If your correspondent had merely continued his reading of the passage from which he quotes, he would have realized more clearly the nature of chastening. We find: "No chastening for the present seemeth to be joyous, but grievous: nevertheless afterward it yieldeth the peaceable fruit of righteousness unto them which are exercised thereby. Wherefore lift up the hands which hang down, and the feeble knees; and make straight paths for your feet, lest that which is lame be turned out of the way; but let it rather be healed. Follow peace with all men, and holiness, without which no man shall see the Lord."

The writer admits sin to be the chief cause of suffering, and yet contends that God has ordained such a condition to exist. He says, "Of course sin is the chief cause of suffering, but God foreordained before the foundation of the world that it should be so." In other words, God decreed that sin should exist, and so is the author of it, a statement as false as it is absurd. God created all that was made and declared His creation good. Can any one logically contend that God, good, can be for one instant the creator of evil? To acknowledge any other power as true is to dishonor God. To acknowledge that evil is as real as good is to admit that it must be immortal. As darkness is only the absence of light, so are evil and sin the absence of good. Christ Jesus overthrew the supposition that sin and suffering possess any reality by demonstrating their utter powerlessness.

The rest of the writer's article sounds like excerpts from Schopenhauer. The Bible plainly states that man was created in God's image and likeness, and such being the case, he must reflect God's attributes, which are all positive good. If "we have no right to avoid pain and suffering," why did Jesus show that we had not only the right, but the power? He clearly demonstrated that man is free from sickness and suffering, and that disease is not the law of divine Love.

✧ ✧ ✧

How beautiful the feet of those
Who on the mount of holy praise
Have walked above the vale of woes,
To aid the toiler on his ways!—
Not on the mount of holy light
To live alone in calm repose,
But ever lifting into sight
The blind, who in a vale of woes
Are striving to attain the height,
And wrestling with their phantom foes.

R. E. Key.

Editorial

Our Text-books

In these days of much writing about Christian Science, and much seeking of opinion one from another, it is both refreshing and helpful to turn to what our Leader wrote to the church in Washington a number of years ago, as reproduced on page 203 of "The First Church of Christ, Scientist, and Miscellany." In this letter she made it clear that her teachings are fixed and determined, and in saying, "I have nothing new to communicate: all is in your text-books. Pray aright and demonstrate your prayer: sing in faith," she gave a gentle but firm rebuke, not to the church to which she was writing, but to that class of Christian Scientists who, like the ancient Athenians, are ever looking for some new thing. In this saying she gave an example of the greatest kindness that one Christian Scientist can render another who is perplexed or in doubt about the course he should pursue, namely, to turn him to the study of the Bible and Science and Health, never forgetting that divine guidance is ever available for all. James says, "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him." It is also well to remember his further admonition, "But let him ask in faith, nothing wavering."

In these books is to be found the whole of Christian Science, the healing truth which Jesus preached and demonstrated, and which Mrs. Eddy has shown to be sufficient for all human needs,—not only for spiritual growth, but also for the healing of the sick and the reformation of the sinful. This is the experience of every Christian Scientist who has fought the good fight and "kept the faith," and it will continue to be the experience of all who unselfishly follow in the footsteps of the one who proved her fitness to instruct and to lead in the restoration of primitive Christianity. These writings, more than any other teachings, bring to all who diligently study them a higher concept of God, a more exalted sense of His loving-kindness, and a greater certainty that He is the guiding and governing Principle of all true being.

Every close student of Mrs. Eddy's writings cannot fail to understand that she has fully stated an exact and beneficent Science of which God is the center and circumference, and successfully to demonstrate this Science requires the most exact knowledge of its Principle. This can be obtained only from its text-books. It is useless to depend on personal opinion, and the many so-called "helps" to Christian Science which are offered as easy steps to the acquirement of a demonstrable knowledge of its practice, and we but waste time in assuming that there is a royal road to this knowledge. The sooner we realize this, and apply ourselves to the study of only such writings as Mrs. Eddy has prepared for our instruction, the sooner will we make the progress which is necessary to advance the coming of the kingdom in our own experience, and fit us for the greater work of helping others to this end.

Our Leader left no uncertainty about the needs of Christian Scientists when she wrote, "A Christian Scientist requires my work SCIENCE AND HEALTH for his text-book, and so do all his students and patients. Why? *First:* Because it is the voice of Truth to this age, and contains the full statement of Christian Science, or the Science of healing through Mind. *Second:* Because it was the first book known, containing a thorough statement of Christian Science. Hence it gave the first rules for demonstrating this Science, and registered the revealed Truth uncontaminated by human hypotheses. Other works, which have borrowed from this book without giving it credit, have adulterated the Science. *Third:* Because this book has done more for teacher and student, for healer and patient, than has been accomplished by other books" (Science and Health, p. 456). What more need be said?

ARCHIBALD MCLELLAN.

Forgetting One's Self

A REPROOF sometimes administered to a child or young person is this: "You are forgetting yourself," words which have a much deeper significance than appears upon the surface. They distinctly point to an ideal of conduct which one is supposed to keep ever in view, and none would be willing to admit themselves unresponsive to this ideal.

Every civilized man wishes to be considered a gentleman, though few are ready to live up to all that this involves in the way of high thought, speech, and action. Too often do mortals lose sight of the ideal and admit some "intruding belief, forgetting that through divine help we can forbid this entrance" (Science and Health, p. 393). In the epistle of James we find a sharp contrast made between "hearers" and "doers" of the word. The first he compares to a man who looks at his own face in a mirror, then turns away and "straightway forgetteth what manner of man he was." Then we find the apostle presenting quite another type, the spiritually awakened, the one who has looked into "the perfect law of liberty, and continueth therein." Of such James says, "He being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed."

This teaching is wonderfully in accord with Christian Science, in its declaration of "the perfect law of liberty," which is realized only as the perfect man—God's reflection—is seen in the mirror of divine Science. A material concept of man fails to give freedom, hence Mrs. Eddy's insistence upon the fact of man's spiritual nature as God's likeness. This is no mere theory to be contended for, but an eternal fact, the knowledge of which is indispensable in gaining dominion over the body as well as over sin and disease. No one can deny that it was Jesus' spirituality which distinguished him from those about him, and which called forth such astonishment, when he stilled the tempest with a word, that those with him asked, "What manner of man is this, that even the winds and the sea obey him!" The Master did not forget man's divine endowment, even in what seemed the greatest danger, as did the disciples, who cried out in terror, "Lord, save us: we perish." Had Christ Jesus believed man to be material and governed by material law, his question, "Why are ye fearful?" would have been uncalled for. In view of man's spiritual selfhood, which includes "dominion over all the earth and its hosts" (Science and Health, p. 102), we can see why Jesus not only "rebuked the winds and the sea," but also the forgetfulness of the disciples, when he said, "O ye of little faith."

The Christian Scientist is constantly being reminded by our Leader's inspired teachings "what manner of man" he really is, as God's child. Lest he should forget this all-important thing, he is taught to turn away from the material evidence which reports man as sick and sinful, or it may be in deadly peril, and to look continually at the divine ideal presented by Christ Jesus, of whom St. John says, "As he is, so are we in this world,"—not after death, be it observed, but here and now, if like the Master we are governed by Love and Truth.

The psalmist's admonition, "Forget not all his [God's] benefits," should ofttimes be heeded by us. He tells us how

Digitized by Google

the children of Israel, after they were safely led through the Red sea, sang the praises of their divine deliverer, but, alas, "they soon forgat his works," he tells us, which means that they forgot the truth of being which underlies these works in every age. The psalmist tells us in another place that God has crowned man "with glory and honor." This is surely well worth remembering if the temptation should ever present itself to indulge the sense of malice, hate, impurity, or dishonesty. St. John says that the one who is born of God cannot sin. It therefore devolves upon us to prove for ourselves and those about us that we have not looked unto "the perfect law of liberty" only to turn away and forget what it means to be God's children, doers, not mere hearers of the life-giving, freedom-bestowing word. Let us never forget ourselves, and thus fail to bring forth the fruits of Spirit, the "love, joy, peace, . . . gentleness, goodness, faith," which characterize man's true selfhood.

ANNIE M. KNOTT.

Perceiving the Ideal

How true it is that we truly see only what we truly are! This fact illumines St. John's declaration that we shall be like God when we see Him as He is. It reveals the significance of that spiritually poetic sense which recognizes beauty as an expression of Truth, and this ability to perceive the ideality of every divine manifestation, and to be made strong, true, and loving thereby, is an ever-present help toward the higher life. It continually ministered to the spiritual advance of our revered Leader, who has given us the scientific ground of her own aptitude in her statement that "when we learn the way in Christian Science and recognize man's spiritual being, we shall behold and understand God's creation,—all the glories of earth and heaven and man" (Science and Health, p. 264).

Mrs. Eddy has thus directed thought not only to the at-one-ment, the inseparableness of perfection and beauty, but to spiritual sense as the only diviner of beauty as well as truth, the only reliable interpreter of all things. She has made us see that growth in the perception and enjoyment of the ideal, the truly beautiful, naturally and necessarily attends our growth in the knowledge of God and His manifestations. Our delight is grounded not only "in the Lord," but in the glory of His appearing. Spiritual sense thus gains for us both the Science and the art of God. When this becomes true of our every-day experience, we can answer for ourselves, in all humility, to the inquiry of the psalmist, "Who shall ascend into the hill of the Lord? or who shall stand in his holy place?" We have passed the threshold of the faith that is understanding, and it is ours to "receive the blessing from the Lord, and righteousness from the God of [our] salvation."

It is interesting here to recall that, after having enumerated various afflictive possibilities of the aspiring life, the writer of the twenty-seventh psalm anchors his confidence of the divine protection in the fact that the one thing he most desires and will ever seek after is that he "may dwell in the house of the Lord," the realm of reality, all the days of his life, "to behold the beauty of the Lord." The disclosures of the beautiful are thus identified with divine revelation. Its perception is made an end of worship; and they who note the tribute to a perfect law and order presented in the perfection of form and proportion, the delicacy and charm of outline and texture, the richness and refinement of color found in the little children of the woods and pastures these days,—they who, denying the claims of materiality, have learned to see and rejoice in the immaculate splendors of so simple and yet so wondrous a thing as a violet or a lady's-slipper,—these enter into the psalmist's thought with praise, for by their responsive companionship with that which speaks ever of Truth and Love they are being helped to hear the word which was spoken to Moses out of the glowing bush at Horeb.

Attempts are constantly being made to define beauty in terms of the material, but all must fail, because it does not belong to anything that is unideal, it cannot be classified with that which is transitory and subject to decay. Indeed, it eludes measurement and specification, and for the reason that it is infinite. It is the order of the divine appearing, "the beauty of the Lord" is His inseparable glory; it is the mark of the transcendence of Spirit, the inherent quality of the good; and the belief that it pertains to matter is as mistaken as the belief that Soul is in body.

One's rejoicing in the sunset is increased when he remembers that the earth is hung in the heavens, encircled with this unfading magnificence of color, a coronal radiance of light which in the morning and the evening emblazons the way for ascending thought. He doubly rejoices when he has so awakened to truth that spiritual sense enters into and claims its own in this and every inspiring human vision, thus bringing us a constant reminder that God "hath made everything beautiful in his time," and that we are privileged to walk before Him every hour of the day "in the beauty of holiness."

JOHN B. WILLIS.

"Well done"

IN the *Sentinel* of May 14, 1904, Mrs. Eddy wrote as follows of one who was retiring from a place in Christian Science work which he had filled with credit to himself and much usefulness to the cause for which he had unselfishly labored:—

"He retires crowned with honors—his Teacher and Leader loving him, his students praising him, and the race benefited by his labors."

May we not with justice apply this commendation to Alfred Farlow and Judge Septimus J. Hanna, who have recently retired from the committee on publication and the board of lectureship respectively. These men have labored long and faithfully in the positions they have occupied, and the thanks and good wishes of all Christian Scientists are due them for what they have accomplished. From a letter written by Mr. Farlow to the Board of Directors of The Mother Church, we quote as follows:—

"Notwithstanding the long leave of absence which you have so kindly allowed me, it still seems unwise for me to resume the activities of the committee on publication. Hence I am writing to request that you allow me to retire from the duties of this department of our church.

"In taking this step, I desire to express heartfelt thanks to you for your ever-hearty support and uniform kindness, and if it is proper in such a letter as this, I would express gratitude to the entire Christian Science field for their splendid cooperation in all the matters pertaining to this branch of the Christian Science work. May I also express my best wishes for the future prosperity of the publication committee department."

Judge Hanna's letter to the Board of Directors is as follows:—

"After much careful consideration, I have concluded to request the Christian Science Board of Directors not to reappoint me as a member of the Christian Science board of lectureship.

"In this connection I wish to express my deep appreciation of the fact that I was deemed worthy of a place in this

Digitized by Google

important branch of service in our movement. I desire also to speak of the joy I found in this sacred service.

"Nevertheless, in view of other public work coming within the scope of my duty, the added care of an increasing number of students, and all the incidental activities pertaining to the life of a Christian Science practitioner, I feel that in withdrawing from the lecture field I am only exchanging one kind of labor for another.

"In taking this step I wish to express my sincere thanks for the unvarying kindness and courtesy shown me by the Christian Science Board of Directors, and for their numerous evidences of brotherly love and interest throughout this relationship."

Among the Churches

Current Notes

MARQUETTE, MICH.—First Church of Christ, Scientist, began on Easter Sunday to hold regular monthly services at the Upper Peninsula Branch Prison. This is the institution to which come the long-term and life prisoners, there being no capital punishment in this state. At present there are three hundred and thirty-one inmates, fifty of them being in for life. Attendance at divine service is not compulsory, but at our first meeting about one hundred and sixty were present, and at the second, one hundred and eighty. The regular order of service, with the omission of one hymn and the notices, is used, the hymns being sung by the church soloist.

The lessons have been so wonderfully appropriate to the occasion, the first one being "Probation after Death," and the second, "Adam and Fallen Man," that the first reader announced emphatically that these Lesson-Sermons were read by all Christian Science churches all over the world on these particular Sundays. The men listen with the closest attention, and nearly all of them avail themselves of the literature brought for distribution and left by the door when they go down to their cells. The prison wardens tell us that we draw a larger proportion of the men than other denominations do. The readers and musicians consider this work a great privilege, and they are very grateful for the opportunity to spread the gospel of good works in such a place.

Correspondence.

WICHITA, KAN.—Without pomp and with very little ceremony the corner-stone for the new church that local Christian Scientists are constructing on North Lawrence avenue, was laid yesterday [May 6]. The work will be rushed until the first story is finished, and this will then be used for services by the organization, which is now holding services in Philharmony Hall.—*Wichita Daily Eagle.*

The Lectures

Boston, Mass.

Clarence C. Eaton, a member of the Christian Science board of lectureship, delivered a lecture Friday evening [May 29] on Christian Science, under the auspices of The Mother Church, The First Church of Christ, Scientist, Boston, Mass., in the church edifice. John C. Lathrop, first reader, introduced the lecturer, and said:—

It is observed that as the mission of Christian Science to humanity becomes better understood, and as the thoughts of mortals become prepared to receive it, this Science is embraced by a steadily increasing number with a whole-hearted and joyous acceptance, which assures ultimately the destruction of all human discords and the solution of every mortal problem. The world is restlessly and eagerly seeking to realize the fatherhood of God and the brotherhood of man, and to escape the persistent punishment of the ills and errors of the flesh. It finds in Christian Science an orderly, simple, and demonstrable system of Christian metaphysics, which, when understood, is proven to be the way to master these long-standing difficulties, to satisfy every good aspiration, and to meet all practical needs. Christian Science is a subject, therefore, which should engage the closest and most patient attention of all thinking persons.

The Christian Science Monitor.

✦

Berlin, Ontario, Canada

First Church of Christ, Scientist, was filled by a representative and appreciative audience to hear the lecture on Christian Science delivered by Bicknell Young. G. W. Allan of Toronto, member of the publication committee of Ontario, was the chairman of the evening, and his introductory remarks were as follows:—

A moment's meditation will remind us that our concepts are ever changing. The concept of yesterday differs from that of today as the view-point of today differs from that of yesterday. To us standing in the valley, the hill may seem to be among the clouds, but as we climb the mountainside, from our changed view-point our concept has changed, and we see the hills more plainly. Which of these views is the right one? All of them, none of them; that is, all are purely relative, for no one of them is absolute. All are better than any one, but all are purely relative. So tonight, if we get a view of life that is above the commonplace, let us not at the close of this evening say, "Yes, that was very beautiful, but we must get back to reality." Which is the real? Is the valley view, the commonplace view, the real one? Is it more real than the view from the mountain-top? Are we too prone to accept the commonplace as the test of the present? We do not consider that as the test of the past. All the difference between the great men and women of history and ourselves is, that we are prone to accept the commonplace, whereas the great men and women of yesterday have accepted the mountain view as the real.—*The Daily Telegraph.*

✧

New York, N. Y.

In introducing Virgil O. Strickler at the first of two lectures on Christian Science given at Third Church, Richard P. Verrall, first reader of First Church, said in part:—

The presence of this large gathering to listen to a lecture on Christian Science is indicative of a universal desire to know more of God. Since the beginning of religious history there never was a time when this desire was stronger or more fully met than it is today. Through Mrs. Eddy's inspired message, hundreds of thousands of people have been restored to health and happiness, and the gospel of a full salvation from sickness as well as sin is again being preached by the wayside. The teachings of Christian Science rest exclusively upon the Scriptures, and are especially designed to make religion practical in its application to human needs.

At the second lecture Harry H. Hess, first reader of Third Church, said in part:—

In the seventy-eighth psalm we read, "They spake against God; they said, Can God furnish a table in the wilderness?" This passage of Scripture indicates very clearly the opinion of the world with reference to spiritual power or influence, and this opinion has not changed materially during the years

Digitized by Google

that have elapsed since this psalm was written. The master Christian, however, met this question squarely with the declaration, "With God all things are possible;" and what is more, proved his words by his works.

The healing of the sick as practised by Christian Scientists today is, therefore, in accord with the teachings of Christ Jesus, though in direct opposition to material belief. Mrs. Eddy, the author of the text-book, "Science and Health with Key to the Scriptures," denominated her discovery Christian Science, and as proof that her book is an exposition of truth itself, or if you please, spiritual law, Christian Scientists point to the numerous cases of healing which have resulted from the study and application of this system. The importance of the proposition presented in Christian Science, and the convincing character of the evidence offered in its support, warrant an investigation, at least, on the part of every one.—*Correspondence.*

Chicago, Ill.

The introductory remarks of J. Edward Reilly, first reader, on the occasion of the lecture on Christian Science at Fourth Church, by Clarence W. Chadwick, were in part as follows:—

Christian Science is the all-important subject, for the reason that it is, or teaches, the Science of Life, involving the entire phenomena of existence, from the most insignificant detail of our every-day routine to the grand realization of immortality; it is the Science of Truth, defining the law, substance, intelligence, and harmony of God and His creation; it is the Science of Love, revealing the nature of God and His tender relationship to His children. In encompassing the height, depth, and breadth of its momentous proposition, Christian Science maintains a consistent agreement with the Scriptures, and claims not to be a new truth, but a new discovery of that truth which is never old and never new, that changeless truth which Christ Jesus taught and practised, and which is new only to the comprehension of mankind.

Correspondence.

Oklahoma City, Okla.

Bicknell Young, who lectured on Christian Science in the Overholser Opera House, was introduced by ex-Congressman Elmer E. Fulton, who said in part:—

No matter what our position is, whether as doubters or unbelievers, it seems to me we must concede that the nature of the claims which Christian Science makes, the character of the evidence it brings in support of these claims, and the phenomenal growth it has experienced, are such as to place it in a position where it is at least entitled to recognition and an attentive hearing.

While my knowledge of Christian Science is but limited, yet as I understand it one of the theories or doctrines it advocates is that health and happiness on earth, and the full enjoyment of this life with which God has blessed us, are not incompatible with salvation in the world to come. In other words, the believers in Christian Science do not have to die in order to get the full benefit of their faith; they maintain that health and happiness are the absolute right of every believer in God, and that in fact sickness and disease are incompatible with such belief; that disease is in fact akin to sin and exists merely at our pleasure, and should be, and can be, and is healed and cured the same as sin. If these are some of the things Christian Science teaches, and if these things are true, if these things can be done,—if sickness, disease, ill health, and the untold suffering entailed thereby, can be banished from the face of the earth,—then surely we must agree that Christian Science is the greatest boon offered suffering humanity since the time God gave to the world His only-begotten Son.—*Correspondence.*

Hibbing, Minn.

In introducing Judge Clifford P. Smith, who lectured on Christian Science, Atty. D. T. Collins said in part:—

It has been my good privilege during past years to hear some eminent lecturers on the subject of Christian Science, and from their lectures and from my own ordinary observations I long since concluded that the followers of the Christian Science movement were doing a great and noble work for humanity. In every city, village, and hamlet that boasts of any civilization, can be found Christian Science workers who are quietly and constantly giving unto suffering humanity blessings that no others give.—*Correspondence.*

Lectures to be Delivered

Appleton, Wis.—Virgil O. Strickler, Congregational Church, 8 p.m., June 26.

Altoona, Pa.—Judge Clifford P. Smith, Mishler Theater, 8 p.m., June 22.

Barre, Vt.—Rev. William P. McKenzie, Universalist Church, 8 p.m., June 30.

Durango, Col.—William R. Rathvon, June 29.

Grand Junction, Col.—William R. Rathvon, Congregational Church, 8 p.m., June 25.

Greenville, Ohio.—Rev. William P. McKenzie, St. Clair Memorial Hall, 3 p.m., June 21.

Hornsea, Yorkshire, England.—Col. William E. Fell, Public Rooms, 8 p.m., June 23.

McCook, Neb.—William R. Rathvon, Masonic Temple Opera House, 8:45 p.m., June 22.

McKenzie, Tenn.—Hon. Clarence A. Buskirk, Church Edifice, Main street, 8 p.m., June 23.

Oakland, Cal. (Fifth Church).—Francis J. Fluno, M.D., Grand Theater, East Fourteenth street and 90th avenue, 8 p.m., June 29.

Oakland, Cal. (Sixth Church).—Bicknell Young, Claremont Photo Theater, Telegraph avenue and 51st street, 8 p.m., June 29.

Oregon City, Ore.—Francis J. Fluno, M.D., Busch's Hall, corner Main and Eleventh streets, 8 p.m., June 25.

Pacific Grove, Cal.—Bicknell Young, T. A. Work Hall, 8 p.m., June 27.

Pittsburgh, Pa. (Third Church).—Virgil O. Strickler, Palm Garden, 8:15 p.m., June 28.

Punxsutawney, Pa.—Virgil O. Strickler, Jefferson Theater, 2:30 p.m., June 28.

Richmond, Cal.—Bicknell Young, Lincoln School Auditorium, Tenth street, between MacDonald and Bissell avenues, 8:15 p.m., June 28.

San Francisco, Cal. (Third Church).—Bicknell Young, Dreamland Rink, Steiner street, near Sutter street, 3 p.m., June 28.

Testimonies of Healing

I had such a glorious proof, in the year 1911, of the all-sustaining power of Truth as revealed through Christian Science, that I feel impelled to tell of it, with the hope that it may give fresh courage and help to some one passing through a like experience. On Christmas day, 1910, a member of my family was taken seriously ill. From that time till quite the end of the summer, it was one great anxiety, entailing a strain so intense, both physical and mental, that without Christian Science I must have broken down under it. For the first five months I either had to rise at three in the morning or did not go to bed until that time, and then was liable to be called at any minute; indeed, for one week of the time I never went to bed at all, but took what snatches of rest I could through the day. I was in constant attendance in a sick-room under peculiarly trying conditions. I had the full direction and management of a large house, a household of eleven people, including two hospital nurses. I had to take over and get some grasp and understanding of money and business matters, of which I was quite ignorant. I seldom could get out of doors, and never for more than half an hour.

The strain was great, but I came through without a break, having indeed proved the truth of Paul's words, "I can do all things through Christ which strengtheneth me." I do not mean to imply that I did not many times feel the strain, but Truth ever upheld me. On two occasions, in those weary night vigils, when I had a feeling that I could endure no longer, there quite suddenly came to me so clear a realization of God's all-presence and power that all sense of exhaustion left me, and I felt as fresh as though I had just got out of bed. This proves to us the truth of the prophet's words, "They that wait upon the Lord shall renew their strength."

It has all been so beautiful, so wonderful! And it has been my blessed privilege to see the clouds of sickness and helplessness gradually cleared away, and a return of health, strength, and reason, where to mortal sense recovery was not possible. All through this time I was ever being warned by friends who were not Scientists that I must break under the strain, that I must have rest and change, and that never again would I recover my natural sleep. I can only say that I did not break down, and I had no change; my sleep is now sounder, sweeter, and more unbroken than it has ever been.

I write from a heart full of thankfulness to God, and of gratitude to Mrs. Eddy and to those dear friends who so lovingly and faithfully helped to keep my feet firm on the rock and my face turned ever to the light. As I look back, I see how wonderfully I have been led all the way, not alone in the experience above given, but in many other ways of which I cannot speak. As I feel the daily loosening grip of the old troubles and worries and sorrows, which seemed to hold me as in a vise, and now see the falsity and sham of much that made my world in the past, I view life from a new and ever widening outlook, and can but say, Thank God for Christian Science!

Even though at times I seem to lose ground and to be threatened with engulfment in the old mortal beliefs, I know it is only a "seeming," for I know the truth, and no one and nothing can take that knowledge from me. These two Bible verses in my darkest moments brought me light, calm, and peace: "Thou wilt keep him in perfect peace, whose mind is stayed on thee." "Be still, and know that I am God."

EMILY M. CHRISTIAN, St. Leonards-on-Sea, England.

With a heart full of gratitude for many blessings gained through the study of Christian Science, I take pleasure in sending my testimony, which may be helpful to other sufferers who are afflicted with a similar ailment. I had suffered from a throat affection for about ten years. Every spring I had a severe attack, but finally the thought came to me that being sick so much acted as a barrier to my progress, and that I must have relief. Instead of using medicine as usual, I turned to Christian Science, and I can thankfully say that in one or two treatments I was healed. I have had no recurrence of this trouble, although later I was affected with severe rheumatism, and compelled to take to my bed. The pain was intense, but through the aid of a practitioner I was relieved after a few treatments, and with fifteen treatments I was healed.—A. C. SPINTI, Milwaukee, Wis.

✧

I would like to tell what Christian Science has done for me, with the hope that I may thus help others. Over three years ago, after having bitterly opposed this teaching for seventeen months, I gradually became interested and began to read the Lesson-Sermons with my husband. Six weeks later our oldest little girl was taken quite ill one night. I dosed her as usual with a drug, for I was not quite satisfied to trust her to Christian Science treatment. The medicine had no effect, however, and her fever continued alarmingly high. The second day I telephoned for a physician, who diagnosed the case as scarlet fever and a throat disease. He took a culture of the child's throat and left, saying he would return the next morning, and told me to use a material remedy which he prescribed.

After the doctor left I thought, Well, if she has those two terrible diseases, God is the only one who can heal her. I therefore had my husband telephone a Christian Science practitioner, who immediately began treatment absently. The next morning when the doctor arrived he said, "The health department notified me about ten o'clock last evening that the culture did not develop." He then walked to the child's bed to examine the rash again, and said: "This rash has changed overnight. Why, this must be only a stomach rash." He wished to discharge the case, but I was still so full of fear that I insisted upon his returning again the next day; and he did. The fourth day he said there was no use in his coming any more, but if the fever still continued he would put up the scarlet fever sign and call it one of those mysterious cases.

The child's temperature went down, and I telephoned the doctor to that effect the next morning. I asked him how I would know if it was scarlet fever. He laughed and said, "Oh, you will know it all right, for she will peel, and her little sister will take it." All this time I gave her no medicine and the practitioner was giving absent treatment. In ten days' time she did "peel," and the little sister was taken ill. I am sure now, however, that if I had not had so much fear, she need not have been sick. However, within one week she was entirely healed.

Another healing of which I would like to tell, is of a case of surgery. The little sister was playing with a neighbor's child, and she fell, injuring her arm badly just at the elbow. We instantly notified a practitioner and told her that we would take the child to our family physician. She said that would be all right and she would go to work immediately for the little one. When we arrived at the doctor's office, he examined the arm and said it looked so strange that he would advise us to take her to a surgeon. This we did. The surgeon looked at it and asked if the arm had ever been broken before. It had not, we told him. "Well," he said, "it is a

Digitized by Google

strange case, so I'll bandage it and you keep cold water on it and bring her here Sunday morning." This was on a Thursday morning. We went from there to the practitioner, who kindly and lovingly reminded us that Truth needed no cold water.

By Sunday the arm was very much swollen, and when the surgeon examined it again he said the swelling was caused by the cold water, which made the bandage shrink. Meantime, we had not put a drop of water on it! He could find no break, so he bandaged the arm, thinking it would be more comfortable for the child while traveling, as we were to leave the city. We wrote to a practitioner in Chicago (the accident occurred in Louisville, Ky.) and had absent treatment for about two weeks. The child got along well, and has had no trouble with her arm since. My husband also has been healed of colds and rheumatism.

For all these manifestations of God's love and care we are very grateful, but even more thankful for having been brought closer to God and for having learned that He is ever ready to help us. It is a joy and a comfort to know that Christian Science is so simple that even little children can understand it and help each other.

KATE THOMPSON BEARD, Chicago, Ill.

✧

It is now nearly twelve years since I first began the study of Christian Science. From the first reading of Science and Health I was very much impressed with the entire reasonableness of its outlook, and indeed with what seemed to me then, and still seems, the obvious and self-evident truth of the solution of the life-problem, and the sublime answer contained within its pages to the eternal query of sickness and sin.

Although nominally a church-member and baptized and confirmed, I had never given religion, or indeed anything but my own pleasures, a really serious thought. In some ways, perhaps, this was as well for one who would never have had the moral courage fairly to face questions to which there would have been no answer; one who would have shut his eyes to facts and fancies alike and gone stumbling on through the darkness, bruising himself not a little and others a great deal. Fortunately for myself, the questions and answers came simultaneously, and I can never be sufficiently grateful for the real salvation which that implies. The first reading of Science and Health seemed to carry me off my feet, the second to set me on them; but a practical application was needed to give me any real firmness, and I got it.

An intermittent, lingering, and at times very painful internal trouble made its appearance. I had help from more than one practitioner at times, but did not seem to get any better. I say did not seem, because on looking back I can see that real progress was being made all the while, and that mere physical relief was the last and least of my needs at that time. To make a long story short, the trouble continued with various ups and downs for some years, during which time I had far more help from friends than I ever deserved, until finally the ailment disappeared altogether. It seemed to go out one day just like a candle, and beyond an occasional very feeble attempt at a flicker it has never returned. "Exactly!" some skeptics may say; "you grew out of it!" and I confidently believe that is what I did do.

Yet it is not for what I grew out of that I am so grateful, but for what I grew into. I grew into a better and larger understanding of God as Principle, as the all-seeing, all-knowing, and all-pervading Mind, which "always has met and always will meet every human need" (Science and Health, p. 494). No amount of medicine could have taught me this, or that the miracles of Jesus of Nazareth were neither the result of personal magnetism nor a special gift to a single being, but were the demonstrations of an absolute understanding of divine Mind.

The care and effort which seem to have been necessary for me to make the above demonstration bear convincing testimony to the magnitude and grandeur of the colossal work of our beloved Leader in establishing upon earth, for all time, this eternal truth. It is scarcely a matter for surprise that Christian Scientists seldom close their testimonies without recording their deep gratitude and respect for their Leader. No worthy motive would attempt or expect to debar them from doing so. Among the innumerable blessings that come to one in Christian Science, perhaps the greatest of all is that it really is the key which unlocks the Bible and reveals its treasures to all those who have sufficient faith and humility to turn that key. Christian Science has indeed done much for me; I only wish I had done a hundredth part as much for it.—CECIL F. ARMSTRONG, London, England.

✧

I have most fervently desired wisdom and understanding, and have been led to see that I must trust in the Lord with all my heart, and lean not to mine own understanding. Through the study of "Science and Health with Key to the Scriptures" I have been able to overcome bowel disorder of long standing. I have been greatly helped through the writings and testimonies in the *Journal* and *Sentinel;* and the Lesson-Sermon, with the Bible, is my daily food. My desire is to have more and more of the Mind of Christ. I am so situated that I can seldom get to the public place of worship, even to the Sunday service; but Truth and Love are over all, and true worship is confined to neither time nor place. I desire to be more thankful to God, and grateful to our beloved Leader, Mrs. Eddy, whose pure life and work made it possible for us to get a more spiritual interpretation of the Scriptures.

I consider my healing complete and have lost all fear of any recurrence of the trouble. I am grateful beyond expression for that, and for all other blessings which have come to me through my knowledge and acceptance of Christian Science.—ELIZABETH R. KING, Southampton, L. I., N. Y.

✧

I wish to express my gratitude to Christian Science for the many blessings I have enjoyed since I began its study four years ago. I have been healed of stomach trouble and all the ills that go with it. I have also been rescued from the need of a surgical operation.

At the time I began to study this teaching, one of our boys, then seven years old, was very delicate. He had not grown and had gained only six pounds in four years. He could wear a suit made for a three-year-old boy. I was advised by the practitioner, to whom I went for treatment for him, to take him to the Christian Science Sunday school. We lived five and a half miles from Elgin and I told her I could not take the children so far (I had four old enough to go), but she told me to try to take him for a few weeks at least, and I did. In two weeks his whole appearance had changed. He was a happy, healthy, fearless child. How he grew, and how he loved the Sunday school! In two years he had grown enough to make up for the years he had not grown, and now he is as large as any twelve-year-old boy, although he is just past eleven.

Here I may say that the practitioner did not treat him; she said it was my own work and I must do it. Then she told me how to work in Science, and at first I was quite angry and a great deal disappointed, for I had known of Christian

Digitized by Google

Science only a few weeks and felt that I could never help him. I did as she told me to do, however, and with the Sunday school to aid in the good work it was perfectly done. For this and many other blessings I am truly thankful to God, and grateful to our dear Leader, Mrs. Eddy.

JENNIE LAUVER KEVERN, Elgin, Ill.

❖

September, 1886, found me weary of life, for I could not find among the many material remedies any cure for two so-called incurable diseases,— milk leg and an abnormal growth. I had worn a bandage on my leg for three years and could not go without it an hour without suffering great pain and swelling of the limb. There was also a large growth in my side, and our family physician was called in to examine me. He said to my husband, "She has one chance out of ten to live, and that is by the knife," and advised me to go to a hospital to have the growth removed.

About this time a brother and a sister of my husband were healed through Christian Science after all medical aid had failed, and as a practitioner was then in our little town, I wished to try this healing method, for I had much faith in God and was willing to turn to Him if I only knew how. How to pray aright was what I greatly desired to know, for I had come to believe that if our prayers were not answered it was because we prayed amiss. With the consent of my husband I went to the practitioner for treatment, and he talked very differently from the way our minister did. He encouraged me by saying that God could and would heal me if I came with the desire to know and to do His will.

I cannot tell of the surprise and joy and peace and love that filled my whole being and made me "every whit whole." I removed the bandage from my limb, and I never suffered any more pain. The abnormal growth also disappeared. I received treatment just one week. Neither the milk leg nor the abnormal growth has ever made its appearance since I was healed so many years ago.

The practitioner advised me to get a copy of Science and Health. I did so, and I cannot express my happiness when I learned that our Father-Mother God had not made evil, and had not put life, substance, and intelligence in matter; that I could look beyond and above the flesh and know that I was the image and likeness of God, whom I wanted to serve. I have had many trials in the flesh, but through the understanding of divine Love I have had many proofs of God's healing power. I have never grown weary of looking to Him for comfort, peace, and love; and to say I am thankful for Christian Science but feebly expresses my feeling. I am deeply grateful to Mrs. Eddy, who worked unceasingly for me and mine and all the world, to give us this truth through which we all can be happy if we will.

I. ALICE TUTTLE, Stillwater, Okla.

❖

My thought goes out in gratitude for physical healing and the understanding that Christ in Science has brought to me of the "life that maketh all things new," for "the freer step, the fuller breath" in which I am rejoicing today. Before coming into Christian Science, I did not know what it meant to take a free, full breath. I was a sufferer from asthma of a peculiarly distressing type. At first it came upon me as an occasional attack during the damp or extreme cold of the winter season, alternating with acute lung trouble; finally it became an almost constant companion, complicated with severe kidney and stomach disorders. I went north and south, east and west, in search of a cure, but all to no avail. The doctors' decision was that I had lung trouble and was not long for this world.

After a sojourn of some months in the Rocky mountains, I returned to my home city, Chicago, thoroughly disheartened and discouraged. I became very much worse, and at last turned to Christian Science. I had been reminded of this teaching in Denver, as it was from a lady of that city that I had first learned of it on the train. She had told me of the wonderful healing, through a Chicago practitioner, of a malignant growth in its last and so-called fatal stage about twenty years ago. I did not investigate this teaching, however, until I had thoroughly proved that *materia medica* could do nothing for me. It is about thirteen years since I came into Christian Science, and I have been completely healed of all those complaints which to me were so painfully real. Truth has been my only physician, and is my remedy at hand under all circumstances and conditions. I am rejoicing in perfect health, and everybody says I look as if I had never been ill in my life.

We are all truly grateful for the physical healing, but immeasurably more so for the understanding which enables one not only to help one's self, but also to lift others out of despondency into a knowledge of the blessed truth which is healing and regenerating all mankind. I am thankful to God, and grateful to Mrs. Eddy for her wonderful book, "Science and Health with Key to the Scriptures," which is teaching and leading us into a knowledge of the Christ and his saving truth.—MARIE B. LYMAN, Los Angeles, Cal.

❖

[Translated from the German]

I have long felt the desire to express my gratitude for all the good that Christian Science has brought me, and the healing of a severe illness which I experienced last summer forbids the further delay of such an expression.

About the middle of June, 1913, I was suddenly seized with what seemed a very serious attack of pleurisy, accompanied by all its symptoms, such as high fever and expectoration of blood. My daughter, who had come from a distance and was visiting with me, wired a Christian Science practitioner for help. With three visits and absent treatment from the practitioner I was restored in a comparatively short time. After four weeks had elapsed I was on my way to the Tyrol, where I keenly enjoyed the wonderful beauties of nature. In order to satisfy the members of my family I had a physician make a thorough examination. He pronounced me a perfectly well woman, and congratulated my son, who was accompanying me, upon having such a well mother.

In former years I used to be overcome by a sense of great fear when left alone, a fear that something terrible might occur, but thanks be to God, I am free from this distressing condition now. I live alone, and go out and travel alone with a sense of the omnipresence of God, good, as my protection.

My children and grandchildren are also partakers of the blessings of Christian Science, and for all this my thankfulness goes out to God, and my gratitude to our dear Leader, Mrs. Eddy.

MARTHA ZAHN, Neukölln b. Berlin, Germany

❖

It is now several years since I first heard of Christian Science, and I wish to express my gratitude for what it has done and is doing for me. I did not come to it for physical healing, but in the hope of gaining a knowledge of "the peace of God, which passeth all understanding," and I am thankful to say I have now attained a knowledge of divine Love and the peace of God that nothing can take away.

When I took up the study of Christian Science I was

Digitized by Google

spring of 1908, I was suffering from an abscess (I had had one or more annually for several years) and my health was very poor; in fact, I was considered a semiinvalid. With the help of a Christian Science practitioner the abscess soon passed away with very little trouble and I have never had another since. This is to me very beautiful, for the doctor told me I would probably be afflicted in this way all my life. There are many other smaller ailments that have also disappeared into their native nothingness. It is impossible to express what I feel in words, but my earnest desire is to put into daily practice what I am learning from the study of the Lesson-Sermons. This is the only way I can prove my thankfulness to God, and my gratitude to Mrs. Eddy for giving us "Science and Health with Key to the Scriptures."

WINIFRED DALE, London, England.

✧

As written in the *Monitor*, "Thanksgiving is thanksliving," and we are trying to live our gratitude for the many good things Christian Science has given this household. Healing, both physical and spiritual, has been ours, and many times the present availability of the great Physician has been proven to us. Dispositions have been improved, habits have been dropped, and lives have been improved in every way. The last of three children was brought to us in Science, and the birth was absolutely painless. The mother was up the second day, and on the third day took entire charge of the child. The nurse left the same day. The attending physician marveled and carried away with her some literature, at the same time expressing the desire to know more about Christian Science. At one time we had three cases of severe illness in the family, one child being out of her head the first night; but in each case the conditions were successfully met and overcome through absent treatment in Christian Science, and by the fifth night all were free and well. Thus we are trying "thanksliving," and giving thanks for this new-old Science.—L. D. MACGIBENY, Woodbury Heights, N. J.

✧

[Translated from the French]

The following testimony is written in gratitude to God for the blessings which I have experienced through Christian Science.

For twenty years I suffered with nervousness, which gradually manifested itself in severe attacks of headache and a stomach disorder, and no food agreed with me unless drugs were resorted to. During a temporary stay in Geneva I made the acquaintance of a Christian Science practitioner, who elucidated the subject to me with all kindness and love. After a few treatments all the ailments above mentioned vanished, and I am now able to eat everything without using drugs.

For this healing I am indeed thankful to God, who through the Discoverer and Founder of Christian Science has brought to us the truth and enabled us to realize its healing power.

FRAU JEANNE DEMENGA, Geneva, Switzerland.

✧ ✧ ✧

God's temple rears its stately walls
To heaven,
And the voiceless song of unsaid prayer
Ascends to Him
Who needs no halls or structures fair.

In sunny fields and shady wood,
All error yields to the word of good.

A. H. LEVY.

From Our Exchanges

[*Pacific Christian Advocate*]

Jesus could not be called, in the ordinary sense, a reformer. He did nothing that we of this age expect a reformer to do. Indeed, there are only two of his utterances that aimed directly at leadership in reform measures. He opposed easy divorce and he condemned official graft when he said, "Render unto Cæsar the things that are Cæsar's." Slavery was all about him, a more oppressive bondage than America ever knew; but he did not strike off the shackles of a single bondman. Drunkards reeled through the streets of Jerusalem, but he had no crusade against the liquor traffic. Courtesans flaunted their signals of vice along his pathway, but he established no rescue homes. He erected no house of mercy, founded no hospitals, formed no lepers' colony; no asylums for the blind bore the stamp of his genius for doing good. It has been said that he was quite as remarkable for what he did not do as he was for what he did. He did none of the things that we look for the great philanthropists to do.

What then shall we say of Jesus? Was his marvelous altruism merely a matter of words? By no means; he was immeasurably the greatest benefactor the world ever saw. He established the brotherhood of man. He enunciated the principles of all reform. His golden rule was framed to free every slave, overthrow every unholy traffic, forever do away with "man's inhumanity to man." He put wrong on the scaffold and right on the throne, all around the globe. His "good Samaritan" was by him placed in the lead of all eleemosynary effort in all succeeding generations of men. He did more; he arranged to enthrone himself in the affections of men, and then to bring in everlasting righteousness. He planned his own incarnation in the life of the world, and thus to secure removal of the burdens and every possible mitigation of its woes.

We take no crown from the brow of our Lord when we say that he was no reformer; but we put upon his head one of the brightest diadems when we say that he is the source, the inspiration, and the motive power of every movement for the uplift of humanity in all the world.

[*The Christian Register*]

Good people, in their pious reference of affliction to a divine will, are unconscious how often that reference produces anything but pious feelings in the breast of the sufferers. And their revolt is just. The consolation involves a false comfort and a twisted course of cause and effect, and it is oblivious of the real sources of evil. In candid truth, when we hear the words "Thy will be done" repeated with reference to what has come about by flouting and disobeying God's will or by shutting the eyes to its plain direction, they stick in the throat. "Would God Thy will were done" would suit the case better; and this is the sense the phrase has in the Lord's Prayer, from which it is torn in a way that reverses its meaning. "Why did God afflict us?" The reply should often be flat, "He didn't."

[Dr. J. H. Jowett in *The Christian World*]

What a change from the old Saul in Adam to the new Paul in Christ! Let me have one other final glimpse at these amazing contrasts. Take this from his old days, under his old ancestry, in his old world: "As touching zeal, persecuting the church." And take also this: "And Saul, yet breathing threatening and slaughter against the disciples of the Lord." And then take this from the new days in the new ancestry, in the new world: "Love never faileth: . . .

Digitized by Google

the greatest of these is love." What a revolution! In his old life he believed in the ministry of force; in his new life he believed in the constraining ministry of love. In the one life he sought to coerce men into his faith; in the other he seeks to woo them. In the one he uses the compulsion of the sword; in the other the constraint of the spirit. In the one he drives; in the other he wins. But, I say, what a wonderful revolution! This man had met the Lord on the way to Damascus, and he has beaten his sword into a plowshare, and his spear into a pruning-hook, and in the realm of faith and religion he is no longer a warrior; he has become a father, quietly and patiently raising the flowers and fruits of the Spirit. "Old things are passed away."

[Rev. Nehemiah Boynton, D.D., in *The Advance*]

The value of history is only incidentally the record of events; it is essentially the appreciation of the development of the life of the spirit in the experiences, in the discoveries, the inventions, and the institutions of men. The world is one great processional, and every age is but a pageant portraying the onward march of the conquering spirit. The fact of the spiritual life is one of the growing facts of history. It never exhausts itself in feeling or in knowledge. It tries things out; it is the footprint on the sands of time. It is the cheerful yesterday. It is the testimony of the rocks. It is the progress of the race. It is the increasing purpose, running doubtless through the ages.

[Rev. Percy T. Olton in *The Churchman*]

To make truth the child of ignorance, and liberty the denial of obligation, and progress the result of anarchy, is indeed to rule God out of His universe. To think of life as disconnected, unrelated, and void of experience, is to reduce man to something lower than the brute creation. To exalt instinct above reason, and emotion above intellect, and the primal passions above the spiritual needs, is to declare that life and immortality are vain dreams. There can be no dependable foundations upon which to rest human endeavor, or to base human hope, if the past has nothing to give us and the present only that which it has gained for itself.

[Rev. R. J. Campbell in *The Christian Commonwealth*]

We are constituted for a greater than earthly life can furnish even at the best; this is not our home; the spirit can never be satisfied amid the things of sense; we are in exile, but never without God. I do not think any one can contemplate the amazing contradictions of human experience without being struck by the fact that we seem to belong to two worlds and are continually exhibiting tokens of both. You have not accounted for man when you have given his earthly pedigree; there is something else that clings about him and gives intimation of a higher origin than the dust and the clay.

[*The Congregationalist and Christian World*]

There is a time to grow, as the blossoming and gardening days of May bear testimony. There is a time for growth, a springtide of adventure also in the human soul and in the life of the church. The significant thing is that growth nowhere takes place without a consenting spirit on the part of that which grows. The buds and seeds are ready for the spring. Faith and hope in the soul ought to be ready for the least encouragement of circumstance. If the church is worth its salt in any community, it is an organization on the lookout for opportunities of service, and diligent in making use of them when they appear.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

❖

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

❖

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

❖

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

❖

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ANNE H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The national forest reservation commission has just approved the purchase of the Pisgah forest from the estate of the late George W. Vanderbilt at an average price of five dollars an acre. The tract consists of eighty-six thousand seven hundred acres, and the total cost is therefore four hundred and thirty-three thousand five hundred dollars. The price paid is less than the average for other tracts already acquired, although the Pisgah forest has been developed by its former owner into one of the best forest properties in the country. This is the second time that the commission has had the purchase of this tract under consideration. Once before, the question of its purchase was taken up, but the commission did not deem it advisable to acquire it at that time.

The tract includes portions of Transylvania, Henders, n, Buncombe, and Hayward counties in North Carolina. It covers the entire eastern slope and portions of the northern and western slopes of the Pisgah range, one of the most prominent of the southern Appalachians. Its forests influence for the most part tributaries of the French Broad river, which unites with the Holstein river at Knoxville, Tenn., to form the Tennessee river. Mrs. Vanderbilt wishing the tract to remain intact and to become the property of the people, offered it at a figure two hundred thousand dollars less than that at which it was held by her husband.

It is proposed to make the tract a game refuge for the preservation of the fauna of the eastern mountains. It is particularly well suited to this purpose, since it is already well stocked with game and fish, including deer, turkey, and pheasants; and in the streams rainbow trout and brook trout, with which they have been systematically stocked from year to year. With this purchase, and with others just approved, the total area approved for purchase under the Weeks law in the eastern mountains is one million seventy-seven thousand acres.

The electrical control system to operate the Panama canal is said to be the most advanced method ever attempted in the field of transportation. The specifications for the entire generation, lock control, and distribution of electricity have decided advantages over hydraulic or air systems. Leading engineers from many parts of the world continue to arrive at the canal with a view of learning the details of the system while the work of preparation is going on. It is expected that the surplus water of Gatun lake will ultimately supply the electrical energy for the entire Canal Zone.

Electricity generated at the Gatun powerhouse will be distributed for the operation of the three big locks for the permanent machine shops, to the dry docks, to the coal-handling plants, and various other auxiliaries. It will also be utilized to light the locks and the villages of the Canal Zone. As fuel is scarce and consequently costly, it is also expected that electricity will be used on an extensive scale in the homes, especially for cooking purposes. The electrification of the Panama railroad is likewise under consideration.

Two hundred and twenty-six great congresses and conventions, with memberships running as high as one hundred thousand persons, have voted to make San Francisco their headquarters in 1915. These, with sessions ranging from four to fifteen days each, will make an average of four conventions daily during the life of the exposition; and the number already scheduled is not half the full number expected. Fully three thousand other conventions, many of them made up of organizations whose membership is comprised in a dozen foreign nations, are in correspondence, and thousands of their members are planning to meet at San Francisco.

The secretary of the British committee of the Panama-Pacific exposition recently sailed from England for San Francisco, to confer with the authorities as to the best means of enabling British exhibitors to participate in the exhibition. Efforts are being made to induce the government to appoint an honorary commission to carry on the work of organization. If the government does not do this, the committee is determined to do its utmost to make the British exhibition at the Panama exposition a great success.

Sir Thomas Shaughnessy, president of the Canadian Pacific railway, has opened the Bassano dam, the largest dam in the world. It is a gigantic structure built to conserve the waters of Bow river, Alberta, for the irrigation of nearly half a million acres of western Canadian land. Stretching seven thousand feet in length and containing over a million cubic feet of earth and concrete, the Bassano dam took three years to build.

The Massachusetts House has ordered the bill for the improvement of the Merrimac river to be engrossed. The measure provides for the dredging of a channel so as to make the river navigable as far as Ward's hill in the city of Lowell, and also for the expenditure of one million dollars by the commonwealth, provided, however, upon a government appropriation of six million dollars.

Volcanic eruption on Mt. Lassen, in northern California, occurred at five o'clock in the afternoon of May 30. A crater twenty-five by forty feet, with lateral fissures, was found. Mud and boulders lie from one to two feet deep over an area two hundred feet in diameter.

The Bronx (N. Y.) parkway commission is to acquire for the city of New York a strip of land six hundred feet wide on both sides of the Bronx river from Bronx park to the Kensico reservoir, a distance of fifteen miles. It is believed that the land necessary to be bought for the project, and all measures necessary for the establishment of the parkway and for saving purposes, will cost four million dollars.

The demand in recent years for all sorts of waste has grown until there is a national association of dealers in waste materials. It is surprising that at the recent annual meeting of the association it was found that the members had transacted a business during the year amounting in the aggregate to seven hundred million dollars, and this in materials that were formerly considered worthless.

Issues similar to those in the California case just decided in the Federal district court at Los Angeles, are involved in the Motion Company case of Wyoming argued before the supreme court in May. In the California case the court held invalid the order of President Taft in 1909 withdrawing from entry coal lands valued at from two hundred and fifty million to one billion dollars.

The "thread trust" was adjudged a combination in restraint of trade and ordered dissolved by the United States district court of New Jersey at Trenton. Each of the defendants is ordered to dispose of holdings in other companies, and directors and officers are enjoined from making or carrying out any trade agreements or understanding between the various corporations.

Five hundred teachers of English recently gathered in Tokio, Japan, for their second conference in the history of the country. Of the total about 5 per cent were foreigners, English and American men and women. The entire proceedings of the conference were conducted in English and the meeting lasted over ten days. The first of these conferences was held at Kioto last year.

Early indications point to one of the largest English walnut crops that southern California has ever produced. The trade of the county has already bargained to take the greater portion of the full output, and the probable profit of the growers will be about three million dollars.

On May 27 the American University, as the graduate school being established in Washington, D. C., by the Methodist Episcopal church, has been called, dedicated with appropriate ceremonies the first two buildings on its ample campus in the northwest suburbs of the city.

Siegfried Wagner and his mother have announced their intention of presenting to the German people the building where Wagner operas are given in Bayreuth as well as Villa Wahnfried, together with the treasures and properties collected by the great composer.

The aluminum output last year in the United States was seventy-two and one third million pounds. There has been a steady yearly increase since 1888, when only eight thousand pounds were produced.

The public service commission of New York has opened bids for the construction of the two proposed tunnels under the East river from down-town Manhattan to Brooklyn. The total was $12,461,000.

The Mongolian government has for the third time presented a note to the American and European ministers requesting recognition of its autonomy.

The United States Steel Corporation will erect a ten million-dollar plant in Canada at the earliest possible moment.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI June 27, 1914 No. 43

The Laborer's Hire

JUDGE CLIFFORD P. SMITH

A CONTRIVANCE that is quite popular with those physicians who are unwilling to accept the natural law of demand and supply, but insist on an artificial advantage, is a bill that is framed so as to give medical doctors the sole right or exclusive privilege of receiving compensation for services. An instance of this is found in the present law of an American state, which reads as follows: "Any person is regarded as practising medicine who in any manner holds himself out to the public as being engaged in the diagnosis and treatment of diseases or injuries or deformities of human beings, or who suggests, recommends, or prescribes any form of treatment for the intended palliation, relief, or cure of any physical or mental ailment of any person, with the intention of receiving therefor, either directly or indirectly, any fee, gift, or compensation."

From a close reading of this spurious definition one can see that all of it depends on the last clause. It means, in short, that any person is to be regarded as practising medicine who does this or that "with the intention of receiving therefor, either directly or indirectly, any fee, gift, or compensation." To illustrate: If a clergyman should deem it his official duty (for which he is paid) to pray for the recovery of a parishioner, or to recommend something else for "palliation, relief, or cure," he would be forbidden by this law to do either. Of course, the instigators of this law did not expect to use it against every one who might violate it. There is only one religion whose ministers have done enough healing in recent centuries to attract the attention of the medical profession.

It is impossible to forbid Christian Scientists to practise healing, or to practise healing for compensation, without thereby abridging the rights of all other persons to employ them. Take, for illustration, the case of a man whom medical doctors have pronounced incurable and whom Christian Science might cure, as it has cured many such cases. A very large number of the members of Christian Science churches are living witnesses to this fact. If the law provides that none but medical doctors may practise healing for compensation, it will thereby forbid the man whom they cannot heal from employing a practitioner of a method which has cured a great many such cases and might cure him. He can only obtain the services of such practitioner by asking it as a gratuitous favor or by soliciting him to commit a crime.

Can such a law be a legitimate exercise of the police power? Is an "effectual fervent prayer," voluntarily sought and earnestly given as a means for healing, intrinsically criminal? Then, if it is not inherently criminal, is a criminal quality added to it by compensation? Are not the practice of prayer and the practice of medicine essentially different, even antithetical? Do things of an opposite nature become the same by reason of a collateral circumstance in no wise affecting their character? Can human law change a fact or alter the inherent qualities of things?

"The police power cannot be used as a cloak for the invasion of personal rights or private property, neither can it be exercised for private purposes, nor for the exclusive benefit of particular individuals or classes." (American and English Encyclopedia of Law (2d ed.), Vol. 22, p. 938.)

"We are therefore clear that the plaintiff in error was not a practitioner of medicine in the sense of our statute or in the popular sense; and the fact that he received fees and compensation for treatment, in the shape of gifts, could not make what would otherwise not be the practice of medicine a violation of the statute against such practice, for it must be apparent that if the mere laying on of hands amounts to the practice of medicine in any sense, it is so without reference to fee or reward." (From the opinion of the Georgia Court of Appeals in Bennett *v.* Ware, 4 Ga. App. Reports 293, 61 S. E. Rep. 546.)

"In all Christian churches prayers are offered for the recovery of the sick, and all decent Christians, Friends possibly excepted, believe in supporting their clergymen. The Christian Scientist has exactly the same right to be paid for his service." (From an address before the New York State Bar Association by Edgar Montgomery Cullen, former chief judge of the New York Court of Appeals.)

A good act is not made harmful to the community by compensation. The Founder of the Christian religion said, "The laborer is worthy of his hire;" and he said this to his disciples when sending them forth to preach the gospel and heal the sick. (Matt. x. 5-15; Luke x. 1-12.) This Christian precept has become a legal maxim. It is cited by the courts and is a part of the law of the land. Christian Scientists are expected to observe this rule of law when they are the recipients of any service, and no good reason can be given for discriminating against them when they serve others. If no benefits were found to result from their ministrations, there would be no demand for them. Since there is a demand for the services of Christian Science practitioners, the subject of compensation should be left to the parties who render and receive the service, as it always is left in identical situations.

As a rule, a Christian Scientist who gives his entire thought to the ministry of redemption and healing is better qualified than one who divides his time between this work and some other vocation. It is obvious, also, that a Christian Scientist can do more healing when he receives compensation for it than he could if he were obliged to produce an income by another occupation. Hence, all of the reasons why the ministers of other churches are paid, obtain in favor of Christian Science practitioners. As Mrs. Eddy has said: "Till Christian Scientists give all their time to spiritual things, live without eating, and obtain their money from a fish's mouth, they must earn it in order to help mankind with it. All systems of religion stand on this basis." (The First Church of Christ, Scientist, and Miscellany, p. 216.)

"In contrast with the political absolutism which it was intended to destroy, and which it has endeavored to supersede, constitutional government is based upon the principle of equal guaranties for the rights of all citizens, without distinction of persons or classes, under the protection of coordinate and distributed powers, exercised by public officers freely chosen by the people, and revocable after fixed periods of office.

Recognizing life, personal liberty, and property as elements of inalienable right, constitutional government aims to guard these from every form of violation." (From an article in *The North American Review* by David Jayne Hill, former assistant secretary of state, former ambassador to Germany, and former minister to Switzerland and the Netherlands.)

"*Constitutional law—Purposes of government—Police power.*—To justify the state in thus interposing its authority in behalf of the public, it must appear, first, that the interests of the public generally, as distinguished from those of a particular class, require such interference, and that the means are reasonably necessary for the accomplishment of the purpose, and not unduly oppressive upon individuals." (From the syllabus of the Supreme Court of Wisconsin in State *v.* Redmon, 134 Wis. Reports 89, 14 L. R. A. (N. S.) 229.)

Martyrs

J. S. BRAITHWAITE, M.A.

THE word "martyr" is from the Greek, and means primarily a witness. No other significance attached to it at first. It was used to signify any kind of testimony, whether of good or of evil. It was used in connection with the false witness brought against Jesus at his trial, and it is also used of Jesus himself in Revelation. It is employed in translation, instead of the usual word "witness," only three times in the New Testament, and in each case it carries with it the additional significance that the witness died for his testimony, and so it came about that this meaning of a violent death as the result of Christian testimony became attached to the word.

In time a kind of mock heroic meaning was added to the word, and its usage became associated with any kind of egotistical testimony which brought abuse or suffering in its train. "Do not make a martyr of yourself" is advice that one may hear given where one person believes another to be either indulging in self-pity or making an appeal for sympathy on the ground of some imagined grievance. "The selfish *rôle* of a martyr," writes Mrs. Eddy, "is the shift of a dishonest mind, nothing short of self-seeking; and real suffering would stop the farce" (Miscellaneous Writings, p. 288).

The true meaning of the word in its older sense is beautifully expressed in Science and Health (p. 37), in which martyrs are characterized as "earth's luminaries, which serve to cleanse and rarefy the atmosphere of material sense and to permeate humanity with purer ideals." This passage, which preserves the original meaning, contrasts strongly with the thought of suffering and selfishness which we have noted as being a not unusual emphasis attaching to the word today. It is perhaps because of this latter that one would not aspire today to be known as a martyr, and because in the light of Christian Science we seek after neither suffering nor calumny, though we recognize that neither is to be feared. We do not believe in the necessity for these things any more than the gardener believes in the necessity for weeds; whereas we do believe that Life, Truth, and Love have a scientific and indestructible relation to the human consciousness, and we also believe in the necessity of studying and practising Christian Science in order that this relationship may be proved in every walk of life.

It is ours to overcome death as evidenced in all forms of disease, and hate as evidenced in all forms of sin. These things are the weeds in the garden of our consciousness. The plucking out of these errors on the basis of scientific knowledge, in contradistinction to personal influence, power, or magnetism, is the demonstration of Science, and the one who effects this proof is called a Scientist. The fact that the term Scientist has in the past been misapplied, can make no difference, because its meaning remains unchanged. A Scientist is one who knows from an understanding of Principle. The essential consequence of this knowledge is that the Scientist can and does demonstrate what he knows practically. The martyr, or witness, on the other hand, is one who knows from observation (Anglo-Saxon, *witan*, to know), and the implied consequences of this kind of knowledge, suffering and distress merely, we have already considered.

It is said in the book of Revelation, in connection with the promise of a new name, that it will be one which "no man knoweth saving he that receiveth it;" also that he that receiveth it shall "eat of the hidden manna." What is the "hidden manna" but "the great truth of spiritual being, healing the sick and casting out error" (Science and Health, p. 33), the fundamental and sustaining truth of Christianity? What name more completely exemplifies this promise than Christian Scientist? The true significance of the word "Science," or "Scientist," was beautifully understood by the poet Wordsworth in a poem written about one hundred years ago. The following prophetic lines from it serve as a striking illustration of the point:—

> So shall they learn, while all things speak of man,
> The ability to spread the blessings wide
> Of true philanthropy. . . .
> Science then
> Shall be a precious visitant; and then
> And only then, be worthy of her name.

[Translated from the German]

All That the Father Hath

AMANDA STEPHAN

How deep is the meaning of the Master's words, "All things that the Father hath are mine"! In meditating upon them, we find that their proper understanding takes away from humanity all sorrow and suffering, for it refers to the true relation between God and man, and shows, as Mrs. Eddy says in Science and Health (p. 275), that "all substance, intelligence, wisdom, being, immortality, cause, and effect belong to God." All we have is from God, the dispenser of all good, and it is just because He is the source of all good, and of good only, that man can have no quality which is not in keeping with God's nature. Our text-book further says (p. 475) concerning this man, the real man to whom Jesus refers, that he "has not a single quality underived from Deity," and adds that he "possesses no life, intelligence, nor creative power of his own, but reflects spiritually all that belongs to his Maker."

Jesus never claimed to possess anything which did not belong to his Father, but emphatically declared and affirmed, "All things that the Father hath are mine;" and if we strive earnestly to let that Mind be in us "which was also in Christ Jesus," we should ask ourselves the very important question whether we consider anything to be ours which does not belong to God. Do we ever acknowledge disease, sin, lack, or limitation of any kind as a part of us? Do we ever concede power to these errors, thereby identifying ourselves with them in our thought? or do we always separate them from man who is spiritual and forever above disharmony and decay, yea, who is the image and likeness of God, and is, was, and eternally will be that image, for God's order changeth not? In the Bible we read, "Thy righteousness is an everlasting righteousness, and thy law is the truth."

Digitized by Google

Then, do we ever admit that man is material, made of matter, which is the exact opposite of Spirit, God? If we do, we claim something which is not of God, and serve error instead of serving Him; we serve the error of which Jesus said that it is "a murderer," and "a liar, and the father of it," while the apostle Paul writes, "Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey; whether of sin unto death, or of obedience unto righteousness?"

"All things that the Father hath are mine," said Jesus, and these things must also be ours, for on another occasion his words were, "My Father, and your Father; . . . my God, and your God." If, therefore, all that belongs to the Father is ours, there are no limits to our spiritual power. Spiritual man is the expression or reflection of God, and God is not limited. Christian Science teaches that this man reflects throughout eternity God's glory and infinite radiancy, illuming the universe through God's light, not through his own; for, as the psalmist says, "in thy light shall we see light;" and Paul writes in keeping with this thought, "For of him, and through him, and to him, are all things: to whom be glory forever."

The knowledge that all things which the Father hath are ours, frees us not only of the many and varied beliefs of lack and limitation, but also protects us from the loss of the smallest idea of our spiritual possession, for all such ideas are in God, who is omnipotence and eternally conscious of His own, and they, in turn, are secure in Him. God is never separated from His idea, but one with it. Just as the picture which we behold in the mirror is neither a property, a quality, nor a product of the mirror itself, but is in every respect wholly dependent upon that which is reflected, in the same manner the eternal reflection of God, spiritual man, rests wholly upon God, the divine Principle, of which the Bible says that with Him is "no variableness, neither shadow of turning."

"That which is past"

MAY BELCHER

STUDENTS of Christian Science who are striving to correct their lives according to the rule given them in their text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, should always recognize the necessity for correcting the false view of past events as well as the false view of present ones. Rightly to view the present, we must also rightly view the past. To gain a sure metaphysical basis from which to work, we need to start with the fundamental truth that God is the only power, the only Mind, the sole creator of the universe and man. If we admit the existence or presence of evil in any form, our reasoning is incorrect, and it is useless under such circumstances to expect to gain the right solution of any problem.

In those wonderful verses in the third chapter of Ecclesiastes, so full of meaning to every student, we read: "I know that, whatsoever God doeth, it shall be forever: nothing can be put to it, nor anything taken from it: and God doeth it, that men should fear before him. That which hath been is now; and that which is to be hath already been; and God requireth that which is past." Here is a clear, definite statement of the great fact that God's law of good and God's perfect spiritual creation have always existed; that there never has been anything which had power to destroy that law, or in any way disturb the absolute harmony of Spirit. It always was perfect, it always must be perfect.

Most of us who come to Christian Science have in the past been impelled, by either physical or mental suffering, to seek refuge in something which promised us relief from that distress. Often, when we did this, we found that every material prop had failed us, and then we were ready to turn to our Father-Mother God, who is always waiting to receive and comfort those who seek Him as a little child, with the humble desire to learn the way that reveals the kingdom of heaven within us.

One of the first lessons we learn in Christian Science is the necessity for right thinking about every problem which may present itself; and while we honestly try to practise this in our daily living, we are not always quite so quick to see that we must also apply the same rule to the past. Unconsciously we cling to the belief of past pains and material pleasures. The memory of old sorrows, of disappointment, and perchance injustice, have still a place in our consciousness. We sometimes speak and think of these conditions as realities, and often the old resentment and sense of injury will again try to hold dominion over us. But these verses from Ecclesiastes show us quite definitely that God requires all that is past,—and what is it? It is certainly not past false belief that God requires, but it is the destruction of false belief by the knowledge that it never had a place in God's kingdom, that God never created it, and that consequently all the life or truth it ever seemed to possess was due entirely to the carnal mind, which St. Paul tells us "is enmity against God."

The truth about anything must always destroy the lie, and so, in proportion as we are able to realize that God is the only Mind, whose law is unchanging love and harmony, we shall be able to rise above the false testimony of the material senses, and so break the mesmerism with which the belief of a discordant and unhappy past would bind us. Jesus said, "Ye shall know the truth, and the truth shall make you free." Here is a glorious message of hope and comfort to all who still seem bowed down with shame and misery. Often, a despairing one will say: "How can I ever be free from the past? It will always be like a millstone round my neck; the memory of past wrong-doing will cling to me forever." To all these weary and heavy-laden ones who are seeking divine aid, the Comforter, divine Science, comes and gives them rest and peace by showing that Truth is the only power, and that man is now, and forever has been, the expression of God; that our true self is the reflection of Love and purity. As this glorious light breaks in upon us, we are able to see that the human sense of the past never existed save as a false belief, and so we are not, as Paul wrote to the Corinthians, "unclothed, but clothed upon, that mortality might be swallowed up of life."

This knowledge will heal all sense of separation and discord which may seem to have arisen in families or churches, because all past wrongs will be obliterated and all sense of personal injury and resentment destroyed. As we claim the freedom from past errors for ourselves, so we shall also claim it for our fellow men. We shall no longer be holding them down with the cords of condemnation and criticism, but will lead them into the glorious liberty of the sons of God. We can never be really free ourselves if we hold a wrong thought about another, or if we are making a personality of evil. Therefore as we strive each day to follow more closely in the footsteps of the great Wayshower, Christ Jesus, we shall gain a broader, grander thought of what this great Christian Science movement stands for, and how through the exemplification of its teachings it is bringing healing and salvation to the whole world.

Let us begin each day with the firm and thoughtful determination to know more of God, to keep our eyes fixed on "the

Digitized by Google

enduring, the good, and the true" (Science and Health, p. 261). If we do this faithfully, we shall have no time to waste in idle regrets or in thinking of the faults and failings of others. This understanding that God alone requires our past, our present, and our future, will send us forth a united band of earnest, consecrated workers, ready and willing to sacrifice all for the sake of bringing health, happiness, and freedom to humanity.

The Day of Miracles

LOUIS A. GREGORY, LL.B.

THE works of scientific healing and regeneration which demonstrate that Christian Science does "reinstate primitive Christianity and its lost element of healing" (Church Manual, p. 17), are frequently disallowed by professed Christians, with the assertion that "the day of miracles is past." This assertion voices the belief that the healings recounted in both the Old and the New Testaments, as effected through the power of God, Spirit, belong wholly to the past and cannot be reproduced today, and thus denies that Christian Science healing is spiritual.

One such critic of Christian Science recently declared in a public discourse that he believed in a "Christian science, but not in that of Mrs. Eddy," and he argued that the modern practice of medicine is a Christian science of healing. His conclusion was that the day of the miracles of Jesus has given way to the day of healing by drugs and surgery. The fact may properly be noted here, that medical authority and medical practice not only do not support the claim of a Christianly scientific basis for drug healing, but also have specifically disclaimed that such healing has any necessary relation to the works and teachings of Jesus. It is important to note also that the great Physician and the healing Principle described in the Scriptures are not recognizable in such a system; for, in the place of Jesus of Nazareth, the messiah of this theory is material law; and instead of the wisdom of the Father, who, as Jesus said, sent him and accomplished the works, the prevailing medical theories would have to be accepted as the basis of healing.

If this critic and his mistaken assertions were an isolated case, it would not be entitled to consideration, but it is typical of a wrong estimate of Christian healing that is occasionally expressed in both the pulpit and the pew of Christian churches; and this view involves errors that must be corrected if the power of Spirit is to be generally demonstrated today as it was by the Galilean Prophet. Throughout the Scriptures the teaching is consistent that we should rely upon Spirit, God, for healing, and not upon material means, so that any serious attempt to support medical theories with Christian teaching is illogical, and is subject to the Socratic *reductio ad absurdum*.

Healing through reliance upon God's power is not limited in its manifestation to the period of Jesus' work, since it was practised by Jewish patriarchs and prophets for two thousand years before the birth of the Messiah, as well as by the early Christians for centuries after the crucifixion. The periods or conditions of thought in which spiritual healing does not appear are those in which the Christ-spirit is supposed to be absent, a thing of the past. Christlike healing is impossible today only to those who do not realize that the Saviour, the eternal manifestation of God, is ever present and all powerful. Chronology speaks of a period "before Christ," whereas Jesus declared of his spiritual self, the Christ, "before Abraham was, I am." Professed disciples of the Nazarene speak of a period in the past as "the time of Christ," although he affirmed, "I am with you alway." Christian Science teaches that the Christ-spirit is just as available and powerful for good now as it was when Jesus taught and healed; and it requires, among other things, that its adherents show "these signs" of healing which the Master said "shall follow them that believe."

The gospel of John represents Jesus as saying that he came to do his Father's will. Unless we assume that Jesus was not faithful to that mission, we must believe that the metaphysical healing done by him was a manifestation of the will of God. If it is not in accordance with God's will to heal in the same way today, then God's will must be variable and must have changed; but such assumptions contradict the weight of Bible authority. The Preacher of the Old Testament declared, "Whatsoever God doeth, it shall be forever," and this statement is in harmony with the highest Scriptural concept of God. The Teacher of the New Testament asserted many times and in different ways that the healing and saving work was not of himself, but was the work of God. Consequently, when the preacher or teacher of the present affirms that the day for the manifestation of God's work is past, he is taking it upon himself to contradict the generally accepted theological authority.

The contention that drugs and surgery are the modern healing expression of God's power is only a subterfuge. Neither in methods nor in results have they anything in common with the works of the Master. That these methods have no necessary relation to Christianity, or knowledge of God, is shown in the fact that they are adopted and applied alike by the atheist, the idolater, the follower of any non-Christian belief, or by the professed Christian. The results of these purely material methods do not support the claim that they are of divine origin, since these methods are admittedly powerless in many cases, and are at best but temporary and partial helps toward postponing the triumph of the "last enemy." The history of thousands of years of medical practice shows a constant increase in the amount and variety of sin and sickness, yet that practice is upheld as the intelligent application of the teaching that God decrees health, goodness, and life, which consequently must be forever; thus it is found wanting when weighed in the Master's scales,—"By their fruits ye shall know them."

In dogmatic religion, the use of the word "miracle" involves the thought of a suspension or contravention of law, and as being therefore incomprehensible. The general scientific use of the word describes a wonder which, even if not understood, is presumed to be in accordance with law: merely an advanced problem, the solution of which requires a clearer understanding than has yet been attained. Today there is a decided tendency away from the dogmatic toward the scientific view, and this may be described as in a sense the passing of the day when Jesus' wonderful works are considered to be incomprehensible.

This change was forcefully forecast by Mrs. Eddy, the reason for it being briefly stated on page 474 of Science and Health: "Christian marvels (and *marvel* is the simple meaning of the Greek word rendered *miracle* in the New Testament) will be misunderstood and misused by many, until the glorious Principle of these marvels is gained." Further, concerning the "Principle of these marvels," she says (p. 138), "Divine Life, Truth, and Love, and not human personality, was the healer of the sick;" and, "On this spiritually scientific basis Jesus explained his cures, which appeared miraculous to outsiders." Thus Christian Science disposes of the assertion that "the day of miracles is past," with the proof that the miracles referred to never were mysterious or inexplicable, but were the direct result of divine law as scientifically understood and applied.

Selected Articles

[Frederick Dixon in *Northern Weekly Leader*, Newcastle-on-Tyne, England]

There can, I think, be no doubt that the Rev. Mr. ——'s sermon on Christian Science has been of substantial benefit to the Christian Science movement. It has never been the habit of this movement to advertise itself, and it never will be, although the Dean of Westminster has lately announced that religious advertisement is a desirable thing, as it serves subconsciously as a reminder to human thought of the kingdom of God.

Advertisement by any system of mental suggestion seems tolerably irreligious to a Christian Scientist, for he knows perfectly well that the only measure in which men can be brought to understand the kingdom of God is in proportion as they walk in the footsteps of Jesus the Christ. The whole trend of the teaching of Christian Science is to make this plain, and inasmuch as this critic has followed a great many others in drawing the attention of the world to Christian Science, he has helped to give a good many people a chance to learn something about it, when otherwise they might have waited many years before it was brought so forcibly to their attention.

The critic's monthly magazine declares that it is no breach of confidence to say that his sermon has added very much to his correspondence. That is a statement there need be no hesitation in accepting. An attack on any religion will always bring the sympathetic approval of those who dislike that religion. Judging so crudely by results is, however, always a mistake. What his magazine has omitted to realize is that though the critic may have hardened the hearts of certain opponents of the Christian Science movement, he has turned the thoughts of all those who are open-minded toward it, with the result that, as is always the case in these circumstances, his sermon has brought an enormous number of inquirers to Christian Scientists.

The simple fact is that it is always very much easier to attack your neighbor's religion than to demonstrate your own; always very much easier to abuse the plaintiff's attorney than to make good your own case. If the reverend gentleman really wishes to counteract the teaching of Christian Science effectually, he will have to give to mankind a more practical religion, and therefore one which will appeal more to sick, sorrowing, and sinful humanity. He began by declaring that Christian Science was non-Christian and unscientific, and he proceeded to make this good by practically denying the message of the gospels and sneering at the teaching of the great natural science thinkers of the ages. I am not going to follow his example of imagining that an *ipse dixit* is an argument, and that if one only asserts a thing violently enough, it proves it to be true.

I am going to show that this critic, when he talked of Christian Science being unscientific, knew nothing at all about the teaching of natural science, and was preaching merely one of those sectarian views of religion which would promptly be denied by an Anglican in the next parish or a Roman Catholic in the next street. A Christian, according to the critic's man in the street, is simply one who nominally accepts his view of the teaching of Jesus the Christ. Unfortunately, Christians have for centuries differed as to what this teaching is, and have murdered and persecuted one another without the slightest mercy for simply daring to disagree with their respective dogmas. It is a view of Christianity which accepts profession as the test of conviction, and it is entirely opposed to the teaching of Jesus.

Christ Jesus said that those who believed on him would be able to do his works, and so he made the test of that ability the proof of a man's Christianity, and not his mere verbal assertions of assent to a dogma. Jesus knew exactly how much assertion was worth, and the writer of the epistle of James summed it up quite clearly when he declared that faith without works is dead. What were the works of Jesus which he insisted were to be the test of a man's Christianity? The enormous majority of them were works of physical healing. Eliminate the stories of physical healing from the gospel and you will seriously impair it. When John sent his disciples to demand if Jesus was the Christ, it was to these very works of physical healing that Jesus referred them; and when a man fulfils the requirement of Paul, that he should let that Mind be in him "which was also in Christ Jesus," he will find that he is able, in a measure, to repeat the works which Jesus of Nazareth alluded to in proof that he was Jesus the Christ.

A Christian, then, is not a man who relies on a mere verbal, dead claim of faith, but a man who insists on the living proof of works; and the claim to be a Christian can properly be made in the exact proportion in which the works which Jesus did are repeated by his followers. "He that believeth on me," he said, "the works that I do shall he do also," and in those words he made it clear to humanity that the only proof which could be given that the gospel preached was the gospel of Christ, was the ability to perform the works of Christ.

A very similar and an equally simple argument is all that is necessary to dispose of this critic's views on Science. Mrs. Eddy, he says, instead of seeking, as natural scientists do, to find out the facts, dropped into an astonished world the dictum of the unreality of matter. If he knew anything at all about what he terms the facts, he would know that the theory of the unreality of matter is about the oldest philosophic teaching known to the human race. It was prevalent in the East long before Plato adopted it in the West, and from the time of Plato down to the present moment it has been the center of what is known as the idealistic as opposed to the materialistic teaching of the philosophy and natural science of the world. What Mrs. Eddy did, was to insist on making this teaching practical, and the method upon which she relied for making it practical was the method taught by Christ Jesus in Galilee when he declared, "The flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life."

Truth is the only scientific thing there is, and absolute truth is the only absolute science. Jesus said, "Ye shall know the truth, and the truth shall make you free." What was the truth to make men free from, but sorrow and sickness and sin? In being the absolute truth, this truth was scientific, and that is precisely what is meant by a Greek word,—commonly translated wrongly in the various versions of the New Testament,—which speaks not merely of a knowledge of God, but of a full, exact, that is scientific, knowledge of God.

It is quite impossible to follow this critic through the travesty of Christian Science which he lets off in a series of unsupported *ipse dixits*. That would be too big a task for the limits of a letter. The most ridiculous, however, of all his assertions was that Christian Science was avowedly preeminently devoted to making life easy. The only way in which it is possible for him to urge that statement is by ignoring the whole teaching of Mrs. Eddy's book "Science and Health with Key to the Scriptures." From the beginning to the end of that book Mrs. Eddy is showing that sickness and sin are equally mental in their origin, and must be overcome mentally. She says on page 210, "Jesus healed sickness and sin by one and the same metaphysical process." The only way in Science in which a man can be healed of sickness is by over-

Digitized by Google

coming mentally in his consciousness a belief in any power opposed to God. As a consequence, the only way in which you can heal a man scientifically is to heal him morally. The sick man becomes physically better exactly in the proportion in which he becomes spiritually more alert, and to say that Christian Science aims at creating bodily ease, is only true if by that you mean that the only way in which it destroys physical suffering is by giving peace to the human consciousness, the "peace of God, which passeth all understanding." If the critic thinks that the attempt to walk in the footsteps of Christ so as to gain this peace is a path of ease to the senses and of pleasure to the flesh, he must have a remarkably curious idea of what Jesus meant when he said that those who wished to be his disciples must take up the cross daily and follow him.

All this is just an indication of what Christian Science teaches, within very confined limits, but it should be sufficient to show that when the critic undertook to criticize Christian Science, he was engaged, first, in exposing his ignorance of natural science and philosophy; secondly, in perverting everything that Christian Science teaches; and thirdly, in attacking his neighbors for doing something he is apparently in no hurry to attempt himself.

✧

[H. Cornell Wilson in *Utica* (N. Y.) *Press*]

Christian Scientists derive their authority to heal from the Founder of the Christian religion, who not only healed all manner of sickness and deformity, but taught others to do likewise, assuring them that their ability to heal the sick would be one of the "signs" of discipleship to which he referred. If the understanding of God healed the sick in the first century, it can heal them today, for God has not changed. He is "the same yesterday, and today, and forever."

It might be well for our critic to know that Christian Science has been practised for nearly fifty years, and that during this time it has not been proved in a single instance that Christian Science has been responsible for the spread of disease. Indeed, because of the tendency of many to misjudge what they do not understand, Christian Scientists are usually more careful than any other class of people to observe all reasonable sanitation and quarantine regulations.

Christian Science has frequently been called upon in cases of contagious diseases that have been given up by physicians as hopelessly incurable, and it has restored the sufferers to perfect health. Furthermore, it is the only physician in thousands upon thousands of homes throughout the world, and the efficacy of its treatment is evidenced by the fact that failures under its ministration seldom occur.

✧

[Thomas F. Watson in *Selma* (Cal.) *Enterprise*]

That the Rev. Mr. —— should classify Christian Science with "Millennial dawn, Hindu pantheism," and other cults, showed a deplorable lack of knowledge of the subject upon which he lectured. Now, it would naturally be expected that any public speaker would first inform himself thoroughly on the subject upon which he expected to speak, but it is plainly manifest to any one who knows anything whatever of Christian Science that the above-mentioned speaker did not do so. The text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is easily accessible, being in most of our public libraries, and in all the Christian Science reading-rooms, where any one can inform himself on this important subject. Christian Science has nothing whatever in common with the teachings referred to, but when the gentleman says the teaching of Christian Science is four thousand years old, Christian Scientists agree to that and even more, for the truth about God and man which it teaches is as old as God.

That Christian Science is the direct opposite of pantheism is plainly evident. According to Webster, pantheism is "the doctrine that the universe, taken or conceived of as a whole, is God; . . . that there is no God but the combined forces and laws which are manifested in the existing universe;" while Christian Science teaches that God is Spirit, and not in matter. The definition of God given in Science and Health (p. 587) is as follows: "The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence."

As to the Christian Science teaching in regard to marriage, Science and Health states, "Marriage should improve the human species, becoming a barrier against vice, a protection to woman, strength to man, and a center for the affections." Again: "Marriage should signify a union of hearts. Furthermore, the time cometh of which Jesus spake, when he declared that in the resurrection there should be no more marrying nor giving in marriage, but man would be as the angels" (pp. 60, 64).

This critic deplores the fact that so many people embrace Christian Science; but the reason is not hard to find, for its teachings are founded on the Bible, especially the teachings of Jesus and the apostles, and it comes with "signs following," healing the sick and weary ones of earth through the power of the Word, as the Master taught. He said, "Go ye into all the world, and preach the gospel;" also, "Heal the sick." Our critic may find it rather hard to explain why professed Christians today are not healing the sick as the Master commanded. Meanwhile it would be well to remember that the Bible teaches: "Judge not, that ye be not judged. For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured to you again."

✧

[George Shaw Cook in *Peoria* (Ill.) *Star*]

Doubtless many of your readers have been greatly interested in the sermon, "Religion without Superstition," which was published in a recent issue. Some, however, will object to the implication that to "mix healing with religion" involves superstition. Jesus "mixed healing" with his religion; Paul "mixed healing" with his religion. Are they for this reason to be regarded as having been superstitious? The early Christians for about three centuries "mixed healing" with their religion to the extent, according to secular history, of raising the dead. Are the primitive Christians for this reason to be regarded as having been more superstitious or less reasonable than those of today who relegate healing to the medical profession and reserve for the Christian minister only the offices of preaching to and praying for the members of his flock? Has this method of dividing the work of Christian ministry demonstrated itself to be entirely satisfactory and successful? Have modern physicians in their efforts to cure disease exceeded the work of Jesus and the early Christians? Have present-day clergymen found that preaching without healing is sufficient to satisfy the reasonable demand of their parishioners for salvation from the ills as well as from the sins to which flesh is heir?

Some ministers and many laymen have found that the results of their religion, when applied to human needs, have not been all that could be desired. Many have been forced to admit that their religion did not give them the practical results which they not only desired but had a right to expect from applied Christianity. For this reason hundreds and thousands in all parts of the world have turned in their

Digitized by Google

extremity to that religion which includes healing of physical disease by spiritual means, and have found it to be a restoration of primitive Christianity. They have found that in a reasonable, logical, rational way Christian Science has explained to them how to experience present salvation, not only from sin but also from sickness, and incidentally from one of its chief causes, superstition.

✧

[John M. Dean in *The Commercial Appeal,* Memphis, Tenn.]

In these days of enlightenment it is somewhat surprising to read a report of an address delivered by the president of such a dignified body as the Tennessee State Medical Association, in which he indulges in misstatements regarding Christian Science which are no less intemperate because ignorant rather than intentional. The ordinary newspaper article does not afford sufficient space in which to answer the zealous doctor's diatribe, item by item, and indeed much of it requires no answer before an intelligent public.

For the sake of accuracy, however, permit me to say that there is no mystery in Christian Science, unless it be the "mystery of godliness," which is always strange to the mind trained in purely material modes and methods. To the man who lives in a circumscribed world, or who specializes along some narrow line of thinking, everything beyond and above what he knows—or thinks he knows—is dark and mysterious. Christian Science is an open book that may be read of all, and it is the natural foe of ignorance in every department of life, including medicine. Mental suggestion has absolutely nothing to do with the operation of Christian Science and they are polar-opposites. Even the slightest hint of hypnotic influence is exposed as something to be especially guarded against, and no Christian Scientist could or would attempt to employ it for any purpose whatever.

The insinuation that only those who have no "urgent, real, or obvious disease" find help in Christian Science, is not borne out by the facts. Hundreds of individuals in Tennessee have been healed of diseases which capable physicians had pronounced incurable, and our medical critic need go no farther than Memphis to substantiate this statement. Here are to be found those who have been healed of almost "all manner of disease," including tuberculosis, Bright's disease, paralysis, blindness, and many other types which even the most rabid critic would not presume to class as imaginary. It will not do to say that these people did not have the troubles of which they were healed, for practically every such case had been previously diagnosed and treated by reputable physicians, and to question their authenticity would be to indict the entire medical fraternity. Christian Scientists do not become such because of some fanatical determination to do without medicine, but because they have found relief from bodily and moral ills which no other system afforded them. If *materia medica* had proved itself sufficient to meet their needs, Christian Science would never have been heard of, and there would have been no occasion for our medical friend to lose his temper and his judgment in a discussion of something about which he evidently knows little or nothing.

It is quite true that Mrs. Eddy left a considerable estate as the result of her literary labors, but it is equally true that practically all of this was bequeathed by her to a trust fund for the propagation of the religion which she rediscovered, loved, and taught. What more crowning evidence of her sincerity could our critic ask? The reckless statement that Christian Science practitioners only "practise upon the affluent" is calculated to make a Christian Scientist smile, for I am sure that I speak conservatively when I say that fully fifty per cent of the healing work done by Christian Scientists in Memphis is performed "without money and without price," and this, too, despite the fact that they are as much entitled to compensation as are their medical brethren who, rightly and without question, accept fees for services rendered. It is gladly conceded that much philanthropic work is done by the better class of physicians, but it is hardly possible for any physician to be more unselfish than the average Christian Science practitioner, who is ready to respond to distress calls day and night, but never asks who will be responsible for the fees.

In answer to the critic's amazing statement that "no Christian Scientist ever reads out of the garbled edition of the Scriptures to a poor person," we must plead guilty, for no Christian Scientist ever reads to any one out of a "garbled edition of the Scriptures." The only Bible used in the services of the Christian Scientists is the King James Version, which is in universal use among all English-speaking Protestants; and if the critic will devote a little time to the study of this book, and especially of that part which treats of the life and works of the Master, he may learn something of a spiritual method of healing far surpassing all knowledge gained from medical books, and may incidentally acquire a more tolerant and Christian way of discussing those with whom he does not entirely agree.

Permit me to say, in closing, that Christian Scientists have never fought a law regulating the practice of medicine, and they are more than willing that those who assume to administer poisonous drugs should be regulated in a manner compatible with the safety of the public. In short, they do not object to the doctors regulating themselves, and only protest when an attempt is made to regulate the private affairs of those who do not believe in *materia medica.* They are entirely familiar with that class of political doctors who infest the halls of every state capitol when the Legislature is in session, and will not be found wanting when the time comes to check the selfish demands of such. They have never fought laws designed for the purpose of promoting sanitation, pure food, and kindred matters, and they yield to none in their advocacy of cleanliness, both within and without. They are also familiar with that larger class of unselfish physicians who toil on as best they know in their efforts to relieve suffering humanity, and that bid Godspeed to others who from their various standpoints are striving to accomplish the same work.

Such humanitarians as these have neither the time nor the inclination to mix in these studied efforts to stifle liberty, conscience, and progress. They know that their work is largely experimental, and that the cocksure conclusion of today will be the discarded theory of tomorrow, and they are not willing to block the various highways of endeavor simply because others choose to travel along some other road.

If Christian Science is a fraud, it will and should fall because of that fact, and not because of persecution; but if it is the truth, it will live forever, in spite of all the labored denunciations of misguided zealots of whatever walk or profession.

The Test

HAROLD SUSMAN

WERE actions weighed within a scale
By Truth, oh, which would be
The proofs that Christ with joy would hail,
Of Christianity?

Think you they would be prayerful din,
And hours upon one's knees?
Or rather, casting out of sin,
And healing of disease?

Editorial

"Let patience have her perfect work"

One of the lessons that Christian Scientists are learning is the need for "patient continuance in well-doing." They are beginning to understand what Christ Jesus meant when he said, "In your patience possess ye your souls." He saw all about him the beliefs of life in matter, and he patiently and persistently labored to overcome these beliefs. He did not attempt this, however, with the mistaken violence of those who would take the kingdom of heaven by force, but rather with that loving tenderness, compassion, and assurance which binds up the broken-hearted and comforts them that mourn, in fulfilment of his mission, as foretold by Isaiah.

Mrs. Eddy further saw that the progress of mankind out of these beliefs—the "passage from sense to Soul," as she has called it (Science and Health, p. 566)—must be a matter of time. Not that the power of God is limited, but (as she explains so clearly on page 396 of Science and Health) "the refutation of the testimony of material sense . . . becomes arduous, not because the testimony of sin or disease is true, but solely on account of the tenacity of belief in its truth, due to the force of education and the overwhelming weight of opinions on the wrong side,—all teaching that the body suffers, as if matter could have sensation." It was for this reason, and the added fact that she had learned that "in the midst of imperfection, perfection is seen and acknowledged only by degrees" (Science and Health, p. 233), that she planted the Christian Science organization on an enduring basis, with rules and by-laws which should be as applicable to its needs fifty centuries hence as they are today.

Mrs. Eddy knew, having proved it for herself, that divine Mind is unvarying; that Christ, Truth, is "the same yesterday, and today, and forever." Therefore all that is good and right and helpful at one time, is good and right and helpful at all times. These rules and by-laws, laid down for the guidance of members of The Mother Church and to which they subscribe in becoming such, were not the product of chance. As their author has said of them: "They were not arbitrary opinions nor dictatorial demands, such as one person might impose on another. They were impelled by a power not one's own, were written at different dates, and as the occasion required. They sprang from necessity, the logic of events,—from the immediate demand for them as a help that must be supplied to maintain the dignity and defense of our cause; hence their simple, scientific basis, and detail so requisite to demonstrate genuine Christian Science, and which will do for the race what absolute doctrines destined for future generations might not accomplish" (Miscellaneous Writings, p. 148). Should any one be tempted to believe that he can be a Christian Scientist without a thorough knowledge of the by-laws of The Mother Church, as well as of Science and Health, he should consider well the words of our Leader just quoted. Jesus said, "If ye continue in my word, then are ye my disciples indeed."

It is the experience of every sincere student of Christian Science that every time he rereads Science and Health he finds new treasures which he had failed to find in previous readings, and this experience of itself begets patience in its promise of the reward that will attend further seeking. This is equally true with the Church Manual; and to know what it contains, and to realize the completeness of its scope, requires more than a mere cursory perusal. The Manual, like all of our Leader's writings, teaches us that the need is for mankind to be reconciled to God, and that in this process myriads of false beliefs have to be overcome. That these false beliefs are not always overcome in an instant is not a reason for impatience, but rather for greater patience and greater knowledge of what has been given to us.

John said, "Now are we the sons of God, and it doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him; for we shall see him as he is." The sublime confidence of these words was based upon understanding, and not upon blind belief. With the same confidence in God as the only power, and in the perfection of His creation, as are here expressed, patience is seen to be both wise and normal. We may well take home to ourselves, therefore, the apostle's counsel: "Let us not be weary in well-doing: for in due season we shall reap, if we faint not."

Archibald McLellan.

Man's Unlimited Endowment

No chapter of the Book of books is more impressive, more wonderful in declaration, or more worthy of our study than the seventeenth chapter of John, for it is a marvel both of content and of diction. It voices the longest known prayer of the world's Redeemer, and opens to us the treasury of his heart of hearts, the depth of his love for God, for his disciples, and for all mankind. It is a poem of spiritual perception and filial piety; it is an epitome of the gospel, and speaks for the daring of trustful affection, the uplifting freedom and venturesome spontaneity of a grateful "confidence toward God."

This attitude of faith is at once recognized as ideal, as normal to the true Christian, and as supplying the condition of entry into the experience of joy and peace in every life-relation. It should characterize the thought of every believer, even as assurance and expectation characterizes the thought of the mathematician as he applies the basic law of numbers to a problem in hand, and draws upon this law without the least reserve. Speaking of his Father-Mother God, and ours, the Master did not hesitate to say, "All . . . thine are mine." He rejoicingly entered into the possibility of utilizing the infinite Life, Truth, and Love. He asked largely, that his joy might indeed be full, and he thus revealed the colossal dimensions of what the unknowing would call his presumption, the disposition personally to appropriate the universe of good. As we come to think about it, however, we recognize that this is the instinct both of the diamond and the dewdrop, with respect to light, and why, in the very nature of things, should it not be the instinct of man, as God's image, with respect to spiritual truth? Why should he not rejoice in the fulness of his freedom and authority as a son of God?

In this portrayal of the possibilities of a godlike life, one finds the richer meanings of the word "reflection," as Mrs. Eddy has used it, to express the relation of man to God, his endowment, as St. Paul says, with all the riches of grace in Christ Jesus. The understanding of the wide-awake boy is capable of mirroring every truth, not only of the multiplication table but of mathematics, and this because he is dealing with universals, every one of which belongs by inheritance to intelligence. Christian Science declares that Principle is expressed in its ideas, and this metaphysical truth takes form in every uplift and compass of faith, even as it finds noblest expression in this wondrous prayer of Christ Jesus.

The realization of this our inheritance is the consummation of Christian Science. It means the practical possession of that unlimited patrimony to which the great apostle referred when he wrote to the Corinthians, "All things are yours; . . .

Digitized by Google

and ye are Christ's; and Christ is God's." This is the glory of the gospel, that in Christ one can claim the possession of all good, and bank upon its reliability with as little reserve as truth steps forth unblushingly naked. This is the key to the redemption of consciousness in Christian Science, and it is at the service of all who are attracted toward and conformed to that Christ-ideal in which dwells "all the fulness of the Godhead bodily." To gain a lively sense of this exaltation and privilege of man, our true selfhood, is to be lifted up to a level not only of conscious superiority to temptation and sin, but of demonstrable supremacy over it. It is to sit on the right hand of God, it is to be a king and priest in His name.

JOHN B. WILLIS.

Love Impartial and Universal

IN the sermon by Mrs. Eddy, entitled "Christian Healing" (p. 8), we read, "The mistaken views entertained of Deity becloud the light of revelation, and suffocate reason by materialism." On page 1 of the same sermon she says, "The difference between religions is, that one religion has a more spiritual basis and tendency than the other; and the religion nearest right is that one." The tendency of many religious cults has unfortunately been to limit the divine favor to their own sect, on the ground that some special doctrine held by it stands for obedience to some divine decree, and that without obedience thereto salvation is impossible. The prophet Micah, however, brings the divine requirement before us in quite another way. In rich metaphor he presents a controversy between God and His people, with the mountains as arbiter. God reminds His people of the many deliverances wrought for them by divine Love, and He asks, "O my people, what have I done unto thee? and wherein have I wearied thee? testify against me." After the recounting of all the mercies bestowed, the plea ends, "That ye may know the righteousness of the Lord." The people with deepest humility then ask what they can do to show their contrition, and how they shall approach the Most High. To this the mountains make reply, "He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?"—a requirement which rests upon all men, nations, and faiths today no less than when the decree was handed down in that august court.

It is true that the Scriptures contain the most scathing denunciations of evil, but even these point to the universality of Love's provisions for all mankind, since without the destruction of error there could be no peace, no harmony for any. A study of the Bible reveals the fact that inspired men in different ages, in the midst of widely differing human conditions, were ready to declare the ceaseless going forth of the divine purpose, which is always to bless and to save. Thus we find Joseph telling Pharaoh of the divine Love that was caring for himself and his people to the full extent of their responsiveness, and this was evidently much greater than we have been accustomed to think. We have regarded the Egyptians merely as heathen, and to mortal sense they were evidently grossly material, yet Joseph was made ruler over Egypt because the king saw that his wonderful mentality was due to his communion with God, infinite Mind. Who ever heard of a prime minister being chosen in modern times because of his spirituality?

Again, we read of Daniel's experience in Babylon, when even a sensual heathen king sent for him, when in deep trouble, saying, "I know that the spirit of the holy gods is in thee." And how wonderfully did Daniel declare to him the Love that loves all, and that must begin by destroying the mortal's love of sin and materiality! There is no difference on the divine side, though there may seem to be a great difference in results, on the human side, due to a greater or less responsiveness to the demands of Truth and Love.

In this age, the apparently slow processes of human redemption are being marvelously accelerated by the understanding gained in Christian Science that neither sin nor disease is real, because neither is of God, and by the related truth that the real man, as God's likeness, is never sick or sinful. Christ Jesus declared that his followers should do the works which he did, and ever greater, and his works were undoubtedly done through divine Love. At the beginning of his earthly ministry he bade his disciples offer the truth only to "the lost sheep of the house of Israel." Later, he bade them "teach all nations," and he added, "teaching them to observe all things whatsoever I have commanded you," and nothing but Love, spiritually understood, can enable us to obey this command. No "mistaken views" of God will do this work, for God's way must be ours if we would reflect the divine power, and as our revered Leader tells us on page 266 of Science and Health, "Universal Love is the divine way in Christian Science." Love divine "fainteth not, neither is weary," though there may seem to be no response to its appeal, and because of this we may work on, each day with renewed strength and larger understanding of Love's all-power.

Among the Churches

Current Notes

UNIVERSITY OF CALIFORNIA.—The Christian Science Society of the University of California is an organization similar to the clubs existing in other universities and colleges. It was organized in 1907 by a number of students of this university in accordance with a provision in the Manual of The Mother Church. The work of the society has been actively conducted from that date to the present time, and its purpose is to unite more closely the Christian Scientists within the university, to welcome entering Christian Scientists, and to afford those so desiring an opportunity to learn the truth about Christian Science as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Bimonthly testimonial meetings and gatherings during the summer session are held in First Church of Christ, Scientist, Berkeley. In the fall semester, a reception is given to students who desire to become acquainted with the work of the society. In the spring term, a lecture on Christian Science is delivered by a member of the board of lectureship of The Mother Church. Practically all the writings of Mrs. Eddy, including the German translation of Science and Health, and a copy of "The Life of Mary Baker Eddy" by Sibyl Wilbur, have been placed by the society in the Doe library. In the periodical room are *The Christian Science Journal*, the *Christian Science Sentinel*, and the *Monitor*.

Digitized by Google

SPRINGFIELD, ILL.—An event of considerable importance to Christian Scientists and their friends took place today [May 12], when the title to the Shutt homestead, corner of Second and Edwards streets, passed to First Church of Christ, Scientist, of Springfield. The property is one of the most desirable locations in the city, one hundred and seventy-two feet on Second street and one hundred and fifty-two feet on Edwards, being within one block of the state house and the supreme court building. During the past years this congregation has been preparing to take this step, and they feel that they have secured a practical, desirable, and valuable piece of property, admirably suited to their purpose. They have been holding services in several different locations in the city since the movement was started some years ago; namely, at the Jewish Synagogue on North Fifth street, the Odd Fellows' Building, and lately in the Unity Building, where the quarters have been too small to accommodate those who wished to attend. There is a substantial brick residence on the property at the present time, which will be remodeled to suit the immediate need of the congregation. As soon as this is done, the services will be held there, and that, it is expected, will be about July 1.

✣ ✣ ✣

The Lectures

Board of Lectureship

In accordance with the general plan of democratic government in Christian Science churches, The Mother Church Manual grants all power to initiate arrangements for a Christian Science lecture to the church or society desiring it. The board of lectureship, therefore, is not permitted to select the lecturer for any church or society, and it keeps no record of the whereabouts of its members. A church or society applying for a lecture should correspond, through its clerk, with that member of the board of lectureship whose services are desired, at his address as given in the lecture circular. Joint lectures, however, may be arranged for through special committees representing the local churches.

The church-membership is the host in giving a lecture to the public, and the host naturally should be present, else the guests may remain away for lack of interest. Should the host reach such proportions as to exclude the guests from the limited quarters provided, then the host as naturally would permit the guests to be seated first.

The increased cooperation among Scientists in arranging for lectures has effected such a wonderful harmony as to invite the highest appreciation from the lecturers; and the loving encouragement which they extend to the workers is reciprocally blest. The spontaneity of loving cooperation has proved more winsome to the press; for it is much easier to publish reports of the lecture and frequently their publication is invited. We are not unmindful nor unappreciative of the far-reaching results of the distribution of the *Monitor* in advance of the lecture. That work seems to arouse a splendid interest in the coming lecture.

With the same spirit of cooperation extended to the needs of neighboring churches, by promptly notifying them as soon as the lecturer accepts their invitation, much has been accomplished in lessening the traveling expenses. It is to be expected, however, that such expenses necessarily vary for different trips. Perhaps the greatest mutual benefit arising from these arrangements is to cause the application to be filed with the lecturer selected, as soon after July first as possible.

Inasmuch as the giving of at least one lecture annually is obligatory on each branch church (Manual, Art. XXXII, Sect. 4), there would seem to be no good reason why the approximate expense therefor should not be included in the annual budget of legitimate expense for which provision must be made, instead of regarding it as a separate item for which a special fund must be raised.

The circular of the board of lectureship, which is annually revised so as to answer all questions that may arise in arranging for lectures, is being mailed at this time to the church officers, in care of the church clerks.

BLISS KNAPP, *Secretary.*

Lecturers Appointed for the Year July 1, 1914, to June 30, 1915

Hon. Clarence A. Buskirk, C.S., R. F. D. No. 1, Princeton, Indiana.

Clarence W. Chadwick, C.S.B., 654 Omaha National Bank Building, Omaha, Nebraska.

George Shaw Cook, C.S.B., 525 Orchestra Building, Chicago, Illinois.

Clarence C. Eaton, C.S.B., 719 South Union Avenue, Tacoma, Washington.

Col. William E. Fell, C.S.B., Fowthorpe, Filey, England.

Dr. Francis J. Fluno, C.S.D., 1732 Franklin Street, Oakland, California.

Willis F. Gross, C.S.B., 505 Berkeley Building, Boston, Massachusetts.

✣

Dallas, Texas

Bicknell Young delivered two lectures on Christian Science in the edifice of First Church of Christ, Scientist. On the second evening he was introduced by DeWitt McMurray, who said:—

It is probable that there is no one who does not with more or less frequency and seriousness ponder over what has been called "the riddle of existence," who does not from time to time meditate deeply upon his past, present, and future. The belief in God is instinctive, and it is also the result of reason. But all down the ages men have stood amazed, confused, and appalled at the existence of evil along with good. They have been unable to reconcile the statement that God is omnipotent, all-powerful, while at the same time admitting that there is a power opposed to God. The psalmist says, "Power belongeth unto God," and the Christian Science text-book, "Science and Health with Key to the Scriptures," says, "There is no power apart from God" (p. 228).

Men have wondered how, if God is omniscient, having all wisdom and intelligence, there could be another being, who is

Digitized by Google

antagonistic to Him, and who is also intelligent, but wicked. The Bible tells us that "the wisdom of this world is foolishness with God," and the Christian Science text-book tells us that God is all-wise, all-knowing. And men have been unable to understand how, if God is omnipresent, everywhere present and always present, there could be a person or power opposed to Him and present with Him. Again, the Christian Science text-book says, in speaking of God, "There is no other power nor presence" (p. 471), and the psalmist exclaims: "Whither shall I go from thy spirit? or whither shall I flee from thy presence? If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall thy hand lead me, and thy right hand shall hold me."

Christian Science states the facts as to man's being and his relationship to God. This it proves by the "signs following,"—healing the sick and restoring the sinner. Because of these things, it has become a subject of absorbing interest, and of the most profound consideration by the thoughtful as well as by the suffering, throughout the world.

The Dallas Times-Herald.

Westfield, N. Y.

An audience of upward of three hundred had the opportunity of listening to a lecture on Christian Science delivered by the Rev. William P. McKenzie in Assembly Hall. G. G. Gibbs introduced the speaker and said in part:—

I know very little about the belief of the members of the Christian Science church. I know nothing of their views regarding physical healing or the prevention of disease; but I do know that I have come in contact with Christian Scientists, and my experience with them leads me to the belief that their faith and their works make this a better world. The bigot who sees no good in any religious denomination other than his own, and who is intolerant of any view which differs from his, will differ from me in my last statement; but I believe that in the light of modern understanding bigotry is rapidly giving way to broader vision, and man is acquiring that charity which permits him to overlook that in the creed of others which does not agree with his, and to commend the creeds of others for the good that is in them.

The Westfield Republican.

Pittsburgh, Pa.

Clifford B. Connelley, dean of the Carnegie Institute of Technology, in introducing Clarence C. Eaton, who lectured on Christian Science at the Nixon Theater under the auspices of Second Church, said:—

A well-known Christian writer (not a Christian Scientist, either) remarks, "It is a part of our sin that we are sick," and then he adds, "It should be a part of our religion to be well." I wonder if this does not fit in with Christian Science. At any rate, it sounds like a real, practical gospel, which I take to be the claim of Christian Science.

We are living in an intensely practical age. Everything seems to be turning in that direction. In the educational world, within the lifetime of most of us, a great change has come over its conservatism and traditionalism. We are aiming—and I might add hitting the mark, too—at making education more in touch with real life as we have it day in and day out. The school is now training the hand as well as the mind and heart. "Education," it is said, "is the handmaiden of religion." It seems fitting, then, that our religion take on a more practical aspect. As I understand it, during the past fifty years, a time almost parallel with the new movement in education, Christian Science has been interpreting Christianity in the terms of the practical.

I must confess that my knowledge of this movement in religion is limited to two sources. The first is hearsay; and I am sorry to add that the hearsay view is often most intolerant. The other source of knowledge is certainly more gratifying, in that it deals with the excellent personnel of the people who subscribe to this form of Christianity. Many of my associates, whose friendship I value most highly, are earnest believers in this movement. I am glad to add that I find them no less companionable or cheerful or mutually helpful because of their belief; if anything they are more so. It might be added, also, that I have been an interested reader for some time of your excellent publication, the *Monitor*.

Correspondence.

St. Joseph, Mo.

The commodious edifice of First Church of Christ, Scientist, was filled to overflowing with those who desired to hear the lecture of Bicknell Young. The speaker was introduced by A. D. Aiken of this city, who said in part:—

I am interested in Christian Science because of the help and benefits derived from it by those near and dear to me. That it is a practical and demonstrable religion is attested by thousands who are living testimonies of the beneficent and curative powers of its teachings. Christian Science is essentially a religion of love, a religion of service. The greatest of the great said that he "came not to be ministered unto, but to minister." His life was one of service. The motto of nobility was and is: "I serve." Relief from disease, sickness, sorrow, misery, and want is assured to those who practise the teachings of Christian Science. Greater service than this cannot be accorded to humanity.—*The St. Joseph Observer.*

Shelbyville, Ind.

The seating capacity of the Alhambra Theater was taxed to its capacity for the Christian Science lecture delivered by Clarence W. Chadwick. In introducing the speaker, the first reader, D. Wray DePrez, spoke in part as follows:—

You have come here to hear, not a new truth, but a new interpretation of the old truth, for Christian Science is not new, as its only foundation is the Bible. Christian Scientists believe and have proven that "with God all things are possible," and the thousands upon thousands of adherents who have proven this in their own lives by the overcoming of sin and sickness, desire, out of gratitude for this good received, that others may know of the truth and be helped to solve their problems in like manner.

It is a good plan for every one to hear the other side, rather than a reiteration of his own religious views; and in order that the public at large may have the opportunity to know what Christian Science is and what it has done and is doing today, these lectures are frequently held.

Shelbyville Democrat.

Testimonies of Healing

During a period of nine years I was not well for more than a few months at a time. We moved to the South in the hope of finding a better climate, but there was no improvement in my condition. I was sick at one time for nearly eight months, spending six weeks in a hospital in New Orleans. That was in 1907. In 1909 we left the South and settled in East Rutherford, N. J., but during the first two years there I was practically a wreck, and was very often home from my work. A doctor from Carlstadt was my attending physician, and he came every day for about five weeks. He could not diagnose my case. Some days he said it was anemia, other days he would call it lung or stomach trouble, until finally my wife asked him to tell her the truth about me. Then he said that I had lung trouble and could not possibly live more than nine months. My wife nearly broke down after the doctor left that morning, but she did not tell me what he had said until a few months ago.

After that I was never well. I always had a severe headache and was also extremely weak, so I again went under the care of a physician, whose diagnosis differed from that of the other doctor. To relieve me of the terrible headache he gave me an opiate, and this was continued every second day for two weeks, until I was so affected by the poison that I did not know myself or any one else. Finally, one night, the foreman where I worked visited me, but I did not know him, and the next day I was removed to a hospital in Passaic, for the purpose of undergoing an operation. I left a few days later, but I cannot say that I was entirely well. I felt unhappy, a burden to myself, cranky to my wife and children, dissatisfied with everything, and I often wished for death.

All at once there came a change. My wife made the acquaintance of a very devoted Christian Scientist, and through this noble woman and her husband I received my first knowledge of Christian Science. At first, however, I did not pay much attention to it, in fact did not believe in it, but after reading some literature which my wife received from this lady, I came to think more deeply about this teaching. Then all at once my health was restored. I have not had a day's illness for more than two years, never felt so strong and happy as I do now, and I am glad to say that I am not any longer disagreeable and dissatisfied. This change was brought into my life by the truth and love of God made known to me through Christian Science.

I am unspeakably thankful to God for all the blessings we have received. I am also grateful to Mrs. Eddy for giving us Science and Health.—Fairy Brook, Carlstadt, N. J.

✥

In November, 1905, I underwent a double operation for appendicitis and a diseased condition of one kidney. These ills had caused me a great deal of discomfort and suffering, and an operation seemed to be the only means of getting some relief. The relief obtained, however, proved to be of only a temporary nature, and in a little over a year my condition was as bad as before the operation, and in some respects worse.

I suffered from depression, nervousness, and an extreme sense of nausea which was often more trying than pain. After several examinations, it was found that the other kidney was in an abnormal condition, and according to *materia medica* it was not possible to have another operation of this nature. My parents, doctor, and friends were all most kind, and did everything that love could think of to make things brighter for me; but in spite of their efforts, I finally came to the conclusion that life was not worth living and wished I might be allowed to pass on. The doctor said I would be more or less of an invalid for the rest of my life, that I would never know what it was to be really well again.

When a friend of mine (who is not a Christian Scientist) heard what the doctor had said, she asked my mother to let me have Christian Science treatment, saying she was quite sure it would help me. We knew nothing about Christian Science, but my friend's sister-in-law lent us some literature, including the text-book, "Science and Health with Key to the Scriptures." After reading a little, my mother said she was sure that Christian Science could do me no harm, even if it did me no good, and for the sake of saying that we had left nothing untried, she asked me to have treatment. To this I consented, although I did not believe that anything could succeed when the doctor had failed, but I attended a Wednesday meeting at First Church of Christ, Scientist, London. I went again the following Wednesday, and was introduced to a practitioner after the service. I began to have treatment that week (about the last of January, 1909), and in three weeks I was perfectly well.

My practitioner asked me to read in Science and Health every day. This was a great trial to me, as I was not in the least interested in the subject, but I obeyed, as I felt that I ought to do my part when others were trying their best to help me. The fourth day after treatment I felt so much better that I did not want to do anything but read all I could about Christian Science. That night I went to bed without any thought of fear, and consequently did not wedge my door and window, as I had been in the habit of doing for a long time past. It is now five years since my healing, the five happiest years of my life, and I have had no return of the old symptoms.

At the time I heard of Christian Science I wore glasses and was about to have them altered. Since studying this teaching, however, I have forgotten all about them, and have no need for them. I know that sight as God gives it is perfect. I have also been healed of anemia, a complaint for which I had tried many remedies, but for which I never found a cure; and I was healed in one treatment of catarrh, from which I had suffered for several years. For many years my greatest wish was to become a hospital nurse, but now I know that I have learned a better way in which to help the suffering ones, although doctors and nurses deserve our gratitude and thanks for doing "the best they know."

I am more grateful than I can say for Christian Science, and though the physical healing is such a great blessing, I am most grateful for the better understanding of God and of the Bible which Christian Science has given me, that understanding of the truth which our beloved Leader tells us is "God's remedy for error of every kind" (Science and Health, p. 143). Through the help I have received from this teaching, I am now able to do the work I love the most, namely, nursing the sick. I was absolutely physically unfit for this work before I was healed in Christian Science. I can only express my gratitude by trying to help others as I have been helped.—Alma B. Wightman, London, England.

✥

It is difficult to express in words my thankfulness to God for the moral, physical, and spiritual help that my husband and I have received through Christian Science. It is now seven years since I first began to study Christian Science and to place entire reliance upon its healing methods.

I suffered from chronic rheumatism for many years but was healed in a few treatments from a Christian Science prac-

Digitized by Google

titioner. I was also cured of an attack of acute lung trouble of a most serious nature. After being treated for four or five days, I was completely healed, and have had no return of any of the symptoms of the disease. My husband had a most remarkable healing of an acute throat affection. Before he learned of Christian Science he had suffered frequently with his throat, and the physicians who treated him found it necessary to lance it; but as a result of this revelation of Truth he was healed after a few treatments, and was able to resume his business duties the following day.

