Again, in Section 11, Article VIII, of the Church Manual, it is plainly stated that "a member of this church shall neither buy, sell, nor circulate Christian Science literature which is not correct in its statement of the divine Principle and rules and the demonstration of Christian Science." Under this touchstone there should not be any difficulty in settling the status of any book put on the market as purporting to teach Christian Science. It is the office of Mrs. Eddy's writings, the authorized text of Christian Science, to teach the "new tongue," and no book by any other author is entitled to rank in this category. The same is true of that large class of books which, in the belief of those who circulate them, are better adapted to the beginner in Christian Science than are Mrs. Eddy's writings. If these books were offered as are other novels, on the basis of being "a good story," and were allowed to stand or fall on their literary merit, there could not be the same objection to them. The incorrectness, the departure from the straight line between authorized and pseudo Christian Science literature, comes when these books are advocated as "teaching Christian Science in a more attractive way." There is only one standard to which we may safely ally ourselves in gaining a correct understanding of Christian Science, and that is the teaching of its Discoverer and Founder, Mary Baker Eddy.

Much of this has been said before, in the *Sentinel* of Feb. 4, 1905, and in response to the many requests for something on this question we quote a part of the editorial, as being equally applicable to the conditions of today, as follows:—

"While it is possible to answer these questions in a very few words, it seems better to go into the matter in a more general way, because of the very considerable number of books of various kinds which have been issued by Christian Scientists within the past few years, and because of other books issued by persons who are not Christian Scientists, but who have mentioned Christian Science in a commendatory manner. As both these classes of books seem to be on the increase, and as they are being extensively advertised among Christian Scientists, it has become a fair question to ask whether any of these publications can be considered as having the official approval of the denomination, or as speaking for the cause in an authoritative way. The answer which must be made to this question is that the only publications for which the Christian Science church assumes responsibility are the writings of the Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science, issued through her own publisher, and the periodicals, pamphlets, etc., issued by The Christian Science Publishing Society. All others must be considered as not being Christian Science literature, and as having no more authority to speak for, or bind, the denomination, or to represent the cause, than would properly be conceded to a book published by a lay member of the Methodist church, for instance, to bind that denomination, even though the book should set forth the author's views about Methodism, or attempt through fiction to present the doctrines of that faith in an attractive manner.

"This statement must not be construed to mean that we are passing judgment upon these books. It simply means that they are not Christian Science literature in the sense in which that term is used by Christian Scientists. One of the greatest dangers in their circulation is the inconsiderate acceptance of all their statements as synonymous with the teachings of Christian Science. Another danger is that they may be given out in substitution for the authorized literature which alone is representative of this great movement.

"We are told that some Christian Scientists have looked upon these books as the most suitable literature to place in the hands of investigators or beginners, but this seems to us to be a subtle temptation to make Christian Science so easy for our friends that it will not grate harshly upon their established views regarding God, man, and disease. When we accede to such temptations we forget that many of these established views need to be overturned as speedily as possible, if the individual is to be benefited; therefore the best service we can render our friends is frankly to take the ground that mortal and material concepts of ethics, economics, religion, and medicine have not saved mankind from the results of their self-imposed laws, and in doing this it is not necessary for us to prepare the way for Science by first presenting a diluted article."

Archibald McLellan.

The Crown of the Year

The Thanksgiving season, with its high tones of gratitude for blessings divinely bestowed, is over, and we begin to ask ourselves what are its abiding lessons for us. Perhaps the ruling sentiment with American people at this time is thankfulness for the measure of political and religious freedom enjoyed by the nation, also its prosperity. The more thoughtful, however, look deeper than this, and ask to what extent these are being made subservient to higher ends, and what progress is actually being made in the establishment of that righteousness which alone exalteth a nation. On the surface is seen the great danger of forgetting the vital interests of the nation in satisfaction with the material which, at its best, "passeth away"; but beneath this is an unceasing demand that the moral and spiritual nature of man be given its rightful recognition in all the spheres of human activity, and that this demand is felt and its justice generally admitted, is indeed cause for thankfulness.

In his earlier experiences the student of Christian Science is largely grateful for relief from suffering, and then he becomes conscious that deeper gratitude is due for the truth which brought him freedom, that knowing of the divine nature which Jesus said "is life eternal." As this is perceived, it becomes very clear that all true blessings are spiritual, and that there is no power which can deprive us of these in their utmost richness and fulness. In the sixty-fifth psalm are these words: "Thou crownest the year with thy goodness," and as we read them we may well pause and ask ourselves if

Digitized by Google

the year is thus crowned for us, if we have gained such a grasp upon the divine goodness that we are radiating truth and love everywhere. If this is true of us, the noise of sea and wave, and "the tumult of the people,"—the discord and strife of mortal mind,—will for us be still, and the "outgoings" of every morning and evening will be vocal with praise. In this psalm we are reminded that God may answer us by what to mortal sense will seem "terrible things," but we are at the same time assured that they will be "in righteousness," for nothing unlike the infinite goodness can ever come from God, and we can always refuse to open our mental doors to aught that God does not send, whether disease, sin, or any other form of discord.

In recounting our blessings received in Christian Science, *the emphasis comes to be placed more and more upon the deeper realization of the spiritual fact at all points in our experience, and this is what gives the truest sense of security and the deepest thankfulness.* Our revered Leader tells us that "we reach the Science of Christianity through demonstration of the divine nature" (Science and Health, p. 4), and as it dawns upon us that God is infinitely good, we draw near to Him with no doubt or uncertainty as to His readiness to bestow whatever we need, and our growing recognition of the divine goodness aids us in our "demonstration of the divine nature." As we reach this point, our love for our heavenly Father becomes a mighty healing influence, and it includes more and more a deeper, truer love for Christ Jesus and for the one who has made his teachings a life-giving power in our own day. We thus prove the truth of St. John's words, "Every one that loveth him that begat loveth him [or her] also that is begotten of him." The apostle asks how one can love God, "whom he hath not seen," if he love not the brother "whom he hath seen," and who is, humanly speaking, nearer his own plane of thought.

In Science and Health we read that after Jesus' disciples gained "the true idea of their glorified Master, they became better healers" (p. 47). This will be no less true of Christian Scientists, as they understand and love better the one through whom the healing power of Truth has been revealed to them, and the love which rests upon the highest idea will unfold until it include all humanity, blessing most those who love most. The clearer views of God and man thus gained will mean a spontaneous and perpetual thanksgiving which echoes daily the psalmist's pæan, "Thou crownest the year with thy goodness."

ANNIE M. KNOTT.

Christian Courtesy

A PROMINENT writer has recently made the rather startling declaration that "we live in a mannerless age," that the thought and bearing of the people at large is characterized by a pitifully discreditable degree of irreverence, incivility, and immodesty. One might hope that this is simply an impulsive extravagance of speech, since, no doubt, the spirit and purpose of not a few is illy represented by their bearing; but as a whole, men appear to be very much what in fact they are, whether vulgar or refined, and every careful observer of current customs and tendencies, the habits and pose of the average man, will concede that there are at least many surface facts in support of the statement, and that the subject merits thoughtful consideration.

Unmannerliness always betrays either ignorance of the ideal or indifference to it, and in either case the fault is grievous and for the most part utterly inexcusable. In thinking of the matter, it is well for us to remember that everything worth while must have an ethical basis, it must find its beginning and its completion in right thought of God and His manifestation. All conduct, whether personal, communal, or international, and all relations, whether social, political, or economic, must express the law of eternal right, else they are neither sane nor safe. In its motive and intent every truly intelligent act or attitude must therefore commend itself to universality, and the realization of this fact lends dignity to every aspect of life and points to the only effective way of remedying our faults. There can be no trivialities to the right-minded, since orderliness expresses an all-inclusive law, and this law is divine. This truth supplies the philosophy of every needful observance, including that of good manners.

What St. Paul has said of the less comely parts of the body as receiving the "more abundant" consideration, since the "comely parts have no need," is no less pertinent to conduct, since it is in the little things which make up so large a part of the average life, that character, the presence or absence of nobility, is most frequently disclosed, and the Science of Christian living gives both the perspective and purpose which will render one's bearing chaste and winsome in every relation and event. To this, very special emphasis has been given by our Leader, in the oft-reiterated "Rule for Motives and Acts," which declares that "a Christian Scientist reflects the sweet amenities of Love" (Manual, p. 40). To those who would "see good days," St. Peter commends the spirit of compassion and courtesy; that in all their human relations they "be followers of that which is good," and Mrs. Eddy has rephrased this thought for us in her persuasive reminder that if selfishness gives place to kindness, we shall bless even them that curse us. (See Science and Health, p. 9.)

This expresses the gist of the whole matter: unselfish thoughtfulness alone bears the sweet bloom of courtesy, and no line of self-cultivation will yield a richer return. He who adopts for his motto, "To love everybody, and make everybody love me," will become kindly and winsome by instinct. Selfishness is brusque, disrespectful, inconsiderate, intrusive, indelicate, impolite. It is always patience-trying and inherently cruel, and from its enslavement naught but divine Love can set men free.

Christian Scientists have been well instructed in all these things, and it is their business to redeem this unideality also, by the exhibition of that unvarying kindliness, unselfishness, and courtesy of bearing, both in the little things and the large, which in every hour of every day will bring to all they meet the uplift of an ennobling example. The living word is the corrective fact; bad manners must go down before good manners. Let us not forget that here also demonstration is the great desideratum.

JOHN B. WILLIS.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

The Lectures

Memphis, Tenn.

Virgil O. Strickler delivered two lectures on Christian Science in the new auditorium of First Church. At the first lecture he was introduced by ex-Assistant Attorney-General David A. Frayser, who said:—

I am not a Christian Scientist, but I have had full opportunity to observe the teachings of the Christian Science church and to note the results. I can attest, therefore, that Christian Science is a religion of uplook and uplift, a religion that broadens and humanizes and spiritualizes. It brings man nearer to his fellow man, and nearer to his God. I know, moreover, that those who follow it in truth and sincerity lead very happy lives, and are large factors in the joy, cheer, and happiness of those about them. I also desire to say that it is not a religion of rigid dogma or foolish formalism, but is practical in its nature and operation, one that is carried into the home life and world life of its followers. The world is better because of Christian Science and Christian Scientists.

At the second lecture the introductory remarks of C. N. Churchill were in part as follows:—

Reared in an atmosphere of *materia medica*, my father having been an orthodox allopathic physician, I naturally drifted into the drug business, afterward becoming a graduate in pharmacy. It may readily be seen what my attitude of thought was toward that which I believed to be such foolishness,—Christian Science. In accordance with Paul's statement, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." Having been a sufferer with chronic catarrh for over thirty years, resulting in serious stomach, lung, liver, and kidney troubles, I endured this complication of diseases for five years. My condition then having become hopeless, and being thoroughly discouraged, I was induced, after having refused Christian Science a number of times, to take up the study of it, with the result that I was thoroughly and completely healed without any other treatment than the study of this teaching as set forth in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. While this physical healing was wonderful, it sinks into insignificance in comparison with the spiritual regeneration which took place in consciousness.

Correspondence.

Malden, Mass.

The introduction, by Louis R. Müller, first reader, of William D. McCrackan, M.A., who lectured on Christian Science at the Malden Auditorium, was in part as follows:—

We are here to listen to a lecture on Christian Science. To many the subject is not new, but to others the words "Christian Science" mean little more than a new doctrine or theory which may be an interesting field for investigation.

A twofold discovery awaits such listeners: first, that the truths of Christian Science are not new, for truth is always eternal; second, that an investigation of this subject is wholly unlike any other. The Science or knowledge which is the subject of such investigation is not a thing of material statistics or human theory, but a spiritual fact—the fact of man's relation to God; and it dwells for each man in his own consciousness, for "the kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you."

I have said that the truth presented is old, older than the earthly advent of Jesus, for the Christ bore testimony of himself in these words, "Before Abraham was, I am;" and again, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." Each statement of truth to which you listen has always been your true though perhaps unrecognized possession. Turning to the Bible we read in John: "In the beginning was the Word, and the Word was with God, and the Word was God. . . . In him was life; and the life was the light of men. And the light shineth in darkness; and the darkness comprehended it not. . . . That was the true Light, which lighteth every man that cometh into the world."

When we turn to this eternal light as reflected in the acts of Jesus, we find that his earthly career was a series of demonstrations of the truth he came to teach. He was a Wayshower whose guidance is so clear that there is no occasion for stumbling to those who would follow his path, which leads into all truth.—*Correspondence.*

Pocatello, Idaho

Bliss Knapp, who lectured on Christian Science, was introduced as follows by Attorney Carl Barnard:—

There was a time when the term Christian Science meant nothing to most of those who heard it, other than that it was but another name given by some fanatic to an old or new fad or doctrine; but an intelligent people have gradually come to know otherwise. All mankind, whether they realize it or not, desire the good which abounds; and all mankind, whether they acknowledge it or not, know that true Christianity is that good which they desire.

It is but a truism to say that the understanding of any proposition is better and more clearly defined when studied and practised scientifically; therefore, why not the study and practise of Christianity scientifically? Such, as I understand it, is the mission of Christian Science.—*Correspondence.*

Santa Monica, Cal.

A large audience greeted the lecture of the Hon. Clarence A. Buskirk at First Church of Christ, Scientist, of this city. The speaker was introduced by the Hon. George H. Hutton, who said:—

During the past fifteen years it has been my privilege on different occasions to introduce a lecturer to an audience of this kind. Thinking over the matter tonight, and my own mental condition and attitude, the evolution has been rather interesting; but I would like as a personal matter to say that I believe I owe to Christian Science my health and ability to be here tonight.

The difficulty with which the Christian Science idea has to contend is not one of unbelief or disbelief in its Principle, but in a refusal to learn what that Principle really is. This is not particularly surprising, for all new movements are accepted with more or less suspicion; the world was slow to believe that the earth was round, and insisted that it was square. It was round all the time. The fact was there, but humanity was slow to accept it. Humanity was also slow to accept the law underlying gravitation, which was, however, working just the same. The failure of humanity to accept the truth is so much the worse for humanity, not for the fact. It is just so with the fundamental truth of Christian Science which will be clarified and explained tonight. It is not something new; it was always here, reaching deep down into the very nature and essence of things everlasting and eternal,

Digitized by Google

stated in simple terms, declared and illustrated by Mrs. Eddy; and it will be explained here tonight by one of the authorized lecturers, who will state her teachings without modification and without exaggeration. If you are convinced, you will have to accept. If you are not convinced, you are not yet ready. The promise is to "whosoever will."

Santa Monica Outlook.

✧

Glens Falls, N. Y.

Following are the words of introduction by Harry E. Swan, first reader, at the lecture of Judge Clifford P. Smith on Christian Science:—

Jesus said: "Blessed are they which do hunger and thirst after righteousness: for they shall be filled." It is proof positive, when we see the increased attendance at Christian Science services and lectures, that the trend of human thought in recent years has been to reach out for something higher and holier, more practical and substantial than the dogmas and theories of the past. Thinking people generally concede that there can be and is a reiteration of the teachings of Jesus the Christ. It is true that "one touch of nature makes the whole world kin," and surely we meet on common ground in our endeavor to elevate the standard of man and bring him to realize his birthright and dominion, not his subjection. Because we know that in Christian Science we have a religion which "always has met and always will meet every human need" (Science and Health, p. 494), we enjoy our privilege of having a lecture semiannually for the purpose of giving the public a better understanding of the healing and regenerating influence of this gospel of love.—*Correspondence.*

✧

Portland, Maine

An audience of about fourteen hundred listened to the lecture given under the auspices of the local First Church of Christ, Scientist, at City Hall. The lecturer of the evening, Bicknell Young, was introduced by the Rev. Harry E. Townsend of Westbrook, who said:—

Every age has dreamed of an ideal condition of human society. Plato dreamed of his republic, St. Augustine of the city of God, Moore of Utopia, and Jesus of his kingdom divine. Plato, St. Augustine, and Moore believed that this ideal condition of society would come through governmental law. Jesus believed that it would come through obedience to moral law, by doing unto others as you would have them do unto you, by seeking "the kingdom of God, and his righteousness." Then as the flowers turn to the sunlight and as rivers run to the sea, so man shall come to his moral and spiritual heritage in God. Because I believe that the Christian Science department of the Christian church is trying to bring in God's kingdom, I take pleasure in introducing the speaker of the evening.—*Evening Express.*

✧

Punxsutawney, Pa.

The lecture on "Christian Science and its Results" by William R. Rathvon in the Jefferson Theater was well attended. The lecturer was introduced by Prof. H. H. Smith, who said in part:—

The teachings of Jesus and of the early apostles are accepted almost universally throughout the leading nations of the world by all religious bodies. All accept him as the Wayshower, but differ as to the interpretation of his teachings. If it is true that Jesus is "the way," then it becomes important that we understand this way, if we wish to be free.

Christian Science claims to be the reestablishment and the practical application of the teachings of Jesus, as employed by him nineteen centuries ago. Whether you agree with this claim or not, it is not now seriously questioned that Christian Science does heal diseases. It has healed thousands of hopeless sufferers, and you will find its churches scattered broadcast throughout the world. It is a question, however, which needs to be approached without prejudice, a subject which needs honest, judicious, and careful consideration. Why reject it because we hear it spoken of lightly? All reforms have been brought about through persecution. Why doubt it because we at first cannot understand it? We do not doubt the truth of algebra or geometry before we have made a study of these subjects, and neither should we doubt the claims made concerning the work of Christian Science until we have honestly investigated for ourselves, applied its teachings, and proved them either true or false.

Many of us know what it is to be in bondage to sin, sickness, and sorrow. Life's problems are many and the burdens at times seem almost too much to bear. Perhaps there is a message for you here tonight. Only have ears to hear and eyes to see those things which are of God—we cannot mistake, for the Master said, "When he, the Spirit of truth, is come, he will guide you into all truth;" that is, the knowledge of truth will make you free.

Christian Science claims that Jesus meant what he said, and that an understanding of his teachings is just as effective today to heal disease and cleanse from sin and make men free, as when centuries ago he went about Judæa preaching and teaching.—*The Punxsutawney Spirit.*

Testimonies of Healing

Perhaps my experience in becoming a convert to the teachings of Christian Science has not been widely different from that of others; and while none should fail to credit Christian Science with calling them from a life wherein they were not fulfilling their noblest purposes, the tendency to look backward seldom proves profitable, and too often causes one to stumble, as one usually travels in the direction in which he looks. In overcoming error we are told to forget "those things which are behind;" and this is not least among the many valuable lessons I have learned in Christian Science.

My home in the West was shattered when my father was stricken with paralysis. He was an ambitious dentist, and for many years president of the Kansas College of Dental Surgery at Kansas City, Mo. From a child I had been possessed with a sympathetic desire to relieve physical suffering. To this end, after nursing my father through the most critical period of his illness, I came to Chicago and entered a homeopathic medical college with the determination to perfect myself in medical science, that I might restore my father to health. I was consumed with the fear that he might pass on before I could complete my course, therefore I studied night and day in the hope of discovering some sure remedy for his relief; but my eyes failed me after about one year of tireless study, and I was forced to abandon my purpose.

At that time Christian Science was only a name to me, for I knew nothing of its teachings; but as I began to think seriously of religion, trying to locate the connecting link between the ancient Christ teachings and present-day codes, and to reconcile my former religious opinions with modern business methods, there appeared serious discrepancies. I then began a systematic perusal, as my eyes would permit, of various religious creeds, including the philosophies of the far East. Each had its good points, but all had the same fault,—they were unsatisfying, illogical, and fell short of the one vital requirement, viz., a rational explanation of God as the true basis of every religion or philosophy.

Through what seemed mere coincidence, I had made a number of friends in Chicago who were Christian Scientists, and they urged me to take up the study of Christian Science; so for the sake of presenting an intelligent refutation of what seemed to me a beautiful but impractical vision, I procured a copy of the text-book, "Science and Health with Key to the Scriptures," and went to work, confident of soon gathering enough points with which to prick this bubble. Needless to say, I failed to find anything to criticize or question, but to my utter amazement I found a satisfactory explanation for every question of religion that had troubled me. Almost as soon as I began my study, illness manifested itself in the form of rheumatism and throat trouble,—two enemies which I dreaded, as their acquaintance was of long standing. The doctor who had previously attended me was now unable to relieve me. I continued to grow worse, until in extremity I rather reluctantly submitted to absent treatment in Christian Science, and the healing of both ailments was immediate.

This was two and a half years ago, and I have not yet found an occasion wherein I could reasonably doubt God's willingness to help those in trouble. I have been benefited physically, morally, financially, spiritually, and my fondest hope, that of helping my father, has been realized. I would not lead one to believe that he has been entirely freed, but he, as well as my mother and one of my sisters, has accepted very lovingly the faith which they all had ridiculed, and each has reaped many benefits. A bowel affection which had troubled my father from childhood, has been overcome, and many other grave difficulties for all of us, the greatest of these being fear. Of myself, I can honestly say that all fear as to my father's condition, as to the future, or fear of any other nature, has been entirely effaced, and I am filled with trust, and that peace "which passeth all understanding."

"Words at their best, are but hollow sounds" in voicing gratitude. Indeed, I feel that the only sincere and fair way is to extend to others all the love and kindliness that I am able to acquire in prayerful and painstaking effort. This will in a meager way show the gratitude I feel toward that patient, gentle woman, Mrs. Eddy, who has given to the world the greatest gift it has received since the days of the Nazarene prophet, who labored to open the world's sealed eyes to the justice and love of God.

GRACE ROBERTA WASSON, Chicago, Ill.

✥

It is now four years since I experienced a most wonderful healing through the truth as found in Christian Science. For ten years I had intermittently suffered, both day and night, with severe pains throughout my whole body. Everything possible was done, both by doctors and friends, to relieve my suffering, but all in vain. Operations followed at intervals, until they ended with a serious one, from which I seemed to rally slowly; but I so greatly desired to return to my much-loved work, which was that of a sister in the Wesleyan East End Mission, that I made an effort and returned at the end of seven months. The superintendent insisted that I should rest as much as possible. Nevertheless, with all the loving care which both doctor and minister gave, in a short time my sufferings became so intense that I finally went home to rest for a few weeks, then went to the sea, hoping the change would do me good; but I grew worse daily.

Our heavenly Father had, however, better things in store for me. Four days before I left the seaside, a lady came to stay at the house where I was, and the day after her arrival she began to talk to me about passages from the Bible. I soon felt that she had a higher revelation of Scriptural truth than I had, and that night, instead of taking medicine to get relief from pain, I read the Bible in this new-found light, and the result was that I went down to breakfast next morning well! Christ, Truth, had healed me! I returned home as already arranged, and the wonderment and surprise of my friends when they saw me, words cannot express, for two of them had been to see me the previous week and had taken word home that I was in a dying condition. I told those at home of the lady whom I had met, and that the light she had thrown on the Bible had healed me.

My mother, who had suffered more or less all her life with heart, kidney, and stomach troubles, and had hardly ever been without a doctor or drugs, at once accepted what I told her, and at any sign of pain we immediately began to declare the truth, with the result that soon medicine was no longer even thought of by either of us. We were very grateful for this healing, and I wrote to the lady who helped me, expressing our gratitude for the words she had spoken. She replied, that if I wanted to know more, I should go to the Christian Science reading-rooms in London and ask for the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. At the name of Christian Science I became frightened. Had I unknowingly been deceived and led away from God? But I reasoned with myself that my mother and I had been healed by believing the truth as found in the Bible and taught by Christ Jesus, and this made clear the light this lady said was to be found in the Christian Science text-book. I determined, however, that no book or people should separate me from the truth as found in the

Digitized by Google

Bible, and with this thought I obtained a copy of Science and Health which I read secretly for a month. During this time my mother became aware that I was reading a new book, and finally I told her that the light which had brought our healing was to be found in a religion called Christian Science, and that this book which I was reading explained it all.

I then went to a testimony meeting in London, and there I heard the most simple and beautiful Christlike love and faith voiced in thankfulness for healing from all kinds of ills. After a few weeks my mother and brother went with me to hear for themselves these things of which I had told them. This teaching struck a responsive chord in our hearts, its beauty and holiness stilled the noise of sects and creeds or names, and we saw only the Christ, Truth, again present as in the days of Jesus. We soon found that we could not truly progress in the understanding of Christian Science while continuing to worship with those who taught and believed only part of Christ's teachings, so we deemed it wise to sever ourselves from our old church, which had been to us a firm and grand stepping-stone to Truth. We shall always be grateful for this stepping-stone, but no words can ever express our gratitude to God, and our thankfulness to His noble servant, Mrs. Eddy, who held aloft the torchlight which enabled us to find the whole of the truth that Christ Jesus brought to men.

Our only physician and medicine since that memorable Sunday night when a stranger bore Love's message of deliverance to one fast sinking under the burden of suffering, has been the truth which our Master said would make us free. Christian Science has enabled me to know God as my life, and today I rejoice in the inheritance of health, strength, and peace which is the rightful possession of all God's children, and none can say me nay.

ADA LATHAM, Leicester, England.

✧

About three and a half years ago I became interested in Christian Science through the help received from a practitioner, both through letters and conversation. In six months' time I was healed of the liquor habit. Through the study of the literature, I became possessed of the desire to do my best at all times. I had never had such a desire before, and I became more unselfish in my thoughts, more willing to forgive and bear with my neighbor, and I made a strong effort to clean up my life and my conversation, having formerly believed that in order to be forceful I must use profane language. These things were, however, utterly swept away. I have had no desire whatever for liquor and its associations since that time, but on the contrary have had to watch to keep from being disgusted at the sight of others using it.

I have tried, not by proselyting, but by letting my light shine, to show others the path which I am following. I was never given to worry, but formerly thought of myself, not of others. I have been able, I feel, to do much good to my friends and acquaintances by letting them see that I am happy and by making them understand that I would do them only good. My friends in my former life marveled at the way in which I had changed,—they could not but believe; at the same time they did not understand it, and waited to see the effects, which they have found to be permanent. They all knew of my habits before, and were impressed with the abrupt change after I took up Christian Science.

Three years ago I was married, and have grown happier each day in the strength gained through Christian Science and through acquaintance with Scientists, and have been able to a very great extent to keep the atmosphere about me clean. We have had many wonderful demonstrations, both physically and financially. I do not know of a point of view which offers so broad a field for thought, so bright a hope, and so sure a reward.—GEORGE A. PINNELL, Kansas City, Kan.

✧

It is with a grateful heart that I think of the wonderful help which Christian Science has been to me, and I feel it a duty to tell others about some of the many blessings received through its teachings. It has made our home a place of peace and harmony. For many years I was a slave to *materia medica*, but through the knowledge of God gained in Christian Science, the truth has made me free.

My son was taken very sick, and we called a doctor to diagnose the case. He pronounced it a very serious attack of typhoid fever, and insisted on our giving him no solid food. He also said that the boy would not be able to sleep on account of the high fever, and that it would be necessary to attend to him throughout the night. I immediately called a Christian Science practitioner, and from the first treatment my son was helped; he slept all night, and in three days he was perfectly well. Our daughter's baby was also healed of acute lung trouble and whooping-cough. For the many blessings which we have received through Christian Science I am indeed very thankful to God, and grateful to Mrs. Eddy for revealing to the world the truth which heals and saves. I am also grateful for the Christian Science literature.

MRS. HANNAH MORGAN, New Castle, Pa.

✧

[Translated from the German]

Six months ago one of my fingers became sore, and finding myself greatly troubled, I went to a clinic, where the ailment became aggravated despite medical treatment. I suffered much pain, and in about ten days the physician informed me that two of the joints of the finger would have to be amputated, as the diseased condition might otherwise extend to the hand; and lest this should occur, I consented to the operation. Subsequently, incisions were made in the remaining joint, without remedying the trouble; on the contrary, the physician now told me that the hand was becoming affected. In my despair I saw that my only hope of obtaining help rested with God, for with men it was impossible.

It was at this time of great need that my attention was called to Christian Science, and treatment was given me on the evening of the same day by a kind practitioner. During the healing, which began immediately, the trouble yielded in the inverted order of its coming. The fearful, timid mental attitude which had always seemed part of me, and the dreadful recollections of the clinic, which caused me to yield to discouragement on the return of the pain off and on, were the reasons for the complete healing being rather protracted. The good practitioner had to be very patient with me, but after several weeks had elapsed, complete healing was realized, and I am now able to attend to my duties, which also include heavy work. I feel that I cannot be too grateful to God for having been led to Christian Science, and I also wish to give sincere thanks for the faithful help which I have received. It will be my endeavor to advance daily in the understanding of Truth.—FRAU MARIE RUNGE, Breslau, Germany.

✧

Some seven years ago, disgusted with the life I was living, and just about at the point where our home was likely to be broken up as the result of my habits, I turned to my wife, upon her final appeal to me to quit drinking, and like a drowning man grasping at a straw, told her I was ready to

Digitized by Google

do anything she advised. She had very little knowledge then of the remedy she proposed, but she said I might try Christian Science. I sought a practitioner, and was speedily healed of the liquor habit of long standing, the tobacco habit, and all the destroying tendencies and meannesses that the whisky habit develops and fosters. I was not only healed of the desire for stimulants of all kinds, but I rose above the thought that I was missing some pleasure or enjoyment. This was the greatest satisfaction of all, and due to the fact that I found something tangible to take its place. I know it is possible for every one to obtain the same healing as I did if he will but turn away from matter for happiness and seek good through spiritual means.

I found unspeakable peace, joy, and freedom, a clarity of vision and purpose that I had long dreamed of as an attainment to be desired; but I thought it would be realized through material methods, through some wonderful drug perhaps. I am grateful for Christian Science because of the understanding it gives of God as divine Principle, through which we can solve every problem that presents itself; grateful for the harmony it has brought into our home; for its practical use in business life, and for its power in overcoming self, thus destroying anger, resentment, etc.

To sum up, Christian Science gives us a basis for right thinking, and this is what men are seeking; and when they find it and use or apply it, sin, sickness, and death will disappear, for then we shall all know God, from the least unto the greatest.—N. W. Couch, Butte, Mont.

✧

I can truthfully testify as to my healing in Christian Science. I was healed in four treatments of a severely injured ankle, and at another time I was healed in three treatments of what was called pleurisy. I am very thankful to God for the help received in Christian Science, also grateful to Mrs. Eddy for her teachings.

Mrs. J. Hilbok, Chicago, Ill.

✧

Three years ago I was led into Christian Science. As I was on the train, going to Longmont, I gave a gentleman a book to read, and in handing it back he made this remark: "I think Christian Science is the coming religion." I then asked him to tell me about Mrs. Eddy, as I had not read anything about her for a long time, and he told me so much that was good that I made up my mind to investigate Christian Science thoroughly.

In course of time a practitioner came to see me, and I began to tell her all about myself. First, I referred her to a large medical book from which I had taken prescriptions, and she said that instead of studying medicine I should study the Bible. I said that I studied the Bible, and my prayer-book too, but I thought it was dreadful to be forbidden to study doctors' books. I nevertheless went on to relate my tale of woe. The altitude was too high; I could not sleep half the night; I had stomach trouble, nervousness, and also believed that I could not walk a block. The practitioner treated me, and later, as I listened to her explanation that God is Love, and God is good, a sweet peace filled my thought, but I could not understand why she had not prayed aloud. I slept like an infant, however, and next morning awoke refreshed for my daily duties.

We came home in a few days, so I was sorry I had learned so little about Christian Science. Still, I felt so much better that I knew it was the religion I had been seeking for years, and though the kindness of several Scientists, who sent me the *Journal* and *Sentinel*, I gained much good. I soon bought a copy of "Science and Health with Key to the Scriptures" and began to study it, but there were many things I could not understand until I got the Lesson-Sermon. Since writing the above I have had the great privilege of again visiting Longmont and attending three Sunday services and Wednesday evening meetings.

Words fail to express my gratitude for daily benefits, both temporal and spiritual, showered upon me and all mankind by our Father-Mother God, through His beloved Son, Christ Jesus, "who will have all men to be saved, and to come unto the knowledge of the truth." I am also thankful that dear Mrs. Eddy was inspired and sustained by divine Love so wonderfully to lead us into an understanding of Truth. My prayer is that we may so live day by day and hour by hour that we may be worthy with her and all the redeemed to enter into the heaven which, like God, is ever present.

Margaret M. Householder, Lamar, Col.

✧

For over nine years my every need has been met through a practical knowledge of God's presence and power as explained in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was led to investigate this truth, though not in search of physical healing, but rather because I felt a growing need of something higher and more substantial than material sense can perceive. I had long since drifted away from the teaching of my church, for much of it seemed contradictory and unreasonable. My higher sense of justice could not accept a religion whose God permits sin and sends sickness and suffering upon His children. In this condition of doubt and unbelief I was, however, neither satisfied nor happy. I felt that there must be a true side to everything, if I only knew how to find it, and again I began to look into religion. But the mystery of life seemed to deepen as I searched through many isms, which at most could only give me the hope of a future and far-off heaven; and this did not satisfy my present need or solve for me a single problem.

While in this doubtful and inharmonious mental condition, Christian Science was presented to me, and on attending a Wednesday evening meeting for the first time in The Mother Church, I was so impressed with the testimonies given, that I felt a great desire to know more about Christian Science. I soon procured the text-book and began an earnest perusal of its contents. The reading was slow, owing to my limited understanding of English. I would often stop at the end of a sentence and read it again and again, earnestly trying to comprehend its meaning; then its marvelous light would break upon me. I shall never forget this experience, and to express it I must use Mrs. Eddy's words in "Retrospection and Introspection" (p. 23): "Soulless famine had fled. . . . Being was beautiful, its substance, cause, and currents were God and His idea. I had touched the hem of Christian Science."

The reading throughout Science and Health was a continuous revelation, and I came to have a new concept of God and His creation. It revealed God as Principle, hence the direct cause of all right thought and action. To learn that He is the one intelligence, the one Mind, and to prove this by demonstration, has been the greatest blessing of my life. While reading the chapter on Science of Being, the tobacco habit left me. This proved to me Truth's power, as I had tried hard to overcome this habit through will-power and had failed. I have also been healed of catarrh, for which I had tried many remedies without avail. A sensitiveness of the throat has been healed, and minor ills, such as colds, have been quickly met and overcome. As God is our eternal parent, so is He also the great provider, the giver of all good,

Digitized by Google

the source of all supply, and of this I have had many convincing proofs.

Words fail to express my thankfulness to God for Christian Science, and my gratitude to its Discoverer, who labored long and patiently that a suffering race might know the truth that makes free.—Axel Peterson, Everett, Mass.

✧

I send this testimony in gratitude to God for the happiness that has come to me through the teachings of Christian Science. For seven years I had been a sufferer from nervous trouble in a most aggravated form, and although medical treatment relieved the pain to a certain extent, I was never *really free from it until I began to study* Christian Science. *Through the understanding* of Truth as revealed through our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and some loving help from a practitioner, this has been entirely overcome, and for three years I have been perfectly well. For this healing, and endless other blessings, I can never be sufficiently thankful to God, and grateful to Mrs. Eddy for her book which so illumines the Scriptures.

Mrs. E. P. Garland, Colchester, England.

[Written for the *Sentinel*]

Sympathy

OLGA CYPRIAN BRIDGE

We watch beside some weary sufferer's bed,
And bitter, blinding tears of pity shed.
How earnestly we long to give relief,
But our own hearts are charged with heavy grief!

We hold the hand of one whose weary life
Is but a dark abyss of storm and strife;
We seek to brighten it, but at the tale
Of wretchedness our spirits droop and fail.

We meet one mourning o'er a heavy loss,
And think to share with him the cruel cross;
But mingled tears do yet the faster flow,
And two instead of one are bowed with woe.

What good, then, is this human sympathy?
It does not set the earth-bound captive free,
But rather spreads the world's great griefs and fears,
From him who suffered first to him who hears.

Ah, friend, if you would help your fellow man,
Rejoice, and smile on him whene'er you can,—
The sympathy which blesses, cheers, and heals,
Is that which neither fear nor sorrow feels.

Give to him all you have of heavenly love,
Knowing that it will every ill remove;
Keep thought of him ideal, pure, and strong,
So shall you help the suffering one along.

Give him a cup of water in Christ's name,—
Unconsciously he's thirsting for the same;
Surround him with a tender, radiant joy,
Which shall the ills of mortal sense destroy.

Know man to be the Father's perfect child,
Heir to all good, whose life is undefiled;
Hold ever to the truth that makes men free,—
Thus will you show true Christian sympathy.

From Our Exchanges

[*The Christian Work*]

Religion must enter into life or it is nothing; and it must enter into the whole life. Every word, every act of Christ, was a protest against divorcing religion from life. Our lives cannot be divided up and portioned off into different compartments. If we are to be religious at all in the true sense, religion must be to us the motive power behind and beneath all else. It cannot be set apart as one of the activities of mind or heart or soul. The scope of its work must be universal. It must pervade the whole being. From within outward it must be supreme all along the line, moving the center of life, and tingling to the very finger-tips. It is this which explains our failure. We must confess to this much failure at least, that we do not have a constant sense of being God-directed, with all our paths made plain. It is because we have not acknowledged Him in all our ways; because we are keeping back part of the price. We have not given ourselves up entirely to His sway. We do not feel ourselves to be God-directed, because we are not God-possessed. It is not speculative atheism which we need fear for ourselves or others, but the practical ungodliness which keeps Him at a distance from the affairs of life. And so we miss the promise because we omit the conditions. "In all thy ways acknowledge him, and he shall direct thy paths."

[*The Universalist Leader*]

We are called by our servants in office to give thanks on a day set apart; and some will do it, and many will not, and those who do not are apt to justify themselves by thinking they have nothing to be thankful for! But they know too little or too much. They are not well balanced. They are living in a little corner of this big life; they have pushed their heads down into the dust and do not see the sunshine. They are eating the bitter brown skin of the sweet pecan meat! They have put on their yellow or green spectacles, and gloat with envy or jealousy over friend and neighbor. They have not learned the primary lessons of life; they count that gain which flows toward them, and think that alone deserves gratitude; they know too little; sometime they will recognize that life's possessions which endure are those which flow forth from us in service to others, that we really possess only that which we give away.

Mostly, we need a shaking up at the Thanksgiving season; we know too little, or in vast conceit we know so much we cannot learn. The Thanksgiving day has lost not a little of its power, because it has departed from the simplicity in which it had its beginning. It has become to many most perfunctory, or its real character is mislaid, and it is but an opportunity to show to the world that we can be just as foolish as any one else! Why not stop and be sensible just for a little bit, and be honest with ourselves and other people and the world, and with God.

[*The Christian Work and Evangelist*]

We know that whatever Jesus said, his words would go right back to the very same principle that underlies all the utterances against trust in riches and care for the morrow,—namely, that the man who is consumed in getting money, and who is putting all his energy into dividends, and is worrying unceasingly and exclusively about his future, is in very imminent danger of losing his own soul. . . . If a man wants treasure in heaven, he must lay it up there. There is great danger that men come to be so intent on caring for their bodies, both for the present and the future, that they quite

Digitized by Google

forget these things. And who can look out upon the world he knows, meet the men he meets, or open the daily papers without saying with Jesus, How hardly shall they who are engrossed in getting riches and caring for themselves find the kingdom of heaven? That is the great question for today, not whether a man who is worth a few thousand dollars can get into heaven when he dies, but whether our mad and feverish rush for wealth is not dwarfing our finer, higher nature, and whether we are not losing a certain reposeful peace that comes from trust in God and some hours spent in His service, by our too great worrying about what shall happen to us when we are seventy years old. Provide for those days if you want to, but do not lose your soul in the endeavor. There are rich men who have well provided for their bodies, whose souls may be so poverty-stricken and anemic after their body is in the grave that they will scarce be able to endure even heaven.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

The incarnation is an experience of Christ, the personal acceptance of the nature and life of God as one's own; the atonement is simply the same thing. In the one we emphasize God's part, in the other man's. . . . The mere glance at Christ is often enough to carry the soul through the process which came to perfection in him. With this, every idea valuable in Christianity is retained and made an actual experience. We can go back now and take up the Bible afresh. It is the record of the highest human thought about God gradually becoming a positive revelation; not in an infallible word or maxim, but in a personal expression of God, and in life lived out in our world. The real clue to the gospel story is in what one has experienced and in what one is drawn to desire. And so we come back to the worship and work of the church to find in company and in corporate acts a new vision and a new power, persuaded that as we get down to the very depths of ourselves we find both God and our fellow men a center of union, and a vantage for social reformation, international union, and the redemption of the race.

[*The Continent*]

Real faith in real truth will never fear rational inquiry nor resent the demand that the doctrines of the church shall be expounded without violence to the powers of reason wherewith God endows the human soul. And whoever supremely loves Jesus, loves truth first and creed afterward. Giving a reason for the faith that is in it, the church today must give that reason, not in the dialects of dead ages and cloistered schools, but in language "understanded of the common people" and vivid with the fire of immediate contemporary conviction. Those only are truly Christian who care more for the things of the spirit than for any good of material comforts and possessions; who are unhesitatingly prepared to give up any material good whatsoever rather than sacrifice the least possession of the spirit.

[James S. Kittell, D.D., in *The Christian Intelligencer*]

I wonder if that is all we see at this Thanksgiving time,—fields rich with grain, markets full of merchandise? Are there not things more fundamental than the material comforts of life, things that make for ease, and leisure, and happiness? The thing we need most is a consciousness of the spiritual order manifested in the great movements of modern life. It is in times of plenty that we are most apt to forget God. May this day remind us, not only of a national wealth in material things, of a vast domain of military and naval greatness, of a nation sitting in the councils of the world's powers, but also of God, and of a spiritual order.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now in press, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been translated into German ("Die Christliche Wissenschaft: Eine Religion der Liebe"), and is now printed in pamphlet form and ready for distribution. Forty pages and cover. This lecture was recently published in English, and both editions are on sale at prices of the regular pamphlets as shown on the opposite page.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1 but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable *for daily study.*

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, marbled edges, 95 pages, single copy, $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy, 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIII indicates the year 1913; XIIII is used for the year 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

NATIONAL

Conferences have taken place between the United States attorney-general and the chairman of the board of directors of the New York, New Haven & Hartford railroad, with the probable result that a basis of dissolution which would restore competition in New England transportation and meet the government's demands will be reached some time in the near future without a court fight. An agreement to meet the demands of the attorney-general would provide as follows: For a separation of the New Haven and the Boston & Maine railroad; for a separation of the New Haven and its trolley lines in Massachusetts, Rhode Island, and other states; for a relinquishment by the New Haven of its control of steamship lines, some of which are held by the department to compete for the New York-Boston traffic; for the nullification of the New Haven's agreement with the Boston & Albany railroad.

On recommendation of Secretary Lane, President Wilson has withdrawn from entry forty-five thousand seven hundred and twenty acres of public land in southern California, believed by experts of the geological survey to be valuable for its oil contents. The reserve thus created includes more than two thousand acres in the Sunset district, located in the foothills of the San Emigdio mountains, forty miles west of Bakersfield, and nearly forty-four thousand acres in the Belridge-Lost Hills district, directly between two already well-developed oil fields. The President has restored to entry one hundred and twenty thousand acres of supposed coal lands in western Montana. Only a small part of the land was found to contain coal, and that was of a low character.

Additional suits were filed in the federal court at New Orleans, La., against the American Sugar Refining Company, by Louisiana planters, manufacturers, and dealers. They charge the company with being a monopoly under the Sherman antitrust law, and that it manipulated the sugar market to depress raw sugar. The new suits ask for $16,457,023 damages. All similar suits now pending there ask for damages aggregating approximately fifty million dollars.

The new municipal group at Springfield, Mass., consisting of auditorium, tower, and city offices building, built at a cost of more than one million five hundred thousand dollars, is now in complete service. There are two large buildings of Greek architecture, between which is a campanile tower three hundred feet high. One building is devoted to auditorium purposes, containing a large exhibition hall, the main meeting hall, which seats five thousand persons.

Congress is asked to appropriate $1,108,680,777 to operate the government of the United States during the fiscal year 1915, according to the estimates prepared by each department and sent to the House by Secretary of the Treasury McAdoo.

The navy estimate which Secretary Daniels has sent to the House appropriations committee asks Congress to vote one hundred and forty-five million dollars for the naval establishment during the next fiscal year.

One hundred and thirty-five deer hunters have been fatally injured, and one hundred and forty others have been injured, several probably fatally, in twenty-one states this fall, according to a press tabulation.

New York city has succeeded in its campaign to raise four million dollars in the interests of the Y. M. C. A. and the Y. W. C. A.

The date of the official opening of the Cape Cod canal has been set for July 4, 1914.

INTERNATIONAL

The federal government of Canada is considering legislation to deal with Hindu immigration in British Columbia. A radical measure, it is said, will be presented at the next session. Formerly Hindus were barred from Canada under a regulation compelling them to travel by direct steamer from India, there being until a few months ago no such service in existence. Now, however, certain steamers make the direct voyage, and Hindus are entering the province in large numbers.

A Belgian delegation composed of technical experts, accompanied by an English engineer, traversed the region of the falls of the Congo river some months ago in order to make a thorough study of the question of the canalization of the lower Congo. According to the tenor of their report, if an adequate system of canalization is carried out, steamers of one thousand tons can be navigated as far as Stanley pool by means of a series of suitable locks.

By a majority of 21 in the House of 561 members, the demand of the French government for a loan of one billion three hundred million francs for purposes of armament and defense was accepted after a bitter debate in the Chamber. At a later debate on the subject, the government was defeated and the ministry resigned.

So much progress has been made with the electrification of the suburban lines of the London & South Western railway, England, that it is almost certain that by next year a good service of electrically propelled trains will be running on the Kingston roundabout line.

During the last seven years South Australia has paid approximately two million five hundred thousand pounds of the public debt out of surplus revenue.

The French Chamber of Deputies has rejected the proposal for women's suffrage by a vote of 311 to 13.

INDUSTRIAL AND COMMERCIAL

The value of fuller's earth mined in 1912 in the United States was $305,522, and Florida was the principal producer. The principal use of fuller's earth in this country is in the bleaching, clarifying, or filtering of fats, greases, and oils. The common practise with mineral oils is to dry the earth carefully after it has been ground to thirty or sixty mesh, and run it into long cylinders, through which the crude, black mineral oils are allowed to percolate slowly. As a result, the oil that first comes out is perfectly water white and much thinner than that which follows. The oil is allowed to continue percolating through the earth until the color reaches a certain maximum shade. With the vegetable oils the process is radically different. The oil is heated beyond the boiling point of water in large tanks, from 5 to 10 per cent of its weight of fuller's earth is then added, and the mixture is vigorously stirred and then filtered off through bag filters. The coloring matter remains with the earth, the filtered oil being of a pale straw color, provided the operation has been conducted with sufficient care.

The Chicago, Burlington & Quincy railroad is planning the elevation of its trackage between Chicago and Aurora, a distance of about forty miles. If the plans are finally ratified, work will begin next spring. The elevated portion will be four-tracked and electrified, and the cost of this work is estimated at something like twenty-five million dollars, the expenditure of which will be distributed over several years.

Despite a decrease of seven hundred thousand tons during November, 1913, as compared with November, 1912, ore shipments from the Northwest for the season have again broken all records. From the seven docks at Duluth, Superior, Two Harbors, Minn., and Ashland, Wis., vessels carried 40,538,413 tons to eastern lake ports.

The sawing season of the lumber mills of Bangor, Maine, and vicinity, is now practically complete. Between eighty-eight and ninety-five million feet of spruce, pine, and other lumber has been sawed in this vicinity since April 1.

The greatest grain shipments ever known at Port Arthur, Ontario, are in full swing. Before navigation closes it is expected that one hundred and seventy million bushels of grain will have left the elevators at the head of the lakes.

San Francisco recently received its first cargo of lumber from the Tongass National forest, Alaska. The shipment consisted of one million five hundred thousand feet of Sitka spruce.

Sawmill waste of Douglas fir, of which an enormous quantity is found in the Western forests, is being used to make paper pulp by a mill at Marshfield, Ore.

One hundred acres in the Florida National forest will be sown to maritime pine seed this fall. Maritime pine is the source of the French turpentine industry.

The value of imports into Chili by parcel post during 1912 amounted to $1,992,884.

British customs revenue last year aggregated $175,870,520.

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI December 13, 1913 No. 15

Entertaining Angels

BLANCHE HERSEY HOGUE

CENTURIES ago a good and devout Israelitish king declared, "The angel of the Lord encampeth round about them that fear him, and delivereth them." So long as we think of angels as personal celestial beings, distinct from God and separate from man, we gain little from this statement save its poetic value and the religious feeling it may nourish. When, however, we learn through Christian Science that angels are "God's thoughts passing to man" (Science and Health, p. 581), we become conscious of the spiritual law concerning salvation. As we read the Bible we find both in the Old Testament and the New that the holy men of olden time were saved from direst danger by angels, but Christian people have too long been accustomed to think that these were personal visitations which belonged to a bygone period, and that they are not available for us today. There is therefore great need that we lay hold anew upon the Scripture promises, which are so wonderfully illumed in Christian Science, and find that "God's thoughts" do deliver all those who trust Him.

In Christian Science we are taught that God is divine Mind. This Mind is infinite, everywhere present. It is wholly and only good, knowing no evil. It is the only power. Man, the spiritual, eternal, real man, the original which mortal mind claims to counterfeit in a fleshly man, exists as an idea in the divine Mind, and as such has no relation to the material counterfeit falsely called man; knows, in truth, only spiritual things. Divine Mind supplies to its ideas its own qualities —wholly good, spiritual thoughts, spiritual understanding. The real man, the true consciousness, is the spiritual understanding of God, man, and the universe, while mortality, with its belief in matter, in sin, sickness, and death, is the false sense of God, man, and the universe. Whenever, therefore, any one of us individually lays aside a wrong belief about existence and receives spiritual understanding into his thinking, an angel straight from God has come to him; a spiritual idea lights his mentality and puts out mental and moral darkness, and brings healing and strength now and always.

A personified concept of "angel" has usually seemed vague and uncertain, a being we might or might not believe in, but one with whom we could not affiliate. The angel of spiritually right thinking, however, is something which can come inside our own mental borders and abide with us. We can keep thought receptive to the divine idea through the sincere desire for good and by abandoning evil as soon as we see it to be evil. Standing mentally at this point of receptivity, we truly pray; and this is the open doorway through which angels crowd. Then, as these luminous thoughts, God-given, multiply righteousness within the secret place where motive and purpose are born, protection, too, is vouchsafed to growing pureness of heart, and the encamping angels do deliver us from trouble.

God gives; man receives. Divine Mind sustains; man and the universe are thereby sustained. This great activity is wholly mental, purely spiritual. Mrs. Eddy defines it as divine Mind reflected by man. It is an infinite thought-process in which God, Truth, Life, Love, infinite, divine, all-knowing, all-seeing Mind, nourishes and cherishes His own ideas, contains and maintains them, protects and preserves them. This activity of Mind is surely the infinite mode by which man exists. Mortal mind declares that man has a material personal existence apart from God, and all the discord of human experience bases itself upon this belief; and this mortal mind may ask how spiritual reality is going to help material trouble when they are such direct opposites. Christian Science answers that God-given thoughts enter individual consciousness to correct wrong thinking. The angels that inspire right thinking have an office, a work to perform in saving mankind. This Mrs. Eddy defines on page 581 of the text-book, "Science and Health with Key to the Scriptures," in declaring angels to be "the inspiration of goodness, purity, and immortality, counteracting all evil, sensuality, and mortality." Such angels change our thinking. Encamping with us, they expel wrong thought. They enrich, bless, uplift, and purify, in fact transform individual thinking; they are the saving power in human consciousness, that "mind of Christ" which the apostle tells us is available for all mankind. Surely for every wrong thought there is a saving "angel." Truth always saves from error, and Christian Science has come that we may find the truth as Christ Jesus lived and taught it, and receive its angel hosts of pure, true thoughts.

In her 1901 Message to The Mother Church (p. 8) Mrs. Eddy says: "We have the authority of Jesus for saying Christ is not God, but an impartation of Him." Again upon page 10 she writes, "Christ being the Son of God, a spiritual, divine emanation, Christ must be spiritual, not material." Her use of the words impartation and emanation applied to Christ as the Son of God is akin to the statement, "Christ is the true idea voicing good, the divine message from God to men speaking to the human consciousness" (Science and Health, p. 332). Here we can understand God as having sent Christ, who was exemplified in Jesus, to save the world; divine Mind imparting itself through its highest idea, uttering itself to men, and entering human thought-processes as a divine "emanation" to pierce and scatter the darkness of wrong belief. God thus imparts His angels to him who stands cleansed and receptive to them; and the clustering company of them bring holiness for sin, health for sickness, joy and light for distress and darkness.

Christian Science as theory does little for us; practised it does much. These angels of God must be entertained. Unwelcomed at the threshold of our mental courtyards, they cannot reach our need. Given entrance, they save and heal. Meek desire to know God, and patient obedience to His law, open wide the doors of thought to God; and we must be instant and constant at this doorway, seeking Him. "Round about them that fear him," reads the psalm, "the angel of the Lord encampeth." So when fear hath torment, when sin tempts, when sickness and grief and loss and worry threaten us, we turn straight to the angels of God's presence and let them in. Always we bid them enter, and always we cherish them if we are obeying Truth. Nothing keeps us so busy as this business of watching our thoughts and seeing that only

Digitized by Google

the angels encamp with us. Evil would strike its tents at our doors, perchance would rush its pretentious hosts upon our domain of thoughts; but knowing that Truth steadfastly sets a watch of angels, we may reasonably expect them to deliver us if we trust and serve God through right thinking, not half-heartedly, but wholly and entirely.

Not "unawares" are angels entertained in Christian Science, but with alertness, with fixed purpose, with keen, quick responsiveness to the divine demands.

✧

Value of Right Thinking

ROBERT W. SAGE

It is obvious to any observer that successful endeavor must necessarily have as its mainspring a normal mentality, and it therefore behooves those who seek success to watch their thought-processes and to know that as surely as they lapse into disorderly thinking so surely will this eventually be manifested in a lack of harmony in their business affairs.

There is no lack of advice supplied from time to time along these lines, but mankind is constantly appealing for the wherewithal to profit by this advice. A man finds his efforts to think right beset with what seem to be insurmountable difficulties, and like the apostle of old he exclaims, "For that which I do I allow not: for what I would, that do I not; but what I hate, that do I." Mrs. Eddy, the Discoverer and Founder of Christian Science, has exposed the fallacy of seeking the rule of right thinking and therefore of right living, among the mutable and ever-changing phenomena of the material world. She shows very plainly that it is impossible to gain permanent results by building upon false foundations. In conjunction with this she exposes the fallacy of depending for guidance upon the material sense which she names mortal mind.

No one ever worked more intelligently and brought out more certain results than Jesus of Nazareth. In the face of the seemingly impossible he manifested an ability to furnish supplies in the wilderness of human belief for the needs of mankind, by constantly referring to the Principle of life which was not to be found in matter or among the evidences of the material senses. He said, "I can of mine own self do nothing," and on another occasion he explained, "I have not spoken of myself; but the Father who sent me, he gave me a commandment, what I should say, and what I should speak." It was the understanding of divine Principle which he came to give to the world that others also might work the works he exemplified.

A knowledge of this Principle is obtained only as we cease to grope among the phenomena of material belief, cease to accept as final the evidence of the five senses, and thus are able to comprehend the import of Jesus' words to his disciples, "I have meat to eat that ye know not of." This is the secret of all right action and of all truly logical and successful thinking. We must have meat, sustenance, of which the material world is not cognizant. Only as we constantly turn aside from the mesmeric influence of oft-recurring material effects, and depend upon a divine cause in spite of this evidence, can we really bring out success and stand in calmness and confidence amid whatever difficulties the material man would present. Dwelling in the "secret place" which cannot be found while we are living in conformity to the ways of this world, mankind will reach a permanent basis of thought and action undisturbed by the shifting winds of mortal opinion.

It is necessary to observe here that such a condition of harmony is not to be obtained by force, that is, will-power, for the "kingdom of heaven" is not to be so reached, but is found only as mankind becomes loving, unselfish, and pure. It is not possible for a man swayed by passion and appetite to gain quiet and refreshment amid the green pastures which can only be found beyond the evidence of sense dreams.

Christian Science has brought to the world the means whereby we may understand the words and works of Jesus and ultimately know what was the Mind or Principle that animated him. Without some degree of understanding of this Principle, our best intentions may result in uncertain effects. What is successful today fails tomorrow, and we find ourselves faced with the problem of changing effects resulting from changing causes. As the builder requires a standard and rule in order to bring about reliable results, as the mathematician is constantly referring to certain results already obtained and demonstrated in order to prove the more advanced problem before him, so does mankind in every walk and in every hour require a vitalizing knowledge of the Science of Life practised by Jesus and again brought within the reach of mankind in this present generation.

On page 494 of the text-book of Christian Science, "Science and Health with Key to the Scriptures," are these words: "Divine Love always has met and always will meet every human need;" and again, "To all mankind and in every hour, divine Love supplies all good." Love is reflected in obedience, and in living in conformity to the rule of life our Master taught, we come into a realization of the truths of being, although they contradict the evidence of the seen world. It is a well-known fact that persistence wins the prize in all branches of human endeavor. Success is not given away, it is to be earned; likewise, in order to attain success in the fullest sense of the word, it is necessary first persistently to seek the kingdom of God and the righteousness pertaining to it, familiarize ourselves with the Science of Life taught by Jesus, and so benefit by the results of such knowledge. Thus in the consciousness of humanity will the angelic message, "On earth peace, good will toward men," be renewedly fulfilled.

Taking up the Cross

IDA L. BAKER

Now and then one hears expressions of disappointment from those who have taken up the study of Christian Science, but who have not immediately realized the peace and harmony which they had expected. They looked for discordant conditions to vanish as a mist in some undefined and miraculous way, but they have had to awaken to the fact that Christian Science demands of all who appeal to it for help, the practise of the highest virtues, combined with a degree of mental activity to which they have heretofore been comparative strangers. The Scriptural text, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee," states clearly the divine requirement by which harmony is to be secured. In the endeavor to keep thought stayed on God and to realize only the presence of good, much genuine mental work is needed, and this work is immediately and insistently demanded of every Christian Scientist. The call for daily watchfulness and prayer is imperative.

Advancing in the understanding of Christian Science, the student discovers many habits and mental tendencies which must be destroyed, root and branch. Every plant which God hath not planted, must be eradicated before one can enter into that peace "which passeth all understanding." One is often tempted to relax his vigilance and to drift along with the tide of mortal belief; but this submission to error's claim only

Digitized by Google

delays the coming of harmony into thought and life. Ultimately there must be, on the part of the student, an unswerving devotion to Truth.

Christian Science teaches that, unless the motive has its source in divine Principle, the deed itself profiteth nothing. Motives arising from selfish aims and purposes, separated in belief from the one infinite God, have neither power nor reality, and are therefore barren of good results. "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." "It is the spirit that quickeneth; the flesh profiteth nothing." To yield to the temptation to credit or identify self with goodness apart from the one universal good, to desire to confine or limit goodness to one's own personality,—*this can have but one outcome*, namely, inharmonious experience.

The tendency to drift along with the stream of human error, the error of the ages, calls for so much less exertion on the part of the worker, that he often succumbs to evil, instead of exerting himself to take a firm stand for Truth and righteousness. In the work of purifying consciousness, the separation of true thoughts from false beliefs, Christian Science demands of us ceaseless watchfulness and obedience to these words of our Leader: "Keep your minds so filled with Truth and Love, that sin, disease, and death cannot enter them" (The First Church of Christ, Scientist, and Miscellany, p. 210). Any secret longing to hold some attribute or quality of Mind as one's own personal possession, is often quickly dispelled when, by a more direct focusing of thought upon the seeming right desire, we discern its subtlety and selfishness.

At different epochs of the world's history there have arisen prophets and apostles who have gone about, not clothed in their own righteousness, but in the righteousness of God, good. Moses, Elijah, and the other prophets, lifted up their voices to stay the tide of evil, to dispel the mist of materialism. These Old Testament heroes ever associated righteousness with God, and never identified it with finite personality. The prophet Micah, in his endeavor to arrest the ungodliness of Judah and Israel, proclaimed these words to the people: "He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?" He thus taught that men must receive and express the divine attributes of infinite Mind, and only to the degree that this is done is harmony manifested, and they are blessed with peace and prosperity. Isaiah beheld the divine ideal, the redeemer, and stepped forth with this prophecy upon his lips, "A man shall be as an hiding place from the wind, and a covert from the tempest; . . . as the shadow of a great rock in a weary land." This inspired prophet had caught a vision of the ideal man, of him who could say in regard to sin and unrighteousness, "The prince of this world cometh, and hath nothing in me."

Because of his purified consciousness, his freedom from any desire to claim for self what belonged to God, Jesus of Nazareth, the prophet of Isaiah's exalted thought, was able to bring to needy men glimpses of the divine harmony of Spirit, God. With selfless love he declared, "For their sakes I sanctify myself, that they also might be sanctified through the truth." This great Exemplar of mankind also said, "If any man will come after me, let him deny himself, and take up his cross daily, and follow me." Again we hear his invitation, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

In this day and age, Mrs. Eddy, the Discoverer and Founder of Christian Science, following the example of Jesus, took up her cross, and went forth on the Christ mission "to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised." In the spirit of the prophet she has written, that to all who long for freedom from suffering, here and now, and for a state of bliss and happiness, "there remaineth, it is true, a Sabbath rest for the people of God; but we must first have done our work, and entered into our rest, as the Scriptures give example" (Miscellaneous Writings, p. 216).

Perception and Advance

JANE L. VILAS

THE statements that God is omniscient, and yet that He is "of purer eyes than to behold evil," seem contradictory to the novice in Christian Science who still clings to the old sense of the reality of evil. The altars of such a one were erected to an unknown God whom he ignorantly worshiped. To him God still seems far away, and over and over again comes the question, If God knows no evil, how could He have sent His Son into the world to save His children from evil?

One of the first essentials in the study of Christian Science is the exercise of discernment between reality and unreality, between the true and the untrue, the error which cannot be found in the realm of Truth. We are admonished to "try the spirits whether they are of God," and taking the divine character and manifestation as the only standard of absolute good, it is necessary for him who would enter the kingdom to leave behind the old materialistic concept of God, and grow into the understanding of Him as the one all-inclusive Mind.

Herein lies the gracious boon conferred upon tired, sin-sick humanity by our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in that it shows how to discard the old belief in a God made in the image of man, seated on a suppositional throne somewhere far off in space, whence He governs a universe which is apart from Himself. This wonderful book, so compassionate in its message, presents God to awakening human thought as the loving Father-Mother who never created evil, but who in Christ reaches out through unnumbered avenues to save from illusion of every kind, to bring men to a realization of their divine inheritance. As aspiring consciousness opens its windows to the light of Truth, there comes a better understanding of God and of His Son. The "milk of the word" is first assimilated, then its "strong meat," until the full realization of the absoluteness of good is reached, doubts vanish, and all problems are solved.

Up to this point the student has pictured himself as sinful, sick, and helpless, needing a Saviour who would come to him and lift him from his fallen state. But now he begins to realize that a mortal sense of life, with all its pain and disappointment, struggle and failure, is not true being, is not God. Evil he recognizes as an illusion, the "imagination of the thoughts of his heart" spoken of in Genesis; and in every manifestation of error he sees nothing more than the twisting and writhing of the old serpent in the process of its own undoing. In its lawlessness it is without law; in its transitoriness it is without substance, and in its unreality it is without truth.

At this stage in his progress the student faces the absoluteness of the statement that God is All-in-all; and if faithful and honest of purpose, he takes perfection as his goal. Like St. Paul, "forgetting those things which are behind, and reaching forth unto those things which are before," he presses "toward the mark for the prize of the high calling of God in Christ Jesus." Perfection is the origin and nature of man's true being. It alone expresses the one absolute God, the source of every good and every perfect gift. It characterizes the only Mind, whose activity is the law of righteousness;

Digitized by Google

which is in turn the process by which the universe is sustained. It is manifested through the Christ, "the only begotten of the Father," the perfect idea; not sent to a benighted world at a specified time or through a single specially favored personality, but by virtue of its perpetual and uninterrupted activity operative at all times and at every point in the universe. It maintains harmony, for it is harmony's self, and corrects all error, since it expresses the very nature of divine Truth.

When one acquires, even in a small degree, this understanding of the immanence of God, this realization of "Emmanuel, . . . God with us," he offers up a pæan of praise and thanksgiving. He is ready to accept the gracious invitation of Love, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

✧

Reason for Rejoicing

ERNEST C. MOSES

In the tenth chapter of St. Luke it is related that Jesus appointed seventy students to go among the various communities of Judæa to preach the gospel of Christianity, and to give practical evidence of its power by healing the sick wherever they should find the people receptive of the Christ-healing. These students departed on their mission of good will, health, and holiness, and shortly thereafter they returned to the Master in a very happy mood, saying, "Lord, even the devils are subject unto us through thy name." The record by Luke indicates that these students were so elated over the destruction of sinful and sickly conditions among the people, that Jesus recognized in their attitude of thought a grave error, and promptly rebuked it. After assuring them that through the spiritual idea of God which he presented they had dominion over all the alleged "power of the enemy," and that nothing should by any means harm them, the Master said, "Notwithstanding in this rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven." This we might understand to mean that they were to rejoice not because the beliefs of sin and sickness were subject to those instructed in the truth, but to be happy because they knew and were abiding in the conscious power of Truth.

The same reason for rejoicing should be recognized today by all students of Christian Science who find that a willingness to be governed by the divine Principle of this Science enables them to obey the command of the Founder of Christianity to "heal the sick" as well as to preach the salvation of God in overcoming sin. We may indeed be grateful for the destruction of every sickly and sinful thought through the application of the divine Science which Jesus expounded and illustrated in his life-work; but our rejoicing must find its sure basis in a conscious realization that our true individuality or character is in God, Spirit.

The obligation resting on Christians to rejoice in the consciousness of heaven within their thoughts, is based on this positive command of the Master to rejoice in their understanding of reality rather than in the mere overcoming of that which is unreal. Unreality does not contain or present anything in which to rejoice, since there is nothing in its destruction, as such, to make us glad; for rejoicing is a spiritual quality, proceeding from divine Love, the one and only cause and creator. There can be no true rejoicing in any man's heart, unless he knows God through His eternal Christ, the consciousness of Truth which every man possesses, albeit many seem asleep to this priceless inheritance. Only Truth can make us happy; certainly error can offer us no basis whatever for rejoicing.

Jesus made this plain in the parable used to illustrate his statement that "joy shall be in heaven over one sinner that repenteth." The Master did not intimate that heaven rejoiced because a sinner had lost his sin, but because heaven is always a state of bliss, and because as each human being finds his true character to be spiritual, not material, he finds an inner well-spring of rejoicing, heaven within him. Jesus raised this query: "What woman having ten pieces of silver, if she lose one piece, doth not light a candle, and sweep the house, and seek diligently till she find it?" This query the Master answered by saying that when the lost piece was found, the woman would call the neighbors together and say to them: "Rejoice with me; for I have found the piece which I had lost." The woman did not rejoice because of overcoming her sorrow over the loss of her money, but because she had found that which was supposed to have been lost. The rejoicing of the woman would arise from the positive side of the experience, from her own more complete sense of substance, undiminished by the passing belief of loss.

This is a good symbol of the experiences of Christian Scientists; for, in our acceptance and application of the truth, our realization of the Christ with us, we find, as did Jeremiah, that because God has loved us "with an everlasting love," He has with that same loving-kindness drawn us irresistibly to Him, to a conscious realization of the eternal power and ever-presence of divine Love, and that is indeed enough to make one rejoice with every passing hour.

In accepting and acknowledging salvation through Christian Science, those who enter this sure but narrow way of redemption may hear today the inspiring words of the tender, loving Shepherd spoken centuries ago through the prophet, and realize their fulfilment. "Then shall the virgin rejoice in the dance, both young men and old together: for I will turn their mourning into joy, and will comfort them, and make them rejoice from their sorrow. . . . and my people shall be satisfied with my goodness, saith the Lord." Moreover, if we are faithful in wisely spreading the good news of the reestablishment of the healing religion of Christ Jesus in Christian Science, and faithful also in doing its healing work, we shall surely realize the precious fruition of the still higher promise of the Master: "He that reapeth receiveth wages, and gathereth fruit unto life eternal: that both he that soweth and he that reapeth may rejoice together."

A Reading from Nature

WARWICK JAMES PRICE

Drifting in from the moaning sea,
Over the beach and the tide-pooled lea,
The gray fog shuts down drearily
On all my world;
Till the outer bar is a distant sound,
And the children's tent but a misty mound,
And the trees dim sentries set around,
Their standards furled.

Yet once the sun shall his sword-rays wield,
All things that old ocean's wraith concealed
Will reappear, as the haze veils yield;
I know this true.
How plain the lesson they taught me then:
That the mist-bred troubles befogging men
Shall fade into empty nothings when
Truth's light breaks through.

Selected Articles

[Frederick Dixon in *Birmingham Gazette*, Birmingham, England]

It is perhaps a pity that "A Christadelphian" has written to request that he be informed on what Christian Scientists base their claim to be faith-healers, because it so happens that in adopting the name of Christian Science, Mrs. Eddy repudiated any connection with faith-healing as it is commonly defined. I am not going to criticize faith-healing; I am merely going to point out that the description of Christian Science healing given by your correspondent is simply a travesty of the fact. This critic says that miraculous power to heal was conferred on the apostles and their immediate contemporaries and then withdrawn. Now, the Bible does not say that the healing was miraculous, and does not say it was temporary. There are two words in the Greek Testament translated miracle, and that only in certain places. One of these words means an act of power, and the other a sign, and neither of them ever had any supernatural significance. The word miracle was introduced into Christian literature by Jerome in the fifth century, and it had then no more supernatural meaning than the Greek words.

It is no use attempting to argue about this. The miracle was simply the proof, or object-lesson, of the truth of Jesus' teaching, and he made it an obligatory proof when he declared that those who believed on him would be able to do the works he did. In those words he himself made the power to perform so-called miracles the test of any one's right to the name of Christian. Unless you are going to alter the meaning of the Greek and English languages to make the Bible fit your own theories, it is equally impossible to maintain that healing was a temporary gift to the church. Your contributor says, "The power having been withdrawn from the church since the death of the apostles and their immediate contemporaries (for good and sufficient reasons), are we not justified in rejecting Christian Science faith-healing?" As a matter of fact, not a single statement in this will hold water any more than the statement about miracles. First, there is nothing in the Bible, as has been shown, to say that it was withdrawn. Second, there are no reasons at all given in the Bible, good or sufficient or otherwise. Third, who are to be defined as the immediate contemporaries? Like all the critic's other statements, these are nothing but a string of unsupported "ipse dixits."

Finally, Christian Scientists have never excluded leprosy, or anything else at all, from the operation of Christian healing. Every man, they insist, is a Christian in proportion to his power to repeat the works of Jesus, and to do greater works. At the same time, to say that no one who has not raised the dead is a Christian healer would be just about as sane as to say that no one but a senior wrangler is a mathematician, or no one but Grace a cricketer. The most unfortunate part of the argument, however, is the reference to leprosy, for Christian Science has healed leprosy, and, to give one instance, the patient was a medical man who had been in practise for a quarter of a century.

✧

[Paul Stark Seeley in *The Oregonian*, Portland, Ore.]

The orthodox minister who has found time to deliver a series of sermons denunciatory of what he believes to be Christian Science, could direct his efforts to a much better purpose. In choosing to attack the religious beliefs of a large number of his fellow men who are endeavoring, with a gratifying degree of success, to reduce the sum total of the world's load of sickness and despair, he displays not only his lack of knowledge of the subject which he assumes to discuss, but a regrettable spirit of intolerance which would, if it could, tear down that which has given to many thousands health in place of sickness, joy instead of sorrow, and peace where discord was before.

In *The Oregonian* of today the reverend critic is quoted as saying that those who come to Christian Science do so because "they are looking for physical benefits and have not investigated its merits as a religion." Just what the gentleman may regard as the merits of a religion we will not presume to say. He will, we trust, not dispute the truth of the apostle's statement, that "faith, if it hath not works, is dead," or the fairness of that law of evidence applied by the Master to prove the divine origin of his teachings, "The . . . works that I do, bear witness of me;" a thought emphasized again in his Sermon on the Mount, where he showed what he regarded as the test of true Christians, in that pointed verse: "Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles?" Christian Scientists ask to have the merits of their religion judged by no lesser standard than that established by Jesus. They hope the critic is willing to apply the same test to his religion.

Until the theologians of the present are able to prove their faith by their works, and so fulfil the unconditional command of the master Christian to "heal the sick," they can gain nothing by attacking a religious system that is willing to accept the Master's every command and to rest the future of its growth not on dogma or creed, but on its ability to bring to the individual, and so to society, better health, better morals, greater happiness, and a clearer and more scientific understanding of God and man.

✧

[Brigman C. Odom in *Beaumont* (Texas) *Enterprise*]

In a recent issue an evangelist is reported to have said, while conducting a revival service in Beaumont: "Mary Baker Eddy believed there is no hell." Inasmuch as the statement in the paper is separated from its context, we have no means of knowing just what the speaker's concept of hell is, and consequently what thought he meant to convey to his hearers. To say that Mrs. Eddy believed there is no hell, is unjust to her and to the Christian Science movement; it is wholly false and untrue; and one informed as to her life history and teachings would not have delivered such an utterance. A number of references to hell are made by Mrs. Eddy in her writings, and her position is always Scriptural. The hell she pictures is the same miserable, sinful mental state mentioned in the gospels and elsewhere in the Bible.

In an address in 1904 on the occasion of the dedication of the church in Concord, N. H., Mrs. Eddy says, "I am asked, 'Is there a hell?'" And her answer in part is, "Yes, there is a hell for all who persist in breaking the Golden Rule, or in disobeying the commandments of God" (The First Church of Christ, Scientist, and Miscellany, p. 160). Mrs. Eddy, with the Bible, teaches that hidden, unpunished sin is hell,—even the hell of a "guilty conscience waking to a true sense of itself, and burning in torture until the sinner is consumed, his sins destroyed." On page 196 of Science and Health we read that "sin makes its own hell, and goodness its own heaven," and on page 266, "The sinner makes his own hell by doing evil, and the saint his own heaven by doing right," while the Scripture says, "Whatsoever a man soweth, that shall he also reap."

The leading thinkers and scholars of today, both among theologians and scientific men, hold that hell—the effects of wrong thinking and wrong doing—is mental torment, anguish; and that one can be in such a state here as well as after the transition called death. If the critic believes in a place where a flame of literal fire is fed by material sub-

Digitized by Google

stances, and in which the souls of the departed who failed while here to make peace with God, are burned eternally; if this is what he means when he says, "Mary Baker Eddy believed there is no hell,"—he is correct; for the writer is quite sure Mrs. Eddy had no such conception of hell. She taught that the sinner is punished—is in hell—so long as he sins or believes in sin. "Thou shalt by no means come out thence, till thou hast paid the uttermost farthing."

Mrs. Eddy was a gentlewoman, cultured, highly intellectual, and spiritually-minded. Her whole life was spent in the close study of the Scriptures, from which she drew the inspiration of a life filled with usefulness and good deeds,—thus living up to Christ's commands to love one's neighbor as one's self.

✧

[H. M. Mason in *Nashville* (Tenn.) *Banner*]

It is reported that "Miss Millar, the Australian evangelist, denounced in specific terms the 'fallacies' of Christian Science," and that "Miss Millar has challenged 'false religions' and 'false doctrines,' chief among which she places Christian Science." If Miss Millar is entitled to be called an evangelist, her mission in Nashville, and wherever she may speak, is comprehensively set forth in Webster's definition of evangelist, the principal clause of which is, "A bringer of the glad tidings of Christ and his doctrines." The Biblically acknowledged exemplary evangelist James said: "Speak not evil one of another, brethren." "For in many things we offend all. If any man offend not in word, the same is a perfect man, and able also to bridle the whole body." Judging, criticizing, and denouncing a religion is an action strictly in violation of evangelical ethics.

All Christian religions are necessarily represented by the Young Women's Christian Association. If I were to attend an occasion under the auspices of this association with the understanding that the Christian Science religion was to be expounded, and the speaker devoted his time to denouncing another religion, I would naturally feel that I had been imposed upon. For several years I was a business man, and learned through experience that a man with a good business, making a success, has neither time nor inclination to advertise another's business through any kind of spirit or means, denunciatory or otherwise. I believe that rule is a good and safe one to follow, and would serve as a reliable indicator in connection with religions and professions of all kinds. Any one who speaks disparagingly of a religion making the history throughout the world that Christian Science is presenting, is palpably "intruding into those things which he hath not seen."

Miss Millar said: "Recently I said to a woman in New York city, 'Do you know there are sixty thousand girls living in one section of the city in the blackest and vilest of degradation?' The woman replied simply, 'It does not exist in reality.'" I have no means of knowing that this woman to whom Miss Millar refers is a Christian Scientist, or that her thought in regard to the unreality of evil was not further elucidated during this interview. I can say, however, that the reliable witnesses to the fact that Christian Science is liberating people from evil conditions—degradation of all kinds—are numerous everywhere, and present conclusive evidence of the merits of this teaching. The influence from which these results come forth, emanates from the reasoning that if "all things were made by him [God]; and without him was not any thing made that was made," and that "the lust of the flesh, and the lust of the eyes, . . . is not of the Father," and "passeth away," then, in the scientific sense, there is no reality in evil. Proceeding in this way by no means tends to make a benefactor unmindful of another's needs, or in any way uncharitable. No Christian Scientist pretends to prove evil conditions to be unreal except through an educational process somewhat after the manner in which a musician demonstrates all music to be based upon a principle, which absolutely proves the unreality of all discord.

As mathematics, music, all sciences, when demonstrated, dispose of all that is unlike their immutable harmony, should not the truth about God, the science of Life, establish the perfection of being, in answer to the Lord's Prayer, "Thy kingdom come . . . in earth, as it is in heaven"?

✧

[George A. Law in *The News*, Danbury, Conn.]

Inasmuch as, even at this late day, it is unusual for a so-called orthodox clergyman to pay such a tribute to Christian Science as to acknowledge it "accomplished some good," an incident of this kind is well worthy of comment. In a recent issue this statement was reported to have been made in the First Congregational church by the Rev. Benjamin W. Bacon of Yale Divinity school. Such a manifestation of the present-day tendency to consider the subject of religion from a broader view-point doubtless received the deserved commendation and approval of your readers. Due, more or less, perhaps, to the brevity of the published account of his remarks, while stating that the practise of Christian Science results in "an unusual amount of cheerfulness" and that it "accomplished some good," this gentleman is also credited with saying that, at the same time, it brings a number of "attendant evils in its trail." This proposition is at once seen to be inconsistent, for it is apparent that the same activity cannot possibly bring forth two results which are direct opposites, one good and the other evil. Unfortunately it is not stated what he thinks these evils are.

Christian Scientists endeavor to follow Jesus' example, who said, "It is the spirit that quickeneth; the flesh profiteth nothing." He paid little or no heed to the physical, turning the attention away from the body toward the moral and spiritual, teaching with emphasis that a proper and full recognition of the spiritual was necessary to experience health. To those whom he healed he said, "Sin no more, lest a worse thing come unto thee," clearly indicating sickness to be the result of sin, evil, and that freedom from disease comes as a natural result when sin is forsaken. Jesus also characterized evil as a lie, for he called the personification of evil "a liar," and "the father" of lies. In this manner he declared evil with its resultant conditions, sickness, discord, etc., to be unreal to the spiritual, true man, God's image and likeness, and he taught how to dispose of these inharmonies by treating all evil as unreal, having no rightful place in man's experience.

By adopting Jesus' method of distinguishing between the true and the false, the real, legitimate, and the unreal, thus discarding the error in consciousness and accepting Truth, the works of Jesus are today being repeated in the healing of all manner of diseases and restoring harmony where discord formerly existed.

✧

[John W. Doorly in *The Leeds* (England) *Mercury*]

In a recent issue H. Waller speaks, as "a lay reader of the Church of England," of "the old Platonic nonsense which Christian Scientists propagate." He goes on to suggest that this nonsense is based on ignorance of the Bible. Now, he is only a lay reader in his church, but it is not so long ago that no less a person than the Archbishop of York felt himself called upon to state that Christian Scientists were among the keenest students of the Bible that he knew. Of course the critic will appreciate the archbishop's opinion.

Your correspondent seems to be under the impression that Christian Scientists do not believe in a resurrection, and it will

Digitized by Google

perhaps relieve him when I tell him that they undoubtedly do, but they believe that the resurrection is a continuous process, to be adopted here and now, of resurrecting mortals from the belief in sin, disease, and death, and making them understand that the redeeming Christ which saves from sin, disease, and death is the "Lo, I am with you alway." Why wait until you die to be resurrected, if that Christ is ever available, and is "the same yesterday, and today, and forever"? Christian Scientists not only read the Bible constantly, but they understand and utilize its teaching in their every-day experience, and they do not try to postpone the practical results of its teachings through a worn-out theological platform. "By their fruits ye shall know them." Today there are many people alive and well who would have been in their graves many years ago had it not been for the practical understanding of the teaching of the Bible which Christian Science gives. This is indeed a practical view of resurrection through Christ.

✧

[Henry Deutsch in *Minnetonka Record*, Excelsior, Minn.]

In considering the questions proposed by your correspondent, we must of course remember that they are simply a repetition of those interrogations which have agitated the world from the beginning of time, and which have never been answered,—nor can they be answered, from the standpoint of material philosophy or purely human logic. God being infinite, it is impossible for finite comprehension to apprehend Him in terms of logic or language. We cannot prove God's existence by the mere process of human evidence, but nevertheless we know He does exist through that inner sense or feeling which responds to the higher intuitions of Spirit. God is defined in John's gospel as "Spirit," and it is said, "They that worship him must worship him in spirit and in truth." God being Spirit,—and on this there can be no possible controversy,—and He having created man in His own image and likeness, the real man must be spiritual and not material.

It is to be noted that there are two records of creation, one in the first chapter of Genesis, and one in the second. An examination of these two chapters will indicate very clearly that the first refers to the spiritual creation, and is undoubtedly the original record of the real creation, which is not disturbed or contradicted until we find in the sixth verse of the second chapter, "But there went up a mist from the earth," and thenceforward we have a material record of creation which negatives the original narrative and confines the creation of man to the male only, instead of male and female, as indicated in the first record.

The inaccuracy of the second record is further apparent when analyzed by facts. In the seventh verse we read, "And the Lord God formed man of the dust of the ground," but natural science informs us that material man, or body, is not made or composed of dust, but is really and actually about eighty per cent water, and the balance various salts, etc. Without, however, going into a further discussion of the so-called dust man, it is beyond controversy that what we recognize as man is not the physical body, but rather the mental or spiritual expression; wherefore we find it true in so many instances that men and women who present the poorest manifestation of physical development are really most manly and womanly, and as pointed out in "Science and Health with Key to the Scriptures" by Mrs. Eddy, "if the real man is in the material body, you take away a portion of the man when you amputate a limb; the surgeon destroys manhood, and worms annihilate it. But the loss of a limb or injury to a tissue is sometimes the quickener of manliness; and the unfortunate cripple may present more nobility than the statuesque athlete,—teaching us by his very deprivations, that 'a man's a man, for a' that'" (p. 172).

Mrs. Eddy very satisfactorily disposes of our doubts and questionings and arguments *pro* and *con* as to what man is by her statement, "At present we know not what man is, but we certainly shall know this when man reflects God" (Science and Health, p. 90). The definition of man and the explanation of his origin as given in Christian Science follow clearly and logically a rational interpretation of the Bible, and they have this advantage over all other systems, to wit: they can be proven by all who are willing sincerely to seek and honestly to strive for their exemplification. It stultifies human reason and belittles the concept of Deity to believe that His image and likeness, the highest manifestation of His handiwork, should be typified by the monkey or some other of the lower forms of the animal creation, and it accords more with our conception of Deity to accept those explanations and definitions which coincide with that inspired view of John as given in I John iii. 1, 2. There is no question but that the kingdom referred to by Jesus in his statement, "The kingdom of God is within you," is God's spiritual kingdom, cognizable only by spiritual consciousness. Its territory is the infinite spiritual universe; its king is the one God, and its subjects are God's spiritual ideas, His infinite manifestations.

Your correspondent describes very aptly what should be the test of any religious faith; and if he will honestly and sincerely try Christian Science, he will soon learn that it does what is claimed for it, and more especially, that it heals the sick and reclaims the sinner. It is true that when a person believes he is sick, he unquestionably feels sick, because he reaps the effects of his belief, or, as the Bible says, "as he [a man] thinketh in his heart, so is he." And so when he passes through the belief of death, it is true that the so-called mortal body manifests no evidence of life; for the material body is not man, and the real or spiritual man never dies, but is immortal. Jesus emphasized this very strongly in the raising of Lazarus when he said, "Our friend Lazarus sleepeth."

In order to understand Christian Science it is necessary to study the Bible carefully to obtain its spiritual interpretation. When we do so, we find that the so-called matter or dust man is synonymous with the carnal mind, which is so often referred to in the New Testament as opposed to the spiritual, and is undoubtedly the one described by Paul in his wonderful injunction to put off the old man and put on the new, "which after God is created in righteousness and true holiness." "For as many as are led by the Spirit of God, they are the sons of God."

The greatest discoveries have become realities and facts in human existence through the process of intuitive perception and faith. Some great fundamental truth has been revealed to a person ready for it; has been accepted by him or her as true, with faith, and been acted upon, the results proving its correctness. So with Christian Science, the truth of Mrs. Eddy's statements can be demonstrated by any one who will manifest sufficient faith in God to put it to the test, and the results, as proven by the testimony of thousands of witnesses, indicate that such faith will be well founded and rewarded by the joys, peace, and comfort promised to those who "abide under the shadow of the Almighty."

✧ ✧ ✧

Time's measure counts for naught. True joys in selfless moments come,
While hours of thought, self-centered, drag wearily along.
Ask of the sensuous pleasures past, their fruit. The past is dumb;
But love that seeks a brother's good, will fill the heart with song.

Editorial

Board of Lectureship

THE Christian Science Board of Directors is pleased to announce the following appointments to the board of lectureship of The Mother Church, to take effect immediately:—

James D. Sherwood, C.S.B., 508 Beatty Building, Houston, Texas,

Jacob S. Shield, C.S.B., 36 South State Street, Chicago, Ill.

✧

"Speaking boldly in the Lord"

AMONG the authorized activities of the Christian Science church, none is more important than is that of the board of lectureship. No other is doing more to leaven the thought of the world in its inevitable progress from a very material concept of God, man, and the universe, to a better, higher, and infinitely spiritual concept. When Mrs. Eddy established this activity of the church which she founded, she had great hopes for its success, and it must have been a great joy to her to be able to write to the members of this board: "I am more than satisfied with your work: its grandeur almost surprises me;" also, "The Christ mode of understanding Life—of exterminating sin and suffering and their penalty, death—I have largely committed to you, my faithful witnesses. You go forth to face the foe with loving look and with the religion and philosophy of labor, duty, liberty, and love, to challenge universal indifference, chance, and creeds. Your highest inspiration is found nearest the divine Principle and nearest the scientific expression of Truth . . . Meet dispassionately the raging element of individual hate and counteract its most gigantic falsities" (The First Church of Christ, Scientist, and Miscellany, p. 248).

Because this work is so important, and because Christian Science has been so greatly misrepresented in the past, it is particularly gratifying to learn, as we do from reports received, that the lectures are now being more generally attended by large audiences than ever before. Another gratifying feature is that, because of the increased demand for opportunity to attend these lectures, a great many of the branch churches and societies are providing more than the minimum one lecture a year for which the by-laws call. Many of the churches, indeed, are giving two lectures each year, some three, some four, and some even six.

Through these lectures the public are learning that the doctrines and teachings of Christian Science are not what they were commonly supposed to be, and that the ponderous judgment which has been so often passed upon these doctrines and teachings, namely, that they are "neither Christian nor scientific," is but a high-sounding phrase and not based on either investigation or sound thinking. They are also learning that the belief, which has been carefully fostered for centuries, that the healing of the sick can take place only through medical and surgical treatment, is no more true today than it was in the time of Christ Jesus and his immediate followers. They are finding out that Christian Science is not a religion for any particular class of society, but for all mankind, without consideration of age, sex, or social station. Although it is not possible for the lecturers, in the short time at their command, to teach Christian Science in its fulness, they are clearly demonstrating that it is evangelical in the truest sense of the word. It is not the province of the lectures to teach Christian Science, but simply to clear up the general misconceptions of the subject and prepare a foundation upon which those who are sufficiently interested may build through study and demonstration "the structure of Truth and Love" (Science and Health, p. 583) in their own consciousness.

Not the least gratifying incident in connection with the lecture work is the friendly way in which public men are willing to introduce the speakers to their audiences, and in so doing to bear testimony to their own observation of the good wrought by Christian Science, not only in healing the sick, but also in bringing peace and joy into the lives of its followers. With the increased number of members of the board of lectureship, as announced above, we may safely assume that still more good will be accomplished, and that many more of those men and women who have exhausted the resources of earth in their search for health and holiness, will find through the lectures a hope that health and heaven are still possible in human experience. Surely this is not too much to expect, if our own attitude toward these workers for Truth is that which Paul besought from his fellow laborers who have "put on the whole armor of God;" namely, "praying always with all prayer and supplication in the Spirit, and watching thereunto with all perseverance and supplication for all saints; and for me, that utterance may be given unto me, that I may open my mouth boldly, to make known the mystery of the gospel."

ARCHIBALD MCLELLAN.

✧

"Abundantly satisfied"

THE explanation of a vast range of human experience has been given us in Mrs. Eddy's terse statement on page 365 of "Miscellaneous Writings," that "mortal mind is calling for what immortal Mind alone can supply." An unquenchable desire for happiness, and an inherited false sense as to what will satisfy this desire,—these constitute the fundamental factors of every tragedy of history and of life. Who could sum up or picture the laborious effort, the ceaseless and oft-times utterly selfish struggle of men for that which never has brought content and never can, and this for the reason that human consciousness has a divine element, a capacity that speaks for God, and that can know no peace apart from Him.

The ideal concept of man which is revealed in Christian Science,—this and this alone bases a true philosophy of life, and until one has gained it, he is a prey to the insatiable demands of ungratified want. It is with such that the prophet Isaiah was rebukingly pleading when he said, "Wherefore do ye spend money for that which is not bread? and your labor for that which satisfieth not? hearken diligently unto me, and eat ye that which is good, and let your soul delight itself in fatness." Christian Science is at one with all Christian faiths in declaring the goodness of God, but it is quite unique in its insistence that "no wisdom is wise but His wisdom; no truth is true, no love is lovely, no life is Life but the divine; no good is, but the good God bestows" (Science and Health, p. 275). Not only the supremacy, but the alone-ness of God with respect to the supply of human need, is here given Scripture emphasis, and seen to be vitally related to human happiness. He alone "satisfieth the longing soul," and when with the psalmist we can say, "Whom have I in heaven but thee? and there is none upon earth that I desire beside thee," then our feet have surely entered the paths of peace.

Theological statement has abundantly affirmed this fact, but the hearts of Christian people have been very tolerant of its contradiction. They have associated much that is classed as good with other things, and sought for it in other directions. How true this is of the pleasure which we have all so sedulously and so continuously tried to secure. How little

Digitized by Google

is God thought of today, by the average Christian man, as the source of pleasure, the fountain of every-day joy, and yet this sense of Deity as "delightsome" is as old as David, for he sang, "Delight thyself also in the Lord; and he shall give thee the desires of thine heart."

