helping her, saying, "When I was in the sanitarium I thought I never would get well enough to go home again, but the day after I left there I felt that my prayers to God were being answered, and every day I have been more sure, and now I know it; and I want to talk with the woman who has been treating me, and to know what Christian Science is." She did not wish to return home without a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy and a "Christian Science Hymnal," so her husband bought them for her. Sunday she attended her first Christian Science service and told the practitioner she had then been the nearest heaven that she ever had been in her life. Eight days from the time she began treatment she returned home, and a year afterward we were informed she was still taking care of her five children, and later that she was attending services and "real happy."

As I was the friend who helped select the practitioner and nurse, I am happy to send this statement of the benefits Christian Science has brought to one poor mother. When in great darkness she found "the true Light, which lighteth every man that cometh into the world."

LILY V. HAYNES, St. Paul, Minn.

I am glad to say that the testimony sent in by Mrs. Lily V. Haynes, respecting my serious illness and my healing in Christian Science is a correct statement of the facts. I am also glad to say that my healing has been permanent.

MRS. L. A. MCDOWELL, Luverne, Minn.

The undersigned is the senator referred to in the testimony by Lily V. Haynes of St. Paul, Minn. I clearly remember the incidents therein narrated, and, so far as I am conversant with the facts of the case, the statements therein contained are true and correct.

E. H. CANFIELD, Luverne, Minn.

✧

I desire to express my heartfelt thanks for all that Christian Science has done for me during the last eight or nine years. I was considered delicate from childhood, and for some time before hearing of Christian Science was especially so. I could hardly walk at all, as a very little exertion exhausted me, and at that time I was quite unfit to take any active part in life; if I made an engagement I was never sure that I would be able to keep it. I also suffered very much from constant colds and throat trouble. Now all that is quite changed, and I hardly ever have any occasion to think about my health. One of my kindred remarked some time ago that I now always looked well, and I certainly feel so; and for this complete physical change I am most deeply grateful. Only those who have had ill health can fully know the blessing the reverse of that means.

For some years before I came to Christian Science I was without any form of religion, the teaching of the church having ceased to satisfy me; but I shall always be grateful for the good that I did receive from it in former days. During these years I was searching for something that would satisfy me, and I looked in several directions. At first I was chiefly interested in Christian Science on account of the physical healing it accomplishes, not only in my own case, but in that of others, but I have gradually come to see that it has also given me the religion which I had wanted for so long; and though I do not in any way underrate the physical help, I value this far more. Christian Science is bringing great peace into my life, and I feel that its teachings, which are simply the old Bible truths made clear to us, will enable me to meet the problems of life; and even if one is not at present able to solve all that come, it means a great deal to know that this can be done—as a writer in the *Sentinel* once said of seeming trials, they are "only another opportunity to prove the allness of God."

I am more grateful than I can say that Christian Science has come into my life, and for this wonderful understanding of the Christ-teaching which has been revealed to this age. It does indeed "make all things new." I am very grateful also to our dear Leader, Mrs. Eddy, through whom this understanding has come.

MARGARET LILIAN HARDIE, Belstone, England.

✧

When I think of the many blessings which my family and I have received through the study and application of Christian Science, I feel a great desire to express my gratitude through the pages of the *Sentinel* in the hope that my testimony may be of some help to other seekers after the truth. Christian Science was brought to my attention some fourteen years ago in London, England. The way during these years has not been by any means one of roses, but I am grateful for the many lessons and for the purifying process which has taken place in my thinking, for I have, as St. Paul has said, been "transformed" by the renewal of the mind.

Christian Science has made me a better man mentally, morally, and physically. The physical healing has come only in proportion to the purification of my thinking, only when thoughts of fear, envy, jealousy, anger, hatred, malice, selfishness, etc., have been lessened and then destroyed. Last year I was freed from intense suffering which had caused me sleepless nights for months, and for this demonstration alone I am deeply grateful to God and to the one who so patiently helped me. I have also had to learn the lesson not to lean on my own understanding in my profession as a musician, but to place my trust and faith in Spirit, God, our Father-Mother, who is infinite intelligence, and to know that the real man, God's image and likeness, reflects and partakes of this infinite intelligence. I am striving to remember that "I can of mine own self do nothing," and yet that "I can do all things" well "through Christ [the realization of Truth] which strengtheneth me;" that God, Spirit, has already made all things good and perfect spiritually; and that, in order to receive the blessings, I have nothing to do but to let His will be done, and just know this truth daily and reflect more and more love toward God and my neighbor.

Nothing but Christian Science has been used in our family as a remedial agency during the last fourteen years, and it has always met our needs. I am truly thankful to God and grateful to our beloved Leader, Mrs. Eddy, for all these blessings.—Frederik Frederiksen, Chicago, Ill.

✦

With the psalmist I can say, "I sought the Lord, and he heard me, and delivered me from all my fears." It was the longing for health, after becoming thoroughly disheartened with sickness and a long list of sorrows and misfortunes, that led me to Christian Science for help. The passing on of two children, followed quickly by a business failure which left my husband and myself homeless and without means, caused such a general breakdown that I hardly cared to live. My dear mother urged me to try Christian Science, and so I did, as I had one boy nine years old left and I longed to bring him up myself.

Such help as I have received I can hardly measure. I was healed of several very disagreeable ailments, including extreme nervousness. My entire life has been changed and my home has been made harmonious. The study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has been so helpful it has brought about a continuous unfolding of good and great spiritual uplift. All my thoughts have been changed for the better. The fear I entertained respecting our little boy was hard to overcome, but at last it was met; and he is now man-grown and for twelve years has had neither physician nor medicine.

The old unrest has passed away, and sweet peace and courage fill my life. This passage of Scripture, "Seek ye the kingdom of God; and all these things shall be added unto you," has also been fulfilled, for plenty is here after the business failure, with no fear for future needs, for God supplies all.

I must also express love and gratitude for our dear Leader, Mrs. Eddy, who has taught us this demonstrable truth in Science and Health. The periodicals are a great help to our cause, an uplift to the world at large; they are slowly but surely changing the public thought, and are very helpful to Scientists themselves. Many times a testimony which I have stopped to read immediately after receiving my mail has been exactly what I have needed, and has been of lasting benefit to me. With love and gratitude to her who lifted this generation out of its sleep to a true knowledge of God, I am indeed thankful to the Giver of all good.

Mrs. Emma L. Tripp, West Somerville, Mass.

✦

I wish to make an acknowledgment of my healing, now almost ten years ago, of chronic stomach and intestinal trouble followed by a nervous breakdown. This condition had been predicted by physicians as the consequence of literal starvation for many years.

When a physical and mental wreck, I turned to Christian Science and asked for help, which was graciously given me. I was completely cured, and can eat anything set before me. Since then I have witnessed and experienced many healings in Christian Science, the most remarkable being that of a fractured elbow, with no other help than the study of the Bible and "Science and Health with Key to the Scriptures."

One day in August, 1910, while stretching a rope over my head it broke, and I was thrown from a platform on which I was standing, falling on my arm. When I arose to my feet the arm hung from the shoulder, useless. The first day I put my arm in a sling, but I seemed to see what Paul describes as "another law in my members, warring against the law of my mind," so I took the bandage off, and by the night of the second day, which was Wednesday, I could raise it considerably. In two weeks I carried food to my mouth, and in three, when I testified for very joy and gratitude in our church, I raised the arm above my head in proof of my healing. The arm is now in every way as normal as the other.

In tribute to our dear Leader, Mrs. Eddy, who, like one of old, said, "Come and see," let me add that a just and true appreciation of her and of her work has been to me a great help and joy. Having first accepted Christian Science as the truth taught by Christ Jesus, she took her rightful place in my thought as Leader, teacher, guide, and friend, the messenger of Truth to this age.

Mrs. Mary C. Jerman, New York, N. Y.

✦

For two years I had what was supposed to be rheumatism in my knees. I went to some hot springs, where the doctor put me on a system of diet and baths for six months, but with no effect. My knees were so painful that I could hardly rise from a chair without assistance, and I walked with difficulty. After leaving the springs, I went to my home in Chicago, and there was examined by a prominent physician, who diagnosed the case and said that I should have an operation on each knee. My husband objected to this, and after returning to San Francisco I went to a Christian Science practitioner and was healed in a few treatments,—four or five, I believe. This was during 1911, and I have had no return of the trouble.

I was also healed of a felon on my thumb, which was extremely painful. The pain was overcome in one treatment, and all swelling gone in a few days. Then too I have been healed of chronic headaches, from which I had suffered since childhood. What I am most grateful for, however, is the healing of a sense of despondency and fear which had held me in bondage for weeks at a time; but I was patiently led into the understanding of this healing truth, and I am now able to help myself out of many minor difficulties.

My greatest joy and peace now come from the daily reading of our beloved Leader's books and the study of the Lesson-Sermons.—Stella W. Lillick, Belvedere, Cal.

✦

It gives me great pleasure to speak of the healing power of divine Truth, as revealed through Christian Science. In a recent experience I was wonderfully helped, through the healing of serious injuries to my knee and ankle. For a short time after the accident I experienced very little pain, but the entire limb seemed numb and paralyzed. I felt that I was able to overcome it in Christian Science, but the pain soon began to increase and became almost unbearable, so that the help of a practitioner was called. With one treatment, and within twelve hours of the time that this help was asked for, the conditions had entirely disappeared and I scarcely felt any effects of the accident. I felt indeed grateful for the relief, and was happily surprised at the wonderful rapidity with which the suffering and discord were overcome through a convincing demonstration of the great power of Truth in divine Science.—J. A. Moyer, Kansas City, Mo.

✦

From my first treatment in Christian Science I received all the strength, peace of mind, and understanding of God I could assimilate and use. These divine blessings so freely reflected to one greatly in need, have since proved to me the presence of the divine Comforter, and although similar demands have had to be made many times since then, they have always been supplied. Sincere gratitude for these benefits has grown to where I must give thanks for larger privi-

Digitized by Google

leges, namely, church membership, especially in The Mother Church, and class teaching that has helped me to appreciate my first healing, which was instantaneous. A lack of strength and mental peace was said to be due to stomach trouble, but the understanding of God, and the realization of none other than His presence, silenced the fear which had oppressed me for more than twelve years. Besides this, there were other complications of four years' standing which material remedies had failed to cure.

The order and harmony maintained in the Christian Science reading-rooms has prompted gratitude within my consciousness, as it points so directly to our dear Leader's purpose. Each book or sentence is a messenger to prepare all earnest seekers to receive the help of God's word, revealing His Christ through Christian Science, and none shall seek in vain.—Mrs. Nellie Bronson, Missoula, Mont.

✧

[Translated from the German]

Our family has experienced an immeasurable blessing through the healing of a mental disorder in the case of my sister, and we who were privileged to observe this glorious proof of the power of Truth are profoundly grateful. For my part, upon attending the Christian Science services I very soon experienced a sense of peace as the result of the teachings of that church, and I soon began to use the thoughts of truth which I took home as well as those I found in the Christian Science literature. Thus it has been possible for me during the past four years to overcome every disturbance, partly through my own efforts and partly with the help of a Christian Science practitioner. Through the understanding of God and man which I have gained thus far, I have also been able to demonstrate the unreality of evil on several occasions when I have helped my husband by means of this truth. Sharp pain in the side, which grew almost unbearable, disappeared while I declared the truth for him, and on another occasion he overcame distress in the ear within thirty-six hours. Even in cases where attacks of severe cold would not yield in their incipient stages, the accompanying symptoms were far less serious than formerly, and they would disappear in a much shorter time. Thus I have learned to trust in divine Love under every circumstance, and thereby have experienced rich blessings daily and hourly.

I have endeavored to acquire a knowledge of the English language in order to be able to study Science and Health, but now that I am in possession of the German translation I often pause in reading, and with a sense of utmost gratitude remember our beloved and thoughtful Leader through whom it has been made easy for us to know the truth and to enter into the heritage of the children of God. I am daily striving to grow into a fuller understanding and to prove my gratitude by my life.

Frau Pauline Neumann, Berlin-Wilmersdorf, Germany.

✧

When I first came to investigate Christian Science, not quite nine years ago, I was very much prejudiced against all forms of religious doctrines which were based on the Bible. I was an agnostic, and was never ashamed of it. I would become very irritable when it fell to my lot to attend a religious ceremony of any kind. I never had a good word for any of the churches, and this included the Christian Science church as well.

I remember having on one occasion poked fun at Christian Science in a very disagreeable and unkindly manner. What frame of mind I was in to investigate it may be imagined. I did not for one moment believe, before I began my investigation, that I was going to derive the least benefit out of it; indeed, I thought I was beyond ever being restored to happiness again. A friend of mine prevailed upon me to read the book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I was somewhat suspicious that this friend was not altogether right. Near to where we were sitting, there lay on the table this wonderful book to which he had referred, so I picked it up, opened it at the beginning, and from what I thought at the time to be curiosity, began to read. I must have read for ten or fifteen minutes, when I turned to my friend and said, "All this seems to be well written, and if you will let me I will take the book to my room and read it during the night and return it to you in the morning." To this he consented.

No one, I am sure, knew what I was undergoing in the way of mental strain at that time. Life was not worth living, and I was miserable and unhappy because of the immoral habits to which I was bound and from which I could not get away. We, my friend and I, were living in a hotel at the time, and every night I would get the little book, read it carefully, and then return it in the morning. Finally, when I had finished reading it, I turned to the New Testament to find if the Bible really contained all these plain statements about what God can and will do for man, and there I found them just as they were quoted in Science and Health. Satisfied that as yet I had found no contradictory statements, I went back to Science and Health and began over again, and by the time I was halfway through, a healing from the cigarette habit took place, and with this healing came the spiritual uplift that accompanies, I believe, most healings. I found myself again taking interest in life, not trying to be happy in the old way of debauchery, but in a new way, at least new to me, and that way was the one which Christian Science points out, an understanding of which proves beyond a doubt that man must be born again. I was so happy that I wept many, many times, and I began to be thankful for what Christian Science had done for me.

This is written with the hope that it may reach some one who is in need as I was; and if such persons will only try Christian Science and earnestly search for a way to live a better life, God, with whom they become somewhat acquainted by the study of Christian Science, will lead them out of the bondage of sin and they will find a happy life.

Carl A. Schulz, D.D.S., St. Louis, Mo.

✧

Christian Science has revealed to me a God who is Love, who, as the psalmist says, "forgiveth all thine iniquities; which healeth all thy diseases." I was healed in Christian Science first of a complication of diseases, and later of paralysis and rheumatism, when one leg was two and a half inches shorter than the other, according to one of San Antonio's leading physicians.

While I am thankful for the physical healing, it is as nothing compared to the spiritual awakening. I am thankful to God for the work of our dear Leader, who has taught us to know that God is Life eternal. I am also thankful to our Publishing Society for our periodicals, especially for our clean newspaper, *The Christian Science Monitor*.

Mrs. Emma C. Warren, San Antonio, Texas.

I did not come into Christian Science for physical healing, but I was healed of the liquor habit and of profanity by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. I will speak of a case of mental surgery where I proved the power of Truth.

Being a painter, I was at work and holding to a chimney for support, when the bricks gave way and I fell from the

Digitized by Google

roof of the building, a distance of about fifteen feet, and was picked up unconscious. I continued so for about half an hour, but as soon as I could speak I told those near me to telephone for my wife to come. My shoulder was out of place, the bone broken between the shoulder and the elbow, three ribs were broken, and a gash was cut in my leg. Before my wife could reach me they had called a physician, who drove me home in his buggy. As my wife was a Christian Scientist, she called a practitioner, who immediately took up treatment for me. He said it was better to have the physician set the bone; and the doctor did try to do so, but failed. After a few hours the practitioner who usually helped us returned and gave me treatment, and in about half an hour I was dozing in my chair, when suddenly I felt the shoulder go into place, and a few minutes later the other bone was replaced by the power of divine Mind. The second week poisoning manifested itself in the place where the leg had been cut, but this also was met in Science. It was washed each day and a clean bandage kept on it. Within seven weeks I was again at work.

I wish to express my gratitude for our Leader, Mrs. Eddy, who has shown us the way to reach the divine aid.

G. R. Warren, San Antonio, Texas.

✦

For three years the understanding of the allness of God, good, and the unreality of evil, has been unfolding to me through the study of Christian Science. My father had passed on three years before this time after suffering six years from so-called Bright's disease, and the belief in heredity was very strong with me, as the physicians condemned me to the same disease.

When I applied to a Christian Science practitioner for help I was a semiinvalid, suffering all the time, unhappy and discouraged. The physicians could give me no relief, could not even allay the pain with drugs; but help came very quickly to me when I reached out to the truth, and I am very thankful today to know that I am a well woman, and so pronounced by one of the medical fraternity. Ever since that time, March, 1909, I have found divine Mind "a very present help in trouble," and have been very thankful to Mrs. Eddy for her life and labors, which have made possible this understanding that has come to me.

Mrs. Helen R. Willson, Uniontown, Pa.

✦

[Translated from the German]

I herewith wish to express my most sincere gratitude for my wonderful healing of a severe trouble. In January, two years ago, as the result of a cold, an abscess formed underneath my right eye which defied medical treatment and caused me much pain and worry. In addition to this, erysipelas of the face set in and kept me from work for quite a while. Upon the recommendation of friends I was led to resort to Christian Science treatment. I was completely healed with three treatments, and enabled to go out without a bandage. The trouble has not appeared again, thanks be to God!

A year after my illness my wife was taken with a severe attack of acute lung trouble, while on a visit to California. She wired to Pasadena for treatment to be taken up, and she was healed with God's help through prayer in Christian Science. Since then, *Der Herold der Christian Science* has been a welcome friend in our home, and many an evil has been eliminated from our experience through prayer to God. This testimony is given in gratitude.

A. E. Naumann, Milwaukee, Wis.

From Our Exchanges

[*The Christian World*]

Save us from the people who pose as examples, who on every occasion deliver their little moral lectures, their Pecksniffian maxims, who talk from their own height of virtue down to the inferiors they patronize! These are no builders. They lack that first principle of moral architecture, the knowledge of themselves. The work we are thinking of is hardly an affair of words at all,—certainly not of lecture words. It is a work of insight and of sympathy; of faith in our brother and of the attitude toward him which faith begets. We see in him, behind all his faults, the possible structure, and the materials for it that lie in him; and with these materials we deal, letting all others severely alone. We perceive his own daily inner struggle of his good with his evil, and we put all our strength into his fight. Does his evil, his passion, his temper overflow upon us? Shall we reenforce that bad side of him by adding fuel to the flame? The essence of a quarrel is that each is meeting the other's evil by his own evil. Here are two bads uniting for a common defeat of the good. At such moments the thing is, not to talk, least of all to talk back, but to dive down to the depths of our being, down to our innermost reserves of faith, hope, and love. There, where in silent wrestling we have won the victory over ourselves, we have won it for our brother, for wrath cannot contend forever against love. A soul of that temper in a household, in a workroom, yes, in a senate, in a world, is accomplishing the finest artistry, is rearing structures with which no Parthenons or Taj Mahals can compare. They are spiritual buildings with heaven's own beauty, its own eternity upon them, palaces to adorn the city of God.

[*The Christian Work and Evangelist*]

The history of every religious revolution at the center is a record of operative power, transforming personality and environment alike, and placing large bodies of men and women in entirely new relations toward heaven and their fellow creatures. The foul influences of degenerate art, literature, and politics have yielded to nothing less than the expulsive power of Christlike love, and pusillanimous and shifty characters can be made solid and trustworthy only by its regenerating grace. Without this type of Christianity mere professions are valueless; our real service to those citizens who differ from us in religious belief is to demonstrate its efficiency in our actual lives. Then its reality puts skepticism at defiance, and those who are earnest and right-minded, though they may not worship with us, will feel the stirrings of the mystic energies of purity, helpfulness, and compassion.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

The soul's home-coming is only the fulfilment of the eternal purpose of the God whose creatorship is the activity of His love, only an entrance upon the glory that eternally is, flawless, undimmed, all-embracing. "God requireth that which is past,"—yes, for to Him nothing is past, nothing is wasted, nothing valueless that any child of His has ever had to learn or suffer; it is all included and fulfilled in the blessedness ineffable and beyond compare. "Jesus Christ the same yesterday, and today, and forever," is to us the revealer of the Father's heart and the truth about ourselves and our destiny. Nay, more: he is our way home; he is our means of reaching our "inheritance incorruptible, and undefiled, and that fadeth not away," that which "was in the beginning, is now, and ever shall be: world without end." The reason why Jesus is what he is to us today; the reason why he has cast such a

Digitized by Google

spell over the imagination of mankind; the reason why we never can bear to have his dignity diminished or anything detracted from his preeminence in the life of the race, is that we instinctively recognize that in him the eternal has broken through this whirligig of time, this monstrous panorama of materiality, this dream of mundane existence, and has laid bare the secret of what we are. We are spirits in prison, children of the living God enchained in darkness and bewilderment; and he has come to get us out. This monstrous phantasmagoria of earth and heaven, this appalling mystery of endless creation and destruction, ceases to be dreadful in his holy presence. He is above it all; his is the glory which was with the Father before the world was.

[*The Advance*]

There are impulses within the human soul which are suggestions of the Spirit of God. He who finds himself prompted to say a kind word or do a worthy deed should not hesitate too long before obeying the impulse. As we grow older we act less from impulse and more from what we suppose to be reason; but the great souls of earth have trusted not merely their logic but their intuition. Philip saw the chariot coming. He did not know who was within; but the path he was traveling intersected the road at such an angle that he could meet the chariot at the parting of the ways, and something within his heart prompted him to meet it. It was as a voice saying, "Go near, and join thyself to this chariot." Philip was not wholly concerned with the opportunity of riding. He spoke the word that won to Christianity one of its most notable converts among men in official life.

So many things happen incidentally that have within them the secret of a wonderful providence. How many things Jesus did that were quite incidental to some other purpose or plan. He saw and called Matthew as he passed on another errand. He healed blind Bartimæus as he was passing along the way. He saw Zacchæus in the tree as he was passing underneath. He healed the woman who touched the hem of his garment as he was in the throng, hurrying to an important engagement. All these things and more Jesus did quite incidentally. In every one of these instances he had another errand. These and other instances represent his use of incidental opportunity. It comes to us all, and it must be acted upon or neglected.

[Woodrow Wilson in *The Pacific Baptist*]

I am sorry for the men who do not read the Bible every day; I wonder why they deprive themselves of the strength and of the pleasure. It is one of the most singular books in the world, for every time you open it, some old text that you have read a score of times suddenly beams with a new meaning. Evidently the mood and the thought of that day, bred by the circumstances that you cannot analyze, has suddenly thrown its light upon that page and upon that passage, and there springs out upon the page to you something that you never saw lie upon it before. There is no other book that I know of, of which this is true; there is no other book that yields its meaning so personally, that seems to fit itself so intimately to the very spirit that is seeking its guidance.

[*The Christian Register*]

Unless the teachings of Jesus are applied, they might as well not be revered. And common sense is always demanding at least a sincere approach, at least a consistent attempt at imitation. Such earnestness as throbs in fiction, in sociological theory and practise, such sincere glow as lights up literature and life in each generation, cannot be mere emotionalism. It must mean something, and it is an ever-renewed challenge to men to do something.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

In accordance with instructions from the Rev. Mary Baker Eddy, given in March, 1910, her book "Science and Health with Key to the Scriptures" has been translated into the German language and printed as a special edition with alternate pages of English and German. Description and prices will be found on the outside cover page of the *Sentinel*.

The volume "Poems by Mary Baker Eddy" *is specially* bound; 79 pages.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets including Bicknell Young's lecture, "Christian Science: The New Birth," which is now printed in German. The new pamphlets are ready for distribution and are listed as follows:

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise the Treasurer promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 45 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pp. The Original, Standard, and only Text-book on Christian Science Mind-healing. Price (cloth), single copy, $3.18; two to eleven books inclusive (cloth only) to one address, $3.00 each; twelve or more books to one address, $2.75 each. Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, single copy, $4.00; twelve or more to one address, $3.75 each. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies, inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

Miscellaneous Writings—1883 1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

Church Manual. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Christ and Christmas. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

Unity of Good and Other Writings. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Christian Healing and Other Writings. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform with the pocket edition of Science and Health. Bound in Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Retrospection and Introspection. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Unity of Good. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Pulpit and Press. A unique work, important to the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more, 75 cents each.

Rudimental Divine Science. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of *questions* and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

Rudimental Divine Science. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more to one address, 40 cents each.

No and Yes. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

Messages to the Mother Church. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Message to The Mother Church. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges, 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Our Leader's Message. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 85 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Communion Message, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Two Sermons. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. One volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more, 45 cents each.

Christian Healing. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

The People's Idea of God. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

Feed My Sheep. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Items of Interest

NATIONAL

More than one fifth of the men who served in the army and navy of the United States during the civil war were on the government's pension roll at the beginning of the present fiscal year. The annual report of Commissioner of Pensions Saltzgaber shows that on July 1 last there were 462,379 civil war pensioners. During the past year there was a decrease of 34,884 civil war pensioners, while the net loss in the entire pension roll was 40,094, leaving 820,200 pensioners of all classes. There remain 1,142 Mexican war pensioners and 1,066 from Indian wars. The last surviving pensioner of the war of 1812 passed away eight years ago, although 199 widows of that war's fighters still receive pensions, a decrease of thirty-nine since last year.

It is stated that next month the Atchison, Topeka and Santa Fé road will initiate in the Arkansas valley of Colorado an experiment for the better marketing of fruit and vegetables, and if successful this method will be extended throughout the road's lines. Refrigerator cars will be sent out to pick up small quantities of this class of freight, move them to central points, and attach them in carload lots to its big refrigerator trains. The road has been successful in its dairy and poultry traffic by that method, and there is thought to be no reason why the fruit and vegetable traffic should not be handled in the same way. Millions of dollars' worth of this class of merchandise is wasted every year for lack of such a service.

Secretary Daniels has formally announced that the historic battleship Oregon, which made the famous trip around Cape Horn in the early days of the Spanish war, will lead the great international fleet through the Panama canal when the waterway is formally opened in 1915. It has been suggested that all surviving officers who served on her during the 1898 cruise be again at their posts of duty. In this event the Oregon will be commanded by Rear-Admiral Charles E. Clark, retired, now living in Washington. The acceptance by the British foreign office of the invitation from the United States to send a squadron of British warships to go through the canal was also announced.

Unusual interest was manifested in official circles on Oct. 25 in the departure from Hampton Roads of two divisions of the Atlantic fleet battleships for a cruise to the Mediterranean. This is to be a courtesy cruise, but it is being pointed out that incidentally it will direct the attention of the world to two important facts,—that American battleships in actual service are prepared to hold their own against any navy afloat, except that of Great Britain, and that because of its geographical advantages the United States can despatch its dreadnoughts three thousand miles from home shores without uneasiness.

Delegates to the seventy-ninth annual convention of the Delta Upsilon fraternity, meeting in Rochester, N. Y., last week, voted to bar from membership after 1917 any college freshman who had been a member of a high school or preparatory school secret fraternity. It was also agreed to urge the Pan-Hellenic council to take similar action to govern college fraternities in the country.

The dedication of Princeton's graduate college and the Grover Cleveland memorial tower, which is included in the architectural scheme of the college buildings, took place last week. Practically every American college was represented by one or more of its faculty, and several foreign universities sent distinguished scholars. Hundreds of Princeton alumni returned to their *alma mater* for the occasion.

President Wilson has appointed Nov. 27 as a national day of thanksgiving.

INTERNATIONAL

Loans amounting to nearly thirty million dollars will be necessary to meet the deficit in the Austrian budget for the first half of 1914. This so-called transition budget, intended to pave the way for transferring the date of the beginning of the fiscal year from January to July, estimates the expenditure for the six months at $312,891,776, and the proceeds of the loans required to balance the deficit between the revenue and expenditure will be applied to the army, the navy, and the railroads. Baron Engel von Mainfelden, in introducing the budget in the lower house of Parliament, explained that this "unfavorable budget" was due to recent events in the Balkans, but that the economic organization of the country was sound.

News that Tibet demands complete autonomy without even Chinese official representation at Lhasa, its capital, and also asks for indemnities from China, has reached the Chinese government from the Chinese Tibetan conference in progress at Darjeeling, India. The two vast dependencies of Tibet and Mongolia, at the time of the anti-Manchu revolution, proclaimed their autonomy, and have defended it ever since. China is now fighting to maintain her frontiers against both of them, respectively, in the provinces of Chili and Szechuen.

The Austrian government, as the result of recent developments in the emigration traffic from Austria to the United States and Canada, has introduced a bill into the lower house of Parliament prohibiting any emigration liable to have an adverse effect on military recruiting in Austria or calculated to promote the white slave trade. Official announcement has been made in Vienna that the great increase in emigration is an evidence of the wide-spread secret organization for encouraging the emigration of persons liable for military service.

INDUSTRIAL AND COMMERCIAL

The New South Wales minister for works, the Hon. A. Griffith, recently turned the first sod of the projected railway from Barellan to the Cliffs. The new line will traverse another of the state's rich wheat centers, and will connect with the greatest irrigation area of the Australian continent, so that in a few years' time thousands of people will be settled where now there is only forest. This new railway will cost one hundred thousand pounds. The present New South Wales government's new railways total 765 miles.

A unification of operation of the surface traction lines of Chicago, which practically amounts to a merger, has been proposed by the companies to the city council, and marks the first step in what may be the final stage of the inauguration of the one-city-one-fare plan. There are two large surface car systems in the city, one operating on the North and West sides and the other on the South side.

Negotiations have been closed by an English syndicate for the purchase of extensive coal land and mining properties in the New River district of West Virginia at a price said to approximate fifty million dollars. About five hundred and fifty thousand acres of land and ninety-six collieries are involved in the transaction.

A return issued by the Queensland lands department, showing the land selected in the first half of the year, says that the area selected was 3,848,678 acres. Agricultural farms numbered 777, comprising an area of 266,364 acres. Grazing selection absorbed 3,270,507 acres in 271 farms.

Texas will produce and market more than one million bushels of Spanish peanuts this year. The 1912 crop exceeded four hundred and fifty thousand bushels, and the increased acreage this year will more than double the production.

The bureau of statistics of the American Iron and Steel Institute has received direct from the manufacturers complete statistics for the production of pig iron in Canada in the first six months of 1913. The amount was 545,981 gross tons.

The possibility of India taking a leading position as a silk exporting country is once more proposed by Commissioner Booth-Tucker in the annual report on the silk centers of the Salvation Army in India and Ceylon.

China has granted to Japan an important concession for the extension of her railroads in southern Manchuria, which will open up a great agricultural district. The new line is to start at the city of Chinchow.

There is much waste in getting out the flawless white oak necessary for tight barrel staves. The forest service is trying to induce manufacturers of parquetry flooring to use some of this waste.

The government geologist of New South Wales, on his return from a trip through Queensland, expressed surprise at the great extent of its coal resources.

The trade balance of Argentina for the first six months of the year is $80,965,784. The imports were $201,250,000, and the exports $282,820,084.

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI November 1, 1913 No. 9

Literature for the Beginner

SAMUEL GREENWOOD

THE question is sometimes raised as to the propriety of placing the so-called "Christian Science novels" in the hands of inquirers, or of others unacquainted with the teachings of Christian Science, in preference to our own authorized literature. This course is said to be favored by some on the assumption that Christian Science will appear more pleasing or attractive if presented in this form, but these well-meaning students overlook the fact that the truth of spiritual being, as taught in Christian Science, is never pleasing or attractive to the sensuous thought and cannot be made so in any form. On the other hand, we do well to remember that to the awakening spiritual desire, honestly reaching after Truth, the teaching of Christian Science is always welcome.

It should be unquestionable that the best literature on Christian Science to place in the hands of any one is its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and other works by the same author, since no other books are published which give the complete and correct statement of Christian Science. It should also be unquestionable that the best auxiliaries in making the public acquainted, in a measure, with the teachings of Christian Science, and with what it is accomplishing, are the publications of The Christian Science Publishing Society. No other writings than the above can rightly be considered authoritative on Christian Science, unless it be the lectures and other work rendered in an official capacity by accredited representatives of the cause.

Under apparently adverse and unfriendly conditions Mrs. Eddy established the cause on an enduring basis and brought the movement to its present efficiency and usefulness with no other literature than the Bible, her own writings, and the publications which she authorized. As stated in the Preface to Science and Health (p. x), she made no effort "to suit the general drift of thought" but "bluntly and honestly" gave to the world "the text of Truth." If, then, from the beginning of her work, and throughout her personal association with and supervision of the movement, our Leader found it unnecessary to clothe the statements of Truth in a garb thought to be particularly attractive to human taste, why should we at the present day think to make Christian Science more acceptable and inviting by departure from her methods, so abundantly proved to be safe and successful? It is the demonstrable knowledge of the truth, not entertainment, which is needed, and for which mankind are asking. Those who are willing to receive the message of Christian Science will accept it quite as readily when presented in its purity, as when it is associated with a mass of unrelated matter.

The reason for circulating the authorized literature alone in introducing Christian Science to the public should be obvious. If it were proper to use other works for this purpose the difficulty would arise, at least for the uninitiated, where and how to draw the line between the books of different authors. Without an authorized standard or a recognized imprint as a guarantee of genuineness, how is the public to discriminate between what is true and what is false? This difficulty would naturally increase with the increase of that class of literature, until the unenlightened public would be at the mercy, so to speak, of any chance writer who might be tempted to put forward his own interpretation of Christian Science. It can easily be seen that much of this literature might and probably would be misleading and therefore dangerous, since "a slight divergence is fatal in Science" (Rudimental Divine Science, p. 17). Christian Scientists should see that it is but a phase of error which would suggest the inadequacy of our own literature, for the natural effect of accepting this suggestion is to send out the thought that the authorized literature on Christian Science is not the most effective upon the subject.

The safe way for those who wish to learn more of Christian Science is to confine their attention to the works which are authorized and commended by the Publishing Society. Granting that some of the books in question are not objectionable, and may in their way be both interesting and useful, what assurance have those who do not know the authors that their explanation of Christian Science is correct? Such books as have sufficient literary merit will find their way into circulation among the reading public with other works of their class, and will there find ample field for the good they may be fitted to accomplish; but when our beloved Leader has taken so much care to safeguard our literature and prevent its adulteration, it surely is not wise on the part of Christian Scientists to open a wide door to such possible adulteration by commending as helpful to the acquisition of a knowledge of Christian Science, books that do not have the endorsement of our Publishing Society. The authors of such books purporting to explain Christian Science may or may not be competent to do this, and it is in the latter case where mischief is liable to creep in, since a wrong impression is more difficult to remove than simple ignorance.

Experience disproves the belief that people find their way into Christian Science more quickly through the medium of a love story than through its regular literature. If one is not thirsty, all the stories that can possibly be written about the beneficial properties of water will not make him so; and if he is thirsty, it is pure water that he needs and not anything else. The problem is not to make the water inviting by means of decorated cups or artificial flavors, but to provide an abundance of water which is pure, and to bring it within the reach of those in need. There need be no hesitation in placing authorized literature on Christian Science in the hands of those one wishes to help, "and never fear the consequences." "Those ready for the blessing . . . will give thanks" (Science and Health, p. 570); and those not ready for this blessing will not be induced to accept it by some other means.

It is not the intention here to cast reflection upon any book or to question its author's motive. A well-written

Copyright, 1913, by The Christian Science Publishing Society

Digitized by Google

story, presenting high ideals, is always helpful, but it is not necessary to go so far as to commend such a book as a medium for gaining a knowledge of Christian Science, since this can be done with more propriety through the channels provided for that purpose, in which the ideas presented have been subject to careful and competent scrutiny before publication. "Let there be milk for babes," writes Mrs. Eddy, "but let not the milk be adulterated" (Retrospection and Introspection, p. 61).

✧

Promptness and Preparedness

E. J. SIMPSON

In the many problems of business, in matters of statecraft, in the stress and storm of militant conditions, in all the ramifications of effort and endeavor, promptness in execution, preparedness to do, and swiftness in doing, are qualities which the general thought labels "dependable." These mental equipments and their exercise are just as necessary (perhaps more so) in things which men and women call small and insignificant as in the big things. It is an old and perhaps a trite expression, but nevertheless true, that no chain is stronger than its weakest link. As the infinitesimal moment broadens into the hour, the hours into the day, the days into the widespread horizon of eternity, so the seemingly small things unfold and develop into completeness of relation.

On page 230 of "Miscellaneous Writings" our Leader says: "Success in life depends upon persistent effort, upon the improvement of moments more than upon any other one thing. A great amount of time is consumed in talking nothing, doing nothing, and indecision as to what one should do. If one would be successful in the future, let him make the most of the present. . . . All successful individuals have become such by hard work; by improving moments before they pass into hours." One should not neglect the detail work, or slight any part of his duties merely because the detail matters seem either irksome or unimportant. Aspiring for success, one should start right. The work or occupation must be legitimate, the motives right, the purposes honest, and the desire to improve the moments sincere; then there should be no lack of confidence in ultimate success. And there can be no such lack when we fully rely upon divine Love for guidance.

Carelessness in listening to and in pondering instructions engenders more or less carelessness in executing them, and many torn and tattered experiences are written all over with defeat and disaster due to overzeal in venturing to carry out orders which have been but illy digested, by stepping outside of well-matured instructions, in overlooking some necessary detail, rushing in where "angels fear to tread," and doing valiantly the heroic but ofttimes unwise thing. The ultimate of the exercise of promptness and swiftness without the necessary preparedness would not be so hurtful were the overlooked or neglected detail the only part involved; but the uncared-for detail is the weakened link which makes the chain less dependable. This is true not only in Christian Science endeavor, but in the ordinary affairs of life as well. To the Corinthians Paul said, "And whether one member suffer, all the members suffer with it; or one member be honored, all the members rejoice with it." It is very necessary, therefore, in the exercise of diligence, that we manifest a due regard for the detail work, and thus do our part in making the body of our work complete and harmonious.

In the work of mailing or otherwise distributing literature, this should be done with promptness, and this promptitude should be well fortified with up-to-date mailing lists or by carefully selected places where literature may be left. Sometimes literary data lose much of their force when literature is permitted to pile up in the office or headquarters instead of being promptly sent forth on its mission of good. So, too, in matters of correspondence, letters and communications from any source should be accorded a prompt reply. By an immediate response, or a loving explanation, we may give the cup of cold water just at the time when most needed. Our preparedness in this direction will be strengthened if we familiarize our thought with the contents of the text-book and with the Church Manual. Sometimes a citation promptly given may fully answer the query of some anxious correspondent.

In connection with the duty of antidoting misrepresentations, it is deemed very important that corrections be made at once, though not without thorough preparation. One should differentiate between the quality of swiftness and that of hurry. Swiftness hastens on its mission, "shod with the preparation of the gospel;" while hurry seems to imply zeal without wisdom. With the wise exercise of intelligent promptness, necessary corrections sally forth, armed with the assurance that "God will supply the wisdom and the occasion for a victory" (Science and Health, p. 571). Our readiness and ability to defend, and our confidence in the justice of our cause, are thus indicated, while preparation supplies our statements with the elements of fairness and correctness.

It is a matter of considerable satisfaction that the more open attacks upon Christian Science have become less and less frequent; but because of this we should not be found asleep at the post of duty. On page 249 of Science and Health our Leader says, "Sleep and apathy are phases of the dream that life, substance, and intelligence are material;" and on page 102, "So secret are the present methods of animal magnetism that they ensnare the age into indolence, and produce the very apathy on the subject which the criminal desires." It is therefore a sacred duty, in every line of work, to have on hand an abundant supply of the oil of preparedness, that our lamps may be always brightly burning; likewise, to be ready at all times speedily to respond to the call of duty, and be ever free from the snares of mental inertia. As one of our hymn writers has so well said (Christian Science Hymnal, p. 19):—

Abide not in the realm of dreams,
O man, however fair it seems;
But with clear eye the present scan,
And hear the call of God and man.

Think not in sleep to fold thy hands,
Forgetful of thy Lord's commands:
From duty's claims no life is free,—
Behold, today hath need of thee.

Songs of Deliverance

ELIZABETH EARL JONES

Since most people are prone to make mistakes at times, or to be misunderstood and misjudged, there are perhaps few temptations so subtle and insistent as the temptation to revert in thought or conversation to troubles past, or to persecutions "for righteousness' sake," perchance, from which divine Love has delivered or is delivering us. From this mesmerism of self-pity, or selfishness, we need to rouse ourselves, since it must of necessity hinder progress. We need to look up, give thanks, and endeavor to understand and emulate that mental state of our Master which culminated in his ascension. If Jesus had tarried in thought upon the cruelty of mortal mind which laid our stripes upon him, if he had dwelt upon injustice, suffering, and the humiliation of Calvary, he would have remained in Golgotha, have ceased to progress, and we would

Digitized by Google

have been deprived of the glorious proof which his final overcoming sealed; proof of the impotence of evil, and that all is Spirit; that there is no matter, even as Mrs. Eddy teaches.

The most beautiful and significant point brought out in the story given in the third chapter of Daniel respecting the victory of the three young Hebrew captives who were cast into the "burning fiery furnace," is, that not even "the smell of fire had passed on them." Christian Science insists that man as God's image is spiritual and perfect, "yesterday, and today, and forever," and has never in reality had a material experience or earthly history, hence he has never been in the furnace of affliction, for he has never been outside the embrace of the divine consciousness, never apart from Life, Truth, Love, purity, joy, peace, plenty, honor, and dominion. Therefore we should not go about with the smell of smoke and conflict upon us, but ever singing the songs of the redeemed.

Seemingly incomplete demonstrations are often brought to completion by a joyous, grateful recognition of the good already received and by denying self and its false demands for sympathy; by turning thought unreservedly to God, acknowledging and glorying in His infinite goodness, allness, and sufficiency, and realizing that evil has no history. On page 281 of "Miscellaneous Writings," Mrs. Eddy says that we must "count ourselves always as debtors to Christ, Truth." Jesus counseled his disciples to depart from whatsoever city would not receive their message, and in departing to shake off the very dust thereof as a testimony against it. Our testimony of the nothingness of evil and the allness of God, good, is not sincere and complete so long as we allow the dust of persecution or affliction to remain with us, to obscure our spiritual vision, and to stain the purity of our ideal and its expression. If a city or mental state is unworthy of our abode, its least reminder is unworthy to remain in our consciousness. Says our Leader, "Allow nothing but His likeness to abide in your thought" (Science and Health, p. 495).

Christian Science has opened wide the gates of heaven for us, where we may find and keep all the beautiful, pure, and good of which false beliefs would rob us. How gladly should we shake away the dust and stain of unworthy memories, sorrows, regrets, doubts, fears, and apprehensions, that we may abide secure in Love's holy habitation, here and now, where the one Mind includes and unites us all! The question we should ask ourselves is not, Have I suffered? but, Have I accepted my deliverance? and if not, why not? These exquisite lines occur in our beloved Leader's poem "Satisfied" (Poems, p. 79):—

It matters not what be thy lot,
So Love doth guide;
For storm or shine, pure peace is thine,
Whate'er betide.

. . . . . .

Love looseth thee, and lifteth me,
Ayont hate's thrall:
There Life is light, and wisdom might,
And God is All.

"Be not afraid"

HERBERT ARTHUR HUTCHINSON

A LITTLE while ago a great storm swept over the county of Surrey in England, and outdoor workers were glad to get indoors and under shelter. Through all the deluge of rain, however, wild fowl were steadily winging their way, quite unconcerned, to their favorite feeding-places. A flock of wild geese passed far overhead, with a cheery "honk! honk!" They were not afraid, although high up and in the very midst of the raging elements. Why should we be afraid? Have we less trust and confidence in the providence of good than have the birds? This question recalls the passage in the twelfth chapter of Job, "But ask now the beasts, and they shall teach thee; and the fowls of the air, and they shall tell thee."

What is this fear? If analyzed, it will be found to be merely a mental suggestion and nothing more, that if such and such a thing happens, evil will come to pass. Should this proposition, however, be met with the understanding that God, divine Love, is all-presence, all-power, and thought be thus lifted above the evidence of sense testimony, it will be invariably found that the evil does not come to pass. Instead, there will be the peace and happiness which comes from the Giver of all, who gives good alone.

We are sometimes beset not with physical, but with mental storms, the far worse passions of the carnal mind, and the only way to keep from being stampeded with fear when these elements rage as they seem to do, is to commence our thinking with "Christ's keynote of harmony, 'Be not afraid!'" (Science and Health, p. 410), to begin and to end with the understanding and realization of the presence and sure supremacy of harmony as God's universal and eternal kingdom "in earth, as it is in heaven." Christ Jesus, the Wayshower, said: "Fear not, little flock; for it is your Father's good pleasure to give you the kingdom."

Knowing the Truth

FLORENCE E. B. DONALDSON

CHRISTIAN SCIENCE demands of its students that they shall know the truth of being as demonstrable fact, and not merely speculate on or theorize about things pertaining to God. The psalmist understood this when, echoing the words of Moses, he sang: "Know ye that the Lord he is God." In the Preface to "Science and Health with Key to the Scriptures" Mrs. Eddy writes: "Ignorance of God is no longer the stepping-stone to faith. The only guarantee of obedience is a right apprehension of Him whom to know aright is Life eternal" (p. vii). As we grow in the understanding of the one Mind, we see that all true knowledge is in God, and therefore it is only as we reflect good that we are conscious channels for those real and true thoughts which are indeed "verities."

Science reveals the fact that belief in the supposititious fruit of the tree of the knowledge of good and evil is a transgression of divine law, which results in the further belief in the reality of sin, sickness, and death. The first step out of this mist of false sense is taken when, drawn by Truth, we look up, and then recognize that the error we have hitherto believed real, is indeed error, illusion, nothingness. When Moses bade the Israelites who were suffering from serpent bites to look up at the brazen serpent, he was leading them, in obedience to divine command, to look away from the error; and the presentation of that which was not only harmless but typical of wisdom, ousted from thought the fear of the poisonous vipers, whereupon the people were healed through their awakened sense of God's protecting care. We need to see clearly that the tree of the knowledge of good and evil is a product of mortal mind, arising from the mist which claims to cloud our thought, and is as erroneous as its phantom fruits, which must be seen as nothingness, powerless to tempt or to destroy.

The unreality of evil is necessarily difficult of comprehension to suffering sense; but the honest perusal of our text-book, with its reiterated statements and explanations of the illusion of sickness, compel the beginner to look at fleshly ills from a

Digitized by Google

different view-point, and it not infrequently happens that healing comes with the dawning hope that, as disease has arrogated to itself the right to impose penalties, these may be set at naught as God's law is understood and obeyed. In the light of our Leader's teaching on this point, we see clearly that from cover to cover the Bible shows sickness to be but the outcome of the Adam-dream, and as Christ Jesus demonstrated to his disciples for all time, it is no part of God's creation and cannot continue to be manifested when the realization of the true image and likeness eliminates the human fear of disease. It is helpful to note that not only did Jesus, and some of the prophets, prove the nothingness of the false claims of death, but that the verse of the psalmist's song which ecclesiastical theology has utilized as specially applicable to the human sense of death, really describes the supposed abode of the "king of terrors" as "the valley of the shadow [the illusion] of death;" and this is essentially the teaching of Christian Science.

True knowledge is of God, and must be truth. It follows, therefore, that in reality there is nothing to know or to be known but truth. To know the truth is to know something of God, to have some measure of understanding of His allness, some realization of conscious unity with the one Mind, the one Ego.

The most antagonistic among the Jewish scribes and Pharisees had to admit that Jesus showed great knowledge of the things of God. They also admitted his ability to express himself with judgment and acumen, with keen insight into motive, and with a wisdom of which they could not fathom the origin. But Jesus himself made no secret of the source of his knowledge: "The words that I speak unto you I speak not of myself;" and he told his disciples that in their hour of need it should be given them what they should speak. We cannot doubt that in his youth and early manhood Jesus was a good carpenter. He must have learned his trade in Joseph's workshop; but we know that the loving care for others, the meek obedience, the self-abnegation and growth in grace, were the result of constant communion with Spirit, God. We have abundant record that during his brief ministry Christ Jesus turned unceasingly for instruction and guidance to the source of all real knowledge, the only intelligence, and he gave a definite command to his disciples to watch and pray.

To know the truth is to know more of God. The task demands daily and hourly study, for it is the lesson of infinity, our work for eternity. Overwhelming as this may seem to finite sense, we know that spiritual progress is the law of God, and that with each clearer apprehension of divine Principle we are laying hold of eternal life.

Power of the Word

EDYTHE M. ELWELL

DURING the study of one of our Lesson-Sermons in which the parable of the sower was most helpfully explained and illumined by passages from Science and Health, the writer felt impelled to relate the following experience in proof of the power of the Word of God to "guide to the divine Principle of all good" (Science and Health, p. 299).

When I was a young girl, my mother took me to a Christian Science practitioner to be treated for neuralgic pains in the head. Neither my mother nor I knew anything about Christian Science, but because I had received no relief from medicine, and believing that this new religion, of which we had just heard in our city, was a form of faith-cure, she felt that at least I could not be harmed by the experiment. In a very few treatments I was healed. The practitioner very kindly explained to me what Christian Science teaches, and among other things she drew my attention to the last verse of the first chapter of Genesis, and told me that Christian Science enabled us to demonstrate the great spiritual truth contained therein.

The seed of truth was thus sown in my consciousness; but it fell upon stony ground, for an enemy—the arguments of error that I was too young to think for myself, and that I must not entertain the thought of leaving the church of my family for a new religion—came immediately and took away the word which had been sown in my heart. Then followed a few years of much mental disquietude and unrest; but later I went alone to New York city, and one day, as I sat pondering over my disturbed mental state and longing for inward peace, as clearly as though a voice had spoken to me, the words of that last verse of the first chapter of Genesis came to me, "And God saw every thing that he had made, and, behold, it was very good." Instantly I said to myself, It is the word of God, and immediately I thought of the practitioner at home, and I purposed at once to attend the Christian Science services; which I did, and was greatly helped thereby.

I made preparations to take up the study of Christian Science earnestly and systematically, but again error was allowed to hinder me; "the deceitfulness of riches, and the lusts of other things entered in," and choked the word, and it became unfruitful. The two years that followed were filled with bitter experiences, my mental condition growing worse all the while. Finally, when the night of materiality had closed in upon me so that I saw no ray of light anywhere, the word was spoken to me again, through the same verse and in the same way, and this time it fell on good ground, and I was healed and saved through Christian Science. I also found that, as God's servant had told me years before, Christian Science does enable us to prove that everything God has made is good, "very good," and that His word does not return unto Him void.

[Written for the *Sentinel*]

Love

LUCY NICHOLSON

Across the gulf of human limitation
Love reaches out!
Across the seething waves of desolation
And arid wastes of doubt
Love's mighty hands stretch ever,
Spanning gulf, desert, river!
And our poor groping fingers find and hold
Hands, strong and kind, and, following where they lead,
Out of the earth-mists cold,
Find heaven indeed!

No seas too deep, no desert-wastes too pathless
For Love to reach!
With all earth's hosts against us, Love, still scatheless,
Can meet, and conquer each!
Oh, how, then, be despairing,
Hurt, hopeless, or uncaring?
If we but push the clinging mist aside
And face, unfaltering, the ghosts of fear,
We find, with arms held wide,
Love, now and here!

Selected Articles

[Frederick Dixon in *Kentish Express*, Ashford, Kent, England]

It is impossible to go about the world, listening to what is being said and reading what is being written about Christian Science, without becoming aware that a vast amount of criticism and prejudice is being aroused by the perpetual reiteration of the statement that its teaching is opposed to what is termed historic Christianity. Now historic Christianity is just one of these phrases which is very much simpler to make use of than to define; and the various sects which make use of it so volubly against Christian Science are usually in the position in which Bacon declares Pilate was when he put his momentous question, "What is truth?" that is, too heedless to stop to consider the consequences of his own words; for historic Christianity, if it has any meaning at all, is the record of the struggles, quarrels, and differences of the various sects during the past nineteen hundred years. It may be as well to make this perfectly clear.

There was a time, centuries before Maupertuis, when it was a Christian dogma, and a dogma it was exceedingly dangerous to deny, that the world was flat. Augustine of Hippo had explained that this was so, that the earth was a vast plain surrounded by mountains, from which the heavens were stretched like a drum-skin. This was in order to get over the difficulty of the people at the antipodes at the second coming; for it was demanded, if the earth was spherical, how, when the last trump sounded and Jesus descended out of the clouds, were the people on the other side of the world to see him? Again, it was once insisted that the earth was the center of the planetary system. Copernicus' great book containing the refutation of this was placed upon the Index, and Galileo was summoned before the holy office for maintaining it. All this was necessitated by the acceptance of the dogma that the earth was created by God for the peculiar benefit of the Adamic race, as a dwelling-place, that is, for human man, supposedly made in His image and likeness, and irreverently described by Falstaff as a fantastical split radish. Truly, as Goethe says, "man never knows how anthropomorphic he is."

The simple fact is, that the Christianity of Europe has been changing century after century, sometimes even decade after decade. The Christianity of the fourth century, Mr. Froude says, in effect, was not the Christianity of the fifth century, any more than the Christianity of the fifth century was the Christianity of the centuries succeeding it; medieval Christianity died at the Reformation, and was reborn in Protestantism; and he goes on to ask if the medieval builders who built the cathedral of St. Andrews by the North sea, could meet the Calvinists who shattered it into fragments, or even the Presbyters who tread its aisles today, how much they would understand the one the other. This very briefly is the record of historic Christianity, that is, of Christian dogma as recorded in the histories of the centuries which have elapsed since Constantine. If anybody wishes to maintain that it is a record opposed to all the teaching of Christian Science, he will find that he will be able to rely on the support of every Christian Scientist in making his statement good.

History itself is little more than the human record of human actions. The more deeply you study it, the more completely it will minister to your perplexities; for the human mind is so constituted that no two people appear to be able either to view or to record the same incident in identical terms. "Read to me," said a great European statesman, who himself had made much history, to his son, "anything you may choose except history, for that at any rate we know to be untrue." Historic Christianity is the record of what men have preached as the Christ, and what men have done in the name of the Christ, and it is a record gathered in Eden from "the tree of the knowledge of good and evil." All that there is to know, from an historical point of view, if it is possible to put it in that way at all, of the Christ, is contained in the Bible; and the Bible, though in a way an historical record, has to be interpreted in a spiritual sense, if it is to be of any practical benefit to the world, and that is why Mrs. Eddy has said, on page 320 of Science and Health, "The one important interpretation of Scripture is the spiritual."

Now, in the Glossary to Science and Health, on page 583, Mrs. Eddy has defined Christ as "the divine manifestation of God, which comes to the flesh to destroy incarnate error." And in proportion as a man grasps the meaning of this, he attains something of the knowledge which Christ Jesus had of God; that is, of absolute Truth. This is what Paul meant by having that Mind "which was also in Christ Jesus." And it is obvious that just in proportion as one acquires the Mind of Christ, he loses the human sense of intelligence with all its limitations and its fears, and enters upon the demonstration of his God-given dominion over the supposititious power of evil, manifested to the physical senses in the Adam-dream of sin, disease, and death.

The gospels contain the historical record of the one who came proclaiming and demonstrating in the highways and byways of Palestine the Christ, the truth about God. The theology, that is, the word about God, which he preached, he demonstrated through the miracle or object-lesson; and he declared that those who believed on him, that is, understood his theology, would be able to perform his miracles, that is, to demonstrate the truth of that theology in the way he had demonstrated it. In this way he made the miracle, not a claim to divinity on his own part, but the test of his followers' understanding of his teaching, that is, of the Christ. If historic Christianity has any meaning at all, it is the record of this fundamental fact, and it is embalmed in the command, "Heal the sick, cleanse the lepers, raise the dead, cast out devils." Christian Science is doing this, and in consequence Christian Science is historic Christianity, the only historic Christianity there ever was or can be.

✧

[R. Stanhope Easterday in *Shelbyville* (Ind.) *News*]

A speaker at the County Teachers' Institute, as quoted in a recent issue, so misstates Christian Science teaching as sadly to misinform your readers. The province of the newspaper being to give facts to the public, I am sure that a short statement regarding the fundamentals of Christian Science will be acceptable.

The speaker in question states, "The fundamental principle of Christian Science is correct," but straightway indicates that he does not comprehend that same infinite Principle, when he implies that such "fundamental" is "the close relationship between body and mind."

The fundamental Principle of Christian Science is nothing short of God, infinite Truth, and a fundamental teaching of Christian Science is in the Scriptural admonition, "Let this mind be in you, which was also in Christ Jesus." Paul's ideal of Truth couched in this quotation inculcates the Mind of God, the Mind of the Father, which our Lord himself insisted was his only criterion of right thinking and right acting. Jesus' unequivocal declarations, "I do always those things that please him [God]" and "I seek not mine own will, but the will of the Father which hath sent me," bespeak that more wholesome, healthful, and life-giving outline of mental activity which characterizes Christian Science effort and savors not one whit of the doubtful, misleading, stultifying so-called

Digitized by Google

domination of "mind over matter" or of one human mind over another as hinted by our critic. In a word, Christian Science is a recapitulation of the teachings of Christ, whose psychology, as we have shown, was the psychology of the infinite or divine Mind, while his one sole principle of physiology was couched in the brief but significant admonition, "Take no thought for . . . the body."

[Albert E. Miller in *Once-a-Week*, Toronto, Canada]

The February number of *The Westminster* contains a contribution on Christian Science to which I beg leave to offer some reply, inasmuch as this article does not deal justly with the teaching of Christian Science, but on the contrary misrepresents it.

In making out what he alleges to be a case against Christian Science, the critic overlooks the fact that Christian Scientists consistently seek but to follow the admonition of Jesus of Nazareth, whom all Christians love and revere. Our Master in speaking to his disciples said, "As ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick." Further he said, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." One of the last things Jesus is recorded as having said to his disciples is, "These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." Christian Scientists frankly admit that the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, teaches that the whole of Christian Science is not yet demonstrated, that mortals must grow spiritually and attain a clearer understanding of Truth before they can accomplish all that the Bible promises.

Those who have had experience first with medicine and then with Christian Science treatment testify that their experience with the latter averages far better than their experience with the former; hence their allegiance to Christian Science. Those who have practised first medicine and then Christian Science testify as a rule that in the practise of the latter they have healed a larger percentage of their patients than while practising the former. Thousands of families testify that they fare much better with Christian Science and without medicine than they formerly did with medicine and without Christian Science, and only those who have had experience with both are capable of giving testimony of any value upon this point. Christian Scientists are an enlightened people, consequently they would not be inclined to give their support to any practise which is not demonstrably efficacious. They do not discard material remedies merely to be fanatically loyal to a religious belief, but because they have proved by actual experience that in so doing they are choosing the better way.

Let us glance for a moment at some of the statements which our critic makes concerning Christian Science. He says, for example, that the man who has neuralgia is told by the Christian Scientist that he has no pain at all, that his face is not really swollen, and so on. I doubt very much whether any Christian Scientist would undertake to tell a man who is suffering that he does not manifest in his physical body the pain which he believes he has. At the same time it is true that Christian Science leads the thought, as far as it can, away from the body, letting it dwell upon spiritual things. In Science and Health we find on page 460 the following significant paragraph: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being. If Christian healing is abused by mere smatterers in Science, it becomes a tedious mischief-maker. Instead of scientifically effecting a cure, it starts a petty crossfire over every cripple and invalid, buffeting them with the superficial and cold assertion, 'Nothing ails you.' "

The confession on the part of our critic that "nine tenths of all real diseases tend to cure themselves, and if permitted to run their course, disappear as spontaneously as they appear," leaves but little for the doctor of medicine to do, and arouses the suspicion that bread pills are all too frequently administered in a sort of hocus-pocus effort to make the patient believe that it remained for medicine alone to discover what ailed him and to administer the necessary relief.

Christian Scientists, as a rule, find effects where the average physician believes he has discovered cause, and in tracing all disease to a mental origin find themselves able not only to relieve the patient's present necessities, but to fortify him against a recurrence of the experience. Christian Science is teaching men and women how to live better lives and to dispense, in increasing measure, with the need of being sick. It does this by pointing out that all sickness is the result of sin, either intentional or unintentional, and that by keeping close watch upon one's mental guests, casting out such intruders as hatred, jealousy, sensuality, and envy, one can not only expect but actually maintain a much higher order of health than if the disease were not routed in its incipient stages.

The patients who come to Christian Science for healing are, in many instances, overdiagnosed; that is, they have had as many varieties of diagnoses as they have had physicians. They are overloaded with fear. They are sick and tired out with physical suffering; and it is no wonder that they find peace and comfort in this teaching, which proves that man is made in the image and likeness of God, and is in his real selfhood as perfect as the creator who fashioned him. It is no secret that the Christian Science movement has been recruited very largely from the ranks of those for whom medicine held no hope of recovery. The happiness and joy which has come into their lives through forming an acquaintance with Christian Science is of the substantial sort that enables them not only to enjoy better health than they formerly had, but to share it with others.

In this latter fact lies the secret, if secret there be about it, of the Christian Scientist's good health. In helping others one meets his own needs and contributes to his own welfare. The Christian Science movement is made up of those who are endeavoring to help others; and in this way they are breaking the fetters of disease and sin for themselves. It is an admirable plan, and one that is well worthy of consideration by all.

[Paul Stark Seeley in *The Telegram*, Portland, Ore.]

A statement made in a recent issue attempts to couple Christian Science with will-power and mental suggestion as a means of healing. The statement is entirely erroneous, and I therefore ask leave to correct it. In truth, will-power and mental suggestion are the direct antitheses of Christian Science, and cannot be used in connection with it any more than two objects can occupy the same space at the same time. Neither human will nor the usages of mental suggestion bear any relation to Christian Science, nor can either be coordinated or conjoined with it in practise. They are mutually exclusive, for where the latter is the former cannot be, and *vice versa*. Indeed, the line of demarcation is so clear that he who runs may read, if he will.

The basis of Christian Science healing is the recognition and realization in individual consciousness of God as infinite good, perfect and eternal, and of the true man, His son, as

Digitized by Google

made in His image and likeness, spiritual and good, thus affirming the spiritual fact stated by John, that man is in truth the son of God. Thus it is seen that healing in Christian Science is accomplished only through an understanding in some measure of spiritual existence, and of the Father, "whom to know aright is Life eternal" (Science and Health, Pref., p. vii). The human will, on the other hand, recognizing no God, acknowledging no law, abjuring all science, utterly forsakes the basis of healing accepted and proved true by the Master and his disciples, and now made the foundation for present-day healing works by Christian Science. Without principle or intelligence, the will of mortal man strives to *do that for which no reason* exists save its own vacillating *impulse. A phase of the carnal* mind declared by Paul to be "at enmity against God," it must eventually perish of its own weakness, as man perceives his present and eternal unity and coexistence with God, whose nature he in reality possesses. Then, laying aside all pride, arrogance, personal sense, and self-will, he will be able to say with Jesus, "I seek not mine own will, but the will of the Father."

Like will-power, mental suggestion has nothing in common with Christian Science. In fact, it has no more to do with Christian Science than it has to do with God, and its relationship with God is *nil.* Sometimes practised by a person upon himself, temporarily to remove one form of belief with another, it is more often employed by the hypnotist, with or without the subject's consent, to accomplish through another his own purposes, and wholly without consideration for God or his fellow man. Conceived in ignorance and clothed in a phraseology of modern invention, it carries beneath its mask the mystery, superstition, and sophistry of ages. Seeming at times to do good but in truth doing only evil, it is double-edged and Janus-faced, divided against itself. Without God it is without hope, and loses its temporary place in the practises of mankind as consciousness becomes enlightened and men turn from the testimony of material sense to spiritual sense, from the mortal to the immortal, from the temporal to the eternal. Both will-power and mental suggestion are of the mortal or human mind. Writing of this mind in Science and Health (p. 151), Mrs. Eddy says: "The human mind has no power to kill or to cure, and it has no control over God's man."