I can hardly describe the feeling of joy which we experienced upon receiving the healing, and my husband and I are both thankful to God for these many blessings. We give this testimony with the deepest gratitude, and with the hope that we may gain a greater understanding of Christian Science.

MRS. GEORGE W. TURNER, Brooklyn, N. Y.

✧

I am very thankful for what Christian Science has done for me, and I would like to express my gratitude. In going down the cellar steps on Feb. 14, 1912, I slipped and fell to the bottom, striking my head against the wall, and became unconscious. My nose and mouth were very much bruised, and bleeding, and as soon as I could speak, I sent for a Christian Science practitioner. The practitioner was with me for about an hour, and I can never describe the spiritual uplift that I received when the light of Truth came suddenly to my consciousness. I felt a great sense of peace, and with it all pain vanished. Although it had been a great nervous shock, I slept and rested well all night. The next day my shoulder, elbow, and knee had some discoloration, but I had free use of my arms and was able to walk around as usual. I was entirely healed, and have felt no ill effects from the accident since that hour.

I am truly grateful for the many blessings I have received through Christian Science.—SALLIE A. GEIGER, Reading, Pa.

I hereby corroborate this testimony, as I was present when the accident happened. I can never be thankful enough to God for what Christian Science has done for my wife and myself, and for the spiritual knowledge of the Bible we have received.—HARRY G. GEIGER, Reading, Pa.

✧

[Translated from the German]

This testimony is written with a sense of deep gratitude and love for the many blessings which have come to me and my family through Christian Science.

For over seven years I was afflicted with a diseased condition of the leg, which in the opinion of many physicians was due to calcification of the blood. We left nothing untried. I was refused admission to a hospital where I had sought help as a last resort, since my case was said to be hopeless. To this serious trouble was added a severe attack of influenza and of pleurisy. I was needed in our business, and therefore could not have the necessary rest in bed. When I consulted the physician again, he informed me that since I had neglected to follow his advice formerly, he was not able to cope with the case, and that my recovery from this severe illness was impossible. All he could do for me would be to administer hypodermics as a means of assuagement. To this I would not consent, as I had gone through three severe operations within a few years and had a keen recollection of the suffering caused by these injections. I therefore refused pointblank the services of the physician, and none of his prognostications came true.

It was then that I received at my bedside the visit of a dear friend and adherent of Christian Science. Among some smaller publications he gave me a copy of the *Herold* and pointed out to me the way of Christian Science. Although I knew nothing of its teachings, I had no difficulty in grasping them, and after a week's reading of the literature handed me, I undertook, though with great difficulty, a trip to Braunschweig in the company of a friend, herself an ardent Christian Scientist, in order to attend a Wednesday evening meeting. That same evening I asked a practitioner for help. Absent treatment was soon taken up in the most loving manner, with the result that after two weeks I was completely healed of all my troubles.

I would like to mention here that from the day treatment was begun, I never missed one hour in the store, where I had been helping my husband for many years, though with great difficulty. The many customers who come to our store were so surprised at my steady improvement and quick recovery that a large number of them embraced Christian Science. Thus, with God's help and through the understanding of the truth, I have been fully restored, and I now experience a joy in domestic life, as well as in our business, such as I have never known before.

It is impossible for me to express the great help which I and my family have received through Christian Science, and words fail to convey my thanks when I think of our Leader, Mrs. Eddy, who helped us to get on the right road. Christian Science has brought us not only health but harmony and happiness, so that we have every reason to join the psalmist in saying: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases."

FRAU JOHANNE GEHRMANN, Schöningen b. Braunschweig, Germany.

✧

I consider it my duty as well as a great privilege to testify to what Christian Science has done for me. While listening to the testimony of a friend at a Wednesday evening meeting some time ago, I suddenly realized that I had been healed of neuralgia, from which I had suffered for many years. I was also healed of the drink habit. While I feel deeply grateful for the physical benefits received, I am doubly thankful for the spiritual uplift which enabled me to realize, when left entirely without material support, that God is our source of supply and "a very present help in trouble."

I am constantly being helped in many ways, and am gaining a better understanding every day. I enjoy all of the *Sentinel*, and am always interested in the testimonies. For the Bible, and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I am deeply grateful.

MRS. WILLIAM B. ASTEN, Washington, D. C.

✧

When I look back and compare the past with the present, after four years of trying to live the truth as taught in Christian Science, I find every condition improved upon. The old way of doing business was mostly under stimulation by the use of liquor and cigars to pave the way; now, having the standard of Principle to work from, I find myself imbued with moral courage and the way clear to meet business or any other conditions fearlessly.

I feel that I owe an endless debt of thankfulness to God, and to the teachings of that life-giving book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, for my healing from many vices. This book was in our home for many months before I picked it up to learn how my wife was healed during one week's treatment in Christian Science, after years of suffering; and before I had read it through, the liquor habit of twenty-five years' standing had left me.

Digitized by Google

In a short time the tobacco habit of many years also disappeared, and I am thankful to say the healing has been permanent. When I take my place each Sunday with forty men ushers in a Christian Science church, and see the cleanliness and purity of these men as God's children, free from tobacco and all other taints, I consider that a great privilege has been given to me.

My hardest struggle in this journey from sense to Soul was the constantly changing ways of doing business. The first year, every transaction seemed to go wrong; if I earned a compensation for services, it seemed to be withheld. The second year was an improvement. I was gaining a better understanding of the truth, and continued to seek "first the kingdom of God, and his righteousness," and as I gained in spiritual strength and understanding more was "added unto me." The following year, by seeking still more of the Mind "which was also in Christ Jesus," the supply was threefold, and it is ceaseless.

I am convinced, by the many demonstrations in my family, my business, and myself, that if we will give Christian Science a fair trial, by giving up each day a part of the sense-testimony that appears so real to us, a change will soon be manifest, as the best evidence of the proof of its teachings. I am glad to note the number of men in this great city, among lawyers, real estate men, members of the board of trade, brokers, dentists, and clubmen, who are interested in Christian Science; and there is not one who does not rejoice with me in having found the way up from and out of former conditions.

I feel that I owe unceasing thankfulness to God, our ever-present help, and gratitude to Mrs. Eddy for the discovery of this great truth, which is surely redeeming the world; also to the Publishing Society in Boston for our priceless periodicals.—Samuel P. Brannan, Chicago, Ill.

✧

As I do not have the opportunity of acknowledging my gratitude for Christian Science publicly, I am glad of the privilege of sending my testimony to the *Sentinel*, so that others may know how grateful I am. In the two years' study I have had of Christian Science, my life has been almost completely changed. Whereas I once feared God as a God of wrath, who would inflict punishment for every little thing we might do that did not please Him, I have come to think of Him as a God of mercy, love, wisdom, and justice, and that He will tenderly care for us and help us over the rough and stony places. Our second child, now a year old, has never known sickness, with the exception of a few hours one morning, when, thanks to the great Physician, I knew where to go for help, and she was quickly healed.

To Mrs. Eddy I am extremely grateful for her patience and work in giving to us this saving truth. I am grateful indeed for the literature, as I find it such a help and strength in my daily life. Words cannot express my thankfulness to God; and I earnestly desire to live such a life that I may be worthy of the name Christian Scientist.

Eula Rush, Salina, Kan.

✧

It is with a deep sense of gratitude that I send this testimony to the healing power of Christian Science. For three years I suffered from an internal growth, which, although not large, was the cause of much discomfort and a persistent hemorrhage. Knowing the truth of Christian Science, I tried to overcome this difficulty myself by the study of the Lesson-Sermons and the reading of Christian Science literature; but the condition was too real to me, so some months ago I asked for help. During all this time I had told no one, except the practitioner, of my condition, as I thought it would be much easier to meet if my family did not know of it.

After having treatment for a while I was greatly relieved of my fear, and after about a month I seemed so much better that I told my practitioner that I thought I could get along alone; but a great mental strain came upon me soon afterward, and I had to call for help again. The practitioner worked for me about two months, when one day the growth came away. I realized such a sense of freedom, not only from the bodily discomfort and pain but from fear, and such an understanding of God's allness and power, that my heart was filled with thankfulness to God, who has given us this new-old truth through our revered Leader, Mrs. Eddy.

Ella S. Gripper, Campo, Cal.

✧

Although reared in a strictly religious way, I early began to do my own thinking, and I soon saw that religion, as I knew it, was sadly out of touch with humanity's needs and distresses. It was clearly impossible for me to continue to pray to God for blessings when I saw that, if He were omnipotent, He must be responsible for good and evil, and thus omnipotence was destroyed. This led me to become an agnostic. I sought happiness in material things, and cherished the hope that some day a great chemist or scientist would eventually fathom nature's secrets and tell us how and why we were created, giving a rational and logical explanation of first cause. Just to live on, working hard for subsistence, suffering sickness, sorrow, and despair, and having no certainty in life or death, brought a great discontent and rebellion that such things should be.

My lot was cast to live inland on this great continent, raising stock and tilling the soil. The struggle for existence was keen, and the powers of nature seemed hard and cruel, snatching success from my grasp when it appeared just at hand. The desire to get on in the world was so great that big risks were continually taken, and the time came when a greater one than usual seemed to be the end; and the loss of the means so laboriously accumulated over many years appeared impossible to avoid. Just at this stage a Christian Scientist crossed my troubled path, and I was led to ask him what this new religion was. I had just vaguely heard that such a religion existed, and that it claimed to heal the sick. The statements he made were so wonderful, as he recounted the story of healing and regeneration in his family, and his earnestness was so impressive, that I decided to buy a copy of Science and Health. I began to read it more from curiosity than with any thought of deriving healing from its pages. The idea of a book healing disease seemed preposterous. I had read scores of books by the world's greatest minds, and all I had gained was doubt and despair.

I had chronic stomach trouble, and had suffered for years from a skin disease which appeared whenever I was overworked or worried. This disease was carefully studied and worked on by a clever medical friend, who took a special interest in the case, but he could not clear the disease out or give me any satisfactory explanation of the reason for its appearing. The best he could do was to say that I would always have it, and he gave me two powerful drugs to allay the suffering when it appeared. Besides these ills I had several minor complaints, necessitating constant drugging. Financially I was in deep water, and appearances were very much against my success.

My first reading of the Christian Science text-book caused me to marvel at the temerity of its author in making many definite, authoritative statements, which conflicted so strongly with what I considered my accumulated knowledge that I

Digitized by Google

decided the teaching was impossible. However, I kept on reading, and within one month the chronic stomach disorder and bowel trouble vanished, and I was conscious of a great freedom. This happening so astounded me that I considered it only fair to the author of this wonderful book at once to cease taking the material remedies which had been in constant use all my life, and to give her teaching a fair trial. I then began a systematic study in order to try to grasp the Principle, which apparently lay in an understanding of the author's discovery. After six months' careful study of Science and Health and my discarded Bible, I was completely healed of these diseases, and within two years my financial affairs worked out so well that all anxiety was removed and I was on the highway to success.

I can now say, after six years, that I have attained some little knowledge of the vastness of this marvelous Science. Every vestige of the old ailments has long since passed out of my life, and in a most glorious manner I have been lifted out of all financial embarrassment and every need has been supplied. Happiness and joy, vitality and strength, have displaced misery and suffering, because now I know that the creator of the universe is wholly good, and ever ready to help the children of men. During all these years I have not tasted a drug or consulted a doctor. I have enjoyed better health than ever before, eating my food without question, and my capacity for work has never been greater. My healing has been very beautiful and gratifying, but it is only an incident by the way.

Christian Science has shown me the road that leads to eternal life, and has given me a practical rule whereby I am sure that I can win my way to the kingdom of heaven (harmony) by faithfully following the way so lovingly pointed out by our dear Leader, Mrs. Eddy. It also shows me how I can help my fellow man to see this glorious light; that is, by seeing no evil, thinking no evil, hearing no evil. I am very grateful for the redemption that has come to this age through the saving and healing power of Christian Science.

JOHN O'BRIEN, Sydney, Australia.

[Written for the *Sentinel*]

Arising at Dawn

LAURA GERAHTY

A LITTLE burden traveled through the air,
And as it flew from troubled heart to heart,
It grew and magnified each little care
Which mortal thought had made of it a part.

On, on it went, with weariness constrained
To rest betimes on clouds of gloomy gray;
And while it tarried, and as darkness waned,
A little angel thought passed by that way.

It touched the burden with its silvern wing
And, scarce perceiving aught but light and song,
Broke through the clouds where poised the dreary thing,
Dispelled the mists and gaily sped along.

The burden trembled as the doom of pain
Rang out in tones that thus made glad the night,
Then broke and fell to lifeless dust again,
And morning woke with only love and light.

. . . . . .

A woman sat. Through hours of prayer and tears
A restless infant lay upon her knee.
At dawn, on wings of faith, surmounting fears,
She rose, to love and light and harmony.

From Our Exchanges

[*The Christian World*]

Behind all enthusiasm of the sterling kind there must be contemplation through which conviction of an ideal's supreme worthiness and importance is attained; and we are landed upon the paradox that in order to become truly enthusiastic we must first of all become truly quiet, so that a right sense of moral values may arise within us and the authority residing in the supreme ideals may seize upon our souls. Men drop into the poorer and less lasting enthusiasm because they are too lightly and too swiftly enthusiastic; they have not dwelt for a solemn hour in the calm regions of eternity, seeing the great forms of right and truth slowly take shape before them and stretch forth commanding hands to capture them; they have not become sufficiently still to grow passionate afterward under authoritative spells, nor given self away with such abandon as would insure that self would be returned to them energized and inspired by a not-self greater than they.

Nor is the transiency of such enthusiasm as many experience any matter for surprise. Not being part of right's eternal activity, it will be easily daunted when difficulties appear; it will not possess or seek for an adequate equipment. For all its parade of seriousness, it is precisely lack of seriousness that creates and accounts for it; and of moral quality it has none at all. It is too excited to be really passionate or to have passion's strength. So we end on the paradoxical note again,—it is out of calm contemplation that true and enduring enthusiasm is born, because only to calm contemplation of them do the eternal ideals reveal themselves for what they are; and the real enthusiast is he who has passed into their solemn presence and there bidden his tumultuous heart be still.

[*Western Christian Advocate*]

To touch men's lives there must be in the preacher and his message the element of integrity, the ring of genuineness. The truth must possess the preacher through and through,—the truth as it is in Jesus. The conviction, "We believe, . . . and therefore speak," gives arrows of thought, headed with flame, that strike into the conscience. Such preaching commends itself "to every man's conscience in the sight of God." The preacher will preach on those truths that touch the moral emergencies of life, that throb with destiny. He will sound forth the eternal verities that mean life or death to men. He will waste no time on hypotheses or conjectural doctrines, or on dogmas that, when proved to the satisfaction of the preacher, will elicit from the struggling man in the downright tussle of life: "Well, what of it, anyway? What has that to do with my life, my struggles, temptations, hopes, and fears?"

[Charles C. Albertson, D.D., in *The Homiletic Review*]

Blessed is everything that tends to widen our sympathies and give us the consciousness of new relations. Blessed is the religion that takes us out of ourselves, makes us superior to our limitations, creates a new world for us. Supremely blessed is the gospel of Jesus Christ, for of all religions that the world has seen it offers its disciples the most abundant life. The distinctive glory of Christianity is its expansive spirit. The key-note of it is the greatest possible development of the individual. It aims to make every man a king, every heart the throne of the eternal, every life a consecrated temple. "The humblest life that lives may be divine." It is a great undertaking, and it is unique in Christianity.

Digitized by Google

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

Many a man is nearer to the stature of Christ in having fought and fallen than one who has never had to fight a particular temptation at all. And those who have been most fiercely assailed may know of a surety that they are being prepared as vehicles of the Spirit of Christ to bring relief some time, somewhere, to other beleaguered souls. No experience is ever without a divine meaning, and no soul is left to struggle alone. Believe it to be the will of God that you should overcome, and overcome you shall; but believe also the still higher truth that you are called to overcome, that in you divine love may find opportunity of pouring itself forth to weak and sinful men.

[*The Continent*]

No one man can be big enough to comprehend the needs and desires of all his fellows. No single force can interpret for the mass of humanity. The people must speak for themselves in their own mighty multitude-voice. More commanding than the wisdom of the people is the God led trend of the people. God works His will through personalities without doubt, but it is the mass movement of the people, drawn by the omnipotent magnetism of His providence, which makes that will magnificent and irresistible. Notwithstanding excesses of evil here and there, it yet remains easy to trace from age to age across the arena of history a stupendous progress of mankind toward the will of God. When one has realized that march of the people, he dares never afterward revile or deny democracy.

[*The Watchman-Examiner*]

It is becoming more and more common to meet in public speech as well as in print the statement that those parts of the Bible that commend themselves to one's judgment should be used and the rest should be rejected; and the same standard of self test is applied to all sources of religious knowledge and persuasion. This centering of morality and religion in self is certain to result in the death of both. Men never rise above their standards; and if they find their standards in themselves, they will never rise higher than themselves. The inevitable result of a rejection of an external and corrective authority will appear in the increasing degeneracy of their followers in morality and in religion.

[Rev. W. F. Skerrye in *The Christian Register*]

To face all that life holds of sunshine or shadow with brave courage, because we are walking with and looking up to the Father; to find everlasting satisfaction and joy in the beauty and life lying all round us, because they are the truest expression of His wisdom, His power, and His love, is to begin to live, to embark on the soul's great adventure. But victory comes only through the giving. To know the Father by these dear, common, holy ways, and then to give, first thanks, love, and glory to Him, then loving, understanding kindness to every neighbor in such ways as we may in the small corners where He has placed us,—this is to live indeed.

[*The Christian Work and Evangelist*]

The world is beginning to wonder if there is not some better way of settling disputes between nations than by war. Men are asking: Have we got to go on killing one another, one body of Christians trying to rip to pieces by shrapnel and bayonets another group of followers of the same Lord, to settle a dispute between two governments, or vainly to endeavor to settle a question of right or justice? There is a very decided feeling everywhere manifest that there must be some better way.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

New and improved class record books for use in Sunday schools are now published and ready for distribution. Size 5⅜ x 8¼, with ruled pages for two years' record, printed on good quality paper and durable cover. Prices of books, registration cards, and coin envelopes as follows: One hundred class record books, $6.50; 12 copies, 90 cents. One hundred registration cards, 25 cents; 12 cards, 10 cents. One hundred coin envelopes, $4.00; 12 envelopes, 50 cents.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

As a result of experiments during the past few years, the department of agriculture is now advocating the use of the bedding-out system of herding sheep on open ranges, instead of the old close-herding system which has heretofore been in use. This system gets its name from the fact that the herder who attends the band, camps and beds his flocks wherever the sheep find themselves at nightfall. Under the old plan he established a fixed camp and bed-ground and drove the sheep back to the same place each night. Through experience on the national forest ranges last year, the department states that lambs from bedded-out bands were five pounds heavier on an average at the end of the season than those which were trailed to and from established bed-grounds, and that the range can carry from 10 to 25 per cent more sheep than when so much is trampled out in traveling back and forth. The disadvantages of the old system were that the forage suffered by being badly trampled, and was actually destroyed at and near the bed-grounds; the sheep lost weight in going to and from the camps, and in dry weather suffered not a little from dust and from crowding. Moreover, under the old system the sheep were kept pretty well bunched; under the new plan they graze at will in scattered, open flocks and are constantly moving through new feed instead of traveling over areas already fed over. There are few sheep lost.

The principal provisions of the three bills — the Covington trade commission, the Rayburn railroad stocks, and the Clayton omnibus measures constituting the administration trust program passed by the House of Representatives, are as follows:

The interstate trade bill provides for the establishment of a board of three members to have control over industrial corporations, similar to the control exercised over railroads by the interstate commerce commission; it provides that all corporations, with a capital of not less than five million dollars, except those now subject to the interstate commerce commission, shall submit annual reports of its financial condition to the commission. The commission may also designate corporations having a capitalization of less than five million dollars from whom it desires reports. It may call for special reports in addition. The Rayburn bill, amending the interstate commerce law, makes it unlawful for any common carrier to issue stocks, bonds, notes, or other evidences of indebtedness, without the approval of the commission. The bill gives the commission power to require information from railroads and other common carriers and prescribes an elaborate system of reports. The Clayton bill is designed to strengthen and support the Sherman law and other acts against monopolies and restraint of trade.

For years the grievous destruction of bird life at lighthouses, says *The Sphere*, was supposed to be unavoidable and caused by the birds directly striking the lantern and being maimed or stunned by the impact; but Prof. J. P. Thijsse holds that most of the birds are only attracted to the light, and that they circle about it for hours until exhausted, when they fall and perish. He accordingly devised resting places to be fitted on the lantern itself, without interfering with its illuminating power, for the birds to perch on, and his experiments have been on trial for three years at the Terchelling lighthouse in Holland. The light is very strong—thirty million candle-power. Before this, on migration nights, thousands perished in a single night, while now the mortality does not exceed a hundred during the whole migration time. The Royal Society for the Protection of Birds, taking the matter up, have persuaded the board of Trinity House to erect and test the contrivances provided by the society at two English lighthouses— St. Catherine's on the Isle of Wight, and the Caskets in the English channel.

For some time past Belgium five-franc pieces have been sold at a relatively high premium in France, with the result that a regularly organized traffic in these coins has been actively carried on. The government has of late become so seriously alarmed at this prospect that somewhat arbitrary measures have been put in force, with a view to preventing the extensive export of these coins. No person is permitted to carry out of the country any considerable sum of money in silver five-franc pieces without being provided with a duly authenticated government permit. Any one found at the French frontier with what the Belgium customs authorities choose to consider as an unreasonably large amount of silver five-franc pieces on his person, is liable to be apprehended, and to have the coins found in his possession confiscated.

King Christian X of Denmark has placed an unexpected obstacle in the way of the plan of the Danish Cabinet to solve the deadlock in electoral reform by dissolving the upper house of Parliament, whose members, by refusing to vote, have stopped the passage of the constitutional amendment bill. The bill, which abolishes all property qualifications for electors of members of the upper house and takes away from the crown its present right to nominate twelve members, passed the lower house on June 9. When the bill reached the upper house the Conservatives, including the King's nominees, absented themselves, and as they number more than half of the sixty-six members, no valid vote could be taken.

The price of fuel oil is enough lower than it was a year ago to enable the United States to make a saving of six hundred thousand dollars on its contracts for the next fiscal year for vessels of the navy. The government consumption during the year will be about one million barrels, and that so large a saving was to be made was not known until bids for the annual supply were opened in Washington a few days ago. This reduction in price is the result in part of the agitation in Congress, encouraged by the navy department, in favor of having the government acquire a sufficient amount of oil lands in Oklahoma to insure a supply for the warships independently of private companies.

The total quantity of apples and pears exported from Hobart, Tasmania, up to April 3 this season, to places beyond Australia and New Zealand, is equivalent to 526,679 cases, or 203,760 cases in excess of the quantity exported at the corresponding date last year. The total quantity of fruit of all kinds shipped from Hobart to all ports this year is 631,572 cases.

The proposed Lincoln memorial highway, to stretch from the Atlantic to the Pacific across the United States, is not the only transcontinental highway in North America. A similar highway across Canada, the plan of which was conceived about a dozen years ago, is now rapidly nearing completion, and will be in use throughout its entire length within two or three years.

The income tax will fall by nearly twenty-four million dollars to provide the revenue expected from it by the framers of the new tariff law. United States government officials believe that they are meeting with the evasions which were predicted before the law was enacted. The treasury department has served notice of its intention to start after the "evaders."

Argentina imported more than four million tons of coal in 1913. Cheap freight rates facilitate the importation of British fuel, and as the largest consumers are the railroads, and these are principally in the hands of English companies, the United Kingdom has had a clear field, although in recent years the United States has been coming forward.

It will shortly be possible to accomplish the journey between Moscow (Russia) and Tokio (Japan) in eleven days. A weekly express is to be run in future from Moscow to Vladivostock without change of carriages. The train will reach Vladivostock on Saturdays, connecting with steamers to Tsugaru, and thence by rail to Tokio.

Statistics for 1913, dealing with the silk trade of Lyons, France, show that in spite of disturbed economic conditions a record was established for the year. The total figure was four hundred and sixty-seven million seven hundred thousand francs, as against four hundred and twelve million francs in value in 1912.

The wool exports oversea from Sydney and Newcastle, New South Wales, during the past nine months up to the end of March, have amounted to 792,869 bales, showing an increase of 73,066 bales. With the exception of a few bales exported to New Zealand, the whole of this wool went to Great Britain.

Andrew Carnegie has given another endowment of one million dollars to the Carnegie Institute of Technology, and the same amount to the Carnegie Institute, both of Pittsburgh, Pa. Mr. Carnegie's donations to local institutions of learning now amount to twenty-four million dollars.

Secretary McAdoo has announced, after a conference with President Wilson, that the election of directors of the new reserve banks should be completed about July 1, and the banks should be fully organized and ready to begin business about Aug. 1.

The Colombian Senate has ratified the Colombian treaty with the United States without amendment.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI July 4, 1914 No. 44

"The only begotten Son"

M. G. KAINS, M.S.

DEVOUT people have often been at a loss to interpret the phrase, "the only begotten Son of God," except by assuming that Jesus is that Son, even though St. John, the only Biblical writer who employs the phrase, first uses it as a simile, just as Nebuchadnezzar used the similar phrase, "the Son of God," when speaking of the "fourth" man walking with Shadrach, Meshach, and Abed-nego in "the midst of the fire." St. John writes, "The Word was made flesh, and dwelt among us, (and we beheld his glory, the glory as of the only begotten of the Father,) full of grace and truth." A little farther on in the same chapter he writes, "No man hath seen God at any time; the only begotten Son, which is in the bosom of the Father, he hath declared him." In the third chapter he again uses the phrase in declaring, "God so loved the world, that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life." In neither of the other two passages where this phrase is used are the words employed with a different shade of meaning.

A careful examination of the phrase, especially in connection with the use of its correlative employed by Nebuchadnezzar (by the way, the only person mentioned in the Old Testament who employs it in the singular number), will show that it does not apply exclusively to Jesus, but that it is a generic term often used in the plural, and by the substitution of the word "child" or "children," to imply the Christ. In our day Christ has been interpreted as "the true idea voicing good, the divine message from God to men speaking to the human consciousness" (Science and Health, p. 332).

This thought that the Christ, and not the human Jesus, is the only begotten Son of the Father, may be very aptly illustrated by a botanical simile. When a botanist classifies a rose or any other plant, he deals with a more important subject than the mere specimen in his hand or under his microscope. He has in mind the rose which the specimen he is examining more or less imperfectly approaches, expresses, or typifies. In fact, he knows only one rose, and that not found perhaps in a whole field of roses, namely, the ideal rose, all of whose parts are in place, fully developed according to the botanist's idea, thus constituting the perfect or model flower. When teaching his pupils, the botanist must convey this idea of the perfect rose by means of such specimens as most nearly approach the ideal blossom in form. The pupil with this highest conception of the ideal in mind can recognize its characteristics even in very imperfect or perhaps injured specimens; for the ideal is capable of manifold expression, and can be recognized in spite of variations, however pronounced they may be.

In a similar way the ideal man, "the only begotten of the Father," is the only man that Christian Science recognizes and classifies. But this ideal man, like the ideal rose, has an infinitely varied human expression. Jesus demonstrated the Christ in a more pronounced degree than any one else of whom we have record. That was his mission. "He was appointed to speak God's word and to appear to mortals in such a form of humanity as they could understand as well as perceive" (Science and Health, p. 332). But he was by no means alone in this mission. Before his day people who understood in some degree what the Christ, the ideal man, "the only begotten of the Father," really is, presented the proofs of their understanding by healing the sick and living godly lives in the truest, highest sense of that term. Our Leader says, "The Christ is without beginning of years or end of days. Throughout all generations both before and after the Christian era, the Christ, as the spiritual idea,—the reflection of God,—has come with some measure of power and grace to all prepared to receive Christ, Truth. Abraham, Jacob, Moses, and the prophets caught glorious glimpses of the Messiah, or Christ, which baptized these seers in the divine nature, the essence of Love" (Science and Health, p. 333). In line with this teaching we have Paul's statement to the Colossians: "To whom God would make known what is the riches of the glory of this mystery among the Gentiles; which is Christ in you, the hope of glory."

Today, those who through the apprehension of this inspired message of Christian Science to the world have grasped the significance of this phrase, are able in some degree, just as were Jesus' disciples, to heal the sick, and to prove in other less conspicuous ways that the kingdom of God is at hand. Each one knows himself, herself, to be a more or less imperfectly self-realized expression of "the only begotten of the Father," and, what is of equal importance, he knows that every other individuality is in the same class. Every one who catches a glimpse of this fact has only to make his own realization so perfect that the Christ-man, "the only begotten of the Father," may appear. Then he has presented the proofs of his sonship in the same manner and in the same degree as Jesus did. This is the task set before every seeker after Truth: "Be ye therefore perfect, even as your Father which is in heaven is perfect."

Are We Building?

LOUISE KNIGHT WHEATLEY

How does the Christian Scientist build a church? To be consistent, it is evident that he cannot build it out of matter, even though the continuous sound of the hammer and chisel may seem to authorize such a view. The world watches the so-called material structure rising day after day under the hands of the busy workmen, and it says, This is the church which the Christian Scientists are building. But the Christian Scientist knows better. He knows that the Christian Science church is already built, and that the edifice which is becoming visible to the community is but the outward type and symbol of that perfect spiritual idea, the real church, "an house not made with hands, eternal in the heavens." He also knows that unless he has this perfect model ever before him, he is not building at all. The church which the world sees may present an imposing appearance; it may be very large and stately, and it may have cost a great deal of money; yet one knows that unless he has built on the right foundation, he has done nothing, for a display of matter is not a Christian

Science church. Unless the true substance has entered into every grain and fiber of its construction, our Leader says, "though you should build to the heavens, you would build on sand" (Miscellaneous Writings, p. 135).

The building of a Christian Science church is a metaphysical process. Building is knowing; it is realization. Building, like healing, is a grateful acknowledgment of that which God has already done. Healing, as the Christian Scientist understands it, is not an attempt to change matter, so that sick matter shall presently become well matter; it is rather a looking away from matter altogether, to contemplate instead that perfect spiritual being which needs no healing, for its "builder and maker is God." Similarly in the building upon which the Christian Scientist enters, no attempt is made to change matter, to pile it up, brick by brick and stone by stone, until it finally assumes such shape that the world says, The church is finished. Rather does he look away from matter, to contemplate instead that spiritual creation, the real church, not being built, but already finished, not to be made perfect and complete, but, like the real man, to be seen and acknowledged as already perfect and complete, because God made it so.

One definition of church, as given in Science and Health (p. 583), is this: "Whatever rests upon and proceeds from divine Principle." We know what rests upon divine Principle, even the spiritual universe of which this Principle is the cause and creator. We know also that which proceeds from this same divine Principle, even the perfect ideas of which this spiritual universe is composed. As right ideas, therefore, take the place of human misconceptions, we are gaining the true concept of man, and are at the same time building the only church "which hath foundations." When Jesus said, "Destroy this temple, and in three days I will raise it up," he directed thought to the spiritual structure which the true Christian Scientist is building, and which is being advanced to its completion only as he casts out of himself or others "whatsoever worketh abomination, or maketh a lie." He is building it when he is healing himself or others from erroneous beliefs about God and man, when he becomes more gentle, more kind, more loving, more patient, more pure, more honest, more compassionate. He is building it when he acknowledges no separation between "my church" and "thy church," but recognizes only "our church," wherein all ideas are in accord, because they forever reflect the perfect Mind which formed them.

The world may well rejoice when a Christian Science church is being built, for it means that a healing is going on in that community of which the sleeping world as yet but faintly dreams. It means that the activity of good is entering human consciousness and sweeping away much useless débris, just as a fresh, clear winter's snow will sometimes descend upon some smoky town and cleanse its dull, murky atmosphere, so that the sun may shine out later upon a world of dazzling whiteness. Building means purification, for as each would-be builder purifies his own thinking from all that is unlike God, the true temple, built without hands, will shine out in all its resplendent beauty. As he divests himself of criticism, self-will, intolerance, pride, ambition, envy, personal domination, and worldly policy, he will help to clarify the atmosphere for all concerned. As he frees himself from the old, clinging tatters of a belief in lack, and ceases to limit God in any direction, "all these things" which are deemed essential to carry on the outward building to completion, "shall be added." Supply is spiritual, and when it seems to give out, we have need to look into our hearts first, and into our pocket-books afterward. It is not lack of money, but lack of love, which makes an empty treasury.

Building processes are sometimes slow, not so much because the builders are unwilling to work, as because they seem unwilling to work together. Can we not afford to drop another coin of love into our treasury, and do as did those builders of long ago, of whom Isaiah wrote: "They helped every one his neighbor; and every one said to his brother, Be of good courage. So the carpenter encouraged the goldsmith, and he that smootheth with the hammer him that smote the anvil, saying, It is ready for the soldering: and he fastened it with nails, that it should not be moved." This is indeed the sort of nail that shall not be moved, for it is fastened in the spirit of loving cooperation. Then let us draw a little closer to our brother in this holy toil. If we all work happily together, animated by "one steadfast high intent," the visible structure can do no less than proceed steadily and harmoniously toward completion, without obstruction, hindrance, or delay.

The visitor to The Mother Church cannot fail to be impressed with what Mrs. Eddy has called "our prayer in stone" (Miscellaneous Writings, p. 141). It is indeed a true Christian Science prayer, for it is the prayer of realization; and as he looks upon the stately edifice, his heart goes out spontaneously to those unnumbered thousands who, from their overflowing storehouses of love and gratitude, took part in its construction. The edifice in Boston is but the outward expression of the thought of those who built it; and we, in coming after, acknowledge with grateful appreciation their fidelity to the true model, which must have been ever before their enraptured vision or they would not have been able to rear so beautiful a structure. May we, in building our branch churches, be equally faithful, since they will be just as good as our concept of them, no better. Then shall we not daily and hourly search our thought, lest something unfit to enter should slip into or in any wise hinder the construction while the watchman sleeps?

There is a testing-time for every building, and that is the day when the storm comes, and beats upon it. It is ours so to build that when the rains descend and the floods come, we shall not be dismayed. The tempest may surge up to the very door, and hurl itself against it, but it cannot enter. Poor little pitiful pretense of a storm! It will soon die harmlessly away in the distance, for in that building against which it dashed itself in empty fury, there was not one grain of "untempered mortar," not one particle of anything which, in time of stress and strain, would disintegrate and crumble; for it was built right in the first place. It "rests upon" that which can never be moved; and "all the building fitly framed together" is held and cemented in one complete, harmonious whole by the cooperation of the builders, who worked in love and were sustained by the divine Principle of all true being.

Working Together

WILLIAM W. PORTER

On page 583 of Science and Health Mrs. Eddy has given the definition of church, in part, as "whatever rests upon and proceeds from divine Principle." It must be conceded that anything thus grounded must abide, remain fixed in unity and harmony. Today a marvelous truth is being demonstrated in The Church of Christ, Scientist, throughout the world. Thousands and tens of thousands of men and women are gathered in branch church organizations to prove, in the experience of each individual, unity of thought and action ungoverned by the personal domination of any person or persons. Of this remarkable circumstance human history contains no parallel throughout the past, and this marvel has been wrought by the individual acquisition of the true spiritual meaning of church. In proportion as this spiritual

Digitized by Google

view has been attained, there has been dispelled the sense of the church as a material phenomenon or organization.

It is not always a pleasant task, and it may require some courage, to inaugurate a system of mental self-analysis, but the results fully warrant the conscientious effort required for each Christian Scientist to ask himself, "Does the concept of church and church-membership which I am holding, measure up to the inspired standard established by Mrs. Eddy in the passage referred to, and in The Mother Church Manual?" The determining factor in concluding this mental self-analysis is our ability to work together in one consciousness, not for the gratification of personal desire, but "to the glory of God."

Jesus emphasized the two great commandments of love: the first, "Thou shalt love the Lord thy God with all thy heart;" the second, "Thou shalt love thy neighbor as thyself." The latter essentially demonstrates the former, and thus they are inseparably combined. The command to love through spiritualized thought is always this: "Go, and do thou likewise." Go thou and demonstrate the ability to work together for good in the Master's vineyard. If for any reason one seems to see in practical activities a sense of association from which he must separate or exclude himself, may not such a one have missed the true interpretation of church? May it not be true, so long as something presents itself as a sense of church from which separation or exclusion seems necessary, that the true understanding or view thereof has not been gained?

At this point let us not forget that the scientific understanding of church "must be wrought out in life-practice." "Right motives give pinions to thought, and strength and freedom to speech and action" (Science and Health, pp. 202, 454). The psalmist caught the spirit of unity pervading right motives, noble desires, and his thought found expression in this song of praise: "Behold, how good and how pleasant it is for brethren to dwell together in unity! It is like the precious ointment upon the head, that ran down upon the beard, even Aaron's beard: that went down to the skirts of his garments; as the dew of Hermon, and as the dew that descended upon the mountains of Zion: for there the Lord commanded the blessing, even life for evermore."

This is the aim of all genuine Christian Science practice, wherein the ability to work together for good, and to love our neighbors as ourselves, is demonstrated. In this realization of unity The Church of Christ, Scientist, is surely making advance.

Guarding the Door

PRISCILLA M. HOGG

It would seem that there is often heedless talk about church matters among members and adherents of our churches, and a little lesson that was recently learned by one Christian Scientist on this subject may be helpful. One day, while away from home, she was studying the rules and by-laws of the branch church to which she had applied for membership. Her companion, who was not a Christian Scientist, was a friend with whom she had been closely associated in another church. This friend was an ardent social worker, and thinking that she would be interested, the Scientist said, "Christian Science church government is purely democratic." The friend remarked, "Do you think any government is ever purely democratic?"

This innocent question proved to be a pitfall for the Scientist, who left the door of thought decidedly unguarded for a moment. Her friend knew that for many months previous to this the Scientist had been attending a Christian Science branch church in the city in which they both lived, and also knew that she was not seeking to join that one, but another in the same city. The Scientist, forgetting the gratitude which she owed as a former adherent of the church first attended,—indeed, forgetting everything that she ought to have remembered,—was very foolishly about to utter criticisms upon its government, which after all she knew nothing about, as she had never been a member. At that moment, however, she was sharply stung on her right hand by a wasp. In her sudden surprise she flung her hand against the nearest object and killed the insect. At the same instant, and above the disturbing sense of pain, was a feeling of great relief that the venomous thoughts had not been uttered, and that instead, their sting was dead, for the unreality and futility of that error was made manifest and would not be likely to have any hold upon her again.

A few minutes later the powerlessness of the physical sting was also demonstrated,—the one seemed a type of the other,—and not until this was accomplished did the friend know anything about it. It only seemed possible then to tell her the less important part of the tale. The moral seemed to be peculiarly the Scientist's, and it meant to her that our every effort should be given to realizing and declaring the true ideal of church, that presented on page 583 of Science and Health. Respecting this we may well recall the Master's words, "Let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil."

Longing for Light

MARY WARD LEWIS

Those who love nasturtiums have no doubt noticed that the flower-stems vary greatly in length. The flowers on the ends of the vines or in sunny locations, while just as bright and perfect, have short stems, while those close to the ground, under the thick leaves or back in shady corners, have long stems. They have had to reach a long way up to the sunlight. At first, the tiny buds down under the leaves must have had little sense of the sunshine. Thick, overhanging leaves shut them in, but they felt the call of the light; they needed it and steadily they grew toward it. One by one they rose above the leaves, and each finally presented its offering of fragrance and beauty. This effort made them the more desirable for service. They had gained by overcoming.

The lesson is obvious. When we first hear the call of Christian Science, to many of us it seems a long, hard way to reach the plane of spiritual understanding. Inherited false material beliefs seem to hide the light of Truth and interfere with our progress, but, like the flowers, we can rise above them all. Indeed, as Mrs. Eddy has said: "Only as we rise above all material sensuousness and sin, can we reach the heaven-born aspiration and spiritual consciousness, which is indicated in the Lord's Prayer and which instantaneously heals the sick." "We apprehend Life in divine Science only as we live above corporeal sense and correct it" (Science and Health, pp. 16, 167).

We do not need to transplant the flower to enable it to reach the sunshine. We know that it will rise above the leaves, and gain by that same effort. So in life, we do not have to go away from our home and friends or change our environment to come to our own. It may be our duty and our vantage to work out the life-problem just where we are, even though our surroundings may seem discouraging. In so doing we shall learn our lessons and gain strength. In rising above the seeming obstacles of our own path, we shall gain the freedom to reach and the wisdom to help others. As we look at the plants in the garden bed, nothing but leaves

Digitized by Google

may appear; but under the leaves the buds are surely pushing their way upward, and when they reach the light, they will be all the stronger, and have the longer stems we so much desire, because of their patient effort. If, therefore, we see no evidence of the coming of our dear ones to Christian Science, we may still know that all is well. Under the unpromising seeming there is the fact that man, in truth, is God's child, and in the light of the Father's love, ever present and ever active, human sense will in due time yield to the drawing power of love, and spiritual sense will find its blossoming.

These flowers bring us yet another lesson. The buds near the ends of the runners bloom so quickly and easily because the parent vine has lifted them up into the light. This is a thought for us who are parents. We may and should so live that we shall help our children, and bring them more quickly to the apprehension and enjoyment of Truth. Jesus said, "Suffer little children to come unto me, and forbid [hinder] them not." Mrs. Eddy has said: "Christianity causes men to turn naturally from matter to Spirit, as the flower turns from darkness to light. Man then appropriates those things which 'eye hath not seen nor ear heard'" (Science and Health, p. 458). If we are truly living the Christ-life in the home, our sweetness and strength will make daily contribution to the betterment, the advance of all about us, and especially those who are nearest and dearest.

Watchfulness

LILLIAN VON GESSNER

Not long ago I had occasion to go to a near-by city. The day was somewhat gloomy and the skies were overcast. As I took my seat in the train, my first thought was to turn to the window and push the shades well up, so that I might have an unobstructed view of the landscape, not that I was expecting to make any special study of the latter, as it was already very familiar to me, but from an instinctive desire for light and for a broad outlook.

The matter which was taking me to the city seemed a somewhat complex one, and I realized that it was far wiser to study it in the light of truth rather than from a merely human, business point of view; so after settling down quietly I immediately began to work mentally over the problem before me. For a while all went well, and my spiritual vision seemed very clear. A sense of peace and quiet pervaded my mental atmosphere, and the way I was to go seemed to lie plainly before me. Minutes passed, and suddenly I became aware that a great change of feeling had taken place. A peculiar sadness appeared to be creeping over me, and a sense of darkness as well. I started, and turned to the window to find that very slowly, but none the less surely, the blinds had been slipping down and had now more than half concealed the outlook. I pushed them back into place, and this time made sure that they would stay. "There," I exclaimed, "is your lesson. Just as those blinds, which you were not watching, slipped slowly down and thus cut off the light of day, so a human sense of things has gradually crept into your mentality to darken your thought because you were not watching."

It is an old and a true saying, that there are no little things, and that it is on the small, invisible events of life that the greatest issues hang. As in the case of a giant tree, it is not the great, imposing-looking roots that do the most effective work, but rather the minute fibers that carry the sap to the heart of the plant; for though the big roots uphold the weight of the monarch of the forest by giving it a solid hold in the ground, the life-imparting sap is sucked up into and distributed throughout the giant by the myriad tiny fibers that seem no more substantial, many of them, than silken threads. Destroy these seemingly unimportant rootlets, and within a short time the leaves will first droop, then shrivel up, and a dead tree will soon be ready for the woodman's axe. So too in our daily experience, while the big problems, coming upon us suddenly, may seem at first to stun us, their next effect is to induce us to renew our energies; to work and study till the battle is o'er and the victory won, when we exultantly square our shoulders and take a deep breath. But it is the ceaseless, endless repetition of minute annoyances which, like the incessant singing of the mosquito that becomes so exasperating to our senses, seems to wear us out and sap our moral vitality.

In this same wise the first wrong thought, like the untrue note on the violin,—the note just a little off tone, that makes the entire piece discordant,—if it is not speedily corrected by Truth, soon makes jangling discord of what would otherwise be sweetest harmony, and leads us astray. If not quickly discovered and cast out, it will so warp our perception that ere long we will not be able to distinguish between truth and error. When the tuner is not perfectly sure of his pitch, he strikes his tuning-fork. Thus every thought that seeks admittance to consciousness should not be allowed to slip in through unguarded doors, nor yet be shut out by slowly descending blinds; but with doors securely guarded and windows wide open to the light, it should be challenged, and admitted only when it rings true or measures up to the standard. And this standard we know. The Master said, "By their fruits ye shall know them." The fruits of the Spirit, as Paul tells us, are "love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance;" while the fruits of mortal thought are aversion, unrest, discontent, discouragement, irritability, distrust, uncertainty, weariness, dissatisfaction, and all unloveliness.

Well did she who first revealed to humanity the fact that Christianity is Science, and has most practical application to man's every-day needs and problems, understand the full importance of keeping the strictest watch over the army of thoughts which so oft, like "ravening wolves," seek to storm the inner sanctuary of consciousness. And in Science and Health (p. 392) she has given us this word of counsel: "Stand porter at the door of thought."

[Written for the *Sentinel*]

Summer Rain

ELIZABETH EARL JONES

Oh, the smell of summer rain
As it patters down the dust!
And, oh, the thoughts that come again
Of verdant hope and vanquished pain,
Like fragrance rising from earth's crust,
Subdued and wet by summer rain!
Who could cherish doubt and fear,
When through lattice pink and white
Of blossoming trees, blue skies appear?
For sooner gone than dreams of night
Are fickle clouds of summer rain.
Oh, the thrill of emerald green
When the sun comes out again!
And, oh, the freshness of the flowers,
Gently steeped in summer showers!
Everywhere God's smile is seen;
All the world looks sweet and clean;
And feathered folk in loud refrain
Sing gratitude for summer rain.

Selected Articles

[Frederick Dixon in *Weymouth Telegram*, Weymouth, England]

A recent critic says that because the universe teems with expressions of God's love, therefore God must have created the universe. It will be seen from this that this critic is a very master of the *post hoc propter hoc* method of argument. Seeing that the earth also teems with sin, disease, and death, to say nothing of misery of every kind, what, it might be asked, does this prove about creation? One cannot help wondering if he ever read a remarkable passage in "The Light of Asia," which, discussing this very fact, concludes, "Each slew a slayer, and in turn was slain."

Then the critic seems to be troubled because Christian Scientists cannot do the whole of the works of Jesus. He appears to think that because Mrs. Eddy passed away, that proves Christian Science healing to be a fraud. This is the sort of argument with which the medieval church met the statement that the earth was a sphere. They said nobody had ever been round it, therefore it was a plane. In the present instance, not only is Jesus known to have raised the dead, but Peter and Paul did also, so that unless the critic is going to contend that because every one is not a senior wrangler, therefore no one can work out any mathematical problem, it is very difficult to discover what he is trying to prove.

Then, again, he wants to know what I mean by saying there is no material law, and he is indiscreet enough to say that he supposes I mean that the law, "Thou shalt not kill," does not mean to kill a material body. As a matter of fact, I meant precisely what I said. I was speaking of law, and when the critic gains a slight perception of what is meant by law in an ordinary scientific sense, he will discover that I was talking about those facts which are described as law because no variation in them has ever been perceived, and not about civil or religious codes which men break just whenever they please. Hume, on a famous occasion, described a miracle as a violation of a law of God, with the result that Huxley was forced to point out that the very fact that what was called a law had been broken, proved scientifically that it was not a law, and that if a miracle seemed to break what human beings regarded as law, it only proved the existence of a law with which those human beings had been hitherto unacquainted.

And now for the critic's great question, which I have been answering for some time past, but to which he says he cannot get an answer. Why, he asks, if material nature is not real, should any one seek to heal it? Why, will he tell me, if two and two are not five, should anybody seek to prove them not? For the very simple reason that, in the one case as in the other, you are endeavoring to destroy the belief in a lie, and so, to that extent at any rate, to overcome the human ignorance which prevents men from gaining a knowledge of the truth which is to make them free. Truth is reality, and reality is truth. The fact that two and two are not five, is truth, and is consequently a reality. A child, however, may believe the lie, and have to be educated out of the belief by being given a better understanding of truth. A man believes in sickness, which is equally as false a belief as the belief that two and two are five, and he has to be educated out of this belief by being given a better understanding of Truth, that is, a better understanding of God. The truth which is to free the world is an absolute knowledge of God, and an absolute knowledge of God is a scientific knowledge of God, and a scientific knowledge of God is exactly what is insisted upon in the epistles, in a Greek phrase commonly translated knowledge of God, but which should be translated a full, exact, or scientific knowledge of God.

A scientific knowledge of God constitutes a knowledge of divine law, and divine law is not something which can be broken, any more than the fact that two and two are four is something that can be altered. A human being in his ignorance may refuse to be bound by law, but that will not break the law, any more than a childish denial that two and two are four will alter the fact. What happens is, that as long as the misstatement continues, the discord resulting from the misstatement will continue. Just as long, in consequence, as men choose to believe that God created physical man, with all his sins and sufferings, so long will they fail to overcome those sins and sufferings. The so-called orthodox Christian sects, all of which, be it said, were heterodox before they were considered orthodox, have been preaching the divine creation of material man for the last eighteen centuries, in the intervals of trying to take what they have termed the God-given life of man if he refused to consent to their own particular man-made dogmas. They have preached at him all these centuries, insisting on the reality of sin, and are surprised that sin has not been overcome.

It is exactly the same with medicine. For centuries, material man has been drenched with every sort of material remedy, from boiled sea-scorpions (and let me point out they had to be red ones) to powder ground out of mummies, and from a preparation of stale attic oil to preparations of human fat. The doctors have fought just like the theologians. John of Gaddesden cured smallpox by wrapping the patient in red cloth, but the faculty to which he belonged prosecuted Roger Clerk for fastening a parchment on a woman's chest. A generation which insisted on inoculation for smallpox has been succeeded by a generation which made inoculation for smallpox a criminal offense, while the leading medical paper of its day jeered at the discovery of the stethoscope as the introduction of a piece of wood into the sick-room. The allopathic physicians dragged the homeopathic physicians into the law courts, and got them sent to prison, for all the world as if they had been mere Protestants denying the doctrine of transubstantiation, or unregenerate Baptists denying the doctrine of infant baptism. One thing they were all sure of, that sickness was real, and the one thing they are all equally amazed at is that sickness has not been overcome!

The simple fact is, that if you consider sickness a law, you are not likely to overcome it. The medical profession may claim that it is doing wonderful things, and it may persecute those who dissent from this claim, exactly as the churches once persecuted those who dissented from their dogmas; but there is no less sickness in the world for all that. There is nothing to show that there were less fatalities in the camp hospitals after Cressy, where oil was used, than in the camp hospitals after Kirk Klisse, where antiseptics were used. It is perfectly true that in this country the plague wave has been exterminated, but we have got a permanent plague condition in what is known as the "white scourge." The whole difficulty, according to Mrs. Eddy's teaching, is because medical science is always dealing with effects instead of with causes, dealing with the phenomenon of matter instead of with the noumenon of mind.

The primitive church recognized the mentality of disease, as Jesus recognized it when he asked, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" He healed disease, as everybody knows, by a complete disregard of material remedies and by a realization of the omnipotence of the divine Mind. This healing was not confined to the days of Jesus and his immediate disciples, but continued through the centuries previous to Constantine, as anybody may see by a reference to the writings of the Fathers. It became more spasmodic, certainly, as orthodox Christianity

Digitized by Google

became more materialistic. Even in the dark ages, however, it did not totally disappear, and it was revived from time to time by such men as Fox and Wesley, though they worked blindly and without a perception of the Science of Christianity.

Sooner or later the return to Christian healing was bound to come. It came as soon as a person arose unselfish enough, pure enough, and spiritually-minded enough to pierce through the materiality of the human concept of life and to gain a purely spiritual perception of it. That person was Mrs. Eddy. Through years of misrepresentation and abuse she steadily pursued her course until she reached her goal. Today the Christian Science movement stands unshakably planted upon her demonstration of the power of divine Principle, and not all the futile criticism or untempered invective in the world will have the least effect in shaking its foundations.

✧

[M. I. Whitcroft in *Western Daily Press*, Bristol, England]

Christian Science bears no relationship whatever to any form of "mental or magnetic healing," and is, in fact, entirely opposed to all forms of treatment which include the use of hypnotism or human will-power. It cannot honestly, therefore, be classed among them, and when it is, this is apt to mislead those who have no personal acquaintance with its teachings. The statement that "quackery and charlatanism are so rife," scarcely serves as an argument for having "abandoned the field to their exploitation." These evils were rife in Jesus' day, but that fact was not used as an excuse by his immediate followers or the early Christian church to desist from their work of healing the sick on the Christianly scientific basis which he had practised and taught, and which he said that all who believed on his word should continue to do, and thus establish the truth of their words by their works, which are now, as then, the proof of Christianity.

If the reverend author has now recognized that "the grain of truth" which enables Christian Science "to flourish" is "present in orthodox Christianity, and always has been," he will heal the sick as Christian Science has been doing for nearly forty years, and no one will rejoice more at this than Christian Scientists themselves. It is, however, always a little unwise to talk about "orthodox Christianity," seeing the great diversity of opinion among Christians as to what is orthodoxy; so perhaps the critic would have been happier in his choice of words had he said that "the grain of truth" had always been present to those spiritually-minded enough to perceive it. That "half truths and errors are best met by a sane presentation of positive (absolute) truth," none will deny; hence the publishing of "Science and Health with Key to the Scriptures" by Mrs. Eddy, in 1875. In that book there is "no silly condemnation of medical skill;" on the contrary Mrs. Eddy writes (p. 164), "It is just to say that generally the cultured class of medical practitioners are grand men and women."

✧

[George Shaw Cook in *Waukegan* (Ill.) *Sun*]

As reported in the *Sun*, a critic of Christian Science recently resorted to the method of quoting disjointed extracts from the Christian Science text-book for the purpose of ridiculing its teaching. This method of quoting sentences and phrases from "Science and Health with Key to the Scriptures" without any regard to their context is, I regret to say, not unusual; but the present critic, in commenting on the quotations he has made, certainly displays an unusual degree of ignorance of this teaching.

The simple facts concerning the healing of sickness and sin by Christian Science are sufficiently convincing to have attracted the serious consideration of thinking people in every part of the world. Among those who have found Christian Science to be practical, satisfying, and demonstrable, are many intelligent, well-educated persons holding positions of trust and responsibility, as well as those in humbler walks of life. Wherever Christian Science finds them, it is the universal testimony of its adherents that acquaintance with the subject has made them better in health, in morals, and in every other respect.

The statement that Christian Science teaches that there is no God, only mortal mind, is as far removed from the truth as the east is from the west. The very opposite is true. The term "mortal mind" is used by Mrs. Eddy as the best available term to describe the belief that there is intelligence and life separate from God. On almost every page of Science and Health is the statement in one form or another that God is the only cause or creator, and that He is the only Life or Mind there is. Mrs. Eddy explains over and over again that there is, for this reason, no enduring reality to what she describes as mortal mind or its phenomena. She insists that in fact there is no reality apart from "infinite Mind and its infinite manifestation" (Science and Health, p. 468).

The implication that Christian Science teaches or encourages its students to believe that there is any excuse for uncleanliness or filth is unwarranted. As a matter of fact, the habits of clean and pure thinking with which Christian Science inspires its students, inevitably result in cleaner living and greater purity and cleanliness of environment. The critic's estimate of the Discoverer and Founder of Christian Science is greatly at variance with that of many intelligent and representative people, who gladly acknowledge her not only as a public benefactor, but as one of the world's greatest religious leaders.

✧

[Norman E. John in *Wilmington* (Del.) *Morning News*]

Christ Jesus taught that God is Spirit. Christian Science accepts this teaching, and emphasizes that God as Spirit is omniscient, omnipotent, and omnipresent. Most Christians believe that God is omnipotent, omniscient, omnipresent, infinite Spirit. Then, according to Christian teaching, it remains for the Rev. Dr. —— to carry the burden of proof to its ultimate and prove that God is not omnipotent, omniscient, and omnipresent; that matter is real, that it is eternal, and therefore that Spirit is not infinite and ever present. If he can tell what matter is, he can do more than any philosopher or theologian who ever attempted it.

The basis of matter has by the majority of thinkers rested for years upon the speculative hypothesis of the atomic theory. That has largely given way, and a new suppositional theory of ions has been advanced. Other thinkers analyze matter as a creative force. Huxley said, "All that we know today about matter is that it is the hypothetical substance of physical phenomena." If, therefore, there is nothing more tangible in defining matter, as to its reality and entity, than the evidence of the senses, we think there is considerable food for thought in the statement in Science and Health, as found on page 124: "Spirit is the life, substance, and continuity of all things. We tread on forces. Withdraw them, and creation must collapse. Human knowledge calls them forces of matter; but divine Science declares that they belong wholly to divine Mind, are inherent in this Mind, and so restores them to their rightful home and classification."

Mrs. Eddy, the Founder of the movement, defines Christian Science as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1). Thus it will be noted that she has brought forth no invention or innovation,

Digitized by Google

for she could not invent a new law of God. She has named the law—the eternal law of God—"Christian," because it manifests the Christ-nature, and "Science," because being capable of proof, having unchangeable cause and effect, it fulfils all the demands of the term "science." Further, because, as Job says, God is "in one mind, and who can turn him?" the eternal law of God is also the will of God. Christian Scientists love to use this larger definition of Principle to express the unchangeable nature of God, "with whom is no variableness, neither shadow of turning."

Our critic may be fully satisfied with his key to the Christ teaching and practice, but the writer is convinced that the following excerpt from a letter of a Presbyterian missionary who spent years in the missionary work in Japan, voices the void in many a heart: "Every one of you would be interested in visiting the leper hospital—one of several in Japan. I visited it just before returning to America, and spoke to the one hundred and fifty patients who were able to assemble in the Hall of Religion—a place where Buddhists, Shintoists, and Christians have equal privileges. I have never felt so unworthy to speak to any one as to those same marred, defaced outcasts of humanity. After we came back, my young assistant said to me, 'Sensei, there is some remedy, and the healing of the lepers by Christ was his call to us to find it.'

"I can understand how the great Christ just had to put out his hand in healing touch. If he realized that all power was given unto him, what a well-spring of joy he must have had in his own spirit! I think the saddest feeling possible is to be unable to help when in the presence of suffering. But I do believe that there are great forces in the spiritual world, which would yield as marvelous results there as electricity is doing in the material world. And yet we are old fogies—doubting Thomases—and do not reach out and possess and make use of these wonderful powers. We are all like men groping with only a candle light, when all the undiscovered blaze of electric light could have been theirs for the seeking. I wonder if we are not failing—all of us—right here. We are only dimly realizing the meaning of 'all power is given unto me.' "

Christian Scientists are keenly aware that they are not always successful; but in that they see no cause to condemn the law of God or limit the power of God, nor the endeavors to heed the commands of the Wayshower to heal. They read in the Scriptures that when Jesus went back to his own country "he did not many mighty works there because of their unbelief." When his students failed to heal the epileptic boy and crowds gathered to question, he said, "O, faithless and perverse generation." When his students asked why their efforts were not successful in healing the boy, he told them such cases required more preparation on their part. Christian Scientists humbly feel the rebuke when they do not succeed, and earnestly pray for more understanding. But because the student of Christian Science has not gained the understanding to reach all cases, is that sufficient reason for our critic to conclude that Christian Science lamentably fails? With the same reasoning and the same spirit of fairness, we presume he would say that Christianity fails because, while the number of conversions are often reported, it is not published how many hear the sermons and exhortations and yet are not made Christians; nor how many have said "I believe" and have backslidden.

If the minister in giving his sermon intended his hearers to believe that by Mrs. Eddy's advice Christian Scientists are to shift the responsibility in contagious diseases, and that in cases not quickly healed a regular physician be called, we must conclude either that he does not understand the advice and the practice of Christian Scientists, or that he is presenting an unjust interpretation thereof. It is true that Mrs. Eddy has advised, and that Christian Scientists are adhering to her advice in submitting to vaccination and in reporting contagious diseases when required by law; not that they wish to shift the responsibility, but that they respect the opinions of their fellow citizens in regard to these requirements. And it is to be further stated, that in obeying these requirements the Christian Scientist by no means turns his cases over to *materia medica* for healing, for, as a general rule, the Christian Scientist is allowed to continue his work, with the proper isolation of his patient as required by quarantine laws, until the work is finished.

Mrs. Eddy does not advise that a regular physician be called in cases which have not yielded quickly to the treatment of Christian Science. She does advise, however, that the patient shall always, and at all times, be free to exercise his choice as to what method of treatment he shall receive, and likewise be left entirely free to decide when one form of treatment shall be given up in preference to another.

✧

[H. Cornell Wilson in *Brooklyn* (N. Y.) *Times*]

Permit us to call your attention to the reference to Christian Science in a recent editorial entitled "Gentle Feminine Influence," in which you assume that Christian Science and mental suggestion are similar. For your information, we beg to say that the human mind has no part in the teachings or practice of Christian Science. It is the human mind which makes discord, and that which makes discord obviously cannot destroy it. Jesus said, "Not my will, but thine, be done." In other words, he knew it was not the human mind, but the Mind which is God, good, that enabled him to do the works he did. Almost every page of the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has some reference to the necessity of overcoming the human with the divine before the teachings of Christian Science can be demonstrated.

[Written for the *Sentinel*]

All for Thee!

EDWARD FREIBERGER

When night to morning's beams gives way,
I wake to Thee!
When waves of traffic beat the day,
I serve but Thee!

When skies are bright and joys prevail,
I sing of Thee!
When thunders roll and storms assail,
I'm still with Thee!

When discord seeks to blight my way,
I voice but Thee!
When trials come to wreck the day,
I know but Thee!

When rest and peace prove blessings rare,
I thank but Thee!
When bliss supreme reigns ev'rywhere,
I live in Thee!

When day in evening sinks to rest,
I cling to Thee!
When night by silence is caressed,
I'm safe with Thee!

When Spirit stills all sense of strife,
I worship Thee!
O Love divine, thou Truth and Life,
I praise but Thee!

Editorial

"If any man will come after me"

THERE is only one reasonable explanation why the multitudes followed Jesus in those few brief years of his earthly ministry. True, he came among them as the long-expected Messiah, he who should redeem Israel, but he held out no specious hopes of sharing in the pomps and vanities of a material kingdom. He made it plain that those who walked with him would find it a thorny way, would be persecuted and reviled. "In the world ye shall have tribulation," he told them, and that he himself must suffer many things. When Peter rebuked him for speaking thus, he reiterated yet more plainly, "If any man will come after me, let him deny himself, and take up his cross, and follow me,"—he wanted no man's allegiance under false pretenses! He held out no allurements of riches or power, but he did say, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." He knew that those who truly sought and found the kingdom of God would be able to hold "all these things" at their right valuation.

Jesus saw all about him, as one may see today, multitudes of people who were suffering from ills of every kind. Many of them doubtless had lost all hope of relief, but he who had been sent "to heal the broken-hearted, to preach deliverance to the captives, and recovery of sight to the blind, to set at liberty them that are bruised," was "moved with compassion" as he beheld them, and again and again, as we read, "he healed them all." Such was his interpretation of the Messianic mission, that the coming of "The Prince of Peace" meant freedom to those in bondage. Surely the great scale of those days did reveal the longing hope of those who trusted that they too might be included in his ministrations, explains as nothing else can why the multitudes thronged him wherever he went.

For almost a half century Christian Science has been making its appeal to the world. Its Discoverer and Founder, Mrs. Eddy, literally took up the cross in her endeavor to follow in the Master's footsteps. She pointed out to her students that to be a Christian Scientist meant self-denial and cross bearing; but it offered a priceless boon, the ability to heal the sick and reform the sinning through the power of Truth. She did not promise short cuts or bargains, but she pointed them to "the peace of God, which passeth all understanding," and without which earthly treasures are as "apples of Sodom."

We of today, who are profiting by what our Leader and her early students experienced in those years when Christian Science was on trial for its life, as it were, can never forget what we owe to her and to them for holding fast to the truth and demonstrating to the world that it does make free from sickness and sin even as the Master promised when he said, "Ye shall know the truth, and the truth shall make you free." Just as now Christian Science has won its way, and it is here, so it does heal the sick that today its followers are to be found throughout the civilized world. The pendulum of popularity is swinging the other way, and to be a true Christian Scientist is constantly to possess a passport to the confidence and respect of the community. But the standard it demands of its followers is still that of the Master: "If any man will come after me, let him deny himself, and take up his cross and follow me."

The day of declension is particularly ours. Christian Scientists by their consecrated living have won for the cause they represent and for themselves a recognized standing. But we are not to rest on past laurels, particularly when the dangers of the advance-guard have been borne by others. It is for us, then, to gird ourselves anew, and go forward in the strength of Spirit to overcome every form of evil. So long as its manifestations are among us, whether it be as sickness, sorrow, or hatred, envy, and kindred errors, just so long must we strive for its overcoming, until the world is won for Christ.

Mrs. Eddy recognized this need for consistent living when she wrote (Miscellaneous Writings, p. 110): "Beloved children, the world has need of you,—and more as children than as men and women: it needs your innocence, unselfishness, faithful affection, uncontaminated lives. You need also to watch, and pray that you preserve these virtues unstained, and lose them not through contact with the world." At whatever cost to ourselves, shall we not adhere to the standard our Leader has set us, daily taking up the cross without which we cannot merit the crown?

ARCHIBALD MCLELLAN.

Progressive Contentment

CHRISTIAN SCIENCE begins with the individual by making him desire and seek after better things than those which seem to prevail when he turns to the truth. If he is in bondage to a sense of sickness or of insufficiency, it tells him of the truth which sets free from all that is unlike God. It may therefore be asked if he at the same time becomes contented with his present condition, as contentment is rightly regarded as a Christian virtue. To this it may be answered that he no longer tries to be satisfied with sickness, or any other phase of limitation, on the mistaken supposition that these are divinely ordained, or at least divinely permitted for his good. St. Paul says, "I have learned, in whatsoever state I am, therewith to be content;" yet it is he who tells us of pressing toward the mark, which makes it very clear that his contentment had in it no element of stagnation or unprogressiveness. His statement to Timothy, however, throws the needed light upon this subject namely, "Godliness with contentment is great gain." One who is godly is satisfied with his spiritual possessions, which have in their very nature the element of true progressiveness, for, as our revered Leader tells us, "progress is the law of God" (Science and Health, p. 235).

In pondering Paul's words, one is led to think of the popular belief that those who are born and reared in cold climates develop greater hardihood and endurance, both mental and physical, than do those in hot countries, because of the demand to rise superior to outward conditions. A German poet of the thirteenth century says, "Earth's cold winds but make our spirits brave," and this will be readily admitted; but we should see at a glance that living in the mental plane has power to make one better or worse; that it is the overcoming of the mesmeric which calls forth its new energies, mental and spiritual, and lifts us higher with each experience. It should also be seen that the overcoming of the sense of isolation and loss-to-God, supposedly inborn in certain dull families as equal opportunity to grow into God is in every way superior to its environment. Mrs. Eddy says (Science and Health, p. 241), "The spiritual demands during the material supplies comfort and endurance surpassing all human aids," while the apostle declares, "He that overcometh shall inherit all things," and this gives us the key of what would seem the most trying conditions.

It is possible that some one may ask what resistance and effort have to do with contentment. To this it may be answered that without the right sort of antagonistic resist-

Digitized by Google

ance to wrong conditions would be of little avail. Spiritual being is always harmonious; it provides for the happiness and harmony of all of God's ideas. Our resistance should therefore be addressed to the belief in that which produces discord, though it may claim the authority of natural law, as in the case of extreme heat or cold. In stilling the storm, Christ Jesus proved that discords have no place in the kingdom of God; but strangely enough his professed followers for many centuries have lost sight of this vital truth, and have tried in vain to be content while discord has seemingly prevailed as sin, disease, destruction, and death. But a better day has dawned in Christian Science, and with it new types of character are being unfolded. No longer is feverish energy regarded as necessary to one's progress, but instead calm and steady devotion to "the infinite tasks of truth" (Science and Health, p. 323), with courage, strength, and good cheer in addressing one's self to daily duty. The lowliest station will furnish opportunity for the exercise of all these qualities, and steadfast endeavor will inevitably lift all who are worthy to their rightful place in the realm of Mind, as surely as the tree leaves seed and soil behind it in fulfilling its destiny.

At every step of the way, we may prove that neither winter's chilling blasts nor summer's burning heat can hinder our progress, and when we realize the ever-presence of God's kingdom, these will no longer be in evidence, for with the recognition of the reign of Spirit, and spiritual law, there will be perpetual harmony and sure contentment.

ANNIE M. KNOTT.

✧

"Caught up unto God"

THERE is nothing quite so gorgeous as a jeweled morning, and those who revel in its freshness and song gain a vision with which no other offering of the day can compare. Every least leaf and blade of grass is adorned with an oriental magnificence. All the flashing splendors of light are revealed in limpid crystals that vie with the brilliants of the Milky Way for number, and that will melt an hour hence into the light to which they have yielded in every angle and arc of their sphered purity. This is the greater marvel of the dewdrops, that they so readily enter into the source of the dawn, thus limning the course of spiritual consciousness and illustrating the meaning of responsiveness to Truth. Welcoming and embosoming the light, they are so flooded with it as to suggest nothing else to those who look upon them. This possibility is due, withal, to their purity. There is no fleck of dust within to mar their irradiation, and when the fulness of the sun has come, they leap unhampered into a larger life.

All this helps one to apprehend the teaching of Christian Science that spiritual capacity is not something that man must acquire; it is native to him as an expression of divine law. When, therefore, human sense awakens to the consciousness of manhood in Christ, its career is predetermined; it is "caught up unto God," and dwells at-one with Him. Salvation is thus seen to be the realization of man's spiritual blend with his Maker, and this distinctive teaching of Christian Science is given the greatest possible emphasis in those wondrous words of the Master, "That they all may be one; as thou, Father, art in me, and I in thee, that they also may be one in us."

Entirely in keeping with this declaration of the at-one-ment of God and His idea, Mrs. Eddy has grounded the perfectibility of human sense in the perfection of man, and one of the corollaries of this teaching is found on page 39 of Science and Health, where she says, "To break this earthly spell, mortals must get the true idea and divine Principle of all that really exists and governs the universe harmoniously." We are to progress in the spiritual life by persistently knowing the truth of being, by recognizing those eternally harmonious relations in the realm of Spirit which are expressed upon the human plane in the health and happiness that we cannot help longing for.

Christian Science is awakening mankind to the necessity of being lifted out of the common round of material experience, the plane of sense satisfaction, and of its sequent suffering and disappointment, and it is proving that this is accomplished as Jesus' words, "The truth shall make you free," are practically honored in our philosophy, our aspiration, and our effort. The seeming hopelessness of the undertaking to save the race, rests like a pall upon Christian endeavor, and to the query, "What will, what can, lift men out of the pit of sense enslavement?" Christian Science answers, "The Christ-coming, the rule of the knowledge of the glory of God and of man in His image." Said the great Wayshower, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." It was the vision of the Christ-man, attained and retained, which exalted the lowly Nazarene and enabled him to demonstrate that spiritual overcoming which has made the cross the symbol of all that is great and good.

The glory of the dewdrop is the glory of the sun. In its perfection and purity it is possessed by and reveals the light, and thus it speaks for man as related to Truth. The ideal presented to Christian believers by St. Paul was this, that they "might be filled with all the fulness of God." This possibility pertains to every one who has gained the Christ-concept of man, who is pure in purpose and aspiration, and who is patiently seeking to be as responsive to Truth and Love as is the dewdrop to light.

JOHN B. WILLIS.

✧ ✧ ✧

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

VICTORIA, AUSTRALIA.—It is now some few years since the *Monitor*, the *Sentinel*, and the *Journal* have, through the good offices and sympathy of the inspector-general of the penal establishments, been in circulation among the inmates of the penal institutions of the state, and these publications have been much sought after. Christian Science services are now held in various departments of the penitentiary at Pentridge and the jail at Melbourne. On April 16 last year, the first of these services was held in the jail, and on the 23d the first service was held in the Pentridge Stockade. The Christian Science church, having resolved to undertake this work, authorized the board to appoint a suitable number of students to accompany the readers on their mission of good will, and later, special readers were appointed. Permission

Digitized by Google

having been readily obtained from the authorities, services were organized and started as indicated. The services variously take the form of the Sunday or Wednesday meeting, as may be deemed best by the readers, although most of them are held on some week-day.

The prison workers associated in the work help by their presence and prayers in the furtherance of the cause, and in the giving of testimonies as to their own experiences. If one may judge by the attention given by the prisoners and the hearty way in which the singing is joined in, the seed sown must of necessity bear fruit. The numbers attending the services vary with the particular departments in which they are held. At a recent service held at Pentridge, there were fully two hundred men present.—*Correspondence.*

Brazil.—We have been having a most interesting trip through beautiful Brazil, but did not have the pleasure of meeting any Christian Scientists until we reached Sao Paulo. We had looked forward to this pleasure in Rio de Janeiro, but finding none there, had not expected to find any in Sao Paulo, when one evening, in conversation with a friend, we learned that the American consular agent was a Scientist. We had met him several days before, but had not known this. As soon as we made known to him that we also were Christian Scientists, there was a glad smile given us, and he told us of the meeting they had there every Sunday.

It was sweet, indeed, to meet for several Sundays with about ten or more earnest young students. Our hearts overflowed with joy when we realized that this little meeting was made possible by the faithful work done in Christian Science by practitioners in the United States, Switzerland, France, Porto Rico, etc. Much good work has been done for these dear ones, and they, in turn, have done some good work. Those who were healed in other countries brought the truth here, and thus enabled others who had lived here for years, and who were "athirst in the desert" (Science and Health, p. 570), to drink of "the living water." The nations represented in this gathering are American, Austrian, German, English, and Brazilian.—*Correspondence.*

Columbus, Ohio.—The building committee of Second Church of Christ, Scientist, met on Friday morning, May 22, at seven o'clock, to lay the corner-stone of their new church building, to be located at the southwest corner of Park street and First avenue. The new structure is expected to be ready for use on Thanksgiving day.—*Correspondence.*

Hermosa Beach, Cal.—Members of the Christian Science church arranged for a reading-room to be located in the Grannis Building during the week-end celebration. Chairs, tables, and plenty of reading matter were placed there, and visitors made welcome.—*Hermosa Beach Review.*

✧ ✧ ✧

The Lectures

Los Angeles, Cal.

The remarks of the Rev. C. C. Pierce, D.D., at "Auditorium, Theater Beautiful," on the occasion of a lecture on Christian Science by Col. William E. Fell, were in part as follows:—

No one who can lay any claim whatever to even a very limited knowledge of human history and the progress of mankind, can have failed to notice that the advancement of the race has again and again been characterized by great movements, profound, irresistible, vital, and seemingly beyond the power of any known human agency to retard or control. Without taking the time at our disposal from the speaker of the evening even to mention a number of these great movements in detail, I will simply say that in my opinion Christian Science has already taken its place among them. As such it has manifested some at least of the characteristics which have seemed inseparable from these world-wide phenomena to which I have referred. It has had its period of obscurity, of struggle, of opposition, of misunderstanding, of criticism, of imitation, and there have been those who, compelled at last to take notice of it, have predicted that it was short-lived, and destined speedily to fall to the ground.

It is altogether needless for me to call attention to the fact that, apparently regardless of misunderstandings, oppositions, criticisms, counterfeits, and baleful predictions, this great movement, founded under God by one of the greatest personalities of all the centuries, has calmly, steadily, complacently, and quietly, but successfully, pursued the even tenor of its way.—*Correspondence.*

✧

Middletown, Conn.

Virgil O. Strickler delivered a lecture on Christian Science to a large and very appreciative audience in the Middlesex Opera House, the first lecture on Christian Science to be given in Middletown. He was introduced by Prof. Robert H. Fife of Wesleyan University, who said:—

Those who have watched the progress of Christian Science from without, have been struck by the fact that its victories have been won by appeals to the spirit of love of humanity, and not by disputatiousness or intolerance. The Christian Scientist has a right to ask the same spirit of tolerance from all those who claim to be followers of "The Prince of Peace," who came to minister to a world racked by pain and torn with strife and hatred. We are proud to call ourselves an intelligent community, and as such it is clearly our duty to hear before condemning, remembering that truth is many-sided and that none of us has a monopoly of it.

Surely a faith which carries the palm branch of love and peace upon its banners, and which makes no more pretentious claim than to bring health to the suffering body and peace to the suffering soul, has a right to our earnest and respectful attention. We should call ourselves fortunate in being able to hear a statement of its fundamentals from an authoritative source.—*Correspondence.*

✧

Beverley, England

Col. William E. Fell gave a lecture on Christian Science in the Small Assembly Room. Ben. Haworth-Booth, Esq., of Rolston Hall, Hornsea, the chairman, in opening the meeting, said it was not denied that Christian Science interpreted the gospel teaching in a manner new to the thought of this age. Jesus plainly declared that in the years to come the world would receive fresh light upon the momentous subjects of his teaching, and said: "I have yet many things to say unto you, but ye cannot bear them now. Howbeit when he, the Spirit of truth, is come, he will guide you into all truth: . . . he shall receive of mine, and shall show it unto you." The Christian healing of sickness by purely spiritual means was nothing new; it was practised before the days of Jesus, and it was regularly practised by his immediate followers, and the early Christians until the third century of this era, when it appears to have been lost in the growing materialism of the age and of the church under Constantine.

In Christian Science, healing is again restored to its place. On all sides we see the slaves of sickness and of sin, but we have the clear promise of Christ, "Ye shall know the truth,

Digitized by Google

and the truth shall make you free." The fulfilment of this blessed promise comes to the world in Christian Science, and many thousands have already received a knowledge of the truth and are freed from the fetters of sin and disease. Time was when men denied the healing of Christian Science,—they deemed, indeed, in this sad world that it was too good to be true,—but in the face of so many witnesses such denial is now seldom heard. The freedom promised in the text is full, perfect, and sufficient, here and now, a gracious gift "from the Father of lights," "who forgiveth all thine iniquities; who healeth all thy diseases."—*Beverley Guardian.*

Toronto, Ontario, Canada

Prof. Hermann S. Hering lectured on Christian Science at Massey Hall. He was introduced by E. Wyly Grier, who said in part:—

About a year ago a man of more than ordinary intelligence told me he believed that God brings to us our physical ills, and that we should submit to them in resignation on account of their divine origin. A few moments afterward he was conversing with some one on Christian Science and admitted that it was accomplishing a number of wonderful cures, but he stated that these cures only exhibited the craft and subtlety of the devil, who, in fact, achieved them. These two statements, briefly summarized, amounted to this: that God brings us sickness, and that the devil, in almost all instances, heals them. The ignorance of Christian Science and of God (according to the Christian Science concept) shown by this prediction is wide-spread, though not always so flagrant; but, thanks largely to the board of lecturers selected by The Mother Church, a serious exposition of the tenets of this concept of the truth, given with great earnestness and lucidity, makes it unnecessary that any one should be unaware of what it is that Christian Science offers to mankind.

Correspondence.

Parsons, Kan.

In a lecture on Christian Science given by Clarence W. Chadwick at the Elks Theater, Judge John Madden in his introductory remarks said in part:—

Mrs. Eddy has helped the world. Her "confused mysticism," so often referred to by modern Pharisees, is the same as that of St. Paul when he spoke on Mars' hill; the same as that of St. John when he opened his gospel with "the Word"; the same as that of St. Peter at the gate called Beautiful, when he declared his poverty in silver and gold, and his wealth in that abundant love which hangs like a shield on a warrior's arm and covers his breast as a corselet.

Correspondence.

Hanford, Cal.

William R. Rathvon delivered a lecture on Christian Science in Armory Hall. He was introduced by Mrs. Elmer F. Clute, clerk of the local Christian Science church, who said in part:—

We come, presenting Christian Science to you, not in enmity toward other faiths, not to criticize or to depreciate, but in love, seeking only the highest good for all, bringing you our best, desiring that you may know the truth which makes men free, delivering them from bondage "into the glorious liberty of the children of God." All mankind, consciously or unconsciously, are reaching out after good; all men are seeking happiness; and it is our privilege tonight to bring to you one who will tell you simply and without exaggeration how to find that good, how to secure that happiness. Down through the centuries has come the promise of perfect peace to those whose minds are stayed on God, and daily and hourly men and women are claiming that promise. Daily and hourly they are proving before our eyes, by demonstration over sin and disease, their increasing understanding of the infinite.—*Correspondence.*

Huntington, Ind.

The remarks of J. W. Caswell in introducing Virgil O. Strickler, who lectured on Christian Science in the Huntington Theater, were in part as follows:—

All the agitation and various movements for reform, be they religious, commercial, or political, indicate to the observer that there is an unrest and a desire on the part of thinking people to improve conditions. Men and women are banded together to secure various reforms. The individual cannot be helped without helping the community in general, and all these movements have helped us to reach the conclusion that the world is not only growing better, but is better.

We have come here to learn if there is not something in this new-old religion, called Christian Science, that contains what we have been unable to find in the old order of religious thought. Those of us who have a vague idea, or perhaps none at all, of what Christian Science really is, will find that the foolish things said about it are not true.

Correspondence.

Fresno, Cal.

An audience that filled the Theater Fresno, listened to an interesting lecture on Christian Science by William R. Rathvon. He was introduced by the first reader of the local church, Mrs. Palmyra R. Gundelfinger, who spoke in part as follows:—

All the world is seeking happiness. Christian Science is bringing it to thousands, healing them of sickness, of trouble, of sorrow, of worry, of sin,—of all the ills of the flesh. Happiness, it teaches, is found in Mind, not in external things; in the words of the Master, "The kingdom of God is within you;" and Christian Science shows us the way to this kingdom, how to find it within us, and how to live therein. It brings "on earth peace, good will toward men."

Fresno Republican.

Oakland, Cal.

An audience that filled the Macdonough Theater to the doors, met to hear the Rev. William P. McKenzie lecture on Christian Science under the auspices of Fourth Church of Christ, Scientist. He was introduced by Mrs. Josephine Perkins, second reader, who said in part:—

This audience tonight is one of the many proofs that there is in the world today a hunger and thirst for the real things of life, a desire to have life, and to "have it more abundantly." This desire has led thousands upon thousands to become students of Christian Science. They have been comforted by its cheer and encouraged by its words of confidence in God and His infinite goodness to the children of men. As we ponder the words and works of Jesus and see how rapidly the law which he came to give us is being fulfilled, the mist of years between his time and ours fades into nothingness. We see again the multitudes gathering to hear the truth, and to learn of their God-given heritage to health, joy, and life eternal. As a natural sequence to spiritual growth comes the externalized manifestation, and progress along every line follows.—*Oakland Enquirer.*

Testimonies of Healing

[Translated from the German]

I wish to express my most sincere gratitude for all the good that has come to us within the last six years through Christian Science, and my earnest desire is that this testimony may prove a means of help to some fellow being who is still laboring under a sense of grief and physical distress.

Prior to my acquaintance with the teachings of Christian Science, darkness seemed to enshroud my life. As far back as I can think we had to contend with a serious case of illness in our family, and the years of worry and sorrow had so much affected me that I was unable to sleep, and I suffered with headaches almost day and night, besides having a dreadful ringing in the ears. Our family physician was unable to afford help, and when my condition became almost unbearable, I consulted a noted ear specialist, who after a thorough examination told me that my nerves were so run down that I would lose my hearing completely within a measurable space of time and would be incapacitated for any work, unless I did all within my power to tone up the system.

I then resorted to a great many means of improvement, but they all failed, and finally, in a state of great dejection, I went to see a noted specialist for nervous diseases. He prescribed all kinds of remedies, which were faithfully used, and I remained under his care for over a year. During this time my general health gradually improved, but the distress in the ears remained. I had also suffered since childhood from a stomach difficulty in a severe form, and had taken remedies constantly, but failed to experience improvement.

It was then that I first heard of Christian Science and began reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Through my own study of the wonderful teachings contained therein and the faithful help of a dear practitioner, I gradually realized better health and more freedom, and today I may say with a grateful heart that I am healed of these ills and feel more peaceful and happy than I ever did before. We have also had wonderful proofs of the power of divine Love as our source of supply in many a seeming case of need.

For all the blessings which we have experienced I herewith give thanks to God, whom I more and more recognize to be an ever-present help, and I wish to express my gratitude for Mrs. Eddy, who through unswerving faithfulness found it possible to bring to men this never-failing, glorious truth.

Anna Maria Wagener, Tannenhof, Schwerin i. Mecklenbourg, Germany.

✧

I feel very grateful for what Christian Science has done for me. It is now between five and six years since I was healed of very severe stomach and bowel trouble. I had been suffering for several years and trying all kinds of medicines and doctors, with only occasional relief, until I became so low I could hardly leave my bed, and for weeks was unable to eat solid food. My wife had been interested in Christian Science for some time, and had derived much benefit from the study of the Bible with Science and Health; so when I seemed to have tried everything material, I turned to God for help. When I first asked for Christian Science treatment, I was unable to leave my bed, therefore I had absent treatment; but in a short time I was able to be about, and after five weeks' treatment began to eat ordinary food. I was then greatly reduced in weight, but I kept on gaining, and have been in perfect health for several years. I now weigh more than the average man.

I have also been healed of acute lung trouble. One day, a year ago last winter, I was compelled to come home from my work, and it was with difficulty that I reached home, as I could scarcely breathe and seemed to be getting worse all the time. My wife tried to help me by declaring the truth, but fear seemed to hold her, so she called a Christian Science practitioner, who came and gave me a treatment. I became much better at once, and was able to return to my work the next morning. I was completely healed in that one treatment and have never had another attack, although when the doctors learned that it was my second attack, they said I would have a return of the disease again this year; but knowing that God's cures are permanent, we had no fear.

I cannot be thankful enough for what I have gained by knowing that God is always ready to give if we only ask Him aright.—A. E. Earl, Willowbrook, Cal.

It is with a heart full of thankfulness to God for Christian Science that I send this testimony to tell how I have been led from what seemed everlasting darkness and despair into the realm of heavenly light, peace, and the joy of good health to me and mine. For years I had been troubled with a nervous affection which at times of severe mental strain caused me to have fainting spells. Doctors treated me constantly for these, although they were not frequent; but I seemed to find no relief from the haunting fear of having one of these attacks and was always expecting them.

After my marriage I had several operations but found no relief. I, however, had no fainting spell for five years, until after the passing away of my new-born baby, several years ago, when I became a nervous wreck. I was in such a condition that it took me three or four hours each morning after arising to become enough relieved of my dazed condition to venture upon the street, and ofttimes I had to return to the house for fear I would collapse. Almost constantly I had to resort to stimulants for relief. Physicians, after a thorough examination, said I needed another operation; so one was performed, but no relief resulted. In sheer despair I felt that the only thing left for me was to do away with myself.

A friend of mine had just become interested in Christian Science, and as she had been healed she advised me to try this treatment also; but being a Jewess, and taught to consider the very name of Jesus as a symbol of wrong, I did not think any good would come of it. Finally, however, when I had gone to the depths of despair, I decided to have Christian Science treatment, and as a result, today I am a well woman. I have not taken a drop of medicine or consulted a physician for almost three years, nor have I had a fainting spell since May 15, 1911. I am now perfectly well, attend to my duties, and accomplish all that I set out to do without any trouble whatsoever. All this I owe to Christian Science.

I have also had satisfying proof of the great good that has come to mankind through Christian Science. I am very happy to say that I have a baby boy ten months old who was born under Christian Science treatment, the result being that this was my first normal confinement. My other children were born under *materia medica*, and both times I was left in such a serious condition that operations had to be performed afterward. On this occasion, however, I was able to sit up the fifth day, and shortly thereafter could attend to all my duties. Since then I have enjoyed splendid health and have been able to overcome all problems that have presented themselves, as I have learned to realize more and

Digitized by Google

more the allness of God and that "to those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii).

Many other blessings have come to our home. Fever and throat affection were quickly overcome for my little daughter, and financial difficulties have been straightened out through a realization of the truth. I am truly thankful to God, and grateful to Mrs. Eddy for Christian Science.

ADELE SCHWEIGER, Bronx, N. Y.

✧

I have often thought of sending in my testimony of what Christian Science has done for me, but I have always been at a loss to know what to say. I know, however, that these testimonies are living witnesses, for my wife was led to study Christian Science from reading them in the periodicals.

About sixteen years ago my mother wanted me to go to the Christian Science meetings, but I told her I did not care to do so, as they did not interest me, and so she said no more. Soon after this my brother and I were clearing up an old stack bottom in the meadow, and I found some roots which I thought were artichokes, so I ate one. When we had finished our work we went up to the barn, and I told my brother that the artichoke had made me sick. He went after grain for the horses, and I started to go to the house, but had not gone far when I fell to the ground and became unconscious. When my brother came back, he saw me on the ground, and got a neighbor to help him. That was about six in the evening, and it was nearly eleven before they could get a doctor.

At first the doctor thought I was dead; he could not pry my teeth apart to give me the medicine, so he injected a drug hypodermically. Then they sent for my parents, who were fourteen miles away. When mother asked the neighbor how I was, she was informed that the doctor said he did not think I could live another hour, and it had already been nearly two hours. Mother said she did not know what to do, that the only thing she could think of was that God is good; and she kept repeating this truth on the way. When they got home, she was told that I was better.

Soon after I ate the root (which proved to be a wild parsnip), a neighbor who is a Christian Scientist went to work to realize the truth. As I said before, I became entirely unconscious of material things; I realized no pain whatever. Although everything was done in a material way that could be done, still I am entirely sure it was Christian Science that healed me. While I was unconscious of my surroundings, many things were revealed to me. I saw the words Christian Science before me, and a peace came to me that I had never known before. I was unconscious nearly two days, when all at once I awoke to things about me. When I got up the next morning I threw away the medicine which the doctor had left. I felt as if I could walk on the water, so to speak. Then I believed; now I am beginning to understand, and it is beautiful.

Can one explain or convey to another the peculiar fragrance of a flower? Quite as impossible is it to explain the joy and peace we realize from this new way of studying the Bible which Christian Science has taught us, but we know it is the truth that has made us free. When this experience occurred, my understanding of Mrs. Eddy's teachings was very slight, and I feel that I have gained slowly in the knowledge of the truth since that time. I have been in the civil service as government farmer, Indian service, for about five years, and am considered perfectly sane, although some said that I would lose my mind and was going crazy, because, as it seemed to others, I said some foolish things after I was healed of the poisoning.

My wife has been studying Christian Science for about three years, and we have had some fine demonstrations in our family. I am enjoying good health at the present time.

SIDNEY L. CAULKINS, Hammon, Okla.

✧

I send this testimony to tell what God, through Christian Science, has done for me. I was a physical and mental wreck when my son advised me to try Christian Science. I had been under medical treatment for a year, had tried different medicines, was a month at a sanitarium taking baths, electricity, etc., but with no benefit. The doctor said I was suffering from nervous breakdown, an abnormal growth, bowel disorder, and stomach trouble, for which I was on a diet. I was unable to sleep without taking a drug, and was full of fear and mental gloom. My husband had to give up work for eight months to care for me, as I was afraid to be alone.

I was a Bible student and had taught in a Sunday school, but I was unable to apply the teachings of the Scriptures for my comfort. During my talk with a Christian Science practitioner I learned that "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind;" that it was only error trying to bind me; that instead of submitting I should heed Paul's admonition to "stand fast . . . in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage." This verse was my first ray of light in the darkness, and I clung to it.

A few weeks after Christian Science treatment was taken up for me, Truth began to expel the growth. I could eat and sleep, action became normal, and in less than three months I was doing my work, and have done it ever since. That was in the fall of 1910. I have also been healed of catarrh of forty years' standing; in fact, I have become a new woman in every way.

While I am very thankful to God for my healing, I am even more grateful to Mrs. Eddy for the spiritual understanding which has opened up the Scriptures to me. I feel I could not live without this truth.

MRS. J. H. STALKER, Larned, Kan.

✧

I am sure that my acknowledgment of the benefits received from the study of Christian Science is long overdue, and that nothing can be gained by waiting for further experience or progress. I first heard of Christian Science about six and a half years ago, when a friend lent me some copies of the *Sentinel*. For some time previous I had been in very poor health. I had consulted several doctors for relief from stomach trouble, and of course had taken a large quantity of medicine. Since October, 1907, I have not had occasion to use medicine. Several severe attacks have been met and overcome by absent treatment from a Christian Science practitioner, and my outlook on life is now much brighter and happier than before.

It is impossible for me to recount the many blessings that have come to me as a direct result of the study of Christian Science. In my business life I receive constant help, and I am often able to rectify errors that would otherwise occasion loss or annoyance. Although I am thankful for the physical help, I am more thankful for the way in which Christian Science explains God and the Bible. I was at one time a church-member, but I drifted away from the church. The more I learn of Christian Science, however, the more I am convinced that our Leader, Mrs. Eddy, has revealed to us the truth about God. I was often perplexed as to the

Digitized by Google

nature and purpose of the Almighty, and thought that the various preachers rather contradicted themselves, for they certainly confused me.

As an apparently isolated member of our church, I must say how very helpful I find our literature. I was previously much addicted to the reading of novels and other books, but now I desire little else than our various publications and our Leader's writings. Science and Health is a living book to me, for it enables me to understand and believe the Bible. When depressed and sick, I have found healing in its inspiring pages. I have no hesitation in saying that I owe my present happiness and success entirely to my endeavor to live up to the exalted teaching of Christian Science.

ARTHUR PETTS, Canterbury, England.

About fifteen years ago I found what all my life I had been in need of—the Christ teaching. My childhood was not joyous and active, as it should have been. Pain was a constant companion, and to be free from headache seemed to me would be heaven. As I grew to womanhood, instead of getting stronger I spent much of my time in bed, in as quiet a place as I could find, for at times even a footstep on a carpeted floor pained me. Change of climate, electricity, different schools of medicine, all failed to bring health. One conscientious Christian physician said to me after I had undergone an operation: "You can never be free from neuralgia in this world, such a case as yours is never healed. If a physician could heal it, he would become famous."

I prayed to be healed, and one day a friend inquired why I did not try Christian Science. Eagerly I asked her to tell me more about it's teaching. I had questioned a few people about it, but they had urged me not to try it, not even to read about it. In response to my inquiries my friend sent me a small copy book of "Science and Health with Key to the Scriptures" by Mrs. Eddy, saying, "Read it." This I did for hours and I slept better that night than I had for years. The next morning I bought a copy and began to study it. My healing was not rapid, but it was and is sure. Now I had the joyful benefit of class instruction, and I have since devoted much of my time to what I love best to do, that is, help to free others from a state and sin by the word of God as taught in Christian Science.

PHILIPPINA I. BUTLER, Chicago, Ill.

It is with a grateful heart that I tell of the blessings which I and my family have received through Christian Science. Seven different doctors treated me for stomach and heart trouble, and a very severe bowel disorder. I suffered from hemorrhoids constantly, and was never free from pain. In June, 1911, I had a very painful operation for female trouble, and was helped somewhat, but grew worse after a few months. I turned to God confidently to heal me in some way whereby I could regain my health. As I was on the road going back to the doctor who had operated on me, I met a lady who said only a few words, but what she said was like the "still small voice" of Truth: "Let your doctor attend to you. I want you would try Christian Science?" These words came to me very distinctly, and I did not go to Dr. ——'s office, but went to my home and sent him word not to call on me, but I do not remember that I told him why.

I took up Christian Science treatment in April, 1911, and experienced a good deal of mental strife at the beginning. My husband was opposed to it, but it has been remarkable how it has healed many others of his household, and I know that it will be everything to me. I am glad to say it is my delight and privilege to find an understanding of this truth both a preventive and a curative in my family of four small children. The Bible tells us, "Prove all things; hold fast that which is good." I have found Christian Science to be the greatest blessing that ever came into my life, and I am going to hold on to it. I am deeply thankful to God, also grateful to Mrs. Eddy for this demonstrable truth that sets us free.

DOROTHY WASSON, Big Springs, Texas.

For the countless blessings that have come to me and mine through Christian Science, I wish to express my thankfulness to God, also to bear testimony to a recent healing. On Monday night before Christmas, 1912, while at my work, I became very ill. When I reached home, I had a high fever, very bad throat trouble, and headache; also, I was extremely nervous. Next morning I was no better, but went to work as usual, thinking I could overcome this inharmony with the slight knowledge I had of Christian Science. In a little while I found that I was growing worse, and so went home. I immediately appealed to a practitioner for help, and the following morning the fever was gone and I was able to be up and about the house. On the second morning all manifestations of the ailment had entirely disappeared, and I was able to go to my work well and happy, as usual, and there has been no return of the trouble.

I am especially grateful for this healing, since before coming into Science I was subject to such attacks, and under medical treatment was always confined to my room for about a week. During the four years that Christian Science has been in our home, it has indeed proved an ever-present help. In the Preface to Science and Health (p. vii) our Leader has said, and truly, "To those leaning on the sustaining infinite, today is big with blessings."

WALTER J. JORDAN, Lexington, Ky.

For the benefit of the public and with thankfulness to God and gratitude to Christian Science, I wish to render a testimony of one of my many healings through Christian Science.

To begin with, I am very fond of outdoor sports, among them motor cycling being my favorite. On Aug. 8, 1912, I met some friends who were going to High Bridge, a place near Lexington, Ky., and was asked to join them. They were in an automobile and had a good start before I could get my machine in working order. When I arrived at the city limits they were nowhere in sight, so putting on all speed I decided to try to catch up with them. I was traveling very fast, when all at once I saw that I was coming to a sharp turn in the road. I applied the brakes as usual, but it failed to work. The only thing left for me to do was to try to make the turn—that is all I remember. The machine and I struck the stone wall on the right of the road, and I was thrown about forty feet below it, a rocky creek bottom directly on my face and head.

I regained consciousness about thirty minutes after and found my friends bending over me. I was taken to a nearby place where it was found that my ribs were very sore—the doctor almost certain the lower jaw bone was not broken. My nose bleed a few hours, and a cut in my face from the pavement on the side. The only thing I would do during the day was to see in my face. A Christian Science practitioner came to my room and began treatment immediately. The result was that I was out of the hospital in three days and out on the street with my friends again on Aug. 16.

My nose healed without the aid of stitches, and it is actually my entire head without the aid of stitches or medicine. On

Digitized by Google

same with my strained limb and shoulder; and last but not least, one can hardly distinguish a scar of any kind on my face, where fifteen stitches were taken. This is only one of my many healings; and yet some people say, "I wonder why he is a Christian Scientist."

It is not only for the physical healings that we are Scientists, but more for the spiritual uplift and a better and clearer understanding of the truth, which brings man into closer communication with God.—J. Earl Jordan, Morgan, Ky.

✧

I wish to express my gratitude for the peace and happiness which have come to me through the explanation of life as taught in Christian Science, for the knowledge that evil is no part of real being, and that there is an ever-operative law by which evil of every nature can be completely overcome. Christian Science has given me an understanding of the Bible which formerly I could not gain, and has restored me to health when I had no prospect of ever being well.

When about two years of age I had a serious illness, which left me very delicate and never free from pain. I was constantly under the care of doctors, and for a year or two before hearing of Christian Science I had been unable to sleep naturally. Among other things I suffered from extreme exhaustion, nervousness, and a very great sense of depression. A great deal of my life I spent in bed or lying down to rest. At the time I first heard of Christian Science I was using regularly various drugs which I believed I could not live without, but after reading a few chapters of the Christian Science text-book, "Science and Health with Key to the Scriptures," I saw clearly that material remedies had no power to heal, since God is the only power; so I gave them up entirely, and soon found that practically every physical discord had disappeared. Since then I have enjoyed splendid health, and have not spent one hour in bed through illness. Any physical discord which has become manifest has been very quickly healed in Christian Science.

Fortunately I heard of this teaching just in time to prevent the amputation of the toes of my left foot. It had been decided that this would be necessary, owing to the great pain which they occasioned, and which toward the last the doctors could not even relieve. Above all, I am grateful to Mrs. Eddy for showing us that God is the only Mind, that He directs and governs all in perfect harmony.

Lizzie H. Stevenson, Glasgow, Scotland.

[Written for the *Sentinel*]

When Love Sways

CHARLES C. SANDELIN

Soft breezes stir, and lo! the solemn dell
Awakens as to being: to and fro
Its mute inhabitants do lightly blow,
And may perchance a tale of gladness tell.
But hush! Now yield they to a mystic spell,
Nor gentle sway nor leafy tremor know,
And but as senseless, silent specters show
When flee the winds that did each move impel.

O Love, that doth each worthy thought inspire,
While thou art absent, mute indeed the heart!
But comes, anon, the hope of true desire
And makes the quickening sense of Spirit start,
Awaking us from dreams unreal and dire
To know the lasting bliss Thou dost impart.

From Our Exchanges

[*The Christian Advocate*]

When Jesus said to his disciples, "I am among you as he that serveth," he expressed a social ideal (and magnificently illustrated it in his whole life) which is fast coming into recognition as the best regulative principle for the complex relations of modern society. To serve humanity in all that one does, is an ideal for the commercial world which, if made generally operative, would redeem our competitive system from its grasping insincerity and greed. Let the accumulation of riches be a consequence of service rather than the result of a specific effort to amass a fortune, and there will be little complaint on the part of even the discontented, and no objection from those who are fair.

There is no necessary iniquity in becoming rich; there is vast evil in becoming rich through the misfortunes or ignorance of other persons. It does not seem impracticable for a merchant to choose for himself the ambition to be a Christian man, selling Christian goods for Christian uses, at Christian prices. If business cannot be brought to such a test as that, it has no right to be called a Christian business, whatever may be the religious professions of the men who conduct it. This principle of service through wealth will not only safeguard the gainer of riches from sordid ambitions, but it will direct the use of his accumulations.

[*The Christian World*]

The God of our heaven must become the God of our earth, the knowledge of our Father must become a demonstration of our brotherhood, the pattern of the mount must become the tabernacle of the wilderness, the passion of the soul for God must become the inspiration of our life for our fellow men. The world is calling out today for real service from men and women who can go into it with a true religious spirit. Recent social developments are calling for voluntary workers to make them effective; voluntary workers who need to begin with the great conviction that all lives are sacred and hide within themselves divine possibilities, and that the worth of humanity lies beneath all its differences and divisions. Workers are needed who have a heaven of light and love and wisdom overarching their world, and who are willing to go forth in the faith of high ideals to render service to humanity, to establish on the earth the kingdom of God and His glorious will. Moments in heaven are granted to most men, and the world would soon be different if they would let the God of those moments govern the ordinary life.

[Rev. R. J. Campbell, M.A., in *The British Congregationalist*]

There is today, unless I am greatly mistaken, a strong craving evidenced on every hand for a truly authoritative divine word to our age and to the individual soul. Confronted as we are with a new and portentous social situation, and with a new apprehension of the mystery surrounding the problems of human life and destiny, in fact, a more intense realization of the utter inability of either science or philosophy or both together to get behind the phenomenal universe and lay hold of reality,—in a word, with a reassertion of the claims of the soul as distinguished from those merely of the senses and the mind,—we are hearing once more the expression of the wistful desire for a religious authority, foundational, indefeasible, inerrant, and all-sufficing. Am I right in this? A new age demands a new word, and recognizes its own insufficiency to utter it. The infallible church theory has broken down, so

Digitized by Google

has that of the infallible book, and the supposedly infallible reason is following suit.

We are like inhabitants of a storm-swept isolated island, content to live in a cave on the shore till unusually high tides invade our security and drive us to seek shelter in the woods. But the shelter is imperfect; the rains and the winds search us out; wild creatures prowl around us and dismay us by their presence; trees get uprooted, or their branches are not strong enough to bear what we put upon them. So we betake ourselves to a new refuge, buildings erected by our own hands, each man for himself, with the rough tools and slender materials at our command. Alas! these are no more permanent than our previous homes. One sudden tempest and they lie open to the sky, stripped roofless and bare. There is nothing now to be done but to await the coming of fuller resources from the mainland beyond the horizon, and begin again, this time more stably and solidly. This is exactly the position we find ourselves in, religiously speaking, today. The cave of an ecclesiastical system has become untenable; the diversified forest of sacred literature is after a while found to be no better, if indeed as good; and finally, the individual reason proves just as helpless as a dwelling-place for the soul.

[*The Continent*]

A thousand times modern unrest repeats the ancient complaint: "This is an hard saying; who can hear it?" It is the revolt of insurgent souls unwilling to be held up to the high, fixed points of God's righteousness. But Jesus changes no hard sayings. The only way to obliterate these lofty demands is to resolve God into a vaporous concept of the human mind. Then He may be made over every morning to suit. That, some people are trying to do. But the religion of the Bible is the religion of a God fixed and final. Moreover, it is the religion of God's incarnate revelation of Himself in Jesus our Lord—likewise fixed and final.

Jesus Christ is not merely an ecstatic dreamer, standing midway of the rising centuries, pointing the way by which he trusted that humanity would rise. Instead, Jesus is the immortal torch-bearer, standing through all ages at the summit of the road, showing with eternal authority the one way home to God. He himself is Way, Truth, Life. In this he must be unalterably true or there is no Christianity. Religion might be left without this, but not Christianity. One changeless reality back of all reality—God; one infallible revelation of that reality—Jesus: these are ineradicable axioms of Christian faith.

[*The Christian Intelligencer*]

Never was there more urgent need of preachers with a living message. We cannot prescribe to the letter all that this message must be. To be living, its main theme and object must be Christ, who is Life; but no one can control the intellectual history and spiritual struggle of another. God has His own way with different types of men. Woe be to those, however, who bring no light, who drag their doubts into the pulpit, who spread religious confusion. Woe be to those also whose technically orthodox message is merely the dead echo of a living past. We must preach the Christ of history, but the Christ of history must be to the preacher the Christ of personal experience. Carlyle says, "Perfect ignorance is quiet and perfect knowledge is quiet, but the transition from the former to the latter is a stormy one." We do not want the serenity of ignorance in the pulpit, nor do we want the buffetings of inner storms; we want the calm assurance of perfect knowledge of Christ as Saviour and Lord, and it is not for any one to prescribe iron rules of method to one who truly knows his Lord.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

New and improved class record books for use in Sunday schools are now published and ready for distribution. Size 5⅜ x 8¼, with ruled pages for two years' record, printed on good quality paper and durable cover. Prices of books, registration cards, and coin envelopes as follows: One hundred class record books, $6.50; 12 copies, 90 cents. One hundred registration cards, 25 cents; 12 cards, 10 cents. One hundred coin envelopes, $4.00; 12 envelopes, 50 cents.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 15 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 85 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Entered at Boston, Mass., post office as second class matter.

Items of Interest

Urged to prevent commercial monopoly of valuable natural energy, the bill for the development of water-power in connection with the use of the public domain, one of the measures of the Democratic program for conservation legislation, has been reported to the House of Representatives from the public lands committee. The measure would preserve to the people ownership of all public lands available for hydroelectric purposes and provide for their leasing.

"Hearings," the report said, "conclusively show that more than 50 per cent of the developed water-power in the public land states is owned by twenty-eight private corporations and their subsidiaries, and that six of these control together more than 30 per cent of the developed power. Of the twenty-eight companies seventeen are other subsidiaries of the General Electric Company, or closely associated with it through holding companies, interlocking directorates and banking connections."

Cuyahoga county, Ohio, will add sixty miles of main trunk road to its four hundred miles of similar pavement, according to the 1914 road improvement plans. A minimum width of sixteen feet has been adopted and the expenditure, including bridges, etc., will be in excess of nine hundred thousand dollars. The mileage to be built in these roads was duly proved in Cuyahoga county. The county has expended more than eight million dollars on this type of roads, and the result has been universally satisfactory. In spite of the fact the county's motor wheel tax increase has given more than two million dollars revenue during the past two years, Cleveland, with six hundred miles of pavement to its credit, will save about eighty miles of streets this year, including resurfacing.

Negro farmers own or control five million one hundred thousand acres of land in the state of Alabama alone, or three hundred and fifty thousand more acres than they controlled in 1900, says the *New York Times*. The colored farmers of that state have under their control three million five hundred and sixty-three thousand acres of unimproved land, and at present they are farming five hundred thousand more acres of improved land than they were cultivating in 1900. In ten years the number of negro farmers increased 17.3 per cent, and now they own or control one fourth of all the farm property in Alabama, having an aggregate value of ninety-seven million three hundred and seventy thousand dollars.

According to a bulletin just issued by the committee on relations of railway operation to legislation of the American Railway Association, despite the fact that it would cost the railways of the United States about $581,127,100 to replace forty-four thousand wooden cars by steel and steel underframe passenger equipment, as proposed by seven bills now pending in Congress, the roads themselves have within the past six years increased their steel passenger car equipment from a total of 629 on Jan. 1, 1909, to a total of 9,492 cars on Jan. 1, 1914, and during the same period have increased the number of steel underframe passenger cars from 673 to 3,385.

The third international opium conference at The Hague has reached an agreement that the international convention looking to the suppression of the opium traffic, drafted by the conference in 1912, can come into operation as soon as the adhering powers have ratified it, despite the abstention of some of the powers. This convention aims not only at the suppression of the opium traffic, but also at international traffic in cocaine and other noxious and habit forming drugs. The representatives of forty-four nations have taken part in the conference on this subject, although not all the states have signed the convention.

Another illustration of the rapidity with which opium smoking in China is being suppressed is afforded by the fact that the British government has now agreed to recognize the province of Hupeh as clear of the production of opium as from June 1. It is further stated that the provinces of Fukien and Chekiang are also clear, but the date upon which this is to be recognized is not yet announced. In accordance with the Anglo-Chinese agreement on the subject, the importation of opium into any Chinese province can be forbidden as soon as the growth of the poppy in that province has been finally suppressed.

A little more than forty-three thousand acres in the White mountains have just been approved for purchase by the government. The land is between seven hundred and forty-three hundred feet in elevation, and in the lower valleys are a number of abandoned farms now grown up to trees. Most of the timbers have been cut to make room for pasture, but there are good stands of second growth, and quite a considerable value. With the cost of cutting and stumpage what it is, there is said to be excellent promise of a new stand of spruce.

At its quarterly session the Jamestown exposition commission, the highest officers of the exposition of the new century days, which would cost about seven hundred and fifty thousand pounds, the proposed extensions and improvements to Durban harbor, South Africa, involved a cost of two million pounds. The scheme will take from five to seven years to carry through, and it is expected to provide accommodation for thirteen vessels of large size, with a maximum draft of forty feet.

Announcement was made at Wellesley College commencement that six hundred and twenty-two thousand dollars had been paid or pledged toward the one million two hundred and fifty thousand dollars the college must raise before Jan. 1, 1915, to secure the conditional gift of seven hundred and fifty thousand dollars from the Rockefeller Foundation. The largest single gift was two hundred and fifty thousand dollars for a central dormitory to be located on the site of the burned College Hall.

Comptroller of the Currency Williams estimates that about five hundred million dollars in national banks throughout the United States is available for farm mortgage loans under the provision of the federal reserve act, making it possible for national banking associations to lend money on improved farm lands. The farm loan clause of the act is now in force, and makes it possible for national banks to make farm loans before the formal organization of the federal reserve board.

The standardization of commercial law is the object of the international parliamentary commerce conference, which opened at Brussels recently. Forty delegates, representing many nations, were in attendance. Among the subjects to be discussed are the recognition of arbitration by international law, and the establishment of international control over assurance companies. A resolution aimed at making the effects of bankruptcy universal, was adopted unanimously.

The last hope that final action by President Wilson might prevent the promulgation of the order abolishing the wine mess on board American warships was destroyed when the order was placed in the hands of the public printer. It has now been formally promulgated by Mr. Daniels, and will be issued to the service. It was sent to the printer without the President's signature.

Completion of the new port works at Bahia, Brazil, is anticipated before the close of the year. This construction began in 1908, and as fast as appropriations were secured, section after section was finished, all with additional docking facilities without any interference with existing shipping. When the whole system is completed, there will have been an outlay approximating twenty-five million dollars.

A world's record for the duration flight of an aeroplane carrying only the pilot was created June 24 at the aerodrome at Johannisthal, Germany, by Oskar Bider. He remained continuously in the air for eighteen hours and ten minutes. The best previous mark, sixteen hours and twenty-eight minutes, was made by Pinet in France on April 5.

The transcontinental railways of the United States won their claim for the return of some seven hundred million dollars which for nine years the supreme court decided had not been paid in the patents making the land grant to the government if found in certain minerals.

Representative Parker of New Jersey has introduced in the House the bill of the joint committee on postal affairs providing second class mail matter and compensation for transportation of mails to provide a scientific system of paying the railroads for carrying the mails.

During the year 1913 the United States imported 2,[illegible] pounds of coffee, having an entire value of nearly one hundred and five million dollars. Over two thirds of the coffee consumed in the United States comes from Brazil.

Reports from the peach-growing districts of Georgia give promise of a record-breaking crop.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI July 11, 1914 No. 45

In the School of Christian Science

ROBERT NALL

It was a remarkable sight which presented itself to the parents of the boy Jesus when, three days after the close of the feast at Jerusalem, they found him in the temple. Here was a lad—perhaps to most of those who knew him a very ordinary lad—sitting, probably on the floor as was the custom, at the feet of the great priests and religious teachers of the day, "both hearing them, and asking them questions." There are many apocryphal legends surrounding this incident, but they only tend to obscure its beautiful simplicity and to distort its meaning. Jesus was not there to teach, but to inquire and learn. He already knew that his mission on earth was to be about his "Father's business," and the information he there gained, giving him the point of view of learned theologians on those eternal questions which affect man's relation to God and his destiny, must have been of priceless value to him when he entered upon his three years' activity. In all the years that he spent in Nazareth, he stored up great treasures of spiritual wisdom and understanding, ever growing in the knowledge of truth and in the power for righteousness. It was apparently a long and slow process, this preparation for his divine career. But how adequate it was! And was it not because Jesus knew how much there was to learn, and how much there was to overcome materially, that he was always patient with his disciples?

One may gather from the plain records of the gospels that these disciples were not quick learners, but they were students in whom the Master must have seen fitting qualities for the high work before them. They were attracted to him by an influence which at first must have seemed mysterious, but which they came to know as the spiritual power which comes from the recognition of oneness with God, infinite good. So they followed him, and listened to him day by day, as he taught by the wayside and in the temple, and best of all in those quiet hours when the little band was alone, and when many pearls of divine wisdom must have fallen from his lips. There it was that the Master expounded the Science of Christianity and explained the operation of spiritual law, —the law of good,—which in these later days we are beginning to apprehend with clearer insight than has been known since the early years of the Christian era.

We are all learners in the school of life, yet we often fail to discriminate between knowledge which is essential and that which is non-essential. A little thought soon convinces us, however, that the only learning which is of any value is that gained from a spiritual source. The disciples became stalwart Christians, valiant, courageous, strong for the truth, because of their spiritual-mindedness. They were at all times eager to be taught, and in this respect they are an example to Christians for all time. There is nothing mysterious or impossible in the teachings of Jesus. This is being proved by the operation of the Principle of Christian Science.