So too with beauty, which has been associated by all Christian believers much of the time, and by most of them all the time, not with God and His activity, but with things apart from Him, things which decay and become abhorrent, and yet which it has been believed He made! "One thing have I desired of the Lord," says the psalmist; "that will I seek after; that I may dwell in the house of the Lord [right consciousness] all the days of my life, to behold the beauty of the Lord." This is the scientific desire which the true Christian Scientist entertains, and it is no less practical than it is philosophical.

So too with peace, which has been identified very largely with ideal conditions, here or elsewhere, rather than with the divine appearing; with God's giving of place and provision, rather than His eternal gift of Himself; with rest in material comfort, rather than rest in the Lord. Christian Science leads to the realization not only of the sovereignty of God, but of the allness of God; that He is not only to bound our thought but to fill it, be the Father and Mother to whom we shall not only turn in every hour of need, but with whom we shall find our recreation, our inspiration, and our delight. Christian Science does not assume to add anything to the Christ-teaching, but only to bring human consciousness into the practical realization of its vital content, that God may be in human experience what He is in truth, All-in-all.

JOHN B. WILLIS.

Limitation Overcome

MANY of those who come to Christian Science for healing, soon discover that the truth does not deal with their physical ailments alone, but extends to all the phenomena of human experience. The worker in Christian Science aims to bring his patients into conscious harmony with God's law at every point, and in the ratio that this is accomplished, discords vanish one by one. In some cases they go so quickly that the healing of "mind, body,, or estate" appears as one process, which it actually is, though in other cases it comes more slowly, through a growing understanding of the truth. No real progress is made, however, until the seeker after health and harmony sees the importance of doing what Christ Jesus commanded, namely, seeking "first the kingdom of God, and his righteousness," for by this means alone can the mortal sense of limitation be really overcome.

On page 129 of Science and Health Mrs. Eddy makes a statement which is capable of the broadest application, when she says, "We must look deep into realism instead of accepting only the outward sense of things." She adds, "Can we gather peaches from a pine tree, or learn from discord the concord of being? Yet quite as rational are some of the leading illusions along the path which Science must tread in its reformatory mission among mortals."

When one is healed in Christian Science of a sense of illness, he becomes to some extent conscious of the fact that the kingdom of God is here and now. Like a child new-born, he must, however, become acquainted with the things of the kingdom, also its laws, which are spiritual and perfect, and he must obey these laws or he will miss the blessings which they are intended to provide. If honest with himself, he will see that he has neither understood nor obeyed these laws in the past, or he would not have had the sense of discord and limitation to contend with. If we fail to obey God's law after its demands are revealed to us, we are, as St. Paul says, "without excuse." If order is "heaven's first law," then we must apply it in all we think and do, for in this way we shall bring harmony into our own lives and bless all with whom we are associated.

One who is orderly and intelligent is ever in demand as a worker, and need have no fear that his services will miss recognition, for the Mind which he reflects, if he is truthful and unselfish, governs not this world alone but the entire universe. Not many, perhaps, think how large a part selfishness plays in perpetuating the sense of limitation. Mortals want more than they have demonstrated, and because others have certain things they get them, not knowing whether they can ever pay for them, and quite forgetful of the fact that self-denial on the material side, if practised from the right motive, leads to expansion on the spiritual side and breaks in the only sure way the claim of limitation. Here, too, we need to remind ourselves often that time must not be wasted, that the spiritual demand in this respect must be met, given priority over all other considerations, and then we shall not be limited, either as to time or aught else. This does not mean that we shall always do what others may desire, but our activity and our mental processes will be unmarred by haste or confusion, which may affect many others besides ourselves.

As we study the Old Testament we find clear and definite statements that God's people should have no sense of lack or limitation. The psalmist says of the godly man, "Whatsoever he doeth shall prosper." The Hebrews were taught to consecrate to divine service a tenth of all they possessed, and instead of this enactment limiting them, it broke for them the material sense of limitation by compelling foresight, prudence, and self-denial. It was orderly giving, and it led up to that higher law enunciated by Christ Jesus, "It is more blessed to give than to receive." While Christian Scientists may not "pay tithe of mint and anise and cummin," or even of dollars and cents, their giving to the cause of Truth should be orderly, spontaneous, and generous, and it should come "first." That this has been largely true of them is well known, but let us all get a firmer grasp of the "realism" mentioned by our revered Leader, and we shall then be, as St. Paul says, "making many rich" in the truest sense, while "possessing all things" ourselves.

ANNIE M. KNOTT.

Among the Churches

Current Notes

MELBOURNE, AUSTRALIA.—Authority having now been issued by the Victorian penal department for the regular holding of Christian Science services in the Melbourne jail and at Pentridge penal stockade, a rota has been drawn up covering the next twelve months. With the sanction of the chief secretary, initial services were recently held in these prisons, which were regarded as experimental by the prison authorities, and the above authorization is consequent thereon. For the present, the services will be held monthly, but it is hoped that very soon weekly meetings will be sanctioned. Indeed, it is not unlikely that request to that effect may be made by the requisite number of Pentridge, or long-term, prisoners, which will involve permanent weekly services being authorized in that section of the jail.

The first service in the reformatory section at Pentridge has just been held, when forty-three prisoners out of a possible fifty-five voluntarily attended. This section consists solely of prisoners confined under indeterminate sentences. The service was in the form of a Wednesday evening meeting,

Digitized by Google

and several of the committee of prison workers which has been formed by the Melbourne church, spoke in explanatory testimony; and at the close the prisoners present expressed their thankful appreciation, with the hope that they would soon see their visitors again. Gratitude was also voiced for the Christian Science literature, which is regularly supplied to the prison through the distribution of literature committee, and of which, in accordance with the prisoners' desire, a larger supply will now be provided. It transpired that one of the prisoners in the reformatory section owned a copy of Science and Health and was a regular reader of the Lesson-Sermon.—*Correspondence.*

EVANSTON, ILL.—A splendid new edifice was added yesterday [Nov. 16] to the places of worship which have won for Evanston a name as "the city of churches." The new structure is First Church of Christ, Scientist, and is the fourth fine edifice to face the small park at Chicago avenue and Grove street. The audience-room has a seating capacity of nine hundred. Beneath the main auditorium is a commodious Sunday school room and parlors. The opening services were held in the morning, and services were also held in the evening. The edifice cost about one hundred thousand dollars.

The Chicago Record-Herald.

MILWAUKEE, WIS.—The corner-stone of Second Church of Christ, Scientist (the former Third Church), was laid Nov. 6. The edifice is being erected on Highland boulevard just west of Twenty-seventh street, on a lot 165 by 240 feet. The main auditorium will seat one thousand people, and the gallery about three hundred and fifty more. The approximate cost, including the organ and the building lot, will be one hundred and twenty thousand dollars.—*Evening Wisconsin.*

PORTLAND, ORE.—The Christian Science churches of Oregon maintained at the state fair a tent reading-room which had many visitors during the week, and there Christian Science literature was made available for free distribution. The work of *The Christian Science Monitor* as an advocate of clean journalism was brought to the attention of many through the distribution of a large number of copies.

Portland Telegram.

LINCOLN, NEB.—A Christian Science society has been formed at the University of Nebraska by a number of students who are adherents of Christian Science. The official requirements for recognized university organizations have been complied with by the organizers, and a meeting place in the Temple has been assigned for the use of the new society.

Daily Star.

LOS ANGELES, CAL.—The new Seventh Church of Christ, Scientist [San Pedro], was formally opened Oct. 26. It is situated on Seventh street, near Center, the lot having cost four thousand dollars, and the building, which is on the bungalow order, represents an expenditure of twenty-five hundred dollars.—*Los Angeles Tribune.*

PALM BEACH, FLA.—So far had work progressed upon the new Christian Science church being erected entirely by the contributions of its members, that services were conducted there Nov. 2. The new building is at the corner of Hibiscus and Poinsettia avenues.—*Palm Beach Post.*

LOGANSPORT, IND.—The new Christian Science church which is in course of construction at the northeast corner of Ninth and North streets, is rapidly nearing completion.

Logansport Chronicle.

The Lectures

Hobart, Okla.

H. L. Standeven, in introducing Judge Clifford P. Smith, who lectured on Christian Science at the Opera House, spoke in part as follows:—

Forty years ago there was only one Christian Scientist in the world; today there are hundreds of thousands that have subscribed to the faith. Forty years ago there was not one Christian Science church; today there are nearly fifteen hundred Christian Science churches and societies, dedicated to the omnipotence of God, the spirituality of man, and the nothingness of evil. There must be some reason, some sound basic reason for this remarkable growth, as it has been accomplished in the face of the most unjust criticism and bitter denunciation by the people who have not given Christian Science sufficient study.

Christian Science is a demonstrable religion, something you can demonstrate every day of your life. In fact, Christian Scientists must demonstrate their religion every day of their lives or they are not true Christian Scientists. They believe that every person should have a right to worship God according to the dictates of his own conscience, and they grant that privilege to every person. Since Christian Science is a demonstrable religion, it is something that persons can absolutely rely upon. A great many people have come into Christian Science not because they want to, but because they have to. When something has been proven to them, they know it to be an absolute fact, and for this reason a great many people today are Christian Scientists.

Many are prone to judge and condemn without thoughtful investigation, and the prejudice that exists in the minds of a great majority of people with reference to Christian Science is based upon the fact that they have not investigated before they have judged. To correct the erroneous idea existing in the mind of the public as far as possible, these lectures are given, and it will be the aim of the speaker tonight to explain the basic principles of Christian Science.

The Hobart Daily Republic.

✧

Waupaca, Wis.

A very appreciative and intelligent audience listened to a lecture on Christian Science by Virgil O. Strickler. Attorney Irving P. Lord introduced the speaker, saying in part:—

I am not a Christian Scientist, but I hope that I am a Christian. I do not know as it makes a great amount of difference which particular road any of us travel, so long as we reach the coveted goal. No matter what creed we embrace or with what church we affiliate, we should all aim to do unto others as we would that they should do unto us. We should love God, not fear Him. Love and labor, faith and charity, are the fundamentals of true Christianity.

Although Christian Science is less than a generation old, its basic truths date back to the time where the memory of man runneth not to the contrary, and the rapid growth of Science has been phenomenal in the extreme. I am personally acquainted with most of the members of the Christian Science church in Waupaca, and I can truthfully say that as far as those qualities go which make up desirable citizenship, they compare most favorably with the membership of any other of our local churches. Some people have treated Christian Science lightly because it was founded by a woman, but I personally resent such aspersions on the sex.

Waupaca Record-Leader.

Digitized by Google

Natick, Mass.

The Rev. William P. McKenzie delivered a lecture on Christian Science in Concert Hall, under the auspices of the Wellesley Christian Science Society. He was introduced by Carrington Howard of Natick, who said:—

We are all striving to bring into our experience those things that make for happiness and richness of life, and to put out and exclude those things that make for unhappiness and discord of every kind. The greatest person the world has ever known was Jesus Christ. After a test of nineteen centuries his influence is today greater than that of any other person, and is spreading more rapidly than ever before. He demonstrated the possibility of overcoming without any material means, the same sins and diseases and troubles as are bothering us today. The secret of his success, the secret of his life, was to know God. "And this," he said, "is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." God first, always, but Jesus Christ as well; for without knowing him and his teachings we are blind as to the way. He taught and proved for all ages that for those who know God aright and are sufficiently spiritual minded, the spiritual and not the material becomes the real or abiding element of being, and the discordant elements which had been accepted as the real, disappear. When we understand and can prove this for ourselves, we honor and love all the more the one who so unquestionably proved this for us first; for now we can appreciate the full significance of his teachings and his life.

If we see what we have always accepted as a material law, broken time and again, or even once, we are no longer willing to accept it as a law, but rather know that it was ignorance of a higher law which made us take the other for a law. We are likely to call the old "a belief," for we thought it was true. Christian Science teaches us, by a spiritual interpretation of the Scriptures, to recognize, and to prove in our every-day experiences, the reality of a spiritual law higher than our material so-called law. It does not annul any law, or claim to, but it does teach us to recognize and be able to demonstrate the true law. So people are turning to Christian Science for guidance in thought, and therefore in action, and for relief from every form of human discord, by learning its nothingness. And the secret of understanding, today as of old, is to know God; to know God as Life, without an element of death; to know God as Truth, without an element of error; to know God as Love, without an element of hate or of envy or of jealousy or of malice; and to know the real man as the image and likeness of God,—not material, but spiritual.

Correspondence.

Columbus, Ind.

Bliss Knapp lectured on Christian Science at Crump's Theater. He was introduced by the Hon. L. Ert Slack of Franklin, who said:—

Every new thought or discovery must of necessity stand the test of public investigation and demonstration. In order that Christian Science may endure, it too must stand the test of investigation and demonstration. I dare say we will all concede that Christian Science has been much investigated. Since it radically changes the common religious beliefs, this teaching has been challenged by the ministry; and since it radically changes the common beliefs as to material bodies, it has been duly investigated by scientists; and since the practise of Christian Science has become so universal among citizens of all countries, its practise has been challenged in the courts of law.

Christian Scientists generally, and the organization itself, have not tried to evade all proper investigation, but on the contrary, every effort has been and is being made to assist in the presentation of this Science to the people of the whole world. As a result of all this inquiry and criticism, Christian Science grows, and grows rapidly. Its supporters and followers are found in every walk of life, and its churches are crowded with the thoughtful citizens of thousands of cities in this country, Europe, and Asia. While the period of investigation continues, the day of positive demonstration is at hand. Men and women in their right mind are testifying every day to the absolute proofs of Christian Science, its moral force, its gospel of peace on earth, and its power to heal mankind of all manner of ills of the flesh.

Columbus Daily Herald.

Brooklyn, N. Y.

A lecture on Christian Science was given by William R. Rathvon in Prospect Hall, under the auspices of Second Church of Christ, Scientist, where a large audience gave the closest attention. The lecturer was introduced by Llewellyn C. Morley, first reader, who spoke in part as follows:—

The question, "What is truth?" has occupied the attention of past centuries and has been answered again and again, but not through a material perception of things, not by pagan or modern philosophy, but only through those whose spirituality has enabled them to discern what mortal eye hath not seen or human ear heard; and the greatest of these was named our Lord and Saviour Jesus Christ. He showed to us by his demonstrations of healing the sick, reforming the sinner, and raising the dead, that the apprehension of his Father, divine Love, enabled him to conquer all materiality with spiritual truth, and give to every one that seemingly marvelous message of eternal Life!

Over forty years ago there was again given to the world the same message, Christian Science bringing forth the fruits of healing the sick, reclaiming the sinner, and giving an understanding of Life eternal here and now. Since that time the Christian Science movement has grown steadily but surely, until it now extends over every portion of the civilized world, and tens of thousands are rejoicing today through the understanding of its teachings.—*Correspondence.*

Lectures to be Delivered

Brunswick, Maine.—Judge Clifford P. Smith, Town Hall, 7:30 p.m., Dec. 18.

Fremont, Ohio.—Virgil O. Strickler, Colonial Hall, 8 p.m., Dec. 18.

Los Angeles, Cal. (Second Church).—Col. William E. Fell, Church Edifice, 948 W. Adams street, 8 p.m., Dec. 20.

Los Angeles, Cal. (Fifth Church).—Col. William E. Fell, Wilcox Auditorium, 6380 Hollywood boulevard, 3 p.m., Dec. 21.

Norristown, Pa.—Virgil O. Strickler, Opera House, 3 p.m., Dec. 21.

Pottsville, Pa.—Virgil O. Strickler, Victor Theater, 8 p.m., Dec. 21.

Prosser, Wash.—Francis J. Fluno, M.D., High School Auditorium, 2 p.m., Dec. 14.

Redlands, Cal.—Col. William E. Fell, Contemporary Club Hall, 8 p.m., Dec. 23.

San Francisco, Cal. (Joint lecture).—Col. William E. Fell, Dreamland Rink, Steiner street near Sutter, 8 p.m., Dec. 16 and 18.

Toronto, Ontario (First Church).—Prof. Hermann S. Hering, Massey Hall, 3 p.m., Dec. 21.

Testimonies of Healing

I write this with a heart full of gratitude and joy, and with the hope that others who have not yet become conscious of God as omnipresent Love, may be blessed as I have been in the understanding of Christian Science. Mrs. Eddy's devotion to the cause of Truth has blessed all mankind.

About a year ago, when to mortal sense I was suffering from a complication of diseases, among which were heart and kidney trouble, a kind friend brought Christian Science to my notice. Years before, Science and Health had been given to us, but I read very little in it. Being in good health at that time, it did not appeal to me; in fact, it seemed impossible for me to believe in it.

To go up-stairs where the book happened to be when the friend mentioned the subject, was quite an effort, owing to the condition of my heart; but the book was found, taken down-stairs, and literally devoured. No longer did its teachings seem vague and impossible. Now it meant life to me! The first sentence I read, "To those leaning on the sustaining infinite, today is big with blessings" (Pref., p. vii), brought hope to my heart; and as I continued and the truth of God's love and power and availability dawned upon my consciousness, I felt that God would heal me as He had healed others. Then the revelation that man is perfect now and forever, because made in the image of God, made clear to me the fact that all my seeming ills were nothing, regardless of what the material senses seemed to say. I knew I was free then and there, and I praised God for it, though months passed before I manifested perfect health outwardly. This did not disquiet me, however, for I knew the truth and clung to it, and therefore could patiently await the result.

Today I am well and strong and happy through the power of divine Truth. Not a day passes without having the divine presence manifested to us and infinite Love revealed to us. Like the psalmist I can say, "How precious also are thy thoughts unto me, O God! how great the sum of them! If I should count them, they are more in number than the sand." For the healing of our infirmities we are more than grateful to the beloved Father; but it is the spiritual awakening, accompanied by the consciousness of the reality of God's protecting and loving presence, which calls forth the best there is in us, in an endeavor to be worthy; which inspires with the desire and determination to be approved of God, "a workman that needeth not to be ashamed."

My healing was wholly brought about through the study of the Bible, Science and Health, and other Christian Science literature, and through the understanding thus gained, I have been enabled to know the truth for another and myself many times. To those weary and heavy-laden, who do not yet understand the depth of infinite Love, I can say out of my own experience, "Seek, and ye shall find."

Mrs. Frank H. Temple, Samoa, Cal.

✧

[Translated from the German]

This testimony is written in deep gratitude for the unspeakable blessings which have come to me through Christian Science. For weeks, or rather months, I was confined to my bed on account of a serious physical trouble, accompanied by distressing pain, which did not leave me for one hour. We consulted various specialists, but all material remedies failed, and I was taken to a hospital. My hope of getting well there also proved vain, for although the physicians made every effort possible to help me, I did not experience the slightest relief. Finally, I asked to be taken back home, as all hope had left me.

At that time my attention was called to Christian Science, and I expressed the wish that a practitioner be asked to give me treatment. This was done, and after the first explanation of Christian Science I felt the thoughts of fear leaving me. The more I grasped of its teachings the more decided was my improvement, so that in about three weeks' time I was able to leave my bed, all pain and inflammation having disappeared. A year has elapsed since then, and I have not been confined to my bed for a single hour during that time. I can accomplish more than ever before, and have not been reminded of the trouble in the least. The following thought, expressed in a hymn, is constantly with me:—

God is my strong salvation;
What foe have I to fear?
In darkness and temptation,
My light, my help is near.

Daily, hourly, we have proofs of God's loving care, when we put our trust in Him. Honor and praise to our God for all His blessings, and thanks to our beloved Leader, who has taught us to know God as Life, Truth, and Love!

Frau Minna Gegenheimer, Stuttgart, Germany.

✧

It is only a short time since I came into Christian Science. Up to that time my life had been spent in the drug business. The last six years of it I traveled, and this has afforded me an opportunity to see the actual harm done by the use of medicines. I suffered from kidney trouble, and a chronic disorder for years, besides a stomach ailment, nervousness, and numerous other complaints. I consulted physicians the country over, took medicines, but steadily grew worse. This brought me to a realization of the falsity of reliance upon drugs, and I then began to see that I was living a lie and selling things I did not believe in. The more clearly this came to me, the more I became discouraged in my work, and the less I accomplished, until finally I prayed to be delivered from this evil. I did not at that time know the God to whom I was praying, but I now know that divine Love led me into Christian Science and opened the way for me into another business in which I am striving to live the truth. With this change came a happiness and content which money cannot buy. I have also been cured of physical ailments, and each day I am receiving more and more of the blessings which are ours by knowing and living in the truth. I know now what it means to be born anew.

I am grateful to our dear Leader for all Christian Science literature, and I hope this testimony will bring other sufferers into the light.—E. A. Buesch, Chicago, Ill.

✧

It is with a deep sense of gratitude that I submit my testimony to the efficacy of Christian Science to heal and to comfort. It has been my help for a number of years, and under its teachings errors of many sorts have been destroyed in my consciousness. From a better understanding of what God is, there has come to me a sense of freedom and peace and harmony which I cannot express in words, and which I can only try to show through love and thankfulness. Since I have been interested in Christian Science many physical difficulties have been healed, and during periods of disappointment and trouble this truth has indeed been my comforter and given me strength in time of need. Through the reading and study of Mrs. Eddy's writings I have earned valuable lessons; I have learned to understand and love the Bible, and have gained

Digitized by Google

a sense of love and compassion which has overcome to a large extent in my own thought the sense of fear and ignorance.

For the joy and harmony which surround me, and for the knowledge of the truth which I have gained in Christian Science, I am truly thankful, as this knowledge, slight as it may seem, is sufficient to guide me to a fuller understanding, and has many times enabled me to be of service to others. My feeling for Mrs. Eddy is one of boundless gratitude; and for the love and kindness I have received from other faithful Christian Scientists when it has been necessary for me to ask for help, I am sincerely thankful. I desire to express this thankfulness in loyalty and obedience to the teachings of Christian Science as given by Mrs. Eddy in our text-book, "*Science and Health* with Key to the Scriptures."

GERTRUDE M. HIGGINS, Boston, Mass.

✧

When Christian Scientists are exposed to so-called laws of disease, Christian Science furnishes the true remedy which establishes health and peace. In March, 1912, I was attacked by mumps. I applied to a practitioner here for help, then I went back in spite of bad weather, carried on all my work at home, also my studies, and was not affected at all by my efforts. The sense of pain in eating certain kinds of food was overcome and the contagion destroyed. The mother and three children in the home where I stayed while away at school, did not take the disease.

This demonstration proved anew to me the ever-presence of God, and I am thankful to Him, both for the messenger, Mrs. Eddy, and the message, Christian Science, which interprets to us the teachings of our blessed Exemplar, Christ Jesus, so that even a little child may quickly understand and prove them.—ENA M. JURGENSEN, Bloomington, Ill.

✧

Some years ago I had an attack of measles, followed immediately by another and what is considered a very dangerous form of this disease. After a long illness, during which life was despaired of, a recovery was apparently effected through the loving and faithful service of physicians and nurses. This illness, however, according to the medical belief in after-effects, left a terrible skin disease. Physicians in various parts of this state and one from the East expressed their inability to aid me. Many remedies were tried, but they were without avail.

Christian Science was then resorted to, and before the end of three weeks' treatment, perfect healing was realized, after seventeen months of torment and experimentation with material agencies. The condition of the feet became so malignant at one time, while under medical treatment, that amputation was proposed as the means of preserving life; yet under Christian Science treatment the recovery was so complete that not an hour has been spent in bed owing to pain and swelling in these members, whereas from two to five days at one time would be necessary under former treatment.

Not only has Christian Science been a physical benefactor, but a spiritual regenerator as well, revealing God, the Principle of the universe, as infinite Love. Having been a member of an orthodox church (during which time much good was assimilated), the demonstrable knowledge of a divine Principle that is wholly good, and of man as God's image and likeness, is worth far more than the physical healing, the latter being merely the proof of the former.

In every department of work Christian Science is a rod and a staff that comfort, direct, and heal, for which profound gratitude to God is felt, and also to Mrs. Eddy.

RAYMOND H. ARNOLD, Spokane, Wash.

I want to express my gratitude for the wonderful blessings that have come to me through Christian Science. I know that it is the true religion, the religion which Jesus practised and taught. I was fully convinced of this when my little boy was instantaneously healed of a severe attack of illness four years ago. Immediately after the treatment in Christian Science he sat up on his grandmother's lap and laughed and played. My own fear of spasms was completely destroyed at the same time, for he never had another.

I am truly thankful for the understanding of the healing power of Truth, which shows us the unreality of suffering, for I can truthfully say that when my last child was born the birth was painless. The next day I felt perfectly well, and the fifth day I arose, dressed, and was about the house as usual. This was my third child, and the difference in the conditions between the first and the last was so great that I can never cease to be thankful for Christian Science. I am also grateful for the spiritual understanding which teaches me patience and how to cast out fear when error seems to be real. For all this I owe gratitude to God, and also thankfulness to Mrs. Eddy, who gave Science and Health to the world.

MAE GEIS, Massillon, Ohio.

✧

It is with the deepest gratitude to our loving Father-Mother God, and a desire to help others as I have been helped, that I recount a few of the many blessings Christian Science has brought to me. About two years ago I was healed, after suffering for twenty years, of acute attacks of sickness and pain for which doctors and specialists could do nothing but relieve with an opiate. After my healing in Christian Science, I gave up my bath chair,—which I had used for a great many years, and entirely for the last few, always taking it with me when I went away,—for now I can walk wherever I need to go.

Two years ago I was instantaneously helped in a severe attack of hemorrhage of the lungs, for I felt no pain, inconvenience, or loss of voice, taking my meals as usual. I was down-stairs the third day, out the fifth, and attended an evening Christian Science lecture about the tenth day. When a much less severe attack occurred some years ago I was in bed for weeks, quite an invalid for the rest of the year, and under the doctor's care.

Lately I had the great privilege of class instruction, and am deeply grateful for the good I received. My desire is that I may gain a still better understanding, so that I may be able to help others. I realize that God is indeed all Love, and although the physical help I have received is very beautiful, it is nothing in comparison with the spiritual uplift and the realization of God's presence and protecting care through which this fear and other troubles have been largely overcome.

I am grateful to our beloved Leader for showing us the way of Life, Truth, and Love.

MRS. C. E. JONES, Sale, Cheshire, England.

✧

When I first heard of Christian Science, about five years ago, I thought its teachings very beautiful, but I had no idea that they could be made practical in daily life. Ever since I was a little child, I had suffered from chronic throat trouble, and several doctors had told me that I could not get rid of this condition. I never knew what it was to be entirely free from pain and discomfort in my throat, and every few weeks I had a very severe attack, which usually made it impossible to swallow anything but liquids for several days.

After I had known of Christian Science for about two years,

Digitized by Google

I happened to be staying with an aunt who was interested in it, and while I was there I had a very bad attack of this trouble. My aunt begged me to write for Christian Science treatment, and on the very last day of my visit I did write to a practitioner, asking for help. The next morning my throat seemed worse than ever, and I put it down to the cold journey of the previous day; but about midday I suddenly felt all the pain disappear, and turning to a friend who was with me I said, "My throat is absolutely well!"

That was three years ago, and from that day to this I have had no trouble with my throat. I knew in the first moment of freedom from pain that I was healed, the feeling of peace and security being indescribable. I then began to study Christian Science in earnest, and it made the world new for me. I found that this wonderful truth heals one not only of sickness but of sin, while it overcomes difficulties and all the trivial worries of every-day life.

I do not know how to express in words my gratitude for Christian Science, for the new and beautiful outlook which it gives, as well as for the sense of real, true love which it makes one feel for one's fellow beings.

Lucy Nicholson, Aberdeen, Scotland.

✧

As I am isolated from other Christian Scientists I feel that I must give expression to my gratitude for this healing truth through the columns of the *Sentinel*, but I find it difficult to know where to begin and where to end. My first healing took place in Colorado Springs. After having been in poor health for many years, and gradually growing worse, the last two years prior to my healing were spent mostly in a hammock or in bed. We had nine different doctors in those last two years. They did not seem to think me in any immediate danger, but they failed to find anything to help me, and I was very much discouraged.

No one, except those who pass through a like experience, can know how rejoiced I was to find that there is a "balm in Gilead," and a "physician there." I was healed in Christian Science, and in less than three weeks was able to do my housework; but I have always considered my physical healing the smallest part of the good which Christian Science has brought into my life. To know and begin to prove that "now are we the sons of God," and that "now is the day of salvation," is of much greater importance. There is no problem too small to take to God, and there is none too large. Time and again have I proven that God is my strength; time and again have I proven Him to be my source of supply; and we know that all things outside of harmony can be proven unreal, however real they seem to the senses. How glad we are to hear that those confined in prison are gaining a demonstrable understanding of this truth! After all, are we not all prisoners until Truth sets us free, and do we not all have to work, watch, and pray, as our dear Leader tells us, to gain our freedom? I am more grateful to her than I can say for the truth that makes free, and for the help which the periodicals bring to me.—Vinnie Matthews, Willard, Mo.

✧

My gratitude to God for Christian Science is very great, far greater than I can put in words. About two years ago a copy of Science and Health was placed in my hands by a very dear friend, and as I read the book I knew I had found what I had long been searching for. I shall never forget the joy I experienced as the truth dawned on my consciousness.

I was brought up by good and loving Christian parents, but the old teaching seemed inadequate to give me the peace and help that I longed for. From the day I gained peace through the teachings of Christian Science, our text-book has been my constant help and comfort. Since then I have had many proofs of the efficiency of divine Truth as applied to physical ailments, some of twenty years' standing,—bowel, kidney, and stomach trouble,—all of which have vanished into their native nothingness.

When we know that God is Love, and that He has only thoughts of good for us, and sends us no evil, we gain the understanding of Him as an ever-present help. Truly His ways for us are "ways of pleasantness," and our paths are "paths of peace." The Bible and Science and Health, the *Journal*, also the *Sentinel* and *Quarterly*, are my daily study, and I am gaining an understanding of God as Life and as Spirit. I am also coming to see the nothingness of matter.

I am truly grateful to Mrs. Eddy, who has shown us the way to apply the truth as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death, and I gladly acknowledge Christ Jesus the Wayshower, and God as All-in-all.—Almeda A. King, Harper, Kan.

✧

I would like to tell others how many times I have been able to overcome error in different forms through a knowledge of Christian Science. It has been a practical help to me and my children for several years, mentally, physically, and spiritually, more especially spiritually. I have proved the healing power of ever-present Love in such ailments as measles, chicken-pox, and other so-called children's diseases, while a recent demonstration with my baby has emphasized this wonderful healing power. The case was diagnosed by a doctor as congestion of the kidneys, in his estimation a thing difficult to get rid of quickly; but all evidence of it was gone in about four weeks. It is now over a year and a half since the healing above mentioned and the condition has not returned. Our literature is most helpful and encouraging.

Mrs. T. Fairburn, Auckland, New Zealand.

✧

About three years ago, when I first began to investigate Christian Science, I was rapidly failing both in business and in health; in fact, in everything I undertook to do. Then every one thought I had serious lung trouble, as I was getting very thin; but as soon as my thought was turned to God, as Christian Science teaches, I began to grow healthy and happy, and my every need has been supplied. Our baby is now three years old and has never taken any medicine, neither have any of the others in our family of three since I became interested in Christian Science. God has been our only physician and our source of supply. I am deeply grateful for the great good that Christian Science has brought into my life.

H. H. Deatherage, Los Angeles, Cal.

✧

Four years ago I was taken with a bad attack of acute lung trouble. I had been in poor health for a year, and had tried four different physicians with little benefit. I was very weak and was taking two different kinds of medicine when I came down with the lung trouble, and it seemed useless to send for a physician. I had been talking with a friend who was a Christian Scientist, so I sent for a practitioner. In a short time I was healed of the lung trouble, and also of the female trouble from which I had been suffering. All these ailments left me, and have never returned. I am very grateful for this truth that sets us free.

Mrs. Nellie M. Shapley, Colorado City, Col.

Digitized by Google

I am glad to add my testimony of healing in Christian Science, hoping that it may help some one in need of the assurance that "with God all things are possible." From infancy I had suffered from an annoying eye trouble which caused intense nervousness and at times complete exhaustion. After trying several well-known specialists, who agreed that glasses were my only help, I was growing constantly worse, so I was prompted to try Christian Science, although I truthfully say that under that name I had never looked for God's power to heal and had no thought of betterment. One treatment, however, was sufficient to convince me of the great truth which it proclaims, and I was filled with a joy such as I had never known.

From that day I have never needed glasses, and I now see much better without them than I ever did in the fifteen years which I spent in trying to see with them. For the relief which came to me through this healing truth, the spiritual uplift, and the awakening to the knowledge that one power alone can meet human need, fills me with gratitude which words fail to express. I thank God every day for Christian Science, this wonderful revelation, and ask that I may live so near to divine Love that I may be used to help others to see and know the truth.—Mrs. Pearl A. Jones, Fort Russell, Wyo.

✧

After eight years' experience in the truth as taught by Mrs. Eddy in "Science and Health with Key to the Scriptures," I feel it a duty to tell others what Christian Science has done for me and mine. I have been healed of heart and stomach trouble, and many other ills. I have also been lifted out of such bad moral conditions as envy, jealousy, hate, selfishness, the tobacco and liquor habit, as well as such mental conditions as fear, worry, doubt, discouragement, etc., and in place of being without any hope or God, I have a firm hope and trust in God as my only Saviour, through a knowledge of the truth taught in Christian Science. I now know that God is the source of my life, my health, and my supply.

Our children have been healed of measles, scarlet fever, throat trouble, whooping-cough, etc.; and we have also received help in case of accidents, such as falling down a flight of stairs. One child, just three years old, had some hot tea spilled over her, but the effects were overcome instantaneously, for there was not even a blister; and another child had a large flatiron fall on her foot, but this injury was healed in two days, all through Christian Science.

We have had no medicine in our house for the last eight years. Our only reliance has been in God. I hope this may be as a cup of cold water to some needy one.

William Somers, New York, N. Y.

Through Christian Science our baby was healed of a wasting disease, whereupon we got a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and studied it together. We went to church for some time, and after studying the text-book for three months my husband found that he was healed. He could eat whatever he wanted, and having at the same time lost all appetite for liquor and tobacco, our home became more harmonious. He has given a testimony of this healing several times in the Christian Science society of which he is a member, and I gladly assent to its truth, as I have been an eye-witness to his healing, and also to that of the children.

My husband has not been sick one day for several years, and he is more interested in Christian Science than ever. We are indeed grateful for it, since it has brought peace and harmony to our home, where formerly there was only discord.

Elizabeth H. Somers, New York, N. Y.

From Our Exchanges

[*Western Christian Advocate*]

The great idea of Jesus was the kingdom of God. He believed so firmly, so unwaveringly, in the ultimate triumph of righteousness and peace, that his vision makes the dreams of the world's greatest optimists fade into darkness by comparison. He recognized the dangers which he faced, the forces which he had to meet, the tragical mistakes and disloyalties of his followers, but without a moment's hesitation he launched his idea because he believed in "men and religion." He believed in the potency of his idea because he knew what was in man, and had a steady and sublime faith in his strength and nobility and heroism when freed from the terrible obsession of sin.

In the mind of our Master the kingdom of God was not a pleasing hope, a beautiful dream, a golden age in some far-away future, floating like a sunset-cloud on the dim horizon. It was something real, present, irresistible in its movement. He did not conceive of it as an inward state of the soul or a future state of blessed existence. It was objective, social, and universal,—a new social order in which men, recognizing themselves as children of the Father, shall likewise acknowledge their true relation to their fellows and substitute cooperation for competition, love for hatred, trust for suspicion, peace for war, and all the virtues which adorned the character of the Master for the vices which prey upon, torture, and divide humanity.

[Dr. James Drummond in *The Christian Commonwealth*]

Freedom and life are the twin offspring of the Spirit, and till the spirit of Christ captivates our hearts and kindles there the fire of worship and love, we have made no real advance. If Christianity is for us only a thing to criticize and dissect, while its majesty and power are hidden from our eyes, the future is not with us. Criticism still lingers among verbal questions, and however valuable in its proper place, rather conceals than elicits the genius of a literature which bears the impress of lofty and inspired souls. What we need, in addition to well-grounded information, is a prophet's faith and a prophet's voice to make the sacred writings throb and glow and burn with something of their old brilliance and power, and to bring home to the sleeping heart their mighty call to righteousness and God. Oh, that we might awake to the duty that lies at our hand, and, uplifting the standard of spiritual freedom and spiritual life, proclaim the covenant which is ever new between the Father of all and each fresh soul whom He finds and sanctifies, and so herald the way toward a better time, when the deadness of the letter shall have passed away and the Spirit remain to give us life for evermore.

[Rev. C. S. Mills, D.D., in *Hartford Seminary Record*]

I believe that if one reads aright the signs of our times, he will see a new hope and faith in the church, both as a human fellowship and as an instrument of God in fulfilling His plan for mankind. Those upon the altar of whose hearts the flame of passion for social service and civic reform has long been burning, and who not long ago took almost a contemptuous attitude toward the church, believing that it was hopelessly conventional and conservative, are now turning to it as holding the key to the situation, and are expecting to make with it an alliance of immeasurable significance. They observe that its conscience is awakening to the sphere of applied Christianity; that it is beginning to shape its life and to turn the mighty stream of its influence to bring in a social order in accord with the teaching of its Master. Those whose lives are centered in the hope and prayer for the conquest of the

Digitized by Google

world for Christ, the soldiers of the "far-flung battle line" of the cross, are rejoicing in the notable growth of the missionary spirit in the church and the new grip that it has on the statesman and the financier. We all recognize that the new voice in politics, rising not only from the new party, but also from the new spirit in the old parties, is wonderfully cognate to the voice of a militant church, and gives further weight to the conviction that the church is challenged as never before to be alive to its strategic place in the mighty movements of the age, and to spare no pains to define its ideals and to lay far-seeing plans to realize them.

[Prof. Kirsopp Lake, D.D., Univ. of Leyden, in *Boston Transcript*]

Christianity stands at the crossroads. The church is failing. The cause is not far to seek, for it is this: that we have not at present a theology which satisfies the men and women of today,—no, not even the majority of them. Our present theology does not state religion in a language which is our own. All of our thought has undergone great change since the early Christians first formulated the theology which we have inherited. At work in the twentieth century are four great influences: a new sense of abstract justice, a changed view of the universe, a keener appreciation of historical truth, and a realization that society has its duty to the individual as well as that the individual has a duty to society.

[*The Congregationalist and Christian World*]

The religious situation in this country at the moment presents no more interesting phenomenon than the simultaneous working of two great and apparently contradictory forces. The ideal of unity beckons the Christian world onward. A noble dissatisfaction with competition and waste manifests itself on every hand; but along with it we behold a revival of denominationalism. Are these two tendencies really antagonistic? If so, we would be standing still or retrograding; we would be working at cross-purposes when we ought to be marching shoulder to shoulder.

The explanation of the apparent contradiction lies in the fact that the new denominationalism is a means to an end, and not, as has been too often the case during the last three hundred years, an end in itself. If there be a reaction from somewhat vague though glowing dreams of unity, it is a reaction to a denominationalism on a distinctly higher plane. It is due to the conviction that we can not and must not suddenly abandon cherished and measurably satisfactory bases of action in order to commit ourselves thoughtlessly to a great inchoate ecclesiastical framework the nature of which no man can today foresee.

[Rev. Alfred Rodman Hussey in *The Christian Register*]

The world needs nothing so much as spiritual Christianity. The lifting of humanity's burdens and the consolation of its sorrows depend alone upon the increase of Christlikeness in human hearts. Who, among all the men on earth today, is he who is giving to civilization its best support? Is it he who repeateth the name of Christ? he who subscribes to the letter of a host of conventional creeds, who offers full assent to every dogma, however irrational and outgrown? No! It is he or she for whom religion is life; who, whether his confession of faith be eloquent or inarticulate, still lives the Christlike life, and in his conduct of every-day affairs shows forth the spirit of the Master. Among all such genuine Christians, none, after all, finds himself so steadfast in the day of affliction, so well fortified against temptation, so amply supplied with the weapons needed for spiritual warfare, so patient under tribulation, so strong in danger and serene in death, as he who dwells in conscious relationship with Jesus Christ; for whom Christ, yesterday, today, and forever, is a loved companion and unfailing friend.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY." —A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now in press, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

The lecture, "Christian Science: A Religion of Love," by Virgil O. Strickler, has been translated into German ("Die Christliche Wissenschaft: Eine Religion der Liebe"), and is now printed in pamphlet form and ready for distribution. Forty pages and cover. This lecture was recently published in English, and both editions are on sale at prices of the regular pamphlets as shown on the opposite page.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1 but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations *from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.*

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, marbled edges, 95 pages, single copy, $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy, 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

NATIONAL

The first good roads bill to be introduced in the House of Representatives is that which has just been presented by Chairman Shackleford, chairman of the roads committee. His measure has been carefully worked out, and is the result of years of study on the subject of federal aid to good roads. The whole purpose of the bill is to set a federal policy of encouragement of road construction. When communities go to great expense in the construction of roads, the government financial aid for the maintenance of these roads is correspondingly high. But on the other hand, splendid country roads may be maintained by dragging, and the government has aid for this type which will be of material help in paying for keeping the roads up to specifications. The bill provides for cooperation between states and the federal government in determining the road types and mileage, and in the twenty million dollars it is proposed to appropriate for the first year, each state shares according to its proportion of the total mileage of the country.

Secretary Lane has announced that the total area of public lands withdrawn from general entry, up to the end of November, was a trifle less than sixty-seven million nine hundred thousand acres, of which all but about ten million acres is included in coal withdrawals, and is therefore open to homestead entry, with a reservation of mineral rights to the government. The coal lands, classified and valued, aggregate eighteen million eight hundred and eighty thousand acres, and are valued at seven hundred and sixty-six million dollars. The total classification of lands in western states under existing laws amounted at the end of November to nearly two hundred and ninety-four million acres.

The register of the land office at Juneau, Alaska, decided on Nov. 28 that twenty-one coal claims of the so-called McAlpine group of two hundred on Cook inlet, be held for cancelation because of fraud. The claimants were mostly clerks and stenographers employed by large corporations, who are alleged to have signed powers of attorney and relinquishment when required by their employers to do so. The claims included forty-eight thousand acres of coal lands. The indictment estimates the value of the lands at fifty million dollars.

The resolutions as adopted in the national rivers and harbors congress at Washington, D. C., recommend the creation of a department of public works with a cabinet official at its head; an annual rivers and harbors appropriation of fifty million dollars from Congress; the standardization of waterways as to the depth of channels; the making of laws compelling freer interchange of interstate traffic; the prohibition against domination by railroads of water traffic; and state or municipal ownership of water terminals.

Government ownership and operation of telegraphs and telephones, confined in the first instance to the long-distance lines, will be an issue in the present session of Congress. Estimates made by experts indicate that the cost of acquiring these lines will be at least two hundred million dollars. Bills will be introduced and referred to committees, and there may be hearings and reports, all of which will tend to keep the question before the public.

President Wilson is preparing to urge upon Congress the subject of farm credits. At a White House conference members of the United States rural credits commission submitted to the President a tentative draft of its report and a rough outline of its bill to facilitate farm credits.

The Raker bill, giving San Francisco water supply and power rights in the Hetch-Hetchy valley of the Tuolumne river, Yosemite National Park, passed the Senate by a vote of 43 to 25. The bill had previously passed the House.

The University of Pennsylvania's Amazon expedition has discovered, in regions of Brazil never before penetrated by white men, three tribes of Indians hitherto unknown.

INTERNATIONAL

The Euphrates barrage from Hindich north to Bagdad was opened Dec. 12. It is the portion of the great irrigation works designed by Sir William Willcocks, the designer of the Assouan dam, for Turkey, which are intended to restore the fertility of the traditional Garden of Eden. The system will cost, when completed, no less than one hundred and fifteen million dollars, of which twenty-five million dollars has already been expended on the present section of the work, known as the Feluja project. Three million acres of what were in early history the finest agricultural lands in the world are to be eventually reclaimed. When the system is completed, the Tigris, the Euphrates, and the Akkar Kuf lake will form part of a controlled system of canals, weirs, and barrages. It is estimated that the cultivated area will be doubled, and that the crop of wheat along the Euphrates will be trebled. The scheme would also result in a vast increase in the yield of cotton.

An international congress for the protection of wild animals recently met at Berne, Switzerland, on the initiative of the Swiss government, and seventeen countries were represented, including the United States. After discussion, the congress appointed an international committee with headquarters at Basel, which will promote protective legislation and organize propaganda in favor of the object of the congress. The most urgent work of the committee will be to obtain the passage of laws stopping the wholesale destruction of whales and seals, as at the present rate the species would be exterminated in a few years. Attention will be turned to the fur animals, birds of paradise, egrets, and big game, such as elephants. It was pointed out that there are now in Africa only four hundred thousand elephants, and that they are being killed at the rate of forty thousand a year. The committee will not only devote itself to animals, but will attempt to put an end to the slow extermination of the primitive peoples of Australasia and South America.

The premier and treasurer of South Australia in his budget speech said: "An area of over eight hundred and fifty thousand acres of crown lands was surveyed during the last financial year. The principal localities in which surveys were effected were on the Yeelanna and Minnipa Hill railway lines, adjacent to the Darke's Peak extension railway line, along the Brown's Well railway line, and in the Franklin harbor district. In addition, five towns were surveyed. At the present time, surveyors are engaged on an area of over four hundred and fifty thousand acres of crown lands on and adjacent to the above railway lines; and surveys of five thousand acres in the North Bungaree estate, recently purchased for closer settlement, and ten thousand acres of repurchased university lands on Craigie's plain, south of the railway line to Morgan, are also in progress."

INDUSTRIAL AND COMMERCIAL

A report has lately been issued in Calcutta, India, under the auspices of the Indian Forest Records, upon the exploitation of the savanna grasses of India as material for the production of paper pulp. Hitherto no wood paper pulp has ever been made in India, but it is considered likely that pulp made from bamboo will shortly be put on the market by local enterprise. There is a large opening for a strong, long-fibered pulp having some of the qualities which at present can be obtained only by the use of expensive linen and cotton rag, and there is good reason to believe that such an article can be supplied by several of the coarse savanna grasses common to so much of the waste and thinly forested areas of this country. The first paper pulp mill in India is shortly to be established at Lucknow.

Seaweed burning in Norway is one of its interesting industries. An enormous amount of seaweed is deposited on the coast by the waves in spring, and in some places the weed is cut by boatmen. Two-wheeled wagons are loaded with the wet, slimy weed, which is taken up the beach and spread out like hay to dry. It is then raked up in heaps and burned. The ashes are exported to Scotland, where they are used in the manufacture of iodine, and sell for 1.3 cents a pound. For the past forty-five years seaweed ashes have been exported regularly from Stavanger to Scotland to the extent of fifteen hundred tons and upward per annum.

Several steamship lines operating on the Great Lakes have been merged into the Canada Steamship Lines, Ltd. The lines involved are the Quebec Steamship Company; Richelieu & Ontario Navigation Company; the Ontario & Quebec Navigation Company; Canadian Inter-Lake Line; Inland Lines; and the Northern Navigation Company. The new company will control more than one hundred steamers.

What will be the longest electric power transmission line in the world, extending from Bishop Creek, Cal., to Mexicali, Mexico, a distance of four hundred and twenty-five miles, is now being built.

Total shipments of anthracite coal from Pennsylvania in the first eleven months of 1913 were 63,407,010 tons.

Spirit's Characterization

IRVING C. TOMLINSON, M.A.

A NOTEWORTHY contribution which Christian Science has made in behalf of the spiritualization of mankind, is the work it has accomplished in fixing our gaze, not upon corporeality, but upon spiritual being. "Science and Health with Key to the Scriptures" by Mrs. Eddy, teaches that matter does not make up man's identity, but rather that he is born of Spirit, and that spiritual being constitutes its allness. A striking instance of this clear recognition of the all-power of Spirit is found on page 76 of this text-book, where man is spoken of as "an individual consciousness, characterized by the divine Spirit as idea, not matter." In the first place, this scientific statement sets forth the fact that man is individual, since each person has his own individuality, separate from all others, as the unit one is distinct from every other number. In the next place, it states that man's individuality is not in matter; it does not exist in masculinity or femininity, neither in the height, form, features, nor in any outward likeness by which one is known to his fellows, but rather in the true individuality characterized by Spirit, not by matter, as idea, an expression of Mind.

The characteristics, then, which constitute the real man are the spiritual qualities that he reflects. He is the offspring of Spirit, and is not of material parentage. Christ Jesus said, "That which is born of the flesh is flesh;" and it can never be anything but flesh, despite its pretensions. Man's true being is identical with Truth, and therefore is at one with divine intelligence, and he is a constant reflector of divine Love. His substance is spiritual, and his being is the manifestation of infinite Principle. God never changes; hence the character of God's image never changes, but is ever perfect and complete, and the false human belief needs to be transformed to an understanding of this fact.

Man, being spiritual and not material, is subject only to the laws of Spirit, and no material law has power over him. Controlled by the one law of life and health, it is natural for him to manifest strength and peace. Governed solely by the ever-present law of Mind, the actions and movements of the entire body are harmonious and normal. Being wholly subject to the law of God, God's idea is possessed of such dominion as brings peace, joy, and life eternal, finding in Mind what can never be found in matter. Shakespeare's counsel is therefore pertinent when he says, "If you were born to honor, show it now; if put upon you, make the judgment good that thought you worthy of it."

When one takes a seed in his hand, he knows that the development of that seed will be characterized by the individuality of the tree or plant from which it came. Plant an acorn in the ground, and you understand of a surety just what tree it will produce; you know the character of the trunk, the sort of fiber in the wood, the shape of the leaves. The entire offspring of that acorn is foreordained because of the very nature of the source from which it sprang. So Christian Science teaches its students (to recall the sentence already quoted) that man is "characterized by the divine Spirit as idea, not matter." Therefore, remembering his origin, he is to think of himself as the possessor of spiritual substance, the inheritor of eternal life, the copartner of the Christ that is without beginning and without end. All this we realize when, and only when, we demonstrate the truth of the great Teacher's words: "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." One comes to know God by knowing Christ Jesus who manifested Him. The Master said, "He that hath seen me hath seen the Father."

A remarkable passage in the first chapter of Hebrews bears directly upon this point, for the author speaks of Christ Jesus as "the brightness of his [God's] glory, and the express image of his person, and upholding all things by the word of his power." As Mrs. Eddy interprets this thought, Jesus was "'the express [expressed] image of His person [infinite Mind]'" (Science and Health, p. 313); she also calls attention to the fact that "the phrase 'express image' in the common version is, in the Greek Testament, *character*." The true man, therefore, is always "the expressed image" of "infinite Mind," manifesting the very "character" of the "most High." To know that there is but one embodiment, one manifestation, and that it is spiritual, the reflection of Life, Truth, and Love, gives to us a consciousness of that dominion which was man's heritage "before the world was."

Overcoming Evil

REV. JAMES J. ROME

THE natural inclination of mortal mind, like everything else pertaining to materiality, is toward retrogression. Without some higher and better influence there could not be progress or improvement. This is manifested in the reversion of improved species of plants and animals back to their original type. Improvement is always attained by overcoming hindrances, hence in the elevation of the human consciousness to a better and more spiritual plane, the demand of truth, that all evil claims and tendencies be overcome, must be complied with. The proneness to avert this demand is responsible for many ingenious excuses. The most dangerous arguments of error are always the most subtle and are presented in the most plausible forms. When confronted with the purity and power of the great Master, the devils cried out, "Let us alone; what have we to do with thee?"

Error makes the same demand today, but it is more artful in its approach and comes clad in vestments which are the counterfeits of good. One of its subtle seductions is that to deny error is to make something of it. Of course there are only two alternatives left; namely, either to ignore error entirely, and so leave thought unguarded, or to admit that it is real and dangerous and hence to be feared. Both are delusive. While it is not the part of a Christian Scientist to invent or imagine different forms of evil, nevertheless it is evident that if some phase of error is present in consciousness, he must have a belief in its reality, to some extent at least. Whatever may be the thought presented, it must either

Copyright, 1913, by The Christian Science Publishing Society.

Digitized by Google

be accepted or rejected. If a suggestion of error is accepted, it is recognized as real; if it is rejected, it is denied. There is surely little question in the mind of any Christian Scientist as to which course should be taken.

But the question may be asked by some one, How often would you have me deny error? If I have met it and denied it once, is not that enough? Will it not make it seem real to keep on denying it? The answer is, that error needs to be denied as often as it seems to be in evidence. Mortal mind is composed of many kinds of error, and these may assume different forms. To think that we have dispensed with a given error when we have met it once and denied it, is to leave ourselves exposed to its attack in another form. We must keep on the alert to free our thought of all kinds of error at all times. In "Miscellaneous Writings" (p. 343) Mrs. Eddy writes: "The weeds of mortal mind are not always destroyed by the first uprooting; they reappear, like devastating witch-grass, to choke the coming clover. O stupid gardener! watch their reappearing, and tear them away from their native soil, until no seedling is left to propagate—and rot."

Another argument which may be met is, that to oppose or strive against error is using will-power. For instance, a man who uses tobacco is convinced that the habit is wrong, but he has been told that simply to refuse to smoke would be using will-power. If the man continues to smoke after he sees the error of this indulgence, he is yielding to sin, whether the act is sinful in itself or not. Paul is very positive on this point in the fourteenth chapter of Romans, where he writes, "To him that esteemeth anything to be unclean, to him it is unclean," and "He that doubteth is damned if he eat." Furthermore, the continuance of the habit requires as much exercise of will-power as would be needed in abstaining from it. The different steps necessary before the indulgence can be accomplished are all directed by human will. The fact of the matter is, that the will has been given too much power already. The seeming evil is but a manifestation of the wrong use of will-power, and this misuse of human will is really the evil that needs to be overcome.

The tendency of mortal mind is to seek the line of least resistance. To uncover animal magnetism and expose its subtle machinations was no pleasant task for the Discoverer and Founder of Christian Science, and the meeting and overcoming of animal magnetism is no pleasanter task for the Christian Scientist today. But shall we hesitate to oppose the evil that would hinder our progress because it destroys a false sense of harmony? Jesus said, "Whosoever doth not bear his cross, and come after me, cannot be my disciple." Mrs. Eddy does not fail to point out the difficulties that must be met in the effort to uncover and destroy error, but speaks of even her own disinclination to undertake its exposure. On page 222 of "Miscellaneous Writings" she says: "I shall not forget the cost of investigating, for this age, the methods and power of error. . . . I was saying all the time, 'Come not thou into the secret'—but at length took up the research according to God's command."

Neither is it enough to deny error in a sort of general way. Evil does not work in the realm of mere generalities; it is specific in its attacks, and Christian Scientists must be just as specific in their efforts to meet and destroy it. The intimation that the denial of error is but an elementary stage which one should expect soon to outgrow, is another subtle claim. The temptation for one to flatter himself that he has reached a point beyond this, may put him to sleep when danger is nearest. There is no hint in any of our Leader's writings of such a point being reached in our present stage of work. It was because Jesus would not comply with the demand of the demons to let them alone, that they cried out, "Art thou come to destroy us?" James said, "Resist the devil, and he will flee from you." There is no conflict between this passage and the injunction of Jesus, "Resist not evil," when the context is considered. The latter refers to the dealing with evil in others, guarding us against the sense of resentment, and is in line with the thought of Paul when he says, "See that none render evil for evil unto any man." James is dealing with the appearing of evil in one's own consciousness; then it must be denied and rejected instantly.

But more than a simple denial of error is necessary in order that one may rise superior to its claims. One must know why error is unreal. It is only as the ever-presence and omnipotence of good is discerned and acknowledged that the powerlessness, the nothingness, of evil is recognized. The discernment of the reality of being, however, is altogether spiritual; to attain it, therefore, it is necessary to reject all material evidence. We must deny what to material sense seems to exist, and recognize that in place thereof there is always the spiritual fact of being. This gives us courage and assurance, and we are enabled to hold ourselves superior to whatever forms error may assume and to demonstrate the nothingness of evil because of the allness of good. In "Christian Science versus Pantheism" Mrs. Eddy writes, "Finally, brethren, let us continue to denounce evil as the illusive claim that God is not supreme, and continue to fight it until it disappears,—but not as one that beateth the mist, but lifteth his head above it and putteth his foot upon a lie" (p. 6). In Revelation we read, "To him that overcometh will I grant to sit with me in my throne, even as I also overcame, and am set down with my Father in his throne."

Love

EMMA J. SHOECRAFT

Love is expressed in purity, enfolding and unfolding its own ideals. It is the fatherhood and motherhood of God, protecting the "beloved Son." It delivers from the terror by night and from the arrow by day. Love is the open fount to those athirst for Christ. It leads in the narrow way of "Thy will be done," which is yet broad enough for all. Love is reflected in humility bending low before the angel of His presence. It is the "pearl of great price," luminous with divine luster. Love gives inspiration, breathing "the music of the spheres," the hope that maketh not ashamed, and faith reliant upon God. It gives confidence and trust. Love inspires prayer within the "secret place," whose silent activity rolls away the stone from buried ideals and awakens holy aspirations. It gives constancy and patience, calmly watching and toiling midst storm and stress. It lights the torch that takes away Gethsemane's gloom and robs Calvary of its shame. Love supplies the manna that feeds the hungry heart, it is the power which multiplies the loaves and fishes today as it did two thousand years ago on the banks of Gennesaret. It ushers in the resurrection morn aglow with the risen Christ. It speaks through law, the understanding of which dethrones belief in other power.

Love furnishes the transparency through which is reflected our brother man. The redemptive motive always has been and ever will be Love. It was divine Love that whispered to the Virgin-mother the truth of being, and illumined the consciousness of Mary Magdalene. Love is light, revealing true fellowship with the Father and the brotherhood of man; the only substance, omnipresent and omnipotent. It is the great heart of God giving eternal life to all; the Word made flesh; God manifested through the healing Christ. The divinity

Digitized by Google

of Christ Jesus was Love's reflection, that consciousness of man's eternal unity with the Father which touched, and ever will touch, the heart of waiting humanity. In Christian Science, Life, Truth, and Love are seen to constitute the trinity and harmony of being.

The Wayshower mounted every step in the ascending scale of being, whose tones have vibrated peace to a storm-tossed world down through the ages. To reflect Love is to "let this mind be in you, which was also in Christ Jesus;" it is the debt of gratitude we owe to him who demonstrated the deathless Ego; moreover, to prove the healing and saving power of Love is the tribute due the loving sacrifice of our Leader.

Systematic Study

ELIZABETH HIGMAN

As all are supposed to know the value of system in the affairs of life, we should at once see the importance of it in the greatest of all affairs, that of gaining a better understanding of Truth. My own past method of studying our Christian Science literature was too unsystematic to satisfy me, and my desire for light on the subject was supplied by an article which appeared in one of our periodicals in 1910, in which the writer pointed out the advantage to be gained by reading all of our Leader's works at least once during each year. This impelled me to try to work it out, with the surprising result that by reading five pages each day, one can cover all of Mrs. Eddy's works in one year, an investment of time which is trifling as compared with the return of good it brings.

As Christian Scientists we should and do find our capacity for work increasing, but we must bear in mind, that to continue in well-doing, and to do the "greater works" which Christ Jesus assigned to us, we need daily to spiritualize our thought by the study of the Bible and the authoritative literature of Christian Science, especially Mrs. Eddy's writings, for which nothing else can be substituted.

Most Christian Scientists gratefully realize the need of reading our daily, weekly, and monthly publications which are doing so much to spiritualize the whole world's consciousness, but we must not let this displace the more important study of the works of the one who has made all the rest possible, because not only all that has been done, but all that remains yet to be accomplished, is and must be the result of a faithful adherence to and the practise of pure Christian Science as our Leader has stated it. Jesus said, "These ought ye to have done, and not to leave the other undone." My own practise of a more systematic method of reading has proved such a profitable experience that I can heartily recommend it to others.

An Exaggerated Perspective

VERNE E. TAYLOR

Every line of human activity may, in its every-day incidents and conditions, offer to the student of Christian Science analogies at once interesting and helpful. One such was recently presented to a student whose daily work has to do with amateur photography, by a ludicrously distorted picture of a cow. The gentle bovine expression of the exaggerated face of the animal added to the absurd effect, and completed as laughable a caricature as can be imagined.

It does not seem possible that any person who had ever seen a living cow would be at all likely to accept this print as a trustworthy likeness of the creature; and yet, to one who faithfully believes what he sees and refuses to go farther for enlightenment, here was irrefragable evidence of the existence of a monstrosity. A slight knowledge of optics, however, would convince him that the grotesque effect was not chargeable to any irregularity in the make-up of the cow, but was a simple illustration of an exaggerated perspective, an aberration produced by a certain type of uncorrected lens, by which the effect of distance upon the apparent size of objects is increased beyond the true standard. This distortion reminded the writer that true perspective is as absolutely necessary for a faithful rendering of comparative values in daily life as in artistry. To allow objects, events, or conditions to assume a magnitude out of all proportion to their true value, simply because to our present sense they occupy the immediate foreground in our mental picture, is to give our view of life an exaggerated perspective which will surely produce a concept as unworthy as was the picture referred to in this case.

One of the first considerations in artistic composition is the relative treatment of the foreground. A near object, not undesirable in itself, but which would, if allowed to occupy a position of too great prominence, detract from the merit of the picture, can often by a change of view-point be so subjugated and brought into accord with the theme of the whole as actually to add to the value of the composition; and this, as we speedily learn in Christian Science, is equally true of our treatment of and attitude toward other experiences. This point may be illustrated by the case of a young woman who through the activities of scientific right thinking secured much-needed and almost ideal employment. For a time her daily life was one continued song of gratitude; then in connection with her duties came an incident which brought a sense of annoyance, and this assumed such proportions in the immediate foreground of her thinking that there was little opportunity for contemplation of the more pleasant phases of her work. Gratitude was forgotten; easy hours, pleasant work, and good salary were overlooked; and every good and attractive aspect of her work was more or less completely obscured by her enormously exaggerated sense of what was really a trifle. After a time, however, this young woman began to realize that her whole outlook on life was being distorted by this exaggerated perspective, and she determined so to change her view-point as to cause the incident to assume a proportion more in keeping with its true importance. To this end she ceased to think of it; and in a surprisingly short time not only had the circumstance ceased to annoy her, but in assuming a less obtrusive position in her mental composition, it came to fit in most harmoniously with the general atmosphere of confidence and cooperation which pervaded the office.

Other lessons, too, were learned from the picture of the cow. Was the faulty rendition inherent in the print itself? No; the print was a faithful reproduction of the negative from which it was made. Was the negative, then, chargeable with the inaccurate delineation? No, again; for the sensitive plate had truthfully recorded the image projected upon it. Where could the blame for such a monstrous libel on a gentle animal be placed? Solely upon the lens, the medium by which the image of the normal, symmetrical animal was so grossly distorted, and by which this caricature of its own making was presented to the passively receptive plate. Therefore, in seeking to get a better likeness of the original, it will avail nothing to make another print, since a better print cannot be had from that negative; or to make another negative with that lens, since it is not capable of producing a better negative; the only remedy is to use a corrected lens.

Again, the analogy is plain to us in the light of Christian Science. In seeking to "undo the errors of sense" (Science and Health, p. 240), it is of no avail to try to change the outward effects—our position or circumstances—until we first

Digitized by Google

shall have changed that of which these externals are the expression; namely, our distorted concept of man and the universe. This concept, or recorded impression, must be replaced with the true likeness, and this can never be projected upon our consciousness by the uncorrected, aberrating lens of mortal sense. "Through spiritual sense only, man comprehends and loves Deity" (Science and Health, p. 481), and this sense alone can form the perfect concept and delineate it upon the human consciousness.

Of particular significance seemed the fact that the same lens or agency which first forms the erroneous and inharmonious image, also transmits this falsity, of its own creating, to the sensitive plate. The two actions must be regarded as inseparable. Similarly, it is the same material sense which first forms its grossly distorted image of God and His universe, including man, and then forces this caricature upon the human consciousness. The outlining and the projecting process cannot be separated, and it is therefore fatuous to expect to receive the impression of the correct, spiritually formed image through the faulty instrumentality of material sense. To use an old illustration, one may scientifically know that the earth rotates, while the sun, so far as our earth is concerned, is stationary; but he can never receive this correct impression through material sense, even after he knows it to be true; and no more reasonably can we expect this deceived and deceiving sense to testify to the Truth-conceived idea of man. Spiritual sense alone can transmit its own concepts.

But must we then endure the grievous concept presented by mortal sense, since this sense cannot be made the agency for the transmission of the right image? No; we must discard it absolutely. "Let Christian Science, instead of corporeal sense, support your understanding of being," counsels Mrs. Eddy (Science and Health, p. 495); and when we do this, we shall have no distorted concept to correct or deal with, for the perfect lens of spiritualized thought will present only the beatified divine image for our acceptance.

Appreciation and Participation

J. S. BLAKE

Of the various channels established by Mrs. Eddy for the advancement of Christian Science, the weekly testimonial meetings seem to me to belong in the front rank. Many Christian Scientists who attend these meetings regularly, seemingly do not fully apprehend their import, for with due appreciation there would follow full and free participation; and a great many can doubtless recall some meetings where the intervals between the testimonies have been too long and too frequent.

We sometimes hear it said, especially in the smaller centers of population, "I have given my testimony so often that I have nothing interesting to say; I will keep still and let others do the talking," such a one forgetting for the moment that the truth expressed, always heals some form of error. The student of Christian Science, through study and experience, gradually learns to realize that it is not the mere testifying which blesses every listener; it is Truth, divine Principle, expressing itself, and this realization will assist in overcoming the fear of criticism which at times keeps us in our seats when we ought to be giving of our abundance. As Principle has no useless activities, we may know that each testimony helps to meet the problem of some one in the congregation, and our text-book tells us that "whatever blesses one blesses all" (Science and Health, p. 206).

The speakers derive as much good as any one from the testimonies. To the spiritual consciousness, the testimony is not that a human being has been healed of this or that disease or inharmony, but that the truth has overcome its seeming opposite, error. If there should be only twelve Christian Scientists in an audience, and each of them came prepared to give out some experience of the overcoming of error by divine Love, it may be readily seen that such a meeting would not have any long intervals between the testimonies.

The intention of our Leader in giving us these meetings, must have been, not alone to acquaint the inquirer with actual experiences of healing in Christian Science, but also to give the Christian Scientist the benefit of the work necessary to present the testimony in fitting terms. I have found this preparatory work a most beneficial exercise. The telling of the victories of Truth over error is certainly doing God's work, and it should be done in a firm, confident manner, and in a strong, clear voice, so that all in the room may hear.

I am deeply grateful for the many blessings brought to me by the understanding of Christian Science, sometimes through individual study, and sometimes with the aid of our loving practitioners. Among other blessings have been the overcoming of an appetite for intoxicants, the habit of profanity, and a proneness to lose my temper. These healings were effected not by any special effort on the part of a practitioner or myself, but by the change of consciousness due to Christian Science, from a material to a more spiritual basis, a change which naturally occurs when one sincerely takes up the study of Christian Science, in which we learn more and more of the relationship existing between God and man, through the study of the Bible and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

[Written for the *Sentinel*]

Gratitude

MARGARET MORRISON

I THANK thee, Father! O that I might know
The meaning of those gracious words, that flow
From humble hearts up to the eternal fount
Of Love; and thence, returning, do anoint
The brows of pain with peace, and to the gloom
Of earth-bound prisons bring light's balm and bloom!

I thank thee, Father! Lovely flowers blow,
In tender radiance and joyful glow,
Their perfumed praise across the face of man,
Who blinded walks, nor knows the heavenly plan
Of love bestowed and gratitude returned.

I thank thee, Father! In the sky 'tis burned,
Impassioned in the sunset flame, and then
Returns in meekness with mild stars again.
It woos the wind to whispering quietness,
And stills the storm-swept sea with soft caress.
It thrills in every soaring song of bird.

. . . . . .

I thank thee, Father, that my prayer is heard!
The living word in living trust is said,
The stone rolls back, the grave gives up its dead.

. . . . . .

I thank thee, Father! May I know the rest,
The perfect peace with which these words are blest.
O may this be no crumbling creed to me,
But living law of might and potency,
To show that Thou art good, and good alone,
And naught but good can man receive or own!

I thank Thee that I have eternity
In which to learn of Love and thankful be.

Selected Articles

[Frederick Dixon in *Kentish Express*, Ashford, England]

A recent critic, who signs himself "A Student of History," presents five dilemmas, which he hopes, I imagine, rather than expects, I shall be unable to reply to. He says that for one posing as a teacher I am very ignorant in mixing up Christian Science with historic Christianity. Now we will see about the ignorance presently, but I have not posed as a teacher. I have never written one word in this paper except in reply to attacks. In doing this, I have, I imagine, exactly fulfilled the demand of a certain historic Christian, named Peter, "to give *an answer to every man that* asketh you a reason of the hope *that is in you.*"

On the other hand, I am not aware that there is anything in historic Christianity which would support the habit of making anonymous attacks on other people,—imagine an apostle with an alias! Let me hasten to add that sobriquets, like "Boanerges," were not intended to conceal identity. Giving a reason for the hope that is in me, I repeat that historic Christianity is the Christianity taught by Jesus. The test of that Christianity is the ability of those who profess it to perform miracles. The rest is all talk. Any one can say that Jesus taught this or that; Jesus demanded that they should prove it. Denying that the command to heal the sick and raise the dead is operative today, is the most antichristian reading of history imaginable, and it is commonly supported by abusing some one else for endeavoring to do it. Centuries of burning and murdering dissenters from the chameleon of orthodoxy have never succeeded in healing the sick and raising the dead, nor will merely dogmatic statements, delivered with the full authority of anonymity, replace the historic Christianity of faith, demonstrated in deeds, by the pulpit Christianity of that faith without works which is dead.

Secondly, I am told that I am ignorant of the maxim that "the exception proves the rule," or I would never have quoted Mr. Haweis on the Athanasian creed. Now, to begin with, does your correspondent believe that Mr. Haweis was the solitary swallow of a non-Athanasian summer? He was, on the contrary, only an example of a colossal migration. Nor is the exception which proves the rule logic; it is purely a popular epigram, without its Latin origin quite as inaccurate as such things commonly are. Does your correspondent really think that it would prove two and two to be four if they were occasionally five?

Number three is a bald comparison in six lines between Christian Science and Buddhism. It is an *ipse dixit*, and a not very coherent one, given without an attempt at justification. Of course, if argument only consisted in making unsupported assertions, it would all be very simple. Your contributor's knowledge of Buddhism may, however, be deduced from his knowledge of Christian Science. He says Mrs. Eddy denies the necessity for a mediator. On page 30 of Science and Health Mrs. Eddy writes, "This enabled him [Jesus] to be the mediator;" and on page 315, "Jesus was the mediator between Spirit and the flesh," while on page 332 she quotes Paul's words, "There is one God, and one mediator between God and men, the man Christ Jesus." I presume this statement is one of the exceptions from your contributor's accuracy which proves the rule.

Dilemma four simply bristles with inaccuracies. I rather thought when I wrote of Mrs. Eddy's noble chapter on Prayer, that your contributor would run his head against the nearest critical wall. The words "noble chapter on Prayer" are reproduced with "noble chapter" in inverted commas for the simple luxury of a sneer. It so happens, however, that the biter has been badly bitten. With miraculous accuracy he has supplied the inverted commas to what is really a quotation from one of the very keenest critics of Science and Health, but a man who had sufficient breadth of view to take breath in his animadversions to point out what a "noble chapter" the chapter on Prayer was.

Next, we are told that the original Greek of the word "atonement" has nothing to do with unity, and that any scholar could have told Mrs. Eddy so. As a matter of fact, no one ever said anything about the original Greek, but Mrs. Eddy, in common with every scholar who has written on the subject, has insisted that "atonement" means at-one-ment. It is a little arbitrary, at the same time, that all these scholars should be dismissed as ignorant, in a letter to the press. The word "atonement" occurs, to be quite accurate, exactly once in the whole King James text of the New Testament, but the Greek word translated "atonement" occurs several times, and in all the other instances is translated "reconciliation." There is no shadow of excuse for translating it propitiation, and this is so thoroughly recognized among theologians that Norris calmly declares that the word "atonement" has by a true instinct been deepened into expiation.

When people's instincts are permitted to alter the meanings of words, they generally alter them in accordance with their prejudices, and so we have "atonement" made into "expiation," and "sign" into "miracle." The King James translators used the word "atonement" because, like "reconciliation," it meant making at one. When Shakespeare makes Richard II say to Bolingbroke and Norfolk, "Since we cannot atone you" you must fight, there was no thought of expiation in his words; he meant simply, since we cannot make you one, or at one. This is exactly what Mrs. Eddy has insisted on. Your contributor, on the other hand, does not tell us what the historic doctrine of atonement is, whether it is that of Dr. Beibitz, or one of the other four he quotes, or one of those which held the field before any of these. The historic doctrine of the atonement is the doctrine taught by Jesus of Nazareth in the words, "I and the Father are one" (Revised Version), not, "I and my Father," which is a wrong translation. The original Greek is quite clear on that point. This doctrine is extended in that other saying, "my Father, and your Father," and is finally concentrated in the opening words of the Lord's Prayer, "Our Father which art in heaven."

Finally, under his fifth heading, your correspondent says I have watered down the statement that Christian Science can heal the sick and raise the dead, to simply healing the sick. This, of course, is another of the exceptions which prove his rule. I never even alluded to the subject. If, however, he wants me to allude to it, I will tell him that neither Peter nor Paul was God, but that they raised the dead, and that Christian Scientists can heal the sick and raise the dead exactly in proportion as they grow in the stature of the manhood of Christ.

Jesus of Nazareth healed the sick without any reference to medical theories, and he declared in a famous saying, made without reference to time or place, that those who believed on him would be able to repeat his works. If, therefore, it is necessary to employ doctors today, it can only be because "the prayer of faith," which the Bible says is to heal the sick, has become less efficacious, while the skill of the doctor, who may be "an infidel, heretic, or Turk," has grown more efficacious. In plain English, the Almighty permitted the workings of faith while generations of doctors were gradually qualifying themselves to better the gospel method. Surely such an argument has never been put forward since Kepler, with magnificent effrontery, declared that he could afford to

Digitized by Google

wait a century for a reader of his book, when the Almighty Himself had been content to wait four thousand years before creating the man who could write it.

We all know the history of medicine. Inspired by a disreputable Roman god in Olympus; rioted in by pagan experts, whose remedies Pliny describes as frequently too foul to mention, and whose diploma he defines as the right to kill; then the playing thing of witch doctors, and later of itinerant charlatans; next endowed with a lancet in a barber's shop, and slowly emerging into the dispensary; and finally surviving in the medical schools of today. Century following century of charlatanism, superstition, and ignorance, and mankind left in suffering all the time while the atom was being discovered and subdivided into electrons. The whole idea is unthinkable and preposterous. They poured oil into men's wounds at Crécy just as they used antiseptics at Port Arthur, and healing took place because the minds of fourteenth-century bowmen were as susceptible to impressions as twentieth-century riflemen.

The writer of the old "Religio Medici" believed in mummy powders and prayer, while the author of the modern "Imitation" insists on vivisection, and says that prayers "cannot reach the cells of the liver." The result is about the same in each case, because sickness is a state of consciousness. That is why Jesus declared, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" and that is why Mrs. Eddy writes, on page 460 of Science and Health, "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being."

The early Christians never dreamed of separating the healing of sickness and sin. They recognized that the divine command was to preach the gospel and heal the sick, consequently they preached sermons, as Jesus did, which healed the sick. It never occurred to them that the pagan doctors, busy over their tabloids of charred weasels' flesh and tinctures of sea scorpions' gall, were healing anything. They believed that prayer could not only reach the cells of the liver, it could even raise the dead; but then, they regarded prayer a little differently from some modern critics.

A man who prays without ceasing is certainly not a man engaged in incessantly beseeching an omniscient Deity to change His mind and act differently. "Desire," Mrs. Eddy writes, on the very first page of Science and Health, "is prayer," and the man who incessantly desires to possess the Mind "which was also in Christ Jesus," is the man who continues instant in prayer. In order, however, that prayer may be efficacious, it must be scientific, not in the sense of Sir Oliver Lodge, but in the sense of the New Testament. The New Testament writers use a phrase, persistently and inadequately translated "knowledge of God," which should, of course, be translated "scientific knowledge of God." Such a knowledge is a knowledge of absolute Truth, beyond which there can be no knowledge fuller or more exact. This is the knowledge of the truth which Jesus declared would make the world free; the knowledge which can be demonstrated as all scientific knowledge can be, not in theories of the transmutation of matter into what Sir William Crookes terms "protyle," or the formless mist, nor even in what Sir William Ramsay terms the manifestation of energy, but rather in the healing of sickness, the overcoming of sorrow, the destruction of sin.

Nevertheless, natural science, if I may adapt a phrase of Mr. Whistler's, is, like nature itself, creeping up. No more is the believer in the miracle met with the bludgeon of "the Gadarene pig affair," or the enunciator of the unreality of matter confronted with the argument of the upraised heel. The miracle, the exegetist and the natural scientist begin to see, is the demonstration of a scientific theory; the unreality of matter, the natural scientist and the exegetist are slowly coming to perceive, is the theory of which the miracle is the demonstration. The only absolute science, said Aquinas, is theology, or the word of God; all the same, this science, as Aquinas fathomed it, was nothing more than what Paul describes to the Romans as "a zeal of God, but not according to knowledge." To the Franciscan Aristotelian, theology was the knowledge of an anthropomorphic Deity, but to Paul, theology was that scientific understanding inseparable from the Mind of Christ, and it was the Mind of Christ, and not the person of Jesus of Nazareth, which asked, "Whether is easier, to say, Thy sins be forgiven thee, or to say, Arise, and walk?"

The Bible is either true or it is not. The Mind of Christ either once healed the sick and raised the dead or it did not. If it did, these things can be done again, as Jesus insisted, in the exact ratio in which a man knows the absolute Truth; that is, acquires the Mind of Christ. Sir Oliver Lodge launched the colossal truism that truth was in the world before modern natural science, which is only another way of saying that modern natural science is only very relatively scientific, which we all know. Jesus, walking on the sea of Galilee, broke the law of gravity just seventeen centuries before the apple, dropping in the garden at Woolsthorpe, revealed it to Newton. Nevertheless, modern natural science explained the "Riddle of the Universe," and denounced the immortality of the human soul which Sir Oliver proclaims.

What is the immortality of the soul which Huxley, Tyndall, Darwin, Herbert Spencer, and all the helots of materialism have "sniffed at"? Tennyson says in "In Memoriam":—

> And trust,
> With faith that comes of self-control,
> The truths that never can be proved
> Until we close with all we loved,
> And all we flow from, soul in soul.

All the same, neither the view of Sir Oliver nor Lord Tennyson can be made to square with the Bible. The soul, in the psychology of the Hebrews, was simply the animate principle in matter, and the bird, beast, and fishes of Genesis were all created with souls. Any one who will take the trouble to turn to the Psalms will see just what the writer thought about the immortality of the soul, and any one who will turn to the New Testament can learn what Jesus thought of it. The Greek of the New Testament and the Hebrew of the Old have precisely the same material meaning. In rare instances, it is true, a deific, not a human, significance is required by the text, but this only makes scrupulously accurate what Mrs. Eddy writes on page 482 of Science and Health: "The proper use of the word *soul* can always be gained by substituting the word *God*, where the deific meaning is required. In other cases, use the word *sense*, and you will have the scientific signification. As used in Christian Science, Soul is properly the synonym of Spirit, or God; but out of Science, soul is identical with sense, with material sensation."

The fact is, that most of these criticisms originate with critics who have not grasped the elementary fact, driven home so vigorously by Froude in his discussion of Spinozism, that every writer is at liberty to define his own terms, and that these definitions must be accepted in order to render discussion permissible and possible. So long as critics discuss Christian Science on the basis that you can legitimately define an isosceles triangle as an oblong, and then dismiss Euclid as nonsense, they will succeed in nothing beyond exposing

Digitized by Google

their own ignorance. Christian Science is Science, and must be discussed exactly. It is Science, and therefore it depends on demonstration. Humanity has accepted religion for centuries on the basis of the blind faith of St. Gregory. Christian Science demands a return to the demonstrable Science preached by Jesus of Nazareth in Palestine.

✧

[Ezra W. Palmer in *The Gazette*, Colorado Springs, Col.]

The gentleman of the medical fraternity who attacked Christian Science in a recent issue, objects to it because it teaches the fallibility of the material senses. He quotes the lecturer as saying that "only disaster follows this evidence," and then enters a plea for the physical senses, claiming that life, goodness, intelligence, mind, love, are all, as he puts it, "predicated" on the human senses.

The critic shows his ignorance by declaring that Christian Science is based on feeling, which he defines as love, and declares "there can be no such thing as love without the senses." Again he is reminded that St. John defines God as Love, and this infinite, ever-present Love is the basis of Christian Science. Nowhere in the Bible is there any warrant for the assertion that Love, when used as a synonym for God, or when used to define man's relation to God, as in the sentence, "Thou shalt love the Lord thy God," has any connection whatever with the physical senses or any human emotion or feeling. Such a view is a travesty on the teachings of Jesus, and the apostles and prophets. An analysis of the claims of disease, sin, sickness, and disaster, shows them all to be based upon the evidence of the physical senses. It is this false evidence deluding mankind which Christian Science combats. Did men understand God, look to Him singly and entirely, sin, sickness, and death would pass away, and man's rightful existence as a pure and perfect child of the ever-present God would be apprehended and demonstrated.

The weakness of this critic's attack on Christian Science lies in his inability to distinguish between spiritual verities and the material sense of things. As well argue that the earth is flat because the eye does not see otherwise. There is not the remotest possibility of Christian Science ever being associated with hospitals, as he surmises. Christian Scientists have in God a safer reliance in trouble than any human treatment can bestow.

Our medical friend boasted of the growth of medicine and surgery, while declaring that Christian Science "will never advance one step." This is rather amusing in view of the marvelous growth of Christian Science all over the civilized world. Judging from the speeches at the recent health congress in Colorado Springs, the growth of medicine and surgery has not been in the direction some of its sanguine backers would desire. One well-known medical authority declared that "the mortality rate for many diseases, in spite of advanced surgical and medical knowledge, was increasing at an alarming rate." Another declared our money loss in the United States because of sickness alone was seven hundred and fifty million dollars. *Materia medica* has held the field for thousands of years. The above are its confessions of failure. In view of this admitted failure, it is well to give earnest heed to the adherents of Christian Science, who declare they have more freedom from every form of illness than ever before, and can point to the healing of every known disease through their understanding of God.

✧

[George Shaw Cook in *Peoria* (Ill.) *Star*]

As quoted in a recent issue, the Rev. J. M. Darnell describes a new church, of universal appeal, which he prophesies will some day be established among men, apparently disregarding the fact that such a church already exists. Had he more accurate knowledge of the nature and purpose of the Christian Science church, instead of decrying it and wishing for its downfall, he would recognize in it the fulfilment of his own expressed desire for a church of universal brotherhood declaring the universal fatherhood of God. This church was established by its Founder for the purpose of reinstating primitive Christianity, which includes the healing of the sick as well as the reform of the sinner, in the Christ way, through the power of God. That its mission is being faithfully performed, is attested by unnumbered thousands of grateful beneficiaries in all parts of the world; and it does not exclude the man with the "pick and shovel," as our critics say, but invites him freely to its services, where he is welcome to a seat that is provided for rich and poor alike, by the voluntary contributions of those who give cheerfully for this purpose, according to their several ability. It seems regrettable, therefore, that the Christian Science church should have been described as the church of the rich and exclusive, merely because its members generally have learned how to be well and prosperous, not at the expense of their neighbors, but because of an enlarged sense of the presence and beneficence of God.

Truth's Vestal Dawn

CASSIUS M. LOOMIS

THE very hills 'round Bethlehem teemed with song.
The east was fringed with myriad golden beams;
The world was just awakening from its dreams
Of human guile and undefeated wrong.

A memorable hour! yea, blessings crown the day.
Hear ye, O earth, the Prince of Peace is born!
Such was the gladsome theme that fateful morn
Throughout Judæa's hills and far away.

A breath of silence, such as might foretell
A crash of earthquake or a tempest drear—
A silence such as sturdy yeomen fear—
Upon the morn that breathless moment fell.

Then, like a shout from out a sheen-lit sky
A host of angel voices sang as one:
Our vestal babe is born! God's will be done!
Praise ye, O men, the powers enthroned on high.

God's will indeed! behold the kingly crown—
The majesty of Truth, behold its sway!
A living faith for all the world today
Hath swept the earth and cast our idols down.

Sayest thou the hills of Holy Writ seem cold?
The night of conflict has been long, perchance.
The doubting heart may look toward heaven askance,
And men may stray from out the Christly fold.

Yea, be this true—God is our Father still.
The mighty leaven worketh, fear ye not.
Throughout all space there is no truant spot
Unhallowed by the Father's changeless will.

Peace, peace, be still, O doubting heart bowed low.
A new-born Christ on earth awaiteth thee.
Love's gospel, lived anew, hath made us free
From fear, from sin, from every mortal woe.

Editorial

"Yesterday, and today, and forever"

WITHOUT any disparagement of the good things directly within their own sphere of action, and the multitudinous efforts for social betterment which the churches find themselves called upon to advocate from their pulpits, we quote as follows from an editorial which appeared recently in the *Kennebec Journal* of Augusta, Maine:—

The third Sunday in December is urged upon pastors, Sunday schools, young people's societies, and all other religious societies as "peace" Sunday.

It almost seems that every Sunday will be a "something" Sunday, by and by. If churches and religious societies will consider what Jesus Christ's platform was, they will find themselves standing for peace, clean living which prevents disease, and for every other good thing which modern advertisers are likely to attribute to their own perception and profound study. The practical study of what Jesus Christ taught, nearly two thousand years ago, will give new ideas on "peace" policy, arbitration, and resistance of microbes.

Let's have a genuine Jesus Christ Sunday, and invite all in to hear something new and remarkable from ancient annals of peace, good will, arbitration, human love, and human cleanliness that is divine.

This editorial puts its title in the form of a very significant question, "Why not a Jesus Christ Sunday?" From this we infer that the writer of it was of the opinion that it is the business of the churches to present any and every question which they may discuss, from the standpoint of the teachings of Christ Jesus. This certainly seems to be the proper viewpoint for every Christian on every public question. Take, for instance, the question of peace. What more need be said on this subject than the words of Christ Jesus in his Sermon on the Mount? Is not the golden rule the foundation for universal peace? Is not the love of neighbor for neighbor, in its universal application, the beginning and the ultimate of world peace? And do we not find that every virtue and every kindly deed is in accord with the teachings of our great Master, because he taught the omnipotence of good and the omnipresence of Love?

All these things would be prominent in what the *Journal* refers to as "a Jesus Christ Sunday," but there is one thing which would have to be more prominent than any other in the observance of such a Sunday, else the title would be more or less of a misnomer. We refer to what Mrs. Eddy has spoken of as the "lost element of healing" (Church Manual, p. 17), the power to heal that was lost only because it was not given its rightful place in Christian ministry from the third century to the nineteenth, when Mrs. Eddy again made it the test of an understanding of the Master's teachings. An equally potent reason for the temporary submergence of this healing power was because it was decried as an ungodly presumption on the part of those who desired to give literal obedience to Jesus' command to heal the sick.

The vital fact in the teaching of Christian Science is the ever-presence of the Christ; as Paul expresses it in his epistle to the Hebrews, "Jesus Christ the same yesterday, and today, and forever." Then that phase of the ministry of Christ Jesus to which so much attention is given in the gospels, that of the healing of the wounds and bruises of suffering and sorrowing humanity, cannot consistently be ignored by his professed followers today, nor is there any other phase which more definitely shows the at-one-ment of Father and Son.

"A Jesus Christ Sunday" in the churches would be one in which all the gospel of Christ Jesus would be preached and demonstrated, and if the churches are not having fifty-two such Sundays each year, then there is something wrong. Our Master said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you;" and if this injunction was universally obeyed, there would be no need of special Sundays in the churches. Neither would there be complaint about lack of attendance at church services, for the churches would be bringing in the millennium and demonstrating the fatherhood of God and the brotherhood of man, that understanding of God as the infinite Father which obedience to the supreme commandment, "Thou shalt have no other gods before me," inculcates.

ARCHIBALD MCLELLAN.

Christmas Lessons

WITH most of us, especially those who are no longer children, Christmas is a retrospective season, and we are apt to compare the past with the present, possibly to indulge in vain regrets for the days that are gone, when perchance the good we then had was little appreciated. In any event, it is surely well worth while to ask ourselves what lasting gain of joy and gladness is ours from these anniversaries, and what treasure of holy memories—of love, unselfishness, and forgiveness—we have laid up for the days and years to come. Some of the children count the dolls, the tops, and other toys which came to them at Christmas, and wonder if another season will bring as many gifts. The older people smile at this, knowing the transitory nature of toys, but do they inquire of themselves how much they have to show of the things that perish not "with the using"?

All this and much more comes to thought as we read the chapter on Christmas in "The First Church of Christ, Scientist, and Miscellany," and strive to reach the altitude of thought attained by our beloved Leader when she wrote (p. 262): "I celebrate Christmas with my soul, my spiritual sense, and so commemorate the entrance into human understanding of the Christ conceived of Spirit, of God and not of a woman—as the birth of Truth, the dawn of divine Love breaking upon the gloom of matter and evil with the glory of infinite being." As we ponder these words, we can be no less than grateful that through her teachings we have been in large measure freed from the tyranny of custom, and thus enabled to celebrate Christmas with our spiritual sense and witness to "the dawn of divine Love" in human consciousness. Thanks to Christian Science, our awakened spiritual sense pierces the gloom of mortal mind, sees the light of Truth, and hears above the rumors of strife and carnage the angels' sweet strain of promised peace on earth, and of "good will" not only to men, but among men.

Let none think that because Christian Scientists have to a large extent turned away from its outward and material observance, they forget to gather the lessons of Christmas. If they ever do so, it is because they have not followed their Leader in launching out into the depths of divine Truth. "A Christmas Sermon" in her "Miscellaneous Writings" (p. 161) lifts the pall of material and personal sense, the belief in a departed Saviour with which our religious concepts were shrouded, and declares the ever-present Christ, or to quote St. Paul, "Christ in you, the hope of glory." In addition to this sermon, and many other vital words by her on the same subject, we have that profound though perhaps little understood message given in the illustrated poem, "Christ and Christmas," of which we might say as did the Master of some of his own utterances, "Let him that readeth understand." It points to the divinity of the Christ, as "the way, the truth, and the life," and shows that only as we leave behind us the mortal concepts of birth and death can we fully understand the Christ-healing and demonstrate it in every hour of human need.

Today a rare gift is offered Christian Scientists in the

Digitized by Google

new book, "The First Church of Christ, Scientist, and Miscellany," a volume rich with the ripened fruits of inspiration, wisdom, and spiritual experience. It invites us to a Christmas which shall be with us all the days of the year, when we can say, in the spirit of Isaiah, "Unto us a child is born, . . . and his name shall be called Wonderful." Many there are who say this with gladness, because Christian Science has done for them what Jesus said the Comforter would do. For them (to quote again the new book) "this truth has traversed night, through gloom to glory, from cradle to crown" (p. 257). The Christ-idea is for them crowned with the power that heals and saves and blesses. Its light is outshining the darkness and is no longer uncomprehended, and as Mrs. Eddy goes on to say, "at this immortal hour, all human hate, pride, greed, lust should bow and declare Christ's power, and the reign of Truth and Life divine should make man's being pure and blest." Such be our Christmastide!