The world is even now tiring of its materialism, and is seeking a God whom man may not only believe in but understand. Outside of and apart from all material systems of belief and practise, Christian Science is demonstrating and proving by its works the existence of such a being, the one and only God, who is all-presence and all-power, so disproving the efficacy as healing agents of will-power, mental suggestion, and all other systems of earthly belief. "If," as Mrs. Eddy writes in Science and Health (p. 183), "Christian Science dishonors human belief, it honors spiritual understanding; and the one Mind only is entitled to honor."

✧

[J. W. Pope in *Southern Pines* (N. C.) *Tourist*]

A few days ago I picked up from my table a little book of thirty-three pages, entitled "The Law of Kindness." It was put out by the great publishing house of the Christian Scientists. It had lain on my table and shelves for months. I had seen it often and passed it by, but this time I thought I would read it. Now and then thoughts strike deep, and sometimes they seem to come as a sort of challenge to do a thing.

I read this book carefully. I read it again the following day, and then I summed up its contents and attempted a comprehensive study of them. What is Christian Science? What is science? I will not give Mrs. Eddy's definition; I will take Webster's. Science is to know. In a general sense it is knowledge, certain knowledge; the comprehension or understanding of truth or facts by the mind. The science of God must be perfect. To my mind there was incorporated in this little book the very quintessence of science and truth, so far as they are related to our duties to God and man; or to put it in another form, it contained all that is vital in the exposition of the great essentials of religion. Its whole structure was built on love. This was its sublime foundation, the bedrock on which it rested; and such religion, exemplified in life, we must clothe with the dignity of superiority, of supreme excellence.

To love is Christianity in the practical, in action, in the life. It is religion in the concrete. Love is the great basic principle that should govern all lives. Hate is destructive in all its tendencies. It creates discord in the family, church, community, and state. It blurs every life that holds it. It is the curse of all mankind. I am not a Christian Scientist. I wish I were, in the higher sense of the word, but I may pay homage to a people who have set their faces toward the light, who crave a larger knowledge of spiritual truth, who set their standards high, who place lofty and noble ideals before them and strive to realize them. The world has been degenerating from the spiritual toward the material, substituting a lip service for genuine worship. It has attempted to "serve God without God," and this is the paramount cause of the anarchical conditions that exist today.

✧

[Ezra W. Palmer in *The Denver* (Col.) *Times*]

The truthfulness of a sentence in a Christian Science lecture was challenged by a clerical critic in a recent issue. In the paragraph in which the sentence occurred, the lecturer explained the scientific meaning of communion, which he defined as "the recognition of the unity of God and man." When man is in genuine communion with God he is not subject to human thought or controlled by it. He sees and knows from a spiritual basis, as Jesus did when he knew the thoughts of those about him. But this is not human mind-reading, termed clairvoyance, hypnotism, or mesmerism.

Christian Science makes a clear and radical distinction between the workings of the human mind and true spiritual insight which rests on demonstrable understanding of God. "There is mortal mind-reading and immortal Mind-reading," as Mrs. Eddy points out (Science and Health, p. 83). In fact, the ecclesiastics of Jesus' time knew quite well the action of the human mind as manifested in necromancy, sorcery, clairvoyance, and hypnotism. So well did they know its evil nature that they deemed they could utterly discredit Jesus by charging that his healing was done on this basis. His scathing rebuke of this accusation is recorded in the twelfth chapter of Matthew, beginning with the twenty-fourth verse. In accord, therefore, with the teachings of Jesus, the lecturer declared that the "theory of transmission of thoughts from one person to another was false," because man is a spiritual being, and in reality receives thoughts and ideas only from God, the divine, infinite Mind.

Doubtless the critic who so fluently charged falsehood on the part of the lecturer, experienced the phenomenon recited. Furthermore, he doubtless could watch the sun rise and then declare that the sun moves, for behold, he saw it move! Thousands of men for long centuries did so declare, and Galileo suffered imprisonment for exposing that fallacy. So patently apparent is the falsity of this sense evidence that any man who adheres to it, attracts public attention, as would the unearthing of an unusual fossil. Likewise, enlarged spiritual insight into the teachings of Jesus shows the theory of clairvoyance and telepathy to be false, despite the protests of modern critics.

Editorial

"The First Church of Christ, Scientist, and Miscellany"

CHRISTIAN SCIENTISTS everywhere will welcome the announcement, from the publisher of Mrs. Eddy's books, on page 178 of the *Sentinel*, to the effect that there is now in process of printing a book by Mrs. Eddy, entitled "The First Church of Christ, Scientist, and Miscellany;" in other words, a second volume of the contributions of our revered Leader to the periodicals which she founded, together with such contemporaneous explanatory and historical matter as was selected by her, also the articles specially contributed by her to various outside publications. The work of compiling this volume was begun while Mrs. Eddy was still residing in Concord, N. H., but the pressure of other matters delayed completion, and it is only recently that it has been possible to get the book ready for the press.

"The First Church of Christ, Scientist, and Miscellany" is uniform in style with the other books by Mrs. Eddy, and numbers 364 pages. The first part is given over to the history of the building of the extension to the original edifice of The Mother Church, and the second part contains the history of First Church of Christ, Scientist, Concord, N. H., our Leader's gift to her home city; also Mrs. Eddy's messages and letters to the branch churches, together with her many vital contributions to the literature of Christian Science which afforded such timely help and counsel when they were first given to the field through the *Journal* and *Sentinel*, and which will continue to heal and to bless throughout the ages. We are sure our readers will welcome the opportunity to obtain these treasures from our Leader's pen in a permanent form, as it makes possible the possession of articles hitherto unavailable because long since out of print.

"No monopoly"

VERY closely related to the belief that some particular person is "the practitioner" for a certain locality, is the mistaken sense that a person who has once been the patient of Mr. A or Mrs. B is forever bound to this practitioner and under a very solemn obligation to apply to Mr. A or Mrs. B, as the case may be, when in need of help in Christian Science. And very much akin to both of these beliefs is still another, namely, that as Mr. C or Mrs. D is "the teacher" in a certain city or town, no person residing in that place who wishes to be taught in a class, should presume to apply to a teacher elsewhere for such instruction. A little reflection, however, will show that these beliefs are simply beliefs of proprietorship which are the outgrowths of a false sense of man that would make him responsible to some individual instead of to his creator.

That these false concepts of man's relationship to his fellows should have gained a footing in many places is to be regretted, for it is largely upon this cause that the personal friction which hinders the growth of churches and individuals is based; and when this sense of egregious personality finds expression in such statements as, "Mr. E will not be healed until he comes back to me," or "Mrs. F will have to suffer until she acknowledges me as 'the teacher' or 'the practitioner' of this field," it is time for serious thought and a speedy getting back to the fundamentals of Christian Science teaching. There is nothing in the Church Manual or in Mrs. Eddy's writings which can possibly be construed as affording a foundation for any of these erroneous conditions of thought, in fact Section 30 of Article VIII of the Church by-laws distinctly forbids such mistaken practises in its specific declaration that there shall be "no monopoly." Again, in Section 7 of Article XXX, Mrs. Eddy places on each member of the church the responsibility for the proof to the public "that Christian Science heals the sick quickly and wholly."

Every person who knows sufficiently the basis of Christian Science to heal the sick, should have the opportunity of doing so, unmolested and unafraid, certainly so far as other Christian Scientists are concerned, as long as the "signs following" testify to the genuineness of his understanding. In fact, Mrs. Eddy declares that "it is possible,—yea, it is the duty and privilege of every child, man, and woman,—to follow in some degree the example of the Master by the demonstration of Truth and Life, of health and holiness" (Science and Health, p. 37); and there are few communities where a willing and really capable worker will not sooner or later find himself fairly forced into the work by some case of pressing need. The sooner Christian Scientists awaken to their personal and individual responsibility for the propagation of this healing gospel among their fellows, the better it will be for them in the resultant growth in understanding which is the natural outcome of demonstration, and which must in turn redound to the benefit of those who come to them for help to throw off the bondage of sin and disease.

The call to take up the healing work is a high and holy one, and every opportunity to gain a deeper understanding of the fundamentals of Christian Science healing should be improved. It was to enable the student to profit by the experience of those more advanced that class teaching was instituted, and it is impossible to measure the far-reaching influence of these yearly classes and association meetings. But the privilege thus conferred must not be selfishly used, nor will it be if those thus favored are indeed followers of him who said, "Take my yoke upon you, and learn of me; for I am meek and lowly in heart." Nor need any hesitate to "speak the word" because he has not yet "attained," for we have our Leader's assurance (Science and Health, p. 495) that to progress most rapidly in the understanding of Christian Science one should "study thoroughly the letter and imbibe the spirit," a method which is surely the open door to practical demonstration on the part of her every follower.

ARCHIBALD MCLELLAN.

True Neighborliness

THERE is no sign of our times which is more encouraging than the universal longing for the fruits of brotherhood. It is a cry for fellowship and kindliness, and it can be satisfied, not by legislation and the enforcement of right, however legitimate and desirable these may be, but only by obedience to Jesus' command, "Thou shalt love thy neighbor as thyself," which is the theme and demonstration of Christian Science.

In answer to a direct question respecting this command, Jesus told the simple story of the good Samaritan, in which he defined not only the nature of neighborliness but its true Christian measure. He makes it clear that the poor man who had been wounded and robbed, symbolizes our "near-by" needy fellows, as the Greek puts it, and that they are to be loved as we love ourselves and would have others love us. The conduct of the Samaritan has always been recognized as consistently Christian, and the heart of the great economic movements of our times is a demand that Christians shall follow his example, a reasonable requirement which certainly must be met before our social problems can be solved.

Digitized by Google

The Master came at a time when racial pride and prejudice had united to bring about the unbrotherliness of religious intolerance and social exclusiveness. This was the attitude of the scribes and Pharisees whom he addressed, and the pith of his story was the condemnation of caste, their lack of the Messianic impulse of genuine compassion.

But says dilettante human sense, How can I love the unlovable? and the answer is, You cannot, but you can be compassionate toward it. We have no reason to think that the Samaritan felt any romantic attachment for the personality of the wounded man, but he did manifest unselfish consideration for him, and this, surely, is the meaning of the *prescribed measure "as thyself."* The recognition of our own *unlovableness in disposition*, conduct, or person would not lessen our demand that justice be done us, or our interest in securing for ourselves every creature comfort. Men are none the less considerate for themselves though they find much to dislike in themselves. They are always self-compassionate, and every follower of Christ must be thus minded toward his every brother man.

"But," some may say, "that is difficult!" Yes, it is; and it is just here that Christian Science comes to give us the Master's vision of man, that we may be compassionate as was he toward all who have been wounded and robbed by false material sense or by that selfish connivance or custom which Burns names "man's inhumanity to man." When in Christian Science we come to see man in God's image and likeness, altogether lovable and good, we also see that the ministry of compassion is not an expression of sentimental sympathy, but of the healing activities of spiritual understanding. When we meet a cripple we are always kind to him, gladly give him our seat. Enlarge this nobler sense, and it will become all-inclusive, like that of Jesus, of whom our Leader has said that he "beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. . . . and this correct view of man healed the sick" (Science and Health, p. 476).

This is not a theoretical view-point from which, after the manner of the priest and the Levite, we are permitted to look complacently from afar upon human misery and say, "Be ye warmed and filled;" it is the secret of true Christlike affection for our fellow men, and it alone enables and impels us to exhibit that genuine compassion which helps mightily in the healing of humanity.

JOHN B. WILLIS.

✧

Truth's Appearing

IN the fourth chapter of Paul's second epistle to Timothy he speaks of the "crown of righteousness, which the Lord, the righteous judge," shall give to all those "that love his appearing." The apostle warns the followers of Christ against false doctrines, disputes, and endless discussions, and urges Timothy to be faithful, when he says, "Watch thou in all things, . . . make full proof of thy ministry;" a demand which as surely rests upon us today if we count ourselves among those who love Truth's appearing.

If we had been asked, before we became students of Christian Science, what we understood by the appearing of God or of Christ, it is likely most of us would have replied that it meant the coming of Christ to judge the world; but Paul's words respecting those that "love his appearing" would hardly have been applicable in such case, for had we not been accustomed to think of that coming, according to the words of an old hymn, as

> That day of wrath, that dreadful day,
> When heaven and earth shall pass away;

and how could we love such an appearing, even though we might believe it to be inevitable? In Christian Science, however, the appearing of Christ has taken on for us a quite different meaning. To many of us who were in the depths of sorrow or sickness, some kindly voice said, as to the blind man, at Jesus' bidding, "Be of good comfort, rise; he calleth thee." Then came to the suffering human sense the appearing of the ever-present Christ, the Truth that antedated Abraham, and with Truth's appearing came the healing of sorrow and sickness and the casting out of sin. Who would not love such an appearing and rejoice in it "with joy unspeakable and full of glory"!

But there is another side to the question. Are we giving "full proof" of our love for Truth in watchfulness and prayer, and especially in guarding the treasure which has been given us, in its unsullied spiritual purity? Are we ofttimes measuring ourselves by the stature of manhood in Christ, and finding whether we are really coming out from materiality with its baseless delusions, and growing so strong in the strength which God supplies that we can face every temptation fearlessly, yes, gladly, knowing that each trial, rightly met, means another victory for the cause of Truth? Do we in all things give Truth preeminence over every personal consideration, being all the time fully aware that nothing else counts for anything?

What if others do not see things as we do (which is likely to be the case until those concerned in each human problem see it in God's way), should not those who see most clearly love Truth's appearing so well that they can wait patiently until the divine way appears to all who are laboring for our cause, whatever the line of their activity? If we ourselves are giving "full proof" of our obedience and sincerity, we need have no fear that the cause of Truth can be hindered or even delayed in its stately advance, for we have this assurance of our revered Leader: "Whatever obstructs the way,—causing to stumble, fall, or faint, those mortals who are striving to enter the path,—divine Love will remove; and uplift the fallen and strengthen the weak" (Miscellaneous Writings, p. 328).

We should never lose sight of the fact that Love alone can really remove whatever would seem to hinder Truth's appearing, and as we reflect this Love all that is crooked "shall be made straight, and the rough places plain." Isaiah, who said this, went on: "And the glory of the Lord shall be revealed, and all flesh shall see it together." What a promise, for with its fulfilment all sickness, sorrow, pain, and death shall vanish away forever. Once we believed that Christ would come in the clouds. Now we know that as Christ, Truth, appears the clouds are dispelled,—all the clouds of fear, doubt, self-will, and self-love fade out to those who are, to quote Paul again, "looking for that blessed hope, and the glorious appearing of the great God and our Saviour."

ANNIE M. KNOTT.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second

Digitized by Google

floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

GRAND VIEW, IND.—With a small society of twelve resident members, it seemed quite an undertaking to maintain a reading-tent at the first Chautauqua held in Grand View, Ind., in July, 1912, but realizing the source of our strength, it was decided to take the step; and this was done, with creditable success. When the advisability of maintaining a tent at the second Chautauqua was discussed, each member felt the step to be a wise one. The superintendent of the grounds was a prominent doctor, who thought he did not want a Christian Science tent inside the Chautauqua fence, but when he gave us the most beautiful and prominent location on the grounds, we certainly felt grateful to divine Love for meeting our need and helping us to realize that all of God's children do love each other. We had many more visitors than during the previous Chautauqua and distributed a great many pieces of literature. The platform manager, who is a prominent Presbyterian minister, made several friendly calls at the tent.

Correspondence.

HUTCHINSON, KAN.—The Christian Science tent, maintained by our local church at the recent state fair held in this city, accommodated a large number of visitors. The thoughtful attention given and the comfort afforded by this tent were very much appreciated by all who visited it, and many departed with a kindlier and more receptive attitude toward Christian Science. A special effort was made to acquaint all with *The Christian Science Monitor* as an exponent of clean journalism, and its message of newspaper cleanliness and wholesome thought was found to be a welcome one. We also took advantage of this opportunity to give out announcement cards of our lecture. During the week, 770 *Monitors*, 570 *Sentinels*, 149 *Journals*, and 328 pamphlets were distributed.

Correspondence.

INDIANA.—The Christian Science churches and societies of Indiana again maintained their reading-tent and exhibit at the state fair this year. Free literature, including copies of the International Edition of *The Christian Science Monitor*, was dispensed. The exhibit contained a copy of each kind of literature issued and sold by The Christian Science Publishing Society, including the Bible (King James version) and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. A particularly interesting feature of the exhibit this year was a copy of the German translation of Science and Health.

Indianapolis Star.

BALTIMORE, MD.—Three services, all of which were largely attended, marked the formal opening yesterday [Oct. 5] of the beautiful new First Church of Christ, Scientist, which adorns University parkway, near Roland park. The structure is seventy feet square, and the main auditorium has a seating capacity of at least seven hundred, with room for at least three hundred more in the galleries that hang over the large vestibule.—*Baltimore American.*

BUFFALO, N. Y.—The new edifice of First Church of Christ, Scientist, at North street and Elmwood avenue, was opened Sept. 28. Work on the building was started in November, 1911, the corner-stone being laid on May 7, 1912. The auditorium will seat twelve hundred persons, and the whole building represents an investment of about two hundred and fifteen thousand dollars.—*Buffalo Commercial.*

The Lectures

Baltimore, Md.

In introducing William R. Rathvon, who lectured on Christian Science under the auspices of First and Second Churches, Frederick D. Hall said in part:—

Christian Science is a religion of love; it is a demonstrable religion, to which the lives of thousands and tens of thousands of its adherents are daily testifying. It heals, it binds up the broken-hearted, it sets the captive free—free from the bondage of sin, disease, and death. Jesus said, "Ye shall know the truth, and the truth shall make you free." There is no time limitation, no indefinite waiting for the fulfilment of this promise, it follows as a natural consequence upon our realization of the truth; and I take pleasure in announcing the presence of one in our midst who will expound this great truth as taught by the Galilean Prophet over nineteen hundred years ago, and revealed to this age by Mary Baker Eddy, the Discoverer and Founder of Christian Science.—*Correspondence.*

Scranton, Pa.

When Virgil O. Strickler lectured here on Christian Science he was introduced by Laurence H. Watres, an attorney, and first reader of the local church, who said:—

It is not necessary to cite particular instances of the many problems confronting the world in national and international affairs, in civic and social class questions,—not to mention those which perplex us as individuals,—to bring out the fact that there is involved in the solution of each problem the working out of a law higher and more far-reaching than any merely human rule or enactment. The solving of all problems on a right basis depends on the working out of God's laws. It is not an entirely new proposition, that we are justified in searching for and expecting to learn the truth today as to what God's laws are,—the working of those laws and the actual extent to which we can apply them to practical affairs. The teachings of Christ Jesus are full of promise and full of the possibility of immediate fulfilment in this respect.

With a view of bringing light to bear on this search for Truth, rather than for the mere purpose of increasing the strength or membership of the Christian Science church, this lecture is being given.—*Correspondence.*

Toronto, Canada

What was probably one of the best attended lectures on Christian Science ever held in Massey Music Hall was given by Judge Clifford P. Smith. He was introduced by Jack M. Jackson, first reader, who said:—

What a world this would be if we could all, forthwith, lay down our burdens, the load of trouble and distress, mental and physical, which so many appear to be carrying! What a difference it would make if we could approach our daily tasks free from the load of care, rejoicing each day in the harmony and freedom from burdens of all sorts which is man's normal state of being, his divine and everlasting heritage, a freedom which is possible of attainment here and now by each one of us, in proportion to our spiritual understanding of the Bible promises; for did not Jesus the Christ say, "Come unto me, all ye that labor and are heavy laden, and I will give you rest"?

Too long have most of us regarded these Biblical invitations and injunctions as intended only for a remote age, and impos-

Digitized by Google

sible of being complied with in the present day. Christian Scientists the world over, however, are proving daily that the invitation and promise just quoted are capable of being fulfilled literally today. Daily they are parting company with their ancient enemies, sin, disease, and burdens of all sorts, through the light which Christian Science throws upon the Scriptures, and which enables the Christian Scientist to say to these enemies, with the voice of authority, "Loose him, and let him go." There is nothing mysterious about the way in which these results are being accomplished, and the gospel of salvation and healing is free to all.—*Correspondence.*

✧

Sandusky, Ohio

A lecture on Christian Science was delivered by the Rev. *William P. McKenzie* in Carnegie hall. He was introduced by Thomas H. Savery, Jr., who said:—

We are living in a wonderful age in which truth is being sought. We chiefly desire to know the truth regarding God and our relation to Him,—to God who is Life, Truth, and Love as taught by Christ Jesus,—and more of the true, practical Christian religion which our Master taught and which brings joy, peace, health, and harmony into our lives, our homes, our business, and into every relation and experience in life.

William Penn once wrote, "Truth is worthy of inquiry; for it of all things is most reasonable;" and Jesus said, "Ye shall know the truth, and the truth shall make you free." Through Christian Science this truth is being taught to the world, and today hundreds of thousands have come to know it and have found the practical religion of Jesus, which he taught and demonstrated. It is being proved today throughout the world and the command of Jesus is being fulfilled, "Go ye into all the world, and preach the gospel," "Heal the sick, cleanse the lepers, raise the dead."—*Correspondence.*

Testimonies of Healing

I am a traveling salesman, on the road almost constantly, and tonight while reading the Bible in my room, I was deeply impressed with these words of Christ Jesus: "For I tell you, that many prophets and kings have desired to see those things which ye see, and have not seen them." I feel that I no longer have any reason or right to withhold my testimony of healing; certainly no one in all the world should be more truly grateful than I, for after years of wrong living and thinking, a wreck financially, greatly impaired mentally, and tortured night and day in a veritable hell of mind and body, I lay in the last ditch, at the parting of the ways, and, as two St. Louis doctors decreed, with only two more hours to live.

In this extremity my wife was asked by a kind-hearted friend why we did not try Christian Science, since all else had failed. I had to mortal sense typhoid in its worst form. For days, in order to reduce my temperature to normal, three expert nurses had been engaged in packing my fevered, unconscious body in ice every few hours. I had what the doctors pronounced eight distinct hemorrhages in a few hours. In this condition an absent treatment was given me by a Christian Science practitioner in his home, some five miles away, with the result that in twenty minutes I rallied; in two hours the doctors said a miracle had been performed, for my temperature had gone down to normal, and I slept quietly and peacefully without fever or delirium. My recovery to perfect health was rapid, and wonderful to tell, not only did several chronic physical complaints leave me at the same time, but I was also permanently cured of the tobacco habit of years' standing, gambling, swearing, and drinking. In short, I was absolutely made new,—spiritually, mentally, morally, physically. I soon procured a splendid position as a traveling salesman with a good salary attached, so that my family and I have everything in reason that money can buy.

I am indeed grateful to that noble woman, Mrs. Eddy. Her teachings have made my life a heaven where it was once a hell! My one great desire is to learn more of the blessed Christ, divine Truth, and if possible to help others to a realization of that peace "which passeth all understanding."

WILBUR F. WILSON, Austin, Texas.

✧

For a great many years I was a hospital nurse, and I remember once asking a patient who was interested in Christian Science what it was. She said I should wait until I was in great need and I would then understand it. At the beginning of 1908 I had a severe nervous breakdown, which took the form of extreme sleeplessness, with intense neuralgia in my head. This condition lasted almost a year, and as I then began to sleep better, I thought I should get well; but the spine seemed to be affected and my ability to walk became less and less, while I suffered greatly from pain in my back. I went to a hydropathic institution and tried baths, massage, and electricity, but as time went on I grew gradually worse.

At the end of about three years, I was a complete wreck—could hardly read, write, or walk. I was in bed all the time, with the exception of sometimes getting out of doors in a spinal chair. I then heard again of Christian Science, and as a last resource decided to try it, although I did not know much about its power to heal, or that it was a religion and had churches. I could not go to a practitioner, so I had absent treatment, and on the first day I was healed of something from which I had suffered for twenty-five years. At the end of three weeks I was able to go to London alone, and a week after that I could walk a mile. I continued treatment for some months, since the understanding came to me slowly, but during that time I was able to leave off glasses. I am now absolutely healed, and with the healing has come a clearer understanding of God. My gratitude for Christian Science is very great.—EDITH M. SMITH, London, England.

✧

Although it is only four years since I came into Christian Science, I know that I have found the straight and narrow way and I am trying to walk therein. I came for healing and have been wonderfully helped of chronic trouble. I have had many demonstrations, one in a case of severe burning. A large piece of meat slipped into a kettle of hot fat, which splashed over my face and eyes. For a moment I suffered intensely, but instantly I declared the truth of being, and in a moment the pain had gone never to return. For a few minutes my sight was blurred, but it soon cleared, and I have had no trouble with my eyes since. The water ran from my face all day, but I went about my work just as if nothing had happened, and had no trouble whatever. I have not even a scar to show how badly I was burned.

For this healing and many other blessings I give God the glory, and I know He raised up Mrs. Eddy to make the way plain for us. The desire of my heart is that I may understand more and more of this truth, the truth that brings us out of bondage, and that my life may be so true that I can help others who are weary and heavy laden to understand it. I thank God every day for our helpful literature.

MRS. ANNIE C. HAMLIN, Brooklyn, N. Y.

✧

It is with a heart overflowing with love and thankfulness to God, and gratitude to our dear Leader, Mrs. Eddy, for her unselfish life and her devotion to the cause which has been and is such a help to mankind, that I send this testimony. I have been healed of severe nervous conditions and throat trouble of long standing; also of two diseases pronounced incurable by one of the best physicians in Los Angeles, namely, abnormal growths and a disease of the bladder in its worst stage. I was healed of the latter in one treatment. I have also witnessed many other wonderful cures in our own family as well as among those we know.

My husband was healed of the drink habit, to which he had been a victim for nearly twenty years. This had caused his family and himself untold suffering, loss of self-respect, and business trouble. His healing was most remarkable, not only because of the depth to which he had sunk, but because so many of his old associates turned about and followed his example. This healing took place three years ago, and since that time he has had no desire, whatsoever, for alcoholic drink, and is healthy, happy, and prosperous. A little child in our family would surely have passed on had it not been for Christian Science; also a woman in our employ was healed of a severe attack of apoplexy after her doctor had told her he could do no more—that she was beyond his help.

Mere words cannot express what this truth means to us, and I can only say daily, Thanks be to God, whose dominion is an everlasting dominion over sin, sickness, and death.

JEANICE S. BLACK, Chicago, Ill.

✧

In March, 1905, I was taken with a severe attack of acute lung trouble. I called a doctor, and in examining me he said that one of my lungs was badly affected, that I would have to do certain things, and that if I refused he would not treat me. This was the fourth day after I had been taken ill. I dismissed him, and as there was no other doctor in

Digitized by Google

town I began to prescribe for myself. In two days my fever had become very high, and I felt that if I did not receive relief from some source I could not live long. The fall before this, my wife had taken up Christian Science, and I had been healed of a severe stomach trouble. She naturally wanted me to try Christian Science again, and while I thought it was all right for her, I cared nothing about it myself, not understanding the truth. I told my wife to go for a notary public to attend to my business, for I would have to die, but her particular friend, a Christian Science practitioner, called about this time, and she said I need not die if I did not want to. When I asked her if she could heal pneumonia, she said she could not, but that God could. I then asked her if she would give me treatment; she said she would if I would give up medicine and the taking of my temperature. I consented to do as she requested.

This conversation took place about three o'clock in the afternoon, and in a short time I became unconscious, so that my wife thought I was dead. I realized nothing until about seven o'clock, when everything became clear to me again and I was free from the illness, excepting that I was very weak. The next morning, however, I was up at the breakfast table, eating breakfast, when the practitioner came in at half past six. An obstructed condition of the bowels was overcome almost at once, and on the following morning I was out taking care of my team. When the doctor was told that I was out he said it was impossible! I was back at my work, well-drilling, inside of two weeks, however, and out in all kinds of weather, with no bad effect.

I will mention another experience with instantaneous healing. A tooth was paining me, my face was badly swollen, and my wife called in the same practitioner. This was late in the evening, so I went to bed, slept well all night, and in the morning my tooth was all right and gave me no further trouble. I am grateful for the quick relief experienced on both occasions, and it is my desire to understand more of this truth and to practise it in my daily life, for only in this way can we prove our deep-felt gratitude to God, and our thankfulness to Mrs. Eddy for her labor for humanity.

J. W. Ask, Kirkwood, Cal.

I gladly certify to the truth of the above testimony. I was an eye-witness to this demonstration in the case of so-called pneumonia. My husband seemed to have passed away, and the practitioner called him three times before he showed any signs of life. He then revived, and in a short time threw off the accumulation from his lungs, became conscious, and was free from fever and pain. He perspired freely that night, and in the morning he changed his clothes and went back to bed, but in a short time he said he was hungry, got up, dressed, and for the first time in more than a week, ate normally. I was at that time young in Science, and it seemed wonderful to me to see one raised from the dead, as it were. We have had many proofs of God's healing power since then.

While I am thankful for this physical healing, I am yet more so for the spiritual uplift and the knowledge of man's relation to God. I cannot express my deep gratitude to God, and my thankfulness to Mrs. Eddy, the Discoverer and Founder of Christian Science.

Mrs. Laura B. Ask, Kirkwood, Cal.

✦

Up to the time my little boy was six years old I believed in *materia medica*. The child was considered very delicate. He was pale and lifeless and very irritable. We were unable to make him eat properly, and often for days he took nothing but water. When he was six years old the crisis came,—he had convulsions one after the other. We had three doctors, one staying night and day, but for about a week the child steadily failed. A Christian Science friend heard of this and called to inquire for him. I told her the doctors had given him up and I felt all hope was gone. She then asked me if I would be willing to try any other treatment, and I told her I would try anything. She called at half past two, and at that time the child lay helpless on the bed. After she had been treating him but a short time the child brightened, and soon asked to have me wash and dress him. Then he asked for something to eat. We gave him milk and he drank it, although he had never liked it before. By half past four he was walking around and playing with his toys. Since that time he has eaten well, and is now a happy, healthy boy.

I should also like to tell how Christian Science helped me personally. Ever since the birth of my first child, I had suffered constantly from pain in my side. The same practitioner treated me, and now the trouble has entirely disappeared. I cannot be too thankful to God for leading me to Christian Science.—Mrs. Selina Ellen C. Sowdon, Roslindale, Mass.

✦

I wish to express my gratitude for the great blessings which Christian Science has brought to me and mine. My ailments were seemingly legion, but the truth has been my only remedy for a number of years. Rheumatism in different forms, dropsical swelling, and later a bad leg which would be considered serious, were all perfectly healed by the power of Truth. In July, 1912, while about my work in extreme heat, I was suddenly overcome with what seemed to be paralysis of the right side. I could not control myself, and when my daughter came to me I could only speak a few words, and those not very distinctly. I tried to realize the truth for myself during the day, but as the trouble did not yield, I followed the advice given in our text-book (p. 420), "If students do not readily heal themselves, they should early call an experienced Christian Scientist to aid them." When the practitioner arrived I could with difficulty tell my trouble, and when I tried to get up I was unable to do so. The following morning (Sunday), although I could not use my hands very well, my speech was improved, and I walked to church both morning and evening. Friday of that week I was able to take part in cleaning our church for the Sunday service. At the end of the second week I dismissed the practitioner, feeling even brighter and better than before this experience.

Although we have had many wonderful proofs of the power of divine Truth, I think this last the greatest demonstration of Christian Science in this locality, showing us as it does that "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear." I am truly thankful to God, and grateful to Mrs. Eddy, who so bravely held the light of this glorious gospel of healing before mankind.

Mrs. Ellen J. Young, Peterboro, Ontario, Canada.

✦

For more than five years I have been studying Christian Science, and have found it to be truly the promised Comforter. I was healed of liver trouble, from which I had suffered for six years, and could not find any relief in *materia medica*. This disease seemed to have depleted the system greatly, and I was fast becoming a nervous wreck. It was impossible for me to perform my daily tasks; but now it is quite different, for my work is accomplished easily and with little or no fatigue. Members of our family have also been healed. Scarlet fever, kidney and lung trouble, heart disease, chronic bronchitis, and some minor ills have all been overcome.

Digitized by Google

Our blessings have been manifold under the ministrations of Christian Science, and we feel greatly indebted to Mrs. Eddy for this wonderful discovery which she has given to the world.—Mrs. William J. Schroer, Hartwell, Ohio.

✦

Four years ago my misunderstanding of Christian Science yielded to the truth regarding it, and I found what I had long sought, namely, the truth about God and man's relation to Him. Since then not a day has passed in which we have not proved the power of divine Love to overcome discordant conditions. I am very thankful to God for Christian Science, and grateful to Mrs. Eddy for making it known to us "as the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1). I am also grateful for the healing which has been experienced by my family and myself; but beyond the physical healing is the happiness and peace which come with the unfolding of spiritual understanding. I know that a greater realization of God's presence and power is revealed to us as we express our willingness to fulfil our "promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497).

Kate Chaffee Hamilton, Fort Riley, Kan.

✦

I was healed of nasal catarrh in a serious form and of many years' standing by reading the Christian Science textbook. This trouble had come upon me almost unawares, through a long period of years, until it had assumed a chronic form. I will not enter into details as to the many different ways I was affected and seemingly hindered in my work as a teacher, but I was nervous and irritable, and growths had formed in my nose which affected my breathing. The doctor informed me that unless I had these growths removed, they would endanger the bones of my nose.

At this time I became interested in Christian Science, but not from any thought of physical benefit. I never thought of my physical condition when I began to read Science and Health, but I had not read very many weeks before I became suddenly aware one night, as the book dropped in my lap, that the catarrh was gone. That was over six years ago, and the healing has been complete. My nose is perfectly clear, and I have no difficulty whatever in breathing. I also wish to bear testimony to the spiritualization of thought realized through the study of Christian Science.

Leila Ada Cooper, Pittsburgh, Pa.

✦

[Translated from the German]

My brother, who lives in Oberreichenbach, not far from Frankfort-on-the-Main, was healed of a very serious lung trouble through reading *Der Herold der Christian Science* and having a few explanations given him on the subject of Christian Science. In the winter of 1910 he became very ill and was unable to attend to his work. He had been bedridden for several months when Christian Science was brought to his attention. Of the two physicians consulted, the second one, a Frankfort man, had diagnosed the case as pulmonary disease, while the village physician said that my brother would die within a few months unless he were taken to a sanitarium; but after hearing of Christian Science my brother asked for the *Herold*. A few explanations were given him on the subject, and he then began to read and look up the Bible passages indicated in the Lesson-Sermons and ponder over them. After a few months he was healed, and in the autumn had recovered the strength necessary to do labor in the fields. When examined by his former physician, the latter declared that his lungs were in a perfectly sound condition.

My mother was greatly rejoiced over my brother's recovery, and consequently looked into Christian Science. She laid aside a truss which she had worn for twenty-eight years, and was able to do very heavy work without experiencing any inconvenience. Our whole family has been blessed, and we are all indeed thankful for the many benefits received through this great truth.

Luise Gröll, Oberreichenbach i. Vogelsberg, Post Birstein, Germany.

✦

I desire heartily to recommend Christian Science to any one needing help, as the work done for our child and myself has been entirely satisfactory. Though not a Scientist myself, I am thankful for and appreciate the help received. I fully realize that it was God's truth which benefited us. The first treatment given was for our boy in the summer of 1911, when he had a severe fall, bruising himself and injuring the skin. After a few hours he complained of his head, and thinking he might have received some internal injury, I called the practitioner, who treated him about a half hour, when he fell asleep and slept over three hours. He then got up and played as though nothing had happened. After two or three treatments he improved so rapidly that it was marvelous to me. At the end of the third day all the broken skin peeled off and the scars were entirely gone. I know that under material treatment it would have taken about two weeks for similar results. Another time a fever, from which he had suffered all night, was overcome with one treatment. Besides this, a pain across the forehead which had affected my eyes, was also overcome with one treatment. I trust this may prove of benefit to some other sufferer.

Mrs. C. Wieland, Kirksville, Mo.

✦

I have been a student of Christian Science for more than ten years. Before taking up the study I was a veritable slave to the use of drugs, believing that my existence was dependent upon them; but upon hearing of Christian Science I was at once healed of this form of idolatry. I have found that a demonstrable knowledge of Christian Science is of inestimable value to the business man, and inasmuch as Christian Science is the science of right thinking and acting, all problems may be readily and accurately solved by its Principle.

I am appreciative of the privilege of association with other Scientists in the Sunday school and church work, and I am grateful to God, the giver of every good and perfect gift, as well as thankful to Mrs. Eddy, through whose spirituality this understanding of Truth which heals disease and overcomes sin was brought forth.—Charles F. Cox, Watts, Cal.

✦

I wish to testify to my mother's healing, also to the way that I have been helped to understand God through Christian Science. When a practitioner was called to my mother, she was suffering from liver complaint to such an extent that she could keep nothing on her stomach, not even water. She was relieved of all pain in a very short time, and could eat anything. The practitioner found me in a fainting condition, in which I had been for two hours or more, but I was brought back to grasp the truth that God is Life, and after that I gained a normal state of health. I cannot tell any one how thankful I am to God for what Christian Science has done for my mother and myself.

Margaret Seeley, Providence, R. I.

It is with pleasure and gratitude that I testify to the splendid healing work done in Christian Science for my little daughter, who was suffering under a very serious attack of stomach and bowel trouble. I treated her myself until fear seemed to take possession of me. I then asked a practitioner for assistance, and through her faithful and effective work the help came in a day or two. The healing was most beautiful, the little girl being quite restored before the week was over.—Mrs. Anna R. Weikert, Highwood, Minn.

✦

[Translated from the German]

I am desirous of expressing my gratitude and telling of the good which has come to me through Christian Science. About four years ago I first heard of its teachings through a friend from America, and I feel all the more indebted to this friend since she showed such patience in answering all my objections. My health had been very poor during the last ten years, and at times I would have as many as two nervous attacks within a day. This weakened me to such an extent that I was confined to the bed the greater part of the time, or at least I had to lie on a couch. I consulted many physicians, every one of whom said and prescribed something different, but all proved a failure. Besides this I suffered from great mental distress, which would come over me as soon as darkness set in, and was so intense that I could never stay alone in the evening.

I have been freed of these sad conditions solely through the study of Science and Health and the endeavor to put into practise what I have grasped, for I never applied to a practitioner for help. After securing a copy of the text-book, I carried it home like a treasure, for many were the beautiful citations from it which I had read in *Der Herold der Christian Science*. When, however, I started reading (we did not have the advantage of a German translation at that time), I discovered that my knowledge of English was so small that the study was not possible without the aid of a dictionary; but I soon saw that Christian Science helps us as much to overcome difficulties in the study of a language as in solving any other problem.

I could tell of other benefits which I have received, not only physically, but also in a business way, for which I am most thankful to God. I am also grateful to our revered Leader, Mrs. Eddy, for the spiritual freedom which I have received through Christian Science. I have experienced in my own case the truth of the Master's words: "Ye shall know the truth, and the truth shall make you free."

Martha Naumann, Paris, France.

✦

For three years, from 1905 to 1908, I was under treatment with four of the ablest physicians of this county for a most distressing disease of the stomach, with frequent attacks of vomiting, also pain in the eyes and head. I was in fact disabled from working on my ranch and had to employ laborers, until one day, when much discouraged by the expense which brought me no benefit under medical treatment, I met an insurance agent, who gave me his experience with doctors and Christian Science. By the latter he had been cured of rheumatism, from which he had suffered for many years and during that time had spent thousands of dollars without relief. I was willing to try the experiment, and took absent treatment from a practitioner in Santa Barbara. After two weeks I was entirely cured, and I am now, at sixty-one years of age, hardy and strong, and attend to my own work. I wish to express my gratitude for Christian Science by making this statement.—Lucien Beal, Santa Barbara, Cal.

From Our Exchanges

[*The Christian Register*]

The modern minister in a large parish cannot be what the old parson was to a small group. We must respect that sturdy ideal which has disappeared, though we have rejected many of his doctrines and are unconvinced by his logic. In our mind's eye we can see him in the plenitude of his power, thundering from the pulpit with a voice of authority that is now seldom heard in our modern churches. Then the church was the great binding influence of the community; now it is only one of the many enticements and interests and opportunities life presents, and oftentimes the weakest. The sermon that once was the great motive power is now only one of the attractions that cause people to enter the door of the sanctuary.

A great tenderness has grown up toward the listener and the pewholder. He must never be bored by long, dull discourses, but always considered and pampered, whereas in the old days he was made to endure hardness to the point of suffering. He often sat for hours in a cold meeting-house, and if perchance he fell into a gentle doze, he was rudely awakened by the beadle. Non-church attendance was severely punished in the early days, even to the point of imprisonment and fine. When we consider our luxurious modern churches, so perfectly warmed and lighted, and the difficulty there often is in inducing people to enter them in large numbers, we can appreciate what the church really meant to the devout souls of early colonial times.

[*The Universalist Leader*]

The great trouble with the age is that it does not understand its own values. It does not know what is worth while. It inflates the prices of cheap goods, thinking thereby to make the goods good! We are making mighty appeals for certain things of the earth, thinking when we get them we shall have all; but there must be an entire readjustment of values before we can know what we as immortal souls are worth. Dr. Jowett has touched upon this in one of his studies of the deeper things of human life, and considers the question in the concrete when he says: "When a man has drunk the blood of the Lord Jesus, what cares he for the blood of caste? When he has become akin to 'the Lion of the tribe of Judah,' what cares he for 'the tribe of Benjamin'? When he has 'received access into grace,' and 'sits in heavenly places in Jesus Christ,' what cares he for the status of lofty social class and distinction? When he is endowed with 'the unsearchable riches of Christ,' what cares he for the station granted to wealth? What cares he for coveted places and powers when he has received 'the power of the Holy Ghost'? 'What things were gain to me, these have I counted loss for Christ.' Now when a man has made the great find, 'the pearl of great price,' all his old price-lists will be torn into shreds. He accepts the Master's valuation of things, and he will put the price upon them as appointed by the Lord. And we may be perfectly sure that mighty changes will take place in the contour of his life. 'Every valley shall be exalted and every mountain and hill shall be made low.'"

[*The Congregationalist and Christian World*]

Christ would not emphasize any single method of administering his church. He evidently expected it to be an abiding power among men, but he said little about its framework and constitution. He left such matters to the common sense of his disciples, believing that they would be wise and skilful enough, as the centuries went on, to adapt the outward form

Digitized by Google

to the immediate situation. The world will never be saved by ecclesiastical machinery. We doubt if Christ would lay much emphasis on formulations of truth. He expects his disciples to think fearlessly and patiently on the great things of God and to state their conclusions in positive, definite language, always to keep their minds open to the new light that shall break forth from God's Word, never to deride the foundations upon which other generations have built. But Christ knows that men are not clamoring for a new statement of faith.

The world will never be saved and its problems solved by a creed. Nor would any single practical issue comprise the substance of our Lord's message to us today. He is interested in them all,—rural evangelism, religious education, city missions, rural problems, the boy scouts, Christian unity, and all the rest. But it is not by exalting one device or pushing one of the many "movements" that the church can fulfil its obligations to mankind. The world will not be saved by any single propaganda.

What, then, would Christ say? What does he by his spirit in our hearts say? He puts cardinal emphasis on his own person and the contents of his gospel. He summons all his followers of every denominational name to renew their loyalty to him and to the great ideals for which he lived and died. He yearns to see his spirit actuating them in their homes, their business, and all their relationships. The world will be saved and its problems solved through multiplying Christlike lives.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

If there was one thing upon which our Master laid stress more than another during his earthly ministry, it was the insufficiency of intellect to attain to the highest knowledge. "I thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent, and hast revealed them unto babes." He insisted that there was a higher wisdom than the wisdom of this world, and a higher type of man than the merely rational man, and he assured his followers that to seek to become what they had seen in himself was to find the way to that wisdom, that knowledge, which was eternal life. "The time cometh, when I shall no more speak unto you in proverbs, but I shall show you plainly of the Father." The New Testament is full of this thought. Thus the apostle Paul says: "We speak the wisdom of God in a mystery, even the hidden wisdom, which God ordained before the world unto our glory." And again: "Now we see through a glass, darkly; but then face to face: now I know in part; but then shall I know even as also I am known." Instead of groping about in the darkness of materiality, as a blind man gropes his way about the world he lives in and does not really know, we shall open our eyes in God's marvelous light, see as He sees, know as He knows, and become partakers in our Saviour's everlasting glory.

[Rev. J. H. Jowett in *The Christian World*]

Suppose every word we spoke were to become incarnate and move about in our midst, a visible presence reflecting its own nature! With what kind of beings should we be populating the world, angelic or fiendish, gracious or repellent? Should we care to see our words if they were suddenly to visualize themselves in their appropriate flesh? Words do not become incarnate in this way; nevertheless they are mighty unseen ministers, ever at work, weaving nets of wickedness or robes of righteousness. There is a very striking phrase in the book of Isaiah: "The fruit of the lips." The figure suggests that everything in life finds its supreme expression at the lips; as a tree culminates in the fruit, so life and character culminate in our speech.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now in press, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Forsyn" ("The Providence of Good"). Seven articles, thirty-six pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the currnt year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

Church Manual. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Christ and Christmas. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

Unity of Good and Other Writings. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Christian Healing and Other Writings. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform with the pocket edition of Science and Health. Bound in Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Retrospection and Introspection. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Unity of Good. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Pulpit and Press. A unique work, important to the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more, 75 cents each.

Rudimental Divine Science. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

Rudimental Divine Science. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more to one address, 40 cents each.

No and Yes. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

Messages to the Mother Church. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Message to The Mother Church. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Our Leader's Message. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Communion Message, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Two Sermons. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. One volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more, 45 cents each.

Christian Healing. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

The People's Idea of God. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

Feed My Sheep. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.***

Items of Interest

NATIONAL

Government ownership of railroads as a remedy for high finance, low wages, and high rates, was brought forward in the discussion of railway physical valuation at the twenty-fifth annual convention of the National Association of Railway Commissioners at Washington, by Clifford Thorne of the Iowa commission. "Private ownership of American railroads," he said, "is costing us more than four hundred million dollars a year. The northeastern railroads are today asking for a 5 per cent increase in freight rates, amounting to approximately forty million dollars annually. This percentage applied to all railroads would total about one hundred million dollars. If it were possible to purchase the outstanding securities at market prices or at par, and issue 3 per cent bonds to get the money with which to do it, we would save enough money yearly to allow all this increase asked by the eastern roads, and to extend the same advance to all the other railroads, and then double that amount again, putting three times as much as they are asking for into better property, and then have one hundred million dollars to distribute in wages to labor every year. We could do this and not raise freight rates one penny. More than four fifths of the civilized nations of the world own and operate their railroads."

At the National Pan-Hellenic Congress, which has just closed in Chicago, and which was attended by nearly five hundred women representing many college sororities, the following important resolution in regard to high school societies was adopted: That no fraternity represented in the National Pan-Hellenic Congress bid a girl who has been a member of a so-called sorority or other secret or Greek-letter society of similar nature existing in a high school or other school of equivalent standing, whether such society exist openly or secretly. This ruling is to apply to a person who shall either accept or retain membership in such society after September, 1915. This action was the direct outcome of a paper read before the congress last year by John Calvin Hanna, principal of the high school at Oak Park, Ill., and is in line with the policy of Mrs. Ella Flagg Young. The congress, which was organized in 1902, by seven of the oldest national women's fraternities, now represents eighteen nationals, with an aggregate membership of nearly fifty thousand women, whose chapters are located in eighty-seven colleges and universities.

The railway commission of California took decisive action recently on its long-projected scheme to compel every interurban electric road in the state to institute the block system in the interest of public safety. The Pacific Electric Railway Company, which operates about nine hundred and fifty miles of rapid-transit lines in southern California, was called upon to furnish the necessary data for the equipment of its entire system. A few of its lines now operate under the block system, but it is calculated that a perfect compliance with the commission's desires in the premises will entail an expenditure of about one million two hundred thousand dollars.

The first policies in a state life insurance fund in America were issued last week by the insurance department of Wisconsin. The Legislature enacted in 1911 the law establishing a "life fund to be administered by the state without liability on the part of the state beyond the amount of the fund, for the purpose of granting life insurance and annuities to persons who at the time of the granting of such insurance and annuities are within the state or residents thereof." At present five plans of insurance are offered. These policies represent standard forms issued by legal reserve companies.

Officials of West Virginia have signed an agreement with the federal government to divide the expense of guarding the state's thickly wooded hills and valleys from destruction by flames. Elaborate precautions will at once be taken to prevent the outbreak of forest fires in the West Virginia mountains that in the past have been so disastrous and costly. Lookout stations, connected by telephone, will be erected, and a regular patrol, both mounted and afoot, will be constantly on the watch.

A contract has been entered into by the Boston port directors and the Cunard Steamship Company, International Mercantile Marine Company, and the Hamburg-American Steamship Company, guaranteeing fifty thousand dollars a year for twenty years, to be paid by the steamship companies to the directors in return for certain preferences in the use of the proposed three million-dollar dry-dock to be built at South Boston.

Secretary Bryan has sent a formal note to all the European governments asking them to suspend the formulation of a policy toward Mexico until the United States has defined its attitude. England, France, and Germany have already been heard from, and it is expected that the other governments will follow the three great powers in awaiting the decision of the United States as to the next step in bringing about peace in Mexico.

With the gift of one hundred thousand dollars from an anonymous donor already in hand, and the promise of two hundred thousand dollars more from the general education board, Wellesley College is about to inaugurate a vigorous campaign which has for its object the addition of a million dollars to the productive funds of the college. The fund itself will remain intact and the income only will be used.

The fish and game commission of Massachusetts, according to a recent statement, have placed in the rivers and lakes of the state during the year nearly twenty-two million fish, including white perch, trout, wall-eyed pike, yellow perch, and Chinook salmon.

At thousands of post-offices throughout the country there will soon be put on sale a combination postage-stamp book. It will contain twenty-four two-cent stamps and an equal number of one-cent stamps, and the price will be seventy-three cents.

Thousands of men and hundreds of women in all parts of Kentucky took part in the recent "good roads day" of the state. Schools were closed in the majority of the cities and hamlets.

INTERNATIONAL

Mr. Burrell, the American wheat expert, who recently went to New South Wales under engagement to the government of that state, has concluded his investigations and recommended the government to adopt the bulk handling system of wheat throughout the state. He estimates that the complete scheme, including one thousand box cars for the railways, will cost eight hundred and fifty-four thousand five hundred pounds, and he fixes the saving to the country under the bulk handling of wheat at four hundred and thirty-seven thousand pounds on every thirty million bushels dealt with. Another consideration is the enhanced value that will result from the grading of the grain. His opinion is that New South Wales wheat is superior to that grown in either the United States or Canada, and when graded, will bring the highest prices in markets abroad.

Some harsh measures for the restriction of emigration have just been taken by the German government, who have forcibly transported back to Berlin from the Dutch frontier two parties of would-be emigrants, numbering over one hundred persons in all. A law exists in Germany which gives the authorities power forcibly to prevent emigration, especially when an "assisted passage" is provided by the country for which the emigrant is bound. Hitherto this law has never been applied.

The Calcutta jute mills show a total profit for the past half-year of one hundred and twenty-seven lakhs of rupees (nearly eight hundred and fifty thousand pounds) as compared with sixty-four lakhs (nearly four hundred and twenty-seven thousand pounds) during the corresponding half-year in 1912.

Hidcomi Takahashi, the author of "The Wealth of the Japanese Empire" and other kindred works, has spent some time in endeavoring to arrive at an estimate of the wealth of China. In total wealth, Mr. Takahashi declares, China proper ranks fifth in the list of the different nations of the world.

INDUSTRIAL AND COMMERCIAL

It is reported that a product made by a new patented process from paper yarn, and which is said to have advantages over other similar products as a substitute for jute, will shortly be put on the market under the name of "stranfa."

The three thousand apple trees in the orchard of McClay Brothers, near White Hall, Ill., have yielded sixty thousand barrels of apples. It will require about four hundred cars to move the crop to storage quarters.

The three thousand and seventy car-loads of vegetables will bring an estimated return to southern California gardeners this fall of one million two hundred and twenty-eight thousand dollars.

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI November 8, 1913 No. 10

[From *The Christian Science Monitor*]

Thanksgiving Proclamation

PRESIDENT WILSON, on Thursday, Oct. 23, issued his first proclamation as President of the United States, as follows:—

"The season is at hand in which it has been our long respected custom as a people to turn in praise and thanksgiving to Almighty God for His manifold mercies and blessings to us as a nation. The year that has just passed has been marked in a peculiar degree by manifestations of His gracious and beneficent providence. We have not only had peace throughout our own borders and with the nations of the world, but that peace has been brightened by constantly multiplying evidence of genuine friendship, of mutual sympathy and understanding and of the happy operation of many elevating influences both of ideal and of practise.

"The nation has been not only prosperous, but has proved its capacity to take calm council amid the rapid movement of affairs and deal with its own life in a spirit of candor, righteousness and comity. We have seen the practical completion of a great work at the isthmus of Panama which not only exemplifies the nation's abundant resources to accomplish what it will and the distinguished skill and capacity of its public servants, but also promises the beginning of a new age of new contrasts, new neighborhoods, new sympathies, new bonds and new achievements of cooperation and peace.

"'Righteousness exalteth the nation' and 'Peace on earth, good will toward men' furnish the only foundations upon which can be built the lasting achievements of the human spirit. The year has brought us the satisfaction of work well done and fresh visions of our duty which will make the work of the future better still.

"Now, therefore, I, Woodrow Wilson, President of the United States of America, do hereby designate Thursday, the 27th of November next, as a day of thanksgiving and prayer, and invite the people throughout the land to cease from their wonted occupations and in their several homes and places of worship render thanks to Almighty God.

"In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

"Done at the city of Washington, this twenty-third day of October, in the year of our Lord 1913, and of the independence of the United States of America the one hundred and thirty-eighth.

"By the President:

(Signed) WOODROW WILSON.

"W. J. BRYAN, *Secretary of State.*"

'Coercive legislation"

WILLARD S. MATTOX

ON page 80 of "Miscellaneous Writings," Mrs. Eddy says: "Unconstitutional and unjust coercive legislation and laws, infringing individual rights, must be 'of few days, and full of trouble.' . . . Tyranny can thrive but feebly under our government. God reigns, and will 'turn and overturn' until right is found supreme." This utterance has never had greater significance than it has today, when citizens are confronted by an unusual activity on behalf of many medical laws, some of which easily fall under our Leader's designation of "unconstitutional and unjust."

In approaching civic or political questions, the Christian Scientist is not likely to be biased by purely partizan considerations, because he is learning to solve all problems, whether individual or communistic, by reference to Principle, and by the application of a fixed scientific rule. This attitude toward all public questions of the day is calculated to give to the Christian Scientist a poise, a calm and judicial outlook which enables him to view a situation impersonally and which greatly enhances the value of his work of reform. It is in this impersonal manner that the followers of Mrs. Eddy will work to restrain the mad ambition which is seeking to enact "unconstitutional and unjust coercive legislation," and since it is one of the fundamental teachings of Christian Science that error is never to be personalized, the Christian Scientist will not treat the evidences of medical aggression as anything but a phase of what Paul so aptly called "the carnal mind," which "is enmity against God."

Mrs. Eddy must have foreseen the present-day attempt to enthrone the drugging system and cloak it with the authority of civil law, when she wrote, "Certain elements in human nature would undermine the civic, social, and religious rights and laws of nations and peoples, striking at liberty, human rights, and self-government—and this, too, in the name of God, justice, and humanity!" (Message to The Mother Church for 1900, p. 10.) In the name of humanity and the public health, attempts are constantly being made to infringe the rights of citizens, and to establish a medical despotism which would equal the most unhappy days of religious tyranny the world has ever known. On the plea that the public health and the public welfare must be conserved, plans are being laid to fetter not only the bodies but the minds of men in a bondage more oppressive than that of human servitude. The mortal mind sets up its idols of material medicine, and the command issues, by way of legislative enactment, that all must bow to this strange god or suffer the legal penalty. The purpose is the same now as it was in the days of Daniel and Shadrach, Meshach, and Abed-nego. The only difference is in the form of the penalty for disobedience to mortal mind's mandates. Civilization has simply exchanged wild beasts and superheated furnaces for more polite, but none the less unjust, punishments.

We need only to examine the medical literature of today, and glance at the laws proposed or enacted, which are meant to put the citizen, his business, his home, and his entire family under the undisputed control of the medical hierarchy, to realize that the situation bids fair to be almost as serious, in its way, to the faithful of today as it was to those sturdy pioneers of Christian Science in bygone centuries who chose to worship God and to depend upon Mind rather than upon matter. Men have taken their stand for Principle, for religious rights, in every age. When Daniel refused to accept the dietetic régime ordered by the civil authorities, he came into conflict with the primitive hygienic theories and medical system of that day. The results were convincing! It was

demonstrated beyond peradventure in the court of King Nebuchadnezzar that a state of health is not conditioned on rules of hygiene or on material laws of health.

Students of history recognize that certain elemental traits of human nature prevail throughout the centuries, with the necessary modifications and changes to fit new conditions. Exhibitions of autocratic domination, in the name of the law, have persisted through every phase of the progress of the human race. There is no great difference between the attempt a few thousand years ago to prescribe a mode of living for Daniel and his fellow religionists, and the present-day attempt to examine and control the physical condition of our school children. Medical examination in the public schools today is merely a modern development of the carnal mind which was enmity against the good that Daniel knew and practised, which sought then and seeks now to dethrone the government of God and substitute the government of material medicine.

The evolution of the idea of forcible physical examination of school children is quite simple. At first, there was instituted compulsory education, which was all very good and proper and justifiable. Then it was urged that if the state had the right to compel education, it had an equal right to compel physical examination of the children. The very natural sequence is compulsory treatment, which must inevitably follow, in the opinion of the exponents of school inspection. If one doubts the probability of such "unconstitutional and unjust coercive legislation," he need only note the following passage from the statutes of one of the Eastern states: "If the parents or guardians are unable or unwilling to provide the necessary relief and treatment for such pupils (as are declared to be defective or diseased), such fact shall be reported by the principal or teacher to the medical inspector, whose duty it shall be to provide relief for such pupils." Here we have the accomplished fact,—compulsory treatment provided for by law; for, mark this, that it shall be the duty of the medical officer to treat children whose parents do not care for them as the state deems necessary to their health. There is no choice, no option.

In the logical progression of this element of despotism in mortal mind, is it inconceivable that further attempts will be made to control the citizen in the domain of morals and religion? Is it too much to believe that the effrontery of the false claim of evil will not stop with its present demands? Already the state has been given the authority to care for the bodies of the children, to prescribe for their physical well-being and dictate the form of treatment. It is but a short step to the claim that the state has the right to care for the moral and religious development of the child. That this step is about to be taken, is evident from the appearance during the last year of proposals to teach sex hygiene in the schools, and the attempt to pass eugenic laws, all of which forcibly brings to mind the words of Mrs. Eddy: "If, as is indisputably true, 'God is Spirit,' and Spirit is our Father and Mother, and that which it includes is all that is real and eternal, when evil seems to predominate and divine light to be obscured, free moral agency is lost; and the Revelator's vision, that 'no man might buy or sell, save he that had the mark, or the name of the beast, or the number of his name,' is imminent" (Miscellaneous Writings, p. 113).

In the days of Daniel, the dominant materialism demanded "children in whom was no blemish," and then proceeded to build up a purely physical sense of perfection and to enforce its demands by process of law, just as it does today. The king's edict was equivalent in all respects to the modern medical inspection laws, which provide for compulsory treatment after compulsory diagnosis. The theory of state medicine says today, as it said in Nebuchadnezzar's time, in language which is reminiscent of the Scriptural account: "Bring us the children, and we will inspect and examine them, with the idea of making them physically fit. There will be no blemish in them, for we will look at their teeth and cut out their tonsils and diagnose all their ills, and then treat them according to our theory of health, 'nourishing them three years, that at the end thereof they might stand before the king,'" or in more modern language, that they may be "efficient social units."

Daniel was the prototype for all succeeding centuries of those who have protested against whatever attempted to abrogate man's divine right to be governed and controlled solely and absolutely by God. Daniel protested then, and there are many who protest today, against medical dictation in the guise of legal edicts. Daniel claimed his inalienable right to worship God according to the dictates of his conscience, and when those dictates included a demand for exemption from something closely akin to present-day compulsory medical treatment, Daniel did not hesitate to take his stand. The results of this resolute reliance on Mind to care for his well-being are recorded in the first chapter of the book of Daniel, and constitute a splendid demonstration of the superiority of metaphysical over medical treatment. When put to the test, Daniel's spiritual treatment proved to be efficacious, reliable, and even better than the materialistic theories held by the government and enacted into law, for the record says of Daniel and his companions, that "at the end of ten days their countenances appeared fairer and fatter in flesh than all the children which did eat the portion of the king's meat," and when compared with those who had been subjected to compulsory inspection and treatment, "among them all was found none like Daniel."

The parallel is obvious. It is no vain boast to say that Christian Science children, if left to the wise care of loving parents, if exempted from forcible treatment by materialistic methods, will be no menace to the public welfare, and will be at least as "efficient social units" as their fellows who trust to medical theories to keep them well. For over forty years, thousands of children and adults have chosen to let their loving Father-Mother God guide their steps and guard and preserve their health. They have chosen what they think is the better way, and their daily experiences, in many homes, have proved that God is indeed a "present help in trouble," and that His grace is sufficient for them in sickness no less than in health. They do not obtrude their religious or medical views on others, but they claim a freedom of thought and religious action which governments accord all classes of citizens, and they point with confidence to the verdict of the king in the case of Daniel and his friends, for it was said that "he found them ten times better than all the magicians and astrologers that were in his realm."

Victory

NETTYE NACHMAN

THE significance of victory in the light of Christian Science is diametrically opposed to the general acceptance of the term. The carnal mind with its self-will and mad ambition can never achieve true victory, but must needs give place to the meekness and might taught and demonstrated by Christ Jesus. In Paul's letter to the Corinthians we read, "Thanks be to God, which giveth us the victory through our Lord Jesus Christ;" and on page 571 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, are these words: "At all times and under all circumstances, overcome evil with good. Know thyself, and God will supply the wisdom and the occasion for a victory over

Digitized by Google

evil." "The weapons of our warfare" are indeed not carnal, but are, as the apostle says, "mighty through God to the pulling down of strong holds." Every illusion of this so-called carnal or mortal mind must be brought low, that human thought may come into subjection to Truth and Love.

Christian Science, the word of God, is engaged in extirpating from human consciousness all wrong thoughts, malice, lust, hate, anger, indifference, fear, etc. Thus the entire human consciousness is reached, and the beneficent effect of the truth is universally felt in all the affairs of life. The glorious work which Christian Science is accomplishing has been promised since the beginning, as when the prophet wrote, "And the Lord alone shall be exalted in that day." This is the day of salvation, the time when the light of ever-present Love is outshining the darkness of ignorance, superstition, and persecution. The law of God is casting down the imaginations of *materia medica*, its laws of disease and hygiene, and "bringing into captivity every thought to the obedience of Christ." That belief of the carnal mind which Paul says is "enmity against God;" that belief of mind in matter, like the stone which was rolled away from the sepulcher of Jesus by the power of infinite Love, is overcome today in Christian Science. Truth brought Daniel safely out of the den of lions, and is always the victor, never the vanquished.

Today Christian Scientists are gaining the victory over self, sin, sickness, and death by the same method that Jesus used in his healing and saving ministry. "The law of the Spirit of life in Christ Jesus" has in these days made thousands "free from the law of sin and death." Jesus used this rule of divine Science to work out every problem which confronted him. The victory invites us forward now. Our loyalty to Principle, our brotherly love, our pure, unselfish lives as "doers of the word," will enable us to achieve the victory in the way of Truth's appointing.

Referring again to our inspired text-book, we read on page 45, "Jesus vanquished every material obstacle, overcame every law of matter, and stepped forth from his gloomy resting-place, crowned with the glory of a sublime success, an everlasting victory."