Mrs. Eddy, the Discoverer and Founder of Christian Science, was always a very humble learner. In the Preface to her text-book, "Science and Health with Key to the Scriptures," she writes that "today, though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ" (p. ix). "It is written in the prophets," said Jesus, "And they shall be all taught of God." This is the secret of power, a secret which is being fathomed by every Christian Science student as he sincerely and honestly seeks to make the unfoldment of the truth and his growth in spiritual understanding the paramount purpose of his life. When all else is subordinated to this, then it is true of them, as it was of the immediate followers of the Master, that the power to heal the sick is not a special gift, but accompanies that understanding of the Science which presents the true concept of God and His law and which the Master demonstrated by healing the sick and sinning.

If, therefore, we desire to possess and cultivate the highest gifts, and to find the truth of being in order that we may be lifted out of the clouds of perplexity and fear, and possibly much suffering, we need not leave the spot where we are; but here, and now and always, we may be drinking of those perennial springs of spiritual knowledge which the loving Father has given in abundance to all His children. For teachers we have the sacred Scriptures, full of grace and truth, overflowing with riches, revealing that spiritual sense of God and His universe, including man, which will illuminate our understanding and gradually disperse the mists of false material sense. We have the Bible made luminous to any thoughtful mind, a book that by its profound spirituality, its revelation of Truth, its exposition of the scientific unity of all creation, and its remarkable penetration of all the sophistries of mortal thought, has been, and continues to be, a saving influence to countless thousands of heart-hungry and bodily-stricken men and women. We also have the Christian Science text-book, of which Mrs. Eddy herself, although she wrote it, inspired by infinite Love, was always a diligent student. With these helps we may be obedient to that great command, "Learn of me."

What Jesus the Christ taught his disciples, and through them all humanity, is what we must learn if we would "enter into life." What did he teach, and what may we learn? It is a wonderful curriculum, this course of spiritual study,—wonderful not only by reason of its results, but also because of its simplicity. This is not always quickly acknowledged, but the beginner in Christian Science, which is the embodiment of all that Christ Jesus revealed and demonstrated, soon learns that his progress is in proportion to his humility and to his acknowledgment that the most formidable difficulties are those which are raised by mortal thought. These are overcome as one learns of the allness of the one God, infinite good; as one gains understanding enough to apprehend, even slightly, that there is no power in evil, which is a base deception, and that divine Mind, which is the only Mind, is omnipotent over all false concepts and erroneous beliefs,—the only enemies with which we have to contend.

Breath of freedom comes to us as we turn thought Spiritward and seek to shape our lives in accordance with the truth of an enlightened consciousness. We see that our sense of proportion has been wrong; that while we have been trying

Digitized by Google

to find peace and happiness in our own little material orbit, with our hearts set on the things that by their very nature can never be anything but ephemeral and illusory, we have been ignorant of our real selves. We have thought ourselves material beings, necessarily subject to sin, disease, and death; whereas we come to know ourselves as spiritual, with dominion over everything that is discordant and inharmonious, because such things have no place in the kingdom of heaven.

This means that we learn to trust in God, not as a mere theory, which is no trust at all, but as a practical, every-day experience. We acquire a new and purified concept of life and of love, of sacrifice, fidelity, and obedience. Religion ceases to be supernatural; it is a demonstrable daily knowledge of God. The loyal Christian Scientist is grateful to testify that his holiest and most joyous privilege is to bring "into captivity every thought to the obedience of Christ," Truth, and thus continually to advance from the Egyptian land of slavery, where he served the awful taskmaster of sinful sense, to the promised land, where all mortal fetters are cast aside and the new song of redemption can be sung with whole-hearted gladness. In this way we learn of the spiritual relation, the oneness, of God and man, a truth which destroys every fear and solves every problem. As Mrs. Eddy has said on page 196 of "Miscellaneous Writings": "The sweet, sacred sense and permanence of man's unity with his Maker, in Science, illumines our present existence with the ever-presence and power of God, good. It opens wide the portals of salvation from sin, sickness, and death."

❖

To Understand Life

CATHERINE YOUNG

THE longing desire to understand life is in some form or other, the predominant aspiration of the human mind. Down the long sweep of the centuries men have sought the answer to this tremendous problem. The past, the present, the future, in fact the whole material world, is searched in the hope of finding the key to the mystery, and still the search goes on. In the last analysis, indeed, human living is in itself but the search for this answer, the desire epitomized.

"Mortal existence," Mrs. Eddy writes in Science and Health (p. 428), "is a state of self-deception." When mortals awake to the unhappy, the doubtful, the confused sense of things which obtains everywhere in individual and national life, they feel that in some way they are being deceived, either by themselves or by the educational and religious systems in which they have been nurtured, and at once they become alive to the ceaseless search, the endless striving, in their own consciousness.

In every age the human heart has been inspired with the hope of finding the way out of its difficulties, and invariably this way has been sought for in the physical realm, in the realm of human experience. When no way is found in this direction, then arises the inevitable conclusion that after the change called death we shall understand, and this by its lack of reality and vitality only adds to the sense of failure and powerlessness. So great indeed is the confusion caused by the failure to find the way of understanding in human life, that the vast majority live in a semi-conscious state of unbelief, content to let a select few do their thinking for them, following blindly those whom they have chosen as their leaders; or else they are too lethargic to trouble about the matter at all and follow mechanically in the footsteps of their fathers, regardless of the changes that have taken place in the passing of the years. But always the result is the same,—endless sorrow, pain, sin, sickness, and death.

To those who have long been cognizant of the agony of uncertainty, the pain and folly, the hopeless struggle of human existence in the old way, the message of Christian Science comes with beautiful and instantaneous relief and healing. When the realization comes to such a one that "man is not material; he is spiritual" (Science and Health, p. 468), and that the way Jesus pointed out twenty centuries ago is not transcendental, but is the true, practical way out of all human difficulties; when he finds that this way is open for all to walk in, today and for all time, then for him life is changed, peace enters the heart, a sense of security and certainty fills the mind, banishing fear and doubt forever.

During his earthly ministry many must have followed the great Master's teaching and found the living way,—and there have been faithful followers of Truth throughout all time,—but as human theories took the place of spiritual demonstration, the truth Jesus taught was early obscured. Today Christian Science has come, making this teaching once more clear and pure, giving the world a key by which it may read the Scripture correctly, and pointing out man's mistake in searching for an understanding of life in and through perishable matter, where by its very essence life could not exist. St. John says: "The Word was God. . . . All things were made by him; and without him was not any thing made that was made." Of personified evil Jesus said, "Ye are of your father the devil," who "abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it."

The light of Christian Science shows us how we may begin to understand life aright, to be born anew. Too long has mankind twisted the sacred teaching of the Bible this way and that, to suit the age or their own personal opinions, but the time for spiritually scientific thinking has arrived, and with it has come the desire to interpret the Bible more simply and truly. The great Master's words would be powerless for us today had he meant them only for the age in which he lived and for the people who listened to him. His great works would be no incentive to us today, had they been unnatural and abnormal. Understanding this, the "still horizon's grander view" (Hymnal, p. 4) is open for us now, and it is within the power of every one to solve his problem today as of old, by looking away from matter into the unsearchable realm of infinite Mind. We can press on with the knowledge that we have with us the power of God. Seeing before us "the vision and the splendor" of a reality of which there can be no end, our feet are planted on a sure foundation, and we have begun to prove the infinite applicability of Christian Science to all the varied problems of human experience.

❖

Gamut of Graces

C. P. VANDEVOORT

IF ANY of us have failed to grasp the full import of the apostolic exhortation, "And beside this, giving all diligence, add to your faith virtue; and to virtue knowledge," as it occurs in the second epistle of Peter, first chapter, the reason may be in the fact that our English translation does scant justice to the original, thereby hiding in some measure its strength and beauty. The Greek word translated "add" comes to exhort for a chorus its root being identical with our English word "choreus," and it turns at once that the apostle's thought must have been the perfection of harmony obtainable from the full gamut of the Christian graces. We find, therefore, the several notes attaining the highest not in their individual relations to one another, while only just enough are used (seven) to complete the octave. Nature's

Digitized by Google

faith becomes the key-note of man's mental harmony, for the Scriptures teach that "without faith it is impossible to please him [God]," and again, that "whatsoever is not of faith is sin." Thus faith is seen to be the foundation of a concordant life, to which in turn are quickly added virtue, manliness, courage; and then, going a step farther, a key higher, this courageous faith is supplemented by that demonstrable knowledge which is defined in Christian Science as "understanding."

Then the note of temperance is sounded as a governor, that our "speech be alway with grace, seasoned with salt," lest we fall into the error of speaking unscientifically, as did even Peter himself on one occasion, "not knowing what he said." But days of darkness may be ahead, days in which, having done all, we are to stand; and for this the major fifth of "patience" is essential, that dominant of the mental mode, which must have its perfect work that we may either stand firmly or if need be "run with patience the race that is set before us," as we keep our eyes steadfastly upon Christ, Truth, our living head. Further, like Timothy, we are to exercise ourselves in godliness,—godlikeness,—since in such likeness man was and is created, and we have the assurance that this "is profitable unto all things, having promise of the life that now is, and of that which is to come."

Moreover, in our contemplation of the creator, we are not to lose sight of God's idea, our brother man, to whom our obligation or debt is always brotherly kindness, a debt due daily until we come to see, as our Leader tells us, that "the divine Principle and idea constitute spiritual harmony" (Science and Health, p. 503). Then, and only then, are we enabled to strike with clearness the final note of our scale, charity or love, in completion of the chord, not as a separate note but rather as the "do" of faith raised an octave; a faith from which all fear has been eliminated, until it has become the grace-note of perfect love, for "perfect love casteth out fear."

Well might the apostle Peter add, "For if these things be in you, and abound, they make you that ye shall neither be barren nor unfruitful in the knowledge of our Lord Jesus Christ."

✧

Bearing Up the Ark

EVA S. W. WILLIAMS

In the seventh chapter of Genesis we have an account of the beginning, increase, and continuance of the flood, an episode which, like most others narrated in the Bible, is symbolic in many points of the varied individual experiences of Christian Scientists. Perhaps some so-called fatal disease has been cured, and the one to whom proof has thus been given, enters into the ark, which is defined in Science and Health as "safety" (p. 581). For him safety lies in the dawning perception of man's true being as "coexistent and eternal" with God. Perhaps he has been driven into this haven of refuge by longings which no creed or dogma had hitherto been able to satisfy; at any rate, he has accepted the fundamental truth of Christian Science, that man is a spiritual being, as the basis of his future thought and action. What happens next? It may be that a time is given him in which to rejoice in his new-found sense of deliverance without severe tests being put to the sincerity of his convictions, or the light may be so vivid as to enable him to reflect immediate healing and help to others, and to meet without difficulty every trouble which assails himself.

Sooner or later, however, the waters begin to rise! Old false beliefs show themselves as deeply rooted; friends and relatives oppose and obstruct his peaceful way, or truth stirs up the deposits of wrong thought and habit, even as Mrs. Eddy has said, "Error will hate more as it realizes more the presence of its tormentor" (Miscellaneous Writings, p. 278), all of which explains the statement of Isaiah: "I form the light, and create darkness: I make peace, and create evil." Last but not least, mental apathy within and animal magnetism or hypnotism from without, call for recognition on the student's part and for an assertive overcoming. No shaft that is aimed at him, however, can harm if he is alert to obey the command of Science that we be a law of denial to all such things. Constant watchfulness is needed to detect the different processes by which one is being tempted.

The result to all those who are honestly trying to "follow on to know the Lord," is wholly to the good; these things are the increasing waters which "bare up the ark, . . . above the earth." The forty days of flood, the one hundred and fifty days during which the waters prevail, are but incidents in the true Scientist's career. God's promises are "yea, and . . . Amen," and the time comes when we can open the window of the ark, when we can pass fearless and unmoved amid earth's scenes of misery or fancied joy, for as we read, "The ark indicates temptation overcome and followed by exaltation" (Science and Health, p. 581). We have not yet attained perfection, but for us the bow of promise is ever in the cloud; the waters have been assuaged, for we no longer accept their evidence as real.

✧

Service

JOSEPH F. HIBBARD

Many individuals are given opportunities for service other than that into which their own personal interest enters. Opportunities for service to the cause are given to many Christian Scientists. The particular requirement may seem insignificant and the service of little moment; or it may be something that calls for much of our time, the setting aside of our own plans, or the rearranging of affairs to enable us to take up the duties which the call involves. The performance of these may bring to us a sense of pleasure, or they may seem arduous. The service may even be a humble one, and the performance of it seem unworthy of our sense of dignity; or it may be one which confers a mark of distinction. It may be a difficult task, as was Peter's when the Master requested him to tarry and watch, for we read that his eyes were heavy, so that he slept while the Master wrestled alone.

The Master's work requires many kinds of service. Of Peter and James and John, he asked that they watch one hour. Of one is asked participation in the varied activities in the field; of another, the best thought in the handling of large problems. Of one, the carrying of bundles; of another, the accounting of finances. Of one, the teaching of a class; of another, the giving of a cup of cold water in the spoken word, or other ministration.

Do we avail ourselves of the opportunities to render service lovingly? Do we put aside selfishness for the cause of Christ, Truth? Sometimes we hear one say, "I am not capable;" yet this one never entertains a doubt of the ability of another who may be asked to perform the same service. Is not this a guise under which selfishness is masked? Again, we hear the argument that we have already borne a share of the burden; it is now time for some one else. Of such it may be asked, Does it never occur to you that your opportunity to serve will not be always? Others will follow you, and they will take up the burden in turn. Like the spokes in the wheel, it becomes your turn now and then to bear up; but as the wheel moves on, another and another takes the place, and you are borne by them.

Digitized by Google

Standing before a great modern printing-press, one is impressed with the multiplicity of the operations of its various parts. One piece requires the strength to withstand tons of pressure; other parts, great delicacy of touch. Some do their work very quickly, others with apparent deliberation. Some never cease in their activity; others remain quietly at their appointed place, ready and alert, and do just a little but an important thing at the instant it is required. Some parts of the machine are much in evidence and do their work conspicuously; other parts, though quite as important, are hidden away from the observation of all, and their presence is known only to the pressman.

It is so with the Master's work. Like the parts in the printing-press, we are parts in a great plan. To do our work cheerfully, lovingly, enthusiastically, is our highest privilege, and in doing it we are certain to be blessed. The blessing comes for the performance of the humble duty just as surely as for the performance of that which seems more important; for in reality the one is of as great importance as the other. If the delicate operations of the printing-machine were left out, the work of all the other parts would be deranged. And so too will the blessing come, even though the work is hard and difficult and laborious, if it is lovingly performed; for, as our Leader tells us, "Love is reflected in love" (Science and Health, p. 17). Then surely love will be reflected back to us in large measure for that which we bring to the performance of our labor.

✧

Protection

FLORA E. MILLER

How manifold are the promises of God to His children concerning their preservation, protection, and deliverance! In Genesis we read, "Behold, I am with thee, and will keep thee in all places whither thou goest;" again, in Revelation, "Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be their God." How beautiful and inspiring it is to learn from these and unnumbered other Scripture passages that God's promises are the same "yesterday, and today, and forever;" that Truth changes not, and that even as God saved His people in the days of Moses and David and Christ Jesus, so He can and does save them today!

In proof of our Father's protecting care, let me give a personal experience. One beautiful spring afternoon a school-teacher, who is a Christian Scientist, took her pupils to a neighboring hilltop to gather spring flowers and enjoy the splendid view. One side of the hill had long since been converted into a stone quarry, and so much had been cut away that it presented a precipitous bluff with a perpendicular drop of not less than twenty-five feet, at the base of which were many loads of undressed stone. The teacher and pupils made the ascent from the other side of the hill, and as they were nearing the summit she asked the children to keep close beside her and by no means to go near the stone quarry.

The flowers were beautiful, and soon all were deeply engrossed in their pleasant task. After a little while the teacher had a feeling of disquietude, as if something were not quite right. She looked toward the bluff above the stone quarry just in time to catch sight of one of the little girls as she disappeared over the edge of the precipice. For a second, fear that seemed utterly overwhelming in its intensity seized her, but instantly it was denied; then there came and remained a complete conviction, a steadfast realization, of God's power and presence and protection, a knowledge of God's allness, which was growing ever clearer and more convincing.

When the teacher realized that all was well with the child, she discovered that the other children had left her. She found a path leading around the side of the hill to the stone quarry, and followed it, declaring the truth at every step of her way. When she came in sight of her destination, she saw that the other children had reached there, and were standing around the little girl who had fallen over the precipice. The little one was also standing, and oh, how that teacher's heart went out to God in gratitude for this glorious manifestation of Life and Love!

As soon as the teacher reached the spot, she examined the child and found her limbs practically unharmed, a small bruise on her head evidencing that this part of the body struck the rocks first. The child was smiling when the teacher arrived, and after wiping off the tears still glistening on the little face, and declaring to the other children that their companion was not at all badly hurt and would soon be quite well, they all went back to town.

The teacher silently and joyfully poured out her gratitude to God, realizing that He had indeed given "his angels charge," and presently the children began to sing their little songs of joy, entering "into his gates with thanksgiving, and into his courts with praise." The little one was at school early the next morning, and there was no swelling or bad discoloration. She said she had not suffered from headache, and in a short time the bruise was entirely healed.

In Zephaniah we read, "The Lord thy God in the midst of thee is mighty; he will save, he will rejoice over thee with joy; he will rest in his love, he will joy over thee with singing;" while the psalmist tells us that God "shall give his angels charge over thee, to keep thee in all thy ways." Continuing the thought, our revered Leader writes, on page 567 of Science and Health: "These angels deliver us from the depths. Truth and Love come nearer in the hour of woe, when strong faith or spiritual strength wrestles and prevails through the understanding of God."

✧

[Written for the *Sentinel*]

Love's Way

LAURA GERAHTY

Speak kindly. Each reforming word
That flows with love's smooth stream,
Lightens the burdened sense of thought,
Aiding the heart with sorrow fraught
To break its dream.

Think guardedly, for tongue ne'er tells
Nor knows the power of thought.
Each selfish wish or bitter tear
Or angry glance or hidden fear
Is dearly bought.

Walk fearlessly, for Jesus trod
The selfsame road of pain.
His wounded feet the way have shown,
And o'er the thorns the rose has grown
That knows no stain.

Pray simply. Every pure desire,
Bereft of fashioned phrase,
Has access to the ear divine,
Where, blessed in deeds, true motives shine—
Love's perfect praise.

Selected Articles

[Frederick Dixon in *Leytonstone Express and Independent*, Leytonstone, London, England]

The report of a lecture on Christian Science given by a clergyman, is interesting if for nothing else than as showing what this critic understands by Christianity and what he believes Christian Science to be. First, he imagines Christian Science healing to be effected by suggestion, and he accepts this as Christian; secondly, he declares that Christian Science gets rid of the incarnation, and as such is unchristian. Let us examine both these doctrines.

Christian Science expressly and unqualifyingly rejects healing by suggestion. It does this for two reasons. First, because the human mind is not a healing element; and second, because the entire process of suggestion is antichristian. The human mind is itself filled with beliefs of good and evil. It is incapable, therefore, of true healing, which means a total denial of the power of evil. What happens is merely that the sick man's mind is dominated for a moment by a stronger mind, and his thought directed into a different channel. The cause is unaffected. When the pressure is removed, the thought of the patient reverts to the former channel, and except that the human will-power of the sick person has been weakened and made less capable of future resistance of evil, little has occurred. Now, Christian Science teaches that sickness is the result of some material belief. It sets to work, consequently, to eradicate this belief. If it is successful, the cause of the sickness is destroyed, and the patient is permanently healed.

In healing the paralytic man, Jesus demanded, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" It is clear from this that Jesus saw some metaphysical interdependence between sickness and sin. Christian Science explains this interdependence. Sin, it says, is not a temporal or geographical expression, so that what is normal in one country may be regarded as abnormal in another; and what is desirable in one country is undesirable in the next. Sin is, scientifically speaking, a belief in anything apart from God. In this way the man who is sick as the result of flagrant vice, is guilty of a deliberate sin of commission; none the less, the man who is sick through believing in some material law of inharmony, is guilty of the sin of omitting to recognize that there is no power but God.

Now, to heal either of these beliefs it is necessary that the patient should repent. The Greek word translated repent means, however, to change your mind, even to the exact opposite. When a man, therefore, changes his mind from a belief in the power and reality of evil, to a recognition of the infinity and omnipotence of good, he repents, and finds that the kingdom of God, or harmony, is at hand. This change means the overcoming of the carnal mind by the Mind of Christ. To make a patient physically better, in Christian Science, it is consequently necessary to make him spiritually clearer. To become "every whit whole," he must become every whit holy, for holy is only an adaptation of the more archaic term wholly.

This, roughly, is the difference between spiritual healing and healing by suggestion; but the claim that the latter is Christian in any sense is insupportable. If it is possible for the human mind to suggest good, it is equally possible for it to suggest evil. Being itself torn by all the carnal passions, it is bound to convey these in the process. Its treatment is, in short, the fruit "of the tree of the knowledge of good and evil," which the book of Genesis declares ultimates in death. Jesus put the same fact quite clearly when he was accused of practising the art of the exorcists in healing through Beelzebub. The exorcist practised undiluted suggestion. This, Jesus declared, was "the knowledge of good and evil," or of a "kingdom divided against itself." Such healing, he explained, *ipso facto*, could not stand. But he declared healing through the Spirit of God brought with it the peace of God; in other words, spiritual healing is concerned in healing a man by teaching him how to attain the Mind of Christ.

From this it may be gathered how true is the accusation that Christian Science ignores the incarnation. The incarnation takes place in the exact proportion in which the Mind of Christ replaces the carnal mind. Once, and once only, has the Mind of Christ been fully manifest to humanity, namely, in the person of Christ Jesus. Jesus, however, never claimed that he was the only son of God. He spoke of "my Father, and your Father." He taught his followers to pray, "Our Father which art in heaven;" and he bade all Christians be "perfect, even as your Father which is in heaven is perfect." On page 332 of Science and Health, Mrs. Eddy, speaking of "the Son of God," calls attention to Paul's declaration that "there is one God, and one mediator between God and men, the man Christ Jesus."

The work of this mediator was manifested in the atonement, the effort to atone or make at one, for that is all the word atonement means, man and God. This atonement is brought about as man attains to the Mind of Christ. The Mind of Christ cannot, however, be fully attained so long as man believes that actual life is inherent in matter. Just as Jesus' earlier miracles were devoted to proving life to be spiritual, so the miracle of the crucifixion was devoted to proving mortal man's inability to destroy life. The victory over death by the gateway at Nain, in the garden of Bethany, at the house of Jairus, culminated in the victory on the cross, which on page 238 of Science and Health Mrs. Eddy has described as "the lodestar in the demonstration of Christian healing."

[Lloyd B. Coate in *Dayton* (Ohio) *News*]

You have said some very good things in your editorial on "Intolerance." We heartily assure you that Christian Scientists are not afraid of getting too much of heaven here upon earth. There is no strife on their part with medical practitioners. As citizens of this great republic they maintain that it is their God-given right, guaranteed by the constitution, to have their choice of mode of healing, that which from experience has proven most efficacious. Most of the people who are now classed as Christian Scientists were once sick, and medicine having failed to restore them to health, they turned to Christian Science for relief and found it. If there seems to be any strife, it is due to the fact that a certain class of physicians would try to deprive Christian Scientists of the same rights they ask for themselves. Christian Scientists are willing to obey the golden rule. Let others do likewise and you will not find any strife.

Christian Scientists are willing for those who believe in medicine and other systems of healing to have whatever mode they think will benefit them. This is their right. Now, on the basis of the golden rule, why should not others be as willing for Christian Scientists to have what they believe in, what has already been proven in their experience to bring the greatest relief? When this is granted them, there will be no strife. Christian Scientists do not want to see any strife between nations, between different denominations, between individuals, between different professions, between newspapers.

For several years Christian Scientists in Ohio have been deprived of their just rights as citizens, and we hope the time

Digitized by Google

is not far distant when the Legislature of this state will give to her citizens the same right the Illinois Legislature has been willing to give to her citizens the Christian Scientists. You are right; it is time medical intolerance should pass away. When the position of the Christian Scientists is understood, there will not be found any bigotry on their part.

✧

[A. H. Skinner in *Kalamazoo (Mich.) Telegraph Press*]

We believe with St. Paul that "there is one God, and one mediator between God and men, the man Christ Jesus." In Christian Science we are taught that "Christ expresses God's spiritual, eternal nature," and that Jesus demonstrated this. Mrs. Eddy also says, "The divinity of the Christ was made manifest in the humanity of Jesus" (Science and Health, pp. 333, 25). Jesus made the distinction between the corporeal concept and the spiritual idea when he said: "Why callest thou me good? there is none good but one, that is, God." "I do nothing of myself." "Before Abraham was, I am." "I and my Father are one." "My Father is greater than I."

The assertion that Christian Science denies the presence of any physical being and all disaster is incorrect. We learn from the Bible that all that God created is good, and as disaster is not good, it is therefore not created by God, although very real to the material senses. If we were as spiritual in our thoughts and desires as was the Master, we would see the man of God's creation. He saw the true man, God's image and likeness, where we see only material man. Christian Scientists try to follow St. Paul's admonition to "put off . . . the old man," and "put on the new man, which after God is created in righteousness and true holiness." No Christian Scientist believes that "all souls are absorbed in God." On page 259 of Science and Health we read, "Man is not absorbed in Deity." Buddhism and Mohammedanism are as unlike Christian Science as they are unlike an orthodox church of Mohammedans, and Christian Scientists would not be guilty of publicly or privately making such a charge against that people.

The speaker who audaciously declared that he failed to find heaven or hell mentioned in the Christian Science textbook, certainly avoided the truth's searchlight. Heaven is mentioned many times in Science and Health, and hell is mentioned a number of times. "He that runs may read." Christian Science teaches the fear and reverence for God and the Christ. What it denies the reality of is error, as the speaker says, and not one word is spoken to what might or might not be, or what we are hoping for, but of what we are present. In my Bible the good book records a conversation between Jesus and Satan, and he left him saying that we do not worship him. The devil is error, we destroy it's presence by knowing that God is supreme. The [illegible] which [illegible] for an attack of the devil. Christian Scientists do not [illegible] they deny [illegible] have been cast out and [illegible].

[illegible] that we have the power of prayer as [illegible] Jesus's statement. "All things is to pray [illegible] and we have the promise in another "[illegible] ye shall receive" [illegible] "Pray one for another, [illegible] may be healed" and we [illegible] to [illegible] Jesus." The [illegible] is a righteous man [illegible] much." The [illegible] affirms that [illegible] the sight of all [illegible] Jesus includes [illegible] but it [illegible] to [illegible] human heart."

[illegible] that we have the support of the Bible it [illegible] that [illegible] must be removed [illegible] is [illegible] in being [illegible] that he was [illegible] than the really [illegible] there is the universal thought to meet; when the right thought about God and man is established, the cure is complete. To rebel against disease is wise; to know that God never made it, and that there is no law of His to uphold it. Even physicians say that disease is not inherited, that inheritance is simply a tendency to some particular disease. The divine Mind, which harmoniously governs the sun, moon, and stars, certainly can regulate man's body, if allowed to do so.

All the charges against Christian Science arise from lack of understanding of its teachings. If these were understood, all Christians would bid it Godspeed. We can feel only pity for those who assail Christian Science, which is God's message to this age.

✧

[Judge Clifford P. Smith in *Boston Daily Advertiser*]

My attention has been attracted by a news item in the *Advertiser* which reported the proceedings of the international Sunday school convention at Chicago. It seems that a question arose about modifying the attitude of reserve or disapproval which the churches represented in the convention have for many years maintained toward other churches. Upon this question a delegate from Missouri is reported as saying that "the Christian Science churches are clamoring for recognition, and other sects will follow."

The gentleman from Missouri cannot be well informed, unless he means that the facts concerning Christian Science call loudly for recognition. In one of her Messages to The Mother Church (1902, p. 2), Mrs. Eddy said: "To live and let live, without clamor for distinction or recognition; to wait on divine Love; to write truth first on the tablet of one's own heart,—this is the sanity and perfection of living, and my human ideal." This is also the ideal of The Church of Christ, Scientist, and its members, while trying to keep on the best of terms with all other religionists, have not sought formal or official recognition in any quarter.

As we view it, the only recognition to be desired is a just acknowledgment of the good that Christian Science has done and is doing. But this is a matter of individual information and experience; it cannot either be much hindered or much advanced by the proceedings of conventions.

✧

[John W. Dowty in *East Lynne (Mo.) Times*]

In a recent issue I notice the report of Archdeacon ——'s sermon, in which he couples Christian Science with Buddhism and Mohammedanism because, as he states, its teachings have no personal call to Jesus. I take it for granted that the archdeacon studied the Christian Science textbook, "Science and Health with Key to the Scriptures," before he attempted to speak publicly upon the subject, but it would hardly be possible to make a more incorrect analysis of the teachings of Christian Science than to associate them in any way with Mohammedanism or Buddhism.

[illegible] wish, however, to call your readers to judge for themselves whether Christian Science teaches us to appreciate the [illegible] sacrifices of Jesus Christ, and for this purpose I [illegible] Mrs. Eddy's teachings on this subject from her book "[illegible] and Yea" p. 33. "The sacrifice of his blessed life was [illegible] and it was a million times greater to all [illegible] ages if the cross [illegible] Jesus' sacrifice stands [illegible] amidst [illegible] suffering and human woe. The [illegible] human life is a continuing sacrifice, and Jesus [illegible] suffered for all mortals to bring a true [illegible] and he [illegible] was to show them that the way out of the [illegible] pathway of all human error must be through the [illegible] self-sacrificing life of Jesus. Matthew [illegible] and Peter. Matthew xvi. 24, 25. Whosoever will [illegible] the Lord. The

Digitized by Google

currents of Christ Jesus' life, purchasing the freedom of mortals from sin and death. This blood of Jesus is everything to human hope and faith. Without it, how poor the precedents of Christianity! It was not to appease the wrath of God, but to show the allness of Love and the nothingness of hate, sin, and death, that Jesus suffered. He lived that we also might live."

Because Christian Scientists understand that true appreciation of Jesus' mission entails going and doing likewise, that is, overcoming sin, disease, and death through the apprehension and practical utilization of his teachings, and because they take practically his statement when he declared, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven," this in no way signifies that they do not recognize gratefully the unparalleled example of Jesus Christ, but rather does it evidence the fact that they appreciate it keenly.

Of how much value to the world would it have been if men, instead of understanding and utilizing the teachings of Euclid, had deceived themselves into the fallacy that it was only necessary to believe in Euclid and to talk about his wonderful discovery? Christian Scientists have proved to mankind that they indeed understand and appreciate the mission of Christ Jesus, by healing a multitude of sick and sinful men and women from their sins and diseases; and if the archdeacon would appreciate this fact and impress it upon his congregations, he would not have to dwell upon the divisions in the ranks of his church as he had to do in his sermon.

The days of dogma are numbered, because mankind are understanding and demanding that practical, demonstrable Christ who alone can heal and save them, and who declared, "Lo, I am with you alway." This Christ, Christian Science has revealed anew to the world; hence the marvelous growth of the movement, in spite of any denunciation from those who have not taken the trouble to acquaint themselves with its teachings.

✧

[Frank Bell in *The Evening Leader*, Carbondale, Pa.]

Referring to a sermon quoted in a recent issue, it would seem that one who starts out to discredit Christian Science from the standpoint that nothing based on falsehood can last, would be most careful to avoid basing his own conclusions on anything other than the truth. No one will deny, as our friend says, that a lie will never save the world, and it ought to be self-evident that misrepresentation will never stop the growth of the Christian Science movement.

To assert that the teaching of Christian Science as to sin and suffering may be summed up in the statement, "There is no such thing," is to misrepresent Christian Science. It will require only a brief perusal of Mrs. Eddy's writings to ascertain how clearly she recognized that the human or mortal mind entertains evil beliefs which, if not destroyed, are liable to find expression in sinful word or act. She declares, however, that men are capable of rising above the enslaving claims of a wicked mind, and offers specific and practical information as to how to achieve this very desirable result. That to which Mrs. Eddy refers as being free from sin is neither more nor less than is meant by the statement, "Whosoever is born of God doth not commit sin," which our friend will find in the Bible. On page 32 of "No and Yes" Mrs. Eddy writes, "Frequently when I touch this subject [Is there any such thing as sin?] my meaning is ignorantly or maliciously misconstrued." Yet there is no excuse for this, since she also says, "A sinner . . . may say, as a subterfuge, that evil is unreal, but to know it, he must demonstrate his statement. To assume that there are no claims of evil and yet to indulge them, is a moral offense. . . . Evil which obtains in the bodily senses, but which the heart condemns, has no foundation; but if evil is uncondemned, it is undenied and nurtured. Under such circumstances, to say that there is no evil, is an evil in itself" (Science and Health, p. 447).

Christian Science has no "theory" as to suffering; it leaves theorizing to those who have time for such diversion. Christian Science substitutes practice for theory, and its practice demonstrates that suffering ought to be and can be destroyed through a right apprehension of its cause and the application of scientific methods. Instead of ignoring bodily ills, Christian Science traces them to their source and there deals with them in the only permanently effective manner.

✧

[Charles E. Jarvis in *Pasadena* (Cal.) *News*]

Undoubtedly one of the most vital questions in which humanity is interested is that of physical health. Those who possess it are interested in retaining it, and the afflicted are assiduously seeking relief. It is true that in many instances individuals have turned to Christian Science as a last resort and have been permanently cured, not only of physical ills, but of sin, sorrow, and poverty as well. It should be borne in mind, however, that the primary healing, of whatsoever nature, is but incidental to the spiritual regeneration which invariably results from a sincere desire on the part of the one who has been healed to know more of that truth which Jesus said would make us free, and which has just been demonstrated in his case.

The writer has heard and read many thousands of testimonies of healing resulting from the application of Christian Science teaching. In nearly every instance gratitude has been particularly expressed for the moral and spiritual uplift which has taken place in the life of the individual as a result of a study of the Bible in the light of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. There is always, too, a spirit of thankfulness for the physical benefits, though this is relegated to second place.

Christian Science is essentially a religion, and as such it must be recognized. Fundamentally, it regards man as the spiritual offspring of God, as described in the first chapter of Genesis, and it accepts literally the declaration of Jesus that "God is a Spirit: and they that worship him must worship him in spirit and in truth." Therefore it is obviously impossible to apprehend the spiritual import of its teachings from a material view-point. As a religion it is preeminently Christian. Its adherents not only obey the command of Jesus to go into the world to preach the gospel and to heal the sick, but they are striving to measure up to the test demanded by the Master of those who profess to believe on him: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." It is practical, because by its daily and hourly demonstration it is being proved that a right understanding of God and of man's relationship to Him makes it possible for us to perform today the works which Jesus said we could do. Finally, it is satisfying, for verily it brings into the lives of its followers "the peace of God, which passeth all understanding."

✧ ✧ ✧

All love is of God. Every true friend is a glimpse of God. The affection that leaves Him out loses its divinest sweetness. No friend is truly known or loved until known and loved in God.—Lucy Larcom.

Editorial

"Lest ye enter into temptation"

It is sometimes a trying experience to the young and enthusiastic adherents of Christian Science, and oftimes to those who have not long grounded in the facts, to find that they are not exempt from it as did the disciples and that constant watch is needed to keep in the straight and narrow way which is the direct road to the kingdom and the Father's house of "many mansions." It is not until they look back and possess the growth in understanding of Him who "to know aright is eternal life," to which they have attained through those very trials and temptations, that they see and realize what they have to appreciate why it is as Mrs. Eddy explains on page 22 of Science and Health, that "love is not lazy to advance as from its vantage, for love learns that it will be tried and proved."

Mrs. Eddy gives no more vital assistance to this statement in the paragraph which [illegible] she points out that the [illegible] not [illegible] the natural [illegible] [illegible] [illegible]

determination is based thereon. Pettiness, the narrowness of mortal sense, can never give us a right perspective, and this explains the stumbling of both the ignorant and, as well, of the worldly-wise. We need, all the time, that broader, grander view which we command only in the measure of our spiritual ascension.

Christian Science brings to its sincere students that spiritual concept of life, its source, nature, relations, privileges, and responsibilities, which is corrective of human sense at every point, and which increases one's usefulness as it enriches his sense of freedom and joy. Following it, we learn in every circumstance, crisis, or personal need to enter into the "substance of things hoped for," and exercise that wise and true judgment which saves us and those we counsel from the fateful mistakes of mortal sense.

JOHN B. WILLIS.

Things Contrary

THERE are few if any outside of the teachings of Christian Science who are awake to the fact that the flesh and Spirit "are contrary the one to the other," as St. Paul tells us in his epistle to the Galatians. Many professed Christians would admit that there is a difference between the flesh and Spirit, and that the temptation to sin comes from the fleshly nature; but there is generally a very indefinite sense as to the availability and power of Spirit to overcome all the evil tendencies of mortals. Besides this, there is practically no effort made by mankind in general to turn to spiritual law for aid when bodily suffering assails them, yet Christian Science comes to assure us that the real man is, both primarily and ultimately, a spiritual being; hence he is not dominated by matter or the flesh.

Apart from the teachings of Christian Science, there is a widely prevailing opinion that spiritual things are vague and uncertain, so far as this world is concerned. Most men assume that matter, or the flesh, represents the realm of law, and that the wonderful works of Christ Jesus, for instance, were outside of this realm; hence it would not be even desirable to encourage their repetition. Students of Christian Science, however, learn by actual experience that the carnal mind is lawless and destructive (Paul says it is "not subject to the law of God, neither indeed can be"), and they agree fully with Mrs. Eddy when she declares that "outside the material sense of things, all is harmony" (Science and Health, p. 489).

As students begin to understand spiritual things, they see the oppositeness of flesh and Spirit, but they also learn the allness of Spirit and the consequent nothingness of the flesh and all materiality. In other words, they find themselves in the realm of reality, where things are substantial and eternal. This being realized, those who have through Christian Science gained a large measure of freedom from the flesh, begin to be conscious of the ceaseless operation of spiritual law and order, expressed in health and harmony. The outsider who knows such persons is forced to admit the great change, but usually proceeds to account for it materially, failing to see how anything but material means could bring it about. The writer recalls one such case, where a sincere Christian woman who had suffered for over twenty years from ill health, turned to Christian Science in doubt and fear, and was entirely healed within a week.

The writer, who was not then a Christian Scientist, attempted to tell her own physician of the case, and together they tried to find a reason for the cure, apart from Christian Science. They finally (and most illogically) agreed that the unquestioned cure was due to abstinence from drugs and dieting, but the narrator forgot to say that her friend had on several occasions, prior to coming to Christian Science, tried to live in a natural sort of way, but for the two or three weeks of such experiments there was practically no action of the digestive system, and what seemed very serious illness followed. The good woman's physicians told her that she must never again neglect the regular use of the prescribed means, or she might even lose her life; but in Christian Science it was at once proved to her that divine law never ceases its activity, and what the flesh could not do, nor mortal mind, spiritual law soon accomplished when its light was admitted to her consciousness.

Strangely enough, the friend who knew of the healing, and the good doctor who listened to her account of it, never dreamed how faulty was their own logic in continuing to admit the domination of the flesh; but one of them was approaching the dawn, and when it came, it meant the abundant life offered by Christ Jesus. It also meant a steady turning away from all belief in that which is contrary to the things of Spirit, for thus alone is freedom gained. Paul says, "If ye be led of the Spirit, ye are not under the law,"—the law of sin, disease, and death,—but governed by the spiritual law which makes free.

ANNIE M. KNOTT.

Readers of The Mother Church

As announced at the annual meeting of The Mother Church, June 9, the readers elected for the ensuing term of three years are:—

First Reader, H. Cornell Wilson, C.S.

Second Reader, Mrs. Blanche Hersey Hogue, C.S.B.

Mr. Wilson brings to the responsibilities of his office the practical experience of the man of business and the wider knowledge of men and affairs which long service in the cause of Christian Science begets. A native of Saginaw, Mich., his early education was received at the Michigan Military Academy at Orchard Lake. From school Mr. Wilson entered the lumber business, in which he was actively engaged until early in 1898, when he became interested in Christian Science through the healing of his wife. Before the year closed he had taken class instruction, and from that time allied himself with the cause. During his residence in Washington, D. C., Mr. Wilson was first reader of the Washington church for three years, and was also elected to the readership of Second Church in New York for a three-year term. He had served only a part of the term, however, when other duties called him elsewhere. Besides this, Mr. Wilson acted as secretary in Mrs. Eddy's household for several months, and has twice filled the office of publication committee for the state of New York, serving three and a half years in all. It was from this office he was called to that of first reader of The Mother Church.

Readers of the Christian Science periodicals will always associate the name of Mrs. Blanche Hersey Hogue with the many helpful articles which have come from her pen in the last decade. In coming to Boston as second reader of The Mother Church, Mrs. Hogue is returning to the New England of her childhood, as she is a daughter of the state of Vermont and lived in Montpelier until in her seventh year she went with her parents to the far West. Her early training was received in the public schools of Portland, Ore., from which she went to New York for further study. It was about this time that Mrs. Hogue became interested in Christian Science, through the healing of her mother, and she was one of the early workers in the Portland field, serving seven years as first reader of the pioneer church, until the rule of "rotation in office" went into effect.

Among the Churches

Current Notes

BROOKLYN, N. Y.—With exercises, the solemnity of which was not lessened by their extreme simplicity, the beautiful structure of First Church of Christ, Scientist, situated at New York avenue and Dean street, was dedicated May 17 before congregations that overflowed the building. Three services were held.

An historical sketch of the organization of First Church was given by the chairman of the board of trustees. He recounted the establishment of the denomination in Brooklyn in 1886; the later organization of Second and Third churches, also their subsequent consolidation with First Church. The erection of the building was commenced in 1908; the corner-stone was laid on July 9, 1910, and the structure was entirely completed early in 1913, although used for services for some time prior to completion. "The union of the three churches," he said, "has been much more than the mere bringing together into one congregation of three bodies of people; it has been a demonstration of unity of thought and purpose, of affection and effort, on the part of those who were members of these different churches. It seems to have opened the way for, or at least to have enabled, this church to be the beneficiary of a broader demonstration of unity affecting all Christian Science churches in Greater New York. This church is the first to be erected in this city to which all the churches in the city have contributed. For this manifestation of brotherly love we are most deeply grateful, and it is a great joy to us that we are now in a position to show our gratitude in a practical way."

As a measure of assistance to other churches of the denomination, it was announced that the collections of May 17 would be divided among Fourth Church of Manhattan, First Church of Richmond Hill, and First Church of Flushing, all of which are now erecting buildings. This will continue on one Sunday of each month, except June, during the summer. It was also announced that the balance in the treasury of First Church had been voted by the members as a contribution to the building fund of Second Church of Brooklyn.

The Brooklyn Eagle.

KANSAS CITY, MO.—The first services by the congregation of the new Fourth Church of Christ, Scientist, were held Jan. 4, in Gladstone Hall, at St. John and Elmwood avenues.

Kansas City Times.

The Lectures

Brookline, Mass.

Bliss Knapp gave a very interesting lecture on Christian Science, under the auspices of The Mother Church of Boston, in the Beacon Universalist church. He was introduced by Dr. George L. Perin, who said in part:—

We have very old and very respectable authority for the declaration that a tree should be judged by its fruit. Accepting that ancient standard of judgment, I should be inclined to give Christian Science very high rank. This teaching has made a tremendous contribution to the sum total of human happiness in the practical annihilation in some millions of human souls of three very pesky devils,—fear, anger, and worry,—and a numerous brood of physical and mental ills that are the natural offspring of these three devils.

I do not know how some of you may feel about it, but I am willing to take off my hat to a church that can make a poor man feel rich, that can make a sick man feel well, that can make a dying man start a new business, that can make a man smile even when he fights, that can make a man who was afraid of his shadow lie down at night and sleep in sweet serenity, that can turn the acid of worry into the exhilarating tonic of trust; in short, that can take the stoop out of a man's shoulders, clarify his complexion, postpone old age, and make him walk erect, as if he really believed he was God's child living in God's world.

If you will just remember what an inferno fear is, you will agree with me that this is no small achievement. I have often thought that the old orthodox hell of fire and brimstone would seem cool and refreshing compared with the torment of fear which some men have endured. And so with anger and worry. One big fit of anger will poison a man's blood for a week and cut five years from his life, and it will do that even if he tries to explain it away by calling it "righteous indignation." Everybody knows that he has emphasized the "indignation" and not the "righteous." As for worry, language is quite inadequate to describe it. One week of worry will make a man go stoop-shouldered, one month of it will derange the stomach, one year will whiten the hair, and two years will clip ten years from his life.

Now what I observe is, that by some strange spiritual alchemy Christian Science actually does silence these three tormentors in many a life, and when I sometimes get into a street-car half full of these genial Christian Science optimists on their way to church, I actually catch the contagion of their faith, and feel like saying, "Almost thou persuadest me to be a Christian."—*The Brookline Tocsin.*

❖

Southport, England

At the Cambridge Hall, a lecture on Christian Science was given by Col. William E. Fell. Lady Victoria Murray presided, and in her opening remarks said that the board of lectureship was instituted by their Leader, Mrs. Eddy, so that all might have, through these lectures, an opportunity of learning something of what Christian Science really is. It was necessary, however, carefully and prayerfully to study the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in order to gain a demonstrable understanding of the Science of healing both sickness and sin. Just as in mathematics the basic law of mathematics must be understood before it can be demonstrated, so also in Christianity the Principle of Christianity, God, Love, must be understood, to be demonstrated as a present help in time of trouble. A mere belief in God could do no more for any one than a belief in the principle of mathematics could do. Understanding is essential. She had believed in God and prayed to Him, but neither the belief nor the prayer cured her of spinal and bone disease, which she had suffered from all her life, and which *materia medica* had pronounced incurable. For twelve years she had lived abroad in the East, and during that time the Christian Science text-book was given to her to read. As she studied it and began to understand God as the infinite and the only cause, Mind, and man as His idea,—the idea of perfect harmony,—she was healed.—*The Southport Visiter.*

❖

Dallas, Texas

The building of First Church of Christ, Scientist, was taxed beyond its seating capacity by a throng which came to hear Bicknell Young lecture on Christian Science. The lecturer was introduced by Brigman C. Odom, who said:—

The purpose of Christian Science is to uplift and purify thought. Health and happiness follow as results. "By their

Digitized by Google

fruits ye shall know them," is the test. Arguments and theories, within themselves, have little or no value. The practical utility idea prevails. The question is not, What can you say? but, What can you do? The apostle James declares that "faith without works is dead," and says, also, "Show me thy faith without thy works, and I will show thee my faith by my works," clearly implying that what you say and do must be productive of results in better health, in greater satisfaction and peace of mind, and in bringing the necessary daily supply. This is in harmony with what Jesus taught when he said, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."—*The Dallas Morning News.*

Burlington, Kan.

The lecture on Christian Science at Newk's Theater by Clarence W. Chadwick was heard by a large audience. He was introduced by Supt. W. S. Rupe of the high school, who said:—

It is written that we shall know the truth, and the truth shall make us free. We have been in the presence of truth since the world began. The trouble is, we have not always recognized it. Truth is always shining like a beacon-light, and fain would beckon us onward and upward; but sometimes we love darkness rather than light. During the last one hundred years men have been seeking truth as never before. In the fields of science, philosophy, and religion, men and women are demanding and seeking for the truth. It is not within the province of our honored guest to prove that Christian Science is truth, but it is within his province so to direct our thoughts that we ourselves may know.

"By their fruits ye shall know them." Although I am not a Christian Scientist, I know that this teaching has brought happiness, hope, joy, and love into the lives of many of my friends, where before all was darkness. Regardless, then, of faith or creed, it behooves us to weigh well the thoughts that are expressed in behalf of a science and a religion which has for its creed, the Bible; for its earthly end, the stamping out of sickness and sin; and for its ultimate goal, the salvation of the race and the rule of universal love.

The Burlington Republican.

Winsted, Conn.

In introducing Bliss Knapp, who lectured on Christian Science, Walter D. Hood said:—

I am not a Christian Scientist, and am ignorant, except in the most superficial way, of the teachings of this religion. I have, however, observed that in general Christian Science makes its appeal most strongly to highly intelligent persons. I have also observed many times that its followers seem to practise two virtues more generally than many other Christians do; namely, the abstaining from unkind and unnecessary criticism of others, and the assumption of happiness. Any religion, be its name what it may, that inculcates charitableness toward the faults and foibles of one's fellows, and the duty of being happy and cheerful in all the vicissitudes of life, is entitled to respect.—*Correspondence.*

Redwood City, Cal.

A lecture on Christian Science was given in Foresters Hall by William R. Rathvon. The introductory remarks by Willis G. Bohannan were in part as follows:—

About six years ago my attention was called to Christian Science, and during this short period the number of Christian Science churches in San Francisco have been increased from one to six; in Oakland from one to six; in Los Angeles from two to nine; in Chicago from eight to sixteen; and a like increase is going on all over the world. This growth is made possible by the fact that the attendants are students of the Bible, seeking freedom, guided by "Science and Health with Key to the Scriptures" by Mrs. Eddy. The apostle Paul declared that he was free born, and it certainly is the inherent right of all men to be free. Jesus said, "Ye shall know the truth, and the truth shall make you free."—*Correspondence.*

Exeter, N. H.

Judge Clifford P. Smith, who lectured on Christian Science, was introduced as follows by the Hon. Edwin G. Eastman:—

I have been asked to preside at this meeting, and it gives me much pleasure to do so. I used to feel that certain lines of thought which pertained to life, whether in politics or religion, were right, but I have come to think that there is no political party which has not some element of good in it, and that all denominations and sects have the well-being of the people at heart. I am glad to say that I have known Mrs. Eddy well, and I am very proud of her for her religious views and citizenship. I consider her the most remarkable woman, perhaps, that this country or any other country has produced.

We are here to listen to one who can ably explain the doctrines of Christian Science, which are for the well-being of the people.—*Correspondence.*

Fairfax, Okla.

A lecture on Christian Science was delivered by Virgil O. Strickler at the school auditorium. He was introduced by Hubert Quigley, who said in part:—

Many of you, like myself, are not Christian Scientists. This is not due to the fact that you have investigated the teachings of Christian Science and found them faulty, but rather because you know very little of the doctrine. For myself I will say, that so far as I do know of Christian Science, it is perfect in every respect, and shows that it is worthy of thorough investigation. Within your very midst I have seen this simple faith bring sunshine, peace, and gladness into homes that were filled with sickness, misery, and darkness, and lives that were wrecked by evil habits reestablished on truth, uprightness, and honesty. If for no other reasons than these, I would be a firm admirer of Christian Science.

Osage Chief.

Baltimore, Md.

The introduction of Prof. J. Elliott Gilpin of Johns Hopkins University to the lectures on Christian Science by Bicknell Young, at the edifice of First Church of Christ, Scientist, was as follows:—

Just as we often hear a student of music trying to interpret one of the classics without a clear conception of what the composer had in mind, so we hear those who have just skimmed over the surface of Christian Science explaining what it is and what it is not before they have advanced far enough to prove or disprove its truth. I was misled by such statements until I began to investigate the subject carefully, and as I tested and witnessed the power of Truth to meet discordant conditions of all kinds, I found that every human need could be met by the proper application of its Principle.

Correspondence.

Testimonies of Healing

[Translated from the German]

At the age of twelve I met with an accident and sustained an injury of the right thigh. A week later stitches were taken, but it was a long time before the wound healed, and ever then it would break open at times, causing intense suffering. About a year and a half ago the condition grew so serious that medical attendance became necessary. Another operation was made, but it proved unavailing. My acquaintances and myself believed that I would have the wound for the rest of my life. God's help, however, was not far off.

One day a dear lady called my attention to the healing performed through Christian Science. She gave me a few text-books to read, and I decided to apply to a practitioner for help. The latter declared herself ready to take up the work, and explained to me a number of Biblical statements which heretofore had been incomprehensible to me. My faith in God's help was strengthened, however, the first time I allowed mental sense to view its claims and perceived doubt to exist my consciousness caused the healing to be prevented. After having had treatment for quite a while, I thought I must try to understand the power of infinite good myself through the reading of the Herald and the Bible. One day I suddenly felt quite ill and was taken with severe headache, and as this condition prevailed the next day, I asked a practitioner for help. She gave me some literature and took up treatment. On the following day I was able to resume my work, to my great satisfaction, and the headaches have never returned.

This proof of the efficacy of Christian Science renewed my courage in holding to the truth. My two efforts were not successful, however, as there was more slumbering in me, as it were, as a result of my previous views and fear of operation. I could now more fully appeal to a practitioner, but several weeks went by before the healing of my leg took place, owing to the very gradual emergence of my thought out of error. One day, when I took off the bandage without taking any notice, I found that my leg was healed, and it has remained so. This was eight months or more ago.

I thank God from the depths of my heart that the truth and its healing power has been revealed and made available to the world through Mrs. Eddy.

Elisa Fasse, Chemnitz, Saxony, Germany.

✦

I feel it my duty to tell the readers of the Sentinel what wonderful things God has done for me. About six years ago I went to a Christian Science practitioner for treatment. I did not have any faith in Christian Science, but my daughter said it surely could do no harm and it might help me. The doctors could do no more for me, and I knew my time on earth was short. I did not feel much somewhere. I asked the practitioner if she could heal me when I did not believe in the healing, and she said Christ could and asked if I did not want to believe in it. I told her that I knew nothing about it, but was willing to look into it, so she kindly lent me a copy of Science and Health. I read prayerfully as best I could, but after reading a while I thought that I could not understand and read Science and Health with a dictionary, as I would do in the world. I have been studying Christian Science treatment in my home since that time, and with three years and a supreme trust in God, with the study I do. I have also been healed of a disease in the most serious form from which I had suffered all my life.

One day I burned my hand so severely that ordinarily I would have lost the use of it, but through realization of the truth the hand was well in about two hours. Many times I have been able to overcome slight ailments, as headache, trouble with my stomach, etc., through my own understanding, but sometimes I have been obliged to ask for help. My grandson who is living with me is a faithful little Scientist. I have been able to help him a number of times, once in a case of toothache, and again when he was suffering from a throat affection with cold and high fever. I am very thankful to God for what He has done for me through Christian Science.—Emma E. Carle, Reno, N. Y.

✦

It is a pleasure to give a testimony of my healing through Christian Science. In August, 1912, I was taken with a severe cold, which settled in my throat. This was on Wednesday, and by Sunday the condition was so serious that I could not swallow. I tried to treat myself, but I did not improve, so I went to a Christian Science practitioner in Lima for treatment. That evening I could eat a little supper, and on the following Tuesday I went to work, for I was healed. I have also been healed of other ailments through studies in Christian Science. I am truly grateful for a knowledge of this truth, and I am daily gaining in understanding.

A. M. Chaffee, Delphos, Ohio.

✦

I have much reason to be grateful for all the help received through the Christian Science literature, and it is with a sense of real happiness that I send a testimony to the Sentinel, for I always feel sad with increasing gratitude that this periodical was the means of bringing me to Christian Science. At that time I knew nothing about the subject, and being a church-member and very much taken up with church work, I seemed to have no desire for anything more. Hearing from a friend, however, that Christian Science was a healing religion, and that wonderful healing was being accomplished through an understanding of its teachings, I felt a great longing to know something about it, and gladly accepted the Sentinel she gave me. I had not read two pages before I became absorbed in the study of its contents, and while reading I felt as if awakening to a sense of the realness and goodness of God such as I had never experienced before, and for days I could think of little else. Very soon afterward an opportunity came for me to get more than the little understanding I had gained.

A great trouble came in the family, and I was suddenly called from home to a house filled with sickness and sorrow, where the mumps had passed me. The next day, I myself was taken with the same disease, and for a short time was alone with the help of the Sentinel and textbook in my love-filled appreciation of the Scriptures and power of divine Love. I felt no fear, and in a few hours was perfectly well. That I felt grateful indeed goes without saying, for I had been led to Christian Science, and I soon began earnestly to study the text-book, "Science and Health with Key to the Scriptures," by Mrs. Eddy, finding that all I knew of good before was just a prelude as I grew in understanding and learned more of the saving truths of Christian Science. This was about three years ago, and I find more and more what a privilege it is to work for the needy and help others to realize the happiness and peace which Christian Science gives. I am most grateful for a revelation of the wonderful truth.

[illegible] After healing for some hours in the night with a sensation of an explosion, I felt that I would have to send for help, when quickly the thought came, All I need is [illegible]

Digitized by Google

for God is "a very present help," and at once it seemed as if I could hear the beautiful words, "He shall give his angels charge over thee." All the suffering and pain ceased, and my consciousness was filled with that perfect peace "which passeth all understanding."

Though oftentimes there are seeming difficulties, and much to be overcome, I know that through persistent, right endeavor, and loving obedience to the demands of Truth, only good can come; and it is my earnest desire so to live that my light may shine before men, that they may glorify our Father which is in heaven. The words on page 254 of Science and Health, "When we wait patiently on God and seek Truth righteously, He directs our path," and Jesus' words, "I am not alone, because the Father is with me," have been a wonderful source of comfort and inspiration to me; the way has been made clear, and it will grow brighter "unto the perfect day."

The cause of Christian Science is steadily progressing around us, and here in our midst we are rejoicing over many cases of beautiful healing, gratefully proving the truth of our Master's words, "These signs shall follow them that believe." I thank God for Christian Science, and I am indeed grateful to our beloved Leader, Mrs. Eddy, who through her pure, self-sacrificing life was ready to receive the message of Truth, and to bring to our consciousness a redemptive understanding of God, infinite Love, the Father-Mother of all, ever present and ever available to meet our every need. I am glad to say that the healing has been permanent, and as I gain in understanding I am better and happier in every way than before coming into Christian Science.

M. Edith Perkins, Swansea, Wales.

✧

At the end of the school term, June 16, 1911, my little daughter, aged seven, was taken with what *materia medica* calls St. Vitus' dance, and seemed to grow worse every day. She got so ill that she could not walk, and she also had to be fed; then she lost her voice. I treated her to the best of my understanding, until a Christian Science practitioner returned from out of town whom I asked to take the case. The illness was immediately met and overcome, so that when the child began to go to school the first of the fall term, no one could tell that she had been in such a condition. It is almost two years and a half since the healing, and she has never had any return of the trouble.

This is only one of the many demonstrations that have been made in our family. We are truly thankful to God, and grateful to Mrs. Eddy for what Christian Science has done for us.—Margaret E. Crane, Beloit, Wis.

✧

[Translated from the German]

Since earliest childhood my fifteen-year-old son had been afflicted with what is called "long-sightedness" in a severe form, making it necessary for him to use strong glasses all the time. As this defect was steadily growing worse, we were becoming much alarmed, when Christian Science with its sublime teachings came like a ray of light into this darkness of fear and worry. I applied to a practitioner for help for my son, and with five treatments he was not only healed of the defect of the eyes, but also of a serious stomach trouble. After his third call at the practitioner's office, my son came home beaming, with his glasses in his pocket, and today it would be difficult for him to see anything with these very glasses which he wore so many years.

I myself was a sufferer from a stomach ailment for a good many years, and for a time my diet was greatly restricted. When I in turn asked a local practitioner for help, I was entirely freed from this ailment after the third treatment. I can hardly find words to express my deep-felt gratitude for this spiritual healing, which has revealed to us the power of divine Truth and made us gain a new sense of and a new outlook on life. I think of our Leader, Mrs. Eddy, the active pioneer and Founder of Christian Science, with a sense of grateful reverence and unspeakable love. Fear and doubt have vanished from my consciousness, unflinching faith has remained victorious, and a liberating and jubilant song rings within me. "O death, where is thy sting? O grave, where is thy victory?"

Frau Agnes Vogel, Braunschweig, Germany.

✧

Three and a half years ago a baby was born to me with a foot turned so that he would never be able to walk. The doctor asked me to put braces on him, but I did not like to do that; yet I knew something must be done if I wanted my boy to walk. Later, on hearing of Christian Science, I went to a faithful practitioner, and with one treatment the child not only stood but walked. He was then fifteen months old, and ever since he has been perfectly straight. People who do not know that he was crippled, would never think of it. This great truth not only cured my baby, but it has healed me of a stomach trouble that doctors pronounced incurable, and has helped me to the righteous way of living. I am glad to say that my healing has proved permanent, more than three years having passed since it occurred. My oldest boy had been a sufferer from malaria, but since he has learned of Christian Science and attends Sunday school, he has not had a sick day.

This teaching has indeed brought health, peace, and happiness to our home, and for the understanding of Truth which I have gained, words fail to express my thankfulness to God and my gratitude to our dear Leader.

Mrs. M. Frick, St. Louis, Mo.

✧

About eighteen months ago I heard a lecture on Christian Science in Oklahoma City, and this was my first knowledge of this teaching. The lecturer made the statement that many people had been cured of physical diseases by reading Science and Health, and at that time this seemed to me a very absurd statement.

Soon after coming to St. Louis, however, I was loaned a copy of the text-book, and before I had finished reading it I was healed of stomach disorder and a severe case of bowel trouble. Since that time I have been cured of varicose veins. Three physicians had told me there was no help for me, except to wear an elastic stocking or a bandage. I was also cured of typhoid fever last January in less than forty hours, with no bad after effects except an abnormal appetite, which became normal in a few days. The practitioner I employed made but one visit. Through the understanding of Christian Science gained since that time, I have been able to overcome minor ailments by applying the truth. A chronic case of catarrhal trouble disappeared very quickly; also a case of ulcerated tooth was met and overcome with but little pain. For these and many other blessings I am indeed thankful, but the greatest blessing of all is the spiritual enlightenment gained by the study of the Bible and Science and Health.

I am happy to say that my healing by divine power has been permanent. My health was never better than at present, and the understanding of God's Word that I have gained, with the help of Science and Health, has enabled me to be of service to some of my friends, one case being the healing of

Digitized by Google

a rupture. The more I study Science the more interested I am, and I desire to be worthy and able to demonstrate God's power through the truth as given to us by our revered Leader, Mrs. Eddy. I am also thankful for the literature of the Publishing Society, which is doing such splendid work for humanity.—HENRY R. WHITE, Chicago, Ill.

✦

When I had suffered for weeks with attacks which nothing but an opiate seemed to relieve, and had been tortured with hot applications and baths, I begged my nurse not to give me any more, but she said she had to obey the doctor's instructions. I became so weak and suffered so intensely, the pain growing worse each day, that I welcomed the thought of death. Then came a consultation, which resulted in the verdict that I must go to the hospital at once for an operation to remove gall stones. All preparations were made, even to the packing of my trunk, for I had given up all hope of living through the ordeal.

I owe it to gratitude to my sister in the East, which delayed my going to the hospital for a few days. This was mind's action in God's opportune time, for in my great distress I turned to Christian Science. The great power was so wonderful, and I was so free of the pain, nausea and sore depression, the absence of which I knew must be God, that I was at once sure, and knew, nothing was a puzzle and no more. The next day brought great improvement. The doctor was dismissed, and the nurse, and with the help received from my practitioner and the knowledge received from the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed. I am grateful to God for giving to the world one who was able to bring light to the sin-sick children of a life which is true and eternal.—[illegible], Escondido, Cal.

✦

[illegible] I took up the study of Christian Science for [illegible] I [illegible] I [illegible] [illegible] [illegible]

to take treatment, although I did not know anything about it except that this friend had been benefited. I called on a practitioner, and after having a treatment, returned to the house just about dinner time and ate the first hearty meal I had been able to enjoy in a month, and to my surprise without the usual after effects. In the first treatment I was healed of nearly all my ills, and in less than a month they all yielded to the power of Truth, with the exception of my eyes; but in about three months, after I had begun to study and help myself a little, I was able to lay aside glasses that I had worn for over seven years, and I have not needed them since. I am glad to state that my healing has been permanent.

Recently I completed a special course in music, under difficulties that would have seemed insurmountable had it not been for the sustaining help of Christian Science. I have mentioned only a few of the many benefits received from this teaching, as I have had several instantaneous demonstrations and many other blessings through the application of the truth. It is no wonder we are grateful to Mrs. Eddy for bringing to us this demonstrable knowledge of God.

GLADYS H. SNYDER, New Orleans, La.

✧

I feel so much gratitude for the happiness that Christian Science has brought into my life, that I am writing my testimony in the hope that some one may be helped and encouraged by reading it. I did not come to Christian Science for physical healing, as I was very well, except that I had frequent attacks of serious throat trouble and very bad colds. These, however, I considered inevitable. I began to attend the church services and to read in a desultory sort of way, with the thought that Christian Science might help my mother, who was practically an invalid; but for nine months I could not understand it enough to bring it into my daily life at all. Then a great difficulty arose that I could not meet in a material way, and in desperation I turned for help to the little I knew of Christian Science. My need was met almost immediately, and this showed me so plainly the all-power of God that I needed no further incentive to make an earnest study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Soon after this experience I had an attack of scarlatina, which was overcome in two days with absent treatment, and which left no after effects, though I did not stay in bed at all.

For four years now I have not touched medicine of any sort, and seldom need help for physical ills, as my throat is quite strong and colds are much less frequent and are very quickly overcome. I never fully appreciated the power of Christian Science, however, until a short time ago, when my mother passed on. All the dread of separation and death seemed lifted from me, and I realized that "the spiritual real man has no birth, no material life, and no death" (Science and Health, p. 288). With the small understanding I have gained I have found greater happiness than I ever thought possible, and my outlook on life is quite changed. My greatest desire is to be the means of helping others to find this truth.—VERA HILL, Chelsea, London, England.

✧ ✧ ✧

Father, I do not ask that Thou shouldst give
Me more and more that I may be content to live.
Instead of asking all, I'll give to Thee
More loving thanks, and to the world more charity.

FLORENCE C. DYER.

From Our Exchanges

[The Continent]

There are countless voices challenging the church today to do this and that, to attack this evil and that problem, to minister to the needs of men on this line and on that. The church ought to respond. Jesus responded with a beautiful promptness and fulness to similar calls; he healed men's bodies, reunited families, fed the hungry. But there came times when he had to assert his main mission. He was not a wonder-worker, though he worked wonders. He was not a body healer, though he healed bodies. He was the messenger of a saving gospel that covered the whole need of men, a gospel that told of a loving Father and of an eternal life.

Effort is often made to edit the gospels so that this spiritual and eternal element can be omitted, and Jesus may be described as a social reformer, pure and simple; but this can be done only by violence. The church has the larger, more difficult, more trying task on hand,—the task of keeping alive the spiritual in man. And as in Jesus' day men did not think of him mainly in those terms, so in our day men do not think of the church's mission mainly in those terms. Ministers of the gospel are not sent into the world because the rank and file of men want to see Jesus, but because everywhere and all the time they need to see him. To them, as to him, there are no more delicious experiences than when men appear who do want to see him.

[The Christian Register]

The world all about us becomes a totally misunderstood affair to those who lack spiritual vision. Baptized with the spirit of real love, and illumined with an aspiration for improvement, the soul finds delight everywhere. The woods are not lacking in God's presence any more than in natural beauty; the dawns and the sunsets are alike expressions of God's presence; the rocks and the wilderness are not devoid of uplifting and inspiring voices; yet the important point is that our daily work—the things most simple that concern us—becomes inspired when we see it full of the divine good will. This is the beginning-point. No one can teach wisely, in the pulpit or out of it, unless he is literally born over in his seeing and hearing faculties, as Jesus said. We must have our eyes opened to apprehend the spiritual side of our daily life. It is there,—in the garden, in the kitchen, in the office, and wherever else we are trying to do what ought to be done.

[Christian Work and Evangelist]

It may be that we are standing at the foot of the hill that leads to the spiritual heights above; as we think of our life it may seem that we have never awakened to our spiritual consciousness, as if our life had been altogether lived on the physical or intellectual or moral plane. Perhaps we can see only one step ahead. Let us take the one step. Let us make up our mind to persevere in our quest for Truth and Life, no matter what our disappointments have been. Let us live in the great thought that we are spiritual beings, that the body and intellect are only instruments for us to use, that death can never touch us at all, that we are one with God and one with our fellows.

It may be that we will find many things that must be cast aside,—prejudices, narrowness, bigotry, meannesses of various kinds, self-complacency, pride, and self-righteousness; we shall have to get rid of all these encumbrances as we climb the heights, but rest assured it is worth while. The true solution of the supreme problem of every life is found in spiritual development as we enter this higher state of consciousness and

Digitized by Google

the soul begins to manifest its life and express its powers. What others have achieved, we may achieve; what others can do, we can do. If we hold to these thoughts, and shut our eyes to everything that is not spiritual, the spiritual consciousness will gradually unfold within us, for as a man "thinketh in his heart, so is he."

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

What is of the flesh only, is never truly yours,—never yours until you are able to appropriate it in the spirit, till the soul of it passes into and abides in yours. And what you get in this way will remain yours when the outward semblance thereof is destroyed, when all the illusions and limitations of sense have vanished away forever.

This, then, is the principle of my text as it comes to us straight out of a ripe and wonderful Christian experience, a testimony from the heart of one of the most remarkable men that have ever lived,—"As having nothing, and yet possessing all things." If I had to put it in the form of an exhortation to you, my hearers, coming in here fresh from your encounters with the world this morning, I should say: Beware of anchoring your life to anything that is not essentially of the deeper soul. Beware of being dependent upon outside things for your felicity. You are vulnerable as long as your happiness is governed by your circumstances.

[*The Universalist Leader*]

There is a sense of isolation, of solitude, as we watch some great, unselfish prophet or servant of God as he walks across the stage of life. We see that his followers do not understand him. We discover the alloy that they mix with his pure hopes. We know that much of what he says and does falls on his followers as seed falls on a stony or parched ground.

Discipleship with a great soul is not a guaranty of greatness; enlistment under a great captain cannot make one a true soldier. There are those who name as their masters some who have put to shame all meanness of motive, yet themselves are mean. We must be more than followers of any noble cause before we are noble. One of the processes we can witness anywhere is that of paring down the fine precepts and divine ideals of the prophets, in order to make them fit into narrower vital dimensions. Nearly every great cause in history has suffered an eclipse through the adaptation of it to coarse human needs.

[Dr. G. Campbell Morgan in *The British Congregationalist*]

Every great creed, what is it but an endeavor to interpret the things of God? a reverent attempt, an attempt made necessary by some hour of crisis when a demand for the crystallization of the truth in phrases and terms of the day had to be met,—but, after all, human interpretations, and nothing more. And so with regard not to creeds alone, but to every other form of tradition, let us draw this distinction between revelation and human interpretations thereof.

[Dean Inge at Westminster Abbey in *The Christian World*]

Do not think of Jesus Christ as occupying a position in the sky which could be determined by a good telescope. That is picture-book theology. Christ has passed into the invisible world, which is very near to us, around us, and among us. Ever since the first ascension day, there has been only one way of getting near him, and that is to be like him, for such is the law of the spiritual world.

[*The Advance*]

The real garden of God is within the soul. Heaven, the heaven from which no angel can be cast down, is the heaven within.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

New and improved class record books for use in Sunday schools are now published and ready for distribution. Size 5⅜ x 8¼, with ruled pages for two years' record, printed on good quality paper and durable cover. Prices of books, registration cards, and coin envelopes as follows: One hundred class record books, $6.50; 12 copies, 90 cents. One hundred registration cards, 25 cents; 12 cards, 10 cents. One hundred coin envelopes, $4.00; 12 envelopes, 50 cents.

"Christian Science Healing: Spiritual and Scientific," a lecture by Prof. Hermann S. Hering, C.S.B., has been published in pamphlet form and is now on sale at the prices of the regular pamphlets, as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

About forty-five billion feet of lumber of all kinds is the annual production in the United States; of this, nearly twenty-five billion feet, board measure, are further manufactured, the other portion remaining for rough construction lumber and for similar purposes. This is exclusive of material which reaches its final use in the form of fuel, railroad ties, posts, poles, pulpwood, cooperage, wood distillates, and the barks and extracts demanded by the tanning industry. Nearly or quite one hundred different woods are used in this country under their own names, while an unknown number find their way to shops and factories without being identified or separately listed, except under general names. Fifty-five principal industries use wood as raw material. More than one half of the total consumption consists of planing mill products. The next industry, in point of quantity of wood used, is the manufacture of boxes and crates. For this, nearly four times as much wood is used as is demanded by the builders of steam and electric cars, which industry comes next, and five times the amount that goes into furniture.

Notable progress in the chemical treatment of timber to prevent decay was made in 1913. Ninety-three wood-preserving plants consumed over one hundred and eight million gallons of creosote oil, twenty-six million pounds of dry zinc chloride, and nearly four million gallons of other liquid preservatives. With these the plants treated over one hundred and fifty-three million cubic feet of timber, or about twenty-three per cent more than in 1912. Impregnation of wood with oils and chemicals to increase its resistance to decay and insect attack, is an industry which has become important in the United States only in recent years. In Great Britain, and in fact most of the European countries, practically every wooden cross-tie and telephone or telegraph pole receives preservative treatment. In the United States less than thirty per cent of the one hundred and thirty-five million cross-ties annually consumed are treated, and the proper treatment of an annual consumption of four million poles may be said to have scarcely commenced.

Plans completely to restock all trout streams and lakes throughout the national forests of Colorado, Wyoming, and South Dakota, within a period of nine years, are well under way, as the result of the approval by the federal bureau of fisheries of a plan of operation prepared by the forest service. The bureau of fisheries has promised to furnish the necessary fish fry for distribution to the various forests, the shipments of fry to be directed to railroad stations nearest the waters to be stocked, so that as many streams as possible may be supplied from a central point. The planting of all fry will be performed by forest officers, who will keep close check on the results of the work. According to the estimates of the forest officers, approximately twenty million trout fry of the brook, rainbow, and black-spotted varieties will be needed to meet the requirements of all the waters adaptable to the production of trout.

That at least one twentieth of all the stock bred on the open range of the West perishes before it reaches market age, and that much of this loss can be stopped, is shown by results reported from the national forests. This waste is said to add millions of dollars to the people's meat bill and thus gives one more cause of the high cost of living. Storms and droughts, predatory animals, poisonous plants, diseases, bog holes, icy hillsides, and insects swell the total losses, as do many other minor causes. The animals to be grazed upon a national forest are subjected to a rigid inspection by the federal bureau of animal industry before they are allowed to enter the forest. This cooperation between the bureau of animal industry and the department of agriculture has made it possible to keep the forest ranges remarkably free from all forms of stock losses.

On the Little Fork of the St. Joe river near Lewiston, Idaho, on one of the areas extensively burned by the 1910 forest fires, the forest service is now at work reforesting three thousand acres of land only valuable for timber production. A crew of about one hundred and twenty men has been assembled on this watershed and is engaged in planting seedlings. During the course of the day each man plants an average of eleven hundred seedlings, so that a strip about four hundred feet wide by a mile and a half to a mile and three quarters long is covered. The plants used are mainly white and yellow pine from the government nursery. The crews are setting about one hundred thousand plants a day, thus reforesting about one hundred and forty acres daily. The cost of doing the actual planting work is about $2.71 per acre.

With prospects of its becoming a permanent ornament, what is planned to be the largest outdoor floral display of its kind ever held in America is at present well under way in the Fenway, in the Back Bay, Boston, Mass., as the exhibit of the Society of American Florists, which will hold its annual convention here Aug. 17-21. The garden will show more than half a million dollars' worth of plants, and the whole display will cover ten acres. More than five thousand delegates from America and Europe are expected to attend the convention.

The Norwegian Parliament has followed the lead of Secretary Daniels of the American navy and has adopted a resolution prohibiting the consumption of intoxicating liquors by officers of the Norwegian army and navy during their terms of service. The enlisted men were already enforced abstainers, and the officers' messes on the warships and in the garrisons are now to be made "dry."

For five years the general assemblies of the two great Scottish Presbyterian churches which meet annually in May, have been occupied mainly with the question of their reunion in one united church. Union committees have been appointed by the Established Church of Scotland and by the United Free Church, and they have so prepared the ground that the union of these two bodies is now held to be inevitable.

According to the *Novoe Vremya*, the national defense committee of the Douma has decided to vote an additional fifty million dollars for the Black sea fleet. According to a statement, the minister of finance has informed the budget committee of the Douma that Russia will have to spend three billion five hundred million dollars within the next five years for the army and navy.

The city council of Vienna is proposing to float a loan of seventy-five million dollars at once, to be expended mainly upon the development of existing municipal ownership undertakings. It is proposed to spend thirty million dollars on subways around the congested districts of the inner city.

Proposals of the British government to acquire capital in the Anglo-Persian Oil Company for the purpose of maintaining an oil supply for the navy are under discussion in the House of Commons. The new arrangement would secure control of an area of five hundred thousand square miles.

There were registered last year in Massachusetts 62,660 automobiles. Before July of this year the registrations were in excess of sixty thousand. The income of the state from certificates for cars and licenses for drivers has already gone above seven hundred and ten thousand dollars.

The House of Representatives, by a vote of 174 to 87, agreed to the Senate amendment to the naval appropriation bill to sell the battleships Idaho and Mississippi to Greece and to apply the proceeds to building a superdreadnought.

All previous records of anthracite coal production in the United States were broken in 1913, when the output was 81,718,680 long tons, according to the figures recently given out by the geological survey. This exceeded the highest previous output by nearly one million tons.

At the beginning of 1913 the American Telephone & Telegraph Company had four million six hundred and ten thousand miles of wire in use. During 1913 a total of one million five hundred thousand miles were strung. Of the total mileage in use, 92 per cent is copper wire.

The largest order for pipe ever given in California was recently placed. The actual expenditure will be more than one million dollars, and the pipe, which is for an oil line from Coalinga to Martinez, will weigh about thirty million pounds.

The German philosopher, Rudolph Eucken, who visited America as German exchange professor and lecturer in 1912-13, has accepted an invitation from the University of Tokio to lecture there this autumn.

When the shipments of Tasmanian apples and pears to the oversea markets this season are finished, the total will probably be not far short of one million bushels.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI July 18, 1914 No. 46

Liberty

JUDGE SEPTIMUS J. HANNA

THE fifth chapter of Galatians is among the most instructive of St. Paul's teachings. It contains many golden nuggets of spiritual truth, and it begins with this strong admonition: "Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage."

We should especially note the tense employed. Paul does not say, Stand fast in the liberty wherewith Christ will or may make us free, but rather "hath" made us free. The difference is vital. Paul makes an all-important distinction which has been too much lost sight of in Scriptural exegesis. He knew that spiritual man, being in the image and likeness of God, is free-born, and by virtue of his birthright cannot be enslaved, for there is no power to destroy the spiritual man's liberty. Sufficiently armed with this knowledge, men win the victory and assert their freedom from the bondage of the material senses. The old habit of expecting freedom as a future gift, or hoping it may come our way if it be God's will, should therefore give place to the certain knowledge that we have been free from the beginning. Until we have undergone this change of consciousness we are still more or less in slavery to false belief, and cannot do our best work either for ourselves or for others.

On page 227 of the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy says: "God made man free. . . . Christian Science raises the standard of liberty and cries: 'Follow me! Escape from the bondage of sickness, sin, and death!' Jesus marked out the way. Citizens of the world, accept the 'glorious liberty of the children of God,' and be free! This is your divine right. The illusion of material sense, not divine law, has bound you, entangled your free limbs, crippled your capacities, enfeebled your body, and defaced the tablet of your being." This clarion note sounds the whole truth of being. It tells the story of liberty, past, present, and future. It is our declaration of independence duly signed, sealed, and delivered, for it bears the signet of eternal Truth. This same chapter of Galatians also contains that potent religio-philosophical affirmation which is always helpful and encouraging to the struggling disciple, "A little leaven leaveneth the whole lump." Often in times of stress this comforting message comes to our aid. Paul makes plain the leavening process: "For, brethren, ye have been called unto liberty; only use not liberty for an occasion to the flesh, but by love serve one another." Loving service, then, is the seed of liberty, the leavening process.

Thus we see that, while broadly affirming the absolute spiritual truth, Paul does not overlook the evidence of the false material senses. He was doubtless aware that the attainment of liberty was conditioned upon the destruction in human consciousness of all that tends to bondage. Nor does he rest with the above general affirmation. In unvarnished terms he recites "the works of the flesh" (as he calls the methods of error), and leaves out of his severe indictment little that pertains to the things of the flesh, concluding with the logical deduction that "they which do such things shall not inherit the kingdom of God." Having thus uncovered the claims of the false senses, he turns again to the spiritual and breaks forth into a joyful acclamation: "But the fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance: against such there is no law." He thus powerfully antidotes the fleshly infirmities which he had just enumerated and caps the climax of this great epistle.

It may not be amiss here to speak of the orderly interchange observed in Scriptural teaching with reference to the spiritual and the material, the divine and the human, bringing out in consistent sequence the differences and distinctions between them, and to note that only as we keep a watchful and discriminating eye on these interchanging phases do we hold our thought receptive thereto. What is true of the Bible is equally true of the Christian Science text-book, for this logical order is rigidly maintained throughout. That our Leader was keenly alert to the necessity for this kind of teaching is evidenced by the method she pursued as well as by her frequent mention of that necessity. Her admonitions in this respect should suffice to prevent us from getting into that state of self-deception which sometimes causes us to think we have reached the highest realization of absolute truth when in fact we are yet more or less in bondage to error.

We cannot too earnestly or too constantly affirm the allness of Spirit and the nothingness of matter. We cannot too thoughtfully dwell in the "secret place" of Spirit or too fully know our relation to God as His eternal idea. We cannot too deeply realize that there is no power excepting that which comes from Spirit; but in knowing this we should never lose sight of the subtle claims of error, for it is the effectual overcoming of these that brings us our liberty. On the other hand, we should not dwell so much in the realm of mortal discord and false belief that we thereby shut out of our consciousness the light of divine Truth and thus cripple our usefulness. In this way we learn to crucify the flesh and "live in the Spirit," which is the essence of liberty.

Requirement

GERTRUDE S. MC CALMONT

ALMOST startling in simplicity of promise and fulfilment is David's statement to the aged Barzillai, when he said, "Whatsoever thou shalt require of me, that will I do for thee." David had ceased to mourn for Absalom; he was returning "in peace unto his own house." Barzillai, with whom he had found shelter at Mahanaim, had come down to conduct him over Jordan. This Jordan was a hard crossing for David. In his appeal to Barzillai, "Come thou over with me, and I will feed thee with me in Jerusalem," gratitude mingled perhaps with a desire for human support was expressed. Barzillai, being "a very great man," went with him over Jordan a little way, and there, before returning "unto his own place," said, "Behold thy servant Chimham [longing]; let him go over with my lord the king." How great a man was Bar-

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

zillai! teaching David that longing, earnest desire, together with activity, was sufficient to support.

Here it was, after the crossing of Jordan accompanied by Chimham, that David's vision of requirement gained for him the knowledge of possession. His promise to Barzillai may well express a growing recognition of "Emmanuel, . . . God with us," the all-powerful, ever-present active law of good. The steps toward this receptive attitude are counted first in gratitude; then faith grows stronger (Chimham being with him), his confidence more secure; and finally victory is assured, as evidenced in his glorious pæan of praise and thanksgiving for deliverance.

Inasmuch as the Scriptures were written for our instruction, this word "require" is worthy of analysis. Derived from the Latin *re* (again) and *quærere* (to seek), one learns that it involves the expenditure of effort. A vital meaning of the word given in the Century dictionary is, "insist on having; demand." The word "demand" carries with it a sense of authority, and thus it becomes plain that one must "come boldly unto the throne of grace, that we may obtain mercy, and find grace to help in time of need." Coming boldly is simply claiming as our divine right all good; it is knowing that not one good thing is lacking, because all that the Father hath, all that the divine law of good provides, is legitimately ours; always has been ours. It needs only to be appropriated.

The I AM always is. There never was a moment when the divine law of good, the I AM, ceased to operate impartially for the welfare of all. It cannot be stopped in its activity, or even hindered. What do we require? Health, joy, peace; in short, the Mind of Christ. It is ours. It is all a mental process. First, there must be sincere requirement, since mental receptivity is always precedent to realization.

A knowledge of requirement does not change the eternal fact, the Science of being, but it does bring thought into receptivity to that eternal fact whereby we can appropriate the truth that is ours. When doubt, discontent, and unsatisfied longing prompt the heart to cry out for help, this answer comes from Truth: "Whatsoever thou shalt require of me, that will I do for thee." Whatsoever! No matter how deep the longing, no matter how often comes the cry, when one, tired of the futile search through material ways, turns for help to that divine Love which meets every need, the fulfilment of Truth's promise is experienced. In strong contrast with David's former appeal for support comes his exultant cry of assurance, "O taste and see that the Lord is good."

"Feed my sheep"

JESSIE BALFOUR ELLIS

THE poetic mind in all ages has been wont to compare humanity, driven by "every wind of doctrine," wandering in the difficult and dangerous ways of mortal sense, to a flock of frightened and strayed sheep, and there are no lovelier parables in any literature than those in which our Lord describes the relationship of God to man as that of a shepherd to his flock. When the people followed the Master into a desert place, running "afoot thither out of all cities," his heart was touched with compassion "because they were as sheep not having a shepherd." Again he said, "My sheep hear my voice, and I know them, and they follow me; and I give unto them eternal life; . . . neither shall any man pluck them out of my hand." Then, going back as he always did to first cause, he added, "My Father, which gave them me, is greater than all; and no man is able to pluck them out of my Father's hand." Long before this, Ezekiel had heard the divine voice saying, "Should not the shepherds feed the flocks?" And when Peter, slowly awakening to the tremendous significance of the Master's reappearance after the three days' struggle with the last enemy to be destroyed, was reminded of his own triple denial by the thrice reiterated question, "Lovest thou me?" he was given that lifelong task which was to be the proof of his protestations, in the thrice reiterated command, "Feed my sheep."

Does not this command come to us all? And does it not present the inevitable question, What food have we to offer to the sheep? Christian Scientists must realize that what they have to offer is all the truth that Jesus demonstrated, all of which he reminded Peter on that glad, victorious morning by the lakeside. Theirs is the serene assurance that there is no evil in the world which cannot be overcome by the Christ, the spirit of Truth. All this Christ Jesus demonstrated later, when Spirit had so triumphed over material sense that he passed out of mortal vision. He was no longer Jesus of Nazareth, but the complete manifestation of divine power, of that life which is "hid with Christ in God," discernible now only to the awakened spiritual sense.

"I am the good shepherd, and know my sheep, and am known of mine," said the Master; and in Ezekiel we read, "Ye my flock, the flock of my pasture, are men, and I am your God, saith the Lord God."

Jesus has shown us what it is to be "men": that we need not believe ourselves to be lost and wandering sheep, dumbly asking, without hope of satisfaction, "Hither hurried, whence?" and "Whither hurried, hence?" but that we may know ourselves a guarded flock, tended and guided by the great shepherd heart of the universe. Christian Science has proved to us that this is no mere poetic fancy, but a living truth, founded on divine Principle. It is now our great privilege to teach men so, not only with our lips but in our lives.

Continuance

WALTER SHAW

JESUS said, "If ye continue in my word, then are ye my disciples indeed." Those who have accepted the teachings of Christian Science, and have been studying the textbook, "Science and Health with Key to the Scriptures," for some years, find therein an imperative and constant demand for progress. A few who have not apprehended what this teaching involves, may have grown weary, and under stress of some "hard saying" have become offended, like a portion of the Master's followers who "from that time . . . walked no more with him." To say that Christian Science is an easy method of salvation would be to understate the facts. There is no royal road to true, practical religion. An acquiescent belief in Truth is quite futile. The demand is for repeated proof or demonstration that we understand Truth. Every problem solved means advancement to a higher standard. Our great comfort is that increased knowledge of divine Truth brings clearer understanding and power to work, so that we may ultimately rejoice in tribulation, knowing that it will eventually bring "a far more exceeding and eternal weight of glory."

It is often helpful to remember what others went through at the dawn of the Christian era for Truth's sake; how Paul endured in his wonderful work and practice, and also to recall our Leader's struggles in the early years of this great movement. Without such trials and testings what would have been the value of these examples of fidelity? Mrs. Eddy says, "Progress takes off human shackles" (Science and Health, p. 256), and surely it is inspiring to know that the bondage

Digitized by Google

of material sense must ere long give place to perfect freedom. Advancement is gained by devout consecration and love for the cause. It is through moral and spiritual growth that we conquer error. Christian Science presents the highest ideal. It teaches that it is not merely intellectual development that is needed, but self-abnegation and love for God and man.

On the first page of Science and Health we read that "desire is prayer," and what one truly desires is evidenced by conduct more than by words. Many strive eagerly to acquire all the help they can gain from our services and from our periodicals. In every Christian Science field there are those who are never absent and never late. Others still allow weather conditions or social engagements to influence them, not having yet seen the importance of putting Christian Science, the cause of Truth, foremost of all duties. There may be times in the experience of every student when disappointments temporarily cloud our vision. These may arise through the difficulty of arousing those we love to a sense of the paramount and vital importance of Truth. The desire to propel others seems inherent in human belief. The inquiry, "What shall this man do?" brought the sharp reprimand from the Master, "What is that to thee? follow thou me;" and if we could always remember the obvious lesson from this reproof, we might save ourselves much trouble. It may, however, be the joy and privilege of each of us to be counted among those "who by patient continuance in well doing seek for glory and honor and immortality, eternal life."

Wednesday Evening Testimonies

LOUISE SATTERTHWAITE

It was a winter night, but I noted with interest the appearance of perspiration upon the forehead of a gentleman sitting in front of me. The occasion was a Wednesday evening meeting, and a voice near us was heard speaking with zeal but not with discretion,—it was indeed a voice heard in this meeting as regularly as Wednesday evening came around. Though its owner was possessed of a kindly thought, nevertheless, since acts as well as motives need to be considered, it often happened that the words uttered by this one did as much harm as good. On this occasion the testimony, supposed to be slightly humorous, verged close upon the blasphemous, and amused smiles were noted on the faces of some of the visitors, while on others a shocked expression was seen. The man who perspired was a member of the church, and he suffered poignantly.

As I listened to the testimony, the thought came to me that if she or any one of us had been put into a witness-box, how carefully would we have weighed our words! Yet in this greatest of all witness-boxes, when we should present with the utmost wisdom our side of the case, this is not always done. The Christmas season had just passed and another picture came before me, where each one carefully selected the most appropriate gift and then delicately and daintily prepared it for its bestowal. It had to be just the right thing, or as near to the right thing as could be attained; it had to be free from all blemish or imperfection, and with choice and true words inscribed on it. I then thought that as these testimonies were intended to be gifts, it seemed as if they were not always so carefully prepared as they might be.

To testify at a Wednesday evening meeting is for many not an easy task; but the right sort of preparation would make it easier. One should determine just what thoughts are to be expressed, and then go over them mentally several times. One man whom I know, and who always speaks very well indeed, writes out his testimony, afterward condensing it and reading it over several times; then when he comes to speak, while many things may be forgotten, at least the most important are surely remembered.

A testimony is a gift laid on the altar of Truth, one given from a heart overflowing with gratitude, so that others may hear of the good things that God "hath prepared," and perhaps come to share them. Our gift to our fellow men should be carefully prepared, and presented with as much grace and propriety as possible. Having made the offering, the one who bestows it will find to his great surprise that he is a hundredfold richer than he was before, and in the days that follow he will continue to reap the good which has come from his expression of gratitude.

✧

"To the glory of God"

HERBERT ARTHUR HUTCHINSON

Christian Science teaches us one lesson in particular: that all is and must be for "the glory of God." It is very instructive to see that in the older Scriptures the Hebrew word that means glory, is used in the rather limited sense of honor, and that as generally employed in the New Testament this word has a much fuller significance. This fact appears clearly in the account of the temptations of Jesus in the wilderness, as given in Matthew's gospel. We thus see that as thought rises to a higher sense of God, the character of the divine glory unfolds in human consciousness. When men gain a glimpse of "the evidence of things not seen," something above and beyond physical sense, this view may be said to be supernatural, that is, above the ignorance of mortal mind, which does not understand itself because it cannot understand God, and hence cannot understand God's man, of whom mortal man is but the counterfeit.

Mortal mind builds up the sense of finite personality, personal ambition, personal glory, personal sense, alias the devil, none of which, even when apparently successful, can ever satisfy, and soon they pass away. Mortals are continually building up a wrong sense of "I"; they fall down, worship, and give titles to this false ego. In Christian Science God is the only Ego; He is divine Principle, and when the truth of being, the Christ-idea, is lifted up in consciousness, all who really desire purification and transformation of self, apprehend it more or less clearly, and are drawn to it. Where this irradiation of purity enters consciousness and is welcomed, character becomes spiritualized and exalted, thought grows more harmonious, and peace obtains.

One of the purest things to human sight is a mountain-top covered with newly fallen snow and bathed in sunshine. If this is a symbol of the human sense of purity, what must purity itself be? No evil can possibly be present, nothing that "defileth, . . . or maketh a lie." Since what God has made has always been and will always be, creation is but an unfoldment in human consciousness, and Christian Science effects this disclosure of spiritual ideas, expanding harmoniously because naturally, in manifestation of the nature of our loving Father-Mother God. These unfolding spiritual ideas are ever being refreshed with "showers of blessing," distilling softly and lovingly on them.

The book of Revelation opens with a blessing on those that read, on those that hear the prophecy, and on those that "keep those things which are written therein;" and as the nature of the spiritual and eternal content of being dawns in consciousness, there is gained that vision of the divine glory so graphically described by John in the fifth chapter of Revelation, "Every creature which is in heaven, and on the earth, and under the earth, and such as are in the sea, and

Digitized by Google

all that are in them, heard I saying, Blessing, and honor, and glory, and power, be unto him that sitteth upon the throne, and unto the Lamb for ever and ever." A correlative statement of this Scripture is found on page 520 of Science and Health, where Mrs. Eddy says: "Unfathomable Mind is expressed. The depth, breadth, height, might, majesty, and glory of infinite Love fill all space."

✧

Reflection

C. L. BOSTWICK

We shall all agree that "few persons comprehend what Christian Science means by the word *reflection*" (Science and Health, p. 301). None of the definitions of natural philosophy as given in the dictionary, nor any of the more extended explanations thereof elsewhere, are satisfactory or complete in answering the question, What does our Leader mean by reflection? As the word appears many times in our text-book, we are stimulated to inquire into its true meaning.

In our human experience we know that the more perfect the mirror the truer and more accurate is the reflection, and that bent and imperfect mirrors give back imperfect and distorted reflections. For centuries mankind have been looking into the mirrors of theory, creed, and dogma, so-called orthodoxy, and have there beheld that which they have been taught to believe is the true man, though fallen, sinful, depraved. The continued contemplation of this reflection, together with the remembrance of that verse from the account of man's creation as given in the first chapter of Genesis, "So God created man in his own image, in the image of God created he him," has caused humanity to have confused and contradictory conceptions of Deity. God has become to them a corporeal, manlike being, sometimes angry, sometimes loving, unable or unwilling to control or prevent evil,—at least permitting it. And all this because they have been looking into an imperfect mirror, where they have beheld discord, sickness, sin, and inharmony of every sort, and have never really seen the true reflection of God.

God has never changed. He is "the same yesterday, and today, and forever," and since man is created "in the image of God," it necessarily follows that man is also unchanged and unchangeable. The fault must lie, then, not with God or with man, but with the mirror that has been used so long. In Science and Health (p. 515) Mrs. Eddy says, "Your mirrored reflection is your own image or likeness. . . . Now compare man before the mirror to his divine Principle, God. Call the mirror divine Science, and call man the reflection. Then note how true, according to Christian Science, is the reflection to its original. As the reflection of yourself appears in the mirror, so you, being spiritual, are the reflection of God." Divine Science being the perfect mirror, gives back the perfect reflection, revealing, as Mrs. Eddy says on page 259, "perfect God and perfect man."

The command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," might be expressed, Reflect the Father perfectly. How it is possible for each individual man, woman, and child to reflect God perfectly, was beautifully illustrated to the writer while out walking one summer morning. It was shortly after sunrise, and the air was soft and warm. Birds were singing, and everything, trees, grass, and flowers, seemed to give eloquent expression of perfection and harmony. The path he had followed ended suddenly at the edge of a marsh which was covered with tall grass, and on the end of each blade glistened a dewdrop, that caught the rays of the sun and sent back its reflection. There were thousands upon thousands of these clear, crystal spheres, and thousands upon thousands of reflections, each as perfect and complete as if it were the only one instead of one among a multitude. Then the thought came, Here is what is meant by reflection,—we must individually express Truth. Then it was noticed that there were drops, just as perfect as the others, but which sent back no reflection because there was some obstruction between them and the sun. This seemed to illustrate the thought that mortal mind, with its multitudinous devices, is the obstruction which seems to interdict the perfect reflection of God, for, as Mrs. Eddy has said, "absorbed in material selfhood we discern and reflect but faintly the substance of Life or Mind" (Science and Health, p. 91). It is ours to reflect Life, Truth, and Love, our eternal Principle, and if we would see the true reflection, we must use the perfect mirror of divine Science.

✧

Peace and Rest

ANNA W. HOLLEBAUGH

Jesus said, "Come unto me, . . . and I will give you rest," and "Peace I give unto you: not as the world giveth, give I unto you." Rest and peace such as the world gives are not desirable conditions, inasmuch as they usually mean indolence and inactivity if not laziness, and a false sense of security. In Science and Health (p. 519), we read, "The highest and sweetest rest, even from a human standpoint, is in holy work," while peace is found not in the possession of harmonious material conditions, but more often in spite of them, even the peace "which passeth all understanding."

There is an old-time fable of a man who having dwelt many years in a dark cave, grew weary of it, and began to pray for the sun to come and remove the darkness. "Darkness," said the sun,—"what is darkness?" The man replied, "If you will only come and look into my cave, you may see it for yourself." So the sun came, and looking into the cave its rays penetrated to the darkest recesses. "Darkness,—where is the darkness?" was the demand. And this is the demand of man today when he realizes that "God is light, and in him is no darkness at all." God is All-in-all: then what and where is the darkness, or evil in any form, except as a false claimant, testifying to the absence of light, of good, the omnipresent God.

The question is sometimes asked, "Why do you say light is real and darkness is unreal, when the latter is as much in evidence as the former?" The answer came to the writer one morning on viewing the sunrise. When the sunlight appears, it is seen to be positive, for its rays dispel its opposite, the darkness. On the other hand, darkness is negative, for it has no power to dispel its opposite, light. It is no thing or entity, and is therefore unreal, being simply the supposed absence of light, which has source and substance. Health has a Principle, a source, while sickness has none; goodness has a creator, while evil has none; and so on through the round of real things versus unreal things. Reality is forever eternally true, perpetual in its being. Unreality is now and forever false; it flees before the light of Truth. As we consciously realize these things, as we come to Christ, Truth, we shall find peace and rest, "not as the world giveth," but that which it can neither give nor take away.

✧ ✧ ✧

The murky clouds and tempest fade away,
The darkest night doth yield to perfect day:
And so thy gloom shall fade,—thy heart grow bright
Within the splendor of Truth's wondrous light;
Nor shall remain a single tear or scar,
Nor erring thought from thee Love's presence bar!

Charles C. Sandelin.

Selected Articles

[Frederick Dixon in *The Woodford* (England) *Times*]

In a recent issue there is printed a lecture by Mr. —— on the subject of Christian Science. This critic is one of the people who cannot let Christian Science alone. He is perpetually lecturing and writing on the subject in a hopeless effort to stop the spread of the movement. I say hopeless, because he has never succeeded in doing anything except help to spread it. He has, on the whole, been the best advertiser of Christian Science in the United Kingdom, and nothing seems capable of lessening his industry. He began his lecture by a sort of definition of Christian Science which really on the face of it is quite meaningless, and is at any rate a hopeless parody of Christian Science. He said that it denies the reality of disease but believes in the reality of health, pleasure, and life. Certainly Christian Scientists believe health to be nearer reality than disease, and life to be considerably nearer reality than death. They also certainly believe that happiness is nearer reality than unhappiness, if that is what the critic means by pleasure. At the same time they do not believe that physical health, material happiness, or animal life is real. They believe these things to be the counterfeits of the real, and that reality is not physical health, but spiritual harmony; not death, but eternal life; and happiness not the destructible happiness of the physical senses, but the indestructible joy of spiritual perception.

This critic undertook to lecture upon Christian Science without the remotest idea of what it teaches, and he began with a fundamental perversion. If you are going to discuss Mrs. Eddy's teaching about reality, you must begin by accepting her definition of reality. That is an admission every scientific thinker in the world would lay down as an irrefutable axiom. If you like to say that Euclid described a square as a circle, of course you can reduce Euclid to nonsense. If you like to say that Mrs. Eddy described one element of the relative as relative and another element of the relative as absolute, you can, of course, make her talk nonsense, but the real nonsense is in saying that she ever made any such statement. What Mrs. Eddy says is that the only reality is divine Mind and its ideas, God and the spiritual creation. From this she draws the conclusion that material phenomena, as cognized by the human senses, are nothing but counterfeits of spiritual phenomena, just as the human senses themselves are counterfeits of spiritual perception.

Up to a certain point this is the ordinary teaching of idealism which existed thousands of years ago in the East, and has been taught in the West since the time of Plato. The ultimate difference is, however, fundamental. Whereas the idealist of the schools of natural science insists that the human mind, or energy, is the actual noumenon which produces the phenomenon, which is unreal simply because it is a phenomenon, so the Christian Scientist insists that the noumenon, whether of mortal mind, or energy, is itself unreal, being the counterfeit of divine Mind and spiritual energy. Christian Science, then, does not in the least consist in sitting down and saying you are well when you feel ill. It consists in gaining a scientific understanding of divine Principle, and learning to demonstrate the law of this Principle so as to extinguish in the human mind the various beliefs which produce a subjective condition of sin, sickness, and death.

The critic, however, went on to argue that though there might be some reason in saying that pain and disease could be destroyed mentally in a reasoning person, the lie direct was given to the claim that they were unreal by their existence in animals. According to the whole race of idealists from Plato to Berkeley, and from Berkeley to Lord Kelvin, matter is a subjective condition of mind, or energy. Now, an animal is precisely as much a subjective mental condition as a human being. The difference is that the noumenon, mind, manifests less intelligence in an animal than in a human being. The animal and the human being are, however, of course both subject to the supposititious law of pain and disease in the noumenon of which they are the subjective conditions. The difference largely is that pain being, as Huxley long ago pointed out, a state of consciousness, pain is felt more acutely by the intelligent human being than by the far less intelligent animal. Mrs. Eddy points out, on page 489 of Science and Health, that "when the unthinking lobster loses its claw, the claw grows again. If the Science of Life were understood, it would be found that the senses of Mind are never lost and that matter has no sensation. Then the human limb would be replaced as readily as the lobster's claw,—not with an artificial limb, but with the genuine one."

This is precisely what Jesus taught when he restored the ear of the high priest's servant, after it was cut off by Peter. Now, Jesus declared that those who believed on him would be able to do the works he did. It is obvious, therefore, that when a man understands the teaching of Jesus completely, he will be able to restore a lost limb as readily as to heal sickness. In order to do that, however, two things are necessary,—first, to gain a knowledge of the absolute spiritual truth which, as Jesus explained, will free mankind from the trammels of materialistic knowledge; and, secondly, to walk in the footsteps of Christ so completely as to banish from human thought the belief in all sensuality. In plain English, the only way in which spiritual healing can be accomplished or received is in the exact proportion in which the carnal mind gives place to the Mind of Christ. This is the teaching of Mrs. Eddy, and this is the gospel of the New Testament which Christian Scientists are endeavoring to preach today as it was preached in the first century.

✧

[R. Stanhope Easterday in *Logansport* (Ind.) *Journal-Tribune*]

According to a report of a sermon by an evangelist appearing in a recent issue, in attempting to illustrate a point on the subject of belief, the evangelist had recourse to the unfair custom, all too common among critics, of citing disconnected statements of Christian Science teaching wrested from their necessary setting in explanatory context. Mrs. Eddy's actual statement on the subject of the alleged poisonous nature of certain vegetable and mineral substances, if read with unbiased mind in its legitimate setting in the context on pages 177 and 178 of "Science and Health with Key to the Scriptures," will be found to be a logical and practical deduction from the teaching of the Scriptures on this point.

While our critic, however, is ridiculing Mrs. Eddy's reasonable attempt to deal with certain phenomena of existence in a logical, scientific, and Scriptural manner, he is himself signally failing to explain to us the significant declaration on the part of infinite, divine intelligence, not of human conjecture, to the effect that after Deity had completed His creation of all things, and had Himself pronounced the same "very good" in its absolute entirety, God said significantly, "Behold, I have given you every herb . . . which is upon the face of all the earth, . . . to you it shall be for meat." Christian Scientists logically reason that if "every herb" of God's creating is good for food, and if "whatsoever God doeth, it shall be forever: nothing can be put to it, nor anything taken from it," then present-day death-dealing attributes of certain herbs must be the result of some gigantic misconception of God's creation. Hence, it is but logical to con-

Digitized by Google

clude that a cultivation of the truer concept of all things will eliminate poisonous qualities and their dire results. Unless the evangelist can advance a more reasonable explanation of Scriptural promise and possibility couched in the words, "If they drink any deadly thing, it shall not hurt them," which promise, by the way, is but a part of our Lord's unequivocal outline of his stern criterion of true discipleship as given in verses 15 to 18 of the sixteenth chapter of Mark, it might be well not to scoff at either the theory or practice of others.

When the prophet healed the poisonous waters with a pinch of salt and the pottage with a bit of meal, neither of which latter ingredients are conceded to be antidotes for poison, he pointed a big lesson both in divine economy and in effective, intelligent faith. It is significant also that the prophet did not eliminate either the water in the first instance or the gourds in the latter instance. Jesus achieved, in the healing of "all manner of sickness" and in the raising of the dead, far greater feats than the antidoting of poison; yet in addition to declaring significantly that "my Father worketh hitherto, and I work," he laid grave responsibility upon his followers in all ages in his promise, which was a world commission, "He that believeth on me, the works that I do shall he do also."

It would seem, therefore, the better part of discretion were our critic himself to strive harder to do "these mighty works," in place of declaring that those who are trying to emulate the Master in all his works are "ridiculous" and "nonsensical." Meanwhile Christian Science will legitimately continue to increase its already accumulated evidence of "signs following," in effectual contravention of superficial denunciation and criticism, thus supplementing, not abrogating, the Christian effort of those of other religious and medical faiths. It is but just and fitting, moreover, to cite in conclusion the broad and significant fact, supplementing cases of definite antidoting of poison in Christian Science, that in the healing of almost any so-called bodily derangements, Christian Science effectually antidotes poison more or less deadly, resulting from patholysis.

✧

[Frank Bell in *The Times*, Warren, Pa.]

A correspondent undertakes to discuss Christian Science as if it were a system of dogmatic belief to be weighed and balanced against other aggregations of human opinion, instead of a rule of life to be judged by what it does for its adherents. Christian Science is not seeking to compete with scholastic or creedal theology, and the Christian Scientist is not engaged in trying to conform his thinking to any one of the numerous standards of so-called orthodox profession. Words do not constitute the religion of the Christian Scientist. Even if the disciples of dogma could come to anything like an agreement among themselves, the Christian Scientist would regard it as of no vital importance to wear the label of orthodoxy. With him, "practice not profession, understanding not belief, gain the ear and right hand of omnipotence and they assuredly call down infinite blessings" (Science and Health, p. 15).

Therefore, if our friend had been able to show that the teachings of Christian Science are as "heretical" as he seems to believe, and still had ignored the fact that the objects and achievements of Christian Science are in strict accord with the highest ideals toward which religious effort has ever been directed, Christian Science doubtless would have survived the shock. It needs to be said, however, that his alleged exposition of the teachings of Christian Science is largely inaccurate. One or two illustrations will suffice.

Mrs. Eddy does not, as stated, deny that God is Person. She denies that Spirit could be physically personal or that omnipresence could have location, form, or outline. God's spiritual personality is affirmed, not denied. Principle is but one of a number of terms employed by Mrs. Eddy to awaken a proper concept of Deity. Dictionaries define principle as cause or source, and in that sense the word is synonymous with creator. In answer to the question, "What is God?" Mrs. Eddy says, on page 465 of Science and Health, "God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love." She adds that these terms are "intended to express the nature, essence, and wholeness of Deity," and that "the attributes of God are justice, mercy, wisdom, goodness, and so on." What is there "heretical" in these statements?

Whether a right desire is a better kind of prayer than the sort that is heard of men, is scarcely a matter on which there can be a worthy difference of opinion. Nor is there occasion for dispute as to the relative value of the prayer that consists of pleading for more good, and prayer which seeks a better realization of the good already at hand. This is not a matter of theory, but of practice, and any one may prove for himself whether the latter kind is an effective solution when the former kind fails to bring an answer. Mrs. Eddy does not claim to have originated the idea. "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them," was uttered nearly twenty centuries before Mrs. Eddy wrote Science and Health. She quotes that utterance at the head of her enlightening and practical chapter on Prayer. Christian Science does not teach that humanity is immune from sin, but quite the contrary. When Mrs. Eddy speaks of sinless man, she refers to the perfect, spiritual, eternal manhood, as she carefully explains. This "heresy" is therefore a figment of somebody's imagination.

The critic attributes to page 134 of Science and Health the statement that "the true Logos [Word] is demonstrably Christian Science." He then proceeds to set up another "heresy" by paraphrasing the familiar Scripture so as to read: "In the beginning was Christian Science, and Christian Science was with God, and Christian Science was God," etc. If our friend had divested his thought of the unwarrantable notion that Christian Science is "Eddyism," it might have enabled him to see a comma rather than a period after the words he quotes. What Mrs. Eddy wrote was this: "The true Logos is demonstrably Christian Science, the natural law of harmony which overcomes discord." If Mrs. Eddy chooses to call the attention of mankind to the natural law of harmony, and to use the term Christian Science in designating it, the natural law of harmony does not thereby become Eddyism, any more than what is termed the law of gravity became Newtonism by reason of the identity of its discoverer. Now, by using what Mrs. Eddy actually wrote, and not the abbreviated version as given by the critic, the paraphrasing of the reference he cites would read: "In the beginning was the natural law of harmony, and the natural law of harmony was with God, and the natural law of harmony was God. All things were made by the natural law of harmony, and without the natural law of harmony was not anything made that was made." What has become of the "heresy"?

If our friend rejects the explanation that general human belief is the power back of the effect of the drug upon the body, perhaps he has a more enlightening explanation of exactly what is the power, whence it is derived, and how it operates. If he doubts that the physical body is of itself sensationless, perhaps he would favor us with accurate data as to the sensations of a body bereft of mind. If he knows Christian Science does not cure organic disease, it would be

Digitized by Google

interesting to learn how he knows this. Possibly he merely believes that Christian Science does not heal disease. Stricter accuracy on the subject of Christian Science would have saved a great deal of printer's ink in times past, and it still has its economic value.

✧

[John W. Doorly in *Pontefract and Castleford* (England) *Express*]

Mr. —— raises objections to what he terms the teachings of Christian Science. He is in the happy position of having decided for himself exactly what these teachings are, and although this decision is quite unlike what Christian Science teaches, he proceeds to show where these teachings are wrong. I quite agree with him that his statements as to what Christian Science teaches are wrong; but then, they are in no way the teachings of Christian Science; for this religion does not teach that the tomorrow of the world is with Christian Science. It does teach that the yesterday, today, and tomorrow are with that Christ which Christian Science exemplifies and whose commands it is daily fulfilling. If the critic likes to believe the old fairy-tale that some day the impossible sight is going to be witnessed of a personality called God sitting on a throne and judging several thousands of millions of human beings, he is quite at liberty to continue in this dream. Christian Science, however, teaches that the very Christ, or God's law, which the critic talks about so freely, is here and now judging evil every minute, and healing and redeeming men from its various phases just as soon as they are willing to turn from their belief in the power and reality of evil.

This gentleman is sure that the world needs a shepherd instead of a science; but Jesus declared, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven." Again, he declared, "Ye shall know the truth, and the truth shall make you free." If the truth is not scientific, then I should like to know what is. Fortunately for humanity, we live in a scientific age, when humanity is demanding and obtaining a practical, ever-present Christ, revealing God's law to them, and healing them from their sins and sicknesses; and no amount of worn-out dogma or blind "faith without works" can stop the mighty onflow of this new-old truth revealing God's love for man and His ability and willingness to be "a God at hand," and "not a God afar off."

The interest of Christian Scientists in the Bible, and their deep knowledge of it, is so well known that the critic's remarks on this subject bear no weight. Let him heal one sick man, or one sinner, through his belief in Christ, and he will stop bothering about his neighbors' religious views, and will rather devote his energies to practising what Jesus Christ commanded, "Heal the sick, cleanse the lepers, raise the dead, cast out devils."

✧

[John L. Rendall in *The Fairfield* (Iowa) *Journal*]

Our critic states, "Christian Science says that prayer to God for the sick has no effect." Christian Science emphatically does not say any such thing. What Science and Health asserts is as follows: "A mere request that God will heal the sick has no power to gain more of the divine presence than is always at hand" (p. 12). On page 11 we read, "Prayer cannot change the unalterable Truth, nor can prayer alone give us an understanding of Truth; but prayer, coupled with a fervent habitual desire to know and do the will of God, will bring us into all Truth."

Now, just a word as to the "cures of Christian Science" which our critic declares are all of "neurotic, nervous, and functional cases that could have been cured without as well as with Christian Science." He says further, "There is not a single authentic cure of organic disease to the credit of Christian Science." In this statement he ignores abundant proof to the contrary. If he really wants evidence of healing by Christian Science, I will gladly furnish him with incontestable proofs that many such cases have been entirely cured by Christian Science. He who decries Christian healing, and denies that the command to heal the sick and raise the dead is binding upon Christians today, is denying the plainest teaching of Christianity that the Bible contains. If Christianity stood for anything in Jesus' time, it stood for proofs of the Messiahship through the healing of the sick. When John sent his disciples to the Master asking, "Art thou he that should come? or look we for another?" Jesus answered, "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed," etc.

It is a sad commentary on so-called orthodox Christianity that its denial of Christian healing is sometimes accompanied by abuse of those who practise it. Jesus cared nothing for doctrines or formulated beliefs; he cared nothing for the opinion of the medical or ecclesiastical authorities of his time, but he furnished incontestable proofs of his Messiahship through his works, and for the basis of judgment as to one's Christianity he left the statement: "By their fruits ye shall know them." If it is necessary to build hospitals, to employ doctors and medicine today, it is not because the "prayer of faith" has been less efficacious, but because mankind has exchanged faith in God for faith in drugs and material means. Christian Science has come to this age as a protest against modern materialism, and it has come as did the Messiah, furnishing proofs of its essential Christianity through the healing of the sick and the reformation of the sinner. It teaches not faith in personality, but faith in the one infinite God, beside whom "there is none else."

✧

[From *The Seattle* (Wash.) *Sun*]

That Christian Scientists are today one of the greatest factors in the work of breaking down the traditional orthodox views of God and establishing in their place a belief in the universal servanthood and all-inclusive love of the divine Spirit, is the opinion of the Rev. J. D. O. Powers, who lectured at the First Unitarian Church on "A New Conception of God, Our Great Need." He said in part:—

"Christian Scientists say that all men should open the channels of the mind to God's love, that God is always good, and that He is the one universal Love of the universe. They believe that mankind, once it opens wide its mind to the influence of God, will become perfect mentally, morally, and physically. Christian Scientists, like the Unitarians, hold to ideas totally differing from the mythological belief of the orthodox church, that God is the stern, unrelenting ruler of the universe, a ruler who drives the fear of death and condemnation into the minds and souls of His subjects."