ANNIE M. KNOTT.

Atonement

THE greatest possible contribution to the settlement of theological problems is found in the teaching of Christian Science that the rational and demonstrably true interpretation of the Scripture must in every instance begin with God, and that it must consent to no concepts which are out of harmony with His ideal and infinite nature. This at once settles the question of the spiritual nature of God's universe and of man. It also settles the question of the nature of evil and supplies an intelligible basis for the doctrine of atonement, the philosophy of salvation.

To have part in the atonement, writes Mrs. Eddy, is to "rise into newness of life with regeneration" (Science and Health, p. 24). The definition of the meaning of the word is thus taken out of the field of dogmatic contention, and made a matter of practical demonstration. The thought of divine appeasement, or of meeting the demands of violated divine law, as modern scholastics would put it, thus gives place to the thought of human redemption, and passive dependence upon what Christ has done for us yields to the impelling realization that we must become Christlike, and do the Master's works.

The fundamental thought of most theological views of the atonement is that it is a change effected by the sacrifice of Christ Jesus, in the attitude of God toward men by which their salvation or unity with Him is made possible. Christian Science, on the other hand, teaches that the atonement is the "exemplification of man's unity with God" (Science and Health, p. 18); that it is not a means to an end but the end itself, and that the efficiency of Jesus' sacrifice inheres in his practical demonstration, for all men and for all time, of the power of Truth and Love, embraced in human consciousness, to overcome sin, sickness, and death. Mrs. Eddy daringly presents this point of view when she goes on to say that Christ Jesus "did life's work aright" to show men "how to do theirs, but not to do it for them nor to relieve them of a single responsibility."

Those who accept the parable of the prodigal son as our Lord's interpretation of the gospel, his poetically illustrated statement of the philosophy of salvation, must be impressed with the fact that the only thing called for by way of provision or preparation for the wanderer's reinstatement as a son, was the return to his father in a spirit of repentance for his wrong-doing, and of willingness to be obedient to his father's will. There is no hint that the father had to be appeased, or that the unworthiness of the boy had lessened in any degree his loving interest.

Christian Science brings a great illumination to this whole subject in its recognition of God as infinite Truth, and here the at-one-ment with the truth of natural law and order into which students and experimenters have come in the field of physics, mathematics, etc., supplies us with many helpful analogies. This unity is always incident to and in direct ratio with escape from error, the ignorance of misapprehension or false sense, and it is verified by the fact that the authority and power of the investigator is correspondingly increased. Thus through his successful seeking Mr. Edison has gained that marvelous acquaintance with and command of elemental forces which has made his name so familiar, his life a blessing to humanity. Divine Truth is always available when we sincerely desire to be at one therewith. It demands no placation or appeasement, though forever opposed to error, and all its resources are instantly at our disposal when we come to know and honor its law.

As understood in Christian Science, Truth is one, embracing in manifestation all real being; and at-one-ment with Truth, with God, is gained, therefore, as we progressively awaken to right consciousness, our true selfhood. It is thus seen that Truth and its manifestation, Principle and its idea, God and spiritual man, are forever at one and need no reconciliation; that between Truth and error there can be no reconciliation, and that our at-one-ment is achieved in the measure of our possession of the Mind that was in Christ Jesus.

JOHN B. WILLIS.

Lecture in The Mother Church

The First Church of Christ, Scientist, in Boston, Mass., announces a free public lecture on Christian Science, by Prof. Hermann S. Hering, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Boston, Monday evening, Dec. 29, at eight o'clock. The public is cordially invited.

Among the Churches

Current Notes

STILLWATER, MINN.—The little society at Stillwater has been accorded the privilege of holding service in the new prison every alternate Sunday, beginning at nine o'clock. There is a beautiful auditorium, which seats more than eight hundred on the ground floor, and which is reserved for the prisoners, with a gallery seating about three hundred reserved for visitors. Yesterday morning [Oct. 19] there were in attendance about one hundred and fifty prisoners and about one hundred visitors. Almost all of the prisoners join in the singing, in the audible repetition of the Lord's Prayer, and in the responsive reading. The responses are increasing every week.—*Correspondence.*

RIVERSIDE, CAL.—The two Christian Science churches of this city combined their efforts, and as a result their booth at the fair was very attractive. Here one found a quiet place to stop, where Christian Science literature was provided.

Riverside Enterprise.

CHICAGO, ILL.—A new Christian Science reading-room has been opened at 225-227 The Temple, 108 South La Salle street. These rooms are maintained for the free use of the public by the twelve Christian Science churches in Chicago.

Chicago Tribune.

Digitized by Google

MEDFORD, ORE. At the county fair held recently in Medford Ore., a *Monitor* free reading room was maintained with gratifying results. All the Christian Science periodicals, with the exception of *Der Herold der Christian Science*, were on hand for free distribution, and the daily average of literature given out, for the five days of the fair, approximated sixty pieces. Much interest was shown by people hitherto unfamiliar with Christian Science and its literature; and that the work was not without practical results was evidenced, not only by later requests for reading matter, but by the presence of new faces in the Sunday congregations. Since the first of April, the reading room of First Church in Medford, through its distributing committees, has sent out literature amounting to a monthly average of three hundred and seventy-five copies of the different periodicals. In the month just past the total reached was practically five hundred.—*Correspondence.*

MELBOURNE, AUSTRALIA. Country residents flock to Melbourne in thousands for "show week," and this year the attendance numbering in all just within one hundred and eighty-five thousand, at the annual exhibition of the Royal Agricultural Society, exceeded by twenty-five hundred the highest record of previous years. Last year, First Church of Christ, Scientist, Melbourne, provided a reading tent on the show ground. Improved arrangements, consequent on last year's experience, were made this year. The tent was again well patronized, and several of the visitors in expressing great take for the opportunity to rest, also voiced their appreciation of the excellent nature of the literature provided.—*Correspondence.*

[illegible] The Christian Science reading room, started by the local society at the recent county fair held at this city, was very much appreciated by its many visitors. As a result of the work The Christian Science Monitor, and several copies from the Publishing Society, were sold each day of the fair. A special effort to acquaint our visitors with the good work of the church was always noted with interest. A large box was devoted to these literature, and the reading of the pamphlets of Christian Science [illegible].

by those who are recognized as having authority to speak. We are all glad to obtain information, except perhaps on questions pertaining to religious faiths other than our own. It is well for us that most people accept without question the religious beliefs of their mother, for her religion has made the mother the ruler of the Christian world; and it is but natural that we should feel a resentment toward any encroachment upon that particular religion which made our mothers to us individually the highest exponents of the human race.

Many characters demand something that is not found in their early environment, and the gratification of those desires has led to explorations into the various fields of science and religion. Among the many sects of the Christian religion is one which has come into being during the lifetime of most of us. Those who can view it with as little prejudice or bias or bigotry as it is possible for those of one faith to view the effects of another faith on its devotees, must ascribe a resultant serenity or happiness upon its followers which is not common, and which leads us to believe that it is a great boon to those who have embraced it. It is to learn more of this religious faith that we are here this evening, and I am sure we will all derive a great deal of instructive pleasure from the lecture which will now be delivered.—*Correspondence.*

✧

Fortuna, Cal.

Hon. Clarence A. Buskirk, who lectured on Christian Science at the Methodist church, was introduced by Mrs. M. E. Van Duzer as follows:—

The understanding of God which is gained through the study of Christian Science may be likened to Jesus' parable of the talents. The talents which were put to use increased with usury. The understanding of God increases or unfolds through application, while the unused talent decays and is lost. Christian Science is indeed a practical religion, useful daily and hourly. Only through living the precepts which Jesus taught are Christian Scientists enabled to prove the omnipotence and omnipresence of God here and now; "a very present help in trouble," be it physical or mental.

The Humboldt Beacon.

✧

Akron, Ohio

Professor Olin of Buchtel College, in introducing Bicknell Young, who lectured on Christian Science, said:—

It is indeed a pleasurable honor to stand before this splendid audience to present the speaker of the evening upon a Christian subject.

Christianity is not upon the defensive, as some critics of life would have us believe; it moves forward, conquering, and still to conquer, every stronghold of sin and suffering and sorrow. Of sin it is promised, that "the knowledge of the Lord" shall cover the earth "as the waters cover the sea;" of suffering, that our joy shall be full; of sorrow, that God himself shall wipe away the tears from every eye. We are fighting forward in a tremendous campaign that will not be finished until we are redeemed, soul and body, to purity and strength. We sing,—

Like a mighty army,
Moves the church of God.

An army moves in brigades and battalions and regiments and companies, and in the battle different divisions may have different duties. One may attack this stronghold, and another that; one may charge up a mountainside, and another sweep the plain; each makes its own challenge, and backs it up with its life; but the victory of one is the victory of all.

So in the Christian struggle, different divisions may have different points of attack; each gives its challenge, and backs it up with its life of devotion. Christian Science makes its challenge to the materialism of this day, and it is a mental challenge. Material philosophy and Christian Science cannot both live. Christian Science is a sane attempt to build human life upon a basis of spirituality; and to this every Christian can say "God speed." But in establishing life upon a spiritual basis there are far-reaching consequences in the physical plane, and Christian Science has the courage to face the logic of its own argument. In this, too, every Christian can say "God speed," since the victory of one is the victory of all.—*Correspondence.*

✧

Cambridge Springs, Pa.

A lecture on Christian Science was given by Virgil O. Strickler in the Avenue Theater to a very attentive audience. The lecturer was introduced by Mrs. Carrie Stoughton, supervisor of music in the public schools, who spoke as follows:—

We are living in an age of progress, in a time when people are wanting to know about many things. A spirit of inquiry is abroad, and there has never been a time when men desired so earnestly to know about those things which lie back of the physical, in the realm of the metaphysical, and which are perceived but dimly by man in his present state of advancement. Christian Science is the science of metaphysics, and goes back to the unseen cause of visible effects. You are here tonight because you have heard something about it. You perhaps know of some one who has been brought from the brink of the grave, or another who has been healed of a so-called incurable disease, or others who have been brought out of poverty, discouragement, or other abnormal conditions. So, in order that those who desire it may learn more of Christian Science, and also to correct some erroneous impressions regarding it, we have one with us this evening who will speak on the subject that is engaging the attention of people the world over.—*Correspondence.*

Testimonies of Healing

It would be impossible within a limited space to do more than enumerate the profound changes of thought which Christian Science has wrought in me during the seven years I have known of it. When I first saw the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was numbered among that negative class of people called agnostics, a name which I suppose all its advocates recognize as eminently unsatisfactory and indicative of a waiting frame of mind, a waiting for more definite knowledge than the creeds and dogmas of centuries are able to supply. I had studied natural science for many years, having graduated from Cambridge University in the departments of chemistry, physics, and the biological sciences, and had subsequently engaged in research work there, publishing the results of that work. During the time between leaving Cambridge and my first introduction to Christian Science, I had taught and lectured on natural science in one of England's largest schools, where the principal part of my work consisted in laying the foundation of a future medical career for the boys who attended my classes.

When Christian Science was first presented to me, it was essentially a new theory, which required the proof of application and derived result before it could be accepted as true, just as any other theory required to be tested. During these seven years it has been shown day by day, in thousands of instances, to be not a mere theory, but a statement of definite, unchangeable law, which is susceptible of proof at any time and in any place, and which in its application has been attended by entirely satisfactory and successful results in the exact proportion to my faithfulness in obeying the law.

Among the many proofs of the law of demand and supply which Christian Science offers, from the point of view that it will supply what is needed, I wish to return my deepest gratitude for one which came to me. I was a passenger on the steamship Titanic which collided with an iceberg and sank in mid-ocean on April 14, 1912, and I am convinced that if it had not been for the knowledge of Christian Science, and the application of such knowledge to overcome conditions of fear and danger, my name would now be on the list of the missing. We know, as Christian Scientists, that we are learning day by day to rely on God absolutely for our help in every condition of human life, and are content to accept the innumerable blessings which come to us as a result of such reliance, without seeking or wishing to know the intermediate steps that come between our faith and its results. But in this case the way in which a small knowledge of Christian Science protected me, and led me out of danger, is so unmistakable that it may be helpful to relate it.

At the first sign of danger, after the collision occurred, I went to my cabin and read the ninety-first psalm through carefully three times. I had just turned from this study to the interpretation of the twenty-third psalm as given in Science and Health (p. 578), beginning, "[Divine Love] is my shepherd," when the final call on deck was made. I put the Bible and Science and Health in my pockets and responded to the call, armed with the knowledge which Christian Science reads into the ninety-first psalm, known as it is to every Christian Scientist as a refuge in time of danger. In this mental condition I was able to remain quietly in the position where I first placed myself, on the starboard side, and watch the boats, which had been lowered to the deck below, fill with the women and children collected there, descend to the sea, and row away into the darkness. While doing so, a rumor went around among the men on the top deck that they would be taken off on the port side, and although subsequent events proved it had no official origin, this report seemed at the time to be authentic, and was accordingly acted upon by nearly every one. But it seemed more in harmony with the spiritual sense of the ninety-first psalm, more in tune with the teaching of Christian Science, to "be still, and know that I am God," to avoid the crowd and remain quietly on the starboard side until some opportunity of escape presented itself.

Some little time later there were repeated calls for women on the deck below, where the boats were being filled, and looking over the edge of the top deck I saw a life-boat almost full. No more women were to be found, and one of the crew, seeing me looking over, first inquired if any women were to be found on the top deck, and on my replying that they had all been sent down half an hour before, he told me to jump in. I did so, and the boat was presently lowered to the sea. After some hours of wandering about in the darkness we reached the Carpathia safely, where all the passengers landed in perfect health and without any untoward incident.

From the moment of being picked up from the life-boat I was free from any sense of strain or shock, and during the four days on the Carpathia I found the knowledge of Christian Science sufficient to meet every condition that presented itself. When finally landed on the dock at New York, there was an insistent sense of loss, since all my baggage, clothing, and money had gone down with the ship. But here again the knowledge that Christian Science gives was able to destroy this thought and prove that every human need is supplied by reliance on God as the source of all supply. I had insured my baggage, a few minutes before embarking at Southampton, for a sum that covered the whole cost of new trunks and clothing. My money, which had been entrusted to the purser of the Titanic and locked up in his safe, was in the form of a letter of credit and bank-notes. The amount of the former was easily made good to me, and the numbers of the latter had been noted by my bankers, so that the value of these notes was returned to me by the Bank of England in due course.

There can be no reasonable doubt that Christian Science was the means by which I escaped from the wreck of the Titanic, and it is equally certain that any knowledge which I had of the material laws of natural science was useless on such an occasion. It would never have occurred to me to turn to the latter for help in such conditions of danger, but it was quite a natural and almost unconscious act to resort at once to the Bible and the interpretation which Christian Science gives. Equally natural was it to bring away from the wreck the Bible and the Christian Science text-book as the most important things with which to face the embarkation in boats and the drifting about on the sea. Something of the true value of Christian Science was revealed to me that night, and the way its students come to appreciate their reliance upon it.

The debt which we as Christian Scientists owe to our Leader, Mrs. Eddy, the Discoverer and Founder of Christian Science, is brought home to one by an experience of this kind. I have realized more than ever before that such results are attributable directly to her purity of insight, her unconquerable determination to learn the exact truth about God in the face of every obstacle, and the spiritual nature which enabled her to place on record the availability of divine laws for humanity in every conceivable circumstance.

Lawrence Beesley, London, England.

✦

I owe so much to Christian Science that I feel it a duty to send my testimony. I do so with a heart overflowing with gratitude to God, also with thankfulness to Mrs. Eddy, for my healing. It is now over two years since I was practically lifted from the grave and relieved of my ailments.

Digitized by Google

I was said to be of a very nervous disposition from infancy up, while my eyes were very weak, and I began to wear glasses when quite young. I had frequent headaches, which were said to result from the condition of my eyes; but I always attended school, as it was my desire to become a teacher, and my wish was at last granted.

I began to teach the primary grades of my home school, and I dearly loved the work, but during the second year I became very nervous. I tried different so-called nerve tonics and seemed better for a while, but I then began to have what were called nervous breakdowns, the doctors saying that I needed a rest, and that I would have to give up my teaching if I wished to get better. My illness finally ran into what was called epilepsy, for which all cures that were ever heard of were tried. I also had throat trouble and would catch cold easily. My lungs became affected, so I was ordered to take long walks, and physical culture was tried. I walked two or three miles every morning, and dieted for months, but all in vain. I became very weak and had to give up walking, as my strength seemed to be leaving me and I was decreasing very much in weight.

I could not understand why I should suffer so, for I was a church-member, always tried my best to live a Christian life, but never could comprehend why God should punish me in that way. I often prayed to God to take me or deliver me from my misery, for I can never express in words my suffering. My older brother had been employed in the city for some time and wished us to go there, so we went; but after several months I became very much worse. I coughed more, my lungs pained me continually, and at times I could not talk above a whisper. I had been confined to my bed for several weeks when a noted specialist was called. He pronounced my case tubercular, and said that one lung was completely dried up and the other one was affected. He also said I could not live longer than a week, and perhaps not so long. He gave me medicines to quiet my nerves, but said I could not be cured.

We had not then heard much of Christian Science, but the manager of the company by which my brother was employed stated that his wife had been cured of several ailments by Christian Science and referred him to a practitioner. My brother came home and spoke to my mother about it, and the practitioner was called. I told her about all of my diseases, aches, and pains. She then explained God's love to me, said that my diseases were not real, and that God does not cause His children to suffer; that I could eat anything I wanted, and it would not hurt me. She was kind and patient, and she loaned me her copy of Science and Health and gave me three treatments in all, I think. I began to improve at once, and after the first treatment the thought came to me that if my other ailments could be cured, my eyes could be, too, and I took my glasses off at once and have not used them since, and my eyes are normal in every way. I felt much better, and every word in Science and Health was so interesting that I could not leave it. I read and reread it, for its teaching seemed so true and wonderful.

My health is now perfect in every way. I am healed of all my diseases, aches, and pains. I was greatly reduced when I began treatment in Christian Science, but in two months I gained considerable and am now quite robust. I am working every day, and can never express in words my thankfulness for this healing and the understanding which I have gained. When I meet my old friends and neighbors who knew of my ill health, they look at me in astonishment, as I have changed so much. I want to live so that others may see that there is something in Christian Science and its teachings, and that God's way is the only way which leads to life eternal.

Miss Frances Schlatter, Fort Wayne, Ind.

My attention was directed to Christian Science through the healing of my gums, also of a bowel difficulty of twenty-five years' standing. I then began the study of the text-book, "Science and Health with Key to the Scriptures," in which Mrs. Eddy says that "desire is prayer" (p. 1). It had been my prayer all my life long to know God, and I am learning each day that as our consciousness is purged of all error, evil, we come to understand Him. With even a slight understanding of Christian Science, I have overcome an irritable, impatient disposition.

About four years ago my daughter and I were coming home, and just as I started to get off the street-car, I discovered that it was still moving. I was thrown face downward, but I turned over and struck on my back. My head did not strike the pavement, and I was on my feet as quickly as I had fallen, to the surprise of those around me. Every one was excited but myself, my daughter fearing that I was seriously hurt; but I held God steadfastly in my thoughts and divine Love protected me.

One night in October, 1910, as I was asleep, these words came to me so vividly that I awoke:—

God moves in a mysterious way
His wonders to perform.

I was never able to interpret the dream until the night of Jan. 7, 1911, when I received a telegram telling me of the tragic death of my daughter. For a few moments I never moved, then the thought came to me that to God there is no separation, and some time afterward I remembered my dream and said: No, God does not move in a mysterious way, but in a divinely natural way, and to Him there is no death. What a sense of peace came over me in knowing that God is Love, and not a God of wrath! I have realized that God is my refuge and strength in times of sorrow, and through this great sorrow I am more humble and penitent. Mrs. Eddy says, "Sorrow has its reward;" also, "The more difficult seems the material condition to be overcome by Spirit, the stronger should be our faith and the purer our love" (Science and Health, pp. 66, 410).

For all that Christian Science has done for me I am indeed grateful to God, and thankful to Mrs. Eddy for giving us in Science and Health a "Key to the Scriptures," an understanding of Truth which brings peace and joy and a contented mind.—Julia Parker, Los Angeles, Cal.

✧

I should like to express my gratitude for what Christian Science has done for me and mine. I have a daughter who was sick for seven years, and we tried about twelve doctors, besides other material methods, but with no permanent benefit. When we were about to give up all hope of her ever getting well, she was induced to take up Christian Science, and from the reading of the text-book and a few treatments she gradually became better, and now she is as well as she ever was in her life. For this, and innumerable blessings that have come to our family in Christian Science, I feel deeply thankful to God, and also to that grand woman, Mrs. Eddy, for pointing the way.—Charles Cheesewright, Stockton, Cal.

This is to state that after an absence of more than two years my sister, Miss Jessie Cheesewright, visited her former home in Denver, where we first became interested in Christian Science, and I can certify that her healing has been complete, and that she is now in better health than she has been for many years. As a result of her healing my sister is a faithful student of Christian Science, and two other members of our family have become Scientists. I wish to express my deep gratitude for this healing, as well as for many other benefits.

C. V. Cheesewright, Denver, Col.

Digitized by Google

I gladly give my testimony to the healing power of God, ever-present Truth and Love, for I was healed of what was called an abscess of the liver. I was very sick for six weeks, and had three different doctors attending me, but they all gave me up and said there was nothing more to be done; so I stopped taking medicine and turned to Christian Science. I sent for a practitioner, who gave me a few treatments, and in five days I was able to walk around. I am indeed grateful for all the blessings which have come to me through this healing truth.—B. J. Amsberger, York, Pa.

✧

Christian Science was brought to our notice over three years ago. I was then suffering from what was said to be a diseased condition of the heart, but through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed. I have also been healed of eye trouble which made the wearing of glasses necessary, and many other lesser ills have been overcome by the truth which makes us free. Not only have physical diseases been healed, but I have been blessed in many other ways.

I wish to express my grateful acknowledgment for all the benefits I have received, and my daily hope is that I may live so as to be worthy of the name Christian Scientist.

Grace Littlewood, Brooklyn, N. Y.

✧

I wish to express my thanks for having been able to get Christian Science treatment for our son, ten years of age, when he developed a case of measles. He also had a badly ulcerated mouth, and could eat scarcely anything. We are a long distance from a practitioner, so our letter did not reach her until three days after he was first taken ill, but as soon as treatment was given the healing was immediate. His mouth was so quickly and perfectly healed that he never felt the pain again, and he ate his food and went to sleep. He was entirely well, and there were no bad after effects.

My own understanding of Christian Science is small, but it has been sufficient to overcome croup for my son, and to heal a wound in his instep from a rusty pitchfork. I have also been able, by applying this truth as I understand it, to overcome the suffering from bad burns, once in particular, when I upset some boiling water over my chest. It would have been a bad scald under other conditions, but it did not hurt me at all after a few minutes. The place healed perfectly in a week, and left not the slightest scar. Besides all this I have been healed of chronic suffering of twenty years' standing. I am becoming more and more interested in Christian Science, and I read and study the Lesson-Sermon, also take the *Sentinel* and *Journal*, and hope soon to subscribe for the *Monitor*. I am more thankful every day for all the help and comfort which Christian Science brings.

Mrs. H. R. Morris, Wapella, Saskatchewan, Canada.

✧

I first heard an intelligent explanation of Christian Science in December, 1888, through one of Mrs. Eddy's loyal students. Many times previous to that I had prayed, in my way, to be guided out of the mental condition which seemed about to overwhelm me, and my prayers were answered when Christian Science was thus presented.

With three young children to rear and educate, and small means at my disposal, I was deeply distressed and discouraged. On the verge of despair, I had said repeatedly that if this is life it is not worth the struggle, and but for my children I would not continue it. I had made up my mind that if a separation from these little ones should ever become necessary, I would take my chances, and theirs also, on another plane. In this state of mind I asked if Christian Science could do anything for one's mental condition. I said I had no physical ailments particularly to be gotten rid of; that my trouble was mental, and that I wanted a religion which would change my whole thought. Then the answer came, "We generally get what we work for." My physical ailments disappeared as the mental atmosphere was illumined, mainly through the study of the letter of Christian Science and by imbibing the spirit as far as I was capable.

Since 1888 I have not used material remedies of any kind, having found Christian Science to be the panacea for all *ills*, both physical and mental, for myself and others. *I can only* express by my life my appreciation of our *beloved Leader*, Mrs. Eddy.—Mrs. Mary F. Gregory, Arkansas City, Kan.

✧

Before Science and Health came to me, my faith in the promises of God, though they were not fully understood, sometimes brought peace, and as a girl I prayed for a brother whom our good doctors expected to pass away within seven hours. I was reminded of a passage of Scripture which destroyed my fear, and this brother was out of danger three hours after the time the doctors expected him to pass away. In another illness, however, some years later, my prayers failed to heal him. Then Christian Science was recommended to him, and he was healed, though not quickly, and became Mrs. Eddy's student.

My brother sent me a copy of Science and Health, and because I felt I owed it to him to read it, I did so, with the prayer that if it were error I might perceive it; but only a few pages were read before I was convinced that Christian Science is Bible teaching, and true. I threw away the medicine for my children that had accumulated, and began to apply what I read. I was quite well myself; my fear was mostly for them. I did not get enough understanding of Truth to overcome this fear altogether, but Science and Health has lightened my darkness and given me health all these years. After one of my children was taken from me, I opened the Bible for comfort, and the first words I saw were these from Jeremiah: "Thus saith the Lord; Refrain thy voice from weeping, and thine eyes from tears: for thy work shall be rewarded, saith the Lord; and they shall come again from the land of the enemy." Science is indeed the promised Comforter.

Not long after I began to read Science and Health, a carbuncle made its appearance, but no one knew of its presence. I slept as usual and performed my regular duties. An injury to my eye caused me no suffering until the third night, when I was awakened by severe pain. I remembered that hate has no power, that matter is not power, for it is not intelligent; that divine Love is all-power, and everywhere present. Relief came at once and was permanent.

Some trouble with the knee brought on pain twice before Science and Health came to me, and after I began to study Christian Science the pain came again. No one knew of it, and the second time it made its appearance it was overcome instantly. I was down-town shopping, busy all day, and until evening did not think of what had once seemed so real. I saw that I must trust God more, and I would have more courage. This finished the overcoming of the ailment. I have seen some cases of instantaneous healing of so-called incurable disease, but better than all to me is the understanding of God and man that Science gives us, and through this understanding the ability to forgive our enemies, to overcome hate and fear.

Words cannot express my gratitude to God, and to our Leader, Mrs. Eddy, for all the good that has come and is coming to humanity through Christian Science. I am grate-

ful for the work of the pioneers, the teachers, lecturers, and those through whom our literature comes to us, grateful for our church services, and for all the comfort and peace that this truth is bringing to storm-tossed humanity.

MRS. THEDA H. WILLIAMS, Chicago, Ill.

✧

[Translated from the German]

I would like to tell of my experiences in Christian Science, for I have a great sense of joy and gratitude for having been led to find the truth which makes us free. In May, 1913, our three-year-old child was attacked with measles and had high fever. We had been acquainted with the teachings of Christian Science for some time, so we quietly set to work to overcome this condition, and later asked a Christian Scientist for absent treatment, which was taken up. After the first treatment the fever left, and within a few days the disease disappeared entirely. The child was completely healed, and has enjoyed the best of health ever since. For this convincing proof of the power of divine Love I am deeply grateful to God, and also thankful to Mrs. Eddy, through whom He has shown us the true way of attaining health and holiness.

FRITZ HEMPEL, Hannover, Germany.

✧

For a long time I have felt that I must express my debt of gratitude for the many blessings we have received through Christian Science. There are eight members in our family, and for sixteen years Christian Science has been our perfect guide, a never-failing source of health and harmony. Through the reading of the Bible as explained in Christian Science, we have learned that God meets our every need. I have had the privilege of class instruction, which has helped me greatly in times when error seemed as a solid wall; but when Truth lights the way these walls disappear as the mist before the sun.

With deep gratitude to the one who has opened up the way in Christian Science, and pointed us to that Love which is God, we are endeavoring to walk in the path she has illumined.

ROSE ANNA HUBBARD, Pleasant Hill, Mo.

[Written for the *Sentinel*]

Tonight

JULIA WARNER MICHAEL

No herald bells proclaim this night
A welcome to the King,
Yet through the darkness of despair
The angels softly sing.

No sound of footsteps hastening
Onward with merry din,
And yet beneath the lowly roofs
The Christ is ent'ring in.

No holly hangs upon the hearths
To greet the Yule-tide guest;
Instead, humanity's great need
With naked, bleeding breast.

No hand is laid upon the wound,
Nor lips are moved in prayer,
And yet the sickness and the sin
Are healed beyond compare.

No need to wait for waning moons
The seasons to unweave
Ere cometh holy Michaelmas—
Tonight is Christmas eve.

From Our Exchanges

[Rev. M. A. Lichliter in *Baltimore* (Md.) *Sun*]

It is worthy of remark that Jesus did not concern himself greatly with the matter of knowledge. The word was not often upon his lips. He had another word, however, which was his favorite. It was the word truth. It includes all that knowledge means and more. It relates one's learning to character. It suggests a sphere of intelligence above the learning of the schools. It offers a mastery superior to the mastery of mathematics or literature. Mental alertness and brilliance are not the objectives of true Christian knowledge, but rather a certain poise of soul, a certain grasp on the fundamentals of character, a certain sense of oneness with God.

In all this I do not seek to disparage the knowledge of the schools; but it is well to face the facts. There are hundreds of thousands who cannot enjoy the privileges of a thorough academic training, but they may be, for all that, seekers after the truth; and they may come to know the truth. And there are many in the schools who are keen in their thirst for knowledge, yet seem to be indifferent to ultimate truth. They do not relate their knowledge to character; they do not follow the gleam until it leads them to God.

Hear me, young people of the schools! It is better not to know at all than to have a knowledge which does not find its inspirations in the infinite. Better far is a humble discipleship of the truth than a false pride in intellectual achievements. These will fail one when the night comes, but the lover of truth in the school or out of it has found the unfading light.

[Rev. R. A. Dunlap in *Hartford Seminary Record*]

One aspect of the human in Jesus is the variety of his human interest and sympathies. All kinds of people felt, when face to face with him, that he understood them and that he cared for them. Even those toilers who may not have known of the carpenter's shop at Nazareth, felt instinctively his comprehension of the lot of the laboring man. He numbered among his friends members of the professional classes of the day. Scholars and teachers found in him an unfailing power to grasp their point of view and to enter into the questions that weighed upon their minds. He was equally at home among the very poor, the moderately comfortable, and the wealthy. An ex-grafter and politician loved him. Military men were his admirers. There were women of the underworld who felt the power of his pure friendliness, perhaps more than one who was saved by this means from a life of shame. Sheltered and cultivated women in elegant homes prized his friendship among earth's fairest gifts. The aged were touched by his gentle consideration. Little children loved to climb upon his knees, and he appears to have been genuinely interested in their games. When people were glad, they liked to have him with them; he was a wedding-guest, and feasts were given in his honor. When people were sorrowful, they wanted him; and toward the lonely lot of the widow, toward the sorrows of any who had suffered bereavement, no compassion was ever more gentle, no sympathy was ever more genuine.

[*Northwestern Christian Advocate*]

The world growing better? Yea, verily! Who doubts it but that unfortunate soul who has been caught by some local maladjustment and blinded to the larger aspect? The challenge is thrown down to name a single great movement wherein cannot be detected a positive betterment of conditions and a decided advance toward the righteous goal,—civic prog-

Digitized by Google

ress, political conceptions in nation and state, the emancipation of woman, the conservation of life, the protection of girlhood, the growing temperance sentiment, the finer conception of Christian service, the stirring life within our own and other denominations, attended with a sense of unity that is often embarrassed by purely administrative or property claims—these are but parts of the swelling song which is rising with diapason effect.

The claim is not made that society is speeding precipitously toward the new Jerusalem and even now is drawing near the pearly gates. Moral reform and religious betterment progress about as slowly as physical evolution. We are not now concerned with the end so much as the direction of life. If it is upward, we can be happy on the way by merely appreciating the incline. "He shall see the travail of his soul, and shall be satisfied." The whole of life is a process, an evolution, a climb; the accomplishment of one effort but reveals larger labors just ahead. And the journey never ceases. From some vantage nook in the mountainside we may turn to gaze below and above, but we are not permitted to tabernacle.

In the light of these observations we must and do secure our joy in the discovery of a gradual but well-defined uptilt of the road. It needs a generation, a century, to detect the grade, but the way leads up; and as pilgrims traveling therein we rejoice. The delectable city is ahead, and though at times the clouds of sin trail low and obscure the fair vision, we know whither we are bound.

[James S. Kittell, D.D., in *The Christian Intelligencer*]

When we turn to the world of religious things, it is with great hope. We are coming to see that man is incurably religious; and we are coming to recognize the religion of all men. Religion is "the conception we form of the power that is responsible for our being, our relation to that power, and the course of life which results from the conception and the relation." To be without religion would be to be without any conception of life, which would mean that one did not think at all. No man is without some kind of religion. We are coming to recognize this and build on it; to lead this beginning to the highest religious conceptions as we find them in Christianity. One of the most hopeful things of the present age is the wide-spread interest in religion, especially the Christian religion.

[*The Christian Register*]

Gradually the world at large is arriving at the conception of a growth into righteousness, without convulsions or violent demonstrations that are sometimes ephemeral in their influence. There are natures born into the world so fine, so well balanced, so morally and spiritually poised, we cannot imagine a theatrical display of religious experience, for with such natures all experience is religious. But even in such souls, which are rare, there will be a continual broadening and deepening of the religious life, a something akin to the old theological idea of sanctification,—that clarity and purity of soul that seems to exist beyond the limits of human imperfection.

[*The Christian World*]

Nothing can be done with men communally until they have been effectively dealt with individually. It is when men's hearts have been set to the right tune; when they have been brought into a right relation with life's highest and holiest, and sworn allegiance to that; when they have learned religion's secret of faith and love,—it is only out of such materials that you can build an enduring, a happy world.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now for sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. *Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.*

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

"Das Heilen der Christlichen Wissenschaft ist geistig und wissenschaftlich" ("The Healing of Christian Science is Spiritual and Scientific"), a lecture by Prof. Hermann S. Hering, is published in German only and is ready for distribution. Forty pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1 but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, marbled edges, 95 pages, single copy, $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy, 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.***

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

NATIONAL.

A sweeping declaration in favor of the principle of government ownership of telephone and telegraph lines, and an assertion that the postal service now is self-supporting for the first time since 1883, are features of the annual report of Postmaster-General Burleson. He says that the government has demonstrated its capacity to conduct public utilities, and he is clearly inclined to the taking over by the post-office department of the telegraph lines, and possibly also of the telephone lines. Discussing that, the postmaster-general says:—

"A study of the constitutional purposes of the postal establishment leads to the conviction that the post-office department should have control over all the means of communication of intelligence. The monopolistic nature of the telegraph business makes it of vital importance to the people that it be conducted by unselfish interests, and this can be accomplished only through government ownership. The successful operation of the parcel post has demonstrated the capacity of the government to conduct the public utilities which fall properly within the postal provision of the Constitution. Every argument in favor of the government ownership of telegraph lines may be advanced with equal logic and force in favor of the government ownership of telephone lines. It has been competently decided that a telephone message and a telegram are the same within the meaning of the laws governing the telegraph service, and therefore it is believed that the statute enabling the government to acquire, upon the payment of an appraised valuation, the telegraph lines of the country, will enable the government to acquire the telephonic network of the country."

Final estimates of production and value of fourteen of the important crops which form a part of the enormous grand total, aggregating approximately nine billion dollars, of wealth produced on farms through the soil and farmers' live stock during 1913, have been announced by the crop-reporting board, bureau of statistics, department of agriculture. The figures are the official government estimates of acreage, production, and value, based on prices paid to farmers on Dec. 1. These fourteen crops are only a portion of the production of the soil, which approximates six billion dollars in value each year. The total value of the animal products of the farm is estimated at about three billion dollars annually.

"The production of crops in the United States in 1913 was materially below the average," the secretary of agriculture, David F. Houston, announces, "the yield per acre of all crops combined being smaller than in any year of the past decade with the exception of 1911. The corn crop, the most valuable farm product of this country, is smaller than any crop since 1903. Wheat production is the largest ever recorded in this country. The oat crop is the third largest of our history. The hay crop is smaller than the large crop of 1912. The cotton crop will perhaps rank fourth or third in size. The acreage devoted to corn, wheat, oats, hay, and cotton, comprises about 90 per cent of the area in all crops, and therefore has a predominating effect upon the general average condition of all crops."

Taking advantage of reductions under the Underwood tariff law, the navy has adopted the general policy of purchasing supplies in the markets of the world instead of only in America. The latest call for bids put out by the navy bureau of supplies and accounts is for one hundred thousand yards of dark blue cloth for trousers, jackets, and caps for enlisted men. While previous specifications for bids for that material stipulated that American wool must be supplied, in the present instance the specifications have no limitation as to whether it shall be domestic or foreign grown. Officials say the old tariff measure practically eliminated foreign bidders. The awarding of the contract for beef to Argentine packers several weeks ago, led to a substantial decrease in the bids submitted by American packers.

Because the completion of the one million-dollar endowment fund now being raised will not provide for all the needs of Wellesley College, it is announced that a second fund is to be raised for adding much needed buildings to Wellesley's equipment.

Raising the old battleship Maine from the mud of Havana harbor cost the United States $792,989, according to a report sent to the House of Representatives by the war department. The total appropriation was nine hundred thousand dollars.

The Panama canal was actually open from end to end Dec. 16. The dredges have removed the Cucuracha slide sufficiently to allow the passage of medium-size steamers.

INTERNATIONAL.

The opening of Parliament in Italy by King Victor Emmanuel in the hall of the Senate recently, marked the opening of the twenty-fourth legislature, but only the third session of Parliament since his accession to the throne in 1900. During the five years which have elapsed since the delivery of a speech from the throne, the Libyan war has occurred and universal suffrage has been adopted. To both these subjects reference was made by the King. With regard to home affairs, the King presaged democratic legislation, especially in connection with the development of primary and technical education. In order to give culture to the large mass of people who were enfranchised for the first time, it was necessary that vigilance should be exercised in the care of the country's artistic treasures. In connection with judicial legislature it was necessary that a reform should be carried out, giving women their proper place in the home.

The British battle-cruiser Tiger, known as the "mystery ship," was launched last week at the Clydebank ship-building works, where her keel plate was laid on June 20, 1912. Details of the new vessel have been carefully guarded. It is known, however, that her engines are designed to give the hitherto unattempted horsepower of 100,000, calculated to develop a speed which will eclipse that of any naval vessel afloat. Unofficial reports give the Tiger's dimensions as: Length over all, 700 feet; beam, 90 feet; displacement, about 30,000 tons. Her armament is said to comprise eight 13.5-inch guns, in pairs in turrets on center line, and twelve 6-inch guns in casemates, with two 21-inch submerged torpedo tubes.

The great scheme for the enlargement of Paris, which came as a complement to that proposed at the beginning of the year for the razing of the fortifications, will be considered by the municipal council shortly. The original scheme for the razing of the fortifications has already been passed by the municipal council, but Parliament has so far not given its sanction to it.

The forests of Norway are mostly in private or municipal ownership, the nation owning 28.5 per cent of the total forest area. The national forests of the United States occupy only about 20 per cent of the total forest area of the country.

Germany is said to have an oversupply of foresters, so that well-educated men have hard work to secure even inferior positions.

INDUSTRIAL AND COMMERCIAL.

An election for the voting on an issue of bonds for Ward county irrigation district No. 1, to the value of five hundred thousand dollars, to provide for the construction of a large irrigation reservoir at Sand Lake, ten miles north of Pecos, Texas, and the irrigation of several thousand acres of land, will be held next February, under the new irrigation district law. This district, which has just been formed, is one of the first to be organized under the new act and will pave the way for extensive development operations in other parts of West Texas.

Nearly twenty-four million dollars' worth of ships of various classes for the United States government, for the Argentine navy, and for private individuals and corporations, are being built, and are in various stages of completion at the Fore River shipyards at Quincy, Mass. The shipyards on the Delaware river, where besides Cramps' and the New York Ship Building Company's plants, there are several small yards, have a total of fifty million dollars' worth of work in hand.

Few industries in South Africa are making greater headway than that of dairying. During the last two years, creameries have sprung up in the vicinity of almost every large center, and the annual output of butter has been continually increasing. With the improvement in stock which has been proceeding, and the increased provision of winter feed, there is every prospect of dairying as an industry becoming every year more popular.

Ninety carloads of pecans—two million five hundred thousand pounds—were gathered in central Texas this year, for which the growers received approximately two hundred thousand dollars. Ballinger reported the prize tree, which netted its owner three hundred dollars.

The wheat acreage in Kansas this fall is estimated at nine million. This is a million and a half above the record.

A Broader Outlook

SAMUEL GREENWOOD

MORTAL thought revolves around the supposition that life is a creation or development of what it terms matter, and that man has therefore a material origin, personality, and environment. Limited by this belief to a material outlook, mortals mistake ephemeral sense-phenomena for realities, and submit to the reign of materialism as the divinely chosen means for governing the universe. Human passions and impulses, ambitions and desires, are the product of this false concept, the earth and heaven of so-called mortal consciousness; and only as this consciousness reaches through Christian Science a higher and broader view, do we begin to apprehend the wholly spiritual nature of life and its manifestations.

"Here [in the material sense of things] have we no continuing city," said Paul; hence Christians should not consider it their abiding-place, nor be influenced by the testimony of matter to the extent of feeling at home in it. We seek a city "to come," continued the apostle, not implying a future state but a change of consciousness. However, while we are satisfied with a purely material sense of health and life, happiness and prosperity, we are not seeking that spiritual habitation or heavenly consciousness spoken of in Scripture as "made without hands." Contentment with worldly success or ease is always fatal to Christian progress, for it is, in effect, a mesmerism in which one is oblivious to the presence and actuality of God's kingdom on earth, the reign of good in individual consciousness.

It were well to pause sometimes to ask ourselves what we are working for, what we hope to accomplish with all our days of labor and nights of anxious thought. What do we expect to have left in our possession for it all when the dream is spent? The days pass on in unbroken continuity. No matter how delightful may seem the hour of some cherished fulfilment, we may not prolong its passing or hold consciousness at that point, for we cannot stay the unfolding of human experience. The days continue their procession while mortals enact their little dramas, while they make and spend their hundreds or their millions, labor and plan to provide for present wants or a future of ease, and follow the line of their desire. Here it may be asked, To what is the passing of the days taking us? What is the end in view of our seeking and striving? A mere livelihood, the possession of money and lands, of temporal power and pleasure? What of good do we expect to retain permanently in our experience as the result of what we are now doing? Is our outlook confined to materiality that it occupies so much of our attention, or is there nothing more worthy than the attractions of the passing show for which we are willing to work?

Let us examine ourselves. Which appeals more strongly to us, the possession of material things, or the understanding and demonstration of divine Truth and Love? To drift aimlessly from day to day, with no conscious or directed effort to rise Godward, is equivalent to having no desire to be better than we are, or to achieve more good than we are now effecting. We do not rise higher than we look. When we journey with eyes to the ground, we miss the glory of the hilltops and the sunrise; likewise if we keep our gaze "on things on the earth," we are not in a position to see or to reach the heights of spiritual revelation toward which Christian Science is beckoning humanity. What we have learned of the nature of God assures us that if we will lift our eyes to Him, and be willing "to know no other reality . . . than good" (Science and Health, p. 242), then Divine Science, "the light of the knowledge of the glory of God," will illumine consciousness, and the shadows of a sinful sense will begin to disappear. It is this larger outlook which Christian Science brings, laying bare, as it does, the poverty of all that is material, and broadening human vision to perceive that the substance of life, on earth as in heaven, is spiritual and eternal.

The choicest of earth's treasures, wealth, honor, power, etc., have never helped mankind to a knowledge of God or prepared a single heart for heaven. To gain a loving and lovable spirit is worth more to a man, even in this life, and is immeasurably more substantial, than all that a material conception of being claims to bestow. A demonstrable knowledge of what God is, and of man's relation to Him as His image and likeness, will do vastly more to relieve the sense of poverty, or to fill the heart with love and joy, than all the gold on earth. Knowing that this is so, our chief interest should at all times be to gain more of the things that do not pass away, the things that are eternal.

It is not necessary to wait for some sharp experience to awaken us to the transitory and unsatisfying nature of mundane things. In Christian Science we may today see the horizon lift on a life which is spiritual, and find that broader outlook wherein earthly experiences shrink to their relative insignificance and we begin to recognize that man is essentially godlike. We read in Science and Health (p. 468) that "eternity, not time, expresses the thought of Life," and this fact applies to present affairs as truly as it will to those a thousand years hence. We are apt to regard our problems from a too narrow outlook, and to be unduly influenced by the circumstance or self-interest of the passing hour. That which a purely human view sometimes argues to be for our welfare, might prove to be not the best course when measured by its effect upon our future character and life-work. The development of our real character, the bringing to light of the true idea in us, is hindered as much by sins of omission as by sins of commission. To find the right view-point, we need to get away from selfish demands, and from the considerations solely of our immediate environment or circumstances, and see things in their relation to our eternal as well as to our temporal well-being.

For example, if we are called upon to perform some service in the church, or to forgive and forget a personal injury, a narrow view might argue, in the first case, that it is not convenient, that it will interfere with business, pleasure, or social demands; or, in the second instance, that it will humiliate and offend our dignity, or sacrifice what is our due, or expose us to misinterpretation, were we to meet the offender in love, or go all the way or even half-way in treating him

with self-forgetful courtesy and kindness. Well, it might do all that, but it has never been the nature of evil to make it easy for mortals to do right.

The question is not one of personal gain or loss, but of righteousness. Shall we order our conduct according to a selfish view, or shall we decide in the light of the larger good? To be sure, it might make little apparent difference to our immediate experience whether we obey the divine prompting in either of the above instances, and we may argue that it will be all the same in the years to come which course we choose to pursue: but will it? Will it be all the same to us, or will we accomplish the same degree of progress, if we do not do the things God calls us to do today and every day? Today's doings, our thoughts and acts, continue their influence, and will lighten the tasks of succeeding days or hinder progress until the evil has been eradicated. Hence the all-importance of obeying divine Principle in everything, in preference to our own selfish wills, since the freedom to demonstrate God's allness can be gained in no other way.

In the larger view which comes through the study and application of Christian Science, the relatively better things of human belief are not despised, but become subordinate to the student's spiritual welfare and progress. As we rise in consciousness to see the pettiness of earthly things, we come to appreciate, in some degree, our Leader's spiritual outlook when she wrote, in *The Christian Science Journal* of April, 1905, "This time-world flutters in my thought as an unreal shadow," as well as the exalted vision of the apostle who saw the passing of materiality, with all that belief in it implies, and the coming of the "new earth, wherein dwelleth righteousness."

A Lesson from Experience

WILLIAM M. WHITMIRE

Not the least among the many blessings which Christian Science has revealed to the world, is its disclosure of the impersonal nature of evil; and the illumination thus thrown on many passages of the Bible which have heretofore been more or less obscure, makes the Scripture more practical in its application to our present needs.

An experience which the writer had some months ago, illustrated evil's unreal and impersonal nature, and also gave him a much clearer concept of the meaning of a passage in the Bible which before had been clothed in considerable mystery. It occurred at the close of a day which he had spent in trying to help a near relative who was reported to be quite ill. In order to transact some business while waiting at a station, he went into a basement room where quite a number of men were gathered, who were using loud, obscene, and profane language. Primarily to prevent any disturbance of the work being done for the one who was sick, he immediately began to affirm very earnestly the ever-presence of God, good, the allness of Truth and the consequent harmony, also to deny the power or reality of anything in opposition thereto. Almost instantly the loud talk ceased, and during the whole time he remained, which was some thirty minutes, there was no more obscene or profane language used and no error of any kind voiced. So quickly and effectively had Truth's work been manifested, that the writer was surprised at the result, being rather inexperienced in resorting to the power of ever-present Mind as understood in Christian Science.

This experience revealed a new meaning to the words of Jesus to Peter shortly after the attack by the infuriated mob in the garden of Gethsemane, when he commanded Peter to put up his sword, saying, "Thinkest thou that I cannot now pray to my Father, and he shall presently give me more than twelve legions of angels?" Mrs. Eddy defines angels as "God's thoughts passing to man; . . . the inspiration of goodness, . . . counteracting all evil," etc. (Science and Health, p. 581). Jesus well knew the effective power of these "angels," if they were resorted to by him in that seemingly dark hour of his earthly career; he knew that these divine ideas could immediately quell the mob spirit there manifested, and thus prevent what the world regards as one of its greatest tragedies. But he did not choose thus to turn away from the supreme demonstration which was confronting him. A more important phase of truth was to be manifested; for the time had come when humanity was to witness the Master's greatest triumph, in which the wrath of man was not only to be brought to naught, but even made to redound to the glory of God and to the uplifting of the Christ-idea before the whole world.

Thus, through the better understanding which Christian Science gives us, we may often behold "the beauty of the Lord," and worship in His temple, finding Truth's sanctuary everywhere, even amid the clamor of mortal experience; for every knee shall be made to bow before the declaration of Truth's ever-presence.

Love's Endowment

ZONA BERG

God's perfect gift to man is man's unchanging perfection as His image and likeness. The Science of Christianity ascribes to God the origin of all that is good, and shows us that He is the creator of good only and that He made all "that was made." It is this joyous and inspiring fact of man's eternal sonship with God that makes the Christian Scientist so proverbially happy and free. He finds that since God is his Father, the giver of all good things, none of the supposed discords of material sense can have place in the true likeness of Him who "saw every thing that he had made, and, behold, it was very good." Logically, then, the human belief in the existence of evil, that which can be no part of God's creation, is the basic error underlying all mortal troubles.

In his Sermon on the Mount, Jesus gave out the somewhat startling injunction, "Be ye therefore perfect, even as your Father which is in heaven is perfect." This at once prompts the query, How is this possible? Christian Science replies: By knowing that God is infinite Mind, the source of all being, and that all His children, or ideas, are sustained, guided, and governed by Him; that there is no other source of existence than God, hence material existence is a false belief. Thus the way is paved for the perfect realization of true existence, which forever manifests the divine harmony.

St. Paul said, "Every man hath his proper gift of God." It is very comforting to know that every individual has his own particular gift or ability, for many may be led to believe they are worthless, good for nothing, because they suffer from some disability which seems to hamper their usefulness. As children of God we all have a work to perform, and no sense of error can operate to keep us from doing it. God's gifts are wholly spiritual, and they are best developed when consecrated to the work of helping men to know the truth of being, which annuls the sentence that would doom them to lives of uselessness. Many a man whose ability is not apparent, even to himself, needs but to be awakened to the truth about God and man. The belief that evil is a reality, precludes its destruction or elimination from consciousness, while the truth that good is all, when grasped by mortals, enables them to overcome the limitations and sins of the carnal mind.

Our great life-problem here, the importance of which

Digitized by Google

cannot be exaggerated, is to awaken from this belief of life in matter, and in the awakening to acquire for ourselves and impart to others the true Science of being. God being infinite intelligence, in whom are hid all the treasures of wisdom and knowledge, man, His child, cannot be ignorant or helpless, but shares in these inexhaustible treasures. God never made the supposed elements of failure which men have erroneously believed can combine to prevent their success. He never intended men to be failures. He made man in His own image, and gave him dominion over all the earth. According to the Declaration of Independence, "man is endowed by his Maker with certain inalienable rights, among which are life, liberty, and the pursuit of happiness." Leaving mortal conditions behind, we now have the privilege of entering into our inheritance of all that belongs to us as the children of God.

The Father's greatest gift to the world today is Christian Science, a gift that all who receive and understand are impelled to give to others; and thus it is redeeming humanity from sin, sickness, and death. In all parts of the world songs of gratitude are rising to God from those who have been freed from suffering and given back to usefulness. As students of Christian Science we are striving to delineate the Christ-ideal in our lives, and we must press on to the goal guided by "divine revelation, reason, and demonstration" (Science and Health, p. 109). The gaining of a larger, clearer thought of God, of Truth, brings us the realization of our true liberty, and helps us to assist others in gaining theirs. Mortal life is only a counterfeit of the spiritual life which is ours in Christ. In the second chapter of I John we read: "Love not the world, neither the things that are in the world. If any man love the world, the love of the Father is not in him. For all that is in the world . . . is not of the Father, but is of the world. And the world passeth away, and the lust thereof: but he that doeth the will of God abideth forever."

Our text-book teaches us that we need to gain the true understanding of God and man. Having found creation in accord with its creator, we find man to be like his author. He is not in a material body, for God is his Life. As the light of day speaks for the presence of the sun, so man, in the realm of Mind, "is deathless, spiritual. He is above sin or frailty. He does not cross the barriers of time into the vast forever of Life, but he coexists with God and the universe" (Science and Health, p. 266). The image and likeness of a perfect God cannot be less than perfect; and as we turn our thoughts from the contemplation of sinning, suffering, dying humanity, we perceive that the real child of God is as far removed from the material concept as is God Himself.

"Now," cries St. John, "are we the sons of God," even though "it doth not yet appear what we shall be." God's work is perfect, and harmony must be attained by all.

Head and Heart

RICHARD P. VERRALL

In ancient metaphorical language, especially in the Scriptures, the heart and not the head seems to have been regarded as the seat of thoughts and motives; hence we read in the Bible, "A good man out of the good treasure of the heart bringeth forth good things: and an evil man out of the evil treasure bringeth forth evil things." Nowhere in the Bible is the head referred to in connection with right thinking, although it is frequently used as an equivalent for false belief. In his second epistle to Timothy, Paul predicts perilous times that shall come when "men shall be lovers of their own selves, . . . without natural affection, . . . heady, high-minded, lovers of pleasures more than lovers of God." Modern physiology has reversed the relative duties of the head and the heart and now locates the intellectual activities in the head, while to the heart is assigned a purely mechanical function. In their present-day metaphorical use the head is thought of as the seat of the intellectual faculties, the heart, the seat of the affections and emotions.

According to Christian Science, in which all things are interpreted spiritually, religion is shown to be "of the heart and not of the head" (Science and Health, p. 140). Truth and love must therefore become deep-seated feelings of the inner man, and not merely beliefs or formulas for outer observance. The Scriptures are replete with urgent appeals to mankind to put away the "wicked imaginations" of the heart and to possess "an understanding heart." Jesus pronounced a benediction upon the spiritually minded or "pure in heart," and declared in plain language that "they shall see God." In view of this promise, the purification of the heart must naturally become the chief end and aim of all true Christians. It involves a complete reformation of the habits of the human mind and calls for a systematic practise of right thinking and living.

In order that the heart may be thoroughly cleansed of the manifold impurities of mortal belief, it is necessary to have a Principle and rule by which to distinguish between good and evil. Recognizing this fundamental need, and actuated by a great love for mankind, Mrs. Eddy labored for a lifetime to establish on earth a system of scientific religion designed to fulfil the twofold purpose of healing and teaching.

The gospel of universal salvation as taught in the Bible, and interpreted in Christian Science, is based upon the working out of one's own salvation. It does not in the least depend upon what others may be thinking about or doing to us, but it does most vitally concern our own thought and action in relation to others. In the chapter on Prayer in the Christian Science text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy clearly sets forth the vast difference between vain repetitions and the prayer of faith which heals the sick.

The really important question of spiritual growth is found, not so much in what one knows of the letter of Christian Science, but in how much of its spirit is being felt and demonstrated. The necessity of assimilating the Word of God in human consciousness is as important to the welfare of the inner man as digestion of food is supposed to be to the physical body. This process involves patience and perseverance; it requires constant application of divine Principle to the problems of daily life, and willingness to subordinate human inclinations to the spiritual ideal. In order to avoid extremes in conduct, we must not overlook the fact that Jesus fulfilled the law while demonstrating the gospel. He was subject unto his parents after having confounded the wise men in the temple; he suffered John to baptize him with water, although he knew full well what it means to be baptized by the Holy Spirit; he said that men should render "unto Cæsar the things which are Cæsar's," while he also taught that they should render "unto God the things that are God's." All this shows how thoroughly legitimate and temperate was his example.

In our day, Mrs. Eddy has admonished Christian Scientists to obey the statutes of the land, and she has wisely advised them to trust in God to save them from any bad effects resulting from obedience to public health laws. Realizing that God is the only power, she declares that "evil which obtains in the bodily senses, but which the heart condemns, has no foundation" (Science and Health, p. 448). Is it not therefore evident that the regeneration of the human heart under the influence of Christian Science should reveal in due time the perfect man referred to so frequently in the teachings of Jesus? This of course does not mean a perfect mortal man, for that would be a self-evident impossibility; but it does

Digitized by Google

mean that mankind will awake in God's likeness when they behold Him as He really is.

Writing to the church at Corinth, Paul refers to the brethren as "the epistle of Christ . . . written not with ink, but with the Spirit of the living God; not in tables of stone, but in fleshy tables of the heart." This is a remarkable illustration of Paul's advanced metaphysical perception, and shows how thoroughly he understood the process of mental regeneration through transformation of the heart. Surely no form of religious service can ever come closer to the fulfilment of the divine ideal than that which Jesus described as the worship of "the Father in spirit and in truth." Thinking truly about God and man and the kingdom of heaven must be a prerequisite to our becoming successful "ministers of the new testament," and the effect of this form of pure and undefiled religion is today being made manifest through "signs and wonders," as of yore. How sincerely grateful we should all feel that the Comforter is now here to emancipate mankind, and that they who have been touched with the spirit of Truth may sing, as did the psalmist, "I will praise thee, O Lord, with my whole heart."

✧

Seeming Standstill

ANNA GOERITZ

In a testimony meeting a lady expressed her gratitude for an experience whereby a seeming standstill in spiritual growth had become to her an incitement to greater progress. This thought was my companion for several days. Then I happened to turn over the leaves of a botanical book, when my eyes met the illustration of a corn-stalk in its various stages of development, and at once the above-mentioned thought became quite clear to me; the growing corn had become a symbol of our growth in the understanding of Christian Science.

When the young plant first leaves the ground, it springs up as a light green blade; but soon its growth is arrested, for it has to form a joint that shall become a support for the next section of the hollow stalk. After a little while this new piece stops growing so that a second joint may be formed, and the process is repeated as many times as is required to give the stalk its full height, which varies from one to two meters. Such a height is necessary in order that the stalk may present all sides of the springing ear to the sunbeams and so ripen into a perfect maturity. Without these supporting joints, which always seem to cause a temporary standstill in its growth, the stalk would never be able to bear the ear which in ripening becomes heavier each day.

This development typifies our spiritual growth. The first steps in Christian Science are generally fresh and light, but very soon apparent difficulties spring up, and our advancement is not so smooth as we thought it in the beginning. Then we have to learn that Christian Science makes demands upon us which we must obey if we want to pursue the way upon which we have entered. This may whisper discouragement, for progress seems to halt, and we see no possibility of getting on; but this very condition of mind turns into a blessing, if it leads us to enter upon a serious self-examination. The new demands are so much greater than those made upon us hitherto, that mortal mind is not able to fulfil them, indeed it can scarcely understand them, and we feel that we need help, since our human thought and will are no longer sufficient, as they seemed to be in former times, for the solution of our problems; but in the degree that this becomes clear to us, a feeling of humility takes its rightful place in our hearts, and humility is an essential condition for every progressive Christian Scientist.

Like a young child clinging in his sense of helplessness to the hands of his parents, we then stretch out our arms to our Father-Mother God, and never in vain; for divine Love always listens to true prayer and lends the helping hand, that we may rise with renewed strength to enter upon new growth. Unfortunately, however, we as mortals do not know how to cling steadfastly to the divine guidance, consequently very soon there come new trials which threaten to impede our progress. Again we have to discern our helplessness, have to learn that all our intelligence and strength are in God alone, that we are entirely dependent upon Him; and again we reach out for divine Love, which ever supports us and gives us strength to go up higher.

As a rule, there are many repetitions of these experiences in the life of every one, but though for the moment they seem to stay our progress, they can never really hinder it; rather do they become a means of education, since, recognizing more and more our own weakness as well as that of all humanity, we are ever and anon brought back to humility, till at last we are lifted up into a clear realization that God is our very Life. When this point is reached, we begin to grow steadily in the knowledge of God, which must purify, elevate, and strengthen all who are ready to bring forth the golden fruit of demonstration; for demonstration grows only out of the true knowledge of God and man's relation to Him, and it is inseparable from growth in Christian Science, just as the golden ear in its fruition is inseparable from the normal growth of the corn.

This lesson came to me a few days before I needed it most urgently for the solution of a certain problem, and I was the more grateful for it because it became to me a new proof of that abiding and inexhaustible divine Love which knows and meets our every need long before we ourselves have become conscious of it, as our revered Leader, Mrs. Eddy, has so comfortingly taught us.

✧

[Written for the *Sentinel*]

"The high and holy place"

LOUISA SWEET

Thy habitation, O most High,
Invisible to mortal eye,
To sense so far and yet so near,
The secret place,—Thy presence here.

In Scripture lore we read of Thee
Inhabiting eternity;
And yet Thou sayest Thou dost come
To dwell e'en in the humblest home.

No bound'ries mark Thy dwelling-place;
No eye can see, no hand can trace,
Nor time nor tide can mark our way
To Spirit's realm of endless day.

O God, exalted far above
All finite thought, Thy name is Love;
And Love through all eternity
Supplies man's need eternally.

O Spirit, Principle divine,
We know no other power than Thine;
No other love can us enthrall;
Thou art our Father, All-in-all.

Selected Articles

[E. M. Ramsay in *The Northern Chronicle*, Inverness, Scotland]

Christian Science claims to be a scientific explanation of the gospel teaching which enables the student to gain a much clearer conception of the nature of God, cause, and of man's true nature as God's child. It shows him that not only all the sin in the world, but also all the poverty, misery, suffering, and disease, are the direct result of weak, inaccurate, and sinful thoughts accepted. It teaches him to distinguish, with ever increasing accuracy, between right thoughts and wrong, and plainly proves that if he would be healthier and happier, he must think more truly, more justly, more honestly, must manifest more of the God-qualities, becoming kinder, purer, and braver. Thus the student of Christian Science finds that impure, dishonest thoughts are more destructive to health than impure air or adulterated food, and he becomes conscious, as never before, of the hideous nature of sin. But while Christian Science shows him this, it does not leave him there. It reveals to him the power, the omnipotence of good, its nearness, naturalness, and availability, and shows him how to begin to be transformed through the renewing of the mind.

Throughout Mrs. Eddy's writings she upholds the highest standard of morality, insisting not only on the outward observance of the ten commandments, but on that obedience of the heart which is inculcated in the Sermon on the Mount. In many American prisons her books have been warmly welcomed by the authorities because of the good effect they have had on prisoners. Numbers have been lifted out of sin by their teachings, and enabled to lead an honest and useful life; but, as Mrs. Eddy says in "Miscellaneous Writings" (p. 107), "without a knowledge of his sins, and repentance so severe that it destroys them, no person is or can be a Christian Scientist."

✧

[Editorial in *Portland* (Ore.) *Spectator*]

The remarkable growth of Christian Science has attracted the censorious attention of the Rev. Delmer H. Trimble of Centenary Methodist church, who in a series of three sermons has undertaken the task of destroying the work begun by Mrs. Eddy. The first of these subversive discourses was delivered on a recent Sunday evening; Christian Science continues to rest steadily on its firm foundation.

The reverend gentleman tells us that Christian Science is a pagan religious system that masquerades under the name of "Christian," and that it is not Christian. Very likely if it is pagan, it is not Christian; and yet its followers may be more Christian than is this critic, for no one, not even he, has ever heard any religion denounced in a Christian Science church; and he does not know any Christian Scientist who declares that his system of theology is the only true one, and that the believers in all other systems are doomed to the eternal pain of hell-fire. My imperfect acquaintance with Christian Science unfortunately comes from too infrequent meetings with those who believe in its teachings; but I have found them very sincere, tolerant, sympathetic, honest, and happy, and devout without being fanatic, a class of highly desirable citizens. From them one receives the impression that Christian Science, which the critic says is paganism, is a religion that may be practised elsewhere than in church, that is not out of place in the home or workshop or office or store, and that is serviceable during the whole seven days of the week.

Notwithstanding the reverend gentleman's somewhat unchristianlike attack, it would not surprise me if he and the Christian Scientists were traveling toward the same heaven by different ways. It may be that he is kicking against the pricks of the Christian Science theology rather than of the Christian Science religion. He is a theologian, and a theologian is one who is so furiously devoted to the letter of his own belief that he can see no good in the spirit of the other man's faith. When a preacher finds his audience yawning over his religious discourses, he begins to discuss theology, and puts his hearers to sleep.

Of course, this critic's ill-advised sermons will not hurt Christian Science. Under the unfair, bitter attacks of abler men than he, Christian Science progressed amazingly; when the assaults ceased, it continued to prosper. It is doing good in the world, and so is the splendid church in which the reverend gentleman is one of the preachers. If there were no evil to combat, if sin was no more, and the wicked had ceased from troubling, and if again "the morning stars sang together, and all the sons of God shouted for joy," then could the pulpits afford to war one with another; but while crime flourishes, and on earth there is no peace, it seems that among religionists whose object is the regeneration of the world, there should be harmony, agreement, and friendship.

✧

[George A. Law in *Waterbury* (Conn.) *Republican*]

The history of medical practise is a record of experimentation, during which almost everything on this globe has at one time or another been taken by mankind as medicine. It has been a continuous performance of discarding methods and remedies for others, these also to be in turn as promptly rejected, so that today it is impossible to point to even one remedy known to cure disease. In the face of this, we are asked to abandon all other methods of healing and establish *materia medica* as the only scientific method.

It is common knowledge that the ranks of Christian Science are recruited from the failures of *materia medica;* therefore it is patent to all that if *materia medica* had fulfilled its mission, there would have been no turning away from it. Christian Science is a revival of the spiritual healing taught and practised by Jesus, who healed all manner of sickness by applying the spiritual laws of life to human experience. Jesus knew that man was created spiritual, and that everything God made was good, as recorded in the first chapter of Genesis. He also knew that whatever did not measure up to the standard of good was no part of man's true experience, and therefore by a realization of the truth of being, the truth about God and man, thus eliminating illegitimate abnormalities, he healed sin and sickness, established harmony, and even overcame death and the grave. Inasmuch as the basis of Jesus' healing was an understanding of the absolute truth respecting God, His creation, and the spiritual laws governing same, including man, it can easily be appreciated that Jesus' healing was necessarily strictly scientific. Jesus was the one healer who knew no failure. It is beyond argument that those who show by healings already accomplished that they are striving to follow in his steps, should not be criticized for their efforts.

["Physician" in *The Morning Telegraph*, New York, N. Y.]

I wish to take this opportunity to speak a word or so of praise for *The Morning Telegraph*. Recently I was in a small city in Oregon, and the little weekly paper there had a reprint of an article from your paper on the subject of Christian Science. While I am not a member of that church, the article was so just and wholesome that it appealed to me. Why should people not have the right to follow their religious convictions if it results in better health and morals?

It seems to me that the chief antagonism to the Christian

Digitized by Google

Scientists is fostered by the American Medical Association. The recent shameful treatment of the Berlin physician, Dr. Friedmann, was also, it seems to me, engendered by their attitude. Despatches from Berlin now state that the Friedmann theory is being generally hailed as a boon to sufferers in Germany. Whether the remedy is a cure or not, does not justify the treatment accorded him. Physicians should be open-minded on all questions. Christian Science has stood the test for years. If it has curative qualities, I, as a physician, will certainly welcome it over the system which is now in a measure working in the dark. *The Morning Telegraph* is deserving of praise for its courageous stand on all public questions.

✧

[Charles I. Ohrenstein in *The Post-Standard*, Syracuse, N. Y.]

Christian Science has everything in common with all Christian denominations, going only one step farther in obedience to Jesus' command,—that of healing the sick through radical reliance upon God, as well as reforming the sinner. To charge, therefore, as does a letter published in your paper, any arrogance or pride to this denomination, is not warranted. Christian Scientists are indeed mindful that all that has been achieved for them is wholly due to God.

There is something that is due to the public, however. This something is to let no confusion arise as to what Christian Science is and what it is not. It is for this reason that corrections are made when Christian Science is classed with beliefs contrary to it. It should be understood that this is always done without any bitterness and without any feeling of being holier than others. It may be well to point out that Christian Scientists rest content with defining their own doctrine, and that without attacking others. This method seems to them a proper one for all to pursue. Those who have anything of real worth to offer will without doubt find this method a successful one.

✧

[From an editorial in *Fort Smith* (Ark.) *X-Ray Bulletin*]

With commendable zeal and enterprise the Christian Scientists of Fort Smith maintained a room on the fair-grounds in October, where all callers were welcome to free seats, free telephone service, and free literature. *The Christian Science Monitor*, one of the greatest, cleanest, and best daily newspapers published in all the world, together with several other publications, was given free to all who wished to read it. These people are not blatant proselyters, and they offered nothing for sale. They solicit no contributions from those who are not Christian Scientists, and they quarrel with no one on account of religious differences. They believe in the teachings of Mrs. Eddy even as the inspired revealer of the teaching of the Christ; even as Christ believed in the words of the inspired prophets of the older Jewish Scriptures. Whatever may be the differences of opinion on the subject of religion, the fact remains that this church is a silent but potent factor in shaping the lives and destinies of more than a million self-sustaining and respectable, honorable and industrious citizens in America,—a citizenship that does not contribute inmates either to dens of vice or to almshouses. As such, we respect them and wish them long life and prosperity.

✧

[From an editorial in *Buffalo* (N. Y.) *Medical Journal*]

A while ago we attended a Christian Science lecture, not because we are tending in that direction or "investigating" the subject, but because it is a good plan for every one to hear the other side rather than a reiteration of his views, whether they be political, religious, or philosophic. In one sense, the strength of any cult lies in its audience. It must be admitted that Christian Science is phenomenally strong in this respect. This audience was large, decorous, thoughtful, if not keenly and analytically critical. We met several friends and were introduced to several others deeply interested in the cause. One little thing impressed us forcibly: there was not a sign of the vulgar gloating over the presence of one of a different faith that is to be seen at many meetings, political, religious, and medical, and no hair-trigger proselyting such as mars the dignity of some churches. In other words, these people were too well-bred hosts to express surprise at the presence of a guest. However we may disagree with Christian Scientists, they are almost without exception gentlemen and ladies, and we like them in social life because they are not eternally fussing about their insides and tempting us to talk shop about their viscera, as do so many of our lay adherents.

✧

[George Shaw Cook in *The Daily Bulletin*, Bloomington, Ill.]

Referring to a letter in a recent issue from "A Bloomington Woman," I think her effort to prove our statements regarding the cause and cure of disease to be inconsistent, is not altogether successful. In the first place, she omits two very important sentences from one paragraph of her quotations from our former letter. We said, "Many types of disease are effects of latent fear, hereditary temperament, superstition, ignorance, or some of the generally accepted beliefs of the human mind which seem to operate as law." This was said in explanation of our previous statement that even according to Christian Science not all diseases are due to conscious fear or wilful sin. We then said: "Suppose a man is sick because of one or more of these mental causes, will drugs cure him? Is there any antitoxin that will destroy hatred, or any serum that will prevent fear?" Our critic omits these questions, which, when quoted with the context, make perfectly logical the subsequent explanation that, according to Christian Science, nothing will cure a man in these circumstances but the knowledge that God is Love and that man as the image of God can not and does not know fear or hate.

Nothing in the foregoing is inconsistent with the illustration used previously to show that according to chemical experiment many abnormal physical effects result directly from mental causes. The stumbling-block in the critic's way is doubtless her failure to appreciate the fact that we are speaking only of the relative when referring to disease and its supposed cause, whereas the statement that man is the image and likeness of God, or Love, is an absolute statement. Christian Scientists, in analyzing the nature of matter and evil as a temporal appearance, do not make a reality thereof, and know that they could not do so, for they understand, as Mrs. Eddy points out, that in reality, or in the absolute sense, "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468).

Christian Science makes no distinction between the so-called physical effect and the so-called human or mortal mind which causes it, but shows that one is merely the concept of the other, and that they are inseparable. It classifies the mortal mind and its phenomena as unreal in the same way that Paul did when he said, "For the things which are seen are temporal; but the things which are not seen are eternal." That the objection of the present critic is not a new one, is shown by the fact that Mrs. Eddy wrote many years ago on page 346 of Science and Health: "It is sometimes said that Christian Science teaches the nothingness of sin, sickness, and death, and then teaches how this nothingness is to be saved and healed. The nothingness of nothing is plain; but we need to understand that error *is* nothing, and that its nothingness is not saved, but must be demonstrated in order to prove the somethingness—yea, the allness—of Truth."

[John W. Harwood in *Observer and Times*, Accrington, England]

Your issue of the 4th instant contains a report of a lecture given by the pastor of a Congregational church on the subject of Christian Science. It is usual to expect a lecturer to be cognizant of the facts relating to his subject, but that such was not the case in this instance is very clearly shown in the unjustifiable and untrue statements which were made regarding Mrs. Eddy, the Discoverer and Founder of Christian Science. His assertion that "Science and Health is the Bible of Christian Scientists," is but one instance. The Bible, which many who are now Christian Scientists seldom opened before knowing of Christian Science, and which they now love to read and study because they are able, through the light thrown upon it by Science and Health, to perceive its more spiritual and infinite meanings, is the same Bible from which this pastor himself takes his texts each Sunday and gives to his hearers what he thinks is its meaning. If, as the lecturer asserts, this text-book, "Science and Health with Key to the Scriptures," has brought to the author a fortune, it must bear witness to the fact of its great usefulness to mankind.

The one thing the critics give Christian Science credit for is the one thing that is not warranted, namely, its insistence on the power of the human mind. Now Christian Science does nothing of the kind. The insistence, as set forth on almost every page of Science and Health, is upon the power of God, who, as defined by Christian Science, is "incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love" (p. 465). It is the revelation of the omnipotence, omnipresence, and omniscience of God, good, which exposes the impotence or nothingness of evil, including all disease.

That a minister of the gospel should emphasize the reality of evil and disease seems strange, for if disease or sin existed as a fact, or reality, it would be impossible through any system to destroy it. In Jesus' time diseases were known as devils, and Jesus defined devil, or evil, as "a liar, and the father of it," and said, "There is no truth [reality] in him." So when Christian Science relegates evil, including disease, to the realm of falsity, it is but following Jesus' example. The remedy that Christian Scientists use for casting out devils and healing the sick is the same as that employed by Jesus. He said, "Ye shall know the truth, and the truth shall make you free." Free from what? Free from believing a lie. Jesus came not to destroy the law, but to fulfil it, and in fulfilling God's law, sin, disease, and death disappeared, proving these conditions to be neither God-created nor God-permitted.

The critic implied that the acts of healing, etc., of Christ Jesus were supernatural manifestations at a special time, but this is not Jesus' teaching. He said, "He that believeth on me, the works that I do shall he do also;" and among other signs which he said should "follow them that believe," is the healing of the sick. He also said, "Lo, I am with you alway." Christian Science shows by its teachings and practise that the Christ is ever present, and able to heal all manner of diseases now, as in the beginning of Christianity.

It is irrefutable that there have been innumerable cases of the healing through Christian Science of all manner of disease, including those named by the critic. This is another evidence of the critic's lack of information. The Christian Science weekly and monthly periodicals contain testimonies of healing, and in all the Wednesday evening services testimonies are given. It is because of these, its practical effects, that the Christian Science movement is growing so rapidly. Our critic says that "the difference between Christ and Mrs. Eddy was that Christ never failed." Neither Mrs. Eddy nor any other Christian Scientist has ever thought of comparing her with Christ Jesus. Any failure to heal is due to the lack of that Mind "which was also in Christ Jesus," and in the Preface of her book Science and Health, Mrs. Eddy says of herself, that "today, though rejoicing in some progress, she still finds herself a willing disciple at the heavenly gate, waiting for the Mind of Christ" (p. ix). Does it not seem strange that a minister who assumes to preach Christ, and who denies the necessity for healing the sick, should magnify isolated cases of failure under Christian Science treatment, and yet pass by unnoticed the more than four hundred thousand deaths which occur in England and Wales every year under the care of physicians and surgeons? While this pastor would like the juries to bring the verdict of murder against some Christian Scientist who is endeavoring to follow Christ according to his command, he shuts his eyes to the impotence of material remedies as seen in the hundreds of thousands of deaths occurring annually in England alone. People are finding out that after all has been done, without avail, according to *materia medica*, they can be healed through the understanding of God as taught in Christian Science, and many of the adherents of Christian Science are those who have gone through this experience. When people have Christian Science treatment, they are using the most powerful agency in existence, that is, the power of God.

The critic is quite right in one respect, namely, that Christian Science is not faith-healing. Although Christian Scientists have faith, it is not the faith which people have in drugs, etc. The faith of the Christian Scientist is founded on a knowledge of the nature of God, of His infinite goodness and love, of His unvariableness. The interpretation put by the lecturer on the well-known saying of the apostle James, that "faith wthout works is dead," is I think quite original. "You must have faith," he says, "but the works were the skill of the surgeon," etc. Again I will put it to the pastor that this is not the teaching of James, for he says, "The prayer of faith shall save the sick."

Christian Scientists do not set aside the doctrine of atonement, redemption, etc., for the improved lives of Christian Scientists, redeemed from sin, are proofs of the efficacy of the atonement. Christian Science does not dishonor Christ, but is the demonstrable knowledge of Christ. It does not deny his divinity, but teaches that Christ is the Son of God. Its teaching regarding the nature of God and man is based on the Scripture. Jesus said, "God is a Spirit," and we read that God made man in His own likeness; hence the only conclusion to be reached is that man in his real nature is spiritual.

Before launching such an attack against Christian Science, it would be well for the critic to search the Scriptures and find out what Jesus really taught and what commands he gave his followers, and then see if he is in a position to condemn others who are healing in the name of Christ.

What is more wonderful than answered prayer?
  Is it the loveliness that clothes the earth,
  The birds' sweet music, springtime's joyous birth,
The wholesome renovation of the air,
Clusters of stars and starlight everywhere?
  Is it the sound of little children's mirth,
  A mother's love, or friendship's proven worth,
Or all of these and all that's truly fair?
A new-born child is clothed with wonder, clad
  With mystery, and beautiful are hands
    And lips that pray; but oh! the heart that lifts
Its voice affirming God is All, what glad,
  High wonder fills it! All it understands
    Blossoms in answered prayer, God's gift of gifts.

FREDERICK OAKES SYLVESTER.

Editorial

World Righteousness and Peace

THE individuality and universality of righteousness which is to usher in a world peace, the time when "every knee shall bow . . . and every tongue shall confess to God," had its beginning in what has been styled "the great commandment." He who taught mankind to pray, "Thy kingdom come. Thy will be done,"—the reign of peace,—declared this commandment to be the summing up of law and prophecy, namely, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself." Obeyed, it would be peace.

This, too, is the basic law of Christian Science. As Mrs. Eddy points out on page 26 of our text-book, "Science and Health with Key to the Scriptures," "Jesus spares us not one individual experience, if we follow his commands faithfully; and all have the cup of sorrowful effort to drink in proportion to their demonstration of his love, till all are redeemed through divine Love." Throughout Mrs. Eddy's writings, indeed, there is to be found, as of greatest importance, an insistent and persistent demand for individual righteousness. Nowhere does she intimate that the kingdom of God is to come through force of numbers or by vicarious effort. Neither does she hold out any hope that improvement or reform of social or governmental conditions is to be brought about merely by coercion or the enactment of some form of law. She knew that men who are honest simply because "honesty is the best policy," as the saying goes, are keeping the letter of the law, but ignoring the spirit. Such men are no nearer righteousness than are many who are not so outwardly circumspect in their relations with their fellows.

Mrs. Eddy writes on page 322 of Science and Health: "A man who likes to do wrong—finding pleasure in it and refraining from it only through fear of consequences—is neither a temperance man nor a reliable religionist." To carry this saying to its application to international peace, would be to say that the nation which refrains from war simply because of its direful consequences, is neither a safe neighbor nor an elevating object-lesson to the rest of the world. There must be a higher and better motive than mere self-preservation; rather, a desire for that brotherly love which is the natural outcome of obedience to the golden rule, and the ushering in of that universal harmony which is the establishment of God's will "in earth, as it is in heaven." This was recognized by Talcott Williams, dean of the school of journalism at Columbia University, when in a recent address on "Universal Peace" he said:—

> We comfort ourselves with the phrase that war is a necessary evil. There are no necessary evils. The only necessary thing in the world is righteousness, and the reason why deep down in the consciousness of men there rests unshaken and unchallenged the conviction that international peace is not for our day, is because international righteousness does not exist in our day.
>
> World peace can only come through world righteousness. The world will never become righteous through peace. Peace can only come through righteousness. Those who urge peace as a remedy and a cause forget that peace is only the visible sign of righteousness, and only when righteousness and peace have kissed each other will war disappear. While evil remains, conflict will remain. While evil exists, force must be ready. Alike, the providence of God and the law of man bring not peace but a sword for those who work iniquity. In the economy of man and the universe of God there is no peace for the wicked.
>
> War will not disappear through peace, but peace will appear through righteousness. All that brings justice and righteousness will bring peace, and all that hinders justice and peace continues war.

World righteousness and peace is far from being an impossibility, but its accomplishment must begin with the individual. In other words, there can be no enduring structure of national or international righteousness, unless the foundation therefor be laid deep and wide in individual righteousness. Christian Scientists often refer to our Master's saying, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," because they have found this fulfilled in their own experience. In seeking to know God and to be obedient to His will they have found health, happiness, and ever-present and omnipotent Life and Love. "The whole is equal to the sum of all its parts," and when the search for righteousness becomes as great a passion with all mankind as the search for riches and pleasure has become with so many, then indeed will the reign of universal peace be ushered in. It is to this end that all Christendom should bend its energies, for when, as Mrs. Eddy points out on page 22 of "Pulpit and Press," "the bonds of peace are cemented by spiritual understanding and Love, there will be unity of spirit, and the healing power of Christ will prevail. Then shall Zion have put on her most beautiful garments, and her waste places budded and blossomed as the rose."

ARCHIBALD MCLELLAN.

Progress and the New Year

SOME one has well said that "the new year should be a spiritual renaissance." Pleasure often marks a pause in our progress, a content with momentary satisfactions, and this is its greatest hazard. The genius of growth is discontent with anything less than the ideal; hence the worth of Young's counsel to reflection. Said he,—

> 'Tis greatly wise to talk with our past hours,
> And ask them what report they bore to heaven.

Thus will the backward look both qualify and quicken the forward, give that firmer poise and deeper penetration of thought which invests our steps with safety and leads to larger futures.

One of the chiefest gains of this reflection is a more intelligent grasp of inheritance. Noting what our forbears did with their relatively meager gifts, we are led to think of what they would have done had they possessed our resources and knowledge, and so are the better able to orb the achievement which it is ours to chronicle. This invariably makes one humble, and tends to interdict that unprogressive attachment to a present order which quite forgets that it was the product of some daring nonconformity. It was here that Mrs. Eddy showed her ability to turn reverently away from the formulas of her forbears, that she might be true to their spirit. In this also she was following the footsteps of the Master. He appreciated full well what devotion to the Mosaic order had meant to his people, and yet he as evidently saw that it must give place to a more spiritual concept of God and of man, of sacrifice and of service.

The form of its expression may vary, but the eternal facts of Truth remain to be understood in more saving relations, to be felt in a more searching and redemptive nearness. This always characterizes the true preacher and poet; he is the man or woman of vision, and is ever crying: "God made man free. . . . 'Where the Spirit of the Lord is, there is liberty'" (Science and Health, p. 227). This is the great lesson of Science, that every least good and true thing the past has brought us, is of enduring value, but that its imperfections and ills have no claim upon our veneration or tolerance. The history of the Christian church has again and again witnessed to a tenacious retention of that which had no semblance of worth or of right to be. How often has the inevitableness if not the legitimacy of the afflictive as well as the unuseful been maintained, and men have not only consented to but gloried in the fettering beliefs of the past!

Digitized by Google

Christian Science comes to declare that no imperfection, no bondage to material belief, no conformity for conformity's sake, has any right which the free man is bound to respect, but that every unideal habit, predisposition, tendency, and asserted law is to be regarded as an imposition, an enemy to the advance of truth. It teaches, moreover, that enslavement itself is a trifle as compared to our consent to enslavement. It is always the mental attitude that counts, and he who has learned well this single fact in Science, has not only right, but assured access, to the tree of life, every day of the new year.

This fact, that evil has no Principle, no law of continuity, and hence no inherent staying power, is one of the most significant truths of Christian Science, since it rebukes and must *ultimately break the hold* of that sense of inescapable subjection to human ills which is the arch-deceiver of all mankind. Kings' children are universally regarded as princes of the realm, and we have no thought that he who has inherited an earthly fortune can ever be in want of earthly things. Nevertheless, we have consented to a thousand limitations and sufferings, while calling the King of kings "our Father"! More than this, we have rioted in our inconsistency by declaring that the most despicable disabilities are the inheritance of every child of God! Christian Science commends itself as altogether commonsense-like in teaching that evil has absolutely no standing in good society, and hence is not to be received, however time-honored its credentials.

Heaven's gifts for the new year are only the good, the beautiful, and the true; and to this joy-bringing realization and demonstration his followers were specifically commended by the Master, when he sent them forth to preach the good news, namely, "Let your light . . . shine before men."

JOHN B. WILLIS.

Watchfulness

ALL through the Scriptures are admonitions to watchfulness, and nowhere do we find greater emphasis placed upon it than in the Master's own teachings, the nature of his warnings being twofold. He bids his followers guard against the approach of foes, and says by way of illustration "that if the goodman of the house had known in what watch the thief would come, he would have watched, and would not have suffered his house to be broken up." But this is not all,—he shows that it is no less important to watch for the coming of the divine idea, spoken of as the "master of the house." To be asleep in any sense when a message of Truth and Love is seeking admission to our consciousness, is a fatal error, and may mean the entrance of the foe that would break up the unguarded abode.

It was the wakeful and watchful shepherds who saw the first gleams of light on the Judæan plains, then heard the angelic message, followed by the full choir, singing, "Glory to God in the highest, and on earth peace, good will toward men." We would hardly venture to say that for nearly two thousand years no such song has been sung, but we cannot deny that it has been seldom heard, or if heard at all, heeded as it was by the simple shepherds. At the dawn of Christianity it meant much to be sufficiently watchful to see the light, then hear and heed the message, and it means no less in our own day. In her book "Retrospection and Introspection" (p. 23) Mrs. Eddy tells of the disappointments and dreariness of mortal experience, before the light of Truth illumined for her the darkness; then she says, "When the door opened, I was waiting and watching; and, lo, the bridegroom came! The character of the Christ was illumined by the midnight torches of Spirit. My heart knew its Redeemer." For her, the tireless watcher, the night was gone, and, to use her own words which follow, "Being was beautiful, its substance, cause, and currents were God and His idea." This did not mean that watchfulness was at an end. Rather did it mean that its purpose was more vital than before. It was no peering out into the darkness to ask, "What of the night?" Instead it was with spiritual sense quick to hear the cheering response, "The morning cometh."

Of old the shepherds knelt by the cradle of what seemed a helpless babe, one whose very life was threatened by a jealous and cruel king; but when a few years had rolled by, the needy and despairing knelt before the man Christ Jesus to ask for the divine gifts which he was so ready to bestow upon those ready to receive them,—sight to the blind, feet to the lame, health that no mere wind of material circumstance could sweep away, and life to those whom men called dead. Do we believe this? Yes, all of it; because, thanks to the gracious and glorious teaching of Christian Science, we daily prove the Principle of the Christ-healing, in things great and small, and know that greater and ever greater "works" will be ours, if we keep well in view the Saviour's command to his slumbering disciples, "Watch and pray, that ye enter not into temptation,"—the temptation of sin or sickness. If we fail to watch, our prayer is apt to be a cry for help, when the foe should have been kept without the citadel.

But let us not lay down our spiritual weapons at any stage of the warfare. We read that Peter slept when he should have watched, then denied the Christ; but he waked to watch and pray to such purpose that history holds no greater instance of heroism than his fearless and impassioned defense of John and himself, before the rulers, when charged by them with the offense of healing the lame man who lay at the "Beautiful" gate. With Peter watchfulness and prayer had reached the Science of being, and it was his fellow worker, John, who gave to Sardis the ringing message: "Be watchful, and strengthen the things which remain." If, as our Leader tells us, on page 95 of Science and Health, "the world is asleep in the cradle of infancy, dreaming away the hours," let those who are awake to Truth watch and pray, that the long dream may be broken and a welcome given to the Christ that forever heals and saves.

ANNIE M. KNOTT.

Among the Churches

Current Notes

DES MOINES, IOWA.—Another Christian Science church is promised for Des Moines in the not far distant future. Twenty thousand dollars, which will be the nucleus for the new structure, is already in possession of the present church officials for this purpose. The money is the donation of a late member of First Church of Christ, Scientist, who left a farm of one hundred and eighty acres to the church, and this property is valued at about one hundred and ten dollars an acre. At the present rate of growth, Christian Scientists of this city feel that a new church will before many months be a necessity. During the last eighteen months the Sunday morning congregations have taxed the capacity of the present large edifice on Eighth street, although when the building was erected it was supposed that it would meet the needs for years to come.—*The Register and Leader.*

AUGUSTA, MAINE.—The Christian Scientist society has purchased the lot on Bowman street where the Springer Airdome now stands for the site of its new church, which will be built within the next year. The lot, comprising two acres, was sold for three thousand dollars.—*Kennebec Journal.*

The Lectures

Wakefield, Mass.

A large and appreciative audience gathered in Wakefield Town Hall to listen to Virgil O. Strickler, who set forth the teaching and aim of Christian Science. The lecture was given under the auspices of First Church of Christ, Scientist, of Reading. Maj. H. W. Whitten presided, and made the following introductory address:—

Lack of understanding is the cause of all the evil in human experience. We try to measure God by human standards or comparisons, and fail miserably. God is infinite good, and in proportion as we recognize this fact, we experience good. Jesus the Christ said, "Ye shall know the truth, and the truth shall make you free." Christ Jesus told us what truth is, but many do not wish to receive it. It involves the giving up of too many pet beliefs; it requires self-surrender and self-effacement. The injunction to become as a little child is literal. The saying of Jesus, that having eyes ye see not, and having ears ye hear not, is as applicable today as when said by the Wayshower.

I know that even a glimpse of the truth will work wonders, and but for such a glimpse, I myself, instead of being here today, would long since have perished, a victim of drink. It is indeed a reason for great thankfulness that Mrs. Eddy was born to this age, that she might give us a clear vision and a correct hearing of Christ's teachings through "Science and Health with Key to the Scriptures."

Wakefield Evening Mail.

✧

Warsaw, Ind.

In the Circuit Courtroom, Judge Clifford P. Smith delivered a lecture on Christian Science to a large and interested audience. The speaker was introduced by Attorney Bertram Shane, who said in part:—

When I refer to religion, I refer to no particular class, creed, or nationality of religionists. My reference is to the great underlying Principle and object,—the doing of good, and the ultimate happiness and prosperity of mankind; for I take it that in this is encompassed all that true religion in its broadest sense contemplates. To my mind all true religious activity is for good, and all religious activity should be encouraged, whether its seat of operation be among the swarthy tribes of darkest Africa or in the lands of highest civilization and refinement,—this to the end that all mankind may be raised to the plane of most exalted ideals. Every word, every step, every accomplishment in this direction is something toward the solution of the great problems of life, toward the advancement of civilization, and toward the grand consummation,—the universal brotherhood of man.