Truth's High Behest

LEWIS PRESCOTT

In Science and Health we read that "the epoch approaches when the understanding of the truth of being will be the basis of true religion" (p. 67). Christian Science is unfolding a new sense of existence, namely, the spiritual, the truth which Jesus demonstrated. Every one seeking an understanding of Christ, Truth, is encouraged by seeing in this Science the divine nature so clearly and definitely reflected that he is naturally drawn to God, the divine Principle of being. The sufferer, the sinner, or the unbeliever in Truth's absolute supremacy is destined to awaken from the dream of life in matter, into a spiritual consciousness of Life as God, Life expressed in universal goodness and harmony. In this better consciousness, hope, courage, and faith lead on to spiritual understanding. We read: "And the Lord shall be king over all the earth: in that day shall there be one Lord, and his name one."

Through the study of Christian Science spiritual ideas appear like the dawn of a beautiful day, and glow into meaning, blessedness, and fruition. No more profound event in the life of Jesus, previous to his resurrection, is recorded than the transfiguration. To transfigure means, according to Webster, "to change to something exalted and glorious; to give an ideal form to." In his account of this event, St. Mark adds, "After six days Jesus taketh with him Peter, and James, and John, and leadeth them up into an high mountain apart by themselves: . . . And his raiment became shining, exceeding white as snow; . . . And there appeared unto them Elias with Moses: and they were talking with Jesus."

In Christian Science, Spirit is God, and man reflects God spiritually, hence spirituality is the similitude of God. Science and Health gives the Christianly scientific definition of Moses as "a type of moral law and the demonstration thereof;" and of Elias as "prophecy; spiritual evidence opposed to material sense" (pp. 592, 585). To these three disciples, therefore, the transfiguration must have unveiled the far-reaching spiritual fact that in Christ Jesus law and prophecy were fulfilled. "For," as Paul has said, "it pleased the Father that in him should all fulness dwell." The Master's life was ideal and practical. Returning from the mount of transfiguration, Jesus' attention was immediately drawn to the case of a boy whom the disciples remaining at the foot of the mount had failed to cure. Reproving them for their lack of faith, their failure to heal him, Jesus said, "Bring him unto me," and he reassured the father of the boy with the words, "All things are possible to him that believeth."

Christian Science is "the light which heralds Christ's eternal dawn" (Science and Health, p. 95). It reveals Christ as the spiritual ideal, the man who dwelt in Mind from the beginning; and of such the Scripture saith, "Let them have dominion." Our thankfulness for Christian Science is in proportion to our recognition of its spiritual excellence and naturalness, its conformity to Truth. To all in need of the health God bestows, the encouragement, the solace of divine Love, divine Science, the spirit of Truth, reiterates today the Master's command, "Bring him unto me."

✧

"We would see a sign from thee"

ANNIE V. C. DODGSHUN

When the scribes and Pharisees came to Jesus, asking that a sign be given to them in proof of his God-bestowed power, he answered them in these words: "An evil and adulterous generation seeketh after a sign; and there shall no sign be given to it, but the sign of the prophet Jonas." One may ask, What was "the sign of the prophet Jonas"? Surely no outward manifestation of power in the so-called realm of matter. Coming to see the loving-kindness of God through varied experiences, Jonas listened to and obeyed the voice of Truth and received the blessing. Therefore, "the sign of the prophet Jonas" is surely that of obedience to the law of God, the law of Love. And this sign of obedience the Master gave to his immediate followers and those around him throughout his earthly life. His mission was to establish the kingdom of God, the reign of righteousness, or right ideas, in the human consciousness, and as a sign or proof of the establishment of this kingdom within, he demanded willing obedience to that Mind which was in Christ Jesus, to the Son of God, for he said, "If ye love me, keep my commandments."

The mortal, or carnal mind, with its manifold forms of belief, is ever demanding of the workers in Christian Science that an outward material sign be given as proof of the power of spiritual law to heal. To the dishonest and impure thought, to the thought manifesting dis-ease in mind, body, or environment, and also to the honest thought, which is hungering and thirsting after righteousness, or right thinking concerning God and man, there is only one answer to be given, and this is implied in the words of the Master, "There shall no sign be given . . . but the sign of the prophet Jonas," the sign of obedience to the spiritual demands of Truth and willingness to meet its requirements.

Digitized by Google

The proof of healing is in the mental sign which is manifested in changed thought, the desire for a higher understanding of God and a growing recognition of man as spiritual and perfect; and if the Christian Scientist is obedient to his high calling of God, and is convinced of the infinite power of divine Truth, and recognizes at all times the completeness and wholeness of God's idea, the sign of true healing will appear in the consciousness of the patient, and with it will be manifested an improved belief of body. The honest worker in Christian Science desires to see quick and permanent healing. He is learning that only as he casts the beam out of his own eye can he see clearly to cast the mote out of his brother's eye. There is less need of lengthy mental argument and more of abiding in the healing consciousness of Truth and Love, less talking about love and more of loving. If we are holding thoughts of condemnation, resentment, hatred, pride, if we are exalting human personality and permitting human opinion to govern our thought, thus failing to acknowledge the one omniscient Mind, we are allowing this unlikeness to God to reign in our consciousness, and we shall thus be separated from God.

Absolute obedience, in its scientific sense is the quick and unremitting response of the human mind to righteousness, it is the activity of right thinking, by which mortal concepts are exchanged for divine ideas and we come into unity with the Father. The Christian Scientist is learning that only as he holds thought steadfastly to the absolute perfection of God and man and willingly takes each step as it comes in the line of self-effacement, can the belief in mortal selfhood be lost and the understanding of the divine nature more and more illumine consciousness. Mrs. Eddy says (Miscellaneous Writings, p. 117), "Obedience is the offspring of Love; and Love is the Principle of unity, the basis of all right thinking and acting; it fulfils the law."

Reflection versus Belief

CHARLES K. MILLER

THE words "reflection" and "belief" are used so often by our Leader in her endeavor to elucidate the subject of Christian Science, the study of which is enabling its students to enjoy an ever-increasing understanding of God and man, that a consideration of these words may throw added light upon our path. Let us take the words of St. John, "Now are we the sons of God," and their correlative in Science and Health, "Man is His image and likeness" (p. 468), and we have statements of truth which conflict with the evidence accepted by the material senses. We have had such unbounded confidence in the seeing of the eye and the hearing of the ear that it is not always easy to comprehend how man can be perfect now, when it seems so evident that he is subject to sin, sickness, and death.

Now the reflection of any object on the surface of a body of water, being a material concept, does not express in a satisfying way the conditions of spiritual reflection, but it offers some helpful lessons which tend to turn thought into channels leading to a better understanding of the true reflection. Suppose we approach a lake on the opposite side of which is a high promontory, which we observe as we advance toward it. Arriving at the edge of the lake, we find a man peering absorbedly into the waters, which are somewhat disturbed by the intermittent breezes. He perhaps has approached the lake without observing the promontory, and has been so intent upon the changing appearance of the mountain, which seems to him to be under the water, that he has not looked up to see the object which is being reflected. How much this is like the mortal state referred to by Mrs. Eddy in Science and Health (p. 91), where she says, "Absorbed in material selfhood we discern and reflect but faintly the substance of Life or Mind"! In his ignorance, or in his absorption in the testimony of the physical eye, the picture presented to him by mortal sense, one may accept the inverted mountain in the lake, undergoing changes of contour and color, as the actual object of vision. It may be said that no one could be thus deceived, that every one knows a reflection when he sees it, but if so, is it not because of what he knows, apart from what his eye sees?

Suppose, for the sake of our illustration, that the gazer believes the mountain to be in the lake, and that it is changing its shape and contour, and he calls our attention to the mysterious appearance. If we were no more enlightened than he, we would coincide with his belief. "But," we would say to him, "this is only an inverted and imperfect reflection of the mountain; look up if you would see it in all its glory." No harm is done by the distorted reflection, except in so far as one believes it to be real, and suffers by confused thought in consequence. When the delusion is dispelled, the truth having been disclosed to him by one knowing better, his false sense is cast out and forgotten.

Let us note what has happened during this time. The mountain has remained the same; it has always been there, ready to be reflected whenever the surface of the water was ready. It was never in, never contaminated by or mixed with the disturbed water, and when the mirroring surface is faultless its perfect image appears.

May we not apply this assumed experience to the problem of life, of exchanging "the objects of sense for the ideas of Soul"? (Science and Health, p. 269.) On page 467 we read, "Science reveals Spirit, Soul, as not in the body, and God as not in man but as reflected by man." If for the purpose of analogy we think of Soul, God, as the mountain, and man as the eternal reflection of God, we have this fact symbolized by the reflection from the surface of the water. Let us see if the field of human thought will not fit in here. Suppose a person is believed to be sick. He is said to look sick, and physical examination has convinced those making the examination that he is sick. Have they not been like the man on the edge of the lake, watching the distorted concept caused by the disturbance of false belief in human thought? To reveal the real man, the image of God, it is only necessary to lift perception by the transformation of human sense.

Each one of us can be a reflector of all that divine Mind includes,—intelligence, health, purity, etc.; and like the one approaching the lake we can, if we will keep God before us, lift those in bondage to false belief, sin, sickness, and death, to the true consciousness of purity, health, and life eternal.

After presenting a long list of trials and afflictions, Paul says: "In all these things we are more than conquerors through him that loved us." In times of doubt and despair, when material thought crowds thick upon us, and the way seems blocked in every direction, one should pause and ask the question mentally: What was Christ's mission? was it not to demonstrate the power of Truth over conditions far worse than these, and has he not promised that the victory of the cross shall be ours also? We know that we shall not be tempted more than we can stand, and through every difficulty, every care, every sorrow, divine Love will show us a way of escape. "He that keepeth Israel shall neither slumber nor sleep." Amid seeming turmoil and strife, it is our privilege to express infinite rest,—God's calm restfulness which waits unchanging to be reflected by us.—ZAIDEE DOUGLAS ADAMS.

Selected Articles

[Frederick Dixon in *Eastern Daily Press*, Norwich, England]

To a vast number of people, probably to the great majority of the citizens of the world, Christian Science healing still stands for a purely medical process. This fact, if the world could only realize it, is a severe reflection on the orthodox creeds. It shows how great a gulf has been allowed to widen since the time of the healer of Gennesaret, between the healing of sickness and the healing of sorrow and sin, and how completely the churches have surrendered one half of their duty to a profession, many of the members of which are avowed agnostics and materialists. Yet Jesus said, "Preach the gospel" and "Heal the sick;" and himself healed the sick in demonstration of the truth of the gospel he preached.

It is very difficult to understand how anybody can persuade himself to believe that the mere temporary removal of disease can be dignified by the name of healing. To contend that the victory over one microbe, which leaves the patient at the mercy of the next microbe, in a microbe-laden world, can be described as healing, even from the world's point of view of science or Christianity, is preposterous. Healing, to be worthy of the name, must destroy the mental germs which produce sin, disease, and death, and which were catalogued by Paul in the appalling list of the works of the flesh; and it must do this by substituting for them in the human consciousness the fruits of the Spirit. It must lead a man away from the fears that surround the belief of life in matter, into an understanding of life eternal, and it must do this by showing him that the understanding of eternal life is dependent, as Christ Jesus declared, on a true knowledge of God and His Christ. Then the patient will not get well only to fall sick again, but will be able to stand in front of the legions of disease and sin, clad in "the whole armor of God," the strength which enabled the psalmist to write: "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."

Mrs. Eddy has defined heaven on page 587 of Science and Health as "government by divine Principle," and this consequently is why, as she explains on page 47, "leaning no longer on matter, but on the divine Principle of their work," the disciples became better healers. One does not, however, succeed in exchanging the government of matter for the government of Principle in a day. It is the result of a long and weary struggle with the carnal mind. The Christian Science treatment, therefore, which heals the sick, is not comprised in a few minutes' realization of Truth by a sick man's bedside, but is the result of months and years of consecration, which brings the healer to the sick with something, however faint, of that knowledge of the power of Truth which raised Jairus' daughter with the words "*Talitha cumi.*"

To the ordinary man this may seem a great claim to put forward. It must, however, be remembered that it is put forward not in the name of an individual, but in the name of divine Truth. The healing power of Truth is illimitable, however limited the understanding which endeavors to avail itself of it. It is possible for every mathematician to calculate an eclipse, but it by no means follows that every mathematician can. So, though Christian Scientists may be unable to repeat all the miracles of Jesus, it does not make those miracles supernatural. To argue that it does, would simply be to repudiate Jesus' own words, when, speaking not of a particular age or to a particular audience, but of the whole world, in all ages to come, he declared, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also." In those words Jesus made the power to work what the world terms miracles the test not of his own divinity, but of the Christianity of those who professed to believe in him. And any one who is inclined to cavil at this had better remember that he also said: "Heaven and earth shall pass away, but my words shall not pass away."

There has never been a moment since those words were spoken when they did not bring hope to the sick to whom they were whispered; but today they are bringing something more than hope, they are bringing fulfilment. There is more sickness in sin than in disease, more anguish in sorrow than in pain, more hopelessness in despair than in death, and it is to those who suffer from all of these alike that Christian Science speaks, in the words of Christ Jesus: "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls. For my yoke is easy, and my burden is light."

[Henry Deutsch in *News-Tribune*, Duluth, Minn.]

Permit me to write a word in answer to the reference to Christian Science that appeared in the report of a sermon preached in a local church. With so much redemptive work necessary in the world, and so many still so far from the desired goal described by the Master as "the kingdom of God . . . within you," it is surprising that a professed follower of the Christ can find time for attacks on and abuse of other members of the Christian faith, who are not only earnestly striving to exemplify the teachings and works of the Master, but are actually proving their work and fulfilling the demands of the test which he instituted, "By their fruits ye shall know them."

Christian Scientists are enemies of no one, preferring to heed the injunction of the Master, "Love your enemies," rather than to waste their energy in seeking occasion to condemn those who have differing opinions. Jesus prescribed certain rules by which his followers might be judged: "If ye love me, keep my commandments;" "He that believeth on me, the works that I do shall he do also;" "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover;" "Preach the gospel;" "Heal the sick."

Inasmuch as it is conceded that Christian Scientists, to a degree not deemed possible in this world, are obeying and demonstrating their loyalty to these precepts, it cannot be possible that they are enemies of the cross which symbolizes the life and work of the Master. In the symbolism of his blood shed upon the cross they find the incentive and the need for proving their baptism in his blood by following in his footsteps and doing the works which he did and commanded his followers to emulate. In this respect, at least, they are one step in advance of those who are satisfied to let words instead of actions, professions instead of practise, manifest their allegiance and loyalty to the Master. As James said, "Faith without works is dead."

There is no relation between Christian Science and the teachings of new thought, spiritualism, and theosophy, and it has nothing in common with these teachings. We do, however, concede to the devotees of these teachings the right of their own opinions and their own practise without judgment or condemnation from us. They have in their ranks men and women who are earnest and sincere in their faith and in their actions, and while we cannot agree with their views and doctrines, we do not arrogate to ourselves the right to judge

Digitized by Google

or condemn them. Our reverend friend might well heed the time-worn lesson that it is the men who construct and build up, who by example as well as precept prove that faith which is within them, who succeed and by their works test the validity of their professions. Such men have so much to do in their own fields that they have not the time or the inclination to step aside for the purpose of attacking or condemning those who disagree with them, and the history of Christian Science illustrates the well-known fact that persecution and attack but serve to promote advancement and growth. If our friend could prove by his works what he claims to believe, he would have neither occasion nor necessity to be disturbed by those who happen to disagree with him, and a little study of his Bible might incline him to heed that excellent advice of Gamaliel, "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

✦

[Charles K. Skinner in *Detroit* (Mich.) *Free Press*]

A recent sermon by one of the good brethren of an orthodox church tells us that "if the church of today were more spiritually alive, Christian Science would decline; when faith in prayer is rekindled, and the Sermon on the Mount is applied to business and politics, the bottom will fall out of these side issues and the church will return to its own." The speaker paid a tribute to Christian Science which is appreciated, but it is well to remember that all down the ages, when a pressing need came for reform on any particular line, the supply was forthcoming. In the present instance, Christian Science has come not to glorify any individual or any sect of followers, but to teach all people that the Sermon on the Mount is just as applicable in our relations with our fellow men today as it was nineteen hundred years ago. Christian Science proves that the wretched and cowardly assertions of some men that "it is impossible to succeed and do an honest business today," are without foundation in fact.

The sincere and honest study of Christian Science has but one result, namely, a greater and more earnest desire for a spiritual understanding of the Scriptures and their application to daily life as exemplified by the Master. His words were clear-cut and to the point: "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you," and this he said from pure demonstration in his own beautiful life. Of this life Mrs. Eddy speaks as follows, in Science and Health (p. 18): "He [Jesus] did life's work aright not only in justice to himself, but in mercy to mortals,—to show them how to do theirs, but not to do it for them nor to relieve them of a single responsibility." No religious teaching has proved a greater power as an instrument for reformation from sin and its awful results than has Christian Science in the brief period since its teaching was first given to the world.

✦

[Editorial in *X-Ray Bulletin*, Fort Smith, Ark.]

The editor of the *X-Ray Bulletin*, while not a Christian Scientist, is not wholly uninformed as to the teachings of Christian Science, and well knows that among the considerable number of Christian Scientists whom it has been his pleasure to know, are only those who are considerate of one another and of their neighbors, kind, generous, public-spirited, progressive, and patriotic. To our mind, one thing alone hallows Christian Science and gives it a full right to the kindly consideration of all good people. That one thing is, that the Christian Science movement was conceived and launched by a woman, already well into the second half of life, who had been without health, money, or friends of great prominence or influence, who at the close of forty years of ceaseless trial and triumph, passed the portals of mortal ken, leaving the living seed of a life of higher purpose growing in every social and civic center in all the world, and perhaps a million of devout followers whom she bade follow her only so far as she followed Christ.

✦

[John W. Doorly in *The Middleton Guardian*, Manchester, England]

In a recent issue I notice an excerpt from a criticism stating that "we make our own worries, and then repeat the error by resorting to Christian Science for relief." This doctrine of "don't worry" is all very well as far as it goes, but unfortunately these negative remedies accomplish very little for the ills of humanity. Christian Science teaches the positive practical gospel of Christ Jesus, which enables mankind to meet and destroy every discord of mortal sense with the "law of the Spirit of life in Christ Jesus" which makes "free from the law of sin and death." The Christian Scientist, through the understanding of the ever-present law of good, is enabled to utilize this law just as he would utilize the multiplication-table, and to banish sin, disease, and worry just as he would banish a mistake in mathematics, because he understands that every evil is, in its final analysis, not a material effect but a mental delusion born of the ignorance of God's law, and must give place to a right mental condition, that is, to the understanding of that law. In fact, he knows that truth, or the will of God, must destroy error, or the delusions of mortal sense, just as light destroys darkness, because one is real and the other is unreal.

Christian Science is in no way allied to mental science, for Christian Science teaches the actuality of one infinite Mind, in whom we all "live, and move, and have our being," while mental science believes in minds many; they are therefore direct opposites.

✦

[R. Stanhope Easterday in *New Castle* (Ind.) *Courier*]

Christian Scientists contend that all God's children are "called to be saints," and they strive to comply with the further Scripture, "Be ye therefore perfect, even as your Father which is in heaven is perfect," but reasonably base all effort to this end upon the sublime logic of Paul in the words, "Brethren, I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus." They find, furthermore, in such legitimate striving for the perfect, that satisfying "communion of saints" which includes among other graces of the spirit a compliance with the divine command, "Take no thought for your life," either before or after the transitional experience called death.

Such legitimate exercise of Christian faith is reasonably devoid of the numerous superstitions, rites, and customs that have characterized religious enthusiasm in the past, and that have ever proven a barrier to that wholesome, spiritual growth "in grace, and in the knowledge of our Lord and Saviour Jesus Christ," which should characterize every true Christian and render him a "saint" in the true significance of the term.

✦

[Thomas F. Watson in *Daily Review*, Pacific Grove, Cal.]

Christian Science does not teach that there "is no sin," in the sense our clerical critic seems to believe, but it does teach us how the Christ overcame, and still overcomes the belief in the reality of sin, sickness, and death. In "Science and Health

Digitized by Google

with Key to the Scriptures" by Mrs. Eddy (p. 460) we read: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being;" and on page 405, "The good man finally can overcome his fear of sin. This is sin's necessity,—to destroy itself. Immortal man demonstrates the government of God, good, in which is no power to sin. . . . If sin is not regretted and is not lessening, then it is hastening on to physical and moral doom."

The gentleman says that "the church has not been putting *its emphasis upon bodily healing*, but upon the saving from *sin*." *Jesus commanded his* followers to "preach the gospel," and *also to* "heal the sick." The Bible says, "Show me thy faith without thy works, and I will show thee my faith by my works;" and Science and Health states, "The best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death" (p. 201).

We agree with the critic when he says, "The church must come back to the whole gospel, the healing of the body as well as the soul." This is just what Christian Science is doing. The world needs a demonstrable religion, and Christian Science is meeting that need by healing the sick, comforting the sorrowful, and destroying sin in the manner taught by Jesus and the apostles. Our friend the minister will find that Christian Scientists are endeavoring to obey all of Jesus' commands.

✧

[H. Farmer Hall in *The Brighton* (England) *Herald*]

Those who know something of the teachings of Christian Science, who have seen the sick and the dying restored to health and the characters of men reformed through its ministrations, cannot but wonder why a clergyman of the Church of England should feel called upon to refer to Christian Science as a "modern folly, which is neither Christian nor scientific." Nevertheless, such are the words attributed to the Rev. Canon Wakeford in the report of his sermon before the members of the Medical Conference gathered in St. Peter's church.

Christian Science is successfully demonstrating to the world that the teachings of Jesus the Christ are applicable to every need of humanity today, just as they were in the days when he was upon the earth. Millions gratefully testify that through the teachings of Christian Science the Christ has become to them a living reality and presence, bringing joy and healing into their lives, making them healthier, happier, and better men and women. Jesus said, "By their fruits ye shall know them." Some would claim the right to be called Christian on the basis of dogma, and would deny this right to those who claim it on any other basis. Christian Science must, however, adhere to the standard of the Master.

If, then, Christian Scientists in the healing of the morally and physically sick are emulating the works of the great Physician, such procedure is undoubtedly scientific. On page 313 of "Science and Health with Key to the Scriptures," Mrs. Eddy says that "Jesus of Nazareth was the most scientific man that ever trod the globe." His followers will accept this statement in proportion to their discernment of the science of Christianity.

✧

[Willis D. McKinstry in *The Wichita* (Kan.) *Eagle*]

A recent issue reports a local minister as saying, "The only effective way to answer Christian Science is to offer the people a Christ able to heal the body in sorrow and sickness." We heartily agree with him upon this point. It is the healing Christ that satisfieth a hungering heart. Christian Science teaches the fulness of God and the Christ as recorded in the Holy Bible, beginning with the first chapter of Genesis and concluding with the last chapter of Revelation. The teachings of Christian Science do not ask the world to worship a new God; its only appeal is that the human misapprehension or wrong belief relating to Him be given up and He be known as omnipotent and omnipresent Life, Truth, and Love. This understanding of God enables mortals to go to Him at all times with the assurance of His willingness and ability to meet their needs, mentally, morally, and physically.

He also says: "One does not have to go off on the vagaries of Christian Science for physical help from the Lord." "Vagaries" can bring help to no one, neither can a blind faith avail much; but a scientific right understanding of God will heal all our afflictions and save us from our destructions. That this right understanding of Him has come to the world through Christian Science is proven by its healing results, and the healing is not solely physical, but with it has come a great moral and spiritual awakening.

At an Episcopal church congress in Cincinnati, one of its speakers in referring to Christian Science healing said, "The church threw away a jewel and a woman picked it up."

✧

[*Los Angeles* (Cal.) *Times*]

"Why, God loves me as much as He does any one else, and if I am in trouble He is surely going to help me out."

Such was the remark made to the writer recently by one who would be called a hard-headed business man. So expert is he in his line, indeed, that he has been called to push the interests of a very important business in a large city. A simple statement like this, accompanied by such childlike trust, was a clear indication that he had come into touch with the Christ spirit, and it developed later that his confidence had been brought about by reading the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy; not that such teaching is confined to this book, for it is simply the teaching of the Bible. Nevertheless here is another evidence that Christian Science is awakening its students to a more vital and practical interest in the Book of books, which has guided and comforted so many noble men and women down through the ages.

It is this practical sense of the ever-presence of God that the business man needs. When he grasps the fact that the God of a perfect universe is supreme in the counting-house, that the God of heaven is the God of his home, that there is indeed but one God, and He omnipotent, then he has a sense of a God with whom he wishes to be associated. In fact, it would be to every man's advantage if he would consider himself in partnership with God. "O for a closer walk with God," should be the aspiration of each heart, but the walking with God should be continuous.

That man can hardly expect to be led aright who refers only certain questions to God and tries to carry others along by himself. One cannot say "Thy will be done" in that and mine in this, or even leave the so-called minor or unimportant matters to take care of themselves. What did Jesus mean when he said, "But even the very hairs of your head are all numbered," unless it was that the smallest details of daily living are governed and directed by our Father, and that we should commit ourselves entirely to His guidance and protection? As we read on page 70 of Science and Health, "The divine Mind maintains all identities, from a blade of grass to a star, as distinct and eternal."

Editorial

Love's Omnipotence

In the ninth chapter of Luke is recorded the sending forth of the twelve disciples whom Jesus had selected, and although his instructions to them are given in some detail in this and other chapters of the gospels, it is noticeable that the real purpose of their going forth is stated in a single terse sentence, namely, "And he sent them to preach the kingdom of God, and to heal the sick"—truly a momentous mission succinctly stated.

That the work which the Master himself was doing did not differ from that which he had sent these disciples to do, is very evident, for we read in the eleventh verse of the same chapter that when the people had followed him to "a desert place belonging to the city called Bethsaida, . . . he received them and spake unto them of the kingdom of God, and healed them that had need of healing." These few words epitomize Christian ministry, and although Christian Scientists have been and are today assailed for endeavoring to continue this ministry, the fact remains that nothing short of the healing work which Jesus did and commended to his followers offers irrefutable proof that his teachings are understood.

Mrs. Eddy found that the preaching of the kingdom of God, and the healing of them that have need of healing, are just as inseparable now as they were in Jesus' time, and that it is as essential to Christianity today as it was then that we should have in us that Mind "which was also in Christ Jesus," in order to do this or any other work for the benefit of humanity. The fact that at the present time mortal thought is greatly stirred on all questions affecting human liberty, possibly more stirred than ever before, makes necessary an understanding of God, and of our Master's great ministry, which will hold in check the marked unrest of this time and restrain it from seeking license instead of liberty. The proof of this understanding must necessarily come through the same proofs which Jesus gave, otherwise there is no means of knowing that the gospel in its purity—the gospel of the kingdom of God—is being preached; and if it is not preached and practised with signs following, but little is to be expected in turning human unrest into that "glorious liberty of the children of God" which the apostle Paul declares is the natural heritage of "the sons of God."

The world is slowly learning the lesson that neither brute force nor dominant will-power is the right factor to bring about a solution of or a doing away with the social and industrial evils that today are holding the interest and attention of the more thoughtful. No merely arbitrary ruling can effect the accomplishment of what are generally conceded to be needed reforms, but when we have attained to such a degree of understanding that we are able to bring to bear the omnipotence of divine Love as each problem presents itself, we shall prove for ourselves, as Mrs. Eddy points out on page 201 of Science and Health, that "the way to extract error from mortal mind is to pour in truth through flood-tides of Love." We shall look upon all these phases of error not with bitterness and angry resistance, but with that same tender compassion, that yearning to cast off the shackles of sin and disease, as did the Master when the multitudes thronged him; and in proportion as we are endued with his vision of the spiritual man, perfect in the image and likeness of God, it will be said of each one of us, He "healed them all,"—healed them of their poverty, their sicknesses, their unrest, with the realization and understanding of that Love which must ultimately settle all human questions.

In considering this subject it is impossible to ignore the significant bearing on it of the First Commandment, that supreme summing up of the law and the gospel of which Mrs. Eddy writes on page 340 of Science and Health: "The divine Principle of the First Commandment bases the Science of being, by which man demonstrates health, holiness, and life eternal. One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed." It all comes back to the primary rule, that the constant exercise of love for God and for our fellow men is our individual part in the final annihilation of evil, the solution of every vexed problem.

Archibald McLellan.

✧

Spirituality

We occasionally hear the remark from outsiders that Christian Science is not a spiritual religion, because from their point of view the emphasis is largely laid upon physical healing. Impressions of this sort are often gathered from the testimonies of healing given at the Wednesday evening meetings, or published in our periodicals, and we must not overlook the fact that a good deal is said about the body and its ailments, up to the point of emancipation in Christian Science from this bondage. The non-Scientist would most likely fail to see that the tendency to talk about bodily conditions is due to early associations and habits, also the generally prevailing belief in physical law and the diseases attached thereto. It is true that this tendency is to a large extent overcome when people accept Christian Science, but in the recalling of past experiences, when people are giving testimonies, it is apt to crop out. Then there is a desire, on the part of many listeners who need healing, to know if those who testify had ailments and symptoms similar to their own, and to this the one testifying often responds, it may be unconsciously, although to his own sense the emphasis is all placed upon the fact that he was healed by divine power after material means had failed.

Here some one is likely to say that non-Scientists do not talk about their ailments in discussing their religion, and this may be granted; but such people do not believe that religion can heal, while the Christian Scientist does, which is an important difference. Even so spiritual a man as John the Baptist became confused over this question, and doubted the Messiahship of Christ Jesus because of the prominence given in his ministry to healing. Moreover, John sent from his prison a sort of protest to the great Teacher; but the answer was, "Go and show John again those things which ye do hear and see;" then the Master enumerated the healing works which were being done by himself and his students, and added a blessing to those who should not be "offended" or antagonized by his work. On another occasion the Pharisees charged Jesus with casting out devils "by Beelzebub," and he asked them, "By whom do your children cast them out?" They did not even attempt to heal by spiritual means, as did the Master, but relied upon faith in matter as a curative agent, as the multitudes do today; and now, as then, the demand of a spiritual religion which heals the sick arouses the bitterest opposition on the part of mortal mind, until sufferers begin to see that as man is a spiritual being the human need of healing must be met by a spiritual remedy.

Our brethren in the other churches do not perhaps see what it means to us to apply the word of God with perfect assur-

Digitized by Google

ance in every hour of need, or know that our confidence is strengthened in every experience, whether the healing come slow or fast, because in either case the whole result is far beyond what we ever experienced when we relied upon drugs. Even on the physical side there is renewed energy, greater than ever before,—the more abundant life promised by Christ Jesus; and this includes the quickening of the spiritual nature and the consequent disappearance of the evil passions of the carnal mind, as darkness is swallowed up by light. This is explained by Mrs. Eddy as a spiritually scientific process, the full understanding of God and man bringing the perfect *healing* which means the realization of sinless and deathless *life*. (See Science and Health, pp. 115, 116.)

Christian Scientists rejoice at every indication of advancing spirituality the world over, knowing as they do that this means health, harmony, and happiness for all mankind. Our revered Leader says (Pulpit and Press, p. 22): "When the doctrinal barriers between the churches are broken, and the bonds of peace are cemented by spiritual understanding and Love, there will be unity of spirit, and the healing power of Christ will prevail." This assuredly means God's kingdom come, and His will done, on earth as in heaven.

ANNIE M. KNOTT.

"And forget not"

THE history of the children of Israel is in large part the story of God's remembrance and of their forgetfulness of His covenant with them. With a frequency of reiteration which speaks for the tenacity of their indifference, the stupidity of their stumbling, they were reminded by patriarchs and prophets of God's faithfulness and compassion, and of their solemn obligations to remember His precepts to do them; nevertheless, their resistance to these appeals is chronicled again and again in these words: "And the children of Israel remembered not the Lord their God, who had delivered them."

That forgetfulness still remained a marked characteristic of the chosen race, is seen in the fact that our Lord's address to his brother Hebrews might be epitomized as a reminder of the spiritual content of their faith, from which they had turned away until it was quite forgotten; and he defined the office of the "Comforter" that was to continue his work, when he said, "He shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you."

All this gives added significance to the statements on page 55 of Science and Health, in which Mrs. Eddy identifies the "Comforter" as "divine Science," that appearing of "Truth's immortal idea" in human consciousness by which we are enabled to "realize God's omnipotence and the healing power of divine Love in what it has done and is doing for mankind." The ministry of Christian Science to the church today was well expressed by St. Peter when he said to the early Christians that he sought to "stir up [their] pure minds by way of remembrance." Its spirit, and the message to all, is embodied in the one hundred and third psalm. It teaches that mortal birth and experience is as the poet says "but a sleep and a forgetting," the mesmeric stupor of false belief from which we are awakened in the coming of Christ, Truth, and it brings quickening assurance in its declaration of man's safety in that embrace of the divine consciousness to which Isaiah referred when he wrote: "Zion said, . . . my Lord hath forgotten me. Can a woman forget her sucking child, . . . yea, they may forget, yet will I not forget thee."

This is still the offense of all mankind, especially of those who have accepted St. John's great affirmation, "Now are we the sons of God," but who do not even try to demonstrate the eternal sovereignty of this sonship. And how constantly one comes upon illustrations of this pitiful fact. Ian Maclaren never penned a more touching chapter than that which tells of the passing of Georgie Howe. It is the story of the eclipse of a rarely endowed and rarely consecrated young man who is given up by "Marget," his gentle Scotch mother, and by "Domsie," his great-hearted teacher, in the spirit with which Abraham bore his son to the altar of sacrifice. The pathetic picture is etched in a masterly way, but that its hopelessness could have been consented to by a minister of Christ indicates an astonishing forgetfulness of the fact that God did not consent to the tragedy which the patriarch's imperfect sense had premeditated, and of the yet nearer fact that the Master healed the sick and required of all believers that they do likewise. Though the simple people of Drumtochty were devoted Christians, the healing Christ was quite unknown to them, and he is correspondingly unsought if not unknown in the instance of unnumbered millions of professed Christians today, and for the reason that their spiritual leaders have been educated to ignore Love's eternal mandate, "Heal the sick." This is one of the most startling aspects of twentieth-century Christianity, that faith in the present power of Christ, Truth, to heal, has become such a thing of the past that its declaration as a practical possibility is looked upon as an innovation if not a heresy!

Christian Science is again reminding the Christian world of its sin of forgetfulness. It is pointing to the bow in the cloud, to the constancy and reliability of light, as a symbol of the abiding power of Truth to dispel false sense, and thus destroy resulting sickness, sorrow, and death. To Israel the word is being spoken, as of yore, Thou shalt not forget the Lord thy God who healeth thee.

JOHN B. WILLIS.

Among the Churches

Current Notes

SALAMANCA, N. Y.—The Christian Science "clean journalism" booth and rest room at the recent Cattaraugus county fair was a wonderful demonstration of God's allness, there being a bountiful supply of everything, from the time the first move was made to the last. The Christian Scientists throughout the county responded in every way, in time, money, and with their presence at the booth for work, and we had a plentiful supply of people from all parts of the county who were willing, some glad, and others anxious, to get the literature. We distributed 1600 *Monitors*, 800 *Journals* and *Sentinels*, and 142 pamphlets.—*Correspondence.*

VINALHAVEN, MAINE.—At the annual fair given by the Pleasant River grange of this place, the Christian Science church of Vinalhaven had a rest tent on the fair-ground. Over a hundred *Monitors*, fifty *Sentinels*, and a dozen *Journals*, together with various pamphlets, were distributed, and received with evident appreciation. The members of the grange were very kind to the Scientists attending, and cooperated with them so far as to have the tent brought there, set up, and returned without any trouble or expense to the church.—*Correspondence.*

LIMA, OHIO.—First Church of Christ, Scientist, inaugurated a new feature at the fair this year, and one that was much appreciated. A rest room was maintained under a commodious tent, and it was one of the most cozy places on the grounds. It was taken advantage of by many women and children. The free distribution of Christian Science literature, and the many little acts of kindness, made every one happier.—*Lima Times-Democrat.*

The Lectures

London, England

The remarks of Maj. L. N. H. D'Aeth in introducing Prof. Hermann S. Hering, who lectured on Christian Science for Third Church of Christ, Scientist, were in part as follows:—

The old-time prejudice against anything new, especially in religion, the unreasoning, intolerant attitude adopted in former days by many, is fast disappearing and now lectures on Christian Science attract vast crowds of earnest, intelligent people, who are genuinely interested and anxious to learn more of that religion which even those who once came to criticize are bound to admit is bringing day by day health, happiness, and peace to thousands of their fellow creatures.

It is less than fifty years since this new-old religion which was preached to the Jews on the shores of the sea of Galilee nearly two thousand years ago, was rediscovered and reintroduced to mankind as the one and only healing religion of all time, thus confirming the prophecy of our Master when he said, "Heaven and earth shall pass away, but my words shall not pass away." Christian Scientists have proved that through the better understanding of the meaning of the Bible which is gained by the help of their text-book, "Science and Health with Key to the Scriptures," the sick are healed of every disease known to man; but it goes far beyond this, for hand in hand and step by step with the healing of the body proceeds the greater work of reformation and regeneration of our moral natures in the destruction of all sin, of hatred, sensuality, drunkenness, dishonesty, and vice of every kind; and the healing of the body is the divinely natural outcome of this regeneration.—*Correspondence.*

✧

Waterloo, Iowa

"Christian Science: A Present Redemption," was the subject of the lecture delivered at the Waterloo theater by the Rev. William P. McKenzie. The lecturer was introduced by the first reader of the local church, Arthur G. Outhouse, who said:—

We are assembled here this evening to hear a correct and authentic presentation of Christian Science. This Science, discovered less than half a century ago, has attracted the attention of millions of people. The assertion that a method had been uncovered whereby sickness could be cured today as it was by Jesus and his followers over nineteen hundred years ago, to some seemed ridiculous, to others sacrilegious. Nevertheless many have accepted the glad tidings and rejoice in the proof of healing. This Science was submitted to the broadest practical test before it was given to humanity. There are many in this city with whom we are acquainted, who can testify to the healing efficacy of these teachings, since they have been healed of so-called incurable diseases.

Evening Courier.

✧

La Fayette, Ind.

Virgil O. Strickler, who lectured on Christian Science at the Victoria theater, was introduced by Thomas W. Heyland as follows:—

During the last quarter of the nineteenth century and the first decade of the twentieth, one of the most remarkable religious movements in the history of the world has been in progress. Under the name of Christian Science a new tree of righteousness has grown on the earth. Its roots have struck deep to the rock of ages. Its branches have gone out to the ends of the earth, and the leaves of the tree are for the healing of the nations. This tree is known by its fruit, that standard given by Christ Jesus when he said, "Every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit. A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." The lives and words of a great multitude, out of almost every nation on the face of the earth, gratefully bear testimony that the tree is good.

Undoubtedly there are many here in this audience who, if the opportunity were given, would gladly testify that they have been healed of their diseases, saved from their sins, and freed from their burdens through Christian Science.

Correspondence.

✧

Watsonville, Cal.

The Hon. Clarence A. Buskirk, who delivered a lecture on Christian Science, was introduced by Frank L. Proctor, who spoke in part as follows:—

There has been no movement in the history of Christianity which has so occupied the thought of thinking people as has Christian Science. We know it has brought peace, comfort, and lasting joy to countless thousands. Those who are familiar with its teachings know that it influences our thoughts for good more than anything else in our lives. Jesus was sent as an example for us to follow, and he gave to all the world for all time a rich promise when he said: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

If we are seeking the good and the true, we are sure to find it. We can all readily understand and appreciate the fact that the world looks brighter, happier, and better when we can see and enjoy its beauties and blessings through healthy eyes and strong bodies. Is it any wonder that we love our Leader, Mrs. Eddy, the one who has made the teachings of the Bible so clear and practical to us? As Paul the apostle was anxious to tell others how his blind eyes had been opened to the truth, so we who have been benefited by Mrs. Eddy's teachings are eager to tell others of the good we have received thereby, that all may share in the truth.

Correspondence.

✧

St. Anthony, Idaho

Bliss Knapp delivered a lecture on Christian Science in the opera house. He was introduced by the Rev. H. W. Burger, pastor of the Presbyterian church, who said:—

I have the honor of introducing to you a gentleman from Boston who represents that type of religion known as Christian Science. All of us have a tender spot in our hearts for that city, because of past historical events, and naturally we open our hearts to the good things which come from there. Our brother, however, has outgrown Boston and has traveled around the world in the interests of Christian Science.

Although I am not a Christian Scientist, I share the lot of many others who welcome truth from every source. The age in which we live demands that all people stand upon a plane where we may see truth above mere form, love above personal beliefs, Christ above "isms." The need of undivided loyalty and service to our one Lord and Master, Christ Jesus,

Digitized by Google

is imperative. We are all brothers and sisters, bound by the one tie of humanity, answerable alike to the same God, and hopeful of the same happy reward. We must receive the truth from every source, bind it about our hearts, and practise it in our lives.—*Correspondence.*

✦

Wilmington, Del.

Virgil O. Strickler lectured at Turn hall on Christian Science. He was introduced by G. Harold Pim, first reader, who spoke in part as follows:—

When Jesus called his disciples together, as is recorded in the ninth chapter of Luke's gospel, and "gave them power and authority over all devils, and to cure diseases," he not only charged them to "preach the kingdom of God," but he commanded them to "heal the sick." Again we read, in the sixteenth chapter of Mark, that Jesus "appeared unto the eleven as they sat at meat, and upbraided them with their unbelief and hardness of heart;" after which he commanded them, saying, "Go ye into all the world, and preach the gospel to every creature," adding that "these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." Our Master was speaking to his disciples, but he did not say, "These signs shall follow you," but "them," "them that believe." Does not his wonderful declaration apply to this age and generation? For centuries this healing element in Christianity lay dormant, unused, until about forty-seven years ago, it was rediscovered and presented to this age by Mrs. Eddy. Christian Science teaches and demonstrates that the healing power of the Christ is ever operative, and is today healing the sick and reforming the sinner as it did over nineteen centuries ago.

Jesus once said "to those Jews which believed on him, If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." Mankind the world over is searching and praying for freedom, —freedom from sickness and sin, freedom from self-imposed bondage to fear, poverty, false appetites, and discouragement. Christian Science is offering a sure salvation to poor suffering humanity. It says, "Ho, every one that thirsteth, come ye to the waters, and he that hath no money; come ye, buy, and eat." It is the coming anew of the gospel of "on earth peace, good will toward men."

Christian Science is a demonstrable religion. It is a practical, logical statement of that fundamental law upon which Jesus' teachings were based, the law of God. That the power of God does heal is evidenced by thousands of happy human beings who have been healed of almost every ailment known to mankind through the ministrations of Christian Science. The dissemination of this good news is therefore a benefit to all humanity, and we are privileged this evening in having one with us who is well qualified to speak on this subject.

Every Evening.

✦

Cornell University, Ithaca, N. Y.

Judge Clifford P. Smith delivered a lecture on Christian Science under the auspices of the Christian Science Society of Cornell University, at which the attendance was very good indeed. In introducing the lecturer, Professor Karapetoff said that he took great pleasure in his task, because it afforded him an opportunity publicly to express his gratitude for the teachings of Christian Science.—*Correspondence.*

Lectures to be Delivered

Albuquerque, N. Mex.—Francis J. Fluno, M.D., Elks opera house, 8 p.m., Nov. 20.

Atlanta, Ga.—Virgil O. Strickler, Lyric theater, 3:30 p.m., Nov. 16.

Brockton, Mass.—Bicknell Young, Hathaway theater, Main street, 4 p.m., Nov. 16.

Cairo, Ill.—Francis J. Fluno, M.D., Jewish Synagogue, 8 p.m., Nov. 11.

Centralia, Ill.—Clarence W. Chadwick, Pittenger opera house, 2:30 p.m., Nov. 16.

Cranford, N. J.—Clarence C. Eaton, church edifice, 8:15 p.m., Nov. 18.

Edinburgh, Scotland.—Prof. Hermann S. Hering, Synod Hall, Castle Terrace, 8 p.m., Nov. 27.

Evanston, Ill.—Hon. Clarence A. Buskirk, church edifice, corner Chicago avenue and Grove street, 8 p.m., Nov. 18.

Fort Scott, Kan.—Hon. Clarence A. Buskirk, Pictureland theater, 7 North Main street, 3 p.m., Nov. 16.

Jackson, Miss.—Clarence W. Chadwick, Century theater, 8 p.m., Nov. 18.

Joplin, Mo. (First and Second churches).—Willis F. Gross, New Joplin theater, 8 p.m., Nov. 21.

Kansas City, Mo. (First Church).—Willis F. Gross, church edifice, Ninth street and Forest avenue, 8 p.m., Nov. 17 and 18.

Kirkwood, Mo.—Willis F. Gross, church building, Washington and Clay avenues, 3 p.m., Nov. 16.

Macon, Ga.—Virgil O. Strickler, City auditorium, 8 p.m., Nov. 18.

Malone, N. Y.—Bliss Knapp, Malone opera house, 8 p.m., Nov. 18.

Memphis, Tenn.—Clarence W. Chadwick, church edifice, 8 p.m., Nov. 20 and 21.

Mobile, Ala.—Virgil O. Strickler, Battle House auditorium, 8 p.m., Nov. 21.

Montgomery, Ala.—Virgil O. Strickler, church edifice, 16 High street, 8 p.m., Nov. 20.

Mt. Vernon, N. Y.—Bliss Knapp, Westchester theater, 3:30 p.m., Nov. 16.

Needham, Mass.—Bicknell Young, Town Hall, 8 p.m., Nov. 18.

Oneida, N. Y.—Clarence C. Eaton, Madison theater, 8 p.m., Nov. 16.

Providence, R. I. (First Church).—Bicknell Young, church edifice, corner Prospect and Meeting streets, 8 p.m., Nov. 17.

Reno, Nev.—Rev. William P. McKenzie, Grand theater, 8 p.m., Nov. 20.

Seattle, Wash. (Fourth Church).—Rev. William P. McKenzie, Hippodrome, Fifth avenue and University street, 2:30 p.m., Nov. 16.

Shellman, Ga.—Virgil O. Strickler, High School auditorium, 7:30 p.m., Nov. 17.

St. Louis, Mo. (First Church).—Francis J. Fluno, M.D., church edifice, Kingshighway and Westminster place, 8 p.m., Nov. 17.

Temple, Texas.—Judge Clifford P. Smith, Gem theater, 8 p.m., Nov. 16.

The Hague, Holland.—Prof. Hermann S. Hering, Pulchri Studio, Lange Voorhout, 8 p.m., Dec. 1.

Troy, N. Y.—Bliss Knapp, Music hall, 8:15 p.m., Nov. 17.

Utica, N. Y.—Clarence C. Eaton, Majestic theater, 8 p.m., Nov. 16.

Testimonies of Healing

[Translated from the German]

It is almost a year since I became acquainted with Christian Science. I have every reason to be grateful for this truth, as I owe to it my restoration to health and happiness. For fifteen years I had been suffering with an abdominal complaint, to which new troubles were added every year, such as asthma, a cough, a diseased kidney, rheumatism, swollen feet, and a stomach trouble which caused me the most suffering. Since 1908 I had dreadful cramps in the stomach at intervals of from three to four weeks. Finally they were of daily occurrence, so that it became impossible for me to eat solid food. Several physicians whom I had consulted were unable to help me, and as I was not benefited by the use of drugs, my condition became so wretched that restful sleep at night was gradually denied me. I then consulted a specialist, who told me that I would have to submit to an operation if I wanted to recover my health, for the trouble would eventually affect my mind; but fear kept me from having the operation performed. Another physician, who was also unable to help me, thought that a sea voyage was the only thing he could suggest that might benefit me.

A friend advised me to try Christian Science, and gave me two copies of *Der Herold der Christian Science*. After I had read them, I thought that if the statements therein partook of the nature of truth, there was a possibility of regaining my health, and after reading these copies several times I knew that the Almighty would restore me. I put my case into the hands of a Christian Science practitioner, who lovingly took up treatment and gave me all the explanations desired on the subject. Every free moment was applied to the reading of Christian Science literature and to prayer for right understanding, and all material remedies were discarded at once. When after three weeks I told my practitioner that I would try to work on for myself, she was delighted at the idea. A severe relapse occurred twice, but this was due solely to a sense of fear which had not yet been eliminated. I then called upon the practitioner, and in both instances the trouble was met within two or three days. We must gain an increasing knowledge of God, and the more we read and ponder, the more will our understanding of the truth grow, which makes us free from all fear and evil.

Since then I have been a much happier and more hopeful woman, taking no gloomy view of things as formerly, for I know that God is always with us and does not forsake His children. I thank God daily from the depths of my heart for all these proofs of His love and for the blessings which I am privileged to experience personally and in my home. I am also grateful to Mrs. Eddy, the Discoverer and Founder of Christian Science.—Mrs. Mary Waechter, Paterson, N. J.

I am a traveling auditor for a railroad company, and as such am obliged to be away from home and among strangers much of the time. Intoxicants and tobacco, which formerly found room in my grip, have for many years been displaced by the Bible, "Science and Health with Key to the Scriptures," and the Christian Science literature. When *The Christian Science Monitor* was first issued, I was puzzled to know how to get the good out of it, but hit upon the following plan. Every Monday morning, on leaving home for the week, I take with me the last six numbers of the *Monitor*. I am always called at six o'clock, and before leaving my room I read over the Lesson-Sermon; then I take a copy of the *Monitor* to the dining-room, and while waiting for and eating my breakfast read the Christian Science article, and others if I have time. When starting for my work I leave the paper on the hotel reading-room table. In this way I know that many are seeing the *Monitor* for the first time. The *Sentinel* and *Journal* are also regular traveling companions.

When I left a hotel in Tennessee, where I had spent some months, the proprietor, in saying good-by, made the remark: "I sure am sorry to see you go; if every guest of this hotel gave me as little trouble as you do, hotel-keeping would be a pleasure." I was once greatly given to finding fault with hotel service, thinking this was necessary, but I received a valuable lesson in that respect from a Christian Science lecturer who came to our town. On talking with him about the hotel and making excuses for the unsatisfactory service I assumed he had received, I was surprised when he replied that the service was quite satisfactory and that he did not find hotel life a hardship. Ever since this gentle rebuke—now almost two years ago—hotel experiences in small towns have been pleasanter and the service more satisfactory. I find that the reading of the Lesson-Sermon is most helpful, as I am thus enabled to overcome hate with love, fear with trust, discord with harmony, error with Truth.

John J. Hesler, Carbondale, Ill.

It is with a heart filled with gratitude that I give this testimony of what Christian Science has done for me and mine, trusting that it will bring hope to some one who is struggling along as I was sixteen years ago. For several years my husband suffered from stomach trouble, though under the care of many physicians, the last one telling him that he could live only about three months longer. He then turned to Christian Science for help and was healed instantaneously. He bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and asked me to read it, as some one in Chicago had told him that people were sometimes healed in this way.

I had been sick for nearly eight years with the same diseases from which my mother and grandfather died, and had been under the care of many physicians, but had grown worse all the time. Desiring to be true to the faith in which I had been educated from childhood, I began the study of Christian Science with fear, but after reading the Lord's Prayer and its spiritual interpretation, as given on page 16 of Science and Health, I realized that I had nothing good to give up, but a great deal to gain. When I learned that God is our Father-Mother, it dawned on me that I could not inherit disease or anything unlike God, good. After studying for about eight weeks, I was completely healed of what the doctors called heart trouble, dropsy, a paralytic affection, and nervous exhaustion. At that time a large basketful of medicine was thrown away, and we have not used any since then.

We had one child, seven years old, who had taken medicine all his life for a weak stomach, and he was healed through the little knowledge we gained in two months' study. One year later another boy was added to our family. He is now fifteen years old and has never taken any medicine. The diseases which other children usually experience, such as measles, chicken-pox, whooping-cough, etc., have not come near him.

I am thankful for these physical healings, but the peace, contentment, and assurance that "my redeemer liveth," mean much more to me. I also know that the best way to prove that I am grateful to God, and thankful to our dear Leader, Mrs. Eddy, for Christian Science, is to live it every day to the best of my understanding.

Mrs. Antonie M. Curran, Marion, Ind.

Christian Science has been a great help to us in the past year. In a case of typhoid fever, our daughter was not able to be out of bed and had been sick for several days before I called for help. The Scientist came to the house and worked for about an hour. At first, we felt that we had a very sick child, but after the treatment the Scientist decided to take her home, and while waiting for her to dress, played several hymns on the piano and sang, the little girl joining in the singing, so that one would not believe that she was the same child of an hour before. When she returned in the evening, she was much better. A short time afterward, she ran a rusty nail into her foot; and this caused a great deal of suffering. The foot was badly swollen and the bone seemed to be displaced. It was several hours after this that I called for help, because the child did not speak of it till she got ready for bed; but in the night she woke up and asked me to call the practitioner, which I did, and in two hours the pain was gone and she was asleep, although she needed some further treatment; but it was all overcome.

Another case was about the same. The child suffered so that her cries woke the neighbors, and I again had to call for help in the night. In the morning the Scientist called up and asked that the patient come to the telephone, but she could not do so. Again the lady came to the house and treated her, and then took her home. A neighbor who saw this said she believed that there was something in Christian Science after all. We hardly knew a time that this child was free from headaches, but now she is much better.

Christian Science has helped me mentally, as well as in time of sorrow and other troubles. Further, it has helped us out of financial difficulties. Our oldest child suffered very much from a stomach disturbance and for several days was very sick, but it was all overcome with Christian Science. Our little boy was run over by a bicycle and his neck and shoulder were hurt. I at once called for help, and in a few days all trace of the injury was gone, and he has never had any trouble since. Christian Science has also helped my husband's mother. For all this I am very grateful.

Mrs. M. C. Bliss, Kansas City, Kan.

✧

Through the teachings of Christian Science I have been released from a great bondage of fear,—fear of weather, of colds and climate. As a child I was taught to be afraid of weather, as I was sick every winter with fever and colds. While in high school I was taken out and sent South, with the verdict that I could not live until spring in a northern climate, my lungs being so delicate. At another time I had an attack which was pronounced by the physician an abscess of the lungs, and the following winter I was kept in the South eight months for fear of coming in contact with the cold and dampness of the North. The next winter it was six months, and this attack required four years of strenuous effort with physical culture, baths, tonics, special foods, etc., to restore me to what was considered a normal condition. I was taught to be afraid of bad or damp air as well as night air, and so my problems were many in trying to breathe fresh air at night.

Is it any wonder that my heart overflows with gratitude to the Discoverer of Christian Science, when through a study of her teachings I have been liberated from such bondage and am set free to enjoy the weather, no difference what the conditions may be? Since taking up this study, an attack like the last one referred to presented itself in all its aggravated forms, but a Christian Science practitioner was appealed to, and in three weeks I was restored to a normal condition, a vast improvement, however, over what was considered my normal condition prior to having learned that God is Life, and that a weak, delicate physical condition is not the manifestation of Life.

It is now six years since I began the study of the Bible in the light of "Science and Health with Key to the Scriptures," and to learn from it that the truth it contains is "our sufficient guide to eternal Life" (Science and Health, p. 497). I have enjoyed the freedom of health and strength ever since, and during this time the Bible has been my daily companion, enabling me to make practical Paul's admonition to the Galatians, "Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage."—Lenore Coe, Cleveland, Ohio.

✧

[Translated from the German]

Rarely in my life have I given a testimony with more gratitude and sincere joy than on the present occasion, which calls for the following statement from my pen. The fact is, that my debt of gratitude to God for Christian Science, and my thankfulness to its noble and high-minded herald, Mrs. Eddy, is so great that it seems as if I could not feel at ease until I had relieved my overflowing heart through a public acknowledgment of the benefits received.

Until a few months ago I had no knowledge whatever of Christian Science and was living the life of an embittered atheist. This sad view of things had urged itself upon me through years of observation and experiences of all kinds, particularly through the crying injustice and the cruelties perpetrated on dumb creatures in the name of science, and the indifference of the official church with regard to this evil; but divine Providence and mercy have led me back and made of me a believing and happy man. Christian Science was the means by which this was accomplished, and I thank God daily, from the depths of my heart, for the love which He has bestowed upon me in showing me the way to the church home which I have found with my dear wife in the local Christian Science society.

In the earlier part of last February I was taken with a very severe attack of illness, the lungs and heart being especially affected. Owing to previous strenuous work, and day and night study extending over a considerable period, my condition was such as might have made the trouble terminate fatally. I then gladly followed my wife's advice and secured the services of a Christian Science practitioner who lived not far from us. We were not members of the society at that time, but had read some literature on the subject which had impressed me. We had also made the acquaintance of the aforesaid practitioner some time before, and as we felt entire confidence in her and a sense of perfect trust with regard to Christian Science, we applied to her for help in this serious case, as we had done before in minor instances, carefully avoiding any other means and keeping away from material associations.

We were not deceived in our trust, for on the second day there was a slight decrease of the alarming symptoms, especially with regard to the disturbed heart action and the lungs; and about noon on the third day, which was Sunday, I suddenly experienced distinct relief. From that time on the improvement was so marked that I was able on the next day to leave bed temporarily, and two or three days later to go out again and attend to my work. This wonderfully quick and complete healing, as well as a further instance of cure of severe catarrh attended by dreadful pain, did not fail to impress me greatly, and so has the Christian Science literature which I have since read.

While on my sick-bed I devoted myself to this unique, beau-

Digitized by Google

tiful, truly edifying and convincing reading, and I did so with ever-increasing joy. Moreover, I had time to revert in thought to things past, and I was led to acknowledge the many blessings God had bestowed upon me, and how often He had held His protecting hand over me in times of severe illness and in cases of threatening danger. Then all my human stubbornness, my bitterness and unbelief, melted away, and the healing, the mental transformation of the infidel, was accomplished. I have recovered my happiness and inward peace. This I owe to Christian Science, and herewith I wish to give expression to my deep gratitude to the dispenser of all things, and next to Him to the faithful and loving Founder of the Church of Christ, Scientist.

TH. PEZOLT, Kirchenfeld, Bern, Switzerland.

✧

In gratitude for the many benefits I have received from Christian Science treatment, I desire to add my own to the long list of testimonials from all over the world, with the hope that I may disabuse any person of my age (eighty-four years) of the notion that Christian Science treatment is only efficacious for diseases of the young and middle-aged.

In September, 1911, I had an attack of illness so severe that I could neither eat nor sleep, and the change in my appearance and condition was so marked that acquaintances and relatives were engaged in bidding me good-by. It seemed to them that my age was sufficient cause for my demise without the added attack of severe illness, but the Christian Science practitioner thought differently. He looked away from the mortal body and saw only God's child, whose condition cannot be changed by age or illness, and the resulting restoration to health after eight treatments justified his statements.

Previous to the foregoing demonstration I had tripped over a wire hidden in the grass, and landed on my right arm, injuring the bones and ligaments so severely that I could not change its position without using my left hand. I applied to a surgeon, who pronounced it a very bad case, bandaged my arm, placed it in a sling, and instructed me to call in three days. I deferred the call eight days, meanwhile relying upon Christian Science. When I went to see the surgeon, the improvement was so marked that he called the attention of a visiting surgeon to it. They took turns at twisting my arm in different positions, asking if it hurt. They believed it a wonderful case of surgery.

Now in view of Mrs. Eddy's great persistency in compelling the world's acceptance of this marvelous Christ-method of healing, would it not be strange, if for thus availing myself of a method so thoroughly demonstrated all over the world, I should be liable to arrest and punishment?

DAVID PUTNAM, San Jose, Cal.

✧

Two years ago I learned of Christian Science, and so many have been my blessings that now I pray God to make me grateful for them all. Before that time I had suffered intensely, but now I am quite happy, with no fear, pain, or doubt.

A year ago I moved to a small country town, when malarial fever presented itself. I was a stranger and sixty-eight miles from a Christian Science practitioner, but I knew that God fills all space and I tried to realize that He would help me. After thirty-six hours I felt compelled to go to bed, but I took the Bible, Science and Health, and the *Quarterly*, and I tried to read the Bible, but both books seemed too heavy for me to hold. I then took up the *Quarterly* and turned to the Lesson on "Love." I read the golden text from the Psalms, "Show thy marvelous lovingkindness, O thou that savest by thy right hand them which put their trust in thee." After reading and pondering this I fell asleep, and in one hour I awoke refreshed and perfectly well.

A few days after this my arm was severely burned, but after a few hours I heard the hymn sung which begins, "How firm a foundation" (Christian Science Hymnal, p. 198), and in thinking of this hymn and the verse from the Bible, it occurred to me that God's right hand was outstretched to help me, and the pain left and the inflammation subsided in a few minutes. The next day the arm was entirely well. I have also been healed of stricture, rheumatism, and headaches of thirty-five years' standing.

With my slight understanding of Christian Science I have been able to help others out of the bondage of sin and disease, and the joy of it all leads me daily to express my gratitude to God for our revered Leader, who gave her time, knowledge, and love to help humanity.

MARY E. BODONG, Alexandria, La.

✧

I wish to give thanks to God for Christian Science. I was healed of a large abdominal growth after a well-known surgeon had said that my condition called for a dangerous operation; but instead I had Christian Science treatment, and the healing resulted. Six months after this, the growth appeared in another place; and though I had some treatments, it continued to grow larger for a year, when suddenly I became very ill from it. The physician of the family in which I was nursing at the time, was called in. He said that I was in a most precarious condition, and that I should waste no time in getting to a hospital and having the growth removed. I did not tell him that I was interested in Science, but went to my own home and sent word to the same practitioner who had helped me before, asking for treatment, and within three weeks I was perfectly well. The growth had entirely disappeared, and I had become normal in size. With the second healing I felt that the fear of the disease was gone forever.

Since I first became interested in Christian Science I have been healed of a stomach affection of four years' standing, acute throat trouble, and a tendency to take cold; indeed, I have been helped in many, many ways by this truth. For all this I am most thankful to God, and grateful to Mrs. Eddy.

MRS. AGNES BAMBERG, New York, N. Y.

✧

I give this testimony trusting that it may help some one who has hoped against hope for relief from suffering. In going up the stairs one night, before the gas was lighted, I lost my balance and fell heavily on my right knee. It did not pain me very much then, but as the months went by I found that I could not bend the knee and that walking was very difficult, and I was not able to attend church during the winter. My friends (who are not Christian Scientists) thought I was foolish not to put myself under a surgeon's care, but I surely believed that God was the only physician. One night I could not sleep for the pain, so I got up, and by holding to a chair I managed to reach the gas. From habit I took up the Bible, and it opened to these words: "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint." It was as though a voice had spoken to me in my great need. Then the thought came, Who are they that shall receive these great blessings? The answer came, "They that wait upon the Lord." I thought I had always trusted in God's help, yet I was very lame. Now, why was it? Then a voice seemed to say, Have you not had it in thought that you ought to have gone to a surgeon?

Digitized by Google

I could not deny it, but then and there I determined to stay up the rest of the night and prove that God was my refuge and strength. As day was breaking, I got up without realizing that I was not holding to a chair for support, but I walked across the floor holding to God's right hand. I was healed! I thanked God, and I have been thanking Him ever since.—ANNIE L. WALTERS, Chicago, Ill.

✧

My thought is full of gratitude as I recall the many ways in which I have been benefited through Christian Science. One morning while walking on the street, I fell, wrenching my ankle badly, and later on I found that a varicose vein in my leg had broken. The pain was so severe that I called a practitioner, and in about three weeks the limb was entirely healed, and the ailment has never returned. In all this time I was not obliged to be in bed an hour. A large lump under one knee also disappeared with a few days' treatment. Through vaccination in youth, I had been troubled all my life with terrible itching and eruptions, which would appear and disappear on my limbs. This also was sent into its native nothingness. Once again it appeared, but quickly vanished as the light of Truth was turned on it. Many minor ailments have also been overcome by the application of the truth.—MRS. HARRIET B. BALL, Pasadena, Cal.

✧

I cannot express in words my gratitude for what Christian Science has done for me and my family. Deafness has been overcome, also dizziness, from which I had been a sufferer since childhood. Not long ago a baby girl was born to us, no physician being present, whereas with the other children a doctor as well as a nurse were in attendance. I was up in a few days, feeling fine, and have been well ever since.

Many ills have been overcome through the understanding of this truth. Jesus said, "Ye shall know the truth, and the truth shall make you free;" and it certainly has done so in my experience. I thank God, also our dear Leader, Mrs. Eddy, for showing us the way.