[Written for the *Sentinel*]

Cheerfulness

HON. CLARENCE A. BUSKIRK

Our lives are in keeping of Love divine,—
What need to be downcast and fearful?
Are we trusting God if we repine?
'Tis the best of good sense to be cheerful.
So, banish your clouds away,
And you'll find 'tis a brighter day.
A soursop's face has weakness and fear in it,—
Be smiling and valiant, there's great good cheer in it.
Banish your clouds away, my brothers,
And send good cheer to the hearts of others!

Editorial

"In spirit and in truth"

THERE is a good deal of what the world calls human nature in the feeling which prompts Christian Scientists to look with great satisfaction upon the constantly increasing number of members of The Mother Church and of the branch churches in the larger cities. This feeling should not, however, lead them to ignore or minimize what is being done in the smaller communities "where two or three are gathered together" in Christ's name. To go into a small town or village and find a little band of faithful workers, in many cases people of very moderate means, maintaining church services and a reading-room, giving a lecture at least once each year, as required by the Church Manual, distributing authorized literature, and healing the sick, is inspiring to the traveler.

We can, of course, and frequently do, get such information from the columns of the *Sentinel* and *Journal*, but we cannot get from any printed page the sense of peace and joy which thrills the visitor from one of the larger city churches, as he takes part in the service of a small church where the Lesson-Sermon is simply and reverently read, the singing is spontaneous and hearty, and the welcome extended to the stranger is cordial and sincere. After such an experience the visitor, if he is at all thoughtful, is much inclined to reflect that neither numbers nor material resources constitute a Christian Science church, but that wherever the love of Truth prevails, God Himself has tabernacled with men. He may also recall that in his reading of the *Sentinel* and *Journal* he has noticed testimonies of healing signed by persons living in similar small towns,—some so small and obscure that he has never even heard of them before, and he thus realizes that it is not through numbers, nor through pomp and ceremony, that the gospel is preached "with signs following." He realizes as never before that Christian Science is a religion for all mankind, and that the God who is worshiped by Christian Scientists is not afar off, but, as Mrs. Eddy has written on page 336 of Science and Health, "God, the divine Principle of man, and man in God's likeness are inseparable, harmonious, and eternal."

It is this clear sense of the omnipresence and omnipotence of divine Love which differentiates Christian Science from other religious teachings. The Church of Christ, Scientist, organized "to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing" (Manual, p. 17), has for thirty-five years been demonstrating to the world that God does hear and answer prayer, in that the sick are healed as in the days of the great Teacher, in fulfilment of his promise, "He that believeth on me, the works that I do shall he do also."

That is why the small church in the town or village is such a power for good in the community, and the individual Christian Scientist has the opportunity to prove to his neighbors and friends the transforming power of divine Love that might be denied him in the great city. It is slow work, sometimes, breaking down the barriers with which error would stay the progress of the truth, and the "two or three" seem so few to hold up the standard; but God can and ofttimes does use the weak to confound the mighty, and the seed which is faithfully sown will sooner or later come to harvest.

Jesus declared to the woman of Samaria that the Father seeketh those that "worship him in spirit and in truth," and this worship can be given just as sincerely in the little upper room as in the domed cathedral. Wherever the Christian Scientist is on Sunday, if he attends service, he hears the same Lesson-Sermon he would if he were in his home church, "a sermon undivorced from truth, uncontaminated and unfettered by human hypotheses, and divinely authorized" (*Christian Science Quarterly*, p. 4). Whether he listens to this "sermon," or reads it alone or with a friend, his heart goes out in gratitude to the revered Leader who gave to this age and the ages to come the Science which is sweeping the world in a great tidal wave of love for God and our fellow man, the fulfilling of the greatest commandment.

ARCHIBALD MCLELLAN.

Glimpses into the First Lessons

IT is scarcely possible for us to enter into the spirit of the beatitudes until we have pondered somewhat the experiences which preceded the giving forth of the Sermon on the Mount. We read that immediately following Jesus' baptism by John came the baptism of the Holy Ghost, and the next step was his departure into the wilderness, where he not only realized spiritually "the great facts of existence" (Science and Health, p. 597), but proved them in his forty days' vigil. From it he went out to do the work which included the healing of "all manner of sickness and all manner of disease," and which led up to his triumph over death and the grave.

We read that after this he went with his disciples "up into a mountain," where he delivered his deathless discourse. Students of Christian Science all know that its opening sentences, called the beatitudes, are included in the "first lessons" provided by Mrs. Eddy's direction for the pupils in all Christian Science Sunday schools throughout the world, and teachers and pupils will gain much in tracing the vital relation between these rare sayings and the ten commandments, to which they are linked in the "first lessons." In the study of these, it is not so much analysis that is needed, as the practical instruction which shows the pupil how to apply his understanding of both in working out his own life-problem. It is easy to show him that the Decalogue is an indispensable provision for human need, that it is the demand of divine justice stated in the terms best adapted to the comprehension of mortals. It is not, however, so easy to explain the more advanced teaching of the beatitudes, which is addressed to the thought that is awakening to spiritual things and looking away from the material.

The "poor in spirit" are undoubtedly those who feel their need of more spirituality, whatever their earthly station, and because of this they could never "covet," much less steal, the possessions of another. Their greatest need is to understand better that in the kingdom of heaven which is declared to be "theirs," no good thing is withheld from any one. This beatitude links itself readily to the third, which is a restatement of the psalmist's saying, "The meek shall inherit the earth." Now meekness has in popular thought too often been associated with tame submission to misfortune, yet Moses, the great Hebrew leader, was said to be the meekest of men. He certainly was not a self-seeker, for he renounced the splendors of a royal court that he might find a way to establish justice and righteousness in the earth, and he did find it, though he had to lead his people, on their way to freedom, through perils which would have crushed a fainter heart than his. A poet says of him,—

> This was the truest warrior
> That ever buckled sword.

Yet Moses' greatest triumph was not won on the battlefield; it was the giving of the moral law to all men and nations with the declaration of the one God, one Mind.

Digitized by Google

In order to understand more fully the meaning of meekness, we should think of him who was "meek and lowly," yet so mighty that sin, disease, and death, storm and tempest, were vanquished at his word; and who is there today, the world over, that does not bow before his name? As all this passes before us, we may well ponder our revered Leader's admonition respecting older students: "Unfold the latent energies and capacities for good in your pupil. . . . Teach the meekness and might of life 'hid with Christ in God'" (Science and Health, p. 445).

Although the beatitudes might furnish lessons for every Sunday of the year, because of their wonderful suggestiveness, we can glean only "here a little, and there a little," for the pupils must be encouraged to find and apply the truth for themselves, guided by the divine Principle of Christian Science. One of them, however, shines like a star, to light every step of our way, in childhood, youth, or mature years. It is this: "Blessed are the pure in heart: for they shall see God." Yes, even in what seems the deepest darkness of sin and sorrow, the pure in heart shall see good and rejoice in the radiance of the light which at length dispels every cloud and turns all sorrow into joy. Do not all the commandments point to this, and invite our obedience that we "may have right to the tree of life"?

ANNIE M. KNOTT.

Intelligent Activity

WHO of us does not stop ofttimes in the path or roadway, these days, to note with wondering interest the shapely little sand-piles which speak for the wonderful industry of the ants! All the day, and all the night, as we are told, they devote themselves to their work, with an energy that seems no less tireless than absorbing. When one realizes what of struggle and strain it must mean for these tiny creatures to excavate such quantities of earth and rock, he is impressed not only with their pluck and perseverance, but with the thought of what such a habit of application would signify to spiritual advance. In one respect these little workers are very greatly handicapped. If they think at all, it is only half-way round the circle of experience, and they are often no less stupid than clever. Nevertheless, they blunder less frequently than most people, and for the reason that these last have immeasurably less instinct, and but a modicum of genuine intelligence in its place.

Busy men are governed largely by the impulse of desire for money, position, or power. Dominated by such desires, the so-called success of many is attributed to the habit of "keeping everlastingly at it;" but here again the absence of right knowing abundantly explains the sage judgment long since rendered, that all their gains are but "vanity and vexation of spirit." Christian Science comes to give demonstrable right-knowing its due estimate and place, in fufilment of Jesus' mandatory words, "Ye shall know the truth." For the present we cannot give up working with our hands, and we have a duty to cooperate with the well-meaning of the world in the advancement of better beliefs; but we are to resist any tendency to substitute content with being busy for content with effectiveness.

Speaking of her self-awakening and world-awakening experience, Mrs. Eddy says: "For three years after my discovery, I sought the solution of this problem of Mind-healing. I knew the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration" (Science and Health, p. 109). Here we have that scientific spirit which honors and enthrones right consciousness, that demonstrable knowledge of the truth of being which is the inheritance of the church, but which has been so sadly ignored and forgotten by the great body of Christian believers that when brought to their attention they no longer recognize it as pertaining to the patrimony of faith.

The subject of that famous first chapter of Peter's second epistle might be named "Accretion through Industry," and he definitely relates it to science when in his exordium he says, "Grace and peace be multiplied unto you through the knowledge of God, and of Jesus our Lord." It is manifest that in his thought there is no "habitual drudge" factor in the requisites of religious advance, no ritualistic treadmill or profitless professionalism in spiritual ascension, but that all the steps he enumerates later on are to be taken "through the knowledge of him that hath called us to glory and virtue."

It is here that we may both profit by and improve upon our little friends of the wayside, whose splendid industry is so often fruitless because undirected by wisdom. This has been one of the most discouraging facts respecting Christian devotion as a whole, both in the home churches and in the mission fields,—that its success has been not at all commensurate either with its expenditure of effort or with the human need. There have been great heroisms of effort with but a negligible outcome, and this will be pronounced sadly true by the great body of Christian believers respecting their own individual living and labor for Christ. This failure is both discouraging and demoralizing, since forced content with "doing at things," always tends to superstitious conformity.

Christian Science teaches that the truest prayer is a continuous maintenance of the desire for good, that the most effective work is a continuous knowing of the reality of good, and it commends that these be wedded to that unflagging zeal which characterizes the industry of the ants.

JOHN B. WILLIS.

Among the Churches

Current Notes

PORTLAND, ORE.—Second Church of Christ, Scientist, which has been holding services for several years in the Woodmen Hall, East Sixth and Alder streets, has recently begun the construction of a new edifice at the northwest corner of East Sixth street and Holladay avenue. This is the fourth church edifice to be erected by the Christian Science denomination in Portland. First Church completed its building at Nineteenth and Everett streets in 1911. Third Church built at East Twelfth and Salmon streets a year ago, and Fourth Church opened its new building at Emerson street and Vancouver avenue the early part of this year. The lot upon which the new church is being built is 100 by 100 feet. The Sunday school room has a capacity of four hundred and fifty, while the auditorium will seat one thousand persons. The cost of the building complete will be approximately forty thousand dollars.—*Portland Oregonian.*

MILWAUKEE, WIS.—With hundreds turned away, the opening services of Second Church of Christ, Scientist, Highland boulevard and Twenty-seventh street, were held on Sunday morning [June 7]. The dedication exercises will not be held until later in the year. With a seating capacity of two thousand people, the church is considered by many to be one of the best examples of church architecture in Milwaukee. The building was erected at a cost of one hundred and twenty thousand dollars. Work was started on it last July.

Milwaukee Sentinel.

UTICA, N. Y.—Shortly after the sun had risen this morning [June 15], the Christian Scientists of Utica and vicinity gathered at the corner of Avery place and Genesee street, where the corner-stone of First Church of Christ, Scientist, was laid. A short history of Christian Science in Utica stated that in the year 1888 a student of Mrs. Eddy came to the city to take up the work of teaching and the practice of Christian Science. Some healing work was done, and this soon aroused interest, so that meetings were held to explain the teaching of Christian Science. The first meeting was held at the corner of John and Mary streets in 1889, and thereafter at the homes of interested students. Later these meetings were held at the Bellevue Flats, corner of South and Steuben streets, for a short time, then again at the homes of students, then at the Christian Science Home, 11 Rutger street, where regular services were held and much interest was manifested.

First Church of Christ, Scientist, of Utica, N. Y., was organized at 11 Rutger street in March, 1894, with twenty-five charter members. Dobson Hall, at Oneida square, was the next place used, and later Bass' Hall, on Oneida street. While meetings were held there, a proposition from the New Century Club to buy their bonds with the building fund money was presented and accepted, and in 1897 the location was transferred to the New Century Auditorium on Hopper street, where regular services have since been held. The lot on Genesee street and Avery place was purchased April 6, 1907. Excavation for the foundation of the new church was begun April 6, 1914, just seven years from the date of purchase.—*Utica Herald-Dispatch.*

GOSHEN, IND.—The Christian Science church property on North Fifth street has been completely remodeled and refinished, and tomorrow [June 7] will see the first Sunday service in the new church. Services were held in the building last Wednesday evening, before the completion of the building.

Goshen News-Times.

The Lectures

Muskogee, Okla.

The remarks by Judge R. P. de Graffenried of the district court, in introducing Bicknell Young at the lecture on Christian Science in the Hinton Theater, were in part as follows:—

When we contemplate the manner in which the people of the world are becoming interested in and adopting the basic truths of religion as enunciated by Mrs. Eddy, it seems marvelous. Well do I remember that only a few years back there was but a handful of those who adhered to the fundamentals taught by her. I know that it is hard for a person reared in an orthodox church and taught its principles and doctrines from infancy, to give this subject a fair and honest consideration. We are too apt to condemn it as sacrilegious without knowing one of its fundamental teachings. We should strive to overcome this prejudice and give this subject the due and earnest consideration that it deserves, and if after fair investigation and conscientious thought we cannot embrace this religion, then no harm is done. I have little respect for the individual who will denounce this or any other subject as a heresy, and at the same time confess his ignorance of its teachings.

It is said that the Christian Science religion is practical, a religion for the home and for the business office, a religion which reaches out and seeks to uplift fallen humanity and implant within them a yearning desire to lead a better and nobler life. It is said that it is a religion which brings joy, happiness, and contentment; and if this be true, it should be welcomed by the people in all countries and its doctrines be embraced by all classes.—*Correspondence.*

✧

Halifax, England

A public lecture on Christian Science was given in the Victoria Hall by Col. William E. Fell. The chairman, J. W. Harwood of Liverpool, in opening the lecture, said:—

The subject of this lecture is attracting the attention of thinkers all over the world. Your presence in such large numbers indicates the great amount of interest there is in your own town. The reason for this is not very difficult to find, for Christian Science is not only reiterating the teaching of Christ Jesus, but is proving it to be true by repeating the works which our Saviour said should follow the understanding of his words. It was this eminently practical nature of Christian Science, as manifested in healing the sick, which appealed to me.

About ten years ago a friend, who is a resident in this town, was staying with my sister in Lancashire. She was suffering from a spinal trouble of many years' standing, which had defied all efforts to cure. The physician who was brought in, stated that there was nothing known in *materia medica* which could give relief. To the surprise of every one he very kindly advised Christian Science treatment. This was obtained, and the healing was almost instantaneous. Since that time I have been an earnest student of Christian Science. I have proved for myself that Christian Science heals both physically and morally, removes family discords, destroys the desire for intoxicants, and heals disease.

When Jesus was asked by the messengers of John the Baptist, "Art thou he that should come? or look we for another?" the reply did not include any recital of creed, dogma, or belief, but referred solely to the works. He said, "Go . . . and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached." When doubt arises as to whether Christian Science is really Christian, and whether it is really scientific or the exact and demonstrable knowledge of truth, the works are again offered as proof.—*Halifax Daily Guardian.*

✧

Los Angeles, Cal.

William R. Rathvon delivered three lectures on Christian Science in First Church edifice. At the first Alice E. Frackelton, in her introduction, said in part:—

Christian Science has brought to the world the right idea or knowledge of God, a God who is infinite, divine Love, unchanging Principle, eternal good, who sends no sin, sickness, or death upon His children. It gives the correct understanding of Jesus Christ, of the true man as God's spiritual image and likeness, and enables us to demonstrate with scientific certainty these truths. It is the Holy Ghost, or Comforter, the impersonal Christ, Truth, which has come to destroy sin, sickness, and death, or the ills to which flesh is heir.

At the second lecture the remarks of Theo. A. Chelson were in part as follows:—

Nineteen centuries ago, Jesus said to those who were willing to listen to him, "Ye shall know the truth, and the truth shall make you free;" and he went about healing the people of their mental, moral, and physical diseases, thus proving

Digitized by Google

his words by his deeds. Christian Science reveals to us this truth about God, man, and the universe; and this truth, when understood and correctly applied, frees mankind today as readily and as surely as it did nineteen centuries ago.

The remarks of E. E. Sutherland at the third lecture were in part as follows:—

The words of the speaker that we are to hear are practical, not theoretical, and are the result or outcome of divine law discovered and established through undeniable evidence. After demonstrating that the understanding of God as revealed through Christian Science heals the sicknesses and sins of the world today as it did during the first century of the Christian era, the good news is heralded abroad that the full command of the great and blessed Master may be obeyed. In the degree that one preaches the gospel and heals the sick through spiritual means only, as taught, practised, and commanded by Christ Jesus, is he glorifying God and proving himself to be a Christian Scientist.—*Correspondence.*

Bellingham, Wash.

Clarence C. Eaton delivered a lecture on Christian Science at the Metropolitan Theater. The speaker was introduced by C. A. Swartz, who spoke as follows:—

Many good things have come from the "Old Bay State" along the lines of human endeavor for the uplift and betterment of man, but nothing that has ever come from that cradle of liberty has made so great an impression, and has so world-wide an influence, as the great Principle and truth discovered and taught by that good and deeply consecrated woman, Mrs. Eddy. In their mortal, mental conceptions, men have ever sought for something better and higher, looked for something beyond their mental ken, in their efforts for happiness, harmony, and liberty. To secure to mankind this great prize, many different denominational churches have been organized, resulting no doubt in much good.

Over forty years ago Mrs. Eddy discovered and gave to the world Christian Science, based on the scientific statement of spiritual truth. Its worth is demonstrated by the many thousands of its adherents all over the civilized world who have been healed from sin and sickness through the teachings of this great Science.—*The Bellingham Herald.*

Manchester, England

There was a large attendance at the West Didsbury Public Hall to listen to a lecture on Christian Science given by Prof. Hermann S. Hering. Lady Victoria Murray, of Disley, who presided, said Christian Science was no new religion. It was simply Christianity understood. In the days of its first great demonstrator, Jesus the Christ, Christianity healed the sick and was available for all the needs of man. Moreover, for a period of about three hundred years from that time, Christians continued to give the requisite proof of their understanding of Christianity by healing the sick. The principle of mathematics was of no use to one who did not understand it. He could not prove a single rule of mathematics without understanding something of its principle. It was precisely the same in regard to the divine Principle of the universe, God, Love. God must be understood, not merely believed, and this understanding healed the sick. She spoke from experience, as one having been incurable. She suffered from spinal and bone disease all her life. "While in this condition, and not yet grown up," continued Lady Murray, "I read 'Science and Health with Key to the Scriptures' by Mrs. Eddy, which is the text-book of Christian Science, and was cured. It may seem strange, perhaps, that the reading of a book could cure one of organic disease, but that book unlocks the treasures of truth contained in the Scriptures and instructs one in the Science of Christ's teaching, the Science of Christianity."—*The Advertiser.*

Pawhuska, Okla.

Judge Clifford P. Smith, who delivered a lecture on the subject of Christian Science at the Jackson Opera House, was introduced by the Hon. A. R. Museller, who said in part:—

Time does not clarify nor science yet explain the mystery of pain, of life, of death. The triumph of materialism was all this world could see, and one by one the cords of matter tied the spirit fast unto the lifeless clod, and mortal weakness fought and flayed the soul. No one seemed to come to lift the sore burden, until from out the East, from out New England's way, there came a woman bold, who bravely said: Mind should triumph over matter. The form you see is not the man or woman real, and all or much of sickness, of malady, of pain, is but the weakened sense yielding unnecessarily to the call of matter's fleeting force. Gird up thy loins, despondent man; thou never wert but to be free from pain, and happy.

It seems to me—perhaps I do not know, and yet it seems to me—that when these thoughts were expressed, Mrs. Eddy saw the star of Bethlehem, as did the ancient shepherds once before, while with their flocks on fair Judæa's hills at night. And out of this stupendous faith has grown a church which in a few short years numbers its devotees by thousands. Its ramifications cover the whole civilized world, and its membership enfolds happy people, clean and healthy people, living decent and law-abiding lives, strangely free from care and sorrow, and all within the tenets of the teachings of this church.—*The Pawhuska Capital.*

Crowell, Texas

The Rev. William P. McKenzie lectured on Christian Science at the Bell Opera House. He was introduced by Judge G. W. Walthall, who said in part:—

It is one of the beauties and chief claims of Christian Science that it lays its entire hopes of recognition and advancement upon the proposition that its tenets are not only capable of demonstration, but that they have been demonstrated and proven true in numerous instances. Whether these claims are true or can be verified by facts, is a matter of historic verity and within the power of each one to satisfy himself. It may be said, however, without the fear of any successful disputation, that this faith has enjoyed a most wonderful growth in the past few years; that today it numbers its votaries by the thousands, and has its churches and societies in every civilized country on the globe.

Correspondence.

Lectures to be Delivered

Los Angeles, Cal. (First Church)—George Shaw Cook, Church Edifice, 1366 South Alvarado street, 8 p.m., July 25, and 3 p.m., July 26.

Manila, Philippine Islands.—Prof. Hermann S. Hering, Grand Opera House, 8:30 p.m., Aug. 28.

Testimonies of Healing

Seven years ago I went to a Christian Science service in New York city upon the invitation of a young neighbor in the apartment into which I had recently moved. She spoke to me on the street, and I replied: "I cannot speak on the street loud enough to be heard. I have lost my voice." She said, "Come down to our church and you will find you have not lost your voice, for God never takes back His gifts." This held my attention, and that evening, Wednesday, I attended a Christian Science testimony meeting for the first time. What I heard satisfied me, answered many queries that I had asked ministers and teachers, all of whom told me I should not ask questions. As I grew older they said these questions were not to be answered until we were in the next life. I came home from that meeting exclaiming to my mother, "Well, I've found what our whole family has been reaching out for always,—Christian Science." People had called us agnostics, atheists, truth-seekers, etc., but we were just reaching out for a loving God who satisfies both head and heart, and I found that it was all here in an organized church, the Christian Science church.

For six months previous to that I had been suffering from a serious difficulty with my voice. I could not sing at all, and even when speaking I was hoarse. Occasionally I could not articulate for several minutes at a time. Singing teachers said this condition was due to a bad strain, that a rest of a year or two was absolutely necessary. One of New York's best teachers told me I would never sing again. Two physicians pronounced the difficulty partial paralysis of the vocal cord, and it certainly seemed true; but in less than two months, as a result of Christian Science treatment, I was singing as I never sang before. Instead of resting in inactivity, as prescribed by doctors and teachers, I worked under the guidance and treatment of a Christian Scientist, and learned among many other priceless lessons that inactivity is not rest, but that working in the real thought of Life as spiritual, not material, is resting in God. Seven years have passed, during which I have held solo positions in New York, also in my Canada home, and have taught steadily, with never a return of the trouble.

I have let so long a time go by, years filled with proofs of the truth of Christian Science, that I hardly know where to begin. My two children have been healed of fever, colds, and whooping-cough. My little girl's cough seemed as bad as that of her playmates, but it lasted only two weeks, while the other children kept it up for the prescribed time, eight or ten weeks.

This past summer I was healed in two weeks of an acute attack of rheumatism, to sense most painful. I could not straighten up for two weeks, although I was not in bed a day and did not omit to serve a single meal; but I knew that Christ Jesus healed the crooked woman, and his "Lo, I am with you alway," comforted and sustained me until the healing came. Not a twinge have I had since. A doctor said it was a bad attack. I knew of this only because my boy awoke with a rash and his father sent for the doctor, who pronounced his case measles, but looking at me he said, "You are a sick woman." I told him that I knew where my healing would come from. Friends have since said that I was lucky to get rid of the rheumatism so soon. I tell them that luck does not enter into Christian Science prayers and results any more than into mathematics; that God is divine Principle, and that Mrs. Eddy has worked out the rules of healing through the study of the Bible, especially the life and works of Christ Jesus. My wonder is that every one cannot see it. Many tell me they think the Christian Science teaching beautiful, but that the world is not ready for it.

My gratitude knows no bounds, and my prayer is that I may overcome self more and more, until my light so shines that others seeing it will glorify God as taught in Christian Science.

Grace Dunbar Crandall, Moncton, New Brunswick, Canada.

✦

It is nearly five years since I first heard of Christian Science. For some years prior to this I had been gradually becoming more ill, until I was weary of trying to gain strength enough to do my work in the home. I was bitterly disappointed at not being able to look after my husband and children in the way I desired. After asking the physician if I would ever be strong again, he told me I would never be able to work much, but with great care I would live a long time. Being utterly wretched, I started to pray very earnestly that I might be taken out of this world, and I could not understand why such earnest prayers were not answered.

At this time I was asked if I would like to read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I accepted the loan of it, and I shall always have a vivid recollection of the comfort gained during the reading of the chapter on Prayer. After reading the book carefully for four evenings, I resolved to rely only on God, and to prove whether or not what I had read was true. The result was to me most wonderful. I was suddenly and absolutely healed of all my ills, some of which were an abnormal condition of one kidney, internal trouble from the birth of the last child, severe headaches which lasted for days, inability to retain food, and sleeplessness. I have never been in bed for one day through any kind of sickness since, although previously I was laid up most of the time. Now I am doing all my own work, and am getting stronger every day. I have had the pleasure several times of hearing people remark upon the great amount of work I can get through.

My one desire is to prove my thankfulness to God for all these blessings by striving to have more of that Mind in me, "which was also in Christ Jesus."

Mrs. J. M. Lambert, Fulham, London, England.

I am not a Christian Scientist, but wish to state that my wife was healed by reading the Christian Science text-book, and she has not been ill for one day since that time, although she was continually ill before then.

T. G. Lambert, Fulham, London, England.

✦

I desire to express my gratitude for the many blessings that have come to me and to my family through Christian Science. For many years I was very much prejudiced against this teaching, for I was viewing it from the standpoint of *materia medica*, as I had spent years in the study and practice of medicine, and for five years of that time I lectured in the medical department of a midwestern university. I believed Christian Science to be a form of hypnotism, and therefore an imposition on the people, and I felt it my duty to oppose what I thought it to be, and therefore proceeded to do so.

In the fall of 1902, through the redemptive power of Truth as taught in Christian Science, my wife was healed of an internal abnormal condition after everything medical had failed. When I learned later of the source of her healing, I did not believe that she could remain well. She has done so, however, and through the study of the Bible and the Christian Science text-book, "Science and Health with Key to the

Digitized by Google

Scriptures" by Mrs. Eddy, I am learning more clearly each day why this was not only possible, but indeed natural. At that time I was addicted to the use of tobacco in different forms, the social drink habit, profanity, etc., and through Christian Science I was healed of these errors without effort on my part, whereas all my efforts to rid myself of them in the past had failed. The fact that these habits and appetites never returned, and that I noted the great reformation, both mentally and physically, which was taking place in the life of my wife as she gained a better understanding of Christian Science, caused me to investigate this teaching more fully.

The result of this humble and earnest investigation was that much prejudice, selfishness, envy, and many other happiness-destroying conditions have been overcome in my experience. As I, through reading the Bible and the Christian Science literature, gained an understanding of God as never-changing divine Principle, omnipotent and omnipresent good, I could see more surely the empiricism of *materia medica*, and I abandoned its practice in 1908. A few months later I was healed in Christian Science of a kidney affection, from which I had suffered periodically since childhood. I am very grateful for the physical healing, but the spiritual uplift and regeneration that I have experienced through the understanding of Christ, Truth, as it is taught and explained in Christian Science, is a cause for much gratitude.

I am indeed thankful to God, also grateful to our dear Leader, Mrs. Eddy, for this much-needed truth, given to us in Christian Science.

CHARLES O. FLETCHER, M.D., Santa Ana, Cal.

I have long wished to express my gratitude to Christian Science for the true happiness and joy it has brought me, as the growing understanding of God's word has healed me of sorrow and sickness and redeemed me from sin. I had no doubt that Christian Science was the word of God when I first heard of it and the healing accomplished through the understanding of God which it brings, for I was waiting and looking for the time when healing would be done according to Jesus' means, and so was prepared to turn to the teaching of Christian Science when medical aid failed.

It was through reading a copy of the *Sentinel* containing an article entitled "God is Love," that I was instantly healed of uterine displacement, for which I had been treated by physicians but received no permanent relief. My husband, being a physician, did not understand my healing, since I had not told him of my investigation of Christian Science because of his prejudice, born of ignorance; but as I did not ask for medicine any more, he supposed his remedies had healed me, until I told him the truth. Desiring more than anything else on earth a demonstrable knowledge of God, and finding and proving to my own satisfaction the truth of Christian Science, I could not be shaken by any argument. I continued my study, and finally my husband, realizing his need, caught glimpses of the meaning and purpose of Christian Science, loved and proved it for himself, and finding the Christian way of healing the sick more effectual than any material method, discontinued his medical practice.

Since beginning the study of the Bible and Science and Health, I have witnessed or experienced the healing of acute lung trouble, poisoning, a skin disease, stomach disorder, toothache, many bad habits, such as the taste for tobacco and liquor, and much bitterness and sorrow. We now have a little daughter nearly four years old, at whose birth no other agency was needed than the understanding of Christian Science, God's law, through the help of a dear friend, a practitioner of this truth. This experience was an occasion of strength instead of weakness, as on past occasions of a similar nature, there being no after-pains whatever. I have never experienced a return of the ailments of which I was healed, and my little daughter knows that only Love heals.

Our son, since my healing in 1902, when he was three years old, has had and desired no other help in trouble than Christian Science. He and his sister are grateful members of our Sunday school, and he is proving the truth for himself. Surely, we have cause for gratitude, and are thankful to God for this revelation of Truth through our dear and revered Leader, Mrs. Eddy. My daily prayer is to live so close to God as to glorify Him in all my thoughts and deeds.

I am indeed grateful for the life and example of our Leader, and the wisdom wherein Love prompted her to establish the Christian Science publications, by which the messages of Love and healing may reach all.

BERENICE CORNELL FLETCHER, Santa Ana, Cal.

✧

I have long delayed sending my testimony of the peace and comfort that Christian Science has brought into my life, and it is with loving gratitude that I give it now. I came into Christian Science two years ago for nervous breakdown, which was caused by a series of bad habits, and today the nervousness has entirely left me and the bad habits have also disappeared. This nervousness was accompanied by a fear of being alone. At one time I was afraid to walk around the block; and it was several months before I could go down-town on the street-car without some one with me. Now, through the understanding that God is everywhere, the fear has entirely left me, and I have absolute trust in God, in whom "we live, and move, and have our being." My business takes me out of town occasionally, and on each trip I have had perfect peace, fearing nothing, because now I have learned to have faith in God.

I am grateful for Christian Science because it has taught me to live right, and each day I am learning more of God and how to be kind and unselfish to my neighbor. I am indeed thankful to God, and grateful to Mrs. Eddy for a religion that teaches us to be better men and women.

WILLIAM H. FLENTYE, Decatur, Ill.

✧

During the ten years of my journey "from sense to Soul" (Science and Health, p. 566), or in other words, since I began the study and application of Christian Science, so many blessings have come into my life that it would take much time and space to tell of them all. Nor can I ever put into words what Christian Science really means to me. Its revelation, sustained by demonstration, of what God is and of what man is in his relation to Him, has opened to me a vista of thought and spiritual research, the earnest pursuit of which leads up to the highest standard of being.

All my life I had groped about for a God whom I could understand and love; in my inmost heart I felt that somehow, somewhere, there was such a God, but how to find Him or draw near to Him I did not know. All about me I saw sickness, sin, and misery of every description; everywhere evil seemed to be more powerful than good. This condition of thought continued until I came to Christian Science, though I came to it merely for physical healing. I was then living in Chicago, and it was there that I received my first glimpse of this glorious truth. I love to recall my entrance into Christian Science, and to compare my last visit to the doctor with my first visit to a Christian Science practitioner. Both occurred on the same day.

From childhood I was afflicted with stomach disorder, which was believed to be inherited. As far back as I can remember

Digitized by Google

there were always some things in the line of food of which I could not partake without subsequent suffering. As I grew older, the trouble grew worse, and other complications set in which increased my suffering. At this particular period I had been under the doctor's care for some time. I was taking medicine, having electric massage treatments, and was observing a most rigid diet without being in the least benefited by it; in fact, I was growing steadily worse. I had to visit the doctor every other day, and as I did not improve, I grew discouraged and most despondent. I asked him one morning whether he thought I would ever be cured. He said that he did not consider my case incurable, but it would be a very slow process of healing; that I would have to continue the treatment indefinitely, as well as observe the rigid diet. I told him that morning that I was starving to death, and begged him to let me have at least a little more to eat each day; but he was most emphatic in his refusal, and in impressing upon me the fact that it would be dangerous for me to take any more food than he was allowing me. I left his office wretched in mind and body, feeling that life as I was living it was worth very little.

I returned home, and while brooding over my condition, suddenly the words Christian Science flashed through my mind. All I knew about this teaching at that time was that it claimed to heal the sick without drugs; but I had never given it any thought, as the mere mention of the subject at home or among my friends was met with ridicule. However, those two words clung to me, and I could not get them out of my mind, so I decided then and there that I would try Christian Science. I knew where a practitioner lived, and I went there at once, without letting any one know where I was going. She was at home, and I told her what I wanted and started to give her a vivid description of my case, as I had been accustomed to do with the doctors; but she very quietly and kindly told me that it would not be necessary to go into all the details. She then gave me a treatment, and soon I felt a wonderful calm and peace come over me. When she had finished, she handed me a book and asked me to take it home and read the first chapter in it. She also said that I need not diet any longer, but could eat whatever was set on the table. I fairly gasped when she said this, and reminded her how very emphatic the doctor had been that very morning regarding my diet; nevertheless, she told me not to be afraid, but to do as she said.

When I left that practitioner's office I was a new being, radiant with hope and happiness. Only a few hours had elapsed since my visit to the doctor, yet what a change! I could not get home quickly enough, I was so eager to look into that book. It was entitled "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had never heard of the author, and I wondered who she was. Little did I realize then with how much gratitude and love I would think of her ever after! On arriving home I immediately started to read the first chapter, entitled Prayer, and as I read, the scales began to fall from my eyes, and I knew that I had found what I had been looking and hungering for, the truth about God and man. I had found the God whom I could understand and love, and I was healed.

That night I ate at dinner what everybody else did, the first real meal I had eaten in a long time, and how I enjoyed it! I slept soundly all night, and the next morning I went to see the practitioner again. She gave me another treatment, and that was all. From that day to this I have eaten whatever was set before me, never fearing any bad results and never experiencing any, except an occasional slight attack of the stomach trouble, which has always been very quickly overcome with Christian Science treatment. Before coming into Science, I was almost daily taking medicine or using material applications of some sort. In the past ten years I have taken no medicine, nor have I used any material remedies whatsoever.

I have had better health and strength than ever before; and while I shall always feel grateful to the physician for his kind and earnest efforts to help me according to the best way known to *materia medica*, still I know that I have found a surer and safer way to health and happiness, as has been proven to me most conclusively in the past nine years. The beloved disciple tells us that "God is love;" and on page 13 in Science and Health we read: "Love is impartial and universal in its adaptation and bestowals. It is the open fount which cries, 'Ho, every one that thirsteth, come ye to the waters.'"

JEANNETTE CLAYTON, Ottawa, Ontario, Canada.

✧

I am indeed grateful to Christian Science for the many blessings that come to us through a better understanding of our Father-Mother God and man as His image. I am especially thankful for a demonstration that was made for me in June, 1912. I was taking a lay-off from my regular work as locomotive engineer to attend the graduating exercises of the University of Utah and the Salt Lake high school, as I had a son graduating from each of the schools. As there was a day between the two events I went up to Ogden on some business. Returning at noon, I wished to reach home as soon as possible, and I made ready to get off at a point opposite my home, where the train slowed down at a signal tower. I had a valise in my left hand, and with the other on the hand-rail of the coach, when I reached this point I sprang off. I did not immediately let go, as I hoped to regain a better balance, but instead this made matters worse, and I was dragged a short distance. I fell face downward and very close to the rails. To keep from being dragged under the train I was trying to rise, when the steps of the following coach struck my hip and back, rolling me over several times. The pain in my back was intense and sickening, but I declared the truth, contending that there are no accidents in Mind and that God's man cannot be injured.

After the rest of the train had passed me, I got up, and accomplished the walk of two blocks. At first it seemed that every step would be the last, but as I kept on declaring the truth, I was able to walk easier as I neared home. Arriving there, I found my wife was away, and feeling very faint, I went to the telephone and asked for help from a Christian Science practitioner. I could only say, "Please help me to know that there are no accidents in Truth." She said that she would take up treatment immediately.

When my family returned home some hours later, I was able by a supreme effort to get up from the couch where I had been lying. At sight of me my wife wanted to know what had happened and said I looked very ill. I told her of my experience, and she examined my back, finding it very much swollen and discolored. The skin had been torn off for a space as large as the palm of my hand. She washed and cleansed the wound, and put a soft piece of old linen over it. She also called the practitioner, told her the nature of the injury, and asked her to come to see me, which she did. The next evening I was able to dress and go to the graduating exercises, and to sit for two hours without experiencing much pain. I could walk but very slowly, and getting up and down was very painful. In a few days the sore began to heal, but a big hard lump formed and then seemed to change to water. There was very little discharge from the wound, and this watery enlargement was gradually absorbed. In eight days I returned to work, still somewhat stiff, but entirely

Digitized by Google

free from pain. The healing continued, and in about three weeks only a red spot remained where the new skin had formed, and I was entirely well.

The injury was not reported to the company doctor, as we wished to rely entirely on Christian Science for healing. We all held steadfastly to the truth, even when during the first week there seemed to be evidence of poisoning. This was overcome as the fear in our friends was destroyed. This healing is only one of many blessings that have come to us through Christian Science.

MORGAN K. BANNING, Salt Lake City, Utah.

✧

It is with a heart full of love and thankfulness to God that I wish to acknowledge some of the many blessings Christian Science has brought to me. I am gradually gaining a spiritual understanding of the Bible, and I love to read it; but before I read "Science and Health with Key to the Scriptures" by Mrs. Eddy, I hardly ever looked into the Bible, as I could not understand it. I believed in God, and that He would save every one, but He seemed very far away, and I never had a prayer answered until I came into Christian Science. It is a comfort to know that God is always near, guiding me "lest my footsteps stray" (Poems, p. 14).

I had suffered with corns for about twenty-eight years, and often thought I would give anything to be rid of them. Life was becoming a burden to me, and I was growing very disagreeable. I called on a Christian Science practitioner and asked for her help, and in less than one week I experienced great relief, for which I am very grateful. I am able to be on my feet all day long and very seldom feel any bad effects from it. I also had eighteen teeth extracted at one time, with scarcely any pain. This was a great surprise to the dentist, and he acknowledged he never saw anything like it. I could tell of many other healings in my home, for all the family are interested in Christian Science. We are daily striving to gain more understanding and have been able to make several good demonstrations.

I am very grateful to Mrs. Eddy for giving us Science and Health, which has done and is doing so much for mankind.

MRS. M. C. PETERSON, Kalispell, Mont.

[Written for the *Sentinel*]

Into the Light

IDA F. W. FOSTER

THE way seems dark, my Father;
Cloud upon cloud seems drifting slowly o'er my head
And loud the thunders roar about me;
When lo! above these clouds of fear I see Thee stand,
And hear Thee say, in voice of sweet command,
"Fear not," and, "Take my hand."

And through the clouds of sorrow, sickness, sin, and fear,
The light of Truth shines clearly far and near,
And leads me to behold the secret place
Where Love doth dwell, and from the gloom
Leads safely home His child so dear.

Thus led, the way still brighter grows,
And though I sometimes stumble and forget,
I closer cling, and ne'er look back with longing or regret.
Thus ever with my face turned tow'rd the light, my hand in His,
I know that I shall stand upon the height and see Him as He is.

From Our Exchanges

[*The Watchman-Examiner*]

Historical criticism may rub off the rust of the sword of truth, but has it sharpened it? We study so much of the past movements of the church that we have little strength left for present endeavor. We watch the waters that have passed through the mill, but the waters that ran the mill of yesterday are of little use to us today. It is interesting to view the past with a telescope, but it is far more profitable to study present movements and conditions, and in the companionship of Christ to find the master keys that will unlock hearts, organizations, and movements now closed to the faith we represent.

It is not a key of gold, however skilfully wrought, that will unlock the door of the world to the spirit of Christ. The medieval church had it, but it could not open the door. The modern church has it, and perhaps realizes its value only too much; but many hearts remain still closed to the messenger of Christ. The early church had no key of gold, but during the first three centuries hardened hearts were unlocked, an empire trembled into a new vision, and Christians passed everywhere, preaching quietly but persistently, in life and in death, with a force that was irresistible, and the life of Christ went whithersoever it would.

[*The Universalist Leader*]

The new theology which is breeding in the social consciousness of the world today is full of the romance and poetry of great anticipations. Under God it expects a new birth of spiritual liberty and a new birth of spiritual power in free men. The prophet of the new times will have the Columbus spirit. He will dream of the other side of the world, rich with the treasures of the mercy and the love of God. And he will sail forth upon the infinite sea, to endure all hardships, to trust to the winds of heaven and the waves of the great deep until his frail bark touches the farther shore. For at last and beyond all our Christian faith is the sum of all romance, of all poetry, of all imagination. It is the great adventure of the soul, searching land and sea, mountains and waste places, for the vision of God, for the New Jerusalem, for the river of life where the leaves of the trees on either side are for the healing of the nations.

[*The Continent*]

No difference what the cause of it, whether harsh struggle for livelihood or covetous absorption in getting wealth, whether ignorance or indifference or sheer stolidity, a life is always tragic which is barren of fresh, stirring interest in the surrounding world. Yet that tragedy includes the vast majority of people, even amid the superior intelligence of favored America. Hosts of humanity live along on a dead level of their own grind of affairs, doing what they must to get along in the world, but with no sense of range and liberty in the glad free things of air and sky and light and life.

The man who passes by God's food for his spirit, can do nothing else than to resort to man-made stimulants for his nerves—or else lapse back to a clod of clay. And a great part of that food is the wonder and beauty that God has packed into His visible creation,—the appeal of flower and mountain, melting snow crystal and everlasting star, shine and shadow, to the sense of color and the love of light and the joy of knowledge with which He has meanwhile packed full the human soul.

If, however, a man, through false shame or sordid desire or because he has not battled courageously with depressing conditions, suffers that native response to be crushed out of

Digitized by Google

him, he must expect to forfeit the inspiriting impetus for lofty living that his creator meant thus to endow him with. One may live all his life level with the ground if he will, but it can only be at the cost of the wealth with which God has filled the arch of sky over his head.

[John Reid Shannon, S.T.D., in *Zion's Herald*]

To be Christlike is to be godlike; to be godlike means oneness with God. Christianity's message is not what man is, but what he may become,—he may become like Christ, as the bulb like the lily. The essence of apostolic teaching is this: He that saith that he abideth in Christ ought himself also to walk even as Christ walked. Christ hath left us an example that we should follow in his steps. Because as Christ is, so are we in this world. Christ is the prophecy and promise of what man may be, as the oak tree of what the acorn may be. He makes proof of our nature, and finds it like the nature of our heavenly Father; for humanity and divinity are in substance one, as are sunbeams and the sun.

We share the human nature which, in Jesus, flowers out into beauty and goodness, into holiness and sinlessness. He is not endowed with a nature that removes him from the category of our human experiences; he is not separate from human beings; a partaker of our own flesh and blood, he lives his life under the same conditions and laws as other human life. He is as the human Master of the soul, as our Lord in humanity, because he is made like unto his brethren, having a nature essentially the same in kind as theirs.

[Dr. G. Campbell Morgan in *The British Congregationalist*]

All creeds of the Christian church that are systematic expressions of belief are to be numbered among the traditions of the Christian church,—sincere, wonderful, but human interpretations. In that moment when a number of men gathered together to formulate into definite expression the doctrines of the church, I am not saying they were doing ill work, but they were giving us traditions, human interpretations. So also there sprang up in process of time certain definitely declared forms of church polity, and there grew up set forms of church life differing from each other,—all tradition. Sometimes these traditions took the form of uniformity of dress, modes of common speech; and so the church of God today has a mass of tradition that has grown up, conflicting, contradictory, as great as were the traditions that had grown about the Hebrew religion in the time of Christ.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

The demand for beauty will perhaps be the crown, as it was the beginning of creative Christian power. Whatever life is, life must be beautiful. The soul must not be starved or degraded by being surrounded by ugliness. Beauty will be no luxury, no addition, no mere adornment of life, but life itself seeking expression. The Christian city of the future will surpass Athens at its best. It has already been described in glorious symbol, which is perhaps more literal than we have dared to think: its gates of pearl, its streets of gold, its walls of precious stones; the city itself a glorious temple of God, and the daily work of its citizens the praise of God and the Lamb.

[*The Christian World*]

It is not by bowing to tradition that we shall reach the true life, but by using all that is best in it as material for our own spiritual realization and as nutriment for our own mind. In doing so, we shall not fail to establish points of contact with the Christians of all ages; we shall find that every generation of God's children has been warmed by the same love, upheld by the same power, and inspired by the one Spirit.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of MRS. EDDY, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

New and improved class record books for use in Sunday schools are now published and ready for distribution. Size 5⅜ x 8¼, with ruled pages for two years' record, printed on good quality paper and durable cover. Prices of books, registration cards, and coin envelopes as follows: One hundred class record books, $6.50; 12 copies, 90 cents. One hundred registration cards, 25 cents; 12 cards, 10 cents. One hundred coin envelopes, $4.00; 12 envelopes, 50 cents.

"Christian Science Healing: Spiritual and Scientific," a lecture by Prof. Hermann S. Hering, C.S.B., has been published in pamphlet form and is now on sale at the prices of the regular pamphlets, as shown on the opposite page.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 85 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

An urgent appeal to the business men and taxpayers of Connecticut to assist in solving the highway problem of the state is being made by the Connecticut Good Roads Association, which has begun an energetic campaign to secure the construction of permanent roads. In the trunk line system of Connecticut there are fourteen hundred and twenty miles of highway. On Oct. 1, 1915, a total of nine hundred miles will have been improved. Only a very small part of the nine hundred miles improved has a hard surface. The greater part of the roads are water-bound macadam. The state highway commissioner has asked for an annual appropriation of five hundred thousand dollars for renewals and reconstruction of trunk lines, and an equal amount for trunk line repairs, all to be used, wherever necessary, in placing a hard surface of some kind on the road.

The sale of the United States battleships Mississippi and Idaho for use in the Greek navy was consummated July 8 by the delivery to Secretary Daniels of a check for $12,585,275.96. The check was signed by an American agent representing the Greek government, which does not figure directly in the transaction. The ships will be delivered to the Greek government within a few days, the Mississippi at Hampton Roads and the Idaho in the Mediterranean, probably at Gibraltar or Villafranche. The Idaho will be known as the Lemnos, while the Mississippi will take the name of Kilkie, both names famed in Greek history.

A concern owning fifteen thousand acres of land on the Atrato river, Colombia, eight years ago planted thirty thousand Spanish cedars from the seed on the tract. It is expected that in two more years these trees will be classed as merchantable timber. Last year one of the trees was cut for the purpose of measurement. It yielded a thirty-foot log squaring fourteen by fourteen inches. The same concern is planting forty thousand additional cedars this year. The trees are being planted twenty-one feet apart, and for the first three years the land between will be used for raising corn and bananas.

The absence of a standard gage on the railways of Argentina causes increasing inconvenience as traffic between far-distant points of the republic increases. Government engineers are now at work in an attempt to unify the track situation. The three gages of the country also complicate export shipping from the ports. The ports of Buenos Aires and Bahia Blanca are served by broad gage lines only, while those of La Plata, Rosario, and Santa Fé have the two gages. With the more recent advent of the standard gage at Buenos Aires there will be three gages.

The contract for the first unit of the extensive improvements that are to be made by the Dallas (Texas) Union Terminal Company has been awarded. It is for the erection of the Union station, which will cost two million dollars. The total improvements to be made will aggregate in cost five million dollars. The contract for the station building requires that it shall be finished within twenty months. It will have a capacity of thirty passenger trains at one time and will be able to accommodate from five to seven hundred trains a day.

Waters of Cape Cod and Buzzards bay met in the Cape Cod canal Sunday, July 5, when the last dike was pierced. The first water to back up was from Buzzards bay. The difference in the heights of tides is five feet, and the difference in the times of high water, three hours. A three-mile current substantiates the calculations of the engineers. The official opening will take place July 29. Dredges, meantime, will clear away what the action of the tide does not remove.

At Washington, the principle of the Bourne good roads plan has won in the Senate committee on post-offices and post roads, and the committee is expected to report out a bill within a short time. The plan will be somewhat modified, the total amount to be raised by the states, through the federal government, being cut from one billion to five hundred million dollars, and the percentage to be allowed for maintenance being increased, but the Bourne plan of financing has been adopted.

America's apple production, more particularly from the handlers' point of view, will be discussed at the sessions of the International Apple Shippers Association, which will hold a three-day convention and exhibition of apples in Boston Aug. 5, 6, and 7. Between four and five hundred members of the organization, coming from all quarters of the United States, are expected to assemble for the convention, which is the association's twentieth annual gathering.

Nearly thirty representatives from associations interested in drainage, flood protection, river regulation, water-power development, irrigation, reforestation, and from engineering societies and public service corporations, recently met in conference at the Hotel LaSalle, Chicago, in the effort to find a general plan of action upon which all might unite, and thus in a measure harmonize the various views as to the method of reaching the desired result.

Tax on real estate based on the income derived from it and not upon its assessed valuation, and exemption of personal and intangible property, is the plan of taxation advocated by Bailie Thomas M'Millan, senior magistrate of Glasgow, Scotland, and Alexander Walker, the city assessor of Scotland, both of whom are completing a tour of investigation of the taxation problem in the principal cities of the United States and Canada.

The Hohenzollern canal, which connects Berlin with Hohenstaaten on the Oder, was opened a few days ago by the Emperor. With the completion of the work, Berlin becomes a port. The undertaking was commenced ten years ago, and has been completed at a cost of over forty million marks. Ships up to about five hundred tons can use the canal, which is crossed by six railway lines, many roads, and over thirty bridges.

The amending home rule bill for Ireland was given a second reading in the House of Lords July 6, by 263 votes to 10. Lord Milner, one of the chief speakers, insisted that nothing would satisfy Ulster but a guaranty that she would never be subject in any way to an Irish Parliament without her consent. The bill he described as merely a temporary expedient to tide over a dangerous interval.

The Kansas wheat crop is one hundred and fifty-four million bushels, according to a report issued by the secretary of the state board of agriculture, and this is sixty million bushels greater than any previous Kansas crop. The corn acreage is five million five hundred thousand, while the oats acreage is one million four hundred and seventy thousand.

The announcement is made that the last section of the French railway into Abyssinia will be completed at the beginning of 1915. The opening of this railway will insure direct communication between Djibouti, the Abyssinian commercial port, and Addis-Ababa. The import trade of the colony reached 33,916,843 francs in 1913.

Herr Landmann, an aviator, last week concluded a non-stop flight of twenty-one hours and forty-nine minutes. This flight constitutes a world's record. The best previous mark was also made by a German, Gustav Basser, who on June 24, at Johannisthal, remained in the air for eighteen hours and ten minutes.

The British minister at Peking has lodged a strong protest with the Chinese government regarding the latter's agreement with the Standard Oil Company to the effect that it would not allow boring for oil by any other party for one year, not only in Shensi and Chihli, but in any part of China.

Smith and Minor islands, fourteen miles north by west from Port Townsend, Wash., have been set apart for the agricultural department as a ground and winter sanctuary for native birds. The order signed by President Wilson imposes heavy penalties for interference with the birds.

The Cherokee nation, the largest of the five civilized tribes of America, was dissolved as a nation at midnight on June 30, and the tribal funds, amounting to six hundred thousand dollars, will be divided among forty-one thousand members.

Suits aggregating one hundred and fifty million dollars, filed against the American Sugar Refining Company, charging violation of the Sherman law, are to be tried in the United States courts in Louisiana.

It is estimated that honey in the comb in southern California will weigh 61,175 pounds, and extracted honey 1,044,200 pounds. Northern California will produce 1,040,000 pounds.

A single orange grove at Porterville, Cal., yielded 34,884 boxes of oranges from its forty-five acres, requiring five weeks for harvesting.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI July 25, 1914 No. 47

Chosen Vessels

REV. JAMES J. ROME

"YE have not chosen me." When we consider what it must have meant to the disciples of Jesus to give up as much as they did and follow him from place to place, listening to his teachings, patiently learning the lessons he taught them and striving to put them into practice, then going out to heal and teach at his command, we can imagine that it might come to them with somewhat startling effect to be told that the choosing was not placed to their credit. Could not Matthew look back to the time when he left the tables where he collected the custom fees, and had not Simon, Andrew, James, and John forsaken their nets and boats and followed him? What, then, did Jesus mean? He must have meant more than simply a personal influence, whereby one person selects another for a service, for Jesus showed that his work was always far above mere material or personal considerations, and he spoke of his works and acts as the reflection or expression of the Father. He said, "I came down from heaven, not to do mine own will, but the will of him that sent me." His call, then, was the divine impress or inspiration coming to the consciousness of these men, a call to which they must respond or be untrue to their higher nature, their true selfhood.

The appeal of Christian Science comes to the world in a different sense and by a different method than does the presentation of the gospel message through the ordinary preaching of today. To the thought that is prepared it comes as a divine impulsion which cannot be refused or denied. The truth seems to have come to Paul in this way, for we find him saying, "Necessity is laid upon me; yea, woe is unto me, if I preach not the gospel!" We hear mention sometimes of those who have decided to take up Christian Science and devote their lives to its study and application. It would appear from the phraseology used at times as if Christian Science were being honored by the consideration thus given it, and occasionally such a mental position has developed into the use of human will or intellectual power, and the work that seems to be done is simply the result of mortal mind influence. The human mind prepared for the Christ-thought is affected in an altogether different way. There is uncovered to it the unreality, the nothingness, of any life or experience apart from the divine. There is no choice, no decision to make, because of the clear sense of the supremacy, the allness, of God and His idea. Such a one involuntarily exclaims with Paul, "For me to live is Christ;" and to him the voice of the Christ comes as of old, saying, "Ye have not chosen me, but I have chosen you."

Happy the one who is listening for this call and is ready to obey, who heeds not the arguments and threatenings of material sense, but says, as did the great apostle to the Gentiles, "Reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus." But what of those who, having heard the inner whispering of the "still small voice," have stifled its sacred monitions with the clamor and noise of mortal sense, or whose ears have become dull through indulgence in materiality? When these claim the blessings of the faithful, must they be met with the rebuke, "I never knew you: depart from me, ye that work iniquity"?

The purpose of this choosing is indicated in the Master's further words—"and ordained you, that ye should go and bring forth fruit." How encouraging this declaration to the earnest worker! The same desire and Christly impulse which indicates the chosen vessel, sends it forth for a purpose, not to make fruit, but to bring forth or bear. Simply let the divine afflatus lead and guide our thoughts, words, and deeds, and the result will be made manifest. The fruit is as certain as the calling. If we but yield ourselves "servants to obey" the divine direction, there can be no mistake about the results. And what are the fruits to be? Just what they were expected to be when Jesus sent his disciples forth to preach. They healed the sick and cast out evils. What could be looked for but the same kind of result or fruit that attended the life and labors of the one who called them, saying, "Though ye believe not me, believe the works," and who sent back the messengers of John to relate the works they had seen as an evidence of the right kind of fruit.

Christianity was evidently meant to make the world better in health as well as in morals, and these will both follow in our wake if we produce the results enumerated by Paul when he says: "The fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance: against such there is no law. And they that are Christ's have crucified the flesh with the affections and lusts. If we live in the Spirit, let us also walk in the Spirit."

As a means to this end Mrs. Eddy, in a letter to a branch church, admonished its members (Miscellaneous Writings, p. 154) as follows: "Honor thy Father and Mother, God. Continue in His love. Bring forth fruit—'signs following'—that your prayers be not hindered. Pray without ceasing. Watch diligently; never desert the post of spiritual observation and self-examination. Strive for self-abnegation, justice, meekness, mercy, purity, love. Let your light reflect Light. Have no ambition, affection, nor aim apart from holiness. Forget not for a moment, that God is All-in-all—therefore, that in reality there is but one cause and effect."

Christian Consideration

KATE HASSELL

THROUGHOUT all history, sacred and profane, there are many instances of a type of courteous consideration which has become a part of exalted consciousness and an active force in the unfoldment of humanity. Of these, none is more dramatic than the account given of an incident in the life of Jesus which is recorded in the twenty-second chapter of Luke. The story reads:—

"And while he [Jesus] yet spake, behold a multitude, and he that was called Judas, one of the twelve, went before them, and drew near unto Jesus to kiss him. But Jesus said unto him, Judas, betrayest thou the Son of man with a kiss? When they which were about him saw what would follow, they

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

said unto him, Lord, shall we smite with the sword? And one of them smote the servant of the high priest, and cut off his right ear. And Jesus answered and said, Suffer ye thus far. And he touched his ear, and healed him."

The simplicity of this story is quite marvelous. Who has ever read it without enkindling emotion? Even the most callous would feel a quickening of the spirit; and yet its hold on the Christian Scientist is not because of its dramatic effect, but because it clearly demonstrates Jesus' method in dealing with the enemy, in contrast with that of his would-be disciple, Peter. Jesus' method is direct and instant in results. In this respect it is identical with that of Peter as shown in the story. Some one had asked, "Lord, shall we smite with the sword?" and before Jesus could reply, Peter had cut off the servant's ear. Jesus, on the other hand, apparently unconscious of the servant's mishap, first answered the question put to him, then without a word to the wounded man, healed him.

Though their methods agree in directness and in their definite results, when the results themselves are compared, the similarity ceases. It is discovered that the methods of Jesus rest upon the law of construction and preservation, while those which Peter used at that time make for the chaos of destruction and annihilation. The analysis of the truth here manifested leads to the contemplation of immutability, immortality, eternity, life, divine Principle. Thus we arrive at Love, for God is Love.

In reality, then, Jesus looked to Love for his rule of conduct, and because of his established relationship to Love, the desire and motive for action were there united, hence the manifestation of the highest form of Christian ministry. The truly compassionate heart always finds easy and natural expression in kindliness and courtesy, and for such a one it is not difficult to be tender and loving; we say he lives close to God. But for that one whose world revolves around his own little ego, who knows nothing of the warm, palpitating presence of the great heart of Love, how soon the marks of decay begin to appear upon him! His selfishness expresses itself in varying degrees of cruelty, intolerance, bigotry, prejudice, disdain, criticism, hate, malice, even murder, until his sun has set.

What a field for Christian Science, with its Principle of love and its rules for living and loving! What an opportunity for the demonstration of this Science to prove to humanity the winsomeness and power of an unfailing Christian spirit! A Christian Scientist not only knows the power that enabled Jesus to touch the servant's wound and heal it, but he understands the rule whereby it can be accomplished. Then where shall the world look for the greatest healing kindness but to those who declare themselves the demonstrators of the Science of Christ?

This story does not furnish a sequel recounting the healed man's gratitude, his subsequent turning to Jesus' disciples for instruction, and his adoption of Christianity, nor does it speak of the effect of Jesus' kindness on the ultimate redemption of the man; but it leaves no doubt as to the attitude of Jesus toward one who had stood as an enemy. The narrative states plainly, "He touched his ear, and healed him." He saw the man as a brother, a child of God; otherwise this noble example of Christian ministry could not have been shown us.

Students of Christian Science can draw inspiration from this story. When we are confronted with that which claims to arrest us in our healing work, to put us on trial for declaring ourselves the children of God, to sentence and even to crucify us, Jesus has shown us what to do; namely, to maintain, keep active a positive healing consciousness, so that we shall see only the idea of Love. Thus doing we shall have acted up to the highest demands of Truth and Love. With sweet assurance we can leave the so-called enemy to the correction and government of divine Mind and extend to him that courtesy which a Christian should show to every one.

Forgiveness

GERTRUDE SANDS SHERIDAN

In Science and Health (p. 497) we read, "We acknowledge God's forgiveness of sin in the destruction of sin." How many times it has been said, "I have forgiven it, but I'll never forget it." And yet what a sublime example of forgiveness our Master has given us! Even at the close of those last tragic events, when every indignity and cruelty that the hate and persecution of the mortal sense could devise had been visited upon him, came these words of godlike love and tenderness: "Father, forgive them; for they know not what they do." If he, our Master and Teacher, could thus speak in the face of the sum total of malice and hate, cannot we, his would-be followers, remember his words and say them truly in the every-day experiences which confront us in our homes, our offices, our professional and social activities?

"To whom little is forgiven, the same loveth little." This utterance of Jesus, full of such comfort and guidance for us if we will but ponder and heed it, partakes of the nature of every inspired statement of Truth,—it is two-edged. On the one hand, it deals with the destruction of evil; and on the other, with the perception and externalization of divine Truth. Forgiveness may be defined as an exalted attitude of mind in which we are enabled to work out our unity with God and with our fellow man. Mrs. Eddy says, "The pardon of divine mercy is the destruction of error" (Science and Health, p. 329). Christian Science teaches us how to obey the Master's injunction to forgive one another.

He who earnestly and honestly seeks to apprehend and be governed by the truths of Christian Science, speedily comes to realize that the one and only place to meet error, to uncover and cast it out, is in one's own consciousness. We need never go beyond our own thinking in order that our brother may be forgiven. In that communion with God which the spirit of forgiveness requires of us, we begin to appreciate the need of bringing every thought into subjection to Truth, and we become so occupied with the activity of right thinking that we gain a deeper humility, and our brother is forgiven because he is loved.

If sometimes we may find the way of forgiveness hard, if we find ourselves marveling at the blindness which can impel one human being deliberately to inflict pain upon another, when it would seem there should be only a sense of fellowship in the working out of the life-problem, at such a time there is certain comfort for us in remembering with Jesus that "they know not what they do." We may well think, too, of the great responsibility which our own need of forgiving places upon us. "That ye may know that the Son of man hath power on earth to forgive sins," Jesus healed the sick of the palsy,—"For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" Our patient, tender, unwavering Wayshower tells us many times, in words too plain to be misunderstood as well as in divine deeds, that to us also this power is given, because to us is given the power to become the sons of God. In Christian Science we learn that this is our true selfhood, and that the reason Jesus did the works of divinity was because he claimed his heritage, his divine sonship, with its responsibilities. His every word exhorts us to claim our perfect origin and sonship as he did, and thus to follow in his footsteps.

Digitized by Google

Moreover, he said, "Whose soever sins ye remit, they are remitted unto them; and whose soever sins ye retain, they are retained." Oh, if we might realize every moment that in refusing to admit as real the testimony of the human senses about our brother, and in persistently declaring the truth about him, we may banish the false claims of inharmony, be it sin, sickness, or any other unlikeness to God! If we could keep this ever before us, how much peace and joy would be ours!

"The Son of man hath power on earth to forgive sins." Jesus used this power, and thus blessed every one upon whom his thought rested. He saw man as God's image and likeness. At the moment when sense-evidence declared a hating, discordant man, Jesus declared and mentally realized the true spiritual selfhood of every child of God, the "Son, which is in the bosom of the Father," never having been separated therefrom. This true view transformed the evil thinker and doer, released him from the belief that he was in the way of happiness; and likewise gave hope of "a new heaven and a new earth" to all mankind.

Let us strive to learn the full import of forgiveness. When tempted to dwell upon or to admit even a slight error or irregularity about another, let us stop and remember that the kingdom of heaven is within all of us, and that it is the mission of divine Love to establish the reign of harmony in every heart. Thus, through loving much, shall much be forgiven.

✧

Mathematical Accuracy

A. C. SPRAGUE

In our text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy frequently compares the rules laid down for the practice of Christian Science, to the rules of mathematics. In gaining a knowledge of this Science we find that we add the understanding of Truth to our consciousness, and that as we do so we naturally must subtract the errors of mortal mind. As we continue in this process our blessings multiply, and we learn in our daily experience instantly to distinguish the truth from the error, and so to separate the tares from the wheat.

If with equal accuracy and certainty we applied these rules to all our problems, how much needless work and prolonged suffering we might save ourselves! When discord confronts us, whether it be physical, mental, moral, or financial, if instead of looking about us to see what there is that could harm us, we would look within our own mentality and learn what "is unlike 'the anointed,' and cast it out" (Miscellaneous Writings, p. 355), how much more quickly would we find relief! How often, when error presents itself, do we look into our brother's mentality to see whether he is directing envy, jealousy, malice, or hate toward us! Yet thereby we are making a reality of these errors in our own consciousness, to be externalized in other forms of discord, instead of knowing that evil is not personal, and there is in reality no material personality through which it can act, but that it is simply aggressive mental suggestion, which presents itself to us hoping for adoption.

If, on the other hand, we turn from error to the truth of being,—that man is the image and likeness of God, and reflects nothing but God's attributes, and never did and never can reflect anything else,—then the belief that there is a mortal mind or a mortal man who can be made a channel for error against his brother, would be destroyed. Mrs. Eddy says, "Evil thoughts and aims reach no farther and do no more harm than one's belief permits. Evil thoughts, lusts, and malicious purposes cannot go forth, like wandering pollen, from one human mind to another, finding unsuspected lodgment, if virtue and truth build a strong defense" (Science and Health, p. 234). Just so sure as is the law of mathematics, so sure is the law of recompense, and so long as we believe in and make a reality of aught that can reflect error to us, so long will we suffer the penalty of that belief. Paul says: "Whatsoever a man soweth, that shall he also reap. For he that soweth to his flesh shall of the flesh reap corruption; but he that soweth to the Spirit shall of the Spirit reap life everlasting."

✧

"My Father's business"

FRED R. RHODES

It would be quite impossible to overestimate the value of a knowledge of Christian Science in dealing with our various commercial problems. After many years spent in battling with the increasing difficulties in business both from within and without, in conformity with material modes of procedure, it has been my ever-increasing joy during the last few years to experience a decrease of worry through the increase of good, and this has come as a natural result of the application of the Christianly scientific understanding of what really constitutes true business.

Webster defines business as "that which engages the time, attention, or labor of any one, as his principal concern or interest, whether for a longer or shorter time;" again, "that which one has to do or should do." Our work, then, is not to be confined to the gaining of the maximum return for the minimum of expense, but to the exchange of our very limited sense of business as merely the successful prosecution of commercial enterprise from a financial point of view, for a higher sense. We are to realize that all true business is not an ultimate but an intermediate experience, not a creating of something but an unfolding of what is already in existence. Since all that God has made is infinitely perfect, the unfolding to our human consciousness can take place only through our endeavor to bring into the lives of those who may be for the moment engaged in this process of unfoldment, a sense of peace, even as our Leader has said of the great Exemplar, Christ Jesus, "Through the magnitude of his human life, he demonstrated the divine Life" (Science and Health, p. 54).

If one analyzes the reason for which he is engaged in business, he is bound to admit that it is with the idea of gaining profit, and profit means "accession of good; . . . useful consequences." It is not until we realize that good is an attribute of God, and in consequence cannot be in any way subject to qualification, that we are able to see that unless we make our profit without in any way causing others to suffer, either through overwork or underpay, we are not being about our Father's business. Further, why do we desire to make profit? Is it not really a desire for contentment? Are we not trying indirectly to satisfy, or to prepare for the future? Here, again, our understanding of Christian Science teaches us to depend on God, at all times and under all circumstances, for everything we need to sustain us. It would have seemed an impossibility successfully to introduce our religion into our daily business life, but as one gradually learns in Christian Science to reduce things to thoughts, he is free to follow a natural method of dealing with all circumstances that may arise, and as a never-failing result, he finds the inharmonious conditions becoming less objectified because of this nobler way of working.

Perhaps the most helpful of the many lessons we may learn regarding our business lives and their relationship to others,

Digitized by Google

is that in reality there is only one business, namely, our Father's business; that all our individual efforts are being made to bring out the perfection of the whole, and that just in proportion as we seek first the perfection of the whole, will our individual sense of possession and joy be enriched.

✧

"I will arise"

HELEN R. DEMING

"WHAT's the use of learning the commandments and all these Bible stories? We can read them out of the book whenever we want to." Thus spoke a Sunday school pupil, a youth of still unawakened thought. The teacher explained that if we thoroughly learn these things so fundamental to all right doing, they become so much a part of our thinking that they even unconsciously control our actions. If we become familiar with the Bible statements and stories interpreted in the light of Christian Science, we gain a store of spiritual truth which may be drawn upon at times when reading would be quite out of the question; for instance, when we are walking along the street, standing in a car, or busy with our daily occupation. At such times these vital truths are always available if we have previously made them our own. Most of us have doubtless had many experiences where help and healing have come as a result of the quick summoning of some one of these loving messengers of Truth. The writer recalls an instance where the need was urgent, and the healing swift and sure.

A great ship lay tossing on the ocean. The storm beat heavily, and the winds dashed the huge waves madly against this house at sea. In a cabin lay one who was suffering from the too common sea malady. In dumb misery she tried to brush away the dream which material sense had put upon her, and longed for the time when there would be "no more sea." She would have liked to turn to the Bible, or to that other dear book, Science and Health, which holds the "Key" to its treasures, but she could not sit up, nor did she think it right to turn on the light while her companion slept. But the "angels of His presence" (Science and Health, p. 174), who are ever near if we desire their ministering, sent her the thought of the prodigal son, and as she mused over it, she saw how she, too, had taken a "journey into a far country," material sense, and had responded to belief in physical law. She, too, had suffered from "a mighty famine," the lack of a realization of spiritual harmony. And what was the remedy for it all? This: "I will arise and go to my Father." She knew that she belonged in her Father's house, and her one desire was to find herself there again. Suddenly she sat up, an exertion she had not been able to make before without extreme discomfort. A light seemed to fill the cabin, —the light of Truth. The dreams of sense disappeared, and had it not been late at night, she would have arisen at once to enjoy her new-found freedom. Although the storm continued to rage fiercely without, yet within all was peace, and for the first time in her life she was able to move about in a tossing ship with no sense of discomfort.

Such was the experience of the writer a few years ago, and it has since occurred to her how typical this incident is of the passing of all phases of mortal thought with the dawning of the divine idea. The story of the prodigal son, spiritually interpreted, is indeed a true tale, divinely told. The younger son is he who, lacking in experience, desires all satisfactions without earning them through spiritual discernment. No wonder that he journeys "into a far country," away from the Father's house. He has his lesson to learn, and he learns it after much suffering. The waves of mortal sense beating upon him awaken him, and then there comes a recognition of his true selfhood. As this dawns upon him, he contrasts his own misery with the peace and plenty under the paternal roof; he begins to know what it means to be the son of the one Father and to dwell in that Father's house. O joyous recognition, O sacred birth of that sweet humility which sees its own shortcomings, the utter futility of all life apart from the Father!

How this story portrays word for word the history of every one's struggle to rise from sense to Soul! When we wander away from the true, we must by the very law of Truth's compulsion come back. Oh, the joy of it, the returning, for the Father always sees us when we are yet "a great way off," and hastens to meet our need with abundant blessing. This being true, would it not be well if all, young and old, acquainted themselves more fully with the life-giving word of Truth which, as understood in Christian Science, is a mighty power?

✧

Watch

H. R. FEARNSIDE

WE read that when Jesus "had made a scourge of small cords," he drove out of the temple certain buyers and sellers who were contaminating it. We are often very quick to grasp the thought that we must purge our home and surroundings of anything that we can define as sinful or evil in any shape or form, and our first thought turns instinctively to those errors which to our material senses seem most in evidence. These may be in our own home or our personal surroundings, appearing in the form of evil habits or faulty dispositions in ourselves or family. We long to see these errors corrected, and disappear. Then, realizing that the home must be kept pure, we perhaps firmly but lovingly insist that an evil to which we are fully awake be kept out of it, and strive to bring this desire into effect. The thought then comes to us that we have taken a right and forward step, and this brings a sense of satisfaction in that we have acted according to our highest sense of right.

Just here is where we need to be even more watchful and alert, for error is no sooner defeated on one point than it attacks with renewed energy from a wholly unexpected quarter, and seeks a foothold with such persistence that we are apt to feel overwhelmed, and cry out that we have so much to meet. Here we should take another step in our understanding that God is ever present, present at any moment in any place. This leads us to see that it is our own consciousness which needs to be purged, until in the clear, pure light of divine Love, we see all error for what it is, namely, a lie. Whether it presents itself to our physical senses or mentally, it is solely a lie, a false belief, and when recognized as such and resisted, it cannot cause us to feel either resentment or fear in any form, for it is driven out of the temple, and we shall not see it either in our home or in our surroundings.

✧ ✧ ✧

The only way to be happy is to be pure. The only way to be pure is to guard our thinking and let every unkind or evil thought die at birth. As we do this, we grow in grace and become God's real children, obedient to Truth, learning to love our fellow men. And that love is returned, with "good measure, pressed down, and shaken together, and running over," for we have become lovable, full of humility and peace,—the humility that maketh glad, and the peace that comes from duty's call well answered.

PHILIP OWEN PEIRCE.

Selected Articles

[Editorial in *New York* (N. Y.) *American*]

The affirmation by the appellate division of the supreme court of the conviction of a Christian Science healer for "practising medicine without a license," calls renewed attention to the faulty condition of the law in this state.

It is futile to question the great number of people—tens of thousands—in this state, who turn by preference to Christian Science rather than to medical methods for treating their ailments; nor can any sane person question their right to gratify their preference if they so choose. Indeed, the court recognizes alike the right of the patient to seek, and of the practitioner to furnish, help by Christian Science methods. Justice Loughlin, in his opinion, said: "The acts of the defendant, if performed in a Christian Science church, or in visiting the members of a church or others, and so administering to them without charge, would not violate the statute."

A famous judge once said: "The law is common sense." Is it common sense to declare the relief of suffering lawful if accomplished in a church or at the sufferer's home, but criminal if done in an office? Is it common sense to make the acceptance of payment for a service evidence that the service was criminal, though it was held legitimate if no pay was asked? If the acceptance of fees is held to be the crux of the legality of Christian Science practice, the deduction is inevitable that the law was designed, not for the protection of public health, but to prevent fees from being diverted from the pockets of physicians of the medical schools. This conclusion is not weakened by the fact that in this case —as in many others—the informant was a detective hired by a medical society.

The number and standing of believers in Christian Science in this state, no less than the admitted wide success of the system of healing in which they believe, makes it intolerable that the law should remain in its present form. A bill for its amendment was most mistakenly vetoed by Governor Glynn, after the last session of the Legislature. It should be corrected to conform with the objections he pointed out, and made law at the next session.

✧

[From *New York* (N. Y.) *Herald*]

In announcing that an appeal would be taken from the decision of the appellate division, the Christian Science committee on publication for the state of New York, at No. 1 Madison avenue, yesterday afternoon [July 11] issued a statement by Clifford P. Smith, of the committee on publication for The Mother Church in Boston.. In part it is as follows:—

"Christian Science is the restoration of original Christianity with its healing power. In Principle and practice it is the same; even though Christian Scientists have not become perfect in its practice. Even as now practised, however, it is the most effective and reliable curative agent known to mankind. Christian Science is not only comparatively safe, but it tends to develop the higher nature and to unfold the qualities which will enable the human race to put off its mortality.

"The attitude of Christian Scientists toward compensation is that which was authorized by Christ Jesus. He who said, 'I must be about my Father's business,' also said, 'The laborer is worthy of his hire,' and he said this to his disciples when sending them forth to preach the gospel and heal the sick. The practice of Christian Science is not the same as the practice of medicine, and it cannot be made the same by law. The public will have the right to employ the most effective aid.

"The great mass of people have respect for their neighbor's faith in God; they despise injustice disguised as law; they dislike monopoly; they favor equal rights absolutely; they value the right to choose for themselves. The only law on this subject which the people need or want is a plain or simple law which would forbid a man to hold himself out to the public as a medical doctor or surgeon, or to accept employment as such, without having the education or training appropriate to that profession. Any law which goes farther than this must be based on the claim that the people do not possess sufficient intelligence to choose for themselves."

✧

[Editorial in *World-Herald*, Omaha, Neb.]

The reasons given by the New York judges, according to the press despatches, for making Christian Science practice illegal, will hardly stand the test of reason. They say that "it is the commercialized use of Christian Science." The same reason would turn every minister who receives pay for his services, out of his pulpit, for if he did not receive pay he would be compelled to leave it. He is "commercializing" Christianity. Aside from all that, there is another question of vital importance. Is personal liberty to be wholly destroyed in this land? Are men to take only the kind of food and drink, only the brand of medicine, and only the religion that is handed out to them? Is there to be no volition left to the American citizen? If a man wants a mental healer to pray or demonstrate over him, what right has government to interfere? If he pays, the whole transaction is voluntary, for these people never attempt to collect their charges in courts. Shall men be left no volition at all?

Some very good people have very little consideration for personal liberty. Do they understand what sort of a system they are advocating? Every man has a natural right to personal liberty and to the exercise of that right as long as he does not interfere with the liberty of any one else. There are psychopathic wards in all of the great hospitals. It may be as truthfully said that psychology is being commercialized and should be forbidden. The fact is, that if Christianity were not "commercialized," there would not be a church organization in existence in a few years. While the New York judges were writing their decision, the Louisiana Legislature was enacting a law, which was signed by the Governor, containing the following words: "Nothing in this act, however, shall be construed to prohibit the practice of Christian Science or the religious tenets of any church whatsoever." Louisiana seems still inclined to allow its citizens some personal liberty.

✧

[Editorial in *The Asheville* (N. C.) *Citizen*]

The appellate division of the supreme court of New York last week affirmed the conviction of a Christian Scientist for "practising medicine without a license." One naturally wonders how an individual could be charged with practising that which he does not believe in as a weapon against disease. It is a generally accepted belief that the teachings of Christian Science advocate the preservation of health without the agency of medicine and drugs, yet here is a case wherein the courts hold that the Scientist was engaged in actual competition with the medical practitioner—an apparently impossible position.

Aside from this question, however, the New York law is wrong when it virtually puts a monopoly of the art of healing in the hands of the medical world. Whether the healing be done in an office or in a church does not constitute a line of distinction, for other courts have so held, and have held rightly. The Scientist can with all propriety accept a

Digitized by Google

fee for services rendered, whether they be rendered in a church, in the patient's home, or in the home of the healer. Yet the New York decision, as recently rendered, makes the acceptance of a fee a violation of the law. The passing of a fee lends no shade of criminality to the services performed. "If the acceptance of fees," says a leading New York daily, "is held to be the crux of the legality of Christian Science practice, the deduction is inevitable that the law was designed, not for the protection of public health, but to prevent fees from being diverted from the pockets of physicians of the medical schools. This conclusion is not weakened by the fact that in this case—as in many others—the informant was a detective hired by a medical society."

There are many thousands of people in this country who profess Christian Science as a means to health and happiness, to the point that it is their religion. The law which would prohibit that preference cannot be regarded in any other light than an infringement upon that religious liberty which our Constitution guarantees.

✧

[Editorial in *The Boston* (Mass.) *Herald*]

Let us see where this latest decision of the appellate division of the supreme court of New York is likely to lead. It has been often said that the power to tax is the power to destroy. Similarly the power to forbid making a charge for an article or a service approximates a prohibition of its movement altogether. Whether people should not be allowed to pay for such professional services as they elect to have, is a question far transcending Christian Science as a system of treatment. . . .

The decision is of wide interest, not only because of the large number of healers deprived of a livelihood, but because it affirms the principle that religion and medicine may not enter into commercial competition. The court holds that it does not assume the function of curtailing a man in the practice of his religion. The opinion does not pass on the question of whether the practitioner may treat lawfully, but only whether he may treat for pay.

There seems a certain inconsistency in this ruling. If a method of treatment is not forbidden by law, it seems difficult to understand that those who desire it may not pay for it. The question is entirely apart from the merits of Christian Science for curing disease.

✧

[L. H. Jones in *The Louisville* (Ky.) *Post*]

The term "commercialized use of prayer," which occurs in your recent news item from New York, means simply that Christian Science practitioners are accustomed to charge a small fee for services rendered by them to persons who choose to engage their services in the treatment of diseases. No right-minded person would desire to receive the services of another without compensation. For many years the doctors, under the pretext always of protecting the public health, have been besieging the legislatures of the various states in an effort to get legislation prohibiting the practice of Christian Science healing, or, failing in this, making it unlawful for Christian Scientists to receive compensation for their services, the obvious purpose of all such legislation being to cripple and impede the progress and practice of Christian Science as a means of healing the people.

Why should Christian Scientists be singled out and made a special object of persecution merely because the people prefer to employ and pay them rather than a doctor or a minister? If it is proper to pay a minister for services he is supposed to render his congregation, a principal item of which is the prayers he offers for their well-being,—prayers which do not undertake to heal anybody,—why should it be considered a "commercialized use of prayer" for the Christian Scientists to pay their practitioners for prayers which they very well know do heal them of any and every bodily infirmity?

✧

[Frederick Dixon in *Leytonstone* (England) *Press and Independent*]

A well-known medical critic, in a recent public address, made a great point of what he called the works of Christian Science, and he told of an elderly lady whom he saw in the street with a broken thigh, and whose one wish was for Christian Science treatment. He said he heard afterward that she had been taken by her Christian Science friends to a neighboring doctor's house to have the limb set. That is the sort of airy way in which this critic usually leaves his evidence, and this evidence generally takes the form of something he has been told, rather than of something he knows. The facts of the case are these: The lady to whom the accident occurred was not a member of the Christian Science church, although she asked for Christian Science help. She was removed to her lodgings, with the result that the keeper of the lodgings declined to take her in unless a doctor was in attendance. Under these circumstances, there was nothing for it but to remove her to a hospital, and this was done.

Now, may I tell your readers a story, for which, if necessary, I can produce chapter and verse, and which I shall not be compelled to wind up with hearsay evidence. Just about the time the critic saw the accident in Notting Hill, another motor accident occurred in South London. A boy was knocked down and his arm fractured. He was immediately treated by a doctor, with the result that the bone refused to set. A specialist was called in, with no better results. At the end of a fortnight or so, the doctors declared that nothing remained to be done but to operate on the arm and unite the fracture by wiring the bone. The boy and his mother both objected to this, with the result that the limb was X-rayed, and the doctors declared that it would be rendered useless unless the operation were performed. They were very emphatic in their declarations, and told the mother that she was simply sacrificing the boy's future, and that his arm would remain useless for the rest of his life. The boy was then treated in Christian Science. The arm set rapidly and naturally. So far from being useless, it is absolutely sound and perfect today. Here is a case of surgery which is positively indisputable, and which may explain why Dr. Saleeby, recently lecturing, after giving a case of healing, through Christian Science, in his own experience, of locomotor ataxia, declared that he looked forward to the time when "medical science of today, partly under Christian Science, . . . could be improved and made more complete."

Then our critic went on to say the usual foolish and untrue things about Christian Scientists doing nothing for their patients. He said that doctors watched their patients day and night, while Christian Scientists did nothing and saw them bleed to death. This, of course, is absolutely untrue. A Christian Scientist works mentally for a patient, while a doctor gives him drugs. But that does not mean that the Christian Scientist does nothing. To take such a case as this critic mentions, some time ago a lady applied to Christian Science for treatment for internal hemorrhage, which the doctors could not stop. She was treated and healed, and has remained perfectly well ever since. Her healing was so remarkable that the doctor who had been in charge of the case specially requested to be introduced to the Christian Science practitioner in order to ask him about the treatment.

Digitized by Google

Had the critic seen that practitioner at work, he would no doubt have said that the patient was being allowed to bleed to death, but the patient was healed in Christian Science after the doctors had failed. So with the broken arm. The surgeons with splints, X-rays, and innumerable other things, failed to heal the arm. The Christian Science practitioner, doing what this critic calls nothing, succeeded in healing the the arm. So, too, in the case of locomotor ataxia, the critic would no doubt have imagined that the Christian Science practitioner was doing nothing, but Dr. Saleeby says that the Christian Science practitioner healed the case after the medical profession had given it up. Under these circumstances, it is perhaps not much to be wondered at that the critic's "furious, hating attack" fails to kill Christian Science, while Christian Science practice is spreading the movement around the world with irrefutable testimony, in the shape of hundreds of thousands of healthy and happy men and women.

May I allude to the one other statement to which the critic committed himself? He said that Christian Scientists were careless about the spread of infection. This is just as untrue as every one of the other statements made by him. Christian Scientists are peculiarly careful about infection, and it is one of the unwritten laws of the movement that every single case of infection shall be at once reported in the usual way. It is not that Christian Scientists are themselves nervous of infection, but they are fully conscious of the enormous fear it exercises in the minds of their neighbors, and realizing the effect of fear to produce sickness and disease, they aid those about them, not, as I have said, because they are in the least nervous of infection themselves, but simply because they believe in the golden rule.

✧

[Frank Bell in *The Press*, Philadelphia, Pa.]

The writer of a communication in a recent issue may rest assured that Christian Science is not substituting a sense of satisfaction in physical health for higher aspirations. The fact that so many "well-meaning Christian people" are adopting Christian Science is strongly indicative that the standards of this religion are at least as high as others.

A large proportion of Christian Scientists, including those who turned to it with no other conscious desire than to be healed of disease, will testify that the relief they have found from physical ills has been the least of the benefits. As for selfishness, if a desire to possess a clean mind and to think pure and good thoughts be selfish, mankind needs more of it.

Christian Science practitioners who refrain from other pursuits and devote all their time to their patients, are not unreasonable in looking to their practice for a livelihood. Help is not denied to any who cannot afford to pay. The notable growth of Christian Science is due to the fact that it is accomplishing that which it claims to be able to accomplish. It is meeting the test of application.

✧

[Ezra W. Palmer in *Rocky Ford* (Col.) *Tribune*]

Considerable publicity was given to a recent attack on Christian Science by an evangelist who for several weeks has been preaching in your city. He is reported in the press as being in Rocky Ford for the purpose of bringing people into closer communion with God, but he evidently departed in a marked degree from his purpose when he emitted a torrent of abuse of the Discoverer and Founder of Christian Science. However, Mrs. Eddy occupies a place of honor in the world today quite beyond the power of any personal abuse to impair. She founded a church whose ministries are world-wide. She discovered again for humanity the healing power of God, which, except in sporadic instances, had been lost sight of since the fourth century; and by means of this an innumerable multitude of sufferers have been healed of all manner of disease and every form of sin. She established an international daily newspaper, published in the interests of humanity and circulated throughout the civilized world.

This evangelist is not quoted as giving Mrs. Eddy credit for her Christian life or godly works, but he has made her the target for abuse and vituperation. One well-known gentleman of your city stated that the attack was in all probability due to the fact that many converts, on signed cards, expressed their preference for the Christian Science church. I submit the proposition that by every consideration of Christian courtesy and fair dealing, no person has any moral right to attempt to poison the minds of the people against any church, and especially against a church which so closely follows the Master's teachings as does the Christian Science church.

The sermons of the evangelist were quoted at considerable length in the press of your city. The gentleman stood forth as an exponent of Christ's teachings, but I find no record of any sick person being healed at his meetings or any quotations from him in the press in which he advocated healing the sick by prayer, or expressed his belief that this is possible. And yet Jesus healed the sick, multitudes of them; his apostles did the same, and the early Christians for three centuries healed the sick and raised the dead. Time and again the great Master declared that his followers should heal by prayer, and he never limited this divine manifestation of God's power to any period of time or to any group of persons. It was a divine gift for all men who should grasp the tremendous fact of the allness of Spirit.

The evangelist's failure to follow all of Jesus' commands may account for his hostile attitude toward those who do. He tried to create the impression that Christian Science healing differs from the Master's. Judging from his remarks, he knows practically nothing about Christian Science. His reported denial that Jesus ever healed a case of sickness absently, has no warrant in the gospels, as it is a well-known fact that in a number of cases Jesus healed persons who were at a distance. Note the healing of the centurion's servant in the eighth chapter of Matthew, and the recovery of the nobleman's child as given in the fourth chapter of John. In both these cases Jesus healed the sick person absently.

✧ ✧ ✧

[Written for the *Sentinel*]

The Healer

RUTH INGRAHAM

To him who failed, one came in duty stern,
Reproaching and admonishing by turn,
And swift resentment caused thereby to burn.

Another with fierce scorn the victim flayed,
Utterly flouting each excuse he made,
Leaving him trembling, self-condemned, dismayed.

A third, indignant, ardently expressed
An overwhelming sympathy, distressed—
Self-pity injured whom he would have blessed.

One came before whose thought the error fled.
"It was a lie, my friend," he calmly said,
"Live now, and 'let the dead past bury its dead!'"

Editorial

"Stand fast"

THE decision recently rendered by the appellate division of the supreme court of New York, which has been so widely commented on by the press, simply lends emphasis to what has been going on in the legislatures of the different states during the years since Christian Science has come into prominence,—to speak plainly, since it has been regarded by a certain class of physicians as a competitor. Previous to this time the practice of medicine was in fact the practice of medicine. There was no contention that the person who did not administer drugs, or in some other way use material remedies for the healing of the sick, was practising medicine.

Immediately, however, that the stage of skepticism or complete denial of the healing power of Christian Science was passed, and it became known that healing was being accomplished by mental and spiritual means, and without the use of drugs or other material remedies,—then the medical profession—not the public—became greatly interested in securing the passage of laws which should so define the practice of medicine as to include every means by which the sick are healed. In some states it was not difficult to secure such laws, because Christian Science had not become as thoroughly known as it is today. In other states certain provisos were embodied in the medical laws which were enacted, these provisos being for the purpose of declaring that the healing of sickness through spiritual means was not to be considered the practice of medicine. In New York state, in 1907, the form adopted and agreed upon between the doctors who were the proponents of the law, and the Christian Scientists who were its opponents, was that it should not be construed as applying to "the practice of the religious tenets of any church."

It was well known and understood by the members of the New York legislature at the time this law was enacted, that the purpose of these words was to declare that the practice of Christian Science was not the practice of medicine; and upon this understanding Christian Scientists withdrew their opposition, being assured that their rights were fully protected, and there being no doubt that such was the intention of the legislature. Now that a court of intermediate appellate jurisdiction has declared, in a divided opinion, that the letter of this law prohibits the practice of Christian Science under certain conditions, there is one thing that should be done in order to put into effect the intention of the legislature which passed this law; namely, for the legislature at its next session so to amend the law as to leave no doubt about its meaning, and no possible chance for it to be put to a purpose for which it was never intended by the lawmakers who were responsible for its enactment. To have on its statute-books a law which has in effect been construed to take away the rights of the citizens in so important a matter as this, is not creditable to the state of New York, and there should be no delay in changing these conditions. It is time the public realized that there is an organized effort being made to take away its liberties through so-called medical legislation, the latest phase of which is thus referred to by the *St. Louis Republic*:—

"Medical zeal sometimes runs beyond bounds. One of the most radical suggestions ever made in a meeting of the American Medical Association, is that the public welfare would best be conserved by subjecting every man, woman, and child in the ninety odd millions of American citizens to a compulsory physical examination once every year. . . .

"But the public resents the cocksureness of the medical man's attitude. The public knows the doctor is by no means an infallible being; that he makes mistakes in diagnosis, in treatment, and even in his recommendations as to sanitary measures. Like everything else that has a hint of compulsion in it, this suggestion would be fought to the last ditch by a very large percentage of the population. When the time comes that a doctor knows as much about his work and makes as few mistakes as the electrical expert or the architect,—then there might be a chance for the adoption of such a suggestion. But medical science changes too rapidly—its 'truths' of yesterday are the exploded theories of today. From its very nature it lacks that exactness and surety which it must attain before it can herd the population meekly before it for a physical examination."

This is plain speaking, and should help to arouse the public to what is going on while they sit quiescent. On pages 927 and 928 of this issue will be found equally significant editorial opinions, which must have carried weight with those who read them. Zeal for public welfare is a popular slogan, but thinking people are beginning to see that the widely advocated medical inspection of school children was merely an opening wedge. It is only a step from the examination of department employees, already proposed, to compulsory examination of the whole people and compulsory medical treatment, unless this insidious advance is headed off. It is time every citizen should take to himself the appeal of the apostle Paul: "Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage."

ARCHIBALD MCLELLAN.

The One Satisfying Acquaintance

No thought, perchance, saddens the after years of so many people as that of the waste of time and opportunity which their ignorance has occasioned. "Had I but known!" begins a well-nigh universal lament; and one of the many blessings which Christian Science confers is that its children are privileged to gain that right point of view which, if they are responsive, establishes their goings in the way of wisdom when they are young.

As one thinks of it, the prevailing handicap which, to human sense, ignorance has imposed upon all, is pitifully serious. When the bark of a little navigator anchors in the haven of some home, he enters a land whose scenes, objects, people, language, and customs, each and all, are absolutely new to him. Those who greet his coming so lovingly, he has never seen before; he has to become acquainted even with his own father and mother. Moreover, he has to get acquainted with himself. He knows as yet nothing whatever of his own impulses, desires, dispositions, capacities, and needs. And all this demand marks but the beginning of the requirements laid upon him, since the knowledge of things as they appear is quite secondary to the knowledge of their meanings in their many and complex relations to human life. All the objects and phenomena into the midst of which he is ushered without consultation, must be interpreted, their thought-content determined, the world within the world explored.

When one thinks of the amount these little newcomers have thus to learn, of the brevity of the time assigned them in human belief for its use, and of the fact that by no possibility can they save those who come after them from the repetition of any single increment of their experience, he is no longer surprised if they stare a bit on first arrival, and seem quite wonder-logged if not frightened, on finding themselves called upon to face such a multitude of mysteries.

This is not all, however, for having laboriously acquired all this information, they are yet to find that the great bulk

Digitized by Google

of world-knowledge is not true. At the best it is only relative, and for the most part based upon a fundamental point of view which is utterly false! They must come to know the utter unreliability of the material testimony on which human beliefs are based, and so as the result of a great giving up, gain an apprehension of the realities of being, the things that are unvarying and eternal because they are of God.

All this gives vast significance to the educational work of imparting to the uninformed demonstrably right ideas about everything. In so far as the instruction conveyed is more considerate for traditions and opinions than for science, for the acquisition of verifiable facts, in so far it simply adds to and projects the pall of human ignorance, and her clear discernment of this must have had to do with the emphasis which Mrs. Eddy has laid upon the fundamentals of thought, and upon the necessity of logically adhering thereto.

Christ Jesus taught that the beginning and basis of reliable knowledge is acquaintance with that infinite Spirit whom John declared to be Love. He thus supplied an educational ground which, as he proved, is demonstrable verity, the substance of all true philosophy, the premise of all profitable reasoning; and this is the supreme declaration of Christian Science, that we must know God before we can know anything else aright. Acquaintance with the many must be preceded by acquaintance with the One!

Men have longed for truth, and some have made sincere effort to find it, but without the revelation of this scientific basis of apprehension, their labors must ever prove but a saddening, defeating waste of time. Job had surely reached this realization when he cried, "Let the day perish wherein I was born, and the night in which it was said, There is a man child conceived." This is one of the first discoveries awaiting the student of Christian Science, namely, that the one time-saving, life-saving fact is an acquaintance with Truth.

Let it be repeated: This is the great demonstration of Christian Science, that monism alone bases the mastery of experience; that we cannot know the many for what they are,—phenomena, facts, others, ourselves,—until we come to know the One. Then only do we begin to live, and the deepest longing of despairing human sense, "Oh that I knew where I might find him!" is satisfied. We have seen the goal of our being. We have touched the garment of Him "whom to know aright is Life eternal" (Science and Health, Pref., p. vii). And now the lament of the thinking world, "Oh that I knew!" gives place to that wondrous assurance of the Christ-consciousness which constituted the psalmist's rejoicing sense when he cried, "Whither shall I go from thy spirit? or whither shall I flee from thy presence?"

JOHN B. WILLIS.

How to Know

THERE are few if any who in some moments of their lives would not give all they possess just to be sure of one thing,—to know that God is and that He cares for them. This very longing, which sometimes verges on hopelessness, is yet a tremendous proof that what they fain would know is the only thing worth knowing in this wide world, and that when one's hope becomes assurance, he has begun to live. Christ Jesus, who knew the meaning of life so well that he could bring it even to those who were asleep in the dream of death, declared that to know God is life, yes, eternal life, which means a consciousness so intense that nothing can overshadow it or separate it from its source, the one who is "Lord and giver of Life," as Mrs. Eddy tells us on page 4 of "Pulpit and Press." To this she adds, "*Reflect this Life*, and with it cometh the full power of being."

As we read the gospels, we find all of Jesus' words and works pointing in one direction, that is, toward life and away from death and the grave, and yet in so doing he aroused the bitterest antagonism of mortal mind, "because," he said, "I testify of it, that the works thereof are evil." We are also told that there was much dispute as to his teaching, some maintaining that he was a good man, others contending that he was deceiving the people. His answer to both is of tremendous significance to us today. He said: "My doctrine is not mine, but his that sent me. If any man will do his will, he shall know of the doctrine." Whatever may be thought or said, there is no other way to be sure that God is, and that His tender care for all His children is the one thing certain, for the assurance is, "I will never leave thee, nor forsake thee." The all-important thing for us is to do God's will, as the Master declared, and then we shall understand man's relation to God and realize at each step of the way the divine provision for all human need.

Those who come to Christian Science for help, whether they believe in God at all or doubt His existence, gain in most cases a wonderful illumination from the very start. It is as if a veil had been taken away, or a door opened which leads into "the secret place of the most High." Even more intense is this illumination, this discovery of spiritual sense, when one attempts to do God's will in the way that Jesus did, and as he commanded when he said, "Heal the sick." This explains Paul's experience when on the way to Damascus. He was engaged in persecuting those who were striving to do God's will, and when the light of Truth suddenly burst upon him, his material sense of sight gave way. "But," Mrs. Eddy tells us, "spiritual light soon enabled him to follow the example and teachings of Jesus, healing the sick and preaching Christianity" (Science and Health, p. 324), and after doing this work for years, he did not hesitate to write to Timothy, "I know whom I have believed."

Our great Master tested the truth he taught by actual demonstration. He abstained from material food for forty days, and then could say, "Labor not for the meat which perisheth." Yet it was through this very experience in spiritual law that he could feed the five thousand. At the close of a long argument with the Pharisees, Jesus said to them, speaking of the Father, "Ye say, that he is your God: yet ye have not known him; but I know him: . . . I know him, and keep his saying." There is no denying that every sincere desire to do God's will must bring a clearer sense of what that will is, and some measure of spiritual growth. If, however, we would have the full radiance of Truth shine into our lives with its healing beams, we must do God's will in the way that Jesus did. Nor need we plead ignorance as to how this should be done, for with Christian Science we have the fulfilment of his promise of the coming to humanity of "the Spirit of truth," which reads: "All things that the Father hath are mine: therefore said I, that he shall take of mine, and shall show it unto you." The knowing thus gained admits of neither doubt nor question; it is the more abundant life which the Master declared and demonstrated.

ANNIE M. KNOTT.

Notice to Branch Churches and Societies

Branch churches and societies which have commenced building church edifices since Jan. 1, 1914, and those which contemplate building within the next year, will please communicate by mail with the TRUSTEES UNDER THE WILL OF MARY BAKER EDDY, Room 102, 107 Falmouth Street, Boston, Mass.

Among the Churches

Current Notes

ROCK ISLAND, ILL.—Negotiations were closed late this afternoon [May 19] whereby the Christian Science church acquired the large plot of ground located at the corner of Twenty-second street and Seventh avenue. The lot has a frontage of three hundred and thirty-four and a half feet on Twenty-second street and one hundred and fifty feet on Seventh avenue. The deal involved fourteen thousand five hundred dollars. The house that now stands on the ground will be removed immediately, and plans and specifications will be drawn up for the new church, which will cost approximately sixty thousand dollars. The Christian Science church located on Twenty-third street between Eighth and Ninth avenues has proved too small for the present congregation, and for some time the directors have been seriously considering the purchase of another site for a new church. This was the first Christian Science church erected in the state of Illinois, and was built in 1896. Since that date the congregation has steadily grown, until the present quarters were found to be entirely too small.—*The Rock Island Union.*

WARREN, OHIO.—Through negotiations just closed, First Church of Christ, Scientist, has secured possession of a property at the corner of High and Vine streets. This property faces one hundred feet on High street and is one hundred and forty feet deep on Vine street, and is an ideal location. The growth of this church has been such that larger quarters are in demand, and to the end of furnishing these as soon as possible, the committee is now at work.

Warren Tribune.

The Lectures

Ridgewood, N. J.

An audience filled the edifice of First Church of Christ, Scientist, to hear the lecture on Christian Science by Bicknell Young. The speaker was introduced by the Rev. Harvey Iserman, former pastor of the Presbyterian church of this village, who said:—

I esteem it a privilege to take even a small part in what is known as the Christian Science movement. When Christian Science was first brought to my attention, my attitude toward it was one of prejudice not unmixed with ridicule. My knowledge of it was founded principally on hearsay, on criticisms by noted theologians and brother ministers; and having been brought up most strictly in the old orthodox mode of worship, I was perhaps more conservative than most of my brethren. However, before preaching a sermon against Christian Science (as I had been requested to do) I determined to make a study of it, just as I would with any other science before attempting to pass judgment, making every effort at the same time to lay aside all prejudice against what I then thought was a dangerous new religion. After a careful study, and after testing its teachings on the true touchstone (the Bible), I came to the conclusion that the theologians and my brethren, whom I respect and revere, were like myself not really criticizing Christian Science, but what we thought Christian Science to be.

I find that the teaching of Christian Science is not new. It is as old as the centuries, being based on divine Truth. Its concept of God is free from all material limitations, for it presents God as infinite Principle, Love, Truth, Life, being omnipresent, omniscient, omnipotent in all the fulness of His infinite personality. Christian Scientists worship the same God our fathers and mothers did; they study the same Bible without changing it in any way; in fact, they are eager students, searching systematically for the spiritual truth. Every day and in every land they are studying the same selections from the Bible and the text-book, "Science and Health with Key to the Scriptures;" they follow the same Saviour, and firmly believe that the Christianity he taught in Nazareth and Jerusalem is for all time, that it can never change in statement or in proof, and that it will be known by signs which he said shall follow: "In my name shall they cast out devils; they shall speak with new tongues; . . . they shall lay hands on the sick, and they shall recover." This explains their undivided allegiance to the command of the Master to teach the truth and heal the sick.

To me, Christian Science is far more than physical healing; it is the spiritual healing of sin, a course of life based on the omnipotence of Spirit and the nothingness of matter. I have found it a practical and every-day religion, sustaining me amid this material age and the discords of sin and death. As a student of this Science, studying carefully a religion that speaks no unkind word, that harbors no malice, that bears no hatred,—this religion of health, of happiness, of eternal love and life not afar off but here and now, only prompts me to further study.—*Ridgewood Herald.*

Riverside, Cal.

Before an audience which filled the Loring Theater, Virgil O. Strickler spoke on the subject of Christian Science. He was introduced by Mayor Oscar Ford, who said:—

Christian Science is too well known and understood in our community to require from me a discussion of its merits or demerits. If, however, we are to apply to this religion the test of the Master, "By their fruits ye shall know them," and if we are to consider the character and intelligence of the men and women who have been drawn into membership in this church here as one of its fruits, we must arrive at this conclusion: It is good. Again, if we are to take the peace and happiness which these same people appear to have found, and which is reflected on their faces and apparent in their actions and every-day bearing, as one of the fruits of Christian Science, we must once more say: It is good.

Riverside Press.

Fremont, Ohio

E. H. Hilt, editor of the *Fremont Messenger*, in introducing Virgil O. Strickler, who lectured on Christian Science, said:—

In this day of enlightened civilization and freedom of thought, we are becoming broader and more ready to listen to the views of others; and it is a sure sign of progress, for we can nearly always gain some good thereby. While not a Christian Scientist myself, I cannot but be impressed by the bright, cheerful, happy, and noble lives of those who have accepted its teachings. Some of my close friends are among this number, and I have had a good opportunity to observe.

Correspondence.

Dallas, Texas

Greater numbers than could be accommodated with seats, or for whom room could be made by the utilization of chairs and standing-room, went to First Church of Christ, Scientist, to listen to a lecture on Christian Science by the Rev. William P. McKenzie. He was introduced by Fred W. Indermille, first reader of the Dallas church, who said in part:—

Throughout the ages the cry has gone up from at least that portion of humanity which has been racked with pain, burdened with sin, or bowed in grief, "What must I do to

Digitized by Google

be saved?" Jesus answered this question nearly two thousand years ago when he said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Multitudes came to Jesus on many occasions, and he healed them of all manner of diseases. In proof of the fact that his teachings were not for himself or his time only, but for all peoples and for all times, he said: "Go ye into all the world, and preach the gospel to every creature." "Heal the sick." "He that believeth on me, the works that I do shall he do also." In fulfilment of these words, Jesus' immediate disciples, and many others, practised Christian healing.

For three hundred years after Jesus was on earth the healing of the sick was continued as part of the ministry of Christianity. Then through lack of spirituality this healing power was lost to mankind. It was rediscovered in Christian Science, and today the age-long question, "What must I do to be saved?" is again being answered. Thousands upon thousands in this and every other land on the globe are, through Christian Science, living witnesses to the fact that God's healing and saving power is still with men, because it has saved them from all manner of troubles and diseases that "flesh is heir to," and it has brought them, in the words of Isaiah, "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness."—*The Dallas Morning News.*

Ontario, Cal.

The Masonic Hall was filled to overflowing to hear Virgil O. Strickler, who delivered a very interesting lecture on Christian Science. Glenn D. Smith, president of the Chamber of Commerce, in introducing the speaker, said in part:—

It is my privilege this evening to introduce to you a gentleman who comes to you with a message, a message in which I am sure you will find much of interest and of profit. You no doubt have often heard Christian Science spoken of as a new religion, but I am sure the speaker tonight will tell you that it is not a new religion,—a new movement, perhaps, but not a new religion, for the religion of Christ cannot be new. Christian Science has attracted to itself people from all sections and from all vocations,—the busy business man, the artisan, and the thinker,—and it appeals not alone to sentiment, but to the reason as well. Its growth during the last quarter century has indeed been remarkable. I welcome and applaud, as I know you all do, any and all teaching that brings to our hearts the love of God, and that leads us to the right path, as Christian Science surely does.—*Daily Report.*

Hoboken, N. J.

Bicknell Young, who lectured on Christian Science at the Gayety Theater, was introduced by John G. Axtman, first reader, who said in part:—

The remarkable growth of the Christian Science movement gives evidence of the fact that the thinking people who have given the subject of Christian Science a careful investigation, have found it to be a practical and demonstrable religion, meeting every human need. The vast amount of interest displayed by the public at these lectures shows the great activity and good which those on the Christian Science board of lectureship have brought about, by elevating the thought of the community with a more accurate knowledge of Christian Science. There was a time when Christian Science meant little or nothing to most people, but thought has risen to the point where the community at large are reaching out for a higher and more substantial doctrine.

The Bible contains the injunction to "preach the gospel" and "heal the sick." Christian Science, through its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, heals the sick, reforms the sinner, gives a broader view with the spiritual interpretation of the Scriptures, and points out the way in which Jesus healed the sick centuries ago. As we accept this truth, we learn to know God, divine Principle, obtain the good, and gain a spiritual uplift which leads into perfect health, happiness, and holiness. Christian Science offers in support of the truth of its teachings innumerable cases of healing.—*Correspondence.*

Firth, Neb.

A fair-sized audience was in attendance at the lecture on Christian Science given by Clarence W. Chadwick at M. W. A. Hall. Frank A. Burling, in introducing the speaker, said in part:—

I am not what you term a Christian Scientist, but I have had full opportunity in these past years to study and observe the teachings of the great truths of the Christian Science church and to note its beneficent results both as to sickness and as to its true Christian fundamentals upheld to the world. It is certainly a religion to me, and a religion of love, as it lifts men up and carries them beyond the material world and sets them down at the very feet of Jesus. It teaches me a religion that symbolizes the fatherhood of God and the brotherhood of man. It is not a human theory, but a spiritual fact.

Christian Science is a demonstrable religion, something we all, from the very least of us, can demonstrate and prove beyond any reasonable doubt in our business life, on the farm, in our home, and in every avenue and walk of life with gratifying results. When we can prove a thing, we know it to be an absolute fact, regardless of the criticisms that may be offered, and for this reason a great army of people have turned to Christian Science and their infirmities and diseases have been healed and the Bible made new to them.

Christian Science is not something new; it is a new-old religion as taught and practised by the Master while here on earth.—*The Cortland Sun.*

Louisville, Ky.

Clarence C. Eaton lectured on Christian Science to a large audience at Macauley's Theater. He was introduced by L. H. Long, who said in part:—

Christian Science is a religion that brings health, happiness, and harmony into every-day life. To know the truth is to know something of God, to have some measure of understanding of His allness. Jesus said, "Ye shall know the truth, and the truth shall make you free." I am one of thousands who have been set free.—*Louisville Post.*

Testimonies of Healing

I have felt for some time that I should tell of the benefits I have received from Christian Science; but now that I have resolved to do so I am at a loss where to begin, for I have received so much good that I cannot tell of all the blessings that have come to me in the short time I have been studying Science. I was extremely bitter against Christian Science, and said many things about it for which I am now very sorry; but I was ignorant of its teachings. Now that I have found the light, I hope to do something to help blot out all I have ever said against this saving truth as revealed in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

When I was driven into Christian Science on the 12th of January, 1911, I was miserable in mind and body. I had worn arch supporters for about seven years, and for a number of months they had failed to help me walk, and my feet would swell and pain me so that I was almost distracted. I had worn glasses for twelve years, and they were causing me considerable trouble, for the heavy lenses which I was obliged to use gave me little relief, as I could hardly see for any length of time. I had headaches for over two years; sometimes they would last for a week at a time, and they were so severe that I could do very little work. For about a year before my advent into Science I had dizzy spells, and I had begun to think I was about to have softening of the brain, for I had a number of bad attacks which lasted a day or two, when I would reel about like a drunken man, and the feeling at that time was terrible. To cap the matter, I was worrying so that I could not sleep for more than an hour any night, and at the same time I had cold night-sweats. I rode by a large cemetery every day from the city, and many times in passing it I looked at the mounds and would say to myself that I wished it were all over with me and I were sleeping in that quiet place.

A friend was visiting here from Seattle, and he told me of the good he had received from reading Science and Health. I always laughed at him, but one evening, just before he returned to the West, he again told me that he knew Christian Science was the truth that Jesus had taught and that it would heal any disease known to mortals. A ray of light then came to me, and I began to think that maybe I had been wrong to condemn a thing before I knew anything about it. On reaching home that night I asked my wife if she had a copy of Science and Health, although I knew that she did not have one, for I had been so bitter against its teachings that I would not allow her to have any of the literature in the house. She said she had not, but could get one, and I asked her to do so. The next evening we started as soon as we had finished our supper and read until about eleven o'clock, and I afterward slept better than I had for years, but not all night. The next day we read more and later, and when I went to bed I slept soundly until morning. Now, when I awake in the night, I think of some of the beautiful sayings written by that noble woman, Mrs. Eddy, and in a short time I am again happily asleep. I have communion with God, good, who is, I know, the maker of everything that is good, and I am happy in the realization that I have found the "pearl of great price."

About two weeks after starting to read Science and Health, I took up the morning paper, and without knowing it began to read without my glasses. This surprised me beyond measure, but I have never worn glasses since then to do even the finest work, and I have to use my eyes very hard in my work. The headaches vanished, I do not know when, but I have never had one since I have studied Christian Science, so far as I can remember, nor have I had a dizzy spell for a long time.

Three weeks after I began to search for the truth, I discarded the arch supports I had worn so long, and although I am very fleshy and walk a great deal, I have never suffered any inconvenience; in fact, I have been able to walk with more ease and comfort than had been possible for over ten years. In business, Christian Science has been a great help, and has done wonders for me in solving the problems that business men have to meet so often. I have never used tobacco or intoxicants since the first night I read in Science and Health, that book which has done so much to relieve the suffering of the world. I had no practitioner; the healings were all accomplished simply by studying the text-book.

To say that I am thankful for all these blessings and for the overcoming of many other discordant conditions with the help of divine Love, is not enough; I am trying by right living to show my love and thankfulness each day. I have many things still to overcome, and am as yet only a babe in this divine Science, but my one aim is daily to grow in the love of God till I shall be in reality the image and likeness of God. The spiritual uplift and peace of mind that I have received from reading the writings of Mrs. Eddy, and the other literature of Christian Science, is of great worth to me. Long before my advent into the truth I had wanted something in religion which I could not find. I could not believe that God, who is Love, could or would send sin, sickness, and death to His children, and now I know that He does not, for He created the world, and all that is therein, and then said that all was very good, so that everything which is not good was not created by God.

During my first year in Science my business doubled, and last year there was also a large increase. None of the ills of which I was healed have ever returned, and I have had many other demonstrations of the healing efficacy of Truth. My health during this time has been better than it was for twenty years, and many of our friends say that I look ten years younger. Every day my wife and I are striving to have more of that Mind "which was also in Christ Jesus." Since we have been in Science, we have found our greatest pleasure in trying to help some one to know the God who heals all our sicknesses.

I hope that some poor sufferer who is groping in the dark, looking for deliverance from his fears, of which I had so many, will read this testimony and be benefited by it. I give thanks to God, and gratitude to our revered Leader, Mrs. Eddy, and all who have helped me over the hard places in these, my first years in divine Science, and the happiest years of my life.—Jacob P. Hager, Chicago, Ill.

It is with a heart full of love and gratitude that I give this testimony. About a year ago I called for help for my little girl, who was having very severe hemorrhages of the nose, caused by abnormal growths. As she had six attacks that day I thought it was time something was done. The growths had been causing trouble off and on for three years, but we had been advised by doctors not to do anything. As time went on, however, they were so troublesome that the little girl became very sick, therefore when the hemorrhage started for the sixth time in one day I immediately telephoned to a Christian Science practitioner, and when I got back the flow of blood had stopped. After eight days of absent treatment the growth came away. Our joy cannot be expressed on beholding this evidence of the healing power of Truth. We thought our troubles were over, but I had been told that if the roots were not out, the growth would appear again.

Digitized by Google

After a few weeks my daughter began to have more hemorrhages, but they were less severe than previously. I will confess that we did have fear; so I told the practitioner, and he made me see that a good work begun means a good work finished. Thus it proved, for Truth finally removed every vestige of the disease. The child has truly been regenerated and is now perfectly well. This is only another proof that the word of God is quick and sharp, and they that have faith can be healed. I hope this testimony will help some one in need. We are truly grateful for the healing.

Mrs. J. B. Miller, Worcester, Mass.

✥

When I take a retrospective view of the past five years, I feel it is time to give to the world a brief account of the joy and peace which the study of Christian Science brings into my life daily. It was when suddenly plunged into the depths of woe that I learned through this teaching how to place reliance on God here and now. It was then that this panacea for all the world's evil, the healing truth of Christian Science, rediscovered by our noble and revered Leader, Mrs. Eddy, was gently presented to me by a now dear friend, who was then merely an acquaintance.