Less than fifty years ago Mrs. Eddy, interpreting the Bible according to her belief in and understanding of it, originated and organized a cult styled by her Christian Science, and gave to the world publications which have worked wonders in the sphere of religion. In this brief period its effect has been powerful for good and world-wide in its scope, and of this work, of the practical workings of this great faith, we are to be told tonight.—*Warsaw Daily Times.*

✧

Saginaw, Mich.

Bicknell Young delivered a lecture on Christian Science at the Masonic Temple, and was introduced by James S. Symons, who said in part:—

Any message that promises more of happiness, more of contentment; that promises physical and mental health, the elimination of worry and unrest; any message that will tell you and me about this very desirable condition and how we may attain it ourselves, ought surely to be very welcome. Even those who do not grasp the fundamentals of Christian Science, those who do not accept its teachings, acknowledge that as a class Christian Scientists seem happier, more content, more well to do mentally as well as physically, than their brothers. As a gentleman said to me not long ago, "They have something the rest of us have not."

Christian Scientists do not believe in forcing or attempting to force their views upon any one. They realize that the greatest demonstration of the practical value of their religion lies in daily living according to its precepts, and in this way arousing in the mind of the casual onlooker the inquiry as to what this something is.—*Correspondence.*

✧

Dayton, Ohio

At a lecture on Christian Science in Memorial Hall, the lecturer, William R. Rathvon, was introduced by Fred. W. Fansher, secretary of the Dayton Chamber of Commerce, who said in part:—

I am not a Christian Scientist, and yet when I was in Boston last fall something led me to go to The Mother Church. As I looked over that vast congregation of five thousand or more, and listened to the singing of that great multitude, and heard the voice of the reader, I was convinced of the force and power of Christian Science. I enjoy reading *The Christian Science Monitor*, a newspaper that is without parallel in the world today,—clean, absolutely clean; a journal of uplift. At a national advertising convention held in Baltimore, "Truth in Advertising" was the dominant note. Since Feb. 26 this year, six states have passed laws against fraudulent advertising. Men and newspapers in their greed for wealth, have deviated from the truth. It is a shame to our civilization that it is necessary to pass such laws; but inasmuch as it is necessary, I am glad to say that I had at least some small part in securing the passage of a law in Ohio which makes untruthful and deceptive advertising a crime. How different are the *Monitor* and other Christian Science publications, which are truthful because it is their desire to be, not because they are forced to it!

Men and women, businesses, religions, cities, all have distinctive characteristics. When you think of Dayton you think of a city that is thoroughly alive, progressive, possessed of an active citizenship of indomitable courage and perseverance, happy, optimistic, all imbued with the idea that nothing is impossible, and that which ought to be done can be done. When I think of Christian Science, I think of a religion that is alert, progressive, happy, optimistic, and at all times soul-satisfying.—*Correspondence.*

✧

Ridgewood, N. J.

The Christian Science church was packed to the doors, many standing, at the lecture by Virgil O. Strickler. The introductory words were by Charles C. Fairchild, first reader, who said in part:—

In every civilized country in the world Christian Scientists assemble every week to study the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the Bible. Probably ninety per cent of those so foregathered have been brought into this new-old faith because they have been healed. Our answer to those who in ignorance say unkind things is, You need not worry, dear friend. If Christian Science is not true, it will pass as the breeze that ripples the

Digitized by Google

placid water's bosom; and if it be true, nothing shall avail to stop or hinder it.

One of the most beautiful things in present-day religious experience is the heroic, fast-clinging faith of the thousands of noble characters in the orthodox faiths. Beaten by disappointments, racked by pain, incapacitated by disease, and torn by the loss of loved ones, they have bowed to the storm, saying it is God's will, that they must not murmur; that they do not understand it, but the inscrutable (and if inscrutable, unknowable) God has some loving purpose. The message that you are privileged to hear tonight is, that it is possible to know the truth about God, and that so far as you know God you shall understand man,—His idea and image,—and that this truth will make you free.—*Ridgewood Herald.*

Chicago, Ill.

Dr. Elgin MaWhinney's remarks in introducing William R. Rathvon who lectured on Christian Science at Fourth Church of Christ, Scientist, were as follows:—

In the last analysis, the history of the human race is essentially the record of a ceaseless struggle for freedom. Everywhere and in every age the best thoughts of the clearest minds and the bravest patriots have been devoted to the cause of freedom, civil, political, and religious. With each victory came new ideals of freedom.

Scarcely had the smoke of battle which liberated the African slave, cleared away, when from the verdant hills of New England came the message of Mrs. Eddy to those in bondage to poverty, discouragement, sin, and sickness, proclaiming a new doctrine of universal freedom. Today hundreds of thousands of individuals throughout the civilized world have heard her message, and through the understanding of it have been emancipated from bondage to poverty, sin, and sickness, and in most instances after every other accredited method had failed. The marvelous growth of the Christian Science movement is therefore based on demonstration.—*Correspondence.*

Providence, R. I.

At the opening of the new edifice of First Church, at the corner of Prospect and Meeting streets, two lectures were delivered by Bliss Knapp. The attendance at the first lecture far exceeded the seating capacity, which is about twelve hundred. At the second lecture the church was well filled.

In introducing the speaker at the first lecture, Warren O. Evans, first reader, said in part:—

From the beginning of recorded history we may note that the one cry of the human heart has been to understand God. "Oh that I knew where I might find him!" has been the yearning of many a mortal, especially when the burden has seemed to be greater than could be borne. Thinkers in all ages have caught glimpses of the infinite, but in such a blind, indistinct way that they have been unable to hold to it. What the world needed was not mere theory as to what God is, but something practical, demonstrable; something that mortals could prove for themselves. Through the manifold experiences of that spiritually-minded woman Mrs. Eddy, there was presented to the human race a statement of what God is, and a statement susceptible of proof. Mortals are therefore no longer left in a maze of uncertainty, but in proportion to their fidelity to and application of these teachings they are able to handle every seeming problem of daily life.

In introducing the lecturer the second time, Mr. Evans spoke in part as follows:—

The question, What is God, and where is God, and what am I? is ever before the world. Many have passed it by, believing it to be beyond human comprehension. Others have endeavored in various ways to obtain a satisfactory answer. Yet with it all, nothing but confusion and defeat have followed. Of all the many beautiful words in the English language, none is sweeter to the poor hungering human heart than that of peace. Who has not, some time in his experience, longed for peace? Who has not searched for it, and when it seemed to be just within reach, found that it was not there after all?

We are all more or less familiar with the statement of the prophet Isaiah, when he said, "Thou wilt keep him in perfect peace, whose mind is stayed on thee." Now that is a most beautiful promise, but with a condition that has seemed difficult to fulfil,—that of staying our mind on God, or good. Not but that we earnestly desired to; the difficulty was to know how. Our great Wayshower, Christ Jesus, left us definite instructions how to live; yet the meaning was lost sight of through many years of darkness. But as a natural working out of God's law, the real import of these teachings was brought to view; and we have in the great discovery of Mrs. Eddy a definite Principle and rule whereby to find our real self. We are here to consider this subject, which has claimed the attention of thousands who have found through its study a clear road to an understanding of God, of Life.

Correspondence.

Lectures to be Delivered

Berkeley, Cal.—William R. Rathvon, High School Auditorium, 8 p.m., Jan. 6.

Beverley, East Yorkshire, England.—Col. William E. Fell, Assembly Rooms, 8 p.m., Jan. 15.

Burlington, Kan.—Clarence W. Chadwick, Newk's Theater, 8 p.m., Jan. 5.

Chicago, Ill. (Third Church).—Virgil O. Strickler, Church Edifice, Washington boulevard and Leavitt street, 8 p.m., Jan. 9 and 10.

Cincinnati, Ohio (First Church).—Bicknell Young, Music Hall, 8:15 p.m., Jan. 9.

Columbia City, Ind.—Bicknell Young, Tuttle's Opera House, 8 p.m., Jan. 5.

Detroit, Mich. (Second Church).—Bicknell Young, Detroit Armory, 3 p.m., Jan. 4.

Fresno, Cal.—William R. Rathvon, Barton Opera House, 8:15 p.m., Jan. 5.

Halifax, Yorkshire, England.—Col. William E. Fell, Victoria Hall, 7:30 p.m., Jan. 22.

Huntington, Ind.—Virgil O. Strickler, Huntington Theater, 8 p.m., Jan. 8.

Testimonies of Healing

[Translated from the French]

Words of thankfulness would be insufficient to express my gratitude for what Christian Science has done for me and mine. According to a physician's statement, my mother was afflicted with liver complaint, which often necessitated her staying in bed. She was unable to take any nourishment and had to submit to the régime prescribed by the physician. Moreover, her hands and feet were swollen. This condition made us all feel very unhappy, for even during the periods when she had no attacks we lived in a state of constant fear.

In 1907 one of my sisters who lived in Canada, and who is a Christian Scientist, came to see us. By her faith and her filial affection she succeeded in making our mother discard medicines and partake of all kinds of food, and taught her to have no fear save to offend God. Our mother was healed in a very short time, and at present, at the age of eighty-three, she eats and sleeps well, and her health is good. Last year, with the help of a practitioner, she even undertook a long journey to her native country, and she experienced no inconvenience, whereas formerly she could not stand the journey on the railroad.

As for me, I have been healed of a chronic disease which caused me terrible suffering. In 1911 my husband, who became afflicted with a very acute form of rheumatism, relinquished material means, after having followed the prescriptions of his physician without experiencing any relief, and turned to God as his only resort. Our faith, however, being insufficient, like that of Peter, we were unable to help him, and therefore decided to ask assistance from a practitioner. To the great surprise of all our neighbors my husband promptly rose from his bed of pain, and he has had no return whatever of the trouble since, although a relapse was predicted by all his friends. The result is, that today he is convinced, as are we, of the healing efficacy of Christian Science. We would not exchange the understanding we have of this liberating truth for any material treasures, however great. Every Sunday the members of our family come together and hold the Christian Science service.

Christian Science has brought a sense of great union and happiness into our family, and we feel that we can express our gratitude for the love and vigilance shown by Mrs. Eddy only by striving to put into practise the teachings contained in her book, "Science and Health with Key to the Scriptures," which embodies the spiritual teaching of Christ Jesus. My greatest desire is to see the light of Truth shine into all suffering hearts. It has been proved to us that divine Love always meets humanity's need.

MADAME C. RENAULT, Cloyes, Eure et Loir, France.

✧

Gratitude brought me into Christian Science,—not my own healing, but gratitude to God, and thankfulness to Mrs. Eddy, for the wonderful cure of my wife, who had been a sufferer from stomach trouble, nervousness, etc., since childhood. Her healing was simply miraculous; and thinking that it may aid some one afflicted in a similar way, I offer this testimony.

During our entire married life, my wife had been dependent upon *materia medica*. We tried several physicians, and although they did all in their power for her, she gradually grew worse, until her condition was alarming. Every few weeks she would have an attack, from which she would not recover for one or two weeks, and each repetition seemed to grow more severe. In the mean time she had undergone three surgical operations without any apparent beneficial results. One physician said that there was a physical defect which would require a capital operation to correct. I had become somewhat interested in Christian Science through witnessing the instantaneous healing of a friend, who was suddenly taken very ill while in my company, and who recovered after a few moments of mental work. This healing, to me, seemed wonderful, and I advised my wife to try Christian Science; but she would not consent, having no faith in it. For a period of about six weeks before taking it up, she suffered more than ever, and could not eat without great distress. Although we consulted our physician almost daily, he was unable to relieve her condition, which gradually grew worse.

Finally, as a last resort, she consented to try Christian Science, and a practitioner was called. The call was made over the telephone at three o'clock in the afternoon, and an appointment was made for the next day. When I got home, the evening after the practitioner was called, I found my wife feeling better than she had for months; and although we were both very glad of her improvement, we did not understand the changed condition. A week's treatment was given her, but the healing was instantaneous, and was brought about by the practitioner denying the error when she was called to take the case. My wife's experience was wonderful, and it showed the power of Truth to heal even before the practitioner saw the patient. All of the ailments to which she had been heir for so many years, vanished with but a few returns, and these were quickly overcome in Science. The healing referred to above happened over three years ago, and since that time Christian Science has met every demand we have made upon it.

I began to read the text-book after my wife's healing, and one day read on page 404 that the way to heal "an inebriate, a slave to tobacco," etc., is to convince him that "there is no real pleasure in false appetite." As I had been a slave to tobacco for over twenty years, what I read on this page appealed to me, and I gave it a good deal of thought. It was my earnest wish to quit the habit, and although I tried several times, I was unable to do so. However, on July 29, 1909, I was liberated, all desire for tobacco left me instantaneously, and never returned.

I cannot find words to express the gratitude which I owe to God, and my thankfulness to Mrs. Eddy for what Christian Science has done and is doing daily for me and mine; all I can do is to try hard each day to live the Christ-life as revealed in the Christian Science text-book, and which will speak more for the cause of Christian Science than any words I might utter.—H. E. MEGINNESS, Terre Haute, Ind.

✧

I am indeed grateful for what Christian Science has done for my family. In April, 1912, my wife was taken to the hospital while suffering from what the physicians said was an acute attack of appendicitis and peritonitis. Her condition was such that upon examination they decided it would be impossible to operate immediately. After a couple of days the surgeon who was called on the case said they would make the attempt, but on account of her condition they would be forced to do so under a local anesthetic. They made an incision, and near the appendix found a large growth, which seemed to be of a malignant nature, also symptoms of a disease of the kidneys; in fact, the condition was so serious that they could go no farther. My wife remained in a critical condition for a week, and they held out no hope for her recovery, as the obstruction was such that they could get no bowel movement.

Through a friend I was then induced to try Christian Science, all else having failed. That night my wife passed

Digitized by Google

into a state of coma, and the physician said he felt sure she would never regain consciousness, in fact doubted if she would live until morning. I went home very much distressed, and a friend who was there shared my sorrow; but late that evening the Christian Science practitioner was called up and treatment was given until half past one the next morning, when the obstruction of the bowels yielded, and the next day my wife was very much improved. In a short time she was taken home, but the growth in her side was still there, and the physicians said she would have to return to the hospital as soon as she had gained a little strength.

We called the practitioner to the house and soon had the satisfaction of seeing the growth pass away. The kidney disease yielded to the power of Truth, and not a trace of it could be found, even under a microscopical analysis. This healing took about six or seven weeks, but after that my wife was quite herself again, and as active as ever. Christian Science not only healed her at this time, but also cured her of a bowel disorder of long standing, and did the same for our baby one year old.

For these and many other blessings, I thank God that we were shown the way to His aid through the teachings of "Science and Health with Key to the Scriptures" by our beloved Leader and benefactress, Mrs. Eddy.

DON B. AMSDEN, Omaha, Neb.

✧

An early experience in Christian Science has always remained clearly in my thought, showing how God leads when we begin to reach out to Him. I had very little understanding of Christian Science, but had an earnest desire to know and follow the Christ in what appeared to me to be a higher way than I had thus far known. One day, while trimming my toe-nails, the scissors slipped and cut the flesh of the toe, and the thought came that serious results might follow. I recalled a newspaper article which I had read a few days before about a man of prominence who had a similar accident, and who in a few days died from poisoning. I tried to banish the fear from my thought, but in due time the same condition was manifested which had been so vividly pictured in the newspaper.

I strove to overcome this condition with my slight understanding, but when my mother discovered me examining the foot, she insisted on doing something; and as the condition grew more painful and alarming I allowed her to wrap the foot in cold compresses that night, and in consequence of the added fear I could not sleep. As the following day wore away and the foot seemingly grew worse, she urged me to call either a doctor or a Christian Science practitioner. We were strangers in this place, as we had recently come from Mexico; but I was eager to hear and learn more of Christian Science. This being Wednesday evening, I ventured to say that with my mother's help and the use of a large shoe I might go to the testimony meeting, and that as we went along we could look for a doctor's sign; but if we did not see one, I knew I had seen a practitioner's sign near the church. As I did really desire God's help, I found the Christian Science practitioner, who was ready and able to speak the word of Truth and cast out the error.

I was so uplifted by the treatment, and so interested in the words spoken to me afterward, that I had gone down the steps and part of the way around the corner to the church, talking eagerly to my mother, when suddenly I took her by the arm and said that I had forgotten about my injured foot. I went into the church and walked home after the meeting without pain or fear. The foot healed rapidly, with no further discomfort, and I have never again gone out looking for a doctor's sign to lead me to health.

I am very thankful to God for directing my faltering steps to Christian Science, and grateful for those He is appointing to do this healing work, thus leading us into a practical religion.—ALTA B. CHILDERS, Los Angeles, Cal.

✧

[Translated from the German]

I feel a great desire to give thanks to God for all He has bestowed upon me and my family through Christian Science. Four years ago I experienced wonderful healing in several instances of throat trouble and in various attacks of illness with my children in St. Petersburg. Still, I groped in the dark, although I felt at the same time that Christian Science must be the truth, the way upon which I might draw near to God; but despite the diligent study of the Christian Science literature I often experienced a sense of discouragement. Two years ago, while I was staying in the country, in very inharmonious surroundings, I began to correspond with a practitioner in Dresden, and with her first letter came a wonderful sense of enlightenment which I can hardly describe,—the sudden dawning upon thought of the unreality of all suffering. With the help afforded by her letters I was enabled to make demonstrations for myself occasionally, and since then discouragement has become a thing of the past.

In cases of severe illness we had absent treatment from the kind practitioner, while the communication was kept up by letter and telegrams; but the greatest demonstration was in the spring of 1912, when I experienced an internal injury, as I am led to believe, by removing a heavy bookcase. The suffering was dreadful, and during one whole night I feared I would die from weakness; but every time my husband wired to the practitioner I felt relieved and was able to sleep. Although it seemed, to sense, that the case might terminate fatally, we never thought of calling in a physician, and in two weeks' time I recovered my former health. Another instance where a severe illness was overcome through absent treatment occurred with our daughter, who was taken with a serious throat trouble; moreover, no one in the household was affected by the contagion.

We are also very grateful for the demonstrations in a financial way of the power of Truth. It is a wonderful thing to realize that we should indeed take no thought for the next day, but abide in the consciousness that our Father in heaven is mindful of every one of His children. I cannot recount the many cases in which we have applied for help to our faithful practitioner; I can only say that in the whole range of human sufferings and weaknesses there is none which cannot be made to yield to the healing touch of Christian Science. I wish to give thanks to our heavenly Father, and also to express gratitude to Mrs. Eddy, for having been so patiently and lovingly led out of disease and discord, on my way to God and to harmony.—FRAU ALLA POHLE, St. Petersburg, Russia.

✧

It gives me much pleasure to testify to the faithful work done for us in Christian Science. My little daughter was taken suddenly and violently ill with what was pronounced acute lung trouble. The fever was very high and she had hemorrhages. We called on a practitioner for help on Thursday evening, and before midnight the disease was arrested and the child was able to be up the next day. On Monday she returned to school, well! In the fall of 1910 this same child's health seemed to fail rapidly, and her appearance was such as to cause many remarks. Again we asked for help in Christian Science, and a few treatments brought a miraculous change. Even now people remark on how bad she looked at that time and how well she looks now. I feel that I could not have kept her with me had not the understanding of Truth

Digitized by Google

been so faithfully demonstrated. The case was past all material help.

I myself have had many a "cup of cold water" in Christ's name, and Christian Science has proved for me the power of divine Love to heal and to save. I lovingly commend it to any searcher after the Christ-healing.

MAE E. DESHAZO, Beatrice, Neb.

✧

I wish to express my gratitude for what Christian Science has done for me, and I hope that some one who reads this may be led to investigate the truth which makes us free, as Jesus promised. In the summer of 1909 I was healed of a severe stomach trouble, but was not then ready to accept Christian Science, so went on in the old sinful way. The next year I was taken sick with an internal disease, from which the doctors said I could not possibly recover without an operation, and that it must be performed very soon, since I could not live long as I was. Then a friend offered me Christian Science and went with me to see a practitioner. In a short time I was healed, not only of the sickness, but of the sin. Words cannot tell how grateful I am for the spiritual uplift which the study of Christian Science has brought to me. I am truly thankful to God for my healing, and also grateful to Mrs. Eddy for showing us the way to this saving truth.

SUSIE WETZEL, Chicago, Ill.

✧

The following instances of healing in Christian Science are given with gratitude. My little son developed measles, and the usual symptoms appeared. I at once telephoned for help, and on the second day the child was perfectly well and absolutely free. Again, during vaccination he did not suffer the least inconvenience. For myself, there has been treatment for influenza of a seemingly severe type, but at the end of one week the trouble completely vanished, and I was able during that time to attend to all my usual duties.

HELEN WOOD, Dublin, Ireland.

✧

For the realization of the power of divine Love which has come to me through Christian Science, I wish to acknowledge my sincere gratitude. As I look back over the past years I can see how one human experience after another, though many of them have seemed hard indeed, has brought me "new views of divine goodness and love" (Science and Health, p. 66). As a child I had an earnest religious nature and tried hard to be a Christian, but when I reached maturity I found my religious beliefs irreconcilable with reason, so I turned away from them entirely. Then followed a period of searching, of reading and reasoning in the vain effort to find a solution of what seemed the mystery of human life. Many things had occurred to make me bitterly unhappy. The laws of the material universe were laws of cruelty and injustice. I could see nothing but the pain of the world everywhere, with no sense in it or excuse for it, and, worst of all, no way out of it. I grew bitter and somewhat reckless, and tried to conceal my unhappiness under a mocking pride. I was ill when I went back to college for my third year, and had an attack of typhoid fever, which left me a physical wreck.

A year later I taught school, though I was not well enough to do so; but I forced myself on through will-power. After two years of teaching, during which I was experimenting with hypnotism in various forms, I had a complete nervous breakdown. For several years I had been trying one physician after another, and one course of treatment after another, but none of them had given me any relief, and I had grown worse until the collapse came. After a few weeks under a physician I was able to be about again, but was so miserable that I determined to try Christian Science. It would be pleasant to say that I saw the light at once, but such was not the case. The struggle was quite severe, but the few weeks' treatment I then received gave me so firm a faith that I could never let go.

Four years followed, during which I struggled along as best I could, reading and receiving many proofs of divine protection. I did not understand, but I tried to, and I prayed, "O send out thy light and thy truth: let them lead me; let them bring me unto thy holy hill, and to thy tabernacles." Those years have shown me that if we turn to God, no matter how blindly, divine Love shields us and cares for us. At last, after a very dark time, I was led to one who patiently and firmly set me straight. She helped me to lay down my human will and turn away from personality and formula to God; to know that He is able to manifest in our consciousness the truth we need, in proportion as we lay down self-will, self-justification, and self-love, and listen obediently.

Christian Science has furnished me the solution of the mystery of life and has given me practical means for overcoming the belief in evil. I am no longer hopeless or helpless. The cry of the world's pain which once rang so despairingly in my ears, is now only a call to greater effort and more consecrated service. More times than I could tell have I seen pain, suffering, and sin go down to their native nothingness before the power of God, and I know that this warfare will go on until the world shall be redeemed. Each has his part to do in the work; first, in correcting his own erroneous sense, and as he is freed, in helping to free others. As we find peace, or harmony, of thought, we find health of body, for health is a mental condition of harmony.

In the light of experience I increasingly appreciate the loving sacrifices, the wisdom, and the patient efforts of Mrs. Eddy, through whom this age has been so blessed.

EDITH VAN VALKENBURGH, Grand Rapids, Mich.

✧

It is now over six years since I became interested in Christian Science, and it has never failed to solve my problems when properly applied. I was healed of a nervous and stomach disorder from which I had suffered periodically for a number of years. The attacks would come suddenly and last a week or ten days, during which time I could not eat and had to endure a great deal of pain. After taking up the study of Christian Science, this condition completely disappeared and has not returned. Everything I am and have I owe to this wonderful understanding of divine Truth.

I am grateful for the physical healing, not having had a doctor nor having taken any medicine of any kind in all these years; but I am far more grateful for the understanding of divine Principle that I can live and use every minute of the day. It has helped me in business and it has made me happy and content with what I have; whereas I used to be in a very unhappy and discontented state. Now I live each day as it comes along, relying entirely upon divine Love to lead me where only good abounds.

I am deeply grateful for all that Mrs. Eddy has done in pointing out the way.

HARRIET A. RODGERS, Brooklyn, N. Y.

✧

It has been my desire for some time to tell of the benefits which myself and family have received since we have had help in Christian Science. I came to Science not for physical healing, but for something that would give me peace of mind, and I have received this to such an extent that those who have seen some of the discords I have had to meet have been surprised

Digitized by Google

at my calmness and peace in passing through these trials. I am deeply grateful for this, and it proves a favorite text in the Bible, which says, "Thou wilt keep him in perfect peace, whose mind is stayed on thee."

During the four years that we have had Christian Science in our home, Truth has met and overcome all sorts of sickness and discord. This last winter, when I seemed hard pressed by discordant conditions, such as various sicknesses manifested by the children, I was grateful that we were not compelled to rely upon nauseating medicines or to watch the weather-vane for any change in the wind for fear of bad results. We can never cease from giving thanks to a loving Father "who healeth all thy diseases," and to our beloved Leader, who made the way clear to us that we might be both happy and healthy. If this testimony has given hope to any seeking the truth, I shall be glad indeed that I gave it.

MRS. FRANCES RUSSO, Oakland, Cal.

✧

I am grateful for many blessings that have come to me through Christian Science. I became interested in it three years ago. I had been a sufferer for many years from nervous trouble and had consulted many physicians. I have been healed of stomach trouble of many years' standing, also of deafness in one ear, of bowel trouble of about two years' standing, of very severe nervous headaches, of colds and rheumatism, and I have gained greatly in weight. Some of the healings took place in one treatment. I have also realized spiritual healing, for which I am most grateful. I study "Science and Health with Key to the Scriptures" by Mrs. Eddy with the Bible, and go over the Lesson-Sermon every day. I am humbly trying to show my gratitude for what God has done for me through Christian Science.

IDA L. MELTON, Kansas City, Mo.

✧

I am truly thankful for the opportunity to express my gratitude for the help I have received in Christian Science. I have been healed of bad headaches and nervous spells. My little girl was healed of bowel trouble, and my son of a badly injured arm, caused from being hit with a baseball. Several cases of measles were met and overcome in a few treatments, and the children were soon up and at play. I am indeed thankful to God for sending us this healing truth, and for all the blessings I have received.—LAURA LEE, Laurel, Miss.

[Written for the *Sentinel*]

To Solitude

MARY TROXELL

"THE world is too much with us; late and soon."*
We fain would pass within the temple gate,
Where in deep solitude, God's gracious boon,
We lose earth's senseless dissonance and hate.
Then, as the trav'ler on some mountainside
Sees through th' enshrouding mist the gleam of light
That, first dispelling gloom, shines far and wide,
Bathing the blue-crowned peaks in radiance bright;
So, listening in the solitude, we hear,
Like some sweet far-off melody, a voice,
Then, full-toned harmony in choral clear
That in majestic pæan swells,—"Rejoice!"
"The world is too much with us," soon and late;
We fain would pass within the temple gate.

*Wordsworth.

From Our Exchanges

[*Western Christian Advocate*]

The nineteenth century immortalized itself by its inventions and discoveries. But the rediscovery of the heart, scope, and mission of Christianity was its greatest achievement. It returned to the main thought and teaching of Jesus concerning the kingdom of heaven. Upon it broke the glorious meaning of the prayer: "Thy kingdom come. Thy will be done, as in heaven, so on earth." Religion, no longer a limited department of life, was perceived as entering into life as a whole, and giving shape, significance, and impulse to all earthly activities, personal, domestic, social, industrial, professional, governmental. No longer narrow and individualistic, but universal and corporate, there was nothing human that did not concern it. This inspiring conception changed the whole front of the church's attitude toward the world.

Its functions, therefore, were widened inconceivably. Its calls to service surpassed enumeration. The decalogue was seen to embrace as many commandments concerning man as God; the Sermon on the Mount to relate chiefly to earthly relations and responsibilities; religion to be not, first of all, a preparation for a life hereafter as much as for the life that now is; the Bible to be a book for the living even more than for the dying. The new conception, this return to Christ and his gospel, brought about a thorough revolution.

Christian doctrine had to be redefined. Our earthly life was more than a specific probation for after-death existence; it was the beginning of an educational process, moral, spiritual, and forever continuous. The incentive to repentance was not simply to avoid a future hell and attain a future heaven, but to respond to Christ's challenge, "Repent: for the kingdom of heaven is at hand," the chance and hour for all self-denials and heroisms. It enlarged the idea of conversion, saying, "When thou art converted, strengthen thy brethren." It presented salvation not as something beyond death and the grave, but as a rescue from the flaming pits of present, soul-destroying iniquities, and the entrance into a present paradise of virtue and holiness.

[*The Watchman-Examiner*]

Putting ourselves back into the time of Matthew, it is clear that here we have the thought of God with men made impressive by incarnation. The child to be born was the real Son of God. The language of Matthew could convey no other meaning to the people of that age than that God was his Father. . . . The child in Matthew is of a nature that makes a life of great significance and unusual conditions inevitable, and fully justifies the later developments of the idea of Jesus Christ in his disciples and in the New Testament writings.

The next stage in the development of the idea of Emmanuel, "God with us," is supplied by Christ Jesus himself. In his life on earth he was subject in large measure to human limitations. In excessive labors he became weary; he could command the attention and confidence of but a limited number, even by his miracles; and, above all, he could reach by his human presence only a very small portion of the people of the earth. So, as he said, it was expedient for him to go away, and in his absence the Comforter, the Holy Spirit, would come to take his place and carry on his work. The great advance in this development of the idea of "God with us" is that the work of the Holy Spirit is both spiritual and universal. He deals with the secret hearts and consciences of men, with a power not available to any external means; and

Digitized by Google

he is at all times active in searching for the salvation of all men everywhere. Christ made the idea of God with men universal and timeless.

Modern religious thought has not risen higher than the thought of Christ, but has developed that thought to make it more real and personal. The modern doctrine of the divine immanence is but an expansion of the idea of God expressed by Isaiah, and is the full realization of the teachings of Christ concerning the Holy Spirit. Religion can go no farther; and, as argued by Prof. Rudolph Eucken, Christianity is the supreme and final religion because its highest ideal is the perfect union of the human and the divine, as realized in Jesus Christ and as possible to all.

[*The Continent*]

The Almighty Father in heaven is He whose will cannot be defeated. That foundation stands as sure when the clouds are dark as when the sun shines. And that in substance was what the courageous and unfaltering Jesus of Nazareth said to the multitudes that springtide day on the shore of Gennesaret. He had been given a message from his Father, a task to do, a purpose of eternal providence to accomplish, and the Father would not let it fail: "All that which the Father giveth me shall come unto me." It was the Lord Christ's own echo of the glorious confidence which the Spirit of God taught centuries before to the prophet who beheld in vision the suffering and triumphant servant: "He shall see of the travail of his soul, and shall be satisfied." It was the same mystic rest amid conflict, and sight through darkness, and steadfastness in calamity, that humanity achieves when it accepts the one faith which includes all other faiths,—trust in the beneficent and sufficient omnipotence of God. From all the world's history past and unto all the world's history future, the one mold and matrix of heroism and grandeur among men is and must ever be this vital sense of a sovereign God. It was so with the Son of God on earth. It is so with earth's own lesser sons.

[Rev. R. A. Dunlap in *Hartford Seminary Record*]

If it was the spirituality of Jesus which gave to his leadership its spiritual quality and meaning, it was the human in him which gave reality and power to his leadership. Had it not been for the depth and breadth of his human nature, I cannot conceive of his having become a leader at all. This gave him his hold on the thoughts of men, his power to appeal to their affections. This enabled him to sow the seeds of the kingdom through Palestine, so that after Pentecost his apostles might reap the results in the formation of the Jewish Christian church. This enabled him to win and hold that group of disciples without whose faith and affection all his work would have been lost. And it is this, the richness of the human in him, which wins to himself the faith and love of Christendom today, giving the spiritual in him a chance, making possible its vital and saving power.

[*The Christian Register*]

The extraordinary vitality of the books of the Old and New Testaments is owing in part to the lofty tone of the descriptions of human opportunity and dignity with which they abound. Men are called "priests of the Lord," "ministers of God," "children of the Highest," "laborers together with God," with many other terms of dignity. One of the most wonderful manifestations of the divine goodness is seen in the fact that the thankful disposition is so often found in those who have come through great tribulation; the most joyful prayers and psalms have always come out of the depths.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

"Das Heilen der Christlichen Wissenschaft ist geistig und wissenschaftlich" ("The Healing of Christian Science is Spiritual and Scientific"), a lecture by Prof. Hermann S. Hering, is published in German only and is ready for distribution. Forty pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, marbled edges, 95 pages, single copy, $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy, 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.***

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

NATIONAL.

The United States circuit court of appeals has decided that the Waltham Watch Company of Waltham, Mass., cannot force Charles A. Keene, a New York jeweler, to stop selling their watches at cut prices. The court affirmed the decision of the federal district court without opinion. Keene bought the company's watches abroad at a price lower than that charged by jobbers here, and sold them for less than the price set by the manufacturer for the domestic retail trade. The decision is in line with recent judgments of the United States Supreme Court that the manufacturer of a patented or copyrighted article cannot fix the retail price.

It is announced by Attorney-General McReynolds that an agreement between the United States government, represented by the department of justice, and the American Telephone & Telegraph Company makes unnecessary a federal suit to compel the corporation to dissolve into its integral parts. Competition is possible under the terms of dissolution voluntarily proposed by the telephone company, for it agrees to dispose of its holdings in the Western Union Telegraph Company. Department officials say that the plan gives the government everything, and more than it could have hoped to obtain in court.

After a three and a half years' cruise about the world, during which she traveled ninety-three thousand miles, the non-magnetic yacht Carnegie, of the Carnegie Institution at Washington, dropped anchor a few days ago in Erie basin, South Brooklyn. During every day of her trip scientists aboard the yacht took magnetic observations, and they brought back with them records of important errors, particularly in the charts showing the compass variations over the Indian ocean.

President Wilson on Dec. 19 signed the Hetch-Hetchy bill granting a public water-supply to San Francisco. He accompanied his signature with a statement declaring that he believed the public needs of the region concerned were served by the bill without impairing the usefulness of the public domain. Asserting that the Hetch-Hetchy water grant was passed "by the most insidious lobby ever assembled in Washington," Senator Works of California has introduced a bill to repeal it.

President Wilson signed the measure known as the federal reserve act, at 6.01 p.m., Dec. 23. In an extemporaneous speech he expressed his gratification at the legislation which he said would furnish "the machinery for free and elastic and uncontrolled credits, put at the disposal of the merchants and manufacturers of this country for the first time in fifty years."

Approximately seven hundred thousand passengers were carried for every life lost on steam vessels in the United States during the past year, according to the annual report of George Uhler, supervising inspector-general of the federal steamboat inspection service. More than three hundred million persons were carried on vessels required to report.

Plans have been completed and the directors of the port of Boston have called for bids for constructing a good-sized railroad yard near the Commonwealth and fish piers at South Boston, a project which it is expected will cost about one hundred thousand dollars.

According to a compilation just completed, the gifts for charity in the United States during the last twelve months amount to $80,135,476.30.

INTERNATIONAL.

The newly formed British Imperial Council of Commerce consists of representatives of chambers of commerce and boards of trade belonging to the empire as well as of some belonging to other countries. Among the countries represented on the council, which already comprises one hundred and fifty members, although its constitution was only recently decided upon, are Scotland, England, Wales, Ireland, India, Burma, Australia, New Zealand, Canada, South Africa, the West Indies, and the Federated Malay States. Paris, Brussels, Constantinople, Genoa, and other foreign towns are also represented. The main purpose of the council is to act as a central and permanent link between the commercial bodies of the empire and to collect and organize information with reference to the development of the different parts.

The minister of public works of Cape Colony, South Africa, in the course of a recent speech, said that within the last three years nine hundred miles of new railways, two hundred and sixty-two new post-offices, and one hundred and eighty new telephone exchanges had been opened in the Union, and there were forty-two thousand additional depositors in the post-office savings banks. During the same period five and a half million pounds had been spent on public works; fifteen hundred and twenty-eight people had been settled on the land, covering an area of four million acres. By means of irrigation, large areas of land would be available for settlement.

The British colonial office recently stated that during its tour in Australia the dominions royal commission made extensive inquiries with regard to the possibilities of the commonwealth as a cotton-producing country, and the members were much impressed with the natural advantages of the northern part of the continent for cotton growing. Before it left Australia the royal commission received from the then prime minister a promise that the commonwealth government would assist in any attempt to establish the industry.

An agreement for the construction of two railroads in China by German engineers, who are to utilize purely German materials, and capital for which is to be provided by German financiers, has been signed by the Chinese foreign minister and the German minister to China at Peking. The cost of the two undertakings is estimated at twenty million dollars, or somewhat less.

After years of bickering it seems at last an assured fact that Guayaquil, Ecuador, is to be put into a wholesome condition. Shipping has increased rapidly, and the city is now much frequented by merchantmen from all parts of the world. Ten million dollars is to be expended for the purpose.

The international commission for the delimitation of the Albanian frontier has unanimously decided to accept the decision reached by the London conference.

The Peruvian government has presented to its Congress the budget for 1914, showing receipts amounting to $17,739,180 against expenditures of $15,549,180.

The Italian ministry of finance has announced in the Chamber that the war in Tripoli cost Italy one hundred and ninety-one million dollars.

INDUSTRIAL AND COMMERCIAL.

The tunnel through Mt. Royal at Montreal has been cut. It is three and one third miles long, and was built for the Canadian Northern Railway Company. Within a year, it is expected, trains will enter the city through the tunnel instead of making a détour around the mountain. The cost of the Mt. Royal tunnel is conservatively estimated at twenty-five million dollars, and in addition the Canadian Northern railway is likely to spend a large sum of money on improvements about Montreal.

After nearly three years of experimentation a manufacturing company has perfected, it is claimed, an apparatus which practically eliminates the smoke and cinder nuisance. The smoke, laden with cinders, coming from the fires which heat huge boilers, is driven at high speed through a sheet of water. By this process practically all of the material which constituted a nuisance is deposited in a big water-tank.

Construction of the huge Bassano dam across the Bow river, in the vicinity of Calgary, Alberta, by the Canadian Pacific Railway Company, has been completed, and as a result of its opening, one million acres of prairie land previously looked upon as of little or no use for agricultural purposes is placed under irrigation.

A railroad company has set aside one hundred and twenty-five acres near Des Moines, Iowa, as an experimental tract for the propagation of catalpa trees, the purpose being to ascertain the commercial value of the timber used for railroad ties and other purposes.

Financial arrangements have been completed in England to build the Alberta, Peace River & Eastern railway, from Hudson's Hope to the Pacific ocean, twenty-three hundred miles, by way of Edmonton and Peace River Crossing, with a branch line to Ft. McMurray.

Sugar-cane in Argentina this season is expected to yield two hundred thousand tons of sugar, the largest crop the country has had.

Much of the cork used throughout the world comes from Portugal, which harvests about fifty thousand tons a year.

Paraguay has valuable forest resources, the most important of which is quebracho, particularly rich in tannin.

Protection

WILLARD S. MATTOX

ONE of the greatest services that Christian Science is performing for the world today, is by way of prevention. It is very generally conceded that Christian Science heals and reforms, but less is known about its inestimable value as a preventive of sickness and misfortune. There are unwritten chapters in the lives of Christian Scientists which, if they could be known, might amaze the world; a record of events which proves the loving care and guardianship of our God, infinite Mind.

A homely philosopher has shrewdly observed that "foresight is better than hind-sight." It is an act of wisdom to know in advance what are the designs of error, and what it is best to do in order to thwart its asserted claims. The blow that is foreseen and evaded, ceases to be a menace. It is good military tactics to discover the enemy's plans before they are executed. Many a battle has been won before it was fought. This is just the difference between what humanity generally understands to be protection, and the Christian Science interpretation of this important function of Providence. One is usually *post facto*, the other is before the event, and coming first, this kind of protection is practical and worth while, because it abolishes the belief that there is anything from which we need to be protected. Mrs. Eddy's answer to the question, "Would you have me get out of a burning house, or stay in it?" emphasizes the scientific nature of the protection afforded by Christian Science. "I would have you already out," she says, "and *know* that you are out" (Miscellaneous Writings, p. 235).

In ancient days, when the moral concepts of the human race had risen no higher than the doctrine of "an eye for an eye, and a tooth for a tooth," cities of refuge were provided, where a man might seek safety from enemies and where his person was held inviolate. As moral ideals improved and advanced, the sense of protection from enemies became dematerialized, and we find the psalmist voicing a great spiritual truth in the ninety-first psalm,—"Because he hath set his love upon me, therefore will I deliver him." Because man's trust is in God, in good, he is protected, and protection thus becomes a mental state rather than a material place of safety. The psalmist makes it plain that man's safety is in Mind, and not in any material modes or means of protection. We learn in Christian Science that its treatment means protection, and it also means abiding in the consciousness of God's allness. God is wholly responsible for man, for all that he undertakes, for all that he is or does. God, through His laws, orders and sustains all of man's activities, and therein lies man's constant protection.

This scientific statement of the relation of idea to Principle, of creation to creator, uncovers and exposes the fallacy of the belief that there are laws, motives, impulses, or causes that are at war with man or are hostile to his well-being. Protection is the absolute conviction, based on an illuminated spiritual understanding, that God is the only power, the only cause, the only lawmaker, and that He is the supreme and only governor of all that really exists. Mortals declare themselves to be constantly in need of protection, and the customary human instinct is to resort to a person or place for aid in times of trouble. Drugs are relied on to preserve health; human laws and the law's agents are depended on for protection from injustice, dishonesty, or whatever asserts its ability to work mortal man's undoing. Mortals insure themselves against fire, accident, and death, in very much the same way that our prehistoric ancestors fled to the walled "cities of refuge."

The difficulty about the human theory as to what constitutes the best means of protection, is that it fails to take into account the mental origin and nature of the discord which jeopardizes the life of mortal man, as well as his health and his success. Until Mrs. Eddy made her discovery that evil in all its forms is an unreal belief, relatively little progress was made in the effort to destroy evil. Drugs and surgery have not diminished disease, or the human liability to sickness. Insurance against death or accident has only served to impress more strongly on the human mind the probability of both death and accident; it has painted in more vivid colors the mental picture of both of these dreaded happenings. It has not reduced the death-rate or minimized the number of accidents. Again, in the realm of commerce, the most elaborate business precautions have not prevented the failure of even the greatest enterprises. And so it is in every department of human life, that which mortals have relied on to guard them, has proved to be a broken reed.

All of these failures to cope with disaster should have taught mortals, long before this, to turn for their protection away from material expediencies to something more sure than anything that our human experiences have ever offered us. To paraphrase a Biblical text, They labor in vain, who hope to find security or protection anywhere but in God. The spiritual perception of the prophets discerned this great truth, and in the Old Testament we find reference after reference to God as the only refuge, a tower of strength, "the shadow of a great rock in a weary land," a shelter from the storm.

That the protection of right thinking is practical and reliable, the students of Christian Science have proved for themselves. In the matter of sickness alone, they have no doubt saved themselves many experiences by reason of their mental attitude on this subject. Mrs. Eddy says that "common consent is contagious" (Miscellaneous Writings, p. 228), and just so it is with all other forms of mortal discord. Christian Science teaches that man and the universe are governed by God, and by His laws, which are always good. When this great fact becomes apparent, the individual thought which grasps it comes under the protection of the universal laws of good, which by their very occupancy destroy the belief that there can be any other kind of laws adverse to man's harmony. The child of God, according to Christian Science, is always in his right place, always subject to the control of unerring Principle. When this is demonstrated, it means the most effective protection from accidents, since these, under analysis, are seen to be only a belief that man can be out of his proper place.

This understanding of what constitutes protection is doing more for the world than may be appreciated at present. It

will take the place sooner or later of all inferior methods of protection, and it will be seen that health conservation is not something that can be secured by legislation or by a more liberal application of the drugging system to the needs of the human race. A true understanding of God will be found to be the only real protection, since that understanding includes no evil. Divine Love is never ceasing in its protection, for God is All, and there is none beside Him.

Right Desires

KATE W. BUCK

When one first undertakes to study Christian Science and tries to get some idea of the basis upon which it rests, as well as some of the ways in which it differs from other modes of religious instruction, he is apt to be puzzled and perhaps confused at Mrs. Eddy's conception of scientific prayer. Taught from childhood the prayer of appeal,—to ask for what was wanted, whether spiritual or material (and not unnaturally it was more often the latter),—one fails to grasp the full meaning of the Christian Science prayer of affirmation or to understand in the least its reason for being. It is sometimes said by those who are beginners in this study, "My old idea of God is destroyed and I have as yet nothing in its place;" and then some earnest seeker asks, "What must I do first in order to gain an understanding of the teachings of Christian Science?"

On the very first page of "Science and Health with Key to the Scriptures" Mrs. Eddy gives in simplest language her idea of prayer when she says, "Desire is prayer; and no loss can occur from trusting God with our desires, that they may be molded and exalted before they take form in words and in deeds." She thus tells us that to desire is to pray, and to know that because one has truly desired, and therefore prayed, the fulfilment of that desire is already begun, since that was the method of confident prayer used by Jesus when he said, "Father, I thank thee that thou hast heard me," even before the evidence that he was heard had been manifested. Another thing which should be coupled with this, in order that the first commandment may be kept to the letter, as Christian Science demands that it shall be, is to desire the things of God, spiritual things, above all else. "Seek ye first the kingdom of God;" and why not? Is not this indeed a "reasonable service," since He has given us "richly all things to enjoy"? Is not God the very foundation, origin, and source of our being, so that in truth we do "live, and move, and have our being" in Him and nowhere else? There is no elsewhere. Having complied, and sought first the kingdom of God, as we are bidden, what happens? Why, all things needful are added; and all this comes from such a simple starting-point, —sincerely to desire that which is good.

Christian Science prayer is a prayer of affirmation; an affirmation that God's work is done, that He was satisfied with it and "saw that it was good." Then we have only to admit and recognize that perfect creation and, because His children are a part of it, claim that which is already theirs, their rightful share in what is simply man's natural birthright. Surely this is a prayer of faith and trust and knowledge, while the other (that of appeal) seems more a prayer of hope and longing, deep and earnest though it often is, but mixed more or less with doubt and anxiety. The Lord's Prayer might be called a prayer of appeal; but after all, in its sweet simplicity it is more truly a desire for spiritual things and for just this day. How the mere words, "Give us this day," tend to relieve all anxiety and fear, when we think upon them in all their fulness and naturalness!

That Christian Science does take away the old concept of God is true,—a God whom people on bended knees must beg to do some needful thing, or undo something already done which seemed disastrous. Some one has well said, "That which is often asked of God, is not so much His will and way, as His approval of our way." Furthermore, Science destroys the belief in a merely personal God, but it enlarges, amplifies, and broadens earlier concepts, in that it establishes a complete idea of a perfect whole, beyond whose love and care no child of His can drift. The Bible teaches that God is ever present, and reason shows us that this would be quite impossible for any person. No personality could fill all space, but Love can and does; so also can Life and Truth. They can all be consistently omnipotent, omniscient, and omnipresent; and this is the Christian Science idea of God: "All is infinite Mind and its infinite manifestation, for God is All-in-all" (Science and Health, p. 468). Is it not enough to know that Life is ever present, that Love is ever present, that Truth is ever present, and that knowing this we know God and are conscious of His nearness?

That Christian Science brings a great change, and that this often produces a stir which seems unpleasant and bewildering as "the old order changeth," is a fact, and the longing to be settled is likely to become paramount. Emerson's opinion on this point is most encouraging: "People wish to be settled; it is only as they are unsettled that there is any hope for them." So one is led to seek what is soon found to be the "pearl of great price," spiritual consciousness, and then comes the question, What shall we do in order to gain an understanding? Here again comes, first, desire; and one who has desired enough to be willing to put forth honest efforts to study the text-book in which the teachings of Christian Science are set forth, has at least started rightly, and there is nothing more to do but to keep on, remembering who it is that doth go before him. Thanking God that he is already partaking of the Spirit and coming into conscious communion with God, each wayfarer will ultimately (whether quickly or slowly) reach the goal with joy. Our Leader says, "So shall the spiritual idea guide all right desires in their passage from sense to Soul, from a material sense of existence to the spiritual, up to the glory prepared for them who love God" (Science and Health, p. 566).

The Great Teacher

STOKES ANTHONY BENNETT

When the prophet Isaiah wrote, "For unto us a child is born, unto us a son is given: and the government shall be upon his shoulder: and his name shall be called Wonderful, Counselor, The mighty God, The everlasting Father, The Prince of Peace;" and when the evangelist Luke wrote, "The child grew, and waxed strong in spirit, filled with wisdom: and the grace of God was upon him," they drew for the world an impressive picture of him who later on was to be known as the great Teacher of mankind.

The Bible has little to say concerning the early life of Jesus; that is, from the time he was born until he was about thirty years of age, when he entered upon his public ministry. With this fact before us, what conclusions are we to draw regarding Jesus' early experiences? What are we to decide that he was doing during those three decades? Are we to dispose of the matter simply by believing that he was occupying himself in a more or less easy, aimless fashion in the carpenter shop or among the townsfolk of Nazareth? Are we to take it for granted, because we are told that he was to be called "Wonderful, Counselor," and that "the grace of God was upon him," because he was destined to become the

Digitized by Google

Wayshower or Exemplar of the race, that he had only to sit down and wait on time? No; such an opinion would greatly underestimate and belittle the life-work of Jesus, and would be directly opposed to sound logic.

In carefully examining the entire career of Jesus, as outlined in the Scriptures, we find that his parents were daily striving to do right and be religious in the highest sense of the term; that is, to serve God fearlessly, understandingly, and to walk in the straight and narrow way. They were modest, unassuming, energetic people, and, like others who are sincere and well meaning, desired that their son should be brought up according to the lofty ideals which they themselves were laboring to render practical. Joseph and Mary must, therefore, have sought to train and educate Jesus in careful keeping with their faith, and this training and education naturally started at home, where, according to the rigid custom of the best Jewish families, Jesus was instructed religiously. Presumably, in due course, he was given the advantages of the synagogue school, in which the history connected with the Old Testament characters and happenings was no doubt learned, as was also the Old Testament law in its fulness. Thus it was that, in common with other Jewish boys, Jesus became well versed in the Jewish Scriptures. Unlike the average student, however, he began to think for himself, refusing to accept the merely theological, dogmatic opinions and notions of his instructors, who, while they doubtless were sincere, nevertheless signally failed to perceive and point out the spiritual or practical import of the Old Testament.

This individual effort on the part of the Master, together with the spiritual illumination which attended it, was clearly shown on the occasion of his first visit to Jerusalem, at the age of twelve, when it would seem that his chief ambition was to associate with the rabbis or doctors of the law in the temple, and ask them questions regarding the great things embodied in the Old Testament. Jesus thus acquainted himself with the religious views of some of the foremost Scriptural authorities of the day, while at the same time giving them his views. "And," as the record tells us, "all that heard him were astonished at his understanding and answers." Jesus probably studied the Old Testament in the Hebrew, and inasmuch as the Aramaic was the Jewish language of the time, he of course understood it and used it in common speech. He may have had, too, a working knowledge of the Greek, which was a means of intercourse with the Greeks who were in Palestine.

We know from the New Testament account of his public ministry that Jesus was the most practical, or, as Mrs. Eddy says in Science and Health, "the most scientific man that ever trod the globe" (p. 313), and we cannot help feeling that from his earliest days he was literally about his Father's business, even as he said he was when Mary and Joseph found him in the temple discussing religious questions with the rabbis. And what was this business which he regarded as so important, so urgent? This, namely, the earnest seeking for a sure way to bring the true knowledge or understanding of God to his own nation, together with the practical demonstration of this understanding.

While there is no Scriptural record of specific works on the part of Jesus up to the age of thirty, this is no proof whatever that he did not perform them, any more than the absence of a record of detailed experiences in the early life of a renowned professor of mathematics proves that this professor did not solve problems before entering upon his professional career. The fact that he became a successful demonstrator of mathematics would at once show that he had prepared himself, and that this preparation had necessarily involved study and practise, the learning of laws and rules and the correct application of them. And so we may be sure it was with Jesus. He knew full well that for him, as for others, to accomplish good and telling results in any line of endeavor, there would first have to be thorough and whole-hearted preparation, and to this he devoted himself for thirty years. Then, having been truly faithful over what to him and others may have seemed little things, he found himself equipped to do his after-work well, and to be made ruler over many things,—yea, to stand upon the plane of perfect understanding.

Jesus' statement to the Samaritan woman, "God is a Spirit," and his declaration in his Sermon on the Mount, "Be ye therefore perfect, even as your Father which is in heaven is perfect," which may be denominated the alpha and omega of all his teaching, certainly make plain that one's chief duty by way of preparation for life's work is first to understand God, Spirit, aright, and then to understand one's self, the spiritual image and likeness of God, aright. This is indeed the only way in which men can work out their salvation and be happy and blessed.

For many centuries the world seemed to be in gross darkness as to how to make practical the teaching of Jesus and to gain that harmony and peace and joy which he promised to all who kept his sayings. Finally, this darkness was pierced by the bright and shining light of Christian Science, the simple, provable truth about God, man, and the universe. Knocking at the hearts of men and women everywhere, it matters not how heavy or hopeless they may be, this Science tenderly and lovingly says: "'Follow me! Escape from the bondage of sickness, sin, and death!' Jesus marked out the way. Citizens of the world, accept the 'glorious liberty of the children of God,' and be free! This is your divine right. The illusion of material sense, not divine law, has bound you, entangled your free limbs, crippled your capacities, enfeebled your body, and defaced the tablet of your being" (Science and Health, p. 227).

Christian Science gives the spiritual interpretation of the entire Bible, but more particularly of the words and works of Christ Jesus; and he who is ready and willing to begin its study, to obey its rules, and to do his best to live up to them, thus gradually but surely coming to understand the allness of Spirit, good, and the powerlessness, the nothingness, of evil, all materiality, will be renewed and uplifted in a manner which language cannot portray.

✧

"Such as I have give I thee"

JESSE GHENT WAITE

PETER said to the lame man who was waiting for alms at the "Beautiful" gate of the temple, "Silver and gold have I none; but such as I have give I thee," and then he healed him in the name of Christ. It is a great and glorious privilege to give, yea, "more blessed to give than to receive." Indeed, to give such as one has, is the only true way to receive. First, one must give up to its native nothingness the old Adam belief, that he may attain unto the new man. This is our great task, as it is our great gain, for it brings unspeakable joy, and peace flowing as a river and watering the desert where selfishness once reigned. This, however, is only the beginning of unnumbered gains. It is but preliminary to that Science which is the divine law of being. God gives all-harmonious life to every man in Christ.

Christian Science reveals the divine order in which life abounds unto more life continually, even as Christ Jesus said,

Digitized by Google

"I am come that they might have life, and that they might have it more abundantly." How many thousands are there today doing just what Peter and John did for the impotent man who was "laid daily at the gate of the temple which is called Beautiful, to ask alms"? Poor? Yes, as the world counts poverty, they were poor, yet rich, and making many rich by a process that is to some a stumbling-block, while to others it is foolishness; but to them that believe (understand) it is the Science of giving such as one has, the Science of the wisdom, the compassion, and the power of God, revealed anew today through Mrs. Eddy's inspired teachings, with "signs following."

Christian Science teaches that there is but one Mind, one source of spiritual truth through which life and harmonious being is guaranteed to every man, from the least to the greatest, and this is seen as we come to understand the Science of life or being. This understanding makes both possible and practicable any task, even to the reversal of the whole system of material belief with all its discords.

The apostle Paul alludes to the fact that as some of the stars are more glorious than the others, so it is in the spiritual realm. There is no room for jealousy here, for the law of giving all that one has to those who are needy, not only supplies every human need, but actually perpetuates itself. It may be that our present beginnings seem small, because our understanding is small; but we need not despise "the day of small things." It is through practise, the use of what we have and the giving of such as we have, that we gain more understanding and give more, and thus gain more to give more, and so on continually. Such is our life, ever and ever abounding, because such is ever-abounding Truth and Love. Referring to the supply of manna, it is written, "He that gathered much had nothing over, and he that gathered little had no lack." Why? Because of the rule of giving freely, of such as each one has, unto whomsoever will receive it.

Reflecting on the infinite possibilities revealed through the writings of our beloved Leader, Mrs. Eddy, it is easily seen how it is that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). Of course, self-denial is involved in giving all that one has, but what a blessed consciousness comes to take the place of the old self! How unspeakable the sense of love gained by those who are thus at one with him who said, "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you."

✧

Commands and Blessings

MARY STEWART

THE ten commandments are quite generally accepted as the basis of the laws which regulate the conduct of all civilized peoples. Seeking divine guidance, in his leadership of Israel from bondage to freedom, Moses received and gave to the people these commandments, called the decalogue. One naturally asks, To whom or to what condition of thought were these commands necessary? Surely not to man, for it is evident that man, whom the Bible defines as the image and likeness of God, could have no inclination, tendency, or necessity to lie, kill, steal, bear false witness, or commit any of the evils therein forbidden. A likeness could not be so unlike its source or original. There is nothing in the divine nature which, reflected in man, could harm or destroy. Being the "full representation of Mind" (Science and Health, p. 591), God's man lacks nothing; he has all. No temptation, therefore, can come to him to do any wrong.

Then who or what is it that has to be commanded not to sin, and for whose protection are these laws given? They are for the protection of humanity, as all will agree, and they are addressed to men, to the sense that is still in bondage to falsity. To the belief that there is substance, intelligence, and life apart from and opposed to God, divine Mind says: Thou shalt not have any other God; nor canst thou make vain the power of the one God. Thou canst not make unholy anything that He hallows; thou shalt not and canst not steal, commit adultery, kill, covetously look upon or bear false witness against thy brother man.

He who accepts the protection of these laws can prove their power. When tempted, he can say with God-given authority, that nothing can rob his consciousness of any good, adulterate his faith, obedience, loyalty, love, or life. He can also deny that mortals can bear false witness against man, against his true selfhood or that of any one else, or make him believe a lie. He knows that mortal, material sense, evil suggestion, hate, and fear, cannot make him believe that he needs or desires anything which God does not give him.

In "Science and Health with Key to the Scriptures," Mrs. Eddy writes, "You conquer error by denying its verity;" also, "Truth is affirmative, and confers harmony" (pp. 339, 418). The law of Sinai makes evil powerless by stern denial, but the beatitudes are affirmations of the result upon human experience of the activity of the attributes of God reflected in human consciousness. These blessings forever rest upon man, the likeness of God, as was demonstrated by the Master. Being pure in heart, man sees God; the merciful man obtains mercy; the peacemaker, the man abiding in peace and unity with God and his brother man, is rightly called the child of God. The meek, the humble, those who seek righteousness, those falsely accused and persecuted, all receive abundant blessings by reason of the real man's inseparability from God, the source of all blessedness.

In John's gospel we read, "The law was given by Moses, but grace and truth came by Jesus Christ." The law and gospel are, however, inseparable, for "love is the fulfilling of the law," and, as Paul explains, "love worketh no ill to his neighbor."

[Written for the *Sentinel*]

Thine is the Kingdom

F. WINIFRED S. BLOXHAM

THINE is the kingdom; so where'er we look
All things bespeak a Father's loving care;
Decay and discord, sin, disease, and death—
No dark dream shadows find a refuge there.

Thine is the kingdom. Open Thou our eyes
To see the vision of celestial bliss;
Here all around us, if we did but know,
Earth's fairest Eden could not vie with this.

Thine is the kingdom; so no serpent's trail
Lies with its curse o'er nature's varied scene;
No savage beast or baneful weed can bring
Discord or death where Love hath ever been.

Thine is the kingdom. How, then, can we lack
Gifts that we know a Father's love provides?
Now, as of old, the hungry may be fed;
All wealth is his who in his God abides.

Thine is the kingdom. Let the earth rejoice,
For lo, waste places blossom as the rose!
We wake to find man's birthright here is peace,
And God is nigh to him who truly knows.

Selected Articles

[Frederick Dixon in *Kentish Express*, Ashford, England]

The correspondent whose letter was recently published in your paper seems to have the very haziest idea of what constitutes a miracle. More than this, he seems to think that a miracle is something of the nature of the feats performed by Hindu conjurors; and finally, he seems to regard it as positively outrageous to suppose that there is a God who ever answers prayer. His humor leads him to put it this way: that if he is out of coal and he prays, he will see coal dropping into his cellar, or that if he has no breakfast and he prays, his breakfast will drop through the ceiling. To be quite candid, his idea of prayer is almost as ludicrous as his idea of a miracle, and that is saying a good deal. He reminds one of nothing so much as the elderly lady in the story who, having prayed all night that the mountain opposite her house should be removed, got up in the morning and pulled up the blind with the remark, "I knew it wouldn't be." At the same time, the question of what constitutes a miracle is a distinctly interesting one, and perhaps those of your readers who do not think it consists of automatic supernatural deliveries of coal or bacon, may be intelligently interested in the matter.

The word miracle is derived, of course, from the Latin *miraculum*, a word which means simply "wonder," and which was adopted by the pagan philosophers to denote their experiments. It had not, until such a meaning was foisted on to it, any supernatural significance, and it never played any part in theology until its first appearance in the later writings of Jerome. Its introduction came about in this way:—

In the Greek Testament there are two words which in the King James version are translated "miracle." The first is *dunamis*, which means simply an "act of power"; the second, *semeion*, which means simply a "sign." These are common words in the New Testament, and are by no means always translated "miracle," even by the King James revisers. Sometimes, for instance, as in the famous passage in the last chapter of Mark, the word *semeion* is translated "sign,"—"And these signs [not miracles] shall follow them that believe;" and sometimes the word *dunamis* is translated "power,"—"And he shall go before him in the spirit and power of Elias." As a matter of fact, *dunamis* is translated not only "power" and "miracle," but "authority" and even "meaning"; while *semeion* is translated not only "miracle" and "sign," but also "portent." It is clear, therefore, that the rendering of miracle is purely arbitrary.

Now when Jerome was making the great translation known as the Vulgate, he retained the normal meaning of the Greek text in the Latin words *signis* and *virtus*. Later, certainly, he made use, in other writings, of the Latin word *miraculum*, or wonder, but that was already in the fifth century. Much had happened in the interim. Constantine had taken the Christian church under his protection. No longer was that religion confined to the shops of the cobblers and the wool-dressers; it had infected the legionaries and spread to the patricians. The curious thing, however, was that the healing of disease as a sign or act of power was steadily disappearing. In the first three centuries it had been commonly alluded to in the writings of Polycarp and Justin Martyr; of Irenæus, of Tertullian, and of Clement of Alexandria; of Origen and Lactantius. Now there was a significant silence. Still, even then it was the monastery to which the sick naturally turned. The guestern house, the hospice or hostel, was always open to them. It is from this we arrive at the English term hospital and the French Hotel Dieu. Gradually but quite steadily the separation widened; the hotel was built in one street, the Hotel Dieu in another; the hostel and the hospital became vastly different in their functions. The church had found the divine command to preach the gospel easier to obey than the corollary to heal the sick, but it still held the medical profession in its grasp, and when Henry VIII was king, every physician was compelled to pass an examination before the bishop of the diocese. By this time there was no pretense of Christian healing. It was healing by tying red rags to bedposts or dosing patients with powdered crickets. Unable to account for the awkward texts in the Bible, the church had surmounted the difficulty by teaching that Jesus was God, and the act of power, the sign or miracle, entirely supernatural. The remarkable part of all this was that the laymen had got so used to permitting the churches to think for them without question, that they accepted this view of healing as contentedly as they did the geography of a flat earth or the astronomy of a circling sun. The physician became almost as suspect as the philosopher, and the argument of the rack and the stake kept both in their right place. So acute did the mesmerism become that, late in the nineteenth century, an unbeliever like David Hume could seriously define a miracle as a violation of a natural law by a divine interposition of the Deity.

That was too much for the colossal common sense of Thomas Huxley. A law, he grimly explained to Hume, which had been violated, had been proved to be not a law; that was all about it. If I met a centaur in Piccadilly, he said, I should not shout miracle; I should realize that my views on anatomy were in need of correction. If I saw a lump of lead suspended in the air without support, I should not exclaim supernatural; I should conclude I was in the presence, not of a violated law, but of a hitherto unsuspected law, and endeavor to find the explanation. This was precisely what Mrs. Eddy had already done, when healed of the effects of an accident regarded by her physician as hopeless. "I knew," she writes on page 109 of "Science and Health with Key to the Scriptures," "the Principle of all harmonious Mind-action to be God, and that cures were produced in primitive Christian healing by holy, uplifting faith; but I must know the Science of this healing, and I won my way to absolute conclusions through divine revelation, reason, and demonstration."

Never once in the whole course of the New Testament record did Jesus lay claim to do a miracle in a supernatural sense any more than to be the Son of God; he speaks of "my Father, and your Father," and he did teach humanity to pray, "Our Father which art in heaven." Just so he declared that "these signs shall follow them that believe," and "he that believeth on me, the works that I do shall he do also." Thus he made the miracle not supernatural, but in the words of Mrs. Eddy, "divinely natural" (Science and Health, p. 591).

What, to a race of shepherds and fishermen brought up in the dense materiality of the Jewish faith, would the miracle have been but an act of power? What, to the educated materialism of the scribes and Pharisees, would it have been but a sign of the truth of the fulfilment of the law? Jesus came, preaching, on the hillsides of Galilee and in the cities of Judæa, the gospel of good news of the new commandment, and when the sensuality and animality of his hearers shrank from the very spirituality of his theology, or doctrine, he fell back on the miracle or proof, declaring if they could not accept this gospel for the word's sake, they must accept it "for the very works' sake." Thus he made the miracle the object-lesson of Christianity, not only in the healing of sickness, but in the overcoming of sorrow; not merely in dominion over matter, but in the destruction of sin. "Now, as then," Mrs. Eddy writes, "signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to de-

Digitized by Google

monstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world" (Science and Health, p. 150).

✧

[David Anderson in *The Southern Cross*, Melbourne, Australia]

A recent issue of *The Southern Cross* contained an extract from a sermon by Prof. Hugh Black, in which he speaks of Christian Science as a fashionable form of racial folly practising esoteric mysteries, the root of which, according to the professor, is an unspiritual thirst after a sign, after thaumaturgics, and other things on the level of conjuring tricks.

The ninth commandment not having been abrogated, it is a little surprising how readily some learned critics use the pulpit and the pen to promulgate representations, which they do not substantiate, of a religion from which they differ, but which, nevertheless, is a religion believed in and striven to be practised by a million of their fellow professing Christians. Investigation is free to all, and Burns, who was a keen observer of his fellow men, clerical and lay, in a few terse words expressed the indisputability of facts. The critic might therefore be invited to quote specifically his authority for the assertions he makes, by indicating any passage in the Christian Science text-book, "Science and Health with Key to the Scriptures," which would show either sympathy or accordance with esoteric mystery and magic or with Pythagorean philosophy.

The study of Christian Science requires no special initiation, unless it be the dropping of prejudice, and there is nothing in Christian Science uncommunicable or unintelligible to the general body of its followers, or to the world at large. Children understand it sufficiently to prove their understanding by its practise. Its thirst is that spiritual thirst for living waters which Christ Jesus commended, and which is quenchable only through obedience to his commands. Its healing may be wonderful, but it makes no claim to the miraculous in any other sense. It regards the miraculous works of Jesus not as supernatural, but as divinely natural, fully accepting the assurance, "He that believeth on me, the works that I do shall he do also."

The existence of Christian Science as a religion, and its continuous and uninterrupted progress, are outcomes of that "weariness and despair and breakdown of blank materialism to satisfy the heart of man" to which Professor Black alludes. Christian Science does not "deceive the carnal heart," as the professor asserts; but on the very best authority it regards the carnal mind as "enmity against God;" that fleshly mind which is a deceiver from the beginning, and wholly apart from the divine Mind, the Mind "which was also in Christ Jesus."

✧

[George Shaw Cook in *Daily Courier*, Jacksonville, Ill.]

In a recent issue the Rev. M. S. Rees is quoted as warning his hearers against Christian Science because it denies, first, the personality of God; second, that God made matter; third, the existence of sin.

In regard to the first of these objections, it should be explained that Mrs. Eddy says of God on page 336 of "Science and Health with Key to the Scriptures," "God is individual and personal in a scientific sense, but not in any anthropomorphic sense." If person can be infinite, God is infinite Person. If person is conceived of as being less than infinite, all-inclusive, omnipotent, omniscient Spirit, then the term person does not adequately convey the true idea of God.

That God, who is infinite, eternal Spirit, could create or be responsible for the existence of matter, which is the opposite of Spirit, Christian Science does most emphatically deny. If anything so entirely different from Spirit could exist, it must be outside of God, Spirit, and that is obviously impossible, for God, divine Mind, is all-presence, the one illimitable, indestructible substance. If God made matter, then matter must be like God, eternal. Paul said, "Flesh and blood cannot inherit the kingdom of God." Then how shall man hope to free himself from matter and "inherit the kingdom of God" if indeed matter is created by God and is therefore eternal? Taking the statement of John that God made all that was made, and knowing that effect must be like cause, Christian Scientists believe that however real matter may seem to human sense, it can have no real existence, because it is not like God, Spirit, the only cause. Therefore they conclude that matter has only the appearance of substance or reality, for, as Mrs. Eddy says on page 468 of Science and Health, "all is infinite Mind and its infinite manifestation." Physical scientists are today confirming the teaching of Christian Science in regard to the unreal nature of matter, and one of the most eminent of these is quoted as having recently described matter as "a suppositional vacuum in a hypothetical medium," and another some years ago said that modern science had not only explained matter, but had explained it away.

The third proposition, as to the existence of sin, must go down with the downfall of matter, for belief in the reality of matter and that of sin are inseparable. Where one is found, the other is always present. If sin exists, it must be of God, for God is the only creator, who made all that exists and pronounced His creation good. But sin is not good, and therefore could not exist as part of the spiritual, eternal universe of God. This is precisely what Christian Science teaches regarding the nature of sin. Christian Science does not, however, ignore the claim of sin to existence, but teaches that it must be recognized as a false claim, to be repented of and forsaken before it can be demonstrated to be what it really is—nothing. This scientific forsaking of sin, and its forgiveness or destruction, comes through the apprehension of Christ, the true or spiritual idea of God, as being of "purer eyes than to behold evil."

Christian Science does not, as our critic seems to think, discard prayer and repudiate the atonement. It teaches its adherents to "pray without ceasing," and constantly to seek a higher and better understanding of the true nature of God and of man in His likeness. Furthermore, it requires the demonstration of this understanding in right thinking and right living. Such thinking inevitably results in the lessening of sin and disease. This is the practical atonement, or "exemplification of man's unity with God" (Science and Health, p. 18), and Christian Scientists believe that in no other way can they realize the full import of what has been mistakenly regarded as the vicarious atonement of Jesus the Christ. Only by following his example can we avail ourselves of the atonement of Christ Jesus, which was in fact the perfect demonstration of man's at-one-ment with God; and this rendering of the word atonement is not used by Mrs. Eddy alone, but is being given by modern scholars as the correct translation.

✧

[Editorial in *Portland* (Ore.) *Spectator*]

It seems strange that while there is so much evil to be combated, a clergyman should find the time and have the disposition to attack those things whose influence is exerted for the betterment of the world; and one wonders how many of the congregation of the Centenary Methodist church the reverend gentleman is leading heavenward by his Sunday evening sermons against Christian Science. The reason for his diatribes seems to be that the Christian Scientists have chosen to travel to heaven by a road that he did not have the happiness to have pointed out to him in the days of

Digitized by Google

his youth as the straight and narrow path. If we should carefully examine his bump of direction, we would indubitably discover that he permits himself to believe that there is only one road to heaven, and that his unerring feet are safely set on it; the rest of us, fatuously believing that we are marching heavenward, are really on the swift descent to Avernus.

In the second of his attacks this critic found fault because Christian Science did not cure all incurable diseases, and said that it was discovered, in some of the so-called incurable diseases that it did cure, that a wrong diagnosis had been made by the doctors. The criticism is possibly just; the power of healing all diseases, either by therapeutic science or Christian Science, has probably not yet been conferred on doctor or practitioner; but in some degree the healing power is a possession of both. We have yet to hear the critic assail the practise of medicine because it does not cure the widow's son and fails to snatch from the grave the mothers of weeping children.

But there seems to be something, aside from healing physical ailments, to Christian Science that the reverend gentleman will not permit himself to note. Christian Scientists have an extraordinary talent for minding their own business. At this they appear to be so busy that they have no time to quarrel with this critic or the particular sort of theology that he professes to believe in. They practise the religion they have with peculiar faithfulness. It seems to be a religion made for every-day use. If the critic had the good fortune to enjoy acquaintance with Christian Scientists, he would find that their religion has a deal of sunlight, cheerfulness, well-being, and well-doing to it. He would learn that they have a fine, healthy, happy outlook, and that they face the troubles of today and the fortunes of tomorrow clear-eyed and unafraid.

It is a mighty poor religion that has not some good in it; and he is a poor religionist who in the other man's faith sees nothing but the bad. When Colonel Ingersoll was trying to destroy our belief in God, he found his ammunition in what the warring theologians said of the God whom their opponents worshiped. The churches today are not making such headway against the forces of evil that they can afford to declare a truce with the natural enemy and fight among themselves. The devil does not recognize any truce; he fights unceasingly, and his most notable victories are gained while the thundering theologians are shaking their terrible chins at one another.

Apparently the people care neither to see the wagging chins nor hear the thunder of the theologians; the pews are unfilled. Possibly the people want less theology and more religion; less fighting over the letter of the faith, and more faith in the spirit; less quarreling among neighbors, and more neighborliness in the churches. When evil has been extirpated, and God's kingdom has indeed come, there will be time for the churches to fight one another; but they will not wish to do so.

✧

[John W. Doorly in *The Halifax* (England) *Courier*]

Our critic asserts that Christian Scientists deny the divinity of Christ. Now, I have been a Christian Scientist for eleven years, and during that time it has been increasingly clear to me that the divinity of Christ is a scientific and unalterable fact which Christian Science has made clear to humanity. But perhaps the critic will tell us where in Mrs. Eddy's writings she denies the divinity of Christ. On page 25 of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we read, "The divinity of the Christ was made manifest in the humanity of Jesus." On page 26 of the same book we read: "The Christ was the Spirit which Jesus implied in his own statements: 'I am the way, the truth, and the life;' 'I and my Father are one.' This Christ, or divinity of the man Jesus, was his divine nature, the godliness which animated him." Again on page 30 we read: "Born of a woman, Jesus' advent in the flesh partook partly of Mary's earthly condition, although he was endowed with the Christ, the divine Spirit, without measure," and on page 583 Mrs. Eddy gives a definition of Christ as "the divine manifestation of God, which comes to the flesh to destroy incarnate error."

The truth is, Christian Science teaches that all real being is divine, because it is the manifestation or expression of the one cause or divinity, but it in no way teaches that poor mortality is divine, but rather that it is the false, fleeting human sense of reality. The letter quoted by the critic makes the foolish statement that Christian Science denies that men have bodies; but there is nothing in the teaching of Christian Science to substantiate such a statement. Christian Science teaches that mortal mind produces all the discordant conditions of the body, and that the human mind and body are both healed by the purifying and invigorating influence of divine Truth as revealed and applied in Christian Science.

✧

[D. M. Ely in *Piqua* (Ohio) *Leader*]

A recent issue contains the report of a sermon by the Rev. Mr. Montgomery on Christian Science. While he finds much of worth in the teaching, his statements in regard to sin and sickness and the manner of their healing need correction. Christian Science takes antagonistic grounds against the reality of sin and sickness and classifies them as Jesus did in the eighth chapter of John: "Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." The nothingness of sin becomes apparent as the allness of God is understood. Jesus also said, "Ye shall know the truth, and the truth shall make you free." Certainly he meant that the knowledge of truth would free us from those things which are unlike truth.

Christian Science teaches that every thought which does not reflect the nature of God, of Life, Truth, and Love, and embody the fruits of the Spirit, "love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance," is of the carnal mind, which is "not subject to the law of God." The Scriptures teach that as a man "thinketh in his heart, so is he;" and in order to think aright, it is necessary first of all to know God aright, so that every thought may be weighed in the balances of Truth to determine its source, whether it be of God or not.

Christian Science declares that "sin will receive its full penalty, both for what it is and for what it does;" and also that "escape from punishment is not in accordance with God's government, since justice is the handmaid of mercy" (Science and Health, pp. 542, 36). Christian Science does not compromise with evil in any form.

The reverend gentleman asks, "Why is the line drawn at medicine" in the healing of sickness? To this it may be answered that Christian Scientists do not use material means or remedies in the healing of sickness, for the reason that their medicine is prayer. In the opening chapter of "Science and Health with Key to the Scriptures" Mrs. Eddy defines the prayer which heals the sick as "an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (p. 1), and that this prayer does heal the sick is proven by the joyful testimony of those who have been freed from sickness and sin and are living witnesses of the power of this Science to heal all manner of disease.

Editorial

"Yea, yea" and "Nay, nay"

In the Foreword to "The First Church of Christ, Scientist, and Miscellany," written in 1906, there are a number of significant declarations in regard to the establishment by Mrs. Eddy of the Church of Christ, Scientist, and its numerous activities. None, however, are more significant than these conclusions or proofs, namely, "(1) that Science and Health does not need to be interpreted to those who are earnestly seeking Truth; (2) that it is not possible to state truth absolutely in a simpler or more pleasing form." Even more to the point is the declaration "that no one on earth today, aside from Mrs. Eddy, knows anything about Christian Science except as he has learned it from her and from her writings; and Christian Scientists are honest only as they give her full credit for this extraordinary work."

In these days of the publication of so many books presumptuously intended to explain Christian Science, or to elucidate some phases of its system which the writers seem to think have been neglected or misunderstood by the author of Science and Health, it is wise for us to turn to this Foreword and lay well to heart its warning note. Mrs. Eddy, as the Discoverer and Founder of Christian Science, discerned that which generations of the most highly trained thinkers had failed to perceive, namely, the invariableness and unchangeableness of the law of God, good. What is more, she proved the truth of her discovery even as did the Master, by works of healing—irrefutable proofs, however much the law back of them and its action might be discredited by her critics. She, too, could say, If you doubt my statements, you must believe the works which attest their verity, for again the sick are healed and the lame walk through the power of Truth.

It is axiomatic of science that it must speak with the certainty of "Yea, yea" and "Nay, nay," and this is the rule that Mrs. Eddy has followed in all her writings on Christian Science. Like all true scientific writers, she has stated a premise and given a rule for demonstration as unvarying and unbending as God Himself, because God, who is All, omnipotent, omniscient, and omnipresent, is the Principle and basis of this Science. As she has written in the Preface of Science and Health (p. x), "The author has not compromised conscience to suit the general drift of thought, but has bluntly and honestly given the text of Truth." In fact this is the only way in which so infinite a theme could be presented with value to those who are seeking the truth for Truth's sake. Here we might say that no one is truly seeking Truth unless he is doing it as Christ Jesus entreated his followers—"Seek ye first [not secondarily or collaterally] the kingdom of God, and his righteousness."

Attempts to make Christian Science easy for beginners by presenting it in a way "to suit the general drift of thought," can result only in diluting or adulterating its literature, and this is one of the dangers to which Mrs. Eddy was most keenly alert. "I am the way, the truth, and the life," said Jesus; "no man cometh unto the Father, but by me." There is no other way whereby to enter the kingdom than that which the Master himself trod, a daily taking up of the cross of self-denial and self-sacrifice, that supreme love whereby all else is but dross so that we gain the consciousness of obedience to the great commandment. So, too, in Christian Science there can be no sugar-coating or gilding of the demands of Truth. Its basic teachings cannot be altered to suit individual preferences. It seeks no followers save those who are willing to obey the commands of Christ in their entirety, even as the beloved Son was obedient not to his own will or desire, but to the will of the Father.

In conclusion, let us go back again to this Foreword from which we have quoted, and consider well these words: "In these stirring times of church building, when the attention of the whole world is fixed on Christian Science, when the growth and prosperity of the cause are matters of general wonderment and frequent comment, when the right hand of fellowship is being extended to this people by other Christian denominations, when popularity threatens to supersede persecution, it is well for earnest and loyal Christian Scientists to fortify themselves against the mesmerism of personal pride and self-adulation."

ARCHIBALD MCLELLAN.

Leaders and Followers

In ancient times, as we read in the Scriptures, spiritual leaders were chosen from among the people to make known to them the divine purpose and power, and to inspire them with a desire to obey the divine will. Not every prophet was called to this high office, but only those who met the divine requirement in calm courage, meekness, self-effacement, and above all, in far-sighted spiritual vision.

In Exodus we read that Moses shrank when called to assume this high responsibility; but God said to him: "Now go, lead the people unto the place of which I have spoken unto thee: behold, mine Angel shall go before thee." We are told that a symbol of the divine presence was with the people, the pillar of cloud by day and of fire by night; also that their needs were often met by what to them seemed to be supernatural means, and that protection from disease was promised, so long as they heeded the commands given through their divinely appointed leader. Again, we read in the fifty-fifth chapter of Isaiah that David was given for "a leader and commander to the people." In both of these cases it is very clear that the leadership was a spiritual office, though it seemed to extend to the outward and material; but its permanent element, that which is even today a mighty world influence, was purely spiritual.

Respecting the leadership of Moses, Mrs. Eddy says (Science and Health, p. 200): "Moses advanced a nation to the worship of God in Spirit instead of matter, and illustrated the grand human capacities of being bestowed by immortal Mind." Leading of course implies following, and nothing less than inspiration and divine guidance can make a faithful follower, any more than it can make a true leader. Moses has had many loyal followers, who prized wisdom far above rubies, and it is noteworthy that the qualities which characterized the leader are expressed in some measure by them. When we think of David as a great leader, we may well recall Kipling's beautiful lines:—

> The tumult and the shouting dies,
> The captains and the kings depart;
> Still stands thine ancient sacrifice,
> An humble and a contrite heart.

As a captain and a king, David had his day, but if this were all of his history he would now be sleeping in forgotten dust. His real office, the leading of humanity toward man's spiritual heritage, has immortalized him for those who follow the divine light which he lifted up in the darkness of a material age, and his true followers are those who are not "afraid for the terror by night; . . . nor for the pestilence that walketh in darkness," because they have made the infinite their refuge.

As we dwell upon the spiritual leadership of Christ Jesus, we are reminded that in the hour of his greatest need every

Digitized by Google

one of his little band of followers "forsook him, and fled." Sad indeed were it if this closed the record, but it does not. These same men, with greater spiritual illumination, rallied fearlessly around his standard,—the idea of one omnipotent, omnipresent God,—and were ready to obey his command, "Follow me," not even counting their lives dear! And who shall tell the number of his followers today? Truly his leadership extends beyond all human reckoning, and foremost among his followers is the one whom Christian Scientists love to name their Leader, the one who has called countless thousands to an understanding of his mighty works and unswerving loyalty to his high demands, she who said to those whom she had led out of the darkness of sin and suffering, "Follow your Leader only so far as she follows Christ" (Message of 1901, p. 34).

It is true that in a sense Mrs. Eddy's followers have only begun to understand what spiritual leadership means, to realize that it is the voice of God, speaking to those who in any age are best prepared to hear, to heed, and to proclaim the divine will, and that each advancing step taken means a more marked departure from material belief and toward spiritual understanding. Are we ready thus to follow?

ANNIE M. KNOTT.

Winsomeness

THE burden of St. Paul's letter to the Ephesians is a plea that the Christian disciple awaken to the preeminence of the privilege and power to which he is called, and in the splendid optimism of his faith he dares to refer to the time when all faithful believers shall attain "unto the measure of the stature of the fulness of Christ"! As one thinks longingly of the possibilities pertaining to such a spiritual realization, he does well to remember that there are two relations which must be maintained to effect a truly saving influence, namely, contact with God, or inspiration, and contact with men, or expression,—the word spoken, and its tactful and discreet utterance.

Of God, divine Principle, Mrs. Eddy has said that He expresses both "Science and art throughout His creation" (Science and Health, p. 507), and these qualities must of course characterize the activity of His image or reflection. This constitutes and explains the greatness and glory of the Wayshower. It was the perfection with which he revealed the nature and capabilities of Truth. The wisdom of Science is the dominant fact in the ideal life, and when we remember the stumblings and shortcomings of the human in all history, who can measure our occasion for rejoicing that the divinity which would make our living victorious is unaffected by the weakness and unworthiness of our Christian discipleship.

The concepts and ascetic devotions of the so-called "holy men" of India, seem utterly defeating both to their own spiritual advance and to their helpfulness to others; nevertheless, without doubt the religious idea, thought of God and of spiritual gain, is their leading impulsion. The pall of ignorance and superstition rests upon what would otherwise have proved a redemptive purpose. This may seem an extreme illustration of the degrading significance of false sense to spiritual aspiration, and yet how often today does the human hindrance to the rule of the Christ-idea assume in effect these fakir proportions and rob us of the fruitage which would certainly be ours were we as wise as we are well-intentioned. Savingly attractive power is attained only when an ideal concept is expressed in an ideal way. The vision is gained through revelation—it is an intuition. The expression is, for the most part, acquired only through schooling; we have to learn to be wise and winsome, and upon no other thought perchance can we more profitably meditate these forelooking days of the new year.

No story could be more pitiful than that of Peter's denial of his Lord, and yet this is the tragedy enacted every time our words, our bearing, or our deeds discredit the truths we apprehend and declare respecting God and man and human privilege. Let us face the fact that it is here and not elsewhere that the one great disability to the triumph of Christian truth has ever been found. St. Paul's letters to the churches are a continuous appeal for consistency of conduct, and apart from her expositions of Christian Science, all of our Leader's writings constitute a kindred persuasive call. The power of God is present in the truth we preach, but we can bring it into saving touch with men only as we become a spiritualized instrument for its activity, in the consistency of our conduct, our honesty, purity, unselfishness, and patient loving-kindness.

Here as everywhere "Love is the liberator" (Science and Health, p. 225). We must be scientific if we would save; that is, we must realize the truth about man, and have that consequent compassion which begets the attitude toward every human being that was defined in the life of the Master as true brotherhood, and that is coming in this our time,—

> To build with song again
> The broken hope of men—
> To hush and heroize the world.

In the long run, love's genuineness is irresistible, and when this distinctively characterizes our daily doings, we have added winsomeness of expression to the worth of our thought, and become the effective embodiments of redemptive truth. To think ever of this, and mold our deeds thereby, is to fill our days with gladness by becoming a blessing to all we meet. Thus will we prove the proverb true, "He that winneth souls is wise."

JOHN B. WILLIS.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

SAN FRANCISCO, CAL.—First Church of Christ, Scientist, which represents an outlay of two hundred and twenty-five thousand dollars, was dedicated yesterday [Nov. 23]. This was the first occasion of the kind in San Francisco. The services were simple, meetings being held in the forenoon, afternoon, and evening.—*San Francisco Evening Post.*

WACO, TEXAS.—During the Texas Cotton Palace held at Waco, Nov. 1 to 16 inclusive, a booth was maintained by First Church of Christ, Scientist. Mrs. Eddy's writings,

Digitized by Google

her life by Sibyl Wilbur, the Bible, and the Christian Science periodicals were kept on display. Two attendants answered questions concerning Christian Science and gave to every one who showed sufficient interest a *Journal*, a *Sentinel*, a pamphlet, or a *Monitor*. The *Monitor* was an especial favorite, our daily supply not being equal to the demand. The German literature, *Der Herold der Christian Science*, and the pamphlets printed in German, were very much appreciated by the Germans on German day. Our stock of *Heralds* was completely exhausted, while our supply of pamphlets was nearly so.—*Correspondence.*

WASHINGTON, D. C.—Fifty members of First Church of Christ, Scientist, at Columbia road and Euclid street northwest, formally withdrew from that organization at a meeting Nov. 25 to form Second Church of Christ, Scientist, in this city. The action of the fifty members was taken at the request of the officials of First Church, who recently announced in a circular to the membership, that another branch of the denomination in this city had become necessary, owing to the overcrowding of the edifice on Columbia road. Immediately after securing their letters from the clerk of First Church, the members went into executive session and elected readers.

Washington Times.

MELBOURNE, AUSTRALIA.—On a recent Sunday an elderly gentleman entered the Athenæum after the evening service had begun, and an usher showed him to a vacant chair in the front row. His attention to the reading was close, and on leaving the hall he remarked to an attendant: "Last Sunday I heard a sermon by a doctor of divinity against Christian Science, and I came here tonight to know something about it. Now that I have been here, I wonder why it is that these ministers cannot leave you people alone."—*Correspondence.*

CHICAGO, ILL.—Dedicatory services were held [Nov. 23] in Eighth Church of Christ, Scientist, of Chicago, South Michigan avenue and East 44th street. This edifice was opened June 25, 1911, and has been used regularly since, but is now being dedicated free of debt. The building has an auditorium with a seating capacity of thirteen hundred.

Chicago News.

SANTA MONICA, CAL.—With a service marked for its simplicity, yet for that very reason most impressive, the beautiful new church of the Christian Science people of this city was dedicated yesterday [Nov. 23] to the service of God, in the presence of a large gathering of devoted members and others.

The Lectures

Johannesburg, South Africa

William D. McCrackan, M.A., delivered a lecture on Christian Science in the Orpheum Theater. He was introduced by William P. Grimmer, solicitor, who said in part:—

Christian Scientists believe that by the light of the Christian Science text-book they have been enabled to find that for which all the world is seeking, namely, the way to the peace which passes understanding. This "pearl of great price" they desire to pass on to others.

These lectures are free gifts from the Christian Science people to their fellow men, and their purpose is the same as that of the reading-rooms. Mr. McCrackan has traveled nine thousand miles from his home in New York city to offer to you something of what he has learned in Christian Science, and I know you will give him a courteous hearing.

Correspondence.

✧

Dawson, Yukon, Canada

A large and appreciative audience gathered at Arctic Brotherhood Hall to hear Clarence C. Eaton lecture on Christian Science. The Hon. F. T. Congdon, K.C., introduced the speaker of the evening, and said in part:—

Some men at early stages of their lives run on mental sandbars, and remain there until the inevitable results of stagnation, decay and death, ensue. Others, in the lead for a time, grow lazy and content, and if ever aroused, find they must run to catch again the ever-moving procession. "Be abreast of the times" is a good motto in regard to matters of thought, and we cannot live up to it and be ignorant of the movement designated Christian Science. In one sense of these words, the sense of systematized Christian knowledge, most of us would like to be qualified for membership. Then the value attached to simple faith appeals to us strongly. The movement has been beneficial even to those who have no knowledge or faith in it, for it is a revulsion from materialism, and a recognition of the profound importance of the spiritual.

Dawson News.

✧

Greensburg, Pa.