MRS. GEORGE GILMER, Ingot, Cal.

✧ ✧ ✧

[Written for the *Sentinel*]

The Hills of God

GERTRUDE RING HOMANS

A CHILD in the valley village,
I gazed with rapture awed
On the mountains' crown near the little town,
And fancied they brought some blessing down
To those below who must toil and plod,
So I called them the hills of God.

And moon-blessed nights from my window
I viewed, o'er meadows broad,
The summits agleam in the silver stream,
And always to me it would surely seem
That angels walked there, glory shod,
In the light on the hills of God.

How oft in the vale of error,
When the senses would defraud,
Must we lift our thought, ere success be wrought,
To the spiritual heights where is ever caught,
Through inward eye, a space that is trod
By the hosts on the hills of God.

From Our Exchanges

[*The Universalist Leader*]

One of the facts which come to the surface in the gospel is the incapacity of most of the disciples for true friendship with Jesus. They did not share his ideals. They could not comprehend his spirit. They blundered whenever they tried to tell him what to do. They followed him, but they never developed into real comrades, for they never really shared in his divine hope. He called them friends. He was ready to make them his equals. But the response was not in them. There were moments when John or Peter may have had a glimpse of his soul, but they never lived in the spiritual world where he dwelt constantly. To be friends of Jesus requires such high and unselfish purposes, such sacred and holy experiences, such splendid and prophetic faith, that few of us ever win that prize. But such friendship is the ideal. It is nobler than belief in him. It is more satisfying than any form of salvation by his power. Just to walk with him, know him, understand him, feel the joy of his presence, and carry with us every day the conviction that we are worthy to go through life with him, that is the highest and most gracious form of that experience, which is religion and life at its best. The friends of Christ must be worthy to be his friends. They must be like him.

[*The Christian Work and Evangelist*]

There are many virtues in the eager, practical utilitarian spirit of our age, and it carries much hope for all of us in its bosom, hope for an ultimate social condition juster than any hitherto reached; but this need not blind us to the dangers and faults of our prevailing type of life. We have to learn that the world will not be saved by machinery and electrical appliances; that these can be developed to an undreamt-of degree and yet leave man essentially where he is, lower indeed in the scale of life instead of higher. We have to learn that there may be moral degeneracy alongside of the splendors of material prosperity. We have to learn to judge things by a higher standard than even the standard of utility; that, in Victor Hugo's phrase, the beautiful is as useful as the useful. We have to learn that the end of civilization is not money, but men, and that the true wealth of nations is more than having our ships in every sea and our commerce in every market. We have to learn the limitations of our common standards and to see that what sometimes passes for idleness is the truest work, and the busiest practicality is often, from the standpoint of eternity, the idlest trifling. Life needs a sanctuary to save it from perishing of cold.

[*The Continent*]

"No scheme for reorganizing society by legislation induces in me any serious faith. I see no hope for the ultimate cure of the world's social ills elsewhere than in the increasing development of such individual character as shall be able and willing by free personal choice to limit personal action within social bounds. Only Christianity, I believe, is capable of producing that character. Therefore, I maintain that Christianity alone can solve the social problems of the age."

"My dear sir, Christianity has had two thousand years to produce that type of character and bring about that social revolution. It has not done it yet. I do not believe it ever will. We must also have human law to compel the individual to act, as you say, within social bounds."

The respondent in this wholly unimaginary conversation was not an infidel. He was not a non-churchgoer. Instead, he was an outspoken Christian of the evangelical sort. In

Digitized by Google

fact, to tell all the truth, he was a minister of the gospel whose record of successful service testified to his consecration in the preaching of Christ. The stumbling-block that lies big in the path of this argument is the sickening, staggering truth of what this minister said; Christianity has indeed had two thousand years to prove itself able to cleanse human society, and it has not done it yet. The very church itself, accepting Christianity, is a society still honeycombed with the gangrene of the selfishness Jesus came to cure. The world sees the ugliness of unbrotherhood sticking out of the "body of Christ" at every pore. No wonder some say the life in the body is impotent.

But honest Christendom knows in its soul that its putrefying sores are the sores of its unfaithfulness, not of its Lord's life. These hated spots fester where it has rejected its Lord's blood. Christendom knows Christ never had a real chance yet in its own church, say nothing of the rest of the world. The power of the living Master does work with thousands, does make them new creatures,—heroic missionaries, self-forgetful comrades of the poor, unresting mothers, steadfast fathers, dependable sons, tender daughters, sacrificial ministers of salvation, and consecrated almoners of many another godly grace for men.

Even the veriest cynic knows some real Christians. Fill the world with such real Christians, and injustice and oppression would flee forever, laws and devices of men being needless to hasten their exit. A craven church might doubt God and say so many real Christians could never be. But a church worthy of Jesus will vow that at least the power of his spirit to make men right-living brothers of men in this world, shall not be discounted until for one generation at least he has been given free way to prove it.

[*The Christian Intelligencer*]

Faith and love are the chief factors of an earnest life. One's visible life is but the outward expression of his invisible modes of thought and feeling, of his convictions and affections; in other words, of his faith and love. As a man loves, he lives; as he believes, he behaves. If he loves God, he is godly; if he loves the world, he is worldly. So, too, if his faith be dim, his life will be dark; if his faith be bright, his life will be radiant. These two constitute the highest and holiest elements of his religious nature. They embrace the sovereign power of the regenerated soul. They make heroes and martyrs and reformers. They constitute the warp and woof of men and women of noble consecration and zeal, who assail error, reform abuses, plant missions, organize forces, found colleges, invent instrumentalities, set resources in order, make onslaughts against sin,—who run risks for Christ and humanity, espouse a good cause while yet unpopular, work where they are needed, even with the weak and despised, where loaves and fishes are few and small and hardships many and great.

[*The Christian World*]

The secret chamber holding the unrealized assets of life has nothing divine about it, and sends no divine influence forth, if its door be flung carelessly open for all and sundry to come in and ejaculate, How wonderful it is! but those who accept the situation in quietude, subduing rebellion even though they cannot wholly subdue regret, and above all, not seeking to repay themselves for their self-repression by calling loudly on the world to admire and weep,—these will find that their unrealized assets, though seemingly lying waste, have been sending forth from their hiding-place a subtle alchemy which has turned much of life's poorer metal (so unwillingly accepted for life's current coin) into fine gold.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY." —A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now in press, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

✧

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the currnt year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy, $5.00; twelve or more to one address, $4.75 each. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy, $6.00; twelve or more to one address, $5.75 each.

GERMAN TRANSLATION. Cloth edition, from one to five copies inclusive, $3.50 each; six or more to one address, $3.25 each. Leather bound edition, printed on Oxford India Bible paper, from one to five copies, inclusive, $5.50 each; six or more to one address, $5.25 each. Orders for the German translation in lots of six or more copies to one address, at quantity prices, may include both bindings.

ORDERS FOR SCIENCE AND HEALTH in lots of twelve or more copies to one address, at quantity prices, may include both English and German editions, and different styles of binding.

Miscellaneous Writings—1883–1896. A book of 471 pages, containing articles published in *The Christian Science Journal* since 1883, with revisions and additions. Price (cloth), single copy, $2.25; twelve or more books to one address, each, $2.00. Morocco, limp, round corners, gilt edges, convenient for pocket, single copy, $4.00; twelve or more to one address, each, $3.75. Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk sewed, single copy, $5.00; twelve or more to one address, each, $4.75. Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 607 pages, 10 x 7, and addendum, bound in cloth, marbled edges. Price, single copy, $5.00; six or more copies to one address, $4.50 each.

Church Manual. Containing the By-Laws of The Mother Church. Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Christ and Christmas. An illustrated poem. Price, single copy, $3.00; six or more copies to one address, $2.50 each.

Unity of Good and Other Writings. One volume containing: Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection, uniform in size with the pocket edition of Science and Health. Bound in morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Christian Healing and Other Writings. One volume containing: Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902, uniform with the pocket edition of Science and Health. Bound in Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper. Price, single copy, $3.50; six or more copies to one address, $3.25 each.

Retrospection and Introspection. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea. Library edition, 95 pages, cloth binding, marbled edges. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Unity of Good. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, 64 pages, cloth binding, marbled edges. Price, single copy, 65 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each. Leather covers (pocket). Price, single copy, $1.00; six to eleven copies, inclusive, 85 cents each; twelve or more copies, 75 cents each.

Pulpit and Press. A unique work, important to the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press of that occasion. Library edition, 90 pages, cloth binding. Price, single copy, $1.06; six to eleven copies, inclusive, 85 cents each; twelve or more, 75 cents each.

Rudimental Divine Science. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 17 pages. Pebbled cloth covers, gilt top. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 55 cents; six to eleven copies, inclusive, 42 cents each; twelve or more copies, 35 cents each.

Rudimental Divine Science. Printed in the New York point system of type for the blind. Price, prepaid, single copy, 50 cents; six or more to one address, 40 cents each.

No and Yes. A brief statement of very important points in Christian Science. 46 pages. Pebbled cloth covers. Price, single copy, 32 cents; twelve or more copies, 25 cents each. Library edition, cloth binding, marbled edges. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more copies, 45 cents each.

Messages to the Mother Church. By Mary Baker Eddy, including Christian Science *versus* Pantheism, and the messages of 1900, 1901, and 1902. In one volume. Library edition, 94 pages, cloth binding, marbled edges. Price, single copy, $1.56; six to eleven copies, inclusive, $1.25 each; twelve or more copies, $1.15 each.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. 15 pages. Pebbled cloth covers. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Message to The Mother Church. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckled edges. 15 pages. Price, single copy, 26 cents; twelve or more copies, 20 cents each.

Our Leader's Message. The annual message of Mary Baker Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges. 35 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Communion Message, June, 1902. The annual message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker Eddy. Deckled edges. 20 pages. Price, single copy, 50 cents; twelve or more copies, 38 cents each.

Two Sermons. CHRISTIAN HEALING and THE PEOPLE'S IDEA OF GOD. One volume. Library edition, cloth binding, marbled edges. 36 pages. Price, single copy, 60 cents; six to eleven copies, inclusive, 50 cents each; twelve or more, 45 cents each.

Christian Healing. A sermon delivered in Boston. 20 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

The People's Idea of God. A sermon delivered in Boston. 14 pages. Paper covers. Price, single copy, 21 cents; twelve or more copies, 17 cents each.

Feed My Sheep. Words by Mary Baker Eddy. Music by Lyman F. Brackett. Price, single copy, 50 cents; twelve or more copies, 40 cents each.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Price, single copy, $1.50; six or more copies, $1.25 each.

The above prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

NATIONAL

The beginning of a new, scientific investigation of the industrial situation, under the direction of President Wilson, which will contribute to the administration's trust legislation program at the session of Congress beginning Dec. 1, has been announced by Commissioner Joseph E. Davies of the bureau of corporations, in an address before the National Association of Hardware Dealers. Said Commissioner Davies: "There is now no governmental or other agencies engaged in attempting to get scientific information on this fact. The problem bristles with difficulty. It will demand an increased appropriation from Congress. The results may not coincide with all we hope to produce, but we can obtain facts that will contribute toward correct interpretation of industrial conditions as they exist."

Attorney-General James McReynolds, concluding final arguments for dissolution of the International Harvester Company before the United States district court, asked that an interlocutory decree be entered by the court, declaring the Harvester concern a monopoly in restraint of trade. He requested that the defendants have a reasonable time to submit to the court a proper plan of reorganization. "It is the view of the government that this company must be cut up into separate and distinct units," the attorney-general said. "This must be done in such a way that the stockholders of the different parts will be distinct. We insist that it is an economic impossibility for companies owned by the same people to furnish *bona fide* competition."

The German ambassador to Washington announces that in all probability ground will be broken for the new embassy building in Washington in April. The German government several years ago bought the building site on S street, between Twenty-first and Twenty-second, northwest, and during the coming winter it will appropriate five hundred thousand dollars for the building. Counting the cost of the site and of furnishing, the total expenditure for this new building will be about one million dollars.

The chief electrical engineer of the aqueduct power bureau of Los Angeles, Cal., has proposed that the city council consider a proposition to employ three electrical engineers to make a report on the questions of investment cost, annual expenditures, and annual earnings in connection with the construction of a municipal power-distributing system. The council is also asked to prepare a statement concerning the power project, its character, the work to be done and proposed to be done.

For the fiscal year ending Aug. 31, 1913, total receipts for automobile licenses in New Hampshire amounted to $152,833.81, while the expenses of operating the department aggregated $11,682.17, leaving a balance available for state highway maintenance of $141,151.64.

Interstate Commerce Commissioner Prouty has sent to the President his resignation as a member of the commission. Mr. Prouty will take charge of the work of ascertaining the physical value of the interstate railroad properties of the country.

Three representatives of the Chinese government, just arrived at New York, are on a tour of inspection of United States mints. They will go first to Washington, then to Philadelphia, New Orleans, San Francisco, and other cities.

INTERNATIONAL

The preparations by Peru toward taking part in the Panama-Pacific exposition at San Francisco are proceeding with the assurance that the structure, as well as the exhibits, will be worthy the occasion and the republic of Peru, and will be finished in time. It has been decided to build the edifice in the pre-Incaic style. On the first floor will be an exhibit of Peruvian antiquities, of which there are a great many. In recent years explorations have borne rich fruit in Peru, and as a result historians have been more active in delving into the past of the nation and the people of the long ago. Agricultural exhibits will also be located on the ground floor, while on the second floor will be found the mining and manufacturing exhibits.

By moving a mountain torrent and tunneling for five miles through Mt. McDonald, at a cost of many million dollars, the Canadian Pacific will reduce its grade through the Rocky mountains by five hundred and forty feet, and at the same time shorten its main line by four and a half miles. In the movement of traffic both east and west, the cost of operation will be so greatly reduced as to show a handsome profit on the millions which will be invested to make the change. Fuel bills will be cut and the speed increased, while the reduction of curvature by over twenty-four hundred degrees means nearly as much in economies as the change of grade.

A Russo-Chinese agreement, by which China recognizes the autonomy of Outer Mongolia, has been signed at Peking. Russia continues to acknowledge Chinese suzerainty and undertakes to refrain from civil or military occupation of the country, with the exception of consular guards. The agreement provides that autonomous Outer Mongolia shall comprise those regions formerly under the jurisdiction of the Chinese governor at Urga, the Tartar general at Uliascutai, and the Chinese governor at Kobdo; but since no detailed maps of the country exist, the exact future frontier will be the subject of negotiations.

According to an official bulletin, published in Rome, showing the results of the Italian elections, the Socialists have gained thirty-nine, while the Republicans have lost seven seats, the standing of the Clerical party remaining unchanged.

Germany still holds to her previous attitude of not taking part officially in the San Francisco exhibition.

INDUSTRIAL AND COMMERCIAL

In addressing the southern commercial congress a few days ago, Clarence Ousley of Fort Worth, Texas, said: "Reckoning this year's American cotton crop at fourteen million bales, the waste in marketing under present methods will amount to at least seventy million dollars. For lack of accurate information, at least as much more is lost in failure to obtain a fair price under the law of supply and demand. It is easily demonstrated that the producers of the South are suffering a preventable waste of one hundred and twenty-five to one hundred and fifty million dollars a year in the net returns from their cotton crop. It is as if we wilfully or carelessly destroyed each year the entire crop of a state like Alabama or Georgia. The waste begins at the gin, and the reform must start there. The bale, which is only partly covered, is damaged by exposure, tolled by sampling, taxed for patching, discounted for tare, depleted and battered at every turn from the farm to the factory, where it arrives ragged, filthy, unsightly, and depreciated, to proclaim the carelessness and the prodigality of the American people."

A corporation for the sale of foodstuffs at small profits, to be known as the Retail Butchers Exchange, has been organized in Philadelphia at a meeting of the Retail Butchers Association. The capital stock is two hundred and fifty thousand dollars, membership being restricted to retailers of meat who control no more than three stores. Officers of the Butchers Association promise a reduction of at least 10 per cent on goods bought from their stores, which number over a hundred. The Housekeepers League, which has a membership of fifteen hundred, played an important part in the organization of the enterprise, and as a guarantee of first-quality goods a label of the league will go with each package.

After five weeks spent in the eastern part of Washington and northern Idaho, G. L. Parker, district engineer of the water resources branch of the United States geological survey, has returned to Tacoma. Speaking of his work, Mr. Parker said: "Our district embraces Washington and Idaho. Washington has the greatest amount of water power of any state in the Union. Oregon follows Washington in this respect, and California is third. The water power represented in Washington is estimated at four million nine hundred and three thousand horse-power. The three states mentioned total 43 per cent of the water power of the United States."

Figures compiled by the bureau of foreign and domestic commerce at Washington, D. C., show that during the fiscal year of 1913 more than one hundred and eighteen million pounds of prunes, valued at six million six hundred thousand dollars, were shipped across the seas. In 1898 the exports amounted to only sixteen million pounds. During the same period, raisin exports increased from three million pounds in 1898 to twenty-eight millions pounds, valued at one million five hundred thousand dollars, in 1913.

Work on the Northern Pacific Grand Forks-Drayton cut-off between St. Paul and Winnipeg will begin early next summer if financial conditions warrant. The cut will reduce the running time from St. Paul to Winnipeg about an hour.

There are in Wisconsin over seven million acres in need of better drainage.

Only One Law

M. G. KAINS, M.S.

CONTRARY to much popular opinion, students of Christian Science are deeply interested in the subject of law as related to human progress. A recent article entitled "Some of Nature's Abstruse Laws," by a celebrated natural scientist, instantly recalls several passages in Mrs. Eddy's article, "Spirit and Law," in "Miscellaneous Writings" (p. 256). For instance, this writer says: "The entire sidereal universe and all that it contains is managed by rigid and set laws. Every law of motion of bodies in space, as suns, planets, moons, comets, and meteors, is known to very high mathematicians with a minute degree of accuracy." After enumerating a few of these laws, of which he remarks, "Perhaps there are as many as five hundred demonstrated laws in the mathematical physical sciences," he calls attention to the general ignorance about them and their workings, and then goes on to say: "Here are the mentological facts: One living in this beautiful world fifty, sixty, seventy, eighty years without being conversant with these . . . fixed laws has scarcely glimpsed *anything*. The case is comparable to that of a person passing hurriedly through a gallery of fine paintings looking at the floor, or going to a theater where all words spoken by the actors were in, to him, an unknown language."

In perusing the article in its entirety, the reader must have been struck with the thought that the author evidently felt for the person who, "not knowing a law of nature, . . . misses at least three fourths of the satisfaction and genuine, not imaginary, happiness" that should be his; for "these supremal laws, . . . equal in transcendent beauty and loveliness, are so much higher than all things human, that they even cannot be compared,—they are in a realm supreme—a world all by themselves." From a knowledge of some of these natural laws and their workings the present writer can understand the feeling which the scientist expresses, but can truly say that whereas the knowledge of the working of a natural law is one of the keenest pleasures that a human being can experience, there is a still higher happiness which just as far transcends it as knowledge transcends ignorance. This is the appreciation of the working of what can be demonstrated only as God's law. For though some of the laws now designated as physical are undoubtedly divine in their origin and working, yet human beings have not so far been able to cast aside their prejudices sufficiently to perceive the line of demarcation and separate the spiritual from the material.

"A falling apple," Mrs. Eddy writes on page 22 of "Miscellaneous Writings," "suggested to Newton more than the simple fact cognized by the senses, to which it seemed to fall by reason of its own ponderosity; but the primal cause, or Mind-force, invisible to material sense, lay concealed in the treasure-troves of Science. True, Newton named it gravitation, having learned that much; but Science, demanding more, pushes the question: Whence or what is the power back of gravitation,—the intelligence that manifests power?"

Whatever may be the feeling with respect to the classification of such laws as that of gravitation, certain it is that there are other laws which have never been claimed as belonging to the physical realm. Perhaps it might be even more properly remarked that there is only one law, namely, the law of God, the law of Life, of Love, of harmony, of perfection, the supreme law which is one with God, and which includes all the so-called lesser laws that may be classed only as manifesting it in diverse directions, but all of these manifestations in strictest harmony with one another. Such is the conception of a universe ruled by the omniscient, omnipotent, omnipresent, and omniactive Being whom we call God. Such a universe must necessarily be governed in harmony, for no being, human or divine, could be conceived of as deliberately governing his creation by laws which would be at variance with one another.

Is it not far more deplorable that human beings should go through their earthly experience in total ignorance of this law and its infinite workings, than that they should be ignorant of the so-called "abstruse laws of nature" about which the celebrated natural scientist referred to has written so eloquently? Is it not far more to the point that every human being should become conversant with the divine laws referred to in order to avoid "passing hurriedly through a gallery of fine paintings"? Is it not far more important to each and every one to place himself in an attitude of receptivity, so that he may experience the practical application of this high law to his daily life by the manifestation of perfect health, peace, joy, and all the other results that characterize its working? Paul gives a wonderfully clear statement of the distinction between divine law and that which arrogates to itself the authority of law, when he says in his epistle to the Romans, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

Again Mrs. Eddy says (Miscellaneous Writings, p. 22): "That Christian Science is Christian, those who have demonstrated it, according to the rules of its divine Principle,—together with the sick, the lame, the deaf, and the blind, healed by it,—have proven to a waiting world. He who has not tested it, is incompetent to condemn it; and he who is a willing sinner, cannot demonstrate it." Many people still shut themselves from such experiences by prejudicially condemning what they believe to be the statements and the import of this supreme law. No one so much as they themselves suffers the penalty for such folly. They are, however, generally too blind to perceive that it is folly to take the attitude they do.

There is one thing, nevertheless, in which to rejoice; namely, that they must all ultimately know the truth, for it is inherent in every one sooner or later to accede to Truth's demands. The higher nature or better self demands it, and will not be quelled in its insistent demands. When that happy time arrives, the prophecy of Jeremiah will have been fulfilled, namely: "After those days, saith the Lord, I will put my law in their inward parts, and write it in their hearts; and will be their God, and they shall be my people. And they shall teach no more every man his neighbor, and every man his brother, saying, Know the Lord: for they shall all know me, from the least of them unto the greatest of them."

Digitized by Google

The most important point of difference between so-called natural laws and spiritual law is, that whereas the former may be considered abstruse, the latter is simple to the person who will be honest with himself and be satisfied with nothing but the truth; for great truths are always simple. Children, and equally pure-hearted adults, readily grasp their significance. Of old, the psalmist said: "Blessed are the undefiled in the way, who walk in the law of the Lord."

It is not necessary to puzzle over a multiplicity of laws; "but one thing is needful," namely, to order one's thoughts in accordance with the supreme law of Love, so that a belief in no other lesser or so-called law can gain a foothold or becloud the spiritual horizon.

Serving Continually

LOUISE KNIGHT WHEATLEY

WHEN Daniel, at the command of Darius the king, had been cast into the den of lions, we are told that the king, after a night of anxiety and fasting, went very early in the morning to see what had taken place. The outlook was not promising. Without was the great stone, sealed with the royal signet and laid before the mouth of the den, while within were the hungry lions; yet there must have been in the thought of the king some faint shadow of hope that somehow his friend would yet be alive. The day before, when he had reluctantly pronounced sentence upon his trusted counselor, he had said, "Thy God whom thou servest continually, he will deliver thee." Now his first words show that his thought is still upon some higher power than any which he himself has ever known. "O Daniel," he cries, "servant of the living God, is thy God, whom thou servest continually, able to deliver thee from the lions?" We remember the brave, sweet answer: "O king, live forever. My God hath sent his angel, and hath shut the lions' mouths, that they have not hurt me."

It is a significant fact that in addressing Daniel the king had twice referred to him as one who served his God "continually." This fidelity and steadfastness on Daniel's part, in the midst of persecution, intolerance, ignorance, and superstition, had evidently impressed Darius, just as it will impress us when we begin to see that this very thing was an important factor in securing Daniel's speedy release from his most trying situation. We are always interested in learning more of how Daniel, as the saying is, "made his demonstration," for this Hebrew captive of centuries ago is not the only person who has ever believed himself thrown into a den of lions, and some have not gotten out so quickly as did he. We may recall that for what appeared to be an endless length of time we beat upon the stone walls of our dungeon without response. We cried aloud for succor, but nobody seemed to hear. Surely, we thought, God is able to save us! He who is "the same yesterday, and today, and forever," will not fail us!

Just at this point we stopped beating upon the walls and began to think. God is indeed "the same yesterday, and today, and forever," but what were we doing yesterday, and the day before that, and the week before that, and the month before that? Were we acknowledging God's allness, reflecting His goodness, rejoicing in His presence and power, gratefully recognizing ourselves as the expression of this infinite All, this supreme I AM of Spirit, or were we idly amusing ourselves in a satisfied sense of ease in matter? It is not an easy thing to readjust one's thinking in an instant. Christian Science teaches that "to understand God is the work of eternity, and demands absolute consecration of thought, energy, and desire" (Science and Health, p. 3). As Christian Scientists we have undertaken a great and holy task, even the amelioration of sin, sickness, and death; shall we therefore be less earnest, less devoted, less steadfast than was this Hebrew captive of old, who went into his chamber thrice daily, opened his windows "toward Jerusalem," and "prayed, and gave thanks before his God"?

It seems so easy to forget! Sense testimony whispers that we live, not in "the atmosphere of Spirit, where Soul is supreme" (Science and Health, p. 590), but in a material world, amid all sorts of material surroundings. It tells us that this is an age of luxury and ease, of many and diversified interests, of countless interruptions, of increasing demands, of feverish unrest. It tells us that one cannot afford to be thought "queer;" that the easiest way is to drift along with the current of popular opinion, to do what everybody else does, to go where everybody else goes, to say what everybody else says, to think what everybody else thinks. There are so many things to be done before we can settle down to do our studying and reading, and our quiet mental work. We would like to serve continually, and we will, after a while; but in the mean time,—and then down we suddenly go into the den of lions, and straightway call loudly upon God to get us out.

He can, He will, He does, for such is the all-inclusive compassion of Love's infinite plan; but if the getting out process is sometimes accomplished only after many strange delays and discouragements, shall we not be honest enough to place the responsibility where it really belongs? It was easy for Daniel to turn quickly to God in his trouble, for his mental processes required but little readjustment. With other Hebrew youths he had been brought, a prisoner, into one of the most corrupt and demoralized courts on earth; but he had not eaten the king's meat, neither had he partaken of wine at the king's table. He had been in the world, but not of it, like the disciples for whom Jesus prayed, "Not that thou shouldest take them out of the world, but that thou shouldest keep them from the evil." Surely it was no hard thing for him who had been in the habit of opening his windows thrice daily "toward Jerusalem," to look up through the little window of his prison and realize the omnipotence of good, of infinite Truth and Love.

Type of the true Christian Scientist is this intrepid Daniel, mingling quietly with his fellows, making the best of a bad situation, living in peace even among a race of aliens and idolaters, but never allowing anything to interfere with the serving of his God continually; for to serve as he did is to think right always. He who "shall abide under the shadow of the Almighty" is he who "dwelleth in the secret place of the most High," not he who goes there only when he is in trouble. The true Christian Scientist dwells so constantly in Mind's abiding presence that his thoughts spontaneously go out in unconscious healing. He does not always need to speak; he lives in an atmosphere of right thinking, which speaks for itself, like the fragrance of a summer garden, silently abloom. Jesus on one occasion had only to turn and look upon Peter to send that weak disciple forth, healed of his fault, and weeping bitterly.

The true Christian Scientist is one who often blesses without knowing it. No one can even casually meet him without feeling better, or take his hand without realizing the sincerity of its clasp, or look into his eyes without remembering that the pure in heart see God. He does not have his moments of rapturous exaltation, followed by the swing of the pendulum to the other extreme, but is ever poised, alert, awake, listening for the Father's voice, ready to go, to come, to wait, to speak or to keep silent, as the Father wills. He is the Daniel of the twentieth century; and when he is cast into the den of lions,—as he sometimes is,—we know that after his night of vigil the

Digitized by Google

quiet hour of dawn will come, when he will serenely look up into the anxious face of his would-be persecutor and say, as did that other one who served continually: "O king, live forever. My God hath sent his angel, and hath shut the lions' mouths, that they have not hurt me."

Individual Work

JOHN D. FRANCE

Mrs. Eddy says that "success in life depends upon persistent effort, upon the improvement of moments more than upon any other one thing" (Miscellaneous Writings, p. 230). Among the first problems which confront the beginner in Christian Science is that of mental work. Sometimes error appears to us with the intimation that we do not want to work, or that all work is for the regular practitioners to do. That this is error becomes evident if we remember the Scriptural admonition that we are to work out our own salvation. Paul does not leave us suspended in mid-air with this statement, but supplements it with the assurance that divine Love furthers our every effort in this direction.

When we comprehend that to think of Truth is to think of God, spiritual thought no longer seems narrowing. As we perceive that our concept of home, of humanity, and of all things is objectified in experience, just as our face is reflected in a mirror, we see the necessity of having our thought established on such a basis as to make experience harmonious, and know how impossible it is for others to do our work for us, or even to render us much assistance, unless we keep our own thought receptive by constant effort toward Christianly scientific thinking. How can Christians walk in an orderly way unless they are striving to bring every thought and act into harmony with divine Principle?

We are also tempted sometimes to believe that others are ignorantly or purposely trying to hinder us in our demonstrations; and how often, instead of dispelling this tempting thought, we offer it as a lame excuse for not expressing the truth we know full well that we should. God is conscious of His own children. Intelligence, strength, activity, supply, and all good are reflected directly to each individual idea from the one source, omnipresent Mind. Principle is a present positive remedy for any form of error that we face at any time. There is an all-powerful law of God with which to conquer every form that error assumes, and there is no condition, circumstance, or combination of mortal belief that can prevent us from turning to God's law in our thoughts, for thought is something which matter has never been able to imprison.

If we acknowledge God's omnipotence to be true, nothing can stop or even temporarily lessen the steady flow of intelligent activity from God to His child. In truth, we are already delivered; but we must wake from the mesmerism of lethargy and realize Love's activity. Why hold to the belief that we lack for supply, opportunity, intelligence, or understanding to do the work our Master told us to do, when we have an absolute Principle to apply to every state and stage of human experience? On the other hand, if we acknowledge the reality of sense testimony, we are simply forging bands to bind us to discordant conditions. We know the way of the Lord is perfect, and we walk in this way only when our words, thoughts, and deeds conform to Principle. If at one time our thought is scientific and at others governed by material sense, our walking is crooked and intermittent. Perhaps others are uplifted and encouraged when we walk rightly, and if we continue all is well. But if we sometimes walk and sometimes stand still, we perhaps cause others to bend the knee to doubt and discouragement, and they may again wander. On the other hand, if we walk rightly we bless all concerned.

Obviously it is the thought that man can be sick, sinful, disagreeable, or sorrowful, held either in reference to ourselves or others, which makes us unhappy. If for an instant we are sensible of harmonious conditions, for that instant we are happy. It follows, then, that if our lives were continuously concordant, permanent happiness would result. When we have once proved by a single demonstration of thought based on divine Principle that such thinking results in an harmonious manifestation, we ought not to doubt or falter in any instance, even though to sense we may stand utterly alone. In our human moments we sometimes think of the difficulties the Lord Jesus encountered as an evidence of the impossibility of our conquering certain phases of error. Jesus said, "I will pray the Father, and he shall give you another Comforter, that he may abide with you forever;" and Mrs. Eddy says, "This Comforter I understand to be Divine Science" (Science and Health, p. 55). If we have even a glimpse of this Comforter, it rests with us to demonstrate its presence and power.

If God is all, then all thought and activity must be of God, and in proportion as we turn away from a false sense of self to the God consciousness, will the divine activity be manifest in us. This is done, not by trying to kill evil, but by realizing the all-presence of good. Paul says, "For we that are in this tabernacle do groan, being burdened: not for that we would be unclothed, but clothed upon, that mortality might be swallowed up of life;" not by taking off an imaginary coat, error, but by realizing that God is perfection in every attribute, and that His image and likeness, man, never was, could not be, less than perfect. Elijah said, "If the Lord be God, follow him: but if Baal, then follow him." If spiritual truth is true, let us use it to dispel every human woe. So long as we believe the control of Spirit to be in the future, so long will the kingdom be far off instead of at hand.

In the writer's early experiences in Christian Science a friend who was a Scientist moved from the city to the country. Seemingly the opportunity for any vigorous work for our cause was rendered impossible, but the writer found on repeated visits that such was not the case. The same activity, the same healing of the sick continued. From this it seems that it is not our surroundings but our own condition of thought that brings forth the fruits of the Spirit. St. James says: "If any be a hearer of the word, and not a doer, he is like unto a man beholding his natural face in a glass: for he beholdeth himself, and goeth his way, and straightway forgetteth what manner of man he was. But whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed."

✧

Appropriation

EVELYN SYLVESTER KNOWLES

If we would be perfect, even as the Father "which is in heaven is perfect," must we not claim and appropriate all the qualities and attributes of the divine nature which belong to man as God's idea? When Jesus said, "He that believeth on me, the works that I do shall he do also," he was thoroughly in earnest. He had claimed man's birthright of spiritual dominion which enabled him to do the works of the Father, and he assures us that it is ours to do the same. A gift or a promise is of no actual value to us until we claim it. The toy given to a child affords him no enjoyment until he accepts and uses it. A promissory note may lie in one's safe for

Digitized by Google

years, adding nothing to one's material wealth unless payment is received. A gold mine or a diamond field will yield nothing to the one who refuses to explore it and appropriate its treasures.

God has given man dominion over all the earth, and it is therefore our part to accept and appropriate this divine gift. Are we doing this, or are we letting the things which we should rule, rule us? We are prone to fear what we should govern; to cater to so-called material laws which we should control; to succumb to sorrow, disease, sin, and death as the result of our belief in the power of that which we might defy. Thus by failing to appropriate man's God-bestowed dominion, we fall a prey to material laws instead of making them subservient to the universal good.

Mrs. Eddy says that man "is the compound idea of God, including all right ideas" (Science and Health, p. 475). Possessing "all right ideas," the real universe is his by birthright. The carnal senses, however, can no more possess the spiritual, than the senses of Soul can cognize the material. At present, while overcoming the flesh and all error, while displacing material concepts by spiritual facts, we cannot ignore the manifestations of falsity, but we can and must educate ourselves out of the belief that they are real, thus ceasing to mistake the counterfeit for the genuine.

This education consists largely in a series of appropriations. To know the spiritual universe, as has been intimated, is man's birthright. The wisdom of Spirit is the rule of right thought; the love of Spirit is the beneficent activity of good; the law of Spirit is the eternal rule of right, which when honored and obeyed, brings harmony and freedom. Through the apprehension and application of spiritual law we may govern the so-called material universe. Sickness flees before God's law, sin and death are destroyed by it; indeed, every phase of wrong thinking and erroneous belief is thus annihilated. Heaven then no longer seems afar, but is found in the individual consciousness, where the reign of health, holiness, and love disseminates blessings every hour and upon all, making our heaven ever present and everywhere, and all this through the application of the truth which is already ours.

We cannot obtain ultimate spiritual results, however, until we have faithfully followed the rules which have to do with the solution of our problems. These rules are simple, the first, perhaps, being the attainment of a teachable, childlike spirit, which yields absolute obedience to governing Principle. In mathematics the basic law is the unchanging right relation of numbers, and in music, the correct relation of sounds. In Christian Science it is the righteous and unchanging relation of God and man,—God the perfect Father, man the perfect child. It is self-evident that in expressing this perfection, man reflects only that which emanates from the divine Mind, his governing Principle.

Only that obedience is acceptable to God which is spontaneous and uncompelled, and which expresses a contented mind. This does not speak for impulsiveness, but for thoughtful loyalty and gladness of spirit. Our Leader says, "Nothing but wrong intention can hinder your advancement" (Science and Health, p. 326). In the mean time, whatever our lot, we may

> Soften the upward path with a smile,
> And sweeten it with a song.

The lowly violet contentedly drinks the dew or rain, murmuring not over chill conditions, or lovingly lifts its little face to the morning's sunbeams, envying not the more exalted position of the queen of flowers. A loving, trusted Father has placed it where it will draw the nourishment best suited to the development of its perfection, and who shall declare it less beautiful than the rose? "If God so clothe the grass of the field," said the Master, "shall he not much more clothe you, O ye of little faith?"

Further, activity, mental as well as physical, is essential in our effort to attain perfection. The great Wayshower was active even when resting; he always emerged from his periods of cessation from work with renewed vigor and enlarged understanding, which proved that he had not been idle. We must be faithful and fearless in our activity. If the result appears to be coming wrong, we have but to fix our gaze upon Truth and Love, and listen for God's voice. Guided by unerring wisdom, we can afford to do what is right at the moment, trusting unchanging Principle for results.

Again, we must have the humility which is gained through the constant contemplation of the divine nature, that rare selflessness which displaces self-pity, self-condemnation, self-will, and every other manifestation of self-confidence or of self-love. Only thus is the mortal or temporal man "put off," and in his stead there appears the pure, spiritual child of God, made in His image, reflecting His perfection, and exercising the promised dominion over all the earth. As our revered Leader has truly said, "Whatever is possible to God, is possible to man *as God's reflection*" (Miscellaneous Writings, p. 183). This statement is corroborated in Revelation, where we read, "Behold, I have set before thee an open door, and no man can shut it." It is ours to enter this portal and appropriate the treasures within.

✦

Just Judgment

JOSEPHINE H. TAPLIN

THE writer has a deep sense of gratitude for the protection of divine Love as manifested to her through the vigilant and untiring devotion to Principle shown by those in charge of our periodicals. Through an earnest desire to be of help, she sent in an article for the *Christian Science Sentinel*, believing sincerely that the rebuke it contained was much needed among some Christian Scientists and that all she wrote was scientific and helpful. Many months passed, but the article did not appear. Questioning why in her inmost thought, she again made a careful study of the copy of the manuscript sent in, when lo, spiritual unfoldment during the waiting period at once showed her its utter worthlessness. She had simply allowed herself to enter into judgment and condemnation of her fellow Scientists and to exploit her own self-righteousness.

What presumption it now seemed, what a faint realization of the all-power of divine Love! Her first thought, upon discovering this, was a great throb of thankfulness for the clear and loving thought of those who examine the articles sent in, joy that her own contribution went no farther than the waste-basket, where it could do no harm. To feel that, after all, she was not allowed to be a channel for harm to our cause gave her a deep sense of the protection of ever-present Love. Mrs. Eddy says in Science and Health (p. 444), "Let us be faithful in pointing the way through Christ, as we understand it, but let us also be careful always to 'judge righteous judgment,' and never to condemn rashly."

The error which the writer tried to attack seems still to be in evidence, but she now knows that it can be overcome only through a deeper and more patient love. Let us be thankful for the all-round thoughtfulness of those who are editing our periodicals, sifting the chaff from the wheat, and giving us to read only that which is helpful, and, in accordance with our promise as found in the tenets of our church, let us strive to be "merciful, just, and pure" (Science and Health, p. 497).

Selected Articles

[Frederick Dixon in *Holloway Press*, London, England]

In a recent issue there is a reference to Christian Science in which the writer says that he is going to cure himself of gout by contraries, and thinks of joining the Christian Scientists. The Christian Scientists, he goes on to say, declare that pain is all imagination, and if you can persuade yourself that you have no pain, you will not feel it. Now, in one sense, I am inclined to agree with him. I think if you can persuade yourself that you have no pain, you will not feel it, for I am quite sure you will not persuade yourself as long as you have the pain. If, however, the writer thinks that this is Christian Science, he is about as completely mistaken as he is ever likely to be.

What Christian Science does say is, that pain is mental, and that the only way in which pain can be entirely overcome is by destroying the mental cause. This is not a position confined to Christian Science; it is the position of all idealist teaching. Where the Science of Christianity differs from the science of the laboratory, is that Christian Science insists that when people say mind is causation, they should take the next inevitable step and insist that in this case pain must be mentally destroyed, and not physically. If, that is to say, a person is suffering from toothache, the pain may no doubt be stopped by the extraction of a tooth or by the application of some drug. In reality, however, all that is happening is that an exceedingly clumsy way of persuading the mind, and so altering its material or subjective condition, is being adopted. It is quite plain that pain overcome by the application of material means is only overcome in that particular instance and at that particular moment, and another pain can assert itself the next moment. What Christian Science insists on is, that when it is once realized that pain is mental, the means of avoiding pain, not only at the moment but thereafter, is acquired, and that therefore real healing has supervened, not by merely dealing with an effect, but by the destruction of the cause. This is not pretending that you have no pain, it is simply recognizing what pain is and overcoming it scientifically. "Sickness," Mrs. Eddy writes, on page 460 of Science and Health, "is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being."

The teaching of Christian Science, then, is undertaken with the object of giving mankind a true understanding of being. If its teaching is effective, not only is the particular case of sickness aimed at healed, but the healing can extend through the whole gamut of human inharmony, whether of sorrow, sickness, or sin. This is surely what Jesus meant when he declared, "Ye shall know the truth, and the truth shall make you free," for he showed that the freedom which was the inheritance of a knowledge of Truth gives man dominion over matter in all its myriad forms.

✦

[Arthur Worthen in *The Miami* (Okla.) *Enterprise*]

It is evident that Jesus knew from his experience with some of his disciples that the time would come when there would be divers sects and denominations spring up, and in order that future generations might be able to distinguish between those who believed (understood) and those who did not, he said that "these signs shall follow them that believe." The theology that Jesus taught healed sickness as well as sin, and the physical healing was to be a mark of discipleship. For upward of three hundred years after the crucifixion a man's Christianity was measured by his ability to heal sickness. The healing of sickness is not the whole of Christian Science, however, but from the amount of suffering and pain seen all around us it would seem that there was a savior needed for the body as well as for the soul. And it is being proved in numberless cases every day that God can heal the sick now just as well as He ever could; and without the use of a poisonous drug.

One of the reasons why we rely on Christian Science in case of sickness is that we get better results from it than we formerly did from medicine. Jesus said, "Ye shall know the truth, and the truth shall make you free." Science, according to Webster, is truth ascertained. Christian Science insists that we can and must know the truth about God before we can enjoy eternal life, for, as Jesus says, "this is life eternal, that they might know thee the only true God." From its very inception Christian Science has been misrepresented and ridiculed by both the pulpit and the press, and in spite of this it has grown with a rapidity that is phenomenal, and the only way to stop it is to give the world something better.

✦

[Paul Stark Seeley in *Malheur Enterprise*, Vale, Ore.]

An editorial in a recent issue calls attention to some statements by eminent surgeons attributing appendicitis to mental causes. Another statement by a physicist, who was quoted, avers that nothing exists but electrons, whose cause is mind. These quotations fairly illustrate a present-day tendency to assign material phenomena to a mental cause. Since the conclusions arrived at by these gentlemen were, by implication, made akin to Christian Science, I ask permission to state what Christian Science teaches regarding matter, disease, and their origin.

For many ages the world's philosophers, investigators, and natural scientists have been trying to solve the riddle of the universe by assuming the reality of material things and then reasoning backward in the hope of finding some rational cause. The story of the man who tried to lift himself by his own boot-straps may perhaps be trite, but it well serves to show the utter futility of all attempts to explain a material universe while neglecting to take into account God and His spiritual nature. Christian Science, however, has chosen the course of reasoning laid down in the Bible, and has presented to mankind a system of religious teachings which begins with the simple premise stated by John, "God is love." From this fountain-source of infinite goodness it derives in its logical conclusions a practical Christianity which is today healing, purifying, and making glad many thousands of human sufferers in the four corners of the globe.

Since God is Love, He can be only good, and His love and goodness can be expressed only by Mind, even by the divine Mind, which is but another name for God. The divine Mind is everywhere; for what can limit intelligence? God must then include in His infinite nature all intelligence, wisdom, and power. There can be no other creator or creation, for God's all-inclusiveness and self-completeness makes a second power or creator an impossibility. As there is but one creator, there can be but one creation, similar in its nature to its cause, even to God, whom Jesus said is Spirit. His creation, therefore, is the spiritual universe and spiritual man, perfect and complete. And here it is of interest to note that in the account of the spiritual creation in Genesis, man is made in God's image and likeness. More than four thousands years later John reaffirms the statement by the declaration, "Now are we the sons of God." It is therefore plain that Christian Science has ample Biblical authority for its teaching that God is Spirit, expressed only by the spiritual universe and spir-

Digitized by Google

itual man. But because Christian Scientists realize in some measure the reality of spiritual things, they do not treat with indifference the troubles of suffering humanity. Rather are they showing by their works the truly scientific way for mankind to find release from mortal bondage.

Following the account of the spiritual creation in the first chapter and first five verses of the second chapter of Genesis, it is related that "there went up a mist from the earth," and in the succeeding verses a material creation, the opposite of the spiritual creation, is described. The mist typifies an erroneous mortal belief which conceived a supposititious material universe and man. It was to avoid the pitfall of this evil belief that the man mentioned in the same chapter was counseled not to partake of "the tree of the knowledge of good and evil." By doing so he became an idolater, for he believed a lie to be a part of the truth, and the material universe and material man, though wholly unlike Spirit, he believed to be God's creation. Material creation and all its attendant ills are, therefore, in the light of Scriptural authority, but a lie believed to be true. There is but one remedy for a lie, and that is the truth, before which it disappears as the darkness before dawn. And so through the recognition of spiritual truth the lie of material sense will disappear, bringing to mankind the fulfilment of the Master's promise: "Ye shall know the truth, and the truth shall make you free." Then will men realize more fully the import of Paul's pointed statement, that "to be carnally minded is death; but to be spiritually minded is life and peace."

The human consciousness has been so absorbed in the mysteries, ambiguities, and contradictions of the material universe that it turns with misgiving and reluctance to God, slow to acknowledge His supremacy and the negative nature of its own being. It was to the materially minded Pharisees that Jesus directed his scathing arraignment of evil thinking, and tore from it forever the mask of false assumption when he said: "Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there was no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." And yet the world, sunk in its abyss of materialism, continues to pull at its boot-straps and wonders why it is not lifted up, though deliverance be in thought itself. Jesus marked out the way, not with material theories and mortal beliefs, but with spiritual understanding, man's God-given inheritance, which is always sure, certain, and demonstrable.

As has been pointed out, Christian Science acknowledges no cause save the one divine Mind, God. Matter, the unlikeness of God, could not be created by Him. Nor is the problem of matter made any clearer by saying that matter is due to a mental cause, for, as said in Science and Health (p. 293), "matter and mortal mind are but different strata of human belief." Indeed, to be let loose from a belief in matter as real and to accept a belief that it is a mental phenomenon, is like converting water into steam. It attenuates but does not destroy it. Both matter and its supposed mental cause must be destroyed by the same process, even by turning from mortal belief to spiritual understanding. Disease and electrons are both concepts of the carnal or mortal mind, and both will disappear when man seeks from God rather than among material phenomena for an explanation of existence. Then will be understood the apostle's declaration, that "things which are seen [spiritually] were not made of things which do appear [to material sense]." The old man, fettered by the claims of material belief, will be put off, and the new man, made in God's likeness, will be put on, whose measure is "the stature of the fulness of Christ."

[M. I. Whitcroft in *Cheltenham* (England) *Examiner*]

I notice in a recent issue, in an article entitled "A Higher Thought Pilgrimage," the writer remarks that Christian Scientists refuse "to recognize the actual existence of disease." I do not know in which of the Christian Science publications she finds this teaching, but if she had taken the trouble to read Science and Health by Mrs. Eddy before making such a statement, she would have found there (on page 460) the following passage: "Sickness is neither imaginary nor unreal, —that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being." Christian Science teaches that the only reality is God and His creation, which is perfect, spiritual, and eternal. Does the writer wish us to understand that disease has a real, actual existence? If so, neither Christian Science nor Higher Thought and *materia medica* combined need ever undertake to destroy it, because man cannot destroy that which is real, that is, true, God-created.

In the same article we are told that to the exponent of Higher Thought referred to by the writer, "disease is a real thing, for which the ordinary medical and surgical processes . . . may be immediately necessary, but which is better met and permanently overcome in the long run by mental discipline, a striving toward clearer and higher thinking, which in turn corrects and ennobles the physical processes." Mrs. Eddy says, "The procuring cause and foundation of all sickness is fear, ignorance, or sin" (Science and Health, p. 411); therefore how can the effect be permanently overcome until the cause of the disease is removed? Jesus destroyed both the cause and the effect through his knowledge that they are one and the same, an unreality, a false belief, the outcome of ignorance of God, and of man made in His image.

Jesus' knowledge of truth, his "right apprehension of the truth of being," healed "all manner of sickness and all manner of disease" without any of the "necessary medical and surgical processes" of his day. He said, "Ye shall know the truth, and the truth shall make you free." Christian Scientists are daily proving that in proportion to their assimilation of the truth which Jesus taught and demonstrated, daily and hourly striving to let more of that Mind be in them "which was also in Christ Jesus," they are able to fulfil his commands to "preach the gospel" and "heal the sick," thus gaining for themselves and others that freedom promised as a result of knowledge of the truth.

While appreciating all that is beautiful and grand, Christian Scientists do not find that, like their critic, they seem to be dependent at every turn on the apparently "material" and to need pleasant environment as a stimulus to higher thought. On the contrary, they find that those things which appeal merely to the material senses, are no more necessary to their mental vision of the real and spiritual, of all that is beautiful, pure, and true, than they were to Jesus, as he went daily about his Father's business amid the poor and lowly in the towns and villages of Judea and Galilee.

✧

[John M. Henderson in *The Spokesman-Review*, Spokane, Wash.]

In a recent issue, in reporting the Episcopal conference, Bishop Brewer of Montana is quoted as saying: "There is a great deal of good in Christian Science, but their theology is as false as hell. . . . Their theory of healing is all right, and healing was taught by Christ, but we have got away from it." Blunt expressions of opinion, unsupported by argument or testimony, do not satisfy the multitudes of this progressive era who are yearning for a demonstrable knowledge of the truth. The Standard dictionary defines theological science

Digitized by Google

as "the branch of science that treats of God and the relations of God and man." Christian Science accepts the Bible declaration that an infinite and perfect God created man in His own image and likeness, and understands that the seeming separation between God and man is the result of centuries of false teaching, and the consequent seeming existence in the human consciousness of a multitude of false beliefs concerning God and man.

On page 497 of "Science and Health with Key to the Scriptures" by Mrs. Eddy, may be found the tenets of Christian Science, the first of which reads: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient *guide to eternal Life.*" Would it not be a difficult matter for the bishop to explain how a theology "false as hell" could be deduced from such a foundational tenet? Mrs. Eddy says on page 145 of the same volume: "The theology of Christian Science includes healing the sick. Our Master's first article of faith propounded to his students was healing, and he proved his faith by his works." On page 138 she says further: "Our Master said to every follower: 'Go ye into all the world, and preach the gospel to every creature! . . . Heal the sick! . . . Love thy neighbor as thyself!' It was this theology of Jesus which healed the sick and the sinning. It is his theology in this book and the spiritual meaning of this theology, which heals the sick and causes the wicked to 'forsake his way, and the unrighteous man his thoughts.'" The theology of Christian Science is the theology which was taught and practised by Christ Jesus.

The bishop's syllogistic arraignment of Christian Science is a "house divided against itself," and must therefore suffer the proverbial consequences. Accepting any two of his three *statements* as premises, and reasoning *a priori*, the remaining *statement* cannot follow as a logical conclusion, for the stream cannot rise higher than its source; good cannot emanate from evil, or evil from good. If the church, as the bishop confesses, has "got away" from Christian healing, it is because of its failure to understand and obey the command of Jesus to heal the sick as well as to preach the gospel. Jesus said: "He that believeth on me, the works that I do shall he do also;" and, "These signs shall follow them that believe;" namely, the healing of sickness and sin. Manifestly the badge of discipleship is ability to do the works the Master did.

Eighteen hundred years ago a statement, almost identical with that of the bishop, was made concerning the teachings of Jesus. The Pharisees admitted his healings, but condemned his theology. They said: "He casteth out devils through the prince of the devils." Jesus cited his healing of sickness and sin as proof of the divine source of the theology he was teaching. One hundred and fifty years ago the theological forefathers of the Bishop of Montana, among them Bishop Gibson of London and Bishop Warburton of Gloucester, condemned the theology of Wesley and Whitefield because it gave "shameful disturbance to the parochial clergy," and included "doctrines big with pernicious influences." The preachers were termed "enemies to the church," "fanatics," "bigots," guilty of "vanity, vindictiveness, hypocrisy,—the natural fruits of fanaticism." Wesley's effective refutation of his critics, in proof that his theology was not false, was his reference to the fruits of his ministry, to the multitude of his fellow men reclaimed from sinful ways. (See Winchester's "Life of John Wesley.")

Today Christian Scientists are striving to teach and practise the theology of Christ Jesus,—the healing of sickness and sin through the understanding of the relation of God and man. They rejoice in some measure of progress, and point in humble gratitude to the multitudes whom the knowledge of this truth has made free.

[Editorial in *Anderson* (Ind.) *Bulletin*]

The announcement by the local Christian Science church of a public lecture seems to make pertinent some observations in regard to this world-wide religious movement. The term "world-wide" is used advisedly. It is only thirty-eight years since Mrs. Eddy first gave to the world her book, "Science and Health with Key to the Scriptures," which contains an exposition of the doctrines of Christian Science and a method of interpretation of the Scriptures in many respects widely at variance with prevailing theological creeds and dogmas.

In the brief period of less than half a century, Christian Science has girdled the earth. The first church organization was effected at Boston in 1879, and is known as The Mother Church. The first building for The Mother Church was completed in 1894, at a cost of two hundred and fifty thousand dollars, and in 1906 an extension to this building, costing two million dollars, was opened for public worship. The organization of branch churches throughout the United States and Canada has gone on with amazing rapidity, until there is scarcely a city or town in which the cult is not represented. In England, Germany, and generally throughout continental Europe, the growth of Christian Science is little short of marvelous. In South Africa, Australasia, and in the "isles of the sea" this religion has flung to the breeze its banner of healing.

The *Bulletin* holds no brief for the Christian Scientists. As a newspaper, it engages in no religious discussions; but it may note that the public attitude toward Christian Science has undergone a great change in the past few years. During the period of early development, the new doctrines were met on every hand with fierce criticism, contumely, and gross misrepresentation; and yet the cause steadily advanced. As the ranks of the Scientists increased in numbers and they were seen to be earnest and sincere in their religious belief, were good neighbors and law-abiding citizens, intolerance gave way to tolerance, and even in many instances to mild approval.

We are informed that the lecture platform is one of the most efficient agencies of the Christian Scientists in presenting their doctrines to the public, and for correcting the many errors in the popular mind regarding these doctrines. The board of lectureship is composed of sixteen men eminently fitted for this work, and their field is the world. They answer calls for their services to all parts of the civilized globe. The healing of sickness and sin, as in primitive Christian times, is a distinctive tenet of the Scientists, and they claim that a spiritual understanding of the teachings of Christ Jesus makes the way clear to the "signs following" which the Master declared should be the evidence of true discipleship.

✧

[John W. Harwood in *Manchester* (England) *Citizen*]

The reason for the world-wide growth of the Christian Science movement is that its teaching is fulfilling the conditions laid down by the master Christian, "He that believeth on me, the works that I do shall he do also." This does not imply any limitation as to what can be done by spiritual means. Dr. Dearmer admits that there is scientific proof that spiritual healing is not confined to neurotic and inorganic diseases, but hesitates to acknowledge that the case of a broken leg could be dealt with successfully. If he admits the healing of Jesus, he must admit that it did not take long to restore the withered arm "like as the other" by spiritual means alone.

✧ ✧ ✧

One truth discovered, one pang of regret at not being able to express it, is worth all the fluency and flippancy in the world.—ALEXANDER SMITH.

Editorial

Breaking Away

On page 150 of Science and Health Mrs. Eddy writes: "The science (so-called) of physics would have one believe that both matter and mind are subject to disease, and that, too, in spite of the individual's protest and contrary to the law of divine Mind [God]. This human view infringes man's free moral agency; and it is as evidently erroneous to the author, and will be to all others at some future day, as the practically rejected doctrine of the predestination of souls to damnation or salvation." That a start, at least, has been made toward the acceptance of the truth of this statement, many who have long been numbered in the ranks of Christian Scientists bear witness, and it is proved anew by the report of a sermon which recently appeared in the *Los Angeles* (Cal.) *Tribune*, from which we quote as follows:—

"Does God Send Disease?" was answered in the negative last evening by Dr. Charles Edward Locke, pastor of the First Methodist church, in his sermon before a large congregation, in which he said in part:—

"The ministry of pain and the philosophy of suffering are themes which essentially belong to the pulpit. There are some persons who think that pain is as much an element in the divine economy as peace, and suffering as rejoicing. Some easily dismiss the whole subject of pain by making God the author of all sickness and disease. Is this just? Is it Scriptural?

"Jesus declared that he was the light and life of the world. 'I am come that they might have life, and that they might have it more abundantly,' he said. On the advent morning the angel choir sang, 'On earth peace, good will toward men,' and Jesus later said, 'Peace I leave with you. My peace I give unto you,' etc. It must be conceded that neither abundant life nor fullest peace is found where there are disease and suffering. Indeed, Jesus was a foe to disease; he rebuked it everywhere.

"It is an ignorant libel against our heavenly Father to claim that He ever sends disease; and thus produces a fracture of a law in order to teach obedience to the law."

About the same time there was preached from the pulpit of another denomination a sermon of which the *Alliance* (Ohio) *Review* said:—

In a remarkable sermon to his congregation Sunday night the Rev. Rudolph C. Stoll, pastor of the First Presbyterian church, said he believed in Christian Science to a degree. He is not a Christian Scientist or he would not be in a Presbyterian pulpit. He believed the present creeds had many things out of date with present-day surroundings. He said the Christian Science creed is one that teaches people how to live; it is a practical truth, and its followers know why they follow it. "If Christ could heal the sick and the apostles could do it for three hundred years afterward, why cannot we do it now, if we are true Christians?" was one of the pastor's questions. It is a truth the followers demonstrate by the way they live. The pastor said he was not a Christian Scientist, but was trying to be honest. He intended to preach what he believed.

From still another pulpit, at practically the same time, was read a letter of resignation from a pastor to his congregation, because he had taken the advanced step of an open stand for the truth of the teachings of Christian Science. This letter, as reported in a despatch from Peabody, Mass., to *The Christian Science Monitor*, was in part as follows:—

"Luke said of the people of Berea that they were more noble than those of Thessalonica in that they received the word with all readiness of mind and searched the Scripture daily, whether those things were so. You have manifested the same nobility in the same way. I have tried, during these years, to grow in the knowledge and practise of the truth, and am convinced that I have succeeded in some measure. I have preached that which I believed true, regardless of tradition or precedent. In so far as my teaching has seemed strange or new, it has simply reflected my conviction that the usual conception of God and man was, to that extent, inadequate and short of the truth. I cannot conceive of any church responding more nobly. You have given me freedom and have freely accepted and tried to live the principles which I sought to preach and to prove before you. For all of this you cannot fail to have your reward.

"My change of views has come very slowly and in part unconsciously. Within a year some have doubted my right to continue as your pastor, although until now I myself have felt no inconsistency in my position. More recent developments of my own belief, however, convince me that I am in honor bound now to leave you free to develop your thought as you will."

In an interview with a *Monitor* correspondent at his home, this pastor (the Rev. Leon G. Miles), in reply to the question, "What are your reasons for resigning your pulpit, and adopting Christian Science?" replied:—

"My reason is that my theological views have changed. They have changed because I have studied the conditions that confront the church of today and the methods which are being used to solve those problems; and it does not seem to me that the methods being used in the so-called orthodox denominations are as successful as they ought to be. While they are undoubtedly accomplishing good, they are not reaching the heart of the problem. The incoming tide of civilization has an element in it that the outgoing did not have, and the spiritual ideal of Christian Science is, in my opinion, the element necessary to be added to meet this need.

"My change of views has come very slowly and in part unconsciously, after some five years of study. The Christian Scientists are doing things. Not that other religions are not accomplishing good, but they are not taking the full gospel. Christ said, 'As ye go, preach;' and immediately said, 'Heal the sick.' And he did not mean with drugs, but by divine power. I have no fault to find with the Baptists. They are doing good work, better than some others in my opinion. It is simply that Christian Science presents a broader outlook to mankind."

These utterances by clergymen who have broken away from the former orthodox belief that sin and suffering are divinely authorized, are significant of the changes which have followed Mrs. Eddy's promulgation of the doctrines of Christian Science. They are indicative of an intense and constantly growing dissatisfaction with the old way of thinking about God, and that the "future day" of which Mrs. Eddy wrote with such confidence is fast approaching. In view of all this, it is pertinent to ask ourselves whether we as Christian Scientists are individually doing what we can to hasten the coming of the day when all men shall know God not as the dispenser of evil, but the giver of "every good gift."

Archibald McLellan.

Need and Its Supply

Asserted human needs are in large part not needs but wants, and to gratify a want may mean not good but ill. It may bring a passing pleasure that has an abiding aftermath of pain, so that the supply of demand shall work havoc for character and the best human interests. Witness the influence of the cheap novel, and the newspaper or magazine which is conducted simply to make money by supplying whatever mortals may want, quite regardless whether it is likely to prove a blessing or a curse in its effects.

The disease and decay brought about by the rule of ignoble wants is illustrated in the comments of Sallust upon the circumstances attending the decline of the Roman empire. Writing of "The Conspiracy of Catiline," he says: "When by perseverance and integrity the republic had increased its power . . . and sea and land lay everywhere open to her sway, fortune then began to exercise her tyranny, . . . the objects of desire became a burden and a trouble, the love of money and then the love of power began to prevail, and these became as it were the source of every evil. Avarice subverted honesty, integrity, and other honorable principles, and in their stead inculcated pride, inhumanity, contempt of religion, and general venality."

The feeding of a wolf of want which has clothed itself in the lambskin of need, and thus made moving appeal for sympathy and satisfaction, has destroyed men and nations in every age, and how manifest are both the deception and its outcome in the self-destroying insistence upon the multiplication of armaments by so-called civilized and Christian nations today!

In his letter to the Philippians, St. Paul expresses the scientific fact of being when he says, "My God shall supply all your need according to his riches in glory by Christ Jesus," and to the inculcation and demonstration of this spiritual truth Christian Science is wholly committed. It teaches that human need can include only that which directly or indirectly con-

Digitized by Google

duces to spiritual advance, and that God and He alone is the source of all that supplies it. It begets the capacity and the habitual disposition to discriminate between mortal wants and human needs. It also begets an habitual and intelligent reliance upon divine Love for the supply of these needs. This is the sum and substance of that illumined faith or spiritual understanding which is no less efficient today than it was in Jesus' time, because it is an immutable divine order, the law of Life.

Here as everywhere the distinctive feature of Christian Science teaching is manifest: it relates every experience of every-day living to God. First of all, it centers thought upon *the discrimination between* want and need, and then upon *God, divine Love, as the* source of supply for every legitimate want, and in this it is leading Christian consciousness back to one of the best habits of the early Hebrew faith. Nothing is more beautiful or more in contrast with much modern belief and impulse than the childlike confidence in God, and the constant turning to Him which characterized the ancient prophets and sages. This is the true Christian attitude, and it effects an adjustment of supply and demand by bringing every human experience into correlation, through praise, or prayer, or both, with divine Love. It enables us to realize the truth of Mrs. Eddy's words, when she says, "Spirit duly feeds and clothes every object, as it appears in the line of spiritual creation, thus tenderly expressing the fatherhood and motherhood of God" (Science and Health, p. 507).

Nothing surely is more assertive and continuous than the sense of need, and when this invariably begets in us a thought of God, and prompts to unswerving dependence upon Him, then triumph is at hand, we can both say and prove that in *God we have* put our trust.

JOHN B. WILLIS.