Early and late I pondered Science and Health, which I found at all times a veritable "Key to the Scriptures." Almost immediately the passage, "Take no thought for your life," commented upon on page 228 of our text-book, was so unlocked that a chronic internal disorder, from which I had suffered acutely for many years, disappeared entirely from consciousness, being washed away, as it were, by the inpour of Truth "through flood-tides of Love" (Science and Health, p. 201). For years I had tried many material remedies for this malady, had been a strict vegetarian for two years, and upon medical advice had taken a course of medicinal waters, etc., but all to no purpose. Finally I concluded that nothing could give me permanent relief.

"Ye shall know the truth, and the truth shall make you free," adorns the wall of our church building, and this promise of Jesus, brought strikingly and understandingly to my notice through Mrs. Eddy's emphatic teaching that "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), has been fully exemplified in my case, for I am no longer in bondage to that tyrannizing belief. During the past five years I have not needed any material remedy whatever, and for this freedom I cannot express the gratitude I feel. Many other Bible promises have been proven true since taking up this study, and they were my counselor and comforter during a great trial. No earthly friend was near, and I had indeed to "place on the Lord reliance." I stood then alone with God, and I bless Mrs. Eddy more and more when I think of the inner comfort and strength her inspiring words gave me in that darkest hour.

When I was quite young in Science, a crochet hook pierced my thigh, but the one thought, that there would be no after effects, took possession of me. After trying unsuccessfully for half an hour to extract the hook, I sent for the practitioner who introduced Christian Science to me. She came, but refused to look at the thigh and sat at a little distance. I chatted, but receiving no response, I looked up and saw that she was treating me, whereupon mortal mind became silent, and thus I became receptive to the truth of God's omnipresence and omnipotence. Nothing then remained to support the erroneous position of the little hook, which was instantaneously dislodged. Imagine my joy at this manifestation of the allness of God, good.

These are some of the many proofs I have had that at last I have gained a right concept of God, a reason for the faith that is in me; that I am on the rock, Truth; that I have touched the hem of Christ's garment and am thereby enabled to give a cup of cold water in Christ's name; and all this I owe to Mrs. Eddy's self-sacrificing career and wondrous love for mankind. I hold a public position from which I have not needed to absent myself once during the past five years. Periods which formerly were fraught with anxiety, arrive and pass now practically free from fear or worry. Moreover, I have been entirely liberated from thoughts which make work a burden. I can do more and more and yet be free from fatigue.

A wish I expressed many years ago to a devout Christian relative, that I might live constantly in a family whose chief enjoyment was the open practice of Christianity, is now fulfilled, for Christian Science teaches so clearly the fatherhood of God and the brotherhood of man, that I feel I am indeed a member of the household of God. I rejoice to know that in reality none is outside the pale. I am grateful to the loving members of our own church who were so faithful in their assistance along the journey from sense to Soul, and my earnest desire is to live so that I may obey the divine injunction, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." "Thus will a life corrected illumine its own atmosphere with spiritual glow and understanding" (Miscellaneous Writings, p. 356).

Jessie M. Phillips, Blackpool, England.

Although I have not yet traveled so far along the Christian Science pathway as my wife, I am nevertheless entirely at one with our revered Leader, Mrs. Eddy, as laid down in her immortal work, "Science and Health with Key to the Scriptures." At first, the idea of a woman, and an American at that, attempting to teach me the Bible, when I could fall back upon such an array of learned divines whose entire lives had been consecrated to the cause of Christianity, and who in turn had enjoyed the use of whole libraries of religious literature transmitted to them from antiquity, caused me to remember that I was a man, and an Englishman too, and that I had no need for these new ideas, as I regarded them, and certainly would not be tempted from what I believed to be the only right way. Besides, generations of my family, and many of them most critical in these matters, had found the church as I knew it all they desired.

I well remember that when I first looked into Science and Health, I regarded the volume as rank heresy, and cast it from me in a mental attitude to which I do not like to refer. For a long time I saw no more of the book. When I did, it was still more or less of an enigma, until I came face to face with those who were not only studying it but striving to put it into practice in all their affairs of daily life. Then it was that the scales began to fall from my eyes, and today I am convinced that, except the teaching and work of Jesus himself, there is nothing so pure and so spiritually ennobling as Mrs. Eddy's statements of Christian Science.

I most gratefully confirm my wife's statement as to her healing, and this gratitude is intensified by the fact that I personally was the cause of the grief which she experienced and which is mentioned in her testimony. Although always of a spiritual bent, she has never been so much alive, alert, and peacefully happy, as since she undertook the study of Christian Science. In place of vague theories she now holds provable beliefs, and this has so enhanced the joys of life that each day brings yet another privilege of thanksgiving, so continuous is the expansion in spiritual understanding.

W. V. D. Phillips, Blackpool, England.

I should like to express my gratitude for the wonderful healing of my son through Christian Science. When he was fourteen months old he was badly burned on the face. While playing, he discovered in the kitchen a large pan, which had been put to soak in a strong lye water. He put his face down into it and drank some. How much he drank we never knew, but we heard him scream, and it was some few minutes before we could discover the cause of his agony. We immediately sent word to a Christian Science practitioner, and in about twenty minutes the child had a natural reaction, being relieved of all the stuff he had swallowed. His throat and mouth, in fact the whole lower part of his face, were in a terrible condition. An agent who came to the door just when the accident happened, stood there urging me to send for a doctor and a stomach-pump; he declared over and over that the child could not live overnight.

The boy screamed for hours, and several times he appeared unable to get his breath. His face puffed out until he did not look like a human being. In the mean while, the agent spread the news among the neighbors, who were all much opposed to Christian Science, and they criticized me very much for not sending for a physician. Nevertheless, one week later the child was perfectly healed. His face was as clear as it ever was,—no scar, no discoloration or blemish of any kind. In three days after that, his throat was in perfect condition also. The neighbors, who had seen the child every day, could not believe their eyes, but had to admit that he was wonderfully healed. Some said it was luck, others attributed it to God's goodness, while others said, "Oh, well, he couldn't have been burned so badly as we thought." I had had many proofs, however, of God's love and protection, and I knew in my heart that His child was cared for, so I paid no attention to their remarks, nor was I tempted in any way to resort to material means.

My hardest work was to overcome resentment toward my cook, who had been so thoughtless as to place the pan within a child's reach. It seemed as though I was so filled with resentment that it blotted out all other feelings, but I am glad to say it was all cleared away through the wise and gentle counsel of my practitioner. I learned then that Love is the only solvent, and the only way out of our difficulties, however dark they may seem. Again this was emphasized when my older son was wonderfully healed of a severe attack of diphtheria in a very short time.

Words fail to express my thankfulness to God for the many blessings that have come to me, and my gratitude to our wise Leader, Mrs. Eddy, who was faithful enough and pure enough to give us this new understanding of God.

Mrs. Frank L. Higgins, Los Angeles, Cal.

✧

Christian Science found me almost a complete physical and mental wreck. My girlhood was nearly devoid of the freedom and happiness which all would say rightfully belong to the springtime of life, so completely were my family and myself bound down by the beliefs of sickness and limitation. Wifehood and motherhood were also robbed of much of their joy by the same errors. When I turned to Christian Science, some four years ago, I had about completed the gamut of material remedies and had undergone two operations. As to religion, I had none. I had been reared in a Christian atmosphere, but its teachings brought me no solace in suffering and need.

Christian Science has taught me the "more excellent way." It has healed me and mine of various ailments, among them being frequent attacks of an acute throat affection, mumps, colds, stomach disorder of years' standing, rectal and kidney trouble, etc. One of my sons was quickly and beautifully healed of the cigarette habit, to which he had been a slave since early childhood. Last, but by no means least, I must state that we were carried triumphantly through a sorrow that would have utterly crushed us but for the help received from Christian Science. All fear in connection with this sorrow was overcome.

For all these many blessings I am thankful to God, and grateful to Mrs. Eddy, also to the loyal Scientists who have aided me in my search for Truth.

Nellie Firmin, Dallas, Texas.

✧

Christian Science has been a revelation to me, and it is a great pleasure, as well as a privilege, for me to testify to its efficacy as a healing and saving agency. I have been helped by Christian Science in many ways, mentally, morally, and physically. My first physical healing was instantaneous, for in one treatment I was freed from a chronic bowel disorder and stomach trouble. I am glad to say that this healing has been permanent; also, that it was followed by the laying off of glasses, which I had worn for what was said to be a structural defect. From that time, four years ago, Truth, as revealed in Christian Science, has been my only physician and has never failed. I am certainly appreciative of these physical benefits, but more marked has been the moral and spiritual change in my life during these years. All desire for liquor, smoking, and those things which formerly seemed pleasurable and necessary, has been destroyed, and with this change has come a peace and happiness before unknown.

Formerly in my business there was fear of unfavorable results, doubt of my own judgment, worry over petty annoyances of the day, etc.; but there is now a conscious, constant understanding of the source of supply. I know that I am about my Father's business, and that the governing Principle overcomes all difficulties and brings harmony and success. The Bible was a closed book to me for twenty-two years, for I did not attempt to read it, and if I had done so without Science and Health, our "Key to the Scriptures," I could not have obtained the spiritual meanings, without which one has not a clear understanding of Truth. I knew nothing about the life of Jesus, the Wayshower, but now his words and works are my constant companions. Christian Scientists know that he had spiritual wisdom and understanding above all others, and they are trying to emulate him in his healing and regenerating work.

For the blessings that have come to me I am truly thankful,—thankful to God for His ever-present, protecting care, and grateful to our revered Leader, Mrs. Eddy, for showing us how to avail ourselves of the loving and protecting care of God in our human needs, here and now. I am also grateful for having had class instruction, and for the periodicals, which always contain many helpful thoughts.

Samuel E. Ramseyer, New York, N. Y.

✧

Mercifully for us, God does not withhold His blessings from mankind, although we so often delay in giving expression to our gratitude. Apathy, or lack of appreciation of the incalculable blessings that are inseparable because part of Christian Science healing, keeps us silent, until Truth itself lovingly forces us to acknowledge our benefits. Once awake to the duty and privilege of testifying to Truth's quick and thorough healing, we rejoice to tell of our experiences, knowing that some one will be helped, maybe freed from just such faults and failings, or sicknesses, as those from which we have been delivered.

The day I bought the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read the Preface

Digitized by Google

and the chapter on Prayer, I was freed from the bondage of cigarette smoking, a habit in which I had indulged for a number of years. The same week I was able to give up material remedies which I had taken by a doctor's orders for many years. As I gradually grew in understanding, and learned that divine Mind sustains man, I gave up taking medicine at any time, and instead of feeling any sense of loss, I daily grew stronger. This was a great proof to me of the sufficiency of the spirit of Truth and Love to support and maintain man always and at all times.

Through the faithful and loving work of a practitioner I have been healed of an internal weakness of many years' standing, from which I suffered great pain, also from a tendency to have an attack of acute throat trouble and influenza every winter. My people dreaded the very name of influenza, as each attack left me in a still weaker and more nervous condition. Since my healing in Christian Science, all fear of a return of the ailment has disappeared, not only from my consciousness but from theirs. A fractured thumb was healed without pain (except for the first few minutes) in less than three weeks, and although it was not set by a surgeon for thirty-six hours after the accident, there was no inflammation or discomfort.

Eight years have now passed since I first attended a Christian Science service and bought the text-book, and I rejoice to say that they have been the happiest and most contented of my life. I am learning to love, to see more of goodness in those around me, and to appreciate their loving fellowship and unity in the grand work of proving to the world something of the healing and saving truth of Christian Science as discovered, taught, and lived by our revered Leader, Mrs. Eddy.—Jane T. Irvine, Glasgow, Scotland.

✥

I wish to testify to a few of the many blessings received through Christian Science. I was a nervous wreck and could not sleep; sometimes I slept but half an hour out of the twenty-four. My right foot and limb had never been in good condition after the birth of one of our children, and it was growing worse all the time, so that I had not been able to walk a block or to lie on my right side for several months. The doctors could do nothing for me, as they said medicine had no effect upon me, and one physician said I could live but a short time. Now, owing to the healing efficacy of Christian Science, I can walk as well and as far as any one. I do all the work for our family of seven, whereas before I had not been able to do anything for some time. My healing has remained permanent, and I am now in perfect health.

Since coming to Christian Science our last baby was born. The birth was almost painless, the last hour entirely so. The kind practitioner arrived about six hours later. The child was born with a large swelling on his neck, but it disappeared in eighteen hours. The doctor thought a blood-vessel had burst and was doubtful if the child could live, but he is now a strong, healthy baby. I was dressed and sat up the fourth day. Everything was harmonious, while before I came to Christian Science all was discord. I have also had nine teeth extracted without pain.

Every day I feel more thankful to God for the many blessings I have received, and grateful to Mrs. Eddy for having shown us the way; also to those who so lovingly helped me through the dark days.

Mrs. Walter Sorensen, Arcadia, Neb.

I wish to corroborate my wife's testimony as given above. I feel very grateful for what Christian Science has done for my family and myself.—Walter Sorensen, Arcadia, Neb.

From Our Exchanges

[*The Standard*]

Why is it so difficult for Christian people who are thoroughly in earnest to understand one another when certain aspects of the gospel are under consideration? It seems strange that the possession of the Master's passion for men who are lost, sometimes makes one unsympathetic toward men who are saved. So complex is our partially regenerate human nature that one not infrequently observes a preacher performing the acrobatic feat—not especially graceful in an esthetic sense or full of grace in a theological sense—of reaching out a hand of love to a fallen sinner while at the same time giving a savage kick to a saint who is engaged in the same work.

Some one will at once make the point that men who have tremendously positive convictions are the very ones who will be most apt to form uncharitable judgments, and that when men have no sharp or clearly-defined convictions of truth, it is easy to be lenient in our estimation of other points of view,—all of which is probably true; but it does not of necessity follow that one may not be gentle and strong at the same time, or that sweet reasonableness of temper is in some way connected with loose thinking.

There ought to be, along with a Christlike passion for lost men, a readiness to recognize the working of the same divine Spirit in the midst of diversities of gifts. We are still too busy in the manufacture of shibboleths. Because our brother does not pronounce his with the hissing sibilants that we use in saying our "sibboleth," he must, forsooth, be preaching another gospel! When will the time come for this harsh and unlovable reaction to be replaced by judgments which disclose a readiness to recognize more than one method of pronouncing the Christian message?

[*The Continent*]

A young man who has decided to get out of himself all that there is in him, in order to get his feet on the level with other people's heads, has chosen a very common way; but it is a very cheap way. No matter how well he succeeds temporarily in his purpose, he will end with a withered heart, an unloved life, and a disappointed soul. But he who determines to seek great things not for himself but for other people, transforms ambition into something sacred.

The essential note of right ambition is comparison, not between one's own success and the success of others, but between what one already is and the thing he believes he can and ought to be. The first comparison works out to envy; the product of the second is consecration. The goal of the first is a mark above one's neighbors; the goal of the second a mark above one's self. The latter is far nearer God. No young life is faced up the real path toward the heights until it has a vision of being the very finest thing God made it capable of,—every power developed to the utmost, every strength harnessed up and held in harmony with every other strength,—just the truest, purest, broadest life that God could have thought of when He gave being and birth.

[Rev. A. T. Bannister, M.A., in *The Christian Commonwealth*]

Here is the most urgent work of the church today,—to draw out and fearlessly to apply to our own time the social principles of Christ, to show that our Christian ethic has a public and a civic application to industrial affairs, to commercial, economic, and political life. When the church boldly faces the new ethical problems which have come with the new

Digitized by Google

time, we shall see an ethical revolution which will have a far deeper effect on the thought and life of Christendom than was produced by the Reformation of the sixteenth century. God's call to the church today is to bring about this ethical revolution, to become the prophetic guide of the people, the embodied conscience of the state, the organized center of all the forces and principles which make for righteousness, which help toward social progress. God, of course, has many allies, and the kingdom of heaven will get itself into being whether men and churches help or hinder its coming. Yet to men and to churches is given their chance, their time of visitation.

[*The Christian Work and Evangelist*]

I wish that we might all look at our politics and our history itself religiously. That is what elevates history,—the thought of God in history,—and that is what makes political action great. I wish that we might feel that our state is church, that God is in our history, that politics is religion, as Moses felt it, and David and Samuel and Isaiah. I cannot think that David felt himself doing anything unkingly in writing psalms. I like to read of Solomon taking things out of the priests' hands and saying the prayer himself at the dedication of the temple. I think it would not have been safe to rebuke the prophet Isaiah or the prophet Samuel for "preaching politics." I think, moreover, that it would not have been safe to rebuke those old Puritan ministers of ours for it. It is a poor, pale, later time that has divorced politics and religion.

Almost the whole of Jewish prophecy is politics. Their politics has become our religion. I wish that our own were that. I wish that, when the American preacher desires to show men plainly the finger of God, he might do as Stephen did and recount the history of his people. I think that in some future time some apostle to the Americans will write in the same high religious strain of the long line of American patriots and prophets who have greatly kept the faith as the writer of that sublime chapter in the epistle to the Hebrews chants the fidelity and the vision of the heroic souls of Israel.

[*The Advance*]

The Old Testament law contains tons of ceremony and grains of command concerning morality, yet the latter outweigh the former. There are chapters of ritual and sacrifice, yet plain declarations that God has no delight in them. There are volumes of mere ceremony, all rigidly prescribed, and verses of ethics dimly hinted at. Yet all the ritual is the husk to protect the ethical kernel within. There is no righteousness but rightness of heart; there is no salvation that does not save from sin. To save men from sin, to make them holy, to help them to do justly, and love mercy, and walk humbly with God,—this is all there is of duty; and all of religion beside this is a means to an end, or else is some invention of man and not a command of God.

[*The Christian Register*]

Out into the real world,—that is where the vacation leads us. However short, of whatever sort it may be, if it takes us into a larger world than the one we live in, it has done its grace for us. It does for us in the every-day life what religion does for our souls. That is, in fact, the finest essence of religion,—that it opens the doors, leads us into thoughts of a course where the world, and worlds on worlds, and stars and galaxies, and the ends of heaven, dwindle beside the order of righteousness and truth and love.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

We are glad to announce a lower schedule of rates for the cloth edition of "The Life of Mary Baker Eddy," by Sibyl Wilbur, and we believe that this will assist in a greater distribution of this valuable book. Single copy, cloth, $2.00; three copies, $5.50; six copies, $11.00; twelve copies, $22.00.

New photogravure plates have been made to replace the half-tone engravings in the edition de luxe of this book, and these plates, printed in a sepia ink, have greatly improved the appearance of the new edition. Single copy, $5.00; two or more copies, each $4.50.

"Christian Science: The Explanation of the Ideal Man," a lecture by William D. McCrackan, M.A., has been published in pamphlet form and is now ready for distribution. The sale prices are shown on the opposite page under the list of regular pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

A large part of the one hundred and ten million dollars that Kansas farmers will get for their wheat crop this year, it is anticipated, is going into motor-cars and trips abroad. This applies also to Oklahoma, which will reap somewhere between thirty and thirty-five million dollars in wheat this year. In Kansas there is already one motor-car to about every forty-five persons, and there are now in storage in Kansas City six million dollars' worth of motor-cars that the dealers in Kansas have no room for in their garages. These cars are for Kansas buyers, and there are orders in the factories for nearly as many more. A third as many more cars are in storage for Oklahoma dealers, and about the same proportion for orders in the factories. Local motor distributors say that this represents only the preliminary sales due to the wheat crop, and that when the 1915 models arrive they will go out by the carload to Kansas. The motor dealers estimate that the sales as a direct result of the big wheat crop will run close to fifteen million dollars.

The International Federation of Master Cotton Spinners and Manufacturers' Associations has evolved a scheme for the establishment of a model cotton plantation in the lower Bari Doab canal colony of the Punjab. The federation has for some time been convinced that India offers the most fruitful field for cotton growing outside America. The establishment of such a colony as that proposed, therefore, is in line with the general policy of the federation. The new company is expected to be able to do its work with a nominal capital of sixty thousand pounds. Its object is to establish a model plantation, not so much as a commercial undertaking as to present an object-lesson for the benefit of India and the cotton industry of the world as a whole. A system of intensive cultivation is to be introduced, and a demonstration of the value of this system will, it is hoped, induce other landed proprietors to adopt it on their estates, and so increase the yield per acre, and also materially improve the quality of the cotton grown.

Lands just approved by the national forest reservation commission for purchase by the government, include 6,083 acres in West Virginia, of which one tract, comprising six thousand acres, is situated in Tucker and Randolph counties, in the Monongahela purchase area. The remaining eighty-three acres are on the Potomac watershed in Hardy county, in the Potomac purchase area. The lands bring the acreage of the Monongahela purchase area up to 42,887 acres, and the acreage of that part of the Potomac area lying in West Virginia to 36,405 acres, while the total acreage in the state approved for purchase, amounts to 105,480 acres. The lands approved for acquisition by the government for national forest purposes in the East since the purchase policy was inaugurated in 1910 are now 1,104,000 acres, having a purchase price of five million five hundred thousand dollars. About two million dollars of the original appropriation remains available for further purchases in the fiscal year 1915.

A committee was appointed at the last convention of Montana Elks at Missoula to investigate the proposed site of a national elk preserve. The report will be favorable and will urge that the site be selected. The purpose of the preserve is to provide a place where the animals may pass the severe winters of the higher altitudes on the Yellowstone park boundaries on the north, and find not only plenty of shelter but ample food. In the proposed reserve there are approximately fourteen hundred acres, located in Park county, a couple of sections of railroad land, and a section of government land which had been taken off the market by option pending final action of the Elks grand lodge. It is stated that the preserve may be procured for fifty thousand dollars.

The quantity of oil which suddenly burst from the Kurokawa oil wells in Japan recently, is more than twice the volume of all the other wells in the empire combined, and is remarkable in the history of the oil industry the world over, as the oil simply flows in a steady stream and is unattended by pressure. Work was started on the new well during the first part of April, this year. After drilling through ordinary earth and rock to a depth of some 1,110 feet, a stratum, known to oil experts as "the shell," was encountered. At midnight of May 25 the drill pierced through this shell, or crust, at a depth of 1,368 feet, into what is apparently the lead bed of an extraordinary deposit.

Among the irrigation projects provided for in the South African Union estimates for the year ending March 31, 1915, the largest is that known as the "Haartebeestpoort reservoir" project. This will consist of a dam built across a "poort," or gorge, in the Magaliesberg mountains about twenty miles west of Pretoria, by which the waters of the Crocodile, Magalies, and Hennops rivers will be stored. The capacity of the dam will be five billion ninety-nine million cubic feet of water, and thirty thousand acres of land will be brought under cultivation. The total cost of the project is estimated at six hundred and three thousand pounds.

That new peace treaties with Great Britain and France will soon be signed by the United States, is announced by Secretary Bryan of the department of state. The treaties are modeled after those recently signed by the secretary with representatives of sixteen other nations. Under the proposed treaties, all questions arising between the nations which cannot be settled by diplomacy, must be submitted for investigation, for at least a year, to an international commission of five members. In the mean time hostilities would not be entered into. The findings of the commission would not be binding.

Awaiting the placing of the one hundred million-dollar loan, the public expects that as soon as the Brazilian government gets the money in hand it will push forward a number of railway enterprises that were suspended when the depression set in. Plans for future construction include roads running north and northwest from the state of Sao Paulo, opening up the states of Matto Grosso, Goyaz, Bahia, and Maranhao. There are in operation in Brazil more than fourteen thousand miles of railroad. The proposed new construction will be welcomed where many immigrants are now settling on farms.

Characterizing the distribution of free transportation by railroads as "a menace to the institutions of a free people," the interstate commerce commission has reported to the Senate the results of its investigations directed against the Louisville & Nashville and the Nashville, Chattanooga & St. Louis railroads. The report says that during 1913 the two roads distributed free passes representing more than eleven million miles of travel, valued at $340,260.61, to more than thirty-four thousand individuals in every walk of life.

A new waterway to Leipzig is planned, and it will in all probability be carried out on the same lines as the Hohenzollern canal. It is hoped by this means that the trade of Germany (especially that of Berlin) with Saxony will be increased. The Potsdam and Berlin Chambers of Commerce find the cost of transportation by water so much less than by rail, that it is expected Berlin will before long have a network of waterways in every direction.

Preliminary to entering suit against the New York, New Haven & Hartford Railroad Company, seeking restitution of approximately one hundred and fifty-five million dollars used for various purchases to enlarge the transportation system, attorneys for the stockholders have written the directors of the company asking them to join in proceedings to restore these millions to the treasury.

The Bank of France and other official banking establishments last week opened subscription to the loan of eight hundred million francs. There was a remarkable rush throughout the day to purchase the new rente, especially among the working classes, and it is generally believed that the loan has been subscribed many times over.

At the time the national defense commission of the Imperial Douma voted one hundred million rubles to be used in the development of the Black sea fleet, the minister of finance announced that Russia, during the next five years, would expend seven billion five hundred and twenty million rubles in the maintenance and development of the army and marine.

Viscount Kitchener, on the celebration of King George's birthday, had conferred upon him by His Majesty, in recognition of his services in Egypt, the dignity of an earldom of the United Kingdom.

The city council of Vienna, Austria, has voted an appropriation of sixty-four thousand dollars to cover the cost of Vienna's separate participation in the Panama-Pacific exposition at San Francisco.

A Pekin despatch to the *Daily Telegraph* says that China is about to apply to the bankers of the five-Power group for another loan of one hundred million dollars.

Vol. XVI August 1, 1914 No. 48

Christian Science from the Legal Standpoint

JUDGE CLIFFORD P. SMITH

In order to approach the subject of Christian Science and legislation intelligently, it is necessary to remember that the American people are a religious people, and that the prevailing religion in the United States is Christian. It is also necessary to know that these historical facts are judicially known and acted on by the courts, and they are presumed to be, and should be, recognized and given effect by the legislatures, and thus enter into and give character to our laws. In short, the Christian religion is, in a sense, a part of our common law, and it should pervade our statute laws. (Cooley, Constitutional Limitations (7th ed.), pp. 696, 670; Bishop, New Criminal Law, Vol. 1, Sects. 495-497; Tiedeman, State and Federal Control of Persons and Property, Sects. 63, 65.) "While the state is no longer empowered to compel people by prohibition and punishment to be religious, it should recognize that in the performance of its function of preserving the peace and security of society, it owes to religion, and to the institutions of religion, an obligation of which it should ever be mindful and considerate." (James H. Webb, Two Centuries' Growth of American Law, p. 336.) For, as Mr. Bishop observes, "upon religion, morals, and education, society and the state itself rest." (New Criminal Law, Vol. 1, Sect. 495.)

Just how much these considerations are heeded in the legislatures cannot be determined; for a legislature is not required, like an appellate court, to record the reasons for its acts. Many cases could be cited in which the courts have recognized these facts and given practical effect to them. One of the leading cases will suffice by way of illustration. In Holy Trinity Church *v.* United States (143 U. S. 457), the court, construing a statute prohibiting the importation of aliens under contract to perform labor, said:—

"But, beyond all these matters, no purpose of action against religion can be imputed to any legislation, state or national, because this is a religious people. This is historically true. From the discovery of this continent to the present hour there is a single voice making this affirmation.

"[After referring to various colonial documents.] Coming nearer to the present time, the Declaration of Independence recognizes the presence of the Divine in human affairs. If we examine the constitutions of the various states, we find in them a constant recognition of religious obligations. Every constitution of every one of the forty-four states contains language which either directly or by clear implication recognizes a profound reverence for religion and an assumption that its influence in all human affairs is essential to the well-being of the community. . . . Even the Constitution of the United States, which is supposed to have little touch upon the private life of the individual, contains in the First Amendment a declaration common to the constitutions of all the states, as follows: 'Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof.'

"There is no dissonance in these declarations. There is a universal language pervading them all, having one meaning; they affirm and reaffirm that this is a religious nation. . . . In the face of all these shall it be believed that a Congress of the United States intended to make it a misdemeanor for a church of this country to contract for the services of a Christian minister residing in another nation? . . . It is the duty of the courts, under those circumstances, to say that, however broad the language of the statute may be, the act, although within the letter, is not within the intention of the Legislature, and therefore cannot be within the statute."

The importance of these considerations to the present subject cannot be overestimated; for if the lawmakers do not restrict the practice of the Christian religion, they will not restrict the practice of Christian Science. Christian Science is a religion which conforms in theory and practice to the religion of Jesus the Christ. The practice of Christian Science is the practice of the Christian religion as he defined it, by precept and example.

A Christian is "one whose profession and life conform to the teaching and example of Christ." (New Standard dictionary.) A good Christian has always been deemed a good citizen. But any law which would restrict Christian Science healing, would stamp as a crime the act of doing what Christ Jesus did and what he would doubtless do again if he were here; it would denounce as criminal the act of endeavoring to be a Christian—the act of endeavoring to conform to the teaching and example of Christ; it would condemn as a public offense the act of doing what he said all his followers should do! (Matthew x. 5-10; xxviii. 16-20; Mark xvi. 14-18; John xiv. 12.) Is there need to say more? If so, let us reason further. Under such legislation, the Christian whose prayers are the most effectual, would probably be called on to commit the most crimes; the one whose ministrations bring the widest salvation to sinning, suffering, and dying humanity, would be the most criminal; the one who most nearly apprehends Christ's Christianity and most faithfully puts it into daily practice, would be the greatest outlaw!

The federal constitution and the various state constitutions secure to all men the right to "the free exercise" of their religion, using the words now quoted or their equivalents. Therefore, according to the plain meaning of the constitutions, religious liberty in the United States includes freedom to practise one's religion as well as believe in it. It includes freedom to make one's conduct conform to one's religious convictions. Whoever believes that the prayer of spiritual understanding is the Christ-method of overcoming sickness, has the right to act accordingly, whether he believes that he possesses the necessary spiritual understanding himself or desires to employ some one who does. Indeed, the state cannot enact any law to the contrary without entering the field of scientific and theological controversy and establishing certain opinions and doctrines as the state therapeutics and the state religion.

In 1905 Governor Mickey of Nebraska, vetoing a bill for a law aimed at Christian Science practice, said: "The constitution of the state of Nebraska declares that 'all persons have a natural and indefeasible right to worship almighty God according to the dictates of their own consciences,' and further adds, 'nor shall any interference with the rights of

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

conscience be permitted.' In the Christian Science religion the ideas of worship and of divine healing are so intermingled that it is impossible to draw the line of demarcation, and hence interference with the one or the other is an interference with 'the rights of conscience' and thus becomes an infringement of the constitutional guaranty of religious freedom." (See also the veto message by Governor Thomas of Colorado.)

The law of Kansas regulating the practice of medicine contains this provision: "Nothing in this act shall be construed as interfering with any religious beliefs in the treatment of diseases, providing that quarantine regulations relating to contagious diseases are not infringed upon." Referring to this provision, the supreme court of Kansas said: "The express exclusion of the element of religious belief in the application of the law was hardly necessary. Religious freedom is guaranteed by the constitution, and without mention in the statute would have been implied." (State *v.* Wilcox, 64 Kan. 789, 68 Pac. 634.) (See also *Ex parte* Bohannon, 14 Cal. App. Reports 321, 1111 Pac. Rep. 1039.)

Of course there must be a limit to what may be done merely in the name of religion. Upon this point the United States Supreme Court has adopted the rule, formulated by Mr. Jefferson, that "it is time enough for the rightful purposes of civil government for the state to interfere when principles break out into overt acts against peace and good order." (Reynolds *v.* United States, 98 U. S. 145; Davis *v.* Beason, 133 U. S. 333.) But an act which is not inherently wrong, an act which is inherently right according to the standard fixed by Christ Jesus, cannot be converted by legislation into an act against peace and good order. There is a difference between right and wrong in human conduct which cannot be changed by legislation; and the highest standard of morality known to the human race is the standard inculcated by Christ Jesus.

"This is a Christian nation. . . . While every one is welcome, whether a believer in Christianity or in any other religion, or in no religion, yet the principles of Christianity are the foundation of our social and political life. . . . The very tolerance which some oversensitive people deprecate is one of the best evidences that in the framing of our Constitution and the foundation of our nation there was recognized that truth which underlies Christianity, to wit, that love not law is the supreme thing." (From American Citizenship by Justice David J. Brewer.)

"The absence of creed and dogma in the Christian Science church, its freedom from materialism, mysticism, and superstition, also the simplicity, uniformity, and impersonality of its form of worship and organization, are among the distinguishing features which characterize this modern religious movement. Hypnotism, mesmerism, spiritualism, theosophy, faith-cure and kindred systems, are classed by Christian Science as foreign to their form of worship. Those practising these beliefs are denied admission to the Christian Science church." (From the New Century Reference Library Cyclopedia.)

"It [Christian Science] declares that Jesus exhibited and taught the power of God to heal and to save, and that Jesus' works, instead of being unnatural and in contravention of law, were divinely natural, scientific, and in demonstration of divine order. It claims to remove the entire ministry of Christ from the realm of mystery, and to present it as a lawful manifestation of the divine immanence—as the availability and adaptability of the truth or Science of being. It pronounces sin and sickness the works of the devil, which Jesus came to destroy, and declares that salvation through Christ, which he demonstrated, naturally includes the healing of the sick as well as the reformation of the sinner. It declares that fear, sin, superstition, ignorance, and an erroneous philosophy constitute the primal cause of bodily degradation and have involved the human race in mortality; and the statement is made prophetically that when the world fully learns this fact it will cope scientifically with and permanently master disease." (From the New International Encyclopedia.)

Sunday School Work

MELISSA F. PIERCE

After carefully reading and rereading many times some of the very helpful articles in our periodicals relating to Sunday school work, I feel impelled to express my gratitude for these and numerous other excellent articles on the commandments which have appeared from time to time. How little we realize the depth and scope of the commandments until we teach their meaning in our Sunday schools! Then the truths they embody begin gradually to unfold.

In the fourth commandment we learn that the Sabbath day means vastly more than merely one day in the week. We see that we can keep the Sabbath only as its larger significance is unfolded to us, no matter what the name of the day may be. On page 584 of Science and Health we find a very different meaning for the word "day" from what we have always been taught outside of Christian Science. There we read that "Mind measures time according to the good that is unfolded. This unfolding is God's day." The intimate relation which really exists between all the commandments is also unfolded in Christian Science.

In working out for my Sunday school class a lesson on the sixth commandment, "Thou shalt not kill," my thought was directed to the story of Daniel in the lions' den, and on reading it again carefully, I laid the Bible down with a prayer of gratitude, for I had found many lessons therein for my class.

It is needless to say that on the following Sunday the children were deeply interested. They learned first of all something about prayer, how Daniel prayed and gave thanks to God three times a day, and how prayer, right desire, affords protection to the child of God whose thought is filled with Life, Truth, and Love. It was easy for the child-thought to grasp the truth that Daniel did not have "other gods." He obeyed the first commandment, "Thou shalt have no other gods before me."

As the lesson for the day in our class dealt especially with the sixth commandment, "Thou shalt not kill," the class could see that those who cast Daniel into the den of lions were not obedient to this commandment. The men who went to the king were full of envy and hatred, and it was this jealousy which tried to kill Daniel. Daniel's thought, on the other hand, was filled with love, and a love-filled consciousness is a protection against hate and jealousy. Daniel's God was divine Love, and the fact was well impressed upon the children that because he held the right thought, because he reflected divine Love, he came through the ordeal unharmed. The lesson for them was brought out that to keep thought filled with love for all mankind is a shield "from the attacks of error of every sort" (The First Church of Christ, Scientist, and Miscellany, p. 210).

Daniel undoubtedly knew that man is God's image and likeness, and that nothing could harm God's child, so he had dominion even over lions. This same dominion has been given to all of God's children, as we read in the first chapter of Genesis that man was to have "dominion over the fish of the sea, and over the fowl of the air, . . . and over every creeping thing that creepeth upon the earth." We also read in

Digitized by Google

the prophecy of Isaiah, "The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them." The children were also told that God did not make lions savage and destructive. The creatures that God creates are always peaceful, beautiful, and gentle. Only the wrong thoughts which seem to be in the world make men and animals fierce and cruel, and these erring thoughts, which are no part of the real man's being, go back into their native nothingness when we find out what our relation to God is, and realize that wonderful truth stated by St. John, "We know that we have passed from death unto life, because we love the brethren." Thoughts which would kill are then seen to be nothingness, and because they are no part of God they are no part of us as His likeness. God's ideas, His reflections, cannot have something that God has not.

In presenting the story of this noble character to the children, one cannot help seeing how patient and utterly fearless was this man of God, even while surrounded by the animals that he had no doubt been taught to look upon as fierce, for surely a thought of fear never entered his loving consciousness. Had it been so, the same error would have been reflected back to him through the lions, and they undoubtedly would have destroyed him. But we know that he returned good for evil, and so was enabled to eliminate all sense of personality in connection with the men who placed him in that position. He doubtless realized that it was not bad people but evil thinking which seemingly tried to kill him.

The pupils were then shown that to progress in Christian Science they must ever be on the alert to return good for evil, by right thinking as well as by right acting. Following up this line of thought, the children saw that good thinking has power, as was again proven to Daniel by the effect upon the king and his people of right thought. They stopped praying to false gods and worshiped the one God, who is Life, Truth, and Love, for we read in the sixth chapter of Daniel that King Darius made this decree: "That in every dominion of my kingdom men tremble and fear before the God of Daniel: for he is the living God, and steadfast forever, and his kingdom that which shall not be destroyed, and his dominion shall be even unto the end." It was also seen that the king had always loved Daniel, although he was temporarily influenced by error, and the pupils were shown that they must guard their thinking constantly; that they should never hold destructive thoughts about God's child in any way, whether this meant themselves or others.

This story can be used in bringing out the meaning of many of the commandments. Take the fourth one, for instance: "Six days shalt thou labor, and do all thy work." Daniel had evidently done his work and labored faithfully in all the days, not merely on one day, and when he found himself placed in that seemingly most trying position, surrounded by lions, his demonstration was complete. He found that there was absolutely nothing to be afraid of. He thus entered the holy Sabbath, God's perfect day. The good had been unfolded and he could rest in perfect peace, no matter what his surroundings, rejoicing that he had the understanding of the one God who is infinite Love. In "Miscellaneous Writings" (p. 216) Mrs. Eddy says, "There *remaineth*, it is true, a Sabbath rest for the people of God; but we must first have done our work, and entered into our rest, as the Scriptures give example." We are told that Daniel had done his work and done it well.

In explaining the Bible passages to the Sunday school children, we as teachers should ever remember what Mrs. Eddy has said on page 492 of Science and Health, "For right reasoning there should be but one fact before the thought, namely, spiritual existence." The writer finds it helpful, before going to her class on Sunday morning, to realize that there is but one teacher, God. Jesus said that we can of ourselves do nothing. We know that we can bring good to the children only by keeping our thought open to Truth, so that Love can be reflected through us to them.

Good Memory

HENRY M. PERKINS

THE accurate retention or remembrance of the things of Truth is of great significance. The counsel to the Israelites was, "Beware that thou forget not the Lord thy God, in not keeping his commandments, and his judgments, and his statutes, which I command thee this day." This emphasizes the fact that a mere mental rehearsal of the divine commandments is insufficient. The Master said, "If ye know these things, happy are ye if ye do them." If the good and true is held in thought with sincere purpose, the life will take its direction accordingly. The more serious forgetfulness of God is the failure to obey Him. Our Leader says, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, p. 261).

In the paths of obedience the blessings of Christian Science have found their way to human hearts and lives. Religion with many consists in the tenacious holding of some man-made creed. The leaven of Christian Science has now largely permeated modern thought by showing that immortal Truth should be articulated with the needs of daily life, and that this can be done not by merely learning the letter, but by being receptive to the spirit of the gospel.

If a good memory consists in remembering and treasuring the good, the natural inference is that this would mean a forgetting and forsaking of evil. To the Philippians, Paul wrote, "Brethren, I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus." How little inspiration or enthusiasm would that great apostle have felt if he had continually thought upon his past failures, his former enmity to Christian truth, and his persecution of the early churches!

In the cultivation of a right remembrance, good results will surely follow. There will be continuous effort to cast out the "wood, hay, stubble" of past thought-accumulation, that room may be made for the "gold, silver, precious stones" of Truth. There will thus be gathered a rich fund of thought upon which to draw for inspiration and strength. Joseph's storehouse in Egypt supplied a nation's want during the seven years of famine. Yet for every one whose memory is stored with spiritual truths there is a richer supply provided, a progressive understanding of God, with all the blessings which it brings.

Unity in Life

MILDRED SPRING CASE, A.B.

To those struggling under the heavy sense of grief which this world says must follow what seems to be the loss of our loved ones through death, Christian Science comes as a healing balm. It tells us there is no death, for God is Life, and we look up in dazed wonder, trying to grasp the meaning which the inner voice tells us is surely true. So, as we hold fast the truth about God and man, we reach out and up for

Digitized by Google

this sense of Life, which tells us of the unity of all God's children. We learn that our loved ones are still alive and may be looking back on the experience called death, wondering how they could ever have believed in its reality. They have found that God's children cannot die, that Life is continuous, everlasting, eternal.

The Bible says, "In him [God] we live, and move, and have our being." Then if God is our Life, and God is everlasting, unchangeable, how could our loved ones die? Indeed we may feel ourselves nearer to them than ever before, if we are reaching out for the spiritual, for we know that we are both living in God. Even the most material of their friends here are now thinking of them as spiritual. The bondage of fear has thus been in a measure loosened, and they may be more free to understand God. If, as Christian Science teaches, there is only one Spirit, one Mind, and we are all in that Mind as God's eternal thoughts, how can we be apart? In so far as we learn to understand God, and to realize that He is Life, so far will we feel the nearness of our loved ones in the one Mind. There is nothing melancholy or far away about it; it is comforting, and near, and now.

God is Love! He is not cruel, else He would not be God. Jesus said, "Your joy no man taketh from you." We all dwell in Mind, and by realizing God's presence we are near our loved ones, no matter where a material sense of limitation may place them. The only thing that could ever die is the belief in death and in materiality, the false sense of life. And how much closer this brings us to our loved ones! On page 42 of "Unity of Good," Mrs. Eddy says, "Life, God, being everywhere, it must follow that death can be nowhere; because there is no place left for it." In John we read, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." The one Mind is, now and always, here and everywhere. By ever reaching out and seeking to know God, we too may share His heaven.

Christian Science brings us the message of unity, not of separation; of presence, not of absence. Tears of grief over the death of those we love can never bring them nearer us, but the realization that all live and move and have their being in God, does establish a sense of the nearness of those who have seemed to pass away. Our work here is not to mourn; it is to "rejoice and be glad" in God our Saviour. It is to join with our Leader when she says, out of the depths of her own experience (Science and Health, p. 45): "Glory be to God, and peace to the struggling hearts! Christ hath rolled away the stone from the door of human hope and faith, and through the revelation and demonstration of life in God, hath elevated them to possible at-one-ment with the spiritual idea of man and his divine Principle, Love."

✧

"Songs in the night"

MARGARET WICKLIFFE

WHILE enjoying a sojourn in a beautiful and picturesque spot situated in the foothills of the Blue Ridge mountains, some sweet lessons came to the writer, filling her heart with gratitude to our Father-Mother God, whose tender love and protecting care is ever with us. Here the great Southern pines, reaching toward the sky, lift their majestic heads, and the beautiful magnolia blossoms fill the air with sweetness. This is the native home of the Southern mocking-bird, the sweetest of all the song-birds, because of those plaintive notes which he sends forth in the night, when all is still, and the quiet moon is shedding that soft, mellow light which makes all nature look so lovely. Thought quickly turned to a little experience of the past, and as it was pondered, the lesson came so sweetly to my consciousness,—how much greater is divine Love than even the highest human sense can express.

At one time I came into possession of a young mocking-bird, a little nestling, quite unable to obtain its own food and entirely dependent upon the mother bird. It was tenderly cared for, fed daily until it could eat the food prepared for it. A large cage was provided and hung outside my window, and for two years the bird was a perfect delight, giving forth the notes of all other birds, even imitating the whistle of the schoolboys. He evidently did not feel any sense of limitation, because he had always lived in the cage. He sang as sweetly as other birds that had always known freedom. Often in the midnight hours I would listen for those sweet notes which seemed to be meant for me alone, and my heart would be filled with thankfulness to God, "who giveth songs in the night." The psalmist gives expression to this thought when he says, "The Lord will command his loving-kindness in the daytime, and in the night his song shall be with me." Then there came a day when the bird escaped through a broken wire in the cage. The open door of the cage and the food did not tempt him to return. The earth, the sky, and the trees were his own,—and who could grudge him the larger, God-bestowed freedom!

Our Father-Mother God provides for all His creatures, and they need no lesser love to provide their daily food. In Science and Health (p. 511) Mrs. Eddy tells us, "The fowls, which fly above the earth in the open firmament of heaven, correspond to aspirations soaring beyond and above corporeality to the understanding of the incorporeal and divine Principle, Love." These little song-birds may often remind us of the Love that makes both night and day beautiful, and bids us let our thought go forth to swell the divine harmony of earth and heaven.

[Written for the *Sentinel*]

Thine and Mine

WARREN C. KLEIN

AMID the clamor of the day,
In common walk or solitude,
An inward song a soft prelude
Enjoins, then drives all care away.

O faith, that needs not sight to see,
Dwell steadfast in my heart of hearts,
Nor let vain doubt divide in parts
God's garment new that covers me!

O hope, my one perennial spring,
From which outpours life's river pure,
Remain fore'er serene, secure,
And thy immortal message bring!

O Love, with wondrous healing touch,
Brood o'er us and abide with me;
Impart thine own sweet constancy,
Of which I cannot have too much!

One Mind divine, supplanting mine,
One cause, one law, one purpose good,
Which furnishes eternal food,—
Let Thine be mine and mine be Thine!

[Frederick Dixon in *Express and Star,* Wolverhampton, England]

An anonymous writer, speaking of Christian Scientists, declares that he has "investigated their methods and results, —many of them in the coroner's court,—and begs to say that should occasion arise, he would prefer a medical practitioner." Will you permit me to point out that the sort of investigation which is gained from reading reports of inquests, necessarily piecemeal, is a very fair specimen of what gentlemen like our anonymous correspondent regard as scientific. What is the truth of the whole matter? An enormous number of patients come to Christian Science practitioners only as a last resort, after they have been given up by the ordinary medical practitioners. When Christian Scientists fail, there is an inquest, and not infrequently they are told that medical aid would have saved or prolonged the life of the patient. I have known a man to be given up by two or three doctors as unable to live longer than a month. This man's life was prolonged for six years with Christian Science help, yet when he died the doctors did not hesitate to say that if he had had ordinary medical treatment he might have lived longer. This is by no means an exceptional case. It has happened several times, and we have always been told afterward that medical assistance would have prolonged the patient's life.

The whole trend of medical argument with respect to Christian Science is a case of "heads I win, tails you lose." If the patient gets well, we are informed that the diagnosis was a wrong one. This has happened literally thousands of times, and is itself a pretty severe reflection on orthodox medicine. If the patient does not get well, we are told that with proper medical help his life would have been prolonged or even saved, utterly disregarding the fact that he has lived longer than the physicians gave him any hope of doing. A very well-known doctor once told me, personally, that if a case of malignant cancer appeared to have been healed in Christian Science, as numbers of such cases have, it only proved a wrong diagnosis. If, he said, the case was healed, it was not the disease they thought it was. If it had been, it would not have been healed.

The anonymous correspondent—why is it that critics are so fond of being anonymous?—is, of course, perfectly at liberty to have a doctor if he wants one; no Christian Scientist would dream of persuading him to the contrary. But if he really thinks that doctors save the lives of all their patients, he had better study the obituary columns of the press. The vital difference is this: that when a patient dies under ordinary medical treatment, a doctor gives a certificate, and no more is heard of it. If a patient dies under Christian Science treatment, a certificate cannot be given, and there is an inquest. The fact that only a mere handful of inquests have taken place, while thousands upon thousands of people have been treated during the twenty-five years Christian Science has been practised in England, is the greatest proof imaginable of the efficacy of its healing. Imagine the condition if there was an inquest on every patient who died under a doctor. The whole population would have to be impressed as coroners' jurors.

The simple fact is, that the Christian Science movement has grown up on its healing work. In the forty-eight years during which this healing has been practised, unnumbered cases have been treated with marked success. As a result of this, the movement has already spread around the world, and it is gaining strength every day. It is a little futile for gentlemen at this period to write anonymously to the press and make statements about coroners' courts. There are more examinations in coroners' courts into orthodox practice in a year than there are into Christian Science cases, in spite of the fact that doctors can give certificates and Christian Science practitioners cannot. Quite recently one well-known doctor said publicly of Christian Science that doctors were coming to see that the Christian Scientists had got hold of an important part of the truth, in proof of which there were cases, too numerous to be denied, where doctors' methods had failed and Christian Science had actually cured the patient. Having quoted a case of locomotor ataxia within his own experience which had been cured by Christian Science, this doctor declared that in the face of such cases it was of no use to say that it was a fraud.

[W. C. Williams in *Baltimore* (Md.) *American*]

It is not very reasonable from any standpoint to suppose that Jesus would take away suffering if it was God's law that humanity should suffer for the purposes of salvation. On the contrary, Jesus demonstrated beyond dispute that pain was one of the things from which even mortals were to be saved. It can be readily understood why those who follow Jesus' command to heal the sick are considered outside the pale of Christianity by those who do not obey this command, or by those who maintain that their idea of Christian teaching must be the correct one, since it is orthodox. Perhaps the best answer to this is, that in the time of Jesus there was not an ecclesiastic or a religious body that regarded him as orthodox, yet that did not prove his teaching to be erroneous. I do not believe that even all so-called orthodox ministers will agree that it is "a firmly established doctrine of both the Scripture and the fathers, that pain and even sin, by the grace of God, lead to a happier end than if not occurrent."

Pain, when the result of sin, has doubtless caused many to abandon sin; but this cannot well be interpreted to mean that a loving Father, whose eyes are too pure to behold evil, would intentionally (if this word is considered to have a different meaning from wilfully) create either. What would be the worldly judgment of a man who gave his child a disease so that when cured the child would better appreciate health? Would the father be loved more for so doing? If we aspired more to the Mind "which was also in Christ Jesus," we should learn that he suffered only to show how, by knowing the truth, all could overcome suffering as he overcame it. If it was God's law that we should suffer pain, we would be attempting to break that law every time we tried to relieve our suffering, whereas Jesus showed the multitudes that it was the fulfilment of the law of God to overcome suffering.

[W. G. Watkins in *Superior* (Wis.) *Telegram*]

The *Telegram* recently contained an article, "Mental Healing by Suggestion," in which Christian Science was mistakenly referred to. Christian Science is in no way related to any system of healing that has for its premise reliance upon the human mind. Instead, it teaches mortals how to subjugate the human will to the divine, and makes possible the manifestation of the Mind "which was also in Christ Jesus," the mission of which is to heal the sick, reform the sinner, and make mankind "every whit whole."

The dualistic mentality which believes in both good and evil,—a belief which found expression in the allegory of the serpent in Genesis,—received no encouragement from the Master, who said, "Every kingdom divided against itself is brought to desolation." He disclosed, once and for all, the line of demarcation between Christian healing and occultism, or mental suggestion of whatever name or nature.

On page 1 of "Science and Health with Key to the Scrip-

Digitized by Google

tures" by Mary Baker Eddy, we read: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love. Regardless of what another may say or think on this subject, I speak from experience. Prayer, watching, and working, combined with self-immolation, are God's gracious means for accomplishing whatever has been successfully done for the Christianization and health of mankind." Christian Science is making known to a needy world the fact that the pure metaphysics as taught and practised by the Master is available in every age.

Jesus attributed no more reality to what is called organic disease than he did to functional. He healed both disease and sin through the realization of the omnipotence of infinite Mind. His ministration, rightly interpreted and defined by Mrs. Eddy in the Christian Science text-book, has enabled thousands to prove that "the Lord's hand is not shortened, that it cannot save." Of the many thousands of well-authenticated cases of healing by Christian Science, a large number of them had exhausted the best efforts of well-meaning physicians and were considered by them incurable. Christian Science is indeed making practical to a material age the words of the Master, "It is the spirit that quickeneth; the flesh profiteth nothing."

✧

[Duncan Sinclair in *Evening Citizen*, Glasgow, Scotland]

In a recent issue occurs the following quotation: "Christian Science, so far as I understand the practice and conduct of those who profess to believe in it, is neither Christian nor Science, but a medley of crude, half-digested ideas culled from the teaching of Christ, the teaching of philosophy, and the teaching of science." In these words the Rev. Mr. —— is reported to have expressed himself. Not very long ago the Archbishop of York, referring to Christian Science, said he had rarely met with such capacity to enter into some of the deeper aspects of truth. He had seen the lives of Christian Scientists tranquil, bright, cheerful. It is quite apparent that the archbishop does not see eye to eye with our critic.

Will you kindly allow me briefly to refer to this clergyman's deliverance? In the first place, his information regarding Christian Science can have been derived only from utterly erroneous sources to have caused him to draw conclusions which are so entirely wrong. Unfortunately, such expressions of opinion are not uncommonly heard from the lips of those who speak about Christian Science hastily or from prejudice, but they invariably remain unuttered after one has seriously looked into the subject. As the quotation gives no indication of the reasons which led him to express himself as he did, we must confine ourselves to stating a few facts about Christian Science.

In "Rudimental Divine Science" (p. 1) Mrs. Eddy defines Christian Science as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony." Understanding God to be infinite and good, Christian Scientists are striving to know good as the only power which is active and immanent in the universe, bearing in mind the corollary that "evil," having no place in the infinitely good, is without real entity, and is consequently powerless. This spiritual knowledge lies at the foundation of all the moral and physical healings that have taken place through Christian Science since 1866. It is daily and hourly fulfilling the commands of Jesus Christ when "he sent them [his disciples] to preach the kingdom of God, and to heal the sick."

With regard to its philosophy, we can say that those who know Christian Science, rejoice in that it has given them a philosophy of life on which they can rely. A true philosophy should deal with fundamentals. This is precisely what Christian Science does; and from these fundamentals—the truth about God as infinite Mind, Soul, Principle, Life, Truth, Love—it deduces with logical accuracy the knowledge of the real spiritual man and the eternal universe. It is one of the glorious discoveries thinking people make when, after studying Christian Science, they find that it presents them with such a stable philosophy. It may seem to resemble at some points various idealistic systems, but one has only to know these and Christian Science to realize how greatly they differ in essentials.

Exception to the name science has often been taken. The word as generally used, simply means systematized knowledge. It will be readily conceded that knowledge derived from the physical senses is always relative; hence the word in general parlance means "relative knowledge." On the other hand, Christian Science deals with God as Principle. It informs us about Him. Knowledge of Him must be real, fundamental, or absolute knowledge, not in any sense relative—to be knowledge at all. And the word science is so used in Christian Science, though its adherents are modest in speaking of their present comprehension of it.

On page 313 of "Science and Health with Key to the Scriptures" Mrs. Eddy writes: "Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause." Thus she states the great fact that in the Founder of Christianity the Christ and divine Science were identical.

✧

[Willis D. McKinstry in *Iola* (Kan.) *Register*]

Your paper of recent date reports the Rev. Mr. ——'s sermon delivered on Peace Sunday, at which time he attacked Christian Science as an enemy of our nation, stating that it "denies the personality of God, declares there is no sin, and makes prayer mere auto-suggestion." The above statement of our critic, when examined in the true light or understanding of the teachings of Christian Science, will be found without a semblance of truth.

If one would know the truth about a given subject, he should seek information from the text-book dealing with the question at hand. Now, let us see what Christian Science does teach about the personality of God. On page 116 of its text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy writes: "As the words *person* and *personal* are commonly and ignorantly employed, they often lead, when applied to Deity, to confused and erroneous conceptions of divinity and its distinction from humanity. If the term personality, as applied to God, means infinite personality, then God *is* infinite *Person*,—in the sense of infinite personality, but not in the lower sense." It is evident that God cannot be circumscribed limited being. Infinity alone can express His true being. Christian Science, instead of denying the personality of God, gives an enlarged conception of Him as infinite, unlimited Spirit, whose personality fills the universe, for God can never be more or less than all.

Now as to sin. Christian Science does not deny that there is a belief in sin, but recognizes the phenomena of evil as the operation of the carnal mind, and not the creation of God; hence that its claim is unreal, and subject to extinction through an understanding of God's ever-operative law of Truth, which destroys error. Dealing with the question of sin, the text-book of Christian Science says on page 29: "Christians must take up arms against error at home and abroad. They must grapple with sin in themselves and in others, and continue this warfare until they have finished

Digitized by Google

their course;" also on page 447: "To put down the claim of sin, you must detect it, remove the mask, point out the illusion, and thus get the victory over sin and so prove its unreality." This is sufficient proof that our critic's statement is without foundation.

His assertion regarding prayer is likewise erroneous. The disciples' earnest desire for true communion with the Father caused one of them to say to Christ Jesus, "Teach us to pray." It was then that Jesus gave to his disciples and the world the Lord's Prayer, which when spiritually understood, as taught in Christian Science, will meet every human need. Again he said: "Therefore I say unto you, What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." Auto-suggestion, or self-mesmerism, has no place in Christian Science. It is the operation of the belief of a mind in matter that denies the command, "Thou shalt have no other gods before me." This "me" is the one infinite, divine Mind, forever intelligently expressed through His image and likeness, man.

Some forty years ago Christian Science gave to a discordant and sin-sick world a scientific understanding of the healing truth as inaugurated by Jesus Christ, and during these years it has emancipated hundreds of thousands from dreaded diseases, and quickened in sinning mortals a desire to know God, and the perfect man as God knows him. Should this spiritual influence, which is awakening mankind to strive to understand his unity with God that he may grow in righteousness, be called an enemy? Christian Science is capable of demonstration, hence the proof of the truth of its teachings.

[C. L. Ramsay in *The Weekly Scotsman*, Edinburgh, Scotland]

In a recent issue I noticed a letter from a correspondent in Dunfermline asking for information about psychotherapeutics, in which he alluded also to Christian Science. The whole subject of mental and spiritual healing has been brought so forcibly to our notice by the publication of the report of the committee appointed to inquire into these matters, that it seems an appropriate moment in which to bring forward some simple statements on the subject for the consideration of the reading public. There has been much talk of faith-healing and of inspiring a patient with hope, and all will admit that faith and hope are valuable aids in the recovery of the sick; but the primary question still is, On what is a man to base his faith and hope, and how is he to obtain these qualities? If he depends merely on suggestion, we submit that he is leaning on a broken reed.

In the first place, a mere mental impression received, if it is not based on knowledge of truth, though it may seem beneficial while it lasts, can only be of an evanescent nature, and is bound to fade away in time, leaving the patient no better than he was before. In the second place,—and this is the more serious consideration,—by the same avenue whereby he receives a suggestion of health, the patient is open to receive a suggestion of disease, and he will be altogether more receptive of impressions of all sorts than he was before the treatment. It is plain that there is no science in such a method as this. The patient is simply for the time being giving over his mentality to the keeping of another, and when it is restored to him it may possibly have received other impressions, of which at the time neither he nor his would-be helper is aware.

Christian Science healing, on the other hand, bases its claim to be scientific in that it is founded on truth, that is, on the understanding of the true essential nature of God and man as revealed in the Bible. When the Founder of Christianity said to his disciples, "Ye shall know the truth, and the truth shall make you free," he must have pointed to the possibility of all gaining an actual understanding of truth on which they would be able to rely in order to gain relief from the ills that afflict mankind. From this it can at once be seen that no form of suggestion is made use of in Christian Science healing. On the contrary, the Christian Scientist endeavors to set his patient free from human beliefs and suggestions of all sorts, that he may be able to hear the "still small voice" of Truth, and come under the operation of spiritual law, God's law of harmony which lies behind the turmoil of what we call human life.

Christian Science assures a man that he has the indefeasible right to control his own mentality, and it teaches him how to do this by defending himself from all thoughts he wishes to exclude. Another point is this: one who has been thoroughly healed in Christian Science is less afraid of disease in general, less liable to incur it in the future, and altogether stronger to resist temptation of all sorts, and so better fitted to cope successfully with the difficulties of life.

✧

[H. Cornell Wilson in *Kingston* (N. Y.) *Express*]

That Christian Science is both Christian and scientific is a fact that can be demonstrated to any unprejudiced person. Human opinion on this question does not suffice. In obedience to the command of Jesus, Christian Science does what other forms of the Christian religion of our time fail to do, viz., heals the sick by purely spiritual means; and it does this in addition to overcoming sin, reclaiming the drunkard, purifying the impure,—healing and saving mankind from all evil. The extraordinary growth of Christian Science throughout the world attests these fruits, and Jesus said, "By their fruits ye shall know them."

When the adherents of those doctrines which have left out of all question the one most essential part of the religious teaching of Christ Jesus, apprehend his instructions on this question of healing, they will no longer oppose Christian Science. On the other hand, they will recognize the great spiritual force Christian Science has made easily available for the betterment of every individual. Finally, they may even unite in extending the Christ-influence, which is truly expressed only through a scientific Christianity.

[Written for the *Sentinel*]

"Songs of deliverance"

M. ROSAMOND WATSON

GLAD hymns of praise from out a dungeon's depth
Burst prison bars long centuries ago,
And proved the might of Mind's omnipotence,
The right of joy to cast out seeming woe.
Chains could not bind, nor fetters manacle
The faith triumphant, which broke forth in songs
Of sure deliverance, blessing all who heard
Their vibrant tones of freedom and of joy.

Sing out, my soul! What though the clouds of sense
Hang heavily, enshrouding all the blue;
What though the bolts and bars of self and fear
Would bind thee fast, a captive at their will!
Arise and sing! Hast thou forgot thy right?
The child of God has heritage of joy,
For He Himself doth compass thee about
With songs of sure deliverance and praise.

Editorial

"He doeth the works"

IT is a very common thing with some well-meaning persons who have seen the healing of disease accomplished through the demonstration of Christian Science, to speak in a way which shows their appreciation of the marvelous change which has taken place in the health of the person who has been treated. At the same time, they show their utter misunderstanding of the case by attributing the healing to suggestion. Some few, in order to seem consistent with this view of what is being done today "in the name of Jesus Christ of Nazareth," go so far as to allege that the works of our great Master were based upon suggestion, thus robbing these works of their divine character and placing them upon a purely material basis.

This is of course but a reiteration of the claim made against Jesus by the Pharisees, that "he casteth out devils through Beelzebub the chief of the devils," a claim which our Master immediately refuted. Throughout his ministry he continued to declare that the works which he did in demonstration of his teaching, were the result of his communion with God,—"The Father that dwelleth in me, he doeth the works," was his explanation of the source of his power to heal. Perhaps no statement of this fact left by him is more emphatically expressive of his divine appointment, and of the divine source of the healing which he worked by the roadside, in the temple, and at the tomb, than is the statement recorded by St. John: "I can of mine own self do nothing: as I hear, I judge: and my judgment is just; because I seek not mine own will, but the will of the Father which hath sent me."

Christian Scientists, as followers of Christ Jesus, are using precisely the same means in healing the sick as did their Master; and only as they rely on the divine Mind on which he relied, do they demonstrate the system of healing the sick and the sinful which Mrs. Eddy discovered in 1866 and later promulgated under the name Christian Science. Throughout Science and Health, and Mrs. Eddy's other writings as well, it is made clear that it is not the fleshly or carnal mind which heals the sick, but the divine Mind, God, which "doeth the works." That it is God alone on whom Christian Scientists rely in the hour of need, is definitely declared in the opening statement of the Christian Science text-book, "To those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii).

Suggestion is but a belief that one human mind has power over other human minds, and its operation does not in any wise change that with which it is supposed to deal, except as it establishes in the thought of the person treated a different belief, which may be quite as erroneous, suppositional, and fictitious as was the first. Christian Science, on the contrary, declares the reality of all true being, the omnipotence, omniscience, and omnipresence of God, and thus banishes the false beliefs about God, man, and the universe, which are the sources of sin, sickness, and death. It builds on the only sure foundation, "with whom is no variableness, neither shadow of turning," because it recognizes nothing as true or real except that which is consistent with and reflects infinite Mind. In "Rudimental Divine Science" (p. 1) Mrs. Eddy defines Christian Science as "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony," and every case of healing in Christian Science is consistent with this definition. It is also consistent with the rule which she has stated on page 428 of Science and Health: "The great spiritual fact must be brought out that man *is*, not *shall be*, perfect and immortal. We must hold forever the consciousness of existence, and sooner or later, through Christ and Christian Science, we must master sin and death. The evidence of man's immortality will become more apparent, as material beliefs are given up and the immortal facts of being are admitted."

Christian Science brings to the sufferer good and not evil, truth and not error, because it is entirely free from the haphazards of human opinion and will-power, and therefore not related to suggestion.

ARCHIBALD MCLELLAN.

Selfishness Uprooted

MORTALS have always been very charitable toward their own failings, so much so that certain phases of error have been condoned and regarded as quite normal. Thus, ill temper has seldom been thought of as inconsistent with Christian character, and the late Professor Drummond has spoken of it in gentle irony as "the vice of the virtuous," which is an equally fitting characterization of selfishness. But Mrs. Eddy tears away the mask from this latter when she says, "Selfishness and sensualism are educated in mortal mind by the thoughts ever recurring to one's self, by conversation about the body, and by the expectation of perpetual pleasure or pain from it; and this education is at the expense of spiritual growth" (Science and Health, p. 260). She tells of the spiritual process which is the reverse of this mortal disease-begetting tendency, when she bids us "look away from the body into Truth and Love," to which she adds, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts."

These words present in a most practical way vital Christianity, and link to modern conditions the saying of Christ Jesus, "If any man will come after me, let him deny himself," a teaching which has been regarded as chiefly applicable to those who were officially serving the cause of religion. If, however, the mortal self is seen to be opposed to spiritual advancement, it is surely well to deny its domination and energetically seek spiritual freedom.

Mrs. Eddy's analysis of mortal selfhood, as characterized by selfishness and sensuality, shows that the thought which should soar is held down by the demands of the body,—how it may be fed, clothed, adorned, and housed. Besides this, the narrow, limiting thought which clings to self is expressed in discordant bodily conditions, and it is well known by those who are much associated with chronic sickness, that with few exceptions it becomes chronic selfishness. Here be it said, however, that the invalid is less to blame for this than are those who with the best intentions minister to selfishness through their ignorance of spiritual law, and it is no light thing to sow tares in the field of human consciousness under the guise of health laws. It matters little whether one is sick or well, poor or rich, unlearned or learned, the demand rests equally upon all to gain the true sense of man's being, with its boundless possibilities for spiritual unfoldment, and this is realized in the self-forgetfulness which finds its highest happiness in serving God and our fellow men.

A friend once remarked to a lady who was a student of Christian Science, upon the sweet unselfishness of this lady's little daughter, who seemed to find her greatest joy in doing things to make others happy. The student responded by saying that Christian Science had made it very clear to the parents that a selfish and disobedient child was disliked by every one, and that one who was allowed to grow up in bondage to these errors would find it more difficult to uproot them in mature years. She went on to say that the family already saw the effects of a loving and unselfish disposi-

Digitized by Google

tion on the part of the child; people instinctively loved her, and she enjoyed good health, the harmonious thought being manifested in a healthful body.

The writer, who was present, long remembered this little lesson, and could see its application to all mankind. There are many beautiful characters to be found outside of Christian Science, but they do not know what it means to "look away from the body into Truth and Love" (Science and Health, p. 261), and thus to gain the spiritual power which blesses and inspires all who come within the range of its influence. To understand the Principle of being, clears the soil of human consciousness from all weeds, and provides for the growth of great ideas. The spiritually-minded radiate love, and draw to themselves, by an unfailing law of attraction, all good things, including health and happiness. Like the Master, they at length draw all men unto them, because self no longer holds sway.

ANNIE M. KNOTT.

Giving up Ghosts

A GREAT artist has counseled his pupils that mastery is to be achieved "only as one learns to let go of himself," and whatever he may have meant by this, his words, when interpreted in Christian Science, become the statement of a most significant truth. The average personal sense is made up of the temporal things it has, together with the temporal things it longs to have, and to these it clings with that fearsome insistence so well expressed by Thompson in his lines:—

> For, though I knew His love who followèd,
> Yet was I sore adread
> Lest, having Him, I must have naught beside.

Men cling to the things that seem, to the daily neglect of the things that are. They are even indisposed to let go of the things from which they consciously suffer, and this not unfamiliar type of mental miserliness is one of the greatest disabilities in the way of human redemption. Nevertheless there stand the words so indisputably, so eternally true, "In the day that thou eatest thereof thou shalt surely die;" and there also, the Master's piercingly pungent comment upon their thought, "He that findeth his life shall lose it: and he that loseth his life for my sake shall find it."

Christian Science helps men to make their true and only effective sacrifice by enabling them to see the unprofitableness of their unreal possessions, by establishing that true sense of values which makes it possible to part with the things of materiality, so long husbanded and loved. It also makes manifest the fact that the only gain to be gotten from a knowledge of error for what it is, is found in our increased willingness to give it up and our increased ability to induce others to give it up. All that is untrue is seen to be so unsatisfying, and so cruelly unjust and hateful in its effects, as to become quite intolerable. We thus reach that progressive mental attitude of which Mrs. Eddy has said: "Willingness . . . to leave the old for the new, renders thought receptive of the advanced idea. Gladness to leave the false landmarks and joy to see them disappear,—this disposition helps to precipitate the ultimate harmony" (Science and Health, p. 323).

The reversal of mortal sense which Science effects at this point is illustrated by the saying of Clifford, the brilliant physicist, that in his universe there was "no room for ghosts," meaning, no room for spiritual factors. To such materialistic thought life is a physico-chemical process, everything is reduced to mechanism; and the giving up of ghosts is the giving up of the spiritual interpretation of things, the idealism of Christ Jesus!

Scholastic theology tries to cling to spiritual verities, while insisting that there is a real material substance and law which the divine order and human welfare pronounce good, and this is its supreme self-stultification. To the Christian Scientist, the giving up of ghosts means that spiritual ascension which leaves behind all belief in the reality of aught but Spirit, divine Mind and its manifestations, the true, the beautiful, and the good. This is the only sacrifice called for, the only giving up that is worth while; and having accomplished it, we no longer live in the flesh, in material desire and sense satisfactions, but in Truth. This is the true asceticism, the true repentance, the true fast, and it means the loss of that which only hurts and hinders; hence it is not a loss, but a gain. St. Paul expressed this attitude when he wrote to the Philippians, "I count all things . . . but refuse, that I may gain Christ" (American Standard Version); and St. Peter surely had the same ideal in view when he wrote, "Wherefore laying aside all malice, and all guile, and hypocrisies, and envies, and all evil speakings, as new-born babes, desire the sincere milk of the word, that ye may grow thereby."

Christian Science makes it possible to give up hindrances by disclosing their unreal nature; it comes not only to bring inspiration, the vision of the ideal, but to free us from the shackles of false belief, to make us not only willing but glad to give up every ghost of error.

JOHN B. WILLIS.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m. (during July and August the Sunday evening service is omitted); Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

MANCHESTER, ENGLAND.—Owing to the full attendance at our Sunday evening services and Wednesday meetings, we resolved to ask the members of this church living on the northern side of the city, to withdraw their membership and form Third Church of Christ, Scientist, Manchester. This resolution was afterward submitted to a general meeting of members held on May 18, when the following resolution was unanimously passed: "Be it resolved that we, the members of First Church of Christ, Scientist, Manchester, in general meeting assembled, do heartily approve the resolution of our board of directors in regard to the formation of Third Church of Christ, Scientist, Manchester; and be it further resolved that a full measure of love and good will be tendered to those who, in obedience to the call of progress and development, are about to take this step in advance, and resign their membership with this church in order to form this new branch. They will know with us that we are still fellow laborers in the vineyard of Christ, where the branches of the vine but multiply to bring forth more abundantly 'the fruit of the Spirit, which is love, joy, peace.'"—*Correspondence.*

PEORIA, ILL.—Last February the members of First Church of Christ, Scientist, residing on the west bluff, withdrew and organized Second Church. They have since been holding Sunday services in Elysium Theater, 2008 Main street, and Wednesday evening meetings in the auditorium of the Washington school. This step was taken on account of the crowded condition at First Church. At a business meeting held after the regular services last Wednesday evening [May 13], the members of Second Church authorized its board of directors to purchase one hundred feet on Barker avenue, between Institute place and University street. The location is a beautiful one, situated in one of the finest residence districts of Peoria. Exemplifying the harmony which exists among the Scientists of this city, First Church also held a business meeting at the same time, and its congregation was notified that Second Church was about to purchase this site. Many who had not had the privilege of helping build First Church, expressed their satisfaction in now having the opportunity to aid the cause in this way. Others who had helped build First Church, were glad again to express their gratitude for Christian Science in a substantial way. A generous contribution for the building fund of Second Church followed.

The Peoria Journal.

HARRISBURG, PA.—First Church of Christ, Scientist, has purchased a triangular lot, 45 by 115 feet, on Clyde street, adjoining the congregation's present church, whereon to build a ten thousand dollar addition. The enlargement is necessary, owing to the steady growth of the congregation, and is expected to increase the seating capacity of the church about two hundred. The lot cost the purchaser three thousand dollars.—*The Dispatch.*

The Lectures

Portland, Ore.

William R. Rathvon delivered two lectures on Christian Science for Second Church. At the first he was introduced by Mrs. Gertrude Deane Houk, first reader, who said in part:—

One of the most hopeful signs of advancement in the present age is the universal desire for a knowledge of Truth. This insistent demand is leading mankind into an investigation of any subject promising enlightenment. This is one reason for the world-wide interest that is being manifested toward Christian Science, and an ever-increasing number are studying and accepting its teachings because it offers a practical and demonstrable religion, one that may be applied in solving the problems of every-day life.

At the second lecture, Atty. Oglesby Young said in part:—

Speaking from personal observation rather than from personal experience or from profound study, it seems to me that those who have accepted the teachings of Christian Science and are faithfully endeavoring to put these teachings into practice, have come nearer to a solution of the many problems of life than any other class of people. Christian Science is essentially a religion which seems to satisfy its followers. It teaches charity, love, good-fellowship, the common brotherhood of man, the omnipotence of God, and that His laws are fixed and immutable; that God is incapable of making a mistake and has never made one; that His power today is as great as ever. It must be obvious to us all that if God ever at any time and through any means was able to heal sickness, He has never lost that power, but still retains it. Christian Science pleads for a rational understanding of God rather than a mere belief in Him. Its teachings are now engaging the attention of thinking men and women in every part of the world, and not the least of its phenomena has been its marvelous growth. Especially is this true when we consider that the recruits to the membership of its churches, and the vast numbers who attend its services, are not secured by proselyting, but are composed largely of those who have accepted or studied its teachings after all other sources of relief had failed them. A religion which supplants fear with courage, which substitutes faith and hope for doubt and despair, which teaches right thinking and honest, upright living, must of necessity add materially to the sum of human happiness and appeal to us all.—*Correspondence.*

Pasadena, Cal.

Virgil O. Strickler addressed an audience of twenty-one hundred, which filled every seat and all available standing-room at the local church edifice on Oakland avenue. Hundreds were turned away, unable to get into the large auditorium. Henry Van Arsdale introduced the speaker as follows:—

When in the beginning of his ministry Jesus came teaching and healing in the valley of the Jordan, John the Baptist, a prophet of great renown, had a sufficient spiritual perception of him to say, "Behold the Lamb of God, which taketh away the sin [the wrong thinking] of the world." This attracted the attention of two of John's disciples, or students, and they followed Jesus, asking him where he dwelt. To this inquiry Jesus answered, "Come and see." What they saw and heard evidently impressed them, for the next day a fellow townsman of theirs, Philip by name, also came to Jesus and, as a result, in his turn sought out a friend, one Nathanael, stating that he of whom Moses and the prophets had written,—that is, the Messiah, or Christ,—had appeared, Jesus of Nazareth. Nathanael perhaps was skeptical; he certainly was sarcastic, for he asked, "Can there any good thing come out of Nazareth?" Philip replied, "Come and see." As a result of what Nathanael saw and heard he could say, "Rabbi, thou art the Son of God."

Through the clear spiritual perception of Mrs. Eddy there has come to this age, under the name of Christian Science, the teaching and healing which Andrew and John and Philip and Nathanael heard and saw, and which is defined on page 224 of Mrs. Eddy's book "Science and Health with Key to the Scriptures" as "a higher and more practical Christianity."—*Pasadena Star.*

Bellevue, Ohio

At the high school auditorium, Clarence W. Chadwick delivered an address on Christian Science before a large audience. J. W. Close presided, and his introductory speech was in part as follows:—

We are here tonight as friends and neighbors, and I assume to hear and learn about Christian Science, and how it affects the lives of those who accept its teachings. It has been my good fortune to meet many of these people in different cities of this country. Wherever I have found them, they are cheerful, happy, and well satisfied with their religion, and apparently are living fuller, happier lives than they formerly did.

The growth and increase of this church seems to be the marvel of the age, and some say this is because it is such a new movement. Let us go back over nineteen hundred years to the country around Jerusalem, and we find a teacher pointing people to a kind and loving God; more than this, we

Digitized by Google

find him healing the sick, opening the eyes of the blind, causing the lame to walk, and cleansing the leper. Finally, Jesus commanded the apostles to go out into all the world, and heal the sick, and preach the gospel to all mankind. This is what the Christian Scientists are doing today over nearly all the world. They are healing the sick and pointing the people to a kind and loving God, who is able and willing to keep them from all evil.—*The Bellevue Gazette.*

✧

Colorado Springs, Col.

The Burns Theater was filled to its capacity when Clarence C. Eaton lectured on Christian Science. He was introduced by C. W. Dolph, who said in part:—

It may be proper and fitting for me to say that it became the lot of a divinely inspired woman by the name of Mary Baker Eddy, author of "Science and Health with Key to the Scriptures," to discover the adaptability of truth to the treatment of disease and sin. She was a most extraordinary person, an original investigator and a profound thinker. She was dissatisfied with the results of the religious teachings of her early life, and being possessed of an insatiable desire to find out and know the truth, she started out on an original religious investigation of her own. She diligently applied herself for many years to the subject of her investigation and was crowned with success, for in the year 1866 she discovered the divine laws of Life which she denominated Christian Science.

In the year 1875 Mrs. Eddy gave to the world the first edition of Science and Health, which is neither more nor less than a code of the divine laws of Life. This book was afterward, and in the year 1891, revised by her. Through this code of divine laws of Life she has shown to the world how sin, disease, and even death, in all their seeming reality, disappear before the operation of divine Principle. This code has stood the fiery test of adverse criticism and has left no dross in the bottom of the crucible.

The truth as expounded in Mrs. Eddy's writings has taken a rapid and firm hold upon humanity. It is so simple and appealing to right-thinking persons, and to those who have a burning desire to know the truth, that today millions of human beings in all parts of the Christian world are happier and healthier by reason of the knowledge acquired by them from her writings, and they are singing anthems of praise to her name, while thousands of stately edifices everywhere are being dedicated to the cause of Truth. No person since the time of Christ has wrought so much good for the people of the world; and by her writings and teachings she has bequeathed to erring humanity the greatest legacy received by it since the days when Christ preached his sermons of truth to the world.—*Colorado Springs Telegraph.*

✧

St. Petersburg, Fla.

Bliss Knapp delivered a lecture on Christian Science before a large audience at the Auditorium. He was introduced by Paul Poynter, manager of The Times Publishing Company, who said in part:—

Mrs. Eddy, the Discoverer of Christian Science, in her text-book, "Science and Health with Key to the Scriptures," brought a message to mankind with clearness and force, giving an exposition and explanation of the Bible that makes its truth available, a living Principle effective in meeting human need. Reversing religious teachings which limit divine power, and medical practice which holds to false gods, this revolutionary volume proclaims that Jesus practised what he preached, that his deeds were even more important than his teachings. It declares that he came to show the way; that his followers were commanded to do the things that he had done, and that demonstration and understanding are God's immortal key-notes, which are evidenced by the sick who are cured and the sinners who are reformed.

From the personal experience and teachings of this consecrated woman has come a religious movement which for its quiet, unassuming expansion and growth is a miracle in itself. The influence of the movement reaches far beyond the numerical strength of its membership and its extraordinary organization, so simple and efficient. It creates wonder by its marvelous cures, and excites comment on account of the zeal and devotion of its followers. It has adherents now by the thousands, churches by the hundreds, and these are substantial evidences that the faith has stood the test of time. Splendid literature is published, magnificent churches are maintained, reading-rooms supported, and through the devoted, consecrated practitioners the messages of truth are taken to the poor and needy, who hunger and thirst for divine Love.—*St. Petersburg Times.*

✧

Scranton, Pa.

D. E. Carpenter, in introducing Willis F. Gross, who lectured on Christian Science, said in part:—

Those who have refused to base opinions on hearsay evidence, who have laid aside prejudice against what they may have thought Christian Science to be, and who have diligently and persistently studied it, are obtaining through this study a spiritual understanding which is making the Bible a new book to them. They are learning that the wonderful Bible promises are alive with meaning for this day and age, and that it is possible and natural to obey both parts of our great Master's dual command to "preach the gospel" and "heal the sick." In short, these people are learning that Christian Science is not impractical and visionary, but that it is a reasonable, practical, demonstrable religion,—a religion that can be used continuously and successfully, every day and for every human problem.—*Correspondence.*

✧

Plymouth, England

Major H. B. Des Voeux, of the Royal Engineers, in introducing Bicknell Young, at a lecture on Christian Science given at the Corn Exchange, said in part:—

Christian Science appeals to people of all grades of society, but chiefly to practical men and women, for this reason, that it is scientific and therefore demonstrable. A Christian Scientist is able to prove that Christian Science is an instant help to him at all times, in exact proportion to his understanding of it. He is able to overcome sin, disease, and the fear of death in himself and others. He is able to overcome discordant conditions in his home, in his surroundings, in his business, in his country, and in the world in general; and only one who is willing to study this Science and gain an understanding of it, can possibly know how much of a help it is.—*Correspondence.*

Testimonies of Healing

Freely and abundantly I have received blessing upon blessing through Christian Science, and from the fulness of my heart I would give to others, through this testimony, something of the joy and encouragement which was given to me through a faithful Christian Scientist. I was sinking into chronic invalidism from a complication of physical ills of long standing, culminating in a dangerous case of appendicitis, and had just come out of a hospital, where I had been taken to be operated on for this trouble. I was pronounced too weak to undergo an operation, but in three weeks I was able to leave the hospital, though in a miserable condition and with no hope of recovery under *materia medica*. For years I had spent a great deal of money for doctors and medicines without finding permanent relief. I had just reached that point of despair and hopelessness when one gives up, and turns from the hope of life to death as a relief from suffering, although I had always prayed as best I knew how.

It was at this point that Christian Science came to me. When the Scientist came into the room where my big chair had been placed in a sunny window, she was a stranger to me. As she was staying in the same house, she had heard of me through the other guests. I will never forget her firm, clear tones as she came up to me and introduced herself, with a smile full of sweetness and good cheer, saying: "I hear you are the new guest, and that you have been in the sanitarium. My dear, there is no need of your being in this condition. It is not God's will. Man is a child of God, free from all man-made laws as to disease. If you are willing you can get well. Will you come up-stairs? I will lend you a copy of 'Science and Health with Key to the Scriptures' by Mrs. Eddy. Read and study the book, and later if you wish I will help you." I had broken down under her loving tones, and only half understood, but I felt as if a great window had been opened and flood-tides of light, of joy, and of hope were lifting my heart out of its gloom. I promised to go to her room if I could get up the stairs, and I did so the next day with a great effort, for every step was one of pain; but there in her room I first heard of Christian Science, and had it explained somewhat. Then I went down-stairs to a room where I knew I would be alone and undisturbed for hours.

To say I read the book would be too mild a way to express it; I simply devoured it. Hour after hour I sat there, and could hardly read fast enough to satisfy the inward thirst I felt for every drop of that spiritual "cup of cold water." All my life I had been waiting for this. I had read and thought deeply along religious lines, and had longed to find a religion founded wholly upon the Bible. As I read and studied I thanked God. I did not understand it all by any means, but under the advice of my new-found friend I put into immediate practice what I did understand. This lady was not at that time a regular practitioner, only an earnest student, but she worked to the best of her understanding, and in three weeks I came out of that dreadful condition healed, and I have remained so. That was in September, 1898, and from that time to this the Bible and Science and Health, with the *Journal* and *Sentinel*, have been my daily reading and study. I have not taken a drop of medicine, while for years before that I was taking something continually. I have not only helped myself, but others, through the understanding of man's true being.

Of one demonstration in particular I would speak. For years I had suffered with an eruption on my face, which at last became very serious. I had tried many things to no avail, and one night as I looked at myself in the glass I realized that man was made in the image and likeness of God, and that I should depend entirely on Him to heal and produce perfectness. I therefore disposed of all material remedies and treated myself as well as I knew how, with the result that within one week my face was perfectly clear, and has remained so ever since.

Thankful as I am for all physical healing, I am a thousand times more so for the spiritual uplift. Christian Science clears and purifies mentality, and is it any wonder that all Christian Scientists revere and love Mrs. Eddy, whose pure mind and elevated thought caught the vision of the Christ, and gave to suffering humanity the text-book of Christian Science, which helps us to understand the teachings of the Master and to walk in his footsteps.

My father took up Christian Science four years ago. He is in his eighty-seventh year, and reads the Bible with Science and Health, the *Journal*, and *Sentinel*, morning, noon, and night. He often says how thankful and happy he is to know that the light of Truth is with him in the ascending path of life, and to understand the pure, undefiled religion of the Christ through the clear teaching of our beloved Leader.

I hope my testimony will help some one who is struggling in the shadows of the valley, to realize that the healing power of the Christ is ever present, and that an error once destroyed in consciousness never returns. I feel that this is "the glorious liberty of the children of God." I wish I could tell what happiness and comfort the Christian Science literature brings into our cozy home, to my father and myself, but words fail me to tell of our blessings in Christian Science. God's blessing is over it all.—Nellie V. Whittier, San Jose, Cal.

I feel that it is both a duty and a pleasure to tell others of what Christian Science has done for me. For thirteen years I was an invalid, suffering from what was diagnosed as organic heart disease and a serious kidney disorder. I had been an in-patient of two hospitals, spending seven weeks in one and four weeks in the other. During this time I had massage and electricity each day for a month, X-rays three times, and one internal operation. I was examined by several of our leading specialists. With all this treatment I got no better, and was told that the case was incurable, that I would be an invalid the rest of my life. Doctors and nurses were most kind to me, and this I appreciate very much.

In October, 1911, a friend asked me to try Christian Science. I had never heard of this teaching before, and I thought it was utterly impossible for Christian Science to do anything for me; but this friend's confidence so impressed me that I promised him I would see a practitioner. I am very thankful that I did so, for I began to improve at once, and in six months was perfectly healed. I have not taken medicine or used any material means since my first visit to the practitioner, and I am deeply grateful for being led to the truth which has set me free. It is a great pleasure to be well and strong, so that I can do all my housework. I also help with the distribution of our literature, and this I love to do. I should like to mention that my husband, two daughters, and a son have all come into Christian Science. For all these blessings I am thankful to God, and more grateful to Mrs. Eddy for giving us Science and Health than I can find words to express.—Mrs. M. J. Edwards, London, England.

I know that the statement of Mrs. Edwards is perfectly true, as I am her brother-in-law. I am not a Christian Scientist, but can bear testimony to her illnesses. The good that Christian Science has done for her has been marvelous.

Oliver Garrett, London, England.

It is over four years since I was persuaded by a friend to give Christian Science a trial. I had been suffering with rheumatism, and I experienced difficulty in walking, but in four visits to a Christian Science practitioner I was permanently healed. Soon after this I passed through a deep sorrow in the loss of my mother, and found that even a faint ray of understanding of this truth greatly sustained me.

I did not, however, with all the benefits experienced, apply myself to the study of Christian Science as I should have done. I had an attack of very severe cold, which terminated in what *materia medica* calls mastoid abscess. I suffered agony for a week, as the pain did not seem to yield readily to treatment. Becoming alarmed, we called in a specialist, who only added to my fear, for after examination he stated that it would be necessary to operate on the throat, ears, and nostrils. I would not submit to an operation, so I again called a Christian Science practitioner.

I had reached the most crucial period in my life, when I must take a stand for God, and God alone. After I had positively decided this, the pain yielded to the truth, and I soon became normal in every respect. The abscess never discharged. For about two months I experienced a dulness in hearing, but this passed away, and I have never been troubled with it since. It was a few months more before the fear of a relapse entirely disappeared, but this has been overcome. Two years having passed, I can say that the healing of both the abscess and the rheumatism has proved perfect, as I have never had a recurrence of either. I have also been healed of severe cramps in the feet, which inconvenienced me more than I can tell. My husband is now in Science, and we are most happy together in its joy-giving work.

I am indeed thankful to God for Christian Science, which has enabled me to prove that Jesus' words are true, and that the signs of healing do follow them that believe (understand) his works and words. Christian Science not only brought me healing physically, but it has come with transforming power, improving my disposition, overcoming anger and sensitiveness. It has also done much for our entire family.

JOSEPHINE DURST, Dayton, Ohio.

✧

About twelve years ago we took up the study of Christian Science in our home, and it was not for physical healing alone, but because of its beauty as a religion. We realized at once that it was the teaching of the Master.

We have had many demonstrations of the power of Truth, and in all these years Christian Science has been our only physician. I would like to tell of my own healing, in August, 1912, for which I am very grateful. I was taken with severe pain in the chest and shoulder and at times could scarcely breathe. For three or four days I did not lie down on the bed, but had to be propped up with pillows, and I could hardly walk from one room to another. My parents decided we would have to ask for help from a practitioner, and as there is none in Hereford, we wrote to the one who lived nearest us. She gave me absent treatment, and I improved somewhat for a few days, but one evening I seemed to get worse, my suffering being intense. We telephoned the practitioner of my condition about dark, and in the mean time we called in some neighbors who are Scientists, as there was so much fear. About eleven o'clock that night I told them all to go to bed, for I was feeling better, and in a short time every one was asleep. At two o'clock I awoke perfectly healed, not only physically but spiritually. My suffering was all gone, and I was so happy. For two hours I praised God all alone, but I could wait no longer to tell the good news, so I called my mother and told her I was healed. Next day I went about my work as if nothing had been the matter. I was perfectly healed, and have had no return of the symptoms.

I am very grateful for the physical healing, but more so for the spiritual uplift and for the understanding I have gained of the truth. There is nothing I enjoy more than the daily study of the Lesson-Sermon. My heart's desire is that I may prove myself worthy to be called a Christian Scientist.—GOLDIE ALICE MAJOR, Hereford, Texas.

✧

At the age of twenty-one I became a slave to the habit of chewing tobacco, and I continued to be so up to Dec. 9, 1912. Prior to coming into Christian Science I made numerous attempts to overcome the habit, but utterly failed until I began to read Science and Health and all of the Christian Science literature. Today I have a disgust for tobacco greater than the former desire for it. Besides this, I have been healed of a very malignant case of skin disease on my head, which had made it almost impossible for me to comb my hair on account of the pain. I have also been cured of severe rheumatism and numerous other ailments.

For all these physical benefits I am sincerely thankful, but above all I am grateful for the spiritual healing received in Christian Science. I wish to express my thankfulness to God, and my gratitude to our revered Leader, Mrs. Eddy, for the blessings I have received.

WILLIAM RUPP, Peoria, Ill.

✧

I have often wished to express my gratitude for benefits received through Christian Science, and I take pleasure in doing so now through the periodicals. From childhood I had suffered from very painful attacks of an acute throat affection, sometimes having as many as three in one winter. At last I determined to give Christian Science a trial, and sent for a practitioner, who found me in bed and very ill. I was able to dress and go down-stairs in less than twenty-four hours after her arrival.

This was over seven years ago, and for one or two years following I would seem to have symptoms of the old ailment, but with help in Christian Science I would be relieved in a few hours, whereas formerly under medical treatment I would always be confined to my bed for two weeks, with a physician in daily attendance. For several years now I have had no trouble whatever, for which I am truly thankful.

JOSEPHINE F. MERRILL, Brookline, Mass.

✧

I am so grateful for all the help Christian Science has been to me, that I feel I must tell others of some of the good I have received. I first became interested in this teaching about three years ago. I was at that time a slave to rheumatism, from which I had suffered for over six years. I was also addicted to the use of intoxicants. The study of "Science and Health with Key to the Scriptures" completely cured me of both these conditions without any conscious effort on my part. Indeed, it was fully six months later when I realized that during this time I had forgotten the pains of rheumatism and had not had the least desire for strong drink.

Some time afterward I was troubled with a very bad rupture and was obliged to call on a practitioner for help. My healing was slow, but for this I am grateful, as I gained a fuller understanding of the truth during the twelve days which elapsed before I realized perfect health. Within a day or so of my recovery, my little boy, then three years of age, fell from the top of some steps, a height of about thirty feet, and struck on the back of his neck. He was able to come into

Digitized by Google

the house alone and my wife laid him on the bed. She then began to read Science and Health, and to hold fast to the truth that as God's child he could not be harmed. This was at four o'clock in the afternoon. I reached home two hours later, and the boy was still in pain and unable to move or to be moved. My wife and I together worked as we are taught in Christian Science, and within an hour the child told us that all pain was gone. Later, when trying to move his head, however, he again cried with the pain. At half past seven, propped up with pillows, he sat at table and ate a fair supper. Then I again laid him in bed, and in an hour he was asleep. With a heart filled with thankfulness to God for His great mercy and loving-kindness, I spent the greater part of the night in praying, reading, and working in Science. Several times during the night the child turned from one side to another without awaking.

Toward morning I fell asleep, but was awakened at six by my boy asking to be dressed. Without saying anything about his neck, I carefully dressed him, and he went about the house playing as usual, except that his neck appeared to be stiff. He ate a hearty breakfast, and when I left the house he was playing with his sister and brother. Later in the morning I called on the practitioner who had so kindly helped me before, and he gave the boy absent treatment. This was about half-past nine o'clock. A little before eleven I telephoned to my wife, and she told me the child was perfectly well, and was laughing and playing, turning his head without the least discomfort.

For these and many other blessings I am indeed deeply thankful to our all-loving Father, and also grateful to our dear Leader for pointing out the way to perfect health and happiness.—Ernest L. Elphick, Montreal, Canada.

✧

In April, 1912, I was healed of extreme nervousness, at a time when I felt myself on the verge of collapse. I applied to a dear friend, a Christian Science practitioner, living in Mexico, Mo., for treatment. She lovingly showed me that my strength was from God, and gradually and surely a peaceful calm came over my consciousness, and I knew I was being cleansed of the mental disorder. I felt so happy, so free from doubts and fears which were indefinable, but which had seemed to be real.

What a blessed thought to comfort one always, that all error is unreal! It makes the world a different place and shows us why man has dominion. I am deeply thankful to God, the source of all good, and grateful to Mrs. Eddy for her brave setting forth of this glorious truth.

Mrs. H. E. Schuster, Fort Madison, Iowa.

✧

Words fail me when I try to express, even in a small degree, my deep sense of gratitude for what Christian Science has done for me. I was healed of tubercular peritonitis after two operations had been performed. I had been an almost helpless invalid for six months, during which time I was constantly under the care of very kind physicians, who did everything possible for my relief. When, however, my family were told that there was nothing more to be done, and that I could live no longer than through the winter (this was the latter part of August, 1910), they prevailed upon me to try Christian Science treatment. The result was, that in a few months I was practically well, and by spring I was stronger and doing harder physical work than I had ever done before.

While I am very grateful for this healing, it is nothing compared to the greater blessing which God has given me,—the peace of mind which is not dependent upon outward circumstances, but only upon the degree of faith with which I am able to lay hold of the promise of Christ Jesus, "Lo, I am with you alway." As the Christ unfolds in the human consciousness, both disease and temptation lose their power, for "greater is he that is in you, than he that is in the world."

Gertrude L. Wood, Washington, D. C.

✧

Words fail to express my thankfulness to God for what Christian Science has done for me. Three years ago I had an acute attack of rheumatism in every part of my body. The suffering was intense, and I was helpless; I could not even move my hand. It was a slow healing, and I can say now that I am glad, for I learned so much from the practitioner who came to see me. I had been in Christian Science only a short time, but am thankful to say that through the understanding of divine Love I was healed, and the healing has been permanent. I have received many blessings through this wonderful truth, and I am deeply grateful.

Bernice Bailey Stewart, New York, N. Y.

✧

I wish to tell what Christian Science has done for me, and to express my gratitude for these healings. In one treatment I was healed of a case of ivy poisoning so severe that my eyes were swollen shut. An enlargement of the neck, for which I had had medical treatment, has also disappeared. I have been healed of a tendency to take cold almost constantly, and have also been relieved from severe colds, which under the doctor's care used to last for months, and which kept me confined to the house when I had them. Any tendency in this direction which has manifested itself of late, has been readily overcome. During the hottest part of the summer of 1911 I was made so ill by the heat that I could not even sit up, and I had very severe pains in my head whenever I moved. A practitioner was called at once, and she gave me absent treatment. This happened about four o'clock in the afternoon, and by eight o'clock in the evening, with the exception of a slight weakness, I was entirely well.

I am very thankful to God, and grateful to Mrs. Eddy for this understanding of the truth, which teaches us how to govern our thoughts so that we may live harmoniously every day.—Ida G. Tayler, Kansas City, Mo.

✧

For many years I suffered from bowel disorder. I tried almost everything that doctors and friends told me of, but got no relief until I took up Christian Science. With the help of a practitioner here I was permanently healed. I also left off wearing glasses. I had worn them for twelve years, but when I was told of the power of Truth I stopped using them at once without any discomfort. Not only has this truth freed me from these ills, but I can see a great change in my disposition. I am not so quick-tempered and nervous as formerly, and I am able to control myself better than ever before.

I am very grateful to Christian Science and its teachings, and wish all men were Christian Scientists.

Samuel C. Foster, Beloit, Wis.

✧

We are very thankful to God for what Christian Science has done for us. Over two years ago our little girl was almost instantly healed of severe cold. Later she caught fire from a gas stove, and was badly burned on the body and arm, but she suffered very little pain and was quickly healed. My two-year-old boy was poisoned and was so ill that friends said he could not live more than two hours, but in that time God restored him to consciousness and he was at play. My husband was in ill health for many years, but he is now strong

Digitized by Google

and well. I was freed from headaches, and last January, after confinement, I made a rapid recovery without the waste or weakness which had followed former experiences.

My sister's baby was so sick in her second summer that she was given up by the doctor. Christian Science treatment was then asked for, and the little one was healed. Some weeks later she drank coal oil and was in a critical condition. Again Truth did the work, and she was saved. About two years ago my mother broke her leg and suffered under the doctor's care for two weeks. She was then treated by a Christian Science practitioner and the pain ceased. She was also healed of gall-stones. These healings were all accomplished by absent treatment, as we live on farms.

MRS. G. B. SLOAN, Larned, Kan.

✧

[Translated from the German]

It is with great thankfulness that I testify to the benefits received through Christian Science. In the summer of 1912 both my boys were attacked by whooping-cough, to which the younger one succumbed. I felt greatly worried about the older child, and a change of climate having been advised for me, I went to my mother in Germany. She is a Christian Scientist, and she gave me pamphlets and a few copies of the *Herold* to read. I soon applied to a Christian Science practitioner, as there was great fear in my consciousness with regard to my remaining child, as well as to the one whose birth I was expecting. I had had a serious fall twice, and this, in connection with the many preceding commotions, would, I believed, preclude the possibility of a normal birth or a healthy child; but through treatment in Christian Science these fears subsided, the birth took place within less than an hour and almost without pain. I felt fresh and well afterward, and happy about the healthy little girl that had arrived. As to the cough of my oldest child, it had entirely disappeared in the mean while.

I still have some struggles with my former concepts, but I hope to advance, through further study of the Bible and of Science and Health, on the way to light and truth. I gladly write these lines, as they may mean encouragement to some readers in the way that I have derived courage and comfort from the testimonies of others when things seemed difficult of comprehension. In the Bible we read, "Commit thy way unto the Lord; trust also in him; and he shall bring it to pass."—FRAU ERNA SCHLABITZ, Szolyva, Hungary.

✧

I came to this city in March, 1911, a stranger, and I had then been interested in Christian Science only a short time. I was staying at the home of a friend, who fell ill and decided to call a Christian Science practitioner. I needed help soon after this, so I went to see the same practitioner and asked for treatment. All my life I had been troubled with bowel disorder, and had never known a time when I was not taking medicine. The practitioner treated me, and now I never even think of taking drugs. I was healed through her treatment, and the healing has been permanent.

I have been cured of other physical ailments, and also of a mental trouble. I have been lifted above a sorrow worse than death, and through the practitioner's help have learned how to bear this burden, so that I now have more peace of mind than I ever thought possible; "but with God all things are possible." Her advice was always to go for relief to the Bible and to Science and Health. I have learned to love these books, and I hope as time goes on to understand them better. I am grateful for Christian Science and for the privilege of attending the Christian Science church.

ORPHA ROSE, Kansas City, Mo.

From Our Exchanges

[Rev. R. S. Loring in *The Christian Register*]

There is nothing in the present controversy which need prevent us from believing that there is something deeper in Christianity than that figure around which both conservative and liberal theologians have woven curious and conflicting dogmas. There is the more mysterious figure which has touched the hearts and the imagination of artists and musicians and poets and saints, and has been an illustration of faith more than a rule of faith, an inspiration to religion rather than any code of religious law.

We may not be able to accept the Christ of theology without doing violence to our modern view of the world, to our critical study of the Bible, to our new conception of what a socially efficient religion should be. We may not even be able to sing, with complete intellectual assent, that hymn by Theodore Parker which seems to center religion in the past, and speaks of Jesus as the Truth, the Light, the Way, and so seems to cramp our new desire for a world-wide and universal type of religion. But that other figure, whose personality we can feel rather than describe, who has made such an impression on the imagination of men, by simple, direct parables, by the gentle and loving life, by the tragic end, that even the busy theologians have not been wholly able to hide this figure from men's sight,—of this influence the world can continue to sing, and from the idealized story of this life it can continue to draw inspiration and hope long after the present intellectual disputes about "Jesus or Christ" have been forgotten and outgrown.

[*The Universalist Leader*]

These are uncomfortable days for those who have settled down to a comfortable belief that the landmarks of thought are set permanently, and that a curse is upon those who remove these landmarks. The boundaries of ideas are changing. The friction of human experience is wearing down and washing away whole ranges of ideas which were once supposed to be as permanent as "the everlasting hills." They are as permanent as the everlasting hills, but these hills are wearing away also. There are no everlasting hills in ideas. Ideas are fluid. Thought is plastic. Definitions are temporary. But the unthinking believer does not, can not, or will not, understand.

There are two great words that are undergoing a vast change which is involving many of the most important interests of mankind. One of these words is religion. The other word is government.

[*Northwestern Christian Advocate*]

We have said that practical and effective union is impossible today because of inherited and cultivated peculiarities of mental approach to spiritual problems in the adult. But the child possesses none of this; the mind and heart are plastic and devoid of dogmatic bent. And if ever the church of Jesus Christ is to get very far beyond the frigid beauty of theoretical federation or denominational union, it will undoubtedly be wrought out in the child mind and heart; and no organization today so prominently reaches all branches of the Christian church as the Sunday school, which thus possesses the supreme opportunity to try out the much-praised doctrine of oneness in Christ.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

The church should be the point where the Spirit of God breaks out in indubitable manifestation. "Ye are the salt of the earth. . . . Ye are the light of the world." This means

Digitized by Google

that the church should be the conscience and the guide of humanity. Here sin should be felt soonest, and the measure of sensitiveness should not be that of inconvenience, openness, general abhorrence, but a deeper sensitiveness to the things that are actually destroying men and societies, spiritual maladies which a rougher estimate passes by. The church should be able to see far ahead. It should be essentially prophetic. It should be able to recognize the presence of God in advance of any other section of humanity. We must cease to believe in the church altogether, unless there is evidence that it is really inspired with the living spirit of truth and guided by the God of wisdom.

[*The Christian World*]

It has been said, with justice, that just as the working of the Father in all the long history of mankind was only made clear in the revelation of the Son, so the meaning of the Son is only made clear through the Spirit of truth and love and power shed abroad in the hearts of men; and, we may add, the Spirit in His mighty acts will only be understood through the church when it comes to itself. For that moment Christian thinking waits. Till the church has a further experience of its own characteristic life, the mission of the Comforter will not be discovered in all its beauty and power. This, then, is the task which immediately awaits us: to experiment in the common life, as that may be created and guided and sustained by the Holy Ghost; to offer ourselves obediently and humbly for the Holy Ghost to possess, not only as individual persons, but as a social being ("many members, yet but one body").

[*The Congregationalist and Christian World*]

The inspired prophets of this century are those who demand profound realization of the fatherhood of God, and a more vital and active consecration to service for the brotherhood of man. The duty of the hour is to recognize in every man, woman, and child, even the humblest, the divine kinship which should join us all together, and to strive, as Mary Antin puts it, "to give all a fair chance."

We must have no privileged class except those who enjoy the just privilege of success fairly won by honest effort and faithful service, and we must have no class branded as inferior because of color, race, or creed. We should make it a master passion to banish intolerance, injustice, and caste spirit, and in the Christian spirit of brotherhood should strive unceasingly to open the doors of opportunity and inspire with faith and hope and courage all who need the helping hand to strive ever upward and to enter into the heritage of all that is best in America.

[*Pacific Christian Advocate*]

The inner principles on which we habitually act are what we must regulate in order to have any abiding happiness; it is not to have a passive religious faith fostering the thought that somehow God will bring everything out right despite anything we can do. We must have a faith that cooperates with God in seeking the fulfilment of all that is right and good.

[*New-Church Messenger*]

By observing the spirit of the commandments, a person may see that he actually steals, for instance, whenever he leaves undone any good which he might have done, because thereby he is responsible for depriving some other person or persons of some blessing which it was within his power and was his duty to bestow.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

We are glad to announce a lower schedule of rates for the cloth edition of "The Life of Mary Baker Eddy," by Sibyl Wilbur, and we believe that this will assist in a greater distribution of this valuable book. Single copy, cloth, $2.00; three copies, $5.50; six copies, $11.00; twelve copies, $22.00.

New photogravure plates have been made to replace the half-tone engravings in the edition de luxe of this book, and these plates, printed in a sepia ink, have greatly improved the appearance of the new edition. Single copy, $5.00; two or more copies, each $4.50.

"Christian Science: The Explanation of the Ideal Man," a lecture by William D. McCrackan, M.A., has been published in pamphlet form and is now ready for distribution. The sale prices are shown on the opposite page under the list of regular pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $8. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.15; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

The interstate commerce commission, acting under the recent decision by the United States Supreme Court, has issued a notice to pipe-line companies to file with it tariffs fixing rates and charges for carrying oil. The decision sustained the legislation making oil pipe-lines common carriers. The belief has been expressed that the commission, in regulating the pipe-line rates, will to a considerable extent exercise a voice in fixing the actual price of petroleum in the United States, if not in the world. The commission itself regards the problem now before it as one of the most important it has ever been called upon to solve. At present the pipe-lines buy the oil to be transported at prices fixed by themselves. The Standard Oil Company in the past, and its successors under the dissolution decree of the Supreme Court, have controlled exports and, it has been charged, prevented foreign interests from buying oil in this country and refining it. This has been accomplished, it is alleged, through the ownership and control of the pipe-lines. Just as soon as the commission fixes rates, rules, and regulations, every one will be accorded equal treatment.

An injunction restraining the Chicago Butter and Egg Board from publishing prices on butter, eggs, and other products, has been issued by Federal Judge Landis in Chicago. In a suit filed some months ago, the government charged that by publishing prices on the commodities in which it dealt, the Butter and Egg Board artificially created prices higher than the market warranted, and violated the federal law prohibiting all acts in restraint of trade. The suit is similar to the recent action against the Elgin Board of Trade, which resulted in the entering of a decree directing that the actual sales should alone be quoted, and no attempt to fix prices should be made by what was known as the price committee. It is the intention of the district attorney to draft a similar decree in the case of the Chicago Butter and Egg Board, making actual sales the basis of butter and egg quotations. The decree in the case will be submitted to the attorney-general for approval before it is entered in court.

The plans now being perfected for the forest service part of the inquiry to be made jointly by the departments of commerce and agriculture into timber and lumber-trade conditions in the United States, provide for covering entirely new ground. Lumbermen are now admittedly conducting their operations with a high percentage of waste, said to be largely due to market conditions, which make close utilization unprofitable. There is no general agreement as to the actual causes of existing conditions and the responsibility for present undoubted evils. With rapidly diminishing supplies of timber to draw upon, wasteful lumbering has come to be recognized as a matter of serious public concern, and an inquiry to discover the causes and seek for possible remedies is regarded by forest service officials as an urgent need. It is believed that the lumber industry itself recognizes the need and will welcome an inquiry conducted along constructive lines.

Huerta's resignation from the provisional presidency of Mexico was accepted by the Senate and Chamber of Deputies July 15, by a vote of 121 to 17. Francisco Carbajal was then appointed President, and took the oath of office in the joint session of deputies and senators. The United States has instructed John R. Stillman, American consul at Saltillo, to inform General Carranza that if he arrives at a peaceful agreement with the Carbajal government for the transfer of powers at Mexico City, recognition will be extended to the resultant administration. Should Carranza refuse to complete the settlement of the internal conflict by diplomatic means and insist on a forcible entry into Mexico City, recognition will be deferred until there is a legal election. American forces, according to present plans, will not be withdrawn from Vera Cruz until a government is recognized.

"One of the most glaring instances of maladministration revealed in all the history of American railroading," is the interstate commerce commission's characterization of its findings in the investigation of the New Haven railroad financial affairs, recently reported to the Senate. "A reasonable estimate of the loss to the New Haven by reason of waste and mismanagement," says the report, "will amount to between sixty and ninety million dollars. Directors should be made individually liable to civil and criminal laws for the manner in which they discharge their trust."

Mining statistics for the year 1913 show that 1,155,302 persons were employed in the mines of the United Kingdom, an increase of thirty-eight thousand on the number in 1912. Of this total, 909,834 worked below ground and 218,056 on the surface. The coal output for the year is the highest on record, amounting to twenty-seven million tons more than the previous year, the year of the strike. The output statistics, in tons, are: coal, 287,411,869; fireclay, 2,585,768; ironstone, 7,709,624; oil-shale, 3,280,143; sundry minerals, 623,954; from quarries 47,604,004.

Under the auspices of the Colombian Society of Engineers, there is to be held in Bogota next year an engineering congress which will be open to members of the profession from all the South American republics. The primary purpose, however, is to unite the engineers of Colombia, Venezuela, and Ecuador in one organization, as it was these countries which at one time constituted the Greater Colombia. It is expected that the government will appropriate enough money for the purpose of entertaining the guests of the Bogota engineers.

The *Morning Post*, of London, England, publishes statistics of the damage wrought by the militant suffragettes since the beginning of 1913. According to this paper, the militants have set fire, or attempted to set fire, to one hundred and forty-six public buildings, churches, houses, and other structures, and have exploded or attempted to explode forty-three bombs. The material damage is estimated at one million nine hundred and twenty thousand dollars, excluding the damage to works of art, which cannot be measured.

California harvested its greatest apricot crop this year. It is estimated that one hundred thousand tons of fresh apricots were picked, and that forty million pounds of dried apricots will be shipped out of the state. These totals do not consider the immense bulk that will be canned and shipped. The crop will bring four million dollars into the state, and of this seven hundred and fifty thousand dollars will have been paid to the laborers in the cutting camps.

The oberburgermeister, Herr Adickes, to whose indefatigable efforts the new university at Frankfurt-am-Main is principally due, recently published a special imperial order in which the Emperor officially approves the establishment of the new university. His Majesty will attend the inaugural ceremonies, which will take place on Oct. 18.

The French Senate has adopted a clause in the finance bill establishing a tax on incomes exceeding five thousand francs. The actual tax is insignificant, but it represents a complete change in the fiscal policy of France, and it is generally anticipated that tax on income will quickly establish itself as a foremost source of revenue.

An official test of the barograph carried by Heinrich Oelerich in his biplane showed that the altitude attained by him on his record ascent at Leipsic, Germany, on July 14, was over eight thousand meters, or 26,246 feet, which is only 154 feet less than five miles.

The bill for alcoholic drinks in the United States in 1913 was larger by nearly one hundred million dollars than in the preceding year. These are the totals: malt liquors, $999,338,054; spirituous liquors, $590,683,301; wines, $134,636,164; total $1,724,607,519.

Two dormitories, to be known as Plant and Blackstone halls, and a science hall will constitute the first group of buildings to be erected for Connecticut College for Women at New London. The buildings are to be completed Aug. 1, 1915.

An extensive program has been drawn up in connection with the annual conference of the International Law Association, which is to be held at The Hague in the Palace of Peace, Sept. 7-12.

Shamrock IV, Sir Thomas Lipton's challenger for the America's cup, under convoy of the steam yacht Erin, sailed July 18 for Falmouth, whence she started for the United States.

The French Senate passed the bill providing for an appropriation of four hundred thousand dollars for French official participation in the Panama-Pacific exposition to be held at San Francisco in 1915.

The chief commissioner of Baluchistan has now under consideration a scheme for irrigating some two hundred thousand acres in the Zhob valley.

The expense budget of the Argentine Republic for 1914 aggregates $193,815,487.

Defending Our Heritage

SAMUEL GREENWOOD

IN "Pulpit and Press" (p. 3) Mrs. Eddy designates our heritage as the "sovereign power to think and act rightly." This indwelling power is the kingdom of God within us, the consciousness of man's spiritual oneness with his divine Principle, and is the most priceless possession of the Christian Scientist. We defend this heritage by our faithfulness to it, by using to the full this power of right thinking and acting. Our only protection from evil lies in our consciousness of good, which is a sure refuge and fortress, "the secret place of the most High." The safety and success of our beloved cause demand that all who are connected therewith shall remain in this fortress, man its defenses, and keep out the evil thoughts which would invade its precincts.

The Christian Science movement has not reached its present position without opposition, and we need not suppose that it will continue the fulfilment of its divine mission unopposed. "The powers of this world will fight," writes Mrs. Eddy; and again, "Truth is still opposed with sword and spear" (Science and Health, pp. 225, 134). That, however, which opposes itself to Christian Science is not a person or persons, but a state of erroneous thought, named by St. Paul "the carnal mind," and defined in Christian Science as the flesh which is opposed to Spirit. In the human consciousness materiality is arrayed against spirituality. The carnal mind, with its material ways and means, opposes Christian Science because of its spiritual ways and means. This mental warfare is the strife between good and evil thoughts, between the thoughts that lead toward sensuality and the thoughts that lead toward spirituality.

The object of attack by the opponents of Christian Science is ostensibly its healing power. Jesus founded Christianity on the power of Truth to heal, and its influence in redeeming mankind waned only when this power was lost sight of. Evil fears only that which has power to destroy it, hence its efforts to undermine and render void the practice of Christian Science; for this Science practised, means the ultimate annihilation of all ungodlikeness. Neither *materia medica* nor ecclesiasticism would oppose Christian Science if it were content to stop with preaching, but the operation of its divine Principle in healing the sick alarms the evil or carnal sense in mortals, and incites it to active hostility.