Virgil O. Strickler, who lectured on Christian Science, was introduced by J. C. Bolger, who said in part:—

The question, "What is truth?" may be said to be as old as humanity itself. Sages, philosophers, and ecclesiastics in all ages of the world have endeavored to answer the question, and the result of these efforts has been a vast accumulation of theories and hypotheses whose practical worth has been determined by the nearness of their approach to the teachings of him who said, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." Jesus of Nazareth not only preached and taught, but he also proved by his life and works that he knew the truth about God and man. This knowledge, he declared, was possible to all who would follow in the way he marked out. But to show that this knowledge was more than a mere intellectual apprehension of his teachings, he said, "He that believeth on me, the works that I do shall he do also." Thus Jesus laid down a rule which must forever remain the test of the genuineness of all religious profession. According to this rule true religion must be made practical in the overcoming of sickness and sin.

Christian Science is a religion which, if the tree may be known by its fruit, can justly lay claim to being the truth

Digitized by Google

concerning God and man, for it enables those who understand it to do the things Jesus designated as the "signs" that should "follow them that believe." Hundreds of thousands of people can testify that they have been healed of sin and sickness through Christian Science. This truth is universal, and its benefits are attainable by all. These lectures are given for the purpose of proclaiming this good news to the world. The local Christian Scientists have provided this lecture, not to proselyte, not to gain a following, but, to use the words of St. Paul, that they might be "helpers of your joy."

Correspondence.

Hollywood, Cal.

Seldom has such interest been shown in a subject as when several hundred people were unable to gain admittance to Wilcox Hall, the occasion being a lecture on Christian Science by Bicknell Young. Asa T. Patterson of Hollywood introduced the speaker in the following words:—

We have met here this evening for the purpose of gaining a better understanding of the teachings of Christian Science, the religion that heals the sick as well as the sinful, as demonstrated by the Master nineteen centuries ago, and as testified to by thousands of those who have experienced the healing power of this great truth in the present age, many of them after having first exhausted every other available remedy. So-called incurable diseases have been healed in Christian Science after long periods of the best medical treatment have failed. We learn from the Christian Science textbook, "Science and Health with Key to the Scriptures," that the same power which heals sin, heals sickness. When Truth heals the sick, it casts out evils; and when Truth casts out the evil called disease, it heals the sick.

East Hollywood Inquirer.

St. Louis, Mo.

John Ashcroft, assistant committee on publication for Missouri, in introducing Clarence W. Chadwick, who lectured on Christian Science at First Church of Christ, Scientist, spoke as follows:—

In the closing years of the first century of the Christian era, when the pure Christianity taught by Jesus and his immediate students had already been adulterated by those who were "teaching for doctrines the commandments of men," there was given to one whose spirituality made him a fit channel for its transmission, that wonderful vision of the future which has come down to us as "the Revelation of Jesus Christ, which God gave unto him, to show unto his servants things which must shortly come to pass." Bridging the dark chasm of the intervening years, this revelation portrays a time when, in the language of the one who recorded it, "there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." It was to be a characteristic of this period that the gospel preached by the sea of Galilee and at Bethany should have found its fulfilment; that men should indeed realize that the Christ is with them always.

Unfortunately for humanity, this revelation came to be regarded as referring to some future existence; and as a result of this error the long night of materialism descended upon mankind. It remained for the Discoverer and Founder of Christian Science, Mrs. Eddy, to detect this misapprehension and undertake its correction, and to this end she established the various activities of the Christian Science movement. Our church services and reading-rooms, our lectures and literature, are all designed and devoted to this healing work,—the healing of mankind's misapprehension of their relation to God; and by no means the least important of these healing and enlightening agencies is the board of lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass.—*Correspondence.*

Elizabeth, N. J.

The introductory remarks of William Ranson, first reader, at the lecture on Christian Science given by Bliss Knapp in Proctor's East Jersey street theater, were in part as follows:—

Forty-seven years ago a New England woman announced the discovery of the laws governing divine healing as taught and exemplified by Jesus of Nazareth, and gave it to the world nine years later in "Science and Health with Key to the Scriptures," the commentary or text-book used by Christian Scientists in their study of the Bible. Christian Science is restating today the teachings of Jesus of Nazareth as shown in the healing of the sick and the bringing into the daily experience of thousands of men, women, and children the uplifting and hallowing effects of primitive Christianity.

Testimonies of Healing

It has long been my wish to add my testimony to those which appear in the *Sentinel*. I cannot be sufficiently thankful for all Christian Science has done for me. I was on a visit to an aunt when it was first brought to my notice by a lady caller, and it appealed to me at once, as I had for some time been desirous of finding a religion that would meet my daily needs. I did not, when I first heard of Christian Science, come to it for physical healing, but for the spiritual uplift, which was felt at once, the mental healing or purifying being, after all, according to my understanding, the most important. I saw that a clean, pure mind, free from all unkind thoughts, must make a healthy body. I had been studying Science and Health for some months when I had a bad attack of illness, an inflammation of the joints, which is a most painful complaint. I was much disappointed when I found I could not overcome this ailment without help, but afterward I was led to see the good, even in this, since the practitioner to whom I went for help was wise enough to point out wherein I had failed. In a few days I was completely healed, and for this I am most grateful to God, and also to my kind helper.

I am day by day learning that God is indeed a very present help. I am living in a very isolated spot, a small fishing village, where there are no other Scientists, and I look forward with great pleasure to the opportunities I sometimes have of attending the Christian Science services or meeting with other Scientists. It is so great a pleasure, when other duties are not too pressing, to study the Lesson-Sermon or to read the *Sentinel*, that I am never dull or lonely, God being so near at hand to supply every need that I have no desire for a busier place in which to spend my days. I thank God, and am also grateful to Mrs. Eddy.

Mrs. Alice Harding, Sunderland Point, Lancaster, England.

✧

I have received so much good, so much encouragement when I needed it, from the reading of the testimonies of others, that I feel I should be ungrateful if I did not tell of some of the benefits I have received. In the spring of 1907 I began to have bladder trouble and then other ills set in. We were then living on the desert and I had to send to a good doctor in Los Angeles. He sent me medicine, but I kept getting worse and in July I went to the city to be treated. The doctor said I must go to a hospital, and there, under the care of doctors and nurses, I remained nearly all the rest of the summer and fall. I was given temporary relief, but found that whenever I got out of bed I became worse. I grew no better but became weaker all the time, and finally the doctor, who had called in specialists, told me that the case had become chronic. As I could not get help there I decided to go to Arizona, where my husband's work had taken him, so that I might be with him when I died, instead of being among strangers. Kind neighbors helped me to dress and took me to the train, where I had the berth made up and went to bed.

When I arrived at the end of my journey my husband carried me into the house and put me in bed. I never expected to get up from it again, but a dear lady who had been cured in Christian Science heard of my being sick, called to see me, and told me how she was healed. I did not doubt that it had helped her, but I did not understand how it could help me, when the best doctors in Los Angeles had tried so hard to do so and could not. She went home, but in a few days returned again and persuaded me to let a practitioner come to see me. I finally decided to try Christian Science, but I kept my medicine, thinking I would have it to fall back upon if I grew worse under the treatment as I expected to do if I gave up the medicine. I soon found, however, that I was getting better, and the next day I felt as if I could sit up a while. I kept on feeling better every day, until all the minor ailments left me, but the bladder trouble was still in evidence, although I no longer suffered from it. After having treatment for about three months, I decided to study and try to work out the problem myself. My complete healing was slow, and I see now that this was for the best, as it caused me to study and find out something about this wonderful truth. About three and a half years after I first had treatment, I suddenly realized one day that the old trouble which had clung to me so long, was all gone.

I have had many blessings for which to be thankful, the healing of croup and other ailments with the children, right at home; and not one drop of medicine has been taken for over four years. I certainly feel thankful to God, also grateful to Mrs. Eddy that she has made it possible for us to know of the truth which sets us free.

Edith V. Otterson, Glenn, Cal.

✧

In 1909, while taking account of stock in a large store, I became very ill. I went home and to bed, and a doctor was sent for, who treated me three weeks; but he could not diagnose the case and so called another physician. They held a consultation, and when my wife went to the office of the first doctor, he told her that I had an abscess on my liver, while the other one said I had a tumor, and that if I was operated on it would kill me. The first doctor said that I would live but two or three weeks and told my wife to let me die in peace. I myself believed it was a case of rheumatism, and told the doctor so, but I remained in bed more than a year and could not move without help.

In all, I had five different doctors, and when I became able I was carried about in a chair. I went to different health resorts, including hot springs, but received no benefit from any source. While stopping at the house of a Christian Scientist I became interested in Science and Health and made it my study while there. I had lost flesh, but I began to improve, and continued to gain so far as the rheumatism was concerned; but the medicine I had taken had injured my stomach, and again I was in a very critical condition. As I could eat no solid food without great suffering, I asked for help in Christian Science, and with the aid of a practitioner all my troubles vanished. I can truthfully say that Christian Science has not failed me in any hour of need.

I thank the good God for His loving-kindness. I also love and am grateful to Mrs. Eddy, that grand woman who has done so much good for mankind.

W. G. Parker, Leadville, Col.

✧

Six years ago I took up the study of the Bible in the light of "Science and Health with Key to the Scriptures" by Mrs. Eddy, with the earnest hope that what I knew it had done for others it might do for me. For nine years previous to that time I had scoffed at what I believed Christian Science to be, and I ridiculed its Leader and her adherents, though I did not know why I did so. A disposition to criticize everything and everybody led me to a lack of confidence in the religion of my God-fearing parents, because I could see that the message of Christianity was the overcoming of fear, and wherever I went fears were being expressed. So I was not led to accept such Christianity, though I earnestly longed for an understanding of what seemed a very mysteriously created world. My constant cry was, "O God, if there is any God, help me, if there is any help!"

Digitized by Google

A few years after my marriage, a friend whom I had never known to be well, and who I knew had been healed by Christian Science, came for a few weeks' stay at our home. Her daily life, upheld by her confidence in the goodness of God, as well as her entire freedom from fears of all kinds, appealed to me as a Christianity which I could accept. Under the guidance of a most patient practitioner and with a copy of the text-book, I found myself able to cast out my false beliefs about the message of Christian Science and our Leader; but it took many months to do this.

Since that time, one child has been born to us, under circumstances of such harmony that I could never cease to be grateful, even if other blessings had not been showered upon us by the ministrations of Truth. Our two older children were constantly under medical treatment of some sort, and were rarely in normal health. Our last two have reversed every material law about the too frequent diseases of infancy, and with the casting away of our "foreboding fears," as our beautiful hymn puts it, these children have not known any more discomfort in teething processes than in the growth of finger-nails.

Many times during these six years we have had cause for gratitude for some wonderful healing, by the power of God, in Christian Science. The "crooked" in thought is being "made straight," and the "rough places" in disposition are indeed being "made smooth." Our Father-Mother God and His spiritual creation are becoming a glorious reality, and Truth declared is to us an ever-present help in time of need.

I rejoice to say that I am in what would be called perfect health of body, and am daily seeking that increase in wholeness of understanding which means real health. I know that gratitude to God is best shown by striving to avoid mistakes. May my gratitude for all the health and peace that have come to us through the study of Science be expressed in this way more and more.—Edith D. Jacob, West Chester, Pa.

✧

I am very grateful to God for Christian Science, since through it I have been entirely healed of the drink habit. I was also healed of a very severe burn, caused by an explosion. For four days I was totally blind and my face was terribly burned. The doctors said I would be badly scarred and would undoubtedly lose my sight. They were called to dress the wounds, then a message was sent to secure Christian Science treatment, and I am glad to say that my sight was restored, and that there are no scars whatever on my face. This happened about eleven months ago, the healing work being done by the treatment in Christian Science.

W. F. Feiler, Omaha, Neb.

✧

I have no fitting words in which to express my gratitude for all the blessings that have come to us in the past three years through the study of Christian Science.

When this Science was first presented to us, we were truly without hope and without God. I cannot remember, even as a little child, of being free from pain, and owing to ill health, had grown so despondent that I seemed unable to see the bright side of anything or the good in any one. I had been treated by many physicians, and the last one who diagnosed my case said that medicine could never heal me, for it was only supposed to build up the system; but the patient must furnish the system, and as mine had so wasted away since infancy, I had none to build up. The Bible tells us, however, that Spirit will form us anew, and I know that the spiritual understanding of being does form one anew, and will heal all of our diseases.

When I first began to investigate Christian Science and was told that God is truly a "present help in trouble," it was very hard for me to believe, for I had never found Him so, though I had been seeking Him all my life; but during the second week of my study of Science and Health the truth of this statement was proven to me so forcibly, through an accident (the explosion of my gas-stove), that I have never since doubted it. My first thought at the time of the accident was that my sight was lost, for my glasses were blown off and I seemed unable to see; but this was only for an instant, then the "still small voice" whispered, "Be still, and know that I am God." With that all fear left me, and for the first time in my life I experienced that peace "which passeth all understanding."

Instead of losing my sight, as was predicted, I found my true vision to be in God, and as our Leader tells us, it can neither be injured nor destroyed. My face and hands were badly burned, but instead of being confined to a darkened room, as was predicted by some, through the loving help of a Christian Science practitioner I was able to resume my household duties that same day and suffered no inconvenience; nor did I lose a particle of skin from my face or hands. Up to this time I had worn glasses for eight or ten years and had suffered untold agony from headaches all my life, until it was feared at times that I might lose my reason; but since the accident I have never worn glasses, and I scarcely know what it means to have a headache.

For these and many other blessings I am deeply grateful to God; and I am thankful to Mrs. Eddy, who, through her unselfish love for all mankind, was enabled to express this truth which makes free.

Maude H. Morehouse, Duluth, Minn.

✧

[Translated from the German]

In January, 1913, I became acquainted with the teachings of Christian Science, and I herewith wish to make grateful acknowledgment of the benefits received. I had gone through times of great distress, sickness being my constant companion for a period of sixteen years. Moreover, my life was often made miserable by my surroundings. My trouble was said to be due to bloodlessness and catarrh of the stomach. I consulted various physicians, not one of whom was able to cure the trouble, and I also tried many other means; but the condition continued to grow worse. I suffered pain in my whole body, had very little sleep at night, and in addition became afflicted with a severe nervous trouble.

In my dismay I besought God to help me; but my prayers seemed to remain unanswered, and the sense of weakness and the pain were increasing steadily. I could neither speak nor hear any one talk, and was almost unable to sleep. There would occasionally be some improvement, but I had given up all hope of ever being restored to health. Prayer was my only comfort, and at times it seemed as if peace were descending upon me.

A "nature cure" institution was highly recommended to me, and I was taken there, though with the utmost difficulty. After several weeks had elapsed, the violent attacks gradually became less frequent and finally ceased to occur. This gave me new courage, and I felt as if I must wait for something to come. The desire was awakened in me to be of use once more in the world and to make up somewhat for the time lost along all the lines which had been neglected. I seemed to see a light like a star of hope in the midst of darkness, but again and again I experienced the most bitter disappointments, and after a few months lapsed into such a condition that everybody said there was no help for me. Still my trust in God

Digitized by Google

increased, and I would answer that with God nothing is impossible. I was determined to fight on, with God's help. I felt that I must get well, that I must live for the glory of God, and do good to my fellow beings.

This came to pass in an unexpected way after I came to Breslau. There I heard of Christian Science, which inspired me with great confidence, and after asking a practitioner for treatment, which was taken up lovingly, I began with the earnest reading of the Christian Science literature, attended the services, and made quick progress along spiritual lines. Now I have not only found health, but also peace. I have been working for months, and I enjoy good sleep at night. Anybody will appreciate my great joy at being able after such a long period of invalidism to attend to work once more. My sole desire is that the light of Truth may shine upon me and illumine my thought, that I may at all times be led to do the will of the Father.

I thank God from the depths of my heart for all the good He has bestowed and will continue to bestow upon me, and I shall ever be mindful of the fact that to Him alone belongs glory and honor. I also feel gratefully indebted to Mrs. Eddy, who has shown us the way to Truth.

MATHILDE SCHADE, Breslau, Germany.

✧

I was taken, about four years ago, with severe pains in the stomach, which came on periodically. Different doctors treated me for different diseases, with no benefit to me. In November, 1910, I was taken so severely ill that my physician thought I would do better in a hospital, and sent me to one in New York. There I came under the care of another physician, who diagnosed the case as gall-stones, after an X-ray examination. He said I must be operated on, but I told him I would have to wait until my husband returned from South America, where he had gone in search of health. I was taken home in December, 1910, on his return, much emaciated. My old physician called to see me, and said he was not sure of gall-stones, but told my husband that I had a heart lesion, and must be kept absolutely quiet.

I remained in this condition till the early fall of 1911, when I procured a copy of Science and Health, which I read carefully. I began to feel better, and in about four months I was in perfect health, as I am today. I cannot say too much in praise of Mrs. Eddy for the wonderful work she has done. I am reminded of the allegory on page 430 of Science and Health of the poor fellow who "committed liver-complaint." I was charged with having "committed" gall-stones and heart disease, but was set free by Christian Science.

FRANCES S. RICHARDSON, Brooklyn, N. Y.

I can vouch for the above as to the condition of my wife, being a physician myself. The diagnosis of gall-stones was from a medical point of view an inexcusable blunder. The diagnosis of heart lesion was true, but it has disappeared. Four months ago my wife came in one day with her face aglow, telling me of how fast she ran to catch a car. I asked her where her heart was. She had not thought of it!

B. B. RICHARDSON, M.D., Brooklyn, N. Y.

✧

I am indeed grateful to God for the teachings of Christian Science,—not only for the many demonstrations of victory over error, but also for a fuller understanding of the Scriptures. The promise of dominion over the animal kingdom, which has lain so long dormant, has through Christian Science given us the realization of the truth presented in verses 17 and 18 of the sixteenth chapter of Mark. These verses proved of great value to me while on a visit to a part of the Transvaal where spiders, tarantulas, and scorpions abound.

Early one morning I was awakened by the sting of a large scorpion in the corner of my eye. The pain was very great; it was as if I had been struck with a hat-pin, or boiling water had been thrown in my eye. Securing a light, I saw a large scorpion running off my shoulder down my arm, and I caught it to prove to my friends that I had been bitten. I immediately took up Science and Health and knew that my remedy was at hand. I worked very hard to know that I had this God-given dominion; that there was no power apart from God, and in a short time the pain was gone; but a bag of yellowish green fluid, the size of a pigeon's egg, was hanging over my eye. My friend examined the eye with a magnifying glass and the marks of the sting could be clearly seen. I neither applied anything nor accepted the offer of a dose of spirits. Jesus' words, "Behold, I give unto you power . . . over all the power of the enemy: and nothing shall by any means hurt you," helped me to overcome my fear, and I was able to go to the breakfast table with little or no trace of the bite.

At another time, by realizing the truth of this same Scripture, I was able to help a dog which had been bitten in two places by a snake. The dog was lying down and foaming at the mouth. I gave him treatment and walked away, and before long the dear creature overtook me and ran on ahead. Again, I had occasion to remember the words, "And if they drink any deadly thing, it shall not hurt them." Another animal drank, by mistake for milk, a very powerful poison. I worked faithfully for some time, as the animal was in a very weak state, but I knew and declared the truth, and the trouble was soon overcome. These few instances show clearly that we have indeed a "Key to the Scriptures," for which we should be ever grateful to our dear Leader, the Discoverer and Founder of Christian Science. May it go across the ocean and be known in every land!

FLORA M. CAMPBELL, Bloemhof, South Africa.

Miss Campbell has asked me to verify her testimony regarding the healing from scorpion bite that she experienced at Pietersburg in October, 1912. I was staying in the house with her, and saw the wound caused by the bite. I also saw the dead scorpion pinned to the wall just above the sofa on which she slept that night. She used only the truth as we understand it in Christian Science, and quickly recovered from the effects of the poison.

ANNIE E. TURNER, Johannesburg, South Africa.

✧

Like many others, I have delayed in sending my testimony to the healing of sin and sickness which has come to me through the study and application of Christian Science. The understanding which I have gained through its teachings is definitely, radically, and fundamentally healing, and it is changing me,—my character, my health, my motives, my actions, my outlook on life, and my relations to my fellow man, because it is teaching me the laws of right thinking. It is giving to me, as to every one else who studies it, a practical means whereby I can avail myself of the help of God to guide and sustain me in every right action, and to overcome every discord and difficulty of life, nothing being too small and nothing too great to which to apply it. It is bringing me a sense of health, stability, peace, and happiness which I have never thought was possible, whereas before I heard of Christian Science I was often ill, nearly always tired, and constantly unhappy and distressed.

I am most grateful for this freedom; but I should like

Digitized by Google

especially to express my gratitude for the scientific fact revealed in Christian Science, that man is governed and controlled by God alone, the one Mind, and not by any human personality with the human influence and attraction which bring in their wake every kind of ill and evil. Christian Science is gradually obliterating from my consciousness even the memory of past discordant conditions, though retaining the good of every experience; it is enlarging my present sphere of love and usefulness, and brightening the future with the sure hope and promise of good for me and all mankind. It is indeed "God with us."

EVELYN A. S. BULL, Edinburgh, Scotland.

✧

Nearly five years ago I took up the study of Christian Science, and I send this testimony with a sense of deep gratitude to God for the many blessings that have come to me through the truth as revealed by a study of the Bible with the aid of the Christian Science text-book. With the kind help of a practitioner I was healed of distressing headaches, rheumatism, and stomach trouble, which I had had for many years, and which I had come to believe were incurable. I had tried many physicians and specialists as well as all kinds of baths, electricity, physical culture, etc. During the last five years I have had many proofs of the efficacy of Christian Science in business as well as in overcoming physical inharmony, and can truthfully say that it meets every need when honestly and faithfully applied. Since coming into Christian Science, the freedom from mental inharmony, such as discouragement, melancholy, and sensitiveness, have in a large measure been destroyed, and for the spiritual uplift I can never express enough gratitude.

I wish also to tell of a recent experience. An abscess appeared on my back, so that I could neither walk nor sit, but in less than six days, with the help of a practitioner, I was able to be up and again attend to my business affairs, whereas in a similar experience which I had had some fifteen years ago, I was compelled to lie in bed three weeks, with constant poulticing night and day, and to have a physician open and cleanse the same, all of which was very painful. To say that I am thankful can never express enough of the love and gratitude I feel toward God, as well as toward Mrs. Eddy, for the light that has come to me and mine, and to all followers of the truth. I am indeed grateful for the Christian Science literature, the *Monitor*, *Sentinel*, and *Journal*, which bring us healing and spiritual uplift.

ABRAHAM LOEBE, Chicago, Ill.

I feel deeply grateful for what Christian Science has done for me. I always thought, even from a limited understanding of the Bible, that the Christ-healing was intended for us if we only knew how to apply it. After I became a student of Christian Science and the understanding grew clearer to me, I realized that I had found the Christ-way, and I am indeed thankful for this knowledge and for the spiritual help I have received. Freedom from fear is a blessing of itself, even if Christian Science never cured a physical ailment; but it does everything.

My little girl was healed of an attack of blood-poisoning after one treatment. She had chills and fever, and in the old thought of fear I am sure it would have proven a serious case; but with the help of a practitioner and my little understanding of the truth she was healed in a short time. For this and many other blessings I am truly grateful, and am trying each day to be better and to grow more into the understanding of this wonderful truth which Mrs. Eddy has revealed to us. I hope to be able to be a Christian Scientist in practise as well as in name.—MRS. DEPEW, Stege, Cal.

From Our Exchanges

[*The Universalist Leader*]

When Jesus came along and so frankly and firmly criticized and deliberately set aside some of the cherished notions of the older times, he shocked and disturbed all of those people who believed that the system under which they lived was necessary to the safety and permanence of society itself. Take the Sabbath. Two thousand years have almost passed away, and still there are many followers of Jesus who are greatly troubled when his attitude toward that problem is even mentioned. All of the morality and ethics of ancient society was inseparable from the ceremonial and ecclesiastical law as this had developed. The mighty moral precepts of Moses had become interwoven with the eye for eye, tooth for tooth, life for life practical social justice of the times. How, then, could one set aside the principle underlying the practise of justice without disturbing the very foundations of society? The conservatives of our own times get excited, frightened, and even angry over suggestions of modifications of our own contemporary administration of justice which are far less revolutionary than were the ideas of Jesus.

The purpose of these comments is not to defend the critics of Jesus,—they are indefensible so far as their personal attitude toward him is concerned; but they were no more guilty than are many of those who score them unmercifully. Therefore let us understand them. Let us appreciate their position, their point of view, and their honesty of conviction. They were really afraid, most of them, that this man would wreck society if he had his way. . . .

The point of the matter which is of most importance is that, aside from a few scheming leaders at most, the men and women who cried "Crucify him, crucify him," were honest men and women. Just as honest as any crowd who cry "Crucify him, crucify him," today, when the prophet of some great and holy cause does not meet with their approbation. There are few more foolish and mistaken notions in the popular cries of our times than that if one is honest he is all right. He may be all wrong. He may be one of the worst blunderers among men. He may be the most determined opponent of what is eternally right. Perhaps his voice is loudest in the mob which chooses Barabbas rather than Jesus for its favors. Something more than honesty is needed in one who is to see straight and see the whole when difficult questions of life and conduct are presented. In order to deal intelligently with such issues, one must be intelligent. When a prophet knocks at his door and asks for a night's lodging for his ideas, this cottager must have some knowledge of the philosophy of history in order to place this pilgrim where he belongs in the evolution of ideas and ideals. For lack of that perspective, many an honest man has closed the door of his soul to the very angels of the living God, the messengers of divine truth, who have paused a moment on his threshold, and have gone their way never to knock at his soul again, just as they did that day. There is something to be said for the experience and the culture, the disinterestedness and the open-mindedness which prepare one for those crises where a great truth of a great soul crosses our path. Looking backward most of us can say, and do say, with a self-pity which is sometimes a humiliating confession, that if we had only known, it would have been different.

[*The Christian Register*]

Multitudes who desire to be religious, who have at times spiritual aspirations and feel the stirrings of the higher life, are yet very much at sea as to what they believe and can affirm. This is not the day of great and positive affirmations,

Digitized by Google

but the day of honest seeking, of hopes which, if not yet formulated, do exist vaguely in the souls of thousands who lead the worldly life, and yet would gladly be religious if it were possible. The way of the world is conservative. It binds like the tough roots of sword grass, and spreads its strong fibers under ground. It makes a solid, binding network of society. It does not like to look unpleasant facts in the face. It will smooth over some horrible things; ignore them as long as possible to protect the average sum of well-being. It distrusts enthusiasm and abhors fanaticism and all extremes. It too often protects the deceptive aspects of a fair surface while underneath is a mass of rottenness.

It is this that supports shameful misgovernment in a great city, political pillage, robbery, and crime. It is the way of the world to sleep well, digest well, enjoy prosperity and ease next door to slums, gambling-houses, and dens of infamy. It minds its own business scrupulously for fear of disturbing what is called the general prosperity, which is too often the prosperity of grafters and thieves. All heroic souls, at times, are obliged to go against the way of the world, and to seek to break up the selfish inertia that lies at the base of society.

[*Hartford Seminary Record*]

Ever since the coming in of the twentieth century there has been in the world of theology a sense of anticipation. There has been the subtle feeling that the fulness of time was here, when there should arise a new, "great" theologian, who would speak forth for this age in architectonic form the deep truths of the religious consciousness of the age. The eyes of some have been despairingly cast backward to the great theologians of the past, and the effort has been made to show their adequacy for the life of our day. Others have appealed to the modern scientific method, and have declared that the only thing necessary was to adhere rigidly to it, and by means of it the theology of the day would of logical necessity be constructed; the only trouble being that the method of science had not yet been applied with sufficient rigidity to the facts of the religious life to produce the result. Still others have concluded that the day of theologic systems is over, and that for each man the religious life he lives will be his theology incarnate, and that each man will have his own. Still, we can hardly rest here.

[*The Christian World*]

And here come we to the central point, down to the real secret of life. The one and only self we can afford to express is that higher self found in the holy place of the temple buried in us; which is of us, and yet so much more than ourselves; the principle of unity between us and our fellow, between us and the universe outside; the self which shows in us as principle, as conscience, as ultimate moral authority; the self whose voice is ever the highest authority, recognized by us as the whisper of God. It is when we have recognized this "categorical imperative," this law which is in us but is also beyond and above us, this duality in unity which makes the true man; it is then we find our place in the world, our work in it, our liberty and joy. We learn the liberty that is in obedience, the only liberty worth the name. "We are all servants of the laws, that we may be free," says Cicero. Yes, when the laws rest on this deepest foundation. To get God's will done in us and by us; for this end to cultivate all our powers to finest use; to get it done by our action, by our influence, by our suffering, by all that belongs to our life,—this is the self-expression of the Christian. It was the self-expression of Christ, an expression so clear in its revelation of an infinite within that men ever since have been reading in it the character of God.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, marbled edges, 95 pages, single copy, $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy, 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.***

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIII indicates the year 1913; XIIII is used for the year 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

NATIONAL.

A suit for ten million dollars against the Quaker Oats Company, its directors, and the directors of the Great Western Cereal Company, has been filed in the United States district court at Chicago by receivers of the cereal company. The suit was the result of the sale of the trade names and principal properties of the cereal company to the Quaker Oats Company on June 23, 1911. It is averred that one million dollars, realized by the sale, was taken by the holders of one million dollars' worth of the cereal company's bonds, leaving the holders of three million dollars' worth of stock only the name of the company and the minor property as assets.

Books will be accepted for transmission by parcel post on and after March 16. The rates will be the same as on other articles, except that books weighing eight ounces or less will cost one cent for each two ounces or fraction thereof. The weight limit of parcels was raised on Jan. 1 from twenty to fifty pounds as the maximum, but the fifty-pound packages will be accepted for delivery only within one hundred and fifty miles of the mailing places. It will be possible, however, to send a twenty-pound package anywhere in the United States. The rates remain unchanged.

Legislation to render possible a state department of survey and registration to make Massachusetts agricultural lands marketable, the establishment of a state agricultural bank to provide money for the resultant agricultural development, and a state bureau of bankers and farmers, was recommended at the closing session of the first conference of the New England section of the American commission on rural credit and cooperative organization at the State House in Boston.

It is declared that the package business of the express companies this Christmas was from twenty to twenty-five per cent less than that of last year. The statement is also made, that since the parcel post service has been in operation, a steady and alarming decrease in the classification of business formerly handled by the express companies has been noted. Adams Express Company stockholders have been notified that the competition which the parcel post service has given that company in its operations has been so severe as to cause a deficit for the fiscal year ending June 30, 1913, of $89,872.

According to a ruling by the treasury department, foreigners drawing an income from American interest-bearing bonds are exempted from our income tax. By this ruling, Americans may escape the tax by naturalizing themselves elsewhere, while Americans who retain their citizenship, but who live abroad, must pay. In the case of wealthy American girls who marry foreigners, their property can be transferred to their husbands and thus go untaxed. This ruling, it can be stated, is not in accordance with the intention of those who drew the law.

A symposium of the views of American railroad presidents, gathered by the *Chicago Tribune*, shows that they would rather lodge greater power in the interstate commerce commission, permitting some supervision of the financing as well as of the operation of railroads, than to continue their present status, which involves them in continual trouble because of conflicting state regulation. This additional power was asked by the commission in its annual report.

INTERNATIONAL.

In the form of a report of long conversations which Chancellor Lloyd-George has had with close friends during the Christmas holidays, the London *Daily Chronicle* gives his views on the armaments question. Pointing to the enormous burden which armaments impose upon the taxpayers, and to the fact that the growth of armaments still leaves the nations in the same relative strength, the chancellor thinks that the present is the most favorable moment in twenty years for a policy of retrenchment. He cites three reasons: First, Great Britain's relations with Germany are more friendly than for many years, both realizing that there is nothing to gain and everything to lose by a quarrel; second, all the Continental nations are now directing their attention to strengthening their land forces, Germany having realized that her exhaustive aims to develop her naval power must give place to improving the army, which is vital to the existence of the empire; third, the spread of revolt against military oppression through Christendom, certainly throughout western Europe. The third reason the chancellor considers the weightiest of all. He believes that this is the right moment for a bold step toward the restriction of the growth of armaments, and thinks it imperative that in the highest interests of civilization he should seize it.

A recent debate in the French Senate exposed once more the heavy drain that the demand for greater armaments is causing in the national exchequer. It was declared that there was a deficit of seven hundred and ninety-four million francs in the current budget, and an estimated deficit of four hundred and fifty million francs in the budget for 1915. This was irrespective of the millions expended in Morocco. In consequence, the government intends to follow the example of Germany and levy a special tax on fortunes.

The object of the drainage works which are being carried through in western Behera and central Gharbiah, Egypt, is to relieve the present water-logged condition of the cultivated area and to reclaim a portion of what is known as the lakes district. The total area that will be affected by the present works is just under one million acres, and about one hundred and thirty thousand acres will be reclaimed, that is, the whole of Lake Mareotis and part of Lake Borollos.

Lord Kitchener, in company with the Sirdar, Sir Francis Wingate, is to decide on the sites for two new barrages. That on the White Nile will be built some thirty miles south of Khartoum, and that on the Blue Nile somewhere in the neighborhood of Sinaar. These works will irrigate an enormous section of country between the two streams, and it is believed that they will produce a cotton-growing district of immense value.

Emigration from Italy is increasing. During the first nine months of the present year, 181,066 more persons left Italy than during the corresponding period of 1912. The official figures give the number of emigrants as 385,225, of whom 252,000 went to the United States, as against 196,106 who left for that country in 1912.

James Bryce, formerly British ambassador at Washington, was given the title of Viscount in the new year's honors list of King George.

France has spent thirty-five million dollars in planting trees on the watersheds of important streams.

INDUSTRIAL AND COMMERCIAL.

The annual report on coal of the United States geological survey shows that the anthracite coal industry has been concentrated into relatively few strong units or companies. Nearly 80 per cent of the anthracite mines were producers of more than one hundred thousand short tons of coal each, and 62 per cent of the mines produced over two hundred thousand tons each. The total production of these large mines—those producing over one hundred thousand tons—was 97.8 per cent of the entire anthracite output.

It is estimated that the log cut on the Kennebec river this winter will amount to one hundred and fifty million feet, or twelve million feet more than last winter. On the Penobscot the cut will be about an average, or two hundred and twenty-five million feet. Operations have been under way since September in most localities.

No shortage in the 1913 potato crop in this country exists, nor will the quarantine against foreign potatoes seriously affect the prices this winter, according to a statement issued by the department of agriculture. The total yield is 331,625,000 bushels, considerably above the ten-year average.

The crop production of 1913 in the United States is placed in a government estimate at ten billion dollars, and the estimator calculates that this gave a cash income of five billion dollars to six million six hundred thousand American farms.

November's foreign trade brought the balance of trade in favor of the United States against foreign nations to $642,100,403 for the eleven months of the calendar year.

The salmon pack on the Pacific coast this year is the largest on record, according to a recognized authority, amounting in all to about seven and one half million cases.

The latest report on the progress of dairying in Canada, says that milk and its products shows a total valuation of one hundred and twenty-six million dollars a year.

The forests of Florida contain one hundred and seventy-five different kinds of wood.

"What I say unto you, I say unto all—WATCH" Jesus

Vol. XVI | January 10, 1914 | No. 19

Momentum of Conquest

ROBERT NALL

THE rapid extension of Christian Science in human thought should awaken an increased sense of responsibility on the part of every Christian Scientist. The world has begun to recognize what this modern renaissance of primitive Christianity stands for, and it is on the watch to see if its followers are consistently harmonizing theory and practise. We may be sure that if they are not, then the world will have little time for them or for Christian Science. We say, and rightly so too, that this scientific knowledge of Truth should not be judged by the merits or demerits of its exponents; but we know that very often it is, and therefore the great need for fidelity, and for keeping our loins girded and our lamps trimmed and burning. There are fundamental truths here which should ever be kept in remembrance, and certain dangers which should be specially guarded against. These may be focused in the thought that we are never to rest satisfied with our present condition. We may have made great progress, and have cause for rejoicing that the promises of God are being fulfilled in our experience; the appeal to divine Love in all circumstances may have become what it should be, a habit of life to us, so that we are thankful to testify that God never fails His children, for we have proved that

> They who trust Him wholly,
> Find Him wholly true.

But are we quite certain that we realize the mighty work which is still to be done? The conflict between the flesh and Spirit will continue until every thought of sin, sickness, and death is completely destroyed in human consciousness. We must therefore go on "conquering, and to conquer," always in the abiding confidence that, as Christ Jesus proclaimed with the certitude of undimmed spiritual sight, if we have faith nothing shall be impossible to us. But let us not forget that he added, "Howbeit this kind goeth not out but by prayer and fasting." And can there be anything more inspiring than our revered Leader's explanation of what "prayer and fasting" mean? Young students may well make a special study of that portion of Science and Health; their enthusiasm will thereby be calmed and steadied, impelled to follow the well-beaten track along which every Christian must travel if he would find the kingdom, and encouraged to pursue the way with gladness.

Every Christian Scientist wants to advance. He has a vision of the promised land. The thought of God has been brought so near and made so clear to him by this new unfolding of Truth, that he longs for victory over all that is unlike God. And there is much to stimulate and inspire. One step in the spiritual way makes it easier to see and take the next. Every overcoming, small or great, as we may estimate it, helps us to vanquish mortal beliefs and fears, those stalwart opponents which seem so formidable and real until we confront them with the truth. Just as "each successive stage of experience," as Mrs. Eddy has written, "unfolds new views of divine goodness and love" (Science and Health, p. 66), so every sinful thought resisted, every "idle word" rejected, every wrong deed replaced by an act of love, means that some of the ramparts of the enemy have been undermined. What did the temptation in the wilderness mean to Jesus? It was a succession of victories. When he had overcome the physical, it was easier for him to wrestle with the more subtle arguments of error that were put before him. The impetus with him was purely spiritual, and his weapon the word of God. He was "with the wild beasts" of satanic subtlety and device, but knowing the illusionary nature of evil, and that the spiritual man has dominion over all the earth, he had the reward of the righteous, for "angels ministered unto him." What Jesus did, every man can, in a measure, do. By his example he showed us that there is no form of temptation which cannot be met and mastered. He never discouraged any of his followers; but he warned them, as he warns us today in the living words of his gospel, that we cannot be Christlike unless the impulsive force within us is that spiritual understanding which places God and His righteousness "first" in our daily lives. And it is this force which will enable us to conquer every seemingly adverse condition.

There is some lament abroad because of the tendency on the part of Christians to be like those of whom the prophet Zephaniah spoke,—the people who "settled on their lees," content to rest in the luxury of material comfort and to be apathetic about spiritual things. The Jewish metaphor is significant of a mental condition which is morally deadening in its effect. Our Master recognized it in his time, and the appeal is just as great to Christian Scientists to be wary of it. If we are not experiencing the momentum of conquest; if we are not advancing step by step in the spiritual road, rejoicing in the subjugation of beliefs of sin and disease in ourselves and others; if we are not apprehending Truth with clearer vision, and finding that omnipresent Love is our protector and defender, then we are in danger of settling on our lees, and of deserving the rebuke of the Master, "Whosoever hath, to him shall be given; and whosoever hath not, from him shall be taken even that which he seemeth to have." The spiritual law here inculcated is one that is vital to the Christian life. When used, our spiritual faculties increase in power and insight; when disused, they become atrophied, hence activity is an indispensable condition to victory. Alive to every privilege and every opportunity, as was our Leader, we may be assured that the accumulation of strength which will come will be a revelation; for where the impelling fact is the consciousness of the allness of God, good, and the conviction of the power of good in infinite Mind, there must be continuous growth. Sin will be scientifically proved to be unreal; sickness and disease will be overcome by the knowledge that it is a mortal dream, and nothing more. The sense of death will be destroyed, because it will be seen that there never can be any separation between God's man and God Himself, and that in the spiritual realm death has no place.

If we have arrived at this knowledge of what Christian Science is, we shall not fall into the error of believing that activity is synonymous with restlessness and ferment. It is often "in quietness and in confidence" that we make the greatest progress. No Christian Scientist can afford to neglect the hour of meditation; nothing else is worthy of taking its place.

Our work and our growth are mental. We must "live in the Spirit." We meet and conquer our foes in the secret of His presence. It is there, by communion with God, that we purify sense and self. It is there that we are most deeply conscious that we possess sovereign power, because we see the Father, who loves us with an everlasting love. It is there that we hear the call, "Come up hither, and I will show thee things which must be hereafter." Thus equipped, we can show to an expectant and hungry world that Christian Science is what it needs, for it is that alone which can satisfy every craving of the human heart.

Knowledge of Absolute Truth

FRANK H. SPRAGUE

THE tide had reached the full and was beginning to ebb. Far out in the cove lay a dull object which at first sight seemed to be floating in the water, but which on further scrutiny proved to be a rock protruding above the surface. As the water continued to recede another jagged bit of rock became visible at a little distance from the first, then another, and so on until a broad reef was exposed to view; and before the tide had reached low ebb it was seen that each rocky projection which, when isolated by the water, had seemed independent of the rest, rose from an underlying ledge or bed of rock which extended out from the mainland where the observer was seated.

This incident illustrates certain phases of experience encountered by the student of Christian Science. Although the ledge had been there all the while, no indication of its presence appeared so long as it remained submerged; but when left bare by the outgoing tide, its characteristic features stood forth in bold relief. Thus it is with the reality of spiritual or absolute being. As the miracles, so styled, of early Christianity had come to be viewed from the standpoint of modern religious thought across the intervening centuries of material belief and theological dogmatism, they seemed to stand out like special exhibitions of a supernatural order with no common ground to connect them with present experience. In process of time, however, a reaction of thought set in; the tide which had given materialistic interpretations the ascendency turned and began to seek more spiritual levels.

The subsidence of this material element in human concepts reached the point at length where Mrs. Eddy, who had long been pondering the question of metaphysical causation, was led in the course of experience to discover that all real phenomena of being have a common basis in divine Principle. The recognition of this fact gave assurance that the conditions which made possible the "mighty works" of apostolic times were not unique or sporadic but constant and law-governed. This assurance, substantiated by repeated demonstrations, enabled her later on to declare with authority: "Christ's Christianity is the chain of scientific being reappearing in all ages, maintaining its obvious correspondence with the Scriptures and uniting all periods in the design of God" (Science and Health, p. 271). Today, the restless, surging tide of material beliefs, human opinions and impulses, so obscures the reality of spiritual being that many are ready to deny even the existence of such a reality, while still more who recognize its existence theoretically regard it as quite beyond the range of concrete experience.

The dominant religious tendency of the period, commonly defined as scientific theism, represents the confluence of two streams of thought, viz., the higher criticism, as it is styled, which is in effect a reaction against supernaturalism, and natural science, so called, which bases its conclusions on material observation. In entering into partnership as it were with natural science, the church finds itself facing a dilemma. The implications of so-called natural science are distinctly agnostic, for, as every student of physics understands, the senses deal entirely with phenomena, effects, and impressions induced by some unknown and unexplained agency or cause. The nature of primary causation, the realm of the absolute, lies wholly outside material processes and, from the standpoint of material sense, is purely hypothetical, unknowable. One may, says natural science, entertain beliefs with regard to spiritual causation, but what evidence can be adduced to support these beliefs?

This negative or uncertain issue is directly at odds with the truth presented to the world by Christ Jesus. Strange as it may seem, the one point emphasized perhaps above all others in the recorded teachings of both Jesus and Paul, appears almost entirely to have escaped the notice of professing Christians of a later period. The basis of the demonstrations of the Founder of Christianity was, as he repeatedly declared, a recognition of the fact that God is Spirit, and that the lines of spiritual activity, which alone represent Him, run counter to the testimony of the senses in important respects. He made it clear that the absolute or spiritual, and the relative or material, at no point merge into each other; that they are not like two ends of a ladder which reaches from earth to heaven; that, however closely they may appear to approximate one another in certain aspects, the spiritual is always spiritual and the material always material, as elucidated in the parable of the wheat and the tares. He discarded material diagnosis and all determinations with regard to man and the universe which rested on the basis of sense testimony. He looked down on conditions from the vantage-point of an enlightened understanding of God as Spirit, and of the facts of existence as He decrees them spiritually. This point of view can never be gained by looking through the lens of material sense. As Mrs. Eddy says, "Delusion, sin, disease, and death arise from the false testimony of material sense, which, from a supposed standpoint outside the focal distance of infinite Spirit, presents an inverted image of Mind and substance with everything turned upside down" (Science and Health, p. 301).

The Prophet of Nazareth insisted in the most unqualified terms that the realm of absolute being is accessible, knowable, demonstrable to human consciousness here and now. Not only this, he also proved by his works that the knowledge his learned opponents had gained by studying relative phenomena was after all a sham, for it led them directly away from the facts of being. His knowledge of the absolute, acquired through spiritual sense, brought him into vital relation with the realm of primary causation, the noumenon of being, divine Principle, Spirit, God the Father. He spoke and acted "with authority," but this authority was not gained by studying material phenomena and their inferred laws. His life has stood out amid the surrounding sea of material beliefs because it manifested absolute being.

What we see depends on how we see; and what we experience depends on the standpoint from which we work. Humanity craves above everything else a definite knowledge of the absolute; and yet men have as a rule failed to gain such a knowledge, simply because they have sought it through relative channels. Knowledge of the absolute is the only absolute knowledge, the only knowledge that is completely self-conclusive and self-verifying. The Roentgen rays penetrate objects which are impervious to the light rays registered by the ordinary camera. The Master repeatedly rebuked his disciples for their failure to exercise spiritual perception, the faculty which brings the things of absolute being within range of human experience. It was his knowledge of the spiritual

Digitized by Google

that showed forth in the signs or so-called miracles, the examples he worked out in the Science of being. It was the knowledge of the spiritual gained by John, Peter, and Paul, which enabled them to achieve results that amazed their fellows who thought and acted on a material basis. It is, too, the Christian Scientist's knowledge of spiritual law which brings about demonstrations, according to their degree, thus proving the reality of spiritual being.

This knowledge, like that of mathematics, develops to the degree that the truth is worked out in experience. In this way one not only gains an understanding of this or that particular phase of truth, but he becomes aware that all the phenomena of real being proceed from a common Principle. As Mrs. Eddy expresses it, "We must recollect that Truth is demonstrable when understood, and that good is not understood until demonstrated" (Science and Health, p. 323).

Sunday School Work

MYRTLE B. S. JACKSON

WRITING on the subject of the study of Christian Science, Mrs. Eddy says, "Give to it the place in our institutions of learning now occupied by scholastic theology and physiology, and it will eradicate sickness and sin in less time than the old systems, devised for subduing them, have required for self-establishment and propagation" (Science and Health, p. 141). Should not these words make us inquire whether the one hour in the week devoted to the study and teaching of Christian Science, our hour in Sunday school, is given that whole-hearted and important place in the lives of children which it merits? Probably there are few grown-up students of Christian Science who have not experienced that only as they have steadfastly sought "first the kingdom of God, and his righteousness," have they enjoyed the betterment of their health as well as worldly prospects. While such people willingly make Christian Science the first consideration in their own thoughts, they do not always remember it should also come first in the thoughts of their children, and so are apt to give secular education the precedence.

Children are very quick to perceive their parents' ambition concerning them, and when they are sent to expensive schools, and see that their school lessons extend over many hours of the week, and that the time for proper preparation and the seriousness attached to examinations all occupy large proportions in the thought of their parents, they naturally begin to feel that those school lessons represent the important learning of life, and the hour in Sunday school begins to fade into quite a secondary place. The general education should certainly not be neglected, but does it not behoove us to see that our Sunday school teaching, which is in reality the Science of true learning, should be brought up to as efficient and interesting a standard as that of the day school, and that special time for the study provided for in the Manual should be as carefully utilized by both teacher and pupil, in preparation, as is the time set apart for arithmetic or history? When the facts are squarely faced, it is not too plain a question to ask, What lesson is ever given, on any subject whatsoever, where the teacher does all the work, while the pupil brings no preparatory study of his own, but simply sits still for an hour, to feel interested if the spirit moves him, and with no definite idea of learning if he does not feel particularly disposed to learn? Since neither youthful nor grown-up students of Christian Science have yet attained perfection, experiences of this nature are not infrequent in our Sunday schools, and perhaps this is so because our methods rather than our hearts are at fault.

When it has been recommended that children should carefully memorize the ten commandments, the Lord's Prayer with its spiritual interpretation, also the beatitudes, as provided in the Manual, it is no unusual thing to hear a parent say, "Oh, but my children have not time, they are so busy with their school studies;" and probably those same children would learn and recite whole pages of poetry for their literature class without stopping to think twice about it. When they grow up and are grappling with human problems, which will be the most valuable lines to come readily to their memory, those of world-writers or those of Christ Jesus?

Christian Scientists have to face the fact that there never was an age when school study was made so interesting and attractive to children as it is today. All that human progress and learning can devise is utilized to make the acquisition of knowledge as entertaining and unlabored as possible. The art of teaching is studied as a branch in itself, metaphysics from the human view-point entering largely into such training, and the result is a very high standard of education. We know that Christian Science includes the very pith of all knowledge, and all knowledge of that knowledge, but our present presentation of it does not always come up to even as good a standard as that of the public schools.

To illustrate. A child who has had two lessons a week on botany, has had the subject-matter enlivened with pictures and diagrams, has been asked to grow things in pots and plots at his own home, and has been told to collect flowers in the holidays, press them, and classify them in a book. He thus grows deeply interested in the work, and may be tempted to feel that this subject is a serious science, while spiritual Science, divine Science, is a less engrossing topic.

Now no one would for a moment advise that children should not learn, in an intelligent and natural way, about the human phenomena which daily confront them, and follow the regular school régime. Such learning would always prove helpful if the Science of Life were but given its rightful place, time, and attention; if children were taught first and foremost that the spiritual sense of all things is the only correct and reasonable mental attitude; if they were shown how to correct the evidence of the material senses, and to seek for the spiritual fact, the reality of which mortal objects are but the counterfeit. But to achieve this desirable result requires patient, systematic work, the cooperation of parents with Sunday school teachers, along lines not so widely differing in method from the ordinary school curriculum.

The children should be lovingly directed by their parents to devote some time in the week to the definite preparation for their Sunday school lessons, as earnestly and as necessarily as they would learn their time-tables or practise their music. It will not be a hardship if proper time is set apart for it, and it will be the means of bringing such zest and interest into the Sunday school class that they will enjoy and attend to the lesson and find they can do better work in day school because of it. The belief is strong that what one learns when he is a child, always remains with him. Often in later years situations may arise when the Bible and Science and Health are not immediately available, and to have the words of Truth memorized in youth coming readily to thought in moments of need, is a very great comfort, perhaps it may prove the saving from great temptation, if not from physical danger. The words of a personal teacher may fade out of memory, but the Bible words remain, and the knowledge of our text-book which the children have made their own by demonstrating it for themselves, after their individual modes of thought, is assimilated far more efficaciously than by listening to some grown-up person talk.

Grown-up Christian Scientists make a point of reading

Digitized by Google

the Lesson daily, together with all the Science literature they can, and of really studying and pondering over the Scriptures, quite of their own accord. A child, however, seldom does this, and it is hardly to be expected that he would. Even if our literature, when it comes to deep study, should seem a little formal and too mature for him, if it is put into his hands in place of his mechanical engine or some illustrated story-book, this will be corrected if his study of Christian Science is regarded as part of his education and comes at regular and allotted times, and just as systematically as his dictation and French exercise. Gradually and spontaneously he will gain that scientific outlook on life which his elders have had to learn through much darkness, doubt, and difficulty, chiefly because it has taken them so long to unlearn all that they themselves were taught when they were children.

Thinking of our Sunday school children, of their glorious heritage of light and their infinite promise, we may exclaim with Longfellow,—

Ye are better than all the ballads
That ever were sung or said;
For ye are living poems,
And all the rest are dead.

✧

[Translated from the German]

What is the Origin of Evil?

DR. CURT GENTSCH

THE adherents of the teachings of Christian Science are frequently called upon to answer the following question: If all that God created is good, whence cometh the evil of this world; how can God be ignorant of evil, when evil confronts us at every step? Such inquirers fail to realize that our human standards and personal concepts do not apply to Deity; that God, according to the teachings of Christian Science, is the divine Principle of good. Transferred into the realm of mathematics, the question might be: If the multiplication table is at all times correct and admits of no mistake, whence come all the miscalculations which we observe daily? The answer must of necessity be: The multiplication table is indeed correct and true at all times, and this despite the innumerable miscalculations which are taking place in human thought. The mistake originates when an erring mortal fails to apply the truth relative to multiplication in a specific case, when he thinks contrary to the basic law of mathematics and acts according to this erroneous concept.

The question as to evil and its supposed relation to good may be answered in the same way. In God, the essence of good, there can be no consciousness of evil. If man, God's likeness, reflects that which is divinely good in a perfect way, as did Jesus, then evil can have no existence for him, since he and his Father are one. In the ratio, therefore, in which mortal man fails to reflect God and fails to avail himself of the Principle of good, will the belief in evil be manifested by him, though (and this is the important point) not through the eternal Principle of truth, and not as a reality, but as error bearing the characteristics of perishableness, of unreality.

If the human sense has so strayed from good as to reflect but darkly the divine image, and error consequently seems to hold sway in one's consciousness, this darkened mental state is apparent to the individual whose thought is more attuned to God; and thus Jesus perceived and rebuked evil in the thought of the Pharisees. But the Principle of good has nothing to do with the counterfeit, with the erroneous, the false concept entertained by the sinner, even as light has nothing to do with darkness. It has no cognizance of such error, for it knows only good, in the same way as the multiplication table or the principle of mathematics knows no mistakes, even though these may cause men a great deal of suffering before they are destroyed. The remedy is that offered in the book of Job, "Acquaint now thyself with him [God], and be at peace: thereby good shall come unto thee."

✧

"The burden of the word of the Lord"

HELEN ANDREWS NIXON

THE list of our Leader's works found on the first and second printed pages of *The Christian Science Journal* furnish food for reflection which will be greatly increased by the reading of the Preface or Dedication in each by their author, Mrs. Eddy. In bringing God's messages to mankind, the prophets of the Bible sometimes make use of the significant phrase, "the burden of the word of the Lord." Webster defines the word burden here employed, as "a subject on which one dwells."

The burden of Mrs. Eddy's thought is ever the allness of good and the consequent nothingness and powerlessness of evil. As students of Christian Science we need to avail ourselves of all her writings for self-instruction, and nothing should be substituted for their diligent study in connection with the Bible. Our thought needs to be constantly replenished and spiritualized from these sources of pure Christian Science. We must get our oil and keep our lamps filled from this store, else our lights will go out or sadly flicker.

The Church Manual states of a church-member: "The Bible, together with Science and Health and other works by Mrs. Eddy, shall be his only text-books for self-instruction in Christian Science, and for teaching and practising metaphysical healing" (p. 34). Science and Health, in the descriptive list above referred to, is characterized as "the original, standard, and only text-book on Christian Science Mind-healing." "Miscellaneous Writings" is lovingly dedicated by Mrs. Eddy "to loyal Christian Scientists in this and every land," for "these practical teachings" are, as the dedication continues, "indispensable to the culture and achievements which constitute the success of a student, and demonstrate the ethics of Christian Science." The latest of these books, "The First Church of Christ, Scientist, and Miscellany," brings our Leader's instructions to her followers up to the present time, and its Foreword may well be pondered by every Christian Scientist. These books, together with her other works, are truly a "burden of the word of the Lord," and they meet betimes, most wonderfully, the human need.

[Written for the *Sentinel*]

A Dream

CHARLES C. SANDELIN

THE night with dreams was filled, with terrors dread,
And real unto my slumbering sense did seem:
Oh, what a world that did with specters teem,
As in the chamber of the living dead!
I sought to flee, but could not turn my head,
Fast bound within the fetters of the dream,
When, lo! amid the darkness there did gleam
A ray of light: behold, the dream had fled!

How beautiful the morning, light and clear!
Assuring beams of the arisen sun
Shine through my chamber window: need I fear
The evil that the phantoms might have done?
Sense is the slumber and the dream, but near
Is Love to waken, and sweet peace is won.

Selected Articles

[Frederick Dixon in *Northwich Chronicle*, Northwich, England]

In the *Chronicle* of recent date is a reference to a statement by the Rev. A. W. Webb on the subject of Christian Science. This clergyman, dealing with a specific instance of an agnostic who has become a Christian Scientist, explains his having turned to the teaching of Mrs. Eddy rather than to that of the orthodox church, by saying that he had probably studied both agnosticism and Christian Science, but had never studied orthodox Christianity.

As a member of the Christian Science movement, who has been brought into wide contact with its supporters all over the world, I do not think that this explanation, which the critic takes as a type, is in any sense an adequate one. To begin with, the man in question had been brought up as a Christian, that is to say, during the most impressionable years of his life he had been taught the doctrines of orthodox Christianity. In spite of this he had strayed into agnosticism, and yet when weary with agnosticism he had not returned to study the teachings of the orthodox church, but had instead turned to those of Christian Science.

Every one knows that it is a maxim of a certain religious sect, that if they can control the thought of a child, anybody else may control the thought of the man. Though in no way endorsing this saying, it is quite obvious that the influence of teaching on the mind of a child is very marked, and therefore the mere fact that the gentleman in question did not return to the teaching of the church, shows that there must have been some peculiar attraction in the teachings of Christian Science. It is not in the least difficult to say what that attraction is. Every Christian Scientist will tell you the same thing, and it has to be remembered that the enormous mass of Christian Scientists have been recruited, not from agnosticism, but from the congregations of the orthodox churches. The attraction is simply this, that Christian Science gives to men and women, to the old and to the young, a practical and demonstrable religion.

It is the largeness of Mrs. Eddy's view, and its practical application to the teaching of Jesus the Christ, which is drawing, and will continue to draw, such vast numbers of thinking men and women to the Christian Science movement. Frequently these men and women have been trained to think deeply, not only on religious subjects, but in the realm of natural science and of every other phase of human thought. They have turned from the teaching of orthodox religion and of orthodox science to identify themselves with the Christian Science movement, not because they have not studied and understood these teachings, but because their study of them has forced them to realize the necessity for something more absolute and more practical, as well as something more consistent with what they conceive to be the teachings of the Bible.

✥

[Robert L. Ziller in *The Austin* (Texas) *Daily Statesman*]

My attention has been called to a statement in Mr. Biederwolf's sermon as published in the *Statesman*, which reads as follows: "Others, by the relegation of sin to the realm of the imagination, rob it of any real existence, and therefore of the need of forgiveness and expungement through atonement, and this they call the philosophy of God and dub it Christian Science."

To any one who knows anything about the teachings of Christian Science this remarkable declaration will at once reveal a strange misunderstanding of the subject. One might even infer that if Christian Science teaches that sin is but an imaginary thing, there would be no necessity to take up arms against it. That nothing could be farther from the fact is known by every one who has even a slight understanding of the subject. There would be no occasion to say anything in this connection were it not for the fact that the critic's published statement is very misleading, and by inference, with respect to evil, reflects upon the position taken by many of our good citizens who are Christian Scientists. No religionists are waging a more relentless warfare against sin of every sort than are Christian Scientists, and they never speak of it as "imaginary." They recognize that sin must be fought to utter extermination, but they do not dignify it by asserting that God is the author of it, and hence they have courage to strive against it with calmness and composure.

What Christian Science teaches about sin can best be understood by studying the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, as this is what all Christian Scientists accept. She says: "Christians must take up arms against error at home and abroad. They must grapple with sin in themselves and in others, and continue this warfare until they have finished their course" (p. 29). "If we have triumphed sufficiently over the errors of material sense to allow Soul to hold the control, we shall loathe sin and rebuke it under every mask" (p. 30). "Sorrow for wrong-doing is but one step toward reform and the very easiest step. The next and great step required by wisdom is the test of our sincerity,—namely, reformation" (p. 5). "Without punishment, sin would multiply. Jesus' prayer, 'Forgive us our debts,' specified also the terms of forgiveness. When forgiving the adulterous woman he said, 'Go, and sin no more'" (p. 11). In addition to these statements, others of similar import are to be found on almost every page of the same book.

Certainly this does not look as if Christian Science were relegating sin to the realm of the imagination, nor do Christian Scientists fail constantly to remember that they, like all others, are in need of the forgiveness and destruction of sin through Christ, to whom they daily look for guidance.

For a number of years many devout, conscientious Christian Scientists in our city have devoted themselves to helping the sick, comforting the sorrowing, and leading sinners from the error of their ways. It is pitiful to note that one who takes the name of Christ should think it necessary to make flings at other sincere Christian workers who are not one whit behind him in good works and devotion to Christ.

✥

[R. Stanhope Easterday in *Muncie* (Ind.) *Star*]

Jesus came teaching, not about evil, how to fear it and how to avoid it, but how to know good and practise it, to the utter exclusion of all sense of evil. Hence he came to be known as "a good man," urging at all times and under all circumstances that we "overcome evil with good." Logically deducing that disease or any form of discord was essentially evil, he applied his universal rule of substitution of invincible good, with the astounding result that he healed the sick as well as reformed the sinner. Such practical theology and such practical medicine logically included naught of the dolorous outline of evil and its stultifying foundation, matter, in the form either of superstition or of anatomy and hygiene. Hence he used no drugs, taught no medical laws, warned against no powers of darkness, but simply urged all to be and to think good.

Why should it be thought a thing improbable for the Master's followers in this day to make a practical demonstration of his sweeping admonition, "The works that I do shall he [the believer in every age] do also"? And why should it be any more necessary now than then to know the mysterious ways of evil, of "the world, the flesh, and the devil," in order

Digitized by Google

that good may come? Christian Science does not ignore evil, or deny the existence of one iota of God's perfect, complete, and unchanging creation as chronicled in the first chapter of Genesis; it simply contends that the dolorous outline in the remainder of the Old Testament but chronicles the tedious misconception of this universal perfection resulting from a "mist" and a "deep sleep" and a "dream," and the process of awakening therefrom and escaping from the bondage of material belief about spiritual fact. He who declared, "Now we see through a glass, darkly," also triumphantly foretold the time when we shall see "face to face." It is not in the mean time illogical for any "in faith, nothing wavering," to cling to and to contend for the inevitable goal of perfection, even in the face of the apparent imperfection on every hand. If the "flesh profiteth nothing," if no one in the flesh can please God, why deride those who in an honest effort at renewal of the mind are able so far to transform the body as to keep it more nearly well than when they were under the thraldom of theological dogma and stultifying medical and hygienic so-called laws? Mrs. Eddy's text-book on Christian Science, "Science and Health with Key to the Scriptures," outlines a much more reasonable handling of the troublesome quantity, matter, and a more sane and effectual effort to handle serpents of sin.

✧

[George A. Law in *The News*, Danbury, Conn.]

In a recent issue there appeared an article which stated that Christian Science had accomplished considerable good in pointing the way toward that higher sphere for the treatment of diseases of the soul into which medicine could not reach. With your kind permission I would like to call attention to the fact that Christian Science has done far more than to point the way in the direction indicated. Those who are correctly informed, know that Christian Science has healed, and does heal, all types of disorder, whether termed mental or physical, functional, organic, acute, chronic, or what not. And those who have studied Christian Science sufficiently to obtain an understanding of its demonstrable Principle, fully appreciate that it could not be otherwise; that inasmuch as the practise of Christian Science is utilizing the power of God to heal, it is obvious that God, being infinite, has no limitation. The life and experiences of Jesus fully prove this, for it is recorded in Scripture that he healed "all manner of disease." Christian Science is a revival of this spiritual healing of Jesus. He never inquired, and there was no necessity for him to know, what the prevailing belief or opinion was relative to the case at hand. Whether it was a so-called incurable one or not was immaterial, each yielded readily to the spiritual treatment which he applied and taught others to practise in their ministrations for the relief of suffering humanity. He admonished his disciples and followers to "preach the gospel," and "heal the sick."

✧

[E. M. Ramsay in *The Scotsman*, Edinburgh, Scotland]

In a recent issue appeared a report of a lecture on Christian Science delivered in the Chapter House of St. Mary's Cathedral. Allow me to make some corrections of the statements therein contained.

Christian Science does not profess to make any additions to the sum total of Truth. Anything that is true, in the absolute sense of the word, has been here from all eternity. The mission of Christian Science is to remove the dust of ages, the prejudices and ignorance which have so long obscured the teachings of the gospel, and to enable the men and women of today to carry out the Master's commandment to heal the sick.

The assertion that Mrs. Eddy's method of healing was taken from Phineas Quimby can be repudiated, not only on historical grounds, but on the fundamental differences between these methods. Dr. Quimby, as he was usually called, was a mesmerist. He believed that he possessed a personal power of healing which he could not account for, and which he was unable to communicate to others. Mrs. Eddy's "Science and Health with Key to the Scriptures" is a scientific text-book, enabling all who will follow the teaching therein set forth to heal the sick. Practically every member of a Christian Science church is able to heal to some extent. The fundamental basis on which the healing is wrought is the recognition of God as the only Mind, cause, law, and power. Such a recognition begins at once to destroy for each student his belief in a personal power or mind of his own. It is therefore diametrically opposed to the teachings of Mr. Quimby and of all others who employ hypnotism and suggestion.

The second point in Christian Science healing is the recognition of the essentially pure, spiritual nature of man made in the image and likeness of infinite God. From this it follows that all that is unlike God, cause, must be foreign to the real nature of man, and, moreover, that which has no place in the infinite God can possess no absolute reality. The physical healing of Christian Science is the direct result of the healing of sin. No man can be healed by this method without being raised morally and spiritually, since we understand that bad bodily conditions, so called, are the result of weak, inaccurate, or sinful thoughts. The Christian Scientist, therefore, concerns himself with the mental condition of the patient, and as this is improved, the patient's health improves also. That this reformation is being accomplished is proved by the healing which our critic does not pretend to deny.

✧

[Frank Bell in *Mercersburg* (Pa.) *Journal*]

Those who wish to be correctly informed as to the teachings and practise of Christian Science will scarcely be content with the interpretations of its avowed opponents. There is in Chambersburg a Christian Science reading-room where all authentic literature on the subject may be freely read, and there are in every community of consequence in this country, and in nearly all other countries, persons of standing and reliability who may be questioned as to what Christian Science means to them as a result of their personal experience. Not a few of these would say, if questioned, that they had first been led to investigate Christian Science through having heard or read unfriendly discourses in which words or sentences had been detached from their context in such a way as to make the subject appear ludicrous; so much so, in fact, as to arouse the hearer's curiosity as to whether there were any intelligent people who believed such things.

This is perfectly natural. When one hears Christian Science denounced as unchristian, with an array of quotations to buttress up this conclusion, one is altogether likely to be struck by the incongruity between this statement and the evidence on every hand that Christian Science promotes all the Christian virtues in the lives of those who have turned to it for help. It is indeed true that Christian Science differs from some so-called orthodox teachings as to the exact nature of God, Christ, creation, man, sin, the devil, etc., but it is also true that the orthodox themselves differ as to these things, and that one who is convinced that his own and his associates' interpretation is wholly right, and all others are wholly wrong, is not well qualified to explain what the others really do believe. There is this great distinction as to Christian Science, however, that it especially emphasizes the fact that mere individual or collective opinions regarding doctrine or dogma are of small consequence as compared with the question of what is the effect of one's religion on one's life. Chris-

Digitized by Google

tian Science has nothing to fear from such a test, and it has small regard for the value of any other test.

The impelling appeal of Christian Science to mankind is its ability to demonstrate to the satisfaction of any earnest seeker that the best promises of genuine religion are capable of being fulfilled here and now. It is because this appeal rings true that the Christian Science organization is averaging three new churches a week and showing a larger increase of membership each year than the year before; that its textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, enjoys a larger sale than any other book that ever was written except the Bible; that the demand for Christian Science literature taxes the capacity of repeatedly enlarged publishing facilities; and that in every community where Christian Science has had time to become well established its churches are filled to the doors at every service. The empty pew is not a problem in Christian Science, which is a virile and vigorous world-wide movement founded on tangible results, and in no respect resembles the grotesque thing which is sometimes depicted by those who have not seriously looked into the subject.

As the good works of Christian Science become better known, the storm of criticism abates. There is little of it now, as compared with a few years ago, and this too must soon cease by common consent. Meanwhile, the one direct and sufficient answer to all criticism is that Christian Science does heal the sick and reform the sinner. The Founder of Christianity did not say Christians should be known by their theological beliefs, but by their fruits.

✧

[Willis D. McKinstry in *The Salina* (Kan.) *Union*]

In a recent issue Dr. Hale indulged in a criticism of Christian Science. Misstatements of the truth of Christian Science expressed through a public speaker cannot, however, thwart its progress or annul the proofs of its divine mission.

The accusations of our critic against Christian Science are allied with those of the Pharisee against Christ Jesus and his works, and to which Jesus replied, "And if I by Beelzebub cast out devils, by whom do your children cast them out? . . . But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you." Our critic would have his hearers believe that it is an offense against God to heal the afflictions of suffering humanity through spiritual means. The ministry of the Master was one of healing, yet his work was void of material or physical means. From the Scriptures we learn that because he spoke with authority it was only necessary for him in healing the afflicted to say, "Stretch forth thine hand;" "Take up thy bed, and walk;" "Lazarus, come forth;" "Young man, I say unto you, Arise." The Scriptural record of his work shows it was metaphysical, and through it man's unity with God was revealed. The indisputable fact of spiritual existence as revealed through Christian Science is today emancipating mankind from the bondage of materialism, in fulfilment of the great Teacher's declaration, "He that believeth on me, the works that I do shall he do also." Hence we have Scriptural authority for declaring that Christian Science is the word of God demonstrated. It proves the divinity and power of His law, which when understood, corrects the human misapprehension of existence.

✧

[H. Cornell Wilson in *The Sun*, Norwich, N. Y.]

In reporting the work of Evangelist Wilson, this gentleman is quoted as saying, among other things, that Christian Science is "neither Christian nor science." This is a hackneyed statement, worn out and frayed by much use among those critics, religious and otherwise, who are determined upon the condemnation of Christian Science.

The views of Christianity held by this particular critic may not fully agree with the teachings of Christian Science, but this is probably due to the fact that his views do not exactly accord with the teachings of Christ. Would any better evidence of this be asked than his own repudiation of the Christ method of healing disease? A study of the words and works of the Master reveals the healing means that Christians should use in season and out of season. No warrant can there be found for the conclusion of our critic that "we must use natural [material] means and common [carnal, as distinguished from spiritual] sense" to heal the sick.

The fifty years in which the works of spiritual healing have been done through Christian Science as demanded by Jesus of his followers, proves the spiritual method of healing to be the true method in this age quite as much as it was in the first century. Results are seen in the ever increasing thousands who testify to having been restored in mind and body as a consequence of the daily reliance upon God which Christian Science inculcates. Christian Science demonstrates that it is Christian by following the teachings and precepts of Christ Jesus, and in that the Christ teaching is provable through Christian Science, it is demonstrably scientific. It is science in that it reveals a knowledge of the truth, the truth that Jesus said "shall make you free." There is an ever increasing desire on the part of Christian Scientists to become more Christlike, and there is a certain degree of attainment along this line. Christian Scientists are notably better than they were before they embraced the teaching of Christian Science. They are earnestly striving to perform their part in bringing to light what is good and true in the world, and to establish the kingdom of God in the hearts of men, that His will may be done "in earth, as it is in heaven."

It would be interesting to know where this gentleman finds his authority for the statement that Christian Scientists teach that "when you break your arm, it is not broken; just think it is not so, and it is not, you know." Nowhere outside of the misstatements made by other critics equally ignorant on the subject of Christian Science can such opinions be found. The day has passed when people will readily give credence to such mistaken views.

[Written for the *Sentinel*]

The Rule of Mind

MINNA MATHISON

RULER of every world and star,
Thou holdest man and beast and flower
In the safe shelter of Thy power,
And leadest lovingly and far.
No power of evil stays Thy hand,
Nor fear nor hate Thy might withstand.

Thy truth leads on to heights above,
Thy strength is might for feeble hands,
Thy knowledge human sense expands,
Thou givest little children love.
The rugged mountains praise Thy power,
Thy mercy spares the humblest flower.

O tender strength, O mighty Love,
Though error foeman's claim may press,
Love knoweth evil's nothingness,
And ever must the victor prove.
Truth strikes of wrong the final hour,
Whose might is love, the only power.

Editorial

Why Not Evangelical?

About every so often, we hear of an incident through which the pronouncement goes forth from some one in a representative capacity for some denomination, that the Christian Science church is not evangelical. The most recent instance is one in the South, where a conference of laymen was to be held in a certain city, "a series of great inspirational meetings . . . under the auspices of the various denominational mission boards of the United States and Canada." The newspaper from which we quote says, "All the evangelical churches of the city are interested, and are cooperating in preparations for the conference." We are informed that at the preliminary meeting in preparation for the conference, those in charge decided that the Christian Science, the Universalist, and the Primitive Baptist churches should be excluded, because they were not evangelical. In commenting on this action, we can of course speak only for the Christian Scientists, and we speak of it not because of its importance, but because it brings to attention one of the many proofs that Christian Science is misunderstood and misrepresented by those who should know better.

Webster's definition of the word evangelical is as follows: "1. Contained in, or relating to, the four gospels; as, the *evangelical* history. 2. Belonging to, agreeable or consonant to, or contained in, the gospel, or the truth taught in the New Testament; as, *evangelical* religion. 3. Earnest for the truth taught in the gospel; strict in interpreting Christian doctrine; preeminently orthodox." In other dictionaries we find definitions essentially the same.

Of the word orthodox Webster naively says, "The term *orthodox* differs in its use among the various Christian communions," and as there is said to be about one hundred and fifty different Christian communions, we must refrain from that part of the definition of evangelical which hinges upon this word, for it would be impossible for any one body of Christian believers to comply with all the one hundred and fifty standards of orthodoxy which human beliefs have set up.

We must, therefore, confine our inquiry as to what is evangelical, to the truth taught in the four gospels, and in forming our verdict as to what constitutes an evangelical church we must be guided by the absoluteness with which such a church accepts the entire gospel of Christ Jesus, and the faithfulness with which it follows his works and teachings. The religious tenets of Christian Science are expressed by Mrs. Eddy on page 497 of "Science and Health with Key to the Scriptures," the first of which is: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life." All Christian Scientists unqualifiedly accept these tenets, which are in absolute harmony with the teachings of Christ Jesus and with his works.

Why, then, class as non-evangelical a church whose adherents understand that the great works which our Master performed were in exemplification of his teachings, and are incumbent upon his followers because he commanded them to do the works which he did! This command is in the gospels, and it was followed until the third century by all who called themselves Christians and were accepted as such. Surely we may be pardoned for questioning if it is believed in and followed by those who today would exclude the Christian Science church from their conferences and fellowship on the ground that it is non-evangelical! Should not these people be a little less sweeping in their condemnation of the faith of others, and should they not beware of the impending destruction of the dwellings of those who live in glass houses, but have not yet learned the folly of throwing stones?

To these people Christian Scientists wish all Godspeed in their Christian work, for they know that every good motive and every good effort must and will do its part toward the fulfilment of the prayer, "Thy kingdom come. Thy will be done in earth, as it is in heaven."

Archibald McLellan.

Truth, Selective and Saving

To see a great magnet gather the nails and other bits of metal out of the rubbish of a steel mill, is to witness a wonderful question-awakening phenomenon, and find an illuminating illustration of the selective drawing-power of the spiritually-minded, the men and women who, securely linked to God, are expressing that discriminating activity of divine Love which is no less considerate and judicial than it is outreaching and irresistible. The magnet is vitalized, given its very being through its representative relation and inherent responsiveness. In all that it is and does it is but a means for the expression of an unmeasured and inscrutable force.

As with the magnet, so with man as understood in Christian Science. In touch with divine Principle, his perception and power are God-bestowed, hence authoritative and dominant. This is the significance of St. Paul's great phrase, "Christ in you, the hope of glory." The truth voiced through man speaks for the divine presence, since "God is not separate from the wisdom He bestows" (Science and Health, p. 6). Christ Jesus declared that he came to do the works of God, and he further said that every Christian believer was to continue to manifest the divine power. This teaching respecting a Christian's authority and resources as an agent for God, has always been theoretically accepted, but only so, and Christian Science has come to make savingly practical this relationship, to demonstrate the almightiness of the word of Truth, when spoken by one who is spiritually linked to God.

Our illustration presents yet another no less interesting thought, namely, that every man of God is to manifest His "hidden wisdom." He is to see and to save every product and outgrowth of that Light which, as St. John has said, "lighteth every man that cometh into the world"; that not only sages and poets, but the common people in so far as they have been impelled by humility and nobility of aspiration, have gained something of good. He is to see the noblest and truest in human consciousness and discriminatingly appeal to it.

This selective capacity of the spiritually endowed relates them in the most significant way to human interests. Every man's experience must now have in it something of the romance of discovery. In the rubbish and débris of this earth-life, glimpses of truth, bits of real goodness and beauty, are to be found; and to perceive them is not only to experience a new interest in the commonplace, and thus to brighten and enrich ordinary events and things, it is to become the interpreter of every phase and aspect of experience to men, the interpreter of character and conduct, of the nobler impulses and insights of men, as expressed in literature and law. It is to come upon the real values in nature and art, the drama and even the tragedy with which we have to do, and it is this fact which institutes our redemptive relation to all these departments of human thought and life.

Christ Jesus was able to see relics of good in those who were classed as publicans and sinners, and this explains in large part his wonderful influence over them. This good he appealed to with that tactful frankness which naturally per-

Digitized by Google

tains to the man of vision, as instanced in his address to the woman at Jacob's well, and he thus cast up a highway for Truth's coming and rule. The need of this truth-discovering insight, this heart-drawing power in all who would help humanity, is imperative, and Christian Science is supplying it in a way and degree which gives an entirely new aspect to the question of the world's redemption. The magnet discovers and draws everything after its kind, and the lesson is clear that if we would see and evoke the good in others, it must be our own prepossession. Christ enthroned in us determines the question of our capacity and our call to be the saviors of men.

JOHN B. WILLIS.

"Perfect models"

MRS. EDDY tells us that we "must form perfect models in thought and look at them continually, or we shall never carve them out in grand and noble lives" (Science and Health, p. 248). A glance at the Concordance to Science and Health shows us where to find a number of deeply interesting and helpful references to this topic, all of which point away from the material to the spiritual. Close self-examination reveals the tendency of the human mind to cling to mortal and material concepts instead of laying hold upon the spiritual and perfect, and this explains the slow advance made by mankind in their efforts to escape from the bondage of material belief. The student of Christian Science who attempts to spiritualize matter, to his own sense or that of others, can find nothing in the teachings of Christian Science to support his views.

In one of Mrs. Eddy's classes, a student remarked that she always endeavored to have the perfect body in her thought when giving treatment. Mrs. Eddy at once asked where she found her authority for such a method. The student unhesitatingly responded that it was from Science and Health, and after a little search she triumphantly read the statement on page 407, "Let the perfect model be present in your thoughts," etc. Smiling, as one would at the mistake of a child, Mrs. Eddy then asked if she regarded the body as the "model" here referred to, and the student said she had so believed up to that moment. With the utmost patience Mrs. Eddy then explained to her students that we can only perceive the divine and perfect model as we are, to quote Paul, "absent from the body" and "present with the Lord."

Humanity has been slowly yielding up the belief in a corporeal God, but it still clings to the belief in a bodily model for man, while accepting the Scriptural statement that he is God's likeness. Its model is therefore that of the sculptor who studies the human anatomy, with some regard to the emotions, passions, and tendencies of the carnal or bodily mind. Strictly speaking, we can have but one model, God's perfect idea, with countless reflections, all governed by the one divine Principle. This does not, however, authorize us to say that there is only one eye, ear, or foot, for when we begin to talk of these we are getting away from the perfect, spiritual model. While it is true that mortals are at present dependent upon the body for the outward expression of their thought and activity, it is none the less true that the eye does not see, nor the ear hear, but that Mind and its idea alone compass seeing and hearing; and because this is true, our revered Leader bids us "look away from the body into Truth and Love, the Principle of all happiness, harmony, and immortality" (Science and Health, p. 261). Thus we shall find perfect models, and "carve them out," not in bodily consciousness, but "in grand and noble lives" (p. 248).

In substituting one's undeveloped or faulty concepts of Truth for the perfect ideas of Science, the student not only retards his own growth, but in pressing his views upon others he is apt to lead them even farther astray than he is himself, for the reason that it is very difficult to present metaphysical ideas through the medium of language. Before we decide any question of Science it is well to read in our text-book the various statements of the question involved and strive to apprehend them spiritually. There are a number of references to models, which may be said to correspond to the Bible phrasing of the pattern shown to Moses in the mount, a figure used by Paul more than once. To Timothy he explains how the Christ-idea was manifested by him in longsuffering, "for a pattern to them which should thereafter believe on him [Christ Jesus] to life everlasting." It is for this reason that we should, as our Leader bids us, keep ever before our gaze perfect models, and if we love our task the result will be health, happiness, and harmony.

ANNIE M. KNOTT.

Suburban Lectures

UNDER the auspices of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., three lectures on Christian Science will be given by Bliss Knapp, C.S.B., a member of the board of lectureship, as follows:—

Milton Lower Mills, in Odd Fellows Hall, 41 River street, Dorchester, Sunday afternoon, Jan. 11, at half-past three o'clock; Brookline, in Beacon-Universalist church, Harvard street (near Coolidge Corner), Monday evening, Jan. 12, at eight o'clock; Winthrop, in Elks Hall, Washington avenue (near Winthrop Beach station), Tuesday evening, Jan. 13, at eight o'clock. These lectures are free, and the public is cordially invited.

Among the Churches

Current Notes

OREGON.—The Christian Science churches and societies of Oregon united this fall in maintaining reading-rooms at our state fair in Salem, Sept. 29 to Oct. 4, and at the annual round-up in Pendleton, Sept. 11-13. At the latter place the reading-room of the local church was kept open all day and during the evening, cards announcing this fact being placed in leading hotels and business houses. At the reading-room, literature was provided for free distribution. *Monitors* were also distributed each day to the hotels and lodging-houses and placed where guests could help themselves to copies, while a rack in the railroad station was kept filled with papers.

During fair week at Salem, our reading-room was visited by seven hundred persons, including the Governor and the chaplain of our state penitentiary. Several doctors and nurses in attendance at the eugenics exhibit, located near us, also called to express their interest in Christian Science and to secure literature. *Monitors* were distributed every morning to a large number of campers just outside of the grounds, accompanied on one morning by cards announcing our reading-room; while small tables, on which were placed papers and a card inviting the public to take copies, were put in the lobbies of Salem's leading hotels with the managers' consent. A similar arrangement was made with one of the exhibitors in the exhibition hall, and a *Monitor* table in his booth gave many passers-by an opportunity to secure copies of our clean daily messenger.

More than five thousand two hundred pieces of Christian Science literature were given out during the state fair and the round-up. Besides the *Monitors*, *Sentinels*, *Journals*, and *Herolds*, which were distributed in goodly numbers, there were also many pamphlets, including those in German, Swedish, French, and Norwegian.—*Correspondence.*

The Lectures

Los Angeles, Cal.

Clarence W. Chadwick delivered three lectures on Christian Science under the auspices of Second Church. Don E. Gilman, who introduced him at the first lecture, in Shrine Auditorium, said:—

In the years following the Master's triumphant climax to his ministry, his apostles, scattered throughout the then civilized world, taught the same doctrine of love and peace that they had received from their inspired Teacher, and, like him, demonstrated their faith by healing the sick and raising the dead. Contented with the religion of their fathers, and antagonized by this new revelation, scribe and Pharisee, emperor and governor, rich and poor alike, ridiculed and persecuted the Christians. Yet the sect, as it was called, grew in numbers and spiritual grace, and for three centuries their teachings were accompanied by their healing practises, material means not being employed. In spite of everything that could be done, not only to hinder their work but to annihilate the Christians themselves, their cause prospered, and its light could not be totally obscured by the dark ages, fulfilling these words of Gamaliel to the council of the high priests: "For if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it."

In the text-book of Christian Science, "Science and Health with Key to the Scriptures," Mrs. Eddy says, "Christianity is again demonstrating the Life that is Truth, and the Truth that is Life, by the apostolic work of casting out error and healing the sick" (p. 97). Rare indeed is the individual who knows not some one who has been benefited by Christian Science. No greater estimate can be asked than that required by the Master: "By their fruits ye shall know them."

At the second lecture, in Second Church edifice, Miss Eloise Mabury in her introduction said:—

We are gathered here tonight, impelled by a desire more or less positive, to find a way out of the tangle of human affairs,—the loss, disaster, and disease which suddenly overtake us, and which we of ourselves are helpless to prevent. Christian Science has come to guide us through what St. Paul calls the "deceivableness of unrighteousness," by declaring to us an all-governing and ever-present God, whose laws are practical and demonstrable in daily living.

At the third lecture, in Third Church edifice, Amaziah D. Davis, in introducing the lecturer, said:—

There is no occasion this evening to bespeak your prayerful attention and earnest thought to a lecture on a subject which is indeed so full of such vital interest for every one that is in need,—in need of health, happiness, and harmony,—for Christian Science, to that one who is ready to receive it, is unfolding a reasonable, scientific, and conscionable knowledge of God, "whom to know aright is Life eternal" (Science and Health, Pref., p. vii).—*Correspondence.*

✧

Toronto, Canada

The remarks of Mayor H. C. Hocken in introducing Clarence C. Eaton, who lectured for First Church in Massey Music Hall, were as follows:—

My part in the exercises of the afternoon is merely to introduce the speaker of the occasion. He has come, I understand, to give instruction to inquirers and to supply inspiration to those "who are of the household of faith."

I am not a Christian Scientist, although my Christian Science friends tell me that I hold some views which would qualify me for membership in the church. I believe, for instance, that as a man "thinketh in his heart, so is he," and that a right spirit is conducive to health and happiness. But I have not yet been able to understand how one's attitude of mind is an effectual safeguard against acute or communicable disease, or that such ailments can be successfully treated by purely mental forces. My education in this direction is probably incomplete.

Christian Science, like all other systems of religion since the world began, must stand the test imposed by the Master: "By their fruits ye shall know them." Judged by this standard, the members of the church who come within the circle of my acquaintance would lead me to form a high estimate of the breadth and tolerance of the church. The religious history of the world shows that when churches become great in size and importance, they are in danger of developing a spirit of arrogance. Christian Science, as I understand it, cannot fall into that fault unless the essential articles of its faith are forgotten. I am bound to say that the members of the Christian Science church are among our best citizens, and that is, after all, the most searching test that can be applied.

✧

Kewanee, Ill.

Virgil O. Strickler lectured on Christian Science at the Grand Theater. He was introduced by Mrs. S. E. Bone of this city, who said:—

We who are its students know that Christian Science brings into our lives a joy and peace which the world can neither give nor take away. I am sure the lecture will appeal to all who are great enough to be humble and who are loving, compassionate, and spiritual enough to be truly Christian. One of the purposes for which this lecture is given is to correct the erroneous impression which some people have in regard to the teaching and practise of Christian Science. We who are students know that we have found the "pearl of great price," the truth that Jesus said would make us free, not only from sickness, but from all discordant conditions of the flesh and the limitations of the material senses. The continued growth of Christian Science throughout the world is today a subject of much discussion. Various reasons have been given by learned men to account for the spread of Christian Science. However honest these personal opinions may be, those who have been privileged to test its healing power, speak from experience, and they say that Christian Science actually heals and saves.—*Kewanee Daily Star-Courier.*

✧

Newport, R. I.

Judge Clifford P. Smith, who lectured on Christian Science, was introduced by Capt. Harry P. Huse, U.S.N., commander of the battleship Vermont. His remarks were as follows:—

We are assembled here today to hear a lecture on Christian Science by one of the accredited agents of that church. Christian is defined in the dictionary as pertaining to or derived from Christ or his teachings, while science is the knowledge, comprehension, or understanding of facts or principles. Hence, the meaning of the term Christian Science, according to this, is the knowledge, comprehension, or understanding of the facts or principles pertaining to or derived from Christ or his teachings; or, more briefly, the understanding of the life and teaching of Christ Jesus.

Christian Science is making its way in all walks of life. In the commercial world and in the professions, in the army and in the navy, among the rich and among the poor, the highly educated and the almost illiterate,—everywhere you

Digitized by Google

will find students of this great Science. Your presence here today is an evidence of the interest felt in the subject. To the Christian Scientist, even to those who have as yet seen the light only dimly, it is the one great subject, overwhelming, absorbing, explaining all others. To other people it is interesting because of the claims it makes of having healed all manner of diseases, moral as well as physical, and because of the number of intelligent people who believe in Christian Science and have become contented, happy, well, and prosperous in it.—*Correspondence.*

✧

Cape Town, South Africa

The Grand Theater was crowded with an audience of between six and seven hundred to hear a lecture on Christian Science by William D. McCrackan, M.A. The lecturer was introduced by the first reader, Lady Molteno, wife of the speaker to the Union Parliament, and she spoke as follows:—

It is my privilege and pleasure to introduce to you the lecturer of this evening. Mr. McCrackan has been lecturing in different parts of the Union of South Africa; but this is not his first trip here, for he was with us two years ago on the occasion of his trip around the world. These lectures are for the purpose of correcting erroneous conceptions about Christian Science, and so refuting many misleading statements concerning it. Christian Science has now reached to the uttermost ends of the earth, and there are thousands today, students of Christian Science like myself, who can testify with me to the truth and availability of its teachings; thousands who have been rescued from sin, disease, and death through a knowledge of the omnipotence of good. I know that you will join with me in welcoming Mr. McCrackan this evening, and I hope you will give him an attentive hearing.

Correspondence.

✧

Kokomo, Ind.

An audience that filled practically every seat of the first floor of the Sipe Theater, with many in the balcony, heard Bicknell Young set forth the teachings of Christian Science. Mrs. Florence Carter, second reader, introduced the speaker as follows:—

Some one has said that God is not God to us unless we prove it. That Christian Science is a practical religion, the world is gradually admitting. Jesus of Nazareth made Christianity practical. He came to show mortals the way of life, of health and holiness. "He wrought a full salvation from sin, sickness, and death" (Science and Health, p. 39). His was a message of "on earth peace, good will toward men." Christian Science brings this same message to humanity today; it is a message of health in place of sickness, of joy instead of sorrow; it brings "peace to the struggling hearts" (Science and Health, p. 45).—*The Kokomo Daily Tribune.*

✧

Mill Valley, Cal.

In introducing William R. Rathvon, who lectured on Christian Science in the Outdoor Art Club House, Atty. C. A. S. Frost said:—

Christian Scientists do not ask any one to believe in Christian Science. While they welcome seekers for truth, no one is importuned to hear about it. One thing that Christian Scientists do say to those who really desire to know more about Christian Science is this: "You do not need to rest your decision simply in blind faith; you can understand and know." In other words, "Any person can find out for himself whether Christian Science be true or not," and that is the only effort Christian Scientists expect any one to make.

Nearly five years ago I was induced reluctantly to seek the aid of a Christian Science practitioner at a time when I was in dire distress. Subsequently I was healed and benefited physically, mentally, and morally through the study and application of Christian Science. Also, whereas I was an avowed agnostic, now I have found God, after having given up the effort to find Him in my search of the creeds and philosophies of the day. Lately I have begun to understand a little about what cured me. This, in a measure, is what Christian Scientists mean by spiritual understanding, and to me, at least, it is the greatest thing in the world.

Testimonies of Healing

Several times since my healing in Christian Science, a transformation so remarkable that I hardly dared tell intimate friends for fear of being ridiculed, I have felt prompted to give my testimony in print, as a message to fellow sufferers, which perchance may lead them to turn to the only power that can give permanent relief,—to God, good.

In February, 1908, I was healed in one treatment of a nervous disorder of twenty-seven years' duration, which was at times so severe that I was tempted to commit suicide. Since my healing I have had so many benefits and blessings, spiritual as well as physical, direct and through practitioners, that space will permit the recital of only a few. I will try to give only such incidents as seem necessary to make the testimony convincing to non-Scientists.