Principle and Consecration

IT is very interesting to students of Christian Science to trace the working out of the spiritual idea in human consciousness through its symbolic presentation as found in the Jewish ceremonial law, and then in the more direct statements of the prophets, up to the practical presentation of divine Principle in the ministry of Christ Jesus. We are reminded in the epistle to the Hebrews that the law had only "a shadow of good things to come, and not the very image of the things." In the study of the entire Scriptures it is well to keep ever before us Mrs. Eddy's statement that "the one important interpretation of Scripture is the spiritual" (Science and Health, p. 320). This does not mean that we should accept or give out fanciful interpretations of any part of the Bible, but that we let the pattern shown on the mount be made of actual service in our character building and in working out all the problems of human experience.

In the books of Exodus and Leviticus we read that at the consecration of the Levites their ears, hands, and feet were touched with blood and also with the holy oil, a ceremony which typified the consecration of human consciousness and activity to divine service. It is also noteworthy that a similar rite was used at the cleansings of lepers, and here it may be well to read the words of our text-book which tell us that "the spiritual essence of blood is sacrifice," and which define oil as "consecration; charity; gentleness; prayer; heavenly inspiration" (Science and Health, pp. 25, 592). With this ever before our thought, we shall see in the light of Christian Science how we may meet the demands of Principle by living consecrated lives, and thus be prepared to do good to all with whom we come in contact. We all need to be cleansed from the leprosy of sensual mortal belief, then we are ready to become, as we read in St. John's vision, "priests unto God." We cannot too often lay hold upon, not the mere sign or symbol, but the vital truth which touches and quickens each faculty until prompt and cheerful obedience is yielded to the demands of Principle.

There are some who wonder why they are not more quickly lifted above all sense of limitation and suffering, if Christian Science is demonstrable, as is claimed. To this it may be answered that, being scientific, all its rules must be complied with. Here is a most important one. Isaiah answers the question, "Who among us shall dwell with the devouring fire?"—and emerge from it victorious? We read that it is he who "walketh righteously, and speaketh uprightly, . . . that stoppeth his ears from hearing of blood, and shutteth his eyes from seeing evil." Such a one "shall dwell on high: his place of defense shall be the munitions of rocks: bread shall be given him; his waters shall be sure," and this beautiful chapter closes with the emphatic declaration, "The inhabitant [of Zion] shall not say, I am sick."

This whole passage is a fine description of complete healing as understood in Christian Science, and we may well ask ourselves to what extent we are obeying the rule which ensures the healing. Are we closing our ears to tales of crime and carnage, of wickedness and woe, and refusing to put life into that which God neither made nor sanctioned? The one who is best prepared to help needy and afflicted mortals is not the one who begins by admitting evil to his own consciousness, but the one who first, last, and always maintains the supremacy of God, good, and refuses to acknowledge aught as real, save God and His idea.

When Adam complained that he was afraid, and naked, God said, "Who told thee that thou wast naked?" Adam and Eve did not stop their ears to evil, and other mortals who follow their example wonder why God does not help them, when their ears are so engaged with suggestions of sin and disease that they fail to hear the voice of divine Love. It is not enough that we refrain from voicing evil; we must not listen to it. Christ Jesus said that the ears of the people were "dull of hearing," and so he could not heal them; but he added, "Blessed are your eyes, for they see: and your ears, for they hear;" that is, hear the life-giving Truth. Can this be said of us?

ANNIE M. KNOTT.

Among the Churches

Current Notes

MINNEAPOLIS AND ST. PAUL, MINN.—The Christian Science churches of Minneapolis and St. Paul united this year in maintaining a reading-room tent at the state fair. The fair is held under the auspices of the Minnesota State Agricultural Society and is considered the largest of its kind in the United States, if not in the world, while its sessions extend over a full week. We were fortunate in securing a most advantageous location, and erected a tent fifty feet long by thirty wide, which was supplied with all the works of our Leader in ample quantities, together with the *Quarterly*, pamphlets, and current publications of the Publishing Society.

We are very enthusiastic over the outcome of this first effort on our part, which indicated very clearly that in succeeding years it may well be greatly expanded. On days when the weather was favorable, we had from three hundred and fifty to four hundred visitors each day, and it was the general opinion that our tent was the most attractive and popular place on the grounds. The workers in charge reported interesting incidents, which indicated that the tent filled a need and performed a function in advancing the cause of Christian Science.—*Correspondence.*

The Lectures

Houston, Texas

To large and appreciative audiences Bliss Knapp lectured twice on Christian Science in First Church of Christ, Scientist. Col. John Q. Tabor introduced Mr. Knapp at the first lecture and said in part:—

Christian Science, the Science of Christianity, as taught by Jesus the Christ nearly two thousand years ago, has been receiving the profound attention of thinking people throughout the world for more than forty years, and at no time more than the present. This is attested by the splendid audience with us this evening and the splendid audiences which greet our lecturers everywhere.—*Houston Daily Post.*

At the second lecture the introduction by Rezin D. Steele, first reader, was in part as follows:—

A large percentage of the Christian Scientists of today were at one time unacquainted with the Principle of this Science of Christianity and, holding more or less erroneous views regarding it, were in consequence prejudiced against it to a greater or less extent. But, either through benefits which they received, or through observation of the benefits received by relatives or friends, they were led to investigate, and found their old opinions and prejudices untrue and unjust; and they also found in Christian Science a satisfying, logical, practical, healing religion, applicable not only to their spiritual welfare, but to every phase of human experience.

Correspondence.

✦

Bangor, Maine

Virgil O. Strickler, who gave an interesting lecture on Christian Science in City Hall, was introduced as follows by Gorham H. Wood:—

The purpose of this evening's lecture on Christian Science is not to persuade any one to depart from religious conviction, nor to raise an argument on the question of religion in any of its phases, but rather to set before us, from an authoritative standpoint, what Christian Science is and what it does, leaving all free to reach their own conclusions. If, however, as a logical sequence of this lecture, we are led further to investigate Christian Science through the writings of its Discoverer and Founder, Mrs. Eddy, and through the church services and other avenues of information open to all, we shall find, beyond question, the reasons why Christian Science has encircled the globe, demonstrating great power and vitality in every city, village, and hamlet it has entered.—*Correspondence.*

✦

San Francisco, Cal.

A lecture on Christian Science was given by the Hon. Clarence A. Buskirk in Dreamland rink, under the auspices of Third Church of Christ, Scientist. The introduction by D. A. Woodward was in part as follows:—

There are some propositions on which all classes of society agree, no matter how much they differ on others. Jesus the Christ, nearly two thousand years ago, voiced one when he said, "Ye shall know the truth, and the truth shall make you free," evidently recognizing that truth must be as effective in our daily life as it is in mathematics; that religion to be true must be scientific, demonstrable. In our time a New England woman, Mrs. Eddy, wrote in Science and Health (p. 174): "Truth is revealed. It needs only to be practised," —to be established in human consciousness, as it always has been in the Mind which was in Christ Jesus, the Mind that freed all those who thronged the great master of Christianity, who said, "He that believeth on me, the works that I do shall he do also." Thousands throughout the civilized world are again proving the correctness of these statements in proportion as they know God to be "no respecter of persons," and that truth never changes.

As Christian Scientists we believe the necessity is to have our true motives and aims understood, to have all recognize that we are striving to live and t ll our neighbors about this gospel, not simply because one great teacher in the first and another in the nineteenth century taught and demonstrated it, but because we have been able to prove for ourselves this eternal fact and give our testimony as to what has come into our lives as the result of the study and practise of their words and works.—*Correspondence.*

✦

Butte, Mont.

Clarence C. Eaton, in speaking on Christian Science to a large audience at the Auditorium, was introduced by Attorney Walter H. Holliday, who said:—

I have been requested, somewhat unexpectedly, to introduce the speaker of the evening. While not a member of the Scientist church myself, I may truthfully state that the reading of Mrs. Eddy's great work, "Science and Health with Key to the Scriptures," as well as other Christian Science writings, has impressed me very favorably and convinced me that, whether or not Christian Science is all its votaries claim it to be, undoubtedly it is a permanent force for good, for the higher development and uplift of humanity. Christian Science is worthy the most serious study and consideration, as all unprejudiced minds who have examined its teachings must admit. Any theory or teaching which is powerful enough to attract the attention of more than a million earnest and educated men and women and transform them into enthusiastic disciples, is not to be dismissed lightly or treated with contempt. This faith is daily gaining ground. It cannot be ignored and it should be understood.—*The Butte Miner.*

✦

Johnstown, Pa.

Willis F. Gross, who lectured on Christian Science, was introduced by Robert C. Hoerle, United States commissioner, whose words were in part as follows:—

In the religious world today, probably no subject is so much talked of and commented upon as Christian Science; and it is likewise true that the vast majority of people are unacquainted with what Christian Science really is, what is claimed for it, what it has accomplished and is accomplishing. It is not a new religion, but a restoration of the teachings of Jesus Christ as actually taught and practised by him, and is based entirely upon the Bible. The first tenet of Christian Science reads: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). With a foundation such as this, is it any wonder that the adherents of Christian Science have accomplished so much?

There is nothing startling or amazing in the fundamentals of this religion. It accepts truths admitted for ages by close students of the Bible, and upon those truths are predicated logical and reasonable conclusions. It is not a religion for those who are mentally sluggish, or one that can be satisfactorily learned and practised without mental effort; and that is one of the reasons why Christian Science has attracted thinking people and is steadily growing, in spite of the attacks

Digitized by Google

upon it from many sources where it is not understood. Its adherents walk through life with such confidence in the ultimate realization of the truth, as presented by Christian Science, that the attacks of those who do not comprehend it bother them not at all. Christian Science numbers among its adherents people from practically every denomination of Christian and other religions, and from every walk of life. Though it was founded only fifty years ago, its adherents today number considerably over a million, and it is a most significant fact that since 1906 this religion has shown a greater percentage of increase than any other.

Correspondence.

✧

Quincy, Ill.

Every seat in the Empire theater was filled at the lecture by William R. Rathvon on "Christian Science and Its Results." In introducing the lecturer, E. G. Bauman, superintendent of public schools of Quincy, spoke in part as follows:—

I esteem it an honor that the invitation came to me to preside at this meeting, and I wish to assure you that it was a very great pleasure to me to accept the invitation. In the course of the past ten years, it has been my good fortune to meet many of those who are devout believers in the doctrines of Christian Science. I have always found these people noble men and noble women, sincere and conscientious in their beliefs. Both observation and study have impressed me with the fact that the doctrines and teachings of the Christian Science church seek to lead its followers to the light and truth as revealed to mankind by the humble Nazarene. It should be no wonder, therefore, that in a span of but a few short years this organization has added to its followers many thousands who are happy in the thought of having accepted its teachings.

Paul Hanus, the noted educational expert, at a banquet in New York city last week, said that the present-day test of the worth and merit of any organization is not opinion, but a thorough, crucial study and a sound investigation, based upon well-grounded principles. The fact that a thorough, unbiased study and investigation has been conducive to the continued growth of the Christian Science church, should cause every person, whatever may be his own belief, to be willing to give to the teachers of this doctrine that attention which comes of a fair and wholly unbiased mind.

The Herald.

✧

Oshkosh, Wis.

Postmaster Edward M. Crane, in introducing Virgil O. Strickler, who lectured on Christian Science, said in part:—

I am not a Christian Scientist, but I am not without powers of observation. I know that the doctrine is in opposition to the turbulence, selfishness, greed, and hypocrisy of the world. I know that despairing souls revive under its benevolent and tranquilizing influence. I know that those weary and heavy-laden find fresh courage in a draught from the chalice of this new faith. I know that in its tenets lies exemplification of the teachings and of the humility of the blessed Jesus.

Testimonies of Healing

[Translated from the German]

I wish to give thanks for the help which I have received through Christian Science, more particularly for two instances in which I have experienced healing, and of which I would like to give a brief account. One of these was a case of inflammation in the palm of the hand, which I had contracted while doing practical work in a ship-building yard. The hand and forearm swelled up so quickly during work that I had to stop, but through the loving help of a Christian Science practitioner I was enabled to use my hand after six days and to do my full share of the work, although the physician who examined my hand, in accordance with the regulations of the yard, had predicted about four weeks' unfitness for work.

The other case was an abscess on the arm, due, I believe, to the same cause as the first trouble. In the course of my year of military service I was on board a German battleship in the Mediterranean. As we had left port for a length of time, it seemed impossible for me at first to secure Christian Science treatment, and owing to unfitness for service, I had to report at the lazaretto. The ship's surgeons tried to help me by making incisions three times, at intervals of from one to two weeks; but instead of improving, the condition grew worse after each incision. They therefore proposed to perform a more extensive operation under narcotics, to which I objected, as I had then been afforded an opportunity to apply for help to the Christian Science practitioner. I had rather weakened my own position by holding the thought that Christian Science treatment could not be effective so long as I was compelled to submit to medical treatment. But from the moment that the physician gave up treating me, I got rid of the mental obstruction, and the result was that on the following day the inflammation was gone. After three days I was able to take off the protective bandage and to stretch my arm, and in one week's time to do gymnastics as formerly. In this second instance help was given from Dresden, Germany, while I was on the south coast of Spain, and I am happy to know that the truth may be applied everywhere, irrespective of time and space.

I am deeply grateful to God, and I wish to give sincere thanks to our revered Leader, Mrs. Eddy, for this wonderful healing truth.—Gerhard Junge, Dresden, Germany.

✧

I wish to express my gratitude for the blessings that have come to me through the study and application of Christian Science. In my ignorance, before I had read "Science and Health with Key to the Scriptures" by Mrs. Eddy, I criticized Christian Science severely; but on visiting relatives some eleven years ago, I was much surprised to learn that they had become interested, and the wonderful healing which they told me had occurred in the case of their youngest child through its agency, excited my curiosity to see the book. I read the chapter on Prayer, and immediately my opinion of Christian Science was changed. Here was something for which I had been striving, and I might add starving, for a long time. When I returned home, I purchased a copy of the book, and my dear mother and myself read and studied it in connection with the Bible; and let me say here, that the dictionary proved an invaluable aid, for many words which seemed to us oddly used, were cleared up by such reference.

We did not become interested in Science in the hope of any physical healing, but through the understanding thus gleaned I was nevertheless healed of a chronic affection of the stomach with which I had been afflicted more than a year. Our family physician had treated me for months unsuccessfully, and I was then taking treatment of one of the best stomach specialists in Indianapolis, Ind., where we lived. The latter informed me that he could not cure me, but could only alleviate the pain during the frequently occurring attacks, and that by following his instructions rigidly I might, after seven years (as according to medical theories the system changes every seven years), outgrow the disease, providing I was strong enough to stand it that length of time.

During one of the severest of these attacks, after I had been reading Science and Health for a couple of months, I determined to try Christian Science. If it healed others, it could heal me. Though in excruciating pain, which no change in position lessened, I cast aside medicine and called for the book, which I read intently for some time. In less than thirty minutes I was a well girl, free from all pain, and I have never since had an attack of that complaint. My back was not left sore, nor was I weak for days following, as I had been after previous attacks.

It has since been proven to me that Christian Science can heal grief as well as acute and chronic disease. The study has benefited me morally, mentally, and physically. I am indeed grateful to God for every experience that has helped to bring this wonderful truth to my vision, and my desire is that I may wisely apply the little understanding I have of this inexhaustible subject, so that I may be accounted worthy to receive and impart more of its blessings.

Ethel C. Brown, Chicago, Ill.

✧

We may well "rejoice evermore," for God in His goodness and mercy does truly dwell with men. Mrs. Eddy tells us in the first paragraph of "Science and Health with Key to the Scriptures" how it is with us as it was with the shepherds in Judæa when the star was seen. I did not begin the study of Christian Science for physical healing, but because I had so long desired to know the "why" of everything, for I believed there must be a reasonable answer to every question that could be asked. Up to eight years ago I spent my life in chasing shadows and grasping after the bubbles of human living, hoping to find the substantial. My questions were of a nature to cause those I questioned to say that those were "the deep things of God" and that such questions were likely to ruin any system of theology. I was no pleasure to myself or my friends, because I was so absorbed in finding the "why" of it all, and was weary of the material, which did not satisfy in the least. I wondered why I had been created to worry those I loved, and every time the "still small voice" would answer that it was for some good, that some day I would find something to satisfy this yearning.

After years of this captivity I began to read in Science and Health at the chapter called Recapitulation, the logic of which claimed my attention. I did not turn from my material education to see as Moses did why "the bush was not consumed"—even though I had had proofs of Truth's power in the healing of typhoid fever and pneumonia—until I was healed in two hours of lockjaw, for I knew this disease was incurable according to medical law. I also found that a good interpretation of "incurable" is this, "Man's extremity is God's opportunity;" and as the truth of this statement dawned upon me clearly, I was able to see the star and rejoice "with exceeding great joy."

My lifelong desire had been to do some good for humanity; but all my plans had failed, for they were built on the sands of doubt and fear. Since beginning the study and use of Christian Science, however, I have seen the truth and trust in God overcome almost every phase of sin and disease, and

Digitized by Google

like Joshua I have stood on holy ground, for I have also seen death overcome. My mother, over sixty years of age, through trusting Christian Science treatment, using God's promises for us, dispensed with the services of a surgeon to take several stitches in a wound, and six days later there was not even a mark to show where the wound had been. This was considered by many a wonderful demonstration of Truth, since the wound was between the ankle and knee, and the bone exposed.

I thank God for the many proofs of His care, and know that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). God does indeed supply my every need. Oh, that I might tell the blessings we gain as we apply Christian Science teaching. Even the Scripture, "O death, where is thy sting? O grave, where is thy victory?" has been found upon our lips.

With much gratitude to our dear Leader for her unselfish labors for humanity, I send this testimony with the hope that I may be one of the "minute men and women" of whom she speaks in "Miscellaneous Writings" (p. 158), that I may learn better how to be a Christian Scientist.

GEORGA F. CAMPBELL, Paris, Texas.

✦

I send my testimony in the hope that it may benefit some seeker after the truth. I thank God for the healing of my young son through Christian Science from a severe attack of mumps. After one treatment the disease left him immediately, and no bad effects followed. I would also express my thanks to God for the healing of my baby girl. Soon after she had been treated by the practitioner, the fever and the severe cold vanished. It was divine Love working through Christian Science that healed her.

I also wish to express my gratitude for the healing of a throat trouble from which I had suffered for over a year. I could not read aloud, but after receiving treatment at the practitioner's house, I came home and read that night to my husband, and have been able to do so ever since. I am well now, and I hope that God will prosper the good work of Christian Science in the healing of the poor, as the Master did and as he taught others to do. Again I thank God for His goodness to me.

MRS. JAMES BELL, Guelph, Ontario, Canada.

✦

I feel it both a duty and a pleasure to tell those who are seeking the truth what Christian Science has done for me. Some five years ago I lost one whom I loved very dearly, and my two little children were left motherless. I struggled on alone, with housekeepers to look after them, and all the time I was trying to drown my sorrow in drink; consequently I lost a good situation, and nearly lost my home, for which I had been paying. My little girl was taken sick and I called in a doctor, who continued to come for about a week and finally said the little girl was well again; but in two weeks she had a relapse.

About this time a sister-in-law of our housekeeper came to stay with her for a while, and she was a Christian Scientist. This was the first time that Christian Science had ever been brought to my notice, and we sat up until twelve o'clock, the second night, talking about it, and what she said made such an impression on me that I promised to attend the next meeting. This I did, and I certainly did grasp at the testimonies which were given that night. I attended every meeting thereafter, but the second week the little girl was taken sick again, and for three days could not retain any food. I trusted in God, however, and finally made up my mind to try Christian Science. I had the child dressed and then carried her in my arms to a practitioner.

I asked the lady to let me stay in the room, which she did, and handed me a copy of Science and Health to read. We stayed there for about half an hour, and I can truthfully say that it was the most peaceful, restful period I ever spent in my life. I felt so serenely happy that it seemed as if God were there, as omnipresent, omnipotent, supreme. It was my first realization of His power. At the end of the half hour the little girl came over to me and said, "I am all right now, papa." We walked about four blocks, when on passing a confectioner's she said she was hungry; so I purchased some cakes, and she ate all but two; these she saved for her little brother. We got home about twelve o'clock and ate a hearty lunch, and she has had no further trouble.

It is needless to say that I continued to go to the Christian Science services, and I put in an application to join the church about a year after I had met a lady there who had taken a great interest in us. In another year this lady came to mother my children. It seemed as if God had led us all the way, and He surely does rule our household. Christian Science has brought me happiness, health, and wealth, and I know that God is Love, that God rules all, and that He is the source of our supply. I find as I continue the study that I get along better and better, but when I neglect my study of the Bible and Science and Health I do not get along so well. I am indeed grateful to Mrs. Eddy for giving us this truth, and I do hope that this cup of water will do good to some seeker after God.—HARRY EASOM, San Francisco, Cal.

✦

It has always been my desire to express my gratitude for Christian Science through the *Sentinel*. I have been acquainted with its text-book, "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy, since I was eight years old, and many beautiful demonstrations of healing have been made for others in our home, as well as for myself. Among them there is one of which I would like to speak.

I was attending a grammar school that had over eight hundred pupils, but I was the only Christian Scientist among them. I fell from the second story to the cement floor of the basement, down stone steps which were iron barred at the edge; but while I was falling I realized that God would take care of me. I was unconscious when taken up, but when I came to, I still clung to the thought of God's allness. A physician and nurse were called, and the principal and several of the teachers were in the room where I was carried, while bandages were placed from my shoulders to my ankles. My mother was out of the city, and I knew that I could not ask any of those present to call for help from a Christian Science practitioner, so I felt that I must declare the truth for myself the best I knew how. The people began to leave me one by one, so I got up and asked one of the teachers to fasten my dress. I thanked all for their kindness, then put on my coat and walked eight blocks to my home.

I got Science and Health and read in it, after taking off the medicated bandages, and within four hours I felt able to get supper. This I did, and I also played some of the hymns from our Hymnal on the piano without thinking of my wrists, which were supposed to have been very much injured. I was without any soreness or discoloration within the next twenty-four hours, and able to attend school after two days. It made me very grateful to know from my own experience that man is given dominion over all flesh, and to be able to prove this without help from any one but God.

I am indeed deeply grateful for the Christian Science Sunday school. Its teaching has not only helped me to overcome error for myself, but I know that thousands of others have

Digitized by Google

been helped in the same way. It teaches them to know the "Life which is Truth and the Truth which is Life by bringing forth the fruits of Love,—casting out error and healing the sick" (Science and Health, p. 35).

MARIE HAUSER, East St. Louis, Ill.

✧

From invalidism, pronounced hopeless by physicians of two schools, and when doomed by them to drag out a miserable existence if I lived at all, Christian Science raised me to health and strength in a few days. In gratitude for my healing and that others may profit by it, I wish to tell the facts.

In September, 1909, after a severe illness, I underwent an operation for intestinal adhesions, said to have been the result of surgical operations at an earlier period. After this operation I suffered keenly for five months and was confined to my bed most of the time. All food distressed me, and at last opiates were prescribed to relieve the pain. I changed from one form of medical treatment to another, and though buoyed up by hope, so that I at first seemed to improve slightly, I soon sank back into a state of hopelessness.

Christian Science had been brought to my attention, but I hesitated to try it; at last, however, utterly discouraged, I decided to do so. A practitioner was called, who told me something of its teaching, and of Truth's healing power. The next day I ate hearty food without distress, the second day I was up and about the house, the third day I went up and down stairs without giving a thought to it, though for months before I had to be carried whenever I went from one floor to another, and the fourth day I walked more than a mile and experienced no ill effects. Six days from my first treatment my healing was complete. I did not know until after my healing that my relatives had been told by my physicians that I could never again be well; that if I lived, which was doubtful, I would be a hopeless invalid.

I once said I was afraid to take up Christian Science, lest it should prove to be a mere fad and I should be tempted to use it for my little boy and find, too late, that it was a failure. I had read distorted stories of such cases. On the contrary, however, it has proved its power many times as a safeguard to the child, in attacks of croup, chicken-pox, fever, and measles. An attack of the last was overcome within an hour, not long after my own healing, by the realization that a child of God could have nothing that God did not send.

I could not be without the understanding of God as divine Principle in the solution of my daily problems. My desire is expressed in the words of Paul: "Brethren, I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

ETHEL L. STOCKER, Springfield, Mass.

✧

Six years ago, when I was still a young student of Christian Science, Truth delivered me in a most wonderful way from great anxiety and fear about the health of my baby. He and I had been in the country to pay a visit, when he caught cold, and soon looked so ill that I decided to return home, though I wired to a Christian Science friend for treatment. My husband, who was not a Scientist, came to meet us at the station, and seeing the condition of the child, he telephoned to a doctor, who came to see the little one as soon as we reached home. After an examination, he declared that the baby had serious bronchial trouble, and left us a prescription. My Science friend came a few minutes after, and gave the child treatment. When I asked her what I should do about the prescription, she told me not to decide then, but to "leave it with God," which I did, with the result that the child was soon looking so much better that his father agreed with me not to give any medicine. The cough decreased in the night, and the functions of the body seemed so normal that I could give the doctor a true dismissing report the next day.

Four days later, although it was winter, the child resumed his going out for two or three hours a day; and how grateful I was for this almost instantaneous healing every mother will easily understand. It is, however, as a Scientist that I still think of the words of my friend, "Leave it with God," and their result, in correlation with Mrs. Eddy's spiritual interpretation of the Lord's Prayer: "Enable us to know,—as in heaven, so on earth,—God is omnipotent, supreme" (Science and Health, p. 17).

MRS. M. MALLOWAN, Merton Park, Surrey, England.

✧

My heart overflows with gratitude for what Christian Science has done for me, and I give this testimony that it may help some weary seeker to find health and happiness. A few years ago a friend gave me a paper which told what Christian Science is doing for mankind. It spoke of "Science and Health with Key to the Scriptures," and I was very glad to get a copy and read it. It was indeed sweet to my hungry sense, for it taught me how to live, and to love all mankind. With the reading of Science and Health came my healing of a stomach and bowel trouble which had given me much care for ten years.

The past two years we have had only Christian Science in our family. The Bible has become a new book, full of many wonderful things, and my prayer is that I may live and do God's work as He would have me do. I am indeed grateful to our Leader for giving us this treasure and daily companion, also to the many kind friends who have helped me to see the truth that makes us free.

MINNIE E. JOHNSON, Grand Island, Neb.

✧

I desire to express my gratitude for the great help received in Christian Science. I had a swollen ankle which was very painful, so that I felt almost unable to walk or attend to my business, which keeps me constantly on my feet. I applied nothing to the ankle, but received absent treatment in Christian Science and read passages in Science and Health, and by the third day all the pain was gone, and I walked about as usual. For this proof of the wonderful power of divine Mind I am deeply grateful.—MAURICE BAYNO, New York, N. Y.

✧

In going across the street on an errand, my son, fifteen years of age, stepped off the sidewalk behind a wagon which stood there, and which was suddenly backed up, knocking him down. Before he could recover himself, a taxicab ran over him, passing over his shoulder and head, and people on the sidewalk who saw this shouted to the chauffeur. He stopped suddenly and backed the machine, but by so doing the wheel was brought back and rested on the boy's head. Men who saw the accident hurried to lift the taxicab, and my boy was pulled from under the wheel and an ambulance was called. Meantime I was sent for, and followed him to the hospital. I tried to induce those in authority there to let me take the boy home, but they refused. My son, who understands Christian Science to some extent and relies on divine power, had from the first held the thought of the protecting power of

Digitized by Google

God. On examination, the physicians at the hospital said the boy's shoulder was broken, and his head was badly injured, one ear being almost torn from the head. When the doctors said there must be stitches taken in the cuts on the head, I refused to have it done. I went home, took Science and Health, and read for an hour, and by this time I had overcome all fear as to results. After I left the hospital the doctors took the stitches in the cuts, one of the number holding my son until it was done.

In two hours from the time I went home, I was back at the hospital and insisted on taking my son home. I was then allowed to do so, upon agreeing to take all responsibility myself. *In six hours he* was able to eat solid food without trouble, the discolorations had disappeared, and the flesh had returned to its natural color. I called no practitioner, but treated him myself, and he recovered rapidly. The bandages were taken off the next Sunday, and in eleven days he was back at work. There was no fever, and no complications set in; for all of which I am indeed thankful to God, and grateful to dear Mrs. Eddy for explaining this wonderful truth that is available to all.—GEORGE WILKEN, Jersey City, N. J.

✧

I wish to express my gratitude for what Christian Science has done for me and mine. My health became impaired, and I was unable to walk any distance or to do my work. Being advised to try Christian Science, I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and with the aid of a practitioner I began to improve from the start.

During the recent flood in Van Wert I was awakened at four o'clock in the morning to find the water rising, and in a very short time it was ankle-deep in the house. I roused the family and began to move things up-stairs while we were waiting for a cab to take us out, which was about three hours in all. When the cab came, I had to walk through three feet of water to reach it, and was in wet clothing more than two hours, but escaped with a slight cold.

I am past seventy-seven years of age and enjoy good health, which I attribute to Christian Science. My husband is over eighty and was an invalid for several years. There was no help for him in *materia medica*, but after taking treatment in Christian Science he began to improve, and was benefited a great deal in every way.

MRS. ELIZABETH SALTZGABER, Van Wert, Ohio.

✧

As a small token of love and gratitude for what Christian Science has done for me, I gladly testify to Truth's healing power. Four years ago, while visiting relatives in Oakland, I had an acute attack of spinal trouble from which I had suffered for four years. It came on about midnight, and grew steadily worse until a Christian Science practitioner came; but in about an hour and a half I was able to sit up, and was well enough to return home the next day. When I had these spells under *materia medica* I would be in bed from two to three weeks. Since this treatment in Christian Science I have never had a return of the disease, for which I am thankful to God.

MRS. L. M. MOORE, Richmond, Cal.

✧ ✧ ✧

The abiding conviction that divine Mind is not, neither can be, denied continuity of expression, in wisdom, power, and love, and that man is the medium of that expression, the perfect reflection of that Mind, bestows upon one a wealth of faith, hope, and courage that enables him to surmount with colors flying every task and trial, and gain the hill-top of true achievement.—HARRY FRANKLIN PORTER.

From Our Exchanges

[*The Christian Work and Evangelist*]

There are two things that it is absolutely useless for us to worry about. First, the things that we cannot help. How utterly useless is worry when we cannot help the thing. And second, the thing that we can help. Worry only hinders us from helping. If you cannot help conditions, worry only makes it impossible for you to bear them; if you can help them, then by all means change the conditions and so banish the cause of your worry. We all go through the days carrying the worry, which in the beginning was a very small thing causing personal anxiety or solicitude; but it has steadily grown until the whole mind is darkened and the heart embittered; slowly but surely it becomes contagious, until it has darkened the lives of others in the same household; and by and by we awake to the realization that we are confirmed in the worry habit, of all habits the most injurious to human happiness and the highest development of character.

If we could but realize that not one in a hundred of the things about which we worry ever takes place; if we could only sit down calmly and with common sense analyze our worries, and get back to the basis of fact that lies beneath the worry, we would smile at our folly and be ashamed of our weakness in allowing such trivial things, usually of our own imagining, to create such havoc in our lives.

[*The Outlook*]

The reunion of Christendom will not come in a generation. No one knows what form it will take when it does come; but one thing is clear, it can come only through union in the spirit. The increasing study of the personality and teachings of Christ have long been bringing Christian people nearer to one another; and every movement which looks toward this consummation ought to have the generous support of Christian people, by whatever name they call themselves. The forces of evil are organized like phalanxes; the forces of good, in the triumph of which alone lies the safety of the modern world, ought also to be organized; and the World Conference on Faith and Order, by its very comprehensiveness and the spirituality which has inspired it, ought greatly to strengthen the faith and inspire the energies of those who work for this fellowship of believers. Under some form, in some way, the followers of Christ must stand together in the great work of bringing the world to a knowledge of him.

[*The Pacific Baptist*]

God does not change, but men's conceptions of Him change; and surely one would be a pessimist who did not believe that men's ideas of God grow truer and better. The great fundamental facts upon which science and philosophy are based do not change, but men's conceptions and interpretations of them do; and unless the reason which God has given us is in vain, those conceptions and interpretations must become better. Systems of theology are constantly changing. If the Holy Spirit is in the world, leading men into all the truth, surely our systems of theology must become truer. It is easy for a man to believe that he has a monopoly of the truth. It is easy for a man to mistake his conception of God for the only true God. It is common for one to mistake his interpretation of the Bible for the Word of God. It is easy for one to believe that his spiritual experiences are the only experiences possible for a Christian.

The man in our day who from the pulpit constantly says to his hearers in substance, Do not think—you will be lost if you do; the man who condemns all modern science and

Digitized by Google

philosophy without explaining why, simply sneering at their conclusions as the figments of men's minds; the man who deifies a theological system without ever attempting to explain or justify it; the man who boasts that he knows nothing of the tendencies of the thinking minds of his generation, is a dangerous preacher. A few will follow him, but the majority of his hearers will smile and pity him. Such a man forgets that all theology is the result of men's thinking and interpretations of God's revealed truth. He forgets that the Bible itself is largely the result of good men's interpretation of the voice of God's Spirit within their souls.

God has revealed Himself in nature as well as in His Book. Men may misinterpret the one or the other, but if the two ever come into real conflict, it is easy to tell where the victory will be. The men who wrote the Bible knew nothing of natural science or pure philosophy.

[*The Universalist Leader*]

One of the chief sources of the weakness of the propaganda of Christianity today is the fact that even the church does not take seriously, and does not put into practise, some of the fundamental precepts on which Jesus built his new society. So long as we admit that Jesus is right in his primary ethical convictions, while at the same time we ignore those ethical precepts in our conduct, so long our discipleship with him will be apologetic and half-hearted. We should either find some practical way to conform our conduct to his rule, or we should out with it and repudiate that rule. The trouble with many of us is that we accept the rule as ideally true, and give it the lie by our whole attitude toward our fellow men. More than we need any more systematic theologies, we need a systematic study of the conduct of Jesus toward his fellow men, and a brave and honest effort to find out wherein he was really right or wrong when he laid down the law of service as his only standard for greatness.

[Prin. W. B. Selbie, M.A., D.D., in *The British Congregationalist*]

We are very strongly urged by all the circumstances of the present day to a renewed consecration of ourselves to the service of Jesus Christ. We all know the signs of the times manifest round about us,—the indifference, the materialism, and the worldliness. But those things are not going to remain. In the very nature of the case they are perishable. The future lies with the spiritual, and the question is, What part are we going to play in building up this future? Are we simply going to be laggards, remaining behind with the stuff, or are we going to be in the front rank of the fighters? And the front rank of fighters today is not the people who get upon platforms and talk; it is the quiet people behind, who think and trust and pray; and we want more of these in our churches. There are plenty of good people about, but would God that all the Lord's people were prophets!

[*The Christian World*]

To make any success of life we must get our roots deep into it. If we are only deep enough rooted, we can grow tall without fear. We must have a self developed in us which, like the oak, knows, amid all the elements it meets, what to choose and assimilate, what to reject. With that in us we can move amid all the experiences, all the clash of opposition, knowing what elixirs they contain. Welcome every new experience, the new burden, even the new sorrow. Let them perform their dreadest function! Is it not to enrich the soul, to drive its roots deeper into the things everlasting? Blessed difficulties of life, which compel us to find our roots in God!

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now in press, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been translated into German ("Die Christliche Wissenschaft: Eine Religion der Liebe"), and is now printed in pamphlet form and ready for distribution. Forty pages and cover. This lecture was recently published in English, and both editions are on sale at prices of the regular pamphlets as shown on the opposite page.

✧

From the Clerk of The Mother Church

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Cloth, marbled edges, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy, 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.***

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIII indicates the year 1913; XIIII is used for the year 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

NATIONAL

The Carnegie Foundation for the Advancement of Teaching has decided to undertake an investigation into the conditions under which instruction in the law is conducted in the United States. The request that this investigation be made was brought to the attention of the Carnegie Foundation by the committee on legal education and bar admissions of the American Bar Association. The work will be commenced at once and will be as thoroughly conducted as the investigation made by the Foundation into the conditions under which medical instruction is given.

The arbitration board chosen to settle the differences between the eastern railroads and their conductors and trainmen filed its award last week in the United States district court. Wages were increased, approximately, 7 per cent, as against about 21 per cent asked by the men. The pay-rolls of the fifty-one roads concerned will be increased about six million dollars, as against eighteen million dollars which the granting of their entire demands would have cost. The new scale is to take effect from Oct. 1, 1913.

Any stockholder, even though he owns only one share of stock, may have access to the books of a corporation and make a copy of the list of stockholders, according to Associate Justice Haley of the supreme court of the state of Maine. Judge Haley ruled that it is justly a part of a stockholder's interests to know who the other stockholders are. Exceptions will be taken, and the case will go to the full bench of the state supreme court.

In order to simplify the placing of pupils who move from one part of the country to another, the United States bureau of education has prepared an accredited list of the secondary schools in the country. Both public and private schools are represented on the list, which is intended mainly as a guide to school and college officers in admitting students to advanced high school standing or to college.

Gross misappropriation of funds belonging to the minor children of the Five Civilized Tribes in Oklahoma, has been disclosed by investigations conducted by Secretary Lane. The secretary has announced that he will call the cases to the attention of a federal grand jury and begin criminal prosecutions.

Election of state officers and legislators once in two years, the biennial election plan, so called, is provided for in a resolve filed with the clerk of the Massachusetts House. Fifteen years ago the voters rejected a similar resolve submitted by the Legislature.

High school fraternities in Illinois were doomed by a decision of the appellate court upholding the right of school boards to expel all pupils refusing to obey rules prohibiting them from joining fraternities.

The Russian government has arranged to purchase in Washington, D. C., for the permanent use of its embassy in the United States, the Pullman home, situated at 1125 Avenue of the Presidents.

INTERNATIONAL

The British South African Company have been prospecting in Rhodesia, and the possibility exists that certain outlying districts, portions of land lying sometimes twenty-five miles from the railway, will be used as ranching centers. Experts consider ranching to be the best way to begin the taming of the wild prairie, for after a few years of such treatment it becomes possible to start on closer operations.

The subcommittee of five which was appointed some months ago to draft a constitution for China, has just finished its labors, and the entire constitution, consisting of one hundred and thirteen articles, is complete, and will shortly be submitted to the constituent assembly of both houses.

Cuevas Garcia, Ecuadorean minister to Panama, has been commissioned by his government to proceed to Europe to contract a loan of thirty-three million dollars, which will be used for water works and sewer systems in Guayaquil, and also for the building of railroads into the interior of Ecuador.

A record number of steamers passed through the Straits of Magellan in the ten months from Jan. 1 to Oct. 31, this year. The traffic comprised two hundred and twenty-one steamers from the Atlantic and one hundred and thirty-seven from the Pacific.

A committee has been appointed by the postmaster-general of Great Britain to consider methods and how far the state should provide for research work in the science of wireless telegraphy.

Application of the principle of universal suffrage to the Italian elections shows that the Conservatives disapprove of the change advanced, while the Liberals strongly approve.

The Longitudinal Railway will extend from Peru to the Straits of Magellan, a distance of eighteen hundred and fifty miles.

Seventy million dollars has been sent to Italy during the past year by the immigrants in North and South America.

INDUSTRIAL AND COMMERCIAL

The subsistence department of the Canal Zone has taken charge of the estate known as Palenquillo and Frijol Grande, which comprises lands lying along the Panama railroad relocation. Title to this land passed to the United States through awards for damages made to the owners by the joint land commission. Some of the land contains valuable fruit trees, together with a considerable amount of cane and bananas. It is planned to go into banana culture on a scale sufficient to meet the commissary and hotel requirements, and also to raise an adequate supply of oranges, limes, and avocadoes. There are about two hundred and seventy-five acres of cultivable land in the tract. A great deal of the original estate was inundated by Gatun lake, and a considerable part of the remaining portion above the eighty-seven-foot level has been detached and isolated, making it necessary to use a launch in visiting the various sections.

Practically every cottonseed oil mill company in Mississippi is made a defendant in an anti-trust suit just filed by state Attorney-General Ross Collins. The suit charged that the American Cotton Oil Company is practically owned by the Standard Oil Company, and that it controls 90 per cent of the cotton oil business of Mississippi and seeks to forfeit the charters of domestic corporations made defendants and to oust from the state the foreign corporations named in the suit. The petition charges that all of the one hundred and three defendants have conspired to fix the price of cottonseed, as well as to control the cotton-ginning industry in the state, and asserts that they have become dealers in bagging and ties with the purpose of controlling the entire cotton business in all its branches.

Auction sales of live poultry have begun at the Gansevoort market in New York city by the Live Poultry Auction Company. It is expected they will bring about a saving to the public of Greater New York of one million dollars annually. The company is capitalized at one million five hundred thousand dollars. The sales are conducted along the same lines as the fruit auction sales. They will continue at Gansevoort market until such time as there shall be completed in the Lackawanna railroad yards, Hoboken, a large sales market, where the great bulk of the live poultry is now received. Then the sales will take place in the new quarters. The total live poultry business in this section now amounts to sixteen million dollars annually. As a result of the establishment of the auction sales, it is said there will be a saving of three hundred and twenty thousand dollars alone on commissions, as well as the difference in cartage.

Government investigations on the Bald Hills, Tasmania, have proved beyond doubt the existence of osmiridium metal *in situ* in the serpentine rock, and samples have assayed fifty-nine ounces to the ton.

The cotton crop of 1912 in Uganda, British East Africa, was thirty-one thousand bales, and that of 1913, twenty-two thousand bales. The estimated crop for 1914 is fifty-five thousand bales.

At the national dairy show, held in Chicago, the Massachusetts Agricultural College has been awarded the gold medal for the best certified milk, in competition with the whole United States. Washington State College was second.

A call has been issued by Postmaster-General Burleson for bids for two million two hundred thousand pounds of twine with which to tie up letters.

It is estimated that the profits to the government from the operation of the new parcel-post system during the calendar year 1913 will be about thirty million dollars.

The United States mints in the fiscal year ended June 30, 1913, turned out 186,626,871 coins, having a face value of $37,496,530.

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI November 22, 1913 No. 12

In the Hour of Need

ROBERT NALL

WHAT is a Christian Scientist to do when, through no fault of his own, he finds himself in a perplexing situation? The simplest answer is, Do that which is right. If he is a Christian Scientist in thought, word, and deed, he will know how the mists of doubt and fear can be dispersed and his course of action made quite clear. To him Christian Science is this, —once put by Mrs. Eddy in the fewest possible words,—"To live so as to keep human consciousness in constant relation with the divine, the spiritual and eternal, is to individualize infinite power" (*The Christian Science Journal*, August, 1904). This power is not intermittent; it is always available; but there are many students who have as yet grasped only a very small proportion of what Science should mean to them and to humanity. They are still on the threshold of faith; they see the dawn of a new life; they are conscious that some impulse for good is beckoning them to press on, with the assurance that the ultimate will be a rich reward. Such are calling, like Goethe, for more light, and there are times when this call becomes intensified. This is common experience, and will continue to be so while error persists in its claim to dominate human thought and mortals yield to it.

The remembrance of this has sometimes a discouraging influence upon those whose minds are not yet solidly stayed on Truth; but this is just a passing phase of that dream life from which we are all bidden to awake, so that we may find our rightful heritage in the kingdom which it is the Father's good pleasure to give us. There never was a time when Christian Scientists, whatever stage of progress they may have reached in the apprehension and demonstration of spiritual truth, needed to be more alert, and to manifest greater fidelity to every fundamental idea which is included in the divine Principle, God.

The writer lives in a large city which has recently been convulsed with an epidemic of disease. All the forces of error were aroused. All those beliefs about matter which we know to be the falsities of human sense were rampant. *Materia medica* made its insistent appeal; and though the disease only assumed what was admitted to be a very mild form, there was an insistent demand, accompanied by statistical "facts" and gloomy pictures of what might happen, for those stringent material measures which are the *ultima thule* of all mortal concepts in dealing with mortal error. The bulk of the community were obsessed with fear, either that they would be attacked with disease, or that their material circumstances would be affected by a threatened "falling off in business." What an object-lesson it was to those who could look on calmly from the higher standpoint of Truth and Love! And what an opportunity they had of showing that divine Love, the ever-present Saviour, will keep in perfect peace all who have come to a right understanding of God and man's relation to Him!

But more than a passive attitude is necessary in a time of crisis, and there was a call here to every Scientist to be active in demonstrating the power of Truth and Love,—not by expecting any special interposition of divine power, but by knowing the spiritual law which is ever operative, and bringing to bear in consciousness that deductive reasoning which recognizes God, good, as the only cause and creator and every effect in harmony therewith. It was truly a testing time! There were those who found it necessary to reexamine the groundwork of their faith, for in view of the possibility that a certain line of action would be taken in furtherance of the belief of *materia medica* and in response to public sentiment, there came the mortal-mind temptation to take the line of least resistance. How subtle this is, the faithful student knows. "Public sentiment," as Mrs. Eddy wrote years ago, "is helpful, or dangerous only in proportion to its right, or its wrong concept, and the forward footsteps it impels, or the prejudice it instils which the future must disclose and dispel" (*The Christian Science Journal*, May, 1901). In this case there could be no doubt of the erroneous nature of the concept, or that the whole condition of public thought and the factors which operated to inflame it, were based upon false reasoning. In such an atmosphere the mental pressure upon every one was intense, and where there was not an absolute dependence upon divine guidance, and a strong realization of the powerlessness of evil, whatever form it might take, there crept in a sense of fear, and doubts arose which had seemingly been buried forever.

There is a contagion of thought which under such circumstances is most insidious in its pursuit of victims, and against which we need to protect ourselves by putting on the whole armor of right thinking. Spiritual understanding will annul and destroy every material belief when we know how to use it with wisdom. Our strength in times of danger—indeed, at all times—lies not in our calling ourselves Christian Scientists, or in being able to talk Christian Science, but in our deep-seated consciousness of the omnipotence and omnipresence of Truth, and of the impossibility that anything can separate God's spiritual idea, man, from His perfect source. Here is a majestic premise upon which we can build our mental superstructure, against which the winds and waves of error, however boisterous and stormy they may be, will be found impotent.

Some lessons were learned in this experience which will never be forgotten. We now know more than ever how imperative it is, if we would be faithful to our high trust, that we should "stand fast . . . in the liberty wherewith Christ [Truth] hath made us free." Moreover, strength lies not in numbers, otherwise there was a time when the mission of the lowly Nazarene would have utterly failed, and when even Christian Science would have staggered and fallen temporarily under the blows of fierce opposition. The seed of truth is sown by God in one heart here, and another there, whence it springs up to spiritualize human thought and bring forth fruit. The story of the ancient city which would have been saved had there been even ten right-thinking men in it, is typical of divine dealings with the human race. There are great cities where as yet Christian Science has but few adherents. What of that? All the greater call for fidelity and courage when the occasion demands. Apparently the little band is

Copyright, 1913, by The Christian Science Publishing Society

Digitized by Google

ruler over only a few things, but those few are the things that count in life's work. The time is coming when the rule will be over everything that has not the divine *imprimatur*. Everywhere we see the phenomena of evil disguised under the pretense of activity of good. We are entitled to meet this by the mental declaration that there can be no such partnership; that right is right, and good is good, and that the belief that these can come out of evil is one of the most fatal of all human delusions.

The glory of our beloved faith is that it is freeing us from the mesmeric thraldom of pernicious human beliefs by a loyal and absolute trust in an absolutely good God. And of all these beliefs it looks as though the last to vanish might be the belief that God cannot be trusted to heal all our diseases. Jesus recognized this in one of his most striking sayings, and Mrs. Eddy had not long entered upon her great redemptive work before she found the Master's experience repeated. Mortals are quite willing that God should forgive their sins, but they look elsewhere when they are suffering the penalty of sin. What is needed, therefore, is that Christian Scientists everywhere should boldly testify that the "mighty works" of healing which are the results of the practise of Christian Science, "are not supernatural, but supremely natural," for "they are the sign of Immanuel, or 'God with us'" (Science and Health, Pref., p. xi).

Teaching the Children

A. B. FICHTER

THE experiences in Sunday school work in all the churches of Christ, Scientist, prove conclusively the far-sightedness of our Leader, who in Science and Health (p. 237) removes all barriers to the instruction of children in "the Truth-cure," so long as this instruction is in harmony with the teaching of the Founder of Christianity, who declared that the childlike spirit alone can enter the kingdom of heaven. She also provides (Manual, Art. XX, Sect. 3) that this instruction "must not deviate from the absolute Christian Science contained in their text-book."

When we stop to think of the tremendous hold which our own early teaching has had on our thought, how it seems to have kept us from letting go of the past, in other words, made us reluctant to see the old landmarks disappear, we begin to realize that all our prejudices are largely the result of this early association and instruction. We also see the wisdom and far-reaching effect of an early implanting of the true understanding of God, and of using and guiding the child's instincts in the right way, so that permanent concepts may be right concepts. What a lasting benefit to a child to begin with a scientific basis rather than with those vague impressions made upon the awakening thought-processes which beget the sense of a corporeal God, sometimes accompanied with the awe of an unseen presence, amounting to apprehension of a possible chastisement that begets intense fear.

The strength with which these impressions seem entrenched in the memory, can be measured when we observe how little they yield to subsequent experiences or instruction. Except in a few rare cases, the child's sense of God does not seem to become any more defined or reasonable with advancing development, and many Christians have come to a place in their growth where they have the feeling that their God has been taken away because this web of undefined impressions, apprehensions, and hopes regarding an invisible, inscrutable presence beyond human ken, has been swept aside by advancing intelligence.

With growth we begin to realize in due time that unconsciously we have absorbed and assimilated unsupported assumptions, that we have been fettered by superstitions sheltered by devout conservatism, and that we have accepted without thought the beliefs which have been transmitted from generation to generation. Not a single word of definite instruction respecting these things may linger in the memory, and yet the impressions it engendered seem hard to eradicate. This should lead us to recognize the fact, that although children learn in words, they gain their information largely from thoughts held by their teachers, and that consequently it is most important in the work of instructing even the youngest, who hardly grasp the words, to present only the ideas of perfect spiritual understanding while addressing them in the simplest language.

Resisting the insistent mental intrusion of picturesque but unreasonable scenes of heavenly pageantry which set forth the materialistic medieval interpretation of the apocalyptic writings, we should put forth the effort to rise to a spiritual vision of ever-present Love, and thus come to understand something more of the child's problem and the obstacles by which he is confronted. The truth is, however, that a child is perfectly able to entertain spiritual thought and to gain a clear concept of that which is intangible to mortal mind, because although it does not seem so to our sense, the materially tangible objects of human thought are alien to the native perception of spiritual intuition. We do not need to enlarge upon the evils with which they are not familiar, the false images, man-made beliefs, and wrong impressions which we should be trying to outgrow. They will readily apprehend the truth, and do this the more easily when their instructors have come to understand the child's peculiar capacity, which Jesus referred to when he said, "In heaven their angels do always behold the face of my Father which is in heaven."

Unwarped by wrong training, a child's native sense of logic is better able to draw the conclusions of absolute reason as presented in Christian Science than those who have come out from the tortuous shifts of human theory, and the Sunday school teacher may often find to his surprise that the adolescent understanding is along straight lines, and leaps where the adult can only laboriously creep. To one who has never heard of them, doctrinal obstacles and mortal beliefs present no barrier to the direct reasoning of Science, and the more the teacher removes their consideration and the memory of their seeming influence from his own thought-processes, the more freely will the sunlight of Truth reach the pupil through him. Pupils should be encouraged and instructed in the practical healing work; they should not be considered unfit or unprepared for the daily application of what they are taught, since only as they apply what they learn will they gain more and apprehend more of Truth.

In their daily contact with schoolmates, relatives, teachers, and parents, it is possible for children to maintain the scientific attitude of Love's reflection more easily than their elders. They can perceive that since Truth is the healer, it will certainly heal, when lovingly and faithfully applied by them, even though they may consider themselves insignificant or little. Teachers can point out ways in which to apply the truth, and thus prove every day the lessons learned on Sunday; and the pupils will enjoy the demonstrations which follow. Then, when the practical value of the teachings of Christian Science is realized and results are confidently demanded, all will learn to observe these results in their daily experiences, and so be encouraged to continue the application until it becomes natural for them to turn to what they have learned of Truth at all times and in all places, thus reaching the joy and the confident trust of those who constantly rely on divine Principle.

The number of those who have never known any other teaching than Christian Science is as yet not very great, and

Digitized by Google

there are only a few who have not some trace of early training to efface. What unlimited development is in store for the cause of Christian Science when our homes and Sunday schools are so permeated with the atmosphere of Truth that spiritual activity and alertness is the natural manifestation and is experienced in the conscious expression of love and in the joy of healing, every false concept of heaven, of God, and of man, having been eliminated from thought.

Considering youth's receptivity and eagerness to learn, its readiness to perceive and its tenacity to retain, its hopefulness, spontaneity, and assurance, its adherence to early convictions and unshaken loyalty to proven truths, the wisest course seems to be to show the children early that Christian Science is demonstrable and useful when it is faithfully applied; that every persistent application of Principle must be effective, and since effective, it is the one way to make our lives useful and harmonious; that it is for every man, woman, and child, and that it is the duty of every one to put into practise every least truth gained. In no other way can the reign of Life, Truth, and Love be established. Only as it is established in each individual consciousness will it permeate the thoughts of all; hence, as every child faithfully does his share of healing, he helps to build up the kingdom of heaven. Faithful parents and teachers will find an ample harvest as they perceive with gratitude the radiance and power of understanding gained in this positive, constructive way, and find how much better Truth has builded than they even dared anticipate.

Withholding

ELIZABETH CUTTING

Mrs. Eddy tells us that "Soul has infinite resources with which to bless mankind" (Science and Health, p. 60). In pondering the meaning of this statement, the writer recalled the continuous supply of good which has come to her since she became acquainted with the Christian Science literature. That this supply could not be lessened, was not, however, at first appreciated. As each number of the *Sentinel, Journal,* and *Monitor* came to hand, mortal mind suggested that it was well to hold on to some of the articles which answered the particular needs of daily experience. This plan was followed for two years or more, when a little incident brought to light the mistake in withholding so much helpful thought from the wider circulation to which it was entitled.

It seemed desirable to move to another part of the town, a step which necessitated the usual sorting over and destroying of possessions not worth removal. While thus occupied, I was much surprised to come across a very large collection of clippings from our periodicals, some of which were already yellowing with age. Then there flashed across me the import of this hoarding habit. Mortal mind tried to argue that I intended to file them away for future reference, or for distribution after they had been read again. What would be the result? Each day, each week, each month, there continued to pour in a ceaseless stream of other good articles, meeting the needs of the hour and allowing little or no opportunity for rereading those which had been equally helpful in the past. I had indeed been so blinded by the mistaken sense that I must hold on to all of these good articles, that for over two years I had been withholding from others what should have ministered to their needs at the time.

From this awakening I began a systematic and prompt distribution of all literature, and I was constantly surprised to see how easy it was to find just the right person or place where each paper might be sent to fulfil a special purpose. There resulted a fuller realization of the meaning of our Leader's words: "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79). I also discovered that I was reading the periodicals much more carefully, to get all the good I could out of their perusal at the time they came.

One who has thus withheld has only to break loose from this grasping thought to experience the joy of the Master's words: "Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over."

Live not for Self

MARGARET CAMPBELL CAMERON

We often hear it said, "You Christian Scientists are most unselfish people; you are always doing something for some one, helping them along life's road." Such kind words make the jolts of life much easier to bear. All the manifestations of Truth and Love set us the example of unselfishness,—the sunshine, the flowers, the air, the hills, the rivers, all that is lovely in nature, from the blade of grass to the mighty oak. Go ask these their mission, and they will answer, To illumine your way, to make sweeter the air you breathe.

Beside the road at Mossgiel Farm in Scotland stands an old hawthorn tree which Robert Burns has made famous in his song "To Highland Mary." It stands quite alone, yet ask it if it lives for self, and it answers: No! I spread my arms and shelter the panting flocks that hasten to my shade. I have protected the young birds as they lay gently rocked in their nests; I have lived for the songster which has perched on my top, for the humming-bird which has paused to rest its glistening wings ere it danced away like a blossom in the air,—so I live not for myself. Go ask the silver brook as it dashes joyously down the mountainside, and it will answer: I was born high up on the mountain top, and I have come down to water the valley that the thirsty cattle may drink and that I may drive the mill-wheel for the miller,—I live not for self. Thus is unselfishness commended by the flower that sweetens the air, by the breeze that rocks the tree, by the raindrops that fill the brooks, and by the dewdrops which refresh the smallest sprig of heather that rears its head on the mountainside.

If we would read the lesson in characters yet more distinct and striking, we may go to the garden of Gethsemane, and hear the Master in prayer for strength that he may do for others. On Calvary, a voice which spoke for the whole universe of God, proclaimed that the highest, noblest deed which God would have us do, is to love our neighbor, to live not for self. Love for God and man is the foundation-stone in Christian Science, and he who loves most will be the greatest among us. Our Leader says, "The vital part, the heart and soul of Christian Science, is Love" (Science and Health, p. 113); and well may we thank God for her leadership. She has trod every step of the thorny way, ever making the rough places plain for us, and today roses are springing up in her path.

"Thanking God"

M. ELIZABETH FLANNIGAN

Some one has said, "Thinking good is thanking God," and at the Thanksgiving season this thought is especially pregnant with meaning to the writer, who has been learning that it is the duty as well as the privilege of every earnest Christian to live his thanks to God every day, thus being enabled intelligently to enjoy the day set apart each year for rejoicing and praise.

Mrs. Eddy says, "God is good" (Science and Health, p. 113), and from this definition of good it follows that to

Digitized by Google

be thinking good is to be thinking godlike thoughts. And what are godlike thoughts? God is Love; therefore it means to be thinking loving thoughts to the exclusion of every unloving and unlovely thought; to the exclusion of every thought of fear, for "perfect love casteth out fear," with its train of anxieties and discouragements. God is Truth. Then we are to think on the things that are true and real; and to have consciousness filled with true thoughts about God and man, dispels that which is untrue and unreal, in other words, all the false testimony of the material senses. The regeneration of thought and affection as described by St. Paul to the Colossians then takes place, that is, the putting off of the old and the putting on of the new, "which is renewed in knowledge after the image of him that created him." Again, God is Life. Then we are to think life-giving thoughts; and every true and loving thought which goes forth to comfort or uplift our brother man is a healing thought, and healing thoughts are life-sustaining and life-giving.

The effort so to spiritualize our thinking as to see that every thought we send into the world is a God-governed thought, can but result in true, loving, life-giving words and works, and this is manifestly "thanking God." It is the "singing and making melody in your heart to the Lord" which Paul admonishes, an endeavor to follow the example of the Master, which is "our proper debt to him and the only worthy evidence of our gratitude" (Science and Health, p. 4). This sort of thinking we can try to do every hour of the day and every day of the year, so that every day shall become a day of thanksgiving, not only for the blessings we have received, but for the harvest of good thoughts, words, and deeds we have been able to sow broadcast in God's vineyard. Well may we say with the psalmist, "Blessed be the Lord, who daily loadeth us with benefits, even the God of our salvation."

✧

Thanksgiving Thoughts

MARY A. DAGGETT

To the Christian Scientist, the giving of thanks is a part of daily life, for his eyes have been opened as never before to the many good things for which to be grateful, so that much of his thankfulness is spontaneous. Gratitude is constantly commended by Mrs. Eddy both in her writings and her example, so that her worthy followers are accustomed to turn their thoughts with due recognition and acknowledgment to the giver of "every good and perfect gift," as well as to the gifts themselves. This mental training is found especially valuable at times of temptation to discouragement and depression, resulting from belief in the reality of some evil about which we are troubled. To turn resolutely away from the supposed evil to the opposite good, from the false material evidence to the spiritual facts, develops courage, strength, and self-control in the individual; and sooner or later the spiritual facts are expressed in harmonious conditions.

The Christian Scientist is taught, too, that true thankfulness is expressed in action, in unselfish deeds which bring good to others. "Gratitude," Mrs. Eddy lovingly reminds us, "is much more than a verbal expression of thanks" (Science and Health, p. 3). When, therefore, Thanksgiving day comes around, it finds many well fitted to celebrate it, and while they are more appreciative of so-called temporal things than formerly they knew how to be, it is not for feasts or outward prosperity that they are most glad; rather is it for "all spiritual blessings in heavenly places in Christ."

For such blessings the writer had special reason last year to be thankful. Having no home of her own in which to celebrate the day, she had often been a fortunate guest in some happy home on that occasion; but this time no invitation came, and she began to think of what she might do to bring happiness to some one else. Among others things, she invited a friend to share with her the best feast she knew, the Thanksgiving service at The Mother Church; but the invitation was not accepted.

Waking early on Thanksgiving morning, her first thought was one of gladness for the opportunity to attend the service, but she could not help thinking of the thousands of pleasant homes with their bountiful tables and happy groups, in not one of which there seemed to be a place or a welcome for her. Then she remembered a recent editorial in the *Sentinel* which said: "In Christian Science we learn to be profoundly thankful for the knowledge that no person, place, or circumstance can rob us of that which God has provided for us." There came also this thought from Science and Health, which had been a comfort many times before, "Pilgrim on earth, thy home is heaven; stranger, thou art the guest of God" (p. 254). What greater happiness or honor than this, to have the companionship of the creator and ruler of the universe? Knowing herself to be thus privileged, whether dining alone in a café or with friends in their home, she set out for the service with a light heart.

After enjoying the reading of the Thanksgiving Lesson-Sermon, and the greetings of friends afterward, she left the church. Something, however, prompted her to turn back to the entrance, where she met a good friend who said, "I was looking for you. Have you any place to go for dinner? Come home with me." On reaching the home, the other hostess (there were two) extended her welcome and said, "We had thought of you, but you have so many friends, we supposed you were provided for." Thought turned at once to another *Sentinel* editorial in which these words from Mrs. Eddy were quoted, "It would never do for people not to have a good dinner on Thanksgiving day." However, not the least cause for gratitude was the fact that the invitation to dinner had been delayed till the last minute, thus giving greater opportunity for the reception of spiritual blessings. Thus was the Thanksgiving day brightened for one out of many, by the spirit and demonstration of Christian Science.

[Written for the *Sentinel*]

Heaven

LAURA GERAHTY

ARE there no flowers in heaven, she cried,
No streets of shining gold,
No angel-songs that rise and fall
As the gates of pearl unfold?
No rapturous meeting of those that loved,
Canceling of sins forgiven?
What then beyond this vale of tears?
How can we enter heaven?

Nay, heaven is here, where the flowers grow
Above earth's dreary sod,
And the perfumed breeze is Love's own breath,
Their beauty the smile of God.
And the gates of pearl and streets of gold
Are the paths of the just and true;
And an angel's song each loving thought
Which comes to me or you.
No need to suffer, no need to die,
Love craves not a single tear;
Life, Truth, and Love, the triune God,—
With them, why, heaven is here!

Selected Articles

[Frederick Dixon in *Kentish Express*, Ashford, England]

A recent critic is much perturbed over the Christian Science attitude toward the atonement, but he apparently has not grasped the fact that there is no orthodox doctrine of the atonement left, for the very simple reason that there are so many antagonistic ones held by orthodox teachers. The vice-principal of the Theological College at Lichfield, to give only one example, described, not very long ago, what he called four different modern views, as a prelude to adding a fifth one on his own account. He said that these modern difficulties in accepting the doctrine were one of the most healthful signs of the times, since it was as impossible to believe that "God could be appeased, or [as we say] propitiated, by the death of an innocent victim," as it was to believe Him to be a jealous and angry tyrant, whose wrath must be satiated with blood and death, and who was a party to an immoral bargain.

The vice-principal draws his views of the atonement, as the critic does, from the Bible. When he is challenged as to his views, he defends them by a process of exegesis. The critic professes to draw his views from the Bible, and he will have to explain them and how he arrives at them by a process of exegesis also. Yet this is the very thing he vociferates so lustily against Mrs. Eddy for doing, declaring that there is no need to explain the Bible. If there is no need to explain the Bible, how is the world to know whether the critic's view or the vice-principal's view or the views of the other four exponents are the correct reading of the Bible? And if the vice-principal, the critic, and the other four gentlemen are to be allowed to explain their views, why is Mrs. Eddy to be forbidden to explain hers? As, however, the critic has referred to the Christian Science teaching with respect to the atonement, I am sure you will permit me to say something on the subject.