In what way, then, does the adversary seek to accomplish its purpose? By what possible means could Christian Scientists be robbed of their power to heal? Evidently by the same means this was brought about in the case of the earlier Christians, namely, through their loss of spirituality. While the primitive church remained obedient to the Master's teachings, the Christ-healing was made manifest in its ministry, and so continued for upward of three centuries; but when the temptation of popularity and worldly prestige crept in, and the church ceased to draw the line between outward form and the inward life, between profession and practice, its spirituality, to a large degree, was lost, and the healing of the sick came to be no longer regarded as an essential function of Christianity.

We do well to remember that the nature of true Christianity has not changed, and neither has the nature nor the purpose of its adversary, the carnal mind. Its object of attack today, as in times past, is the spirituality of those who would follow the Christ in demonstration, since in no other way can it hope to stay the progress of Christianity. In Christian Science we learn that it was Jesus' spirituality which enabled him to "heal the sick, cleanse the lepers, raise the dead, cast out devils;" and it is only the spirituality of Christian Scientists which enables them to follow, in some degree, the Master's example. If the adversary, then, could but materialize their thoughts and desires, if it could but lead the members of the Christian Science church to indulge in worldly lusts, the same effect would naturally follow as when the early church was led to join hands with temporal power, and the healing works now being accomplished would likewise diminish and disappear.

Christian Scientists, therefore, should see the absolute necessity of guarding their heritage, their awakening spiritual understanding, as the most precious thing in their keeping, as indeed it is. We should defend our spirituality as we would our life, for it is our life. What one spiritually understands of God constitutes his individual being, and is his only sense of immortality. In his letter to the Galatians St. Paul sets forth the contrary effects of carnal and spiritual thinking, and if we would be Christian Scientists in reality, we should see that the latter are appearing in our experience. It will be noted that the "works of the flesh" are not confined to physical errors, but include such bad mental conditions as hatred, wrath, envy, etc. Materialization of thought expresses itself not only in material or sensual desires, but in strife and enmity between those who should be doing their work in loving accord. As this apostle pointed out to the Corinthians, "Whereas there is among you envying, and strife, and divisions, are ye not carnal?"

What our Leader in The Mother Church Manual (p. 42) calls "aggressive mental suggestion," emanating from the various agencies of the carnal mind, knocks at the door of each student's thought, and those who are wise and obedient will heed the injunction to "defend himself daily" from these emissaries of the enemy. If not recognized and destroyed, they may enter the unguarded consciousness, and taking form as the spontaneous thought of the individual, deceive him into regarding them as his own natural inclinations. It is this very subtleness of the enemy's tactics which renders constant watchfulness necessary. If these suggestions were audibly voiced, their very antagonism to our convictions would startle us into positive denial; but their silent operation, asserting themselves as one's own thinking, ensnares the indolent thought into easy acquiescence. Hence the obvious importance that students of Christian Science be awake to the nature and methods of evil, and be ready to challenge and deny every suggestion which, if accepted, would betray them into its hands.

The thought of the loyal Christian Scientist is the awakening thought, the thought that is beginning to discern the spiritual nature of God's creation, and of all real existence. The cravings of the flesh, the promptings of self-will, and

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

whatever indicates a depraved sense, do not spring from this mental state, and the student should know they are not his own. The dawning spiritual consciousness which characterizes the Christian Scientist, and which recognizes good as the only reality, cannot be the source of evil thought, and we may have the assurance to reject all such thought as neither part nor product of our own thinking. One who has grasped the teachings of Christian Science sufficiently to identify himself with this movement, knows there is but one Mind, but one source of right thought, but one spiritual activity or ego, and that is God. He knows there is but one Spirit, but one animating Principle, and that is divine. The enemy would have us forget these things and obey impulses which we know do not come from God or from our own enlightened thought.

If our aim is to demonstrate the truth of Christian Science, we should not acknowledge affinity with an evil mind, call evil thoughts our own, or be ruled by a spirit antagonistic to the divine Spirit. The awakening to the nature of God as infinite Love, which comes through the understanding of Christian Science, naturally finds expression in loving and healing thoughts. Thoughts of strife and enmity, on the contrary, come from the carnal mind, and if indulged will surely darken one's sense of spiritual power over evil. "To be spiritually minded is life and peace;" and this spiritual-mindedness, this reflection of divinity in thought and deed, is man's only means of identification with his divine source. This is our heritage, the "sovereign power to think and act rightly," which no human or sensuous argument should tempt us to forsake or forget.

The Healer

JULIA WARNER MICHAEL

THROUGHOUT the ages there has lived and will live but one healer. Earth needs no other, for this healer is the Christ, Truth. In order to understand this subject more fully, we may consider it from the standpoint of the Christ-nature, the Christ-power, the Christ-effect. The first gives us a wide range of vision. The Master said, "I am the way, the truth, and the life." Again he said, "Ye shall know the truth, and the truth shall make you free." We thus readily apprehend that the truth was from the beginning, born of God, hence a partaker of the God-nature, perfect, unchanging, impartial, impersonal, immutable, omnipotent. There has been no time when truth has been absent from creation and no moment when it has been inactive, for it was not withheld from the world until Jesus' advent, neither was it withdrawn at his ascension. If thought has rested upon the man Jesus as the divine healer, as one whom it was sacrilege to try to imitate, whose power was confined to himself alone, a grievous mistake has been made.

Jesus said, "I can of mine own self do nothing." Jesus was a perfect witness to Christ, Truth, but he claimed no monopoly of Truth's power. If he did not claim this for himself, why should we claim it for him?

Beginning with Genesis, the Bible tells of the healing Christ, at work through all the ages down to Jesus' time, and we have the Master's promise that this truth shall abide with us forever. Poverty, sorrow, sickness, sin, and death were healed by the Christ in the centuries before Jesus' time, and have been since, and this healing will continue so long as the need of healing remains. Let us then strive to see the Christ-idea aright, above all mere belief as to person, time, creed, and country, the one perfect physician for all humanity throughout the years.

Our second view-point enlightens us further. The Christ-ability, being the going forth of divine power, is without limit. It reaches to the uttermost parts of the earth, and it is equally available for so-called heathen and so-called Christian. It knows no evil power, no end of life, no incurable disease, no unforgivable sin. In its pure presence the most malignant condition of mortal mind or body becomes but a passing cloud, which leaves no scar in its wake. The truth declared by Christ Jesus is supreme; before it the so-called laws of mortal nature, including birth, blight, death, and decay, become null and void, for Christ, Truth, is divine, unerring intelligence; hence the data patiently sought and acquired by *materia medica* through many centuries and compiled for the knowledge of mankind, become as useless as so many fairy tales would be to heal earth's ills, because these theories are without foundation and constantly changing. Their basis is not the truth which destroys a fever with the declaration, "Fear not," and which raises the dead with the command, "Awake thou that sleepest, and arise from the dead, and Christ shall give thee light."

The brilliant personal magnetism and the intellectual religious eloquence of the pulpit are seen to be powerless to save individuals when contrasted with the simple but mighty and compelling force of Christ, Truth, which says, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," and which keeps its promise in the now, not merely in the hereafter. To this great physician the forlorn hope, the mental lack, the broken heart, the secret sin, the hereditary curse are equally possible of cure. The Christ-ability has not changed in the slightest degree since it liberated the Israelites from Egypt and rolled back the waters of the Red sea; since it preserved Noah, Joseph, Elijah, David, Jesus, and the apostles. What has been done by the truth can be done still. Neither time, belief, circumstance, mortal mind, nor matter can diminish its power one iota. Because it is neither in nor of human personality, but of God, it is changeless.

When we come to consider the Christ-effect, we see that since Christ, Truth, is divine, it is the master of every situation. Its power is irresistible, therefore the result of its application is instantaneous and complete. Its enlightening nature makes its presence felt everywhere, and its divine authority commands obedience. It supplies an abiding tonic for the tired-out thought and body, a clear vision to the clouded mentality, unlimited activity to the helpless, spontaneous joy to the heart-sick, nourishment to the needy, complete forgiveness (the taking away of sin) to the sinner, life to the dying. It enters the prison to set at liberty those who are bound; it brings the "beauty of holiness" into the midst of squalor and wretchedness; it enters the home of wealth and luxury to supply what money cannot buy; it is the solver of every religious, political, individual, and international problem; it never fails. Christ, Truth, never lost a case or a cause.

With such a comprehension of Christ, even in a small degree, are we not privileged to live today in Bible times? Is it not possible for us to touch the hem of Christ's garment and be healed? Is it not for us to experience the day of Pentecost? And though we pass through some Red sea of obstruction, or through some Gethsemane of human sacrifice, is not the promised land before us, and the power of ascension for us also? Beyond question, our beloved Leader has proved the present-day reality and unchanged activity of Christ, Truth, to save to the uttermost those who believe, understand, and obey divine Principle. Let us acknowledge this test, and in order that we also may have greater proofs

Digitized by Google

of this saving power, let us imbibe more thoroughly the spirit and promise of the following words from pages 333 and 473 of Science and Health: "The Christ is without beginning of years or end of days. Throughout all generations both before and after the Christian era, the Christ, as the spiritual idea,—the reflection of God,—has come with some measure of power and grace to all prepared to receive Christ, Truth." "Christ is the ideal Truth, that comes to heal sickness and sin through Christian Science, and attributes all power to God."

✧

Education and Inspiration

LEWIS C. STRANG

In response to the question, "How can I progress most rapidly in the understanding of Christian Science?" a question which instantly arises when the investigator catches a glimpse of the tremendous import of Mrs. Eddy's teaching, there comes the answer, "Study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495). Thus are brought tersely into juxtaposition the two distinct mental processes characteristic of all spiritual development,—the educational and the inspirational.

By the educational process is meant a definite directing of the mental faculties to the work of investigating and comprehending the letter of Christian Science. By inspirational, is meant those vivid flashes of insight into the truth of being, flashes humanly transcendental, but bearing the mark of divine authority in the demonstrations of physical healing and spiritual regeneration that accompany them. A single experience of this sort brings an understanding of Jesus' marvelous power which no amount of polemics can convey, and produces a conviction of spiritual reality which years of faultless argument cannot engender.

As the human mind has a tendency to swing from one extreme to another, the Christian Scientist finds himself continually facing the necessity of accurately balancing in his mental activities the educational and the inspirational. On the one side, he is tempted to be satisfied with a speculative familiarity with the Christian Science philosophy and point of view, until he finds them only "dry bones" in time of dire necessity. Then possibly he goes to the opposite excess, into a kind of sentimentalized spiritual transcendentalism, dealing with vague generalities and an indefinite, undemonstrated idealism. Between these lies the right road, traveling which the human mind is intelligently educated out of itself and inspiration is found to be the normal and natural status of man.

It is self-evident that the purpose of all education is to gain understanding. It is not, however, so self-evident that human understanding is not a mere command of aggregated facts, but rather a state of mind, a feeling or sense of things. Whether it is in business, art, science, or religion, only that man is a master who through the study and assimilation of facts has gained a definite, trustworthy, and comprehensive sense of things,—a mental condition perhaps dimly recognized, but nevertheless impersonal in quality and looking toward Truth itself as its authority. Apprehending this, the Christian Scientist grows to see that what he needs to gain most of all, is not merely an intellectual comprehension of Christian Science, but what may be crudely described as the Christian Science conviction or sense of things,—the letter and the spirit.

The reason why the actual state of mind must supersede theorizing about the state of mind, is because it is impossible to know God as an abstraction. The existence of God is a concrete fact, either real or unreal, to each of us in his individual experience. Because humanly intellectual, theoretical comprehension is called knowing, we are naturally led to try to gain an understanding of that spiritual presence or influence which we call God, by the familiar intellectual process of theoretical comprehension. But we soon learn that the true understanding does not come that way, and this startling discovery induces in every one, to a greater or less extent, a mental bewilderment, the sense of being lost, of being in darkness, even in despair.

Out of this blackness, faith, the forerunner of spiritual understanding, offers the one sure means of escape; faith that is the simple faith of the child, who neither speculates nor demands the reason why, but immediately feels happy and relieved when some one in whom he has confidence tells him that all is well. It is then that "the inspired Word of the Bible" becomes "our sufficient guide to eternal Life" (Science and Health, p. 497). Its reiterated promises are to us what the assuring words of him in whom the child has confidence are to the child. We must let these wonderful promises, proved true in countless cases, so uplift our faith that we, too, have happiness and peace because of their assurance that all is well.

There is no question that we can know God aright if we go about it in the right way. The trouble is, we forget that God is our ever-present, loving Father-Mother, and place Him as something apart from us, to be reached only through the overcoming of great difficulties. Yet who among us has not some little comprehension of that feeling or sense of things which we call love; of purity, tenderness, sweetness, of unselfed right desire, of joy and affection? We all know somewhat of these things, and it is thus that the true consciousness of God finds its beginning. We have but to take this best sense, let it flood our thought, free it from personality so that it includes a universe in its radiant goodness, and we know God. This sense is "God with us." It is our healer and our helper.

Verily, we too, marveling at the magnificent simplicity of it all, can with understanding echo Jesus' words: "I thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent, and hast revealed them unto babes."

✧

"Within the veil"

LOUISE RAVENS

When Moses was commanded to build the tabernacle, as we read in the twenty-fifth chapter of Exodus, he was given explicit directions respecting the plan, the dimensions, the material to be used, and the manner of erecting the structure. While most of these instructions seem to the casual reader to be but ordinary specifications, there are certain passages whose deep spiritual significance can be discerned only in the light of the Christianly scientific interpretation of the New Testament, for they speak of that which is but the copy and shadow of "heavenly things."

While we are apt to think of the crucifixion of Jesus as the nailing of his body to the cross, the truer meaning of it was the denial of the false sense of selfhood through the acknowledgment of his divine sonship, and the meek submission to all that might follow as a result of his fidelity to the Christ-idea, the spiritual sense of being. It was the denial, the crucifixion, of the flesh, that is, of the belief of mind in matter; and this belief stands as a barrier, a veil, between mankind and the presence of the most High. It is this barrier of the flesh which seems to be symbolized by the veil

Digitized by Google

that in the building of the tabernacle was to be hung "between the holy place and the most holy," or the holy of holies, signifying the presence of the infinite; for "there," said the most High, "I will meet with thee, and I will commune with thee."

In this inner sanctuary was to be found the ark, which is defined on page 581 of Science and Health as "God and man coexistent," above which glowed the shekinah, the visible symbol of the divine presence, which, according to an ancient writer, could not, in its greatest splendor, be beheld with mortal eyes, that light which, as St. Paul declares, "no man can approach unto." Until the coming of the Wayshower, the high priest alone was allowed entrance into the holy of holies, and he only once a year; and it remained for the immaculate Son of God to rend the veil of the temple, that is to say, the flesh, that we might have access "by a new and living way" to that within the veil. In his epistle to the Ephesians, Paul says, "For he . . . hath broken down the middle wall of partition;" and, "Ye who sometimes were far off are made nigh by the blood of Christ."

The atoning life of the Messiah was foreshadowed in the blood of goats and calves which the high priest used in the temple service as a type of sacrifice, and the blood of Jesus is again but a type and shadow of that "within the veil," or God Himself, the divine presence which is the vital, life-giving power of the Son of God, the Christ-idea. In Science and Health (p. 25) we read, "His true flesh and blood were his Life; and they truly eat his flesh and drink his blood, who partake of that divine Life."

Thus we learn that he alone can share the life of the Master who is willing to crucify the flesh through the denial of material selfhood, the utter casting out of the belief in a life apart from God, divine Mind. "If any man will come after me," said Christ Jesus, "let him deny himself;" let him deny his false material self, through the acknowledgment of man's oneness with Spirit. The Master said, "Whosoever will lose his life [his false sense of life] for my sake [for the sake of the Christ-idea], the same shall save it [unto Life eternal]." St. Paul, the apostle who in his own wonderful career had experienced what it meant to deny one's self and take up the cross and follow in the Master's footsteps, adds: "Having, therefore, brethren, boldness to enter into the holiest by the blood of Jesus, . . . let us draw near with a true heart," having "our bodies washed with pure water." Finally, St. John declares, "Blessed are they that wash their robes [from the belief of life in matter], that they may have the right to come to the tree of life, and may enter in by the gates into the city" (Rev. Ver.).

✧

Man Perfect

DAVID W. BRUNDEGE

THAT man was created perfect is a fact generally accepted by religious men and women of today; but whether or not he has remained so, is a question that is the source of much controversy. Some in every age have held to their convictions that man could not fall from his original estate; the majority, however, believe that through disobedience man severed his connection with his Maker and is now in a state of imperfection, "fallen."

This belief of man's imperfect nature seems to have been founded upon another belief, namely, that man is subject to certain natural laws, of which he is largely ignorant and which he cannot obey, and on account of this he is sick, sinning, and sorrowful. If this were true, it would appear that man has been created to face an inevitable doom; but we cannot attribute such an arrangement to an all-loving Father. Since it is conceded that God is the only creator, material law can exist only as a belief based upon the testimony of material sense. This sense is the abettor and support of the "carnal" mind, which is "enmity against God," and does not testify to the truth. It declares that man is young and old, that he is sick and well, and that he lives and dies. This testimony is plainly contradictory, and any belief founded upon it is therefore false. It is this false belief which has caused human suffering and despair.

Those who still cling to the theory that man is imperfect, believe in the possibility of his improvement, so that at the change called death he will be ushered into heaven. Human troubles are largely traceable to this false belief, and salvation can be obtained only by correcting it, by denying the false testimony of the physical senses, and by discerning the perfect man through spiritual sense. Being born of God, the evidence of spiritual sense is never contradictory and is always true.

Christian Science teaches that man is perfect now, that he is spiritual, and subject only to the laws of God. Working in harmony with this spiritual truth, Christian Scientists today are healing the sick, comforting the sorrowing, and preaching the gospel to the poor. They are proving that heaven is not afar off, but that it is within the reach of all mankind, and that we can see "a new heaven and a new earth" by rising in the scale of spiritual understanding to a point where we can more clearly behold the perfect man. Jesus knew that God's man is perfect, and it was his understanding of this fact that enabled him to do his mighty works. Our Leader says, "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals" (Science and Health, p. 476).

While contemplating these great verities of being and trying to apply them to our daily problems, it is encouraging to know that we are not alone, but that while we work, God works with us; that unselfish, loving thought is born of God, and redounds to the well-being of the one through whom it found expression. In his compassionate appeal, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," Jesus seems to convey the thought that if we will turn away from the testimony of the corporeal senses and come into the understanding of the perfect man, we shall indeed find rest.

[Written for the *Sentinel*]

Communion

AGNES FLORIDA CHALMERS

A QUIET hour at dawn of prayer and light;
A day alone with Truth amid earth's throng;
A silent song of triumph in the night,—
Such sweet communion hours to heaven belong.

The wine of gratitude for every need;
From Love's unfailing store, the bread of heaven,
The "hidden manna" of a selfless deed,—
This is the feast the healing Christ hath given.

A glimpse of nations walking in the light,
Within the holy city where nor sun
Nor moon doth shine, and where there is no night,
Reveals eternal day as changeless, one.

This moment, now unfolding, Love hath blest.
The holy city coming down from good
Is just at hand. Ye weary pilgrims, rest,—
Communion is revealed and understood.

Selected Articles

[Editorial in *The Christian Science Monitor*]

The inconceivable has occurred. In the twentieth century of the Christian era the nations of Europe have drawn the sword with no more respect for the teaching of the Sermon on the Mount than was displayed by the Roman legionaries on Calvary. The skeptic demands, with unconcealed contempt, whether the event is the result of twenty centuries of Christian practice. The question is perhaps natural, but it is none the less not a little shallow. Christianity is no more responsible for war in Europe today than Epicureanism was responsible for the persecution of Marcus Aurelius; but what is termed religion was, and is, largely responsible for both. You cannot convert the cathedral into something approaching the temple of Janus, nor can you indulge in dithyrambs concerning consecrated battle-flags, without reducing your Christianity to the region of the Cromwellian maxim, "Trust in God and keep your powder dry."

Any one who questions this will find his answer in a famous saying of the Red Prince, quoted approvingly by a minister of today, "Let your hearts beat to God and your fists on your enemies." It seems a curious commentary by a Christian prince on that saying on the Syrian hillside, "Whosoever shall smite thee on thy right cheek, turn to him the other also." No sane person would deny that, in a sin-laden civilization, circumstances might arise to cause, in Mrs. Eddy's phrase (on page 278 of Miscellany), peace to be "subserved by the battle's plan." That, however, is only because the theology of the Christian era has represented war almost as a sacrament. It has unquestionably sanctified a phrase invented for quite another purpose, "Killing no murder."

The simple fact is that if the energies of Christendom had been directed more to the demonstration of practical Christianity—that is to say, to the healing of the sick—war would long ago have become impossible. It is impossible persistently to exclude death from your consciousness without excluding war. The abrogation to a class of the right to heal consequently constituted the surrender, by scholastic theology, of the fruits of the victory won in the garden at Bethany. The effects were incalculable, and included the victory of the sword. The Cæsars realized that clearly enough in their struggle with the Christian legionaries.

Century, however, after century was to pass before the discovery that Christianity must be scientific was to tear religion from the grasp of theological speculation, and, in demanding a faith based not on assertion but on demonstration, to prove the accuracy of Mrs. Eddy's statement (on page 278 of Miscellany), "War is not in the domain of good; war weakens power and must finally fall, pierced by its own sword."

[Frederick Dixon in *Lincoln Gazette*, Lincoln, England]

In the course of an address recently delivered by the Rev. Mr. —— at Spilsby, the statement was made that the speaker could not understand how Christian Scientists "could believe there was no such thing as pain." Of course, if you take a scientific or metaphysical statement and state it in a mere crude, unrelated manner, most people who are ignorant of the subject would find themselves in this gentleman's position. Spinoza, for instance, argued that evil was good. Put exactly like that, it sounds entirely preposterous, and though the world has, as every Christian Scientist thinks, rightly rejected the idea, it would be parodying Spinoza's meaning to state it in that way.

According to the teaching of Christian Science, sensation is not physical but mental. In this it has the support of a large body of natural scientists. If you prick your finger, Huxley once pointed out, hardly anything could induce you to believe that the pain was not in the wound, whereas, as a scientific fact, it would not be within two feet of it. The whole sensation of pain, in plain English, is that it is a condition of consciousness. The way, therefore, to overcome pain is to change the mental condition, and the idealist philosophers, from the time of Plato down to our own time, would have been much more logical if, having insisted that pain was mental, they had gone on to insist that it must be overcome by effecting a change of mind.

The originators of every teaching are, however, permitted to define their terms in their own language. That is a concession which every great thinker and every thinking person has admitted is inevitable. You could not define an isosceles triangle differently from Euclid, and then insist that the argument based on his definition was a ridiculous one; and so, if you are going to take exception to Mrs. Eddy's statements about the unreality of pain, you can do so fairly only by first accepting her definition of reality. Now, Mrs. Eddy defines reality as that which is spiritual and eternal. The material, she insists, is but the temporal counterfeit, or humanly mental misconception of the real. Man, therefore, made in the image and likeness of God, is spiritual, and not material; since God is Spirit, the image and likeness of God must be spiritual, and not material. Now, the divine consciousness is unconscious of evil and unconscious of pain; otherwise pain and evil would be eternal, as they never could be obliterated from omniscience. Therefore, when Mrs. Eddy says that pain is unreal, she does not in the least mean that pain is unreal to the human senses, but that pain has no place in the divine Mind. The critic should have no difficulty whatever in realizing the logic of this.

The simple fact which he might have realized is, that Christian Scientists are engaged every day in overcoming pain; but what they are engaged in overcoming is not an eternal spiritual fact, but a temporal, material misconception. Mrs. Eddy had the utmost sympathy with the people who fell under this misconception, and her teaching was directed to explaining to them the truth which, as Jesus said, would make them free. The truth which is to free the world from the false human conception of pain, is the understanding of the absolute reality of good. Christian Science, therefore, sets out to heal the sick by showing them how to exchange the carnal mind for the Mind of Christ.

[John L. Rendall in *The Dubuque* (Iowa) *Times-Journal*]

Under the caption, "Mental Healing as Commercial Asset," a recent issue contains an article from the *Journal* of the American Medical Association, written in a semifacetious way, which, while to some extent recognizing the value of Christian Science teachings, also perhaps inadvertently presents a view-point which is directly contrary to the legitimate functions of mental healing as understood in Christian Science.

The statement is made that a certain accident insurance company of New York employs as an adjuster in Chicago a devotee of Christian Science. He is said to be a very valuable official on account of his ability to make the people insured in his company regard their injuries from a "Christian Science point of view." With your permission, I will here state that the "Christian Science point of view" is that of absolute honesty and justice. Mrs. Eddy states in "Science and Health with Key to the Scriptures," the text-book of Christian Science (p. 448), "It is Christian Science to do right, and nothing short of right-doing has any claim to the name."

Digitized by Google

This attitude is fundamental to Christian Science teachings. Therefore any other attitude is altogether inconsistent with this religion. The attitude of a Christian Scientist who might be an adjuster for an insurance company, would be to deal justly and in accordance with facts with the company and with their clients, for to be just, one must be just to all concerned. The inference that there is some sort of mental hocus-pocus which may be used by a Christian Scientist to deceive people as to actual facts, is altogether a misapprehension. The intimation that Christian Science might be used indiscriminately on "battle-fields," etc., does nothing more than betray ignorance of the exact teachings of this demonstrable religion.

As a specific example of what Christian Science is doing to correct human thought, I will cite the case of Robert Waddell, of Mitchell, Iowa, who, according to despatches from Washington which appeared in the newspapers of April 15, 1905, gave up a pension which he had enjoyed for years because of the fact that he had been healed in Christian Science. In the despatch mentioned, it is stated, "It is learned that by far the largest number of pension resigners are men who claim to have been healed of their physical disabilities by Christian Science."

Referring to Mr. Waddell, the despatch further states: "One of the cases to come to the attention of the department was that of Robert Waddell of West Mitchell, Iowa. He wrote to Washington, sending his pension certificate, and asking that his name be dropped from the rolls, as he had entirely recovered from the disabilities which were the ground for granting his pension. He said he had been cured by Christian Science. The pension office officials suspected the man of a mild form of insanity and sent a special examiner to Iowa to look into the case. On referring to the records, it was found that the original medical examination had shown the applicant to be suffering from 'malarial poisoning and its results,' among which were enumerated, 'stomach, liver, and kidney trouble, affecting the heart, together with frequent rheumatic conditions.' On this showing Waddell was drawing fourteen dollars a month. The examiner interviewed the leading people of West Mitchell and found no doubt among his fellow townsmen of Waddell's sanity, and finally the man himself was examined and required to give his deposition. The examiner reported to the Washington office that Waddell was all right and evidently quite well, therefore entitled to give up his pension; and he was consequently dropped from the rolls. Since then, John Warner Keys, a dentist here, has surrendered his certificate entitling him to a pension of twenty-four dollars a month. His reason is similar to that of Robert Waddell, namely, that he has been healed by Christian Science and has no right, as a well man, to be drawing a debility pension. Dr. Keys is an active member of the Christian Science Church of Washington and well known in the community."

The cases above mentioned perhaps sufficiently illustrate the attitude of Christian Science in business and other affairs. If Christian Science contains a "commercial asset," it is altogether due to the fact that it teaches honesty and fair dealing one with another.

✥

[G. W. Allan in *The Toronto* (Canada) *News*]

The Rev. Mr. —— is reported to have said regarding evil and imperfection, that "God does tolerate these things and God does originate these things, because they are here." The mission of Jesus Christ was set forth in Jesus' words, "For I came down from heaven, not to do mine own will, but the will of him that sent me," and his doing of God's will is epitomized in his reply to John's disciples: "Go and show John again those things which ye do hear and see: The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." He also referred to the deformed woman as one "whom Satan hath bound, lo, these eighteen years." It hardly seems necessary, in view of these facts, to say that God did not cause these ills which Jesus removed, as he says, in doing "the will of him that sent me." We place the critic's statement and this record of Jesus' words and works in juxtaposition, and leave it to your readers to determine their agreement.

The reverend gentleman is further reported as having said: "I have known them [Christian Scientists] to be dying with their faith in Christian Science. It is marvelous that they should do so when they cannot be cured." Well may he wonder, if he believes that Christian Science is but another of the many methods of healing. Mrs. Eddy, however, says in Science and Health (p. 150): "The mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

The Christian Scientist understands God to be "universal, eternal, divine Love, which changeth not and causeth no evil, disease, nor death" (Science and Health, p. 140). The Christian Scientist's faith is therefore based on the presence, power, and love of God, and we would welcome from this clergyman, or from any other source, information of a better foundation for the faith of the man who is "dying and cannot be cured."

✥

[Algernon Hervey Bathurst in *Burton Daily Mail*, Burton-on-Trent, England]

The anonymous writer of the letter on "Faith as a Cure," takes upon himself the giving of an explanation of the teaching of Christian Science which he has obtained from a book, the author of which is not a Christian Scientist, and which, therefore, cannot be taken as giving a correct or in any way reliable explanation of this religion. Permit me to point out that prayer in Christian Science is, as Mrs. Eddy writes on page 1 of Science and Health, "a spiritual understanding of Him [God]." The healing, therefore, accomplished through Christian Science treatment, or prayer, is not brought about by the intervention of the material, or mortal man, for, as Paul writes, "the natural man receiveth not the things of the Spirit of God: . . . because they are spiritually discerned." The basis of Christian Science teaching and practice is the omnipotence and omnipresence of God. Now, it must inevitably follow that the knowledge of the omnipotence of God includes the knowledge of the powerlessness or unreality of evil. God being omnipotent, there is, therefore, but one power, namely, good; and the belief that good and evil coexist and are in continual conflict, corresponds to the eating of the fruit "of the tree of the knowledge of good and evil," and the "house divided against itself" to which Jesus referred as being unable to stand.

It is just on this point, namely, the unity or allness of God, good, that Christian Science differs so widely from any other system of religion or healing. Nevertheless, this all-important point, recognized only through spiritual discernment, is so simple that it is grasped with facility by children. "Spiritual causation," Mrs. Eddy writes on page 170 of Science and Health, "is the one question to be considered," adding, in the

Digitized by Google

same paragraph, that the "age seems ready to approach this subject, to ponder somewhat the supremacy of Spirit, and at least to touch the hem of Truth's garment." The teaching of Christ Jesus and Christian Science are one and the same, and true Christian or scientific healing can, therefore, be accomplished only to the extent that the true nature of God and His perfect spiritual creation is understood.

✧

[From *Salem* (Mass.) *Evening News*]

Working with characteristic quietness and without ostentation, the Christian Science church in this city has, through its relief station at the church on Lynde street, accomplished remarkable results. Over fifteen hundred families, aggregating some six thousand individuals, have been materially assisted.

The relief station, conducted under the auspices of First Church of Christ, Scientist, closed last evening [July 17], so far as the giving out of clothing is concerned. There has been given away all kinds of wearing apparel for men and women, sheets and blankets. The men have taken considerable winter clothing, but the women have as a rule taken only light clothes, consequently a large lot of thick clothing for women and a small quantity for men remains on hand, with other material. Last evening all this was turned over to one of the charitable societies.

The relief committee will remain intact, and will meet every Monday and Thursday afternoon between four and five o'clock, as well as Wednesday evening, the usual meeting night of the church. The members have given out several checks, and still have some money left, which they will distribute among the needy.

Whenever a person applied for assistance, he was asked if he had been assisted by any other committee, and if not, he was given help without any further questioning, no matter what his creed or his race. If he had been assisted, the committee which had helped him was asked concerning the case. No one was turned away, and a vast amount of good was quietly accomplished.

✧

[Duncan Sinclair in *Eskdale and Liddesdale* (Scotland) *Advertiser*]

In the London letter of the *Advertiser*, your correspondent refers to the clerical and medical report on "spiritual, faith, and mental healing," which has recently been published. There can be no doubt that the report has drawn attention in a very marked way to the fact that material methods of treating sickness have no longer the hold they once possessed upon the community. It also indicates that in orthodox circles there is an awakening to the significance of those wonderful demonstrations of divine power which the Founder of Christianity gave in proof of his knowledge of spiritual causation and law.

I should like to point out that as Christian Scientists were not approached with regard to the many healings that have taken place through Christian Science treatment, the pronouncements of the committee who issue the report, cannot in any sense be taken as constituting a judgment upon Christian Science healing; and it would be well if the public kept this clearly in mind. Christian Science treatment of sickness and evil differs entirely from the methods arraigned before the committee; in fact, there is not the slightest indication given that any single member of it, or any one of those who were examined, had the faintest idea of its nature. Neither hypnotism nor suggestion enters into its practice. It will have nothing to do with such methods, for the perfectly obvious reason that if suggestion can heal, it can also cause sickness, and is, indeed, constantly causing it. Christian Science treatment, on the other hand, can never have any other than a good effect on a sick person, since it sets in operation, by the understanding of absolute truth as opposed to a relative sense of existence, laws whose action produces harmony and health alone.

As your correspondent infers, the "mind" has a great deal to do with bodily conditions. Most people will readily admit, for example, the baneful effects of evil; that such emotional states as hatred, fear, jealousy, anger, impurity, etc., are directly responsible for much of the disease that is prevalent today. Christian Science has been pointing this out for upward of fifty years; and by destroying these and kindred evils, replacing them by such virtues as courage, loving-kindness, truthfulness, purity, and at the same time imparting an understanding of the spiritual nature of man and his real relationship to God, it has healed many a case that had baffled the efforts of those practising material methods of healing. Further, it is a great mistake to imagine that Christian Science heals only functional ailments, since organic disease is being constantly healed through its ministrations.

One is astonished at the crude opinions that are still prevalent about Christian Science, when it is so comparatively easy nowadays to obtain authentic information on a subject so fully and explicitly dealt with in the Christian Science textbook, "Science and Health with Key to the Scriptures," by its Discoverer, Mrs. Eddy. Nevertheless the report is a hopeful sign of the times in so far as it indicates a breaking away from materialism in its crass forms; and this in itself is something for which to be grateful.

✧

[George Shaw Cook in *Canton* (Ill.) *Register*]

Referring to a recent issue, I would say that Dr. ——, an evangelist, seems to have vainly endeavored to practise what he mistakenly termed Christian Science, in asking his hearers to imagine that the vacant seats at his revival were filled. Aside from the fact that Christian Science treatment is vastly different from exercise of the imagination, it may be said that, generally speaking, if it were necessary for Christian Scientists to imagine anything with respect to their church services, it would be that there were seats enough to accommodate those who wish to attend. Christian Science church services are generally crowded by those who come, not because of anything they have imagined, but because of what they have known. This Christian knowledge, they find, is liberating them from bondage to sickness and sin, and they are glad to go where they can learn more of the truth that makes free.

At another time the critic, as quoted in another issue, displays lack of familiarity with or understanding of Christian Science by his reference to its teachings concerning the atonement. Christian Science teaches its adherents to "pray without ceasing," and constantly to seek a higher and better understanding of the true nature of God and of man in His likeness. Furthermore, it requires the demonstration of this understanding in right thinking and right living. Such thinking inevitably results in the lessening of sin and disease. This is the practical atonement, or "exemplification of man's unity with God" (Science and Health, p. 18), and Christian Scientists believe that in no other way can they realize the full import of what has been mistakenly regarded as the vicarious atonement of Jesus the Christ. Only by following his example can we avail ourselves of the atonement of Christ Jesus, which was in fact the perfect demonstration of man's at-one-ment with God, and this rendering of the word atonement is not used by Mrs. Eddy alone, but is being given by modern scholars as the correct translation.

Editorial

"The Lord our God is one Lord"

As this number of the *Sentinel* goes to press, the interest of the world is centered upon the conflict which seems imminent in Europe. It is not, however, a time for fear and excitement, but rather for that exaltation of thought which rests with calm assurance on the knowledge of the omnipotence of God, knowing, as on a similar occasion our revered Leader bade us, that "He will bless all the inhabitants of the earth, and none can stay His hand nor say unto Him, What doest Thou? Out of His allness He must bless all with His own truth and love" (The First Church of Christ, Scientist, and Miscellany, p. 280).

A few months ago, when war clouds gathered in the western hemisphere, we quoted from the writings of Mrs. Eddy for the benefit of Christian Scientists and others who might be ready to listen. Today, when millions of men are arming in preparation for war in the other hemisphere, it may be well to call attention again to these words,—the words of one whose Christianity was demonstrable. We quote from the *Sentinel* of May 2, 1914, as follows:—

In these days of wars and rumors of wars, it is well for us all to remember that evil is never made good by the seeming necessity for its employment. The fact that mankind appears to think there is no other way by which it can rise out of or overcome certain human conditions, is the only excuse for an appeal to force; but even this does not change the fundamental truth that there is but one power and this power is good. Christian Scientists especially should be entirely clear in their thought about war, because they are endeavoring to stand for righteousness at all times; and as Mrs. Eddy has so clearly answered the questions now being asked as to what shall be the attitude of Christian Scientists on this subject, it seems fitting to bring these answers directly to the attention of our readers by republishing some quotations from her writings. Most pertinent of all, perhaps, is the following sentiment from her letter of March, 1898, the period of the Spanish war:—

"The characters and lives of men determine the peace, prosperity, and life of nations. Killing men is not consonant with the higher law whereby wrong and injustice are righted and exterminated. . . . But if our nation's rights or honor were seized, every citizen would be a soldier and woman would be armed with power girt for the hour" (The First Church of Christ, Scientist, and Miscellany, p. 277).

Again, on page 286 of the same volume, she writes:—

"For many years I have prayed daily that there be no more war, no more barbarous slaughtering of our fellow beings; prayed that all the peoples on earth and the islands of the sea have one God, one Mind; love God supremely, and love their neighbor as themselves.

"National disagreements can be, and should be, arbitrated wisely, fairly; and fully settled.

"It is unquestionable, however, that at this hour the armament of navies is necessary, for the purpose of preventing war and preserving peace among nations."

In another letter, which appears on page 278, she writes:—

"Nothing is gained by fighting, but much is lost.

"Peace is the promise and reward of rightness. Governments have no right to engraft into civilization the burlesque of uncivil economics. War is in itself an evil, barbarous, devilish."

Pondering these truths voiced by our revered Leader, our desire can but be that the peace "which passeth all understanding" may hover over this and every other nation until discord of every kind shall cease. Above all else, we must be careful to resist the clamor which at a time like this attempts to sway public feeling by appeals to prejudice and sentiment rather than to divine justice and love.

ARCHIBALD MCLELLAN.

"Loose him"

ONE of the greatest moments, surely, of all the gospel narrative, was that when the company of those who stood before the tomb of Lazarus, and had heard the Master's call, "Come forth," awaited the outcome in breathless wonder. One can easily picture the fixed tensity with which both the incredulous and the expectant leaned forward and looked upon the cave's opening, and hear the cries of astonishment, the exclamations of joy with which they greeted the once dead man as he "came forth, bound hand and foot with grave-clothes," and yet with the step of a conqueror. For him life's supreme event had been experienced, the direst human bondage escaped from, and yet the first word spoken of him was in recognition of limitations, the need of a larger liberty. "Loose him," said Jesus, "and let him go." Manifestly the truth had come to confer the fullest freedom. It demanded the removal of every shackle of mortal belief, including those of affection, and thus, as we learn in Christian Science, it would bring complete spiritual emancipation to each and every one.

Interpreting Jesus' words in the light of Science, one gains a new sense of duty to his fellow men, and especially to those to whom he is deeply attached. He sees as not before what a fettering fact affection may become, and how imperative the call to remove every limiting enswathement with which our erroneous thought may have encumbered those whom we fain would bless. The vision of the truth, the realization of the truth, and the gain of entire freedom by the truth,—these are stages of consciousness, the advancing steps of redemptive experience. He who has even glimpsed the light of Life is in so far "raised from the dead." The valley of shadows can never seem real to him again, he has come to know that its darkness must give place to light; but to articulate this higher sense of Truth and Life with every aspect of past belief, and demonstrate its efficiency in every time of need,—this is an achievement which may be long delayed. Moreover, when gained, entire freedom from the disabling influence of world beliefs, the impress of education, and the manacling mesmerism of personality, must await his further patient growth. It is just here that the Master's mandate, "Loose him," relates itself to his spiritual advance, for it may be his to find that in their mental attitude his family, his social circle, and the Christian friends with whom he has been sympathetically identified,—that all these, under the dominion of false mortal sense, would keep him in a state of bondage which he will consciously or unconsciously have to resist long after he has been able to prove in many ways his saving apprehension of divine Truth.

One of the greatest ministries of Christian Science is recorded in its redemption of human attachments. As fathers and mothers, brothers and sisters, companions and friends, how zealously, and insistently ofttimes, have we hampered those we love, mesmerically bound their hands with our fears and entangled their feet with our selfish solicitudes, and this perchance at the very moment when they were otherwise called and prepared to step out into a life of the largest freedom! To us, therefore, there comes this word today, Loose them, and let them go! Our loved ones, our pupils, our friends—give to all these, to everybody and everything, the freedom of the gospel, the freedom which belongs to

Digitized by Google

their true nature, kinship, liberty, and privilege in Christ. This does not mean that we are to neglect the requirements of obedience in love from our children, nor that we shall hesitate to administer words of counsel and rebuke under circumstances which have Scripture warrant. It means simply that we shall free our fellow pilgrims from every limitation or restraint which the selfish or dominating disposition of human attachments is so wont to impose.

About the best we can do for any one is this,—to know the truth, the divine word spoken of and to him, and then remove the grave-clothes with which our fearsome affections have bound him, and leave him free to work out his own salvation under the divine guidance.

JOHN B. WILLIS.

Watchfulness and Prayer

No professed Christian would deny the necessity for prayer, also for watchfulness, but the most sincere of these would readily admit that they do not avail themselves as they should of the protection and privilege therein involved. Even students of Christian Science, who are awakening to see the wide range of spiritual activity covered by watchfulness and prayer, are apt to excuse themselves for neglect of these requirements, on the ground that they are crowded out by other things, even by what seem the demands of duty. When, however, we admit this even for a moment, we unconsciously arraign the wisdom and justice of our Father, who never requires of us more than we can do; indeed, all that God requires of us is "for our good always," as Moses found out so long ago. It is well to remember here that Christ Jesus, who undoubtedly understood the Father's will, warned his disciples against long prayers and "vain repetitions," but he insisted upon constant watchfulness, and St. Paul advises us to "pray without ceasing." If, however, we ponder these sayings in the light of Christian Science, we shall find them to be in perfect agreement with each other.

On page 4 of Science and Health Mrs. Eddy lays great emphasis upon "silent prayer, watchfulness, and devout obedience," which, she adds, "enable us to follow Jesus' example," and on page 116 of "Miscellaneous Writings" she thus defines obedience: "Never absent from your post, never off guard, never ill-humored, never unready to work for God." Now it is quite possible that one may find one's self so crowded with worldly cares that the prayer which calls for retirement may seem to be ruled out, and material sense may argue that even watchfulness is extremely difficult. The fact is, that without watchfulness everything is likely to be not only difficult but discordant, and the busy hour is the time when we most need the yoke of the Christ-spirit, which makes every burden light. If we then watch our thoughts constantly, knowing that the one important thing is to maintain a Christlike attitude, we shall be astonished at the clarity of vision which results, even while we are under the pressure of earthly demands. We shall know how to do things in the best way and thus shall be "more than conquerors," to quote St. Paul.

This sort of watchfulness really merges into prayer, for it lifts thought into communion with God; but it furnishes no argument for neglect of the kind of prayer enjoined by the Master, when he said we should enter into the closet and shut the door. Respecting this, our revered Leader says (Science and Health, p. 15): "To enter into the heart of prayer, the door of the erring senses must be closed. Lips must be mute and materialism silent, that man may have audience with Spirit, the divine Principle, Love, which destroys all error." Christ Jesus said, "Watch and pray, that ye enter not into temptation," and we cannot too often recall this warning. It matters not whether the temptation come from a projected thought of error, or whether it be some phase of mortal belief which lingers in the student's own consciousness, it must be met and destroyed by Truth, not entertained until it has wrought discord where there should be harmony.

If, like Jesus' disciples in Gethsemane, we are tempted to sleep when we most need to be awake and alert, we should remember that the Master offered them the privilege of watching with him, and if they had responded rightly for that "one hour," who can tell how different would have been the pages of human history! Be that as it may, it rests with us to watch at this crucial hour, that the world's history may be written in letters of light, and the lives of all Christian Scientists become a mighty power for good, because they watch with the ever-present Christ. Who can estimate the influence of one life nobly lived, be the environment lofty or low! Prayer lifts us into man's "native air," and watchfulness forbids the intrusion of aught that is unlike God's perfect idea.

ANNIE M. KNOTT.

Among the Churches

Current Notes

SYDNEY, AUSTRALIA.—Our Thanksgiving service was held on Christmas day, and as the directors of The Mother Church were necessarily included in our thanksgiving, we feel impelled to write and assure them of our loyalty; also of the deep gratitude we feel for the grand work accomplished by them during the past three years, such important years for those at headquarters, as the spiritual ideal of leadership was waiting to be more fully demonstrated. For the achievement of this we send forth a loud song of praise. For the infinite blessings bestowed on this church during the same period, we are deeply grateful.

Since Dec. 31, 1910, our membership has increased seventy-five per cent, and the attendance has grown considerably, on Wednesday evenings having become threefold. In May, 1911, a property was purchased in Riley street for eighteen hundred pounds. In March, 1913, the adjoining property was purchased for two thousand pounds, a mortgage being given for this amount. The site has now a frontage of about 90 by 102 feet, with a lane at the side and in the rear. Plans have been accepted for the erection of a church edifice, to cost eight or nine thousand pounds, capable of accommodating seven hundred and fifty people, and including Sunday school and reading-rooms.

The work of the literature distribution committee has increased wonderfully. *Monitors*, *Sentinels*, or *Journals* (to some places all three publications) are sent regularly to sixteen lighthouses, thirteen pilot stations, eleven literary institutes, six fire stations, P. & O. and Orient mail steamers, thirty interstate steamers, Darlinghurst gaol, Long Bay reformatory, police barracks, three police stations, city municipal library, city school of arts, Queen Victoria markets, Commercial Travelers' Club, "Canberra" federal capital, Burrinjuck, offices Sydney *Morning Herald* and *Daily Telegraph*, Newington Asylum, Sailors' Home, and Balmain Workingmen's Club. During 1913, five hundred and ten *Monitors*, one hundred *Sentinels*, and forty *Journals* were sent out monthly. Large parcels of literature are sent to four mental hospitals at regular intervals. Four thousand *Sentinels* were distributed in the city and suburbs during the lecture period, and large numbers of *Sentinels*, *Journals*, and *Monitors* were given away on the days of the lectures.

MANCHESTER, ENGLAND.—The members and friends of Second Church of Christ, Scientist, Manchester, have erected a new church at Didsbury, and they will hold their opening service on Sunday next [June 21]. The site is excellently situated, both for appearance and convenience, being on part of the well-known Priory estate, and situated near the Didsbury railway station and the tram terminus, Palatine road. The church has a seating capacity of two hundred and fifty, and attached to it is a reading-room for the use of the public, residents or visitors.—*Manchester South District Advertiser.*

OGDEN, UTAH.—The corner-stone of First Church of Christ, Scientist, was placed Monday morning, June 22, on a lot at the northwest corner of Twenty-fourth street and Monroe avenue. The building will have a seating capacity of four hundred and twenty-five and will cost about eighty-five hundred dollars.—*The Ogden Standard.*

NEODESHA, KAN.—The corner-stone for the new Christian Science church was laid Saturday morning [May 16] with appropriate services. The site is at the corner of Fifth and Indiana streets and is one of the choicest in the city. The building will cost between seven and eight thousand dollars.

The Neodesha Register.

FORTUNA, CAL.—Dedicatory services were held at First Church of Christ, Scientist, Sunday, June 14.

Fortuna Advance.

The Lectures

Astoria, Ore.

At a lecture on Christian Science by William R. Rathvon, the speaker was introduced by N. J. Judah, who said:—

Through countless ages, unnumbered millions of mankind, of all races, tongues, and standards, have sought the solution of the deific mystery and their own peculiar relation to it. To some of these people it has come in volume and phase of enlightenment acceptable to them; and these popular convictions stand today as the religions of the world. To many other millions of this waiting and yearning horde of humanity these interpretations are not wholly satisfying, and the mind of man is yet open and receptive to revelations which shall yield ampler and truer concepts and realizations, wherewith the peace "which passeth all understanding" shall fall to them, bring life and conscience into harmony with the Godhead, and seal their living faith to a deathless spirituality. The Christian era has furnished forth the most exalted and enduring of these messages, but even these have been so diversely construed and diffused that their vital essence has been almost eliminated, if not destroyed. The yearning for the readjustment of the Word yet fills and thrills every heart amenable to such appeal, and it is my honor and privilege tonight to make known to you a man with a message garnered at the very feet of the woman chosen to fathom, interpret, and utter the simplest, the most beautiful of these expositions, and known to the world as Christian Science.

Astoria Daily Budget.

✧

Akron, Ohio

A lecture on the subject of Christian Science was delivered at the Grand Opera House, where an audience of about twelve hundred listened attentively to the speaker, Judge Clifford P. Smith. The lecturer was introduced by Frank A. Seiberling as follows:—

The stupendous mystery, whence we came and whither we go, is left for us to solve in the short journey from the cradle to the grave; and while traveling through the valley to the peaks of infinitude of time, we are ever and always searching for divine Truth. You, the adherents of the faith of Christian Science, believe you have found it. I do not know. But I know many instances of those thus believing who have experienced marvelous transformation in thought and being. I do know that where Christian Science has been received, it comes like the morning dew, freshening and awakening to new life those who feel its touch. I also know that Christian Science has added to the sum of human happiness, that it radiates love to all. And believing that it has these beneficent influences, that it humanizes and spiritualizes all who receive it, I feel that we who do not understand should willingly give it a sympathetic hearing.

The Akron Beacon Journal.

✧

Phoenix, Ariz.

Before a representative audience that filled both the auditorium and the balcony of the Arizona School of Music, a lecture on Christian Science was delivered by Virgil O. Strickler. He was introduced by Garth W. Cate, who spoke in part as follows:—

The remarkable growth of Christian Science in this and other countries is no cause for wonder, when we realize that the same tremendously inspiring cause is behind it that gave the early Christian church its divine impetus. It is our demonstrable belief that Jesus Christ was no less sincere when he said, "Heal the sick," than when he commanded the apostles to "preach the gospel." It is the countless number of authenticated cases of healing that have attracted the multitudes of today, exactly as did the healing in Palestine twenty centuries ago. Thousands of happy, grateful people today bear witness that the promise of the Master was founded on truth when he said, "He that believeth on me, the works that I do shall he do also."—*The Arizona Republican.*

✧

Chicago, Ill.

The edifice of Fourth Church of Christ, Scientist, of Chicago, was filled to overflowing at the two lectures on Christian Science delivered by Col. William E. Fell. On the first evening the speaker was introduced by J. Edward Reilly, first reader, who said in part:—

The great interest evidenced in this subject is indicative of the growing unrest of the human mind, which has become wearied with the unsatisfying materialism that has for so long a time held the children of men in unrelenting bondage.

The human mind is slowly realizing its own inability to supply that peace of mind and that healing of the body for which the heart of mankind continually yearns, and this humble state of mind, hungering and thirsting after righteousness, becomes receptive to the divine influence. The illuminating declarations of Christian Science come to this mental condition as a light shining in the darkness, and the individual is led forth by the right way. Christian Science is attracting the multitudes because it preaches the gospel of Christ, Truth, and not only holds forth a promise for the future, but in the present hour bears healing to the sick and reformation to the sinning.

On the second evening Oscar E. Flint introduced the lecturer, and said in part:—

The members of this church have proven and are ready to bear witness to the beneficent influence of Christian Science in every condition which has come into their experience. These proofs are constantly multiplying, and Christian Sci-

Digitized by Google

ence is thereby becoming more widely known, more talked about and written about; and those who are seeking release from the bondage of disease and false appetites, who are seeking to escape from the blighting influence of poverty and misfortune, are turning to Christian Science and are finding a remedy for all these ills.—*Correspondence.*

✧

Pocatello, Idaho

W. W. Witty in introducing Clarence W. Chadwick, who lectured on Christian Science at the Auditorium, said in part:—

In the religious thought of the world, people are coming to demand some practical demonstration of our religious doctrine. They demand that it shall be demonstrated in the daily life in the making of better citizens, better neighbors; in the curing of the ills of society, political and social, as well as personal; and I am led to say, without any hesitancy, that to the Christian Science church we are largely indebted for this enlarged and heightened conception of the religious thought of the world. If I am correctly informed, one of the claims of Christian Scientists is, that the great and fundamental truths of God are as readily demonstrable as a problem in mathematics, and this claim alone is sufficient to warrant a respectful consideration of their doctrines. Their further claim, that through the demonstration of these truths of God the sick are healed, the lame made to walk, the sinner reclaimed, and the despondent caused to rejoice, at once challenges our respect and intensifies our interest. They seem to be willing to be judged alone by the standard set by the Master, "By their fruits ye shall know them," which again challenges our admiration.—*Correspondence.*

✧

San Francisco, Cal.

Bliss Knapp delivered three lectures on Christian Science. At the first, in Dreamland Rink, Arthur F. Fosbery in his introduction said in part:—

Jesus said, "Ye shall know the truth, and the truth shall make you free." Now if a knowledge of truth frees us from sickness or sin, it is plain that the sickness or sin is the effect of believing something which is not true. There are many people who think that evil is sometimes necessary and often profitable, and that sickness is in accord with law. In Christian Science we are taught that sin is selfishness and ignorance, and that those who indulge it are shutting their eyes to the good which God is always giving to those who are willing to use good. We are also taught that disease is never the result of law. Disease is discord, disorder, and there is no way in which God's law, which is the only law there is, can produce disorder.

At the second lecture, delivered in First Church edifice, Miss Carlotta Mabury said in part:—

Mankind is reaching out and longing to know more about God, the God whom Christ Jesus proved to be a God of love, when he healed all manner of disease among the people of his time, and thus unfolded the Scriptural promises to their understanding.

At the third lecture, in First Church edifice, Frank W. Gale said in part:—

Christian Science was given to the world through its Discoverer and Founder, Mrs. Eddy, at a time when the teachings of Christianity were losing their hold upon the people, and materialism and skepticism were setting aside the Bible and its teachings as mythical and impracticable. Yet Christ Jesus had said, "Heaven and earth shall pass away: but my words shall not pass away," and in the fulness of time Mrs. Eddy gave to the world the spiritual understanding of his words "with signs following," proving that the power of divine Truth and Love is still as effective in healing the sick and the sinful as it was when Jesus did his mighty works and said of his followers, "He that believeth on me, the works that I do shall he do also."

At the present time, when the teachings of Christianity are being challenged and many of the accepted beliefs regarding Christ Jesus and his marvelous works are being questioned, Christian Science not only agrees with all the teachings of Jesus, but explains them in such a way that they can be understood.—*Correspondence.*

✧

Lancaster, N. H.

A large audience gathered at the Opera House to listen to an address by Prof. Hermann S. Hering on Christian Science. He was introduced by Willis O. Smith, principal of the high school, who said in part:—

We are all seekers after the truth; I trust that all believe in the greatest welfare of the greatest number, and that all are open to honest convictions. Therefore, if there is any way, based upon religion and science, whereby death shall lose its sting, disease its terror, and sin its power, I am sure we shall all welcome it.—*Coos County Democrat.*

✧

University of Minnesota, Minneapolis

Under the auspices of the Christian Science Society of the University of Minnesota, William D. McCrackan, M.A., gave a lecture on Christian Science in the auditorium of the Physics Building. The lecturer was introduced by Donald P. Loye, president of the society, who said in part: —

We have come here this evening with a desire to learn more of the laws of Truth. People of all ages have sought continually for the truth which can be applied in the solution of the problems of every-day life. Christian Science is the truth which is now being demonstrated with mathematical exactness in all parts of the world. Those of us who are applying it in our university life are finding ample opportunity every day for its demonstration.—*Correspondence.*

✧

Redding, Cal.

The remarks of the Rev. F. N. Cockcroft of All Saints Episcopal church, in introducing Francis J. Fluno, M.D., who lectured on Christian Science in Masonic Temple, were as follows:—

There are few present tonight who have not some friend or relative owing allegiance to the religious body in whose interest this meeting has been called; and we have all seen something of the wonderful healing which the teachings of Christian Science have brought about. These results, to my mind, are a silent rebuke to Christians of other religious bodies, in that the latter are not taking hold of God's promises with the faith that they should.—*Correspondence.*

Testimonies of Healing

It is with deepest gratitude that I wish to tell what God has done and is doing for us all, through this wonderful healing truth of Christian Science. It is now seven years since I first heard of this teaching through my sister's instantaneous healing of an eruption on her hands. She herself knew so little of Christian Science, and I was so hungry to know more of this good news (which really to me did seem too good to be true, because I had been taught that God sent all our troubles to us), that she introduced me to a lady living quite near us who had been a Christian Scientist a number of years. When this lady explained what Christian Science really is, I felt I could not thank God enough for all His love.

A few weeks after this, we had occasion to prove the truth. My little boy, aged six, was taken very ill with measles. I asked my husband if I should send for a doctor or should prove Christian Science. He liked the idea of trusting God absolutely, and on his way to business he left a note for the Christian Scientist. When she arrived, she spoke so lovingly and confidently that I had a beautiful sense of rest and peace, and a sweet consciousness of God's ever-presence.

The boy slept nearly all day and all night, which was most unusual. He had been very ill a few months before this, and the doctor had said he would always be delicate and would require a lot of care, and that I should never allow him to go out in damp weather; indeed, he made me think it almost a pity the child should have come into the world at all if he was to be so frail all his life. When the child awoke in the morning he said, "Mama, I am all better; I want to get up." My husband and I were overjoyed; it seemed to us then so wonderful! When the lady came, I told her the child was much better, and she said, "Of course he is; did you not expect he would be?" I then told her all about his other ills, and she said we must know the truth about them. In less than a week the boy was out, although it was very cold. This was the end of the entire trouble,—cough, bilious attacks, all had to yield to the healing power of Truth. He has been perfectly well ever since. He is now thirteen years old, but every one thinks he is much older, because he is so big and strong.

Words fail me in expressing my gratitude for all that divine Love has done for me and mine. I can truthfully say that Christian Science is the greatest blessing which has ever come into my life.

MINNIE A. TAYLOR, Thornton Heath, Surrey, England.

✧

It is eighteen years since I first learned of Christian Science. My wife at that time began to take treatment and was healed of many diseases. I was in good health then, save for an occasional attack of severe headache, to which I had been subject for years. I paid little attention to Christian Science, until one day when I had a bad headache. I suffered so that I could not sleep or rest, but my wife insisted that I lie down. I did so, and she began to treat me with what knowledge she had of Christian Science. In a short time I was sleeping soundly, and I am happy to say I have never had a return of the old complaint. About ten years later I was taken very suddenly with a serious case of appendicitis. Not knowing what was the trouble, in my fear I hastened to a physician about twenty miles from home. With my wife and daughter I was detained there in a hotel for twenty days and had several doctors examine me. Some told me one thing and some another, but they finally decided I had appendicitis and stomach disorder. They did all they could for me, but I continued to grow weaker.

Being about sixty years of age, I thought I could not last more than a few more days under the doctor's treatment, so I told him if he was going to do anything for me I wanted him to do it, and he said he was doing all he could for me. I then decided to turn to Christian Science for help, so I had my family take me home. After asking for Christian Science treatment, I began to get better, but the improvement was quite gradual, as I had become very ill and weak from taking so much medicine and from suffering. However, I was able to sit up in a month, and I kept on improving until, in about two or three months, I was well again. I did not take the interest in Science that I should have taken and I neglected to put into practice the little I knew, therefore error overcame me again about five years ago in the form of erysipelas. I had a very serious attack, but I applied for Christian Science treatment at once, and it was overcome in a week or ten days. Three years ago I had a second attack, which was also very serious indeed, but through Christian Science this was also soon overcome and destroyed, and I think for good, as I am in perfect health.

I am trying more and more every day to live and learn Christian Science. I enjoy reading the literature very much, and feel deeply thankful to God, and grateful to Mrs. Eddy for the revelation of Christian Science to this age.

J. H. BELL, Hereford, Texas.

✧

Previous to my first attendance at a Christian Science church service, the doctor was a frequent and welcome visitor at our home. Since that day, however, no doctor has entered our house. It was then that I first realized the inspiring truth that God is Love.

We have been freed from many physical ills through Christian Science. A severe case of measles, blood-poisoning, nervous breakdown, varicose veins, and serious burns received from an explosion, have all been overcome. Grateful as I am for these healings, I am much more so for having learned to study the Bible daily, also Science and Health, whereby I have been enabled to overcome envy, jealousy, and a sense of resentment. I am daily gaining a clearer understanding of this healing truth.—FLORA BICK, Milwaukee, Wis.

✧

I feel it is my duty as well as privilege to tell something of what Christian Science has done for me. Prior to the winter of 1908, I had been ill for a number of years. I had been to different hospitals at various times, and had undergone five surgical operations. At the last operation, three of the pelvic organs were removed. I came home from the hospital hoping to experience relief from suffering, but was disappointed in this. I had stomach trouble, pains in head and spine, and was not able to attend to my household duties, as I suffered from nervous shock and was mentally very much depressed.

At this time a good neighbor called, and told me of her healing in Christian Science. At first it seemed as if I did not care to hear about it, that as I had been associated with *materia medica* in the capacity of professional nurse, I could not understand Christian Science; but as I thought over what the dear friend had said to me of her healing and noted the sincerity of her manner, I decided I would try Christian Science for physical healing. I called for the help of a practitioner, and immediately secured a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to read it. With one week's treatment I was free from all suffering. Whereas I had not been able to sit at the table with my family to partake of food, I could

Digitized by Google

eat anything I desired. Refreshing sleep came to me, and anxiety and worry were gone; in their place was a sense of peace which I had never thought possible to experience. Since that time we have had a number of healings in our family; acute lung trouble, colds, measles, whooping-cough, and other ailments, have all been met and overcome in Christian Science.

I am grateful for the physical healing, but for the better understanding of God as divine Love, and for the surety that Christian Science is the truth, words cannot express my thankfulness. I wish also to express my appreciation of the good that is coming to me from our literature, the *Journal*, *Sentinel*, and *Monitor*, and my gratitude to the dear friends who were instrumental in helping me to the better understanding of God.—Sadie A. Malzen, Lima, Ohio.

✧

A few years ago, when I came to Christian Science because of a deep bereavement, I received great help in this direction, so much so that I reached out for more good.

Up to this time I had been a heavy smoker from a boy. I decided that the habit was bad for me, and by exercising considerable will-power, stopped it abruptly, and did not, with one exception, smoke for about nine months. At the end of that period I experienced financial reverses. Discouragement crept in, and the tobacco habit returned even worse than it was before, to the extent that I was smoking forty to fifty times a day. In a few months the financial troubles righted themselves, and as things took on a brighter hue, a loving practitioner pointed out to me the need of clearing my garden from weeds, for if not uprooted, they might grow up and choke the truth that was implanted in one's consciousness. Knowing what she meant, I told her that I would be most grateful to be healed of the desire for tobacco, but that I could not give it up and still have the desire, because it would cause me more suffering than I was willing to endure. At her request, I went to her home one Sunday afternoon, and after talking the matter over, she gave me a treatment. I have never used tobacco since—I have had no desire to do so. It was an instantaneous healing, an absolute proof of the power of Christian Science.

Although the healing of physical ills and false appetites is both pleasant and profitable, it is not to be compared with the spiritual uplift, the joy of knowing that "God is infinite, all-power, all Life, Truth, Love, over all, and All" (Science and Health, p. 17). Surely, no one can have more cause to be grateful to God for Christian Science than have I and mine. Although my understanding may be slight, I at least know that I am headed in the right direction, and I shall make every effort to evidence how truly I am grateful by trying to keep the ten commandments and live the golden rule.

George L. Parker, Reading, Mass.

✧

Many times the testimonies in our periodicals have been the means of renewing my courage and rousing me to greater spiritual activity, and I feel I must add my note to the great song of thanksgiving which is being poured forth by thousands today.

Eight years ago I was taken very ill with rheumatic fever and blood-poisoning. I suffered everything for about four months, when I recovered sufficiently to get on my feet again. Later, complications set in and I was sent to the hospital, operated on, and then sent home again, with the verdict that I had tubercular trouble. The doctor who was then attending me, advised the placing of my couch out of doors (it was then the middle of winter) for a portion of each day. He also had a special stretcher made for me, to which my limbs were to be fastened. The family doctor who had attended me previously, did not agree with the hospital doctor's diagnosis, but could recommend no way of healing the condition. I was quite helpless, in constant pain, weakened by a wholly unnecessary operation, and very thin and worn.

It was at this point that I asked for and received Christian Science treatment. In a few weeks the trouble all came away in the most natural manner, and what doctors, drugs, and operation had failed to do, was accomplished by divine Mind. It seemed like a miracle that I was able to get up out of bed, walk again without pain, and eat and sleep naturally. The suffering I had undergone, and this healing in Christian Science, awakened me to the fact that there was something more in the world than my philosophy had dreamed of; nevertheless, I did not begin the earnest study of this Science until I found that I needed it very much to lead me out of other false conditions. Then, through the study of Science and Health, together with the Bible, other healings were wrought in my family, and I came to recognize that a wonderful change had come into my life.

I had never been religious, in fact I had a most self-righteous contempt for so-called religious people; therefore when sorrow and trouble came I had nothing to depend on. I had always been an omnivorous reader, but nothing I had ever read came to my support when I needed it most, save a sort of hard stoicism which boasted of its indifference to hurt. Little did I know that the heavenly Father's love was pouring forth abundantly all the time, only awaiting my recognition of my own hunger and need. For this awakening to the fact that God is Life, Truth, and Love, I am indebted to Christian Science, and the wonder and beauty of it grows daily. Life is still full of perplexities, but we are alive to the promise that "he which hath begun a good work in you will perform it." We have daily food, inspiration, and comfort in our periodicals and the Lesson-Sermons, and by applying our study to each daily experience, the path "shineth more and more unto the perfect day."

Ethel Munro Goss, Toronto, Canada.

✧

[Translated from the German]

It is with a grateful heart that I wish to tell of all the blessings that have come to me through Christian Science. I had been suffering for several years with very severe and often recurring cramps, which at times made life miserable and kept me from properly attending to my duties, which included indoor and field work. One morning, while getting up, I was seized with dreadful pain in the stomach, which lasted four days and four nights. The physician who was summoned, designated the trouble as a case of gall-stone. Although hypodermics were administered twice and I took medicine, the pain did not yield, and I grew weaker and more wretched, owing to my inability to retain nourishment, medicine, or drink. These attacks recurred every two weeks, and I could not recuperate in the intervals. I was expected to go to the hospital, upon the physician's advice, in order to be operated upon, as this was supposed to offer the only hope of being freed from the pain; but to this neither my parents nor myself could consent.

I had heard of Christian Science through relatives in Berlin, and I now decided to seek help from God. I asked a Christian Science practitioner for treatment, which was lovingly taken up. On the day on which my letter reached her, the pain grew less, my appetite returned, and with ten days' treatment I was completely freed from the disease and able to help my parents considerably in the work which now seemed mere play to me.

Digitized by Google

I am indeed very grateful to God, and also to all the dear people who have helped me on the way to Truth, and I cherish a sense of love and deep appreciation for our dear Leader, Mrs. Eddy, who has again pointed out this way to mankind.—Emilie Jürgens, Belling b. Pasewalk, Germany.

✧

I am glad of the privilege to be numbered among those who bear testimony to their release from bondage through Christian Science. I was suffering from female trouble, said by the doctor to be a malignant condition, and the only hope left was another operation. I had undergone a very serious one eight months before this, and was "none the better, but rather grew worse." I had reached man's extremity, which proved to be God's opportunity. It is certain I would have died but for the saving power of divine Principle. My experience was like that of one whose case is given in Science and Health (p. 382): "The treatises I had read and the medicines I had taken only abandoned me to more hopeless suffering and despair. . . . Mortal mind needed to be set right;" and as our Leader tells us on page 370, "The body improves under the same regimen which spiritualizes the thought." I began to have treatment June 22, 1910, and since that time Christian Science alone has met my every need. My healing has been permanent, and I have not been in bed a day since I took up the study of this Science.

I am so happy and thankful for this saving truth that I cannot worthily express my gratitude.

Lily A. Oliver, Sherman, Texas.

✧

In the interest of suffering humanity I wish to tell others of Christian Science and its wonderful works, to show that "man's extremity is God's opportunity." Some four years ago I had been given a number of opportunities to abstain from the excessive use of strong drink, and although I had tried time and again to do right, the result was always the same. Having been given my last chance, and failing to grasp this opportunity, I was suspended from duty indefinitely. This would ultimately result in my discharge, leaving me physically unfit for work as a consequence, with a family depending on me for support. I was in utter despair, when I consented, upon appeal from my mother, to visit a Christian Science practitioner and submit myself to treatment. After receiving my first treatment I found I had no longer any desire for drink. I was healed instantaneously and decidedly; also, the way was opened for me to reach my employer, which was done satisfactorily, the result being that I was taken back. I soon regained his confidence, also a promotion, and have had three distinct increases in my salary since that time.

Words cannot express my gratitude for what Christian Science, through its great Leader, Mrs. Eddy, has done for me.—Charles L. Gilchrist, Brooklyn, N. Y.

✧

Christian Science has brought such an abundance of good into my life that I feel I can never find words to express my thankfulness to God for leading me to this wonderful healing truth. When I think of the first visit of the Christian Science practitioner, and compare myself as I was then with my present self, I am filled with gratitude, for I have been changed from a nervous, despondent invalid to a useful, busy woman. Formerly the hours dragged by and the days seemed never-ending. I longed for night and sleep, for oblivion, in which to get a little peace. Now the days fly past, and my life is full of joy and work.

Christian Science has wrought this great change in me, banishing the belief of nerves, and also a continuous dread of sudden death, the result of severe fainting spells. So vivid was this dread that I always had a material remedy at my bedside, and during my periods of better health, when I was able to get about more, I would not willingly move from one room to another without this seeming restorative. I had various doctors and a specialist from London to see me during the five years I was ill, but although I appeared to benefit by their remedies at times, I soon lapsed into my old state, and remained in that condition until I received treatment in Christian Science. Even with the first visit of the practitioner I received help, and one serious ailment has never troubled me since. I was also able at once to dispense with the remedy I kept at hand, although I had not spoken about it to my practitioner. During the first week I destroyed the last bottle of medicine, and have not used drugs since that time. I eagerly took up the study of Christian Science, and although I seemingly caught only glimpses of its healing truth, I gradually but surely found myself improving in health and peace of mind.

To show how great is the power of divine Science, I will mention that a few weeks after coming into Science I was able to help my father in the bakehouse to get a good-sized batch of bread in the oven when he was left without help. This was wonderful for one who had spent the greater part of five years in bed, or at her best in easy chairs. Even after this experience many errors had to be turned out of mortal mind, but I received patient, loving help, and with Science and Health and the Christian Science literature my eyes are gradually seeing the nothingness of all discordant conditions.

It gives me great pleasure to say that my healing has been permanent. I am quite a different woman from what I was before I came into Science, and I am making good progress in my study and understanding of this truth, also in bodily strength. I get about the village with confidence, as I had not done for years, and also work about the house. As we are tradespeople I have the care of the shop work a large part of each day. I would like to state that I have had many demonstrations of the power of God to help me over business problems as well as over health problems.

I wish to express my thankfulness to God, and my gratitude to Mrs. Eddy for the love and light which have come into my life.—Rosamond E. Colston, Welling, Kent, England.

I wish to testify that my daughter's testimony is perfectly true, and I am very thankful to God for sending Christian Science to our home, and for the blessing it has brought.

Hester Colston, Welling, Kent, England.

✧

Before coming into Christian Science I realized that I must gain a better condition of thought, so I took up a line of studies that I had been over in my younger days, and the Bible was one among the many books I studied. It always seemed to me that it contained everything for me if I could understand it, and by turning thought from self to study, my health was very much improved.

Soon after this, Christian Science was presented to me by a friend. I did not know at the time why I enjoyed being with her, but I can see now that it was because she reflected Truth and Love. I realize, too, how wise she was in presenting Christian Science to me so that I might get the exact meaning of it. She asked me if I would read one of her books if she sent it to me. I consented to do so to please her, and for no other reason, for I had plenty of reading matter of my own and felt quite satisfied. She accordingly sent me "Miscellaneous Writings." I did not know what the book

Digitized by Google

contained, and I was so little interested in it that I laid it aside till a more "convenient season."

Some time afterward I thought I would read the book carefully, in order that we might talk it over together. It appealed to me from the beginning, and I was convinced that it contained the truth I had been seeking, so my other studies were laid aside and forgotten. At its conclusion I knew that Christian Science was what I needed to bring me peace, happiness, and health. I was not satisfied to stop there, for I wanted "Science and Health with Key to the Scriptures." I therefore purchased it, together with Mrs. Eddy's other writings, and for many years I have made them a constant study. This course has brought me understanding. I have found that Christian Science is to be lived each day, and that today is the time to work. If my work is well done today, I need not be anxious about tomorrow. I realize more and more each day that I exist as God's idea and not as matter, that error is impersonal, a lie, and that a lie has no reality. Regardless of what mortals do or think, Truth remains "the same yesterday, and today, and forever."

Christian Science healed me of severe headaches, from which I had suffered for years. Any extra exertion would bring them on. It also healed me of neuralgia, from which I had been a great sufferer. When I came into Christian Science I knew the promises were for me. I realized that every affirmation of good was helping me to destroy the thought of these ailments, and I know this gave me strength and courage. No manifestation whatever of these troubles has been observed since I obtained relief ten or more years ago. I am very grateful for an understanding of this demonstrable truth.—Mary A. Lipscomb, Joplin, Mo.

✧

[Translated from the German]

Having received so many blessings through the reading of the testimonies, I would like to tell what Christian Science has done for me, with the hope that this may prove a help to others. I had been nervously affected for years, and suffered with headaches daily. I could not sleep at night, and felt so weak physically and mentally that I was not equal to managing my household, despite all my efforts. This condition made me feel so unhappy that nothing seemed to afford me joy, and the remedies prescribed by the physicians failing to effect an improvement in my case, I was afraid that I might never regain health.

While in this mood, I heard of Christian Science through an acquaintance, who brought me some literature on the subject, among which was the *Herold*. Upon reading testimonies of healing dealing with cases similar to mine, I gained new courage. I continued reading with much interest and attended the services as often as I could. Still, my improvement was slow, and I therefore applied to a Christian Science practitioner. Treatment was taken up, and I began to understand the power of Truth, which gradually freed me from all thoughts of disease and sickness. I have been an adherent of Christian Science for the past two years and a half, and although I have gone through some severe struggles during that time, I have been able to perform my daily work in the knowledge that God is my strength and support.

I am very happy indeed, and most deeply thankful to God for having been led to Christian Science, whereby I have gained health and a better understanding of the power of divine Love. I am also grateful to Mrs. Eddy, and to all who have been of assistance to me.

Karoline Hippe, Frankfort-on-the-Main, Germany.

From Our Exchanges

[*The Universalist Leader*]

The pious believer of the old school is having a difficult time adjusting himself to the new and enlarged conception of religion which is brought to his attention constantly. This believer has lived long in a state of mind when he accepted a very plain and simple notion of what religion is. It was always something very definite, very tangible. He has always identified his spiritual experience with a visible church or an ancient book or an ancient creed or an observance of certain ritualistic formulas. Religion, to him, has always been inseparable from and identical with one or more of these objective realities. He thought he knew just what religion was, where he could locate it, and just where it begins and ends in human experience. And now he finds that something has gone amiss. He is bewildered at much that he hears.

Here are men talking about religion, acting as though they take religion seriously who have no religion, so far as any standard with which our puzzled traditionalist is familiar, is concerned. Religion seems to have moved out of its ancient abiding-places. It has lost its distinguishing marks. It has, to our observer, ceased to be real. He fears that religion is vanishing from the world.

[*The Christian Register*]

That people do not make religion the center of their life, do not pursue the culture of the devout life as in past times; that institutions of a social and philanthropic character flourish while purely devotional gatherings do not,—all this means only the change of outward habit and ways. Life is more interesting, as well as more exacting and absorbing, than ever before. People have less time than they ever had for reflection and the expression of meditation. But that there is any radical inward change that makes religion less necessary and welcome, we can see no evidence at all. Meditation and prayer do not take time; all they need is a disposition and an instant. There is no necessary connection between a busy life and the decay of religion. What religion has to do is to adapt her methods to the new circumstances, and devise new forms of calling men to their higher nature.

[*Zion's Herald*]

It does not require a tedious search to find in most individuals something for us to pin our faith to; there are the better parts in most of the people we meet. It does require, though, a manifestation of gentle and courageous qualities upon our part; for it is only as the goodness of our lives shines forth that the best is stirred in others.

Should not this opportunity of bringing out in relief the pure gold of another's character so stir our better natures that we should count it a high privilege to show to the world a pure and brave and patient and loyal front? So to live that our own lives are made richer and deeper is a worthy endeavor; but so to live that the very winsomeness of our living calls into being the best qualities there are in others —ah! such living as that is a loving tribute to him who said that he came that others might have life, "and that they might have it more abundantly."

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

In view of the wider thought that is going to set Christianity free from sectarianism and bondage to intellectual dogmas, and in view of the great missionary propaganda which has shown that Christianity is not national or racial or hemi-

Digitized by Google

spherical, we have every promise that Christ is going to become the rallying-point of our humanity, the means of reconciliation with one another, the breaking down of all middle walls of race, temperament, and thought, and the atonement of God and man. These are things that we hold to be already potential of all humanity. Whoever is human is so far related to Christ, the epitome of our humanity and the Son of man. All must grow into relation to the Godhead through him, that is, by the same way, by the same experience, by the same bearing of the cross. But meanwhile there is being prepared the body, composed of those who are conscious of their relationship to Christ, and who by their corporate life continue the incarnation of God. The spirit of Christ already forms the greatest and deepest fellowship that humanity has ever seen; but the endeavor to express it in a body has met with many setbacks, betrayals, and failures.

[*The Living Church*]

Most of us make an altogether unjust classification of matters into secular and sacred. There are some things which we attempt wholly of ourselves, as though God were not interested or concerned in them; and there are other things which we leave for God to do, as being His particular business and not ours at all. But there is no business from which we can rightly exclude God, and no business of the Father's that is not ours also. Therefore, all things come under the dominion of prayer, even the slightest and the most personal. And while personal failure thrusts us upon the care and protection and help of the Father, it is an infinitely sweeter thing to know an absolute dependence upon Him, to see all our business glorified because it is His.

[*The Christian Intelligencer*]

People are always impressed with religious genuineness. When a man's faith is not merely profession but transforming possession, men will take note that he has been with Christ and they will learn of him. Men who are conscious of a mighty deliverance in Christ, and whose lives exhibit the joy and power of spiritual emancipation, make strong witnesses for the great Physician of souls. In every sphere a genuine faith in Christ, a faith that lets Christ lead in everything, a faith that is steadfast and regnant under all circumstances, is like a light set on a hill: it points the way to God for many a weary traveler.

[Rev. A. C. M'Giffert in *The Hibbert Journal*]

Men know measurably what the past was. They feel secure in it, and in their timidity would like to go on reproducing it to the end of time, repeating the old formulas, believing the old truths, doing the old things, working in the old paths. The future is an untracked country, and their hearts often fail them. The great business of Christianity, the great business of any religion worthy of the name, is to give men faith,—not faith in the past, but faith in the future,—to strengthen their confidence, to study their purposes, to increase their courage, as they look and labor for better things to come.

[Charles S. Hager in *The Advance*]

We are living in days when men dare hopefully to dream the dream of a united Christendom. And we well know that the dream can never come true until men generally become large enough in soul each to try to understand the other, to see from the other's point of view, at least to recognize that there are other points of view. Christian toleration is a plant of slow growth.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

We are glad to announce a lower schedule of rates for the cloth edition of "The Life of Mary Baker Eddy," by Sibyl Wilbur, and we believe that this will assist in a greater distribution of this valuable book. Single copy, cloth, $2.00; three copies, $5.50; six copies, $11.00; twelve copies, $22.00.

New photogravure plates have been made to replace the half-tone engravings in the edition de luxe of this book, and these plates, printed in a sepia ink, have greatly improved the appearance of the new edition. Single copy, $5.00; two or more copies, each $4.50.

"Christian Science: The Explanation of the Ideal Man," a lecture by William D. McCrackan, M.A., has been published in pamphlet form and is now ready for distribution. The sale prices are shown on the opposite page under the list of regular pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Christ and Christmas. A poem. Single copy 25 cents; six or more, each 20 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science versus Pantheism. The Pastor Emeritus' Message delivered at the Communion Service in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 35 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 27 pages, single copy 50 cents; six or more, each 35 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 50 cents; six or more, each 35 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 21 pages, single copy 25 cents; six or more, each 20 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 25 cents; six or more, each 20 cents.

Poems. [illegible] Single copy $1.25; six or more, each $1.00.

Feed My Sheep. [illegible] Single copy 50 cents; six or more, each 40 cents.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Notice has been served by Kansas upon the promoters of railroad organizations, that it will not permit the capitalization of "possibilities" any more than it will permit the sale of "blue sky" securities within the state. The Kansas City, Mexico & Orient railroad, now in course of reorganization, was the first corporation to suffer under this new rule, as it was not permitted to issue securities upon something like twenty-five million dollars' estimated worth of intangible values, franchises, concessions, and grants, which may become valuable parts of the property but are not now of any considerable worth.

The official review on the progress of education in the province of Bengal, India, for the year 1912-13, shows a general satisfactory improvement in the conditions obtaining in the various schools and colleges. Although the number of institutions showed a decrease of thirty-six in the twelve months, the number of pupils rose by twenty-one thousand, and the total number of pupils in a population of 45,488,077 was 1,718,623. This attendance at schools represented fifty-five per cent Hindus and forty-five per cent Mohammedans, the last decade showing a large increase in the latter.

Eight men of prominence have been chosen as members of the board of trustees of the National Bureau of Public Utilities Research suggested by Mayor Blankenburg of Philadelphia to the heads of other cities in this country to assist in efforts to secure lower rates from the lighting, transportation, and other utility companies. The bureau, which will be permanently organized at a convention of mayors and other representatives of cities in all parts of the country in November, has already effected a temporary organization.

Formation of a general international bureau by the consolidation of all international organizations of an administrative character will be discussed at the World Peace Foundation, Boston. These international organizations, about fifty in number, are now so scattered about the world and working along such small lines that their significance is not realized, it is thought, and consolidation of all of them under one head and in one place will add to their efficiency and strength, besides supplying a focus which will make possible a future international world organization.

A proposal to grant a subsidy of one hundred thousand kroner for the official representation of Norway at the San Francisco exhibition is to come before the Storthing shortly. It is thought that this sum will be devoted to the erection of a Norwegian pavilion which, it is estimated, would cost two hundred and fifty thousand kroner. The financial responsibility for the remainder of the sum required will rest with the Norwegian-American committee which has been formed in connection with the undertaking.

The King and Queen of England opened the new joint dock at Hull recently. The new dock has been brought about and is controlled by the North Eastern and the Hull and Barnsley Railway companies, and has been rendered necessary by the rapid increase in the trade of the port during recent years. The area of the new dock opened by the King is fifty-three acres, and there is provision for a future expansion to eighty-five acres. The capital expenditure involved is about three million pounds.

Austria has declared war on Servia, and hostilities have already begun. The incident on which Austria hung her decision to make war on Servia was the reply sent by the Balkan state to the note from Vienna demanding that she take steps to put a stop to the Pan-Servian propaganda in Austria, and also punish Servians indirectly concerned in the assassination of Archduke Francis Ferdinand. The response of Servia was considered "unsatisfactory" and "filled with the spirit of dishonesty."

The opening of the Panama canal to the world's commerce on Aug. 15 has been announced by Secretary Garrison. Probably the first vessel to pass through the waterway will be the Cristobal, a war department steamer now at Colon. There will be no formalities in connection with the event, all ceremonies being left for the official opening in March, 1915, when the international fleet passes through. The canal will be open first to vessels not needing more than thirty feet of water.

The Cape Cod canal was dedicated July 29, and is now open for coastwise traffic. This new waterway, eight miles long, twenty-five feet deep, and from one hundred to two hundred and fifty feet wide, connects Buzzards bay with Cape Cod bay, shortens the route from Boston to New York by about seventy miles, and makes the passage safer. It has taken the Boston, Cape Cod & New York Canal Company about five years to build the canal, and the cost was approximately twelve million dollars.

The Great Indian Peninsular Railway Company has lately completed plans for the improvement of the station conveniences at the Bombay terminus, whereby passengers by the mail steamers from Europe will be able to proceed straight on board the train instead of having to drive through the town, as at present. This has been rendered possible by the construction of a new deep water-mole, alongside which the largest steamers can be berthed.

Two hundred Chinese political exiles met at the Tsukiji Seiyoken hotel, Tokio, and decided to form a new political party called the Mingkwotan, nominating Sun Yat Sen as president. The object of the party is to facilitate the exchange of opinions and effect a true understanding between the members of the party staying in Europe, America, and the South Sea islands, thereby preparing for achievement of success in the future.

The opening up of Asia Minor to trade and European enterprise is progressing. The receipts of the railway from Haidar Pasha, opposite Constantinople, to Angora, have this year, for the third time, exceeded the amount guaranteed by the Turkish government. Yet in the whole of Asia Minor, an area five times as large as the United Kingdom, there were in 1912 only three thousand miles of railway, practically all of it single track.

A proposal has been made by the government of the Netherlands to the effect that the countries which sent representatives to the second peace conference should appoint delegates to a committee for the preparation of a program for the third peace conference, based on proposals of the governments concerned. The date mentioned for the meeting of the committee is June 1, 1915.

The federal government of Australia has appointed a royal commission to inquire into the operations of the alleged meat trust in Australia. Considerable uneasiness has been evinced for some time as to the establishment of the meat combine, and this commission, it is to be hoped, will sift the matter to the bottom. Parliamentary legislation is sure to eventuate if the trust is uncovered.

When an inch of rain has fallen, it means that on each acre of land water enough has fallen to fill more than six hundred barrels of forty-five gallons each. This quantity of water weighs more than one hundred and ten tons. If a rain-storm covered a territory comprising a thousand acres, and this would be a very small shower, one hundred and thirteen thousand tons of water would fall from the clouds.

It is stated that A. J. van der Brenk of Melbourne, Australia, has received instructions from the Australian government to visit the Netherlands and Belgium for the purpose of inducing people from those countries to settle in Victoria, where the government has placed a large area of land at their disposal.

The fifteenth annual convention of the Gideons, known officially as the Christian Commercial Men of America, was held in Boston recently. About sixteen hundred Bibles were distributed among the hotels of the city.

With the registration for the summer session at Columbia University (New York city) practically complete, there are 5,625 students for the six weeks' term, the largest number, by more than a thousand, ever registered there.

A new Italian embassy in Washington, D. C, to cost one million dollars, is being considered by the Italian government, and definite arrangements may be put under way by the first of the coming year.

The production of grain for each of the last five years in South Australia has averaged 21,652,903 bushels, and inclusive of the wheaten hay crop, the mean annual value for the five seasons was £5,296,789.

Twenty thousand six hundred and fifty large, new grain-cars have been bought by seven railroads operating in Illinois, for delivery Aug. 1, to help handle the bumper crops.

President Wilson has directed Attorney-General McReynolds to bring civil and criminal proceedings against the New York, New Haven & Hartford railroad.

Mental Habit

HON. CLARENCE A. BUSKIRK

PEOPLE do not sufficiently consider how very largely a man's mental habit influences, and in fact decides, his character, conduct, the circumstances which environ him, and the whole tenor of his life. It is like the sap of the tree, like the tide that moves in the ocean whatever the winds or storms or sunshine above. It is like the magnet that draws the needle ever its way.

As we scrutinize the people we meet, we find the evidence carved upon their faces and crystallized in their speech and manners, whether they be habitually hopeful or despondent, genial or crabbed, kind and polite or cruel and selfish, helpful and happy or cynical and miserable. "As he [a man] thinketh in his heart, so is he." It may seem much easier, of course, to form the better mental habit when we are young; but the belief in the rigidity of habit when our heads are thatched with gray, may be resisted and subdued successfully if we but persist in the habit of thinking rightly. We may invite and entertain as guests of our mental households, at every period in our lives, our constantly increasing powers to resist and thus subdue all phases and presentments of evil consciousness. The faces of many sickly people whom we encounter show as plainly as the colored glass changes the light of the flame within it, the distempering effects of disappointed ambition, and greed, and like blighting passions. As Paul wrote, "To be carnally minded is death; but to be spiritually minded is life and peace."

Let us consider the mental habit which is the offspring of the Christian Science doctrine and practice. It surely begets a serene and imperturbable faith that the ever-present government of the supreme power which rules man's destiny and being is absolutely good in all ways; it teaches us to realize in our daily thought the admonition of Jesus, "Have faith in God." This means everything; it is the potter's wheel that works day and night to better us. This helps us to obey the command, "Be ye therefore perfect, even as your Father which is in heaven is perfect." We are no longer troubled by the consciousness of a perfunctory and elusive faith in the divine intelligence,—the wavering faith too often begotten of the teachings which present a self-contradictory deity. And right here too much emphasis cannot be laid on the supreme fact that we can surely acquire more and more "faith in God," and that we can learn more surely as we contemplate more and more the divine verities. It is thus that the understanding and realization of the one supreme power becomes a positive force in our consciousness to regenerate and bless.

Why should not the benefit of pondering the power of Truth be even more certain than the benefit of pondering the multiplication table? Bacon has the apothegm, "Reading maketh a full man." The students of Christian Science certainly have an abundance of good reading to uplift and purify. Such reading is a great help in the formation of the right mental habit. It greatly helps to concentrate attention to the right paths of meditation. Mrs. Eddy's writings assist in expelling erroneous concepts of God and man; and we are aided thereby on our way to the point where we gaze forward and upward and glimpse boundless realms of love and loveliness, where our reason is pacified and invigorated, and our spiritual intuitions, ideals, and aspirations are never shocked or appalled.

Words may never portray, save inadequately, the service rendered to humanity by Mrs. Eddy in defining the one lovable and true and wholly reasonable Supreme Being. Unnumbered thousands have thereby been rescued from the forlorn deserts of materialism, where they had been wandering athirst and well-nigh hopeless. The condition is indeed pitiable and affrighting for those whose "faith in God" has become outgrown and moribund. Public corruption and private immorality break free of their strongest restraints when materialism seizes belief and strangles right-seeing conscience. Mortals go forward, or go backward and downward.

It is well for us to consider carefully what a perilous thing it is to entertain wrong concepts of God. "The truth shall make you free," said Jesus. The correspondent of the eternal fact thus stated, is this, that falsehood enslaves humanity. Take, for a specific instance, the wrong concept taught by erring theology to the effect that sickness and death are mysterious dispensations of divine Providence. He who entertains this notion concerning the supreme power, cannot heal the sick according to the Christian way therefor. But the closer and oftener his consciousness comes into communion with God, the more immune it would render him to belief in disease and death; for he thus entertains the great truth that God is Life, instead of believing that God mocks Himself with the direct or indirect causation of disease and death.

This falsehood, inherited for fifteen centuries from pagan mythology, with its admixture of evil-minded deities governing the destinies of mankind, has visited Christendom with its dire slavery of suffering altogether too long. Hasten the time when the entire human race, as well as all Christians, shall learn the truth that disease and death are falsehoods of human origin, and not of God at all; that they are no part of man's being, but are the errors from which the truth makes us free!

Cheerful Giving

GRACE POTTER EVERSON

"GOD loveth a cheerful giver" just as surely today as when Paul proclaimed this joyous truth to the Corinthians; and the results of one's giving are the same, for "as he purposeth in his heart," he shall reap "sparingly" or "bountifully." Because of the common acceptance of matter as the basis of everything, mortals have long been accustomed to believe that only those possessing an abundance of material things, money or goods, could give to any purpose, while quite the contrary is often true. All that will eventually be found worth while, either to give or to receive, is the heavenly treasure, the things of Spirit, to which matter cannot add its minus quantity.

The test of true giving is not what specific thing is given,

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

but how it is given, "grudgingly, or of necessity," or freely and in the spirit of love. Of the widow who cast into the treasury her two mites, Jesus said she had given more than the many who were rich and had cast in much, "for all they did cast in of their abundance; but she of her want did cast in all that she had." Thus he endeavored to bring home the futility of giving for display or to ease conscience, and set above it the giving of a grateful heart. It is not always of avail to give money, unless the understanding of true riches goes with such giving. Dependence upon persons rather than upon God, mental laziness, and dishonesty are often fostered by promiscuous giving. One can never give too much, however, of the understanding of Love. If God-given thoughts, motives, inspirations always went before our giving of things, whatsoever we gave, be it much or little, would never fail to help and bless.

The good of giving cannot be measured in dollars and cents. A tender thought to the broken-hearted is more than the riches of Crœsus; an encouraging word to one struggling with self has helped to gain many a victory; an assuring smile may bring the light to a darkened consciousness. These we can best give only as some measure of infinite Love is unfolded to us; but the loving desire and the infinite supply are one, and the more this gift of giving is exercised, the more abundant does it grow in good. "God gives the lesser idea of Himself for a link to the greater, and in return, the higher always protects the lower. The rich in spirit help the poor in one grand brotherhood, all having the same Principle, or Father; and blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good" (Science and Health, p. 518).

God never requires any one to give out of lack. That is not the kind of giving which He loves, neither that which seeks something in return, but rather the giving out of one's own abundance,—giving as God gives. Indeed, we are told in Scripture that though one bestow all his goods to feed the poor, and though he give his body to be burned, if he has not charity it profits him nothing. Our giving must needs be limited and laborious if we attempt to give out of our own human sense of self and through its ways and means. But to remember that God is the giver, and man but the reflector of His infinite goodness, substance, sufficiency, and liberality, opens the very gates of heaven to us and all.

Into the heart of each one who has learned the lesson of true giving, enters the joyous assurance that it is indeed "more blessed to give than to receive," because giving is the open door through which all good flows into human experience. A homely philosopher says that the hole through which we receive is the same size as that through which we give. The free giver is the free receiver of good as well. He does not give that he may receive, but receives that he may give. The open hand, the open mind, the open heart, is always ready to do both, to be blessed and to bless.

Readiness to grasp opportunities for giving, brings big blessings. The rich young man who asked the Master for eternal life was not ready to give his riches in exchange for it, while the widow woman gave her last handful of meal and a little oil to sustain the prophet when her own need seemed very dire indeed. Wherefore, we are told, the barrel of meal and the cruse of oil failed not, because of her selfless and obedient giving.

Nothing is more obstructive to spiritual growth than the habit of accumulating matter, of hoarding mortal belongings. It is simply laying up trouble, shutting the door on the infinite and omnipresent supply of good. This fact Jesus emphasized in the parable of the man who pulled down his barns and builded bigger ones in which to store his possessions, but was "not rich toward God." It follows, then, that nothing is so operative to break limitation and take off the clamps of fear, poverty, and lack, as right giving.

Writing again to the Corinthians in an appeal to them to prove themselves "ministers of God," Paul counsels that they be "as poor, yet making many rich." From this Christian admonition it is clear that a lack of material things is no adequate excuse for failure to minister good. The disciples and early Christians were generally of humble circumstance, yet there is no collective record of giving that can equal theirs. They gave out of their abundant spiritual store: peace, freedom, blessing, harmony, health; feet to the lame, eyes to the blind, hearing to the deaf. These spiritual blessings Christian Science is again making it possible for every follower of Christ to give. No greater individual gift has ever been offered than that of Jesus the Christ, who gave his human sense of life that the immortality of Life might be revealed and demonstrated. In all his teaching Jesus emphasized the blessedness of giving, even its necessity as a means of advancing spiritual growth.

One need never be deterred from giving by the thought that he has nothing to give. We always have something, more than we think, and the activity of giving releases and so increases our treasure. "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79). None can feel too poor to give when he remembers what God has given him. Out of the divine largess he constantly receives abundant life and all that this includes,—activity, intelligence, health, harmony, dominion, opportunity, faculty, capacity,—and if any of these seem to be withheld, the giving of the good he does possess will make him receptive of more. The spirit of the Christ says to each one of us: "You have something to give! Give up, give out, give in to the outpouring of good! Bring all your tithes into the storehouse of divine Love, and blessing will surely be poured out that you will hardly have room to receive."

It is neither the greatness nor the importance of the gift which counts, but rather the simplicity and sincerity of the giving. Note how unconsciously a little child brings sunshine and joy to all he passes, just because his natural impulse to reflect, to radiate, to give out love and happiness has not been restricted by educated fear and repression. As God's children we have the right to regain this childlike confidence and spontaneity, to let the love we feel flow out impartially to all. This very desire will unseal for us the springs of divine Love and fill our dry and empty watercourses with that living water which shall invite the world-weary traveler and quench his thirst. As in the Christian Science Hymnal (p. 89), let us all—

> Make channels for the streams of love,
> Where they may broadly run;
> And love has overflowing streams,
> To fill them every one.

Our Daily Prayers

GUSTAVUS S. PAINE

In the "Rule for Motives and Acts" (Manual, p. 40) we read that "the members of this church [The Mother Church] should daily watch and pray to be delivered from all evil, from prophesying, judging, condemning, counseling, influencing or being influenced erroneously." Though any merely personal interpretation of the duty here indicated is uncalled for, it is well to note the care and insight with which the words in this by-law have been chosen. Every one of the words used to denote the specific evils against which we must

Digitized by Google

daily protect ourselves is full of meaning, and the thoughtful study of this by-law must unfold more and more of helpful truth.

On page 41 of the Manual is the familiar by-law about "Daily Prayer," which reads, "It shall be the duty of every member of this church to pray each day: 'Thy kingdom come;' let the reign of divine Truth, Life, and Love be established in me, and rule out of me all sin; and may Thy Word enrich the affections of all mankind, and govern them!" Truly Christian Science is a religion of constant aspiration. Only as we purify mortal thought with the understanding that divine intelligence is ever present, can we give to the humanly limited the truth which is to make them free. Even the little children are learning to pray more and more freely in Christian Science, and their prayers are effective.

It would seem that inasmuch as every member of our church is instructed to "pray without ceasing," those who are preparing themselves for membership in the church should likewise conform to this requirement. In fact, the young student will find that from this daily exercise he will gain countless blessings. Thought is turned to the infinite idea, and to the one intelligence which is the source of that idea, so that devotion to mortal personality is given up. Thus step by step the perfection of God, and man in His image and likeness, is unfolded until the perfect healing is attained. Naturally we see the importance of giving heed to our Leader's earnest injunction that we "pray daily" for ourselves; "not verbally, nor on bended knee, but mentally, meekly, and importunately" (Miscellaneous Writings, p. 127). When we thus pray, first of all in the early morning, before mortal thought has had opportunity to raise its clamor, we do indeed receive, as Mrs. Eddy declares in the same paragraph, "more grace, obedience, and love," and are fed "with the bread of heaven, health, holiness."

In the Reading-room

KATE A. BAUM

WHEN one is placed in care of a Christian Science reading-room, to serve God and man, it is soon learned that the answering of questions is a large part of the loving service required each day. Not only the questions of new students and other inquirers, but sometimes those of church-members, give opportunity for wise answers.

To one of these caretakers, whose constant prayer is, "Send out thy light and thy truth: let them lead me," a visitor came one day last summer and asked for a pamphlet now out of print. When she was told that it was not to be had any longer, the would-be purchaser said, "I wonder why." The thought came quickly to the librarian that the right answer to that question was in an old copy of the *Sentinel* which she had been reading the day before, in an article entitled "Infinite Resources" (*Sentinel*, April 28, 1906); but she could not place it at that moment, as another visitor stood waiting for attention, so she answered as best she knew. Next day that article was found, cut out, pasted on a piece of cardboard, and kept near-by. The next time the same question was asked, others were waiting for literature and the day was a busy one; but it took only an instant to pass the card bearing the article to the questioner, and to say with a smile, "If you will read this carefully, it will answer your question better than I can." The remark which came back with the card, was: "I see now; that explains it to me. Thank you very much."

At another time the question was, "If Christian Science is taught in the Bible and is the same method used by Jesus in healing the sick and sinful, why is such value set upon Mrs. Eddy's book?" The editorial entitled "A Great Need Met" (*Sentinel*, Oct. 6, 1906) was ready for this inquirer. Yet another said in a discouraged tone, "Since I have been reading this literature, I have lost my old way of praying, and have not found a better one," and an editorial on "The Lord's Prayer" (*Sentinel*, Jan. 27, 1912) comforted this one. A newly-elected director of the local church remarked that he had not made his demonstration to attend board meetings, and "Our Business Meetings" (*Sentinel*, Oct. 12, 1912) helped him. A member of this church who rarely entered the reading-rooms, said that he supposed the reading-rooms were only for the use of strangers in the towns or cities, but after attention was called to "Reading-room Privileges" (*Sentinel*, Nov. 30, 1912), where one of our editors spoke of this state of thought as "a sly little fox which would injure this branch of the Mother Vine and at the same time rob the members of one of their privileges," the member's gratitude was sincere and his attendance and good works and happiness increased. To one who had the *Journal* and *Sentinel* but seemed to think that he did not need the *Monitor*, the editorial on "Blessing and Blessed" (*Sentinel*, Dec. 28, 1912) was helpful. And so the cards grew in number, articles from the *Monitor* being added to those from the *Sentinel*. In the case of the *Journal*, it is obviously not desirable to cut out any articles, but the title of some article, which is found to answer certain questions specifically, can be put on a smaller card and the inquirer referred to it, the date of the *Journal* being of course supplied.

Many indeed have been the demonstrations of love made with the little card "Expression the Cure for Depression" (*Sentinel*, Oct. 14, 1911). The comment which often came from those who read the article was, "I see now where the trouble lies; it is in my own wrong thinking;" and the face which came in with a cloud upon it, would go out lighted up with a smile. Each card is offered with the loving thought that God is the only power, and that He heals all our diseases; and it "meets the heart's great need" of the visitor in such a quiet, impersonal way.

The librarian's gratitude should be deep for all the articles on reading-room work, and "Profitable Servants" (*Sentinel*, June 15, 1912) was a blessing. Day by day the joy of serving the Lord "with gladness" grows greater as Truth unfolds the way, and the apostle's words are often recalled, "By love serve one another."

Cause for Rejoicing

CHRISTINE J. M. SHULTS

THE writer has received much spiritual inspiration from the words of Moses in the thirty-third chapter of Deuteronomy. Like many others, she has learned in Christian Science the wonderful joy of knowing that the eternal God is our refuge, and "underneath are the everlasting arms." While as yet perceiving so little of what this means in its fulness, the modicum that is apprehended is wonderfully sweet and precious. To be conscious of this unchanging, abiding presence is indeed a foretaste of heavenly bliss. As our loved Leader tells us in Science and Health (p. 351), it is the "living, palpitating presence of Christ, Truth," which heals the sick. It is an active, vital consciousness of "God with us." The realization of this is, in truth, our heritage. The deeper and fuller our realization of this Christ-presence, the better "doers of the word" will we be. The world will then take notice of us, that, like those of old, we have been with Jesus, for we shall shine forth, reflecting the Father.

Digitized by Google

We further read, "Thine enemies shall be found liars unto thee; and thou shalt tread upon their high places." How comforting to know that every enemy, no matter what its mortal name and classification, is a lie, and that power is ours to tread upon it. Our Master says, "Behold, I give unto you power to tread on serpents and scorpions, and over all the power of the enemy: and nothing shall by any means hurt you." He straightway adds, however, that this is not to be the subject for our rejoicing, but rather the fact that our "names are written in heaven." On page 102 in Science and Health we read, "Man, reflecting God's power, has dominion over all the earth and its hosts."

It is ours to know that there can be no partnership between Truth and error, and then courageously to put this into practice. If we are honest, we will be intolerant of every lie that makes an attempt to enter our consciousness, and we shall, through our understanding of Truth, tread upon it to its utter destruction. Dominion is being given to us continually. Let us then express it in thought, word, and deed. A people "saved by the Lord" must needs be a happy people, for the psalmist tells us, "Happy is that people, whose God is the Lord."

Passing of Evil

CHARLOTTE KENNARD

THE symbols used by the writers of the Holy Scriptures are a never-failing source of enlightenment and of unfolding joy to the student of Christian Science. The only way by which we can "dwell in the house of the Lord" all the days of our life, so earnestly desired by the psalmist, is in persistently and perseveringly turning all our thoughts away from materiality, and letting God rule our every desire and aspiration, until what once seemed an effort, becomes so easy and natural that we do indeed dwell in the consciousness of divine Love,—"the house of the Lord." From this spiritual attainment goes forth the power which transforms all our seeming material obstacles and difficulties into nothingness.

Isaiah prophesied that the veil of materiality "spread over all nations" should be taken away, and students of Christian Science know that it is only a veil, a cloud, made dense or transparent by the thinking of mortals. Our beloved Leader plainly counsels us in "Miscellaneous Writings" (p. 290), "When thought dwells in God,—and it should not, to our consciousness, dwell elsewhere,—one must benefit those who hold a place in one's memory, whether it be friend or foe." When an inquirer into Christian Science was advised by the writer to make a practice of spiritualizing his thoughts, the query came, "How can I go through my daily material duties if I keep my thoughts elsewhere?" It was pointed out that by turning his mentality away from all that is unlike God, good, he would soon find that his "material" duties would be accomplished with greater ease, be controlled by an intelligence above the mortal, which he would reflect in the harmonious performance of a required service, until friction, discord, and all evil would fade from his experience.

Our constant prayer for increased spiritual understanding may be thus phrased: "Open to me the gates of righteousness." In his first epistle, the beloved disciple tells us that Christ Jesus "came by water and blood." As water is a symbol of purity, and Mrs. Eddy tells us in Science and Health (p. 25) that "the spiritual essence of blood is sacrifice," we can realize that the only way by which we enter into "the gates" is by a purified consciousness, and by taking up the cross, being ready to sacrifice all material hindrances to the advancement of the kingdom within. The gospel illustration of Jesus driving out of his Father's house all unhallowed forces of commercialism is an important lesson to us, showing that only as we entertain material beliefs do we experience discord, and that they must all be driven out.

If consciousness is filled with pure, loving thought for all humanity, we shall dwell in God, and God in us, as we are assured in the first epistle of John, and thus only will it be found possible to obey the Scriptural injunction as found in the epistle of Peter, "If any man speak, let him speak as the oracles of God; if any man minister, let him do it as of the ability which God giveth." Mrs. Eddy says, "We must act as possessing all power from Him in whom we have our being" (Science and Health, p. 264). These inspired words speak of the grandeur possible to those who dwell "in the secret place of the most High," our only real home. The prophet Isaiah tells us that we shall with joy "draw water out of the wells of salvation;" and it is pure joy for the sincere student of Christian Science, in whose consciousness all belief in sin, sickness, and death is being destroyed.

Isaiah's further words also ring with clear meaning and comfort when he says of the right thinker, "His place of defense shall be the munitions of rocks: bread shall be given him; his waters shall be sure." The rod and the staff of the Lord shall comfort us; we shall become pure in heart and "shall see God." As we overcome all that is unlike God, we are promised that we shall be clad in white garments, symbolic of purity; and to the consecrated Christian Scientist the "white stone" is already his in the concrete understanding and unfoldment of the inspired teaching of Christian Science, so that he echoes St. Paul's words to the church at Corinth, "Thanks be unto God for his unspeakable gift."

Gentleness

MARION EDDISHAW

How winning is the gentleness of Jesus! It has drawn the best in every age, and it never gave offense save to those who wilfully resisted the demands of Truth. Although Jesus rebuked sin, he did so because the offense was against God. His was the true gentleness, at-one with divine compassion, but it was a consuming fire to error.

Christian Science is hourly bringing the reminder that we should think gently,—that we may act and speak accordingly. It is not our business either to judge or to condemn; therefore what need have we for unkindness? If we attain the quality of gentleness, we shall be broader-minded, for we shall not only be able to listen unbiased to two or more sides of a question, but we shall be able to decide wisely and with justice.

That the gentleness of Jesus was appreciated by his loyal disciples is well known, and as Christian Scientists we should endeavor to attain and maintain this quality of the Christ-Mind, so that we may bring help and blessing to many. We find Paul giving prominence to this virtue when he says, "I Paul myself beseech you by the meekness and gentleness of Christ;" and again he tells us that "the servant of the Lord must not strive; but be gentle unto all men, apt to teach, patient." Another promise is, "The wisdom that is from above is first pure, then peaceable, gentle."

He who follows the example of Christ Jesus will find that every circumstance may be handled with gentleness, and that an awakened spiritual vision will banish the vexations and annoyances of mortal experience. We can never lose by being gentle, for gentleness will show that we are already thinking Godward, and this is to be on the winning side.

Selected Articles

[Frederick Dixon in *West Kent Argus*, Lewisham, England]

A recent writer criticizes Christian Science on the grounds that it is at once unorthodox and illogical. In these circumstances, I am sure you will permit me to examine the value of this contention. Orthodoxy is a mere chameleon, if ever there was one. It has changed with every century, but that has never deterred the orthodox who have just come out of the Egypt of heterodoxy, from attempting to perpetuate all the brutalities of orthodox Egypt on heterodox Philistia. Let us leave the past with its record of fagots and racks, thumb-screws and branding-irons, to the execration of history, and come for our example to the present.

If there is any point on which orthodoxy has staked its infallibility, it has been the creeds. For merely questioning the truth of these dogmatic utterances untold thousands of lives have been rendered miserable, and untold thousands sacrificed. Today the question whether the Athanasian creed shall be banished from the services of the Established Church, is deliberately argued in convocation, and the *Times* throws open its columns to attacks upon its use, in which the bishops who voted for its retention are criticized for attempting to make black white by proposing to limit the repetition of a lie to one Sunday in the year.

Unfortunately for the cause of dogma, it does not do to set people thinking. A letter from the bishop of Oxford on orthodoxy, in which he took up the usual position of authority toward questioners, has caused the attack to spread to the Apostles' creed. The most incisive, perhaps, of the church's controversialists, the dean of Durham, has joined the most brilliant, probably, of church scholars, Dr. Sanday, in a reply to the bishop; and their utterances are quite as caustic as those of the Hulsean professor of divinity at Cambridge, on the subject of the Athanasian creed. In these circumstances, it is a little daring of the critic to launch an attack on the orthodoxy of Christian Science, especially as Christian Science is based not upon any creed extracted from the New Testament, but on *ipsissima verba* of the New Testament. Jesus of Nazareth declared that those who believed on him would be able to do his works. In these words he made the criterion of a man's Christianity the extent of his ability to repeat these works. Jesus saw clearly enough that merely claiming to be orthodox was no proof of Christianity, and the writer of the epistle of James made this abundantly clear when he declared that "faith without works," assertion without demonstration, "is dead."

Mrs. Eddy saw clearly enough that the only proof it was possible to give that the gospel preached was the gospel of Christ, was the evidence that the "signs following" were the works of Christ. She therefore accepted for the Christian Science movement the responsibility of proof. For almost fifty years that proof has been given in an ever-increasing volume all over the world. Today the fact that the movement has caught the world in the net of its services, is due to the fact that wherever those services are held, sickness is healed, sorrow is overcome, and sin is being gradually mastered. Whether the Church of Rome, which regards Anglicanism as heretical, or the Church of England, which regards dissent askance, or the Dissenters, who have quarrels enough among themselves, combine to proclaim Christian Science unorthodox, matters less than nothing. The world, hungering for the healing of the seamless garment, proclaims as the man born blind, in ever-growing stentorian tones, "I see."

As for the logic of Christian Science, the charge is even more absurd. Christian Science insists, like the other Christian churches, that God is infinite Spirit, but it does not proceed, like them, to endow infinite Spirit with a finite material form. It insists, like them, that the image and likeness of Spirit must be spiritual, but it does not declare, like them, that sick and sinning material beings are the image and likeness of Spirit. It insists, like them, that God made all that was made and called it good, but it does not say, like them, that evil is real, for that would necessitate the admission that God made evil and called evil good. It insists, like them, that God made man in His own image and likeness, but it does not maintain, like them, that God made the carnal man and the carnal mind, as He must have done if He made all things, and if these are real; neither does it maintain that Spirit inhabits the flesh, which Jesus declared "profiteth nothing," and which Paul says "cannot please God."

If the critic really thinks that this constitutes Christian Science the doctrine of Cerinthus, I can only say he must have a remarkable idea of what Cerinthus is supposed to have taught. Very little is known about Cerinthus, but what is supposed to be known, proves at all events beyond any doubt that whatever Cerinthus is supposed to have taught, was the very antithesis of Christian Science. The supposed Cerinthian teaching may be summed up in three general statements: First, that the Christ came down into Jesus in the form of a dove, and that this dove at the end of Jesus' career flew away from him. I really do not know where the critic is going to get any authority for that in Mrs. Eddy's book, "Science and Health with Key to the Scriptures," which is the text-book of the Christian Science movement. As far as that goes the comparison is absurd. Second, Cerinthus insisted that there was no virgin birth, but that Jesus was the son of Joseph and Mary in the ordinary way. Seeing that Christian Science insists on the virgin birth, and absolutely denies that Jesus was the son of Joseph and Mary in the ordinary way, I do not think the critic's comparison is a very fortunate one here. Third, Cerinthus taught that the world was not made by God, but by another power. Seeing that Christian Science teaches that God made the whole spiritual universe, of which the material universe is merely a supposititious counterfeit, and that it also denies the reality of matter, the gentleman's comparison seems to be a little deficient in exactness. On the whole, most people will be of opinion that it would have been wiser if the critic had left Cerinthus out of the question.

✦

[Judge Clifford P. Smith in *Boston* (Mass.) *Journal*]

"Compensation is no more important to a Christian Scientist than it is to a preacher or a doctor, but he has the same right to it that they have. For one who is able to heal the sick by prayer, to do so and to receive payment for that service no more tends to commercialize religion than paying salaries to judges tends to commercialize justice. All thinking people ought to be able to see that Christian Science healing without compensation would be just as objectionable to those who oppose it as it would be with compensation. The outcry made about compensation is simply a method of opposition."

With these statements Judge Clifford P. Smith sprang to the defense of New York Christian Scientists who are endeavoring to have the court of appeals of New York reverse the decision of the appellate division of the supreme court in the case of a Christian Science practitioner of New York city, a healer, who had been convicted before Justice Seabury of practising medicine without a license and fined one hundred dollars. Judge Smith continued:—

"In court at the trial were about twenty witnesses who were ready to testify to their healing by Christian Science

Digitized by Google

after the failure of other means, and other witnesses to the same effect were within call. This proof was duly offered. For instance, the record contains the following: 'We offered several witnesses to prove that they have been healed in Christian Science, through the mediation of the defendant as a practitioner of the tenets of the Christian Science church, of ills and sicknesses that had been pronounced incurable by licensed physicians of this city.'

"All such offers of proof were rejected, the court being of the opinion that the statutes of the state had been so framed as to make such facts immaterial. The case will be further appealed, but if these rulings should be confirmed by the highest court of New York, would it not be perfectly plain to any intelligent citizen that the law of New York was not drawn with due regard for human rights?

"Nine states, among which is Massachusetts, specifically recognize by name the Christian Science practitioner, and twenty-five by general terms in their statutes. A bill known as the McClelland bill passed both branches of the New York legislature while the case of the practitioner was being tried in the courts. The vote in the Assembly was seventy-nine for and fifty against. In the Senate it passed by the overwhelming vote of thirty-seven to five. This bill was sent to Governor Glynn just before the prorogation of the legislature, and was vetoed by Governor Glynn after the legislature had prorogued. The vote in the legislature shows that the bill could have been passed over the veto of Governor Glynn had the proponents of the bill had the opportunity of securing the two thirds vote necessary.