In 1880, being estimator in a contracting business, I established another entirely different business and tried to run both; but the worry and mental strain resulting from the effort to keep up, soon caused sleeplessness and serious mental depression. I consulted the best physicians, who prescribed the usual remedies of *materia medica*, including an opiate for sleeplessness. About a year after my first breakdown (in 1882), one of my physicians, an old man, told me he was satisfied that medicine would no longer help me. He said I needed rest, absence from business cares, a vacation. I replied that it was impossible to leave my business. "Well," he said, "you'll get rest, good and long, underground, if you don't take it." Startled by this evidently sincere statement, I turned my work over to others and went to Colorado, where friends nursed me for two weeks, which did wonders, and I then returned to my post.

While I had benefited by the Colorado trip in 1882, I was not cured, but was periodically worse than ever. My illness now manifested itself in symptoms of writers' paralysis, loss of memory, etc., and having lost all faith in drugs, I readily adopted the suggestion of my then physician to try electricity, with beneficial results for a time. Often, however, I had literally to force myself, by will-power, to work, until one day I suddenly left the office in such obvious agitation that a fellow employee followed me to the car, thinking I was too ill to look after myself, and left me only when I assured him that the car was bound for my home, where I would get off. But the car passed the office of my then physician, so I got off before I reached home, and after imploring him to give me something to produce oblivion, I broke down and simply cried. When convinced that I was not crazy, he prescribed a drug in sufficient doses to produce oblivion, not sleep, "nature's sweet restorer," and later another drug to quiet the nerves. The usual temporary relief came, and then for permanent relief I tried electricity as recommended by another physician. This surely would help, I believed, and temporary relief again followed.

In the winter of 1907-08 my financial matters got into bad shape and I was out of a job several times, so that my family lost confidence in my business ability, and my good wife had to assume the entire management of the children and "piece out" our limited resources as best she could. One morning in February, 1908, I awoke feeling worse than ever, and said to my wife: "Send for the doctor once more. If he does not come immediately, I will try Christian Science." Fortunately the doctor was not in, so I went to a practitioner, a perfect stranger, and one treatment healed me. I got a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy and read it, and the truth came to me so suddenly, after I reached page 115 in this wonderful book, that it seemed like a revelation. I have had periods of doubt since, but have received help quickly in each instance. I have been a new creature in respect to my views of this life and world. The Bible, which was formerly a puzzle to me, is now clear and consistent, and I read it, also the Lesson-Sermons, with satisfaction.

I could name many minor healings in Christian Science, such as toothache, a crushed finger, imperfect eyesight (it was so poor that even with glasses ordinary print seemed blurred); but the greatest benefit is yet to be named. As a boy I had unusual vitality, but at fourteen I had typhoid fever, which left my constitution so impaired that any ordinary exercise tired me. This was a condition from which I never expected relief, gradual amelioration was all I hoped for. About a year after my first healing I noticed that my powers of endurance were returning. Only recently, in Georgia, it was necessary to get notice in a business matter to a man before ten o'clock the next morning, and the place was forty miles distant in the country. The last train had left, so I took a trolley car for twenty miles, and then tried to hire a team. But no conveyance could be had, and thinking I had to give it up, I retired early. At one o'clock I awoke refreshed, got up, and started to walk. It was so dark I could not see the road, so I took the railroad track, the rails being my guide in the inky blackness. I reached my friend's house about five o'clock, having walked seventeen miles in a drizzling rain, with no bad results. Not even fatigue followed.

I am thankful to God for His boundless goodness and mercy to me in restoring my health, and virtually my youth, and for sending His Christ to heal humanity's sore wounds. I am also grateful to Mrs. Eddy, who by her unselfish devotion to Truth gave us indeed a "Key to the Scriptures" in Science and Health. She has repeatedly counseled us to follow her only so far as she followed Christ, and as she refused praise and homage, she needs no eulogy from me. Her work, I feel sure, has highest praise in approval from above. Her leadership, unbroken by the change mortals call death, continues. May we continue to follow!

CHARLES J. F. KRAFT, Chicago, Ill.

It is with deep gratitude to God, and also thankfulness to our beloved Leader, Mrs. Eddy, that I testify to the many blessings which Christian Science has brought me. Through the earnest study of our text-book, "Science and Health with Key to the Scriptures," a new life was opened up to me, and these words of Paul to the Corinthians became a living reality to me: "Therefore if any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." I had been self-willed and disobedient all my life, but while studying Mrs. Eddy's works, especially her address on Obedience (Miscellaneous Writings, p. 116), there dawned upon my consciousness a new understanding, and a longing to be obedient which I had not known before.

Since that time I have never had the old desire to do my own will in spite of everything and every one. With the breaking of this bondage which had so long held me, came greater freedom and harmony, both physically and mentally. Christian Science has enabled me to pass calmly through experiences which would have overcome me but for the sustaining power of Truth. I well know that it has saved me from many discordant and inharmonious conditions. It has also healed members of my family of appendicitis, pneumonia, the tobacco and liquor habit, yearly attacks of inflammation of the bowels, catarrh, serious eye trouble, and many other ills to which flesh is heir.

Digitized by Google

I am indeed grateful for the physical healing, but even more thankful for the awakening to truer, purer thinking and living, and the understanding which has made it possible to help others. I am grateful to all who have helped me on the way, also for all our Christian Science publications, and for every loyal worker for the cause.

LUCY RIGGS BALL, Jamaica Plain, Mass.

✧

It is some years since Christian Science was brought to us by a kind Scientist who lived near us. At that time my husband was suffering from a growth on his leg, for which he had tried material remedies without avail. The kind neighbor told him of the wonderful healing effected through Christian Science, and he said that if it had done so much for others it could surely help him. She explained the truth to him as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and he was healed.

We have received many other benefits through Mrs. Eddy's understanding of Truth and Love. A copy of Science and Health was loaned to us, and I thought some of it very beautiful and tried to understand it, as I, too, was in need of help, having suffered from childhood. For years I had been a church-member and had tried to do right as far as I knew how. I had been taught that God is Love, but that He sends sickness to draw us nearer to Him, so I was trying to be resigned to my suffering, though wishing for death, thinking it would free me. I had been afflicted with stomach trouble for many years, and had tried many physicians with only relief as the result. I did not accept the truth so quickly as my husband did. I wanted it, but I now see that I was not ready to give up all for it and to rely wholly on God. There were doubts and fears to be overcome, and although I had received help in many ways, I had not faith to believe that Christian Science could cure me of this trouble. I became worse and called in a physician, who treated me for some time, but could not help me, so I was sent to the Leeds infirmary for an operation, as I could neither eat nor sleep.

I had grasped a little of Christian Science, and it was a great help to me then. Indeed, I feel sure I should have passed on from fear if I had not known something of it. I held to the thought that God is Life, and the morning of the operation I took up the Bible and it opened to the first chapter of Joshua. My eyes fell on these words: "Be strong and of a good courage; be not afraid, neither be thou dismayed: for the Lord thy God is with thee whithersoever thou goest." I held to this promise and had no fear, and when I came to myself I was thinking of God. I was in the infirmary and hospital nearly three months, but was still suffering when I asked to come home, as I was afraid of another operation, and my friends were saying I would not be here long.

I again took up Christian Science and was helped, so that I was able to do my own work; but the trouble returned. I feared an operation but wanted material remedies, thinking they might relieve me if they did not cure me. I could understand neither why some were healed so quickly nor why I should suffer as I did. If I had thought about the words of Jesus to his disciple, when he said, "What is that to thee? follow thou me," I should have examined my own thoughts and seen that I was not following him in the way he taught us. I have not taken any medicine since that time, three years ago, and I have had to prove that all things are possible to God. The suffering returned, but, thank God, it was overcome by divine Love. Our Leader says: "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified." "We cannot fill vessels already full. They must first be emptied. Let us disrobe error. Then, when the winds of God blow, we shall not hug our tatters close about us" (Science and Health, pp. 22, 201). I am grateful now for the seeming slowness of my cure, as I have been led step by step to prove the truth of our Leader's words. I am so thankful to know that God is Love, the same "yesterday, and today, and forever," also to know that sin, disease, and death have no place in God's kingdom.

My heart goes out in gratitude to God, and in thankfulness to our Leader, also to all who have helped me out of darkness into light. I cannot express in words my gratitude for all the blessings received from Christian Science, but my desire is so to live each day that my life may attest my sincerity.

ANNIE JACKSON, Skelton, Howden, England.

I wish to add that all my wife says is true. I would also like to express my gratitude for the many benefits received through Christian Science. I have not taken any medicine for years. I have had several attacks of illness, but they have all been overcome through the understanding of Life, Truth, and Love as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

JAMES WARD JACKSON, Skelton, Howden, England.

✧

I wish to express my gratitude for what Christian Science has done for me, in the hope that thereby some one else may find this healing truth. Four years ago I had a nervous breakdown which threatened my reason. My fear was so great that I dared not even tell my wife, and the thought that I might have to go to an asylum was with me nearly all the time. I had heard a great deal about Christian Science, but knew nothing of the treatment, and I would not have dared to tell any one of my condition. I learned, however, that one could obtain the book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, at the library, so I borrowed a copy; but to my disappointment I could not make anything out of it and took it back. For the next three months I read about mental suggestion and many other things along that line; I also read several articles against Christian Science, but thanks be to God they only led me to make another attempt to reach out for the truth, which I was honestly seeking in my way. Again I obtained the book, Science and Health, and this time I was ready for its message,—and it did seem so good to know that I had found the truth which sets free! From then on my wife and I took up the study together, and it was nearly a year before I told any one what my trouble had been; but after that I was not afraid, for I had come to know that God, good, is the only Mind, and that as I reflected this Mind I could not lose my reason. I was healed by the truth.

I had been a slave to tobacco for twenty years and would rather gamble than eat at any time, but the desire to indulge these habits was overcome in a short time. My wife also was healed of a bowel trouble of over ten years' standing, for which she had tried everything, to no avail. It is now three years since she has had to resort to any material means for her health.

For all these blessings, as well as many others, we give thanks to God, the healer of all our troubles, and our hearts are full of gratitude to our dear Leader for showing us the way.—FLOYD E. WEST, Batavia, N. Y.

✧

[Translated from the German]

Two years ago I suffered from an abdominal complaint which necessitated a serious operation. After a time the pain set in again, and according to the physicians' statement another growth was forming. As I dreaded the thought of a

Digitized by Google

second operation, I turned to Christian Science, and through treatment from a practitioner in this locality I was healed within a short time. The understanding of Christian Science has brought me strength and peace, and has made it easier for me to bear the loss of my husband. A short time ago symptoms of illness, accompanied by fever, manifested themselves, but I was quickly healed with a few treatments. For all these blessings I am profoundly grateful to God, and also thankful to the Discoverer of Christian Science.

Frau Anna Müller, Neukölln, Berlin, Germany.

✧

It is with the deepest gratitude that I look back over the past fifteen years and count some of the blessings which have come to me through the understanding of Christian Science. While the way has at times seemed rugged, I thank God that I know it is only a lack of understanding which brings discord. I have never doubted for one moment that Christian Science is the Christ-teaching which Mrs. Eddy has rediscovered and brought to this age in a way that we may all understand, if we are faithful in our study of the Bible and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and apply it in our every-day lives. I have been healed of many ailments, and find the truth a great help in every way, for it can be applied in all our problems, and it brings peace and harmony as we come in contact with our brothers and sisters. For the physical healing which I have received I am truly grateful; but when I realize the spiritual uplift that comes to me daily, I stand in deepest humility before the majesty and might of divine Truth, and can only express my gratitude and appreciation by striving to live Christian Science more faithfully.

Florence I. Woolley, Los Angeles, Cal.

✧

I have much to be grateful for, as I have received many blessings since I accepted Christian Science. A short time ago I had a severe attack of what is termed gall-stones. I called a practitioner, and in three days I was up and around, and a week later I went back to my work. The first time I was attacked in this way I called in a physician, and it took many weeks before I got over the illness, and I felt the effects all winter. While the doctor was attending me he said that probably an operation would be necessary, and the pain I suffered can hardly be described. In Christian Science, however, it was so different! The pain left me almost entirely after the second day that I began to take treatment. For all this I am thankful to God, and grateful to our dear Leader, Mrs. Eddy.—H. G. Schindler, Chicago, Ill.

✧

I am very thankful to God for the many blessings which I have received through Christian Science. My little boy, eight years old, was wonderfully healed by it of appendicitis. A physician, who was a friend of the family, saw the child and pronounced his case a very bad one; but through a clear understanding of Christian Science our many fears were destroyed, the so-called laws of *materia medica* broken, and the healing was made complete.

I am very grateful to Mrs. Eddy, through whom the healing truth has been revealed to this age and the Bible made an open book.—Mrs. M. S. Kribs, Seattle, Wash.

✧

After the birth of our little son in 1905 I seemed unable to regain my strength, and was ailing more or less until two and a half years ago, when my condition was such that my husband insisted on an examination. We went to Denver for that purpose, and after the examination the physician declared there was a growth which could be removed only by an operation.

I had been in touch with Christian Science for quite a while without being able to understand its teachings. Although extremely nervous at this time, and fearing that death would soon take me from my loved ones, I felt that Christian Science was my only hope, so I did not submit to an operation, and instead of returning to our mountain home, we decided to spend the winter in Boulder, that I might be near a practitioner. Although I felt better after the first treatment, the final demonstration was not made till several months later. There were times when the pain was so severe that I thought it impossible to bear any more, but surely "God is our refuge and strength, a very present help in trouble."

I was able to return home, after an absence of four and one half months, completely healed. All outward signs of the disorder have long since disappeared, and I am strong and well. I feel truly thankful to God, and it is my earnest desire to gain more understanding of the teachings of Christian Science, so as to be better able to reflect divine Life, Truth, and Love to those I meet.

Mrs. P. F. Josephine Edwards, Estes Park, Col.

✧

[Translated from the German]

This testimony is given in gratitude for the healing influence of Christian Science. In July, 1912, my five-year-old boy was taken ill with what was said to be inflammation of the bone-marrow in the leg. An incision was made, reaching to the bone, as there was a discharge. He suffered great pain and was laid up with fever for six weeks, but worst of all was the child's dreadful sense of fear. After medical treatment of long duration he was operated upon. A splint was applied to his leg, and after five months all he could do was to move about on the floor in a sitting position. In January we went with him to Budapest, to a physician of repute, the result of whose examination was depressing. The child's leg was put in a plaster cast, and the physician said he should keep it there for several months and then have a mechanical contrivance for the purpose of reducing the shortening of the leg which had resulted from the removal of a piece of carious bone. He also said that the difference between the limbs would increase steadily, and that only through such a contrivance could the leg be brought into a position which would make the condition less apparent.

I had heard of Christian Science, and having read *Der Herold der Christian Science* since November previous to that time, I became desirous of consulting a Christian Science practitioner. This wonderful teaching is not yet known in our native country, and my great wish, therefore, was to take the child with me to Dresden. God guided my steps, and although my husband did not believe in Christian Science, he consented to this long railroad journey. All went well, and in Dresden the kind practitioner immediately took up treatment. The child does not know German, but only Hungarian, and he was very much afraid lest new sufferings should be inflicted upon him; yet he gladly consented to having the plaster cast removed and then crawled around on the floor. Two weeks later it became possible, for the first time, for him to wear boots, and he began to step on his foot.

After one month's treatment the boy was enabled to use his leg without any means of support. His step steadily grew firmer, and we were able to undertake our trip home without having to resort to any appliance. He is now jumping and running about, whereas according to medical prognostication

Digitized by Google

he would have to learn to walk with the help of a mechanical contrivance. The shape of the leg is not entirely normal, but the wonderful result obtained thus far makes us very confident that with steady progress complete harmony will be demonstrated. It is a great blessing also that the painful and distressing experiences have left no traces on the child's mentality. He is lively and bright, and never gives the impression of one who has gone through so much suffering. Young as he is, he understands that God was and is his healer.

I cannot but express my sincere gratitude for the loving way in which the child was treated in Christian Science, and for the surroundings in Dresden which had such a beneficial influence in his case. I thank God for our Leader, and am deeply grateful to know that we are now in a position to realize in the presence of fear of any kind that there is no need so great but that the divine help is greater.

FRAU HANNA RÖSZLER, Arad, Hungary.

✧

It is with a heart filled with love and gratitude for the many blessings I have received through Christian Science that I offer this testimony of the healing of my little son, when about ten months old, of an acute attack of bowel trouble. He was almost in convulsions before I knew anything about it. I tried to realize the truth for him, but seeing the dreadful suffering of the child, and the fears of those around who knew nothing of Christian Science, my efforts seemed unavailing, and after several hours I decided to call for help. I went to the telephone and called up a Christian Science practitioner two hundred miles away and asked for help. The result was almost immediate. I soon noticed that the baby was becoming quieter, and in a few minutes he was fast asleep. He slept several hours, and upon awaking was perfectly well. This is only one of the many instances in which we have received help through Christian Science. I am daily striving to do as our Leader tells us,—"Rise in the strength of Spirit to resist all that is unlike good" (Science and Health, p. 393).

ELSIE R. BRICE, Briceburg, Cal.

✧

I wish to express my gratitude for all the benefits I have received in Christian Science. I began the study of this teaching about four years ago, and such ailments as mumps, chicken-pox, and scarlet fever have been overcome in our home. Not long ago my youngest child complained of not being well. He awoke from a nap feeling very ill, cried, and complained of pain in his head and stomach. I took him up, and in a short time he was delirious. I was all alone with him, but I audibly declared the truth, and in about half an hour he was well and ate some food. I feel thankful to God for this healing, and am grateful to our Leader, Mrs. Eddy, for the Christian Science literature.

CHRISTINE LATOURELL, Wilmont, Minn.

✧

[Translated from the German]

Sincere gratitude prompts me to testify to the blessings which my family and myself have received in the course of years through Christian Science. I suffered from rheumatism and pain in the back for years, and the physician was unable to help me; but my healing in Christian Science was immediate, since help came with the first treatment. My husband and children have also had experiences of wonderful healing. For all these blessings we thank God; and we are also very grateful to Mrs. Eddy for having shown us the way to divine Love and Truth.

IDA URFER, Zweilütschinen, Ct. Bern, Switzerland.

From Our Exchanges

[Rev. R. A. Dunlap in *Hartford Seminary Record*]

Now the source of all I have to say is a certain deep and growing conviction of mine; namely, the conviction that the greatest help toward understanding spiritual leadership lies in trying to understand the spiritual leadership of Jesus. This is not to underrate what may be gained from a study of the spiritual leadership of other men, but to say that the suggestions gained from such study have their deepest significance and greatest value as a kind of commentary upon his spiritual leadership whose example and gospel have been the greatest personal force contributing to the uplift of mankind. And out of the inexhaustible treasury afforded by his example, I would select the suggestion arising from the union of the divine and the human in Jesus, as related to his leadership.

When I speak now of the divine in Jesus, I am not thinking of the deity of Jesus; nor am I raising hard theological questions. I am thinking of his awareness of the Father; I am thinking of his prayers; I am thinking of his sense of the divine meanings of things; I am thinking how he saw the temporal in terms of the eternal, the finite in terms of the infinite; I am thinking of the harmony of his every word and thought with the Father's will; I am thinking how he discovered in the hearts and in the affairs of men, intimations of the kingdom of heaven. I am thinking, in a word, of the spirituality of Jesus, and of the spiritual quality and meaning which this gave to his leadership who had so many qualities of leadership.

And if the leadership of the pulpit today is to be a spiritual leadership, we need to make what I have called the spirituality of Jesus the pattern of our spiritual lives, and the pattern of all our notions as to what is true spirituality. Whatever sense there may be in which we cannot embody the union of the divine and the human in Jesus, there is a sense, I take it, in which the divine is to be united with the human in all those who today incarnate the spirit of Christ.

[*Northwestern Christian Advocate*]

We familiarly speak of our occupation as a vocation, a calling, and of any secondary employment, such as many are engaged in, as an avocation,—something that calls one temporarily from his regular work. That is good so long as we speak of a mere temporal, physical employment; but when we consider life in the light of eternity, then our vocation, as we have familiarly called it, steps back into the class of avocations, while the service of God becomes our vocation. Christ first! All else is to follow in order. Christ is our vocation; we are to bend every effort to grow into him. Mark you, it is a business that requires our every effort; every avenue of the heart and brain must be thrown wide open to receive instruction. Open wide, ye everlasting gates, "and the King of glory shall come in. Who is this King of glory? The Lord of hosts, he is the King of glory."

[*The Universalist Leader*]

Whenever we have the faith of Jesus, and whenever we dare put that faith into our attitude toward others, the same results will follow that followed his ministry. He had no monopoly of love; he worked by no magic. He idealized man. He took his acquaintance on the road with an estimate of the divine possibilities in him. He believed that the most ordinary person responded quickest to sympathetic treatment. He wanted no companionship or discipleship which could not be won by gracious influences. Whenever human souls have broken through the crust of tradition or dogma or sacer-

Digitized by Google

dotalism into this personal intimacy with Jesus, they have found joy and peace and encouragement. Whatever new dispensation of the gospel lies ahead of us in history, one thing at least is growing more certain every day: the new dispensation will be based on liberty; it will depend for its vitality upon the method of Jesus.

[*The Standard*]

A denomination is not unlike a great mountain range. There is something elemental about both of them. Titanic upheavals have usually brought both into existence. At a distance mountains seem so changeless, we think of them as the eternal hills, but that figure is modified once we know them geologically. Erosion and detrition without cease are modifying their surface, and the valleys between are being constantly filled up with the material brought down by these processes from higher up. In much the same way modifications are constantly going on in the denominational mountain ranges that diversify the surface of Protestantism. These processes are equally inevitable. Indefinitely continued, they would doubtless at some remote period bring back that general level of religious life and expression so characteristic of the ecclesiastical uniformity of the middle ages.

[*Western Christian Advocate*]

The kingdom seemed to Jesus to belong as much to this earth as its mountains and rivers and oceans; as its snow and rain, seed-time and harvest. This is the magnificent enterprise with which he challenges us. "Men and religion" means each man dedicated to the idea of Jesus and highly resolved to do the utmost to make this a wholesome, beautiful, righteous, and happy world for us all. It means that each man shall be in sympathy with him, seeing eye to eye, having the like affections and motives, led by the same Spirit, bravely striving for the same supreme goal of human desire and effort,—the kingdom of God.

[*The Advance*]

This is a season when we have good right to expect an outpouring of the Spirit of God upon our churches and their members. From every side come reports of anticipation. The tumult and the shouting over past controversies die. Brethren are in unity and in brotherly love. The world seems to be awakening from its search after vanities, and to be hungering for spiritual realities. "Now is the accepted time." The power of the Lord is present to heal.. Shall any one be healed?

[*The Christian Work and Evangelist*]

We see in the light of our faith that life is measured not by its success and its possessions, but by its love, and love is measured by its service. The hospitable mind is its own best blessing. The loving heart is its own true reward. The generous soul has unawares had an angel for a guest. We put away all malice and hard thought and unforgiving feeling, and as we show love in love's own ways we open the door to Christ. We give the Christ-babe his cradle in our hearts, and afterward he sets up his cross in our hearts, and in our hearts he plants his throne.

[*The Dayton* (Ohio) *Journal*]

There is no loss of the good, the true, the innocent, the beautiful. They are the eternal elements which, with kaleidoscopic power, make up the great scheme of being, existence. A door opens, and what was ours goes forth, not lost, but changed. Sometime, somewhere, we shall seek and find that which we mourn with tired eyes, and then all will be well. It would be a sad world if this were not true. Life is endless, hope infinite, and "God is love."

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, marbled edges, 95 pages, single copy, $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy, 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIII indicates the year 1913; XIIII is used for the year 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

NATIONAL.

The Keokuk & Hamilton Water Power Company, whose gigantic dam across the Mississippi river was recently completed, together with officials of the war department, are involved in an investigation by a committee of the House of Representatives, which the conservationists will try to have ordered as soon as Congress comes together. The charges recite, in general, that the government and the public received the bad end of a sharp bargain. It is also claimed by steamboat companies that navigation has been hindered rather than helped. The conservationists further say that the power company is buying up electric light plants within the sphere of its operations in Illinois, Missouri, and Iowa, "paying therefor in many cases much more than said properties are worth, and thereafter rendering less efficient service than was formerly rendered."

Department of agriculture experts figure that an annual waste in the United States of twenty-two million dollars' worth of ammonia is due to the practise of making coke in the beehive type of oven, which does not admit the recovery of the distillation products. From this ammonia, they say, should be made ammonium sulphate, a valuable fertilizing material. About four million dollars' worth of the ammonia is obtained annually as a by-product of coke-making, while more than five times that much is allowed to go to waste. This country imports annually from Chile about seventy thousand tons of sodium nitrate for fertilizer, which contains 15 per cent less nitrogen than does ammonium sulphate.

The last great sale of Indian lands in Oklahoma under the direction of the United States government began last week. More than a million acres of timber, agricultural, and grazing land are to be sold in five county-seat towns of the Choctaw nation during January, the sale in McCurtain county being the first to begin. Months have been spent by the department of the interior in preparation for the sale. Hundreds of land buyers and home seekers have flocked there to bid on the tracts, which will be sold at auction. There is no lottery in connection with the sale. Every buyer is required to make prompt payment.

Almost two million dollars more money was coined in the United States mint in Philadelphia during 1913 than during 1912. It is shown that during 1913 there were 160,067,676 pieces coined from all metals, amounting to $20,182,841. No money was coined for foreign countries at the mint during last year, although in 1912 a large number of dimes were struck for Costa Rica and more than five hundred thousand dollars in silver were coined for San Salvador.

During the first week following the enactment of the currency law, the treasury department announced that seven hundred and sixty-seven banking institutions in forty-five states, having an aggregate capital, exclusive of surplus, of about three hundred million dollars, informed the federal authorities of their intention to enter the system. About one fourth of the national banks are included among the applicants.

Loss of one hundred and twenty-nine million dollars in two years by the unsuspecting public through swindling operations carried on by use of the United States mails has stirred the postal authorities to a drastic campaign against these schemers. The government's right to deny the mailing privilege to persons or firms whose operations may be tainted, is the weapon to be employed.

Pueblo, Col., the first city in the United States to adopt the single tax, began government under that system on Jan. 1, when a charter amendment adopted at a recent election went into effect. After a certain period, according to this new method, real estate improvements or personal property will not be subjected to taxation.

Hearings with a view to drafting rural credits legislation at this session of Congress will be urged by the House banking and currency sub-committee. Representative Weaver of Oklahoma, member of the sub-committee, says that a large number of farmers, rural bankers, and political economists will testify.

During the past year seven new national bird reservations were established, making a total of sixty-three. It is reported that all, new as well as old, are in first-class condition, with the birds increasing rapidly in numbers from season to season, proving that the object of the government in establishing these reservations is being fully met.

Secretary Lane announced the designation recently of nearly one million seven hundred and fifty thousand acres of lands in western public land states for entry as double homesteads of three hundred and twenty acres each. States affected by these orders are Montana, North Dakota, Arizona, and New Mexico.

During the last thirteen years the announced gifts in the United States to educational, religious, and charitable purposes have aggregated nearly two billion dollars.

The total foreign missionary contributions of American Protestant churches for the last year was $16,898,000.

The Pennsylvania railroad in 1913 carried one hundred and ten million passengers without a single fatality.

INTERNATIONAL.

A public demonstration of protest against the campaign in Morocco was held in Madrid recently. It was attended by large crowds of Republicans and Socialists, and from the character of the meeting it was evident that the policy of the government in the Spanish zone does not gain in popularity. It is stated that the operations are costing nine hundred thousand pesetas daily, and that the treasury is finding it increasingly difficult to meet the demands that are being made upon it. Quite recently the government published a statement which declared that it was anxious to pursue a policy of conciliation in the zone. It is believed that an attempt will be made to reduce future military operations to a minimum, and to secure the pacification of the country by political means.

It is announced by a member of the executive committee of the American Statistical Association that representatives of nations of the world will meet in Brussels, Belgium, in October, to plan an international census and agree on a standard system of national bookkeeping. The purpose is to establish an equitable and national representation at the Hague peace congress. Eventual disarmament and world peace is also distinctly in the minds of the American committee.

Arrangements have finally been made for completing the purchase of the Crystal Palace in London, England, and handing it over to the public, with its grounds.

INDUSTRIAL AND COMMERCIAL.

In connection with the proposed electrification of a part of the Chicago, Milwaukee & St. Paul Railway Company's lines, it is said that the management has decided to adopt the direct-current system in preference to the alternating-current system, which is now in use by the New Haven road. The company has already started work on one hundred and thirteen miles on the Puget Sound line over the Bitter Root mountains. The total cost of electrifying the Puget Sound line over the mountain grades for a distance of about four hundred and fifty miles will be between six and eight million dollars.

"Very few people are aware of the large future for and great value of North Dakota's vast deposit of lignite, which is destined to become our cheap source of power in the state," says Dr. Herbert A. Hard of the North Dakota Agricultural College.

The total foreign trade for the first time in the history of Canada passed the billion dollar mark, the figures for the fiscal year ending March 31, 1913, being $1,068,749,102. The total duty collected was $115,063,687.93.

Sixty carloads of paper wrappers weighing one million eight hundred thousand pounds, are on their way to southern California to be used in wrapping oranges.

The value of coal passing out of continental United States in the present calendar year will approximate one hundred million dollars, against less than half that sum a decade ago.

There is, it is claimed, between three and four hundred million dollars invested by different companies and corporations in motion pictures in the United States.

Canada cuts about two million cords of pulp wood annually, about half of which is exported for manufacture in the United States.

A growing scarcity of willow, generally used for wooden shoes in Europe, is leading to the adoption of poplar.

Squirrels collect much of the seed used for planting by the forest service.

Vol. XVI | January 17, 1914 | No. 20

Infinite Resources

M. G. KAINS, M.S.

MRS. EDDY tells us that "Soul has infinite resources with which to bless mankind" (Science and Health, p. 60), and this great truth is surely no less applicable to what may be termed the financial problems of our churches than to those of individual Christian Scientists. Christ Jesus certainly furnished several definite illustrations of the fact that God is really the source of all true supply; and that the early Christians understood in large measure the spiritual law of supply and demand is proved by the statement in the fourth chapter of Acts: "Neither was there any among them that lacked."

It is so customary for organizations in the business and the political world to present budgets of expense for work to be done that it is perhaps no more than natural that churches should adopt the same practise when outlining the work and expenses for any subsequent year. In the great majority of cases scarcely any other course would seem sensible, much less feasible, to a board of trustees, composed as it usually is of men of experience and proved good judgment in the business world. Not one of them would think of embarking in any enterprise without knowing that he had a sure source of supply to enable him to carry his project through to a successful issue. From a purely business standpoint he would consider himself foolish to attempt this without adequate financial backing, and some might say, Why treat a religious enterprise in any less businesslike way?

Doubtless this attitude is a wise one where an enterprise, be it in commercial or church affairs, is projected on a business basis. But the question arises, Should religious enterprises remain permanently subject to these methods? Does not absorption in and dependence upon such methods inevitably lead to the relegation to the background of the vital, fundamental fact that God is the source of our supply? Startling as this question may be to church-members, is it not true that it searches more deeply for the basic truth in the case than is pleasant to mortal sense? Is it not too often the case that more dependence is placed upon business ways and means than upon the Giver of all good? If so, should it be surprising that certain church-members rich in this world's goods feel called upon to give, and often do give more liberally than they perhaps should, or at the close of the church year make up deficits which should not have appeared? Does not this condition of affairs indicate a lack of trust that God will provide means for the manifestation of His own work?

The Bible is full of cases of individuals who proved that God supplied their every need. The barrel of meal and the cruse of oil did not fail to supply the necessities of life to the widow, her son, and Elijah, who trusted implicitly in God. The psalmist was so imbued with the thought of God's resourcefulness that he declared he had never "seen the righteous forsaken, nor his seed begging bread." In a still more striking way Christ Jesus did not find it necessary to consider material ways and means, to be influenced by the thought that it was essential for him to have in hand any specific sum of money or any estimated number of loaves and fishes before he could prove God to be the certain and limitless supply of every good and perfect gift. Today the individual Christian Scientist knows that these and countless other instances mentioned in the Bible are true, because either he or his friends have proved that God is here, now, supplying every need as it arises.

If we accept the premises that God is omniscient, omnipresent, omnipotent, and omniactive,—in a word, infinite,—we must know that He is unlimited in any and every way that knowledge, presence, power, and activity can be truly expressed. He is not humanly circumscribed. There is no possibility of lack, want, poverty, or restriction to His constant, inexhaustible abundance. He has done His part in placing infinite resources at our disposal; it is our function to utilize them. But unless the recognition precedes the demand, the supply will not be forthcoming; for, as we read in the epistle to the Hebrews, "He that cometh to God must believe that he is, and that he is a rewarder of them that diligently seek him." We do well to keep the fact constantly before thought that increase of understanding is not in proportion to increase of supply, but increase of supply is proportional to increase of understanding. There is an almost antipodal difference between these two statements, a difference that decides the flow or the check of the supply; for when one knows that man does not live "by bread alone, but by every word of God," there is no hesitancy in calling for the supply to meet immediate needs, and it is only present needs for which we have occasion to ask at any given time.

Countless individuals who have adopted Christian Science methods of thinking and praying have proved little by little that everything favors the manifestation of God to those who really trust Him, and that the very channels which previous disbelief, mental blindness, or erroneous thinking declared to be empty, are really running bank full. Furthermore, they have proved that the utilization of their individual supplies does not lessen the flow either to themselves or to others; on the contrary, it really increases the blessings that become manifest to all. Their increase in capacity to secure and to utilize their supply, grows in direct ratio to their correct use of that supply and to their recognition of and thankfulness to God as the source of all blessings, even those which come in disguise.

Christian Science churches are just as individual as Christian Science students. To be sure, they are made up of individuals whose real aims are identical, but they stand for the highest thoughts or ideals of all those individuals. In no sense must they be considered as representing the average ideas of the congregation, because this would imply a mixture of superior and inferior qualities; whereas none but the superior qualities can be spiritual, and thus be entitled to place in the real church, "that institution, which affords proof of its utility and is found elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science" (Science and Health, p. 583).

Copyright, 1914, by The Christian Science Publishing Society.

Digitized by Google

For these reasons trustees, as representing the best and noblest ideals of the congregation, should ever maintain and seek to lift the thought of all to the spiritual ideal and bring it into practical relation with this problem of supply. They should ever seek to lead their brethren away from dependence upon material means and methods. Their aims should be to prove that no need can exist in the actual and infinite presence of supply, that supply is ever available, because God is ever present, and is the sure rewarder of those who diligently seek Him. They should have and should frequently express unqualified confidence in God, so that both they and their brethren may look to God alone with calmness, expectancy, and confidence to supply every need, and that abundantly; for we are assured that out of Love's bounty a table is prepared for us even in the presence of our enemies.

Discouragement

LOUISE KNIGHT WHEATLEY

We read that there was once a time when Moses was discouraged. In spite of the innumerable proofs which he had had of God's power to save, even in the face of what seemed like overwhelming disaster, he had become so utterly heart weary that he longed to die. For the children of Israel were again complaining; they were tired, it appears, of eating manna. Recollections of "the leeks, and the onions, and the garlick" of Egypt filled them with discontent, and they cried: "Our soul is dried away: there is nothing at all, beside this manna, before our eyes. . . . Then Moses heard the people weep throughout their families, every man in the door of his tent."

It was not the first time that they had rebelled. Again and again had they bitterly reproached their faithful leader for taking them from their Egyptian taskmasters only to let them die in the wilderness; and again and again their reproaches had been turned to songs of gladness as the emergency of the moment was met and overcome. But this time the voice of their lamentations seemed to enter into Moses' consciousness and so fill him with discouragement that he could only cry out in his misery, "Whence should I have flesh to give unto all this people? . . . kill me, I pray thee, out of hand, . . . and let me not see my wretchedness."

One of the Christian Science lecturers has aptly termed discouragement "the devil's most useful tool," for this little implement can often effect an entrance where everything else would fail. A man who is discouraged is mentally unfitted for clear thinking; while he is standing still, in a state of helpless apathy, a horde of wrong thoughts, unseen by him, rush through the door in his consciousness which the mortal sense of discontent has opened. So it was with Moses, so it may be with some of us. If one who seems to be struggling against a similar sense of mental depression will study this incident as recorded in the eleventh chapter of Numbers, he will perhaps gain some light on his own problem; for the phases of thought through which he is passing are quite likely to be those which assailed Moses, so little has mortal mind changed its methods since the day when it listened to the wailing suggestions of something which was lacking to make its happiness complete.

In the first place, if we analyze the situation a little, we shall see that Moses was laboring under a most exaggerated sense of his own personal responsibility. This is usually the case with the man who is discouraged. He has forgotten that the battle is not his, but God's. He thinks he is doing something, and doing it alone. "Whence should I have flesh to give unto all this people?" inquired Moses, "for they weep unto me, saying, Give us flesh, that we may eat." No wonder he was discouraged. He was looking to Moses, not to God. His next words, consequently, need not surprise us. "I am not able to bear all this people alone, because it is too heavy for me."

Many a mortal is today toiling along life's road under the same impression. He thinks he is bearing a burden with his own limited human strength, and is crying out because of it; but after a while he will remember that the government belongs to the Christ-idea, not to human sense. The burden is not ours at all, but God's, and we need not carry it a moment longer than it takes us to realize this simple but stupendous fact. Had Moses delivered the children of Israel from the hand of Pharaoh by his own wisdom? Was it because of him that the Red sea had parted, that water had gushed from the rock, that the bitterness of Marah had been made sweet for the thirsting multitude? Had Moses furnished the manna, or instructed the pillar of cloud by day and of fire by night when and where to rest? In short, was it Moses who was leading the Israelites into the promised land, or was it God?

There is, of course, a responsibility which is ours, but it is just to keep so near to God that we will always know what to do. When this is done, we will find beyond a shadow of doubt that "Love inspires, illumines, designates, and leads the way" (Science and Health, p. 454). When we live close to God and learn to distinguish clearly between the voice of Truth and the intimations of error, then we shall make no mistakes. God is continually speaking, and His wisdom is sufficient for every emergency. Our one responsibility is to listen, and to obey.

Through the door opened by discouragement there sometimes slips in yet another foe to peace and happiness, and it is called self-condemnation. Indeed, so closely is this allied to discouragement that they practically enter hand in hand. The discouraged man is frequently found spending much good, valuable time in comparing himself with some one else to his own disadvantage, in dwelling on past failures, in magnifying past mistakes. He bitterly condemns himself because he has not accomplished all that he has set out to do, and looks with feelings not unmixed with envy at the man across the street who seems to have done more. Wise indeed was Shakespeare when he wrote, "Comparisons are odorous." Why indeed should we compare ourselves with any one, when our real need is to strive each day to attain more nearly to that pattern of perfection which was set us, once for all, by Christ Jesus?

And even Jesus did not condemn any one; he only said to the woman who had sinned, "Go, and sin no more." Self-condemnation never takes anybody anywhere. It simply keeps him standing still, seemingly rooted to the spot where his crop of past mistakes is rearing ugly little heads like insistent weeds. These live only so long as we look at them, and he is therefore wise who ceases his gloomy contemplations and, after having made all amends for his mistakes that he can, resolves, in the strength of Christ, Truth, never to repeat the offense, and moves on. There is always today in which to do better; let us thank God for that!

Thanking God, we soon find, is one of the most effectual ways in which to overcome discouragement; for there is no state of mind so utterly destructive to it as that of gratitude. When a man who longs to do better is thankful to God for benefits already received, discouragement will not even take the trouble to ascend the steps of his mental home and look in at the window. And how much we all have for which to be grateful! In the United States a special day is set aside, once a year, on which the people meet in their churches and

Digitized by Google

give thanks to the Giver of all goodness. Although to the Christian Scientist every day in the year is a day of thanksgiving, yet he loves to join with his fellows in audible expressions of rejoicing, to tell of the pillar of cloud by day and of fire by night which is still guiding him out of the darkness of material beliefs into the land of light and freedom. Moses would not have prayed to die if he had remembered the forty days and nights upon Mount Sinai, when the glory of God's presence so encompassed him that upon returning again to the people he had to cover his face with a veil. He was not thinking of Moses then. We are told that he wist not that his face shone.

Like Moses, there are those who today have had their forty days and nights upon the mount. They, too, have seen something of the divine glory as it came to them in demonstration, and for a long time afterward the wonder of it lingered in their faces, bringing to them a radiance that was not of earth, and it did not then seem to them that they could ever forget. Let every doubting heart, therefore, take courage. Let each of us begin to think about our blessings, the greatest of which is this larger thought of God, and His tender, all-embracing love. Let us be glad that we have something to give, even this simple, saving truth of divine Science, which has so enriched our own lives; let us be glad that there are always opportunities to speak of it, and so many hearts waiting and longing to receive it. Let us be glad that we can join in the great harvest song of thanksgiving, even though we may not yet have seen the entire solution of all our own little problems.

And as we "think on these things," these things which are true, and just, and pure, and lovely, and of good report, as the apostle describes them, we will lift our eyes as joyously and as spontaneously as a flower lifts its head to the sun; for on the wings of gratitude there has come even to us that vision on the mount. God has indeed been good to us, and can we not trust Him evermore? As our faces glow again with the sweetness of the memory of the divine goodness, every burden of discouragement slips silently from our shoulders, and we are glad and free.

A True Mental Attitude

FORREST P. WEAVER

"Mark the perfect man, and behold the upright," sang the psalmist; and James tells us that "whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed." It is apparent that action is contingent on thinking, or the result of it, and it necessarily follows that if the thought prompting an act is a divine idea, the act itself must be good. Christian Science maintains that this is the philosophy of true living, and proves it in the only logical way possible by demonstration.

Christian Science points out to men a simple, practical way of right thinking which all who will may follow. A sincere Christian Scientist tries to emulate the example of the Master, "who went about doing good," and only good. His work was always healing, encouraging, uplifting. His teaching seemed transcendental to materialistic thought, but it was a practical transcendentalism; and this constitutes the difference between theory and practise. In this progressive age we apply the pragmatic test to every idea and ask, Will it work? Christian Science invites such a test, and is proving under severe trials that it is demonstrable; and this is the best argument in justification of its existence. When Christian Science comes into one's life, it means a complete mental right-about, and this change of view-point is effected by gaining a true concept of God, a God who is all-embracing goodness, and of man created in His likeness.

When the student sees that the man God made is not a sick person or a sinner, but must, as "image," correspond with or reflect his Maker, and hence be spiritual and perfect, his attitude toward himself and his environment is completely changed. He begins to get a glimpse of the new heaven and the new earth, that glorious vision of St. John where the former things are indeed passed away, and all things are made new. As he grows in the understanding of the truth, the simplicity and practical utility of it all seem so natural that he wonders why he did not realize it before. Did not Jesus say, "The kingdom of God is within you"? and John, "Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be their God"?

Jesus so perfectly realized man's oneness with the Father, and the all-pervading goodness of God, that no matter what discordant condition seemed to present itself, he met it with the healing word. To the storm it was, "Peace, be still"; to the sick man, "Arise, and walk." His sense of peace and harmony was so clear that it was of necessity externalized in his environment. Christian Scientists are reverently and sincerely trying to follow the example of the great Master himself, and this by his authority. The marvelous success of the Christian Science movement in its works of healing and regeneration is proving that Mrs. Eddy did in truth discover the "lost chord," which is permeating "the harsh noises of our day" and which will ultimately transform them into the harmony of the spheres. When the world-weary heart cries out for rest and comfort, and asks as of old, "Can there any good thing come out of Nazareth?" Christian Science replies, "Come and see."

Tarrying in Jerusalem

EVA S. W. WILLIAMS

It is probable that at some time or other most Christian Scientists pass through a period when they imagine that some material step is demanded of them, some coming out from the midst of their customary surroundings, in order that they may be the more "endued with power from on high." They have not yet fully learned that the kingdom is within; that it is the preparation of the heart which is most needed; and that every betterment of their environment will be brought about through the working of divine Principle, when self-will has been rigidly excluded from activity. Most likely they have not given attention to Mrs. Eddy's injunction to students that they should not attempt to "make their moves before God makes His" (Miscellaneous Writings, p. 117).

To one Christian Scientist the lesson which must be learned by all came home in the following way. When she began the study of Christian Science she was trying to meet, as satisfactorily as might be, two sets of duties, namely, home and business. It seemed right for a time to continue this; but then the idea came that a burnt offering should be laid upon the altar, in the form of a decision to abandon one sphere of work and devote herself entirely to the other, the one which seemed to need her most. The attempt to carry this determination into effect resulted in a veritable storm of protests, objections, and remonstrances, showing clearly that the time had not come for any such step. Neither did it come for a number of years, during which the Scientist was honestly desirous of doing what was right in this particular matter, and she had no choice but to meet as adequately as she could her part in the requirements of two separate establishments situated more than a mile apart.

Digitized by Google

There were many struggles, many dark hours when it seemed beyond the moral strength of the Scientist to "obey" and to "wait," to go on meeting the spoken or unspoken criticism of work done under what were, humanly speaking, very real difficulties; but it was only when she had learned to say with sincerity and with conviction, "Thy will be done," that the way opened into an entirely altered career. Results come slowly or quickly according to the mental receptivity of the student; but honest effort is never failure, since always and all the way it is leading up to a higher spiritual standpoint. "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified" (Science and Health, p. 22). For those whose progress seems slow there is encouragement also in Mrs. Eddy's lines, "To the Big Children" (Poems, p. 69), which end with the words,—

In the way Thou hast,—
Be it slow or fast,
Up to Thee.

When Christ Jesus required of his disciples that they should tarry "in the city of Jerusalem," stand through misjudgment and persecution, amidst oppression and tyranny, making no personal effort to escape from these, we are told that they obeyed "with great joy." And it is open to each one of us to learn from individual experience how true it is that our home and our heaven are where God is; and He is everywhere.

A Lesson from the Palm

DAISY CYNTHIA WOOD

Mrs. Eddy has written that "the floral apostles are hieroglyphs of Deity" (Science and Health, p. 240), and the significance of this statement was recently brought to the writer by a friend's story about a plant. A palm, long loved and cherished, began to turn brown, wither, and lose all semblance of life. Careful nursing seemed of no avail, and finally, the leaves having become dry and sear, the owner regretfully decided to dispense with it the next day, when, behold, a light from the chandelier chanced to fall upon the top of the withered palm, and disclosed a pure white bud ready to burst forth into a beautiful flower. Cutting the plant to the earth, and stripping the stalk of its withered husks, she placed it in a jar of water, whereupon the flower unfolded in radiant beauty and tender fragrance, to the delight of all who saw it. Moreover, out from the earth where the plant had been cut away sprang two tiny green shoots, revealing an inherent life which gave promise of future growth and fruitage. Through mute symbolism this floral apostle had brought its lesson of the ever-presence of Life.

Within each human consciousness there lies a seed of Truth which, when touched by the light of divine Love and nourished by the ministry of human kindness, will bud and blossom into a manifestation in us of the redemptive Christ-idea; and this because "Love giveth to the least spiritual idea might, immortality, and goodness, which shine through all as the blossom shines through the bud" (Science and Health, p. 518). This budding and blossoming into spiritual beauty and efficiency is realized in human experience in proportion to our right thought, our realization of the at-one-ment with good of every spiritual idea. This gradually outgrows all the husks of past wrong thinking, malice, hatred, selfishness, fear, the false beliefs which claim that man is separate from God, good, and, behold, the full-blown flowers of spiritual consciousness, veritable apostles of Deity.

In every phase of human experience, as we truly seek we shall find the seed of Truth which, nurtured and developed in pure thought, results in the flowering of a budded promise as the Mind that was in Christ is brought into manifestation. Neither the withered husks of past experiences nor the consuming heat of hatred can cover or blast the bud of Love's spiritual reflection. Even though the shadow of death may seem momentarily to cut to the earth of material sense a human blossom, with the passing of the shadow there will be revealed a new growth which gives promise of eternal life. As the empty husks of all material seeming gradually wither away, nothing remains but the living, vital flower of Truth's perfect idea.

Acquaintance with God

FLORENCE STRATTON WEAVER

In all our study of Bible history we find that the great insistence throughout the ages has been for men to be acquainted with God, and the promise of all life and blessedness has been named as the reward for so doing. In Deuteronomy an exhortation goes forth for the people to know God, in the words, "that thou mayest love the Lord thy God, and that thou mayest obey his voice, and that thou mayest cleave unto him: for he is thy life, and the length of thy days." In the book of Job we are counseled: "Acquaint now thyself with him, and be at peace: thereby good shall come unto thee." Christ Jesus declared, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent:" while John said, "We know that the Son of God is come, and hath given us an understanding, that we may know him that is true, and we are in him that is true, even in his Son Jesus Christ. This is the true God, and eternal life."

In harmony with this Scripture teaching, Mrs. Eddy gives us a single sentence which shows humanity in this age how to get acquainted with God, namely, "through the transparency of Science" (Miscellaneous Writings, p. 183). The blessedness of this close acquaintance with God was once brought to the attention of the writer in the case of a young woman whom she knew. This lady had a sense of deafness, together with a consuming fear that she would lose her hearing altogether. She was as one in a prison-house, with the lights all turned out and the doors locked; but when Christian Science was presented to her, she responded to it as the "hart panteth after the water brooks." The truth seemed to fall on her as showers that water a thirsty land, and the budding and blossoming began at once.

About a month afterward, a relative who had left her housewoman when she was in the awful vortex of fear, returned to the city, and naturally the first question was, "Well, how is your hearing?" Our young woman joyfully replied: "Oh, I never think of it; I am too busy getting acquainted with God. I scarcely lose a moment; it is so wonderful to know God! That is what Christian Science does for one, and I am just about the happiest person in the world." This young woman is now a Christian Science practitioner in an adjoining city. The writer met her a short time since, and she seemed to have no difficulty at all in hearing.

Such an experience is helpful. Whenever the way seems especially up-hill and the problems particularly knotty, a closer acquaintance with God, "with whom is no variableness, neither shadow of turning" will surely meet the situation. Mrs. Eddy expresses this in her "Psalm of Praise" (The First Church of Christ, Scientist, and Miscellany, p. 355): "When will the world waken to the privilege of knowing God, the liberty and glory of His presence,—where

He plants His footsteps in the sea
And rides upon the storm."

Selected Articles

[Frederick Dixon in *Weston-super-Mare* (England) *Gazette*]

In a recent issue of the *Gazette*, Mr. Russell, in an attack upon theosophy and some other phases of teaching, describes Christian Science as "heathenish." I am sure, therefore, you will permit me to show how utterly mistaken such a description is. The worst of religious controversialists is that they often find it necessary to support their own case by an attack on their neighbors. In a way this is understandable; it is so much easier to abuse somebody else than to demonstrate the truth of what you believe yourself. In the present instance, the critic finds it very easy to describe Christian Science as "heathenish." He forgets, however, that it is necessary to do something more than to proclaim yourself a Christian in order to be one. The Founder of the Christian religion took care of that. He understood all about profession and the ease with which profession may be made. He spoke of it quite clearly and without any hesitation as making "clean the outside of the cup and of the platter," and he went on to insist that men must give some better proof of their Christianity than a mere assertion of it. His command to his followers was not merely to "preach the gospel," but to "heal the sick," and he defined Christianity in a phrase the meaning of which it is impossible to whittle away, when he said that those who believed on him would be able to do the works he did. The offense of Christian Science to the critic is founded on this very command. Mrs. Eddy perceived quite clearly the meaning of the words in the epistle of James, that "faith without works is dead," and she insisted that those works should be the works demanded by Jesus himself, that is to say, works of healing.

The healing of Christian Science is no mere attempt to get a man's body well; it is based on another great saying of Jesus, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" The ordinary philosophic thinker has long admitted the interdependence of mind and body, but it was reserved for Mrs. Eddy to insist on the full meaning of the gospel, that all sickness is the result of wrong thinking, and that all wrong thinking is sin. The physical condition of the body is nothing but a reflection of the human mind, and exactly as the human mind is permeated by a belief in matter or an understanding of Spirit, it reflects sickness or health, sin or holiness. The way to cure sickness, therefore, is the way to cure sin, and it is done in Christian Science by permitting that Mind to be in you which was also in Christ Jesus, even though our critic chooses to call it "heathenish."

The world has got into the habit of regarding sin as a sort of local belief; that is to say, that what is a legitimate expression of materiality in Constantinople may be a criminal offense in London. It is quite true that polygamy is a sin, but it is equally true that a monogamist may be as much of a sinner as a polygamist. In plain English, this is what Jesus obviously pointed out when he explained that sin is thought before it is enacted; in other words, that sin is mental. The sin of omission is not necessarily less a sin than the sin of commission. The man who becomes sick as a result of obvious vice has committed a sin of commission, but a man may equally well become sick by omitting to believe that there is no power but God, and consequently no absolute reality in evil. Sin, then, speaking absolutely, is the surrender to a belief that there is any real power but God. If this were recognized by the human race, then the effort to let that Mind be in you "which was also in Christ Jesus," would produce an understanding of spiritual life which would banish the material beliefs of sorrow and sickness and sin so completely from the human consciousness that men would be able to begin to appreciate the depth of that tremendous saying, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

[H. Cornell Wilson in *The Herald*, Syracuse, N. Y.]

Christian Science, according to the report in a recent issue of *The Herald*, is not to the liking of Dr. George P. Eckman, editor of *The Christian Advocate* of New York. I read that this gentleman even went so far as to express the astonishing opinion that Christian Science "robs Christ of his cross, as well as his crown, and . . . puts a fool's cap on the noble brow of science." Entertaining a concept of Christian Science which is without foundation and lacking in truth, it is small wonder that he inveighs against it. Were our critic to study the subject, however, and so gain an understanding of Christian Science, it is more than likely that he too, like others of his ministerial profession, would completely revise this estimate. Mrs. Eddy writes in the text-book of Christian Science, "Science and Health with Key to the Scriptures," that "the sects which endured the lash of their predecessors, in their turn lay it upon those who are in advance of creeds" (p. 239). We may also read that "the cross is the central emblem of history. It is the lodestar in the demonstration of Christian healing,—the demonstration by which sin and sickness are destroyed." "Whoever reaches the understanding of Christian Science in its proper signification will perform the sudden cures of which it is capable; but this can be done only by taking up the cross and following Christ in the daily life" (pp. 238, 178). Our critic has not, I venture to say, read these passages.

"Anciently," as Mrs. Eddy points out, "the followers of Christ, or Truth, measured Christianity by its power over sickness, sin, and death; but modern religions generally omit all but one of these powers,—the power over sin." Then is added, "We must seek the undivided garment, the whole Christ, as our first proof of Christianity, for Christ, Truth, alone can furnish us with absolute evidence" (Science and Health, p. 142). Does not this determination, stated in the words of Mrs. Eddy, furnish the very meaning of Christianity, as well as the correct interpretation of Science? All over the world there are Christians who aver that it does, and that through Christian Science they have found revealed the full meaning of the mission of Jesus the Christ, including also the true significance of "his cross, as well as his crown."

Not long ago a prominent clergyman, in a city near Syracuse, had reason to change his views of Christian Science. In a published statement he said, "Without any acquaintance with Mrs. Eddy or understanding of her teaching, I repeatedly in public, as well as in private, assailed both. Now, knowing more of that Mind which was in Christ Jesus, I am writing with ardent desire that perhaps some one who without knowledge harshly judges Christian Science, may be guided into the way of that charity which 'thinketh no evil.' . . . To me Mrs. Eddy's message is the renaissance of Christianity, a return to the simplicity of Jesus' teaching and work, and through this rebirth I have gained an understanding of God which has illumined the teaching of Scripture and interpreted the vital truth of primitive Christianity." Others belonging to different church denominations might be quoted almost without end, if such evidence were needed, to show that our critic is out of agreement regarding Christian Science with many even of his own school of theology.

[Algernon Hervey-Bathurst in *South Wales Daily Post*, Swansea, Wales]

In your issue of the 18th of November is a reference to the speech made recently by Lord Sandwich. In the course of the article referred to, Christian Science is mentioned, and as its main point is to show the working of "suggestion," I trust you will allow me to say a word in explanation of the fact that Christian Science and "suggestion" have not the faintest resemblance to each other, being, indeed, antithetical in every respect.

Spiritual or Christian healing was practised successfully during the first few centuries of the Christian era, and was looked upon as an integral part of the practise of Christianity. The healing accomplished by Christ Jesus and his disciples is the same as that effected by Christian Science today. It is, I am sure, unnecessary to say that the healing taught by the Founder of Christianity is in no way associated with what is recognized today as "suggestion." Indeed, Jesus the Christ pointed out, in language admitting of no misconception whatever, the difference between Christian healing and other methods. The "carnal" mind, to which the apostle Paul refers and which Mrs. Eddy has described as "mortal" mind, "is enmity against God," and cannot, therefore, accomplish the results achieved through a correct or scientific understanding of that Mind "which was also in Christ Jesus."

Christian Science stands alone today as the only system of healing the sick and reforming the sinner in absolute accordance with the teaching of Christ Jesus. These results are accomplished, not by control of one mind over another, not by mental suggestion, but by the understanding of that statement with which all Christians agree, namely, that God, or good, is infinite, omnipotent, and omnipresent. Now it is quite usual for those who say they accept the teaching of the Bible, and especially of the New Testament, to admit the infinity, omnipresence, and omnipotence of God, or good, but at the same time to argue in behalf of the reality, power, and presence of evil. Such an argument is without either reason or logic, for it is obvious that there is nothing outside of infinity, no power greater or other than omnipotence. The sick were healed, the sinner was reformed, and the dead were raised nineteen hundred years ago by a correct understanding of God and man.

To Jesus and his disciples, sickness did not present the reality which it assumed in the eyes of those who rejected his teaching, and the results achieved proved conclusively that the belief in the reality of sin and sickness as being part of the creation of God was false, as the healing through the practise of Christian Science proves it to be today. "Ye shall know the truth," Jesus declared, "and the truth shall make you free:" and it is this truth, taught by Jesus, which has been revealed to this age by Mrs. Eddy in the Christian Science text-book, "Science and Health with Key to the Scriptures," the truth, that is, about God and man. On page 476 of Science and Health, referring to the healing work of Jesus, Mrs. Eddy writes: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick."

✧

[John W. Harwood in *Gazette-News*, Blackpool, England]

It would seem that those in authority at St. John's parish church are greatly concerned about Christian Science. First the vicar, then his curate, according to the reports in your paper, utters an emphatic condemnation of it. The incentive to do this is evidently produced by great fear. The vicar's inference that Christian Scientists do not value, but despise the body, only reveals his ignorance of the subject. Christian Science shows that sick thoughts make sick bodies, and that right thoughts make healthy bodies. Right thinking is prayer; "The . . . prayer of a righteous man [right-thinking man] availeth much." The implication of the critic that Christian Science teaches that bodily diseases are imaginary, is not warranted, as will be seen from the following quotation from Science and Health: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being" (p. 460).

The statement of the Rev. A. B. Harris that no knowledge of any kind could come except through the senses, is a very surprising one for a minister of the gospel to make. Does any knowledge of God, Spirit, come through the physical senses? Can we see, hear, smell, taste, or touch Spirit or spiritual things? Jesus showed clearly that this could not be done. He said to those who could not understand his teaching, "Having eyes, see ye not? and having ears, hear ye not?" Paul says, "We look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal: but the things which are not seen are eternal." The false evidence of the physical senses did not deceive Jesus into believing that one born blind, deaf, and dumb was helpless. Of one born blind he said, "Neither hath this man sinned, nor his parents: but that the works of God should be made manifest in him." This showed that Jesus knew something more than his physical senses testified to, for his knowledge gave sight to what to all appearance was a blind man. He knew that man was made in the image and likeness of God, Spirit, and that he must therefore be spiritual. His senses must also be spiritual, hence indestructible, eternal. Mrs. Eddy says in Science and Health: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick. Thus Jesus taught that the kingdom of God is intact, universal, and that man is pure and holy" (p. 476).

✧

[Willis D. McKinstry in *Independence* (Kan.) *Reporter*]

In a recent issue there appeared a sermon delivered by Dr. Lowry in which he refers to Christian Science as a false doctrine. The one and only way to determine whether or not anything is true or false is by demonstration. A truth can be proved, as it always offers demonstrable evidence of its verity, whereas a falsity is incapable of supplying true or reliable evidence. He who came and established Christianity on earth gave many proofs of the truth of his doctrine, and he said to those who doubted him or the truth of his teaching, "Believe me for the very works' sake," and then he gave that rule whereby mankind may prove whether or not they believe, spiritually understand, the true doctrine, or whether they are following a false Christ: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Is our critic able to prove the truth of his work according to the injunction of our Lord and Master,—to "preach the gospel" and "heal the sick"? Christian Science is the life and teaching of Jesus demonstrated. For some forty years its teachings have proven that the Christ is here now, and those who accept him are delivered from the bondage of ma-

Digitized by Google

terialism. Today throughout the world there are unnumbered thousands of living witnesses testifying to the healing and regenerating power of Christ, as taught in Christian Science, to elevate and redeem mankind from sin, disease, and death. Christian Science offers mankind a Principle and rule of life which is demonstrable, and this understanding of scientific being proves that God does answer prayer, and that true prayer, a spiritual knowledge of God, man, and the universe, alike reclaims the sinner and heals the sick. For which of these works does our critic stone us?

✧

[Frank Bell in *Public Ledger*, Philadelphia, Pa.]

If it be true, as stated by the editor of the *New York Christian Advocate*, in remarks quoted in a recent issue, that "vague ideas" taught in some of the churches have turned thousands of persons to Christian Science, is it logical or reasonable to assume that this is discreditable to Christian Science? Does it not, on the contrary, imply that this new teaching has been found by these thousands of persons to offer something tangible in place of the "vague ideas" referred to? There are, of course, numerous reasons for the drift from so-called orthodoxy to Christian Science. One which doubtless has appealed to many earnest persons is the quiet emphasis it places on the fact that an individual who accepts the opportunities its teachings reveal for self-improvement will find no time for criticizing the beliefs of others, which may not be fully understood. Christian Science and "New Thought" could not be associated in an intelligent discussion of either, as they are utterly unlike.

✧

[John W. Doorly in *Huddersfield* (England) *Examiner*]

In a recent issue your correspondent, the Rev. A. J. Waldron, in commenting on the latest move of the medical profession to introduce hypnotism or suggestion as a curative method in place of the now thoroughly defunct belief in drugs, couples Christian Science with "New Thought" and what he describes as the "power of faith." Will you permit me to state that Christian Science has little or nothing in common with what is popularly known as faith-healing, nor has it anything in common with suggestion of any kind. These systems are one and all based on the action of material sense, and are simply a fresh attempt of this sense to make mankind believe in the presence and power of something besides the divine Mind. *Materia medica* knows that the days of drugs are numbered, and suggestion is its latest departure from its old methods; but both the belief in drugs and the belief in suggestion are simply different phases of the same carnal mind, and cannot save mankind either from sickness or from sin.

Christian Science teaches clearly the omnipresence and omnipotence of that one Mind which is infinite good, and utilizes the understanding of that Mind to destroy the suppositional effects of the carnal mind, called sin, disease, and death. All other systems hope to destroy these effects through a mental process of the carnal mind, which is, of course, a house divided against itself. The Christian Scientist no more uses his own mind in healing his patient than the mathematician uses his mind when he declares that two plus two equals four to destroy the belief that two plus two equals five. He simply states the truth, and this truth, and not the action of his mind, or what he thinks, corrects this error. Just so the Christian Scientist knows the truth about God and man's relationship to Him, and this truth is God's law, and is, therefore, with power to heal and to save.

Mankind are demanding a practical religion and a practical therapeutic system, and no other ought to be offered to them but the religion and therapeutics of Jesus Christ, who came declaring, "Ye shall know the truth, and the truth shall make you free." In this knowing there is no action of the human mind, and no suggestion, but just the actual scientific realization of God's immutable law, before which the false human laws of sin and disease disappear as naturally as the darkness disappears before the light.

✧

[Editorial note in *Manchester* (England) *City News*]

The crowded meeting in the Town Hall on Tuesday night to hear Professor Hering's address on Christian Science is a proof of the great public interest in that subject, and amply justifies our fully reporting his address in the current issue of the *City News*. We commit ourselves to no opinion on the subject, as it lies outside the range of matters discussed in these columns. But as a local event it possesses some importance, more particularly as the proceedings were presided over by an eminent professor of natural science, whose attitude toward the religion expounded by Professor Hering is decidedly significant.

✧

[Charles E. Jarvis in *Glendale* (Cal.) *News*]

If one will stop for a moment to consider the meaning of the term Christian Science, the justification for so designating the movement, by its Founder, Mrs. Eddy, will readily be apparent. Webster defines a Christian as "one who believes, or professes or is assumed to believe, in Jesus Christ, and the truth as taught by him." The same authority gives several definitions of science, among which we find, "accumulated and accepted knowledge which has been systematized and formulated with reference to the discovery of general truths or the operation of general laws." Now in order to establish any truth, proof must be forthcoming, and the Christian Scientists measure up to the test applied by Jesus to his followers, "He that believeth on me, the works that I do shall he do also," by healing the sick, reforming the sinner, and binding up the broken-hearted, thereby proving that the divine law or Principle understood and demonstrated by Jesus is likewise applicable in this day to the solution of every human problem.

[Written for the *Sentinel*]

Healing

BENJAMIN KEECH

Thou dost not need to spend thy life in woe,—
No will but mortals' ever willed it so.
Thou dost not need to suffer and repine,—
A healing grace surrounds thee, all benign.
God is the name of this sustaining power,
Mighty, compassionate, ready every hour;
For God is Love and Life, and only good,
All loving in His tender parenthood.
As darkness disappears when comes the light,
So error is destroyed by pure Mind's might.
In good there is no evil, small or great,
In Life no death, in Truth no lie, in Love no hate.
God ne'er created pain, and He is All,
Therefore He made no plan for man to fall.
Attune thy thought in harmony with God,
And thou shalt wake to wisdom deep and broad.
Thus is all healing done, all good attained,
All error banished, and true riches gained.
Look up, dear child, up to thy Father's throne,—
All good is thine! Arise, and claim thine own.

Editorial

Seeking Wisdom Aright

In some of the branch churches, especially at the time at which changes in officers are to be made, there often seems to be a great perplexity in regard to the eligibility of certain persons for certain offices. Quite often this uncertainty as to the right course to pursue results in a seeking for the opinion of others, whether these persons are members of the local church or not, and despite the provision of the Church Manual (Art. XXIII, Sect. 10) that "each branch church shall be distinctly democratic in its government, and no individual, and no other church shall interfere with its affairs." Clearly, then, this question of eligibility is a problem to be dealt with by the church or society directly concerned. Instead, however, of giving heed to that sage counsel of the apostle James, "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not," some consult friends in other branch churches, others consult their teachers, and still others instinctively form cliques and endeavor to confirm themselves in the opinions which they originally held.

While it is possible that through these various processes some one may arrive at the right solution of the problem, it is obviously patent that every Christian Scientist should know a better way, in fact the only sure way, to determine upon any course of action, and that a great deal of valuable time and energy is wasted in futile efforts to reconcile the various human opinions thus obtained. The right way is, of course, to seek divine guidance, to give our earnest endeavor to the end that we may have in us that Mind "which was also in Christ Jesus." Of this Mind, this fount of infinite wisdom and loving-kindness, Mrs. Eddy writes on page 492 of Science and Health, "*God is Mind, and God is infinite; hence all is Mind.*" She further writes, on page 275, "No wisdom is wise but His wisdom," and this being true, why not, on all occasions and under all circumstances, seek this Mind for that wisdom which must guide all right action?

When a patient goes to a practitioner of Christian Science, he takes this step because he wishes to have the rule of Christian Science applied to his case, in order that the false beliefs from which he seems to suffer may be destroyed and the truth about God and man made manifest. He would not be able, as a rule, to state his case in just this way at the beginning, but later on, as he gradually through study and demonstration gains an understanding of what Christian Science is and what it has done and is doing for the children of men, this would be approximately what he would say. It is probable, too, that not until he had become well grounded in the teachings of Science and Health, and taken this view of what Christian Science accomplishes in human experience, would he feel himself ready to become a member of a Christian Science church.

In acquiring this fundamental understanding of the truth of being, the seeker after infinite wisdom has learned, among other things, that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468), and it naturally would be supposed that he would apply this fundamental postulate of Christian Science to every problem with which he might be confronted, whether it be in or out of the church of which he has become a member. He has found that prayer as used in Christian Science is answered, that when he prays aright his prayer is answered just as certainly as day follows night. He has also found that it is best to trust God "with our desires, that they may be molded and exalted before they take form in words and in deeds" (Science and Health, p. 1). In every way, therefore, he is pointed to God, infinite Mind, as his only guide and helper. Why, then, should he trust to the opinion of another mortal and therefore fallible mind to guide him in carrying out the responsibilities with which his church-membership has clothed him? Is it because he thinks that God is unable or unwilling to guide him that he seeks human opinion rather than divine wisdom?

We may learn another valuable lesson from the counsel of St. James. With unsparing plainness he points out the reason for discords and differences of opinion, and then says, "Ye ask, and receive not, because ye ask amiss." If the prayer we offer in our search for guidance conforms to that which Mrs. Eddy has outlined in the opening sentence of Science and Health, we cannot ask amiss. If we have gained that sense of "unselfed love" whereby we have cleared our thought of all personality or the indulgence of personal love or dislike, then we are in a position to be guided to decide both wisely and well in all matters. If we truly turn to God for wisdom, we may be sure that what will best serve the interests of the cause will be the basis of our decision in every instance, and there can then be no mistakes to retrieve and no occasion for regret.

ARCHIBALD MCLELLAN.

Redemption

THE word redemption, as understood in Christian Science, gains new significance and value as the spiritual process indicated by it becomes better understood. The word and its derivatives may be found from Genesis to Revelation, and a study of these in the light of Christian Science lifts thought above material sense, with its pains and penalties, up to the freedom which belongs to all of God's children. According to Webster, to redeem is "to ransom, liberate, or rescue from captivity or bondage, or from any obligation or liability to suffer or to be forfeited, by paying a price or ransom." The first Bible reference on this subject is found in Genesis, where we read that Jacob in blessing the two sons of Joseph said: "The Angel which redeemed me from all evil, bless the lads." This, taken in the light of Mrs. Eddy's interpretation of angels, presents a far-reaching truth; it signifies "God's thoughts passing to man; spiritual intuitions, pure and perfect; the inspiration of goodness, purity, and immortality, counteracting all evil, sensuality, and mortality" (Science and Health, p. 581).

In following this thought throughout the Scriptures we find many statements which declare that God redeems men from death and the grave, as well as from sin and sickness, from "the power of the sword" and from "the scourge of the tongue." It is significant that at the very time when redemption is most needed,—when error is at its worst, when defeat seems inevitable,—the divine aid is at hand. Christ Jesus prepared his disciples for times of perplexity, "men's hearts failing them for fear;" but he also said, "When these things begin to come to pass, then look up, and lift up your heads; for your redemption draweth nigh."

In pondering this subject, Paul's statements regarding the redemption of the body, as given in the eighth chapter of Romans, are of deep import to students of Christian Science. He reminds us that "the whole creation groaneth and travaileth in pain together until now," and he adds that even those who "have the firstfruits of the Spirit" are waiting for something, and that it is "the redemption of our body." He also says that in this struggle we are helped in the only way

Digitized by Google

and by the only means which can redeem,—not by drugs or surgery, but by the power of Spirit, God, teaching us "what we should pray for as we ought." This surely brings us very close to Christian Science!

Some unfortunately suppose that Christian Science leads us to ignore the body, but this is a mistaken view of its teaching and practise. The redemption of the human mind and body begins the moment that truth is accepted by one as a remedy for the ills which afflict mankind, and the work of the Christian Science practitioner is to lift thought above mortal sense, up to the true consciousness of man's being as the likeness of God. It should not be forgotten that this lifts one above bodily consciousness into mental freedom and spiritual power, and the price paid for freedom is the surrender of material and sensual belief respecting man for the Christ-ideal of being and doing. Mrs. Eddy says, "Rightly understood, instead of possessing a sentient material form, man has a sensationless body" (Science and Health, p. 280). Sensation in the body implies a diseased tendency. Even on the human plane we are not conscious of heart, lungs, eye, or ear, unless mortal mind is offering a report of some discordant condition, and the remedy for this is to lift the discordant thought from the body, or, as the Master has bidden us, "Look up, and lift up your heads."

One thing is sure, namely, that full redemption is promised and provided! Is it being realized? Christian Scientists are ready to answer this affirmatively in the ratio of their faithfulness to this truth taught them, and with inexpressible gratitude to God for the truth that makes free from fear, disease, and sin, they echo Job's triumphant outburst, "I know that my redeemer liveth"!

ANNIE M. KNOTT.

"Think on these things"

THE vigor and commercial progressiveness of the western world, the abandon with which great business enterprises are entered into, and the ever-increasing habits of luxurious living with their multiplying demands for sense excitation,—all these certainly tend to relegate the cultivation of the meditative mood to the background. While the energy, the go-aheadativeness of our times is accomplishing much that is good and praiseworthy, nevertheless, if permitted to rule, it would banish the calm and quiet of that nobler living whose products have a value above rubies, though unnamed in trade catalogues and unlisted at the bourse. In its golden age Athens was no less famed for its "retreats of the thoughtful" than for its temple-crowned Acropolis, and when these groves were abandoned, the fluted columns of her greatest achievements began to crumble. The Master's habit of going out upon the hills alone, evidenced his recognition of the fact that every true life must pay unfailing tribute to meditation, and only they can follow him to the heights who have learned to love the moments when they are alone with God.

The steadiness and purity of the spring's outflow always tell us of a hidden sea, and no less surely does every large-giving life tell of an unbroken communion with the deeps of Truth, its comradeship with thoughts too great for utterance. Through the vision of the son of Amos it was written, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee;" and Christ Jesus but rephrased this thought when he said, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." The heart of faith is communion, and the strength of a man is his daily consciousness of and reliance upon the divine presence.

It has been well said, that "without great spaces of silence there can be no deep thought," and the end and achievement of the Christ-teaching as interpreted in Christian Science is to silence material sense, to institute and promote the contemplative spirit, to realize, as Mrs. Eddy has written, that "God unites understanding to eternal harmony;" that "the calm and exalted thought or spiritual apprehension is at peace" (Science and Health, p. 506). The student of this Science immediately enters upon a more thoughtful and mentally self-governed life by virtue of his recognition that the world-problem is his problem, and that it can be solved only as he comes to understand for himself the Principle and rule of Science, and applies his knowledge with patient persistence to the elimination of every error of belief. Moreover, as the light of Truth dawns upon consciousness and the ills attendant upon one's own passing false sense fade away, he begins to speak with assurance and authority, and the way is speedily opened for that ministry to others which is the duty and joy of every Christlike man. He is thus stimulated to increased thoughtfulness, that standing for Truth's presence and power which is effective prayer.

In many other ways the study of Christian Science conduces to the thinking habit, especially in that it puts things in their right perspective and answers and encourages honest inquiry; thus furnishing a key to experience, and becoming the interpreter of all things. The fundamental truth of being is now brought into healing touch with every object of attention, and especially every object of need, until the impulsion to turn from the seeming of sense to the substance of Spirit becomes instant and effective in every event and situation. To live a spiritually thoughtful life is to escape from the enslavement of material sense and dwell "in the secret place of the most High;" it is to sustain an illuminating and corrective relation to the whole range of human experience; it is to grow in grace day by day, and prove true the word of Scripture which says, "In quietness and confidence shall be your strength."

JOHN B. WILLIS.

Among the Churches

Current Notes

MINNEAPOLIS, MINN.—Fifth Church, which is located immediately across from the university campus, has let its contract for the superstructure. The church has been worshiping in the vestry, which was fully equipped with reading-rooms, and this now marks the next step forward to the completion of the entire structure.

Sixth Church has just consummated the purchase of additional property to furnish a suitable approach to the church. This purchase gives a commanding location in one of the most important residential sections of the city, as well as on the principal street railway thoroughfare. The superstructure of the church is now completed, and plans are being made for the letting of the contract to finish the interior. Services are being held in the vestry auditorium, which is already finished, and which accommodates in the neighborhood of five hundred people.—*Correspondence.*

OAKLAND, CAL.—A new Christian Science church is to be built at Twenty-third and Valley streets, to take care of the overflow congregation from First Church of Christ, Scientist. A lot 100 by 115 feet has been purchased for ten thousand five hundred dollars, and plans are being prepared for the building. The First Church building at Franklin and Seventeenth streets seats but seven hundred, and the average attendance at services there now is more than eight hundred.

The Lectures

Boston, Mass.

Prof. Hermann S. Hering delivered a lecture on Christian Science Monday evening, Dec. 29, under the auspices of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., in the church edifice at Falmouth, Norway, and St. Paul streets. John C. Lathrop, the first reader, introduced Professor Hering. Mr. Lathrop said in part:—

A lecture to be delivered on Christian Science is of universal interest to many persons. And the prospect of being shown the way to obtain true happiness, to maintain good health, and to gain spiritual understanding, is the sum total of honest human endeavor, and is the day-star which attracts to Christian Science all classes of people.

The large and bright audience gathered here this evening is evidence of a spontaneous and universal desire to know the truth and the way to present salvation, and the means to know God and His divine laws aright. Many thousands of people have found that Christian Science reveals this way, and our lecturer of this evening is strongly qualified by teaching and by practise to elucidate to us this subject.—*The Christian Science Monitor.*

❖

Santa Cruz, Cal.

Knight's Opera House was filled by an appreciative audience to listen to a lecture on Christian Science by Frances J. Flinn, M.D., who was introduced by Miss Ada Niche, first reader, as follows:—

Many ages ago Job, yearning for God, said, "Oh that I knew where I might find him that I might come even to his seat." This longing cry has echoed and re-echoed down the centuries, and in every age there have been many earnest seekers after God. The quest of the human heart has ever been to find the origin of man, to solve the purpose of its existence, and to know its destiny. Consecrated Christian men and women have made the solution of this problem the grand aim of life, but still the cry goes up, "Oh that I knew where I might find him," and the weary search goes on. Deep in the human heart is the conviction that to find God would be to find Life, Truth, Love, and that finding Him would be the remedy for the woes and fears that beset mankind, and something of heaven would be realized. But where shall He be found?

About forty years ago the truth was revealed to one who had sought long and earnestly for God, the truth of which Jesus said, "Ye shall know the truth, and the truth shall make you free." This truth was given to the world through the Science of Christianity, and was named Christian Science. The students of this Science, following the teachings of their Leader, know that they have found God, and something of His omnipotence and omnipresence has been realized by them through answered prayer, that has brought to them better health, more happiness and spiritual peace. Those who have experienced these blessings earnestly desire others to know this truth that makes free, and it is to help us to understand it better that the services of the evening will talk to us about Christian Science.—*Santa Cruz Sun.*

❖

Sabinal, Cal.

The services of Judge H. A. Peters in introducing Judge [illegible] Smith at a lecture on Christian Science given at Sabinal, Texas, were as follows:—

In introducing the speaker of the evening, I would state that I am not a Christian Scientist. About twenty-six years ago, when Christian Science was called to my attention, I smiled; years later, when friends again discussed it with me, I was still intolerant; today, I am a student of the subject, and know, from contact with many friends and members of my own family who are deeply interested in this teaching, of the great results accomplished. All mankind is seeking something better, and deep down in the hearts of men and women there is a desire to know the truth, that they may be set free from their own beliefs and conditions. Anything that elevates or tends to uplift mankind is of interest to us. We are prone to use every effort for our financial advancement and in the performance of our daily duties. If we should give a proportionate amount of time to the study of those things which vitally affect our lives here and hereafter, we would become profound students of all subjects pertaining to our religious welfare.

It gives me great pleasure to introduce to this audience the whose words and whose efforts and whose teachings are intended to be for the benefit of every citizen of Bakersfield, and all those with whom any of them may come in contact hereafter.—*Correspondence.*

❖

Portland, Ore.

Richard Young delivered two lectures on Christian Science. He was introduced at the first lecture by Frank W. Wiers, who said in part:—

It is the aim of this lecture to set forth the truth of Christian Science, and you are invited to investigate and see for yourselves. We know that Christian Science is true because it does heal, and we have abundant proof bearing this point. There is no other agency in the world that is so successfully relieving and healing sick and suffering humanity.

The introduction by Thomas R. Reed at the second lecture was in part as follows:—

The test of efficiency is being applied to religion, and it is meeting tests. Religion, which has generally been considered a Sunday institution, is beginning to take its place as a practical, common-sense part of our everyday business and home affairs. The trend of thought is away from evil and toward good, and man, who has always believed himself subject to sin, sickness, and death, the object of circumstance and chance, is coming to learn through the activity of right living how to live a life of good deeds. And what is bringing about this wonderful and spiritual awakening? It is the same healing truth which Jesus taught and practised. Ancient scriptures say that is bringing about this change.—The truth that has neither end nor beginning and never will have an ending. The truth that was not for a few centuries, but was discovered, or uncovered, by Mrs. Eddy, who named her discovery Christian Science, meaning a knowledge or knowledge of Christ.—*Correspondence.*

❖

Cleveland, Ohio.

In introducing Virgil O. Strickler to an audience which filled the seating capacity of the Denniston Theater, E. C. Simpson, first reader of the local Christian Science church, said:—

I know that a large proportion of this splendid gathering are those who are not known as Christian Scientists, therefore your presence is particularly appreciated, as it indicates a willingness on your part to learn of the Christ message of Truth from the view-point of Christian Science. Your presence also symbolizes that world-wide yearning for something better than has ever before come into your experience.

Digitized by Google

The quest of the world is for some quality of health which will supplant sickness; for some degree of harmony which will dethrone discord; for the element of ease which will break the unrest of disease; in a word, the world's longing is for that "peace of God, which passeth all [human] understanding." Christian Scientists believe they have found the way; those of them who have been healed of sin and sickness, know they have.—*Correspondence.*

✧

Butte, Mont.

A lecture on Christian Science under the auspices of First Church of Christ, Scientist, was given at the Auditorium. The lecturer, Prof. Hermann S. Hering, was introduced by Eugene Hill, who said:—

Your presence here is an indication of your desire to learn more about Christian Science, the most valuable and beneficial discovery ever revealed to humanity. Those who listen with a receptive thought to the spiritually spoken word, receive benefits not only of spiritual enlightenment, but in no small degree experience healing of physical and mental discords. Those who, toiling and struggling, have come to the fork in the road, not knowing which way to turn in life's battle, need hesitate no longer, for this is an hour of awakening. They need stand no longer in doubt and fear, for the right way will be made plain by the message which the speaker brings.—*Correspondence.*

✧

Kalamazoo, Mich.

Willis F. Gross lectured on Christian Science in the Academy of Music. He was introduced by J. Charles Ross, who said in part,—

Christian Science as taught and practised by Mrs. Eddy stands before the world today an undisputed truth. I do not believe there is a man or woman who has honestly, earnestly, and without prejudice investigated and studied Christian Science without receiving great benefit and uplift. I do not believe there is one who has so studied that would condemn or criticize it. There are those, however, who criticize what they think Christian Science is; indeed, it is with some embarrassment that I look back upon the past, when I too criticized what I thought Christian Science was.—*Correspondence.*

✧

Christchurch, New Zealand

In the King's Theater, under the auspices of First Church of Christ, Scientist, a lecture on Christian Science was given by William R. Rathvon. The lecturer was introduced by the mayor, Mr. Holland, who said that personally he had no knowledge of Christian Science, but he felt sure that before the evening was over he would have some idea of the purport of the teaching. For his part, he was always ready to help forward any work which had for its object the uplifting of humanity, and he felt certain that Christian Scientists had that end in view. A proof of their faith was the fact of their having brought a lecturer from so far, which must have been a large expense to so small a community.—*Correspondence.*

✧

St. Paul, Minn.

Henry Deutsch, in introducing Bicknell Young, who lectured in the Auditorium on Christian Science, said in part:—

The message of Christian Science that we will receive this evening is the message of freedom. It is that message, that promise, that gift which was given to us and to the whole world by the Master when in answer to the great cry of human need he said, "Ye shall know the truth, and the truth shall make you free." Now many of those who have questioned Christian Science have said: "Why Christian Science? The Master's message is that which is being delivered by all of the churches in Christendom." In the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we find on page 174 the answer to this question, which is a key-note to Christian Science: "Truth is revealed. It needs only to be practised." It is the method of practising truth, and the results and demonstrations thereof, as proven by thousands upon thousands of cases of healing and redemption through the ministrations of Christian Science, that constitute the peculiar message of Christian Science to this age and to those which shall succeed it.

Testimonies of Healing

It is with a heart overflowing with gratitude for all that Christian Science has done for me, and for what it is still doing, that I give this testimony. About sixteen years prior to coming into Christian Science, I was suffering from a stomach disorder and headaches. I was troubled so greatly that for a period of about twelve years I was unable to eat anything during the morning, and later in the day I could eat only certain kinds of food; furthermore, the very least occurrence would upset my nerves to such an extent that I lost control over myself. I consulted various physicians, among them noted specialists, and even took a trip to Europe with the hope of being cured. About two years ago, one of the most noted specialists said that the only thing left for me was to undergo an operation, and that with the hope of living only a few months afterward.

The day before I was to be operated upon, Christian Science was brought to me. Although I had no faith in this teaching, the proposal was made to postpone the operation for at least one week; but I made it two weeks, for I had suffered so many years that I was willing to do that. I was given absent treatments, and after a few days I was able to eat my first hearty breakfast. I certainly enjoyed it. My healing was not, as in many cases, instantaneous; on the contrary, it was very slow. As the friend who gave me the absent treatments lived so far from us, in another city, I went to a practitioner in New York; and I was so much improved in about five visits that I decided to have the treatments continued through my daughter, who had advanced far enough in Christian Science to help me. I can now say that I am fully healed of all my ailments, and that I have never felt better in my life.

Not alone for the physical healing in Christian Science am I thankful, but for the spiritual uplift, for the understanding of this wonderful truth, and for the harmony and love it has brought into my home. I am thankful to the friend who first mentioned Christian Science to me, also to every one that has helped, but above all to God, the giver of all good; and I am deeply grateful to Mrs. Eddy, who has led us to Truth.

Robert W. Goldman, Astoria, Long Island, N. Y.

✧

I am glad to testify to the healing power of Christian Science. When I was fourteen years old, I was very ill. My physician was puzzled as to the proper treatment, for it was a condition then new to *materia medica*. A few cases among women had been known, but never a case of a child so young. I was many months recovering, and although my general health was good thereafter, I was left with an organic disturbance from which I suffered much. Just ten years later I had the same condition to meet again. By this time the method of removing the organs affected was well established, since it was no longer an unusual thing to hear of a woman afflicted as I was. I refused to be operated upon, and again was many months in recovering, for there was added to this trouble a partial paralysis of the lower digestive organs, and my general health was not so good.

Some time later, while living in the Southwest, I had a complete nervous collapse. Then followed stomach and heart trouble, and many other serious disturbances. Feeling that the high altitude affected me, we removed to a lower one, going to a small town in Ohio. Although I was under a physician's care much of the time while living there, I was in a very wretched state when we came to Chicago some four years later. After being under the care of five physicians within the next three years, two of whom were specialists, I was told by the last specialist, that as I would not consent to an operation he could do nothing more for me; that even if I should consent, he could not say that I would ever be well again, and he admitted that I might not survive the operation.

At this point I turned to Christian Science. I was healed of the paralysis with the second treatment, but the other conditions yielded more slowly. As I see now, these conditions were met in proportion as my understanding grew. I had worn glasses most of the time for seven years, but have had no need of them since the first few months of the study of Christian Science. I was also healed of a diseased condition of the gums. Never having been much interested in religion, although I was for a short time a church-member, and coming to Christian Science purely for the healing, I was much surprised when I found I had not only regained my health, but I had found a believable, lovable religion as well. While I am grateful for this physical healing, my real gratitude to God, and my thankfulness to our Leader, is for the spiritual awakening, which is the real healing, for the uplifted and regenerated thought of which this physical healing is but one of the "signs following," or the proof of the truth of it all.—Mrs. Minnie Baker, Chicago, Ill.

✧

[Translated from the German]

I gladly join other grateful ones in witnessing to the benefits which it has been my privilege to enjoy in Christian Science, with the hope that my experience may prove a blessing to some of my fellow beings. Six or seven years ago I was informed by several physicians that I had no prospect of ever regaining my health. Our family physician, a medical man of high repute, told me after a long period of treatment that investigations and researches extending over years had failed to reveal a remedy for the disease from which I was suffering. Christian Science found me in this condition, and I was healed in a short time. Naturally I took great interest in what had healed me, the deep value of which I realized. I read *Der Herold der Christian Science* and other German Christian Science literature assiduously, in connection with the Bible, and through the study of the Lesson-Sermons the Bible appeared to me in a new light. I learned to love it, instead of laying it aside as formerly, when I failed to experience healing according to the glorious promises contained therein.

Not long after my healing, conditions presented themselves which were so subtle and insidious that I believed them harmless at first, and having no suspicions whatever, I continued with my reading. Gradually the error became apparent to me, and I saw that I must resist it; but the measure of understanding which I had gained was not sufficient to defend myself, and this led me to attend the Christian Science services in Zurich once a week, as none are held in our canton of Aargau. But the more I tried to shield myself, the more persistent the error seemed to be, and the distressing conditions which ensued caused me to become alarmed. Work in Christian Science was taken up for me in a loving way, but it all seemed to be of no avail. There was no evidence of healing, yet I received a measure of consolation which was very much needed, as I might otherwise have fallen into despair.

My journey in the wilderness lasted over a year, and my patience was sorely tried; but at a time when I least expected it, healing came, and in such a wonderful way that I could never have imagined anything like it. I knew that I was standing on holy ground, and a higher sense of peace came over me. In this moment I believed every error to be overcome, but erelong the inharmony manifested itself again, and it meant many struggles, though at times it seemed impos-

Digitized by Google

sible for the error to touch me, till finally I experienced the joy of seeing the powerlessness of evil, as taught in Christian Science.

I can now say that I would not have missed these experiences even if I could, for they led me out of my false beliefs and useless health theories into a better understanding of God, whom I have learned to love and to trust. I am deeply grateful for the benefits bestowed upon me by our heavenly Father in transforming my life and bringing happiness into it, and I also think of Mrs. Eddy lovingly and gratefully for the exalted work which she achieved for humanity.

FRAU SCHATZMANN-DAMBACH, Brugg, Ct. Aargau, Switzerland.

✧

I have had abundant proof that the power of God as taught in Christian Science heals the sick. I had been more or less of an invalid for twenty years, and in September, 1911, having been unable to sleep for a fortnight, my friends as a last resort asked for help in Christian Science, which was kindly and lovingly given me. The practitioner put me in the right way, and I have been kept in good health for over a year.

My case has created much interest in Christian Science among my friends and acquaintances, and I have also been enabled to help many. I have a heart full of love to Mrs. Eddy and to all Christian Scientists.

MARY M. COOPER, Harrogate, England.