There is no doubt at all as to the meaning of the word atonement. It is simply to make or set at one, though it has, of course, attained a later theological and incorrect significance. The true meaning of the word is obviously its meaning at the time it was used. For instance, the Elizabethan meaning of the word let was to hinder. Hamlet's expression, "By heaven, I'll make a ghost of him that lets me!" means simply, I'll kill the man who stops me. Consequently Paul's words, "Only he who now letteth will let," mean, He who now hinders will hinder, though the word itself has since come to mean permit. The word atonement has gone through a similar phase. The Greek text from which it was translated means to make at one, and it was in this sense that Wyclif used it in the earliest of our complete translations of the Bible.

The verb to atone is simply a later form of the old English, to one or to unite. The substantive was originally onement, and was used by Wyclif in this form. In the days of Tindale and Coverdale, it still retained its original meaning, as may be seen by a reference to Shakespeare, to Spenser, or to Bishop Hall; nor was it until the year 1611 that it began to be changed to one of propitiation and expiation, in which last sense it is used by Dryden. The "old word atonement," writes Norris, in his "Rudimental Theology," with reference to this change, "has by a true instinct been deepened into the idea on which it rests, and has come to carry with it the idea of propitiation or expiation." There, roughly speaking, is the history of the word atonement, and it is necessary, first in order to show how completely accurate is Mrs. Eddy's use of this word, as of every other, and second to show how the idea of vicarious sacrifice has been impressed on the text of the Bible, with all its effects in inducing man to believe that his salvation has already been worked out for him by another.

In teaching Christian Science, Mrs. Eddy has retained the pure meaning of the word. "Atonement," she writes, on page 18 of Science and Health, "is the exemplification of man's unity with God, whereby man reflects divine Truth, Life, and Love. Jesus of Nazareth taught and demonstrated man's oneness with the Father." It would be difficult to express more concisely and more exactly the true sense of the term. When this true sense of atonement gave place to the sense of expiation, it became orthodox to represent Jesus as having purchased the forgiveness of man from God with his own blood. This is the Miltonic view, which has been described by the vice-principal of the Theological College at Lichfield as the immoral view, and it is one of the numerous theological dogmas that the English-speaking race owes to the Puritanism of the great poet. In its inception, it is probably due to the blood offering which Aaron was directed to place as an atonement on the horns of the altar once a year.

To these savage views, which have been gradually grafted on to Christian teaching, Christian Science offers the strongest protest. Jesus did not buy the pardon of the world with his life. That would not have lessened the sin of the world, and so made it more at one with divine Principle. What he really did do, as Mrs. Eddy has so clearly explained in her noble chapter on Atonement and Eucharist, was to become the Wayshower to humanity, not by doing its work for it, but by showing it how to do it. In this way he assisted in atoning or reconciling man to God, by giving him a clearer perception of divine Principle, and so enabling him to fulfil the spiritual law by demonstrating the healing power of Love.

It is this healing mission to which the Christian Science movement is directing its energies today. And this, indeed, constitutes for all concerned the effort to work out their own salvation rather than to rely on the superior goodness of another person. The only satisfactory evidence that a man can give that he is succeeding in working out his own salvation, in bringing his life, that is, to however slight an extent, into harmony with divine Principle, is by his success in healing sickness and sin. It was for this reason that Christ Jesus made healing the test of the Christianity of his followers in all ages. And the fact that Christian Science is healing the sick man and the sinner today, in all the countries of the world, is the greatest proof of the accuracy of its teaching with respect to the atonement.

✥

[Willis D. McKinstry in *The Topeka* (Kan.) *Daily Capital*]

In a recent issue the Rev. Robert Gordon gives four reasons why he is not a Christian Scientist. If Christian Science is what our critic thinks it is, he should not be censured for sounding the alarm. But these very reasons, as published in the *Capital*, show, even to the casual reader of Christian Science, that he has viewed its teachings "through a glass, darkly;" and not having a demonstrable knowledge of Christian Science, he is not qualified to criticize its teachings. He says, "Christian Science is a perversion of the plain Scriptures," but the plain Scriptures say, "God is a Spirit." In Genesis we read, "And God said, Let us make man in our image, after our likeness;" again, "God saw every thing that he had made, and, behold, it was very good." Jesus' words are plain and clear, that "they that worship him [God] must worship him in spirit and in truth."

Christian Science teaches that the spiritual interpretation of the Scriptures is the true interpretation; it gives mankind a demonstrable knowledge of spiritual law whereby every man may "prove his own work, and then shall he have rejoicing in himself alone, and not in another." This ability to demonstrate the teachings of Christ Jesus not only proves the

Digitized by Google

Scriptures true, but confirms the Christianity of Christian Science. "Ye shall know the truth, and the truth shall make you free." Our Lord and Master surely had a definite understanding of the meaning and force of this statement; hence, as mortals continue in his word, possessing that mind which was in Christ Jesus, they must necessarily receive the same results from knowing the truth as did the Master.

Our critic says, "Christian Science is opposed to all true science." We do not quite understand what is meant by this statement, but presume it means that Christian Science is opposed to all physical science. The first religious tenet of Christian Science reads, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life," said Jesus. The life and works of the Master, from his birth to the ascension, were apart from physical science. The turning of water into wine, the feeding of the multitude, the stilling of the tempest, and the finding of the tribute money, all contradict the reality and continuity of physical law. Admitting Jesus' works to be in accord with the will of the Father, one readily sees that Mrs. Eddy had divine authority for defining Christian Science "as the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1). Webster defines science as knowledge of principles and causes; hence, God being the cause of all real existence, "true science" is ascertained truth or facts regarding God, His attributes and His laws. He is the source of all being; all knowledge and wisdom emanate from Him; thus Christian Science declares God, divine Mind, to be the basis of "all true science."

If "the philosophy of Christian Science is unsound," as our critic declares, the Scriptural record of Christ's ministry is responsible for it. The gospels are overflowing with accounts of the love and good deeds of him who came demonstrating the way of salvation. It was Jesus' scientific knowledge of God, man, and the universe that enabled him to prove to the world his Messiahship, or unity with divine Principle; his understanding of the law of spiritual cause and effect gave him dominion over the claims of sin, disease, fear, and death, and he said, "He that believeth on me, the works that I do shall he do also." The spiritual knowledge of the Science of being as taught in Christian Science enables mankind to speak with authority, and thereby demonstrates the difference between a blind faith, or belief, and the scientific knowledge of Christ-healing.

Mary Baker Eddy, the Discoverer and Founder of Christian Science, through her spiritual devotion to infinite, omnipresent Life and Love, discerned the healing truth and gave it to the world through her words and works. Her character was above reproach; her life of unselfed love was one unceasing effort to bring Truth and Love to the recognition of man, and her object was that expressed in the first number of the *Monitor*, namely, "To injure no man, but to bless all mankind." She withstood the scoffs and scorn of persecutions without resentment; for evil she returned good, for hate she expressed love.

Christian Science emphasizes the proverb, "Cleanliness is next to godliness." Through its teachings mortals learn that the mere cleansing of the body is insufficient. The consciousness of man must be purged from wrong thinking, for a mind filled with thoughts of resentment, malice, revenge, and dishonesty is far more harmful to the one who so thinks, than the squalor of outward surroundings. So Christian Science declares that man created in the image and likeness of God [illegible] and a pure mind.

For our critic to allege that Christian Science attempts to do away with the bondage of sin through the bold assertion that "there is no sin," is added proof that he is misinformed or self-deceived as to what Christian Science really is. Regarding the question of sin, the text-book of Christian Science teaches: "A sinner is not reformed merely by assuring him that he cannot be a sinner because there is no sin. To put down the claim of sin, you must detect it, remove the mask, point out the illusion, and thus get the victory over sin and so prove its unreality" (Science and Health, p. 447).

✧

[John W. Harwood in *Colne and Nelson* (England) *Times*]

A recent issue contains the report of a sermon by the vicar of Holy Trinity church on "Christianity and Christian Science." It is not surprising that the subject should receive such attention, for Christian Science has, by its works of healing, directed the attention of thinkers the world over to the simple teachings of Christ Jesus. The vicar is quite near the mark in saying that Christian Science has only reasserted an old truth. It is just a reiteration of the eternal truth as taught and demonstrated by Jesus. To the reverend gentleman it would appear that Christian Science has but proclaimed a portion of the truth which the church has neglected, —that of the necessity of healing the sick. When Jesus taught the multitudes, the healing of the sick followed as a natural consequence, and he ever drew attention to the works as proof of the truth of his teaching; not only this, he said that these signs should follow them that believe. There is, therefore, no doubt as to the means of identifying true Christianity.

The Christian Science movement is growing at a phenomenal rate, just because it is fulfilling the condition enjoined by Jesus. The sick are being healed, the sorrowing comforted, the sinning freed from their bondage. Christian Science not only shows that mortal mind governs the body, but also shows that this carnal mind, as St. Paul calls it, which "is enmity against God," divine Mind, is the source of all trouble. So it will be seen that this is not the mind used in healing, for that which causes disease cannot be a healer of disease. Salvation, then, from these mortal-mind conditions, is by way of true thinking. Jesus said, "Ye shall know the truth, and the truth shall make you free." Christian Science reveals the truth about God and His creation. It accepts Jesus' definition that God is Spirit, and that therefore His creation must be and is spiritual.

Christian Science certainly does not teach that matter is the vesture of Spirit. Did not Jesus say that "it is the spirit that quickeneth; the flesh [matter] profiteth nothing"? Why should it profit nothing if it be God's vesture? The vicar's reasoning would make the works of the flesh equal to and as God-ordained as the fruits of the Spirit. It would impute to God the responsibility of permitting, nay, of causing all the evils of mortal existence. Christian Science teaches that God is infinite Spirit, omnipotent, omniscient, omnipresent good, in whose presence evil (which includes all materiality, sin, disease) is proved to be impotent, nothing. This coincides with Jesus' teaching, for he proved by healing every discordant condition, whether manifested as sin, disease, death, or tempest, that it was not God-created or God-permitted. He came to do his Father's will, to fulfil God's law, and he said, "He that believeth on me, the works that I do shall he do also." If it had been God's intention that material remedies should be used for the healing of disease, Jesus would have used them. It is evident that Jesus' way is the best way, and we have his promise that in proportion to our understanding of his teaching will the healing be manifested. Before the

Digitized by Google

vicar again attempts to write disparaging comparisons between Christian Science and his conception of Christianity, let him direct his attention to the fulfilment of the command of our Saviour to preach the gospel and heal the sick.

✧

[Charles K. Skinner in *The News-Palladium*, Benton Harbor, Mich.]

It is unfortunate that any earnest worker for Christianity should have the confused sense of the teaching of Christian Science that is indicated by statements in a sermon recently delivered in your city. The clergyman tells us that "Christian Science asks us to give up our faith in personal conscience *and immortality* for the sake of earthly ease and health." *If there is anything on* which Christian Science teaching is more specific than another, it is the immortality of man as the individual or spiritual image and likeness of God. Christian Science teaches that the divine idea, or image and likeness, which is the true consciousness of every human being, can never disappear or lose its identity or intelligence unless God could become extinct.

It teaches that all of God's creations are perfect and eternal, and that man is the highest of all. On page 295 of Science and Health, Mrs. Eddy writes, "The universe is filled with spiritual ideas, which He [God] evolves, and they are obedient to the Mind that makes them." It makes all the difference in the world in what light we consider man either here or hereafter. If we look at the mortal concept as the image and likeness, the creation of God, and expect it to be immortal, we shall be disappointed, for the Scriptures state positively that "flesh and blood cannot inherit the kingdom of God."

Christian Science teaches, however, that all that is beautiful, good, and true in the human consciousness lives on forever. It gives the assurance to all that the same spiritual law which enabled Jesus to rise from the tomb and to converse with his friends is as operative for humanity today, if we but had the same understanding of God's law that our Master possessed. Christian Scientists believe that there is no separation in true love, and that the same sweet smile, the same tender glance from loving eyes, will greet each one in the new experience of life where there is no sense of death.

"The earthly ease and health" to which the brother refers is the smallest part of the teachings of Christian Science. While it is true that the Master never neglected the opportunity to relieve suffering where the thought was receptive, he at the same time planted a truth and made a demand upon the individual for obedience, faith, or reformation. Christian Science likewise teaches that right thinking and right living are necessary even for earthly comfort. The warning against sin in its myriad forms is dwelt upon constantly in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The true Christian Scientist, while relieving physical suffering, deals patiently and perseveringly with the wrong thought which occasions it, whether it be fear, sin, or discouragement.

✧

[Ezra W. Palmer in *The Star-Journal*, Pueblo, Col.]

A speaker before the Ministerial Association of your city declared that a Christian Scientist was "quick to switch to some hobby, some particular line of thought, some special teaching of the gospel." The critic did not state in what particular a Christian Scientist followed some hobby, so it is difficult to understand what he meant. He may be reminded, however, that the gospel of Christ Jesus is essentially the following of a "particular line of thought." Jesus declared, "Straight is the gate, and narrow is the way, which leadeth unto life, and few there be that find it." The Master further defined the manner of following this particular teaching by declaring that he did what he saw the Father do. What did he do? He healed sickness and destroyed sin, and made clear that his followers would prove their understanding of his teaching by doing the same works. Christian Science reinstates the full message of Jesus to the world. It heals the sick as well as reforms the sinner. If this be a "hobby," as the critic terms it, he is welcome to make the most of it.

The above speaker pointed out several things he deemed essential to a modern church; but his address signally failed to take cognizance of a vitally important feature of Jesus' teaching, and that was the healing of the sick. Does he for a moment imagine that a Christian church can really fulfil its mission when it ignores this teaching of Jesus? And yet he criticizes Christian Science, presumably because it follows the commands of the great Teacher. He called attention to the great number of new religions. Does not this increase point a moral? If the church throughout the ages had been true to the teachings of the Master and the apostles, if it had retained the spiritual, scientific knowledge of God manifested in healing both body and mind, is it not reasonable to believe that the number of sects would be fewer? Dogmas, creeds, ecclesiastical systems, mere preaching—the letter without the spirit—fail to satisfy the yearnings of men looking for fellowship with God. The result—men, fed upon husks, break away and, however blindly, seek new light. The reinstatement of the fulness of Christ's gospel should naturally cause the multiplying of sects in a large measure to cease, because men, having found the truth which satisfies, would no longer wander in the by-paths of dogma. This fulness of Christ's gospel is Christian Science, which teaches the allness of God, and makes clear that knowing God aright is the truth which makes men free.

[Written for the *Sentinel*]

Healing

CHARLES C. SANDELIN

A SACRED hush, a warmth of peace,
A vision seen that eyes ne'er knew!
Perplexing claims of error cease,
Earth fades,—heaven opens to the view!

Yet darkness filled your thought before,
Nor shone a single star of hope.
How harsh the fetters that you wore!
How vainly did you onward grope!

Forgotten now. As from a dream,
You woke to morning's happy light;
Fled is the mist that late did seem,
And life's horizon opens bright.

A word has done this, but a word
That bade you from the error turn:
In silence spoke, in heart was heard,
And oh, how deeply did it burn!

How deep within your wakening heart,
That to the Father turned and sighed,
And would from error's ways depart!
Love heard you when you humbly cried.

And heard you then Truth's message sweet
With gladness, and, rejecting sense,
Did kneel and listen at Love's feet:
All this your priceless recompense!

Digitized by Google

Editorial

Loving Obedience

EACH year, as the time for the annual election of readers and other officers of the branch churches approaches, many letters are received at this office, asking that something be said editorially in the *Sentinel* which will be of assistance in solving the many problems which seem to present themselves in connection with this important phase of church government. This subject, however, has been discussed so fully and frequently in our periodicals, that there seems to be little or nothing which is new to be said at this time, and nothing of avail other than to call attention to what Mrs. Eddy has written on this subject.

As a matter of fact, all that is needed for guidance in this or any other matter pertaining to church organization and church affairs, is to be found in Science and Health, the Church Manual, and the other writings of our Leader, and by diligent study of these writings the way is opened for the solution of every problem as it presents itself. For instance, "A Rule for Motives and Acts" (Manual, Art. VIII, Sect. 1), when understood in the spirit as well as the letter, clearly sets forth the mental state in which church-members should prepare for and present themselves at church meetings; and "Words for the Wise" and "Afterglow" (*Sentinel*, Oct. 21, 1911), also "Rotation in office" (*Sentinel*, Oct. 14, 1911), specifically point the way in regard to the term of office for readers as well as those who are to serve the church in other capacities. Other examples might be given of the care with which Mrs. Eddy has safeguarded particular things in the administration of the Church of Christ, Scientist, but this would hardly bring out the point which we desire to make, namely, that the rules for the demonstration of Christian Science which are to be found in all of Mrs. Eddy's writings, words of loving wisdom and tender admonition, are the rules which must apply, not only to church elections, but also to every incident in the affairs of churches and individual members alike.

In everything that Mrs. Eddy has written there is to be found, either in direct words or by implication, an exhortation to all mankind to seek first the kingdom of God and His righteousness, and the emphasis on the command that this seeking should be paramount to all other desires, is as plainly marked in her writings as in the words of Christ Jesus in "his sermon in the mount." Those who "study thoroughly the letter and imbibe the spirit" and "adhere to the divine Principle of Christian Science and follow the behests of God, abiding steadfastly in wisdom, Truth, and Love" (Science and Health, p. 495), will have their "trials and self-denials" (p. 39), but they will also have the commendation, "Well done, thou good and faithful servant: thou hast been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy lord."

If then, as consistent Christian Scientists, we earnestly desire and strive to be lovingly obedient to the wise counsels of our Leader, we shall find that, viewed in this light, the greater part of these so-called problems will prove to be of our own making; that when each member of a church is ready sincerely to say, "Not my will, but thine, be done," the seemingly insuperable obstacles which the various compounds of self would put in the way of a right administration have been in large measure overcome. These difficulties arise, as a rule, from bringing our acts into conformity with the rule of [illegible] to twist the interpretation of [illegible]

Mrs. Eddy's article "Obedience" (Miscellaneous Writings, p. 116) is a wonderful help in gaining a right perspective. It is all so simple when we get down to the fundamental fact that the demonstration of Christian Science is really letting divine Love rule our every thought, word, and deed. "Obedience," Mrs. Eddy says (p. 117), "is the offspring of Love; and Love is the Principle of unity, the basis of all right thinking and acting; it fulfils the law." The good of the cause should be the paramount interest, not the gratification of personal ambition or pride of place and power. "We are brethren," Mrs. Eddy points out (Miscellaneous Writings, p. 303), "in the fullest sense of that word; therefore no queries should arise as to 'who shall be greatest.' Let us serve instead of rule, knock instead of push at the door of human hearts, and allow to each and every one the same rights and privileges that we claim for ourselves." No other course will satisfy the requirements of the golden rule.

ARCHIBALD MCLELLAN.

Sanctuary

IN the study of the Old Testament we find that the word sanctuary was used to describe the temple at Jerusalem, and more specifically what was known as "the holy place." It has also been extended so as to include all places of worship, and has in addition the significance of "a sacred and inviolable asylum; a place of refuge and protection." The word has also been given in Scripture a profound metaphysical sense which is far broader than that implied by any edifice, however sacred, as for instance in this passage from the Psalms, "Judah was his sanctuary, and Israel his dominion." If we read the definition of "children of Israel," and also that of "Judah," in the Glossary of Science and Health (pp. 583, 589), the spiritual meaning of this text is gained, and we shall readily see how the idea of protection and security is related to it.

In our own time the church, whatever it may mean to different religionists, has come to take the place in thought once given to sanctuary, but it is possible that we do not think as we should of the protection and security inseparably connected with the true concept of church. Here it may be well to note that in the very midst of his healing work Christ Jesus paused to declare for the founding of his church upon the recognition of the ever-present Christ, as made manifest in the divine fulness in his mighty works. The great Teacher and healer was practically excommunicate from the church of his fathers, and those who confessed to faith in his teachings were "put out of the synagogue." It would seem that some of the disciples were influenced to a certain extent by the views of outsiders respecting their Master, but when Peter boldly avowed his faith the Master declared that it was not flesh and blood which had revealed the Christ to Simon Peter, but the Father in heaven. Following close upon this statement in the sixteenth chapter of Matthew, we find in the eighteenth chapter definite instructions as to the rules and discipline of the church then established, rules which were embodied by our revered Leader in the Manual of The Mother Church, and which aim to make the church of Christ a true sanctuary and place of refuge from all evil.

There are some who hesitate about identifying themselves with our church, because, they say, Christ Jesus did not require church-membership of his followers. This is, however, a great mistake, for Paul tells us that Christ "loved the church, and gave himself for it; . . . that he might present it to himself a glorious church, not having spot, or wrinkle, or any such thing." We read that the early believers began to establish the church in their homes, as so many Christian Scientists

Digitized by Google

have done, and everything goes to show that Jesus' followers at that day were fully alive to their privileges and their obligation to give themselves to the work of establishing "the church of the living God, the pillar and ground of the truth." Mrs. Eddy's definition of church (Science and Health, p. 583) is so often quoted that it needs no mention here, save to say that it tells of a sure sanctuary for all who are oppressed.

From the messages to "the seven churches which are in Asia," mentioned in Revelation, we gather that each of these was under the divine protection as represented by the angels of these churches, and nowhere in the Scriptures are there more vital declarations of divine Truth than these utterances of "what the Spirit saith unto the churches." Let any Christian Scientist who questions his own need of becoming a member of The Mother Church and of one of its branches, if one be near him, take a Bible concordance and look up the many references to church and churches found in the New Testament, and he will soon be ready to give up any Laodicean sense of lukewarmness which he may have entertained. It is not enough that we are ourselves within the fold or sanctuary; it rests with us to clear the way for others. Our Leader's words which close the 1900 Message to The Mother Church may well be pondered by us. She says (p. 15), "May the angel of The Mother Church write of this church: 'Thou hast not left thy first love, I know thy works, and charity, and service, and faith, and thy patience, and thy works; and the last to be more than the first.' "

Thankful-giving

THE return of "Thanksgiving" is sure to prompt the most of us to think, rather more definitely and enumeratively than we are wont, of blessings in hand which render our celebration of this event not only a privilege but a duty. The long list of our possessions and pleasures, as compared with those of the many, can but beget the realization that we have abundant occasion for gratitude and for the devotion of something of our good to the making of the less favored more comfortable and happy. All this is well, and yet a little thought regarding the matter impresses one that such a sense is after all rather commonplace and unworthy; that it fails to enter into and express that spirit of praise which animated and impelled the writer of the one hundred and third psalm. We begin to see that the true thanksgiving is very much nobler, finer, more engaging and more significant to one's spiritual life and growth.

Heaven's bounties being "new every morning," it is apparent that our thanksgiving, like our prayer, should become a habitual attitude, the loving and songful expression of a daily delight "in the Lord," our happiness in doing good, "his will." Such an attitude is both a door of disclosure and a point of access through which the finest things are able to reach us, and its practical significance has been signally illustrated in the instance of our Leader, to whose responsiveness to Truth we are all supremely indebted. This was the explanation of her illumination and her efficiency. She showed us that the true thanksgiving is the activity of an affection which is both boundless and perennial.

How delicately yet effectively Jesus emphasized this in those appealing reiterations to Peter, "Feed my sheep," "Feed my lambs." The "love of Christ" which constrained St. Paul and St. Francis in their splendidly unselfish living, —this and this alone speaks for that genuine sense of indebtedness which is all-inclusive, everywhere radiant, and continuous. This is one of the greatest vantages gained by the student of Christian Science. He can but have learned, as did the Master's immediate disciples, that "Love is reflected in love" (Science and Health, p. 17). When the psalmist wondered in his gratitude what he could "render unto the Lord for all his benefits," he bethought him at once of "the cup of salvation," Love's healing gift of truth, and this is the sweetest discovery, the most inspiring demonstration that can come to any one of us, namely, that we may bear this same cup to the famishing sufferers who have found no satisfying springs in all the desert-way of past experience, and thus make fitting return to God for "all his benefits."

This was the practical ministry to which Christ Jesus committed all his followers, and this is the Thanksgiving which you and I are called on to celebrate as consistent, all-loving, and all-conquering Christian Scientists. We can no longer think of the spirit of true thanksgiving as separate from the largest activities of spiritual affection. It is not content simply with the giving of an alms, it is and always must be mediatorial, compassionately self-giving, ministrant. It is forever seeking out the suffering and comfortless; it is not an event, but a life-motive, an impulsion to give the best that has been given to us.

JOHN B. WILLIS.

✧ ✧ ✧

Among the Churches

Current Notes

LOGANSPORT, IND.—The laying of the corner-stone of First Church of Christ, Scientist, at Ninth and North streets, is an epoch in the history of this church organization, and the completion of the edifice will mark an achievement toward which the membership has long been seriously striving. The church will be one of the handsomest in the city and will follow a style of architecture largely adopted by the Scientists throughout the country. Every dollar of the building fund was raised among the members, no assistance being solicited from outside sources. The Christian Science faith in Logansport has grown from a modest beginning, and the religious thought taught by this church was for a number of years beset by prejudice. This hostility has been largely overcome, and, however much the teachings of other doctrines may differ from those of the Scientists, the Scientists have earned the respect of all denominations. Among the many church buildings in Logansport none will be handsomer than the Christian Science church, and in none will worship be more devout and sincere.

Editorial in Logansport Journal-Tribune.

NEW ORLEANS, LA.—First Church of Christ, Scientist, having outgrown the edifice on Coliseum and Melpomene streets, is now building a new church, which when completed will compare favorably with the most beautiful structures in the South. A lot measuring ninety by one hundred feet on the corner of Garfield street and Nashville avenue was purchased for ninety-five hundred dollars, and is completely paid for. Plans for the new edifice were accepted some weeks past and the work on the structure is well under way. The cost of the building will be forty-two thousand dollars.

Correspondence.

ST. PAUL, MINN.—The corner-stone of First Church of Christ, Scientist, Summit avenue and Grotto street, was laid yesterday morning [Sept. 11] in the presence of the readers, trustees, and building committee. The building will be completed in April and will cost one hundred thousand dollars.

The St. Paul Pioneer Press.

Digitized by Google

PORTLAND, ORE.—Fourth Church of Christ, Scientist, has recently begun the construction of a new edifice on its lot bounded by Emerson and Moore streets and Vancouver avenue. This is the third Christian Science church to be erected in Portland. First Church, at Nineteenth and Everett streets, was completed about two years ago, and Third Church, at East Twelfth and Salmon streets, last spring. Fourth Church, which was organized last January, has been holding services since that time in a hall at 246 Killingsworth avenue, the seating capacity of which has seldom been sufficient to accommodate the congregations comfortably.

The lot upon which the new church is being built has a frontage of eighty-five feet and is one hundred feet deep. The building, which will face south on Emerson street, will be sixty-four by seventy-two feet. The auditorium will seat five hundred people, and the Sunday school room will accommodate two hundred and fifty pupils. The approximate cost of the lot and building will be twelve thousand dollars. The church will be ready for occupancy some time before Dec. 1.

Portland Telegram.

RICHMOND, VA.—A booth attractively fitted up in the main building, at our Virginia state fair, was maintained in the interest of *The Christian Science Monitor*, and many hundreds of papers were given away during the week. Those having the work in charge noticed a great gain in friendliness and an increased interest on the part of the general public toward the entire subject of Christian Science, as well as a wider and much greater familiarity with the *Monitor*. All went away with a "Thank you" for a "clean daily newspaper." More Christian Science literature was distributed, both in German and in English, than last year, and many favorable comments were made to those in charge by editors, educators, and business men on the subject of the *Monitor* and its work.

Correspondence.

WILLMAR, MINN.—Members of First Church of Christ, Scientist, gathered at the church auditorium Sunday forenoon [Sept. 28] for the formal dedication of their church building. The dedication services were quiet and simple, and consisted of the regular services of the church, followed by an historical sketch of the cause of Christian Science in Willmar, prepared and read by O. A. Sandven. The auditorium was crowded with members and friends. The same afternoon, Bicknell Young delivered a lecture at the opera house.

The Republican Gazette.

NORTHAMPTON, MASS.—At the three-county fair held in Northampton Oct. 1-3, the publication committees of Springfield, Holyoke, Greenfield, Orange, and Northampton distributed Christian Science literature. A rest-room was maintained the first two days, and literature was given out from there. We bought sixty-five hundred *Monitors*, and of this number sixty-two hundred and sixty were given out, as well as a few *Journals*, pamphlets, and *Sentinels*. It was primarily for *Monitor* distribution that the plan was made.

Correspondence.

LOS ANGELES, CAL.—The members and friends of Second Church of Christ, Scientist, are rejoicing in the opening of a reading-room in connection with the church, at 2222 South Union avenue, on Sept. 22. The room is but a short distance from the church edifice, and is so situated that it will meet the need of one of the smaller business centers of the city, as well as of a thickly settled residence district. Its patronage to date has amply justified the sanguine spirit in which the work was undertaken.—*Correspondence.*

The Lectures

Porterville, Cal.

The Hon. Clarence A. Buskirk lectured on Christian Science to a large and appreciative audience. The introductory remarks by Leslie McAuliff, editor of the *Daily Recorder*, were as follows:—

Friends, we are in the presence of truth. We have been in its presence since the world began. Truth today is more triumphant than ever before. Tomorrow it will shine clearer than today, and so on day after day. It is the way of truth to grow and grow and grow. It has lighted the world from the beginning, and our experience and our faith assure us that it will light it forever. It has always shone brighter at times, as men sought for it more or less earnestly. Men seek for some things they do not find; but no man ever failed in finding something of truth, providing he sought long and earnestly enough. To any man it will be given for the asking.

Truth is positive, not negative; active, not passive. It is quick to be accepted, but the human mind, like the shell-fish, is prone to close its portals to new truths, or rather to new expressions of old truths, for in reality there is no new truth, since divine Truth is eternal. It has always existed and always will exist. Likewise it is always present, all-seeing and all-powerful. It is God, and God is Love. Made in the image of God we are godly in the degree that we accept and live the truth; and in this same degree we are happy and useful instruments of the creator's will.

Mrs. Eddy spent many years of her life in diligent search after truth, and because the love of God and of her fellow man was strong within her breast, she spent many more years in setting forth the truth as she had found it. The almost miraculous growth of the church she founded, and the thousands upon thousands of men and women in all parts of the world who have been made healthy, happy, and useful, are proof enough that she found a new and remarkable expression for eternal Truth.—*Correspondence.*

Paducah, Ky.

Before a comfortably filled house Virgil O. Strickler delivered a lecture on Christian Science at the Kentucky Theater. The speaker was introduced by the Hon. Robert H. Scott, who said in part:—

Christian Science is not an invention, but a discovery. To the intolerant thought of the world, the Christian Scientist is a spiritual autocrat or dictator, come with a new philosophy and authority to supplant the old. But Christian Science, far from being a usurpation, is but the attainment of the Mind which was in Christ Jesus, the appropriation of the truth and power of God the Father which Christ came to demonstrate and establish. The Discoverer of Christian Science avows that she drew upon the Bible alone as the source of her spiritual understanding, and she challenges the world to accept her interpretation as true upon the fair and indisputable ground of demonstration. By the fruits of her followers she invites the world to know them. In the place of profession Christian Science puts proof, and in the place of dogma, demonstration. It reveals the husks of unreality upon which the prodigal sons of the world are feeding, and brings to men a consciousness of God, divine Truth. It bids men come to themselves, and return unto the Father, unto their home. It brushes aside the flimsy limitations which finite thought

Digitized by Google

has set about man's illimitable estate, and supplants error with Truth. For this usurpation of error's rule over men, the Christian Scientist may for a season bear his cross, but like Christ Jesus he may also pray, "Father, forgive them; for they know not what they do."—*The News-Democrat.*

✧

Ridgefield Park, N. J.

William D. McCrackan, M.A., lectured on Christian Science in Assembly Hall, Municipal Building. He was introduced by James H. Plummer, first reader, who said:—

Christian Science is truly a message of peace and good *will to men, a religion* and a belief that positively brings *health, happiness,* and harmony into every-day life. Christ Jesus said, "I am come that they might have life, and that they might have it more abundantly." Nothing, surely, can be more plainly set forth, for that is what Christian Science is and stands for, the abundance of everything good, and that is what is causing its tremendous growth and following. It may be called also the religion of Love, which rids people of sickness by destroying sin, fear, worry, want, and trouble, helping and bringing them to a knowledge and understanding of a God who is all good, and showing them the way to Truth, which is the way to health, harmony, and prosperity. We believe thoroughly the statement of Jesus, that the kingdom of heaven is within and not afar off, and that today is the day to enjoy heaven, and not hereafter.

Correspondence.

✧

Champaign, Ill.

A good audience heard the lecture on Christian Science by Prof. Hermann S. Hering in Elk Auditorium. The lecturer was introduced by F. B. Hamil, who said:—

We realize that it is our duty to keep in touch with the spirit of progress in all the fields of action, thought, and advancement. Great as has been the advance of material civilization during the past quarter of a century, it has not kept pace with the progress in the religious world. Although I am not a Christian Scientist, I have taken off my smoked glasses so that I can plainly see that Christian Scientists are fast becoming a potent factor in the religious life of the world, and I have also observed that the lives of many of my dear friends have become brighter, happier, nobler, and better by reason of its teachings. I am sure that we will receive tonight some valuable information and many beautiful thoughts on a religious topic that is dear to our hearts.

Champaign Daily Gazette.

✧

Altus, Okla.

Judge Clifford P. Smith, who lectured on Christian Science in the Court-house, was introduced by Attorney Brodie Hamilton, who said in part:—

I am sure that those of us who are present this evening have in store a rare treat indeed. I feel equally sure that it matters not what our own religion, faith, or creed may be, it will do most of us good and none of us harm to listen to a lecture which has for its subject a faith, science, or religion the purpose of which is the bringing of mankind into closer relationship with the omnipotent ruler and creator of the universe, and with the teachings of the fundamentals of life, love, and truth as taught and exemplified by the holy Nazarene; a faith, science, or religion the purpose of which is the bringing of health and happiness to suffering and despondent humanity, and the establishment in all the world of the universal brotherhood of men.

The demand of this age is education; not only worldly knowledge, but divine understanding. Christian Science in one sense of the word is comparatively new, but its fundamentals of faith have been embraced by many of the brightest and best educated men of our land, men whose honesty, sincerity, and integrity have not been and can not be questioned. If these men have been made better, healthier, happier, and more noble by their study of and faith in Christian Science, I for one, who hold to another faith, am willing to listen to their teachings and reason them out with those faculties and means which nature has given me to get the best there is in this life.—*Correspondence.*

Testimonies of Healing

It is with sincere thankfulness, and a hope that this will reach and help some one who may be in doubt as to the healing efficacy of Christian Science, that I testify to what it has done for me. It is now about twelve years since my attention was called to it, and I was permanently healed. I had been suffering with what a doctor called serious lung trouble, and had been treated by six different physicians, all of whom no doubt did the best they could for me, but with no results whatever. Like the woman mentioned in Scripture, I rather grew worse. At this period I was in such a condition that I was unable to carry an infant the distance of one block.

This disease was considered hereditary, and my oldest brother and I were treated for it by the same physician at the same time. The result was, that my brother died, while I was later healed in Christian Science; and there has never been the slightest return of the trouble. Being a plumber by trade, I was advised by one of the physicians to quit my work; but I am happy to say that after being healed in Christian Science, with only four treatments, I have never since lost a day's work on account of my health. Just before being healed I was greatly reduced in flesh, but am now above the normal weight.

After having ridiculed Christian Science and having made the statement that I would not try it unless I became insane, I was called upon to prove this statement. As I gradually grew worse I finally consented to give it a trial, and I went to see a practitioner who was recommended to me by a friend. I am willing to confess that I had very little faith in the treatment, and my permanent healing proved to me that it was not faith on my part which healed me. I thank God that I was ready and willing to accept this truth which brings us into health and harmony.—JOHN G. KUEHN, Milwaukee, Wis.

✧

My heart goes out in loving thankfulness to our beloved Leader for teaching me to realize that the truth makes us free. Mental and physical suffering had enslaved me from early childhood, and added to this was a longing but fruitless search for a practical, demonstrable explanation of St. John's declaration, "God is love." Many devoted and faithful members of churches attempted to console me by saying that my physical suffering, and my mental distress because of "man's inhumanity to man," with all the awful calamities which I constantly saw about me, were but the manifestations of divine power, and were intended to prove God's unchanging, compassionate, infinite love. I had always believed that to love meant to cherish, to help, to protect, to sacrifice for, and so I still maintained my faith in Him, realizing that my sufferings did not and could not emanate from the loving Father, but from my own failure to understand Him.

It was at this crisis, when death seemed to be the only relief, and preferable to a hopeless existence with what was said to be organic heart trouble, diseases of the lungs, liver, stomach, and bowels, nervous exhaustion and consequent depression and sleeplessness, spinal disease, and even other disorders, that the first ray of light pierced the gloom enveloping me. A dear Christian Scientist, recently healed of spinal disease and of a dreaded skin disease, asked me if I did not believe God to be omnipotent. When I replied in the affirmative she again questioned me, "Can He not, then, heal you?" I did not reply so quickly this time, for I was forced to think. Either I must give up my belief in His omnipotence or admit that I could be, nay, was healed. That night as I lay sleepless, though not in the old turmoil and fear, I suddenly seemed to see myself as I really was to mortal sight, and I was not proud. All the bitterness, self-pity, self-justification, self-love, self-righteousness, the "ingratitude of barren lives" (Science and Health, p. 4), rose before me, and in clear contrast the wondrous patient love of God stood revealed, until the room seemed filled with light, and again I heard the song of peace and good will, sung by angel voices nearly two thousand years ago to the shepherds of old as they watched their flocks on the Judæan hills.

Peace, joy, and love filled my heart as it seemed to overflowing, and suddenly I was well. Many steps have had to be taken since then, and self in various disguises has had to be overcome. I dare not speak of gratitude; I have not yet earned the right. Innumerable benefits have been received every day since that first glimpse of Truth over four years ago. Among these may be cited the release in less than twelve hours from a fully developed contagious disease; the lifting out of the root of a tooth immediately upon application to a practitioner, after twenty-five minutes of unsuccessful effort on the part of the dentist; the solving of financial problems; mental quickening in study; but in no way has the help received been more important than in the schoolroom, where the knowledge that Love is the only real power has met many seemingly difficult cases of discipline and proven a great mental, moral, and physical aid to the children committed to my care.

The greatest blessing, however, has come from being able to pass on even the slight measure of the knowledge I have of divine Love as taught by our Saviour, Christ Jesus, and by our Leader, Mrs. Eddy, and to prove in some degree "what it has done and is doing for mankind" (Science and Health, p. 55).—LILA M. DELANO, Seattle, Wash.

✧

I have long felt that I should give my testimony to the healing power of Truth, for freely I have received. If my experience should be the means of pointing the way for some one else, weary and without hope, as Christian Science found me, my cup of gratitude will be full.

I had for many years been a worker in other churches, but I finally concluded that there was little help or comfort in them for me. I had lost my health, and the God "who healeth all thy diseases" had not been revealed to me. I "suffered many things of many physicians," took large quantities of medicine, tried dieting for a number of months, then change of climate, spent five months in California, and finally went back to the doctors. Two of the best physicians in the town where I lived, recommended an operation as necessary to remove internal growths. I submitted to it, and though it was pronounced successful, I got no relief. The old troubles seemed to return in aggravated form, but the doctors said I could never stand another operation.

Truly "man's extremity is God's opportunity." My attention was called to Christian Science, and that wonderful book, "Science and Health with Key to the Scriptures," was placed in my hands. It was indeed as "the shadow of a great rock in a weary land." I devoured its contents and for three months had a practitioner's faithful help, and the growths were gradually dissolved. That was over four years ago, and there has been no return of this trouble. During that time I was also instantaneously healed of an abscess at the base of the brain, which a physician said would have to be operated upon at once, or I should lose my mind. I immediately telephoned to a practitioner, and in ten minutes all suffering was gone, and no such symptoms have ever returned.

Besides these healings, a number of minor ailments have been removed, constant headaches now being a thing of the past. I have also given up glasses, which had been worn for

Digitized by Google

over twenty years. Then I have had class instruction. For all these blessings I am indeed grateful; but I am still more so for the spiritual quickening and for a sense of peace and security. I am also thankful to our revered Leader, Mrs. Eddy, who says in the Preface of Science and Health (p. vii), "To those leaning on the sustaining infinite, today is big with blessings."—ANNA J. COPELAND, Denver, Col.

It is with a heart overflowing with gratitude that I add my testimony to the power of divine Truth, which is again made known on earth through Christian Science. About five years ago I was impelled to take up the study of "Science and *Health with Key to the Scriptures*" by Mrs. Eddy. A sense of spiritual barrenness manifested itself in discordant physical and mental conditions, which were apparently aggravated by the use of alcoholic stimulants and tobacco. Previous to this time, I had read the book, first at the bedside of my wife, who was then an invalid, but who was healed through Christian Science. I had prided myself that I did not need any help, and I seemed to get nothing from this first reading of the pages which now make the Bible an open book to me. At last, however, I was awakened to the demands of Truth, and called a practitioner, who treated me for about three weeks. At the end of this time all desire for tobacco, as well as for liquor, had left me.

I have had many other conditions of inharmony destroyed through the understanding of the one Mind, and I will mention one experience. A very pronounced case of typhoid fever was met and overcome by my wife, who was then young in Science, but we knew that divine Love really does the work, and I was up and ate a hearty meal in about twenty-four hours from the time I was stricken. Christian Science has been to us, in all ways and at all times, "a very present help in trouble." I am truly thankful for that understanding of the truth which enables me to help others as well as myself. I am more grateful than I can express to our heavenly Father, and also thankful to Mrs. Eddy for this truth which makes free.—J. C. COPELAND, Denver, Col.

✧

For a long time I have felt that I should express my gratitude through the *Sentinel* for all that Christian Science has done for me since I became interested in it seven years ago. Once more it has proven to me that "divine Love always has met and always will meet every human need" (Science and Health, p. 494), and I feel that I can no longer remain silent.

Quite recently my year-old baby swallowed an open safety-pin. At first a sense of fear overwhelmed me, and I thought of all the material methods used at such a time. Then I recalled a testimony I had read in the *Sentinel* several weeks before, about a mother who used no material methods for resuscitating her child who appeared to have been drowned in the bath tub, but relied entirely upon God to do the work. I also recalled that many discordant conditions had been overcome for me in the past by the power of Truth, and that Love never fails to respond to our faith in spiritual means. Then I felt calmer, and telephoned for help in Christian Science. Four days later the pin was passed, the baby having been perfectly normal during those days.

A year before, when this baby was born, I was surrounded by those who were not interested in Christian Science. My physician, nurse, and husband decided that it was necessary to have an assisting physician, and he was summoned; but before his arrival, the Christian Science practitioner who was helping me, called up on the telephone to know how the case was progressing, and my husband told her. She replied that there would be no assistance necessary in this case. My husband was the only one who heard this, and he did not believe it; but the work was done, and that immediately, and to the astonishment of all about me; while I, who experienced the power of Truth, knew that God alone could have helped me.

I could relate many other experiences where Christian Science has been my only remedy, but will merely say that it has never failed to meet every demand upon it, usually at once, through my own knowledge of God's protecting power as taught by Mrs. Eddy, or with the assistance of some one whose understanding was greater than mine. Most grateful do I feel for all that Christian Science has brought into my life, and especially for the satisfying religion which I have to teach to my children.

MRS. C. P. BOGART, Scarsdale, N. Y.

✧

I wish to give thanks for my healing in Christian Science, which took place in this city about seven years ago. I was visiting here at the time. When I left home on Monday, my foot pained me somewhat, though not enough to mention it to my husband or to give it serious thought; but each day the pain was more severe. On Wednesday I asked for help, but continued to go about until Friday evening, when my suffering was so great that I could not go down to dinner. That night I did not close my eyes in sleep; all I could think of during the night was these words from our "Christian Science Hymnal" (p. 48):—

God is on the field, when He
Is most invisible!

The next morning, as soon as the family were awake, I asked to have a Christian Science practitioner sent for. The family considered the condition so serious that my husband was telephoned to come at once, and other relatives were notified. My husband was held by the asserted laws of *materia medica*, and his fear was pitiful, as the physical evidence pointed to so-called blood-poisoning.

I left for home the following Tuesday. On Friday of that week every trace of the trouble was gone, and I walked several blocks to an entertainment. I had not been studying Christian Science long, but I felt that the practitioner did understand how to pray according to Christian Science and that no other power but divine Truth could heal me. I can never forget how grateful I was that I had heard of Christian Science. I am thankful to God that one in our time has been pure enough to know, and show us, how to use Christ Jesus' words, and that God's will is being done "on earth, as it is in heaven."—MRS. LIZZIE L. R. FOOTE, Memphis, Tenn.

✧

In submitting the following testimony for publication I have related only what seems the most important demonstration that has come into our experience, in the light of which my own healing of inflammatory rheumatism and a serious heart weakness, and that of my wife, who was freed from a serious lung trouble, seem less wonderful.

On Nov. 21, 1910, our little boy, then about four years old, fell from a third-story window to the pavement. He was carried to a doctor's office, and an examination was being made, when his mother followed, having learned of the accident a few minutes after its occurrence. Before seeing the boy, and with absolute faith in God's protecting power, she had telephoned for a Christian Science practitioner. I arrived at that time, and we were shown into the room where the child lay.

Previous to this I had had many proofs of the power of Truth to heal all manner of disease, but this seemed so different, and so terrible, that I felt as though there could be

Digitized by Google

no hope. My wife, however, manifested no alarm, but quietly informed the doctor that we were Christian Scientists, and asked that the boy be taken home. This was readily agreed to, although the diagnosis was not complete and the extent of the injury was not known, except that there was a fractured jaw.

A few minutes later the practitioner came, and the boy was soon sleeping quietly. He slept for an hour or so; then he awoke, making but little complaint, and with no manifestation of severe pain. He slept quite a little during the night, and before noon the next day he was sitting up and having a real good time with his toys. At four o'clock in the afternoon, or less than twenty-four hours after the accident, he asked for an apple and ate half of it, chewing it quite readily. His improvement was rapid, although he would make no effort to walk.

We then discovered that one hip was dislocated, and I asked the practitioner if it would not be best to have a surgeon assist in the case, but she soon made it clear to me that the same power which had healed the broken jaw would also replace the dislocated joint. He was soon walking a little, and within a few months the tendency to limp was entirely overcome.

For this wonderful demonstration, and for the many blessings which have come to us through Christian Science, we are indeed grateful.—N. S. Street, Chicago, Ill.

✧

I feel truly thankful for the blessings that have come to me since the time of my sickness, when all seemed dark. I was under the care of doctors for a long time, who said I had female trouble, tumorous growths, kidney disease, and other ailments. I discarded drugs, as I had lost all faith in them, or any other form of material remedy, and wrote to a Christian Science practitioner for absent treatment. I am now enjoying good health, and can do all my housework, including washing and ironing. Surely the Scriptures are fulfilled, "He sent his word, and healed them."

I have never had the pleasure of attending a Christian Science church, there being no church near me, but I study the Lesson-Sermons, and the more I study the better I can realize the truth of Jesus' promise, "Ye shall know the truth, and the truth shall make you free." I cannot find words to express my gratitude to God, also to Mrs. Eddy for the help I have had in Christian Science. I shall never forget the loving-kindness I have received from a faithful practitioner, and I hope to be able sometime to help others as I have been helped. May this lead some one to find the bright side of life, as I have found it.

Mrs. Cooper Elmore, Welview, Concho county, Texas.

✧

Five years ago I went to Constantinople, fully convinced that there was no congenial work for me in England. I, however, very soon found that I had even less chance there of making any headway, and I was rapidly degenerating into a pitiful bundle of fears and pessimism, full of care, worry, and anxiety about myself and those dear to me. It was in this state that my wife joined me some nine months later, and brought Christian Science to my notice, as she had during this interval become interested in it in England. From that time I have been led lovingly and wonderfully from joy to joy and strength to strength, and today I am back in London, where I have always wanted to be, in a better post than I have ever had before, and I am a happy, well individual, dwelling in that realization of the truth of God's word as revealed to us through Mrs. Eddy. This truth is sufficient for the beginner in this Science to rest in the full assurance of ever-present Love and the omnipotence of divine Mind.

My life is now full of happiness in the knowledge that none of us need stay in hell any longer than we want to, and we shall never know any other than that which we make for ourselves by our own wrong thoughts and ill-doing. I now know that honesty of purpose, pure acts and motives, and an ever-increasing knowledge of Christian Science will bring us nearer and nearer to God, that it will enable us to overcome all inharmony through the truth of being.

With the first glimpse of Christian Science I was able to discard glasses, and as I have learned more and more of it, I have been able to overcome headaches, boils, and to a great extent a skin trouble of many years' standing. All desire to smoke or to imbibe stimulants has left me. I can never express my gratitude for the calm and peace that Christian Science has brought into my life, thankfulness to Mrs. Eddy for making the Bible a living, practical *vade mecum*, instead of only a book of beautiful thoughts and inspired writings. I am truly grateful for the help given me most lovingly and wonderfully at so great a distance, and thankful to all those Christian Scientists who with many a helpful word have made my horizon brighter and clearer.

I am indeed finding more and more every day, that as we obey the command, "Thou shalt have no other gods before me," we gain health and happiness. I rejoice in knowing that divine Love does "and always will meet every human need" (Science and Health, p. 494).

H. Mason-Meyer, London, England.

✧

[Translated from the German]

I daily think with profound gratitude of the blessings which I have received through Christian Science. When I first heard of it and made the acquaintance of adherents of its teachings, whose faces reflected contentment and joy, the desire was awakened in me to know of this religion which had such a happifying influence. Since childhood I had been inclined to melancholy, besides being of a delicate constitution and often in ill health. Many were the faults of which I was anxious to rid myself, and I yearned to be a better woman. Through the loving treatment and instruction of a Christian Science practitioner, it soon became clear to me that I had found the true religion which our great Master taught and practised in healing the sick and reforming the sinners.

Although I had always adhered to the church, yet I often felt the deficiencies of the so-called orthodox teachings; but I was more steeped in the old theological thought than I realized. These old beliefs of eternal perdition and punishment, as well as the mortal sense with its claims, offered such stubborn resistance that it seemed impossible for me to rise into the consciousness of man's birthright as a child of God. I was so weighed down with diseased beliefs and erroneous concepts that without a knowledge of Christian Science I would have had a sad future before me; but although I believed myself to be far removed from God, divine Love was watching over me. The consecrated, untiring, and loving efforts of a practitioner gradually caused the light to dawn in my consciousness, and it became possible for me to study "Science and Health with Key to the Scriptures" by Mrs. Eddy and to understand the truths contained in this wonderful book. My healing went on as I gained in understanding, and I realize that every seeming handicap is turned into a means of attaining a higher sense of truth.

I am deeply grateful to God, through whose loving care I have been led into these ways of peace and to join those who can testify to His truth. I also wish to give thanks herewith

Digitized by Google

for the translation of our text-book. We Germans must strive to fulfil the hopes which led our dear Leader to make us this wonderful gift. The German as well as the English literature on the subject of Christian Science testifies to the faithfulness of the workers, and is to me a source of constant encouragement and inspiration.

WALLY CLEMENS, Berlin-Wilmersdorf, Germany.

✧

While staying with one of my sisters, about twelve years ago, I was taken with a severe pain in my head. It was almost unbearable, and I lay for about three months with what was *called spinal meningitis.* My entire right side was paralyzed; I was unable to speak and was as one dead for a number of days. The doctors did all they could and then gave me up, saying that I could live only a short time; but the everlasting arms of Love were ready to lift me up, as they always are if we only trust. My two sisters were Christian Scientists prior to this experience, but I had always been well and thought I had no need of Christian Science, in fact had given it no thought at all; but we all must awake sometime. My sister sent for a practitioner, who treated me lovingly and faithfully, and in less than a week I was sitting up and the power of speech gradually came back.

I cannot find words to express my gratitude to God, and also my thankfulness to Mrs. Eddy for revealing this blessed truth. I have been married since my healing, and now have two very dear children, who with myself have reaped many blessings from Christian Science.

MRS. GEORGE BAER, Anderson, Ind.

✧ ✧ ✧

[Written for the *Sentinel*]

"Except ye repent"

BEN. HAWORTH-BOOTH

How oft upon the fretful voice of ocean
Have I not heard the carping, canting quest,
How would ye heal by your divine devotion
If ye should fall—as fall perchance the best—
And break some bone? How would ye bide the test?
Long as ye sail upon the summer seas
To wafting zephyrs of the golden west
Your path is easy, but away flies ease
When bones are broke: how meet ye woes like these?

'Tis said in Holy Writ of him who died
To teach mankind to live, "A bone of him
Shall not be broken": though they pierced his side,
His gentle hands, his feet, they broke no limb:
And all who follow through the darkness dim
His sacred pathway—all who drink the wine,
The bitter dregs upon his goblet's brim,
From direful accident have help divine:
The promise is for all, 'tis yours, 'tis mine.

But though they were not sinners worst of all
Who fell beneath the falling bastion stone
When sank Siloam's tower in Salem's wall,
Yet were they sinners; and like fate is prone,
Except we do repent, to cast each one
To dark destruction. O protecting might!
Help us to guard each thought, each word, each tone,
To walk as pilgrims in this weltering night,
So may no foes appal, no fearful chance affright.

From Our Exchanges

[*The Universalist Leader*]

There is one truth which the church as a whole has never yet learned. It has disclaimed autocratic desires; it has lauded the blessings of humility; but it has never yet saturated its own consciousness with the truth that the church, like the individual, is greatest when it serves. Look at these barriers it has always built. Look at these creeds it has set before men. Look at these sacraments which it has insisted are necessary to salvation. Look at these claims of all sorts of infallibility. Study this perpetual insistence that humanity everywhere must come to its terms. This all constitutes a fabric of claims and conceits and demands which have at times been very burdensome.

The time is coming when the church must face a great problem. How earnestly does it wish to win to fellowship with Jesus Christ this great multitude of people out there in the wide world? To the thoughtful it is increasingly clear that the church cannot win that great, free humanity on the terms and by the procedure of traditional ecclesiasticism. When driven to choose between that traditional ecclesiasticism and the freedom of the open world, some of us who are in the church would not hesitate to go forth, and few of those outside will ever come in. How much of its machinery, its formal authority, its claims to infallibility will it give up in order to win the crowd? How far will it pass over to humanity and make terms with the mighty energies at work there? In the hour when God calls, can the church do what it demands of others, make the great sacrifice of its pride? Can it humble itself and remember the words of its Master, that in his kingdom they who serve are greater than those who are served?

[*The Christian Register*]

What is this evolution, this starting up of great principles, that no man can down and the world cannot get rid of? It means that the brute-force age has to make room for higher principles; that the savage is not only unideal, but is intolerable, whether he wears epaulets or khaki. Finally, we have to count on Christ. There is no mistake about it. Call him Son of God or call him Son of man. In either case the Galilean is conquering the world. We have little interest in the quarrel of religions, but great interest in the supreme mastery of that mind which has been able to keep pace with the progress of the world, and still be somewhat ahead of the millennium. In that man's views we are interested. We remember this one sublime fact, that Christianity came into the world singing no abstract doctrine concerning the creation, but proclaiming, "On earth peace, good will toward men." The world has already had to count upon Christ during these past nineteen centuries; and in spite of the rubbish which has been passed off for Christianity, the voice of that religion has been, in its simplicity, peace among men.

[*The British Congregationalist*]

There can be no sort of question that when the church sees men and women being ground down and sweated, by whomsoever and by whatsoever combination of circumstances, they should speak out against the evil fearlessly. We cannot conceive that any thinking Christian man would resent this. The church, indeed, might well become a medium for bringing about a clearer understanding between capital and labor, if both of these great contending forces could be once convinced that the church is in dead earnest and is truly impartial. And let us remark that impartiality means the courage to tell the

Digitized by Google

worker of his duty to his employer as well as the employer of his duty to the men and women whom he employs, and for whose souls and bodies he is often far more responsible than is generally and frankly recognized to be the case.

If, too, the church sees men and women squandering their lives, opportunities, health, and material possessions on selfish and grotesque luxury (as many undoubtedly do), it should say so with no uncertain voice. And if the church sees dishonesty and gambling masquerading under the cloak of business, it should tear away the cloak with a ruthless hand. Is it too much to say that the duty of the church is that unchanging duty which time and circumstance cannot alter, the duty constantly to war with evil, and carry on the unending conflict with the mammon of unrighteousness? In so far as a recognition of this duty is allowed to fall into the background, there will be no advance made toward that renaissance of religion we all so fervently desire.

[*The Watchman-Examiner*]

We believe the church must put a faithful presentation of the gospel of Christ above all else. That is just what all men need, and we are convinced that it is the message they expect and crave when they turn their thoughts and steps toward the house of God. The church must feed and direct and satisfy the religious nature, a more important and worthy service than the satisfying of the social instinct. The message of truth, the impetus and inspiration that men secure at worship on the Lord's day, is what they need to carry into the social and business life of the week. And there is increasing evidence that through the lives of churchgoers this leaven, the leaven of the gospel, is finding its way into society and business, even though there are many indications that point toward increasing religious indifference and moral debauch. Whether there be more or fewer men in attendance upon the services of the church, the church through its leadership must see to it that those who do come, have preached to them the gospel of Jesus Christ, in which alone is the hope of individual and social redemption.

[*The Christian Work and Evangelist*]

The church stands as an eternal protest against the shallow surface life which is ever in danger of withering away because it has no root. It is a constant protest against the idea that the contemplative life, the culture of the devotional, is idleness. It calls to prayer, to praise, to worship, to shut the door on the world, and forget the distracting ambitions and desires and works, and wait on God till the fire burns. It stands as the sanctuary of the race, for the weary and the heavy laden, and all the beaten, broken lives of men. And it tells the strong and the victors in the fight, that away from God their strength is spent for naught, and their victories are empty and barren of good. It asserts that even work without worship is idle, the frantic beating of the air. For this need which the church supplies, is more than a graceful addition to life; it is a necessity for true life at all. Our activities cannot keep themselves up; even our religious and social activities cannot keep themselves alive.

[*The Advance*]

Great men symbolize a nation's ideal and enable it to express its hope and aspiration in terms of personality. This is the supreme value of great men to any generation, that they enable the people to think of their ideals in terms of actual character. This is the value of all sentiment that comes to us out of history, of all the ideals derived from associations with places and incidents in the past.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now in press, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been translated into German ("Die Christliche Wissenschaft: Eine Religion der Liebe"), and is now printed in pamphlet form and ready for distribution. Forty pages and cover. This lecture was recently published in English, and both editions are on sale at prices of the regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the *year in all the Christian* Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, marbled edges, 95 pages, single copy, $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy, 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.***

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIII indicates the year 1913; XIIII is used for the year 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

NATIONAL

The House committee on interstate and foreign commerce is taking the initiative on a plan for a general revision of the laws affecting water-power development. It is planned in the proposed bill to secure a middle ground between the ultraconservationists on the proposition of the development of water power. The decision of the Supreme Court last May in the Chandler-Dunbar water-power case, it is said, has opened the way for many desired amendments to the general dam act. The proposed act will regulate the term of the franchise and the disposition of the power and equipment after the franchise has expired. At present a fifty-year franchise is regarded as a proper one, and it is probable that the committee bill will specify a fifty-year franchise period. The bill will contain a provision that the dam and equipment must be sufficient to utilize all power possible, that none may be wasted. The government is to be given the power to regulate charges for service developed by the power, unless by suitable legislation the state regulates the charges, either through public utilities commissions or other appropriate bodies.

The boundaries of the universe have been discovered, according to a report received at the National Observatory at Washington from Prof. R. A. T. Innes, director of the Union Observatory at Johannesburg, South Africa. The universe, Professor Innes asserts, is contained within the space girdled by the Milky Way, and he figures that the most distant star in that wonderful girdle is five hundred and forty light-years distant from the earth. As light travels one hundred and eighty-six thousand miles a second, or over five and three quarters quadrillion miles a year, the diameter of the universe, by Professor Innes' calculation, is 6,334,951,680,000,000 miles. He says that the most powerful telescopes penetrate far into space, beyond the boundaries of the universe, revealing nothing. In particular, he says, there is absolutely no sign of other universes of similarly constituted stellar systems. He looked out beyond the universe, but his telescope discovered nothing in those far-away depths of space.

Those who advocate federal rather than state control of water-power rights, led by Gifford Pinchot, former chief forester, Henry L. Stimson, former secretary of war, and Walter L. Fisher and James R. Garfield, former secretaries of the interior, won a victory in the national conservation congress at Washington, D. C., last week, in the first test on the paramount issue of the gathering. By a vote of 434 to 154, a motion to refer to the resolutions committee that portion of the report of the committee on waterways which was unanimous, was voted down and the report subsequently adopted without a roll-call.

Having recommended the erection of a government armor-plate plant for the purpose of making the navy independent of the armor plate combine, Secretary Daniels now proposes that the government go into the oil business to cope with the Standard Oil Company. The secretary charges that the Standard is "holding up" the navy, which is now partly dependent upon oil as a fuel. He says that the government should lease oil lands and establish a refinery for the production of oil to be used in the navy. The secretary declares that for the last two years the price of oil has been steadily advancing.

The interstate commerce commission began an investigation last week at Philadelphia, into the rates and practises of the anthracite coal roads. The inquiry is undertaken with a view to determining whether there have been any violations of the interstate commerce laws by the carriers in connection with the transportation of coal, including the question as to whether the roads have observed the intent of the recent "commodities clause" decision, which held that railroads could not transport commodities produced by themselves,—in this case coal.

Approving the favorable recommendation of a special postal department board which studied the proposition, Postmaster-General Burleson has decided to ask Congress for authority to make post-office money orders payable at any post-office.

That the time is not ripe for the formation of a labor party, was affirmed last week at Seattle, Wash., as the position of the American Federation of Labor, which adopted such declaration by a vote of 193 to 15.

State-wide pressure, directed by the Prison Reform Association, will be exerted upon the next Legislature in New York state to abandon Sing Sing prison and to build a farm industrial prison.

More than two hundred thousand acres of public land that had been withdrawn from entry was restored during October and thrown open to settlement.

INTERNATIONAL

An event of momentous significance was the passage of the religious toleration bill by the Chamber of Deputies of Peru at Lima, in October, by a vote of 66 to 4. The bill had already received the approval of the Senate, and thus becomes the law of the land. This notable legislation marks the end of a struggle which has been going on for fifteen years.

The committee which was formed to assist Germans to participate in the San Francisco exhibition, and which held a meeting in Berlin recently, confidently expects to prove, as the result of negotiations, that the participation in the exhibition will be perfectly adequate, as regards the number and importance of the firms, to secure a dignified representation of Germany.

The French cabinet has approved the recommendation of the finance minister for the issue of two hundred and sixty million dollars of perpetual 3 per cent government rentes. The national debt of France is above seven billion dollars, the greatest owed by any nation. The chief obstacle to holding down the swelling tide of expenditures is the huge sum demanded for increases in national defense.

The immediate passage of an act to limit the number of bars, saloons, and other establishments for the sale of spirits in France, was demanded in a petition, signed by 222,072 French women, presented to the Chamber of Deputies last week. The movement of the women is directed against distilled liquors.

The surplus for the year 1912 on the Emperor William canal, joining the North sea to the Baltic, amounted to four hundred thousand marks. Statistics show that the number of ships making use of the canal in 1912 amounted to fifty-seven thousand.

A complete new survey has been made of the country between the Araguaya river and the Madeira river in Brazil. Some of the great mountains indicated on modern maps are found to have no existence.

INDUSTRIAL AND COMMERCIAL

The growth of both the export and import trade of Japan has been unprecedented in the past nine months. The exports show an increase of 22 per cent over the past year, while imports have increased about 17 per cent. The increase in the export trade is due to the growing demand for raw silk, cotton yarns, cotton textiles, refined sugar, copper, and coal; while the growth of the import trade is due to the increasing demand for sugar, rice, raw cotton, oil cakes, machinery, woolen textiles, phosphates, and paper. Great progress is shown in the import and export trade with other Asiatic countries, especially with China and India. The value of the trade with these two countries shows an increase of 32 per cent over the previous year, and with European countries an increase of 18 per cent.