"Governor Glynn, in justifying his veto, said: 'This bill is advocated by Christian Scientists. If it simply allowed Christian Science healers to practise, there might not be serious objection to it, but it goes further than this and adopts the loose language of the medical practice act of Illinois, where the standards of state education and public health are distinctly lower than they are in the state of New York, and it opens the gates to all medical pretenders. Under the phrasing of the proposed law, I am precluded from passing upon the claim of the sincere believers in Christian Science.' "

✧

[H. Cornell Wilson in *New York Sun*]

In reply to the article entitled "Apostolic Gift Found Dormant, not Withdrawn," in a recent issue, permit us to call attention to the fact that both theology and medicine had been in vogue for many centuries when Jesus of Nazareth appeared on the scene, healing by spiritual means alone all manner of sin, sickness, and deformity. He even raised the dead. Doubtless most of those healed and saved had in times past resorted to material methods of some kind in the hope of finding relief, and theology and medicine in Jesus' day were doubtless put to the same shifts to explain his healing work as they are today to explain Christian Science healing to their adherents.

Jesus did not employ medicine. Despite this, however, it is not recorded that he failed to heal in a single instance. If medicine had been the way to effect this result, he certainly would have employed it. But if by spiritual means he healed cases which otherwise could not be healed, he must have had the more effective remedy. He made it known that "no man can serve two masters: . . . Ye cannot serve God and mammon." How preposterous it would be, therefore, to proceed from a material basis, with all the limitations this implies, to aid a spiritual system founded upon the scientifically Christian basis of Jesus' teachings!

If spiritual healing is, as the joint committee concludes, the same as mental suggestion and other so-called human mind methods, the report resolves itself into a veritable declaration that Jesus employed mesmerism or hypnotism, thereby renewing the charge of the Pharisees that he healed through "Beelzebub the prince of the devils." Now, since the human mind causes sin and sickness, it cannot heal them, for Satan will not cast out Satan, even as Jesus said. Jesus distinctly declared that of his own self he could do nothing, that it was the divine and not the human will that did the works credited to him in the New Testament.

The doubt expressed by the committee as to whether moral excellence in healers or the healed was essential to success, again brings into question Jesus' method. The Master asked, "For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" implying that his system healed both sin and disease by the same process. One cannot be helped physically by Christian Science without at the same time being improved morally. The lives of those who become Christian Scientists undergo an improvement which witnesses to this fact.

If the joint committee takes the stand that God is able to heal functional but not organic diseases, it virtually admits that God is all-powerful on some occasions but powerless on others. The Scriptures declare that God is omnipotent, and "the same yesterday, and today, and forever." Therefore, with God one disease may be as readily healed as another. To admit otherwise, would be to declare that Jesus could walk on one kind of water but not on another; that he could heal one kind of leprosy but not another; that he could raise a person who died in one way but not one who died in another. Such logic has not a foot on which to stand.

The fact is, popular systems of theology and medicine find themselves facing a dilemma. Either they must deny the authenticity of Scriptural records of healing and Jesus' iterated and reiterated injunction to his followers that healing the sick would be one of the necessary and inevitable signs of discipleship throughout all ages, or they must accept these records as authentic, and thereby admit that Christian Science, discovered and founded by Mrs. Eddy, and recorded by her in the Christian Science text-book, "Science and Health with Key to the Scriptures," is fulfilling prophecy, and that Christian healing has, through Mrs. Eddy's discovery, been successfully practised for nearly fifty years. While hesitating about which horn of the dilemma to grasp, however, theology and medicine are being put to ludicrous shifts in order to explain to questioners the healing effects of Christian Science.

"Must Christian Science come through the Christian churches as some persons insist?" asks Mrs. Eddy on page 131 of the text-book. She answers: "This Science has come already, after the manner of God's appointing, but the churches seem not ready to receive it, according to the Scriptural saying, 'He came unto his own, and his own received him not.' . . . As aforetime, the spirit of the Christ, which taketh away the ceremonies and doctrines of men, is not accepted until the hearts of men are made ready for it."

✧

[Paul Stark Seeley in *The Oregonian*, Portland, Ore.]

In *The Oregonian* the retiring head of the City and County Medical Society is reported as having condemned Christian Scientists for their attitude toward the medical profession. The critic also expressed displeasure because diseases, the causes of which are much sought after by his profession, are denied by Christian Scientists to exist. Let me first state, and plainly, too, that Christian Scientists entertain no ill

Digitized by Google

will against physicians. Rather do they hold in esteem the honest, high-minded physician who is endeavoring, in what he believes to be the best way, to lessen the sum total of human suffering. It is true that Christian Scientists do not agree with the theories and practices of that system of therapeutics which the learned doctor represents, and for this there is good reason, since a large majority of them have tried its ministrations without relief, and only as a last resort have they turned to the spiritual law of Christian healing. A difference of opinion on matters medical has, however, not lessened their friendly feeling for honest practitioners of other systems than their own.

To say that Christian Scientists deny the reality of diseases is stating only part of the truth, and that the least important part, as I shall endeavor to point out further on. If, however, the doctor is piqued because Christian Scientists deny the existence of diseases which he and his professional brothers are seeking to trace to their cause, he must admit, whatever he may think of the Christian Science method, that it is reasonably successful in the results obtained. Then, too, let it be remembered that *materia medica* has yet to find the primal cause of disease, though its efforts in this direction began many centuries before Christ. Unable to trace disease to its origin, it has ever placed the responsibility for it on certain intermediary physical laws and phenomena, sometimes honestly called secondary causes, always failing to recognize that the phenomena are all reducible to mind, even the carnal, mortal mind which would have men believe that evil is power.

And so, when it is said that Christian Scientists deny the existence of disease, a more complete statement is necessary correctly to present the fact, which is that they have found where disease originates, that is, in a false belief in a power opposed to God. They have found, too, what is of far more importance to the human race, that this belief can be destroyed by realizing the demonstrable truth of being, namely, that God, divine Mind, is in reality the only cause and creator of man and the universe; that God's creation, including man, is, like Himself, perfect; and that sin and disease have no place in or power over God's man, who is in reality forever godlike and harmonious.

Christian Science is primarily concerned, not with the ambiguities of a mortal, material existence, but rather with the finding and demonstrating of the scientific and therefore eternal and unchanging laws of life and health. By its works it is proving to a materialistic world that as man gains a correct understanding of God, infinite Mind, and begins to realize in some degree that there is, in truth, no other power, presence, or intelligence but God, he will, in proportion to his fidelity to divine law, come into that understanding of truth to which the Master referred when he said, "Ye shall know the truth, and the truth shall make you free." Disease, then, becomes recognized for what it is, namely, a strongly entrenched mortal belief in evil as power, and is destroyed by the destruction of that belief,—a result attainable only through the realization and demonstration in individual consciousness of the eternal fact that the true man is made in God's image and likeness, and is, therefore, in reality perfect, even as his Father in heaven is perfect.

✥

[Henry Deutsch in *Duluth* (Minn.) *News-Tribune*]

The recent sermon by the Rev. Mr. —— of Superior, as reported, illustrates the misapprehension which arises from lack of a clear understanding of the Principle, teachings, and operation of Christian Science as set forth in the textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Christian Science is not suggestion, or merely mental healing, so called, the operation of the human mind. It is the restoration of primitive Christianity, a restatement of the teachings of Jesus, fulfilling his promise, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Christian Science performs its cures on the same basis upon which Jesus made his,—absolute faith in the power, presence, intelligence, and love of the infinite God. "Thy faith hath made thee whole" is today illustrated again in the healing works of Christian Science. "The prayer of faith shall save the sick" is again fulfilled in the demonstrations of Christian Science,—a faith that is not merely a belief, but such a clear understanding and realization of the nature of God, and man's relation to Him, as establishes the absolute conviction that He not only can but will heal all our iniquities and diseases. It is scarcely less than sacrilegious to attribute the healing done in Jesus' way to the mere force of suggestion—the action of the carnal mind, which the Bible declares is "enmity against God." That this cannot be the basis of Christian healing is implicitly admitted by its most ardent exponents, when they confess to its own limitations, and when indisputable evidence shows cases healed by Christian Science that could not be healed by mental suggestion.

It is not claimed that suggestion is efficacious beyond mere functional, nervous, or imaginary disorders, and no one even presumes to intimate that it ever brought "sight to the blind" or hearing to the deaf, that it ever healed so-called incurable or organic disease or raised the dead. Neither has it ever brought, as an accompaniment to its physical so-called healing, that spiritual uplift and regeneration,—that transforming "by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God." Christian Science has healed not only nervous and functional disease, but all manner of so-called incurable and organic diseases, even to the extent of restoring life where all usual evidences of death were present. But beyond these proofs to the physical senses, Christian Science has brought into the lives of thousands that breath of Spirit or Soul which gives irrefutable evidence and conviction of "God with us," and thus has restored to agnostic, atheist, and the weak in faith the religious attribute so indispensable to the real growth, progress, and civilization of mankind.

Christian Science furnishes the "signs following" in fulfilment of the Master's promise, "He that believeth on me, the works that I do shall he do also;" but its works reach beyond the mere physical healing, which is a manifestation of the efficacy of the divine Principle to make fully whole, healing sickness as well as sin, as the Master pointed out, "For whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" and as is expressed by Mrs. Eddy in Science and Health (Preface, p. xi): "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation. Now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us,'—a divine influence ever present in human consciousness and repeating itself, coming now as was promised aforetime—

> To preach deliverance to the captives (of sense)
> And recovering of sight to the blind,
> To set at liberty them that are bruised."

Editorial

Testimony Meetings

THE great value of the Wednesday evening meetings is largely recognized by Christian Scientists to be the assurance they convey to inquirers that Christian Science is indeed what it professes to be, namely, a religion which heals the sick, destroys sin, and comforts them that mourn; therefore it is important that the testimonies given should be such as can be easily understood and appreciated by even the casual visitor. To give this assurance in the best way, it is necessary that some care be given to both the substance and the phraseology of these testimonies. We therefore venture the following counsel, based upon experience.

It should be borne in mind by those who speak at these meetings, that persons who attend a Christian Science service for the first time are not familiar with the technical habits of speech into which so many Christian Scientists unfortunately have drifted, and that these inquirers cannot be expected to understand the rather mystifying way in which such words as "belief," "claim," "error," etc., are so frequently used. Another thing to be remembered is that a lengthy recital of details invariably becomes wearisome to the listeners, and in the majority of cases thus described, the point which was intended to be emphasized is entirely obscured by trivial circumstances and conversations which are not essential to the narrative and can have no better effect than to set the stranger to wondering what it is all about. The total time available for testimonies at these meetings is never more than thirty-five or forty minutes, and to use this short time to the best advantage should be the aim of every one who speaks.

Vital questions are pressing themselves upon the attention of the inquirer who has come to this meeting in search of the help which he has failed to find in other systems, and these questions invariably are: Can I be healed of the sickness from which I am suffering? Can I be relieved from the bondage of sinful habits and desires? Can I obtain surcease from sorrow and affliction? It is to the affirmative answer of these questions that the person who gives a testimony to the efficacy of Christian Science should address himself, and it is only through a simple and concise narration of personal experience that this can be successfully done.

A statement that some person of whom the speaker has heard through some other person, has been healed by Christian Science, does not carry much weight with the man who is investigating, neither does the account of cases in which the speaker has acted as practitioner. The most valuable and helpful testimony is that of the persons who have been healed, and if those who speak at the Wednesday evening meetings will bear this in mind and express themselves accordingly, much will be added to the usefulness of the meetings, and the reasonable demands of the investigator will be met. When Jesus was questioned as to his claim to the Messiahship, he did not preach a sermon on the subject. He called attention briefly to the works he had done, and we as Christian Scientists may well follow his example when we attempt to make known the reason for the faith that is in us.

In the larger churches there is seldom any difficulty in filling the time allotted for the giving of testimonies, but where the numbers are fewer it is sometimes a problem, because there seems to be "nothing new to be said," as some have expressed it. If we stop to think, however, we will see that the blessings of Christian Science, like God's "compassions," "are new every morning." Divine Love meets many another need than that of physical health, and if we are making our religion practical, striving to put into constant use the greatest of all the commandments, there will be some new experience of God's goodness to relate each week. There are so many that "labor and are heavy laden," so many hungering for the bread of life, for whom it may be our happy privilege to speak the "word in season," and "blessed is that man," our revered Leader tells us, "who seeth his brother's need and supplieth it" (Science and Health, p. 518).

To sum up, we would urge upon those who wish to benefit their fellow mortals at these meetings, to give a concise and conservative account of their own healing; also to give this account in words which may be understood by the casual hearer, who perhaps has known nothing of Christian Science other than its name. Every Christian Scientist may do this, and in the doing of it, more will be accomplished for humanity than is possible by recounting the experience of others or by the utterance of words unsupported by works.

ARCHIBALD MCLELLAN.

"Invisible things"

IN Paul's epistles there are several references to "invisible things." The one which is in the epistle to the Romans is at the first glance somewhat paradoxical in its declaration that "the invisible things of him [God] . . . are clearly seen." These words cannot, however, seem contradictory or even enigmatical to the student of Christian Science, who soon learns that if he would lay hold upon reality, he must turn away from the evidence of material sense, as did Moses, who "endured, as seeing him who is invisible."

Now it goes without saying that all we see with the physical eye is at best perishable and can never satisfy man's real nature. Besides this, it cannot be denied that the most beautiful and substantial things in the world are supported by an invisible force whose nature is but dimly guessed at, even by those who most admire these things. People are disposed to talk glibly about the phenomena of nature, while those who know most about them frankly confess to their ignorance of that which underlies the appearance. Thus one deep thinker says, that although the law of gravitation was discovered and declared by Newton, gravity itself was as yet unknown.

The Scripture writers agree in saying that God is invisible, and Christian Science goes even farther in saying that the man who is God's likeness is also invisible to material sense. Respecting this, Mrs. Eddy says (Science and Health, p. 264), "As mortals gain more correct views of God and man, multitudinous objects of creation, which before were invisible, will become visible." These objects will have to be apprehended first mentally and spiritually, then they will take the place of the distorted views accepted by mortals as the facts of existence. This would explain the incident at Nain, when Jesus and some of his humble followers were entering that town. To mortal sense "a dead man" was being carried out for burial, but the spiritual fact must have been "clearly seen" by the Master, who said on another occasion, "If a man keep my saying, he shall never see death." The young man was restored to his mother, and great was the change which came over all who were present, for we read that "they glorified God," and saw, though perhaps but dimly, that He had "visited his people."

Many painters have loved to depict the head of Christ Jesus with a halo of golden light, and we need not wonder at this, for on at least one occasion, on the mount of transfiguration, he radiated light till even his garments seemed "white and glistering." This was the shining forth of his divine nature, which was invisible to the darkened sense of

Digitized by Google

those around him; but the eyes of his disciples were opened to perceive its radiance even in the night. This light of Truth and Love was ever shining from Christ Jesus, and it brought healing to all who responded to its life-giving influence. Later, it was reflected by Peter, so that the sick were healed thereby, though it would seem that some mistakenly believed it to be "the shadow of Peter" which brought this happy result. Instead of this, the apostle had so far overcome corporeal sense as to be a transparency for the light of Spirit. In speaking of the transfiguration he tells us that we should take heed to this light, "that shineth in a dark place," until "the day star" arises in our hearts. He also tells us that all the visible and apparently solid things seen by physical sense "shall be dissolved," and then he makes a strong appeal for godliness on our part, so that we may find ourselves in the new heaven and the new earth which are always "visible" to God and His ideas.

Here we may ask ourselves whether we are loyal to the teachings of Christ Jesus and faithful in our obedience to the truth which has come anew in Christian Science. If we are, then the halo of Love's reflection will rest upon our heads, and though it be invisible to mortal eye, it will witness to the divine ever-presence, "outshining sin, sorcery, lust, and hypocrisy" (Science and Health, p. 571). Who would not choose to wear perpetually this crown?

ANNIE M. KNOTT.

"Awake thou"

THE primary and most pressing need of the average man is this: that he resist the temptation to mental torpidity; and this is the appeal of Christian Science. In the spirit of the word of the Lord, saying, "Awake thou," it counsels him to be alert, to think actively, honestly, purely, consistently; to think of God, and God's man, his spiritual endowment and resources, of life's obligations, problems, opportunities, and high destiny. This is the Christ-way, the ascending path, and we are to follow it. The emphasis of much religious teaching has been laid upon a trusting, uninquiring faith, which is defined in the phrase "Only believe." It is a faith which is content that others should solve one's problems, define his privileges, do his thinking, and it need not surprise us, therefore, that the Christian world is full of the spiritually inactive and superstitiously dependent.

Christian Science takes its stand for the present possibility of proving the truth of St. John's great declaration, "We know that the Son of God is come, and hath given us an understanding, that we may know him that is true." It teaches that effective faith in itself is highly intelligent, even when possessed by the humblest; that it quickens, stimulates, impels, and ennobles thought; that it is given to demonstrating its propositions, and that while it is the gift of God, it can become the possession of only him who wills to be wide-awake, who is not disturbed or discouraged by the difficulties which right endeavor may come upon, and who has no other thought than to work out his life-problems.

There is a saying that if one wants to escape trouble he should elect to be born an oyster, and this may serve to remind us of the inescapable fact that the higher the order of human existence, the larger the range of inquiry, the more pressing the problems of thought, and the more abundant the possibilities both of pain and of pleasure. A dull sense is satisfied with a small arena of activities and demands correspondingly few explanations. It takes the majority of things for granted, and has no relish for philosophizing; and the insistence that we rise from this state of mental sleepiness is expressed by Mrs. Eddy when she says, "It is essential to understand, instead of believe, what relates most nearly to the happiness of being," since only "the understanding of Truth gives full faith in Truth" (Science and Health, p. 285). This understanding, it is manifest, can be gained only through that intuition which postulates a high degree of mental alertness, or that process of reasoning which, if inductive, involves the acquisition and classification of all the facts on which a legitimate generalization may be based; or, if deductive, that regard for true premise and logical conclusion which is the very sinew of continuous right thought.

This scientific sense of the nature of faith begets two convictions of supreme significance to Christian efficiency,—first, that the inspiration and healing power of the disciples was not the outcome of an inexplicable spiritual endowment or gift conferred upon them alone, but rather the logical and inevitable result of their apprehension of the spiritual law and order which the Master made known and proved efficient; second, that this law of Truth is still apprehensible, and thus practically available to all spiritually aspiring men. Christian Science thus teaches that one's salvation depends upon a divine factor, the immutability of Truth and Love, together with the righteousness which is evidenced in right thinking and right living. There can be no unintelligent ascension.

To the Christian idealist, the thought of the compass and continuity of the activity of divine Mind is so overwhelmingly vast as to bring him to his knees in adoring wonder; and this thought is no less surely present when he looks upon an opening bud, than when he gazes upon the lens-revealed majesty of a midnight sky. And when he remembers that man is the highest expression of divine Mind, the abnormality of the sleepiness and stupidity of mortal sense begins to appear. For him the call to wide-awakeful thinking has assumed thunderous proportions, and he realizes as not before the imperative reasonableness of the gospel mandate that we "be dead indeed unto sin, but alive unto God."

JOHN B. WILLIS.

Among the Churches

Current Notes

ST. PAUL, MINN.—The new edifice of First Church of Christ, Scientist, Summit avenue and Grotto street, will be opened Sunday [June 14]. With the completion of the building, services at the Masonic Temple, where the Christian Scientists have met for the past five years, will be discontinued. The church, together with the furnishings, represents an outlay of one hundred thousand dollars. Work on the foundation began in the fall of 1912 and actual work of construction began about a year ago. The new edifice has a seating capacity of one thousand and twenty-five. First Church of Christ, Scientist, was organized more than ten years ago, and for a number of years services were held in the Masonic Hall on Holly avenue. Increased membership, however, made it necessary to obtain quarters in the Masonic Temple.—*Pioneer Press.*

HOOD RIVER, ORE.—The Christian Science Society has been organized into a church, to be known as First Church of Christ, Scientist, of Hood River. The trustees are negotiating for a lot, with the intention of building in the near future.

Hood River News.

PITTSBURGH, PA.—The note in the issue of August 1 referring to Harrisburg, Pa., should have referred to Pittsburgh. The increase in seating capacity should have applied to the Sunday school room and not to the church auditorium.

Digitized by Google

CEDAR RAPIDS, IOWA.—Another new church is soon to be built in Cedar Rapids by the congregation of First Church of Christ, Scientist. It is to be erected on Second avenue east, between Twelfth and Thirteenth streets, on a lot on the north side of the avenue which has been purchased by the congregation for that purpose. The building is to cost forty thousand dollars when completed, including the organ, and it will seat about seven hundred people.

The Evening Times.

TRANSVAAL, SOUTH AFRICA.—No less than two thousand three hundred and thirty-four pieces of Christian Science literature were distributed by our local distribution committee in the past twelve months. A presentation copy of Science and Health has now been accepted by the Barberton Library, although the gift met with determined opposition from the curators when first offered.—*Correspondence.*

TRAVERSE CITY, MICH.—First Church of Christ, Scientist, will hold their first service in the new church home, in the Ebner Building on State street, tomorrow [June 7]. While the membership is not large, nevertheless all the expenses have been met, the equipment is all paid for, and there is a substantial sum in the treasury.—*The Record-Eagle.*

CLEVELAND, OHIO.—A new Christian Science society has been organized as the result of the crowded condition of the denomination's services in the various churches. It is known as the Cleveland Christian Science Society.—*Cleveland News.*

✧ ✧ ✧

The Lectures

Cleburne, Texas

There was not a vacant seat in the auditorium of the Carnegie Library when the Hon. H. P. Brown arose to introduce Virgil O. Strickler, who lectured on Christian Science. The introduction was in part as follows:—

The object and purpose of all earnest men and women has been, or at least should be, to discover and reveal to others the true concept of God in His relation to man, and man in his relation to God, as gathered from and portrayed in the revelation of God to man. It frequently happens that the real truth in reference to subjects of investigation, when finally discovered and admitted, is contrary to and in direct conflict with our deep-seated convictions and prejudices. This being true, whatever may be our own ideas upon any question about which there may be honest differences of opinion, it behooves us to give thoughtful consideration to the views of those who entertain opinions different from ours, and who are willing to submit those differences to the impartial judgment of the individual man or woman.

Cleburne Morning News.

✧

Long Beach, Cal.

An audience of approximately twelve hundred listened attentively to a lecture on Christian Science delivered by Bliss Knapp in the church edifice of First Church of Christ, Scientist. The speaker of the evening was introduced by Albert M. Cheney, first reader of the local church, who said in part:—

Regardless of what you or I may think about this vital subject, the undeniable facts remain, that Christian Science has healed a great many people; has brought harmony and happiness into many homes which before were inharmonious and unhappy; and today great numbers of thoughtful, intelligent people are grateful to God for His manifold blessings, which they have been able to receive since gaining, even in a small degree, an understanding of this great truth.

Correspondence.

✧

Centralia, Wash.

The new Christian Science church was packed to the doors on the occasion of a lecture by William R. Rathvon. The speaker was introduced by Mayor H. W. Thompson, who spoke in part as follows:—

I want to add my tribute of praise and recognition to the people of the Christian Science church for the work they are doing throughout our land today in aiming to elevate and lift up humanity wherever they go. I have been acquainted with very many of them, and I find among them the very best people in the land, representative people, and in my personal experience and acquaintance I have discovered that they are about as charitable toward their fellows as any people I have ever met. I have yet to remember wherein a Christian Science man or woman spoke ill of any individual, no matter who that individual might be, and I am sure that is a Christian virtue.—*Daily Chronicle-Examiner.*

✧

Indianapolis, Ind.

L. Ert Slack, in introducing the Hon. Clarence A. Buskirk, who lectured on Christian Science for First and Second churches, said in part:—

More people are trying to find out the right today than ever before, and it is no uncommon occurrence to hear of men and women of high standing, capacity, and ability coming to Christian Science and taking up its study and practice. Mankind do not want to make mistakes. All of us want less of errors in our every-day life. All activities depend too much upon uncertain and imperfect laws, rules, and customs existing under present conditions. We know the divine plan and law is perfect, and we believe it is ours to have. If we can get it, we certainly want it. The demand of the age is to get hold of the divine law and plan, so that we may use it every day, and people are reaching out for information about Christian Science, to see what it means and what it will do.—*Correspondence.*

✧

Portland, Ore.

Clarence W. Chadwick delivered three lectures on Christian Science in the edifice of First Church of Christ, Scientist. The introductions follow. Charles S. Russell said:—

At this time, all over the civilized world, there is a growing tendency to put aside the old ideals, conditions, and teachings which have for many centuries brought us, in only a limited degree, the health, happiness, and contentment that humanity is seeking. It is very evident that we shall never go back to the old conditions, nor will the people be satisfied with any new condition that does not give them these blessings in a very large degree.

One of the encouraging signs of the times is the general inquiry that is being made into the causes which promote human happiness and human misery. At Christian Science meetings all over the world, the halls and churches are being crowded to the doors by an inquiring people, and since they that seek find, many are getting an understanding of this truth that will make them and the world better. Even among those who have but little knowledge of Christian Sci-

Digitized by Google

ence, and who give it limited credit for healing, there is a growing feeling that the worry and suffering they have experienced is not entirely necessary, and a wonder whether it is not caused by a lack of understanding of the great science of life, the science of right living and right thinking.

Judge Stevenson said:—

What I know about Christian Science is little else than a vague impression; but it is a very favorable impression. In common with others present, I am here to learn more about this teaching. I do not know that it is the best religion in the world, but I do know that it is a good religion.

As it is given me to understand it, I am impressed that Christian Science transcends the barren limitations of mere dogma. I am led to believe that it is broadly constructive; that it aims at an uplift general in its scope; that it is concrete as well as abstract, practical as well as philosophical. While it would enlarge the spiritual and embellish the mental, it does not overlook our physical well-being. It teaches the doctrine of health, longevity, and happiness. It mingles hope with cheer, and so teaching, spreads a gospel that touches the heart of our temporal affairs and promises a religion for this as well as for another life.

F. Elmo Robinson said:—

Ages of belief in a manlike God have failed to redeem the world from its self-imposed burden of sin and disease. Great as are the worthy achievements of preceding reformers, it remained for Mrs. Eddy to restore the primitive Christian concept of God and man, which reveals God as infinite Spirit, divine Love, and man as His reflection. In so doing, Mrs. Eddy has again made Christianity a matter of demonstration rather than of mere faith or belief.—*Correspondence.*

✧

Lockport, N. Y.

In introducing William D. McCrackan, M.A., who lectured on Christian Science at the Temple, the Rev. Harry M. Wright, pastor of the Universalist church of Lockport, said:—

If I were to put into a single sentence what I believe to be the dominant thought and desire of the soul of humanity today, I should select the words of the ancient psalmist, "My heart and my flesh crieth out for the living God." To those who form their opinions from the outward appearances, as they find them in the restless, seething mass of objective conditions, this may seem to be too exalted, too optimistic an estimate of the present-day situation from a religious standpoint. But to all who have to any extent risen above the fog and the depression of medieval dogmatism, to all who have come into a clearer light and to a better understanding of pure Christianity as lived and taught by the Master and his disciples, to all who begin to apprehend something of the magnitude of the task assigned to the true followers of the Christ, I believe there has come this thought: "I shall be satisfied, when I awake, with thy likeness." For we have yet to measure up to the command: "The works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

Objectively the world is in a turmoil and a strife, because the soul can never rest in the creeds of apologetic, partialistic theology. It must know the Christ; it must receive his power. It is because of this that the world is listening to the voice of optimism, for the soul hungers for the living bread that endureth unto life eternal. We have every reason to believe that this great message of Christian Science has lifted many a shadow, many a doubt from the human heart, by giving a clearer, nearer view of the Son of God as the Saviour and healer of mankind.

With regard for this church which counts its membership by the thousands all over the world, a church seeking to show forth its faith in works well pleasing to the Master, a church which has yet many things to say unto the world, I commend your careful, prayerful attention and thought to the message that shall be here and at this time presented.

Lockport Journal.

✧

San Diego, Cal.

A crowded audience was present at First Church of Christ, Scientist, to listen to a lecture on Christian Science by Bliss Knapp. The speaker was introduced by Edward Champion, first reader, who said:—

Your presence here is conclusive evidence of your interest in the subject of Christian Science. On page 252 of "Miscellaneous Writings" Mrs. Eddy says: "Christian Science is not only the acme of Science but the crown of Christianity. It is universal. It appeals to man as man; to the whole and not to a portion; to men physically, as well as spiritually, and to all mankind." It is the truth of this statement which attracts people in every part of the world where these lectures are given. The demand today in all things is, Is it practical? and this applies equally to things religious. Christian Science is practical as a religion, as a physician, practical in the home and in business.—*The San Diego Union.*

✧

Dublin, Ireland

A lecture on Christian Science was delivered by Bicknell Young to a large audience in the Abbey Theater. The lecturer was introduced by Capt. H. N. Lee, who said in part:—

Being a soldier in India, this will be the first Christian Science lecture I have heard. Barely four and one-half years have passed since I began applying the truths we are to hear about tonight, but even in this short time I have learned what a wonderful help Christian Science is, not only in cases of sickness but in all the little affairs of every-day life, and naturally the wish is strong that others too may learn as soon as possible to avail themselves of the good awaiting them.

Non-Scientists often ask me what first interested me in Science, and they usually seem surprised when I reply that it was its logic, for there seems to be a very general idea that this religion is even more illogical and visionary than most, whereas, as a matter of fact, it is the only religion which carries its premise of a God who is good straight through to its final conclusion, and then proves by demonstration that this conclusion is true. This is the reason why Christian Science is growing with such rapidity throughout the world, for each person can apply its rules for himself and get his own results for himself; and my advice to every one is: Go and read "Science and Health with Key to the Scriptures" and Mrs. Eddy's other writings, and apply what you learn. As you stick to the truth therein presented, you will obtain the blessings which, as I know, are there for the taking.—*Correspondence.*

Testimonies of Healing

Christian Science was first brought to my attention about six years ago. I did not turn to it for healing, although I was in very poor health at the time. From early childhood I had medical treatment for a bowel disorder which never left me, except for a short time when I first came to Colorado. The medicine used would seem to answer the need for a while, then would lose its effect, and I would try something else with like results. I was also subject to neuralgia, but my greatest trouble was imperfect action of the heart. This condition seemed to make me very weak. Once I fell unconscious, and at another time I was under the doctor's care for two hours before normal action was regained. The physician claimed it was caused by the high altitude.

In 1900 I went to Europe. While there, I felt well and strong, and continued so for a year or two after coming home; then the old ills came back. Although the heart disease never returned in such an alarming form, still I was weak and in constant dread of anything which I believed might bring it on again. Five years later I spent three months in Oregon, and this also seemed beneficial for a time; but no permanent results were obtained. Finally, I was led to consult a Christian Science practitioner for advice and help on a matter that was troubling me at that time, and she kindly loaned me a copy of Science and Health, also some *Sentinels* and other literature. I became so interested that I forgot the medicine I had been taking daily, forgot everything but the wondrous truths I had found.

I do not know how soon I was healed, but at the end of two weeks I realized that I was a well, strong woman. This healing took place six years ago, and none of the conditions mentioned have returned. No medicine or material remedy has been used for myself or our six children since that time. Two of our children were born under Christian Science treatment, one of the births being almost painless.

We have had many satisfying proofs of the healing power of Truth with the children. Our two little girls were exposed to whooping-cough, and one night both were taken sick. A form of acute lung trouble seems to accompany the disease in many cases, and our eldest girl was affected that way. She lay all day in a high fever, taking no nourishment and rousing up only when she wished a drink of water. About six o'clock in the evening I telephoned to a practitioner, who gave both children absent treatment. In about a half-hour my eldest daughter asked for some bread and milk, which she ate, then went to sleep. The fever gradually left her, and she was well the next morning. The younger girl had one hard spell of coughing the next day, then she too was well.

All of the healings were not accomplished so quickly, however; but when they were slow I generally learned some needed lesson. One such lesson came during the healing of our little boy of acute lung trouble. A practitioner was called, and during treatment the child would seem much better, so much so that twice I thought he was healed; but the fever would return. We had lost a little boy of about the same age before we knew of Christian Science, and I found myself continually comparing the cases; they seemed similar in so many ways, although the physician had given the other a different name. To get my thoughts away from the child, I engaged a Christian Science nurse, but still the fever remained.

One evening the practitioner told me it was time for me to rejoice; she said we are told to rejoice always, in ever-present Love. I wished to be obedient, so took the Hymnal and tried to sing, but found I could not. I retired early, with a great desire to be obedient, but did not know how I could, as the child seemed no better. Then I found myself comparing again, but in a different way. I thought of the medicines our other little boy was compelled to take and of the hot baths which frightened him so, and of how this little boy was always made comfortable and happy, of how peaceful and easy he always grew under treatment; and I was so filled with gratitude that I went to the nurse and told her that even if the demonstration was not made, still I had much to be grateful for. I would not have all that torture to remember, which we in our ignorance thought was for the other child's good. Then with a promise from her that she would call me if there was any change, I again retired.

In a few hours the nurse called me. The fever was entirely gone; the boy lay still and white, the only color being his blue lips and finger nails. She said that under a physician she would be instructed to use material methods to give circulation and strength, so I telephoned to the practitioner to treat him, and in a very short time, less than a half-hour, his natural color returned and he asked for a drink of milk. He was well, and regained his strength rapidly.

Mrs. Eddy says in Science and Health (p. 3): "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more." I am indeed grateful for the health, peace, and joy that have come to me through Christian Science, and more grateful still for the better understanding it has given me of God and the Bible. Our dear Leader has also taught us, as we read on the same page, that "gratitude is much more than a verbal expression of thanks," and that our lives should attest our sincerity. I want to live so close to Truth that selfishness and worldly ambition will be laid low, to hold so firmly to the rod of Principle that the waves of mortal belief will roll back, so that I may go forward with my feet firmly planted on the rock Christ, Truth, and by my daily life lead others to this truth which makes us free.

MAY RECKER, Rocky Ford, Col.

✣

During the summer of 1911, through the reading of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed of nervous breakdown. The healing was gradual, and I but half realized what had been done for me. In the spring of 1912 I was taken with what seemed to be a severe attack of malarial fever, and I thought that this was an opportunity to prove Christian Science healing. Up to that time material means had been used to overcome such difficulties, but with the faithful work of a kind practitioner I was healed of that trouble. At the same time my little girl was completely healed of a bowel disorder, from which she had suffered since birth.

I then joined the church in Orange. The three children were brought quickly through an attack of measles. The oldest boy, eight years old, was healed of an injured ankle, and through his own work was cured of chronic bleeding at the nose. There seemed much to be done for the little family, but as understanding of the truth came, the joy of being able to do the work myself was very great. Previously, it had been impossible for me to walk any distance or do my housework without severe pain in back and head, and I seemed to be always tired; but now I am on my feet almost constantly without experiencing the slightest fatigue.

There is no joy to be likened to the realization of Truth's power which is made manifest in the healing of those who suffer. My hope and prayer is to be loving and pure enough to be able to help others through the understanding gained in Science. It has been my privilege, this year, to have class

Digitized by Google

instruction. As I look back on the doubt, chaos, fear, and dread of little more than a year ago, and realize the power of divine Love which has met so many of my needs, I know that this is indeed the truth which has made me free, and that the kingdom of heaven is at hand. Each day is a new opportunity to prove the all-power of infinite Mind, and to express our gratitude for all that has been done for us by our Leader in giving us Christian Science.

FANNIE STEELE WILKINSON, East Orange, N. J.

✧

I feel I cannot afford to let another year pass without a word of gratitude through the *Sentinel* for blessings received from the study and work in Christian Science, for help and healing in the past years. I remember well the joy that came to me with the first article I ever read on the subject. It showed how Jesus' teachings could and should be made practical here and now. "Science and Health with Key to the Scriptures" was advertised on the back of the leaflet. The thought of a key to the Scriptures so charmed me, hungry as I was for a better understanding of man's relationship to God, that without consideration as to what this book might be, I ordered it the following day from the publisher. I had never heard of the book before, and no one had ever mentioned Christian Science to me, save a much-loved friend who a few weeks previous to that time had told me she was instantaneously healed by its methods, after being discharged from a hospital years before as incurable. The account of her healing had little weight with me, however, other than joy to see her well.

The book came, and I shall never forget how the title "Key to the Scriptures" held my thought, nor the interest I felt when I read the first line in the Preface,—"To those leaning on the sustaining infinite, today is big with blessings." It was many months before I met a Christian Scientist or any one who knew anything about this teaching. I have since felt that I have great reason to rejoice in this search alone, for it was then I saw that Christian Science was the promise of Jesus fulfilled. Though I have passed through many hours of darkness and mental anguish since then, I have never doubted that a better understanding would clear the vision and destroy every phase of suffering and morbid human longing.

Many positive proofs of my convictions have come under my observation, showing that we have found the living Christ that heals all our diseases, corrects all erring thought, and will lead into all truth. Words cannot express the gratitude I feel.—ADELAIDE BURRELL, Pomona, Fla.

✧

In the hope that an account of my healing may help others, I will give my experience of God's love and power. A beloved one first told me of Christian Science after I had been to a second oculist, for a serious trouble had arisen about my sight, and operations (two at least on each eye) were considered a certainty. This was in July, 1904, and the time fixed for the first operation was October; but when I went for a final examination it was found there was nothing left on which to operate. The growths had mostly disappeared as a result of the healing power of Truth. I knew that the sight was much clearer, but had not realized that I was healed, though all fear had gone. The surgeon appeared to be very much surprised, for he kept repeating, "It is wonderful." Science and Health had been given me in August, when reading was not easy, but I grasped enough of the truth in those six weeks to see that divine Mind is the great and only power, that God, and God alone, is the healer; and this must have been the saving thought. I am thankful to say that my sight is good, and I see without the aid of glasses.

At that time I was also suffering from so-called hereditary rheumatic gout, with its attendant pain and the inconvenience of dieting (which often meant semistarvation when I was away from home). That has also disappeared, though not so quickly, and hands and feet have gradually regained their original shape. There has been no recurrence of this ailment, though now for years I have eaten any ordinary food without considering possible effect, as in times past.

These are by no means all the blessings for which I am thankful. The more spiritual thought, and the understanding of God, even in a small degree, gives a larger and truer outlook on life, a realization of man's relation to his creator, Spirit, and is cause for much gratitude. Daily I am overcoming error, and gaining more understanding of the true Life, the Life that is Spirit and spiritual.

I give heartfelt thanks to God for Christian Science and for all the benefits received.

ANNA ROW, Streatham, London, S. W., England.

✧

It would be impossible for me to enumerate all the blessings I have received through Christian Science, but I want to tell of one healing which has been more significant to me than any other event of my life. For many years I was addicted to the use of an opiate. It was primarily administered for the relief of pain, but afterward became a daily necessity. I do not need to state here the sufferings, both physical and mental, which I have undergone in past years on account of this habit,—the loss of one position after another, together with the respect and confidence of friends and relatives, although many of them tried in every way to aid me. Physicians tried to give me help and encouragement. I was treated at a local sanitarium for some weeks, and the habit was broken temporarily, but I soon relapsed and became worse than ever.

I continued in this way for some time, trying my best, but was finally reduced to destitution, unable to make a living for myself and wife. With the assistance of friends I was at length sent to one of the best institutions in the country designed exclusively for the cure of drug habits. I remained there for several weeks and was discharged as cured, but after about three months I had to resort to the drug again. For a time I struggled desperately to hold my own, but health began to fail, and everything went wrong, until I realized that I could not last much longer. I actually prayed that death would come to my relief, as all known means for a cure had been exhausted.

One day, however, I found a *Christian Science Sentinel*, which in some unknown manner had come into our house. I had ridiculed Christian Science so much—largely on account of knowing nothing about it, also through the reading of articles on the subject which were entirely misleading—that the contents of this *Sentinel* were altogether different from what I had expected. I began to be filled with hope, and decided to investigate further, for my case was so desperate that I was glad to try anything which would help me. I went to a practitioner, who with marvelous patience listened to my troubles, and kindly and compassionately assured me that help was at hand; that "with God all things are possible." She gave me a treatment, and to my astonishment a feeling of peace, strength, and courage came over me. I willingly parted with the drug, and I have never had a desire for it since. I improved immediately in physical health, to say nothing of the spiritual uplift which I have received through a knowledge of the truth. I had often sought spiritual help, but it always failed to satisfy my anxious thought.

I am glad to state that my healing is permanent. I can

Digitized by Google

truthfully say that for four years and a half there has been no sign of the old desire for the drug, and I can say further that my spiritual regeneration is constantly advancing. I find myself gradually awaking to a fuller appreciation of the great possibilities of Christian Science as a moral and regenerating agent in the world today, and I am finding that I take a keener interest in the world's activities.

I am indeed grateful to Mrs. Eddy for bringing to the world this saving truth, and I am glad that I have gained a sufficient understanding of this Science to be able to demonstrate in a degree the healing power of Truth and Love.

ELIAS HALLENGREN, Galesburg, Ill.

The above testimony of my husband is true in every respect. I am thankful to God that we found the truth when everything seemed so dark and hopeless. I myself have received many benefits from Christian Science, such as health and new courage, for which I cannot be too grateful. I can only express my deep thankfulness to divine Love, and my gratitude to Mrs. Eddy for this great manifestation of Truth's power.—BERTHA HALLENGREN, Galesburg, Ill.

✧

I want to tell of my healing through Christian Science. When I came to Seattle I had been suffering from what the doctors diagnosed as a serious female trouble. In moving here from Portland, the packing and lifting of heavy things seemed greatly to aggravate this sense of weakness. I could not walk any distance, and to carry or lift anything heavy seemed to cause great suffering.

I had some understanding of Christian Science and tried to handle the case myself with the help received from the reading of Science and Health, but was not successful. I then applied to a practitioner, who gave me one treatment. I was leaving the city to be gone some time, but she said she would remember me. I was able to carry my heavy suit-case that day, walked over a mile, and rode twelve miles in a stage over a rough road before I reached my destination that night. I was not conscious of any pain and have never had a return of this weakness. I was completely healed in the one treatment.

My heart goes out in grateful appreciation to divine Love for helping me to a better understanding of this great truth. To say I am thankful for all that Christian Science has done for me, for Science and Health with its wonderful "Key to the Scriptures" which our beloved Leader has given us, expresses my feelings but slightly.

JOSEPHINE BACUS, Seattle, Wash.

✧

I was troubled for eight years with a condition of the arch of the foot. I suffered continually, and at times the pain was very severe. I could not bend my foot, and wore double braces of steel and horn all through the day. At night the foot was swollen, and the pain so acute that I could not rest. I had received practically no relief from medicine, except temporarily from an opiate or visits to the mineral springs.

About a year and a half ago I had another sudden attack, so that I could hardly walk. I limped to the telephone, called a Christian Science practitioner, and told her of my condition. She assured me that the pain would cease, and it did immediately. I prepared breakfast and did my home work, and suffered no pain from that time. About ten days later I dressed to go out and walked for three miles, but it did not tire my foot at all. When I returned home I discovered that I had forgotten the braces. Now I can stand on my toes, something which I had not done for years. I had no faith in Christian Science when I turned to it, but said that when in pain I would call on a practitioner and test it. It has stood the test, for I have had no further trouble with my feet since I had treatment. I am thankful every day for what Christian Science has done for me.

MRS. M. J. WILSEY, Willows, Cal.

✧

I wish to tell of the healing of illness in my family through Christian Science. My daughter's baby, when twenty months old, was very ill with a most serious bowel trouble. A doctor was called, and medicine was administered according to his directions. The child grew rapidly worse, however, and to all appearance was dying. Every one thought it was too late, but still a Christian Science practitioner was sent for. She came, sat down by the mother and child, and in fifteen minutes all saw a great change. Color returned to the child's face and he began to get warm, the purging and vomiting stopped, and all retired for the night (it was then one o'clock). The baby slept well, and was up in the morning completely healed.

There have been more recent demonstrations, and one I wish to speak of. I had rheumatism for several years, and finally could not raise my hands above my head. One day I had a severe attack which affected my heart, and a Christian Science practitioner was called in. She came and gave me treatment. The next morning I awakened to find the pain had left, and in a few treatments I had the free use of my arms. The healing has been permanent. I have been working every day since, sometimes out in the rain, and have felt no ill effects. I was healed at the same time of cramps in my limbs and feet that had troubled me for some time. I am very thankful for the blessings I have received through Christian Science.—M. D. VOORHEES, Baldwinsville, N. Y.

✧

It is now seven years since the light of Christian Science shone upon my life, and with each new experience comes a deepened sense of gratitude, a stronger resolve to pass on the good tidings of this rebirth of the Christ-idea, in which is "no variableness, neither shadow of turning," and a more earnest desire to apply it to my daily life that others may be led to the truth and to that peace "which passeth all understanding." Great happiness has been granted me in my earthly relations, and various physical inharmonies have quickly vanished into their native nothingness. Mrs. Eddy says in Science and Health (p. 494), that "divine Love always has met and always will meet every human need," however seemingly complex, and this is more and more deeply borne into my consciousness. The measure of my gratitude for this priceless blessing is boundless.

MARY S. BAXTER, London, England.

✧

It is with a heart full of love and thankfulness to God, and of gratitude to our dear Leader, Mrs. Eddy, that I send this testimony. I had stomach trouble for fifteen years. I tried the best physicians I knew of, only to find myself growing worse daily. I went to San Antonio, Texas, thinking perhaps the climate would do me some good, but I was no better; then I went to a Christian Science practitioner for treatment. She told me to eat anything I wanted and it would not hurt me. I did not take any more medicine, but I kept it in my room for a few days, until I found that God was what I needed and not material remedies; then I threw all the medicine away and read Science and Health. I was not healed instantly; it was about six weeks before I was

Digitized by Google

entirely well. It has been more than three years since then, and there has been no return of the trouble. I am permanently healed, and for this healing, and the spiritual uplift, I am very grateful.

I would like to mention the great joy I experienced in the healing of my son of a malignant growth in the nose. I received a long-distance telephone message from Dallas, asking me to come to him, so I went. I told him I had nothing to offer but Christian Science. He came home with me and I called in a practitioner. In four weeks he was healed, and is now perfectly well.

I have not words to express the gratitude I feel for the many blessings that have come to me and my family through Christian Science. I am thankful to God for giving us this understanding of Truth through Mrs. Eddy, our beloved Leader.—Mrs. L. J. Caldwell, Fort Worth, Texas.

✧

I have felt for some time that it was my duty as well as privilege to tell what Christian Science has done for us. Two years ago my wife was very sick when our little girl was born, as she had blood-poisoning. The baby's ears were in a very bad condition, and she was not well otherwise. The mother had to be taken away for an operation, and the baby was left with a Christian Science lady. The child came home well and strong and has had only one slight sick spell since, when Christian Science soon healed her. Since then, the truth has done wonders for us in many ways. My wife had dropsy and was under medical treatment for years. The doctor said he had done all he could, but could not help her. She is now well and strong as a result of the healing power of Christian Science.

We are indeed thankful to God for what Christian Science has done for us.—Alfred Bardsley, Wing, S. Dak.

✧

I have always enjoyed the testimonies in the *Sentinel* and the *Journal*, and I would like to add my word of thanks. Five years ago I was very sick and miserable from a nervous breakdown. I had tried all the means known to *materia medica*, but receiving no help, I turned to Christian Science. My healing came very quickly and has been permanent. Finding God, however, has seemed much greater and better than anything else. To think we can have the kingdom of heaven with us all the time, if we strive to know only good! I am very thankful there was a woman pure enough and spiritual enough to perceive this truth and give it to the world. Mrs. Eddy has made the way so plain that all who seek shall find.

Alice C. Fertig, Bronxville, N. Y.

✧

I wish to express my gratitude for what Christian Science has done for me. I have been entirely healed of heart, liver, and lung trouble, from which I suffered a great deal. It is now over seven years since I was healed. I feel very thankful to God for my healing, and I am also grateful to Mrs. Eddy for Christian Science.—Mrs. I. M. Orcutt, Milton, Wis.

✧ ✧ ✧

Let us then labor for an inward stillness,—
An inward stillness and an inward healing;
That perfect silence where the lips and heart
Are still, and we no longer entertain
Our own imperfect thoughts and vain opinions,
But God alone speaks in us, and we wait
In singleness of heart, that we may know
His will, and in the silence of our spirits,
That we may do His will, and do that only!

Longfellow.

From Our Exchanges

[Rev. H. S. McClelland, B.A., in *The Christian Commonwealth*]

If you are truly conscious of an intense desire for righteousness, God is intensely manifest in that desire. If you are sincerely following after the things that are true and good and beautiful, you already possess, within the depths of your being, the surest witness of His presence that the human heart can know. Nor is the day far distant when you will find yourself compelled to acknowledge that your love for the true and the good and the beautiful is the revelation within you of one who Himself is beauty, goodness, and truth. But that vision will come to you, O lover of righteousness, not as the sudden flash of the lightning that blinds the startled sleeper in the valley, but rather as the morning sunshine that softly creeps across the heavens and lights up the face of the traveler already moving toward the dawn. Pray for the coming of that hour. Live in the hope of it, for most surely it will come.

[*Zion's Herald*]

The church and the world are approximating, which does not mean that in their basic principles they are any nearer together than they were in the days of the apostles, but that the thought of many people is confused on moral issues, and less interest is taken anyway in the deeper experiences of the heart-life (where, if anywhere, a man must be right with God) than in the outward conformities to convention, which constitute the average morality of the age. The Neronic barbarism has gone, but in its place has come a self-indulgent indifference to questions of regeneration, conversion, and immortality, which, like Gallio, cares for none of these things.

The change, so far as the church is concerned, is not wholly for the better, for now it is not easy, offhand, to distinguish our friends from our foes, since both, in many instances, wear the same uniform. To be a thoroughgoing Christian, requires in the twentieth century not less courage, but more insight and judgment, than it did in the first century. The plausible, golden-mouthed world will undo all but the most wise and wary followers of Christ. The terror of the old persecutions has been succeeded by the lure of a pretty paganism. Who—now, as then—"is sufficient for these things?" unless he be filled with the Spirit of God, and constantly watch unto prayer?

[*The Christian Work and Evangelist*]

The reason that the disciples, and that small portion of the populace which joined with them, rejoiced so heartily in Jesus' entrance into the city, was that they thought he was going to reestablish a throne in Jerusalem, restore her lost power and prestige, and reign in might and glory. Their "Hosanna" was for a king of this world, for a ruler whose kingdom was to be great, dominant, instantaneous. He knew this and might have yielded. Had he done so, he would have been a great "success," and his cause would have been equally "successful" in the eyes of the world. But he knew that this would have been no success at all compared with the real and lasting success that abode in the seeming failure. He refused to adapt himself to the demands of the multitude. He simply won a handful of men to his cause, taught a few great truths which only a few understood, imparted a new life and vision to a few apostles who wavered even before he died, and then died, not in pomp and glory, but as a defeated man.

Yet this was success infinitely greater than would have come had he yielded to the popular conception. The few

Digitized by Google

men trained became lasting powers in the kingdom of God, and won many more to Christ. The great truths silently, as all great forces move silently, made their way through the years and transformed nations. The new life and vision has bred a new race of men.

[*The Christian Advocate*]

Those Christian leaders who are placing heavy emphasis upon social reform, have no intention of abandoning the work of teaching the doctrines of spiritual religion or the obligation of individuals to God. But they recognize the importance of counteracting the harmful influence of a state of things in the church described by Professor Peabody in these words: "The theological and philosophical interest of the life of Jesus has for the most part quite overshadowed his human and social significance. It has seemed more important to determine the relation of the person of Christ to the mystery of the Godhead than to determine his attitude toward the secular problems of the modern world."

This is a criticism which cannot now be made against the churches with the degree of appositeness which marked it ten years ago. The social teachings and implications of the Christian religion are at this moment assigned a place of priority in the instructions which proceed from our American pulpits. This does not mean that our religious leaders are forgetting the evangelical appeal to the individual conscience for a personal consecration to God, or ignoring the duty of preaching the offices of the Holy Spirit in convincing men of sin and transforming and sanctifying their lives.

[*The Universalist Leader*]

All along the way of religious progress the ecclesiastical world has placed scarecrows to frighten the timid soul back into the beaten path. The church has tried to mother the individual too long. And thus the soul in its passion for liberty hesitates, falters, knows not what to do. Trembling, it sits amid the shadows of its doubts, afraid to advance into the light.

The church should be the mother still, ministering, instructing, leading, but it should not bind and restrict. The wise gardener does not cut off the roots of the growing plant, but he gives it a larger pot or sets it out in the garden. Ecclesiastically, the principle has been to twist and crowd the roots of the unfolding soul so that it would be able to occupy the old pot. And even in advanced, up-to-date southern California, this truth applies in some measure.

[*The Pacific Baptist*]

Our every desire to be right, to be in harmony with the eternal laws of the universe of which we are a part, is the voice of the divine Spirit speaking to us. The secret wish within the heart that the life shall be pure, the simple wish to be true and good, the impulse toward nobleness that comes to every living soul in its best moments, is the voice of God speaking through the conscience.

[*The Standard*]

Our habits are a large part of our stock in trade. Our good habits are our stability in righteousness. We cannot live effectively without acquiring habits. But life is not mere habit. Life is progress. Life is attainment. And he who attains, must now and then survey a new path, and he will do well to try to straighten a few of its windings.

[*The Congregationalist and Christian World*]

The most up-to-date ethics in the world is the ethics of Jesus Christ. His insistence upon love and unselfishness, his refusal to despair of his fellow men, are ahead of and not behind the procession of modern thinking.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

We are glad to announce a lower schedule of rates for the cloth edition of "The Life of Mary Baker Eddy," by Sibyl Wilbur, and we believe that this will assist in a greater distribution of this valuable book. Single copy, cloth, $2.00; three copies, $5.50; six copies, $11.00; twelve copies, $22.00.

New photogravure plates have been made to replace the half-tone engravings in the edition de luxe of this book, and these plates, printed in a sepia ink, have greatly improved the appearance of the new edition. Single copy, $5.00; two or more copies, each $4.50.

"Christian Science: The Explanation of the Ideal Man," a lecture by William D. McCrackan, M.A., has been published in pamphlet form and is now ready for distribution. The sale prices are shown on the opposite page under the list of regular pamphlets.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for publication in the columns of the MONITOR should be addressed, Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.15; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10x7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church. June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church. June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.

Message to The Mother Church. June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman P. Brackett. Single copy 50 cents; six or more, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but mixed lots at quantity prices cannot be made up of different styles or of different styles of binding. *Attention is called to the exception to this rule which is made in the case of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for these works, and make remittance by New York or Boston draft or money order, to

Items of Interest

A concerted effort is to be made during the coming year to bring into use all of the remaining unused ranges in the national forests under the jurisdiction of the Denver office of the forest reserve. The forestry department seeks to utilize all of the accessible forage resources as far as possible consistent with the interests of timber and water conservation, and the permanent use of the ranges themselves. In consequence, practically all of the accessible areas within the national forests of Colorado, Wyoming, and South Dakota are now annually allotted to the live-stock industry.

That the attitude of the Brazilian government toward local manufacturers is one of protection, and that the protective policy is the cause for the high cost of living in the republic, are some of the claims of that portion of the population which insists on a complete revision of the tariff system. It is stated in influential quarters, not identified with the industrial enterprises, that Brazil has outgrown a tariff which places embargoes on importations, and which at the same time serves to enrich the few to the detriment of the many.

Postmaster-General Burleson has completed temporary arrangements for handling mail for Europe under conditions imposed by the withdrawal of many liners from service on account of the state of war in Europe. At least one mail each week would be assured by the vessels of the American line if all the big German, English, and French ships were taken from service. Ships flying the Italian, Dutch, Norwegian, or Swedish flags would be available at times to carry the Atlantic mails.

Arrangements are being made for laying a cable during this year between the Netherlands and England, with a capacity of two double wires. The expenditure will be shared by the two countries. It is intended to experiment in telephonic communication between England and Germany by means of this cable. Should these experiments give good results, the laying of a second cable, exclusively for use between England and Germany, will probably follow.

Because Servia did not give a satisfactory reply to her ultimatum, Austria-Hungary declared war against her July 29. Russia in consequence came to the aid of Servia. Following this, war is in progress, with Russia, France, and England on one side and Germany and Austria-Hungary on the other. Belgium has been invaded by Germany, and France and England are supporting Belgium in her efforts to repel this invasion and to maintain her neutrality.

The first formal ceremony in honor of the one hundred years of peace between the English-speaking nations occurred at Sulgrave, England, July 25, when Sulgrave manor, the home of the family of George Washington, purchased for forty-two thousand five hundred dollars, subscribed in Great Britain, was handed over to members of the centenary committee as a gift to the American people.

It is announced that December, 1914, is the time fixed for the commencement of the work of delimitating the Franco-Italian frontier in North Africa. The task is to be entrusted to two missions, and they will carry it out on the basis of the declaration of March, 1899, on the Franco-British convention of 1898. The distance to be covered by the missions amounts to two thousand kilometers.

Money from the federal treasury will be deposited in national banks throughout the country this fall, to facilitate the movement of crops and promote business generally. Secretary McAdoo will place approximately thirty-four million dollars, and says he is to increase the amount to any extent necessary to meet the country's need.

To carry out the provisions of the bill to assign naval auxiliary vessels and cruisers to mail and commercial use, passed by the United States Senate, the navy department announces that there are twenty-two ships in the navy of tonnages varying from six thousand to nine thousand six hundred that would be available for the work.

Windham hall, to be erected at an estimated cost of fifty thousand dollars, and to be presented to Connecticut College for Women in New London in token of the interest and devotion of the women of Windham county, has just been announced as an established fact. The funds will be raised by popular subscription.

The new light recently installed in the famous lighthouse on the island of Heligoland, in the North sea, can claim the distinction of being the most powerful flashlight in European waters, if not in the world. It is equal to forty million candle-power, and in normal weather is clearly visible a distance of thirty miles out to sea.

It is said authoritatively that the government of Brazil is favorably inclined to the erection of a building in Washington in which there would be a permanent display of the export wares and general products of that country, if the United States government will furnish a site free of cost.

President Wilson of the United States has tendered his good offices to mediate in the European war situation. He sent a message to that effect to the Emperor of Germany, the Czar of Russia, the Emperor of Austria-Hungary, the President of France, and the King of England.

Japan's statistical year-book reveals the following facts: The works with electrical power increased from 456 with 44,282 kilowatt capacity in 1908 to 1,153 with 844,023 kilowatts in 1911. The number of motors in use rose from 568 to 11,248 with 44,055 horsepower.

After an uninterrupted service of sixty years the United States Express Company retired from the transportation business at midnight, June 30, the close of its fiscal year. Officials of the company will at once begin work on the final liquidation of its affairs.

The production of coal in the United States has again broken all previous records, the output for 1913 being 570,048,125 short tons, which is considerably more than double the production of 1900 and more than eight times the production of 1880.

Argentina's commissioners to the Panama-Pacific exhibition are on their way to San Francisco. More than one million one hundred and fifty thousand dollars has been appropriated for the pavilion and the exhibits.

A walnut crop of 10,529 tons, of record-breaking superior quality, is the new estimate of the California Walnut Growers Association for the 1914 output of the state, contained in a circular issued to the trade.

Ground has been broken for the new four hundred and seventy thousand-dollar state highway from the Saratoga summit on the Santa Cruz mountains to the California state Redwood park in the big basin.

The Dominions royal commission is touring the British oversea possessions, inquiring into the natural resources, business, and manufactures with a view to developing interimperial trade.

The usual reception held on Independence day at the American embassy in Paris, was attended by over one thousand Americans from various states of the Union.

The national Senate of Colombia has voted five hundred thousand dollars gold for the purpose of improving the ports on both the Atlantic and the Pacific coasts.

On the urgent request of Secretary of State Bryan twenty peace plan treaties were ordered reported to the Senate last week by the foreign relations committee.

The Turkish budget for the current year calls for the construction of railways and other public works the sum of £T.50,000,000.

The Lever bill, designed to eliminate gambling features in cotton exchanges, has been passed by the House by 84 to 21.

The total debt of the forty-eight state governments of the United States on June 30, 1913, amounted to $422,796,525.

The United States embassy in Paris is to look after German interests in France and after French interests in Austria.

The United States has issued a proclamation of neutrality with respect to Austria, Servia, Germany, Russia, and France.

Owing to the state of war in Europe, all the large stock exchanges of the world have been closed for the present.

The annual value of agricultural products in Belgium exceeds three billion two hundred and thirty-three million francs.

Vermont will expend six hundred and seventy thousand dollars on approved roads during the year.

Conscious Power

CLARENCE W. CHADWICK

A GENTLE cuckoo that had built her nest in the pine tree in the front yard, was sitting quietly upon her eggs one morning when suddenly a four-footed visitor appeared upon the scene. His visit was not a friendly one, and the seemingly helpless bird lay prostrated beside her nest while the robber red squirrel regaled himself with the contents of her freshly laid eggs. Human intervention came too late, so that the poor helpless cuckoo, paralyzed with fear through her lack of conscious ability to cope with her adversary, deserted her nest never to return.

The experience brings a lesson to us all. How often have we given way to the enemy in just the same way, because unconscious of our God-given power of resistance! How often have we allowed fear to control, and lost sight of the fact that divine Love is ever present to cast out all fear! A few well-directed pecks by this cuckoo would have saved her this loss. She had the ability to dictate terms to her invader, but she was not conscious of this fact. Had a crow attempted to rob a king-bird's nest, he would have soon parted with some of his feathers and beaten a hasty retreat. The king-bird stands as a type of fearlessness and conscious power. He knows, he acts quickly, he conquers.

Illumined by the coming of Christ, Truth, many have realized and asserted their right and ability to resist evil. Enough of that "Light, which lighteth every man that cometh into the world," has been discerned by them to dispel fear and to cause them to "act as possessing all power" (Science and Health, p. 264). They thus ally themselves with the only power there is, which always means the sure defeat of fear whenever and wherever it would try to manifest itself. When the evil one would suggest loss or lack of power, they immediately disagree with sense-testimony and lay hold on the infinite, which is ever present and ever available. In this way their mental abode is protected, and there is never any occasion for deserting it. Error may boast itself in a thousand different forms, but they stand firm for what is real and right, and God is with them, a conscious power to defend and maintain their divine rights as children of God.

What a happy world this would be if all were conscious of their God-given power and always made it available in every hour of need! Why are they not conscious of God's presence? Because they are satisfied to judge according to an imperfect standard, a so-called blend of good and evil. They unwittingly place evil on a par with good, and the moment this is done, the all-power and presence of good is lost sight of. Like the unfortunate cuckoo, they see with their eyes, and believing what they see, fear becomes their master and God is forgotten. They of the king-bird type, however, think, speak, and act "as one having authority." What if the enemy boasts of his superior size and strength? This counts for nothing with those who are conscious of living, moving, and having their being in God. Every mental structure reared upon the dual foundation of good and evil, mind and matter, is a house built upon sand, and it will fall sooner or later. The haunting shadow of fear will be its inseparable accompaniment. The only mental structure which will endure will be reared upon the rock, the spiritual consciousness of the omnipotence and omnipresence of Spirit, the teachings of Christ Jesus as applied to our present needs in Christian Science.

Which is the strongest evidence of sanity and sound common sense,—a mental state which is conscious of a presence, power, and law which operates unseen to the outward gaze, which recognition enables one to be free from fear and to conquer sin and disease, or that mental state which is unconscious of the working of any higher power and which yields willingly or unwillingly to suggestions of fear, sin, and disease? The one fairly describes a student of Christian Science; the other a dualist who has not yet learned to make a scientific or demonstrable separation of the wheat from the tares in his own consciousness. Which will soonest attain to that Mind which was in Christ Jesus,—the one who sees and thinks materially, or the one who sees and thinks spiritually, in opposition to sense-testimony? The great Teacher gave no uncertain word as to man's divinely bestowed ability to resist successfully every attempt of error. These are his words: "Behold I give unto you power to tread on serpents and scorpions, and over all the power of the enemy: and nothing shall by any means hurt you."

To make our point clear, let us suppose that the argument of mumps obtains in human consciousness. The dualist, not having learned to place health on any higher plane than he does disease, agrees with the testimony of his senses, admits that there is every evidence of the trouble mentioned, and confidently looks for it to develop and run its prescribed course, which it is very likely to do under such conditions. Any one will admit that this state of mortal consciousness as described was certainly seeing and thinking materially, and even Christian Scientists will admit that it actually had what it believed it had. The Christian Scientist, seeing the manifestation as mental, disagrees with the argument as presented, looks beyond and above the outward evidence of disease, remains entirely quiet upon the subject, not caring to talk about it to any one, clings to the perfection of being in God, wherein man is spiritual and as free from disease as God Himself, and behold the result,—all evidence of inflammation and swelling disappears, and in a few hours the subject is entirely forgotten. The trouble was not expected to develop, nor was there any law acknowledged by which it must run its so-called course.

Was the dualist honoring either God or man by submitting to the dictum of the so-called material senses and evolving the experience of mumps? Was the Christian Scientist dishonoring either God or man by letting that Mind, or consciousness, be in him which Jesus employed to destroy the evidence of sin, disease, and death? Let a thinking world decide quickly which is practical Christianity,—that which calls disease and sin real, and fails to overcome them in individual consciousness, or that which recognizes their unreality and then consistently masters them through the

conscious understanding of the reality and power of good, the allness of God. "Oh that men would praise the Lord" by becoming conscious of God's power and presence, which denies positively, effectually, and eternally the supposition of any other power or presence!

✦

Belief

NINA V. WRIGHT

To many of those taking their first steps of serious thought concerning the practical reason for truths taught in Christian Science, the matter of supply, in its various manifestations of health, wealth, or contentment, is sometimes apt to be confusing. The beginner in Christian Science is very often found to be badly entangled, and at first perhaps unable to distinguish definitely between the seeming conditions of harmony in the mortal man and the absolute facts of harmony in the spiritual man.

To the seeker's beclouded thought at this stage, whatever conditions appear to his vision as those of health, of wealth, or of optimism, he promptly accepts as natural and spiritual, while he would be very unwilling to admit as belonging to the real man, the evidence of sickness, poverty, or the irritable, selfish characteristics of disposition. He very readily grasps that the conditions which appeal to him as inharmonious cannot coincide with his idea of man in God's image and likeness; but he does not so readily comprehend that the manifestation of physical health, material riches, or other things, which are only the result of mortal beliefs, must be equally untrue, and must therefore, by reason of their unsubstantial foundation, be detected and exchanged for the absolute knowledge of that which constitutes reality. It must finally be understood that a belief of health in matter, or of wealth in materiality, is just as erroneous, just as devoid of reality, as is a belief of sickness or of poverty.

To illustrate further may be helpful. Let us imagine that this beginner in Christian Science, who has become confused in this matter of differentiating between the seeming of material health and the actuality of spiritual health, has a friend. This friend manifests a perfectly healthy body; financially he is well established and is prospering daily; his natural disposition is one of contentment and optimism. He is what is generally termed a good man, goes to church on Sunday, is kind, never runs in debt, and is charitably disposed, though knowing nothing whatever as yet of the Christian Science way of thinking.

Again, let us suppose that this beginner has another friend, who is a good man, and he sincerely tries to do what is right in so far as he sees. He is perfectly honest, has always lived up to what is acknowledged to be the ideal of manly uprightness, but physically he is a wreck, a hopeless invalid, and a sufferer for life. He is also in stringent circumstances and knows nothing of Christian Science.

Our new seeker after the truth of things very naturally compares the different mentalities of these two men and tries to find a satisfactory explanation of their individual circumstances. The sense-evidence of the first friend's condition will perhaps be mistakenly accepted by him as the result of spirituality, "because," he argues, "he is a good man;" but he has forgotten the important fact that his friend knows little or nothing of the scientific basis of right thought. Reasoning further, if he concludes that his friend's prosperity is the natural outcome of his having been a good man, how does he account for the manifestation of ill health and poverty which seems to be the sequence of his other friend's past good life?

Obviously this seeker cannot reconcile the sense-evidence before him in these individual cases, and they do not seem to be in harmony with his understanding of what Christian Science teaches. He is therefore confused and disappointed because of these seeming inconsistencies. Can it be that this ideal Christian Science religion, which had promised so much, is, after all, quarreling with itself on some points? Just here he ought to be led to see that the truth of the situation rests on the fact that the different mortals of whom he is thinking are equally sound asleep, each snugly cradled in a dreamland of materiality and its beliefs in a power of its own to give both pleasure and pain. The one needs to be roused from his belief of a healthy material body, from stagnant conditions of belief in material wealth, and from a belief in the possession of an optimistic temperament, the source of whose very optimism is, after all, but a belief in mortal mind as being endowed with ability to bestow happiness instead of unhappiness. The other needs to be awakened from the belief in sickness and poverty as belonging to man or being part of him.

In Science and Health (p. 297) Mrs. Eddy says, "It is as necessary for a health-illusion, as for an illusion of sickness, to be instructed out of itself into the understanding of what constitutes health." This may also be suitably applied to the illusions of material wealth and of temperamental qualities. Any manifestation of material sense, whether it be one of health or one of sickness, of happiness or unhappiness, is not real, and is subject to chance and decay. By a law of its own making, it is eventually sure to tumble in reaction, like a house built on the sands. It cannot stand. When one's thought has its origin in spiritual knowledge it becomes the basis of lasting health, enduring success, and abiding peace.

Reasoning still further, this new inquirer into Truth's way may again stumble over the mistaken notion that, because of his previous ignorance of the true spiritual basis of supply, his past accumulations must needs flee from him, or that his good health is likely to be lost because of its having been the expression of a false belief of health as pertaining to a sound body. This does not necessarily follow, however, and need not, even for one moment, be an occasion of fear. When he is sufficiently enlightened as to the truth of being, when he has awakened to the fact that real health is a phenomenon of spiritual understanding, his feet will be planted upon the rock. By taking thought, first for the spiritual, as taught in Christian Science, health and supply naturally follow as consequents. We cannot possibly persist in thinking along spiritual lines without expressing the fruitage of this right thought in our experience. We thus come to determine for ourselves the nature of experience; we make or mar it according to our own processes of thinking, and it is our God-given privilege to make it the best.

✦

Our Work

JOSEPH B. BAKER

Our work as practitioners of Christian Science is to heal, and only secondarily and incidentally are we to expound the letter of Science, until such time as this work is accomplished, or at least well under way. As Mrs. Eddy writes on page 414 of Science and Health, "Explain Christian Science to them, but not too soon,—not until your patients are prepared for the explanation,—lest you array the sick against their own interests by troubling and perplexing their thought." What would be thought of the cook who neglected the serving of meals to read recipes to her busy and hungry employers,

Digitized by Google

or of the locomotive engineer who let the time of departure of his train go by in order to lecture to his passengers on the expansive force of steam? While the cook might very well inform some one who asked her about her work, and the engineer might find time to explain to an inquirer how the steam turned his driving-wheels, each would understand that such instruction should not be given at the expense of the work regularly expected of them, the practice of their respective professions.

In the grandest and most glorious of all professions, Christian Science, should we depart from the practice of this Science in order to expatiate on doctrinal points, when our brother shows so plainly to the alertly compassionate heart that he needs to be healed? Should we "talk Science" to him, if doing so means leaving the healing undone? In Job we read, "Remember that thou magnify his work, which men behold." Let us acknowledge God's allness in the very beginning of every treatment. Let us "bind up the broken-hearted," and be sure to hold the right thought and give the encouraging, the helpful word in season; then, if opportunity comes, utter the precept, a seed dropped into soil prepared by divine Love.

With the right motive, love for God and man, and the right purpose, the destruction of all error, we shall at least hold in abeyance obstreperous selfhood, which would spoil our well-meant efforts to help the world to Christian Science. Jesus said very earnestly, "The Son can do nothing of himself, but what he seeth the Father do," and our Leader has written, "Spiritual living and blessedness are the only evidences, by which we can recognize true existence" (Science and Health, p. 264). The world, no less than the practitioner of Christian Science, is waiting for these evidences, and the world must see them of its own accord. If we continually remember that we may safely undertake to offer less instruction in the letter of Christian Science, if by so doing we may accomplish more of healing, we shall then be "faithful over a few things," and so find the way to greater usefulness.

Clouds Dispelled

JOEL HARRY BENSON

In the purple valley the travelers paused and gazed skyward. The heavy fog was not yet dispersed, and the progress up the mountain was slow and toilsome. As the party advanced, the mists about them appeared to thicken, but at length a few rays from the rising sun glanced over the summit of the mountain and the bodiless vapor seemed to scamper away. Then, having attained some height above the clouds, they watched the beams of light dispel the mists, which soon disappeared. The lesson was self-evident.

Standing in the valley of discouragement, how often do we gaze ahead and seemingly upward at a cloudy outlook, with error moving the fearsome shadows of mortal belief expressed in unhappiness and discord! We must rise above the mists of corporeal sense and the limitations of mortal law, as did Jesus' disciples, by following Christ, Truth, up the mountain, there to approach perfection "from the summit of devout consecration" (Science and Health, p. 367). The deep sea, often used to symbolize the asserted entity of error, overwhelms the thought that lingers on the level of the surging tide of passion and woe, until it is uplifted by divine Love. As soon as darkness comes into the presence of light, "the former things are passed away."

At the Wednesday evening meeting, a cloud may arise through some word or phrase being dropped by a speaker in giving his testimony, but the meeting fulfils the purpose for which our Leader established it when it becomes a "feast and flow of Soul" (Miscellaneous Writings, p. 149), through that charity which most fully reflects divine Love. To know silently that mistakes cannot creep into a meeting governed by divine intelligence, will help much. A wise word from another speaker, or the reader, may dispel the cloud, as witness the following examples: A lady testified that she had found one must work out his own problems; that in sickness one must do all his own work and not ask for help. Later, another sly fox crept in through the attempt to express gratitude for what "little" knowledge of Christian Science the speaker had.

At the close of the testimonies, the reader stated that he was grateful for the help he had received in Christian Science. He also administered a gentle rebuke, not to any person, but to the thought that we cannot receive help through a Christian Science practitioner, by telling of the experience of a little girl who, in climbing a steep hill, stumbled and fell. She was unable to rise, and it was only with the assistance of a passer-by that she regained her feet. Of course, he said, she did not expect this man to carry her up-hill, although she could have further help should she fall again. Having arisen, she was able to continue her journey, forgetting her past difficulties in her desire to avoid those ahead. Through another illustration the gratitude for the "little understanding" was augmented by the thought that any understanding of Christian Science cannot be called little, for the truth is the "pearl of great price" and cannot be judged by degrees. Proving that two and two are four, not sometimes but always, demonstrates a rule of mathematics as certainly as does the solution of a great problem. Of all good there is an infinite supply.

Mortal mind is the only cloud, and it has no more power than the mist in the valley when we look down on it from the mountain peak. It was only, however, when the man "sick of the palsy" had become quite ready to give it up, that Jesus said, "Arise, and take up thy bed." In an important sense we make our own surroundings. If clouds are about us, it is because we give place to them. As we ascend, our horizon changes, our view grows broader, until we get above the clouds; then, as we read in Science and Health (p. 110), we view the "radiant reality of God's creation."

Truth's Steadfastness

ANNIE C. MAY

In Biblical history the lives of prophet and apostle supply many helpful lessons. We find Moses at eighty years of age learning meekness and contentment while employed in tending sheep near Mount Horeb. Here he saw more of God than he had ever seen in Pharaoh's court, and his experience proves that those who seek God diligently, find Him wherever they may be. As truth was unfolded to Moses, he expressed his readiness to obey, and thus received the promise of God that His people should be delivered from their bondage.

Pharaoh had long sought to effect Israel's destruction, but in the providential order his own daughter had preserved one who was to become their deliverer. The land of Egypt had become to Israel a house of bondage, instead of a refuge in time of famine. The king's obligations to Israel on account of Joseph's service to the country seemed to have been forgotten, for we read that there arose a new king "which knew not Joseph," and who by means of taxation brought the Hebrews into absolute enslavement. Taskmasters made them "to serve with rigor;" nevertheless they increased wonderfully. Separated from the Egyptians, they remained a dis-

Digitized by Google

tinct people, and it is written that God dealt well with them, and prospered them in all they did. The poorest of the oppressed were not forgotten of God, even though they had rebelled against Him. Thus we see that "whatever envy, hatred, revenge—the most remorseless motives that govern mortal mind—whatever these try to do, shall 'work together for good to them that love God.' . . . Because He has called His own, armed them, equipped them" (Miscellaneous Writings, p. 10).

The truth cannot be banished from individual consciousness, and the promises of God bring speedy deliverance from the tyranny of persecutors. When we are conscious of the divine power, we shall see the manifestations of Love. Though seemingly crushed by slavery, the Hebrews were blessed with divine guidance in their forty years of wandering, and their every need was supplied. The divine wisdom, power, and goodness were to them "new every morning." Thus may we find assurance that though the years seem long to us before complete deliverance is realized, our Father "fainteth not, neither is weary." Divine Mind is ever active, ever operative. There may be a Red sea for us to cross, but we shall be led through it, and the bitter waters will be made sweet. Many steps may have to be taken before we reach "the sinless joy,—the perfect harmony and immortality of Life, possessing unlimited divine beauty and goodness without a single bodily pleasure or pain" (Science and Health, p. 76). High tasks are before us, and we cannot be released from one of them; but our guide is "the living God, and steadfast forever." Who or what can harm us if we be followers of Him that is good?

God's promises as revealed to us in the light of Christian Science, are indeed wells of salvation to those who are breaking away from the bondage of material sense. For this we must needs praise Him, and make mention of it to others. The standard is set up, and whosoever will may come and enlist for service. God has called, and His power goes with the call. His people find both rest and shelter by the way, and no evil shall befall them, neither shall any plague come nigh their dwelling. In God's care we are secure and confident. His promises are an everlasting heritage, and He has made them "an everlasting covenant." All the treasures of Truth are given us freely. Surely our Father is most kind and bountiful to all; a refuge to those in distress; a support to the afflicted, giving new hope to those who else were hopeless. He is faithful who hath promised.

✧

No Material Weapons

MAUDE J. SULLIVAN

On page 254 of Science and Health we read: "The human self must be evangelized. This task God demands us to accept lovingly today;" also on page 369, "It is error even to murmur or to be angry over sin." The student of Christian Science will do well to study these statements, making sure that he accepts his task in the manner enjoined. Does the Christian Scientist ever accept his daily task unlovingly? Does he ever take up the sacred weapons of Truth, declaring that God, good, is omnipotent and omnipresent, the while his consciousness is filled with resentment at the seeming reality of wrong or of disease, or perhaps rebellion that there is a problem to solve? Though bravely trying to meet some situation, does he ever murmur over sin, bemoaning the magnitude of the error, or bewailing the fact that there is in his experience "so much to meet"? He cannot do any of these things if he is truly a Christian Scientist.

A wonderful help can be derived from the study of the seventeenth chapter of the first book of Samuel,—the story of the overcoming of the Philistine giant by David, the shepherd boy of Israel, and the observation of his motive and manner in the conflict. The youth, in obedience to his father's command, had gone into the camp of the Israelites, and almost immediately was confronted with the boastful Goliath, who had terrified Israel's mighty warriors. But David's vision was clearer than theirs. He had proved the power of the living God while tending his father's flocks; and he saw in the giant, not a personal enemy, but a defiance hurled at the army of the living God. In His name he met this defiance, declaring, "The battle is the Lord's," his one desire being that "all the earth may know that there is a God in Israel." David went forth in the power of Spirit, Mind, discarding all the carnal means of warfare offered by King Saul. How sublime was his trust as he said in refusing them, "The Lord that delivered me out of the paw of the lion, and out of the paw of the bear, he will deliver me out of the hand of this Philistine." There was no trace of anger or resentment in his attitude. He certainly accepted his task lovingly; for, as the account clearly states, "David prevailed over the Philistine . . . and slew him; but there was no sword in the hand of David."

Turning to page 595 of our text-book, "Science and Health with Key to the Scriptures," we find one of the definitions of sword to be, "Revenge; anger." The lesson is plain to all Christian Scientists. We should, like David, accept our task lovingly, desiring only to prove the omnipotence of God. We should go forth to the conflict with error, with no sword, no thought of revenge or anger, murmuring not in the least over the assault of sin. To murmur thus, our Leader tells us, is an error in itself. We have the promise that God will not suffer us to be tempted above that we are able; so we may be assured that, like David, we shall never be called upon to meet a giant until after we have overcome a lion and a bear.

The writer's attention was called to these truths by a practitioner during treatment for physical discord. An attack of error, boastful and seemingly gigantic, had been confronting her, and not until these truths were revealed did she see that it was "the human self" which "must be evangelized," and she had not accepted the task lovingly. She had been persistent in declaring the truth, but had murmured and been "angry over sin," making revengeful thrusts at error for its seeming existence; but with this clearer sense of Truth, the physical discord was soon overcome.

When one is willing to abstain from the use of the sword, discarding from consciousness the least suspicion of revenge or anger, even ceasing to murmur over sin, the attitude cannot fail to be loving, and the results in harmony therewith. The weapons of our spiritual warfare must express Truth and Love, and as this is clearly understood we shall find, as St. Paul assures us, that Love "never faileth."

[Written for the *Sentinel*]

Benedicite

WARREN C. KLEIN

Boundless as the vast blue sky
Is the thought when lifted high;
Fragrant as the spring's sweet scent
Is the mind that doth repent;
Nurtured as the beauteous flower
Is the life that knows Love's power;
Joyous as the lark in May
Is the sense that learns the way;
Peaceful as the gentlest sea
Is the heart at-one with Thee.

Selected Articles

[Frederick Dixon in *Weymouth* (England) *Telegram*]

A recent critic has for weeks past been insisting on the reality of matter, as though no natural scientist had ever questioned it, and has been pouring contempt on the teaching of the unreality of matter as if the ranks of the great thinkers, from Plato to Lord Kelvin, had never known an idealist. Even now he seems a little puzzled as to what reality really means in Christian Science, and I desire to enlighten him on that point, and then to leave the whole matter, as far as I am concerned, to the judgment of your readers.

To the ordinary man, reality is comprised in the evidence of the physical senses. Being, as a rule, what a great thinker has described as a common-sense scientist, a scientist, that is to say, who measures physical phenomena solely by his material consciousness, he never seems to stop to think what this results in. If he did, he would begin to realize that a great part of his education has been devoted to removing the false impressions conveyed to him by these senses, impressions so vivid that in the past men have persecuted their neighbors without mercy for rejecting them. To the physical senses the earth is a plane, and it required centuries to convince the human mind of anything to the contrary. To the physical senses, again, the sun moves around the earth, and so ineradicable is this impression that a great natural scientist has declared that he could never rid his senses of this belief, though scientifically he knew it to be untrue. So tenacious, however, are the senses of their delusions, that men were once tortured for proclaiming these facts, which are now taught in every school. At the same time, so little has the human mind learned, that it is just as ready to attack the Christian Scientist of today for insisting that the only reality is the spiritual, as it was, in the centuries which are past, to burn Bruno and to imprison Galileo for explaining to it the relative truth with respect to physical phenomena.

Jesus, in explaining the signs of the times to his disciples on the Mount of Olives, declared, "Heaven and earth shall pass away, but my words shall not pass away." The old human concepts of heaven and hell are rapidly passing away, but men hold almost as tenaciously as ever to the reality of the physical heavens and the physical earth. They admit that their fathers' ideas of paradise and purgatory, evolved largely from the poetry of Dante and of Milton, were as mythological as those pictured to the Greeks and Romans in the pages of Homer and of Virgil. They are, however, unwilling to go a step further and to admit that the material view of heaven and hell is nothing but a material concept of future life, rooted in a belief in the reality of the physical universe.

Yet only as mankind begin to understand the manner in which Jesus said heaven and earth would pass away, will it be possible for them to see the new heaven and the new earth; to see, that is, the eternal, spiritual reality of those material clouds and mountains which seem so real today, viewed through the material senses. Christian Science does not teach that the clouds and the mountains are unreal in the sense that when they pass away there will be nothing left, but in the sense that they are the material counterfeits of the new heaven and the new earth, and that, consequently, these can only become visible when, as Mrs. Eddy writes on page 312 of Science and Health, "the sense-dream vanishes and reality appears."

For centuries Christendom has read that oft-repeated saying of Christ Jesus to the woman of Samaria, "God is a Spirit: and they that worship him must worship him in spirit and in truth," and has gone on its way insisting that God made the material universe, without apparently heeding the confusion to which this leads. It would mean that Spirit is the father of matter, that divine wisdom has created something which "profiteth nothing," that the creation of God will one day pass away, and so it ends by admitting unconsciously that matter is temporal after all. Now that which is temporal cannot possibly be eternal, and that which is not eternal cannot logically be described as real; therefore the Christian Scientist takes his stand on the fact that nothing can be described as real which is not the creation of the divine Mind, and that as this Mind is Spirit, the spiritual alone can be defined as real. This fact, that all causation is spiritual, is the knowledge of the truth which Christ Jesus said would make men free, and it makes them free by showing them that there is no material law capable of binding them, for the simple reason that the only reality matter has is the supposititious reality with which they themselves endow it, when they mistake it for the creation of Principle.

This being so, the Christian Scientist does not say the age of miracles is departed, on the ground that the miracle was a supernatural interference with the physical laws instituted by God for the government of the world. He says that the miracle is the divinely natural result of the knowledge of Truth, which Jesus said would make men free, and that this knowledge of Truth includes a realization of the fact that physical law and material phenomena are the counterfeits of the spiritual law and spiritual universe, which are the real and only creation of divine Mind. Consequently, the way to worship God, who is Spirit, "in spirit and in truth," is to strive to walk in the footsteps of Christ Jesus, and by divorcing so far as possible from our consciousness any belief in the reality of matter, to be able to set aside its supposititious laws as Jesus did in the miracles. If these laws had really been God's laws, the miracles would have been not merely supernatural, as supernatural is commonly construed, but superspiritual; for Jesus could no more have reversed an effect of divine causation than omniscience could forget something it already knew.

The miracle was the object-lesson in proof of the truth of the theology of Christ Jesus. Those, he said, who understood the one, would be able to perform the other. The healing of the sick, consequently, in Christian Science, becomes something of far vaster significance than the mere overcoming of disease, important as that is. It is the proof which has already brought to hundreds of thousands of sick and sorrowing men and women the assurance that the promises of Christ Jesus are just as true and just as realizable by the world today as they were by the sick and sorrowing ones through whose streets he walked well-nigh two thousand years ago.

✦

[C. H. Spear in *The Burlington* (Iowa) *Free Press and Times*]

Your article in the *Free Press* of recent date would create the impression that to "just imagine that things are all right and they will be all right" is Christian Science teaching. As this is false, and voices one of the stock misconceptions of Christian Science teaching, I know you will in justice give space to correct it. C. S. not only stands for Christian Science, but also for common sense.

On page 354 of Science and Health Mrs. Eddy says: "The opponents of divine Science must be charitable, if they would be Christian. If the letter of Christian Science appears inconsistent, they should gain the spiritual meaning of Christian Science, and then the ambiguity will vanish. The charge of inconsistency in Christianly scientific methods of dealing with

Digitized by Google

sin and disease is met by something practical,—namely, the proof of the utility of these methods." Jesus said, "By their fruits ye shall know them." Before a vast audience in New York recently, Jacob S. Shield, member of the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., explained Christian Scientists' attitude in times of depression as follows:—

"What is true of the human body is also true of the body politic. A panic produces a rigid state in the arteries of trade, in the manufacturing and commercial centers, so that nothing seems to move without extreme pressure. The dictionaries define panic as 'extreme or sudden causeless, unreasonable fright.' To cure such a condition, confidence must be restored. It was the great cry during the panic of 1907 that everything would be righted if only the fear of the people would relax. If all people were Christian Scientists, there would be no more panics, because they have confidence in the protecting and sustaining care of their heavenly Father, and thus lose the sense of anxiety in regard to their supply. They believe in the verity of the statement of our Master, 'Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you.'"

This shows plainly the difference between your recent statement and the real Christian Science attitude, which is faith in God and absolute reliance on Him. Jesus said, "Wherefore, if God so clothe the grass of the field, . . . shall he not much more clothe you, O ye of little faith?" When the tempest arose and Jesus' disciples roused him from sleep, his first words were, "Why are ye fearful, O ye of little faith?" When Peter attempted to walk the water, but finally felt himself sinking, "immediately Jesus stretched forth his hand, and caught him, and said unto him, O thou of little faith, wherefore didst thou doubt?" To the blind, to the leprous, and to many others he had substantially but one form of answer, "According to your faith be it unto you." To his disciples' question, "Why could not we cast him [the evil spirit in the demoniac] out?" Jesus said unto them, "Because of your unbelief: for verily I say unto you, If ye have faith as a grain of mustard-seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove."

In Mark, Jesus sums up his teaching in one terse injunction: "Have faith in God." And Christian Science teaching may also be thus summed up: I speak from knowledge gained through experience. The business man in distress who turns to Christian Science for relief, finds his worry replaced by confidence, doubt by assurance, discouragement by good cheer, and greed by kindliness. Good things begin to come his way. Obstacles and difficulties that seem mountain high, dwindle into mole-hills that he can easily step over, and he again plans with sagacity and executes with vigor. Mrs. Eddy says on page 128 of "Science and Health with Key to the Scriptures": "Business men and cultured scholars have found that Christian Science enhances their endurance and mental powers, enlarges their perception of character, gives them acuteness and comprehensiveness and an ability to exceed their ordinary capacity."

The condition of a man's business and the condition of his thought are apparently interdependent and homogeneous, but in reality his thinking is causative and his business the effect. Christian Science inculcates right thinking about all the essentials of living, including occupation, profession, business. This thinking being measurably in accordance with the laws of God, the source of all real power is dynamic, efficient, influential, and its effects are noticeable in whatever direction it may be turned. As it is potential for good only, its results are never selfish, subversive, or depressing, but always constructive, buoyant, beneficent. If his own mental attitude is right, the law of God becomes a law in his life and in all his affairs, and he may expect help and protection from it to the extent he demonstrates it. In this way Christian Science rescues the business man, fits him for a truer service, perfects him in what he is doing, finds for him better things to do, or makes him content with what he finds to do; gives him, in short, a wiser, happier, sweeter spirit in all his relations with his fellow men. The understanding of truth as Christian Science teaches it, makes a man worthy to be protected and then protects him.

✣

[Willis D. McKinstry in *The Weekly Republican*, Galena, Kan.]

Mrs. Eddy does not teach the immortality of the flesh or the resurrection of a corporeal or material body from the grave, but what she does teach regarding the eternal life of man, fully coincides with the teachings of the Master. Jesus' saying, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent," signifies that he regarded man's life, not as a material or bodily something, but as a spiritual state of consciousness, even the idea or manifestation of divine Mind, God. Other sayings of Christ Jesus show quite clearly that he also considered heaven a mental state of being, rather than a locality, or a somewhere proposition. "And when he was demanded of the Pharisees, when the kingdom of God should come, he answered them and said, The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you."

On page 492 of Science and Health Mrs. Eddy writes: "The notion that mind and matter commingle in the human illusion as to sin, sickness, and death must eventually submit to the Science of Mind, which denies this notion. *God is Mind, and God is infinite; hence all is Mind.* On this statement rests the Science of being, and the Principle of this Science is divine, demonstrating harmony and immortality."

The warning of the Scriptures to beware of false prophets and of anti-Christs is unmistakably clear, and they give a rule whereby it may be known whether a thing is true or false. The Bible informs us that at one time John the Baptist became somewhat skeptical upon this question and sent some of his followers to inquire of Jesus, "Art thou he that should come, or do we look for another?" and Jesus' reply was, "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them."

The works that Jesus did were for all time, and an example unto all men, for, as he said to Philip, "He that believeth on me, the works that I do shall he do also." Through the teachings of Christian Science mankind gains a scientific knowledge of Christ as the Saviour of the world, and it is upon this understanding that The Church of Christ, Scientist, is founded. This church is now established throughout the world, and the proof of its usefulness is shown by its redemptive and regenerating works.

✣

[C. L. Ramsay in *The Forfar* (Scotland) *Herald*]

My attention has been called to a reference to Christian Science which appeared in your paper in the account of a lecture on "Healing: Physical, Mental, and Spiritual," given under the auspices of the Theosophical Society. As most people are interested in the subject of healing and many are wondering what Christian Science is, perhaps you will allow me to say a few words on the subject.

Christian Science has nothing in common with theosophy or new thought; it does not employ suggestion, and it differs

Digitized by Google

greatly from faith-healing as that term is generally understood. The basis of Christian Science is simple yet profound, for it is founded on nothing else than the actual, essential nature of God Himself, infinite Spirit or Mind, the "great First Cause," who, according to the first chapter of Genesis, made all that was made and pronounced it good. Starting from this premise, Christian Science argues that man, made in the image and likeness of God, his creator, must have been made in the image and likeness of Spirit, or Mind, and must therefore be, in his true, essential nature, spiritual and good. Viewed from this standpoint, sickness and sin, sorrow and suffering, discord or distress of any kind, cannot be any part of man's true and actual nature or being, and so must be transitory, impermanent, the result of error or misconception of the real nature of God and of all things.

Fear, worry, anxiety, together with all that is usually classed as sin, are known to be sources of disease. The Christian Scientist sets to work to free his patient from all sense of fear or any other distress of mind or body, not by suggesting to him that he is not afraid, but by convincing him that there is no cause for fear or distress, since God, omnipotent and omnipresent good, is the only cause. As the consciousness of the presence and power of good takes possession of thought, the sense of pain and distress vanishes, as darkness flees before the light of day, and the patient finds himself well. Thus Christian Science teaches that sickness is of mental origin, springing from ignorance of God and the primal facts of being, and heals it by the right understanding or true knowledge of the nature of God and man. Hence its claim to be scientific. "Ye shall know the truth, and the truth shall make you free."

✧

[Robert S. Ross in *The Evening Sun*, New York, N. Y.]

My attention has been called to a report in your paper of the death in Brooklyn of Mrs. ——, in which you stated that she had been having Christian Science treatment, and that the coroner's office was making an investigation. In this connection, permit us to call attention to the fact that one of today's New York papers had a list of one hundred and twenty deaths in the usual column used for that purpose. This may be regarded as an average daily record. In New York state during the year 1913, approximately one hundred thousand deaths occurred, nearly half of them children. With but an insignificant number of exceptions, all these occurred under some form or other of medical treatment.

Our purpose in giving these figures is not to decry the medical profession, but to show how unreasonable it is for the medical societies to make a cry about an isolated failure on the part of a Christian Scientist and ask for an "investigation," when the number of failures of *materia medica* is legion. Fortunately for medical practitioners, public thought has been educated for centuries to say "Amen" when people die under medical treatment. Such deaths are "regular." Others are classed as "irregular." Thus, unless one dies *à la mode*, his practitioner is haled to court for "practising medicine without a license," and his family is unjustly embarrassed and humiliated by absurd newspaper "stories."

These attacks on Christian Science are made, not because of its failures, but because of its successes. If Christian Science had not succeeded in most cases, its followers would long ago have been overwhelmed by public opinion. But the fact is, that the Christian Science movement is made up largely of those who have been healed by Christian Science after having been given up as hopeless and incurable by other systems of healing. At the present time, unfortunate as it may be, the state recognizes, sanctions, and financially supports one school of medicine, and through so-called health laws is forcing the views of this school upon the public, classing as outlaws all other systems of healing. The state might just as well recognize, sanction, and support one system of religion, for state religion is no more unconstitutional than state medicine. Yet state religion would not be tolerated.

If the right to adopt one's religion is sacred, the right to select one's practitioner is just as sacred. The state has no right to interfere in either, and the time is not far distant when this fact will be clearly seen.

✧

[Albert E. Miller in *Boston* (Mass.) *American*]

In dealing with the subject of life, Mrs. Eddy's teachings emphasize the eternal nature of all that reflects God. Jesus' statement, "I am come that they might have life, and that they might have it more abundantly," is borne out in the mission performed by Christian Science. Many who have despaired of retaining hold upon the present sense of life, have gained a larger share of life and its attendant blessings by the study and application of Christian Science.

To welcome death as a friend is to regard death differently from the way in which Jesus taught that it should be regarded. Jesus regarded death as an enemy, and therefore to be overcome. By far the greater part of his work was performed in preventing and overcoming death. His apostles sought to carry out this teaching. Paul declared, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Again he said, "For the wages of sin is death; but the gift of God is eternal life through Jesus Christ our Lord." To enter into the fulness of life here and now, one should seek to cast out all that conflicts with the truth of being, to overcome sin and sickness by the understanding of God's ever-presence and omnipotence. That which truly lives can never die.

Life itself can never be extinguished. In its true sense Life is Spirit, and the real man, who is the image and likeness of Spirit, can never be separated from Life. This statement, however, should not be taken to mean that the mortal does not pass through the experience of death. To affirm this, would be to deny that which is palpably evident to the human senses. Mrs. Eddy has wisely summed up the situation on page 43 of her book "Unity of Good," in this statement, "The achievement of this ultimatum of Science, complete triumph over death, requires time and immense spiritual growth."

✧

[James Downing in *Natal* (South Africa) *Mercury*]

The article from the *Transvaal Leader* which appeared in a recent issue, entitled "Prayer and the Sick," may be regarded as a sign of the times, and is a welcome indication of the change which is taking place in the thoughts of mankind. Since, however, Christian Science is mentioned in connection with faith-healing in a way which might lead the uninformed to conclude that the two are alike, it is right to state that Christian Science is entirely different from what is generally understood as faith-healing.

To put it briefly, Christian Science stands for the spiritual understanding of an omnipotent, omnipresent, and omniscient God, which the psalmist expressed when he wrote as follows: "Who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies."

It is the work of the Christian Scientist humbly to strive for that understanding of God; and he rejoices in the proofs, which Christian Science furnishes in an abundant manner, that the divine power is without limit.

Editorial

Words of Counsel

THE following heretofore unpublished letter from our revered Leader to the Christian Science Board of Directors, is herewith shared with the whole field because of its wise counsel to all Christian Scientists.

Pleasant View, Concord, N. H., Feb. 27, 1903.

Christian Science Board of Directors.

Beloved Students:—I am not a lawyer, and do not sufficiently comprehend the legal trend of the copy you enclosed to me to suggest any changes therein. Upon one point, however, I feel competent to advise, namely: Never abandon the by-laws nor the denominational government of The Mother Church. If I am not personally with you, the Word of God and my instructions in the by-laws have led you hitherto and will remain to guide you safely on, and the teachings of St. Paul are as useful today as when they were first written.

The present and future prosperity of the cause of Christian Science is largely due to the by-laws and government of "The First Church of Christ, Scientist," in Boston. None but myself can know, as I know, the importance of the combined sentiment of this church remaining steadfast in supporting its present by-laws. Each of these many by-laws has met and mastered or forestalled some contingency, some imminent peril, and will continue to do so. Its by-laws have preserved the sweet unity of this large church, that has perhaps the most members and combined influence of any other church in our country. Many times a single by-law has cost me long nights of prayer and struggle, but it has won the victory over some sin and saved the walls of Zion from being torn down by disloyal students. We have proven that "in unity there is strength."

With love as ever,

MARY BAKER G. EDDY.

"Not the author of sickness"

AN article which recently appeared in *The Churchman*, gives such evidence of a change in the beliefs of Christians about the responsibility of God for the sicknesses and distresses of mankind, that we are impelled to quote from it as follows:—

A western clergyman in replying to the article ["Must Protestantism Adopt Christian Science?"] suggested that the church's failure was due to the "failure of her priests to realize the full extent of their priesthood and the full power of their creed." That he goes to the heart of the question is true, yet the clergy of the church in general are not so much to blame as the school of theology in which they were trained and the erroneous doctrinal teaching upon the subject of health and prayers for the sick contained in the Prayer Book, which is placed in their hands as the authorized voice of the church.

As it stands today, the "Order for the Visitation of the Sick" is a blemish upon our Prayer Book; and it is a distinct harm to our church to retain such cruel and utterly false doctrines concerning sickness and disease. The introduction is archaic and useless. The second prayer contains the words: "Sanctify, we beseech Thee, this Thy fatherly correction to him." There are many diseases and much sickness that cannot be attributed to "fatherly correction." The conclusion of that prayer neutralizes all that has gone before by turning the thoughts of the patient toward the possibility of non-recovery instead of filling him with hope for restored health. There is no thought of the value of the mind as a great factor in healing bodily disease, nor for real faith in spiritual healing. On the contrary, both are practically blocked and discountenanced by the assertion of erroneous statements.

In the third prayer, the minister is told to say: "Know you certainly that it is God's visitation." This thought is carried out persistently through this prayer in a most barbarous manner. No priest with a sane mind could use that prayer today excepting upon a patient who, by virtue of wilful sin, had brought disease upon himself. Even then the prayer would have to be amended at the clause where it is stated that the sickness had been sent to try the patience of the sufferer for the example of others.

The prayer which follows on page 283 opens with the same distorted idea; the patient is urged to take in good part "the chastisement of the Lord." Farther on he is urged to take with thanksgiving the Father's correction "whensoever, by any manner of adversity, it shall please His gracious goodness to visit us." In the same exhortation he is supposed to have read to him: "So truly our way to eternal joy is to suffer here with Christ." This is another distortion of Scripture, because the suffering does not mean and never did mean sickness. Christ suffered, but not with physical disease. He went about cleansing and healing all manner of diseases.

In the prayer "For a Sick Person" (page 42), so often used in our church, the element of faith has little part. Rather it is stifled by the concluding sentence: "Or else give him grace," etc. Both minister and congregation may feel comfortable in conscience in that they have prayed for the sick and whichever way it goes they are on the safe side. In the companion prayer, "For a Person under Affliction," it is incredible to me how thinking ministers can read of God, "In Thy wisdom Thou hast seen fit to visit him with trouble, and to bring distress upon him."

It is unnecessary to enter into detail in setting forth the objections to the statements made, for to modern Christian thinkers they are obviously relics of a period of distorted Christianity. They are utterly at variance with the teaching of our Lord; and the ideas inculcated in them are largely responsible for the loss of faith in prayer in cases of illness among our communicants and church people generally.

This article was written by a minister of the church in which these prayers are a part of the authorized service, and as *The Churchman* is a recognized denominational paper, we must assume that the views above stated are those of at least a respectable portion of the Episcopal communion. May not the time soon come when all Christians will agree with Mrs. Eddy's declaration (Science and Health, p. 349) that "God is not the author of sickness"?

ARCHIBALD MCLELLAN.

Chastisement

CHASTISEMENT is a term little understood, even by Christian people who are familiar with the Scriptural references to it. Most people would admit that it is something they would gladly avoid, as they are accustomed to think of it only as suffering or deprivation; but Paul says that all are "partakers" of it, that is, all the law-begotten sons. Now it goes without saying that in their real, spiritual nature the children of God can neither sin nor suffer. St. John makes this very plain in his first epistle when he says, "We know that whosoever is born of God sinneth not; but he that is begotten of God keepeth himself." The apostle explains this by saying that the children of God love one another, and in so doing they love God and keep His commandments. It therefore helps us to understand the problem of chastisement when we see that it is the material sense which suffers, not God's child. St. Paul throws a wonderful light upon this subject when he says that its object is to make us "partakers of his [God's] holiness," and who would shrink from any process which may be needed in order to attain such a glorious result!

In her "Miscellaneous Writings," Mrs. Eddy speaks of "the sore travail of mortal mind" (p. 15) which is needed before the demands of the fleshly nature are silenced and Soul governs its own idea in perfect harmony. It cannot be denied that mortals cling to the material sense of things, even holding God to be the author of the material universe with all its sin and misery, and so the "wholesome chastisements of Love" (Science and Health, p. 323) are needed to dispel this illusion regarding God and man. The nearer men draw to God, the more do they suffer from the belief in materiality, until they are led to give it up and to seek at any price the joy and harmony of spiritual being.

It is well for us to understand that chastisement is not punishment or even suffering, though to mortal sense it may seem to be both. Paul admits this when he says that "no chas-

Digitized by Google

tening for the present seemeth to be joyous, but grievous;" then he goes on to tell of "the peaceable fruit of righteousness" which results from the needed discipline, that is, when spiritual sense triumphs over the carnal nature. The student of Christian Science knows that bodily suffering is not due to the activity of God's law, but is one of the manifestations of the belief of sensation in matter. Mortals cling to this belief so long as it seems to give them pleasure, pursue it until it would seem that all their energies are exhausted in the maddening quest, then with bitterness of heart they blame God because He will not prolong for them the illusion of life in matter.

All the while divine Love is ready to bestow, not a shadow of health and happiness, but the very substance of these, eternal life with eternal joy. The process of separation between the true and the false, the real and the unreal, constitutes what we know as chastisement. We are all willing to give up our pains, but few are willing to give up the pleasures of sense for the pure joys of Spirit; yet this is the divine demand. We are willing to love more perchance than we once did, but it means a long step forward to heed these ringing words of our Master, "Love your enemies, bless them that curse you, do good to them that hate you, . . . that ye may be the children of your Father which is in heaven." And again, "Be ye therefore perfect"!

"What, is there no stopping place before perfection is reached?" cries the struggling human sense, and Truth answers, "No." If there were, God would be less than perfect, and Love requires that the child be like the Father; hence the unceasing pressure of the demand that the mortal be "put off," though the process may seem to be a daily dying. Christian Science, however, is multiplying the proofs that the spiritual process of separation is not painful, and unlike material surgery it calls upon us to be fully alive to what the great Physician is doing for us and for those dear to us. Christ Jesus, who knew no sin, endured all things for "the joy that was set before him." This is our privilege, too, and each day brings more joy, hence more strength to "run with patience the race that is set before us."

ANNIE M. KNOTT.

An Opened Door

How pleasant it is, these summer days, to think of the many long-confined workers who in their turn are reveling in the freedom of the woods and fields and sky! The plea for escape from drudgery, the privilege of action that is impelled by natural impulse and not by grim necessity,—how instinctive and normal it is! More than this, how universal and appealing its protest against the saddening fact that there are so many faithful and worthy toilers to whom a vacation is quite unknown! Surely nothing can add a sweeter note to the Christian Scientist's outing program than the consciousness that with his own hands, in kindly, generous ways, he has provided some "shut-in," for a little time at least, with the sweet sunlight and fragrant air of a larger life. This is surely one of the meanings of what Mrs. Eddy has named "Christ's Christianity" (Science and Health, p. 271).

When one thinks of the abundance of the natural provisions for the supply of every human need, he can but recognize that while shiftlessness and good-for-nothingness may merit no consideration, save an honest investigation of its cause, involuntary poverty, the struggle for existence which means unremitting enslavement to work, certainly does not speak for the possession of a fair chance for one who is anxious and ready to meet every demand of honest living. On the contrary, it speaks for the present-day fact of what Burns so well named "man's inhumanity to man;" and in the multiplication of such instances we can but grant the reasonableness of the agitation against the wrong of any economic condition which effects this result, although in its intensity such agitation may seem to menace the peace if not the permanence of the communal life as at present organized.

To every such human problem the teaching of Christian Science immediately relates itself in its unequivocal stand for that genuine Christian brotherhood which can and will remove every unjust inequality of opportunity, and in its demonstration that spiritual apprehension supplies not only the inspiration but the capacity to do. It is convincing men anew that the eternal freedom and strength of Truth is an available and saving asset. The vast majority of Christian believers do not think of the association of faith and physical breakdown in honest work as in any sense contradictory or incongruous; and yet how clearly St. Paul defined the true status and capacity of the man of God, when he declared, "I can do all things through Christ which strengtheneth me." Though it has been selfishly torpid for so long, today we can rejoice in the fact that the world is making great strides in the effort to remove the unfair economic conditions which handicap many; and yet more, that it is being awakened through Christian Science to the deeper, more pitiful, and far more universal cry of those who are not only bound but tortured at the hands of false material sense.

In all the world the number of those who have escaped from bondage, physical and mental, through the ministrations of Christian Science, is rapidly increasing; and the cry of the galley-slave is thus giving place to a song of rejoicing. This is the great emancipation, the realization of the freedom of God's world, its abundant health and strength and happiness for all. Speaking of and to every condition of human need, the Master said, "I am come that they might have life, and that they might have it more abundantly." This is the end and achievement of Christian Science, to bring light and life to them that "sit in darkness and in the shadow of death," and this ministry it must and will effect through righteous men. "He that believeth on me, the works that I do shall he do also." In these words of sure promise the Master is calling his every disciple, yes, calling you and me, to open the doors of the imprisoned and to set earth's captives free.

JOHN B. WILLIS.

Among the Churches

Current Notes

GALVESTON, TEXAS.—A magnificent church site has been given to First Church of Christ, Scientist, of Galveston. The gift consists of three lots on the southeast corner of Twenty-seventh street and Avenue P, fronting 128 feet on Avenue O and running back 120 feet. There is nothing on the three lots at present, but it is stipulated in the deed of gift that a church edifice be constructed thereon. Plans to this end will be made shortly, and it is understood that the congregation contemplates building a handsome structure.

The Galveston News.

OAK PARK, ILL.—Second Church of Christ, Scientist, has purchased for fifteen thousand dollars a lot 100 by 180 feet at the northeast corner of North Oak Park avenue and Ontario street, where it will build its new church, which is to cost seventy-five thousand dollars. Ground was broken June 1. The main auditorium will seat a congregation of from one thousand to eleven hundred people, and the Sunday school over five hundred pupils.—*Chicago Examiner.*

Digitized by Google

ORANGE, MASS.—During the Old Home celebration, June 25 to 28, a reading-tent was maintained. The tent was made attractive with easy chairs, couches, flowers, flags, etc. One hundred copies of the *Monitor* were distributed daily, and other literature was given out upon request or where interest was shown.—*Correspondence.*

SANTA PAULA, CAL.—The Christian Science people have started to erect their new church building at the corner of Sixth and Pleasant streets. The building will be on the bungalow plan without partitions, so that at any time they desire to erect a larger church the one now building may be converted into a modern dwelling. The floor plan is twenty-six by forty feet, and it fronts on Sixth street toward the high school athletic grounds.—*Santa Paula Chronicle.*

EUGENE, ORE.—The Christian Science church has purchased a site for a church building on the southeast corner of Twelfth and Oak streets. The property is a part of the half block known as the Lowell property, which was considered a year ago as a possible site for the high school.

Eugene Daily Guard.

❖ ❖ ❖

The Lectures

Wilkes-Barre, Pa.

A lecture on Christian Science by the Rev. William P. McKenzie was given before an audience of about one thousand men and women in Irem Temple Auditorium. The speaker was introduced by W. E. Woodruff of this city, who said in part:—

I am not myself a Christian Scientist, though for this frank statement I ask neither condemnation nor commendation. I am one of those able to listen with impartial poise and with interest to what shall be offered. We may as well remember that Christian Science is not a cult derived from esoteric or exoteric sources of mysticism. It is founded on the precepts and example of Jesus of Nazareth, and as to what Christian Science develops from its source of inspiration, it is in a strict orthodox sense in advance of not a few members and even clergymen of some of the denominations. Whether this Christian Science with its now million of adherents shall some day be merged in the various Christian bodies to energize them, or through force of conditions preserve its own independent organization, is a thing none of us can say or even dream. The world has been asking these centuries, "What is truth?" and if yours shall be the readier answer, the provable, the direct, forceful answer, the world will come to recognize it.—*Wilkes-Barre Record.*

❖

Vancouver, British Columbia

Clarence W. Chadwick lectured on Christian Science in the Orpheum Theater. The lecture was attended by twenty-two hundred and fifty people, over five hundred persons being turned away. Mr. Chadwick was introduced by Professor Odlum, M.A., B.Sc., who spoke in substance partly as follows:—

The immense audience which is present in this building this afternoon, is one of the many proofs of the day that the people of all classes are deeply interested in religious, theological, and Christian problems. During many years, even from the first use of this large public building, I have often been on this platform, and never once before this moment did I see a larger audience packed within its four walls, not even when General Booth was here. This is truly a proof that our Vancouver people are thinking of religious questions and desire to hear more on these topics. I have watched these Christian Scientists for many years, and can assure those present that they stand for law and order, for the honor and worship of God and His Son, Jesus Christ. They stand for and work for the uplift of humanity at every turn, and are proving a blessing to our land.

Correspondence.

❖

Muscatine, Iowa

William R. Rathvon delivered a lecture on Christian Science in the Public Library. He was introduced by S. W. Mitchell, local editor of the *News-Tribune*, who said in part:—

In the material world the view of a person in a valley is very naturally limited by the surrounding barriers, but as he ascends the mountain height the scope of his vision is increased in a degree proportional to the height attained. As this is true in the material world, so also is it true in the spiritual world. A person surrounded by the seeming reality of sin, sickness, and discord, has his vision of the real man limited, to a great extent. But as he attains the heights of right living and spirituality, his view changes, and he beholds man as he really is,—the perfect spiritual creation of the omnipotent and perfect creator, God.

Many people have changed their views regarding man. Once they beheld him as a mortal being manifesting all the seeming discord at the command of error; now they regard him as a spiritual being, incapable of reflecting anything but the nature of God, who is Life, Truth, and Love. This transformation has been due to Christian Science.

A number of people, when the subject of Christian Science is broached to them, say they are not in favor of anything new in religious matters, and that the "old-time religion" is good enough for them. With this class of people Christian Science and Christian Scientists heartily agree, for a study of the early Christians and primitive Christianity reveals to us the fact that the work of Christianity in those days was characterized by the healing of the sick, the restoring of sight to the blind, the causing of the lame to walk, the deaf to hear, and even the dead to be raised.—*Correspondence.*

❖

Salem, Ore.

Ernest R. Ringo, county attorney, in introducing Judge Clifford P. Smith, who lectured on Christian Science at the Grand Opera House before a large audience, spoke in part as follows:—

About the middle of the last century a woman in Massachusetts who was suffering from ill health, and who had despaired of receiving any aid from medical science, began to ponder. At length she conceived the strange idea that disease is to our body what sin is to our soul, and that if God can cure us of sin, He can also cure us of disease; or, perhaps more correctly stated, she concluded that as sin is simply a departure from God's way of doing, disease is a departure from His way of living, and that the way to secure relief from either, is to conform to His way. This woman was Mrs. Eddy, and she named her new belief Christian Science.

We have heard the divine blessing invoked for the sick and afflicted so often that we would hardly have expected much dissension from this new creed. But such was not the case; on the contrary, the strongest opposition developed. A biased

Digitized by Google

public ridiculed the idea. It was so simple, so practical, it could not be true. The notion that any religion could be of actual, perceptible benefit, was incomprehensible. As is not uncommon, the fiercest critics were those who understood the teaching least. No religious doctrine in the Christian era was so scoffed at as was Christian Science. Although the recognized foundation of Christianity is faith, that would not satisfy the opponents of the new creed. Proof was demanded, instantaneous, conclusive proof; and to the entire satisfaction of an ever-increasing number, the proof is being given. The scoffers look around in amazement and are silenced. They see careworn people become happy and free. They see the sick and afflicted become vigorous and strong. They are compelled to admit their criticisms were mainly unjust. I believe I am safe in saying no cause ever won so many unwilling converts.—*Daily Oregon Statesman.*

London, England

The remarks of the Rev. T. B. Hindsley, a Wesleyan minister in charge of a church at Acton, in introducing Bicknell Young at a lecture on Christian Science given in the Kensington Town Hall, were in part as follows:—

It is a great pleasure and privilege to me to be with you for the purpose of introducing the lecturer this afternoon. We are here today to learn something more about God and His relationship to men; to learn something more about that Science which is the only Science worthy the name, as it is the only Science which deals with real facts and unchangeable laws, the facts of spiritual being and the laws of infinite Love.