✧

In May, 1892, so wonderful and beautiful was the revelation of Christian Science to me that I could never find words adequate to express it. For ten years I had studied the Bible prayerfully, with deeply earnest longing for an understanding of the Scriptures, and often wondered why the loving Father did not hear or answer my prayers. I was a professing Christian, but not at all satisfied, because I could not say that I knew I was a Christian, as I often heard others say they knew they were. It was while traveling in California with my husband, who was seeking health, every other means for relief having failed, that Christian Science found us. In conversation with a Christian Scientist, the first one we had ever met, among other statements which she made was this: "Do you not think we have today the same Christ-principle that Jesus had?" Immediately our thought was illumined with the light of Truth, my husband's face beaming with brightness, while only a moment before it was dark with despair. Then I could say with joy that I knew myself to be a child of God, because of the peace, rest, and calm that came to me, all of which nothing but Christ, Truth, can give.

While reading Science and Health, my husband was healed of severe illness supposed to have been caused by overwork. He was also afflicted with a stomach trouble, and mental depression bordering on despair. After dieting a long time, he was finally reduced to the verge of starvation; but with the help of a Christian Science practitioner for about six weeks, he was healed, and began to eat anything he wished, and has remained well ever since. He is now in better health than ever before, weighs more, and does better work as an accountant than he ever did.

I have witnessed the healing of many physical diseases said to be malignant and contagious, as well as seen the appetite for alcohol and tobacco destroyed. I myself have been healed of severe headaches. While my experience is beautiful, the path has not been one of flowers. I have learned in a measure the meaning of these lines of our Leader (Message for 1902, p. 19): "Are earth's pleasures, its ties and its treasures, taken away from you? It is divine Love that doeth it, and sayeth, 'Ye have need of all these things.' A danger besets thy path?—a spiritual behest, in reversion, awaits you."

We are surely grateful for physical healing, and above all for the spiritual illumination that Christian Science gives us, showing us how to solve all our problems of life. For the good received from the *Sentinel*, the *Journal*, and the *Monitor*, I desire to say I owe a debt of love to the faithful editors who are so efficiently serving the cause of Christian Science. I send this with a heart full of gratitude and praise to God for blessings that have come to me through Christian Science, and to our Leader I owe a debt of unspeakable love.

MRS. NORA M. CASE, Los Angeles, Cal.

It is with a heart full of thankfulness to God, and gratitude to our dear Leader, that I confirm the above testimony sent by my wife. I gladly witness to the perfect health, peace, and joy that have been mine since I accepted Christian Science.

GEORGE A. CASE, Los Angeles, Cal.

✧

I was healed through Christian Science treatment of kidney disease over five years ago, and there has been no recurrence of the trouble. I had suffered about two years, and had given up medical treatment, when a Christian Scientist friend, on hearing of my illness, gave me an idea of what Christian Science is and directed me to a practitioner. Inside of two weeks I was in perfect health. This was so wonderful to me that I continued with the practitioner another week, to find out, if I could, how I had been healed, when to my surprise all desire for liquor and tobacco left me without my even having had a glimpse of the fact that Christian Science is so far reaching. I had used tobacco a great deal for about eight years, and began with the occasional use of liquor when about twenty years of age, continuing this course until, at the age of twenty-seven, I wished I had never tasted it.

Christian Science has enabled me to meet and master many problems which I never before dared to face, and I am very thankful for the protection and help it affords.

DAVID J. MACAULAY, Dorchester, Mass.

✧

For about two months in the spring of 1912 I struggled with a very painful and annoying ailment, a form of rheumatism. I applied my understanding of Christian Science to the best of my ability and had at least two weeks of treatment by a faithful practitioner, but the trouble did not yield. Most of the time it seemed almost impossible to perform my necessary duties, and I could get but little rest at night. A student of Christian Science and I spent a night together at the home of a mutual friend, and I was led to mention my trouble to her, not, however, asking for or receiving treatment. She talked to me for a while, voicing the truth clearly and firmly, and I knew that it helped me, for my thought was so uplifted that I was able to realize clearly the power of divine Love and the powerlessness of evil. A few hours later I knew that I was completely healed. The disease had simply vanished into its native nothingness. I was so glad and grateful that I returned the next day to give thanks.

HATTIE SCOTT, Bad Axe, Mich.

✧

Thinking that my experience may help some one else, I wish to write about the healing of my baby girl. She was of premature birth, weighing only three pounds, and was constantly under a doctor's care; but at the age of three years she could not walk. The physicians were unable to help her, though they said she might outgrow these conditions. When a kind friend advised me to try Christian Science, I con-

Digitized by Google

...ended, and the child was healed, for she walked across the room while the practitioner was at our home. We have overcome many other ills through Christian Science, and are indeed thankful to God for the many blessings we have received. My daughter is now five years old, and she is growing stronger all the time. — Mrs. Mooney, Denver, Col.

✦

I wish to express through the Sentinel my gratitude in part at least for what Christian Science has done for me. I had suffered ever since childhood with headaches, for which I had taken so much medicine that my stomach became too weak to bear anything. When I had a severe attack the doctor would give me a hypodermic injection, and I would hardly be over one of these before I had another. For a number of years I suffered in this way, and quite often. [illegible] and I had a very severe attack, and the doctor kept me [illegible] I was in bed. [illegible] I was [illegible] I was [illegible] I was

pronounced my case hopeless, and somehow all our friends and the village people were under the impression that I was not likely to live long.

About this time a friend from a near-by town came to see me, and advised me to go to a man who, he felt sure, would do me good. I inquired what kind of treatment I should receive, and he said it would be what Christian Science gives; but I was no wiser than before, as I did not know what this meant. He left a copy of the *Journal*, and its perusal brought me hope and joy. I decided in a day or two to see a practitioner, but I suffered much on the journey there. However, both my wife and myself had a mountain of trouble destroyed at that first visit, and we left the office quite happy. I may say that I was healed of the stomach trouble right then, for I began to eat anything that was put before me without any ill effect whatever. I also gained strength, and in a few months I weighed more than I ever had in my life. The sense of nervousness was not destroyed so quickly, but I resumed my work after seven or eight weeks' treatment, though I continued with the practitioner for two weeks longer. I have taken no medicine since that time, and I have not missed a day from work on account of the old complaints; then, too, I can do more work with less fatigue. I do not have colds as I did formerly. All this, with many other benefits, means to me more than words can tell, as it does to my wife and four children.

I derive much pleasure and help from the *Sentinel*. I also feel that I could not afford to be without *The Christian Science Monitor*, it is such an instructive, interesting, and constructive daily newspaper. I am truly grateful to the Discoverer and Founder of Christian Science.

M. N. WATMUFF, Linwood, Pa.

✧

With a thankful heart to our heavenly Father, I give this testimony. Some years ago I hurt my back, supposedly by heavy lifting, and in consequence endured much pain. At times I could not even walk, and I suffered from rheumatism and nervousness as well; but I am deeply grateful for having been healed through Mrs. Eddy's teachings as demonstrated in Christian Science.—MRS. JOHN TURNOW, Detroit, Mich.

[Written for the *Sentinel*]

Love "thinketh no evil"

ISLA PASCHAL RICHARDSON

LOVE knows no fear, no anxious dread.
In conscious courage, Love, each hour,
Is proved omnipotent, supreme.
Love knows no fear, for Love is power!

No hate can Love's idea know.
Before its light all hate must fall,
Since light no place for darkness hath.
Love knows no hate, for Love is All!

Love knows no death,—activity
Of good doth never cease, and strife
Harms not th' eternal sons of God.
Love knows no death, for Love is Life!

Love knows no ill, for harmony
Is Love's behest. Our Master trod
The path of Love and conquered all.
Love knows no ill, for Love is God!

From Our Exchanges

[Rev. C. S. Mills, D.D., in *Hartford Seminary Record*]

Now no intelligent student of the gospel can fail to see that the mind of the Master beheld a vision, the most glorious of which man has ever conceived. He called it the "kingdom of God," meaning sometimes the rule of God in the individual soul, but often that ideal social order where God in love and light shall rule in every heart, and men, reflecting the divine light and filled with the spirit of divine love, shall give themselves with abounding joy to serve one another. This divine plan for mankind, devised by his matchless wisdom, set forth preeminently in his teaching, illuminated with the splendor of his optimism, empowered by the gift of the Spirit, abides as the summary of his commands. However remote it may seem from the present-day attainment, it can never be classed as a Utopian dream, for Christ's seal is upon it. It is no momentary picture, to fade away in the heavens like the stars before the sun when a greater day of culture comes on, for it shines with the divine glory which can never be eclipsed; it cannot be swallowed up like the setting sun in the darkness of some night of human need, for God cannot be defeated. It abides, it compels, and it inspires. Beholding that glorious vision, the efficient minister will be obedient to it. He will lay out his course according to its light. Whenever he prays, "Thy kingdom come," he will remember the quality and dimensions of the kingdom for which he prays, and that no prayer is sincere which the suppliant does not himself seek to answer.

[*The Christian World*]

Every week brings its new sport, its new fashion. There is an unparalleled cult of luxury. Our hotels, our steamships, our railway carriages, are full of new inventions in comfort. The world was never so well off. Would any one say that with all this there has been a commensurate increase in joyousness? Never since man began has the croak of the pessimist, the wail of the discontented, been so insistent. And the reason is not far to seek, for all this is simply to begin at the wrong end. The something added, that is of real consequence here, is a something added to ourselves, a something that comes not from without, but from within; or where it is from without, is from above us, and not in the things around us. It is in the development of character, in an increasing clarity of vision, in an insight that goes through the apparent down to life's bottom, fundamental values, that we reach the genuine satisfactions; that we learn to say, How good life is! To have cultivated in yourself the faculties of faith, of hope, and of charity; to have discovered the enduring joy of ordered industry; to have found the beauty of things simple and common; to have struck on the magnificent ideas that lurk behind the every-day facts,—all this may have made no great difference to your banking account; it will have made all the difference to your appreciation of life.

[*The Christian Work and Evangelist*]

Jesus believed that man had divine capacity, but was little until the divine could be poured in. The task of Jesus was to pour this divine fulness into the littleness of men's lives. The gospels are partly the story of this divine achievement. Dr. Bruce has called Christ's ministry "the training of the twelve." The training largely consisted in teaching them how to open their hearts to be filled with the divine plenitude. The transformation of the twelve under this infilling process is the miracle of the gospel; for little men became big, selfish men became impassioned of humanity, a timid Peter became

Digitized by Google

the fearless preacher to a hostile world, the boy John became the seer of eternity. He hath put eternity into their hearts, any man might have said of the work of Jesus with his disciples.

[*Pacific Christian Advocate*]

The needs of our time are not so much intellectual as spiritual; not so much theological as religious; not so much theoretical as experimental. Great things have been done in the field of the philosophy of religion. Admirable things have been accomplished by sheer intellectual effort. Attempts have been made to construe God in terms of philosophy; to probe the relationships of Christ with the Father; to circumscribe the atonement within the compass of logic and rhetoric. There has been minute dissection of the spiritual experiences of ourselves and others. We have sought the philosophy of prayers and attempted to construe it as a higher order of telepathy. The religion of adolescence, of maturity, and the varieties of religious experience have had their apostles. We have had scientific demonstrations of an after life. But—have these speculations concerning God driven men to seek closer fellowship with Him? Has our analysis of the person of Christ drawn the whole world's heart out to love him? Has our theory of sin resulted in making men loathe it the more, and cry out to be delivered from the body of its death? Has our philosophizing about prayer led men to erect midnight altars of prayer for the dying souls of the people? Have our elaborate analyses of the atonement added beauty and winsomeness to the cross? Has our dissection of our brother's soul altogether cured our indifference to Jesus' distress?

Theories on these things, whether conservative or radical, are of course inevitable; but there are matters at present more important. Far better, whatever our theory of God, that we know Him by personal fellowship. Better than any theory of prayer is practical experience of its efficacy. Better than any philosophy of the atonement is the sense of sins forgiven. Better than any description of Christ in the terms of theology is the consciousness that he is formed within us the hope of glory and the Lord of life. We need to remind ourselves, as followers of Christ, that spiritual life is begotten only of spiritual life.

[*The Christian Intelligencer*]

Despite the coming of the Prince of Peace to our world centuries ago, what absence of peace and consequent unrest still abound! The spirit of discontent is everywhere. People seem dissatisfied with themselves, with what they are and with what they have; dissatisfied with their surroundings, occupations, and holdings. The great evil of discontent is entirely too prevalent among men. The trouble is, they do not seek for peace and contentment in the right direction and at the supreme and only source. These possessions and blessings can be theirs only when they bring themselves into harmony with the Prince of Peace. He will show them the face of the Father. Only through him can they have peace with God, peace with themselves and their fellow men, that peace which "passeth all understanding."

[*The Advance*]

No one of us can pretend to be satisfied with the past; and no one of us who is honest and sincere can desire not to do better in the future. One thing is perfectly certain,—we shall not do better without effort; and we shall not do better without the help of God. Let us be thankful that the past has been so good, and then, not as though it had been good enough, or we had been worthy of its goodness, let us press forward. Yesterday is past; a new day has dawned. Let us wake and greet it.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25, six or more copies to one address $2.00 each; morocco or pocket edition, single copy $4.00, six or more copies to one address $3.75 each. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, marbled edges, 95 pages, single copy, $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy, 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIII indicates the year 1913; XIIII is used for the year 1914. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

NATIONAL.

Mayor Mitchel of New York city formally completed the borings of the Catskill tunnel at noon on Jan. 10. Workmen previously prepared for the ceremony by a series of blasts, which broke down nine feet of barrier rock four hundred and forty-one feet underground, at One Hundred and Fifty-first street and St. Nicholas place. The mayor pushed the button setting off the final blast. The work of opening the aqueduct will take more than a year.

The great tube extends from Ashokan dam, in the Catskills, to Schermerhorn street and Flatbush avenue, Brooklyn. Eventually, it will extend to Staten Island. The entire distance is about one hundred and ten miles. The tunnel, which throughout its length runs many hundred feet underneath the surface of the earth, has already cost more than one hundred and twenty-nine million dollars. When completed, it will have cost one hundred and sixty-two million dollars or more. The work in building it has taken the greater part of nine years, with from seventeen to twenty-five thousand men laboring at it daily. Engineers point out that the Panama canal, except for the Culebra cut, did not furnish so many and diverse engineering problems as has the aqueduct. To make way for the new water system that, beginning in 1915, will give New York two hundred and fifty million gallons of water daily, and ultimately a supply of five hundred million gallons, eight villages, with a total population of three thousand persons, were razed.

In its final report to the Massachusetts Legislature the Merrimac valley waterway board has reached the conclusion that the Merrimac river should be improved and opened to navigation by providing an eighteen-foot channel from the sea to Ward Hill, about one mile above Haverhill, and from thence by canal, locks, and channel to Hunts Falls at Lowell; that the federal government carry into effect the project of building the channel from the sea to Haverhill; that the commonwealth of Massachusetts build the canal from Haverhill to Lowell; that the commonwealth and the federal government cooperate as much as possible in the construction of the waterways; and finally, that an appropriation of one million dollars be made by the Legislature for this purpose, but the expenditure of the appropriation to be conditioned upon the passage by Congress of appropriations for the same purpose. It is estimated that in order to make Lowell accessible to vessels of seventeen-foot draft, it will be necessary to expend a little over seven million dollars, and the cost for a dredge channel for seventeen-foot draft with Haverhill as the upper limit, would be approximately one million six hundred thousand dollars.

Thirty-five miles of new trail have been built in Yosemite park during the last year. There are now in the park five hundred and seventy-eight miles of trail and one hundred and forty-seven miles of wagon road. In order to protect the big trees from fire, approximately eighty acres of the upper grove of the Mariposa big trees have been cleared of débris, fallen timber, and jungle growth of shrubs and young yellow pines and firs. Sixty acres of this tract were cleared some years ago, while the grove was under the control of the state of California.

To dispose of the government suit against them on the charge that they are unlawful combinations, the National Wholesale Jewelers Association and the National Association of Manufacturing Jewelers, and their members, mostly New England firms, have agreed to the entry of a decree in the federal courts forbidding them from engaging in certain practises deemed violations of the Sherman law, and with this technicality finished the government will give them a clean bill.

The Senate has passed Senator Weeks' bill fixing standard sizes for cranberry barrels and barrels containing fruits, vegetables, and other dry commodities. A fine of one dollar per barrel for violation of the size is provided. The bill now goes to the House for action.

Harvard University and the Massachusetts Institute of Technology have adopted a plan, combining the educational forces of the two institutions, in which each one will supplement the work of the other in the applied sciences.

INTERNATIONAL.

The French cabinet's project to meet the immense additions to the military expenses of the country by an annual tax upon capital, has been laid before the Chamber of Deputies. This action has been anxiously awaited by the propertied classes of France. It has been estimated that this will produce thirty-eight million dollars in the first year, and more in the years following. The new tax begins with fortunes amounting to six thousand dollars. After deducting one thousand dollars for each child, an assessment of twelve cents is to be made on each two hundred dollars. The assessment then rises gradually to fifty cents per two hundred dollars upon fortunes of over two million dollars. This tax is to be supplemented by an income tax.

A draft of the London Mall approach (improvement) bill, received by the law and parliamentary committee of the Westminster City Council from his Majesty's Office of Works, has been approved. The bill empowers the London County Council to execute the following improvements: A widening of Spring Gardens on the northern side between the center line of the existing Mall approach and a point one and a half chains or thereabouts westward thereof; a widening of the Mall approach on the northwestern side between Spring Gardens and Charing Cross; and a widening of Charing Cross on the southern side between the center line of the existing Mall approach and a point one and one half chains westward thereof.

It is expected that the new Kaiser Wilhelm canal will be opened in April next. It connects the war ports of the North sea and the Baltic, and is provided with the most commodious works of their kind in the world. Many thousands of men have been engaged for the past six years in widening and deepening this canal, and during the greater part of that time the work has been carried on day and night. Its width will henceforth be 148 feet, and the channel has been deepened to 46 feet, while the locks have been enlarged to a length of 1,080 feet.

At a recent meeting of the Mersey docks and harbor board, Liverpool, England, the chairman stated that for the year ending July 1 nearly eighteen million five hundred thousand tons of shipping entered the Mersey, of which over fourteen million five hundred thousand tons made use of the board's docks. For 1912 the value of the trade of Liverpool was £391,452,372, of which exports accounted for £202,910,073,—record figures.

Martial law has been proclaimed throughout the Union of South Africa in response to the declaration of a general strike by the Federation of Trades. This makes a clear issue between the state and syndicalism, or the system of organized sympathetic strikes. The dispute originated with the railroad employees protesting against the policy of retrenchment introduced by their employers.

The dam which it is proposed to build in the Vaal river in connection with the Rand water board's scheme for increasing the water supply of Johannesburg, South Africa, is estimated to cost two hundred and fifty thousand pounds and will take three and one half years to construct.

INDUSTRIAL AND COMMERCIAL.

The final crop estimates for 1913 show that Canada's principal field crops covered 85,375,000 acres, and their value at local market prices was $552,771,500. The principal crops were: wheat, 231,717,000 bushels; oats, 404,669,000 bushels; flaxseed, 17,539,000 bushels. These have a total value of $302,489,000.

The boll-weevil has caused a loss in the production of cotton in the United States in excess of ten million bales, which at a value of only fifty dollars a bale, represents a financial loss of five hundred million dollars.

It is claimed that some of the eucalypts of Australia are taller than the California redwoods, hitherto considered the highest trees in the world.

Makers of hickory handles for hammers, chisels, and other small tools, are now trying to use the waste from mills which make hickory spokes and pick and axe handles.

During the week ending Nov. 18, 34,892 boxes of butter, weighing 888¼ tons, were inspected in Victoria for ports beyond the commonwealth of Australia.

A twenty-acre farm in Minnesota produced this season six hundred thousand pounds of onions and gave a return of nine thousand dollars.

Two million trees will be planted in the national forests in Utah, Nevada, and southern Idaho during 1914.

Mental Unity

GEORGE H. MOORE

ALL learning, every school, every propaganda, every honest attempt to convince others, is directed, whether consciously or not, to this end,—that men may agree in their thought of what is true, may think alike about the fundamentals of life, and thereby act in accord. This is the ultimate goal of education. The misdirection of much of this effort is apparent from its failure. Increase of education often results, not in unity and simplicity, but in greater antagonism, multiplicity, and confusion of schools and of creeds. Human opinion is fairly kaleidoscopic in its constant shifting and regrouping, and yet the vision of a unified race, working in concord toward a common hope, continues to beckon human thought into ever new fields of faith and adventure.

Many high ideals promulgated in the past have failed of acceptance because they were conceived on a basis of compromise or mere conjecture, because they were restricted by the too narrow vision of their promoters, never reached beyond the merely provincial or parochial in their designs, and had no demonstrable relation whatever to the clamorous needs of the present. The teachings of Christian Science have injected an entirely new spirit into our search for reality, in that they declare divine Mind to be the most insistent fact of creation, demonstrable by the individual here and now, quite regardless of the contracted vision or purpose of his fellows. To this end, Christian Science discards as irrelevant and deceptive the long unfolding of speculative opinion, which has so busied the race in weighing and judging thought values without any fixed standard by which to test their validity, and which affords only glimpses of reality, but in no degree enters into or gages its scope and power. Christian Science impels men directly and unequivocally toward realization of the one Mind, not by a process of trimming and pruning, evolution or compromise, but by an absolute change of mental base, putting off the counterfeit man of material sense with all his history, as in no degree handicapping the present or robbing the future. It directs thought wholly to a disclosure of the real man of spiritual image and estate.

The task which the Christian Scientist sets himself is identical with that about which the world has busied itself so long and fruitlessly. His great advantage rests in his cognizance of the fact that Mrs. Eddy's spiritual researches enabled her to unify and define humanity's problem and to exemplify a direct method of solution. Like the leaven "hid in three measures of meal," the teachings of Christian Science are permeating the thoughts and purposes of men, bringing science, theology, medicine, and every other avenue of human research, to one definite task,—mentally to dissociate mankind from false heredity, environment, and hope, and to restore their thought and destiny to its original divine estate.

In Christian Science practise, all experience converges toward this one goal. Every point gained in any phase of activity contributes to the end desired, because it substantiates the rule of Principle, applicable alike to every phase of human need. Christian Science clarifies and certifies human judgment by giving it a fixed and certain leverage; it gives right impulse and direction to desire; it helps the student to make the most of his so-called natural equipment and to increase that endowment immeasurably. The schools have been building on the theory that intelligence may be developed in the individual from some inner mental core or spiritual deposit. Christian Science builds on the understanding that intelligence may be realized as of infinite abundance and scope, never localized or monopolized, but manifesting itself in every item of creation responsive to its control.

The schools take no account of the fact that intelligence may be acquired by one who seems to lack it as a gift, and therein they frankly acknowledge and excuse their failures. "Brains we cannot furnish; we teach only how to use them," they declare. Christian Science, on the other hand, teaches that the only excuse for man's existence is that he may illustrate the activity of divine Mind; that ignorance, stupidity, mental inertia, are abnormal, unreal, untrue; and that the unfolding of true intelligence is not at all a matter of brain power, material heredity, or environment, but depends rather on the presence of those relatively simple moral qualities and spiritual desires which bring the individual into true relation with divine Mind. This fact has been proved again and again in Christian Science practise, by the promotion of the mentally defective or degenerate to sanity and usefulness.

The schools are true to their self-imposed restrictions. Intelligence cannot originate in brain or in any other form of matter. But divorce mentality from such false residence and identify it with the ever-present bounty and cogency of divine Mind reflecting itself in its active ideas, and the problem of education is no longer physical, but moral and spiritual. For centuries the curricula of our schools have aimed at intellectual mastery as their goal. Enthusiasts of today would swing the pendulum toward physical competency as the measure of their task; yet no human quality is so utterly frigid and barren as mere intellect, no endowment so ties a man to earth as mere physical power. Unless these qualities be informed and controlled by higher spiritual instinct and culture, they may and do turn themselves to every form of mischief and degeneracy.

Men of rare spiritual attainments have always dominated their times, and like qualities may again master the present. Fidelity, persistence, honesty, eagerness to learn, self-abnegation, devotion,—such qualities prevail wherever they are applied; the mere locus of their operation is relative and secondary. The seat of these and all like qualities is the divine Mind. Christian Science has proved that such characteristics may be most directly developed by resort to Mind as origin and sustenance. Herein is the secret of the Mind of Christ, manifested by Jesus, the mental process and quality of thought strictly enjoined on his followers as the chief object of their search.

One has only to review one's list of friends to see that

special aptitudes and endowments, that mental dexterity, sound judgment, power, often appear as native equipment or gift. By inference, it is no violation of good sense to assert that many such gifts may be a common and natural possession among men when they shall resume right relations with the Mind whence these qualities proceed. The teachings of Mrs. Eddy disclose the possibility of attaining such relations with infinite Principle, God, that the divine characteristics will appear and perpetuate themselves in efficient, well-balanced manhood and womanhood.

The schools betray their inability to meet the most urgent need of the race, in that they fail to equip men against the great crises of human experience, wherein human wit and will stand aghast at their own impotence, and men fall suppliant at the feet of a power recognized to be infinitely competent, but whose ways are so little known. The supreme educational gift of Christian Science is, that Mrs. Eddy has taught her students how to attain intelligent correlation with the divine source of wisdom and power; she has, in short, discovered the secret of scientific prayer. This is the key which unlocks the kingdom of heaven on earth and opens up to man unmeasured reaches of mental and spiritual growth.

Christian Scientists would not in any degree decry the high purpose of present-day education. They pay full deference to intellectual power; they honor great learning as they do every other form of excellence, if it be devoted to the service of good; yet they recognize that human intellect is not of itself originative, is not an end in itself, for it may be made to serve any one of a thousand motives, good or bad. Christian Science aims to subordinate human intellect and all like gifts to that higher spiritual power which alone is capable of unifying and directing life to its best uses.

This is but in part the educational endowment of Christian Science. In time the schools will find that it will speed their progress amazingly to mold their theory and practise in accord with its basic law, and to enforce its standards of excellence as the real test of their success. "The entire purpose of true education is to make one not only know the truth but live it—to make one enjoy doing right, make one not work in the sunshine and run away in the storm, but work midst clouds of wrong, injustice, envy, hate; and wait on God, the strong deliverer, who will reward righteousness and punish iniquity" (The First Church of Christ, Scientist, and Miscellany, p. 252).

✧

Trusting One Another

LUCY HAYS EASTMAN

THE word suspicion is derived from the Latin word *suspicere*, meaning to esteem, to look up to, to mistrust. It may seem strange, perhaps, that the same word is used to designate two such opposite attitudes. Nevertheless, when we consider how long the world has looked up to personality, which has always proved untrustworthy, we understand why suspicion follows so frequently upon the footsteps of esteem. Although mortals are not perfect, yet we have placed faith in them as though they were, and that is why we so often make the piteous mistake of trusting the unworthy or mistrusting the worthy, until the heart becomes confused and embittered, perchance, with suspicious distrust toward all. It is this belief in personal good and evil which arouses suspicion; and it is suspicion which robs us of that confidence in one another's sincerity so necessary to establish the brotherhood of man.

"A pure faith in humanity," Mrs. Eddy writes, "will subject one to deception" (Miscellaneous Writings, p. 338). How, then, is the sweet confidence in one another to be gained? Christian Science answers this question by turning thought away from person to Principle. Here, in the spiritual understanding of God's allness, we are able to detach evil from our thought of a brother and to see him as our Father's image. Then it is that we begin to perceive the attributes of Soul, reflected in justice, wisdom, goodness, etc., in which there is nothing to fear or mistrust. To behold the real man is to see him as the child of God, and in this way we shall come to trust one another more.

Because like responds to like, we must ourselves be true and faithful if we would trust and be trusted. What indeed is so sweet and strengthening as confidence in our fellows, and why should we not continuously enjoy it? It is the natural, normal relationship between man and man. Only vain imaginings, or the listening to the subtle insinuations of falsity, can deprive us of the joy of trusting one another. To have faith in man because he is God's likeness, is to prove the power of good over evil; it is to wipe away the tears of "man's inhumanity to man," to restore self-respect, to lift the weights of condemnation, to gain the willing acknowledgment of wrong-doing that is its destruction, and to heal that pernicious habit of looking for evil in our neighbor instead of for good. As we learn how thus scientifically to trust our fellow man, the belief in evil finds no ear to listen, no eye to see, no heart to fear it, and God alone is exalted before men.

This trustful attitude impels us to expect the good in every one, and thus unconsciously bring into recognition many rare jewels of character which are known of God, but which, through diffidence or fear of ridicule and scorn, are too often hidden from the world. To trust as well as to be trustworthy, makes for that very cooperation and unity which error would disrupt through suspicion and mistrust. When faith in man is made scientific, it never blinds us to the pretensions of evil; for to see through the eyes of spiritual sense is to see the truth about everything, and to see the truth about everything is to expose evil as easily as the coming of light exposes whatever is concealed in darkness. Never do we mistrust that which we know to be good and true, but only that of which we are uncertain or ignorant. Spiritual discernment so distinguishes the false from the true that, when we trust others through knowing the truth, we become alert in impersonalizing and destroying the evil. Many a time it has been proven, even in such places as prisons, that the more a man is put on his honor the more he is found worthy of the confidence reposed in him.

Because a man did wrong yesterday, is no reason why he is going to do wrong tomorrow. The law of association that would bind an evil past upon a man, may often cruelly perpetuate suspicion regarding him long after he has become worthy of trust. The pernicious effect of distrust upon character is all too often seen in multiplying and perpetuating errors which might otherwise easily fade into their native nothingness. Suspicion, jealousy, doubt, and kindred qualities of the carnal mind, fan evil suggestions into flames of gossip, until noble desire and sympathetic understanding are stifled with their smoke, and cynicism flourishes.

Thus we may see how much each needs the other's trust and confidence, and it is our great privilege to show the world how to meet this need in a Christian and scientific way. From a metaphysical standpoint, faith in man is a result of faith in God, since man is the expression of God's being; hence the declaration of Christian Science, "I am determined not to know anything among you, save Jesus Christ, and him glorified" (Science and Health, p. 200). The analytical ability, however, awakened in the Christian Scientist as he studies mental anatomy, so uncovers latent error that at first it may seem more than ever difficult to trust his fellow man; but as

Digitized by Google

he loses the belief in man as mortal and material, he learns to know him as the child of God, and his faith becomes more intelligent and more abiding. Many a time the Christian Scientist, following spiritual intuition, is called upon to take a pathway which seems wrong to the blindfold eyes of human judgment or worldly wisdom. Under such conditions, faith is needed as at no other time, and we should silence human opinions, surrender personal conviction, and declare the allness of Love until fear and suspicion pale before the presence of Him whose thoughts are not our thoughts, and whose ways are not our ways.

Let us pray for a higher, holier understanding of God and man, that we may go to the brother in need and, slipping our hand in his, tenderly, loyally whisper words of confidence and good cheer. Then indeed will this admonition of the loving disciple be joyfully understood and obeyed: "My little children, let us not love in word, neither in tongue; but in deed and in truth."

Working for Humanity

CAPT. GEOFFREY WILKINSON

PERHAPS few aspects of Christian Science are more inspiring than the manner in which it enables those who have some understanding of its teachings to cease to be helpless spectators of the troubles of humanity, and instead, to take an active part in their removal, through the spiritual realization of the truth of being and in contributing as we may to the advancement of any improved belief for which others are working in their way. Christian Science has come to show men how to pray aright, and how to obtain an answer to their prayers, and this whether their prayers are for themselves, for individuals who may seek their help, or for humanity at large.

It may be assumed that the average Christian Scientist makes frequent use of the two former aspects of prayer, but it is open to question whether the generality of Christian Scientists realize sufficiently their duty and privilege in seeking to overcome the troubles of mankind as a whole. The fact is, that we are all apt to become engrossed in our own personal problems, and many of us either fail to realize, or while realizing fail to comply with, the demands which humanity is constantly making upon us.

We are all acquainted with the prayers we used to hear, in which the divine assistance was implored in matters of public import; but the prayer of supplication, the prayer which maintains the reality of evil and discord, and then asks a personal God for their removal, is not the kind of prayer needed to solve the problems of humanity. If, however, God's kingdom is to come on earth as in heaven, is to manifest itself in human experience as it exists in the spiritual universe of God's creating, then these human problems must be solved, and nothing but the truth of being, understood and demonstrated, will ever solve them.

Christian Scientists have more or less knowledge of the truth which is to redeem humanity, and it is for them to see that mental apathy or laziness does not prevent them from applying it, however apparently stupendous the problems involved may seem. Even if these problems should claim to be agitating many nations, let us realize that "one on God's side is a majority," and declare the truth that will destroy the claim of error, whatever it may be. If the likelihood of war should arise, it is ours to know that there is in reality but one Mind, expressed everywhere; that this Mind is Love, and that all God's children, reflecting this divine Mind, are one harmonious family in Science. Should a strike be pending, let us remember that God is omnipotent, and that God is the very source of justice; therefore justice governs and justice must be done. These hints are of course not offered as formulas to be adopted in cases such as the above, since formulas have no place in the practise of Christian Science, but merely as indications of the way in which we can go to work to destroy the insinuations of the carnal mind.

"Let us, then, be up and doing," remembering, as Mrs. Eddy has pointed out on page 367 of Science and Health, that "because Truth is infinite, error should be known as nothing. Because Truth is omnipotent in goodness, error, Truth's opposite, has no might;" and this holds good whether the error seems to be entertained by an individual or by every nation in the world. On page 340 she has outlined with a marvelously illumined insight the beneficent effects which her teachings must have on the larger problems of humanity, and it is for Christian Scientists to see that all the claims of error which present themselves to society are destroyed by the realization of the one Mind, of the omnipresence and omnipotence of good. It is true that every realization of Truth, to whatever problem applied, is helping to destroy the foundations of mortal belief, and is therefore lightening the bondage of humanity as a whole; but those who are alert will seek to know the truth concerning such aggressive demands of error as may present themselves in the community, and in so doing they are taking an active part in their destruction, for no false belief, no lie, is destroyed until the truth concerning it is realized. "Truth," Mrs. Eddy writes, "is affirmative, and confers harmony" (Science and Health, p. 418). Let us therefore realize the truth; let us act as channels for its dissemination.

Trust in God

F. MILDRED RICKMAN

AN incident which occurred while visiting some friends a short time ago, has proved helpful to me in overcoming a sense of timidity and a want of confidence which was apt to assert itself when occasion demanded that I should apply what understanding I had gained of Christian Science toward helping others. We had been listening to a young violinist, whose fine touch and technical skill, as well as the sense of harmony with which she played, had greatly pleased us all. The pleasure we had in listening was increased by the fact that she played entirely from memory. I could not refrain from mentioning this to her, and asking how she had been able to commit so much music to memory, so that she could play with absolute confidence. She replied: "Of course one has to learn thoroughly and practise perseveringly; and then—one has to trust."

How often since then I have thought of her reply, from which I learned a lesson. Our Leader says, "You should practise well what you know, and you will then advance in proportion to your honesty and fidelity" (Science and Health, p. 449). This was just what the young violinist had done in her musical studies, so that, having studied thoroughly and practised perseveringly, for the rest she could trust. And so, when the occasion offers itself in which we may speak a helpful word to one in need, let us not hesitate, doubting whether our understanding is sufficient, wondering if we shall voice the right thought. Did not the Master say: "It shall be given you in that same hour what ye shall speak. For it is not ye that speak, but the Spirit of your Father which speaketh in you."

So spake Jesus the Christ when sending forth his disciples to bind up the broken-hearted, to heal those that were sick. We may be altogether sure that if we have confidence, and

Digitized by Google

trust in the ever-presence of divine Love to guide our words and actions, we shall be enabled to offer the help we are so eager to give to those in need. But the preparation must have been made beforehand; there must have been the thorough application of the rules, with earnest practise. We must have learned to apply our understanding of the Principle of Christian Science, otherwise when the time of need comes, trust alone will not make up for work poorly done, or perhaps left undone, in times past. But if we have made good use of our opportunities and have learned by past experiences, then we can speak and act with absolute confidence, relying upon divine Love, which will never fail us, and which casts out all fear. Our Leader says, "Step by step will those who trust Him find that 'God is our refuge and strength, a very present help in trouble'" (Science and Health, p. 444).

✧

Giving

FREDERICK M. O'MEARA

IN Science and Health we read, "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (p. 79). In this terse and concise sentence Mrs. Eddy has given us a statement of truth which is a safe and sure guide on the question of giving. Many are inclined to be constantly limiting themselves in thought as to their ability to give, since giving has been for so long associated with dollars and cents; but let any one consider this question, even from an entirely human basis, and it is found to be wholly mental. The student of Christian Science knows that infinite Mind is the source of all supply.

If we examine this question more closely, we shall find that there is much which we all can give. The act of giving implies a primary sense of possession, and the understanding of divine Love is our greatest possession. What is more, it is eternal and inexhaustible. On the other hand, the greatest desire of all mankind, whether they are yet aware of it or not, is for love. Can we not, then, do something to help to supply that need? When finite sense would make us believe that we are poor and not able to give, as are some others of whom we think, let us silence this falsity with the truth that we are able to give, and give abundantly, by reflecting God, good, and manifesting the nature of our inexhaustible source of supply. The ever-operative law of divine Love is a law of annihilation to the asserted law of limitation believed in by mortal mind.

Reasoning from the human basis, of what avail is money to a brother or sister struggling under a load of sorrow or seemingly held in the bondage of disease? Will not a loving and scientific thought, silently held or wisely expressed, be of far greater benefit to such a one than all the wealth of the Indies? Are we not then giving them of our richest treasures? Our Leader reminds us in Science and Health that "millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink;" and she further shows us plainly the course to follow when such a condition of thought is presented to us, as she continues, "Give them a cup of cold water in Christ's name, and never fear the consequences" (p. 570).

An opportunity to give may be presented to us many times each day, and we need constantly to remember that we can always respond to these demands. If we are invited to join in the condemnation or criticism of some one, right there and then we can give that one a kind and loving thought. Sometimes we feel quite justified in expressing ourselves in a critical manner about a brother or sister, but do we always remember that we are not seeing things from the same viewpoint as they are? Perhaps if the circumstances were reversed we might do the same thing, that is, until a fuller understanding of Truth is gained. Our wisest course, then, is to replace the critical thought with the simple truth that "man is the expression of God's being" (Science and Health, p. 470). As God is Love, then man is the expression of divine Love, the perfect Principle of being. In giving our brothers and sisters this thought, we not only help them, but ourselves also.

If the real and highest sense of giving had not been uppermost in the thought of Peter and John as they went into the temple at the hour of prayer, and if money had been given the lame man instead of the words of healing, could he have been found "walking, and leaping, and praising God"? Our ability to give is really to be measured by our ability to reflect divine Truth and Love. An earnest and prayerful study of the Bible and our text-book, "Science and Health with Key to the Scriptures," will show us how to acquire this ability, and we shall then be able to prove in ever-increasing measure that "it is more blessed to give than to receive."

✧

Reflection

GRACE ADA BOUGHTON-LEIGH

IT was a dull gray morning as I stood at my terraced window, gazing over the bay toward Naples. I could just see the dark line of land across the water, so heavy seemed the clouds, when suddenly, as I looked, the pink-white houses stood out in bold relief from the gloom, each separated from the things surrounding it. Here and there, one was touched by the hidden sun behind me in the east. I could not see the sun, and all around me lay in shadow; but as the light pierced through the clouds, the houses in the western bay caught and threw back a bright reflection of the light that was hidden to me.

As I gazed on this scene, I thought of man, God's image and likeness; how as "the Sun of righteousness" touches the consciousness of mortals, one awakened thought here, another there, rises out of the gloom of material sense. Having caught the true understanding of being, these thoughts reflect back into earth's darkness the light of Love and stand out separate from the world and its ways.

Through Christian Science the unseen Principle around and above us is governing and transforming the thought and character of mankind, and as the clouds of material sense are pierced, the sunshine and glory of spiritual understanding will surely grow into the full effulgence of perfect day.

[Written for the *Sentinel*]

"As the waters cover the sea"

FRANCIS E. FALKENBURY

THE other night, while swimming in the sea
Amid a flame of phosphorescent light,
I turned face upward, through the lovely night,
To that great symbol of infinity,—

The sky's wide mead, a-flower with all the stars,
That threw to me their golden gleaming bars.
All about me was a soft and stealing sound,
The voices of the sea that lapped me round;
All across my sense there softly blew
A gentle wind that stirred the waters too.
A mild mysterious harp that seemed to be
Playing the chant sung on the crystal sea.
And in the wondrous calm and holy space
I seemed to see my Father face to face.
The finite for a moment ceased to be,
And God and His idea, all to me.

Selected Articles

[George Shaw Cook in *The Beacon-News*, Aurora, Ill.]

Some time ago, you were kind enough to publish a short letter correcting a misrepresentation of Christian Science made by an evangelist who was then in your city. In this letter I made the general observation that evangelists are not always noted for the accuracy of their statements concerning Christian Science, and this remark seems to have been taken very much to heart by Hugh T. Smith, judging by a letter from him in a recent issue. He even goes out of his way to recall that a certain medical doctor failed to reach the north pole, but I am sure that he does not intend to hold Christian Science responsible for that failure.

To return to the question of inaccuracy, our critic seems determined to demonstrate that the "shoe fits" by proceeding again to misquote Mrs. Eddy. He says that on page 118 of the 1910 edition of Science and Health Mrs. Eddy says, "Christian Science is the second coming of Jesus." I have consulted the 1910 edition as well as other editions, only to find that these words do not appear on page 118 or on any other page, so far as it is possible to discover. In fact it may be safely assumed that the quotation is incorrect, for Mrs. Eddy did not teach anything of this kind; but if our critic had really been desirous of knowing what Mrs. Eddy did teach, instead of reading the text-book for the purpose of finding fault with her teachings, he would probably have discovered that what she said was quite different, for it was the reappearing of the Christ, Truth, or "Spirit of truth," to which she referred.

Then, while insisting that we be accurate, our critic once more misquotes Mrs. Eddy by making her say, "Jesus was not the Christ." What she really said was, "The spiritual Christ was infallible; Jesus, as material manhood, was not Christ" (Miscellaneous Writings, p. 84). It seems to be a way with some critics of Christian Science to quote part of a sentence, and sometimes to leave out or put in a word which makes a vast difference in the author's meaning. Perhaps in the present instance the mistake should be charged to the critic's haste or to the compositor's carelessness, but the effect is the same in any event, and our critic insists upon accuracy.

Frequently critics of Christian Science fail to understand what they read in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, on the particular subject under discussion, because they do not make the proper distinction between the terms Christ and Jesus. They often treat these two words as being synonymous, whereas they cannot, as Mrs. Eddy points out, be properly so used. Christ refers to the spiritual, eternal, changeless, universal truth of God, which has been discerned to a greater or less extent in all ages, but which appeared in its perfection, as an individual ideal, in Christ Jesus. As the one who best understood and most perfectly demonstrated the power of Truth in healing sickness and sin, Jesus was the Wayshower and Exemplar for mankind, and was so regarded by Mrs. Eddy.

In reply to a direct question asked by our critic, Christian Science most certainly does not teach that Jesus was God. If we are to believe that Jesus was God and are to accept the gospel record of the life of Jesus, then we must also believe that God was born of Mary, that God was "tempted of the devil," that God suffered in Gethsemane, that God was dead, and that He was resurrected. Yet this cannot logically be affirmed concerning God, if we accept the Scriptural proposition that He is eternal life, that He "cannot be tempted with evil," and that He is infinite, immutable Spirit, Truth, Love, as most Christians profess to believe. Furthermore, Jesus said: "Our Father which art in heaven, Hallowed be thy name." Was he referring to himself? Again he said at the tomb of Lazarus, "Father, I thank thee that thou hast heard me." Was he giving thanks to himself? And when he was told that Lazarus was sick, he said, "This sickness is not unto death, but for the glory of God, that the Son of God might be glorified thereby." Is it not plain that Jesus did not regard himself as God, but knew that in his true spiritual nature he was the Son of God, and that his demonstration of the powerlessness of sin, disease, and death was for the glory of God, his Father?

Our critic invites us to show one place where Christian Science values the cross or the human sacrifice made by Jesus. In Science and Health Mrs. Eddy says: "Was it just for Jesus to suffer? No; but it was inevitable, for not otherwise could he show us the way and the power of Truth." She continues: "The burden of that hour was terrible beyond human conception. The distrust of mortal minds, disbelieving the purpose of his mission, was a million times sharper than the thorns which pierced his flesh. The real cross, which Jesus bore up the hill of grief, was the world's hatred of Truth and Love" (Science and Health, pp. 40, 50).

And so it may be remarked in passing, that all great teachers and reformers, Mrs. Eddy included, have borne the cross of misrepresentation and have suffered mental, if not bodily crucifixion, by those who have misunderstood them. It is not surprising, therefore, if our present critic, through his misunderstanding of Mrs. Eddy's teachings, and his failure to appreciate her great service to mankind, has been led to say harsh things about her. She did not resent such attacks, and neither do her followers in the demonstration of the Science which she taught. They do not seek controversies with those who differ from them, and seldom if ever begin to argue about Christian Science. Therefore, in seeking to correct for the benefit of your readers some mistakes which the critic has made, I trust it will be understood that this duty has been fulfilled without the least animosity.

✧

[Algernon Hervey-Bathurst in *Birkenhead* (England) *News*]

I have read the letter signed George S. Hazlehurst, on the subject of Christian Science, in a recent issue. The critic's method of reasoning may appear logical enough to those who accept the premise from which he obviously starts. The fact, however, should not be overlooked that Christ Jesus came, as he said, not "to destroy, but to fulfil" the law of God. This he did by healing sickness, destroying sin and discord, and raising the dead. Would the Founder of Christianity, who had come to reveal the law of God, or absolute Truth, have done these works if in so doing he was destroying or even interfering with what God had created, with what was true or real? We are then forced to the conclusion that the discordant conditions which were healed through the understanding and application of the teaching of Christ Jesus were at that time, and consequently are now, unreal. We are equally compelled to admit that the best, and indeed the only, way these same conditions can be healed today, is through the application of those same teachings. Have Christians any more right to believe in the necessity or reality of evil today than Jesus did? Sickness, sin, and all evil do not now constitute God's creation, the only creation, any more than they did nineteen hundred years ago. It is for this reason that Mrs. Eddy writes, in Science and Health, "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal" (p. 497).

It is unnecessary, I think, to refer to the impossibility of

Digitized by Google

believing in the reality or power of evil without being subject to the effects of that belief, and surely the belief in two powers, good and evil, is none other than a "house divided against itself," which Jesus declared so emphatically could not stand. Reasoning with the irrefutable logic which permeated the teaching of the Founder of Christianity, and which was confirmed by the magnificent results accomplished, Christian Science is today healing the sick and destroying sin by identically the same method. Indeed, there is no other way whereby Christianity can be practised.

As to how the scientific practise of Christianity can be referred to as "making a new schism," is more than I can understand. There is one standard, and one alone, whereby Christians can be judged, namely, by their works, for, as Jesus declared, those who understand his teaching will do the works he did. That certain results are accomplished by other means, I do not deny, but I do know that Christian Science is the only system which is healing the sick and reforming the sinner in strict accordance with and in demonstration of the teaching of Christ Jesus. If history repeats itself, it has certainly done so with respect to Christian Science; for just as there were, during the first few years of the Christian era, those who preferred to endorse certain mental methods which were utterly at variance with the teaching of Christ Jesus, and which they denounced in terms it is unnecessary to repeat here, so today, the strict demands of Christian Science to cut off the right hand, and if necessary to pluck out the right eye, call forth the same accusations. Nevertheless, Christian Science continues to spread, for the sole reason that, as Mrs. Eddy writes, on page xi of the Preface of Science and Health: "Now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us,'—a divine influence ever present in human consciousness and repeating itself, coming now as was promised aforetime,

> To preach deliverance to the captives [of sense],
> And recovering of sight to the blind,
> To set at liberty them that are bruised."

[Charles K. Skinner in *The Northwestern Weekly Review*, Detroit, Mich.]

The Northwestern Weekly Review seems to have become a clearing-house for exchange of opinions, and its courtesy should be thoroughly appreciated. If each writer is sincere from his own point of view, and willing to concede the same position to his neighbor, much good may result. The articles by A. K. Sweet and J. H. Dempster are kindly in their reference to Christian Science and its followers, and had the writers pursued their quest to an understanding of the Principle and practise involved, instead of being satisfied with a superficial examination of the teaching, I am quite sure neither would have made the statements he did.

The first of these gentlemen tells us that Christian Science is far from being "philosophic or scientific," and this is where we differ. It would not be considered fair to judge the rules of mathematics by the badly worked out problem of a student, or the science of electricity by the work of one who had not sufficient understanding of the laws involved to gain the success which would have crowned close adherence to established rules. The same test should govern the critic or investigator of Christian Science. The fact that one may have followed out experiments along a material method of healing to the point of even calling it a science, gives him no right to claim that a mental or spiritual system is not a science.

Science, according to the best dictionary authorities, is defined as "knowledge gained and verified by exact observation and right thinking." The subject is divided into several classes, one of which is "absolute science," defined as "definite knowledge of things as they actually exist," and another is "active science," or "systematic knowledge put to practical use." To both of these classes Christian Science claims close relations. It starts with the assumption that God is the only real intelligence or source of knowledge, and whatever intelligence is expressed through humanity is from that divine source. The works of Christ Jesus were founded on this fact. Every one of his healing works was based on the fundamental truth that man was created in the image and likeness of God. He understood that if God is the omnipotent, perfect One, then His spiritual child or reflection, man, is always perfect, and can never be otherwise than perfect.

Jesus saw still farther, that the birthright of dominion given man at the creation, included environment of every nature. It was through this understanding that he was able to destroy the false material sense which held in bondage those who came to him for help. The Master never claimed to do any of his great works of his own power. He said, "I can of mine own self do nothing;" "the Father that dwelleth in me, he doeth the works." He also said, "He that believeth on me, the works that I do shall he do also." It is this work that Christian Scientists are taking up in obedience to Jesus' command. If from lack of full understanding or sufficient spirituality they do not always bring out the best results desired, it by no means proves that Christian Science of itself is not scientific or philosophical, but rather that its student must gain still higher understanding. To refuse to do even the little one knows because the ultimate has not been attained, would not only be unscientific and contrary to the law of progression, but would be absolute disobedience to the commands of Jesus, "Go ye into all the world, and preach the gospel," "Heal the sick."

In noting Dr. Dempster's remarks concerning Christian Science, I wish to take up the strictures which he places upon it. If Christian Science is a discovery of spiritual law, and if it is carrying out the works of the Master in so far as it is possible in this hour of spiritual development,—and this is the claim made for it,—it is well to note particularly the exemptions, if any, that Jesus made to healing any type of disease. History does not record that he made any distinction between the paralytic and the leper, between the impotent and the blind man, between the woman bowed with rheumatism and the nobleman's son healed of fever by absent treatment. To him the abnormal conditions were all destroyed by the power of God.

That every known ailment to which mortals are subject has been healed at one time or another by Christian Science, cannot be successfully gainsaid; that all persons are not so healed is no fault of the system, but has to do with the receptivity of the patient, the fear to be overcome, and the understanding of the practitioner. If the argument is advanced that none but those who are perfect should attempt the healing work of Christian Science, the same rule applies to those of the "regulars" to whom our friend belongs. Christian Scientists are willing to compare case by case with their medical brethren as to results obtained. They have nothing but the most kindly feeling for the honest physician of whatever school, for they know from experience of the unselfish lives of many of these men and women, who sacrifice personal comfort for the sake of humanity; and they do not force their teaching or services upon any person, for they fully understand the uselessness of offering their treatment to those whose faith is in material means, and they respect their convictions.

The contention of this critic that the citizens of the state tax themselves to support medical schools, and that therefore

Digitized by Google

Christian Scientists and others who do not rely on poisonous drugs or the reckless use of the knife, should be compelled to become familiar with these methods, is not well taken. Christian Scientists are not practising medicine, and such compulsion could not be enforced from its very unconstitutionality. Eminent physicians of both the regular and other schools have made the statement repeatedly, that the teaching of physiology and anatomy in our public schools is a strong promoter of disease, by keeping the thought of the impressionable child upon certain parts of the body. A well-known "regular" physician of this city said in his protest, "I know, and every doctor knows, that keeping the thought upon any particular part of the body is bound to create disease there."

Christian Science prevents disease; it also stands for purity of thought, speech, life, air, food, and water, and bids us live in peace with all men, barring out every thought of hate, malice, envy, jealousy, deceit, and dishonesty.

✧

[Marie Hartman in *Het Vaderland*, The Hague, Holland. (Translation)]

In 1866 an American woman, Mrs. Eddy, was suffering from the serious results of an accident which *materia medica* was unable to relieve. In the hour of her great need she, as was her custom, resorted to the Bible, and her prayerful appeal to God brought her an overwhelming sense of God's allness, the consciousness of His omnipotence, and of the one indestructible Life which is not touched by evil or by any appearance of sin, sickness, or death. This consciousness of the protection of God's omnipotent, saving, and sustaining love healed her instantaneously from her severe illness. Mrs. Eddy devoted the next three years to searching the Bible for the scientific rule for what had happened to her, and she thus gained a spiritual understanding of the Scriptures, the fact of man's spiritual existence as the reflection of God, who is Spirit and Mind, being thus revealed to her. She also saw clearly that there are no destructive, malevolent elements in the eternal Spirit, and that the Almighty needs no cooperation with lower powers in order to establish His kingdom in man. The kingdom of God, which according to Jesus is within man, is Life, Truth, and Love governing him, and delivering him from all that is opposed to God,—from the "carnal mind," which through sin and sickness brings death.

Mrs. Eddy learned that her understanding of God helped others to become more conscious of their unity with Him, whereby these also found healing of mind and body. In turn these others found that through the understanding which Christian Science, as Mrs. Eddy named her teaching, brought them, their prayers had the power to lead others to God, the divine Principle, "who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies." Christian Science teaches that prayer is not telling the omniscient the experiences and desires of man, but is listening to God. Such prayer teaches one to know what God does, and to say, "Not my will, but thine, be done."

The mission of Christian Science is to teach mankind to know God better and to serve only Him who said in the first commandment, "Thou shalt have no other gods before me." This is emancipation in the fullest sense of the word, for liberty is nothing but absolute conformity to that which is, to reality; therefore liberty is only possible through a scientific knowledge of the "great First Cause" which we call God. The healing of sickness is a necessary consequence of the understanding which Christian Science brings, of the giving up of false beliefs about God, about life, and about man. The principal purpose of Christian Science is not to flood the world with a host of practitioners, but to teach every man to be true and good, and therefore healthy.

On page 150 of "Science and Health with Key to the Scriptures," Mrs. Eddy writes: "Today the healing power of Truth is widely demonstrated as an immanent, eternal Science, instead of a phenomenal exhibition. Its appearing is the coming anew of the gospel of 'on earth peace, good will toward men.' This coming, as was promised by the Master, is for its establishment as a permanent dispensation among men; but the mission of Christian Science now, as in the time of its earlier demonstration, is not primarily one of physical healing. Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin, to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

✧

[Willis D. McKinstry in *Salina* (Kan.) *Journal*]

Dr. Hale, while conducting a series of meetings in your city, departed from the admonition of the Nazarene to "judge not," when he attacked a Christian organization whose followers are proving the truth of its teachings by their lives and works. The following quotations from the Christian Science text-book show quite clearly that his statements are without foundation in fact. Mrs. Eddy writes on page 497 of "Science and Health with Key to the Scriptures": "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life. We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness." Also on page 275 we read: "All substance, intelligence, wisdom, being, immortality, cause, and effect belong to God. These are His attributes, the eternal manifestations of the infinite divine Principle, Love."

The universe and man being creations of God, must necessarily partake of the nature and essence of His being, and it requires no argument to show the honest reader that Christian Science does not deny the divinity of God or His Word; but on the contrary, is a Science which treats of God's law and government, showing His divine nature and the way of salvation. The teachings of Christian Science give to sincere seekers after truth a spiritual understanding of the Scriptures and their application to daily life as demonstrated by him who prayed, "Thy kingdom come. Thy will be done in earth, as it is in heaven." This spiritual awakening of the human consciousness dispels any belief in infidelity.

✧

[Charles I. Ohrenstein in *The Post-Standard*, Syracuse, N. Y.]

Christian Science has very much in common with all Christian denominations, going only one step farther in obedience to Jesus' command,—that of healing the sick as well as reforming the sinner through radical reliance upon God. To charge, therefore, as does a letter published in your paper, any arrogance or pride to this denomination, is not warranted. Christian Scientists are duly mindful that all that has been achieved for them is wholly due to God.

There is something that is due to the public, however. This something is to let no confusion arise as to what Christian Science is and what it is not. It is for this reason that corrections are made when Christian Science is classed with beliefs contrary to it. It should be understood that this is always done without any bitterness and without any feeling of being holier than others. It may be well to point out that Christian Scientists rest content with defining their own doctrine, and that without attacking others. This method seems to them a proper one for all to pursue. Those who have anything of real worth to offer will find this method a successful one, without doubt.

Digitized by Google

Editorial

Not Words, but Deeds

MRS. EDDY, on page 495 of Science and Health, in answer to the question, "How can I progress most rapidly in the understanding of Christian Science?" counsels in part: "Study thoroughly the letter and imbibe the spirit. Adhere to the divine Principle of Christian Science and follow the behests of God, abiding steadfastly in wisdom, Truth, and Love." This saying might also be applied to the question which soon or late presents itself to every earnest Christian Scientist; namely, how he can best bring this wonderful healing truth to the attention of those with whom he regularly or casually comes into contact.

In itself such a desire is right and laudable, but the mistake is sometimes made by the overzealous worker of thinking that in order to accomplish his purpose it is necessary to do what might be styled active missionary work. He is impressed that he must talk Christian Science to every one, and labor to convert them to the religion which has done so much for him. He forgets, perchance, that he himself was not converted through words, but through the opportunity to see that those calling themselves Christian Scientists were quietly and unostentatiously living a religion which had made them better and healthier men and women than they had been before, and that these same people were healing all manner of diseases for those who came to them for help.

Paul's counsel to Timothy was, "Preach the word; be instant in season, out of season;" but this does not mean that we are to thrust Christian Science as a topic of conversation upon every one we meet, irrespective of whether these persons are ready to receive this teaching or whether the time and place are appropriate. Some go so far as to urge upon their friends, and even upon those whom they casually meet, offers of treatment. Sometimes these persons, through politeness, feel unable to decline such offers, yet this action so arrays them mentally against Christian Science, that they smart under a feeling that they have been taken advantage of while in a position which would have rendered a refusal both rude and embarrassing. It seems almost needless to say that under such circumstances healing very rarely results, and the unwilling patient usually lapses into a condition of positive antipathy to Christian Science. The good intentions of those who have not yet learned to temper their zeal with discretion, is not questioned; nevertheless their lack of perception of the fitness of things is likely to lead them into a course of action which may be positively harmful to those whom they ignorantly try to bless.

The same may be said of those who attempt to argue their friends into an acceptance of Christian Science. Most Christian Scientists of experience have found that Christian Science is something to which no one is converted by argument, for argument rarely results in anything except the confirming of both sides in their original opinions. Mrs. Eddy tersely says that "action expresses more gratitude than speech" (Science and Health, p. 3), and it is our deeds rather than our words that will most effectually prove to others what Christian Science is and what it is doing for mankind. The better way, then, for us to reach those whom we desire to help, is to let the manner in which we pursue the daily round of duty speak for us; in other words, show forth in our daily living that Christian Science has brought us blessings of health and morality which we had not before enjoyed, blessings which it will bring to all who desire the benefit of its loving ministry.

"Live Christian Science, not talk it," is not only a safe motto for every Christian Scientist, be he young or old in the truth, but put into practise it will convert the world. "Ye are my witnesses, saith the Lord, . . . that ye may know and believe me, and understand that I am he;" and as we continue to "study thoroughly the letter and imbibe the spirit" of Christian Science, our daily walk will be so ordered that unconsciously we shall evidence to those we meet that we have a treasure which no one can afford to be without, even that understanding of God and of Christ Jesus and his teachings which is eternal life to him that hath it.

ARCHIBALD MCLELLAN.

Why Trouble Ye Me?

"OH, well, what's the use! What difference does it make whether you call something matter or the projection of a false belief? Won't you experience just the same results if you run into it in the dark?" The inquirer was a very earnest Christian man, but for the moment he had assumed an attitude of thought which, strange to say, is soberly maintained by many who would class themselves as "plain common-sense people." They taboo what they call "metaphysical nonsense," and in so doing practically shut the door on that active desire to know the truth which is the harbinger and necessary antecedent of spiritual freedom.

"What's the use!" has assaulted the ears of all progressives and non-conformists. As our good-natured railer would concede, it expresses the thought of that tremendous social factor which includes "highly respectable conservatism," the lovers of undisturbed content, as well as the victims of prejudice, ignorance, and mental listlessness. Indeed, relatively few people are really glad to be prodded into a livelier pace, and this fact explains just how our best friends often make us exceedingly uncomfortable, and, too, why the appeal of Christian Science ofttimes becomes an offense. The average man finds it easier to follow the round of his modest orbit without exertion. Life thus becomes largely automatic, and mental struggle is quite unknown. He commits all determinations to habit or to unconscious bias, and so, instead of having to make his way through the brush of prevailing belief, he simply accepts the customary or the conventional and follows the curves of the common path.

This is the mental biography of the many, and this because of their love of mental ease. Christian Science awakens thought, stimulates its nobler assertiveness, and thus begets the growth of a sense of individual freedom and capacity in Christ. This is one of its greatest benefits. It discloses the "infinite capacities of Truth, in which God gives man dominion over all the earth" (Science and Health, p. 202). It places no limit upon the verities we are privileged to know and utilize, and it is proving conclusively that the Christian world has suffered an unspeakable loss as the result of its willingness to leave unmastered that spiritual truth which, as Christ Jesus explicitly taught, his every disciple should understand.

How strangely incongruous it would seem for a Kelvin or a Ramsay to say "What's the use!" in disparagement of the inquiring spirit. Every benefit which scientific investigation has conferred is directly traceable to somebody's truth-loving alertness, and so too are all the richer blessings of which Christian Scientists are wont to speak. To such an attitude Mrs. Eddy gives no place or consent, and for this the world has occasion to be profoundly grateful. As one wakes up to the significance of the Scripture teaching that to know God is eternal life, and to the fact that both the possibility and the need of individual acquaintance and communion with the Father of all was constantly emphasized by the Master, the

Digitized by Google

seriousness of the sin of indifference begins to dawn upon consciousness. Christ Jesus discussed no subject and solved no problem that he did not directly link to the ultimate truths of spiritual being. He was always simple and straightforward, but he was also always metaphysical, and to prove that the knowledge of absolute truth is practical, may be said to have been the purpose and consummated end of his life-work.

Being and basic law lie back of the common concept, and if we are to reach and profit by them, we must mine for them. We must penetrate the apparent if we would hope to reach the actual. The bed-rock of every truly spiritual structure can be reached in no other way. The "deep things of God" can be made intelligible even to a child, but they who will not seek for them "as for hid treasures," are sure to illustrate the fact that no pauperism is quite so pitiful as that which is self-made.

JOHN B. WILLIS.

✧

Perfection

IT is simply astonishing how the demand for perfection is resisted by mortals. They are willing to grant that human conditions should be improved, especially if this does not require too great an effort on their own part; but how many are there who would accept the proposition that nothing less than perfection, in all they think and do, should be the constant aim of every human being? Here it may be said that the possibility of even striving rightly to reach this high goal is dependent upon the recognition and unfoldment of our spiritual capacity to grasp the idea of perfection, and Christ Jesus undoubtedly had this in view when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." This demand was voiced by him after he had made a complete separation between the material sense of obedience to God's law and its spiritual sense, which never stops short of perfection.

In Science and Health (p. 353) we find this remarkable statement by Mrs. Eddy: "Perfection underlies reality. Without perfection, nothing is wholly real. All things will continue to disappear, until perfection appears and reality is reached." The trouble with mankind in general is that they deny the possibility of attaining perfection in anything, and so they are content with low aims and achievements, and yet not satisfied, for as the psalmist said, long ago, "I shall be satisfied, when I awake, with thy likeness," and this likeness can never be less than perfect. Mrs. Eddy's words, above quoted, bespeak a great fundamental truth, and if they were better understood and heeded, the failures of mortal experience would be rendered impossible. If our thoughts and efforts were each day characterized by a pure purpose to attain perfection in all things, from the most ordinary duties up to our highest spiritual aspirations, and if we constantly realized that God expects this and no less of us, because He has spiritually endowed man to this end, there would be not weariness, but joy in every effort, and new strength as a result of it.

The honest and intelligent workman who strives to do his best, makes steady gain along his own lines, but the outlook of the Christian Scientist is a far wider one. He knows that his entire nature must be responsive to the demand for perfection, that it is his high privilege to reflect divine intelligence in all things, and to express Truth and Love as his very life. He also learns from Christian Science how to remove, one by one, all stumbling-blocks from the path of human progress, and to "break every yoke" (to quote Isaiah), not by the blind struggles of human will, but by the power of spiritual law, understandingly applied.

St. Paul tells us that we have the privilege of being "workers together" with God, and the psalmist tells us that God's work "is honorable and glorious," which surely means perfect. Christ Jesus declared that his work was all done through his Father and ours, and as we read the thrilling record of that work, as told by himself in his message to John the Baptist, we can see what it meant to have perfection ever before him. He said: "The blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached."

How grateful should we be for all the great Teacher did for humanity, in showing us the way, and also to our dear Leader, who has told us how we may follow this great Exemplar, and keep his high goal of perfection ever in view. A lower standard than that of Christ Jesus can bring nothing but failure and regret, while faithful adherence to it will crown each day with true joys. It was this which inspired Paul in his tent-making, his preaching, and his healing work, until he could say that his entire aim was to "present every man perfect in Christ Jesus."

ANNIE M. KNOTT.

Notice

ATTENTION is requested to our Leader's letter to "The Children Contributors," on page 216 of "The First Church of Christ, Scientist, and Miscellany." This letter was addressed to those children who had contributed to Mrs. Eddy's room in The Mother Church, to whom she then made a gift under the following conditions:—

"I request that from this date you disband as a society, drop the insignia of 'Busy Bees,' work in your own several localities, and no longer contribute to The Mother Church flower fund. . . .

"Further to encourage your early, generous incentive for action, and to reward your hitherto unselfish toil, I have deeded in trust to The Mother Church of Christ, Scientist, in Boston, the sum of four thousand dollars to be invested in safe municipal bonds for my dear children contributors to the room of the Pastor Emeritus. This sum is to remain on interest till it is disbursed in equal shares to each contributor. This disbursal will take place when the contributors shall have arrived at legal age, and each contributor will receive his dividend with interest thereon up to date, provided he has complied with my request as above named."

The Treasurer of The Mother Church, Adam H. Dickey, is now preparing to distribute this fund as directed by our Leader, and in order to facilitate the work, all those who, as children, contributed to the room of the Pastor Emeritus, are requested to send, as soon as possible, their present names and addresses to him at 103 Falmouth Street, Boston, Mass. On receipt of these names and addresses, application and identification blanks will be sent out, and these should be filled out and returned without delay.

The fund has increased through investment until it now amounts to approximately $6,840. This sum, divided among the 2,850 contributors, will give about $2.40 to each person interested.

Board of Lectureship

IN the *Sentinel* of Dec. 13, 1913, announcement was made that James D. Sherwood, C.S.B., had been appointed to the board of lectureship of The Mother Church. As Mr. Sherwood now finds it impossible to undertake this work, he has tendered his resignation, which the Board of Directors has accepted with regret.

The Lectures

Snohomish, Wash.

Over five hundred Snohomish people attended the Christian Science lecture given at Eagles' Hall by Bicknell Young. Mayor W. O. Dolsen was chairman of the meeting, and introduced the speaker of the evening as follows:—

The history of the progress of the human race is a record of small successes and many failures, proportioned according to the degree of the essential element of truth back of the problems with which mankind has had to contend. Since the dawn of civilization, humanity has instinctively realized that truth is the only foundation upon which we may safely erect our temporal and spiritual edifices, and with this idea predominant, we have searched and investigated theories and dogmas and doctrines, gleaning a grain of truth from a mass of chaff, gathering "here a little, and there a little," of that which in its full fruition will set us truly free.

It is said that an untruth cannot perfectly adjust itself to any condition in the universe. No doctrine which has not truth as its fundamental element can long successfully survive. If the doctrine of Christian Science which we are to have expounded to us tonight is based upon error, it will not long endure; but if it is based upon truth, it will weather the gales of time. Its adherents believe that it has truth for its foundation, and have so ordered their lives that we are in all reason bound to investigate the basis for that belief. Without closer investigation than that of observation of the conduct of their daily lives, I am free to say that the most exemplary citizenship characterizes the adherents of Christian Science in this vicinity. If this is due to their faith in Christian Science, and I am compelled to believe it is, I think we are in duty bound to make an effort to find out something about this faith which seems to produce such excellent results.

Snohomish County Tribune.

✧

Ogden, Utah

In introducing Clarence C. Eaton, who lectured on Christian Science, Judge S. T. Cone said in part:—

While not a member of the Christian Science organization, I have especially observed two things which I think commend it to the approval of the people. First, they have drawn their membership not from the ignorant and unthinking, but largely from the most intelligent and respectable classes of the community; and second, they follow Jesus' command when he sent forth his disciples, not only to preach the gospel, but to heal the sick. Other denominations of Christians have for the most part abandoned the practise of the second of these injunctions. But this new and later body deem it their duty not only to preach, but to heal; and from report and observation I have no doubt they have healed thousands of cases of disease. In view of these facts they have, in my opinion, at least earned the right to a hearing.

Correspondence.

✧

Pasadena, Cal.

Judge Frank C. Dunham, in introducing Clarence W. Chadwick on the occasion of the latter's lecture in the auditorium of First Church of Christ, Scientist, spoke as follows:—

The subject of Christian Science is attracting the attention of all thinking people, regardless of their position in life. The reason is, that men of all ages have continually sought for the truth, and it has been demonstrated by thousands and thousands of people throughout the entire world that in proportion to their understanding of Christian Science, truth reveals itself to them,—the great truth about God, and man made in His image and likeness. While talking with his disciples before his betrayal, Jesus said, "I will pray the Father, and he shall give you another Comforter, that he may abide with you forever; even the Spirit of truth;" then again he said, "The Comforter, . . . whom the Father will send . . . he shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you." Christian Scientists understand that this Comforter comes to all as they apprehend the "divine laws of Life, Truth, and Love" (Science and Health, p. 107).—*Correspondence.*

✧

Kennebunk, Maine

Virgil O. Strickler, lecturing on Christian Science in Mousam Opera House, was introduced as follows by James Ernest King of the *Boston Evening Transcript*:—

Twelve seasons at Kennebunk have given me the happy confidence that I know its people,—know them not by their names, perhaps, but for what they are. It is that knowledge which gives me the temerity to stand before you as one who introduces the lecturer of the evening. You see, I have won confidence in the hospitality of Kennebunk people. And what is hospitality? Surely it is not the mere food and shelter given to the stranger within one's gates. It is a finer thing than that. True hospitality is the welcome which open-minded people give to the thoughts, discoveries, and inspirations of their fellow men in Christianity. It is that sort of hospitality—the true hospitality, the welcome of the open mind—which I know a Kennebunk audience will freely give.

Not long ago a gentleman approached a United States senator and asked him how he liked Henry Smith. "Don't like him at all!" the senator replied sharply. "What! you don't like Henry Smith, the fairest man in Washington?" the senator's friend cried out. "Well, you see," the senator explained, "I don't know Mr. Smith at all." So it is, I think, with many persons who say they do not like Christian Science at all. The truth is, they do not know Christian Science at all.

It is that every one may know Christian Science, and know it as it truly is, not as it is reported to be, that The First Church of Christ, Scientist, in Boston, The Mother Church, established its board of lectureship. And it is that the people of Kennebunk may know Christian Science as it is that the local Christian Science Society has brought a member of the board of lectureship to address you tonight.

Huron, S. Dak.

Francis J. Fluno, M.D., who lectured on Christian Science in the Grand Opera House, was introduced by Mayor D. G. Medbery. His remarks were in part as follows:—

I am not a member of the Christian Science organization, neither am I a member of any other religious organization, nevertheless I am strongly in sympathy with every Christian organization. The teaching of Christian Science was given to the world only about forty years ago. At that time it was looked upon with suspicion and doubt. Today Christian Scientists are numbered by the hundreds of thousands, and I am safe in saying that more people have received aid, hope, and alleviation from pain by this new-old religion than by any other religious teaching. It was not long ago that Sir

Digitized by Google

Oliver Lodge of England, a noted scientist there, in delivering a lecture before the scientific congress in Great Britain, made the statement that in a short time science would bridge the chasm between life and death. I want to add one word,—that if this be true, it will be Christian Science.

Huron Morning Herald.

✧

Ballarat, Australia

Notwithstanding many counter-attractions, including the opening of the annual South street competitions, the foremost attraction of the year, a very earnest and appreciative audience assembled in the City Hall to hear William R. Rathvon lecture on Christian Science. The lecturer was introduced by Sidney Watson, who said in part:—

Christian Science is not a new kind of religion, as some people think, but demonstrates Christianity founded on the spiritual interpretation of the Bible. There are no people on earth who study the Bible more than do Christian Scientists, and none who get so much practical help from it as they; and they want the whole world to know of this wonderful teaching which heals sickness and sin, and solves problems about God and man which have puzzled mankind for ages.—*Correspondence.*

✧

Aberdeen, Wash.

B. F. Cauthorn, first reader, in introducing Prof. Hermann S. Hering, who lectured on Christian Science, spoke in part as follows:—

Christian Science is not new. Jesus and his disciples demonstrated its Principle over nineteen hundred years ago by healing the sick and raising the dead; and during the past fifty years this Principle has again been explained and demonstrated by healing sickness and sin. Many thousands of adherents are beneficiaries of this healing and saving power, and they may be found in practically every city and village in the civilized world. Each one knows that he has found in Christian Science that which aids him in every daily problem. He has been shown a God at hand, and not afar off; a God who is a present help here and now. He knows that what benefits one benefits all, and that what does not benefit all is not Christian Science. He knows that every one feels the need of a higher than human power to aid him in working out his salvation; that an understanding of Christian Science does bring man in touch with this higher power, and through this unity solves his problems.

Every Christian Scientist desires that the whole world may come to know what Christian Science is and what it really means to his happiness, and that all may know God, from the least unto the greatest.—*Correspondence.*

✧

Fond du Lac, Wis.

Bliss Knapp delivered a lecture on Christian Science in the Henry Boyle Theater. He was introduced by Attorney Roy L. Morse, who said:—

Public speakers, authors, and writers for newspapers and magazines, are of late devoting much attention to certain details of living which they contend will help us to be happy and cheerful, and they point out the practical value of a smiling face and a cheerful disposition. But one cannot put on a smile arbitrarily, and cheerfulness must be in the heart to be reflected in the countenance. We who have not accepted the doctrines which will be expounded by the lecturer this afternoon, must indeed recognize that there is something in the philosophy of the believers in and followers of Christian Science which makes smiling countenances, and that happy disposition which the world now recognizes as so essential to our well-being. They have put away envy, hatred, and malice, and in their places there is love, helpfulness, and confidence; they are ideal friends, kind and inspiring neighbors, and a good people to live among. I have seen in their religion something broader, deeper, and grander, and if they taught no other thing, were this their ultimate purpose, the life-work of the speaker of this afternoon would be justified, and we could well understand why so many are assembled here to give him respectful attention.

Testimonies of Healing

Having received much help and encouragement for the past three years from the reading of the testimonies of others, it is plainly my duty to voice gratitude for the many benefits that have come to me since I began the study of Christian Science. When "Science and Health with Key to the Scriptures" by Mrs. Eddy was first brought to my notice, I was in a veritable mental slough of despond, and ready to appreciate to the full the clear note of hope and courage which it sounds from every page. As I read on, pain and ailments which had always been with me, and which I had looked upon as my natural heritage, gradually disappeared. A stomach disorder vanished, and the desire to smoke left me so completely that it took me some time to convince myself I was really healed. To my awakened consciousness the habit was only an illusion, and a very absurd one at that.

About a year after I came into Science, an old enemy in the form of severe chest trouble again attacked me, and for a time the symptoms were so violent and persistent that fear often kept me in thrall; but by the help of a kind friend who took my case in hand, and spared no effort to bring me into harmony again, I was able to continue at my work all through the time the illness lasted. There were occasions when to sense I felt so ill that even while my friend spoke encouraging words to me, I seemed to be slipping out of this mortal life. In about three months of Christian Science treatment, worse symptoms were overcome than those which had previously required a two years' rest in the climate of the northern Andes. What a rich blessing has come to humanity in this teaching of our Leader that sickness is only a belief, that while "belief is changeable, . . . spiritual understanding is changeless" (Science and Health, p. 96). I have also been healed of acute attacks of rheumatism, to which I had been subject all my life. Now for over two years this disease has not troubled me in any of its forms.

All these blessings, however, are not to be compared to the joy experienced in the uplifted thought which comes as a result of the study of the Bible and Science and Health. It enables us to meet the problems of life with more love and more reliance on God, and not only supplies our own wants, but gives us confidence and understanding, so that we are able to pass on the "glad tidings" when some brother or sister comes to us in need.

CHARLES EDWARD ARCHER MARTIN, Buenos Aires, Argentine Republic.

I have received so much help and encouragement from the testimonials in the *Sentinel* and *Journal* that I send the following account of my own healing with the hope that it will help some one suffering as I was.

In 1885 I had a long sickness, which left me walking on crutches and with health undermined. After a few years, attacks of pain, at each recurrence increasing in severity, indicated a new trouble, which was finally diagnosed as abscesses in the kidney. I was sent to a hospital, that I might have the benefit of the best advice, but after seven weeks I went home, no better for the treatment received there. I suffered for two years more, at times greatly, and then seemed to be at death's door. A surgeon and a trained nurse were sent for, and an operation was performed; but it was of such a nature that for days the outcome was uncertain. I slowly recovered, but did not stand on my feet for six months and for several months more was almost helpless. In spite of this operation, the abscesses continued to form, and the wound was left open for the discharge. To medical men and their patients such a condition brings great fear, and I shared and reflected that fear. Every time an abscess formed I had all the symptoms of poisoning and was not relieved in any way. I had kind and sympathetic doctors, who expressed regret that they were powerless to help me.

I came to California, and the change benefited me for a time in some ways, but did not stop the trouble. Finally a severe attack brought me to where something had to be done, as my life "hung by a thread," to use the doctor's words. I had been aware for several months that a hard growth had been forming on the kidney, and this also disturbed and puzzled the doctor, and his verdict was that I would again have to go to the hospital and submit to another operation, this time a more serious one than before, as he would have to remove the kidney. I had been having severe chills at regular intervals, followed by such high fever that I would be stupefied for a time, and the suffering during the repetition of these chills was intense, for no medicine had the slightest effect. However, I rebelled at the thought of another operation, and asked for a week to get some of my family from the East, but was told that two days was all that could be given me, as my condition was so critical.

I knew very little of Christian Science, but had heard that Christian Scientists relied wholly on God, and there certainly seemed to be no help anywhere else for me. I had a practitioner sent for, and she came at once, gave me a treatment, and went away, saying very little to me. After she had gone I realized that the pain had stopped. As the time drew near for the chill, I wondered that it did not come on, and gradually I realized that all had vanished, and peace and comfort had taken the place of the suffering. I gained very fast, and in two days was so much better that the dreaded operation was given up. In less than a week I was up, and slowly an understanding of the power that had brought this great change came to me. After a few weeks I thought of the growth, and that, too, had gone to its native nothingness,—I knew not how or when.

Two or three times in the next year the abscesses formed, and discharged very freely, but my fear was gone and there was no pain or sickness, and thus the absolute powerlessness of this seeming poison was proven to me. Faithful, persistent study of Christian Science brought its reward in the perfect healing of the disease, and later of the wound, which had then been open nine years. The doctor had said it could no more heal than my lips could grow together. Sleeplessness, a bowel disorder, and chronic throat trouble all vanished. The crutch that I had carried for over twenty years became unnecessary and was gladly given up. Instantaneous healings of burns, sprains, and other ills, further proved the great power of this truth.

Daily and hourly the healing work goes on in my consciousness, but the possession in some measure of the peace and joy promised by Christ Jesus to his followers far outweighs physical healing. As I have earnestly studied our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, in connection with the Bible which it illumines, I have been healed of grief and loneliness after passing through a great sorrow. Fear of disaster to property by frost was also wiped out by this same study. Class teaching, so wisely provided by our Leader to aid us in this study, has been of inestimable value.

Is it any wonder that I am thankful to God, and grateful to our revered Leader, who has again brought to humanity this truth that makes men free? I am also grateful for our literature, and for our beautiful hymns with their healing

Digitized by Google

words, as well as for our church services, and for our Lesson-Sermons, which point us ever to God as the only power, and teach us that health and strength are our true heritage, for, as the Bible tells us, "now are we the sons of God."

MARY D. CLARK, Los Angeles, Cal.

✧

A few years ago Christian Science came to our family. This, as is so frequently the case, was through the wife, who was willing to lay aside creeds and dogmas and think for herself; brave enough to close her ears to the dictates of innate prejudice as well as to the criticism of public opinion. As a busy business man and a member of an orthodox church I, however, thought I had no time to devote to new ideas, or to follow, as I thought, strange gods.

About this time our boy was just entering school in a northern city, and owing to a nervous trouble we found it impossible to get him to attend. Though he was under the almost constant care of the family physician, he would remain in school only a few minutes, until the teacher would be compelled to send him home, and frequently he would return before he reached the building, crying as though his heart would break, and saying that he wanted to go but could not. This continued for several months, during which time I was bitterly opposed to Christian Science and refused to permit his being treated, though I was perfectly willing to do all I could in other ways; but one day I was pleased to be informed that he had attended school that day without a whimper. This was repeated to me several evenings, and finally one evening he climbed up on my lap and said, "Daddy, I have not missed a day at school for three weeks and I have not cried once, and if you will promise not to get angry I will tell you something." He then informed me that he had taken treatment in Christian Science and was no longer afraid.

His treatment was then continued without opposition on my part. I was an inveterate smoker at the time, and had been for some fifteen years or more, and every attempt to break off the habit left me in physical and mental anguish, until finally I would return to the habit only to smoke the more. Several weeks after the above-mentioned incident I was walking along the street with a cigar in my mouth when I became conscious of the unnaturalness of the habit and its unpleasantness to those I loved, and then came the question of its real pleasure, if any, to me. I stood there on the busy street for a moment with the half-consumed cigar in my hand, then I tossed it into the street and passed on.

That was the last cigar that ever touched my lips, and since then I have not used tobacco in any form, though for all those years I felt lost without a cigar in my mouth and never smoked less than eight or ten a day. There was, however, no struggle this time, and during the seven years following I have had no desire for tobacco. Preferring to make sure of my ground, I said nothing at home for about two weeks, but one evening, as my little girl, then five years old, climbed upon my lap, I said, "Baby, do you know daddy has stopped smoking?" She answered, "I knew you would." I asked her how she knew I would, and she said, as she threw her little arms around my neck and kissed me, that she and her brother did not like to kiss me when I smoked, so they declared the truth for me. There was no sign of fear or doubt, but just that sweet sense of confidence and love that the Master must have seen when he said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." In Isaiah we read, "A little child shall lead them," and thus it was that I was led into the light.

During the seven years that we have been interested in Christian Science, we have been greatly benefited in many ways. Glasses, which I had worn for a long time, were laid away; rheumatism, from which I had suffered for years at frequent intervals, disappeared. But of the many blessings we have received, the one for which we are the most thankful is the healing of our boy of a severe case of illness, which a Chicago physician pronounced tuberculosis of the bone, and which he said would keep him in the hospital for months, if it did not leave him a permanent cripple. He was never sent to the hospital, but for months was practically helpless, at best being able only to drag himself upon crutches around the house.

It is impossible for one not familiar with the circumstances surrounding this case fully to appreciate the wonderful cure effected through Christian Science. At the time of the healing the boy's spine was curved, his hip completely out of joint, and he was scarcely more than skin and bones. His right leg was absolutely helpless and useless. He could move it only with his hands. Almost immediately after the healing, he began to grow in height as well as in weight. When he laid aside one crutch, he could barely touch the ground with his right toes, but in a few days he had discarded his other crutch, and then one cane, and finally, in three or four weeks from the time of discarding the first crutch, he had no use for either cane or crutch. Some five or six running sores on his leg and hip healed entirely, his hip went back into shape and place, and almost in a day his spine became normal. It seemed as though his left leg grew much more rapidly than the right one at first, and when it was fully developed his right one was still short and scarcely larger at the hip or calf than at the ankle. Today one can scarcely note any difference in the two, and he walks erect. The boy is now fifteen years old, in the first year of high school, and is in perfect health.

My heart is filled with gratitude to God for these blessings, and I am thankful to Mrs. Eddy for the sacrifices she made to give us an understanding of this wonderful healing religion.

W. R. CONNER, Chicago, Ill.

✧

My nephew has been healed in Christian Science. It was while his mother was visiting us that we learned that he had a goiter, and later he came to us to ask for the address of a gentleman living somewhere near Beaver Falls who could give him treatment in Christian Science. As we did not know the man's address, we told him of a lady who had once helped my husband when he had a severe cold accompanied by rheumatism. My nephew then requested me to write to this lady and ask for treatment for his neck, which he said had been troubling him for some time. It was noticeably enlarged and pained him at intervals, with sharp though not continuous pains. He had consulted the best doctor in this place, a member of the board of health, who told him nothing could be done with it until the tumor had grown larger, when it could be removed by an operation. He went to another doctor, but finding no help, he turned to Christian Science. After the first week's treatment there was no more pain, and the swelling kept going down gradually, until after about three months there was no noticeable enlargement. He then asked to have the treatment stopped, as he saw no need for any more. Meanwhile, he had also been helped to find employment.—MRS. WILLIAM BEIGHLEY, West Sunbury, Pa.

✧

It is with an overflowing sense of gratitude that I send my testimony, with the desire to help others to realize the good of Christian Science. I want to let all know the blessing it has been to me. I see clearly that all my bringing up was in the wrong belief, for now at an advanced age my eyes are

Digitized by Google

being opened to the truth. I am a Crimean veteran with two medals, a Crimean medal and a Turkish medal, while my age is eighty-seven.

I know that God is not the author of sickness and trouble, and I cannot express my gratitude and delight in knowing this in a practical way. It was about a year ago that a lady called on my daughter and helped her in Christian Science. She also lent me some *Sentinels*, which I enjoyed greatly, and I asked her to get me the loan of "Science and Health with Key to the Scriptures," the book that was mentioned so often in the *Sentinel*. She did so, and I enjoyed it so much that I felt I must have one of my own to keep. The lady got me one, and since then I have read very little else than the Bible and Science and Health, and everything has been most helpfully opened up. I can now read the Bible with a greater understanding and joy than ever before.

Just before Christmas, 1912, I was taken ill, and a doctor was called in. He said I had bronchitis, and that it was very serious at my age. He gave me medicine, and I took a little, but then felt that I could not take any more, that I must rely on God alone. I knew that He is the only healer. The same Christian Science friend came to see me and we had many talks. I could only say that Christian Science was lovely. My granddaughter and grandson also came and had Science talks with me. I was at first afraid to take my food, and my breath was very troublesome, but the lady told me I could eat what I liked, and I did so and enjoyed it. She asked another practitioner to come, and I then realized the help and gradually got better. The doctor called a few times and could not understand why I had improved so quickly. He said I must have a good constitution, but I knew that it was Christian Science which had helped me. I soon got quite well, in fact better than I was before the illness, as I had always suffered with short breathing; but now I have no trouble whatever, and can take my daily walk and enjoy it. My sight was getting poor and I was thinking about getting stronger glasses, but now I can see much better than before and sometimes can read without glasses.

I cannot express my thankfulness to God for all His goodness and love. I am also very grateful to Mrs. Eddy for showing us how to lay hold of this saving truth. My chief desire is to gain more understanding each day.

CHARLES PIPPETT, Bristol, England.

❖

Mrs. Eddy says, "To those leaning on the sustaining infinite, today is big with blessings" (Science and Health, Pref., p. vii). This statement of Christian Science is supported for me by many proofs of Truth's healing power. When I compare the past year in Science with those before it, years of sickness, sorrow, and suffering, my heart is filled with gratitude to God and thankfulness to our Leader for the "spiritual understanding that casts out evil as unreal" (p. 497).

Through disappointment, discouragement, and despondency, I was changed from a happy, care-free girl to a semi-invalid, trying every possible material remedy for healing. Having exhausted the skill of medical men, I took other treatments, and as my condition would not permit much exertion, I had to board near the office where these were given. For a short time I gained rapidly, but a reaction set in which left my condition worse than at first. I was on the verge of deep despair; but the lady with whom I boarded had been healed in Christian Science and I had become interested in it through literature which she had given me, so I sent for a practitioner and experienced almost immediate relief.

The spiritual uplift was, however, the most wonderful of all, and it has brought many other blessings. It is my daily source of joy, and even in my sleeping hours beautiful messages of divine Truth are received. While my progress has seemingly been slow, I know all error will yield, and with Paul I can say that these light afflictions, which are but for a moment, work out for me "a far more exceeding and eternal weight of glory." Through the clearer understanding of Truth attained by my own efforts and those of a loving practitioner, often, in working out my own salvation, there comes that blessed realization, "I will fear no evil: for thou art with me," and harmony is restored.

A few months ago, when my dear mother passed on, I was comforted by the sustaining power of divine Love. The thought of God as the only Life destroyed the sense of separation, which otherwise would have been unbearable. At times when grief would seem to control, the words, "He that loveth father or mother more than me is not worthy of me," again enabled me to prove the worth of divine Science. It has not yet been my privilege to attend any Christian Science service, but I have the *Quarterly* and study the Lesson-Sermon each day, which I find very helpful, also the many publications which our Leader has so lovingly provided,—the *Sentinel*, the *Journal*, and the *Monitor*,—all of which constantly hold before us the things that are lovely and true. Our "Shepherd Song" covers every step of the way, and all of these I count as precious treasures of Truth.

I am so thankful to know this blessed way in my youth, that I may make it my guiding chart, for I have found that God is Life, and God is Love, therefore no foe can harm me.

NORA BROWNE, Yale, Mich.

❖

It is over five years since I began to study Christian Science. At that time I was very unhappy. I did not take up the study for physical ills, although I needed this help. I thought I would first read the book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to see what it taught, and have treatment later. I wanted peace of mind and harmony at once. I got the book and started to read: but as I had very bad eyes I could not see without my glasses. I tried to get along without them, but in vain. One day, however, after I had read Science and Health for about three weeks, I took the glasses off, and have never used them since.

I had a very bad stomach disorder, and was troubled with neuralgia and sore throat in the winters. I was always taking some kind of medicine, had it constantly on hand, and the last doctor said I would have to undergo an operation sooner or later. All these difficulties were surmounted in six weeks by reading Science and Health. I have witnessed the demonstration of the power of Love in my home in overcoming discordant conditions, and I find that I can forgive those who have wronged me. I have experienced quick physical and mental healing for myself and others, and since this experience I have had the benefit of class instruction. I am thankful to God, and grateful to our dear Leader for this wonderful truth which makes us free. I am also grateful to all who have helped me to know more of Truth's healing power.

HATTIE C. GAY, Terre Haute, Ind.