The *New York Sun* says: The recent extra cash dividends declared by former Standard Oil subsidiaries have stirred renewed interest in the activity of oil stocks in the face of inactivity in other securities. Dividends thus far this year show that the former Standard Oil companies have declared a total of 111 per cent on the basis of the one hundred million dollars authorized capital of the parent company, against 52 per cent declared in 1912.

More than one billion menhaden were caught off the coasts of New Jersey, New York, Delaware, Virginia, and North Carolina in 1912. The oil derived from the fish totaled more than six million five hundred thousand gallons, while ninety thousand tons of fertilizer was produced. Forty-eight factories and one hundred and fifty vessels engaged in the business.

Reports received from every section of the state of Texas indicate that the largest pecan crop for ten years will be gathered this fall. The crop is estimated to be worth annually one million five hundred thousand dollars on the average, and Texas produces about 60 per cent of the pecan nuts of the world.

The official estimate of the Egyptian cotton crop is seven million five hundred and ninety-three thousand cantars (of about a hundred pounds each).

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI November 29, 1913 No. 13

True to Type

GEORGE H. MOORE

THERE is no one element of human life that is more vital to continued good health than man's right to his own individuality, his own self-expression and control. This basic fact underlies every revolt of mankind against his oppressors, for it is a fundamental test of manhood. Christian Science not only conserves this right, "but confers upon man enlarged individuality, a wider sphere of thought and action, a more expansive love, a higher and more permanent peace" (Science and Health, p. 265).

A more specious denial of the validity of Christian Science teachings could hardly have been framed than that the emphasis of the allness of God means the belittling of man; and no accusation could be less becoming on the part of the advocates of the present social régime, tending so decidedly as it does to hamper the individual with the fears and traditions of the many. This very ironing-out process, by means of which individual conception and initiative are so held in check that both our thinking and our productive processes tend to conform to a fixed mechanical order, constitutes one of the most serious charges against so-called modern civilization. Any machine-made product which departs from its prescribed model has no place provided for it but the scrap-heap; and a machine-made civilization has no more mercy and provides no better place for wanderers from its mechanically dogmatic and static notions. Variations from its standards are looked upon as anomalous discards, who fight out their cause in life, who maintain their place, if at all, against and in spite of the frowns of entrenched, pattern-made virtue. Mankind almost always suspects a genius and abuses a reformer, until it learns, perchance, to use them to the increase of its own comfort.

The monotonous level of the machine process has appeared strongly barricaded in our schools. The same leveling up or leveling down has been going on in the churches, in society, and in government. Even popular opinion and sentiment have come under this false law, and both are today manufactured at will by a designing press. Our political campaigns are cases in point. More than one of our national or racial, class or religious likes and dislikes is press-made or pulpit-made. Many an honest man would have good reason to blush for holding some cherished opinions and theories if they could only be traced to their original source.

Strange remedies for this mental inertia present themselves, remedies often worse than the disease at which they aim. These arouse and interest men briefly, and then the world forgets and slips again into its well-worn ruts and grooves of least resistance; for the human mind has in itself no true remedy for the ills of its own brewing. Unrelated to a higher power,—the divine Mind, the source of all that is good and true,—human ingenuity is but the blind leading the blind, whereby both shall fall into the ditch. And yet a pathetically large part of mankind thus accepts its modicum of supposedly orthodox thought, hugs its tatters about, and fondly believes that it is exercising a God-given right of individual choice and self-control.

The statement that "God made the country, and man made the town," may possibly be colored somewhat by antiurban prejudice; but certainly the open range of field and forest leads one's thought far away from the dreariness of the wholly man-made, and unfolds in nature a much nearer resemblance to the primitive order of things. If one were to pick all the leaves from a great oak tree, and as preliminary to defining the perfect oak leaf were to attempt the selection of those leaves which were exactly uniform in size, outline, and texture, he would soon find his task to be impossible and fruitless. No two leaves would be alike, though every one might be a perfect leaf, faithful to its parent type, and at the same time unmistakably individual. The same would be true of the maple, the beech, the hickory, or any other variety. Here is no confusion of interests, no loss of identity, but here, in a word, is infinite individuality made manifest, and here also is absolute fidelity to type. The same law operates all through nature,—in the color, markings, and notes of birds; in the texture and brilliancy of the flowers; in the habits and instincts of animals; in the blending and intermingling of grasses, shrubs, and trees. Here, also, if he will but see it, the same law holds man in its eternal embrace.

As viewed by material sense, man seems but a puny creature of circumstance. As God's spiritual reflection, "man is the climax of creation" (No and Yes, p. 17), eternal as the Mind which expresses itself through him. The individuality of man is enlarged in proportion as this fact is understood, in proportion as man becomes truly representative of interests greater than those which concern him alone. Human society is keen to enforce this law in some of its larger relations, wherein the selfishness of the individual plays little part. The nations send ambassadors to foreign courts to speak, not each for himself, but for a nation, and to represent the people from whom he is chosen. These men are placed in a diversity of situations which demand initiative in a marked degree. But whatever the byplay of his individuality may be, such a man is held rigorously to the basic law that, first of all, he must be true to his national traditions and ideals; he must live the part appointed to him, reflect the spirit of the people who sent him, with fidelity and thoroughness. This fact by no means circumscribes his individuality. The importance of his mission, the necessity of typifying the spirit of a people greater by far than he, inspires him to reach out beyond self-centered desire, to apprehend the best for which his nation stands, and to exemplify this definitely and without error.

Man's relations to God are just as clearly and unmistakably representative. The teaching of Jesus made this plain. His life proved it. Mankind's failure to understand and demonstrate this relation is the source of all our woes. Men have been so concerned to preserve their own limited sense of individuality, so jealous of its assumed rights and prerogatives, that they have failed to accomplish the far more important duty of being true to the divine type. The clamor for opportunity too often obscures the quieter call of responsibility, and men therein fail to live the part assigned to them as God's witnesses, those who are appointed to reflect or express His nature and purpose.

Copyright, 1913, by The Christian Science Publishing Society

Mrs. Eddy has written: "In Science all being is individual; for individuality is endless in the calculus of forms and numbers. . . . Clothed, and in its right Mind, man's individuality is sinless, deathless, harmonious, eternal. His materiality, clad in a false mentality, wages feeble fight with his individuality,—his physical senses with his spiritual senses. The latter move in God's grooves of Science: the former revolve in their own orbits, and must stand the friction of false selfhood until self-destroyed" (Miscellaneous Writings, p. 104).

Herein is the secret of right living, herein is the secret of eternal living,—that man should so honor his Father-Mother God by reflection of the divine character and ideals, should so occupy his thought with the spiritual and its human exemplification, should so typify the sonship which is God's supreme gift, that this shall exalt individuality to the point of its highest possible efficiency and true spiritual estate.

Learning to Pray Aright

ROBERT C. BRYANT

CHRISTIAN SCIENCE brings the knowledge which enables us to pray aright, and to pray aright means to have prayer answered. Every Christian Scientist is working to gain this knowledge, and is thereby coming into man's true inheritance of wisdom and power as a child of God. Many thoughtful persons are asking why the Christian Science church is growing so rapidly and why its adherents are so loyal and enthusiastic. The answer is found in the testimony given by Christian Scientists the world over, that they have learned how to pray aright, and that their prayers have been answered, so that they now approach the throne of grace with confidence and boldness. The people are echoing the words of the psalmist: "O Lord my God, I cried unto thee, and thou hast healed me." "This poor man cried, and the Lord heard him, and saved him out of all his troubles."

In personal relations, in business, in every condition and experience, Christian Scientists have seen the salvation of God. The answers to prayer are actual demonstrations here and now of healing and regeneration, of prosperity, peace, and power. And this is the secret of the progress of Christian Science. Who would not be loyal and enthusiastic when he has come to know that God is really "a very present help in trouble"? True religion is based on faith in God, who will help men if they turn to Him aright. Jesus taught that God is our Father, and that if we pray to Him aright, we may ask what we will and it shall be given unto us. He also taught that if we have faith in God, we shall be endowed with the power of divine Truth to remove mountains, to work righteousness, to heal the sick, to do even greater works than Jesus himself did. He taught that the world is thus to be saved.

Because prayer has not been answered, the church has almost ceased to believe in its practical value. Christian leaders and teachers are saying that in these days of enlightenment and progress material means have taken the place of the direct power of God; that men must answer their own prayers by using common sense and the means at hand. They accept the saying that "God helps them that help themselves." If they are sick, they are wont to call for a doctor to administer drugs. If they are in darkness or trouble, they look to the wisdom of men and books. Even sin is reduced to physical weakness or deficiency, which is to be healed by education or environment or medical treatment, or even the knife. Thus men, good men, are coming to think that the world is to be saved by material science and human philosophy, and that education, not prayer, is the hope of the race. But if the world is to be saved by education in material knowledge and by scholarship, the university is far better equipped to teach saving truth than is the church. And this is one of the secrets of present-day conditions, the waning power of professional Christianity.

In the face of these things stands Christian Science, denying the power of material means and human wisdom to save the world, and asserting that mankind are saved only by faith and prayer. It is declaring that true Christianity teaches men how to pray aright, so that prayers are answered, and it offers unnumbered practical demonstrations in proof thereof. Christian Science is simply the Christianity Jesus taught and demonstrated. It is the knowledge of divine law, which if faithfully applied always brings results. It is the knowledge of spiritual truth, which is saving and will save the world. Education in so-called material science and human philosophy is not a substitute for faith and prayer. It has no power to save men from sin, disease, or death, and the university of today can in no wise take the place of or do the work of the church.

What, then, is the prayer of Christian Science? This, namely, the realization and declaration that God is infinite wisdom and perfect Love; that evil is a false belief and has no reality; the acknowledgment that God is good and the denial that He creates or knows evil. How reverently does the Christian Scientist turn to the words of Mrs. Eddy in Science and Health: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (p. 1). With quiet contemplation he rests in the omnipotence of Truth, of good; he knows that God is Spirit, and that all creation is therefore spiritual, not material. He knows, moreover, that man is not a being apart from God or separate from His creation, but that he exists as a manifestation or reflection of God, a spiritual idea of infinite wisdom and Love, hence the mortal, material sense of man is a delusion, and the true man, the spiritual man, the God-man, is perfect as God is perfect, and cannot be the suffering, sinning, troubled creature that mortal sense would have him believe himself to be. As this becomes clear to one, he says "Thank God," and seeks to express in his life the Love that is divine.

As the Christian Scientist thus prays, he sees the demonstration of the truth, the goodness of God, manifest in his life, his home, and his business; he has learned to pray aright. A fuller understanding of this truth destroys all false human belief and makes the human thought at-one with the Mind which is God, which in itself is the complete answer to prayer.

Penitence

HORTENSE L. WHEELER

AMONG the many instances related in the New Testament where the love and compassionate sympathy of Christ Jesus stands out preeminent, perhaps there are no more striking illustrations given than those of the penitent Magdalen and the adulterous woman, although the incident narrated concerning the latter presents an entirely different phase from that of the sincere and heartfelt repentance of the one called Mary Magdalene. While the forgiveness of sin was assured to each, both promises voicing the wonderful love of Christ Jesus, they differ in character; one being made to the sinning sense which repents and confesses its sin, and the other to the sin that is only discovered and yet unrepented of.

To the adulterous woman, the Master, after having reproved her persecutors, turned and said, "Neither do I condemn thee: go, and sin no more," implying that God's

Digitized by Google

forgiveness of sin lies "in the destruction of sin" (Science and Health, p. 497). To the penitent woman, "Thy sins are forgiven" was spoken to the sorrowing heart, for the Master undoubtedly discerned that her experience had been sufficient to enable her to turn away with loathing from the demands of the flesh. This forgiveness or destruction of sin was the reward which the Master ever affirmed to be the return for contrition, humility, and repentance.

The story of the Magdalen affords us an example of that faithful and earnest effort in the overcoming which made a sinning mortal worthy to become a companion of the sinless Master, as it was said of Mary Magdalene that she was ever found at the feet of her Master, seeking wisdom and understanding, and following his precept and guidance. It is also said that out of her were cast seven devils (evils), in gratitude for which she "loved much," and because she loved much, it is written that "her sins, which are many, are forgiven," proving that it is not alone repentance and gratitude which win forgiveness, but that love is essential also.

From the point of view of the Christian Scientist, and judging from the proclivities that usually go hand in hand with the lusts of the flesh, we may easily discern the nature of the many obstacles which Mary Magdalene had to overcome in the process of purification, any one of which might have discouraged one whose efforts were less zealous; but nothing can stay a determination that has everything to gain and nothing to lose. So to the woman whose sinning sense had tasted, perhaps, all the fruits of unrighteousness, where slavery to the lure of the flesh had proven beyond question its unreality and unsatisfactoriness, nothing could appeal but the peace to be gained through an understanding of the life eternal which was demonstrated and taught by the Master. *This life*, and this alone, promised the fulfilment of her hopes, the gain of those things for which she had sought in vain while indulging a material sense of life; for in seeking an outlet for the expression of that spiritual love within, which is ever longing and calling for recognition, she may have turned, as do so many, to a limited personal sense of affection as a substitute.

Comparing that day with one of our own (as the history of sin in one age is in a degree but the repetition of sin in another), we can easily trace the Magdalen's earlier transgressions and final degradation to that false sense of love which lures the innocent and ignorant from the path of purity; and following along the line of inevitable result, we can picture the misery, the mental anguish, which attended her final awakening, and through loving sympathy trace the hand of remorse and self-condemnation as it turns back the pages of memory to those happier days, and later opens to those earlier efforts for reform through which the human heart sought to regain its self-respect by an honest effort toward right living, only to come face to face with the barred door that all humanity had closed against her.

We can also see this same penitent woman, despised of men, clinging to a belief in the love of God, seeking divine aid in the house of prayer, but ruled out of the synagogue by the scribes and Pharisees for fear of contamination, these same hypocritical Pharisees to whom Jesus said, "The publicans and the harlots go into the kingdom of God before you." Finally betrayed and deserted, the scorned of all scorners, rejected and utterly alone, the human heart uttered its now despairing cry to the Father. It was the moment of complete surrender, to which every mortal must come and for which divine Love is ever waiting.

From beyond and above the mortal concept of life, out from that chaos of human suffering, sin, misery, and crime, comes the loving voice of the Christ, calling in the byways, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Peace to the sorrowing heart, for it hears the call to freedom! A light dawns upon the human consciousness; satiated with the flesh, its tyranny and enticements, deceit and wantonness, awakening thought turns away forever from the belief in matter to follow the living Christ, and to find peace and joy in purity and spirituality.

In the later history of Mary Magdalene we find her clothed in her right mind again, ministering to the wants of others, including her beloved Master; and it is a significant fact that it was to this same despised and once rejected woman that Christ Jesus first appeared after his resurrection, his appeal for recognition, the proof of immortality, being made to that purified thought which had sprung up from the very depths of human misery.

Centuries have passed since the earthly career of the faithful Mary, but again, as of old, does the penitent—all those who through Christian Science have come to see the unreality of evil—sit at the feet of Christ to learn the way, and today through pure Christianity is heard again the healing assurance, "Thy sins are forgiven." Now, as then, the compassionate love of Christ finds utterance in the heart of every loyal Christian Scientist, whose mission it is to emulate the Master in all his ways; and the Christian Science church, established to "commemorate the word and works of our Master" (Manual, p. 17), opens wide its portals to the sick and the sinning, and again is heard the gracious invitation of Spirit, God, saying to the wanderers, "Let him that is athirst come. And whosoever will, let him take the water of life freely."

✧

Trust

LYDIA HAMILTON

THE outflowing of divine Love is ever the same, whether we are asleep or awake; whether we are sick or well; whether we have abundant wealth or are under the shadow of poverty; whether we are trusting God or forgetting Him. More sure, infinitely more sure than the sun which shines on the evil and on the good, and the rain which falls alike on the just and the unjust, is Love's ceaseless outpouring of good. How grateful we are to Christian Science, which has opened our eyes to see, nay, which has quickened all our mental faculties to grasp in some measure this great truth!

Longfellow has declared that "things are not what they seem," and thinking people everywhere feel that there is much of truth in this statement; but the fulness of its meaning is apprehended only by the Christian Scientist who has found the one universal view-point, the unity of good, from which vantage-ground he can see and declare one power, one presence, one substance, and one law, and standing in the might of this truth, can know that it is infinitely and infinitesimally true among all the seeming things of a seeming power opposed to God. When the clouds of mortal illusion threaten to darken his vision, he can remember Jesus' words, "Blessed are they that have not seen, and yet have believed." Blessed! Why? Because if in humility and love they hold to their trust, nourish it, cultivate it, contend for it, if need be against the arguments of fear and doubt, they will see. With the understanding of good the Sun of righteousness is sure to break through and dissolve the mist, since its light was there all the time and its eternal splendor is without variableness or "shadow of turning." What a quickening thought it is that we cannot get away from God! On "the wings of the morning," "in the uttermost parts of the sea," in heaven or

Digitized by Google

hell, we can know of a surety that His hand will lead us and His right hand will hold us.

Many are the times that the trustful Christian Scientist can say in the joy of restoration: "Whereas I was blind, now I see." Whereas I was looking to matter for health, holding a belief in both good and evil, I now see health in the unity of man's thought with good. Whereas I was looking to matter for supply, was craving the loaves and fishes of materiality, I now see the boundless wealth of God's spiritual ideas, eternal, indestructible, provided for all His children. Whereas I was looking to human ways and means and persons for happiness, I find my whole joy in loving obedience to the highest good I know, to Him who only knows how to bestow joy, and as Whittier says,—

simple trust can find Thy ways
We miss with chart of creeds.

Trust is the strong clasp which binds our prayers to omnipotence. Sometimes it would seem almost a necessity that we be literally encompassed by mortal mind in order to be fully aroused,—the Red sea before, the mountains behind,—so that we are compelled to look straight up into the Father's face. Then all the rays of infinite Truth that we know, are brought to a focus, and they "bring light instantaneously" (Science and Health, p. 504), healing from sin, pain, sorrow, loss, or lack.

How wonderfully is Love's bounty externalized in our literature! The loving helps coming daily, weekly, monthly, in our periodicals, and then, as if to augment these forces, the pamphlets, are as angels of the great host that have charge over us to keep us in all our ways. Our problems are many and varied, but they all teach us the same lesson, to let go our trust in everything but Truth.

✧

Fear Overcome by Truth

J. G. ALDEN

CHRISTIAN SCIENCE has brought me many ideas of Truth which have enriched my life. One is especially satisfying,—the knowledge that so-called heredity is a man-made belief and has no foundation in reality. The writer has two children in his home who were adopted in infancy. In my opinion, environment in their case had thus far outweighed heredity; but until I became interested in Christian Science I was possessed with a haunting fear that unknown, undesirable traits which might have been possessed by the parents of these children, would sometime appear in their lives to harm and perhaps undo them, and bring disappointment and sorrow to their foster-parents. I was always conscious of this fear in my own mind, and also afraid that such fear would be communicated to my adopted son and daughter and so become both a baneful influence and a stumbling-block.

After I became a student of Christian Science, however, I was overjoyed to find, in thinking one day about this same problem, that the fear which I had so long held had been entirely dissipated, and existed no longer in my thought to have its blighting effect both upon me and the children. This had come about through a realization that in their true selfhood these children were not children of a physical parentage but of God, made in His image and likeness. I had come to realize that the asserted law which would fetter innocence with ills, is not of God; that all false beliefs are set at naught by the truth that God's children are never fettered by inherited shortcomings. I also saw that if divine Love and wisdom intended I should rear these forsaken children as my own, it must also be God's will that I should know the truth which sets them and me free from the bondage of belief in heredity, and which brings to all a heritage of health, harmony, and happiness. It is well for all to keep ever before thought the Master's words, "Call no man your father upon the earth: for one is your Father, which is in heaven."

✧

Wisdom

MARTHA KEEP SINCLAIR

A SUFFERER who has failed to find relief through *materia medica* is often advised to try Christian Science, but refrains on account of what he has thought or heard in regard to its teachings. When such a person applies for help, the wise practitioner will find a way to interest the patient without arousing his prejudice, and thus open up the way for the healing.

A Jewish woman was induced by a friend to be treated in Christian Science for a disease which many doctors had failed to cure. Her first words to the practitioner were, "I do not believe in Jesus, nor wish to hear anything about him." "You believe in 'the God of Abraham, of Isaac, and of Jacob,' do you not?" asked the practitioner. "Of course I do," she answered. "That is the God who heals all our diseases, as the psalmist tells us," the practitioner went on. Through the new view-point thus presented, the patient's interest was aroused, her prejudice taken away, and she was healed.

Another instance was that of a man, past all human aid, who consented to have a practitioner called. His first words to her were, "I am not willing for you to talk to me about God; I am not a religious man." "How would you like me to talk to you about Truth?" asked the practitioner. "I like the sound of that word," he replied. "It is Truth that will heal you," continued the practitioner. The patient was interested, instead of being disturbed by a discussion; treatment was begun, and he too was healed.

These are only two cases out of many where wisdom on the part of the Scientist has made possible the healing work, whereas an argument at that time would probably have turned the sufferers away from Christian Science. If we are guided by divine Mind, the words needed will be supplied by infinite wisdom, even as Christ Jesus promised.

[Written for the *Sentinel*]

Unmoved

LUCY HAYS EASTMAN

A GIFT of love and joy so bright, so pure,—
Roses and heliotrope, gay and demure.
Their mingled fragrance gently floods the air,
Till peace and joy and love seem everywhere.

A gift of consolation wondrous sweet;
Heliotrope and roses the sad and weary greet.
Though night and darkness cast about their gloom,
Softly yield the flowers their sweet perfume.

. . . . . .

Thoughts of gratitude alive with loving deeds,
Christlike courage meeting human needs,
Alike mid solemn dirge or joyful psalm,
Softly breathe they forth Love's healing balm.

O tender heart aglow with truth and love,
Awakened to the blessings from above,
Unmoved by cloudless day or hatred's night,
Breathe forth thy life made fragrant with the right.

Selected Articles

[Frederick Dixon in *British Congregationalist*, London, England]

One of your contributors asks what is the secret of the attraction of Christian Science. The secret is exceedingly simple. It is the fact that it brings to humanity "the peace of God, which passeth all understanding." Many people superficially attribute the success of Christian Science to the healing of physical disease. Such reasoning is extraordinarily shallow. Physical healing no doubt draws the attention of people to Christian Science today, just as it did to the teaching of Jesus almost two thousand years ago. That, however, would not hold them after they had been healed. What *holds them is the perception which* comes to them in healing, *of the power, through* a realization of the omnipotence of God, to achieve harmony in their lives.

If, as Christian Science insists, sickness and disease are subjective conditions of the human mind, then the understanding of divine Principle, which restores the harmony of thought and so destroys the pain and inharmony of disease, is just as powerful to destroy sorrow and want and woe. In plain English, sickness, like sorrow and want, is the result of the inharmony of believing in some power stronger than that of God, good. The healing of disease, which shows that there is no such power, indicates that every other phase of inharmony may be destroyed in the same way. This is surely why Jesus said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?"

✧

[George Shaw Cook in *The Daily Bulletin*, Bloomington, Ill.]

As quoted in a recent issue, Dr. Rowena Morse Mann of Chicago criticizes Christian Science for its attempt to cure poverty and disease by "magic," without regard to the cause thereof. As a matter of fact, this is precisely what Christian Science does not do. On the contrary, Mrs. Eddy in the Christian Science text-book says, "The Christian Scientist finds only effects, where the ordinary physician looks for causes" (Science and Health, p. 379). In other words, the medical doctor is constantly examining the diseased conditions of the physical body as though they were the cause of suffering, whereas the Christian Scientist regards these physical conditions as being merely the effects of some mental cause. Therefore the Christian Scientist, in his treatment of a case of disease, goes directly to the seat of the trouble, and his endeavor is to remove or correct the primary cause of all sickness. The matter physician, in his diagnosis of disease, rarely goes beyond the physical condition, especially if it be considered organic, and therefore in his treatment he deals almost entirely with what the metaphysician regards as mere effects of an erroneous mental state. This will explain to some extent why Christian Science treatment has cured many cases of organic disease which have baffled the ordinary physician.

Some years ago a noted chemist was reported to have discovered upward of forty kinds of poison directly produced in or on the physical body by human emotions, such as fear, anger, worry, hatred, etc. If this chemist's experiments were based upon fact, and I do not know of their ever having been questioned, then is it not plain that many cases of chronic poisoning in the system may be directly traceable to a chronic disposition to be angry or hateful? Is it not as reasonable to admit this as to recognize the fact that acute fear immediately manifests itself in a blanched face? If one is obliged to admit the mental cause of some kinds of physical disease, why not agree with Christian Science that primarily all disease is due to a mental cause? This does not mean that sickness is always the result of conscious fear or wilful sin. Many types of disease are effects of latent fear, hereditary temperament, superstition, ignorance, or some of the generally accepted beliefs of the human mind which seem to operate as law. Suppose a man is sick because of one or more of these mental causes,—will drugs cure him? Is there any antitoxin that will destroy hatred, or any serum that will prevent fear? Nothing but the knowledge that God is Love, and that man as the image and likeness of God is in truth or reality nothing less than the expression of Love, and therefore can not and does not fear or hate, will effect a permanent cure in such a case.

With regard to poverty, it has been well said that a sociologist and a socialist rarely discuss the subject without very quickly coming to a parting of the ways, for one will insist that environment and other influences cause intemperance, and intemperance causes poverty and crime, while the other will claim that poverty itself is the cause of poor environment and discouragement, which in turn afford an excuse for intemperance and crime. Both place the ultimate responsibility upon the community, and both see the remedy in legislation and institutional endeavor. The Christian Scientist recognizes the causes of poverty as appetite, indolence, dishonesty, fear, discouragement, ignorance, superstition, etc., all purely mental qualities, and goes to work to correct in the thought of the individual those conditions of belief which have held him in bondage to lack and limitation. When his work is finished, the individual is reformed and restored to a normal earning capacity, and his poverty is presently outgrown. Through reformation of the individual comes ultimate transformation of the community, and because this fact has been discerned by Christian Scientists, they prefer to devote their time to individual reformation, beginning with themselves, rather than to institutional work.

Our critic crowds into a few short sentences the grossest misrepresentation of the teaching and practise of Christian Science that could be imagined, when claiming in substance that because Christian Scientists are recognizing and demonstrating in their lives the unreality of evil, they are thereby encouraging the indulgence of evil. Only profound ignorance of the facts could be responsible for such a statement. Because Christian Scientists are learning that evil in all its forms is temporal, destructible, and therefore in the last analysis unreal, they are learning how to overcome it. They are beginning to understand that because evil is unlike God, who is the only cause, they need not fear it, and this fact enables them to begin through right thinking and pure living to remove the apparent effects of evil from their present experience. They know perfectly well that this affords no excuse whatever for the indulgence of evil, and they know furthermore that it is only those who believe in the reality and power of evil who find excuse for serving it.

✧

[David Anderson in *The Herald*, Melbourne, Australia]

At the Anglican church congress at Brisbane Dr. Radford once more tilted with the windmill of his misconception of Christian Science. The reverend critic is, of course, entitled to his opinion, and to express it in speech, sermon, or journalistic review, but in his representation of a subject to which he is antagonistic it is desirable that assertions regarding it should be accurate.

As in his Moorhouse lecture, our critic's paper dealt with Christian Science as a phase of ancient agnosticism, but to the Christian Scientist a thoroughly satisfactory solution of the gnostic difficulty propounded to the ancient church is found in the recognition of God, Spirit, as the only cause and

Digitized by Google

creator; and the affirmations and denials of Christian Science are the absolute antithesis of the agnosticism which neither denies nor affirms the existence of a Deity. The ethics of Christian Science are the ethics of Christianity. They are not based on a disunited, albeit orthodox, scholastic theology. Christian Science stands for moralism, but it involves no mysticism. The element of Christianity which it considers vital to religion is the necessity of obedience to the commands of Christ Jesus in their entirety; and it is not perceived how this involves denial or minimizing of any element of truth.

Christian Science solves the problem of sin by dealing with it as powerless in the ever-presence of an all-powerful God. It does not join in the vain attempt to find an origin for that which is not a creation of an infinitely good God. It refuses to acknowledge any influence of the material over the spiritual. It does not regard resistance to sin as an error of the intellect, but it regards sin itself as an error of the human mind which must be resisted and overcome. So far from being a philosophy which stakes all primarily on intellect, Christian Science bases nothing on human intellect. It distinguishes between the human or carnal mind and the divine Mind. Human will, or the sensuous reason of the human mind, it regards as an idolater from the beginning, to be cast down by subordination to the Mind which was in Christ Jesus.

The reverend critic admits that Christian Science accepts the facts of the birth, death, and resurrection of Jesus,—and here he takes an advancing step,—but he says that it evades their significance. The significance attached in Christian Science to these experiences of Jesus may not quite harmonize with the views of our critic, but that does not make such significance a falsity. The reverend gentleman says that Christian Science has no message to mankind. Its message is that which Jesus brought to humanity, "Ye shall know the truth, and the truth shall make you free." It is a message which has brought freedom to the sin-enslaved, and a sustenance to hungry seekers which they failed to find in a starvation diet of creed and dogma. With a fuller knowledge of Christian Science, to be gained from unbiased study of its literature rather than from writings and criticisms of the same nature as his own, our critic will come to see that in his past attacks he has been beating the air, with a result opposite to that at which he aims.

✧

[John M. Henderson in *The Sun*, Seattle, Wash.]

I have read in a recent issue the report of a meeting in your city of the Methodist mission. In addressing the mission, Bishop Richard J. Cooke, D.D., is reported to have said: "I can go into any lunatic asylum in the United States and find men who can write just as sensible books, men who can preach just as sensible doctrines, and who can present just as sensible philosophies as some of the chaff that we have around us, as . . . Christian Science." We have no desire to enter into a religious or theological controversy over the remarks of the bishop. An unprejudiced and fair-minded critic judges Methodism, not from standards of perfection or efficiency sought to be established by Confucius, Pope Pius I., or John Knox, but by attainments in the regeneration of man, following the theological declarations of its own leaders.

One hundred and fifty years ago other bishops, whom Winchester in his "Life of John Wesley" characterizes as "doughty champions of orthodoxy," were pronouncing anathemas on Wesley and Methodism. Among these were Bishop Gibson of London and Bishop Warburton of Gloucester. These recognized authorities on theological questions in the orthodox church of England, denounced the Methodists as "enemies of the church," "who give shameful disturbance to the parochial clergy," and who "teach doctrines big with pernicious influence upon practise." They denounced Wesley as a "fanatic, because he claimed for himself almost the miraculous gifts of the apostles." They spoke of Wesley and of Whitefield as "bigots," guilty of "vanity, vindictiveness, and hypocrisy—the natural fruits of fanaticism." It is one of the freakish coincidences of history that in this day other bishops, the theological descendants of the great and lovable Wesley, "doughty champions of orthodoxy," should assume to pronounce judgment on those who differ from them on the interpretation of Jesus' commands to those sent forth into the work of the ministry of truth.

John Wesley's was a lovable and therefore a very loving nature, and it was seldom that he manifested even symptoms of impatience or wrath, although, because he *dared to differ* with the theological teachers of his day, he was one of the most persecuted men of England. But in replying to his critics, because of their vindictiveness and of the unreasonable character of their criticisms, he was aroused to the use of language that was forceful if not in keeping with his usual considerate tone of expression. He wrote: "Any scribbler, with a middling share of low wit, not encumbered with good nature or modesty, may raise a laugh on those whom he cannot refute." But John Wesley's most powerful refutation of the charges of his critics was in the following language: "In answer to all this I appeal to plain fact. I say once more, What have been the consequences of the doctrines I have preached? By their fruits ye shall know those of whom I speak, even the cloud of witnesses who at this hour experience the gospel which I preach to be 'the power of God unto salvation.' The habitual drunkard that was, is now temperate in all things. The licentious now flee fornication. He that stole, steals no more, but works with his hands. He that cursed or swore, perhaps at every sentence, has now learned to serve the Lord with fear, and rejoice unto Him with reverence. Those formerly enslaved to various habits of sin are now brought to uniform habits of holiness. These are demonstrable facts. I can name the men with their places of abode."

In reply to Bishop Cooke's criticism of Christian Science, and indirectly of Mrs. Eddy, the author of "Science and Health with Key to the Scriptures," and in testifying to the fruits of Christian Science teaching and practise, we repeat the words of Wesley in the foregoing paragraph, and add also a statement of fact well known to all who have honestly investigated the fruits of the teaching and practise of Christian Science, that the sick are healed, the deaf hear, the lepers are cleansed, the lame walk, the blind receive their sight, and the "last enemy" is being overcome.

✧

[John W. Doorly in *The Leeds* (England) *Mercury*]

In a recent issue appear Mr. Ted Smith's remarks about death from the Christian Science view-point. Now, as a matter of fact, Christian Scientists are much more interested in life than in death, for they know that only through the understanding of infinite Life can death be explained, and that explanation, like the explanation of every mistake, would be its cessation. Jesus described death as an enemy, and yet mankind have for centuries been fooling themselves into the belief that it was a friend, and the way to what they considered to be heaven. Yet, in spite of this, every one has done all he could to prevent himself from going this way to heaven. Christian Scientists recognize that death is the consequence of ignorance of God, who is infinite Life. Christian Science in no way teaches that death is not a part of mortal sense, but it does teach that this sense of things is a mistaken sense, and that it can be corrected through an understanding of Truth.

Digitized by Google

If the critic hopes to attain infinite Life through his material senses, he will be disappointed, for it is those very senses which tell him of death, and only through understanding, or spiritual sense, can infinite Life, perfect and indestructible, be known. "Whosoever liveth and believeth in me shall never die," is as true today as it was nineteen hundred years ago, but it is problematical if any one understands enough of infinite Life to demonstrate it.

✧

[Charles K. Skinner in *Detroit* (Mich.) *Free Press*]

In a recent sermon a clergyman of an orthodox church declares that if the church of today were more spiritually alive, Christian Science would decline. He says, "When faith in prayer is rekindled and the Sermon on the Mount applied to business and politics, the bottom will fall out of these side issues and the church will return to its own."

The speaker paid a tribute to Christian Science which is appreciated, but it is well to remember that all down the ages when a pressing need has come for reform on any particular line, the supply has been forthcoming. In the present instance Christian Science has come not to glorify any individual or any sect of followers, but to teach all people that the Sermon on the Mount is just as applicable in the business with our fellow man today as it was nineteen hundred years ago; to teach them that the wretched and cowardly assertion of some men that "it is impossible to succeed and do an honest business today," is as false as the other lies that an evil mind would have us believe.

The sincere and honest study of Christian Science has but one result, viz., a greater and more earnest desire for a spiritual understanding of the Scriptures and their application to daily life as exemplified by the Master. His words were clear cut and to the point, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you," and this he said from pure demonstration in his own beautiful life. Of this life Mrs. Eddy speaks as follows on page 18 of "Science and Health with Key to the Scriptures": "He [Jesus] did life's work aright not only in justice to himself, but in mercy to mortals,—to show them how to do theirs, but not to do it for them nor to relieve them of a single responsibility." No religious teaching has proved a greater power as an instrument for reformation from sin and its awful results than has Christian Science in the relatively short period since its discovery.

✧

[Thomas F. Watson in *Santa Rosa* (Cal.) *Republican*]

It would have been better for Evangelist Brown and his audience if he had preached the gospel instead of lecturing against Christian Science. Not that his mistaken ideas could harm Christian Science any, for these attacks usually arouse an interest in the subject, and lead people to investigate for themselves. And as our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is to be found in nearly all of the public libraries, any honest seeker for truth can easily inform himself on this important subject. It is still true, as it was in the early Christian era, that the truth thrives in spite of persecution.

The Bible states, "If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." Christian Science is a return to primitive Christianity, and does not rest upon human opinions; but each one may prove the truth for himself, "with signs following." The great Founder of the Christian religion, Christ Jesus, taught his followers to preach the gospel and heal the sick, which is just what Christian Scientists are doing; and this accounts for the wonderful growth of Christian Science.

The world is tired of preaching without practise. Science and Health states, on page 201: "The best sermon ever preached is Truth practised and demonstrated by the destruction of sin, sickness, and death." If our critic had looked in Webster's dictionary, he would have learned that "evangelist" means "a bringer of the gospel." Gamaliel's advice is still applicable: "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God." The gentleman says that Christian Science teaches that Christ Jesus did not come in the flesh; but we read in Science and Health, "Born of a woman, Jesus' advent in the flesh partook partly of Mary's earthly condition, although he was endowed with the Christ, the divine Spirit, without measure" (p. 30).

✧

[John L. Rendall in *The Evening Times*, Cedar Rapids, Iowa]

A recent issue of *The Evening Times* contains mention of the sermon on Christian Science by the Rev. J. W. McComas at the "tent meeting." The admonition to his audience to take the Bible for their guide and to be not led away by "every wind of doctrine," is sound advice, and is exactly what Christian Scientists are doing. The Bible teaches certain things of a positive nature, among which is the doctrine of Christian healing. Taking the Bible for our guide, must necessarily mean taking it in its completeness and making intelligent application of its teachings. Thus it is that Christian Scientists, intelligently discerning that Jesus' mission was one of complete salvation for humanity,—not only from sin, but from every phase of error, including sickness,—endeavor to emulate his example in all that it includes.

There is urgent need of salvation from sin, and there is also urgent need of salvation from sickness and disease. Salvation is not a physical something where sin is overcome, neither is it a physical something where Christian healing overcomes sickness. Salvation is always a mental process, that transformation of the body by the renewing of the mind of which St. Paul speaks. Therefore, when through the teachings of Christian Science thousands of people begin to prove for themselves the verity of Jesus' words, "And these signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover," etc., it cannot truthfully be said of them that they are being led away by "every wind of doctrine," but rather are they being led into that way whereof the wise man said, "In the way of righteousness is life; and in the pathway thereof there is no death."

Love's Presence

EDITH L. PERKINS

Seems dark and lone the way?
Be of good cheer!
Think not that thou canst stray,
With Love so near!

Love guides thee every hour,
Where'er thou be,
Protects with gentle power
Unfailingly.

Then, pilgrim, lift thine heart,
The light to see!
Bid every fear depart,—
Love walks with thee!

Digitized by Google

Editorial

"A false, convenient peace" *

OCCASIONALLY we hear the statement made by some Christian Scientist that certain other Christian Scientists "make too much of animal magnetism." If it is intended to convey by this the impression that these Christian Scientists are afraid of animal magnetism, which Mrs. Eddy defines as "the false belief that mind is in matter, and is both evil and good" (Science and Health, p. 103), that it has become an entity to them, the statement is entirely correct—they are making "too much of it." If, on the contrary, the meaning is that those who are thus criticized are giving attention to the specific beliefs of error or mortal mind by denying their claims to reality or power, then there is imperative need for more careful thought and a thorough study of the article, "Ways that are Vain," on page 210 of the new volume of Mrs. Eddy's writings, "The First Church of Christ, Scientist, and Miscellany."

It is quite evident from the context that when Mrs. Eddy made the statement that "evil is not power" (Science and Health, p. 192), she did not intend this statement to be considered as warrant for the closing of our eyes to the evil beliefs which present themselves in human experience. She was thoroughly aware that in this human experience mortality constantly presents itself as more real, more powerful, and more enduring than good, not only because of the receptivity of mortal mind to the belief that it is a creator, but also because the record of humanity is that it frequently calls evil good or necessary, or even "good in the making," as it is sometimes mistakenly defined in an attempt to give it authorization.

It is, of course, fundamental for us as Christian Scientists to know that God, good, is all, and that evil is neither real nor powerful, but we must not be content to rest with the acceptance of this fundamental knowledge, nor with the simple or perfunctory declaration of it. We must measure every human belief and experience by this unchanging and unchangeable standard, and we must brand with "the mark of the beast" every belief or experience which does not conform to the standard of Truth, just as the bank teller brands the counterfeit coin or the gold piece which is under weight. It is not sufficient for him to declare in the abstract that there is no money except good money; he must so stamp the counterfeit that it shall proclaim its falsity to the world, be exposed for the lie that it is.

As Christian Scientists, therefore, we must be alert, through the knowledge of the genuine and good, to detect and brand that which claims to be good and powerful, but is not. Moreover, to declare merely in an abstract way that "all is good," may lead us into pantheism, unless we know and unqualifiedly declare that certain specific things which claim to be good, and which mortal mind believes to be good, are in fact evil, and therefore unreal. Our great Master did not fail to denounce evil specifically, and in unmistakable terms, neither did Paul in his condemnation of the "works of the flesh."

To cite yet another instance, Mrs. Eddy in the "scientific statement of being" (Science and Health, p. 468), a statement which she considered of such great importance as to be fittingly made a part of each Sunday service in the Christian Science churches, does not content herself with simply declaring that "all is infinite Mind and its infinite manifestation," but she also brings out, in sharp contrast, the specific declarations that certain beliefs of mortal mind are erroneous. It will be noted too that she does not make these denials of mortal belief because the words "all is infinite Mind and its infinite manifestation" are inadequate to express the completeness of God and His idea or reflection, but because humanity needs to know, and to be able instantly to brand as untrue, the specific beliefs and claims of mortal mind.

Every demonstrating Christian Scientist proves in his daily work that "evil is not power," and this proof is always secured in the overcoming of specific claims of evil; therefore let us not be deceived into believing that the mere declaration or affirmation that "all is good" is the sum total of Christian Science prayer or treatment. There must be as well an unmistakable recognition of the nothingness of evil.

ARCHIBALD MCLELLAN.

* "The First Church of Christ, Scientist, and Miscellany," page 211.

"Awake thou"

THERE are few passages of Scripture that are richer in intimations than the word of the Lord spoken by Isaiah, saying, "Come now, and let us reason together." Were one man to say to another, "Come, let us consider this matter," we should at once understand several things, to wit, that the speaker recognized a difference in point of view; that he respected the intelligence of the one addressed; that he had analyzed and apprehended the subject in question to his own satisfaction; that he felt sure an agreement could be arrived at if all the facts were but calmly considered, and that he made his appeal with the hope and expectation that unity of thought and action would be reached through the exercise of a common intelligence.

And now do not these words uttered by the prophet mean all this? In them are not you and I asked to put to use a present capacity to get at the root of our problems and solve them by knowing the truth, the law of our being, as it is embraced in the divine consciousness? This is the contention of Christian Science, and what an inspiring stimulus to thought! That the attitude of divine Love revealed in the prophet's words is constant, is more clearly indicated perhaps in that remarkable passage in Revelation which reads, "Behold, I stand at the door, and knock"! Think of it! The divine intelligence patiently waiting for the welcome which will make it possible to impart to us its riches! The entire "wisdom literature" of the Old Testament represents God as thus appealing for recognition at the door of human consciousness, and this gives one a better understanding of the meaning of Mrs. Eddy's demand for "a fuller acknowledgment of the rights of man as a Son of God" (Science and Health, p. 226).

When we individually compass the deeper significance of the divine appeal that we "reason together" with God, infinite Truth, the exalted possibilities and privileges pertaining to our spiritual selfhood appear, and we gain a new sense of man's dignity and of the incongruity of any identification with or consent to the selfishness and sensuality, the pride and pettiness, the ignorance and ignobility of material sense.

Christ Jesus constantly addressed himself to logical thought, and in entire keeping therewith Christian Science teaches that Christian character means quickened intelligence as well as redeemed affection; that salvation is an entirely explicable fact and process; that it is an awaking to demonstrable truth, a passing from the mental darkness of materiality into the light of spiritual understanding. Says St. Paul, "God hath not given us the spirit of fear," which is always an exhibition of ignorance, but rather the spirit "of a sound mind." Redemptive experience is not to be identified with an ecstatic emotionalism, nor yet with the mere effort to be good, though both deep feeling and continuous consecration pertain to it.

Digitized by Google

Though common thought has so generally associated cleverness with evil, intelligence is not a peril to true piety. John Erskine is wholly right when he says that any system of ethics is vicious in so far as it renders us indifferent to the moral obligation to be intelligent. Christlikeness means Christ-mindedness, and this is the only genuine goodness, though an infinite amount of well-intentioned stupidity has passed current therefor.

Christian Science is a summons to wake up. In stentorian tones it is crying in all the world today, "The time for thinkers has come. . . . Ignorance of God" is not "the stepping-stone to faith" (Science and Health, Pref., p. vii). It declares that any kind or degree of ignorance is illegitimate; *that mental lethargy, the mesmerism of unthinking belief, is our subtlest enemy, and that the initial step of spiritual ascent is the realization that to be is to know.* This taken, one's footstep is firm, his gaze straight on and upward.

JOHN B. WILLIS.

Understanding

VIEWED in the light of Christian Science, understanding is a very big word. Some one may say that it is so regarded by those who know nothing of Christian Science, but this would not alter the fact that the understanding of God and His law, as presented in Christian Science, makes it possible to work out every human problem in a way which will not only bless all directly concerned, but reach beyond these to benefit all mankind. In Proverbs we read that understanding "is more precious than rubies," and that "all the things thou canst desire are not to be compared unto her."

The wise man also says that this priceless possession comes from God, who Himself established by it the earth and heavens, which surely makes it clear that man can do nothing of real value save as he reflects this quality of the divine Mind. Need we wonder, then, when we are admonished to seek it as men seek for gold and silver, and yet how many are there who actually do this? As to the practical results to be attained from understanding, we are told in Proverbs of health and wealth,—the "barns filled with plenty," and "length of days" wherein to enjoy the good things rightly gained, the enslaving beliefs of sensuous animal magnetism, which lead down to death, being proved powerless by the one who comes to understand divine Truth and to find his pleasure in obedience to God's law.

Mrs. Eddy's discovery of the Science of being brings us face to face with the fact that there never was a time when divine law was not operative, but that an understanding of this law is needed in order that its blessings may reach mankind. The law which healed the sick, gave sight to the blind, and raised the dead was no less operative, even before Abraham's day, than in the time of Christ Jesus, but there were none who understood it as did the Master, although in all the ages there were gleams of light that foretold the dawn of an understanding which would reveal and demonstrate the eternal harmony.

On page 506 of Science and Health we read that "understanding is a quality of God," and this explains Jesus' so-called miracles, lifting them far above the plane of superstition or even that of mere belief or faith. Reverently be it said, it was the Master's understanding of God which enabled him to triumph over sin, disease, and death, and to open up the way for the full salvation of all who accept the truth revealed by him. In Luke's gospel we are told (chap. xxiv. 45) that after his resurrection he "opened" the understanding of his disciples, and as we read in the Acts of the Apostles we can see what this meant to them. Up to that time they had believed on him, had some measure of faith in his work; but when understanding came, they healed the sick and raised the dead, as their Master had said they should.

Our revered Leader tells us that "the understanding of Truth gives full faith in Truth" (Science and Health, p. 286), and this we all most urgently need. As the understanding of Jesus' teachings faded out of the world's consciousness, his demonstrations were lost sight of and were finally denied as being no longer possible. But since no cloud can ever be dense enough to shut out forever the light of Truth and Love, the understanding of God and of spiritual law came to the one best fitted to receive it, and this understanding enabled Mrs. Eddy to heal the sick as Christ Jesus commanded, and to teach others how to do the same, while she stood guard night and day over the dawning idea of the kingdom of God on earth. Unless the early disciples had understood in large measure the omnipotence of Truth, they could not have met and mastered "the wiles of the devil," and today an even fuller understanding is required to overcome the greater subtleties of mortal mind, but all we need is supplied in richest measure by infinite Love and wisdom.

What we most need is a better understanding with which to appropriate the riches of Christ, and if Solomon knew enough to pray for this above all else, what are Christian Scientists doing in this respect? Are they seeking for understanding as for "hid treasure," and with the full assurance given in the words of Christ Jesus, "Every one that asketh receiveth; and he that seeketh findeth"?

ANNIE M. KNOTT.

Among the Churches

Current Notes

MONROE, LA.—The Christian Science Society is building a temporary church home, with reading-room and reception-room, besides the auditorium, to be completed in November. The total cost will be about thirty-two hundred dollars.

Correspondence.

LEXINGTON, KY.—First Church of Christ, Scientist, maintained a booth during the fair, Aug. 11 to 17, where many Christian Science *Monitors, Sentinels, Journals,* and pamphlets were given to the public. Quite a number expressed their thanks for having such a delightful place in which to rest.—*Correspondence.*

WOBURN, MASS.—A real-estate transaction of considerable importance has been made, whereby the estate at 18 Arlington road, known as the Hayden estate, becomes the property of First Church of Christ, Scientist. This estate consists of about a half acre of land and a large ten-room dwelling, which will be remodeled and fitted to suit the needs and requirements of the purchasers.—*Woburn Daily Times.*

NEW JERSEY.—The earnest efforts put forth by all New Jersey Scientists, especially those of surrounding towns, when the Trenton Christian Scientists essayed to maintain a reading-tent at the annual interstate fair, was a signal demonstration of unity in furthering a great cause. In responding to a call for literature for free distribution, a number of churches took the opportunity also to send copies of Science and Health for use in the state prison, and fifty copies were contributed. The managers of the fair were very cordial and generous in their treatment.—*Correspondence.*

Digitized by Google

NAMPA, IDAHO.—The corner-stone of the new church home of the Christian Science Society of Nampa was laid Saturday morning [Oct. 18]. The edifice, located at the corner of Eleventh avenue and Seventh street, will be of bungalow style. It will have a seating capacity in the main auditorium for two hundred people, and will cost approximately twenty-five hundred dollars. It is anticipated that it will be completed and ready for occupancy in November, and when dedicated it will be free of debt.—*The Idaho Statesman.*

BLACKPOOL, ENGLAND.—In a quiet, unostentatious way, a new church came into being on Saturday [Oct. 4] afternoon. With the title, First Church of Christ, Scientist, boldly inscribed over its portals, the new edifice of brick, wood, and galvanized roofing, occupies a prominent site at the corner of Park road and Hornby road, and it marks a new era in the brief history of the progress of this movement in Blackpool. For some years the Christian Scientists have been meeting in the old Methodist chapel in Egerton road.

The Blackpool Herald and Fylde Advertiser.

LEWISTON AND AUBURN, MAINE.—The Christian Scientists of these two cities are holding services in their new church on College street. Previously they met in Odd Fellows Hall in Auburn. The church, which was the old Quaker Church, has been remodeled and decorated in the interior, so it is entirely changed. As the church is not wholly paid for, it will not be dedicated until it is free of debt.

Bangor Commercial.

ATCHISON, KAN.—With impressive services at noon yesterday [Oct. 19] the beautiful First Church of Christ, Scientist, of Atchison, costing fifty thousand dollars, was formally dedicated in the presence of an audience which filled the auditorium and lobby, and many who were unable to procure seats, stood. The new edifice is the result of eighteen years of patient effort and gradual development, and is one of the finest in the state.—*The Atchison Globe.*

WORCESTER, MASS.—After sixteen years, during which time it has been holding meetings in various halls, First Church of Christ, Scientist, will tomorrow [Oct. 12] worship in a home of its own at the corner of Main and Oberlin streets. The auditorium will seat four hundred and fifty. The new building is of brick and cost nearly forty thousand dollars.

Worcester Post.

TIFFIN, OHIO.—The corner-stone of First Church of Christ, Scientist, was placed in position early in October in the new building now in course of construction on Water street. The stone is that of the building swept away by the flood, and was recovered a considerable distance down the river.—*Daily Advertiser.*

HONGKONG, CHINA.—Christian Science Society of Hongkong was organized into First Church of Christ, Scientist, of Hongkong, on Aug. 12, 1913, and thus becomes the first organized branch church in the Asiatic continent of The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts.—*Overland China Mail.*

NEW YORK, N. Y.—The Christian Science churches of this city have leased the entire front half of the eighth floor in the Æolian Building at 27 West Forty-second street for use as reading-rooms.—*Evening Mail.*

LAKEWOOD, OHIO.—The corner-stone of First Church of Christ, Scientist, Lakewood, was laid Oct. 14.

Correspondence.

The Lectures

McKenzie, Tenn.

In introducing Virgil O. Strickler, who lectured on Christian Science, H. H. McMurtrie said:—

At the present time the professed followers of Jesus Christ are divided into several hundred different sects or denominations. This division is doubtless mainly caused by difference of doctrinal beliefs, that have resulted from as many different interpretations of the Bible. It certainly would seem to be plain that if all men understood the Bible alike, there would be but one flock, in one fold, with one shepherd.

The Christian Science church is, so far as I know, the youngest of all Christian denominations. Its history began some forty years ago, when there was but one Christian Scientist in the world. That one was Mrs. Eddy, a noble-minded Christian woman who was gifted with spiritual intuition far in advance of her day and generation. She stood on the mountain of truth, uplifted by her holy faith higher above the clouds and mists of material belief than any other man or woman of her time. She placed her thought in book form, called "Science and Health with Key to the Scriptures"; and this book has done more to upbuild God's kingdom here on earth than any other human agency of modern times.

One principal difference between the teachings of this church and all others is that Christian Scientists base their faith wholly upon the true spiritual meaning of the Bible as it was understood, taught, and practised by Christ Jesus nineteen hundred years ago. Our Saviour at that time laid down a rule for determining the truth or value of any religious doctrine when he said, "If any man will do his [God's] will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." Every man and woman can measure his or her own conviction, and the results obtained therefrom, by this rule, and each one of us should certainly be willing to allow our neighbor to measure his conviction by a rule sanctioned by our Lord and Master.

Some years ago Christian Science was bitterly opposed, assailed, and ridiculed by hundreds who knew little or nothing regarding its true teachings. Ministers even denounced from their pulpits what they mistakenly supposed to be the teachings of Christian Science. But during the last few years waves of light and intelligence have spread over the world, and today there are thousands of fair-minded thinking people of every creed and denomination who begin to see and know that their Christian Science neighbors and friends state the simple truth when they testify from personal experience that the Christian Science view of Bible truth has brought to them, and continues to bring, health of body in a greatly enlarged degree, as well as peace, joy, and comfort of mind; that it has lessened human suffering in the world, and strengthened faith and hope and trust in our loving heavenly Father, "from whom all blessings flow."—*Correspondence.*

Milwaukee, Wis.

William D. McCrackan, M.A., delivered two lectures on Christian Science for First Church. The introductory words of Fred T. Woodford were as follows:—

It is a pleasure to welcome you all tonight in the name of First Church of Christ, Scientist, Milwaukee. The longing of humanity the world over is to know more of the changeless, boundless goodness of God, and the world is at last awaking to its real need,—the need of understanding God. Christian Science has come in answer to this higher craving for good.

Digitized by Google

The introductory remarks of James Phelps at the second lecture were in part as follows:—

You have come to hear a lecture on Christian Science. Christian Science is the true Science of being; it is the truth about God and man, and man's relation to God. Christ Jesus, the Founder of the Christian religion, from whose words and works Mrs. Eddy gained the inspiration for her writings and on whose teachings her system of metaphysical healing is based,—Christ Jesus, I say, taught nothing new on the subject of astronomy, of mathematics, of music, or of many other subjects I might mention. But the astronomer thoroughly imbued with the spirit and power of his teachings becomes a more profound astronomer; the mathematician who gains a *demonstrable knowledge* of the teachings of the Christ and *Christian Science*, must inevitably become a better mathematician; the musician who assimilates to any extent the truths of Christian Science, improves in power and skill. And this is true of all the really useful sciences, arts, and occupations. As Mrs. Eddy aptly says of Christian Science, "It raises the thinker into his native air of insight and perspicacity" (Science and Health, p. 128).—*Correspondence.*

✧

Portland, Ore.

Bliss Knapp delivered a lecture on Christian Science for First Church in the Church Edifice. He was introduced by C. H. S. King, first reader, who said:—

The purpose of the lecture this evening is not to prove to you or attempt to prove to you that Christian Science is true. I think you will agree with me that no person through the use of friendly arguments or of fossil criticism can prove that a religion is either true or false. The utmost that can be accomplished in that manner is to persuade the human mind in one direction or another. The essential function of a religion, I believe, is to uplift and regenerate and incidentally to make happy. The proof that a religion is fulfilling its destiny may be found in actual human living and human experience. "By their fruits ye shall know them." This, I believe, supplies the test.

During a period of some forty years Christian Scientists have been engaged in giving to the world abundant proofs of the value of this spiritual teaching. The purpose of the lecture this evening is merely to break down the walls of prejudice which hostile criticism may have erected, that you may see for yourselves what Christian Science is, and to persuade you, if we may, to examine Christian Science, to find out what its teachings actually are. Thus the burden of proof is transferred to you, because Christian Science is demonstrable, and you can prove for yourselves whether it be true or whether it be false.—*Correspondence.*

✧

Painesville, Ohio

Judge Clifford P. Smith, lecturing on Christian Science, was introduced by Alice Muzzy MacCaslin, first reader, who said in part:—

We do not invite you here that we may tell how we differ from you, or how we differ from the teachings of other religions, but rather how we agree with the teachings of Jesus the Christ, who said: "Ye shall know the truth, and the truth shall make you free." Here is implied bondage, but also a remedy with a promise of freedom, which needs no plainer speech than Jesus' own words. There is something to know, the knowing of which will make you and me free. If one is not free, then it follows logically that he does not know the truth.—*Correspondence.*

Los Angeles, Cal.

The remarks of William S. Deyo in introducing the Hon. Clarence A. Buskirk, who lectured on Christian Science in Shrine Auditorium, under the auspices of the churches of Los Angeles, were as follows:—

During recent years the word efficiency has found a more frequent place in our vocabularies. Along all lines of human endeavor the tendency is to discard inefficient methods and to demand that our efforts produce the highest possible percentage of results. It is not surprising, therefore, that there should be universal interest in a religion which is daily proving that a correct understanding of God brings immediate results in the way of health, happiness, and prosperity. This religion is known as Christian Science, and it will be our privilege to listen to a lecture on the subject this afternoon.

Correspondence.

Testimonies of Healing

The heart of every true Christian Scientist constantly echoes that infinite thought, God is Love. In gratitude and humility I would tell of my own experience in Christian Science, believing it will be utilized by divine Love to aid some other wayfarer. Seeing an old family friend undoubtedly influenced for good by the study of Christian Science, and talking with him occasionally on the subject, I pondered upon it, and saw no reason why there should not be a fresh revelation to the world in our time. I was, however, much occupied with the activities of the church to which I belonged and did not feel the need of an immediate investigation. Later, one of my own household began to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, but I still felt reluctant even to open it. I wanted to be so sure it was of God that I practically asked "for a sign," and determined that I would have nothing to do with it voluntarily, for if it were indeed of God I should in some way or other be forced to read it.

Not long after this it became my imperative duty to read the text-book daily to another who was able to read very little for herself, and I remember how expectantly I opened it, feeling that my desire had been answered. Coming to it with an open mind, its truth and beauty soon laid hold upon me, and I could not give it up. Then began a period of uncomfortable indecision, which lasted some time. I had not seen a case of physical healing, although I could witness to the removal of much fear in myself. I was in very fair health, but had been troubled in my mind about certain personal problems for a long time, and also over the general problem of life as it presents itself to mortals. It was the definite healing of this undercurrent of disturbed thought which continually cried, "I don't understand," that convinced me of the saving power of divine Science. This came through the reading of an illuminating passage in our Leader's work, "Miscellaneous Writings," pointed out to me by a discerning and kind practitioner. I had no doubt then; I could only adore God as I had never done before. I felt that at last I did understand, and even the beginning of that understanding held more peace than I had thought was ever possible here and now.

I love my old church and feel grateful to it for all the good I learned there. At first I hoped to put the "new wine" into the "old bottles," but I soon found this was as impossible as our Master had said; but I also found that if we are willing to give up all for Truth's sake, we receive in far vaster measure, until our "cup runneth over." Becoming a member of The Mother Church, and taking the step in faith as regards the physical healing which I had heard of but had not seen, I was very soon privileged to see cases of healing, and to be called upon to bring the good news to a sufferer from heart trouble of a severe nature, who, owing to sickness, had not led a normal life for seven years, but who has now been perfectly normal and natural for over two years. I thank God for these proofs of the Christ-healing, and for all the good and perfect gifts which come to us through this further revelation of the one Christ, made through the inspired writings of our beloved Leader.

A proof of my growth in understanding came to me in connection with the church that I left. The minister and office-bearers lovingly invited me still to attend the yearly "socials," that I might meet those with whom I had constantly worked for nine years. The first year, when the date came round, I felt that I could not meet the criticism which although silent I knew to be there, and so I did not attend. I had severed my membership two months before. The next year I felt strong enough to go, and realized, as I sat there in the old surroundings, the year's growth that I had experienced. I felt that if all those present had stood upon one side in opposition to Christian Science and I had stood alone, I should have felt quite safe and upon the rock, Truth.

Christian Scientists rejoice in the revelation of the Christ that was made to the world nineteen hundred years ago, in the life and the love of Christ Jesus; and again they thank God that the Saviour is revealed once more in the impersonal truth of Christian Science.

PRISCILLA M. HOGG, London, England.

✧

I am thankful to God for what Christian Science has done for me. I was a great sufferer from rheumatism, asthma, catarrh, and stomach trouble, and was in pain day and night. I could not lie down to sleep at all; in fact, my condition caused misery both to myself and family, and I prayed to die and be out of my agony. Being a great reader of the Bible, I had read and reread Christ Jesus' teachings in his life from Bethlehem to the cross, and all the good he did for suffering humanity. It chafed me to think I could not have been there to have touched the hem of his garment and be healed. I asked the minister one evening why men could not be healed now, but he only made me an evasive answer. Like Mary, I had pondered Jesus' sayings in my heart, and this answer did not satisfy my cravings.

About two years after this I was visiting some friends in another city, and when I entered the house I asked the lady, who looked so sweet and so well, what kind of medicine she was using, knowing that she had been given up to die by the medical fraternity. Her brother had told her, five weeks before, that if she went through an operation she would be brought home in a box. She informed me that she had not taken any medicine at all, that she was reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and had taken just three treatments from a practitioner. She added that Christian Science would heal me also. She then got the Bible and the text-book, "Science and Health with Key to the Scriptures," and we went through the Lesson-Sermon together before dinner. I then read Science and Health until ten o'clock that evening, went to church next day, and in the evening again read Science and Health. In two weeks my pains and aches had ceased, I could sleep with my windows open, and could eat anything set before me without feeling any uneasiness at all.

In the winter I had an attack of cold and called a practitioner, who gave me absent treatment. I kept at my work but was yielding to error, so one morning I said it would be Christmas before I was well again. I telephoned for some one to take my place, but could not get any one to accept it. I then started to call a practitioner to treat me, and while getting the message the truth came to me that man as God's reflection can do whatever is right and necessary. I took courage right there, and in the afternoon I put all to work. I went to reading with the assistance of the practitioner, and within two hours I was a new man altogether. I worked hard, then went home and ate a hearty supper. My wife said, "I thought you were sick." I replied, "That was only error."

I have never taken any medicine from the time I first read Science and Health. I am a Christian Scientist because in an hour of great straits, when in a distressing state of invalidism, Christian Science came to me as a quickening spirit of truth, a beam from the Sun of righteousness "with healing in his wings," answering every question of the doubting reason, healing my body, lifting me from a state of dependence and

Digitized by Google

almost despair into one of joy and hope, into usefulness and the activity for which I had longed. It awakened a deep sense of love for God and humanity, and for the establishment of His kingdom on earth. I now realize more than ever how much we owe to that noble woman, Mrs. Eddy, for the divinely inspired message of Christian Science. It is indeed true that all things are possible with God.

HENRY C. HALLAM, Weir City, Kan.

✧

It is with heartfelt gratitude that I offer this testimony to my wonderful healing through Christian Science. More than a year ago two doctors told me that I would have to submit to a surgical operation for a growth in the left breast. *Having had two such* operations in the past eight years, I felt that death would be preferable to undergoing another, and I told the doctors so. Several friends spoke to me about Christian Science, but I could see no hope in it, and felt that I would have to leave my husband and children. A few weeks later a friend of mine living in a near-by city wrote me that she had a few days before learned of my condition, and that the lady to whom she was speaking told her that she had been healed in Christian Science of the same trouble three years before.