If you will permit me, I should like to condense my remarks to half a dozen sentences, each sentence being an ascription of praise. I thankfully recognize in the Christian Science church a system of teaching which emphasizes and illustrates the practical idealism of the New Testament. I gratefully acknowledge the successful method of working by means of scientific prayer, which results in the manifestation of ever-present Spirit, God, in casting out evil and revealing the kingdom of God in the midst of men today. I continually admire the consecrated wisdom of a church which uses the testimony meeting as it is used week by week in Christian Science churches. Living testimony carries conviction now as of old, for "beholding the man which was healed standing with them, they could say nothing against it." I rejoice in the restoration to its proper place in the Christian church of one of the most characteristic features of early Christianity; I refer, of course, to the gift of healing. That bright gift was not irretrievably lost in the dust of the centuries, for at last a woman, guided of God, lighted a candle and swept the house diligently until she found it. I joyfully join with my Christian Science friends in asserting that heaven is not a distant locality, but a state of mind,—a present possibility open to all. The city of God is now on the earth.—*Correspondence.*

Oroville, Cal.

Francis J. Fluno, M.D., who lectured on Christian Science in Gardella Theater, was introduced by Judge H. D. Gregory, who said:—

I am not a member of the Christian Science organization, but we cannot help being attracted by the high class of intellectual people, in all communities, who compose this organization; and whatever may be our prejudice or indifference, we must admit that Mrs. Eddy, who founded it, was the most remarkable woman of modern times. Whether we are Christian Scientists or not, we all believe in the brotherhood of man and the fatherhood of God. We are all striving for the same object here and now,—health, happiness, and prosperity; and the great question is, How shall we achieve this great benefit? Our friend whom I have the honor to introduce to you, will make this clear from the standpoint of Christian Science.—*Correspondence.*

Walla Walla, Wash.

Clarence C. Eaton delivered a lecture on Christian Science at the Keylor Grand Theater. Miss Pearl Brown, first reader of First Church of Christ, Scientist, in introducing the lecturer, said:—

We read in the New Testament that Christ Jesus went about the cities and villages preaching the gospel, the "good tidings," and healing every sickness and every disease among the people, and he left the promise that all who believe on him shall do the same works that he did, showing that the power to heal belonged not to a limited period, but extends throughout all time. Christian Science has come to this age with the same loving, healing message that characterized the teachings of the Master. Its truth is widely demonstrated today in the healing of the sick and the reformation of the sinner. Christian Science appeals to the sincere seeker for Truth, and by reason of its logical simplicity it can be made practical by any one who will investigate its teachings.

Correspondence.

Silver Creek, N. Y.

At the lecture on Christian Science, Clarence W. Chadwick was introduced as follows by Mrs. Nellie Erb:—

Although I am not a Christian Scientist, I believe that I represent a very large class of people who welcome every forward movement, and who are glad to investigate every manifestation of that power not of ourselves which makes for righteousness,—and Christian Science makes for righteousness. We have all of us, in our immediate experience, knowledge of wondrous things which this religion has done, and although we may not be willing and ready to accept its teachings as our own sentiments, we are glad to know about it. The world in which we live demands this of us, as well as liberal thought; also the placing of Christ above creed and brotherhood above doctrine. We are all bound together by one common tie of humanity, are striving to attain the same end, and we hope for the same happy issue. We should therefore seek to investigate every proffered statement to find the truth for ourselves.—*Correspondence.*

Testimonies of Healing

[Translated from the German]

My thanks increase to praise, and thought rises to the throne of the Almighty! Like the Virgin Mother I can say, "My soul doth magnify the Lord, and my spirit hath rejoiced in God my Saviour." This sense impels me to testify to the blessings I have received through Christian Science, which include my healing of a severe nervous trouble of six years' standing. Truth is the remedy that truly helps, the one medicine which healeth every ill; therefore we have faith and know that our sorrows are never so great but that God can comfort and deliver us, for He loves His children, and His will is to help and heal.

I look back upon my life as a dream of hardships and sorrows. Had I known of Christian Science, the burden would have been much lighter. I have been a nurse for twenty-one years, during which time I cared for many and very sick people. When I finally lost the ability to perform the duties which were dear to me, there seemed to be no response from the divine side. I often uttered the despairing words, "Lord, I believe; help thou mine unbelief." When my sense of fear and suffering reached its height, I began to murmur against God and men. Twenty-two physicians, with many medicines, baths, and massage, had failed to benefit me, and I was becoming more and more discouraged. Finally, I seemed unable to get along with anybody, as I then failed to understand that God is Love. My strength, yea, everything that was needed for the performance of what I considered a sacred duty, was seemingly taken away from me, and I did not then know of Christian Science. I was taken to a sanitarium, where the verdict of incurability was pronounced upon me. But God's ways are higher than our ways. For many years I struggled with my mistaken concept of God, till I could pray humbly, "Thy will be done."

When all material means failed, I heard of Christian Science. I then thought that my healing would be accomplished in a few weeks, as the practitioner gave me the comforting thought that every one could get well who lived according to the rules of Christian Science; but it was difficult for me, a nurse of many years' experience, to get the understanding of Christian Science. My faithful practitioner showed boundless patience and treated me for years, at any time of day or night, writing to me very often, as treatment had to be absent; yet it seemed as if the physicians were right with their verdict. Finally, however, Truth prevailed. I found health of mind and body, and was able to leave the sanitarium and return to my family. The change that had taken place was evident, though no one knew to what my recovery was due. In my capacity as nurse, I kept the subject of Christian Science entirely to myself, lest my inner happiness might be taken from me.

How victorious did the truth prove in my case! I have shared the experience of the psalmist, when he sings, "My soul followeth hard after thee: thy right hand upholdeth me." When standing at the barred window, knowing not what to do, I would draw a deep sigh with the thought, "I will not let thee go, except thou bless me." I would then have a sense of communion with the source of all good, blessing me, and bringing me the sweet assurance of liberty; but even after my recovery it seemed impossible to get a dismissal from the sanitarium, as the physicians would not credit me with being healed. My healing was, however, brought about, and I have spent the last four years in quiet and happiness in the circle of my coworkers, as a pensioned nurse. I occupy myself in a great many ways, while devoting my attention especially to the study of Christian Science. What a blessing it has meant to me to be able to nurse and work, though in a very different sense than formerly! I have had the privilege of nursing in Christian Science, and God has blessed my work. I know now that divine Love is ever present, that it is encompassing me, and I am a happy, grateful, blessed child of God. I have no time to give to old errors, and I know that divine Truth is the only healing power, that God is Love, and furthermore that I shall keep well and happy as I remain faithful to Truth.

I cannot express in words my thankfulness to God, and my gratitude to the Discoverer of Christian Science for the blessed hours which I have experienced during the last two years in Braunschweig at the Christian Science services, in the family, and in my work. My heart overflows with gratitude, and I praise the Lord in the closing words of that prayer of prayers: "For thine is the kingdom, and the power, and the glory, forever. Amen."

MARIE PAULSOHN, Kl. Flottbeck i. H., Germany.

✧

I wish to give my testimony to the healing power of Christian Science. For many years I was troubled with kidney and stomach disorders. I consulted several physicians and took many kinds of medicines, but instead of relief from the troubles they seemed to multiply, until I was almost a nervous wreck. I was even afraid to eat, because of the awful sufferings I had to experience, as it seemed to me, from the food. Finally, I was told by a physician I would live only a couple of years longer, as I was afflicted with Bright's disease of the kidneys.

One day, while at work in the shop, I was feeling very badly and told one of our customers how I was suffering, but he said that my suffering was not real. However, I was compelled to stay home with a severe case of pleurisy and liver complaint, and during the two weeks I thought of little else than to get back to work and ask this man what he meant by telling me such nonsense as that my sufferings were not real. Previous to this time I had never heard of Christian Science, so I was surprised to learn that there was such a teaching. The man told me if I was willing to read anything he gave me, I could learn whether what he said was true or not. I told him I would be glad to read what he gave me, so I was given a *Christian Science Sentinel*. Reading this convinced me of the truth he spoke, and that it was something I needed, something I had been looking for, but which I had had no hope of realizing. I read this *Sentinel* many times over, I was so hungry for the truth.

I realized that all my suffering was caused by the sins of material sense, that God, good, is not responsible for either sin or pain, and I have learned in Christian Science that I can be made free by thinking right about God and man. Before this I even doubted that there was a God. I have been healed of rheumatism, affecting the heart and limbs, by reading Science and Health, and also of stomach and kidney troubles, for I can now eat anything, and as much as I need, without suffering. Before I knew of Christian Science I was frequently laid up with colds from a few days to weeks, but during the past eight years, in which I have had an understanding of this truth, I have lost but one day from work on account of illness. I have experienced the passing away of a loved one, and although the sense of separation seemed hard to bear, I have known that earth has no sorrow that Love cannot remove.

I am thankful to God for this truth, and to our Master, Christ Jesus, the Wayshower. I am grateful to our dear Leader, Mrs. Eddy, for her unselfish life, which enabled her

Digitized by Google

to discover and point out a way for humanity from misery and pain, and also to those who have in any way helped me to grasp this blessed truth. I am indeed thankful for a knowledge of the truth that makes free.

G. SELANDER, Chicago, Ill.

✧

I am glad to testify to the healing power of God through Christian Science. About three years ago I began to have trouble with my eyes. One morning I awoke to find one of them closed, and even after bathing, it would open only a little way. Thinking I had taken cold, I paid no attention to it, until I found at the end of the week that it did not get any better; in fact, there was a considerable discharge from it. I then decided to see a specialist, and my husband went with me. After the first examination, the doctor said she thought it was paralysis of the eyelid, but she would have to examine the eye again. I therefore went back in the afternoon. This time there was another doctor with her, and they made the examination together. For two weeks they treated me daily, with the result that my eye both looked and felt worse than when I first went to the specialist.

As I was feeling very much discouraged, I changed doctors, taking treatment from the next one every day, except Sunday, for three weeks, my eye getting worse all the time. I asked him how long he thought it would take to effect a cure, and he said he could not tell, as the condition was very stubborn. I made another change of doctors, and this time was benefited considerably; in fact, after a few weeks, with the aid of glasses, etc., I was able to keep the inflammation down, and to the onlooker there was not much to see; but I was never free from a feeling of irritation in my eyes, and a constant dread that the disease would return.

One day—a happy day for me—a Christian Science practitioner came to live in my neighborhood. After several talks with her, I decided to have treatment for my little girl, who was just five years old and had been wearing glasses for a year on account of weak muscles. The doctors said her eye was turning, and that she must not go to school until she was at least nine years old; but in three days, under Christian Science treatment, she was completely healed. I might add that she went to school before she was six years old.

I then had treatment for myself, although I did not tell the practitioner of the disease from which I was supposed to be suffering, but let her think I was wearing glasses solely for my sight. I took off the glasses with great fear, and the next day my eyes hurt badly. Seeing the practitioner in the street, I asked her if I should put them on again, but she told me not to do so, saying she would go home and give me treatment. My eyes ceased to hurt and were quite normal all that day, but the next day they troubled me again, and I asked the same question. The practitioner said she would treat me, but advised me to go home and read Science and Health or some Christian Science literature. I followed her advice with good results, for this time it was several days before I felt any more pain. Then one night it all came back. I could not sleep, my eyes pained me so much. When I arose in the morning, I went over to my neighbor's house and knocked on the door, saying, as I stood before her, "Now, shall I put my glasses on?" My eyes were in such a condition that she needed no explanation as to why I asked the question. After a moment she said: "No, you need not put your glasses on. Come in and I will give you treatment." I went in, and during the treatment which followed, the inflammation and an ulcer, together with the pain, disappeared.

Shortly after my healing I went to England. My friends begged me to take my glasses for the trip, in case the trouble should return, but I thank God that I had learned through Christian Science that He gives perfect sight. My practitioner gave me a *Journal*, in which were the names of practitioners in England, but I did not need any further treatment. I am glad to be able to say that the healing has been permanent. My eyes are in splendid condition, and have been ever since the healing took place, over two years ago.

For this and many other benefits, both mental and physical, received through Christian Science, I am truly thankful to God, and grateful to Mrs. Eddy. I am happy to say that many times I have been able to realize the truth for myself through my understanding of Christian Science.

EMILY BRITTON, Mill Valley, Cal.

✧

Whenever I read or hear read the story of the raising of Jairus' daughter, I am reminded of a demonstration that came to me more than eight years ago. To me it was one of the grandest proofs of divine power that ever came into my life. I had been studying Christian Science for several years and had had some very good demonstrations, when I got into such a condition that it was difficult to lift my hand to my head, and the odor of cooking or anything to eat was disagreeable; the whole world seemed dark and repulsive. I thought I must master this myself by will-power, not realizing God as all-power. My mother, however, happened to come to my home, and on finding such conditions, she began treatment in Christian Science at once; but the ailment seemed stubborn and did not yield. I lay on the bed in a stupor most of the next day, but with another treatment this was overcome. From that moment I knew I was healed, although this condition had been coming on for about two months.

I am thankful to God, and grateful to our Leader for the blessings I have received as I have grown in the understanding of this healing truth.

WINNIE B. COULTER, Belfield, N. Dak.

I can verify the testimony of my sister. Some eighteen years ago I was healed through Christian Science of the tobacco habit, and many people noticed the change in me at that time. Since then I have not used medicine for any ailment. I am thankful to God for the blessings that have come to me through Christian Science.

WILLIAM M. BRUCE, Hastings, Neb.

✧

In the summer of 1911, I felt very unhappy, as I had given untimely birth to a lifeless child, and although doctor and professor declared that there was no reasonable cause for this particular incident, I regarded it as the consequence of the condition of constant fear in which I had lived during the preceding period. Not only had I been frightened by every minute cause, but I had always been pursued by the fear of sudden fright. After recovering from this experience, I felt as one who was seeking but could not find. I found no rest and was continually disturbed by sad thoughts. I had no confidence in the future, and I believed that if ever I might be in happy expectation again, my fear would bring forth the same sad results. There was emptiness around me and nothing really interested me. I now know that all this time I felt an unconscious longing for better spiritual support.

One afternoon, by mistake of the postman, I received a copy of the *Christian Science Sentinel* addressed to one of my neighbors. Impelled by curiosity, I perused its pages and read about the wondrous healings. As a result, I was led to conclude that if Christian Science could help others, it could also help me, and I therefore asked for treatment from a

Digitized by Google

practitioner. As I had never thought much about spiritual things, it was all new to me. The struggle between truth and error was long, but gradually I began to understand that there is only one power, and that is good. Then I learned to trust God.

After some time another little one was expected, and the old fear came anew, but gradually I was able to conquer this error and there were moments of great happiness and peace. On a fine summer night my little daughter was born under the most peaceful and harmonious conditions. The doctor declared that everything went very prosperously, and our baby is a fine, healthy little girl.

Through the study of Christian Science I have gained a better understanding of existence. I now find my happiness in quite a different way than I did formerly. The knowledge of the ever-presence of divine Love gives me peace and rest; and what a blessing it is to know that this happiness cannot be taken away from us, but will increase according to our understanding of the truth!

ALIDA J. MANHOUDT-RINSE, Amsterdam, Holland.

✧

An overwhelming sense of gratitude prompts me to tell what Christian Science has done for me. For five or six years I have silently accepted the benefits which it has brought me, and I think it is time to express a word of appreciation. I had been subject to severe headaches all my life. I remember having very bad attacks when only about four years old, and I continued to have them until I was about fifty-five. I was then asked by my son, whose wife had been healed in Christian Science, if I would not like to try it. I decided to do so, as I had tried everything I had ever heard of. I therefore went to a faithful practitioner and was healed, and the healing has been permanent.

I wish to add that one day I stepped on an icy step, slipped, and fell, striking my ankle on another step and injuring it very seriously. I immediately had word sent to the practitioner who treated me before, and in a few days I was running the sewing machine. Another healing occurred quite recently. The trouble had all the symptoms of a malignant disease of the breast, but it was healed in about six weeks' treatment.

I am very grateful that day by day I am gaining a clearer understanding of infinite Principle, and trust that I may be influential in helping some one else to find the truth that sets free. I daily thank God for the precious gift of the wonderful book, "Science and Health with Key to the Scriptures," by our Leader, Mrs. Eddy.

MRS. E. T. CAREY, Sidney, Ohio.

✧

I am glad to be able to testify to the many benefits Christian Science has brought into my life. I had been a victim of stomach disorder all my life, and in the winter of 1861 and 1862, while serving in the Confederate army, I was stricken with rheumatism and bronchitis. I suffered great pain most of the time, and continued to do so for many years. In 1863 I lost my left arm, and the rheumatism seemed to settle in my right arm, shoulder, and wrist. Many weary months I lay in bed, helpless.

I was treated by many physicians, who kindly did what they could, but without affording me permanent help. In 1890 I came to the Confederate Home for rest and treatment, and was benefited somewhat. I was operated on for hemorrhoids, but received no permanent relief. After about twenty-one years of this form of suffering, attended by daily hemorrhage during the last eleven years, I heard of Christian Science. I called upon a practitioner and asked for treatment. The hemorrhage and pain left that day, and only once, eighteen months later, did I have even the slightest return. The other ills were slower in yielding, but rejoicing in the Lord I pressed on, and am today a well man. I am seventy-nine years old and am able to attend our Sunday and Wednesday services, having missed only three in the last year. I used tobacco excessively for sixty-five years, but now have no desire for it, and a large corn which had given me much pain has disappeared.

I am profoundly thankful to God, and grateful to Mrs. Eddy for my knowledge of the truth which has made me free. I am studying the Lesson-Sermons and Christian Science literature daily, and striving to live in "at-one-ment" with Truth and Love.

J. H. BOST, Confederate Home, Austin, Texas.

✧

It is just four years since I began to study Christian Science. A year previously I had been given the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, by a relative who had become interested in the subject. I was going abroad at the time and took the book with me, but did not see very much in it, and put it away altogether.

I was abroad a year, and on my return home I went to stay with this relative. I became quickly conscious of a change both in her and in her husband. I felt they were resting on something which was giving them a sense of peace and security. They seemed no longer afraid of illness and were meeting more calmly the little difficulties of every-day life. One of their children, a little girl of six years, was ill during my visit. To me she seemed very far from well, and just sat in an easy chair, not speaking to any one. She would not eat anything and looked really ill. I was told she was having Christian Science treatment. After about two days, as she did not appear to improve, a practitioner came to see her, and the next day the child was perfectly well. She ate like a schoolboy, and her face looked pink and healthy; there was not a sign of weakness, and she ran about and played as usual. I was very much impressed by all this, and felt there must be something in Christian Science if it could bring about these results.

Then I began to read the text-book again. This time I found I was interested at once, and as I read on I felt more and more drawn to its teaching. I was in a very unhappy condition of mind at the time; I had no religion at all, and had for a long time given up reading the Bible. I was very lonely, just traveling about, paying visits and living in hotels. Two people whose affection and companionship had largely added to the happiness of my life, both died very suddenly; my husband was killed in an accident, and my mother, with whom I lived for nearly four years after his death, was taken ill quite suddenly and passed away in two or three days. I found it very difficult to be alone, and I could not get free from the sense of grief and loss. All this unhappy condition gradually left me as I gained more understanding of Christian Science. I have been able to make a home and live alone, and I can honestly say that I never feel lonely for a moment. I am gaining a truer sense of happiness, and I am thankful to know that it can never be taken from me.

Besides the experiences mentioned, I had for twelve years been more or less of an invalid, having a severe form of nervous exhaustion, also some kind of stomach trouble. At times I could scarcely digest anything, and I suffered constantly from pain and discomfort. There were times when I grew much stronger, but these never lasted, and there was always a relapse into the old conditions with their attendant miseries.

Digitized by Google

My great fear in these acute stages was that I should lose my reason, and I used sometimes to wonder how long one could go on living in such a condition of suffering. I was a good deal stronger when I heard of Christian Science, but during the time I have been studying it, I have had three returns of the old illness. Twice I recovered completely in about a week, going about and doing things as usual all the time. The last time I had an attack I was in Paris, staying alone in a hotel. The old symptoms showed themselves in a very acute form. I was able, however, with the understanding I had gained of Christian Science, to overcome them in about thirty-six hours without giving up a single arrangement I had made for two rather full days. I got a little nervous after one day and a night, and wrote to a practitioner in London asking for help, but before the letter could have reached her the difficulty had been met, and I was feeling perfectly well and strong again. I was very grateful for this experience; it showed me very clearly what an illusion the whole thing was. That was two years ago, and I have not had a return of those conditions since.

There has, however, been a great deal to overcome in other ways. My thoughts were filled with fear and superstition, and a very great sense of limitation, due, I think, in large measure to the illness from which I had suffered and the many years of inactivity and dependence on others. This has all been rather slowly overcome, but I am indeed thankful to know that I am really getting free from it. I am well and strong, and able to lead an active, useful life. I have found Christian Science a sure remedy for every physical ailment. It is also helping me to see and overcome faults of character. I have felt especially thankful that Truth uncovers the illusion of material sense which sins and suffers, and teaches us that "all is Spirit and spiritual" (Science and Health, p. 331). I have found that just in proportion as I seek the things of Spirit, a measure of peace and an understanding of Love come to me.

I feel very grateful to Mrs. Eddy for the pure and selfless life which enabled her to hear and obey the call of God "to proclaim His gospel to this age" (Science and Health, Pref., p. xi).—Eleanor K. Spurway, London, England.

✧

I send this testimony in loving gratitude for what Christian Science has done for me, with the hope that it may be the means of helping others. For years I was a great sufferer from severe headache, and one day during an attack, a dear friend, a Christian Scientist, came and talked to me, telling me about Christian Science and what it would do for me. She loaned me a copy of Science and Health and told me to read it. I also had asthma in its worst form, so that for weeks I could not lie down, and my husband often feared I could not live until morning, I was so ill. We had several doctors, but they did me no good; the last two said there was no medicine which would help me, and that I should travel until I found a climate that would relieve me, though nothing would cure me. I had, however, begun to read Science and Health, and by studying this book and taking absent treatment from a practitioner, I soon began to get better, and in less than two months I was entirely well. This was over three years ago, and I have had no headache or asthma since. I have also been healed of rheumatism, nervousness, and other ailments.

For this healing I thank our heavenly Father, but most of all I am thankful for the spiritual uplift that I have received since I turned to Christian Science. I thank God for the brave woman who made the way plain to us.

Annie Reynolds, Modesto, Ill.

From Our Exchanges

[The Christian Register]

Religion offers those values which redeem mediocrity and humble pride. It stands alone in approaching human nature through those feelings to which the greatest number of men can respond, and in offering verities within the reach of the ignorant and not to be purchased by any sort of wealth not exchangeable for righteousness. It thanks the Father, Lord of heaven and earth, that He has hid these things from the wise and prudent and revealed them unto babes. What is didactic, what is prudent, what is expedient, what is true and good and beautiful, religion takes each at its value; but it takes them where neither can go of itself, into the inner places of the spirit, so that none are so poor as to be shut out of their blessing, none so mean as not to feel reverence for them. It is written that He fashioneth their hearts alike; and religion is the true seed of democracy, because it brings that which dignifies the common heart of man and reveals that in which alone all men become one.

[The Watchman-Examiner]

It is a mistake to think that we can find happiness without learning the secret of helpfulness. It is the privilege of every man to be "the shadow of a great rock in a weary land." There is no happiness to be compared with the happiness of saving others from unhappiness. It is a mistake to think that we can find happiness without learning the secret of contentment. Half the sadness and misery in the world comes from a senseless ambition to have what others have and to live as others live. Happiness has little to gain from external circumstances, for it is a state of the soul. Only the contented are happy. It is a mistake to think that we can find happiness without learning the secret of humility. It is fatal to happiness to think of ourselves more highly than we ought to think. In lowliness of mind we are to esteem others as better than ourselves.

[The Advance]

Nothing is hindering the work of the kingdom of Christ so seriously as these divisions among the churches, and we need to get that rubbed home into the hearts of the people, so that we may recognize what the big things are and agree to unite upon the big things and let some of the more or less minor things go by the board.

The future lies with the spiritual, and the question is what part we are going to play in building up this future. Are we simply going to be laggards, remaining behind with the stuff, or are we going to be in the front rank of the fighters? And the front rank of fighters today is not the people who get upon platforms and talk; it is the quiet people behind who think and trust and pray; and we want more of these in our churches. There are plenty of good people about, but would God that all the Lord's people were prophets!

The way has been opened out to us very clearly. In every church we find the real trouble is the lack of workers or the lack of pray-ers, or the lack of people willing to put themselves into the work with enthusiasm. There is no such thing as a Christian who is not enthusiastic.

[The Christian Commonwealth]

Many definitions of religion have been given. There is none better than this,—that it is the life of the spirit. Negatively, spirit is that which is not material. There is nothing of which we are more sure than of the existence of spirit.

Digitized by Google

One of the first lessons we learn is that the real things of the world are the invisible things. We cannot see the force that causes the tides, that binds the earth and moon and planets and sun together and keeps them all revolving in their orbits. We cannot see the force—the electricity—that plays through the machinery of the tram-cars and propels them along their course. The closer we get to it, the more it hides itself from our senses. And yet the subtle element is everywhere, as universal as the air and as viewless. Matter itself, when analyzed, eludes our senses, and resolves itself into a center of force that no eye can see or hand touch. All the great scientific thinkers of the world have given up the materialistic hypothesis of the universe. No thinker of reputation today stands for the materialistic philosophy.

Religion is the life of the spirit which rises superior to the life of the senses, which makes a person the master of outer circumstances and enables him to triumph over bodily weakness and pain. There are none who are entirely destitute of such religion, and all are more religious than they know. Such religion is within the reach of all, even the lowest and humblest; it is not something reserved for the initiated and the elect.

[*Northwestern Christian Advocate*]

Our life is measured by the way it accepts the emergent challenges. Many a man can overcome so long as he stands before a puny foe or is considerately "tipped-off" when the enemy is to raid his domain; but that is not life. Life is full of surprises and strung with attacks and ambuscades; and he who has so ordered his life as to face the foe immediately and call into action all his reserves, is fit to serve. What is one's life worth anyhow, that is not trained and equipped to meet and conquer the big things, the lions along the way? It would be colorless and inane. A sudden and strenuous contest successfully engaged in, would so quicken the whole being as to bring actual joy. Our Master knew all this, for he had forty days of attack, at the close of which he was strengthened; and with the thrill of those days upon him, he launched out into the depth of the world's sin. "Watch ye and pray, lest ye enter into temptation."

[*The Universalist Leader*]

It has from the first appeared impossible for the church of itself to do as an organization the work outside of itself, and more and more has it been accepted that it must work through the well established and equipped instrumentalities. But, after all, its chief work must be through its own people; this is the open channel for its service. When it can make its name mean nothing less than personal devotion to all human good; when, if the world hears that a man is a Christian, of whatever denomination, it will know that that man, no matter what his station in life, can be depended upon for every form of personal and social justice, then the enlistment of members into the church will mean, every time, the enlistment of recruits in all forms of social service and righteousness. That is what we want our church to stand for; that is what we want all churches to stand for.

[*Western Christian Advocate*]

Once more there has emerged upon the consciousness and conscience of the Christian church the great thought of Jesus, —the establishment of a kingdom of God (or heaven) on an earth where the Father's will and laws shall be perfectly observed and obeyed. This is the work to which he gave all his years, and which, with its own call and demand for righteousness and justice, he definitely instructed his followers in all ages to pray for and seek for.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

We are glad to announce a lower schedule of rates for the cloth edition of "The Life of Mary Baker Eddy," by Sibyl Wilbur, and we believe that this will assist in a greater distribution of this valuable book. Single copy, cloth, $2.00; three copies, $5.50; six copies, $11.00; twelve copies, $22.00.

"Christian Science: The Explanation of the Ideal Man," a lecture by William D. McCrackan, M.A., has been published in pamphlet form and is now ready for distribution. This pamphlet is also printed in German.

"God's Lovingkindness to Man," a lecture by the Rev. William P. McKenzie, has been translated into German and is now on sale in pamphlet form.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Over one million trees are expected to be sent out from the New Hampshire state nursery this year. The forestry commission is arranging for an increased distribution of trees this fall for planting on waste lands. White, red, and Scotch pine and European larch make up the quantity prepared for this fall's needs. Last fall over one hundred and fifty thousand trees were distributed. Since the forestry commission started the state nursery in 1910, the amount of land in New Hampshire that is reclothed with a valuable stand of young trees is increasing annually. In 1910 sixty thousand trees were distributed. This small total jumped to two hundred and fifty thousand in 1912. Last year four hundred and eight thousand trees were distributed. In the spring of the present year six hundred thousand trees were sent to different parts of the state, and it is expected that the fall shipments will bring the 1914 record to over one million.

Sixty car-loads of raisins, comprising one train of twelve hundred and fifty tons net weight, valued at one hundred and fifty thousand dollars, said to be the world's record raisin shipment, has left Fresno, Cal. The start was made the occasion for a great display of the Fresno business men and boosters. Placards on the train say the shipment totals three million packages of the fruit, most of which is seeded, and is the residue of the 1913 crop, recently sold when the association made the announcement of the fall prices.

Passage of ships to all nations through the Panama canal began Saturday, Aug. 15. This is more than four months ahead of the date set when the board of consulting engineers in 1906 estimated that it would take until January, 1915, to complete the work. The fee for passage through the fifty miles of waterway is $1.25 for every ton (net) of cargo, crew and passengers free. The canal has cost the United States nearly four hundred million dollars. A year from this time, it is figured, the government will have to show receipts of some fifteen million dollars to pay the operating cost of the canal, which would be about four million dollars yearly, and the interest on its huge investment.

The Norwich (England) Consistory Court is considering an application made by the rector and church-warden of Hingham, Norfolk, for the placing of a bust of Abraham Lincoln in their parish church. The bust, which is to be presented by citizens of the United States, will be a copy of the well-known Volk bust. The inscription which it is proposed to attach to the bust is as follows: "In this parish for many generations lived the Lincolns, ancestors of the American Abraham Lincoln. To him, greatest of that lineage, many citizens of the United States have erected this memorial in the hope that for all ages between that land and this land and all lands there shall be 'malice toward none, with charity for all.'"

The International Harvester Company is declared to be a monopoly in restraint of interstate and foreign trade, and was ordered dissolved by a majority decision in the United States district court. Unless the one hundred and forty million-dollar corporation submits a plan for the dissolution of the combination into at least three independent concerns within ninety days, or in case of appeal within ninety days of the issuance of an appeal mandate from the United States Supreme Court, the decision announces that the court will entertain an application for the appointment of a receiver for all the properties of the corporation.

The political machine which for ten years has dominated municipal government in Tokio, was demolished by the reformers at the recent municipal elections. So serious was the reverse, that the organization which was known as the Tokiwakai, and which has been called "Tokio's Tammany," has been dissolved altogether. The good government party regards the overthrow of the organization as a signal victory, and indicative of the general reform movement which is sweeping over Japan in all branches of political life. For the last ten years they have unsuccessfully fought to eliminate the Tokiwakai majority in the municipal assembly.

It is reported that an important discovery of coal has been made in the Prince Albert district of the Cape province of South Africa. The area of the field over which it is presumed the coal bed spreads, is approximately one hundred and twenty thousand acres. Samples of the coal have been shown, and are reported to be equal to the finest bunkering coal in South Africa.

The new banking board of the United States government is now complete. Its members are: W. P. G. Harding of Birmingham, Ala.; Adolph C. Miller of San Francisco; Charles S. Hamlin of Boston; Secretary of the Treasury McAdoo; Comptroller of the Currency Williams, *ex officio;* Paul M. Warburg, of New York city, and Frederic A. Delano of Chicago.

The federal grand jury ended its investigation in Chicago of the Western Cantaloupe Exchange recently, with the return of indictments against seven corporations and twenty-nine individuals. The indictments charge violation of the Sherman antitrust law, illegal control of the product and the fixing of prices.

In accordance with the intention of the admiralty to use oil as fuel for His Majesty's ships, ample provision is to be made for the storage of oil at Rosyth dockyard. Twenty huge tanks are to be erected, and in addition there will be an underground oil reservoir of such dimensions as to constitute probably the largest structure of the kind in the world.

Secretary Bryan and Minister Chamorro signed a treaty, Aug. 5, between the United States and Nicaragua, providing for the cession to the United States of a perpetual option on the use of the Nicaraguan inter-ocean canal route, a naval vessel station on the Gulf of Fonseca, and Big and Little Corn islands on the east coast of Nicaragua.

The report of the Queensland government statistician on the sugar crop for 1913, states that last year's experience with regard to sugar production was a record. The total production was 242,837 tons. The average production of cane to the acre, 20.29 tons, and the average yield of sugar, 2.86 tons, are the highest for the last five years.

A new find of diamonds has taken place at Bloemhof in the Transvaal province. Over two hundred claims have been pegged off at the lime kilns, and it is stated that it is likely to prove one of the richest patches of diamond-bearing ground.

More than seven million five hundred thousand persons climbed the Alps by funicular railways last year. There are now forty-eight of these mountain railways, and the authorities have before them demands for seven more.

In recent years the Chilean government has expended six million dollars on bridge construction. An appropriation of four hundred thousand dollars is expected for the same purpose in 1915.

Approximately five hundred thousand acres of land will be benefited by the proposed irrigation works in Huillapina and Capayan, in the province of Catamarca, Argentine Republic.

The Chilean council of state has approved a bill raising the legation in Washington to an embassy. The United States recently elevated the legation at Santiago to an embassy.

As a result of the third international opium conference at The Hague, all the powers, with the exception of Servia and Turkey, have agreed to ratify the opium convention of 1912.

Expenditures for improvements and betterments on the Santa Fé system authorized in June aggregate one million two hundred and thirty-one thousand dollars.

The imports of Argentina in 1913 amounted to three hundred and eighty-five million dollars, and the exports reached a value of four hundred and eighty million dollars.

Chile contains 187,148,466 acres, of which 23,328,888 acres are suited to cultivation. Only a little over three million acres are made use of at present.

It is expected that the Grand Trunk Pacific authorities will have the big dry dock at Prince Rupert in operation before the end of the present year.

All records for the production of Portland cement were broken in 1913, the total output having been 92,949,102 barrels, valued at $93,001,169.

Signs point to a cotton crop for this year that will be worth eight hundred million dollars to the cotton growers of the South.

Vol. XVI August 29, 1914 No. 52

The Real Man

WILLIAM D. MC CRACKAN, M.A.

IN "Rudimental Divine Science" (p. 1) Mrs. Eddy pricks the bubble of pride which is apt to cling to the word "person," by calling attention to the fact that this word comes from the Latin verb *personare*, to sound through. Classical dictionaries tell us that the actors in the great open-air theaters of ancient times used to wear masks to inform the distant audiences of their characters. For instance, there were masks of comedy and of tragedy. The actor declaimed or sounded his part through his mask, and the mask was called *persona*, from which our modern word person is derived. This word, therefore, does not denote the original or real individual, but only an assumed part in a play,—a character, or a mask. Shakespeare had discerned this when he wrote,—

All the world's a stage,
And all the men and women merely players.

In Christian Science a distinction is made between personality and individuality. In Science and Health we read, "Personality is not the individuality of man" (p. 491). The original, real, or individual man is wholly good, the reflection of absolute perfection, the expression and reflection of divine Love, the child of the divine Father-Mother God. Man made in the image and likeness of infinite good is not a *persona*, or a mask which can be assumed or laid aside according to transient desire or whim. The real man is the derivative of unvarying Principle, unchanging Truth, manifesting the characteristics of eternal, inexhaustible Life and being.

In "Pulpit and Press" (p. 4) Mrs. Eddy writes: "Is not a man metaphysically and mathematically number one, a unit, and therefore whole number, governed and protected by his divine Principle, God?" Man, as God made him, is not a changeling, has no dual nature, no secondary consciousness, wears no convenient mask behind which he can hide his true identity or with which he can deceive his Maker or his fellow man. He is really a "whole number," undivided and indivisible, never a fraction, but always an integer, whose essential integrity cannot be tampered with. This is the man with whom David could identify his real self and concerning whom he could declare, "I have walked in mine integrity."

To the human being apparently struggling between the choice of good and evil, assailed on this side and on that, catching glimpses of the vision of Truth, then seemingly plunged into the darkness of error, torn this way and that by the supposed conflict between "the law of the Spirit of life in Christ Jesus" and "the law of sin and death," this recognition (that person is only a mask) brings with it a great sense of relief. A mask can be taken off. The human consciousness can be relieved of the false pretense about man in order that the reality may appear, because a mask is not the truth of being, but only an assumption, a make-believe, a convention, a covering, or a veil, and not an eternal fact.

The writer recently heard a sermon devoted to an elucidation of the first eight verses of the sixth chapter of Isaiah, in which is described the vision of Truth that came to the prophet and its effect upon him. The sermon set forth how Isaiah exclaimed, "Woe is me! . . . for mine eyes have seen the King, the Lord of hosts;" how "one of the seraphims" laid "a live coal" upon his mouth to purge his sin, the seraphim being interpreted as a messenger and the live coal as divine Love; how Isaiah then heard the voice saying, "Whom shall I send," and was ready to respond with the declaration, "Here am I; send me." The preacher then indicated that Isaiah was thus prepared to go out into the world to reclaim the sinner, comfort the sorrowing, and rebuke evil. Beautiful as this description undoubtedly was, the writer missed two special points in the elucidation which Christian Science makes clear to the student of the Scriptures. There was no explanation of what the vision really was, nor was there any intimation that Isaiah was prepared by this experience not only to save and comfort and rebuke, but also to heal, to cure disease through the spiritual understanding which had come to him in the vision.

From the Christian Science view-point, Isaiah's vision was that of the perfect man, the idea of the divine Mind, the Christ, designated by Isaiah as "the King, the Lord of hosts," concerning whom Jesus the Christ could declare, "Before Abraham was, I am." The prophet's vision revealed to him the true identity of man made in God's image and likeness, and straightway the uncleanness of the belief calling itself mortal man was uncovered to him, and forced from him the agonizing cry, "Woe is me! for I am undone; because I am a man of unclean lips." The sham belief of man, the material masquerade, the mask, the mere *persona*, suddenly appeared to him as an unclean thing, and it needed the live coal of divine Love to purge him of this mistaken notion about man and prepare him for his great mission and redemptive work in behalf of humanity, which would naturally include the healing of the sick as well as the saving of the sinner. Hereafter Isaiah was to tear aside more and more the veil of physical sense, which tries to hide "the King, the Lord of hosts," from human perception. His spiritual sight was to become so clear that he could prophesy the inevitable coming of the Messiah, of him whose understanding of God and man was so clear that humanity would find in him a Saviour, a Master, an Exemplar, and a Wayshower, bringing to earth a complete salvation and a final peace. It was to reach even to the ends of the earth, to the uttermost ages, when all should know the truth beheld by the prophet, whose vision closes with these significant words, "So the holy seed shall be the substance thereof."

Insufficiency of Human Sympathy

MARY I. MESECHRE

THE prophet Jeremiah sounded a note of general human experience when he uttered his plaintive appeal, "Is it nothing to you, all ye that pass by? behold, and see if there be any sorrow like unto my sorrow, which is done unto me." In intimate detail the prophet's heart is fully bared to the passers-by, on the chance that some one, carelessly or with intent, may administer of the anodyne of human sympathy. The fact that mortals have long echoed in varying degree

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

this ancient lament, furnishes positive proof of the self-centered thought and limited outlook of humankind. "My sorrow" would fill the sum of the universe, while "nothing to you" serves to excuse me from other than self-interest.

Why clamor so incessantly for that which we fail to give, or, grown wiser and kinder through trials, offer vainly to the heedless? It has been said that "misery loves company," and has not experience shown that the expression of human sympathy is seldom little more than a rehearsal of the woe and sorrow, the sickness and suffering, of the would-be sympathizer? The thought of human sympathy has become so welded with the sense of human suffering, physical or mental, that the world has all but ignored the fact that sympathy really means a fellow-feeling with others, whether in joy or grief. And how seldom do we find ourselves or others obeying any but the minor portion of Paul's injunction to "rejoice with them that do rejoice, and weep with them that weep"!

Limited by this erroneous concept of sympathy, we even occasionally find those who have so yielded to its mesmeric spell as to believe that sympathy is synonymous with gloom, and that any present manifestation of cheerfulness, or intimation of future joy, betokens heartlessness. It would seem that such a concept has never progressed beyond the incomplete description of Isaiah which prophesies of the coming Messiah as "a man of sorrows, and acquainted with grief." Surely Jesus' own words afford more convincing testimony than can the opinions of any other, and thus, despite the commonly entertained notion of his gravity and solemnity of life and demeanor, we find him explaining his instructions to his disciples in order, as he says, "that my joy might remain in you, and that your joy might be full." Is it conceivable that anything disheartening marked the occasion of this bequest of joy and its accompanying legacy of peace?

That the Master was never deficient in true sympathy is shown by the details of his life as recorded in the four gospels, and as well by the testimony of the writer of the epistle to the Hebrews, who offers strong consolation to the suffering in the statement that "we have not an high priest which cannot be touched with the feeling of our infirmities; but was in all points tempted like as we are, yet without sin." Herein is revealed at once the secret of and the necessity for the insufficiency of human sympathy. Our Master himself echoed the plea for human sympathy when he emerged from his agonizing experience in Gethsemane and found his disciples asleep. In the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy comments on this incident as follows: "During his night of gloom and glory in the garden, Jesus realized the utter error of a belief in any possible material intelligence. . . . His students slept. He said unto them: 'Could ye not watch with me one hour?' . . . There was no response to that human yearning, and so Jesus turned forever away from earth to heaven, from sense to Soul" (p. 47).

Human sympathy is insufficient, because it touches but one point of experience. It never loses sight of the personal equation, because, being based on a belief in material intelligence, its only avenue of expression is through the knowledge of its own suffering. The very depth of its loving sincerity, which prompts the desire to clasp one's arms about a sorrowing friend and lift that one bodily from the limiting environs of grief, evidences as well the unwisdom and fallibility of the affection. The sympathy which matches the experience of our friend with similar points in our own history of misery, merely burdens more hopelessly the suffering heart, which instead "needs its rightful nutriment, such as peace, patience in tribulation, and a priceless sense of the dear Father's loving-kindness" (Science and Health, p. 365). Far more help do we give by silent vigil with that one whose garden path now traces ours, knowing that in God's own time and way will come that viewless ministry of angels, "the inspiration of goodness, purity, and immortality, counteracting all evil, sensuality, and mortality" (Science and Health, p. 581), which sealed the Master's conquest and bore changeless testimony to the sufficiency of God to supply all our need "according to his riches in glory by Christ Jesus."

Individuals and Organization

WILLIAM CAPELL

In these days, when the rapid growth of the Christian Science movement is the subject of comment throughout the civilized world, it is a good thing for the individual Scientist to think frequently of the reason for the existence of the organization, and to ask himself whether he is doing his full part toward the accomplishment of the purpose expressed in these words of our revered Leader: "To organize a church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing" (Manual of The Mother Church, p. 17). Organization is a means to an end, and it is evident Mrs. Eddy saw that a church organization would be of great assistance in giving to the world a knowledge of the priceless truth which had been revealed to her; that it would make possible a uniformity of service in all the field as well as give a basis for the lecture work and for the activity of an efficient publishing society.

A moment's thought upon these and other activities which our dear Leader brought about with the help of the organization, will lead every Christian Scientist to feel *grateful to* her for thus establishing the Christian Science church. This gratitude finds its natural expression in the support of those activities by which all Scientists have been so richly blessed. Each one will consider it a privilege to subscribe for the Christian Science periodicals, and having read them, to pass them to others. He will be glad to support and commend the lectures given in his field. He will earnestly seek to do all in his power toward bringing about the establishment of the kingdom of God in the hearts of men, for this is the great mission of the church.

The Sunday services, the Wednesday evening meetings, and the business meetings afford excellent opportunities for continuous activity and growth, and when the Christian Scientist enters into these services free from all sense of animosity and from the spirit of carping criticism, when he is moved by a humble desire to learn more of the Christ, Truth, and to reflect divine Love, then we have the comforting, stimulating atmosphere in our churches which always attracts the weary and heavy laden. When the Christian Scientist attends the Wednesday evening meetings with a gratitude so great that all sense of pride and fear is cast out, there is a sense of freedom and spontaneity in ever-enlarging measure.

The democratic government which each branch church enjoys, brings with it a great privilege as well as a great responsibility. In order to participate intelligently at the business meetings, each individual should have a thorough knowledge of the affairs of the branch church of which he is a member. It is manifest that when the individual members are scientific, "in honor preferring one another," to quote St. Paul, and when all are seeking to be governed by the one Mind, the business meetings are harmonious. Christian Scientists know that scientific unity can be brought about only as each individual looks to divine Principle for guidance in every step to be taken. They know that unity

Digitized by Google

cannot be gained and maintained by looking to personality instead of Principle. Each must think for himself and not yield to the domination of personal influence.

The "thieves" that sometimes attempt to occupy the "Father's house" will find no entrance when each individual Christian Scientist is found watching. Self-seeking, self-will, discourtesy, pride, fear, hatred, all these robbers which would steal away our peace and destroy our unity, will find no doors open to their entry. Mrs. Eddy clearly saw the distinction between the human organization and the spiritual church, and every Christian Scientist should know the difference full well. If, however, the branch church of which he is a member should seem to be passing through deep waters, the wise Christian Scientist will not spend his time judging and condemning, neither will he from the seeming height of self-righteousness proclaim his graduation from the human organization, but he will strive the harder to do his part toward making the church what our dear Leader intended it to be, namely, the best means for advancing Christ's kingdom on earth.

Putting Off False Sense

ELFRIEDE EBBINGHAUSEN

When the lame man asked Peter and John for alms, he was healed by them. This constituted the disciples' alms, and it not only relieved but completely met the man's need. They gathered their gift from the source of truth. In order that we may be able to dispense such alms, we must first know the source from which to draw, and this lesson may be conveyed to us through the Biblical account of Moses' calling.

Moses was called of God to deliver his people out of bondage, but this task was put before him only after he had ceased to be at the court of Pharaoh, who was responsible for the subjugation of the people. Impelled by a sense of compassion and indignation, Moses attempted the work of salvation by means of mortal belief, before freeing himself from the thraldom imposed upon him; hence his failure, and the necessity that he flee from the court of Pharaoh in order to escape death.

As in the case of Moses, any attempt on our part to overcome error with error will prove abortive, for in so doing we but "increase the antagonism of one form of matter toward other forms of matter or error," which ends in death, while "the warfare between Spirit and the flesh goes on," as Mrs. Eddy points out in Science and Health (p. 145). We should renounce mortal beliefs, and like Moses go into the wilderness, —seek the spiritual, and eliminate from our consciousness everything false, thereby preparing the way for a knowledge of Truth, the coming of the Lord. Moses retired into the desert, and the more he meditated on the spiritual facts of being, the more were mortal beliefs eliminated from his consciousness, thereby allowing Truth to reign therein. Thus the recognition gradually dawned upon him that there is but one power, namely, God.

Moses had reached the Horeb height, where the angel of the Lord appeared to him. There he received an influx of pure thought, symbolized by an angel of Truth, from the realm of peace and harmony; symbolized also by a flame of fire, the purifying fire of Truth which brings to naught all that is unreal and mortal. We read that "the bush burned with fire, and the bush was not consumed." Truth does not destroy its own idea, but its rays bring this harmony all the more into manifestation. When Moses felt impelled to draw near to the reality of being, the admonition was heard, "Put off thy shoes from off thy feet;" that is, put off whatever is mortal and false in thy thought, for thou canst not discern the harmony of being through the material senses. Therefore, divest thyself of these thoughts, "put off thy shoes." This he did, and then the holy task was assigned him of delivering the people of Israel.

The admonition of the angel to put off the shoes, applies to us as well. It points to regeneration, tells us that we too must free ourselves of all false, traditional beliefs in order to lay hold on the things which pertain to the kingdom of God. Then will we be enabled to gain freedom for ourselves and others; to feed the hungry and give to the thirsty the water of life, even as did our Master.

✧

True Vision

FLORENCE STRATTON WEAVER

In Science and Health (p. 516) Mrs. Eddy says: "The substance, Life, intelligence, Truth, and Love, which constitute Deity, are reflected by His creation; and when we subordinate the false testimony of the corporeal senses to the facts of Science, we shall see this true likeness and reflection everywhere." This, then, is our only work in Christian Science, and it insures our progress and triumph.

A mechanic did some work in the home of a Christian Scientist lately, and part of it was poorly done. When he sent his bill, the Scientist wrote him that she would pay for the work that was well done, but as for the remainder she felt she should wait until it was made right. After some days the mechanic responded over the telephone in violent anger, saying that he wanted to be paid in full and at once. So excited was he that the Scientist could only answer, "Send your clerk around and I will pay what is right." The clerk presented himself, and our friend gave him a check for more than half the bill and asked the clerk to explain to the manager her willingness to pay the bill in full when the work was made satisfactory. In a few moments the clerk returned with the check, and then followed another attack over the telephone, with the threat that payment of the bill was to be enforced the next morning.

The Scientist then went to her lawyer, who said she was perfectly right in refusing to pay for work badly done, and told her to leave the matter in his hands. She left the lawyer's office with a great sense of relief that she need no longer dwell on the unpleasant affair, and then planned to go for a ride. She found, however, that she could not enjoy the air or the sunshine. She could not hear the birds sing, and the beauties of the changing landscape flitted by as a mere blank. Looking into her thought, she discovered that she was still in an argument with the mechanic. Then she said to herself, "Why not settle this whole thing in the light of Christian Science?" She remembered Mrs. Eddy's teachings, and having declared the great truths of Science respecting God, and man in His image, she felt that she could go alone to the mechanic and settle the matter without a lawyer, so sure and safe did she feel in her estimate of him. In speaking of angels, Mrs. Eddy says, "We know their presence by the love they create in our hearts" (Miscellaneous Writings, p. 306). Now she could hear the birds, the air and the sunshine came to her with a joyous touch, and all nature declared "the glory of God."

Dismissing the automobile at her door, the Scientist walked around to the mechanic's office. On the way, the thought came, "How do you have courage to 'beard the lion in his den'?" She joyfully responded that it was because she had refused to acknowledge anything but God and His reflection.

Digitized by Google

Having seen this man but once, she did not remember his face. She was sure, however, that she would meet only kindness and courtesy and the disposition to be just. She entered the office, and he came out to meet her from an inner room, smiling and considerate in his manner. When she told him her name, he asked her to have a chair, and said that he was sorry he had talked to her so roughly over the telephone; that it was his purpose now to see to her work himself, and that he would never consent to be paid in full until she was perfectly satisfied. The man seemed quite happy, and she walked out of the office joyous, and lost no time in telephoning the lawyer to enter no proceeding against him, for all had been settled most justly. She had triumphed through Truth, and proved that no law is needed but the law of Love, which, as the psalmist has said, is "perfect, converting the soul," the human sense.

Some one has written that "the great discipline of existence is our refusal to hold an audience with the accuser of our brother," and that "we can never demonstrate perfection for ourselves if we accept a lesser standard for our neighbor, for the truth about one is the truth about all." Surely, if we cleave to this line of thought and procedure, it will be our joy and triumph to reach the mountain peaks where our Leader dwelt when she declared for a God who is infinite alike in goodness and power, and that man is governed by Him. Christian Science will thus overcome the frictions of daily living and prove practical in all our human relations.

✧

Liberality

PETER B. BIGGINS

A FRIEND remarked to the writer a short time ago, when arrangements were being made for a Christian Science lecture, "I was just saying to my wife that one thing which characterizes you Christian Scientists is that you do not hesitate to go to considerable expense for the sake of your religion." The writer replied that there was good reason for this, and illustrated his reply as follows.

There was a man who had lost his health, and as a result his financial circumstances had become straitened. Life seemed to hold for him only sickness, poverty, disappointment, and failure. Christian Science came to his assistance after all other means had failed, healed him of his diseases, and restored his shattered fortunes, giving him an abundance beyond what he could have thought of before. Doctors' bills are now remembered only as part of a hideous nightmare; through greater wisdom in management, unnecessary expenditure is reduced to a minimum, so that he is able to give more liberally in proportion to his earnings. Furthermore, his earning power has increased as the result both of increased strength and a higher order of intelligence, a broader mental and spiritual vision. Above all, Christian Science has given him a satisfying concept of God, brightening his pathway through life, and promising him unlimited blessings for the future. Recognizing that Christian Science is the revelation of eternal Truth, and imbued with an all-absorbing love of Truth, such a man does not grudge what it costs financially to help to bring a knowledge of Truth to others through means adapted to present human requirements.

This little explanation was received by his friend with kindly interest, and the writer felt that he too had been helped by it to gain a still better appreciation of the value of Christian Science to all mankind. It is not, however, in a financial way alone that one has opportunity to be liberal, for we can contribute liberally of time and thought to whatever needs to be done. The materialist thinks that he must use all his time for himself, either to make money or provide for himself some selfish enjoyment. The attitude of the consecrated Christian is diametrically different. Instead of seeking to gain the most he can, he is constantly seeking to give all he can. As good is infinite, the ability to dispense good is also infinite, and we can demonstrate this in proportion as we understand that man is the reflection of infinite Love, who is the giver of all good. No effort is valueless, and no time wasted, when one is seeking faithfully to do better work for God.

Truly has the wise man said: "There is that scattereth, and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty. The liberal soul shall be made fat: and he that watereth shall be watered also himself."

Possession

INEZ KOCH

PROBABLY half the strife in mortal existence comes from the belief in an unequal distribution of worldly goods. We are all tempted to feel that we are entitled to abundance, and when our neighbor is able to travel great distances to attend lectures, or to go through class instruction, we begin to wish we could afford it too; in short, we think that he is enjoying a privilege of which we are being deprived. Even if there is no conscious thought of jealousy, still we wish in our hearts, "I would so much like to possess and manifest abundance like that."

In her book "Science and Health with Key to the Scriptures," Mrs. Eddy teaches that no matter what the condition, it must be met in consciousness, because all is Mind. So, obviously, although we seem to be dealing with a plain matter of money, we must analyze our thought in connection with it. "I wish I possessed what So-and-so possesses," is the tenor of our thought, but when we analyze it we find that this belief that our neighbor has more than we have, is merely the belief that man is separated from good, or God.

If there is only one Mind, good, filling all space, then that good which our brother manifests, is ours as well; and to see it and rejoice with him, is to open the gate of Love through which good is manifested in our experience. To wish for his possessions or to envy him, is to close the fountain of supply, because God is Love, and "is no respecter of persons." All share equally the abundance of good, and man cannot be a partaker of evil, since it has no place in divine Love. To know and recognize good in all around us, and to rejoice in this knowledge, is to do what Jesus taught when he said, "Seek ye first the kingdom of God [of right thought]."

The Way

MARTHA WEBSTER MERRIHEW

THOU needy, pining,
Not yet divining
Thy God's behest,
Ne'er wilful striving
Toward self-outlined arriving
Can truly gain thy rest.
Make thou the humble path thy choice,
And follow where the Shepherd's voice
Would lead thee on thy quest,—
Lo, rest at hand that would abide!
Lo, peace that waits on ev'ry side!
Lean on thy Father's breast.

Selected Articles

[Frederick Dixon in *Wallasey* (England) *News*]

Logic is not, I am afraid, Mr. ——'s strong point, and he illustrates this very completely in his—shall we call it—argument about the woman in the apocalypse. Mrs. Eddy, he explains, teaches that woman symbolizes generic man. Then he adds the playful comment, "Woman means man, man means God, black means white." Now, is it possible that this critic, in all that vast "erudition" which flies from the soldier at Waterloo to the schoolmaster of Auburn, and from the derivation of science from *scio* to the early church quarrels over a diphthong, has never known the word generic or man to be used to cover both sexes. Let me hasten to assure him the usage is quite common from the time of the Latin poets, and can even, in his own phrases, "be supported from Congregational, Baptist, and most hymnals." When he goes on to explain my ignorance over the words holy and wholly, and to explain that one is no more archaic than the other, his erudition becomes a little tiresome. The dictionary which revealed to him the fact that science is derived from *scio*, would, if he had pursued his researches, have revealed the further fact that the connection between the two words is more than what he means by alliterations.

Then the critic asks a question. "How," he demands triumphantly, "could Jesus preach the gospel of idealism of the New Testament before it was in existence?" How, indeed? one feels inclined to answer. Now, may I ask a question in turn? Why did Jesus speak of his "blood of the new testament" before it was in existence? and why was Paul guilty of the same error? May I point out that the idealism of the New Testament was Jesus' teaching, and that that idealism did not come into existence only when first it was written out by some one else and headed New Testament.

I have endeavored to find in this gentleman's letter some definite criticism of Christian Science to which to reply. I regret to say I have been unable to discover anything but the usual mass of unsupported assertions, almost smothered under the dragging in of pieces of miscellaneous information which really have nothing whatever to do with the subject. The method of argument employed by the critic may be, perhaps, tested by the fact that he writes, "Sickness is the product of bacteria, microbes, infection, chills, mosquitoes, improper food, etc." Now this may be all very true, but it does not affect the question in the very least degree. Suppose that sickness, for instance, is the result of microbes,—which will cover a good many other of the critic's causes,—the question arises, What are microbes? Christian Science, in common with the idealism of natural science, insists that they are a product of energy, or, as the Berkeleians would put it, a subjective condition of the human mind. Now, if this is so, the cause of the disease is not the microbe, but the mental condition which produces the microbe. The way, then, to destroy the sickness produced by the microbe, is to destroy the cause which produces the microbe; in other words, to bring about that repentance or change in the human mind which, when effectual, necessarily brings about a corresponding change in the subjective condition of that mind, namely, the human body.

There is only one way, according to Christian Science, in which this is possible. That way is to show a man how he may exchange the carnal mind for the Mind of Christ. Christian Science contends that the only possible way in which the carnal mind can be exchanged for the Mind of Christ, is in the proportion in which a man realizes the fact of the allness of God, good, and the resulting deduction of the unreality of evil. This, of course, does not mean that evil does not influence men as long as it is believed in and regarded as powerful. It does mean, however, that the moment it is seen as the suppositional opposite of Truth, it begins to lose its power over the human consciousness, and there comes to man that scientific knowledge of God, spoken of in the epistle of Peter, which is in turn the absolute knowledge of the truth which Jesus said would free the world,—and free it from what but its ignorance of spiritual law and its belief in suppositious material laws?

✧

[Charles E. Jarvis in *San Diego* (Cal.) *Sun*]

In a recent issue Dr. —— has referred to a man who called himself a Christian Scientist, and who in a spirit of bravado took arsenic with disastrous results. Allow me to say that such a performance has no warrant or justification either in the Bible or anywhere in Mrs. Eddy's writings, and therefore Christian Science should not have been connected with the affair.

Christian Science is the restoration of primitive Christianity, the same as that practised by Jesus and his apostles. It does not require the performance of a spectacular act in order to prove its teachings. "The effects of Christian Science," Mrs. Eddy tells us on page 323 of Science and Health, "are not so much seen as felt. It is the 'still, small voice' of Truth uttering itself."

When Jesus had finished his forty days' fast in the wilderness, he was tempted of the devil to perform feats which to human sense are impossible. Although he realized his oneness with his heavenly Father, and that no harm could befall him, he refused to yield to the tempter. On a later occasion, however, when the need arose, he fed a multitude with five small loaves of bread and two fishes. Paul, through the exercise of his spiritual understanding, saved himself from any ill effects resulting from the bite of a viper, but he had not solicited the occasion to show the power of God. Just so it is with the earnest student of Christian Science. When he understands that he is a child of God and has the loving protection of an omnipotent, omniscient, omnipresent, and compassionate Father, he proves in case of need the truth of God's promise to him "that dwelleth in the secret place of the most High": "There shall no evil befall thee, neither shall any plague come nigh thy dwelling." But he does not claim the victory for himself, nor does he seek the housetop to proclaim it for his own self-justification.

✧

[C. L. Ramsay in *Leith Burghs* (Scotland) *Pilot*]

I have read Mr. ——'s letter on the subject of Christian Science in a recent issue, and I should like to send a few words in reply. How to account for the existence of both good and evil has been the problem of all the ages. Most Christians look forward to the ultimate destruction of evil as foretold in the Bible, but how this is to be accomplished has remained just as great a mystery as the fact of its apparent existence. So long as evil is admitted to be a positive entity or actuality, its existence can only be accounted for in one of two ways: (1) God must be its author. (2) It must be self-existent, having no cause outside itself.

To accept the first of these hypotheses is impossible for the Christian who understands God to be infinitely good and pure and incapable of producing evil. To accept the second is equally out of the question, as that would be to admit the existence of two causes, two creators; in other words, two Gods. Christian Science explains that evil is a hideous misconception, a wrong or false sense of things, an illusion, mis-

Digitized by Google

take, or error, a lie about God and man, which, like any other lie, may produce disastrous results so long as it is believed, yet which can be abolished, but only by the truth. This is the explanation given by Jesus when he described "devil," or evil, as "a liar, and the father of it," and declared that "there is no truth in him." He also referred to the forces of evil as "the power of darkness." In the first epistle of St. John we read, "God is light, and in him is no darkness at all."

What, I ask, is the power of darkness, and what is it that destroys this power? Darkness may be defined as a negation, as a sense of absence of light, though natural scientists tell us that light is never really absent—but it seems so to our senses. What is the remedy? Surely there is but one,—to let in the light. Christian Scientists are finding that as the sunlight of Truth, the knowledge of the power and presence of God, good, is brought to bear upon the sense of evil, the false sense vanishes as darkness flees before the light.

Now this is something that each one can and must prove for himself. Christian Science, as its name implies, is demonstrable truth, to be proved true by actual experience. Those who have accepted Christian Science have done so simply because they have found that it works. If it did not work, it would be of little use to them. Let each one try it for himself. Next time he is assailed by a temptation of evil, sin, sorrow, pain, distress of body or mind, let him declare and try to realize the actual power and presence of God, good, infinite Life, Truth, Love, and persist in this, and see whether the sense of evil does not fade out before the positive actuality and reality of the presence of good.

✦

[Algernon Hervey Bathurst in *Newcastle* (England) *Chronicle*]

While Christian Science stands in no need of publicity from me, it is a little difficult not to say something about it when I am deliberately asked to reply to specific objections to the teaching. I must, however, differ from the reverend gentleman when he says that I am "incapable of seeing the difference between mere statements and proofs or facts." The key-note of Christian Science practice is that statement of James, "Faith, if it hath not works, is dead;" for if Christian Science were merely a theory, it would have ceased to exist long ago, instead of growing steadily till it has already encircled the globe. This great growth is certainly not due to the inability of Christian Scientists to discern the difference between statements and proofs. On the contrary, it is due to the fact that those who understand the teaching set forth by Mrs. Eddy in "Science and Health with Key to the Scriptures," are able to demonstrate it by healing themselves and others. Of course any one is free to doubt or "suspect many of the fruits," but that will not alter the facts, and the individual who has been healed, and that very frequently after having tried every known form of *materia medica* without avail, remains unmoved in his conviction of what has healed him, and is unspeakably grateful for the better understanding of God and man which has come to him through the healing.

I most heartily agree with the statement that "God always works by and through His laws . . . and never goes against them." Unfortunately, however, for those who believe that evil is part of good, or that good and evil are in conflict, the law of God can never be understood so long as it is believed that He permits or even includes a knowledge of disease or sin. Again, if only those reason correctly who reason from the basis of the reliability of the testimony of the physical senses, the only conclusion to be drawn is, that the Founder of Christianity himself was at fault, and this the critic would scarcely wish even to imply. Any one of what are termed the miracles of the Master could be quoted as an instance, but it is because Jesus knew that God was not in or associated with matter that he was able to heal the sick, reform the sinner, and do many other great works, all of which were contrary to the so-called laws generally accepted by the authorities of the day.

Jesus fulfilled the law of God, not by accepting the evidence of the physical senses, but by refusing to submit to them. That is exactly what Christian Science teaches today, and it is because the teaching of Christian Science is synonymous with the teaching of Christ Jesus that the healing work is being so successfully accomplished in every quarter of the globe. Any number of denunciations of the healing of disease by Christian Science treatment, as not being in accordance with the teaching of Jesus, will avail nothing. The growth of Christian Science is not exactly due to the absence of criticism, and a little more criticism will not hinder the growth of Christian Science now, any more than it has done in the past, for the same reason that the criticism and persecution of Christ Jesus and his disciples never stifled the growth of Christianity. As regards the attempt to prove that "sin is not sin, or suffering is not suffering," no Christian Scientist ever endeavors to do so; but in so far as he understands the teaching contained in the text-book, Science and Health, and in the Bible, he is able to prove that man is not the slave of sin, and that suffering can be overcome and prevented just as well today as it was two thousand years ago.

Perhaps the difficulty which some people believe Christian Science presents, is that it is so absolute in demanding implicit reliance upon God, divine Mind. But then, there never were men more absolute than Christ Jesus and his disciples. "Seek ye first," Jesus said, "the kingdom of God, and his righteousness; and all these things shall be added unto you," which certainly cannot be taken to imply, even by the wildest stretch of imagination, that we are first to make certain that all possible man-made precautions have been adopted, and only then turn to God for help. Jesus advised his disciples to know the truth, which he declared would make them free. It was knowledge of the truth which enabled those disciples to heal the sick and reform the sinner two thousand years ago. As Mrs. Eddy writes on page 476 of Science and Health: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick." It is that knowledge of Truth, that understanding of the true nature of God and man, which is Christian and scientific or demonstrable, and inseparable from the practice of the teaching of Christ Jesus.

✦

[Ezra W. Palmer in *The Gazette*, Colorado Springs, Col.]

In a recent issue the statement is made that the Rev. Mr. —— "took occasion to score Christian Scientists, Unitarians, Universalists, and many other sects." The evangelist declared, as a part of his attack on Christian Scientists and others, that "old-fashioned religion had done everything," to which we heartily agree. But the question naturally arises, Who is living and demonstrating old-fashioned religion, the religion which Jesus and the apostles instituted? This religion was a religion of works, not merely of faith or of words. Its adherents proved their faith by their works; they healed the sick, cleansed the sinners, and raised the dead. A careful reading of the sermon of this evangelist in the same issue in which he criticizes Christian Science, makes no reference to

Digitized by Google

healing the sick by prayer or of proving our understanding of God by regenerative works.

The critic's concept of religion, from his public utterances, seems to consist in preaching that God forgives sin, but that healing sickness is no part of a Christian's duty. Christian Scientists believe the Master meant exactly what he said when he commanded his followers in all ages as follows: "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." Does the critic believe this? Does he practise it? If he does, he is doing what Christian Scientists are doing in every city of note in this country. If he does not, he can hardly call himself a Christian, because he does not obey all the commands of the great Teacher who founded Christianity.

✧

[Judge Clifford P. Smith in *The Republican*, Springfield, Mass.]

A friend has sent to me for comment or reply, a clipping from a recent issue of *The Republican* containing a report of a sermon delivered at Springfield, in which Christian Science was denounced for the reason, as our brother put it, that this Science teaches that the dead are conscious. This, he said, is its fundamental fact; and this, he concluded, makes Christian Science an enemy of the Christian church. What Christian Science does teach is that the being which we have in God is continuous and permanent; that life and consciousness are inseparable; and that, from the view-point of absolute truth, all men are alive. As Christ Jesus himself said, "He [God] is not a God of the dead, but of the living: for all live unto him." In a word, Christian Science teaches that the living are conscious, and will ever continue to be so.

The fundamental facts of Christian Science are, therefore, the present facts of eternal life, as distinguished from the false sense of existence which includes fear and torment; and the way that Christian Science offers by which to escape the "eternal torment" dwelt upon in this sermon, is to gain the true sense of being and of what real life includes.

✧

[John W. Doorly in *Wakefield* (England) *Express*]

Your correspondent, Mr. ——, among his many erroneous impressions of Christian Science, seems to be laboring under this, that Christian Science teaching is for the purpose of enabling its followers to have a very good time in the flesh. Nothing could be more erroneous than this view, since the teaching of Christian Science clearly emphasizes that both pain and pleasure in matter are equally erroneous, and that if you believe in the one you render yourself subject to the other. Christian Science does teach, however, that in God's presence is "fulness of joy;" at His right hand "there are pleasures for evermore." It teaches that true being, or spiritual being, is the consciousness of eternal harmony, in which no law of the flesh can operate, but only the divine law of Life, Truth, and Love, delivering men from both the ills and the dangerous pleasures of matter, and giving them true joy and peace.

The critic's intimation that Christian Scientists desire ease in matter, is only another proof that the gentleman either has not read Mrs. Eddy's book, from which he claimed to quote, although incorrectly, or that he has taken no trouble to understand what he read, since in numerous instances the author points out that this is in no way the desire of Christian Scientists or the object of Christian Science. He is very happy because he has found to his own satisfaction that Christian Scientists do not believe that "this is the work of God, that ye believe on him whom he hath sent." From his point of view it is quite true. Christian Scientists do not believe that a mere human opinion respecting the person of Christ Jesus as the Saviour of the world, will save them from evil, but they do know that to understand, utilize, and appreciate the teachings of Christ Jesus which reveal God's law, or the spiritual law, will undoubtedly save them from the only hell there is, that is, the belief in the reality of what Paul terms "the law of sin and death."

Perhaps the critic will accept Jesus Christ's own definition of what it means to believe on him, and of how a believer on him can be recognized, when he declared, "He that believeth on me, the works that I do shall he do also." Judged by this standard, Jesus Christ's own standard, Christian Science has nothing to fear today, since it stands preeminent among religious bodies in its insistence that the works which were done by Jesus Christ, and his followers for three hundred years after, were accomplished through the correct, scientific, and fixed understanding of God's law, and that these same works are just as natural and easy today as they were then, in proportion to one's understanding of this divine law. That a critic whose religious belief does not include this living, vital faith, shoul! object to this teaching, even as the rabbis objected nineteen hundred years ago, is not surprising; but this in no way disproves the fact that Christian Science is revealing to mankind that "lo, I am with you alway," in the very way that this Christ himself decided was the proper and only way, and that is, through demonstration.

Evidently the gentleman prefers to believe in a God and His Christ who permit one to have a bad time here, or even arrange that one should have a bad time, but will provide a better time hereafter! Fortunately for Christian Scientists, they believe in a God who is infinite, divine Love, who does not send or permit sin, disease, or death, but who is forever manifesting Himself through His Christ, revealing to men the truth, and the way of salvation from every phase of physical sense here and now. Which teaching humanity prefers, time will undoubtedly show; meanwhile the statement of Jesus Christ to those who will accept it, still remains vital, "I am come that they might have life, and that they might have it more abundantly." This life Christian Scientists understand to be the government of divine law, making free from all unlike itself.

Glad Assurance

MINNA MATHISON

I WILL be glad, I said; but in the round
Of daily trivial tasks and anxious thought—
Of days with care and bitterness full fraught—
Never my heart a cause for gladness found.

I will be strong, I said, and none shall seek
The kindly inspiration of my word
Without a message, inly felt or heard;
Yet when affliction found me I was weak.

Then came a voice that pierced the darkness through
Of self-bound consciousness, still, soft, and clear,—
By Love companioned, nothing need thou fear;
In Truth thy strength; in Truth thy gladness, too.

Welcome that message old to this new age,
Unfailing answer to the Spirit's call;
Though of mine own self nothing, yet the all
Of Truth is mine through blessed heritage.

Editorial

Our Leader's Hymns

OCCASIONALLY the question is asked from various parts of the field, as to how frequently our Leader's hymns should be sung in the church services. This question was answered in Mrs. Eddy's letter of March 3, 1903, to The Christian Science Board of Directors, and we are glad to quote her words. In response to a request that these hymns be sung more frequently in The Mother Church, Mrs. Eddy wrote as follows:—

"It would be a good thing to have one of my hymns read and sung about every Sunday. It would spiritualize the thought of your audience, and this is more needed in the church than aught else can be."

✧

"Omnipotent and omniscient Mind"

MRS. EDDY, in referring to the healing work of Jesus' disciples after his ascension, writes on page 47 of Science and Health: "They no longer measured man by material sense. After gaining the true idea of their glorified Master, they became better healers, leaning no longer on matter, but on the divine Principle of their work;" and on page 25 of "Miscellaneous Writings" she writes, "Jesus' only medicine was omnipotent and omniscient Mind."

In these sayings Mrs. Eddy clearly indicates that in Christian Science practice "it is the spirit that quickeneth; the flesh profiteth nothing," even as the great Teacher had declared, and upon this same basis the work of healing as Christ Jesus healed the multitudes is to be done today. To measure "man by material sense" would be to give power to all unlike God, to all the theories and beliefs about disease, sin, and death; to regard man as a material being, sick and dying by reason of material conditions, and to be healed only by material remedies. To all of this Mrs. Eddy takes issue in Science and Health and her other writings, and plants Christian Science firmly upon the only enduring basis, "All is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468).

The greatest trouble with the world today is its belief that material methods and means are necessary to keep men well or to heal them should they become ill, and this belief has been so carefully and industriously fostered that mankind is largely in bondage to it. In fact, no other belief is so firmly grounded in the human mind, and none other is so far-reaching in its effect as is this. To meet and overcome this belief is the first duty of each individual Christian Scientist, and it goes without saying that their first struggle must be in their own thought, otherwise "they be blind leaders of the blind." The result of such blind leadership has been declared by our Master, and its effects have been seen in every century; therefore the Christian Scientist who would profit by experience should bend much of his energy toward keeping his own thought clear and his own actions consistent in so important a matter.

Every case of genuine Christian Science healing is an object-lesson to the world that man is not dependent on medicine or material means for life and health, and as more of this healing work is done, the more surely will the fundamentally wrong belief that material means are necessary for the life and safety of mankind give place to the truth of being. A great responsibility is upon Christian Scientists at this time. The world is looking to them for the exemplification of the teachings of our revered Leader, and it is their unspeakable privilege to bear witness to the power of Truth to heal and to save. It is therefore cause for much gratitude that the testimonies of the beneficial results of Christian Science practice are so frequent and so positive. When we remember that every case of healing in Christian Science means that much of error annihilated, that much of its ultimate vanquishment accomplished, we may well thank God for the light which has come to those who erstwhile were in darkness, and that through a right understanding of the omniscience and omnipotence of infinite Mind we enter upon man's heritage of eternal life.

ARCHIBALD MCLELLAN.

✧

Unfailing Joy

IN the presence of an international conflict which threatens to engulf the Christian world with a tidal wave of suffering and unhappiness, many may be led to doubt the possibility of being obedient to St. Paul's mandatory counsel to the Thessalonians, that they "rejoice evermore," or to conform to the kindred and oft-repeated injunctions to the early Christians at a time when they were "troubled on every side."

Though the seriousness of the tragedy of the apostle's own life-experiences is revealed in the eleventh chapter of his second letter to the Corinthians, the triumphant note which pervades all his writings makes it apparent that he had entered into the practical possession, the every-day use of that inheritance which Christ Jesus bestowed when he said, "Peace I leave with you," "that your joy may be full." He proved for himself, to paraphrase the poet, that at its worst

> The world is not so bitter,
> But God's smile can make it sweet;

and they are blessed indeed who through Christian Science have learned the secret of this exaltation of spirit, who have acquired that gladdening and strengthening consciousness of superiority to human events to which the great apostle had attained, and of which we are all in such need today.

True joy is not the rose; it is as the fragrance of the rose. It goes not forth alone, but attends ever upon the realization of Truth, the knowledge of the omnipresence of good. To taste the Master's joy, therefore, we must gain his vision, his sense of certainty, of freedom, and of love. At times like this, when the very foundations of the human order seem to be breaking up, when every rational human hope seems to have failed, and all human thought to end in a shudder of contradiction, he who has not the satisfying conviction, and more, the demonstrable knowledge of the omnipresence and omnipotence of good, can but become a prey to pessimism if not despair. This is the stalking specter of temptation which one may not hope successfully to resist unless he is standing on that solid "basis of thought and demonstration" (Science and Health, p. 259), that immovable ground of peace which the teaching of Christian Science supplies.

They who meditate upon the seventeenth chapter of St. John, will perceive that the Master found his wondrous poise in his realization of the nature, the nearness, and the availability of his Father, and our Father. Ever and again he turned to Truth, the Principle of being, as the wellspring of peace. In the quiet hours of starlit isolation, and as well, no doubt, when surrounded by those who were crying out, "Crucify him," he was wont to withdraw his thought from material seemings, that he might companion with the verities of Spirit, and it is in following his footsteps, here as everywhere, that we share his overcoming and enter into his rest. "Correct material belief," writes Mrs. Eddy, "by spiritual understanding, and Spirit will form you anew" (Science and

Digitized by Google

Health, p. 425). This is the way in Christian Science, and they alone who are following it these days may hope to experience, maintain, and express "the joy of the Lord."

With this calming and comforting assurance of the immutable stability of the things of God, Christ Jesus had a sense of freedom which is gained only as one has learned to identify power with the activities of Truth and Love. He who thinks of the material order as divine, and who is thus logically compelled to affirm that God gives destructive and death-dealing effectiveness to the exploding shell, the bullet's impact, and the bayonet's thrust, precipitates thereby a state of mental confusion that is no less depressing than inescapable. But he who in Christian Science has learned to identify reality and power with the activities of good alone, who has come to understand that there is no war, no disharmony in heaven, and who is able to prove this in some degree in the overcoming of sickness and sin,—he has entered into "the secret place of the most High," and no experience or condition can rob him of that continuous peace and joy which is indeed "the inheritance of the saints."

JOHN B. WILLIS.

✧

Truth and Truthfulness

THERE are perhaps very few who realize the actual value of truth in every phase of human experience, and fewer still who would admit that mortals cannot in the strictest sense speak the truth, for the simple reason that spiritual sense is needed in order to know the truth about anything. Christ Jesus required of his followers righteous judgment, and St. Paul says, "He that is spiritual judgeth all things," to which he adds, "We have the mind of Christ."

Those unacquainted with Christian Science would doubtless demur at the statement that truth can and does heal the sick where all material means have failed, because truth as thus presented would seem to them a mere abstraction; but to the student of Christian Science it would be solid reality, beside which material things would be as shadows. Like faith, truth can move mountains, because faith as the Master declared it means faith in Truth, the truth of God's all-power and ever-presence, and of man's spiritual relation to God, which constitutes the reality of being. How thrilling are the words of Christ Jesus when he tells of what will come to pass when "the Spirit of truth" comes to human consciousness and guides "into all truth,"—the truth about everything, from the least to the greatest. Alas that the world should so long have missed this promised Comforter that takes of the things of the Father,—health, holiness, happiness,—and shows them to those who are suffering in darkness and fear, robbed by false belief of the glorious light of divine Truth.

After long centuries of darkness—the light of Truth shining on forever, though men's eyes were closed to it—one was called to declare anew its mighty power, and Mrs. Eddy heard and heeded the command. What it cost her to obey, none can tell, for the Master's experience with mortal belief was hers also, because, as at that earlier day, "men loved darkness rather than light," they chose matter rather than Spirit. But there were many who were weary of darkness, and they listened, though it seemed hard to believe that Truth alone is mightier than aught that the senses can perceive, and to accept the statement that "omnipotent Truth certainly does destroy error" (Science and Health, p. 353). In spite, however, of doubt and incredulity, those who sought found this true, found that Jesus' declaration, "The truth shall make you free," is as practical and powerful today as when he uttered the words.

There is, however, another vital consideration connected with the puissance of Truth, and it is explained in the [mate]ment found on page 516 of our text-book, namely, [sent] Truth is reflected "in truthfulness;" not in any mixtu[re] truth and error, though in reality they never mix. T[ve] admits of no alloy; it is one with Love, and can never [a] blended with hate, impurity, or selfishness. God alone kn[e] the truth about man, and the divine image can be traced o[n] in truthfulness and by truthfulness. Blind prejudice ca[n] not discern or declare the truth about man; no, not even about the poor struggling human sense, and truthfulness is reached only as we become more spiritual and learn to love more. To this we may apply Whittier's words,—

> But love alone knows whence it came,
> And comprehendeth love.

To realize the power of Truth, we must ourselves be truthful in thought, word, and deed. We must know the truth about God and man, and hold to it unswervingly, whatever the opposing evidence. The more we do this, the surer will be the uncovering of the error which would defeat the divine purpose. Too often are students of Christian Science tempted to make real the counterfeit which is being uncovered, and to the extent that they do this, the reflection of divinity is obscured to the human sense. The whole purpose of our Master's life was to bear witness unto the truth, and shall anything less than this be ours? Not if we would be healthful, happy, strong, and loving. Well might John, the beloved disciple, say, "I have no greater joy than to hear that my children walk in truth."

ANNIE M. KNOTT.

Among the Churches

Current Notes

HARTFORD, CONN.—Second Church of Christ, Scientist, will lease from the Park Ecclesiastical Society its church at the corner of High and Asylum streets. The first services of the Christian Scientists in this church will be held on Sunday morning, Sept. 6. Second Church of Christ, Scientist, in Hartford, was founded Dec. 21, 1907. At that time about thirty people assembled in a small room in the Connecticut General Life Insurance Company building on Pearl street. In a little more than two years, more extensive quarters became essential. In May, 1910, the large room at 48 Lewis street was made available. Soon afterward, Second Church leased three rooms from the Phœnix Insurance Company for three years. The congregation is increasing steadily.

The Hartford Courant.

LIMA, OHIO.—A real estate possession of considerable importance to Christian Scientists and their friends was acquired yesterday [July 14], when the title to the old Brice homestead at 553 West Market street passed into the hands of First Church of Christ, Scientist, of Lima. The property is among the most desirable locations in the city, fronting seventy-five feet on West Market street, and the lot is two hundred and twenty feet deep. The price paid is said to have been ten thousand dollars.—*Lima Democrat.*

OAK PARK, ILL.—On the morning of June 1, ground was broken for the erection of the edifice of Second Church of Christ, Scientist, of Oak Park. The building will be seventy-eight feet wide and one hundred and forty-six feet deep.

Digitized by Google

ain auditorium will seat eleven hundred, while the Sunschool will accommodate over four hundred children. lot purchased for the church is at the corner of Oak k avenue and Ontario street, the most commanding site Oak Park.—*Correspondence.*

of FARGO, N. DAK.—The building committee, with the board of directors and readers of First Church of Christ, Scientist, met on Friday morning, July 3, at six o'clock, to lay the corner-stone of their new church building, to be located at the southeast corner of Ninth street and First avenue south.—*Correspondence.*

STATEN ISLAND, N. Y.—The distribution committee has made fifty visits to institutions, including the public libraries, Fort Wadsworth, Richmond Light and Railroad Company, Richmond jail, and the Society for the Prevention of Cruelty to Children. Thirty-four packages of literature (680 pieces) have been sent to the Mission Yacht Association, eighteen packages (280 pieces) to lighthouses, and one hundred *Monitors* were sent to the Farm Colony. During these six months, our committee has distributed 68 *Journals*, 20 *Herolds*, 500 *Sentinels*, 3,701 *Monitors*, 295 reprints, 43 pamphlets, 76 *Manchester Unions*, 100 *Staten Islanders*, and 33 *Quarterlies*, making a total of 4,836 pieces of literature sent out.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be Nov. 6, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Oct. 14, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to June 5, 1914, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

✧ ✧ ✧

The Lectures

Amsterdam, Holland

The first Christian Science lecture in Amsterdam was given by Bicknell Young on March 12, in the building of the "Vrije Gemeente" (Free Congregation) which was kindly lent for the occasion. Mr. A. J. de Graaf, the president of the Free Congregation, introduced the lecturer and said:—

When we were asked by the Christian Science Society of Amsterdam to lend them our church for a lecture on Christian Science, we met to consider whether we should open our doors to them. We then consulted our statutes, and found that the purpose of our society was to promote the religious life in a liberal, undogmatic way. These three points then presented themselves for our consideration: Can Christian Science be numbered among the religious movements? Is the movement of such importance that there is a reason for us to hear it explained? Is the lecturer who will address us thoroughly competent? It did not seem desirable to us that those who only partly understand a religious movement, should be free to lecture on it.

On the first two points we could reply in the affirmative, while as regards the third, we were informed that Mr. Young is a member of the board of lectureship of The Mother Church in Boston, Mass., and as such is officially qualified to explain Christian Science. We therefore felt obliged to open our doors for this lecture, and hope that we too will learn something from what we are going to hear.

Correspondence.

✧

Los Angeles, Cal.

Willis F. Gross delivered four lectures on Christian Science for Third Church. The introductions in part follow. At the first lecture N. D. Darlington said:—

We are living in what may be called a practical age. The world is not ready today to accept a thing as a fact simply because it happens to be the dictum of some person or of some group of persons, but there is an insistent demand that proof of its truth be offered before people are asked to accept it. Christian Science is in hearty accord with this demand, and is perfectly willing to be judged or measured by it; for it is scientific, and it is susceptible of proof.

Arthur W. Eckman said:—

Christian Science is a practical, every-day religion which, when earnestly applied to our daily problems, enables us to live healthier, happier, and more useful lives. It aids the business man in the more successful conduct of his business; it heals our sickness and destroys our sins. The truth of these assertions is established by the testimony of thousands of good people whose lives have been made happy and successful through its ministrations.

Judge Lewis R. Works said:—

Mrs. Eddy, the author of the Christian Science text-book, "Science and Health with Key to the Scriptures," discovered the philosophy which she so appropriately named Christian Science, in the year 1866. The text-book itself, first published in 1875, and Mrs. Eddy's other writings, awakened interest, slight at first, but growing apace as the years passed on. Notwithstanding the unerring and irrefutable logic of her writings, Mrs. Eddy some years ago saw the advisability of providing additional means for satisfying the increasing interest in the subject of Christian Science, and she directed the formation of a board of lecturers, an institution which has existed ever since. It is the duty of the members of this body, one of whom is present with us this afternoon, to present to the ear of the world a further elucidation of the subject which has been so satisfactorily presented to its eye by the writings of Mrs. Eddy.

H. P. Hitchcock said:—

Christian Science has come to the world, healing the sick and sinning and comforting the sorrowing. These results prove Christian Science to be a practical religion, one that meets all the needs of mankind. It is not surprising, therefore, that many are seeking enlightenment on this subject.

Correspondence.

Frankfort, Ind.

Prof. Hermann S. Hering lectured on Christian Science to a packed house at the Blinn Theater. He was introduced by E. M. Cohee, who spoke as follows:—

A Christian Scientist, of whatever degree of understanding, is always happy to have an opportunity to testify to the blessings he has received from this new-old teaching. Knowing as we do from our own experience that God's promises are kept, and knowing also that His promises were not made for a limited time or to a limited number, we are glad

Digitized by Google

to embrace any opportunity to try to convince our friends that Christian Science holds for them the same blessings we have received from it.

Christian Science does merit your thoughtful investigation; and when it receives it, earnestly and truthfully, we have no doubt of your activity. Christian Science comes to the man or woman who is groping in the darkness of sin, and lifts him or her into the sunlight of Christianity; it comes to the one burdened with sickness and disease, and brings to him health and happiness; it comes to the individual harassed with doubts and fears and deep in the despair of worry and trouble, and shows him the way to that "peace of God, which passeth all understanding." These and all other blessings of Christian Science are not mere theories which cannot be proven; they are not occurring in distant cities only and to people whom you do not know, but they are coming every day to ever increasing numbers of your friends and neighbors, and they are today as surely the result of the right understanding and the right application of God's law as were the miracles, as we have been taught to call them, which were wrought by Christ Jesus on the shores of Galilee.

The Morning Times.

✧

Oskaloosa, Iowa

In accordance with the practice of previous seasons, First Church of Christ, Scientist, gave the people of Oskaloosa another opportunity of hearing an excellent discourse touching the basic teachings of Science. William R. Rathvon delivered the lecture, and was introduced by James A. Devitt, who said:—

In looking over this audience, I am impressed with the presence of a large number who, like myself, make no pretense of understanding the teachings of Christian Science, but who, by their presence this evening, exhibit a genuine interest in what might well be termed the greatest forward movement that has appeared during our generation among the people who accept the teachings of the Christian religion. This is a generation in which there has been and is a constant cry that the church is losing its hold upon the people. There are repeated warnings from those high in ecclesiastical authority, that unless something is done, the Christian church as such will cease to grow, if it does not actually retrograde both in members and in influence.

It is indeed remarkable that in such a generation and under such conditions there should develop an organization which can only be described, by one who is not a member, as the most remarkable religious organization in its growth, development, and the extent of its influence throughout the world, that has appeared during many centuries.

The Oskaloosa Times.

✧

Berkeley, Cal.

An interesting lecture on Christian Science was given by Bliss Knapp at First Church of Christ, Scientist, of this city, under the auspices of the Christian Science Society of the University of California. The speaker was introduced by Dr. Carleton H. Parker of the university, who spoke as follows:—

I appear before you as one who knows little of the creed which draws you together here, but I know very much about what this creed stimulates Christian Scientists to do. I feel more deeply than I can express that Christian Scientists stand bravely for the awakening of that social responsibility which alone can save our society from its growing danger. They translate their creed into the acts of their daily life with a consistency which in this age of religious indifference has again and again astounded me. From the intimate knowledge of their quiet work, I believe that they represent one of the great potent forces of social betterment. To me, an economist, they are essential, because they have touched a social class with a sense of brotherhood in a manner to give us hope that the bridging of the gulf between the two hostile groups can be done.

I admire the church, because it demands that the conviction and belief of its members must be clearly written in Christian and social performance. They represent a great religious honesty and efficiency.—*Berkeley Gazette.*

✧

Alameda, Cal.

Col. William E. Fell spoke on Christian Science to a large audience at the First Unitarian church. The speaker was introduced by the Rev. N. A. Baker, pastor of the church, who said in part:—

Some one has said that mankind cannot be too frequently reminded that there was such a person as Socrates. That remark may be extended, and we may truthfully say that we cannot be too frequently reminded that there was such a person as Jesus of Nazareth. The Christian church invites us to reflect upon the life and teaching of Jesus, but there seems to be a disproportionate emphasis upon his ministry.

The ministry of teaching and preaching has been well emphasized by the older churches of Christendom, and it has remained for a new organization to concentrate attention on the fact that in addition to the ministry of teaching and preaching there is a ministry of healing. It is for this ministry that Christian Science speaks; and I, as one standing for the widest fellowship in religion, am resolved that it shall be given a hearing.—*Alameda Times Star.*

Testimonies of Healing

I am very thankful to give my testimony as to the benefit I have derived from Christian Science. I suffered for forty-five years from what was called acute stomach trouble, attended with a torpid liver, an enlarged spleen, bowel disorder, cough, and sleeplessness. I tried all kinds of medicines, water cures, etc., but none of these did me any lasting good. I traveled to New Zealand, Australia, America, and other places abroad, but without any permanent good results. Soon after I returned home, I had the same trouble. I also dieted on the lightest food I could possibly get, but even this was a failure. To me, life was a burden instead of a pleasure.

About four years ago one of my friends called to see me, and he asked how my health was. I told him I was as bad as ever, though I had been dieting for some months. He said, "I know a person who has been cured without any medicine whatever," and when I asked what had effected the healing, he replied that it was Christian Science. I had been closely connected with our little parish church for fifty years, and I took a deep interest in the services, which I loved and thought could not be wrong. Near to the neighborhood in which I live, there was a Christian Science society, and one Sunday evening I went to the service. Later on a lady sent for me, and kindly lent me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

I did not at first think that I should get healed by the reading of this book, and I found that so long as I read with prejudice I did not advance; but when I abandoned all prejudice, and tried hard to follow the instructions on prayer, then in three weeks the light came. I was entirely healed of the stomach trouble, and all the other ailments from which I suffered gradually disappeared. I can now eat almost anything; and I must say that I have better health than I have had for the last forty-five years,—and this at seventy-one years of age.

I have had no recurrence of any of the ailments. I thank God many times daily for my good health and strength, and I am very grateful to Mrs. Eddy.

George Worthington, Dunham Massey, Altrincham, Cheshire, England.

✧

[Translated from the German]

It is with a sense of great joy and deep gratitude that I herewith testify to having been healed through God's power in Christian Science of what was pronounced tubercular disease of the lungs and vertebræ. Since the birth of my youngest boy, now five years old, I was ailing, and suffered from severe pain in the back and in the chest especially. A "nature-cure" physician treated me for several weeks at his private clinique, and I was informed at the same time that I needed the utmost care in view of the greatly weakened condition of the lungs. About a year after this treatment I felt much better, but then my old troubles returned with accelerated force. I was unable to manage my household affairs, as the pain in the back had become almost unbearable. An outside curvature of the spine was taking place, and a large hard swelling formed in the left side. I submitted to an examination by a physician, the result of which meant a terrible blow to me and my family. The diagnosis was tuberculosis of the dorsal vertebræ and an abscess. I was advised to go to a sanitarium without delay, where a rest-cure extending over a period of several months might be conducive to healing.

As it seemed almost impossible for us to believe this bad news, we consulted several other specialists in this as well as in other localities, but in every instance the dreadful word was that I must leave at once for a sanitarium. The sense of fear and of worry for having to part from those dear to me had such an injurious effect that symptoms of paralysis began to manifest themselves, and according to a medical statement, my lungs were almost entirely diseased. The date of my going to the sanitarium had been fixed, when in our greatest need, and as it seemed through divine Providence, our attention was called to Christian Science. As a drowning man will catch at a straw, so we grasped at what had been extended to us, as it was our last hope.

Not only was this hope to be realized, but our fervent prayers were to be answered. What seemed almost impossible for us to believe at first, occurred. With loving treatment, present as well as absent, I have been freed through Christ, Truth, of the dreadful evil which had beset me. The swelling, which according to the statement of all the physicians whom I had consulted, I would have to retain for the rest of my life, has completely disappeared, after freely discharging through an issue which formed spontaneously. This was the error which had to yield. The pain in the back and in the lungs has almost entirely disappeared, so that for months I have been able to attend to my household duties, without having to rely on others.

My thankfulness goes out in the first place to our loving Father in heaven; and I gratefully remember the author of our wonderful text-book, "Science and Health with Key to the Scriptures," whose efforts have made possible the attainment of a beautiful result, as in the present instance.

Frau Emmy Schmid-Wyssmann, Bern, Switzerland.

[Translated from the German]

It affords me special pleasure to be able fully to corroborate my sister's testimony. We have indeed experienced that God is our only helper in times of trouble. I would like to mention one particular experience which we had during the illness of my sister. It was at the very beginning of her treatment in Christian Science, when she went to spend some time at the home of a family of friends on the Bernese Highlands. She had been there but a few days when we received word that she was very ill. I immediately left home with the intention of returning with her, if possible, on the earliest train; but when I reached her, her condition was such that a trip seemed out of the question. She had high fever and was unable to move in bed on account of distressing pain in the back. I was afraid she might have a hemorrhage at any time, while she became despairing, believing the end to be near.

Our understanding of Christian Science was small at that time, but in that night of need and sorrow I several times read to my sister the Lord's Prayer with its spiritual interpretation as found in our text-book, "Science and Health with Key to the Scriptures," and we clung to the spiritual meaning of this prayer. It was then we felt that God was quite near, encompassing us with His love, and that very night the abscess opened,—the disease, to material sense, found an issue. On the following morning the first ray of divine light illumined my sister's consciousness, for she uttered the words, "Now I do believe that I will be healed."

We were enabled to undertake the trip home. God, infinite power, sustained the sufferer, and from then on, thanks to divine help and goodness, the healing made quick progress. I am giving these explanations chiefly by way of encouragement for the sick who may not yet firmly believe in Christian Science, so that they may not come to a standstill on the

Digitized by Google

way in which they have started, but go on with renewed strength toward the glorious goal. God helps us under every circumstance, for He is indeed Life, Truth, and Love. We have experienced the truth of the words of the prophet Ezekiel, "Have I any pleasure at all that the wicked should die? saith the Lord God: and not that he should return from his ways, and live?"

I gladly confess to the fact that there is nothing of greater value to me than Christian Science, and it shall be my endeavor to grow in understanding. My most sincere desire is to be able to comply with Christ's command to preach the gospel and heal the sick; "for it is God which worketh" in us "both to will and to do of his good pleasure," and He will sustain me in His infinite power.

FRAU SALQUIN-WYSSMANN, Bern, Switzerland.

✧

Five years ago last August I investigated Christian Science. At that time I was ailing with bowel disorder of eighteen years' standing. This difficulty was conquered with one audible treatment. Grief over a dear one was overcome after having a few talks with the practitioner.

Three years ago last June my son was run over. His arm was said to be broken in several places and his thigh fractured. The specialist told me that the injured leg would be three or four inches shorter than the other, that the boy would have to use crutches for some time, and that it would be at least six months before he could walk. He also told members of my family that my son would never be able to use his arm again. I looked at the doctor and felt that he was doing his best. At the same time I mentally declared the truth of being, and the words from Isaiah came to me, "Fear not: for I am with thee." With Christian Science treatment the arm was healed in two weeks and three days. The injured leg is as long as the other, and the boy did not have to use crutches, yet he was out walking in less than two months,—all due to Christian Science.

For the many blessings I have received I am indeed thankful to God, and grateful to our beloved Leader, Mrs. Eddy.

EMMA GREENWALD, New York, N. Y.

✧

It is with the deepest love and thankfulness to God, and with gratitude to our dear Leader, Mrs. Eddy, that I give this testimony. I came to Christian Science for physical healing alone. I was then quite satisfied with my religion, having been brought up in the Jewish faith. After being so greatly benefited through Christian Science, however, I was eager to investigate it, and when I came into the possession of a clear understanding of the truth of its teachings, I was indeed happy to accept it as my religion.

It was through a friend's healing of asthma that my interest was first awakened. I was in great physical bondage at that time, being a constant sufferer from the same ailment in a most aggravated form. I had tried many physicians, also change of climate, but I received no lasting benefit. After a few moments' conversation with this friend, I decided to have Christian Science treatment. My complete healing did not come immediately, nor for weeks or months,—indeed, it covered a number of years; but during all this time I was being benefited mentally, morally, and physically. Today I can honestly say that I am entirely healed of asthma. During the time of my healing, several of my family caught glimpses of the light, and they too are receiving daily blessings. My husband and I are especially grateful for an understanding of this Christ-teaching, which shows us how to care for our little son. Truth has always met our daily need.

Christian Science has taught me that there is but one creation, and one God, the Father of all. I feel sure that if the Jewish people could gain the true concept of the Christ as understood and demonstrated in Christian Science, they too would welcome this higher meaning of the prophet's declaration, "Hear, O Israel: The Lord our God is one Lord."

ELLA MAY ROSENFELD, Portland, Ore.

✧

Words cannot express how thankful I am for what Christian Science has done for me. I had been suffering from a very bad stomach disorder, for which I had been under the treatment of a great many physicians. At the time I took up Christian Science treatment, through the persuasion of a friend, I had been under the care of a stomach specialist for a year and seemed to be getting worse all the time; so I decided to go to a Christian Science practitioner who lived in our town, and in a few weeks I was healed. That was over five years ago, and today I am in perfect health.

For this healing and many other blessings which have come to me in Christian Science, I am most thankful to God. Words cannot express my gratitude to our loved Leader, Mrs. Eddy, for giving us this spiritual interpretation of the Bible.—ELNORA MCKINNON, Sidney, Ohio.

✧

I have many things to be grateful for in Christian Science, but chiefly for the spiritual healing which has come to me. Before coming into Science, I seemed to be in complete darkness, and the harder I struggled to find my way out, the more determined did the waters seem to close above my head. As a child, I attended church and Sunday school regularly, and studied the Bible faithfully, reading it through three or four times; but later I found so many things which I did not understand and so many passages which seemed contradictory, that I finally gave up in despair. I stopped reading the Bible, and no longer went to church and Sunday school. However, I still tried to pray when I was alone, and thought that perhaps sometime I should understand that which I so much wanted to know.

Whenever I had asked about God I had always been laughed at, or those I questioned said they did not know, so that finally I stopped my inquiries, but thought that perhaps after I died I should understand. In Christian Science I have learned that we do not have to die to learn what God is or to understand man's relationship to Him, and to learn what heaven is. Mrs. Eddy's statements in Science and Health have given me a God who is Love, a God whom I can love and not fear. I am learning that heaven is attainable here and now, that it is an harmonious state of mind. Science answers all our questions; it enables us to find all our ideals, and it satisfies our every need because it is a practical and demonstrable religion.

I wish to tell of the beautiful healing which came to me when I had been in Science a little more than three months. My brother and father had passed on, my mother and I had both undergone serious surgical operations, and the last drop had been added to my cup of sorrow, grief, and bitterness when I was told that my mother, too, would soon be called away. All these things had happened within a year and a half. I was badly broken down, and was in such a state of hopeless misery that I felt as if I could not live longer; in fact, I did not want to live. I wondered what I had done to be so punished, and if there was a God, why He did not help me. God did help me, for at this time we decided to try Christian Science for mother as a last resort, as her case had been pronounced incurable by her physicians.

Digitized by Google

When I began my study of Christian Science, I had no thought of receiving benefit myself, but in trying to help mother, I helped myself also. From the first I tried to apply its Principle to the best of my understanding, and my extremity was God's opportunity. I cared for mother constantly, day and night, leaving her only long enough to attend the Wednesday evening meetings, which I found most helpful. We both improved steadily, but in about three months she seemed to grow worse again and passed away. The suffering, however, was greatly relieved and the passing on was peaceful.

At this time it was a marvel to my friends that I kept up as I did, because to mortal sense the strain I had been undergoing for two years was terrible. They could not understand how I did it, but I was learning that God is our life and strength. When my brother and father passed on, I had been hopelessly prostrated with grief, and my friends had all thought that if mother went too, I would soon follow. However, Christian Science was steadily turning my thought to divine Principle, and when this trial came I was completely lifted above the sense of sorrow and grief, for I seemed to recognize the unreality of death and that in truth there is no separation.

I am indeed thankful to God for the teachings of Christian Science, and grateful to Mrs. Eddy for giving us the truth; also for the Christian Science literature, and the Sunday and Wednesday evening meetings. I deeply appreciate the efforts of the loving friends in Science who have so faithfully helped me. I am grateful, too, for the overcoming of many physical ills, also of sensitiveness and self-condemnation. My general health has improved wonderfully, and I am much happier than I was formerly. I have been in Science for a little over two years, and have found it an ever-present and unfailing help in time of trouble. It has met my every need during these years. I only hope that I may help others by spreading the good news and by living as much of it as I understand.

Mabel Ernst, San Jose, Cal.

Although young in Christian Science, I desire to tell how it has assisted me. I had always been a healthy woman, in fact I had never had an illness of any account, but during the summer of 1911 (we were then living in Reading, Pa.), I was not feeling well and was advised to consult a physician. This I did, but after taking medicine and being treated by the physician a number of times, everything seemed to be wrong with me, and I became a nervous wreck; so much so that I was unable to look out of the window at passers-by, could not read, or even be in a room with other people. I imagined all sorts of things, had crying spells, and would awake from sound sleep at night trembling from head to foot. A severe nervous shock seriously affected my heart, and I could not endure any loud talking, could not even read a letter when these nervous attacks came on; indeed, I thought the only thing left for me was to die.

I continued medical treatment for six months, taking a great deal of medicine, and with each dose I became worse. I was unable to eat or sleep, and was much reduced in weight. A friend advised me to try Christian Science, and my husband agreed at once to give it a trial. A practitioner was called, and through my study of the Bible, and "Science and Health with Key to the Scriptures" by Mrs. Eddy, also the faithful work of the practitioner, I gained a knowledge and understanding of Truth which overcame this nervous affliction. While under the physician's care it had seemed necessary, when these spells came on, to take medicine every fifteen minutes, and to use other material remedies, and it would be some time before I was relieved; but after my husband and I had studied Science and Health, we were able to apply our understanding of Truth and in a few minutes to overcome these attacks, which occurred at night, and at last they disappeared.

At the beginning of April, 1912, my husband was transferred from Reading to Tamaqua, and I thought I was in very poor condition to undertake moving, but the practitioner said there was nothing to fear, that God is with us at all times; and He certainly is, for we moved, and I can say, Surely God has been good to us. Four and a half months after taking up Science I could sleep all night, had a fine appetite, ate everything, enjoyed going outdoors, and could again enjoy conversation with my friends. I was doing almost all my own housework, gaining in weight, and every day showed how I was improving, and I can truthfully say that my healing has been permanent.

I am indeed grateful for these many blessings and for the understanding of Truth that has come to me through the study of the Bible and Christian Science. This is only one of the many blessings I have received; and as God is the giver of all good, and only good, I know there is more in store for me, and as we deserve it we shall receive it.

Mrs. Charles W. Fister, Tamaqua, Pa.

I can fully corroborate the above testimony given by my wife, for I know that the understanding of Truth as taught in Science and Health in connection with the Bible, and the faithful work of the practitioner, healed my wife. Christian Science has also benefited me in health and assisted me in solving daily problems. I am truly grateful for what it has done for me and mine.—Charles W. Fister, Tamaqua, Pa.

Nine years ago I went to a Christian Science practitioner for treatment. Since that day I have had no other kind of help, for I have proved that no other help is needed for any human problem. I commenced drinking early in life, but it was not until I was nearly forty years of age that I would acknowledge that I could not stop. From that time until I was forty-seven, only those who have had the same experience know what I went through in the way of suffering. I tried to stop by the use of will-power, medicines, remedies of all kinds, including a well-known cure, and turned to Christian Science as a last resort, though hopeless, after having ridiculed its followers without having the slightest idea of its teachings. I was completely healed in less than one week's treatment, and the truth will do as much for any one. My hope is that this may reach the eye of some one who is looking for relief from the liquor habit. I believe this plain, truthful statement will show the way better than a detailed account of particulars. Christian Science will do the work, for from abject misery I have come into all blessings,—peace, joy, health, happiness, comfort,—and my healing has been permanent. Christian Science, with me, takes precedence over everything.

I am thankful to God, and can find no words strong enough to express my gratitude to Mrs. Eddy. Daily, more and more, I am striving to thank her in the only way she asks, namely, by demonstrating her teachings in all ways.

Allan F. McIntyre, Chicago, Ill.

For more than ten years I suffered greatly from a nervous breakdown, which led to the loss of my voice. I was dumb for sixteen months before consenting to be shown the way in Christian Science. Atlantic City was the Mecca I sought,

Digitized by Google

but Christian Science was what I found. I voiced the truth after having five treatments. "God is good" were the first words to which I could give utterance. God has indeed been good, giving me health and bringing great happiness to all my dear ones.

My healing is permanent, and my faith in Christian Science is absolute. I pursue my studies constantly, and will ever be grateful for the great blessings I have received therefrom. I will ever strive to adhere to the truth, and by actions and deeds try to express my thankfulness to God; also my gratitude to the great woman who led the way, and to the friends who have helped me to understand God's goodness to man.—Carolyn L. Moser, Cincinnati, Ohio.

✧

I desire to express my gratitude for many blessings received through Christian Science in the last few years, also for a most wonderful demonstration over paralysis of the lower part of my body. On the evening of Jan. 19, 1913, I left the home of my son in Hyde Park, Mass., for the purpose of attending church. In going down the steps I missed my footing and fell. I made three attempts to save myself, but finally had to let go. I was assisted to my feet by my daughter, and then a cloud of fear seemed to come over me as I recalled a similar fall which I had in Worcester two years previous; and soon I found myself unable to walk, or even to stand alone. I was carried into the house and put into a large rocker, where I remained twenty hours.

My daughter communicated with a Christian Science practitioner, and as soon as I could stand it I was carried upstairs and put to bed, seemingly helpless, unable to move myself at all. In three days I could move myself freely; in five, I was able to dress and walk down-stairs; and in ten, I started with my daughter for home. By March 4 I had completely regained the use of my limbs. This was to me a wonderful manifestation of the power of Truth to remove all fear and doubt and restore harmony, as well as to establish the mission of Christian Science as taught by Mrs. Eddy. I cannot find words to express my thankfulness to God for His wonderful goodness in restoring to me the use of my limbs. I am grateful to be able to say that this has been a permanent case of healing. I am seventy-six years old, but I have enjoyed better health this last year than for many years past.—Joseph B. Gifford, New Hartford, Conn.

✧

It is with pleasure and gratitude that I acknowledge the help of Christian Science in the healing of my four-year-old girl, in two or three treatments, of a fully developed case of mumps. The third day the child showed no symptoms of the disease. Several minor ills were overcome almost immediately through the help of a practitioner. I had a badly bruised knee, caused from falling on a pavement, and friends predicted I would not be able to walk for several days. I was treated one night, however, and the next morning I was able to walk down-stairs to breakfast without any discomfort. My husband had several acute attacks of rheumatism, but with a few treatments from a practitioner he was able to resume his work.—Mrs. Bert Chandler, Fort Worth, Texas.

✧

It gives me great pleasure to be able to state that through Christian Science treatment I was healed of chronic sore throat. There was a slight attack of this ailment at a later date, but it was soon overcome. I find the teaching of Christian Science beautiful; it has brought much joy and happiness into our home.—Bessie A. Cram, Chicago, Ill.

From Our Exchanges

[J. Agar Beet in *The Hibbert Journal*]

In times of theological transition it is all-important that the leaders of thought state plainly and without reserve, to all sincere inquirers, what opinions once prevalent have been abandoned and for what reasons, and what other opinions have taken their place. Those who enjoy the advantages of sacred scholarship are bound, by their loyalty to him who said, "I am . . . the truth," and who came to "bear witness unto the truth," to give to men and women in the weary conflict of life, as fully as they can, the best results of their research. If these were done, it would appear that modern scholarship has not robbed the church of anything worth having, and has saved it from many difficulties which in days gone by have pressed very heavily on some very godly and thoughtful people. This broader and deeper knowledge of the real significance and worth of the Christian Scriptures is a precious gift of God to the age in which we live. We must prove ourselves to be not unworthy of it.

[*The Christian Commonwealth*]

The church, under its heavy burden of finances, and an unnecessarily costly and elaborate apparatus, has little time or thought or strength to spare for the great task which is, after all, the sole reason for its existence,—the redemption of human life. On the one side is the world, harassed, burdened, weary, hungry; on the other there is the great gospel of love and fellowship, a mighty saving, transforming energy; and between the two stands the church, the custodian of the very gospel which the world needs,—and the church is as harassed and burdened as the world itself. It might use its immense power to bless the world if only it were free. The need of our time is a return to simplicity and directness. More than the institutional, we need the inspirational church, the worshiping, spiritual fellowship equipped for a modern, intelligent, and spiritual evangelism. We must have fewer churches and less denominational competition, simpler but not less beautiful buildings, less elaborate organization, and greater freedom and spontaneity; then we might awake to the realization of the greatness of our religious message and be ready for a definite and sustained attack on the pagan people of England. At present we have little chance of gaining the ear of a weary, jaded, sensation-loving age; we are just one more "concern" among others, but tamer, less interesting—and so less attractive.

[*The Christian Advocate*]

It is not difficult for those whose bodily ills are remedied by Christian apostles to be convinced that the church which seeks to cleanse life from iniquity, inspired by the same compassion which led it to ameliorate physical woes, is worthy of confidence. The root disease of the world is sin. It was to exterminate this fell destroyer that Christ Jesus came into the world. The generation which inclines to give too large a value to earthly comforts, needs constantly to be reminded that while Christianity is the foremost agency in the world for bettering the material condition of men, its supreme purpose is to save them from the consequences, the guilt, and the power of sin.

[Rev. Franklin B. Dwight, D.D., in *The Christian Work and Evangelist*]

We cannot turn the hands of the clock backward. The Christian consciousness of this generation must apprehend truth in the light of its own experience. To attempt to do otherwise is to be dishonest with ourselves. Our fathers

Digitized by Google

regarded the Bible chiefly as a code of laws, and its words, wherever found, in history, prophecy, or poetry, were the words of laws which must guide human thought and rule human conduct unless the earlier statutes were expressly repealed by later teaching. We have gradually learned to see in the many books of the Bible the record of a progressive revelation of the nature and the will of God, and we see in Jesus Christ the true and final revelation of the Father. The light which comes from Christ, "the light of the world," shines backward as well as forward, and illumines many passages in the Old Testament which can only be understood when seen to be provisional and temporary so far as they are laws of conduct, and which represent the gropings of an only partially enlightened consciousness so far as they claim to set forth the divine purpose.

[*New-Church Messenger*]

In looking for the neighbor, one finds him first of all in himself. The neighbor who is to be loved in its first manifestation and primal element is in one's own self. Whenever a man makes discrimination between his selfish impulses and longings on the one hand, and his unselfish affections and purposes on the other, then he is qualified to recognize the neighbor in himself who is to be loved. In despising one's own meannesses and in aspiring toward righteousness, one loves the neighbor in himself. Until one comes to recognize the neighbor in himself and loves him there, he cannot know what is meant by the neighbor as it refers to people other than himself. A man who fails to see that greed, hate, revenge, deceit, and things of that kind, are not to be loved in himself, but are to be hated, cannot possibly love the neighbor in others.

[*The Christian Register*]

Just as truly as the gods put a steep hill between men and virtue, and made it rough and stony, to Hesiod's thinking, so God puts the greatest kindness in the world in the form of earning and winning and attaining. We shall be still kept at it in every imaginable heaven. Not tiresomely, because all labor has alternations of rest, but inspiringly and vitally. Any other arrangement would send the angels tumbling down to the foot of the hill as certainly as any devil could fling them there. . . . As the man who climbs a mountain sees a wider world, and goes down to find it, so heaven will be the sight of glorious possibility, never the stopping it. So the greatest kindness any one can do in this world is to show those who shrink from the pain of it that the hurt is always convertible into good, and that the good won through pain is sweeter than any good known or imaginable.

[*Northwestern Christian Advocate*]

There are people—so-called Christians—who propose to make their own salvation sure, not for the sake of all, but for their own sake. Saved themselves, as they think, they have no concern about the rest of the world. It is well for them to know that such a salvation as they have in mind is no salvation at all. A religion which does not drive them out on the great highway of the world's need, to bring help and light and leading to them that "sit in darkness and in the shadow of death," is a spurious religion; upon such a religion rests not the blessing but the curse of God. To nourish such a religion and to propagate it, is to crucify Jesus afresh. It is to invite the doom of the divine and to insure that our crown shall be taken from us and given to another and more loyal people. Our greatness comes to us not through any wit or desert of ours; it comes by the choice and favor of God.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Publishing Society

"Christian Science: Its Discovery and Development," a pamphlet by William D. McCrackan, M.A., is now on sale by the Publishing Society and can be obtained at the prices of our regular pamphlets as shown on the opposite page.

This reprint is published by the National Alumni Association and arrangements for distribution to Reading Rooms have been made by the Publishing Society. Standing orders on file from Reading Rooms for advance shipments of new literature have not been filled as is usual with new pamphlets which we issue, but orders will be cared for promptly and there will be no delay in shipping supplies of these pamphlets.

"God's Lovingkindness to Man," a lecture by the Rev. William P. McKenzie, has been translated into German and is now on sale in pamphlet form.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 105 Falmouth Street, Boston, Mass.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more, each 38 cents.