I then sought a Christian Science practitioner, who assured me that God would heal me, and that I need not leave my loved ones. In a short time the growth began to disappear, and after five weeks' treatment it was entirely gone. My general health improved, and people now look at me in astonishment and ask why I look so well. My husband has also been healed of a complication of diseases, from which the doctors offered us little hope of recovery. We thank God for the great blessings He has given us, both spiritual and physical, in Christian Science as taught by Mrs. Eddy in "Science and Health with Key to the Scriptures." I trust that some one may be led to Christian Science through this testimony, as I feel that I would never have become interested in it in any other way than through the healing. We are so much happier in every way through the teachings of Christian Science that we wish every one could share our blessings.

MRS. JAMES PEARSON, Stockett, Mont.

✧

About twenty years ago I was taken with a very severe pain in my left side, and I decided to place myself under the care of a physician, who doctored me for several months; but I grew worse, and my heart became so weak at times that I was afraid to go out alone. I then decided to change physicians, but received no benefit, and after trying about a dozen, my stomach became so bad that it would not digest anything; even water disagreed with me, and very often I would have to sit up for hours at night. One physician said there was nothing the matter with my heart, but that my nerves were all unstrung, so I decided to put myself under the care of a nerve specialist. After taking his treatment for four months without being helped, I became discouraged and refused to take any more medicine. At times I felt as if I might die at any moment, and noticing that a little whisky seemed to help me in my misery, I decided to take some every time I felt bad.

This went on for nine or ten years, when I came to the conclusion that the whisky was hurting me more than all my other troubles combined, so I resolved to quit drinking. I tried more than a dozen times to do so, but could not keep from the drink for more than three days at a time, as I became so nervous. Meantime I was using a great deal of tobacco, and it seemed as if I needed to have whisky and tobacco to live. As I really wished to quit drinking, I placed myself under the care of an alcohol specialist, but his treatment resulted in no benefit. Then I took tobacco treatment, from which I likewise received no benefit. But, thank God, I was at last led to Christian Science. A week after I became interested in it, I lost all desire for liquor, and about a month later, in coming from a Wednesday evening meeting, I found my taste for tobacco beginning to leave me, and I gradually lost all desire for the weed. My health is now good; I can eat anything I want, at any time, and sleep all night without discomfort.

For all this I feel as if I can never give enough thanks to God, and I am truly grateful to Mrs. Eddy for the blessings I have received in Christian Science.

THEO. LEMIEUX; New Orleans, La.

✧

Nearly thirty years ago my husband had many severe attacks of neuralgia of the heart, and the best physicians in Chicago gave me no hope, but told me that he might pass away at any moment. It was at this time that I heard of Christian Science and began its study. God blessed me with sufficient understanding to heal my husband quickly, and ever since this demonstration he has been a well man; in fact, stronger than most men of his age.

After so striking a proof of Truth's power, together with many smaller demonstrations, both mental and physical, one would think that I would have given myself entirely to God's work; but instead of so doing, I allowed error to stop my "activities of virtue." The work to be done in Science was forgotten for the pleasures of sense and success in the world of mortal mind. In "Miscellaneous Writings" (p. 362) Mrs. Eddy tells us that "pleasure is no crime except when it strengthens the influence of bad inclinations or lessens the activities of virtue." I now think that this is where I made my mistake. This mortal thought was manifested on my body as inaction. I was attacked by a stroke of paralysis so severe that the bones on my left side were dislocated. This was sixteen years ago, and since then six more strokes have visited me. My demonstration of healing is still incomplete, but I have advanced so far along the road to health and happiness that error can no longer keep me from expressing my gratitude, in the hope that some other sufferers may be encouraged by my long fight.

I am indeed grateful for all the happiness and courage that have been mine through Christian Science during these many years. Surely nothing but divine Love could have kept me here on earth. I daily strive to realize that I am living in eternity. Trials are turned into blessings when we make them opportunities in which to cultivate, like Paul, patience, persistence, faithfulness, and love. All these years I have been able to do my daily duties as nearly as I have seen them. My gratitude to God for Christian Science, and my thankfulness to all the dear ones who have helped me on my way, as well as for the many demonstrations that have brought joy to others, is overflowing.

MRS. ROBERT L. HENRY, Chicago, Ill.

✧

Mrs. Eddy tells us that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). I have found this true in the short time I have been interested in Christian Science. Though I have not had any severe physical ailment of which to be healed, I have had many good demonstrations over colds and headaches, also financial lack, and am slowly but surely overcoming a seemingly deep-rooted sense of fear, manifested in nervousness when performing publicly. I have gratefully received benefit from many good testimonials and articles in the *Sentinel*, *Journal*, and

Digitized by Google

Monitor. Through the constant study and application of Mrs. Eddy's teachings, as found in her great gift to humanity, "Science and Health with Key to the Scriptures," I can say I am a better woman in every way since learning to "stand porter at the door of thought" (Science and Health, p. 392), as our Leader so aptly expresses it, and my needs are daily being met.—WINIFRED B. SCHUTTEN, Los Angeles, Cal.

✧

I am glad to testify to the work done for me in Christian Science. I was effectually treated for severe throat trouble and other ailments. At one time I was treated for a badly injured arm, where both bones were broken near the wrist and the thumb was dislocated. No doctor was employed, so the work was scientific throughout, and the healing was both rapid and thorough.

MATTIE M. PASCHAL, Colorado Springs, Col.

✧

It is with deepest thankfulness to God, and gratitude to our beloved Leader, Mrs. Eddy, that I give the following testimony. Nearly three years ago I came to Christian Science for physical healing. Two prominent doctors of this city had told me that there was hardly an organ in my body which was not affected, and that a capital operation was needed. I then turned to Christian Science for help. I was advised to procure a copy of "Science and Health with Key to the Scriptures" and told that if I accepted its teachings I would be healed. I did as I was lovingly told to do, and the result was to me marvelous. After five days of constant study a catarrhal condition of the bowels—for which I had taken medicine for years—was overcome, and on the twelfth day of my study and application of the truth taught in the text-book, the organ which the doctors had said would have to be removed, resumed its normal condition.

Wonderful as my physical healing has been, the spiritual uplift was a revelation. It has meant a better knowledge of God and man's relation to Him, made possible by that noble woman, Mrs. Eddy, who has blessed countless thousands by her wonderful teachings. My whole desire is daily so to live that I may be worthy to be called a Christian Scientist.

KATHERINE ELDRIDGE, San Francisco, Cal.

✧

I am indeed happy to give my testimony to what Christian Science has done for me. A little over a year ago I was taken with a sudden illness,—throat trouble and fever. I called for help, and in a few days was able to be up and enjoy my meals; but in about eight days from the time of my first attack all the symptoms returned, and, as it seemed, in exaggerated form. I tried to realize the truth of being, but as the pain was so severe I had to ask for help. A practitioner called and gave me treatment, telling me to rise and dress myself.

The next day being Sunday, I went to church. All during the service I was continually declaring the truth, and as the organ pealed forth a beautiful strain on leaving the church, a sense of thankfulness came over me for the privilege of being there. Then came instant healing, for every trace of pain and fever disappeared, and I was able to walk home, a distance of about a mile. The following week my husband, who was similarly attacked, was healed in a very short time.

For all this I am truly grateful, since it clearly proved to me the efficacy of Christian Science. I now know that the truth does make us free. I am thankful to God, and also grateful to our dear Leader, Mrs. Eddy, who has labored so patiently and lovingly for us.

MRS. R. FISHER, New York, N. Y.

Words fail to express fully what we realize as we come to see the healing truth in all its beauty. About five years ago Christian Science came to me, but like many others, I had opposed it from the first time I heard of it, though I knew nothing definite about it. Notwithstanding, God was preparing me for the truth, for in my reaching out for more of Him, it was presented to me by a friend who had been reading the text-book, with the remark that she had never read anything which had been so helpful to her in her Christian life; so I came to where I was willing to read the literature.

My desire was to lay aside for the time being all my preconceived opinions and prejudices, and I prayed: "If it is of Thee, let me see it and have it; if not of Thee, turn me away. I trust Thee, O God." Then I began to read carefully in "Science and Health with Key to the Scriptures," and as I read on I realized that the author of this book was spiritual and consecrated, else she could not have so written; that she was giving me deep truths of which I had never heard before. My prayer was answered, and I knew that Christian Science was of God. The spiritual uplift was wonderful, and the physical conditions were all changed. Chronic catarrh was dispelled; the head, stomach, and bowels all responded to the healing influence of divine Love, and I was made well and kept well. Glasses were laid aside as I learned that sight is "spiritual discernment,—not material but mental" (Science and Health, p. 586).

This spring an explosion occurred in our gas range while I was preparing a meal. As I opened the oven door there was an escape of gas, which ignited with a loud report. In the confusion I was thrown backward. My eyebrows were burned off, and quantities of my hair fell into my hands. As I began to realize what had occurred, I immediately called a Christian Science practitioner who lived near us, and she gave me treatment at once. My face and hand were burned, but that afternoon the pain from the burns all left me, and there was not even a scar to indicate what I had passed through. A realization of the truth came to me in the Scripture promise, "When thou walkest through the fire, thou shalt not be burned; neither shall the flame kindle upon thee."

On another occasion I contracted a severe cold, with throat trouble and an annoying cough, which seemed to cling to me at night, especially after retiring. I did my own quiet work and scarcely spoke of the difficulty to the rest of my family; but I did not get relief at once. One day, when feeling very ill, I retired to my room to lie down, and my sister, on coming into my room, was alarmed at my appearance, as I seemed to be in a high fever. She telephoned at once to a practitioner, telling her of my condition, and asked her to treat me without delay, which she did. The next morning, when she called me on the telephone, I was attending to my usual duties, and could report to her that a perfect victory was mine through the knowledge of the all-power of Life, Truth, and Love.—MRS. M. G. FETTER, New Castle, Pa.

✧

It is with feelings of the deepest gratitude to our heavenly Father that I send this testimony of the healing of physical infirmities which afflicted me up to about the middle of November, 1911, when I was induced to consult a Christian Science practitioner and so through God's mercy found the truth. This truth has healed me of hereditary liver complaint, accompanied by indigestion, headaches, rheumatism, and some minor ailments which had rendered life burdensome to me. Not only have I been greatly benefited in health by the little understanding which I have already gained from a study of the Bible in the light of Science and Health, but my wife also has gained strength.

Digitized by Google

It is wonderful how a knowledge that God is Love and Life and All-in-all, gives one a brighter and clearer outlook, and a confidence to go on day by day trying to do one's best to gain a better understanding of Him who made all things. Though the daily results may appear small, yet we know it is by constant pegging away at the little details that great results are gained; as instance the work of the coral insects, which build under the surface of the ocean for many years before their indefatigable persistence is rewarded in the appearance of the island. I had been seeking Truth for many years before being led to Christian Science, for I was unable to accept the human concept of the creator as a far-distant and fearsome God who visited His creatures with what seemed to me quite *unmerited chastisement*, and what was even worse, everlasting *torment*. But now I know that we are punished only by our own disbelief and wilfulness; that divine Love is everlasting and inexhaustible.

How deep should be our gratitude to God for granting to Mrs. Eddy the understanding which has resulted in her book "Science and Health with Key to the Scriptures"! May I daily endeavor to prove in my life from henceforth how thankful I am that God has led me into the light of Truth!

HAROLD TASSIKER, Johannesburg, South Africa.

✧

For the past seven years I have had no medical treatment, relying entirely upon Christian Science. In that time, with one exception, when outside aid was secured, I have received help from my wife's understanding of the truth, so that I have lost only a part of one day from business. I have been healed of a lifelong stomach disorder, serious eye trouble, a cough of years' standing, a throat affection, colds, and other ailments. Besides all this I have been greatly helped in business and through trying experiences.

H. BRUCE FLETCHER, Dorchester, Mass.

[Written for the *Sentinel*]

Waiting

GWENDOLEN EDWARDS

THERE sat alone at eventide,
Outside a great church door,
A ragged outcast of the street,
Sin-stained and sick and poor.
And as he bowed him low and wept,
Repentant of his wrong,
Across his world-dulled ear there crept
A melody of song.

"O'er waiting harp-strings of the mind"*—
The healing words were sung—
"There sweeps a strain, . . . whose measures bind
The power of pain." Then rung
Within that sad, o'erburdened heart
A note of hope,—ah, more,—
A longing to be pure and whole!
He knelt without the door—

And healing came! Oh, hungry heart,
It was because those strings
Were waiting for the touch of Love,
And this the Christ, Truth, brings.
He put aside his sense of self,
He knelt beside the door;
He waited; and now Love divine
Is with him evermore.

*Poems, by Mrs. Eddy, p. 12.

From Our Exchanges

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

How vast and absolutely infinite are the ideals which can be discerned within, if we only care to bear the sight; the purity, infinity, and worshipful loveliness we can know, if we dare. Untrodden by most beyond the merest fringe, there nevertheless touches our nature on its ideal side something which is as vast as the thought of God, and which, however neglected by us, is still the characteristic of human personality. And if we are sincere all round, in the light of this how we loathe, hate, and mourn what we actually are! We are compelled to brush aside every excuse, and admit that we are this lower thing, because we do not care, because we do not desire anything else with any vehemence, and because we are unwilling to pay the price. Why this should be I have not the faintest idea. I know nothing that explains it at all; but the facts are clear enough. There is a duality in us which was reconciled in Christ.

And whatever the secret of reconciliation was in Christ, that secret is the only thing that can bring reconciliation to us. There is nothing for us but to grow conscious of God, until in worship and love we become like Him. It is incorrect to say that with us this has to be attained, while with Christ it was given, merely received, begotten in him by the Father's good pleasure. A very little experiment with the way of struggle shows that with us, too, it is more a matter of receiving than of attaining, and the New Testament speaks of the Christian nature also as a thing begotten of God. And on the other side stands love to man as the one purpose of life and the one source of happiness. Until we, too, have learned to identify ourselves with others, any search for human happiness is waste of time. There is no other way but the way of Jesus. It is useless to look elsewhere. He has our secret.

[Rev. Asa Sleeth as reported in *The Oregonian*, Portland, Ore.]

In a paper on "The Lost Power of Christianity," the Rev. Asa Sleeth made the statement that the church of the first century of the Christian era wrought miracles, healed the sick, cast out devils, revolutionized society, and gave birth to a new civilization. The church of the twentieth century was in different case with its adding machines, typewriters, statistics, secretaries, treasurers, appropriations and apportionments, its different methods, its machinery, and its money. It had colleges, chancellors, and bishops, but not an apostle, a prophet, or a martyr,—nothing but respectability, popularity, and business efficiency. Even with this array of equipment it was not doing so much as the ancient church. He said it was defeated because it had lost God out of the battle.

[*The Youth's Companion*]

Living as we do from day to day, we do not appreciate the great oscillations of thought unless some shining moment marks them. Such a moment is marked by Sir Oliver Lodge's address, before the British Association, on immortality. Nearly two generations ago, men of science discovered the principle of evolution, and triumphantly proclaimed that material evolution would solve all the problems of the universe. Now at last is coming the swing the other way, and even science is beginning to recognize the vast possibilities of spiritual mystery.

[*New-Church Messenger*]

Love to man is made unselfish and righteous by making the Lord first in the service of man. The first and great commandment is kept by placing the Lord first in what one does

Digitized by Google

for others. In placing the Lord first, all that is done is kept true to the highest good, and spiritual good is done. Genuine spiritual good can be done only when the Lord and His kingdom become the motive of action. Though the whole of one's duty to the Lord may be briefly summarized, the growing love of Him leads one to desire knowledge concerning Him, and the highest attainment necessitates extended knowledge of spiritual things. It is in religion as it is in science. The devout lover of science, to be satisfied, must be familiar with more than the general principles of his subject. He feels that he must also have knowledge of the particulars. Does not religious devotion require the same?

[*The Christian Intelligencer*]

It is by the natural lifting of the heart to God and the faithful doing of many little things by the hand, that character grows into the symmetry of the ideal man. Finally, the divine judgment is through by-products. On the basis of the unconscious expression of character does the Son of man, coming in his glory, render his awards. Those who have succeeded and those who have failed were each doing something else when they were preparing to hear the "Inasmuch as ye have done it," or "Inasmuch as ye did it not" from the judge upon the throne. So we perceive that the Lord Jesus was practising what he had learned with his Father, when, after his feast to the multitude by the lake, he said to his disciples, "Gather up the fragments that remain, that nothing be lost."

[*The Universalist Leader*]

The laws of the Spirit are the same for institutions and individuals. The obligations of individuals are not lost when men organize. Corporations are as moral in their real responsibility as one man would be if in their place. The issuing of a stock certificate does not change the nature of justice or righteousness. The man who hides behind a board of trustees is a coward. The man who excuses himself from any duty by locking his securities in a safety deposit vault and forgetting the management of the enterprises he is interested in, is the victim of an illusion. God never intended that the turning of a key should lock away from us those primary human relations on which the existence of society depends.

[*The Watchman-Examiner*]

The only salvation from evil thoughts is to displace the evil thought by a good thought. The only way to stop thinking about one thing is to begin thinking about another. Salvation from evil thoughts can come only through the persistent culture of the pure, the noble, and the exalted. The psalmist put it this way: "Thy word have I hid in mine heart, that I might not sin against thee." If we would have pure thoughts, we must be careful as to the books we read, the conversations in which we engage, the pictures upon which we gaze, and the companionships of our intimate life.

[*The Congregationalist and Christian World*]

Every Christian should regard himself as commissioned an apostle of peace and an envoy of brotherhood, and use his influence to those ends, wherever his lot may be cast. The call of the Christian in every rank of life today is the call of peace, the call of industrial peace and peace among nations.

[*The Living Church*]

Here we face the world-old problem of evil. Suffice it to say that evil is all negation. It has no existence apart from evil wills. The Bible lends no support to the dualistic theory that Satan is an anti-God. He is neither omniscient nor omnipotent.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY." —A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now in press, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets.. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been translated into German ("Die Christliche Wissenschaft: Eine Religion der Liebe"), and is now printed in pamphlet form and ready for distribution. Forty pages and cover. This lecture was recently published in English, and both editions are on sale at prices of the regular pamphlets as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The per capita tax, of not less than one dollar, is due June 1 of each year. Unless otherwise directed by the sender, the full amount of the remittance will be credited for the current year.

Please remit by postal money order payable at Boston post-office, bank draft or express order. Send currency only by registered letter. Advise promptly of change of name or address.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable *for daily study.*

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, marbled edges, 95 pages, single copy, $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy, 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIII indicates the year 1913; XIIII is used for the year 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

NATIONAL

A decision that is expected to have a far-reaching effect in determining land titles in cases in which companies and private parties have made improvements without obtaining proper authority from the secretary of the interior, was handed down by the United States circuit court of appeals at St. Paul, Minn. The court decided that the Utah Power & Light Company of Logan, Utah, has no rights to land it occupies, which is a part of the national forest in Cache county, Utah. The decision, which reverses the district court of Utah in effect, will practically make possible confiscation by the government of the entire plant, in which five million dollars is said to be invested.

The question whether the governments of the United States and the European countries should not prescribe the lanes to be traversed by ocean liners and pass laws requiring all vessels under the respective flags to adhere strictly to those lanes, is raised in the annual report of the naval hydrographic office. The lanes now in use were adopted by the steamship companies April 15, 1913, and will continue in force until changed by them, unless an international agreement should be reached. The naval hydrographer is at present in London, attending the international conference on safety at sea, and it is expected that he will submit the proposed change to that body.

Success crowned the three weeks of experimentation at Washington, D. C., when the United States naval observatory on Nov. 21 heard the beats of the Paris observatory clock as transmitted by radio signals from the Eiffel tower to the great navy radio station at Arlington. The beats were compared with those of the Washington clock for some minutes. The American and French commissioners, who are conducting these experiments to determine the difference in longitude between Paris and Washington and the velocity of propagation of radio signals through space, were encouraged by their success.

Judge Edgar Aldrich of the United States district court for New Hampshire, in the first of a series of actions brought by the government to secure lands for the proposed White Mountain forest reserve, holds that the government has full authority to acquire by right of eminent domain the lands described in the petition, and that it is necessary that the United States have the ownership of the lands for the protection of watersheds of navigable streams. Judge Aldrich also holds that the Berlin Timberland Company, owner of 30,264.76 acres of land in the Low and Burbank grant, is entitled to receive therefor $242,118.08, and that Ellen Libby, the owner of 763.02 acres, is entitled to $8,011.71. The decision is expected to pave the way for prompt settlement of the other cases on the docket and the offering of many thousands of acres of land in Grafton and Coos counties to the government for inclusion in the proposed reserve.

Incomplete reports received by the state board of fish and game commissioners of Massachusetts, showed that 1,347 of the 7,000 bucks and does at large in the state were slaughtered during the six days of the open season by licensed gunners. Full returns will probably show a great many more. With the season ended, the deputy game wardens began searching the woods for wounded animals. This work will continue many weeks before the injured deer are put out of suffering.

The Philippine commission has passed the antislavery law adopted on Nov. 13 by the Philippine National Assembly. Only a few amendments were made, and these were introduced merely for the purpose of obviating legal defects in the measure as passed by the Assembly.

Telephone property in Ohio, comprising more than seven hundred companies, has been appraised for 1913 by the state tax commission at an aggregate of $68,531,490.

INTERNATIONAL

The agricultural department of the Belgian government is considering a scheme for tree planting on a somewhat extended scale, to be carried out on the famous sand-dunes that skirt the shore of the North sea, mainly from the Dutch frontier to the Ostend littoral. Systematic and extensive planting, it is generally conceded, would not only insure the stability and solidity of the trees, but would result in protecting the fertile tracts located in the vicinity from damage by wind from the ocean.

Official notification as to the political position in outer Mongolia has been published in St. Petersburg and Peking. Under the new agreement the Mongolian government may appoint agents in regions on the frontier where it is deemed necessary by mutual consent, while Russia may appoint consuls in the same manner. The net result, it is believed, will eventually be the incorporation of the province in the Russian empire.

Following upon the Duke of Sutherland's offer to sell the government two hundred thousand acres of deer forest land at two pounds an acre, William Ewing Gilmour of Glencassley has made an offer through his solicitors to sell one hundred thousand acres of land in Ross and Sutherland at two pounds an acre.

China is making an attempt to improve her navy, and a naval base will be formed at Shanghai. A naval college is also to be established there, and it is expected to be of a better type than the existing colleges at Tientsin, Nanking, and Canton. The number of training ships is also to be increased.

A fine automobile route has been constructed in Egypt between Cairo and Alexandria. The road is some one hundred and thirty miles long. The public works department is engaged on plans for a complete network of main routes to cover the whole of Egypt, and these will be in charge of the government, while the secondary roads belong to local authorities.

The French coal strike has been terminated, as a result of arrangements arrived at between the National Miners Federation and the owners, the latter having made certain concessions, temporarily at any rate. Meanwhile the effects of the discussion of the eight-hour bill in the Chamber of Deputies are being awaited with interest.

INDUSTRIAL AND COMMERCIAL

The United Fruit Company, through its selling organization in the year to Sept. 30 last, sold a total of not far from twenty-five million dollars' worth of bananas in the United States at a selling cost of much less than 5 per cent, and with a loss in bad debts of less than ½ per cent. These fruit sales produced over fifty thousand full cars of freight for the railroads of the United States, which does not include the very heavy sales made locally in such big distributing centers as New York, Boston, Philadelphia, Baltimore, and New Orleans.

Postmaster-General Burleson has recommended to the interstate commerce commission that the maximum weight of parcel-post packages be increased from twenty to fifty pounds for all distances. Before the weight limit may be increased it will be necessary, under the law, for the commission to pass affirmatively upon Mr. Burleson's recommendation. It is expected to take such action. The proposed change will not affect existing parcel-post rates. The lower rates will continue to apply only to matter transported within the first and second zones.

That nearly five hundred thousand acres lying within seventy miles of Los Angeles may be turned into productive agricultural land through governmental irrigation, is the belief of the one thousand and more landowners and homesteaders of Victor Valley, says the *Tribune*. According to those actively engaged in booming the project, the soil in the valley is a high quality of decomposed granite, and water is all that is needed to make the region highly productive.

One-cent postage promises to be one of the live issues in the regular session of Congress. No fewer than a dozen bills have already been introduced, and it is said about half of these provide for one-cent postage outright. It is pointed out by members interested in the general subject that the probable large increase in the parcel-post revenue would make penny postage a possibility without seriously hampering the financial affairs of the postal service.

Agents of the department of justice have begun an investigation of the alleged combination of cold-storage concerns, which Attorney-General McReynolds says may be responsible for the high price of eggs and other products. If a combination is discovered, criminal prosecution may result.

The rafting of logs at the Bangor boom for the pulp and lumber mills on the Penobscot has been finished for the season of 1913. About fifty-four million five hundred thousand feet were rafted.

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI December 6, 1913 No. 14

Right Purpose

WILLIAM D. MC CRACKAN, M.A.

At every apparently enforced halt in his progress the Christian may well examine his true purpose in life. Before he takes the next step he may well pause to ask himself the questions, What is it I really want? Do I want the approval of men, or even self-approval? Do I work now so that I may eventually take mine ease? Do I hope to fill my barns, and then live in idleness?

Mankind delights to plan for the time when it will no longer need to work. It seeks to invent mortal ways and means which will be as near as possible automatic. It tries to prepare a program of events as far ahead as possible, so that surprises shall not intervene and the necessity for keeping awake and watching shall be eliminated. Thus mankind hopes to be able to sleep while the mortal plans it has set in motion will be at work in its behalf.

In her sermon on "Christian Healing" (p. 1) Mrs. Eddy states, "Heaven's favors are formidable: they are calls to higher duties, not discharge from care;" and on page 7 of the same work, referring to "the new tongue," she writes, "It begins with motive, instead of act, where Jesus formed his estimate; and there correcting the motive, it corrects the act that results from the motive." Growth in Christian character brings no "discharge from care," in the sense of producing lethargy or lessening activity. Such growth leads to nobler achievements, greater responsibilities. In his parable of the talents Jesus taught the lesson that faithfulness over a few things fits the Christian to become "ruler over many things." But readiness to take the forward step is dependent upon a willingness to correct any false motive which may lurk in the thought. Unless this is done betimes, no demonstration of the power of good over evil is possible.

Experience shows that the desire to prearrange all the details of our lives is caused by fear, by lack of trust in God. It proceeds from an unwillingness to listen to the "still small voice" which will utter its directions unexpectedly, without conforming to mortal demands. He who shirks the unexpected call cannot work out his own salvation through reliance upon God. He will never be ready for the sudden demand. He will not be able to act on the spur of the moment. His deeds will lack the power and effectiveness which come from spiritual spontaneity and plasticity. It will require a great effort for him to break away from the hard and fast plan he has mapped out for himself, and perhaps before he is ready to respond to the call, the opportunity may have passed him by.

The Christian Scientist who strives to order his ways after God's commands need not expect the approval of mortal mind, since that mind is not cognizant of the requirements of the divine Mind and does not hear God's voice. It is useless, therefore, to wait upon the verdict of the carnal mind in working out our salvation, and it is wrong to compromise our spiritual understanding by trying to satisfy the demands of mortal belief and personal sense. Our Master said, "My Father worketh hitherto, and I work," and these words, expressive of the divine activity, should inspire his every follower.

If an honest investigation of motive shows that our supreme desire is to know God, to have a clearer comprehension of the sum total of good, to understand its laws, methods, purpose, and *modus operandi*, then we have the divine approval, and that suffices. The approval of men or of self can add nothing to insure genuine success. It cannot anoint with the "oil of gladness," nor reflect the "beauty of holiness." The Persian king said to Daniel, "Thy God whom thou servest continually, he will deliver thee." Principle will lovingly guide in every hour of difficulty or danger, under every temptation. The unpremeditated way of escape will present itself to him who is ready for the unpremeditated works. Quick obedience makes possible the demonstration which takes mortal mind by surprise. To one who is ready spiritual activity is the greatest joy; ease, distraction, spiritual oblivion do not seem desirable to him. He is not tempted to look forward to a time when he will no longer need to work. The suggestion of living in idleness paints no picture of heaven to him. To try to devise some automatic contrivance, some self-perpetuating system for the purpose of avoiding daily work, would be odious to him. To sleep under the mesmeric sense which would seek to persuade us of no work to do, would mean the negation of happiness.

The prevailing notions of mankind about happiness would really rob one of the opportunity to acquire and maintain happiness. They would limit his ability to do good by confining his activities to rut and routine. Every gain made in Christian progress must be earnest, must be the result of scientific demonstration, of individual effort, of prayerful consideration. It is not possible for the carnal mind to plan or prearrange a spiritual demonstration. Guiding every right motive there must always be the divine word saying, "This is the way, walk ye in it, when ye turn to the right hand, and when ye turn to the left."

Living Water

ANNIE M. PAYNE

Northward along the dusty highway there paced a traveler. He was journeying toward his home country; partly, it seems, to escape the hostility which his work had awakened, the threatening attention of the governing powers. Passing through a country hostile to his race and religion, and drawing near to a city, he sat down to rest while awaiting his companions who had gone ahead for supplies.

Meanwhile a woman approached the same spot from another quarter. Her face was not that of a saint; it wore a somewhat defiant expression, as of one who felt she had too much to bear, though she had brought upon herself increased burdens by an evil course. The day's work had to be done, however, and she came to the well to draw water for her household needs. She took no notice of the stranger sitting there, assuming that as a member of a hated race he would ignore her presence. But no; in a voice arresting in its gentle yet vibrant tones he asked her for a drink. His request did not

Copyright, 1913, by The Christian Science Publishing Society

Digitized by Google

please her. She would herself have offered the boon to a different kind of traveler, and her failure to do so in this case had not been fairly interpreted. Has pride stooped so low? she thought. The man must indeed be thirsty to ask water at her hands! The ready taunt rose to her lips; but the stranger paid no heed to her racial contempt, as with the dignity of unbounded compassion he indicated in his reply a thirst on her part deeper than his own, and spoke of a living fount of good at which to slake it. Step by step he led her surprised thought on, while she clung blindly to materiality in her effort to grasp something of his purpose; bit by bit, however, in response to his gracious, penetrating utterances, she surrendered something of her pride, her self-will, her hostility.

At last, hardly able to bear more, the woman took refuge in the vague future and its promised teacher, the Messias, "which is called Christ," who, she expected, would make all things clear without any trying personal allusions. But in this she was to experience the climax of surprise, for without hesitation the stranger instantly claimed that exalted status as his own. What! this toil-worn, earth-stained peasant, howbeit of majestic mien, the great prophet king of David's lineage and power! For a few moments the woman stood transfixed, silenced at last, and worshiping in spite of herself, in speechless, tremulous joy. Other strangers now come about the well. Several pairs of eyes, not too friendly in their aspect, are furtively regarding the woman, and looking thence to the Master in wonder; but the woman heeds them not. She is feeling the compelling desire that some of her own people might verify and share her good fortune. The water-pots must wait; let the strangers now take their fill; her steps to the town cannot be impeded.

"Living water!" The words that rang in the Samaritan woman's ears as she climbed the slope to the city, are full of meaning for us today. In that wonderful chapter of "Miscellaneous Writings" entitled Pond and Purpose, our Leader, in picturing the interesting symbolism of water, points, as did John the Baptist and Christ Jesus before her, to the baptism of repentance as the absolutely necessary beginning of the higher life. In a common attitude toward this stage of Christian experience we find a parallel to that of this listener of the past; for the tyro in Christian Science also is sometimes desirous to enjoy at once the happy, affluent sense of life eternal, and no longer experience thirst, nor yet the sense of weariness, dust-stained and heavy weighted, which frequently attends early steps in the journey from sense to Soul. But the spiritual idea whispers, Not so fast! There is sin to be purged away, sense desires to be uprooted. Then, like our Samaritan sister again, the Christian Scientist feels perhaps disinclined to meet that difficulty at the outset, and tries, half unconsciously, to put aside the pure monitor, substituting for its requirements zeal for the letter of Science and enthusiasm in church matters. Truth, however, points out, as did the Master, that all this will avail nothing unless the paramount claim of individual purity is recognized. "In spirit and in truth" we must worship, "for the Father seeketh such to worship him;" and only thus will our own progress be ensured, or the problems of our church be solved.

Finally, we perhaps plead that when the perfect manifestation is visible to consciousness, then there will be certainty and loyal following. To this implied need of development Truth willingly assents in many a loving counsel to "emerge gently from matter into Spirit" (Science and Health, p. 485); but it has also for us the marvelously uplifting thought which differentiates Christian Science from all other teaching, and which is thus expressed on page 316 of our text-book: "The real man being linked by Science to his Maker, mortals need only turn from sin and lose sight of mortal selfhood to find Christ, the real man and his relation to God, and to recognize the divine sonship."

It is indeed by looking to the "I AM," the eternal "now" of perfection, that mortals find the healing current of living water, which neither the pious patriarch of the past nor the mighty monarch of a baseless future can provide, but which it is the present privilege of every humble child of God to receive, the joy of Christ, Truth, forever to bestow.

"Take no thought"

GEORGE H. KINTER

THE question, What shall we do with the body, or how shall we properly care for it? has brought trouble to the ages, and today it precipitates one of the hard problems in theology as well as in science and medicine. We are not, however, left without wise guidance in this respect, if we have recourse to Holy Writ. Our Master said, "Take no thought . . . for the body." Here is a distinct utterance by way of divine direction as to what we should do about the body. Most theologians, and Christian believers in general, do not understand that Jesus is to be taken simply at his word; but this fact remains true.

On page 478 of Science and Health Mrs. Eddy writes, "That body is most harmonious in which the discharge of the natural functions is least noticeable." The first great mistake of mankind was made in the assumption that the ills which "flesh is heir to" are resident in the flesh, or the body. Christian Science makes it plain that the ills of the flesh, so called, are resident first of all in mortal mind, and that the divine Mind alone heals. This truism at once makes it clear that the whole problem is a metaphysical and not a physical one.

When Mrs. Eddy tells us on page 201 of Science and Health that "the way to extract error from mortal mind is to pour in truth through flood-tides of Love," we immediately go back to the paragraph preceding this one, and read: "We cannot fill vessels already full. They must first be emptied." Inferentially, we thus learn that it is quite as impossible to empty human consciousness at once, as it would be to fill it with something else while it is already quite full.

It will require much meditation upon the Master's counsel, "Take no thought," to assure us that it is applicable to the present-day needs of humanity, and it is well for us to note all that he actually said, to wit: "Take no thought for your life, . . . nor yet for your body, . . . saying, What shall we eat? or, What shall we drink? or, Wherewithal shall we be clothed? (for after all these things do the Gentiles seek:) for your heavenly Father knoweth that ye have need of all these things. But seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Viewing this statement from the Christian Science standpoint, we observe that when Mrs. Eddy tells us we "cannot fill vessels already full," we are impelled first of all to empty consciousness of that which has occasioned so much distress and discord, sickness, disease, and death. But the way to do it, as she says, the way to get error out of mortal mind, is not by trying to extract that which offends, but by pouring in truth, and that "through flood-tides of Love."

This pouring-in process begins in the consciousness of most Truth-seekers when they first read Science and Health, and goes on as we thoughtfully read the Scriptures, our text-book, and other authorized Christian Science literature, as we attend Christian Science services, hear testimonies of Christian Science healing, or are the recipients of Christian Science treatment. The student may not be sufficiently familiar with

Digitized by Google

the phraseology of Christian Science to understand the significance of this process at once, but if he will turn to page 251 of the text-book, beginning at line 15, he will find its philosophy very clearly and succinctly stated. He is taught that a certain connection or communication is established between the divine Mind and the so-called human mind, which effects the education of the human mind out of its former self, or former sense of self, and ultimates in the realization that the divine Mind is the only Mind there is. The process is wholly metaphysical; it is the application of spiritual understanding to the elimination of false belief.

A common trouble for beginners grows out of the fact that they do not understand how the connection between the divine, *omnipotent Mind and the human* mind, or human consciousness, *is to be cognized*; but this is explained by the statement that the divine Mind operates upon or communicates to the human mind, so that it is presently led and enabled "to relinquish all error." No one, not even the best informed in Christian Science, will contend that this metaphysical work can be completed in a brief time; but if we persevere, and in our perseverance recognize the spirit as well as the letter of Mrs. Eddy's instructions, the truth which has healed and saved so many will be found efficient in us, and we shall come to know that the question of the practical availability of Christian Science is forever settled. The need of persistency in our efforts to apply the truths of Christian Science to the solution of our own problems is duly emphasized in Isaiah's familiar words, "Precept must be upon precept, precept upon precept; line upon line, line upon line; here a little, and there a little."

Our Leader herself followed precisely the course which she has thus mapped out for others, and if we are duly impressed by the success which attended her efforts, we will be impelled to adopt the method which she has commended and by means of which she accomplished so much for the betterment of mankind. In her iteration and reiteration she followed the order of all the great Scripture teachers. We have four gospels, and for the clearly implied reason that one would not have been enough. So, too, the unnumbered repetitions of the great fundamental statements of Christian Science in the pages of our text-book, serve to rivet attention and compel thoughtfulness thereupon in a way which has been vitally significant to thousands of needy people, and the importance of thus keeping fundamental truths before the mind is further emphasized by the fact that Mrs. Eddy named the twenty-six subjects of the Christian Science Bible Lesson-Sermons, which are studied again and again, year after year.

Another point of difficulty which appears to many beginners is this, namely: How can it be possible for the action of divine Mind to be effective upon that which is called the human body? Mrs. Eddy has said respecting this, "The divine Mind, which forms the bud and blossom, will care for the human body, even as it clothes the lily; but let no mortal interfere with God's government by thrusting in the laws of erring, human concepts" (Science and Health, p. 62). Not many of us may have thought that it is God's business to take care of that which we call the human body, but if we remind ourselves once more that it was the Master who said, "Take no thought for . . . the body," we must see that seeking "first the kingdom of God, and his righteousness," holds for us the promise, not alone of holiness, but of health as well, and necessarily on the basis of Christian metaphysics. St. Paul evidently understood this to be a fundamental of Christianity, for in his discussion upon the body in the twelfth chapter of Romans, he employs this significant language: "Be ye transformed by the renewing of your mind." The possibility of this transformation of the human mind and body is proven by the testimony of nearly half a century of Christian Science Mind-healing. Instances of the corrective and redemptive power of Truth may be found in well-nigh every village and hamlet of the civilized world.

In every issue of *The Christian Science Journal* since it was founded in 1883, in each number of the weekly *Sentinel*, and in all of the Wednesday evening meetings in Christian Science churches, testimonies are given in proof of the transformation, by the renewing of the mind, of hitherto sick bodies. Those who formerly used drugs and other material remedies in quantity and without avail, and who have been restored to health through spiritual means alone, are living witnesses to the power of good over evil, of Truth over error. They also come to realize the ever-presence of the divine Mind that cares for His every idea.

Anxiety versus Indifference

EMMELINE HASKELL

Two ladies calling at the home of a friend were told that the baby, who was perhaps two years of age, had never learned to walk, because whenever she was placed upon her feet she screamed with pain.

The visitors returned to their home, and the incident might have been forgotten had they not chanced, two weeks later, to hear that the baby had recovered, and that the parents wondered if their call had had anything to do with it. These ladies were both of them Christian Science practitioners, but since the child's parents were opposed to Christian Science the subject had scarcely been mentioned. The parents were anxious about their baby and a doctor's remedies had failed to give any improvement, but they had not asked for help in Christian Science.

One of the visitors disclaimed any share in the case, as she had felt no particular interest in it; but the other said that after returning to her home she became very anxious that her friends should not lose their baby, as she had lost one who had been similarly affected. She knew that she should not give treatment when it had not been requested, but she also knew that it was wrong to permit herself to be deceived by appearances, and so prayed that her own consciousness might be saved from any consent to this error. This she did until she was wholly free from anxiety; and when told that the baby had surprised its parents by getting well, she felt that her own battle had blessed not only herself but others.

This experience may illustrate the difference between indifference and anxiety. Indifference is not a virtue; it may not harm, but it cannot help others. Anxiety is an error against which Jesus warned us; it indicates lack of faith in God, and thus impedes the manifestation of good, but it is often coupled with a desire for good,—indeed, one definition of the word as given by Webster is "eager desire." Right desire, followed intelligently, tends to cast out error, for "desire is prayer" (Science and Health, p. 1), which is heard of God however much contending fears may seem to stifle it. Solicitude for the welfare of others may in every case be turned into a blessing by letting truth separate the tares from the wheat, distrust of God from a loving desire to help; and whatever the condition which presents itself, it were well always to know the truth and be free.

Many, as they walk the streets of a town, note with anxiety the places where intoxicants are sold. If this anxiety is harbored, it may tend to increase rather than diminish the danger, just as the fear of a disease makes those exposed to it more vulnerable. Let us question our anxieties regarding

Digitized by Google

evil. Men often enter saloons because they are tired of the humdrum of mortal existence and wish to forget it; they desire happiness, health, strength. These are not to be found in a saloon, but error says they are, so men go there and receive a counterfeit of what they are seeking. Remembering for what men are really hungering, we, however, take courage, knowing that through either Science or suffering earth's weary wanderers will at last reach home. Thus met, our anxiety gives place to confidence in Truth. The Scripture says, "He that believeth shall not make haste," so we pass the phenomena of error as dreams, giving thanks that every one that seeketh findeth, and looking steadfastly "not at the things which are seen, but at the things which are not seen," and which are eternal.

The experience further illustrates the more important and inspiring fact that to maintain right consciousness, a "conscience void of offense toward God, and toward men," as St. Paul puts it, is to radiate that healing virtue which speaks for the universal dissemination and irresistible power of spiritual truth.

✧

Right Thinking

KENNETH B. ELLIMAN

We learn in metaphysics that life abides in consciousness; that the character of any one's life is determined by his thinking, hence right thinking means a right life. But how can we know how to think rightly? Most people naturally want to think and to do what seems to be right, but the amount of sickness, accidents, troubles, and failures in most lives, indicates that much of the thinking of the past has not been right. In Christian Science, as set forth in "Science and Health with Key to the Scriptures," Mrs. Eddy has shown us how to think rightly by teaching us the Principle of all true being and the rules for its demonstration. These the earnest and faithful student can learn to understand and live accordingly.

The beginning of all right thinking is God, the divine Mind, the creator and cause of all that is real, and we begin to apprehend God's character and how to distinguish His creation from everything else, when we accept Jesus' statement that God is Spirit. This being true, His creation is spiritual, and the spiritual is the only real. Matter being the opposite of Spirit, material things are unreal. Having grasped this clearly, we begin to think rightly, and if we adhere to this truth, namely, that God is the Principle of all real being, we shall continue in right thinking. The recognition of Spirit as divine Principle is the touchstone, as it were, by which we can test all thoughts to see if they are true and right.

But according to the teachings of Christian Science, besides being Spirit, the Principle of being, God is divine Mind, the source of all right ideas; hence all true thoughts are from God. Moreover, God is infinite, therefore the study of God is an infinite subject; and we can think rightly about everything only when we have a perfect knowledge of God. However, the habit of right thinking will fit us for further revelations of God's nature, until He is fully revealed in us and we are at one with Him. God being the source of all intelligence and all good, if we look constantly to Him we can but have an abundant supply of right ideas. Every idea that comes from God partakes of His nature; hence man, who is God's highest idea, is spiritual and perfect, and we should thus think of him. Furthermore, it is manifest that we can know the real man only as we know God.

The thinking subject is called consciousness, and mortal consciousness is largely made up of perceptions of material objects, which seem to exist independent of our thinking. In Christian Science, however, we learn that thoughts are things, that thoughts which do not proceed from the divine Mind are only illusions, and that the objects of right thought (ideas) are the creations of Mind. Knowing this, we can control the stream of our consciousness by testing our thoughts, by considering their relation to Principle as a criterion by which to retain true concepts and reject the false. To illustrate, memory may be said to be the faculty of recalling to consciousness some fact or experience. Memory is commonly supposed to be a function of the human, mortal mind (so called), strong in some persons, weak in others, according as it has been inherited or developed by some process of training. Considered thus only as a belief, it is often supposed to be lost. And when one holding this belief has a lapse of memory, he thinks he must use great will-power to regain it.

In Science and Health (p. 407) Mrs. Eddy says that "no faculty of Mind is lost." Since the divine Mind is all-knowing, it never forgets, and in proportion as we realize our oneness with this Mind, we manifest a perfect memory. Again (p. 84), we read that "it is the prerogative of the ever-present, divine Mind, and of thought which is in rapport with this Mind, to know the past, the present, and the future." Knowing this, we need not exercise the human will to recall any of the past beliefs or experiences of our consciousness, but we can calmly realize man's oneness with the divine Mind, and so find the thought we want. This faculty does not require any long, tedious processes and expedients to develop it, but it is inherent in man as the child or reflection of Mind; and it is gained in proportion as we put aside the false material belief of self, and learn through Christian Science man's at-one-ment with divine Mind.

Thinking involves both knowing and feeling, and Christian Science brings us both. We are to test our feelings and see if they accord with divine Principle, which is Love. Feelings such as fear, anger, hatred, lust, and self-pity, are obviously unlike divine Love, because they relate to a belief in a material self. On the other hand, meekness, faith, joy, love, and peace, being spiritual, are reflections of divine Love, and so deservedly part of right thinking. Love, in a human sense, may be said to be a desire for good, and when this is our actuating motive, we are safely and rightly guided in our thinking.

When we meet with appearances of evil in the form either of sickness or other discord, we can destroy them by the power of Truth, remembering that "the spiritual power of a scientific, right thought, without a direct effort, an audible or even a mental argument, has oftentimes healed inveterate diseases" (Rudimental Divine Science, p. 9). He who thinks rightly, expresses so much health, harmony, happiness, and peace that he cannot help attracting the interest of those who have not yet learned to do likewise; and they, in time, are led by example to do the same. For, as Jesus said, "If I [the Christ ideal] be lifted up . . . [I] will draw all men unto me." When all men think rightly, truly and lovingly, both of themselves and of one another, they will live in perfect harmony. As Jesus said, this heaven is "at hand," "within," and it is realized by right thinking.

✧ ✧ ✧

But one Light shines; ten thousand rays
  Through earth's dark clouds are breaking,
And envy flees before the gaze
  Of brothers, joyous waking.

But one Mind guides, but one God is,
  One Love does all the righting;
The workers and the work are His,
  All in one cause uniting.

ARTHUR F. FOSBERY.

Selected Articles

[Editorial in *Peoria* (Ill.) *Journal*]

One of the really remarkable religious gatherings in this city was that at the Shrine Temple last Monday evening. The house was filled. The people had come there to hear Bicknell Young lecture on Christian Science. To one who watches modern movements at all, it is something wonderful to see so many people in this city turn out to a religious meeting that has in it none of those elements commonly called sensational. The announcements of this meeting which were published were the most circumspect articles, evidently written by some member of the church and printed in the papers in small type as advertisements. Had this been almost any other religious denomination, the newspapers would have been asked to write much of the stuff themselves, insert it every day for a long time in advance for nothing, and put it up in as catchy a style as possible. The same number of persons at an evangelistic service of any other church organization would have been considered quite remarkable. In most meetings of the kind conducted by any other church, an appeal would have been made for funds. There was nothing said about money in that meeting.

The lecture was a thoughtful deliverance by a man who knew his subject well-nigh perfectly and delivered his remarks in a pleasing manner. There was the assurance which is always found in the speech of one who believes absolutely in the system he is teaching. There were the same sweeping assertions which such teachers always make and offer no apology for the making of them. It was one of the cleanest-cut sermons ever listened to by a Peoria audience. There was no show of enthusiasm on the part of the audience during the delivery of the lecture. The people sat quiet, and there was almost perfect attention from first to last.

✧

[Paul Stark Seeley in *Malheur* (Ore.) *Enterprise*]

In the editorial relative to Christian Science there is sounded a note of impatience because of the uncompromising stand which Christian Science takes in accepting as its basis, without reservation, the Biblical teaching that God is Spirit and the natural corollary that man and the universe created by Him are in reality spiritual. It is even hinted that Christian Science is becoming dogmatic and intolerant. Let me state with emphasis that Christian Scientists have no desire to judge or condemn the religious beliefs of their fellows. Their wish is rather to make known what Christian Science really teaches, and so prevent the spread of false opinions concerning it which might be gained if misstatements were allowed to pass uncorrected. Surely this is asking but fair play, and if in stating the facts Christian Science seems to differ from present-day orthodoxy, it cannot, because of that, be justly termed dogmatic or its adherents be called intolerant.

The road to truth was described by the Master in significant metaphor as straight and narrow, and it is only because of the earnest desire to follow in this way, thus avoiding the pitfalls of that other life road of which he said, "wide is the gate, and broad is the way, that leadeth to destruction," that Christian Scientists hold steadfastly to spiritual reality in thought and argument, and seem perhaps to give scant consideration in their religious belief to the material creation, the opposite of the spiritual, or God-created.

It is stated in the editorial referred to, that "we only surmise what spirituality is and what it means," yet Paul said, "To be carnally minded is death; but to be spiritually minded is life and peace." Surely mankind is not to be forever under a cloud of uncertainty and ignorance, surmising about but never finding true life and peace. In another passage the apostle well explained the meaning of the words "spiritually minded" by his admonition to "let this mind be in you, which was also in Christ Jesus," even the consciousness that understood God as Love, and acknowledged no other power; that recognized God's ever-presence and His consequent ability to heal disease and dissipate the shadows of earthly woe. It was this spiritual-mindedness which recognized good as supreme and refused to compromise with the world's belief in another and evil power. It was this sense of Mind-power that healed the sick and raised the dead, not alone in Jesus' time, but for several centuries thereafter; and it is this same spiritual sense that is enabling Christian Scientists today to do the healing works which Jesus commanded his followers to do. The apostle advised the early Christians to "prove all things," and to "hold fast that which is good;" and Jesus said, "It is the spirit that quickeneth; the flesh profiteth nothing." Christian Science is proclaiming not only by words, but by deeds, that the truth of spiritual being taught and demonstrated by Jesus and his followers is true now and always, and is ever available to every earnest seeker after truth who is willing to let the Christ-mind take the place of carnal mentality and the mortal give place to the spiritual and immortal. The ranks of the Christian Scientists are made up almost entirely of those who sought healing from sin or disease, or surcease from sorrow, or relief from the heavy burdens of care. Most of them had tried the old systems and beliefs to their utmost, and only in desperation turned to that system which not only believes in God as Love, but proves this eternal fact in breaking the yoke of material bondage. In leaving their old beliefs in sin and sickness and in accepting without compromise the Biblical truth that God is Spirit, and man is like Him, Christian Scientists understand that they are but following the admonition of Paul's enlightened thought to "put off the old man with his deeds" and "put on the new man, which is renewed in knowledge after the image of him that created him."

Macterlinck relates the story of a bee, which after finding its way into a bottle struggled desperately to escape toward the sun through the closed end, ever failing to see the open way to freedom so near at hand. Centuries of vain endeavor to find truth through material science would seem to hint the way to another basis for an explanation of God's creation. An investigator and scientist of note has recently given frank expression to the darkness into which the theories of material science have led him. "For every question it answers," he says, "it raises a thousand new ones." And yet Jesus said, referring to the truth which was manifested through him to the world, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life."

The belief in one God has ever been the corner-stone of Christianity, and it was expressed in the first commandment, "Thou shalt have no other gods before me." The Master's answer to the scribe confirms it in those words which, if obeyed, banish all evil from the consciousness of man, for he said, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength: this is the first commandment." And yet to every observer of open mind it must be but too apparent that men have been guilty of honoring God with their lips, but their hearts have been far from Him. Evil, the opposite of God, has been acknowledged as having power and authority over God's creatures and creation. As, however, the monotheism of Christianity becomes not only believed in but understood and demonstrated, religion will become practical, and man will recognize no power or presence but God, whose goodness is infinite, precluding and excluding every false claim of evil, disease, and sin.

[Charles K. Skinner in *Northwestern Weekly Review*, Detroit, Mich.]

In a recent issue of your paper, an article entitled Cults appeared, in which the writer attempted to pay his respects to various classes of people. He tells us that Christian Science occupies a field all alone by itself, for it is neither "philosophical, religious, nor scientific." Let us examine this statement. There are at least two millions of people in the world who have been healed physically and morally by Christian Science. They have come from every walk in life; they are composed of nearly every nationality; most of them have been members of other religious denominations, and among the number many are doubtless the peer of our critic in intelligence, courtesy, and love for humanity. Why did all this vast army accept Christian Science? Why do these people remain faithful to its teachings? No one is asked to believe Christian Science, or ever will be asked to believe it, any more than he will be asked to believe in the multiplication table, as has been aptly said. Is it not because these same people have found a more practical application of Christ's teachings than they ever had before?

It has been truthfully said that Christian Science is practical because it produces results which can be seen. If one is raised from a bed of sickness and restored to perfect health without resort to doctors or drugs, or material remedies of any kind, a good work is done which makes its appeal to the human sense of what is right and true. But it is no less a good work—rather, it is a higher work—when one is redeemed from the malice, revenge, and other products of the carnal mind; and it is no less practical. Our critic says that Christian Science is "not religious." The definition of religion, according to best authority, is "reverence to God, practical piety, love and devotion to humanity." We are also told that Christian Science is neither "philosophical nor scientific." The definition of philosophy is "the science of first principles and causation." Science in its broadest sense is defined as "knowledge." Christian Science, therefore, means a practical understanding of Christ's teachings as demonstrated by him. It is "philosophical" because it teaches and proves that God is the first and only cause and Principle of everything that is real. It is a religion because it teaches and emphasizes reverence and obedience to God and the Scriptures, and the practical living or exemplification of the commandment, "Love thy neighbor as thyself." The first tenet of Christian Science teaching is, "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497).

If Christian Science "tosses aside all the accumulated knowledge of the ages," as the critic asserts, it makes the distinction that Jesus Christ did in his parable of the good and bad seed: "Gather ye together first the tares, and bind them in bundles to burn them: but gather the wheat into my barn." "The knowledge of the ages," derived from materialistic teaching and practise, has brought mankind no nearer to the understanding of God and the relation of man to Him than were men ages ago. On the contrary, Christian Science has brought to the world the practical use of Christ's teaching, and that it is as possible now as when he said, "He that believeth on me, the works that I do shall he do also."

Christian Science does deny the existence of disease as a creation of God, or that it is a reality to Him or His perfect child. It does not, however, teach that disease does not exist to material sense. On page 460 of Science and Health we find: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction." As to the "fat fees" of which the critic discourses so glibly, there are few who do so much work for others gratuitously as the Christian Science practitioner is constantly doing. It is not to be supposed that any one would expect to call a physician who might, or might not, cure him, without paying him his bill, small or large, nor would he hesitate to pay a laborer for work done, even if the result of the work was not what he had expected. The Christian Scientist asks for his work a modest fee, which will compare quite favorably with that of any medical practitioner or surgeon.

The criticism of "matter" as an unreality has become so threadbare as hardly to hold its tatters together, and one is surprised to find a writer at this hour so ignorant of the concession of the world's brightest physical scientists that Mrs. Eddy's position on the unreality of matter as an entity is correct. The earnest thinker does not need to accept personal statements for or against Christian Science, for if he reads the text-book, "Science and Health with Key to the Scriptures," conscientiously from the view-point of its author, —the spirituality of man and the universe,—the truth of its teachings will be apparent.

✥

[John L. Rendall in *The Toledo* (Iowa) *Chronicle*]

Our critic speaks of the great central truths of Christianity. What are these truths? What denomination, if any, has a monopoly upon them? He states that "they are accepted by countless millions in the Christian denominations." What is it that is thus accepted? Specifically it is those teachings held to and taught by theologians of the past and present as correctly defining true Christianity. In itself, the mere fact of age or the acceptance of any belief by millions, means nothing. The prevalent idea for ages was that the earth was flat and that the sun moved. This misconception was older than theology and accepted by more millions of people than was theology; but this, in itself, did not make an untruth true, despite the evidence of the human senses upon which our critic lays so much stress.

To whatever extent the teachings of theologians are demonstrably true, to whatever extent they measure up to the standard of compliance with the complete gospel of Christ, which was and is a healing gospel, these teachings will stand, and this quite independent of any "ology" or "ism." Truth is because God is. Truth is true whether mankind believes it or not. That which does not conform to the eternal law of Truth, will be relegated to the obscurity which awaits every false or imperfect concept, whether it be a misconception of Christianity or of some other teaching. Therefore, the mere fact of the acceptance of certain teaching by millions, does not of itself make this teaching true or Christian; neither does it give one the right to stigmatize as antichristian a teaching which may differ at some points.

Christian Science must be judged, not by what its critics say against it, but by its essential Christianity, by what it really is, and by what it is accomplishing. It must be judged, not by whether it conforms to certain accepted standards or beliefs, but solely by the vital questions: Does it conform to the teachings of Jesus Christ? Is it fulfilling the essential mission of the religion he taught, which surely is the healing of the sick and the reformation of the sinner? Christian Scientists emphatically declare, as the result of their experience, that it does so conform, and they prove this declaration in their daily lives. In every Christian Science church on every Wednesday night, all over this and other lands, thousands of God-fearing people who are the direct beneficiaries of this healing, saving religion, bear willing and grateful testimony to its efficiency as a healing and redemptive teaching. These people are well and favorably known in their several communities. They command the

Digitized by Google

respect and esteem of their friends and neighbors? In any ordinary court of law their testimony would be considered unimpeachable, because their integrity as citizens is unquestionable. They are Christian Scientists because of what Christian Science has done for them. When all else had failed, the power of God through Christian Science healed them.

The history of Christian Science began with one person about forty-five years ago. Today its followers number hundreds of thousands of intelligent people who know the reason for the hope that is in them. These people are gathered from all the walks of life. Among them may be found numbers of graduates from accredited colleges and universities of the land; college professors, ministers of various denominations, physicians of all schools, lawyers, judges, and business men having large interests, as well as ordinary citizens, may all be found within the ranks of Christian Science, and they one and all unite in a song of thankfulness to God that Christian Science has come into their lives. Shall we accept their loving testimony that God is now the healer of the sick; that Christ is "the same yesterday, and today, and forever"? Or shall we ruthlessly repudiate this preponderance of evidence and call them, and the religious teaching which healed them, "antichristian," as does our theological critic? Is it conceivable that these people who are striving to make their individual lives pure and Christlike are following a religion which teaches lust and sensuality, as our critic openly charges? Jesus said, "By their fruits ye shall know them." Certainly this applies in this instance.

✧

[John W. Doorly in *The Oldham* (England) *Chronicle*]

In a recent issue I notice the Rev. A. J. Waldron's remarks on "The Mind and the Body," during which he declares that "the success of such cults as Christian Science is due to the bigotry, conservatism, or ignorance of the majority of the medical profession in the realm of psychology." He then goes on to speak of Christian Science as a strange cult, which is leading thousands astray. It is quite evident that he has no great opinion of *materia medica* in the realm of psychology, and yet he proceeds to state that "we are now entering a realm where the possibilities both for good and for evil are infinite. It is to the medical profession perhaps more than to any other that we look for guidance and help." In fact, the reverend gentleman calmly proposes that we should look to a profession the majority of whom, he states, are governed by "bigotry, conservatism, or ignorance," for the infinite possibilities of the future. Really, this is an astounding proposal. I wonder if he ever heard of Christ, or the "Spirit of truth," that we are assured will guide into all righteousness.

Christian Science, which this critic dismisses as a strange cult, is teaching men and women everywhere to look for a present salvation from every form of evil, including sin and disease, and not to hypnotism or inanimate drugs, as the clergyman proposes, but to God and His Christ, that is, to purely spiritual means. It is teaching mankind what that Mind "which was also in Christ Jesus" is, and how to obtain that Mind and to utilize it in the healing of disease, even as the Master commanded us to do. That a drugging system which has lost its hold upon humanity through its utter failure to heal, should be driven into the intricacies of that particular form of diabolism known as hypnotism, is not to be wondered at; but one utterly fails to comprehend how a minister of Christ's gospel can for one moment consider the possibility of recommending to any one the unreliable action of the human mind called hypnotism as a remedy for the ills of that very mind.

Meanwhile Christian Science, which teaches the absolute presence, power, and availability of the one Mind, God, has released an army of suffering men and women from every form of sin and disease, and has caused them really to understand God and His Christ, and to demonstrate them in their daily lives. Our Saviour's theology and his medicine were one,—"Whether is easier to say, Thy sins be forgiven thee; or to say, Rise up and walk?"—and that one was the infinite law of good, forever making free from evil. It was with the understanding of that one law that he walked on the waters and fed the multitude, and in fact annulled every material law with the law of Spirit, or Mind. Our critic, like every other human being, will some day awake to the fact that humanity cannot be saved either through drugs, strange cults, or hypnotism, but that it is already being radically saved and healed through the truth which makes free, and this truth is unquestionably Christian Science, which is certainly succeeding far more than even this reverend gentleman has any idea, because it is based on unalterable truth.

[William C. Kaufman in *Kalispell* (Mont.) *Inter Lake*]

Your valued paper published an article by the Rev. T. A. Stancliffe in reply to a synopsis of a lecture on Christian Science. The critic says, "The speaker's whole attempt was to destroy the deity of Jesus Christ and reduce him to simply an inspired man." Christian Science teaches Christ Jesus glorified. It does not teach that Christ was God, but that he was the Son of God, as he himself declared, and that Mary's conception of him was purely spiritual; hence he had no earthly father. This fact enabled Christ Jesus to manifest more spirituality than did other men, and this spirituality individualized in him was the Christ. Christ is the spiritual idea of God and existed forever, but this idea was represented by Jesus in order that humanity might comprehend how the divine nature can overcome the belief in mortality.

Mrs. Eddy says in Science and Health (p. 26): "The Christ was the Spirit which Jesus implied in his own statements: 'I am the way, the truth, and the life;' 'I and my Father are one.'" Christian Science teaches that God is divine Life, Truth, Love, Spirit, Soul, Mind, and that Christ is the expression, reflection, or manifestation of God; hence, he is the Son of God. Christ Jesus was a dual personality. This enabled him to be the Wayshower to all men. The laying off of the human and the earthly, as illustrated by the man Jesus, and the appearing of the Christ, is the way of salvation from material living into spiritual existence. The Pharisee and the materially-minded saw the fleshly Jesus, whereas his students and the spiritually-minded saw the Christ, or Son of God; and whenever we see the Christ as the Son of God, then we shall see all men as spiritual and destroy the false concept of man in our consciousness.

The Scriptural passages quoted by the critic prove Christ's at-one-ment with God, and not the deity of Jesus. It is true that the teachings of Christian Science do not coincide with the generally accepted theological beliefs, hence this criticism. Nevertheless, the value of the theology of Christian Science is demonstrated by its proof that it reforms the sinner while healing the sick.

There is a vast difference between being busy and being fruitful. Busy people are often painfully barren and uninteresting. Their activity expends itself in small, mechanical ways which add nothing to the sum of human knowledge or happiness. On the other hand, people who are apparently idle, who seem to be detached from the working world, are often the most fruitful.—Hamilton Wright Mabie.

Christian Science Literature

If the letters received at this office from time to time are to be taken as indicative of the thought of the field at large, there is considerable perplexity among Christian Scientists as to what their attitude should be toward what is termed Christian Science literature, but not "authorized," as are our Leader's writings and the periodicals issued under the auspices of The Christian Science Publishing Society. Fortunately, through the publication of "The First Church of Christ, Scientist, and Miscellany," we are able to refer our readers directly to what Mrs. Eddy herself has to say on this point. On page 224 of the new volume she writes:—

"My books state Christian Science correctly. They may not be as taking to those ignorant of this Science as books less correct and therefore less profound. But it is not safe to accept the latter as standards. We would not deny their authors a hearing, since the Scripture declares, 'He that is not against us is on our part.' And we should also speak in loving terms of their efforts, but we cannot afford to recommend any literature as wholly Christian Science which is not absolutely genuine."