❖

I wish to tell briefly of my healing through Christian Science, and of the many benefits I have received through the study of Science and Health in connection with the Bible. In 1901 I was bitten by a polecat, and poisoning soon set in. Sixteen days later I was taken to Oklahoma City to a Christian Science practitioner. When treatment began I could not stand on my feet, but within a week I was able to walk, and in a few weeks I was healed. Since that time I have

Digitized by Google

studied the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, almost daily, and many are the ills which I have thereby met and overcome for myself and family. Occasionally I have helped others too. One case in particular was that of a little boy who was badly affected with a skin disease. His mother asked me to treat him, and I did so. I gave him treatments for two weeks, and he was perfectly healed.

For all of these healings I am deeply grateful, and I am sincerely thankful for the free and generous gifts of divine Truth. I am also grateful to Mrs. Eddy for showing us in her works the way to health and holiness.

ROSA BUFORD, Arapaho, Okla.

✧

[Translated from the German]

About three years ago I was in an extremely nervous condition, with attacks of dizziness and asthma, the latter in a very severe form, and not one of the various physicians whom I consulted was able to afford me relief. The trouble was growing worse, when my attention was called to Christian Science by a dear friend. I was given several copies of *Der Herold der Christian Science*, which I read diligently; but not being able to see my way, I asked for Christian Science treatment, which was taken up immediately. After a few treatments I experienced relief in a measure, but the main trouble did not yield. The chief reason for this was, that I seemed unable at first to grasp the teachings of Christian Science, although I used every effort in this direction,—it all seemed so intangible and the error so real. My friend explained to me that I must have patience, for with God's help every error would be overcome. Her words proved true in my case.

The healing process was slow though sure, for six months elapsed before the troubles began to yield. Then the headaches and the dizziness gradually disappeared and my appetite improved, but the asthma seemed difficult to overcome. I never had a good night's rest, for I went through torment, as it were, and was weighed down by fetters out of which no one could deliver me save God, on whom I called. He brought me out of a vale of woe into a valley of delight, for the asthma yielded little by little, and now I can say with a grateful heart that I am freed of it. For this wonderful healing which I have experienced through Christian Science I wish to express my deep-felt gratitude to God, as well as my thankfulness to our dear Leader, Mrs. Eddy, who has made known to us the way to Truth.

HEINRICH STRADTMANN, Celle, Germany.

✧ ✧ ✧

[Written for the *Sentinel*]

True Success

EDITH C. CARTER

MAN cannot fail!
Success in every effort is assured
To him whose steadfast trust is in the Lord.
Who casts his burden on omnipotence,
Is freed from deadening weight of mortal sense,
And grasps with humble joy the living fact
That of himself alone no smallest act
Is done. Thus turning to the perfect Mind,
As flowers in sunlight all their color find,
From Life he draws eternal, tireless might;
From Truth, unchanging certainty of right;
From boundless Love, unfailing tenderness.
And so, with God-filled thought that can but bless,
He rises to the joyous consciousness
That those who strive God's goodness to express
Can never fail; theirs is divine success.

From Our Exchanges

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

Happiness is our right; happiness is the natural desire of every heart. It is the one thing which in all his strife man is seeking, even when he does not know it. Nor can he ever cease from the search, even though he never finds it, for the heart will have no rest save this. Sages may tell him that it is an ambition unworthy of man, moralists prove that the search is vain, history show that few have ever found it; yet nothing will dissuade him: he is made that way, and cannot alter now.

Strange, though, that the race should be molded all down history by something that does not exist, and man all his life by something he has never seen; that we should all be haunted by a desire which we cannot define, save by negation of all that we are or know. We dream of some condition, we imagine some achievement, we labor after some ambition, believing that there for us happiness lies hid, but when we have attained we find that anticipation gave the prospect a coloring which fades as we approach: the blue is still on distant hills, the rainbow just as far away. Then is this one ideal that touches all, nature's trick to keep us moving on, a trick that still succeeds when its deception is discovered? Or is it love's game to lure us to reality? There is no other alternative, and this leads out to sunny faith and that to dark despair. Our thirst for happiness is either man's plague or God's purpose, and the mind will tell us which. It cannot be a trick of nature, for to play tricks needs a mind able to see the end from the beginning; a trick is, after all, a design, and we are borrowing the language of purpose. And life shows, too, that the quest for happiness is not a plague, for sometimes we get very near to it. It is because we know this much of it that we long for more, long for it to last forever. Indeed, it is because we know it so well by mystic knowledge that we are never content with what we are or have. Either we have fallen from it or God has sown the seed within our soil.

[*Western Christian Advocate*]

We of this modern age have unnumbered reasons for gratitude in the possession of wealth, privilege, opportunity, and power that our fathers never knew, and could not, by the wildest flight of fancy, anticipate. These marvelous inventions, equipments, luxuries, are occasion for profound and ceaseless gratitude, provided they inspire us to nobler service and to a more unselfish and holy living. Otherwise we have to bemoan our prosperities, and to wish that we might get back to the simplicities of our earlier national life, when men lived in homespun and fed upon the bounties of nature, and thanked God "for his goodness, and for his wonderful works to the children of men."

[*The Christian World*]

We are full of prophecy today, and of the best kind. There lies in the hearts of men everywhere the portent of a mighty change,—the change from national enmity and suspicion to a new feeling of mutual amity and trust. The war-makers, the war-mongers, realize it, and are ill at ease. Their craft is in danger. The trade in which they have enriched themselves; the trade in hatred, suspicion, and fear, in the brutal instincts of men, in the false glories hitherto attached to conquest and slaughter,—all this is today shaking and trembling as though an earthquake moved beneath it. A new thought has entered men's minds. This colossal

Digitized by Google

weight of armaments which is crushing down our civilization.

What, men are asking, has created it all? It is a thought that has created it; just a thought, and a bad one. Put a good thought in its place and the incubus will disappear. That good thought is now in process of incubation. By and by it will emerge in its full strength, and we shall see wonders. The world is trying the power of faith, and already it is moving mountains. One nation trusts another with its money, trusts all races and color of peoples with it, and finds the trust just and. Now men are saying: Why not trust a little farther; credit these peoples with the common sense, with the good feeling which settles difficulties by reason instead of by daggers, and which pronounces definitely and once for all against the cut-throat, robber cult of the barbarous ages? This faith, too, will justify itself. The great prophecy will be realized, because it is founded on a sure thing, on the everlastingly-true nature of the good in its all-sufficiency over all that opposes.

The Personal Issue

What religion has touched the spiritual life of the humblest of men, it is not to stop there, but is to extend and spread from every experience in which it is done to a new motive, and governed by new expectation and corrected with the whole creation. What religion touches the spiritual life of the greatest, it is not to stop there, but is to put the touch of the hand to that by the training of the mind and to that by the consecration of the heart. So, great or small, the mastery of the whole life. It means that we are to be no longer not alone in the church, but in our business, in all our social relations, in the political affairs of the nation, in the art, and even in the study of the universe. So, great or small, we are good and bad, good to make machines or to do the work of machines, or to govern and to teach nations, to teach the laws of the universe or to [illegible] the laws of the whole life and relationship of all men.

The Personal Response

[illegible] has been a [illegible] [illegible] [illegible]

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Uniformity and Unity

ALFRED FARLOW

UNTIL Christian Science could be recorded, as in her written works, and a movement established by means of which a propaganda could be carried on, it was necessary for Mrs. Eddy to act as the personal Leader of this great cause. To this end she formulated the policy of the Christian Science church and placed its execution in the hands of the church's officers and members. Into this movement have been gathered men and women from all walks in life. Some of these have been accustomed to look to others for orders, while some have been accustomed to following their own way. Many of the former need to cultivate greater independence, and many of the latter to subject the human will to the demands of Truth. Since in the church each must be governed by absolute Truth, divine Principle, mere human opinion must be laid aside, else the spirit of independent self-assertion will predominate and the self-willed become a hindrance to the cause, or become severed from it.

The Christian Science movement might be likened to an army acting under the instructions of a given commander. One soldier has been accustomed to a long stride, another to a short stride, but on the march each must comply with the step ordered by his officer in order to effect concerted movement; otherwise confusion and dissipation of force would result. Without organization and without legitimate authority, effective warfare could not be maintained, for the officers would lose control of their men, and each soldier would be left to fight after his own fashion, without respect to rules or regulations.

To illustrate: Suppose the men of an army should stop while on the march or in the activities of a battle, and should gather in groups to advocate plans of procedure differing from those adopted by the general of the army, and although still maintaining their loyalty to the cause, should undertake to put these divers plans into execution. It can be readily seen that under such circumstances there could be no possible success. The individual may successfully plan and operate his own affairs according to his private opinions, but the affairs of a company or an organization must be subject to the control of a central authority and conform to an order which is uniformly adopted.

When one joins the Church of Christ, Scientist, he practically agrees to comport himself according to its rules and regulations as set forth in the Church Manual, and the unity of thought and uniformity of action essential to success can come only by strict obedience thereto. The effort must be "a strong pull, and a pull all together." A movement must advance *en masse*. There can be no "go as you please." The opinion of each individual must be subordinated to the rules and regulations adopted by the body of which he is a member. There must be absolute uniformity in order to maintain unity and provide for progress.

It is well for us to remember just here, that a reasonable sacrifice of personal interest for the good of a worthy cause never injures one's individual development, but on the contrary aids his true advance. It nourishes humility and increases spirituality. Under the light of Science we understand that one can never lose anything that is really beneficial or retain permanently anything that is harmful. The great Teacher required of his followers that each should "take up his cross" and deny himself daily. This surrender of the human will was no doubt one of the "hard" things of which the disciples on another occasion complained, but it was in the truest sense a good thing for all who, seeing the greatness of the cause for which they stood, cheerfully obeyed.

The members of an army must not only move in unison, but they must move without interference. Each must not only keep himself erect, with gaze directed forward, but he must use care that he does not elbow, push, or block his comrades. A soldier whose handling of sword, bullet, or bayonet is awkward enough to wound a comrade, or whose untrained footstep is clumsy enough to trample upon him when wounded, is considered a disgrace to the army. So a Christian Scientist must conscientiously fill his own place, while he is careful not to interfere with his neighbor's work by unlawful competition, unjust encroachment, or unreasonable interruption. As Paul wrote to Timothy, we must each "war a good warfare; holding faith, and a good conscience." We should keep in sight of one another, in step, and in line; but the individuality of each must be honored and respected.

Mrs. Eddy gives sound counsel on this line in "Retrospection and Introspection" when she says, in the chapter entitled Exemplification (p. 87): "Christian Scientists are to 'heal the sick' as the Master commanded. In so doing they must follow the divine order as prescribed by Jesus,—never in any way to trespass upon the rights of their neighbors, but to obey the celestial injunction, 'Whatsoever ye would that men should do to you, do ye even so to them.'"

✧

True Service

MARY HORNIBROOK CUMMINS

"WHEN I first began to study Christian Science," one said recently, "I tried to use it to reclaim that part of the city in which my work appeared to lie, and I did not succeed. Afterward, when I had gained a better understanding, I was willing to let Christian Science use me, and I found my right vocation." It is probable that most of us have made this discouraging effort to limit Christian Science to our individual problems. We have thought, perhaps, that we could help ourselves to just as much of it as we wanted and let the rest go; or we have been willing to accept all that our understanding made possible, but desired to put the new wine of spiritual power into the old bottles of human contrivance, and in both cases the result has been unsatisfactory. Or, again, we may have welcomed the benefits which some knowledge of the healing truth brought to us, but have not been willing to take our stand wholly and openly on the side of Truth. This latter is a fraudulent thought which would seek to deprive the kingdom of heaven of laborers, and which

Jesus characterized as "thieves and robbers." In each instance the attempt is made to climb up "some other way."

The Master pointed out but one way, "If any man will come after me, let him deny himself, and take up his cross, and follow me." The cross, now as then, means complete identification with the cause of Truth. It means merging every personal interest in the one absorbing interest of bringing in the kingdom of heaven. And when the path seems rugged, let us always remember that it is smooth as compared with the earthly road which Jesus trod. "Ye have not yet resisted unto blood," wrote Paul; and this the Master did.

In every walk of life there are people who do not identify themselves with those whose interests they are supposed to serve. Such can be easily dispensed with and replaced at a moment's notice; but the man who seeks first and always his employer's advantage, is a marked man. He is valuable, and his advancement is usually rapid. We all need to remember Paul's advice to Timothy when speaking of spiritual things, "Give thyself wholly to them." It is not a question of solving our particular little problem, but of bringing "all the tithes into the storehouse," of using all our strength and courage in the glorious work of establishing the kingdom of heaven on earth. This is the goal which the true Christian Scientist has ever in view. He may stumble and rise again; he may have his discouraged moments; he may even seem to onlookers to fail in his effort to follow fully his inner vision of the Christ; but, like Sir Galahad, his strength will be as the strength of ten because his heart is pure! With Paul he can say, "I count all things but loss for the excellency of the knowledge of Christ Jesus my Lord."

When we have reached this point in our progress we are content that Christian Science shall use us. We begin to find our proper place in God's plan, and it is no longer necessary to give even a passing thought to material supplies, for "all these things" are added unto us. "The unspeakable peace which comes from an all-absorbing spiritual love" (Science and Health, p. 264) is ours, and we can gladly say, in the words of the hymn,—

Love so amazing, so divine,
Demands my soul, my life, my all.

✧

Healing Testimony

REV. RICHARDS WOOLFENDEN

In the "Manual of The Mother Church" we read: "Testimony in regard to the healing of the sick is highly important. More than a mere rehearsal of blessings, it scales the pinnacle of praise and illustrates the demonstration of Christ, 'who healeth all thy diseases'" (p. 47). This statement has appealed to the writer with much force of late, for it was through testimony of healing in Christian Science that he first heard of this teaching.

I had spent three months in the United States and Canada, touring in search of health, and had returned to England no better, but rather worse, in consequence of having pinned my faith to a medical specific which I found there. Strange to say, I never heard of Christian Science healing during that visit to America in the fall of 1901, but on coming home it was the first thing which claimed my attention. A member of my church came to tell me of her own healing, and what appeared to be the still more wonderful proofs of healing in her sister's family. Through this, the first Christian Science testimony I ever heard, I was led to make personal investigation of the truth of these statements, and afterward took up the study of the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which ultimately brought me entire freedom from the trammels of scholastic theology. Through it I was also delivered from what had become to me the irksome yoke of a ministry which had proved to be in my case at least a mere professional following of Christ, and not the divinely appointed way which calls for the healing of the sick. Three years ago I was provided with an opportunity of proving the truth of Christian Science healing over the claims of physical sense, and the outcome made me still more grateful.

One morning I awoke with this passage from Psalms running through my mind, "Seek the Lord, and his strength: seek his face evermore." The recollection of these words in the newly awakened consciousness brought that peace *and* pleasure experienced only by those who have accustomed themselves to this mental habit. No sooner had I stepped out of bed, however, than sickness and nausea well-nigh overwhelmed me, for I was attacked by an old enemy. For a moment the temptation was strong to return to bed for the day. This would have been my certain action before I knew anything of Christian Science, but now was the time to take God at His word. This word had been given me, and there and then I decided to trust it.

I proceeded to dress in the strength of Truth, but on coming to the breakfast table the temptation appeared in a more subtle form, for there before me was the very food the sight of which would have completely overcome me in the old days, when I should have asked for it to be taken away and a simple diet served instead. Again the word of God came to my aid, "Seek the Lord, and his strength." Quick as thought I relied upon it, sat down to the meal, and enjoyed it heartily. Before I was half-way through, the healing was complete. Now I know what it is to enjoy all my food, and never to live in fear of any of it. That old trouble is gone forever, relegated to the limbo of "chaos and old night."

This incident gave me such a clear illustration of the value of our Leader's great work in opening up the spiritual interpretation of the Bible, that I have been more than thankful for it ever since. My object in writing about it now is to show how the spiritual interpretation was brought to light. On taking up the Lesson-Sermon that morning, I found in the Bible reading this text from Isaiah: "And it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear." How beautifully that was proved in this instance I can never forget.

The passage which came to thought in the early morning was given to meet my need. Supply was present before the occasion for its manifestation had yet arisen. The demonstration over the appearance of evil was abundantly provided for. On looking up the words in Psalms, I found in the margin a reference to the first book of Chronicles, where the same psalm appears in its historical setting. Here the word "continually" appears in place of the phrase "evermore." This threw a new light on the meaning of the psalmist, making his message of more practical import, for to seek the strength of God continually is just the open secret of divine, metaphysical healing.

Again we turn to our Leader's works, and find the whole situation summed up in a passage of immediate worth. In the chapter entitled The Great Revelation, in "Retrospection and Introspection," Mrs. Eddy writes, "If you fall asleep, actually conscious of the truth of Christian Science,—namely, that man's harmony is no more to be invaded than the rhythm of the universe,—you cannot awake in fear or suffering of any sort" (p. 61). I gladly testify to the truth contained in this statement, having proved it many times. Others may prove it for themselves, and thus learn how their reliance is to be transferred from material beliefs to spiritual

Digitized by Google

realities. Success in truth is attained when we learn to make a beginning with God.

Referring one to God as the divine Principle of all being, is the simple rule of Christian Science healing. The application of this rule reveals a spiritual power always at hand, which can be utilized by every child of God. By using it "continually," he comes to discern the illusory nature of all of error's claims, and soon attains the joy of knowing that divine Love is helping him all the time.

Purpose and Prayer

JANE E. HUDDART

AT first sight it seems strange that the vision of the Christ and the remarkable conversion of St. Paul came at a time when he was engaged in a very evil enterprise, for it would seem that the divine message could not possibly be heard by one whose thought and endeavor appeared to be wholly set on the destruction of those who were serving God. Looking farther, however, we see that the persecutor and the persecuted were agreed on many points, especially that of the destruction of evil, its elimination from human experience.

Saul of Tarsus thought that he was serving God and humanity by persecuting and trying to exterminate the disciples and followers of Jesus of Nazareth, as witness his own words spoken to the Jews: "I . . . was zealous toward God, as ye all are this day. . . . I persecuted this way unto the death, binding and delivering into prisons both men and women." It does not seem probable that a man of such high character and ideals as those of Paul could ever have been influenced by mean and petty spite against personality. He did not make war against people, but against what he believed to be evil. It was doubtless a right motive and desire which enabled him to see the vision of the Christ and to perceive right methods of warfare against the common enemy, the seeming power of evil. He then devoted the same zeal and courage to the propaganda of the gospel of Christ which he had shown before in persecuting Christian believers.

Does not this apply to many splendid characters in our own day? Men are devoting time and talent in their effort to destroy evil, the common enemy, and in their present ignorance of what Christian Science is, are classing it as a public menace. When we look at the motives actuating these men, we see how it is just as possible for them to have visions as it was for Paul. We see also why it is that after hearing a sermon or address against Christian Science so many people take up the study of this subject. The man who raises his voice against what he thinks Christian Science to be, is very likely concerned for the welfare of humanity and the uplift and betterment of human conditions. We know that "desire is prayer" (Science and Health, p. 1), and that all right desires reach God. Assuming, as we are disposed to, that all these men earnestly and sincerely desire to learn about God, to know more of the truth that makes free, and because "all things work together for good to them that love God," their good purpose is fulfilled in the fact that more people begin to learn the way of Life as revealed in Christian Science. Jesus said, "Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake," which might be rendered, Blessed are ye (humanity), when with even a false sense of service, rendered to Truth, men shall persecute you, and say all manner of evil against you, my followers.

In Science and Health we read: "Students are advised by the author to be charitable and kind, not only toward differing forms of religion and medicine, but to those who hold these differing opinions. Let us be faithful in pointing the way through Christ, as we understand it, but let us be careful always to 'judge righteous judgment,' and never to condemn rashly" (p. 444). It is the motive which must be examined before we can really judge aright. When those who, like Paul, see the vision and then devote their time and talent to the cause of Truth, any tendency to indulge in remorse will be healed if they simply realize gratitude for the fact that they were divinely hindered from harming their fellow men; that their prayers for humanity were answered in a way and measure far beyond their expectation, as in the case of this apostle, who said that after all his mistakes "the kindness and love of God our Saviour toward man appeared." This came with his vision, and come it must to all who love their fellow men and seek after Truth.

"God is light"

ROBERT C. BRYANT

CHRISTIAN SCIENCE lays great emphasis on the Bible teaching that "God is light," and that because God is omnipresent we are always in this light. As Mrs. Eddy has said, "Whatever is governed by God, is never for an instant deprived of the light and might of intelligence and Life" (Science and Health, p. 215). The human sense of darkness is a belief in the absence of light, the absence of God; but this is a false belief which is dispelled by the truth.

I had occasion a few months ago to drive fifty miles in one day through the Rocky mountains. My companion and driver was a hardy native son, familiar with the roads and accustomed to handling horses. Our route lay through an unsettled country, with only two or three points of human habitation along the way. We were delayed in starting till nearly noon, and when night came we were still about twelve miles from the end of our journey. All the afternoon we had observed that a storm was gathering, and as the darkness settled down the storm came on and the rain and snow beat directly into our faces. There was no moon, the sky was heavily overcast, and soon it was so dark that we could not see our horses, much less the road. Under ordinary circumstances horses may be trusted to keep the road at night; but our horses had traveled forty miles, the storm was beating directly into their faces, and they were inclined to turn to one side or the other at every opportunity.

We were traveling along a mountainside. On our left was a steep bank, with a river at the bottom. We could hear the water rushing over the rocks. The horses had been drawn down to a slow walk, and when the wheels struck a stone evidently not in the road, my companion stopped them entirely and said it was not safe to go on. It was, in fact, so dark that he thought he had lost his sight entirely, from straining his eyes. We both knew that we could not stay where we were through the night, thus unprotected, in the storm, but I had been declaring for myself the truth that sight is wholly mental and is dependent upon understanding; that physical eyes and optic nerves have nothing to do with it; that in Mind there is no darkness or knowledge of darkness; that Mind sees and knows and understands all things; that man, reflecting God, knows the way and sees the way. A flood of Scriptural truths came to me: "The Lord is my light and my salvation;" "God is light, and in him is no darkness at all;" "In thy light shall we see light," and other texts.

I took the reins from the driver's hands and started the horses, striving to know that error could not keep us from seeing the truth and the way. In two or three minutes my companion exclaimed, "Why, I can see the road plainly; can you?" I was already rejoicing in the light, although the

Digitized by Google

storm had not ceased; in fact, it continued for two days. One place in the clouds ahead of us seemed lighter than elsewhere, and for the rest of our journey we drove at a brisk pace, every turn of the road being plainly visible.

Thus night and darkness may seem to come to us, the way may be obscured, and we may be afraid; but if we turn to God, infinite Mind, the darkness is dispelled and the way made plain, as it was for God's people of old, for, as Mrs. Eddy tells us in Science and Health, "there is no place where God's light is not seen, since Truth, Life, and Love fill immensity and are ever-present" (p. 504).

An Appreciation of Christian Science

MABEL FREESE DENNETT

THOUGH I am not a Christian Scientist, I have recently come into sympathy with the movement through first-hand knowledge, obtained from friends, experiences, and the reading of copies of the *Monitor* and *Sentinel* which have been sent to me from time to time. For many years the only impressions I had of Christian Science were received from the adverse criticisms and unfavorable comments sent to me by other friends. These biased my mind and awakened strong prejudices against it.

While in a hospital, however, recovering from an operation, a small pamphlet entitled "Prayer and Healing," issued by The Christian Science Publishing Society, was handed to me. I read it carefully, noting the beauty of many thoughts. Some time after this I became interested in the *Monitor* and greatly appreciated its stand for clean journalism. Nevertheless, no lasting impression for good was received until July, 1912, when a devoted Christian Scientist, having the supervision of my husband's business, and at that time our only acquaintance in the Science faith, paid us a brief visit. The day of his arrival I was suffering with what is known as broken arches of the feet, of five years' duration. Soon afterward the pains began to lessen, and to my great surprise and delight I was able to be on my feet without annoyance. From that day I have never experienced the old pains. Besides this I have had the same use of my feet that I had before the arches broke, wearing, instead of the special shoes worn for several years, anything that I choose, and enjoying the extended walks which for so long I had to forego. I am also accomplishing nearly twice as much as formerly, going about the common round with the joy of an athlete and dispensing with a regular helper. One reason for the accomplishment of a greater amount of work is that I have regained the quick motions and dexterity which characterized my younger days. What makes my recovery seem remarkable, however, is the fact that only a short time before this healing my physician told me never to expect my feet to be well, owing to the duration of the broken-down condition.

Simultaneously with the more complete physical effectiveness there has developed a more complete mental and spiritual unfolding for Christian and social service, and with new responsibilities added power has come, while a deeper consecration for the Master leavens all. Lately I have been reading with interest the Christian Science literature at hand, finding new meaning in the pamphlet previously referred to, "Prayer and Healing," and prizing for its spirituality the leaflet, "If Ye Abide in Me," reprinted from the *Sentinel*. Once, upon the occasion of a union service at the church of my membership, I attended the Wednesday evening meeting at the Christian Science church, and a phrase from one of the testimonies has become a household word in our home, so that whenever our five-year-old son is hurt or troubled, his voice rings with a declaration of man's God-given dominion, and comfort follows.

Since that service I have become acquainted with several Scientists, and have noted their fine character, thoughtful attitude toward vexing problems, and emphasis upon life's brighter side. One Sunday I invited to my home a young girl whom I had known for some time, as she had until recently been connected with the church of my denomination. How surprised I was to note that instead of being frail, diffident, and unresponsive, as formerly, she was well, interesting, alert, and able to give an answer for every question asked concerning her new faith, Christian Science! The more I talk with these new friends and read their literature, the more I realize that theirs is an intense religion of methodized thought containing vital truths of right living.

Thus I have reason to be glad for all the gates which lead into the city that "lieth foursquare," feeling sure that these Christian Science friends who take Him at His word, banishing fear, refining and disciplining their wills, practising the presence of God, and looking for the quickening of their mortal bodies "by his Spirit" (to quote St. Paul), will have an abundant entrance therein. I thank God upon every remembrance of them, and pray that to us all may be given

The will to fashion as we feel,
The strength to labor as we know.

✧

[Written for the *Sentinel*]

Right Reckoning*

MARY I. MESECHRE

GROUPED quietly near the window,
Some little ones, tired of play,
Were conning again the lessons
They had learned in school that day;
While indoors I, with my problem
Unsolved at the set of sun,
Heard, "Three times nothing is nothing,
And one to carry is one."

I lingered there in the twilight
And pondered my problem o'er,—
All my unavailing efforts
To make the result count four,—
But now, rebuked by the children,
I was given grace to see
I'd failed because I had reckoned
That "three times nothing" as three!

Some insignificant cipher
In the problem of daily life
Too oft we count as a factor,
Till our work with failure seems rife.
Again let us heed the children
Whose lessons are scarce begun,
And reckon nothing as nothing,
And measure our sum by one.

No matter how long we reckon
Some cipher as real to be,
The time will come in our counting
Of "three times nothing" as three,
When eyes long blind shall be opened
To the useless work we've done,
For all "times nothing is nothing,"
Since God is the only One.

*See "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 275, line 10).

Selected Articles

[Frederick Dixon in *Birmingham Weekly Post*, Birmingham, England]

In a recent issue, under the heading "Is Seeing Believing?" is discussed in a brief note the teachings of Christian Science and Buddhism with respect to the unreality of material phenomena. As the point of view of these two teachings is so fundamentally different, permit me to draw attention to it. Seeing ceased to be believing to the thinker very many centuries ago. The Eastern philosophers discounted it, and though their Western successors, with an adherence as they fondly imagined to that blessed word "practical," for a time decided in favor of the evidence of the senses, they have gradually been forced to accept an idealistic for a materialistic basis, with the result that Sir Oliver Lodge tells us today that a walking-stick is no more than a quantity of disconnected electrons moving at a tremendous speed.

If we leave out the medieval conceptualists, the first man who familiarized the public in this country with the idea of the unreality of matter was Bishop Berkeley. Of course the discovery that the earth was a globe and not a plane, and that the earth circles round the sun instead of the sun round the earth, had previously caused men to realize that things were not exactly what they seemed. Nevertheless, it was reserved for the Bishop of Cloyne to reduce material phenomena to a mental concept. As has been said, there was nothing new in this. All these theories, however, welded the spiritual and the material together in an indissoluble mass. It was reserved for Mrs. Eddy, in the nineteenth century, to insist that spiritual idealism was something different from this, and to point to the gospel as the text-book of spiritual science.

The illustration used by your contributor, that the Buddhist insists that the dream of the sleeper is as real as the dream of the man who is awake, scarcely does justice to the philosophy indicated. Ultimately, however, Buddhism, like Western idealism, makes spirit dependent on matter, so that in all these teachings spirit, in the words of a well-known churchman of today, becomes the ultimate of matter. This is what Christian Science so strenuously denies. The only reality, Mrs. Eddy insists, is God and the spiritual universe. Evil and the material universe are, scientifically speaking, unreal, and are neither dependent on nor connected with the spiritual reality. Spinoza got rid of evil by making evil good. The Vedantists got rid of it by describing it as Maya, or illusion; but they proceeded to make this Maya just as real as Bishop Berkeley's matter, by joining it to "the Supreme Self" as the producer of the cosmic soul.

In Christian Science Mrs. Eddy insists that the only reality is God, or good, and that as nothing real can exist outside reality, evil, in whatever way conceived of, can be nothing but the suppositional opposite of good. This, she points out, is the teaching of the Bible, which declares that everything was made by God, and made good. If, then, evil exists as a reality, it can only be on the Spinozistic theory that evil itself is good, or else on the Berkeleian theory, which in a way is the Vedantic one, that good is the ultimate of matter. Both these theories are frankly contradictory of the teaching of the Old Testament, and as frankly contradictory of the teaching of the New Testament, in which Jesus described evil, personifying it, after the manner of the age, as a lie, which abode not in Truth. Of course, if Mrs. Eddy had stopped here, with a mere theoretical definition of reality, she would have reduced herself to the level of the theologians who describe God as the only creator and evil as a reality, or of the natural scientists who base their theories on an electron which nobody has ever seen, or on an ether which has never been discovered. Instead of doing this, she based her theories on practical demonstration, and she necessarily chose the demonstration demanded by Jesus, of preaching the gospel in conjunction with healing the sick. In this way she made the healing of sorrow and sickness and sin the demonstration in proof of the truth of the teaching of Christian Science, with the result that for the first time since the days of primitive Christianity, humanity was given a religion which it was not asked to accept as something to be realized in a world to come, but as something provable in its present existence, in accordance with the saying of the Founder of Christianity, "The kingdom of God is within you."

✧

[Edmunds Travis in *The Austin* (Texas) *Tribune*]

The attacks made by Dr. Biederwolf upon Christian Science have unpleasantly surprised local Scientists, who, with other Christians, looked for many good results from the evangelistic meetings. The doctor would hardly dare attack the Methodist, Presbyterian, or Baptist doctrine, yet these are no more Christian than the creed of the Scientists. His latest attack, made upon Mrs. Eddy's declaration that "man is incapable of sin" (Science and Health, p. 475), is, like all that he has said, entirely undeserved. Mrs. Eddy had reference, as every Christian Scientist knows, to the spiritual man, the real image of God, that must necessarily reflect God, and therefore cannot sin. The evangelist's apparent acceptance of the statement that the "soul that sinneth, it shall die," if he takes this to mean that the Spirit, the divine man, perishes, does away not only with the doctrine of future punishment, but also with the doctrine of immortality.

Christian Scientists do not ask the doctor to believe as they believe, but they do ask and had expected of him a more tolerant attitude toward a faith founded, as his own is, on the Word of God.

✧

[Frank Bell in *The Democrat*, Johnstown, Pa.]

If those who indulge in public comment on the subject of Christian Science would only take the trouble to inform themselves as to its teachings and practise, there would be no occasion for complaint, because men have an undoubted right to express their honest opinions concerning differences of belief. Almost invariably, however, that which is offered as an unfriendly criticism, is in fact a criticism of something that is not Christian Science at all. A case in point is the summary of remarks on the subject as printed in a recent issue.

Christian Science does not teach that matter is unreal or non-existent to the human sense of things, or that human beings are immune from sin, sickness, and death. Quite the contrary, it teaches that matter and its discords are inevitable conditions of belief in what is called material life; but it emphasizes the fact that these are no part of the true life, which is essentially spiritual. The point is clearly illustrated by the simple statement that man, made in the image and likeness of God, is not, could not be, material; because God is Spirit, and His image and likeness must be spiritual.

The student of Christian Science begins to get acquainted with his real self, and he finds this knowledge helps him in many ways. His ability to think rightly about himself is made increasingly manifest in better health and morals. Quarreling with the language of its text-book is not the way to stop the progress of Christian Science. So long as it continues to make good its promise to heal the sick and reform the sinner, it will maintain its marvelous growth

Digitized by Google

throughout the world. Those who accept prejudiced or ignorant misstatements concerning it, instead of testing it for themselves, are merely postponing the day of their own inestimable betterment.

✧

[Algernon Hervey-Bathurst in *Evening Mail*, Newcastle-on-Tyne, England]

In a reference I have read, in a recent issue, to the speech made by Lord Sandwich at University College, mention is made of Christian Science, which is classed among "methods" which profess to heal by the manipulation of the mind. Christian Science practise has nothing whatever in common with any such influence. The one thing which a Christian Science practitioner does not, and indeed can not do, is to control the mind of his patient. "Let this mind be in you, which was also in Christ Jesus," is the Scriptural injunction, an injunction which Christian Scientists strive daily to obey. The mere control or manipulation of the human mind can result in nothing more than a change of belief, not in increased spiritual understanding.

In exactly the same way as the knowledge of the truth about a false statement in mathematics, such as that three and three are seven, corrects that mistake and proves that it never was true, so the correct understanding of God and man, as taught by Christ Jesus and reiterated by Mrs. Eddy, must inevitably result in the healing of the belief in the reality of what the great first cause or creator never did create. Christian Science is to be compared with nothing but the teaching of Jesus the Christ, which it reiterates, and any system not strictly in accordance with his teaching, bears not the faintest resemblance to it.

✧

[Charles I. Ohrenstein in *The Post-Standard*, Syracuse, N. Y.]

Several articles have appeared in *The Post-Standard* referring to Christian Science. One of these, an editorial, spoke appreciatively of a stanza from one of Mrs. Eddy's hymns, but concluded with the statement that this "expresses not Christian Science, but Christianity." Another gave the impression that the Christian Science movement is in financial difficulties; and an item, the report of a lecture, stated that the speaker included Christian Science in what is called "New Thought."

There are many interpretations of Christianity; and while Christian Science is apparently not the one accepted by the editorial writer, this should hardly be taken as an occasion for branding it other than Christian. The assumption that "orthodoxy is my doxy," and "heterodoxy is another man's doxy," is no longer entertained by broad-minded people. The fact that the stanza spoken of was the outgrowth of Mrs. Eddy's experience in the promulgation of Christian Science, and that its sentiment is acknowledged to be Christian, is proof in itself that Christian Science is Christianity.

As to the financial affairs of the Christian Science movement, let it be said that no difficulties are being experienced. With respect to spiritual thought bringing affluence, commented on in this editorial, reference might be made to the Wayshower, Christ Jesus, who fed the multitude, provided tribute money, and wine for the marriage feast, because of his spiritual understanding. Also, the children of Israel were fed with manna, and otherwise abundantly provided for, when their thought was spiritually directed.

With regard to the "New Thought" item, it is only our purpose to have it understood that Christian Science has nothing in common with it or with mesmerism, hypnotism, or spiritualism, which it is claimed "New Thought" also includes; nor has Christian Science anything in common with any new or old thought except that emanating from the Mind "which was also in Christ Jesus," which self-evidently is Christianity. The item further stated one theory of "New Thought" to be that "man's body is a magnet, every cell a soul, and love the magnetizer." No better statement could have been selected by the lecturer to show the difference between this teaching and Christian Science, the one depending on bodily magnetism and the other on the divine Spirit. In this connection it may be interesting to readers to see what the apostle Paul, in the fifth chapter of Galatians, gives as the results of magnetizing the flesh,—giving it coercive influence or power; and also, of giving power where power belongs, to divine Spirit, or God.

✧

[H. Cornell Wilson in *The Star-Gazette*, Elmira, N. Y.]

A report from Sayre of the sermon of Dr. Stough, published in *The Star-Gazette*, quotes this gentleman as saying, "I hate Christian Science; I detest anything that will minimize the enormity of sin and its punishment."

I venture to say that every reader of *The Star-Gazette* who is familiar with the teachings of Christian Science, and even those readers who know Christian Science only through witnessing its fruits, will agree with me that our critic does not "hate Christian Science" at all. He "hates" only his own misconception of it. Nothing less than a complete misunderstanding of Christian Science could induce this minister to say that Christian Science "takes away man's sense of sin and tells him he is not so bad as he is." If this were its teaching, Christian Science would long ago have ceased to be a factor in the religious and moral activities of our time. What we see, however, is that Christian Science has been so successfully overcoming and destroying sin and its accompanying results, sickness, disease, and sorrow, that the movement has attained a position as one of the remarkable religious developments of the centuries.

Christian Science brings deliverance from sin. It reveals sin's unreal nature and origin, and turns the individual from it with loathing. Phases of sin heretofore deemed incurable have been found to yield their vaunted dominion through Christian Science. Every Wednesday evening testimonies may be heard, the world over, in fifteen hundred Christian Science meetings, expressing gratitude to God for redemption through Christian Science from the hold of sin in one of its myriad forms. Christian Scientists, without exception, are able to state that they are improved morally and spiritually, even as they have been benefited physically, by Christian Science. Moreover, this is a fact to which the friends and acquaintances of Christian Scientists can bear witness.

The unchristian and unscientific views of evil promulgated by some religionists, ascribing to evil a power equal to and even greater than God, or good, are necessarily at variance with Christian Science. The orthodox theory that a pardon for sin may be had in answer to prayer, or by divine clemency, is also denied. On this point the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, says: "Prayer is not to be used as a confessional to cancel sin. Such an error would impede true religion." "To suppose that God forgives or punishes sin according as His mercy is sought or unsought, is to misunderstand Love and to make prayer the safety-valve for wrong-doing" (pp. 5, 6). The same authority states also, that "divine Science reveals the necessity of sufficient suffering, either before or after death, to quench the love of sin. To remit the penalty due for sin, would be for Truth to pardon error. Escape from punishment is not in accordance with God's government, since justice is the handmaid of mercy" (p. 36). "The way to escape the misery of sin," Mrs. Eddy further

Digitized by Google

says, "is to cease sinning. There is no other way." "A sinner is not reformed merely by assuring him that he cannot be a sinner because there is no sin. To put down the claim of sin, you must detect it, remove the mask, point out the illusion, and thus get the victory over sin and so prove its unreality" (pp. 327, 447). These quotations are sufficient to show that our critic's views regarding Christian Science are entirely unfounded.

✧

[George A. Law in *The Morning Record,* Meriden, Conn.]

A contributor, under the caption, "Ideas of a Plain Man," after having stated that "the history of civilization is the story of a long conflict with pain," among other things says, "We have even produced a sect that denies that there is any suffering in this world." Inasmuch as others have entertained this absurd notion concerning the teaching of Christian Science, I am prone to believe that the foregoing statement may have reference to the Christian Science denomination. That your readers may not be misled and so share in this mistaken concept of Christian Science, kindly allow me to assure them that this is precisely what Christian Science does not deny. On the contrary, its teaching in this respect is that suffering, including pain, sickness, discord, etc., is experienced only through a false sense of existence, and that it has no rightful place in the life of the true spiritual man, the image and likeness of God, mentioned in the true account of the creation as recorded in the first chapter of Genesis. The fact that Christian Science is engaged in a campaign against suffering, to eliminate it from the experience of humanity, is sufficient proof of the fallacy of the assertion made.

In closing, the writer of the article in question asks, "Is pain after all a bad thing?" Is the question intended to convey the idea that he considers it a good thing? A study of Scripture reveals the fact that God created all good, therefore if pain is good, God must have made it; and hence we not only have the incongruity of a God who is Love afflicting His children, but when we attempt to destroy pain and provide hospitals and asylums for unfortunates, as stated in the article in question, we are manifestly endeavoring to relieve conditions which God has created, conditions which necessarily operate from the activity of His law. Then, again, we have the spectacle of Jesus, not only destroying something which God has created, but teaching his followers how to overcome and exclude pain and suffering from life. It is too apparent to need emphasizing, that if pain emanated from God, and is good, Jesus would not have devoted his life to the healing of sickness and sin. He taught his followers by practical demonstration how to assume dominion over these destroyers of man's peace and happiness, which dominion is man's rightful heritage. His admonition to "preach the gospel" and "heal the sick," Christian Scientists are striving to obey.

✧

[John W. Doorly in *The Halifax* (England) *Courier*]

A correspondent who signs himself "A Student of Christian Science," seems quite sure that he knows all about Mrs. Eddy's teachings, but unfortunately for him he has only that "little learning" which "is a dangerous thing," and this I will show quite shortly.

Christian Science teaches that God's man is spiritual and indestructible, that he is the image of perfect Mind, or God. It also teaches that mortal man is but a false, material sense of this perfect man, and bears to this perfect man the relationship which two and two are five bears to two and two are four. Now, your correspondent has failed entirely to grasp the fact that Mrs. Eddy in her writings discriminates between this true man and the false mortal sense of man, and hence he has got himself into a hopeless muddle in his statements as to what Christian Science teaches about the body. His statement is utterly incorrect, and cannot be found anywhere except in the fervid imagination of such critics as your correspondents, who allow their desire to disprove the teachings of Christian Science to overstep their wisdom in making criticisms.

The critic states that Mrs. Eddy says in her book, "Jesus is a mortal belief which disappeared." Evidently the critic did not care to quote Mrs. Eddy's own words, as had he done so his statements would undoubtedly have fallen flat. In her book "Science and Health with Key to the Scriptures" (p. 589), Mrs. Eddy says, respecting Jesus, that he is "the highest human corporeal concept of the divine idea, rebuking and destroying error and bringing to light man's immortality." This definition at once disproves your correspondent's statement, and also disproves his equally erroneous statement that Christian Science teaches that Jesus Christ did not come in the flesh. On page 332 of Science and Health, Mrs. Eddy says that "Jesus was the son of a virgin. He was appointed to speak God's word and to appear to mortals in such a form of humanity as they could understand as well as perceive." It would be quite possible and quite easy to take every one of this correspondent's statements and disprove them, but enough has been done to show that the critic's perverted sense of Christian Science is in no way what Christian Science really is. Moreover, he does violence to the facts when he states that Christian Science "converts no sinner from the error of his ways, transforms no evil life or character." Perhaps it would be impossible to make a statement which contained less truth than this quotation from the critic's remarks. The redemptive gospel of Christian Science has proved itself in the healing from sin and disease of a vast multitude of people, and there are few towns or villages today in which are not to be found living witnesses of this fact.

In conclusion, may I draw this correspondent's attention to the fact that Christian Science has proved and is proving itself to be that "Comforter," or "Spirit of truth," which Christ Jesus promised; and whether he considers this statement blasphemous or not, the fact remains that humanity is appreciating it and lives are being changed and reformed by it in a way that no other religious teaching of today is doing. "By their fruits ye shall know them."

[Written for the *Sentinel*]

Revelation

GWENDOLEN EDWARDS

We put our trust in men and things,
And men and things do fail us;
Our hopes sink down with broken wings,
And bitter doubts assail us.
We walk with bleeding feet along
A stony pathway, stumbling;
From our tired lips doth die the song,
To dust our world seems crumbling.

And then athwart our darkened way,
A golden ray comes gleaming;
We look, and lo! the star of day
Upon our path is beaming!
And all our world is full of light,
And every man our brother,
For Truth hath dawned upon our sight:
Love is our Father-Mother!

Editorial

Practical Preaching

THE fact that church attendance has so largely fallen off in late years has greatly disturbed church people, and many have been the expedients tried for the purpose of reversing this condition, the latest being the "Go-to-church Sunday" movement which is now holding the attention and the hopes of so many religious people. Of this movement *The Chicago Evening Post* writes, editorially, as follows:—

We are watching an interesting movement in Chicago. A concerted effort is being made to reinterest the people in the church. The effort is in itself an admission that there has been a drifting from the church, a growing indifference to its message and its claims.

Obviously little is to be gained by increasing the congregations for one day, and those who are so earnestly engaged in the present campaign would be greatly disappointed were that to prove the net result of their labor. The hope is that if a special effort can effect a contact between thousands of non-churchgoers and the church, the contact will deepen into a permanent relationship for many. If that hope is to be realized, there must be some consideration by the churches of the reasons for the popular indifference which it is now sought to overcome.

Men who are six days engaged in the struggle for existence, their minds burdened with the anxieties of providing for material wants, their hearts heavy with the compulsory service of mammon, their ideals battered and besmeared in the heat and mire of the conflict, ask of the church what hope it offers of emancipation from this thraldom.

It is a real thraldom. If men are to take interest again in spiritual things, they must find some way of freedom for their spirits. The needs of the body, not of choice but of necessity, so press upon them now that they have neither time nor space for spiritual exercise. The immediate concern is not the righteousness that will win them mansions in heaven, but the righteousness that will create better conditions on earth. Under existing conditions it is the merest mockery to say to a man with nothing but his job between him and hunger for himself and his family: "Take no thought for the morrow."

It is not enough to cry out that this is a materialistic age. The cry is a weary platitude on the ears of those who are the unwilling slaves of materialism. If the church is the spiritual force it claims to be, it must prove its claim by courageous and effective warfare against those conditions which have made men the servants of things rather than things the ministers of humanity.

Evidences are many that the church is awaking to this opportunity and obligation as never before. There are signs of a spiritual revival, not of the old heaven-and-hell type so much as of a God-and-my-neighbor kind. *The Evening Post* wishes success for the go-to-church movement, a success that will mean closer intimacy between the church and the masses of the people.

It is obvious, as the *Post* says, that "little is to be gained by increasing the congregations for one day," and the results of this movement will depend largely on the impression made upon those who attend on this particular day, an impression which it is hoped will convert them into regular attendants. The problem then would seem to be to present Scripture truths on this particular Sunday in such a way as to convince the wayfaring man that religion is not simply theoretical or academic; on the contrary, that it is a daily help for daily needs. He must be assured that religion is in fact able today as of old to "bind up the brokenhearted" and "to comfort all that mourn." Last but not least, it must be demonstrated to him that the sick are even now healed through Christian ministry as in the days of Christ Jesus and the early Christians. In short, to the man to whom the daily bread for himself and family is the most pressing need, the church must offer that "living bread" of which the great Teacher said, "He that cometh to me shall never hunger; and he that believeth on me shall never thirst," and with the same assurance that it will relieve his anxious thought. It must prove to them "that labor and are heavy laden" that the Master's yoke is indeed easy and his burden light by showing how the burden of sickness, want, and woe may be lifted from shoulders bowed under their weight of care. Just to the extent, then, that the full gospel of Christ Jesus is preached and practised, in other words, religion is made practical, to that extent will the churches appeal with conviction to that large class of people whom they have thus far failed to reach.

To one who has carefully studied this problem, it is evident that the reason why church attendance has fallen off is because the churches have not met the needs of those who expect to receive practical benefit through religion. The problem, then, is not one for the unchurched people to solve, but for the churches themselves to consider. It is also evident that the churches must change their ways before they can expect the unchurched masses to change theirs. If, on this so-called "Go-to-church Sunday," the churches fail to expound and make practical the full gospel of Christianity, including the healing of the sick, they must not expect *any* great permanent increase in their congregations. Christ Jesus commanded his followers to "heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." Obedience to this commandment, religion made practical, will fill the churches every Sunday.

ARCHIBALD MCLELLAN.

"Pay thy debt"

IN the fourth chapter of II Kings we find the beautiful story of the widow who in her deep trouble went, not to a money-lender, but to Elisha the prophet, of whose spiritual power she was not ignorant; for even at that early day it was recognized that knowledge is power. We are told that this woman's husband was one of the sons of the prophets, a glorious line of those who stood for the truth as against the idolatry of their time. Elijah, their great leader, had risen to a nearer sense of life, and Elisha, his devoted follower, remained to instruct and to cheer the faithful.

The story of this widow's sad plight is well known to all students of the Bible, and it has many lessons for us. The Christian Scientist loves to dwell upon its setting forth of the divine supply for a great need, which recalls most vividly our dear Leader's oft-quoted words, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). There is, however, one lesson which should not be forgotten, and it is found in the prophet's command, "Pay thy debt." This was the first obligation resting upon the woman in this particular instance, and divine Love had provided her with abundant means whereby to respond to what seemed a stern demand of justice. Her response would, however, give her freedom from the condemning thought of her creditor, as well as that of all others who knew of the debt. With this weight lifted, by the operation of spiritual law, she could joyfully give heed to the further command, "Live thou and thy children of the rest."

Paul, who stood firmly for righteousness in all things, said, "Owe no man anything, but to love one another." He insisted upon the payment of all debts to God and to man,—the dues of gratitude, justice, honor, and reverence, as well as the more material debts. He must have known that all unpaid debts imply selfishness, self-love, and self-gratification, mortal tendencies which are very apt to develop unchecked in times of material prosperity, when the wealth of others seems to invite some people to lavish expenditures which quite overlook the demands of Principle. It is true that limitation is unknown in the kingdom of God, the realm of infinite Mind, but it rests with us to prove our place in that realm by seeking "first" its "righteousness," not the gratification of the material senses by the sacrifice of honesty and honor, of peace of mind and self-respect.

The difficulty with most of those who heedlessly incur debts, is that they disregard the almost certain annoyance caused to others, and what is even worse, the sense of insecurity which is apt to prevail where people live "beyond their means" and

Digitized by Google

also beyond their actual demonstration of Science. Christian Science establishes healthful conditions not alone in the lives of individuals, but in the body politic as well, and in so doing it never loses sight of the demand for righteousness. This of course calls for greater and greater spirituality, a setting of our affections on things above and beyond the material, and demands obedience to the divine requirement, voiced by the prophet Micah,—"to do justly, and to love mercy, and to walk humbly with thy God."

In "The First Church of Christ, Scientist, and Miscellany" (p. 114) Mrs. Eddy says: "Owe no man; . . . be honest, just, and pure; cast out evil and heal the sick; in short, Do unto others as ye would have others do to you." Our debt to divine Love is very great, but we can help to pay it by loving one another, and this can often be done by setting an example of true and noble living to those who may not yet see clearly the demands of divine Principle. In so doing we shall better understand the Master's saying as to becoming "rich toward God," and laying up lasting treasure "where neither moth nor rust doth corrupt, and where thieves do nor break through nor steal."

ANNIE M. KNOTT.

True Brotherliness

THE Scripture saying, "None of us liveth to himself," has always been seen to be ethically true, and today it is becoming manifest that it is also economically true; that is to say, the Christian call to fraternalism is being enforced by the requirements of self-protection. The ills and penalties of individual sin being laid in an important sense upon all, men can no longer ignore the demand for social unity. Through his responsiveness to the Christ-appeal, or through his afflictions while resisting the demand of social ethics, every man must learn to be considerate of every other. All thoughtful people are seeing this, the fraternal tide is increasing both in its movement and in its immensity every day; and in this we can rejoice, though greatly tempted sometimes to discouragement in view of the enormity of the human problem.

The brotherhood to which men are being driven by economic and other conditions, is not however the brotherhood to which we are impelled by the Mind that was in Christ Jesus. The world's trade associations, guilds, etc., ofttimes mean little more than well-entrenched monopoly. They are not the exponents of that all-inclusive social justice, that universal well-being which the prophets so constantly identified as the fruitage of righteousness. Clan consciousness always tends toward class consciousness, and, as has been well said, "the consciousness of brotherhood and class consciousness are enemies each to the other," the latter being the precursor of that caste which with respect to every lower rank is nothing less than stereotyped selfishness.

Christian brotherhood is the direct product of that sense of the divine unity of which Mrs. Eddy has said, "With one Mind and that God, or good, the brotherhood of man would consist of Love and Truth, and have unity of Principle and spiritual power" (Science and Health, p. 470). Divine Love's objective is humanity, and its reflection in us must be all-compassionate. This is the teaching of Christian Science, its distinctive goal, and its every worthy representative is seeking to acquire and continually manifest a genuine redemptive affection for every man, yes, and every creature. True brotherhood is absolutely non-exclusive; it is the enemy of every wrong and unfairness in the world. He who in loyalty to God and man exemplifies the Christ-idea, can but become thereby the world's good friend. He lays his hand upon the head of individual need, but his blessing is bestowed upon all mankind. He thus expresses the greatest fact of revelation, namely, that God loves everybody.

It has been said that the most potent influence which links physical scientists together is the consciousness that they are all "serving the same mistress." Each is sustained by the conviction that his effort contributes to the universal progress of science. So, too, Christian Science awakens the scientific sense of racial unity, and thus begets and establishes universal comity and compassion. It teaches, moreover, that we love men aright, that is, redemptively, only as we know man aright. When every unideality is removed from our concept of man, then we are capable of estimating the loss and disability of those who have fallen among thieves, and can feel that Christlike compassion which makes one glad to go to them and bind up their wounds. This true brotherliness means active effort to remove every circumstance and condition, and annul every law and custom which robs "one of the least of these" of a fair chance, and thus it would "make an end of life's stupendous jest."

The fulfilment of the Master's prayer, "That they may be one, even as we are one," seems far removed when we look out into the world; but if when we look within we see the dawning light of his scientific realization, then we may know and rejoice that our faith and love are helping mightily through God to bring about this consummation of the ages.

JOHN B. WILLIS.

Notice

Attention is called to the "Special Announcements" column on page 438 of this issue, in which the publisher of Mrs. Eddy's works announces the publication of a pocket edition of the "Church Manual." There have been many requests for an edition that would be convenient for constant reference, and as every member of The Mother Church should be familiar with its rules and by-laws, this special edition of the Manual will doubtless be a welcome addition to the working library of every Christian Scientist.

Among the Churches

Current Notes

KNOXVILLE, TENN.—The activity springing from the good work done at the Christian Science booth at the national conservation exposition, which was held in Knoxville, Tenn., through the months of September and October, 1913, is being felt on all sides; for not only was the literature freely distributed to those desiring it, but on many occasions the word of God was spoken with healing in its wings. During the two months' run of the exposition we gave away 277 *Journals*, 956 *Monitors*, 989 *Sentinels*, 1,356 pamphlets, and 41 *Heralds*, making a total of 3,619 pieces.—*Correspondence.*

BRAUNSCHWEIG, GERMANY.—An edifice has been under construction since the latter part of May, 1913, on a lot of land (Hedwigstr. 1), which is intended to serve as a home for the Christian Science denomination, and the pleasing exterior of which promises to be an ornament to that part of the city where it is situated. The edifice is in the modern Romanesque style, and its auditorium has a seating capacity of seven hundred. An open space will become available in front of the edifice after the old houses surrounding it have been pulled down. After the completion of the preliminary work, the corner-stone was laid last Monday [Oct. 6, 1913], the event being marked by a simple and dignified ceremony.

The Lectures

Webster City, Iowa

The sixteenth annual lecture on Christian Science, given under the auspices of the local church, was delivered at the Armory Opera House by Virgil O. Strickler. The speaker was introduced by H. M. Sparboe, who said in part:—

Christian Science is not a new religion; it is the reawakening of a slumbering race to the truth demonstrated by Christ Jesus and his followers over nineteen hundred years ago. I take it that those who believe in the Bible, believe that Jesus healed and taught his followers to heal the sick and the sinner contemporaneously. We believe that the same simple teachings of the Scripture are being better understood today, and are being given a more practical application to the needs of humanity. If, as the Scriptures claim, God is omnipotent, omniscient, and omnipresent, can we believe that He leaves us to shift for ourselves and that He is either unwilling or unable to relieve us of our physical ills? Is it not more reasonable to believe that His unchanging spiritual law, if properly and scientifically understood, will protect us against and relieve us from the seemingly inharmonious conditions that surround us?

The critics of Christian Science cite an occasional failure to heal as a reason for condemning it. The same line of reasoning would condemn every church denomination for failing to convert every person with whom it comes in contact. It would condemn the laws of mathematics because some student failed properly to demonstrate its rules. To say that the age of Christian healing has passed because Christians as a rule have ceased to practise it, is as unreasonable as it would be to assume that God's forgiveness of sin has passed because there are so many sinners who do not avail themselves of it. We believe that the saving and healing power demonstrated by Jesus and his followers is present with us today just as surely as is the power of electricity, which until recently has been an unused force and has been little understood.

The Daily Freeman Tribune.

✧

Schenectady, N. Y.

Bliss Knapp, lecturing on Christian Science at the Mohawk Theater, was introduced by Mayor Lunn, who said in part:—

It was a pleasure for me to reply in the affirmative to the request of your committee that I should introduce the lecturer this afternoon. As I looked upon this audience, I could not help thinking of the remarkable difference in the state of mind of the public today, in America at least, over what it was a decade or so ago. The human mind is a very wonderful instrument. It is almost as tenacious of its hold on what is called "error" in the way of prejudice, as it is on the truer things. That is the appearance, but in reality it is not so. I cannot help looking back to what existed a few years ago, when the very name of Christian Science was synonymous with, or rather suggestive of, the prejudices that do not exist in the minds of those who have really thought out the fundamentals of life. We have come at least to that point where every man of good will and every woman of good intent desires to know the truth, for the truth alone makes us free.

It has been my pleasure to hear your lectures, and to be present at your magnificent home church in Boston, where I witnessed a most inspiring service, a service that did me good, and that would do any one good. Fundamentally, deep down, we are all alike, when we get down to Truth, for Truth is not many, but One. I am sure that you have given us a most helpful interpretation of the great reality of God. Speaking of God as Mind, Truth, Life, brings us into contact with concepts that are inspiring. We all love righteousness when we see it, and we have an inherent affection for justice. The very words inspire the best that is in us. Personally I feel that we are coming to the day when we will realize that the essence of all being, the very center of this universe whom we call God, is not simply just, good, righteous, and loving, but is justice, love, truth, righteousness. This interpretation is inspiring; it is my declaration of faith. How far it agrees with yours I do not know.

These fundamental ideas are most helpful for the daily routine of life; therefore I welcome to this city, as its chief executive, the lecturer of today. I welcome him not only as mayor, but also as a minister and a member of the Ministerial Association; and I am sure it is not often that he is welcomed by such a combination.—*Correspondence.*

✧

Los Angeles, Cal.

The second of a series of lectures on Christian Science was delivered by Judge Clifford P. Smith in Third Church of Christ, Scientist, before an audience which filled the building. State Senator William E. Brown of this city, in introducing the speaker, said:—

Nearly a century before the birth of the Saviour of mankind, Israel's greatest prophet declared of those who were to receive his teaching, "The people that walked in darkness have seen a great light: they that dwell in the land of the shadow of death, upon them hath the light shined." In this day Isaiah's prophecy is again being fulfilled, the people that walked in darkness have indeed seen a great light; a light that is dispelling the shadows of sin, sickness, and death; a light that is exchanging "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness;" a light that "lighteth every man that cometh into the world."

Today this divine light is shining upon the dark places of earth through the teachings of Mrs. Eddy in Christian Science. Already it is a proved fact that this Science is the "Sun of righteousness" arising "with healing in his wings," and multitudes have come out of horrible shadows of mortality into the sunshine of divine Love. It is to learn more of this light that we are assembled here this evening, and we are fortunate to have with us one who is qualified to speak authoritatively upon so vital a subject.

Los Angeles Examiner.

✧

Mitchell, S. Dak.

Francis J. Fluno, M.D., lectured on the tenets of the Christian Science church before a large audience in City Hall. He was introduced by Prof. J. C. Lindsey, principal of the high school, who said:—

The fact that the members of the Christian Science church who have in charge these lectures, seek some one outside their church to introduce the speakers, seems to me proof that they are not prejudiced against those who are not members of their own organization. I like this breadth and toleration of the religious creeds of others. The days of religious persecution are not altogether over, I am sorry to say, but I am hopeful from a number of signs that there is to be less and less of it. I do not mind creeds, but I think no one should dictate to any one else what religious course he should pur-

Digitized by Google

sue. Let us not build our religious creed fences so high that we cannot see over them to find out how much good there is in some other creed. Let us remember that it is truth we are after, and the truth shall make us free. Throughout all time, progress in civilization has been made by persons or sects who are trying earnestly, as God gives them light, to do something not so much for themselves as for some one else or for some cause. And let us also remember that throughout all time, when progress has been hindered, it has been by some narrow individual or sect; by some one who could see nothing beyond his own limited and cramped horizon. This is not a new religion, as I understand it, but an attempt to follow more closely the teachings of the Christ, and we shall enjoy this evening hearing an able exposition, not of a creed or a belief but of a Science,—Christian Science.

The Mitchell Republican.

✧

Charlevoix, Mich.

Bicknell Young delivered a lecture on Christian Science at the Charlevoix Theater. He was introduced by Atty. R. W. Kane, who said in part:—

The radical stand of Christian Science for the supremacy of Spirit made it peculiarly susceptible to misconception in an age steeped and submerged in materialism, and aroused against it intense opposition. Gradually, however, at first, then more rapidly, and then with leaps and bounds, the cause gained headway, until now its adherents are numbered by the thousands and its organizations encircle the globe. Meantime, the battle between Christian Science and the materialistic thought has been waged unceasingly; and while the fierceness of the onslaughts of the opposition has to a degree abated, and the active opposition seems to be assuming milder forms, it has by no means ceased; nor is the popular thought as yet widely intelligent on this subject. There is still afloat a large amount of misconception and misunderstanding as to what Christian Science really is. As one of the means to meet this emergency and to remedy this condition, the board of lectureship of The Mother Church, The First Church of Christ, Scientist, of Boston, Massachusetts, has been established. The mission of the members of this board is not to proselyte. They do not argue with or labor with men to become Christian Scientists, but are content to state truly what Christian Science is and what it stands for, and to stop there, trusting in the power of Truth to vindicate and enforce the message they bring.—*Charlevoix Sentinel.*

✧

Bremerton, Wash.

A lecture on Christian Science was given in Eagle Hall by Clarence C. Eaton. He was introduced by Judge Walter M. French, of the superior court of Kitsap county, who said in part:—

For years there has been a restless spirit prevailing among earnest, thoughtful people, a feeling that those who were striving for better and higher things were not realizing in this life all that was possible, that many were placing hopes of happiness too much on the heaven beyond, and had not yet awakened to the possibilities of the present existence. Out of this spirit of longing and unrest have come many of the modern movements for spiritual progress. Less than half a century ago there arose a new teacher. At first her advocates and followers were few, but the lesson she taught has rapidly spread over the entire civilized world. We have come today to hear of this religion. Many of us do not subscribe to its teachings, but there are certain fundamental desires which we all have in common,—we all desire life, health, and happiness, and to know the truth. Those who do endorse the principles to be discussed here today are confident that their teachings proclaim the greatest truth and the highest happiness of all time, and the many wonderful demonstrations of the efficacy of this religion should cause every person to consider it carefully. Men do not gather grapes from thorns, or figs from thistles; and "by their fruits ye shall know them," is the test to be applied, for in the last analysis it is the only test by which a great moral movement can be judged.—*Bremerton News.*

✧

Vancouver, British Columbia

Central Hall was filled to overflowing by an attentive audience who came to listen to the address of Clarence W. Chadwick on Christian Science. He was introduced by the Rev. Mr. May of the Congregational church, who said in part:—

If I should ask that each person in this large audience tonight who supremely desires great earthly riches would manifest that desire by raising the hand, it would undoubtedly surprise us how many hands would not be lifted. But if I should put the question, How many desire, above all things else, happiness, all would vote in the affirmative. There is in the mind of man a universal conviction that real happiness is inseparable from goodness and truth. It is therefore with earnest solicitation that I bespeak an attentive and careful hearing of the words that are to be spoken tonight. I speak as an outsider, for I have never read Science and Health or any other of Mrs. Eddy's works. But I want to say, it affords me great pleasure to testify that Christian Science is a form of the eternal truth that does set the souls of men free and establish them in true happiness and righteousness.—*The Vancouver Columbian.*

Testimonies of Healing

[Translated from the German]

I have experienced so many proofs of the power of Truth and Love in my own case and that of others, that for some time I have felt I should send in my testimony. In March, 1906, I was taken down with hemorrhage of the lungs, and by August of the same year had had three recurrences. Upon the advice of our family physician I was taken to a sanitarium for lung affections in Goerbersdorf for four months, to be under treatment and have complete rest; but despite all this I had three more hemorrhages, and these were so severe that I became entirely disheartened. I now began to think of leaving the place, but the physician would not consent to it. He thought it great folly to undertake so long a journey in such a condition; but I could not stay there any longer, for I wanted to die among my relatives.

In this hour of despair I remembered Christian Science, of which my cousin had told me quite a while before. She had also sent me copies of *Der Herold der Christian Science*, which did not interest me at first; but now the time had come. I wrote to a Scientist in Berlin, asking for help, and the following day, after receiving a letter from the practitioner, I left for Berlin, with God as my friend and protector. I was in a happy frame of mind; I felt content and was without fear, so that everybody was amazed, for they did not know what had happened. After becoming better acquainted with Christian Science and having had two weeks' treatment, I returned home to my dear ones, not to die, but to live, and to find that the teachings of Christ Jesus can be demonstrated in this age.

Gradually, as I have grown in the understanding of Truth, I have been able to overcome all fear and false beliefs as they approached me. I now realize with a heart full of joy and thankfulness to God, and gratitude to our dear Leader who has shown the excellent way, that God is my life; therefore no error, no disease, can have any power where God is. I had a hard time at first, because I was all alone in this place and my family were opposed to Christian Science; but divine Love gave me strength to overcome everything. I am striving to obey the truth and at the same time destroy all false beliefs, so that I may at last reach the goal and manifest the perfect child of God. I think of the youthful David as an example, and I would be as fearless before every false belief as he was, for he said that God would fight for him.

I would also like to mention the following experience. I was called to a little boy belonging to one of our neighbors who had faith in Christian Science. As the boy was evidently very sick, I was at first afraid to answer this call, but it became plain to me that my personal self had nothing to do with the case, but that God, Truth, would be the helper, and I then responded gladly. The child lay still and motionless on the lap of his mother, who was crying bitterly. I took him on my lap, and thanked God earnestly for the revelation of Truth and Love which He has given to all who earnestly seek it and cherish no fear or misgiving, and the child became well that very hour. He soon began to talk and to play.

I cannot describe the feeling of gratitude which came over me. I would not exchange this glorious truth for all the riches of earth. My mother and sister have also had many proofs of the truth for themselves, but it is impossible to tell all in this testimony. In the hope that many who are suffering from false beliefs, and possibly near death, may be helped, I write these experiences, with a heart full of joy and gratitude.—Augusta Ney, Pölitz, Pomerania.

Since first becoming interested in Christian Science and trying to live in conformity with its tenets, the demonstrations which have been ours are so many and so varied that to show my gratitude for them, and perhaps help some other wayfarer, I feel bound to write of them. I did not come to Christian Science in the first place for physical healing, but became interested in it because it gave me for the first time a practical answer, backed up by proof, to the question which for years I had asked in vain, Whence come sin, sickness, and sorrow, and for what purpose do they come? I could not believe the orthodox teaching that God sent sickness and sorrow for our good, and that sin, though abhorred by Him, was inevitable; yet at the same time that we must do our best to avoid it, and in another world everything would come all right.

Shortly after first hearing of Christian Science I was married, and my husband being as interested as myself in this matter, we continued our study of it and felt convinced of its truth. With the little knowledge we have gained, many have been the "signs following." Severe headaches, that used to prostrate me for hours, have been overcome, and periodic attacks of indigestion, that used to last for a couple of weeks at a time, have completely vanished. With the aid of a practitioner, different forms of gout have been greatly relieved, and the birth of our child two years ago was rendered almost painless, with everything around most harmonious. Even above all this is the wonderful interest and understanding with which we now read the Bible, and consequently the help that we draw from it; and for this we feel unbounded gratitude to God for giving us such a guide to eternal life, and also thankfulness to Mrs. Eddy, who has given us the spiritual interpretation again, after centuries of darkness.

Emily Morrice, Wangford, Suffolk, England.

I wish to corroborate every word my wife has written. I bought a copy of Science and Health in 1896, but it seemed to me full of fancies and impossibilities, so I laid it aside. In 1904 I again sought to understand this teaching, and with a view to the physical healing of a dear relative I attended First Church of Christ, Scientist, in London, and was put in the right way of understanding by the kindness of one of the church-members. Since then, what began with a desire to help another physically, has gradually grown to an understanding of the real aim and object of our lives here; an understanding which, however small, unfolds daily; an understanding which has been made clearer by proof on proof, and which ever grows. The apparent difficulty of obeying the "great commandment" to love God above all else, and to love one's neighbor as one's self, becomes less and less of a difficulty as theory gives place to fact by means of demonstrations accomplished,—demonstrations of health, of peace, and of ease in the business matters of life. I never take medicine, and I never want it. I seldom worry now, for I realize the truth of life, and peace comes to me. When accident or trouble befalls,—and I have had experience of both,—the power of Truth comes to me quickly, while financial and business worries, which beset me steadily for many years, have turned into success, with a peace along lines far other than my intellect would have urged me to follow. I only wish that space enabled me to write one half of the benefits I have received. My firm desire and fixed intent is to continue to live in the way of our Master's teaching, that others may be led into this most perfect path.

Frederick Morrice, Wangford, Suffolk, England.

✧

It is with gratitude to God for the blessings daily bestowed upon me in Christian Science, and for the understanding of the Scriptures and the spiritual quickening which I have

Digitized by Google

gained through the teachings of our beloved Leader, Mrs. Eddy, that I give my testimony. I have been healed not only of headaches and stomach trouble, but of so-called organic disease and serious injuries.

In December, 1910, I had occasion to go up in the attic, and having only a plank to walk on I lost my balance and fell. My right limb went through the ceiling up to my thigh. I was so wedged in by the force of the fall that it was impossible for me to move. I was alone at the time, although I knew that God, who is ever present, was with me. I knew also that He would free me from my imprisonment, even as He had freed me from my adversaries before, and I declared so. How long I was hanging in this distressing position I do not know, neither can I tell how I managed to pull myself out, but when I was freed from my predicament my leg felt as though it were dead, for the blood had stopped circulating, and it being a very cold day I was thoroughly chilled. Two or three days after this I found that the kneecap was seriously affected, and a few months later my leg began to get stiff; then my knee began to swell, with very sharp pains, and it swelled to an enormous size. My friends were alarmed and told me I had better see a surgeon, saying that under certain circumstances Mrs. Eddy gives that advice in her book Science and Health; but I told them my faith was in the one and only power, and that was divine Love.

I then called for a Christian Science practitioner, being unable to treat myself because of the intense pain, and took treatment for about four months. Praise and honor be to God, to Him who healeth all our diseases, and who forgiveth all our iniquities, for behold, after much suffering the kneecap with a creaking sound went back to its place and is now as normal as the other. I can only express my gratitude by striving to know more of the truth of which our Master said, "Ye shall know the truth, and the truth shall make you free."

Mrs. C. F. Sheibley, San Francisco, Cal.

✧

I have had several proofs of the power and ability of Christian Science to heal the sick. I went to a practitioner one night, through a snow and wind storm, suffering intensely from earache. The lady gave me treatment, and I was healed instantaneously. As I was about to start home I began to cover my head again, but she directed me to omit the extra wraps and to go out as if there was no storm. The truth removed my fear of taking cold, and I did as I was directed, walking home three quarters of a mile. I have had no return of the trouble since, although I had suffered from earache every winter for several years.

It gives me pleasure to recommend Christian Science to any sufferer who needs help. I write this with profound gratitude to God, and also thankfulness to our beloved Leader for the blessings of Christian Science.

Mrs. L. J. Stickel, Pittsburgh, Pa.

✧

I wish to express my gratitude for what Christian Science has done for me and for my family. I was healed over four years ago of heart trouble, and of female weakness in its worst form, by reading and studying the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. My daughter also was healed of appendicitis and acute lung trouble. Since my healing I have never been in bed a day on account of sickness, neither have I taken any medicine or used material remedies in any form. I am truly thankful to God, and grateful to dear Mrs. Eddy for the truth that has delivered us from the "power of darkness," and "translated us into the kingdom of his dear Son." My greatest desire is to be worthy of being called a Christian Scientist.

Mrs. M. M. Hackett, Tribbey, Okla.

[Translated from the German]

With a heart full of gratitude I desire to tell others of the blessings which Christian Science has brought to me. I was healed of chronic female trouble, from which I had suffered for three years, and I trust that the good work will reach farther among the needy ones. I know that Christian Science will help all who are willing to study faithfully the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.—Mrs. O. H. René, Honolulu, Hawaii.

✧

I did not come into Christian Science through any physical healing. It was at a time when I was looking for something substantial on which to lean that Christian Science found me, and it has given me comfort and joy. Some time ago, while visiting in a small city in the middle West, I awoke one morning to find the ground covered with a deep fall of snow. I went out and swept the walks and the porches, but as I was not accustomed to this sort of exercise, that evening at dinner my arms ached so that I could hardly lift my food to my mouth; however, it was Wednesday evening, and we all went to the Christian Science church. While a testimony of healing was being given, I felt all the pain leave my arms as if a weight had been lifted from them, and I knew that the realization of the truth as given in that testimony had healed me.

This is only one of the many things that Christian Science has done for me. It has made the Bible, which I had packed away in a trunk, my daily companion, and I am always finding new and wonderful truths in it. I am also thankful for the Christian Science literature, as it teaches me to know more about God.—Marie D. Rice, New York, N. Y.

✧

Mrs. Eddy says (Science and Health, p. 1), "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God." This I know to be true. I came into Christian Science through the healing of my baby, for when he was a year old he had no use of his limbs, neither could he keep food on his stomach. We gave him medical treatment, but he grew worse, and it seemed as if there was no help for him. I became utterly disheartened and thought that nothing but trouble came to us.

It was at this time that I heard of Christian Science, through a very dear friend who came to see him, and after the first treatment I could see that he was better. Through continued treatment, and "absolute faith" in God, he was healed in seven months of all the trouble. I can say that I am truly grateful to God for Christian Science and for the benefits we have received from it.

Mrs. N. A. Brush, Whiting, Ind.

✧

I am indeed very grateful for all the blessings I have received since coming into Christian Science. I was healed of bowel troubles and severe attacks of colds. Other ills were also overcome through the loving work of a practitioner. I can hardly find words to express my thankfulness to God and my gratitude to our beloved Leader, Mrs. Eddy, for leading me to know that God is an ever-present help in trouble, and for the peace, harmony, and happiness which came into our home through this beautiful teaching.

Martha Hershelman, Chicago, Ill.

✧

It is with pleasure and deep gratitude that I give my testimony. I was a member of an orthodox church for twenty-three years, but a scoffer at Christian Science, although I did not understand anything about it. My husband and I

Digitized by Google

had occasion, however, to be in a Christian Science home, one of the members being a practitioner, and I was soon impressed with their love for one another, and saw that they possessed a religion superior to mine.

I was at that time wearing a heavy brace for spinal curvature (pronounced tuberculosis), and upon being asked why I wore it, I replied that it was my only means of support. I was then told that God never afflicted any one and He would heal me of my trouble. While talking to the practitioner the second day after having Christian Science explained to me, I experienced a pressure on my shoulders such as I had never felt, and I said that if there ever was a demonstration of Truth's power this was surely one. I had the brace removed, and have never felt the need of it since.

I had been living in constant fear, never going without the brace day or night. For two years I could not even sit up to be bathed without it, and I had been troubled with the spinal affection for eight years. Besides this I had suffered greatly with rheumatism for a number of years, also a bad form of stomach trouble, all of which have disappeared since I became interested in Christian Science. I took treatment for three weeks, and was healed in November, 1911. I have never used any material remedy since, but before that time I was continually traveling for my health, though nothing afforded more than temporary relief until I found that God is the source of every good and perfect gift.

I have surely given Christian Science a thorough test, for I worked three months in a store, then went to the farm, where I have been working from early till late and have found God to be my strength at all times. I have also found that Truth is always stronger than error, and Christian Science has made all things new to me. I had never been strong in my life, and never knew what perfect health was until I found the truth.—Anna Madden, Dover, Col.

As I have received many blessings from the teachings of Christian Science, I would like to tell of at least one experience with the hope of helping some one else. Two years ago my daughter, then twelve years of age, came home from school with what seemed to be a serious throat trouble. I gave her Science and Health to read, and did such mental work for her as my understanding permitted; but in the morning she was apparently worse, having high fever and much pain. I called a practitioner, but for three days she seemed to be now better, now worse. At the end of that time, however, the fever had left and the throat was almost well. The fourth day I decided to send her to school, but the principal told me that all children who had throat trouble would have to be examined on account of scarlet fever having broken out in the school. The doctor came and examined the child, but could find no trace of this fever. He said, however, that he would have to quarantine her for a time, as the disease might develop, and that the younger child, then nine years old, would have to be kept home from school, as she had come in contact with the disease.

The practitioner was called, and work in Christian Science was taken up immediately; but about midnight the younger child became very ill with throat trouble and biliousness, and by morning a severe case of scarlet fever was in evidence. Treatment in Christian Science was continued, and by noon the fever was gone and the child was well, with the exception of the peeling of the skin, which both children experienced. There were no after effects. They were quarantined for twenty-one days, but there was no manifestation of ailment or lack of freedom. The time was spent in study, sewing, games, and the reading of Christian Science literature. Apart from obedience to the law, we felt no need of quarantine. This healing proved to me that Christian Science heals all forms of disease; it also proved to me that "Love is reflected in love" (Science and Health, p. 17), for during the time of quarantine the different health commissioners and doctors called and expressed nothing but respect for our faith.

All this shows me the omnipotence and infinite goodness of God, infinite Mind. I am very grateful to our dear Leader, who has made it possible for us to understand the truth about man's real being as the child of God.

Mrs. S. Lutz, Hollywood, Cal.

I am glad to express my gratitude through our periodicals for what Christian Science has done for me. From the time that I can remember I had constant trouble and pain in my left ear. About seven years ago I went out to skate one morning, but came in at eleven o'clock and complained to my mother about earache. She put some medicine in the ear, and I lay down and fell asleep. Three hours later, when I awoke, I found the left side of my face slightly swollen, and by Sunday afternoon the swelling had spread to the back of my ear. My parents did everything for me that they knew how to do, but the swelling remained, and seeemed to affect the entire body, so that when I wanted to sit up in bed I had to be helped.

The following Wednesday a physician who was called said that I must be taken to the hospital immediately, to be operated on, as an abscess had formed in the ear. After the operation the left side of my face was paralyzed and I had lost the hearing of my left ear. The doctor who performed the first operation wanted to perform a second, but my parents objected to this. We then learned of a specialist for diseases of the ear, nose, and throat, whose services were engaged. For three weeks he treated the ear twice a day, thereafter once a day for one year. For three years I took treatments from this doctor, but found little relief.

We then heard of Christian Science through a friend whose son had been healed by it. My parents engaged the services of a practitioner, and after my first treatment I removed a tube from my ear which had been kept there for some time. I continued treatment in Christian Science for about one and a half months, by which time the ear was completely healed, the facial paralysis had also disappeared, and I have enjoyed perfect health ever since.

I am indeed thankful to God, and grateful to Mrs. Eddy for a better understanding of God and His law.

Edward Hinderland, Chicago, Ill.

I wish to tell of an instantaneous healing which I experienced a short time ago. I had a sudden attack of acute rheumatism in my right arm and shoulder. I treated myself that evening, declaring the truth and striving to know God's allness. During the night I awoke at intervals, still in great pain and unable to move my arm. I, however, continued to "be still, and know." In the morning the condition was seemingly the same, when my husband said to me, in reference to another problem, "Do you really believe it possible for so and so to happen?" Like a flash the thought came, and I said, "What cannot God do!" The instant I spoke my arm was freed. The pain was gone, and I was able to attend to all my duties as usual, and I have had no return of the ailment.

This experience was very uplifting to me, as error had generally yielded slowly. What Christian Science means to me no words can tell; and though there are still many problems to be worked out, there is the joy, the certainty, that if

Digitized by Google

I am doing my part, keeping the door open to the Christ-thought, then nothing can enter "that defileth, . . . or maketh a lie." Since then I suddenly lost my beloved husband, and in consequence all material means of support; but all sense of death was removed, and at the same time a way was opened up so that my every need has been supplied. The post I am now filling brought me to Bexhill, in England, where I formerly lived.

What our beloved Leader has done in making clear to this age the truth that our Master lived and taught, time will show; yes, is showing. Our hearts overflow in love and gratitude to her who by her life and work proved that our God is not afar off, and that the healing Christ is with us here and now. Sorrow and sighing do indeed flee away, and their place is taken by joy and thankfulness unspeakable.

LILLIE C. SEARLE, Bexhill, England.

✧

I am grateful for the many blessings that Christian Science has brought into my life. I had suffered much from a weak back for eleven years and was nearly always tired, but four years ago I asked for Christian Science treatment and was healed in a few weeks. I am most grateful for the physical healing, but still more so for the spiritual uplift and the entirely changed outlook that have come to me. I used to worry a great deal and was very easily depressed, but through Christian Science I have been learning to let go the old limiting, fearing thoughts, and instead to "accept the 'glorious liberty of the children of God,' and be free!" (Science and Health, p. 227.)

I am more thankful than I can say for the sense of peace and the confidence in the power and presence of divine Truth that Christian Science has given me.

MARGARET D. MCKIE, Buxton, Derbyshire, England.

✧ ✧ ✧

[Written for the *Sentinel*]

Dawn of Truth

G. BRUCE STAUFFER

WEARIED am I of chasing
The fleeting phantoms of sin,
That lured me on
With wine and song
Life's pleasures gay to win;
Yet in my round
No peace I found,
But misery and sorrow's kin.

Thus stop I in my folly
To see my quest in vain:
The law of lust
Is dust to dust,
The dirge of death the strain
That sweeps the past
As though 'twould ask,
Thou fool, was God to blame?

Truth comes! O'er black despair
Of wasted years, of hope dismayed,
This dawn of peace
Bids passions cease:
Peace in God's great love is made.
Sin's shadows flee,
For Truth doth free
From mortal ills. Be not afraid.

From Our Exchanges

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

"We are all Socialists nowadays." So Sir William Harcourt declared some years ago. We might alter the saying slightly to, We are all religious nowadays, with the same element of truth and the same amount of exaggeration. Nearly every one wants to be accounted religious now; no one is content to be considered entirely beyond religious appeal or feeling; every man has some ideal, makes some recognition, which he wishes to be reckoned as religious. This is a remarkable change from the attitude prevailing thirty years ago. Then it was almost a sign of superiority to be free from anything that could be called religious. What is the reason for the change?

Something must be set down to the collapse of materialism. No one who counts in the realm of thought today would dream of attempting to explain man or the universe by pure mechanism. Impartial investigation has revealed that everywhere we encounter spiritual principles which cannot be reduced to a material basis or mechanical laws. Something must be set down to increasing culture. Our better knowledge of the past reveals that man is incurably religious. Religion appears before reason, and has been the greatest influence in molding the history of the race. If we are going to understand the past, we must summon up sympathy for religion, or the past will remain forever a closed book to us. The culture of the past comes to us chiefly through art, and art is everywhere bound up with the inspiration of religion. Deepening thought is helping to change the general attitude. It is no longer recommended that we turn from religion to reason, to ethics, or to social reform, in the hope that these will provide a sufficient substitute. If religion is not true, these are not true either.

[*The Christian World*]

It did indeed require an insight deeper than the common to perceive, especially in the earlier, ruder days, the conquering qualities of the spiritual, to predict its future from what it was. The insight, you may say, was a scientific one. It was the result of a true diagnosis. Just as the modern researcher, probing and testing the qualities of radium, can give his forecast of what it is to accomplish, so the prophet, the moral genius, whether he lived three thousand years ago or is among us today, predicts what the spiritual will do from his knowledge of what it contains. The latest to appear in the human development, it seemed the weakest thing of all. It was, for it was in its first infancy. Amid all the rough, wild forces around it, man's animalism, his ferocity, could it survive? But the prophets saw its quality; saw the divinity that was in it, and so they were sure of it, and of themselves, its heralds and spokesmen. They might die, be tortured, crucified, but it would live and would conquer. . . . Men believe, with prophets and apostles, that the good is going to win.

[*New-Church Messenger*]

In the broadest sense, every church should have a social meaning. Though the church as a spiritual institution may not be able to identify itself with any political party or particular organization to promote the welfare of society by carrying into effect any particular political platform, yet its function to fill every movement with the right spirit must not be overlooked. Society, in the larger sense, should ever be before it, and it should proclaim the great spiritual truths

Digitized by Google

needed for the times. Further, such truths should be so stated that men of every party can alike appropriate them, and carry them out on the plane of individual duty and even of politics.

[*The Christian Intelligencer*]

Another special Sunday has been added to the ever-growing list. An effort is on foot to secure a country-wide observance of Feb. 1 as "Go-to-church Sunday." Are we to make people feel that if they attend church once a year it is well with their souls? And are Christians to feel that their obligation to the unchurched is discharged by trying to get them to pay an annual visit to some place of public worship? This whole business strikes us as frittering in the great business of winning the world for Christ. It is simply another addition to multiplying forms in present-day religion. What we need is the real thing—a heart on fire for God, which will be instant in season and out of season.

[*The Public*]

What wonder that the world welcomes the Christmas-tide as a truce to human strife! The year-long struggle of man against man, of woman against woman, and of child against child, for the sake of a mere living, is a strain on our better nature. We shrink from making this sacrifice of our ideals in order to preserve our bodies. We are ashamed that in the thick of the fray we rail at each other, question each other's motives, and do many unworthy things. The Christmas-tide offers temporary surcease; it gives us another opportunity to furbish up our ideals and to renew our lost aspirations.

[*The Christian Work and Evangelist*]

If the church is to flourish, and if the nation is to flourish, in the best sense, we shall have to get back to the old evangelical root. We shall have to get back its conquering faith in God, its conquering faith in men; get back its hardihood, its simplicity, its sense of urgency in dealing with souls, its belief that men, properly met with the spiritual claim, will yield to it and start on the way upward. What is the use of sermons that mean nothing and that do nothing?

[*The Living Church*]

Is the Christian's goal freedom from condemnation, or the commendatory "Well done"? If the church and her people have lost anything of power, or if they have fallen short of that which might be done, it is because of bondage to the things of the flesh. "Are ye [we] not carnal?"—to make the quotation inclusive. Is the ministry a "living," or an opportunity? Is membership in the church an end, or a means to an end?

[*Pacific Christian Advocate*]

We are not our own, but Christ's. The whole life of the Christian rests on this, and if we will not assent to it, we cannot go on to discover and possess the treasures of life that are deep and true. We cannot truly rest anywhere else, for Christ's we are, whether we admit it or not. It is simply a question whether we will recognize his ownership with love and loyalty, or live in insurrection and faithlessness.

[*The Christian Register*]

The chief end of man is to cooperate with life and love. You cannot separate holiness from wholefulness and bundle it into a creed. Holiness here is still to do our fulness in the world. Holidays are those days which are most rightly lived. The most holy life is the all-around, most busy and useful life. It is not the extra prayers that are uttered, but the nobler deeds that are done,—these constitute holy days.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is to be issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75. This book is now ready for delivery.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Society

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

Translations into Dutch, German, Norwegian, and Swedish have been made of a number of pamphlets. These are ready for distribution and are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.***

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

NATIONAL.

Gradual purchase of forest lands during a period of five years, and an annual appropriation of fifty thousand dollars to buy land not devoted at present to the growing of timber, are two recommendations made by the special commission created by the last Massachusetts Legislature to investigate the taxation of wild and forest lands.

"It is the opinion of the commissioners," said the report, "that even with the additional incentive offered by a better system of taxation, there will yet remain several hundred thousand acres of wild or waste lands within the state, in large part covered by brush or scrub growth of no commercial value, which private capital will be slow to develop. Such lands not only prevent the development of the potential wealth of the state, but they are in addition a serious fire menace in each community. Nearly a million acres of such land are lying idle in our various towns. It is important that the commonwealth should take the initiative in the solution of this problem by the establishment not only of a fair and encouraging system of taxation, but also by the establishment of a number of state forests of substantial area."

The claim of the Missouri, Kansas & Texas Railway Company to sixty-two million dollars damages against the government for the latter's failure to turn over alternate sections of land along its line through Oklahoma, will furnish one of several important oral arguments to be made during the coming week before the Supreme Court. In 1866 Congress offered to grant alternate sections of land as soon as the Indian title thereto should be extinguished, along a line of railroad to be constructed across the present state of Oklahoma to Denison, Texas, to the first railroad to build a line from the eastern terminus of the Union Pacific on the Kansas and Missouri state lines to the southern line of Kansas. The Kansas & Neosha Valley railroad, which has since become the Missouri, Kansas & Texas, won the race. The government has not turned over the land, however, contending that it never became a part of the public lands of the United States. The railroad claims twenty dollars an acre damages, but the court of claims decided against it.

The general understanding between the nations has been that the peace conferences at The Hague should be held once in eight years. The second peace conference, in 1907, recommended that a third conference be held in 1915, but no arrangements have been made to carry out that recommendation. Precisely what the United States government will do, has not been determined, but it seems probable that, following a meeting in New York, it will send through the state department a note to all the powers signatory to The Hague conventions, reminding them of the recommendation of the conference of 1907, that another conference be held in 1915, and seeking to obtain their agreement to a meeting next year. The conference of 1907 also recommended that an international committee be appointed two years in advance of the conference of 1915 to prepare a program. That committee has not yet been appointed.

Secretary Daniels has declared before the House naval committee that an international agreement for a total cessation of naval construction would be preferable to a one-year naval holiday, and that while he hoped for ultimate disarmament among all the powers, it would be impracticable to suspend naval activities without a combination of at least two of the world's greatest nations. He believed that, with a consideration for the tax burdens of the people, two new battleships was the minimum program of naval efficiency for the United States and saw no reason for the navy general board's program for four battleships. Secretary Daniels said he did not see anything in the international situation to change his view that there was nothing to warrant any extraordinary activity.

Arbitration of all questions which may arise, including those involving national honor, is proposed in a treaty, the terms of which have been agreed upon by Secretary Bryan and Constantin Brun, the Danish minister. It is expected that the new treaty will be signed soon. The convention, which will be an amplification of the principle of Mr. Bryan's peace proposals, makes no reservation whatever in the subjects to be submitted to arbitration. Its basis is a convention between Denmark and Italy, signed at Rome, Dec. 19, 1905, which obligates the signatory powers to submit to arbitration at The Hague court "all disputes of whatever nature that may arise between them and could not have been settled by diplomacy."

To hasten the physical valuation of railroads, the interstate commerce commission has asked Congress to appropriate two million dollars for continuing the work next year.

INTERNATIONAL.

A committee is to be appointed in Norway for the purpose of considering the question of opposing the formation of trusts and other corporations tending to destroy free competition, to raise prices, and so on. Until lately there have been few of these combines in Norway, but several have now been formed which threaten to monopolize certain branches of industry. It is also thought that certain large companies from other countries are contemplating the control of various articles of consumption extensively used throughout Norway, and the government, therefore, think it necessary to intervene.

When the Suez canal was originally made it had a depth of twenty-six feet. At various periods it has been deepened, until it reached its present depth of thirty-two feet. Operations are now in progress with a view to making it uniformly thirty-nine feet deep. There is not a single lock between the almost tideless Mediterranean and the Red sea, and the waterway remains constantly at an almost uniform depth.

Communications have recently passed between the federal government and the state cabinets in regard to the representation of Australia at the Panama canal exhibition. The proposal is to have an Australian court and send a combined exhibit representative of the production, industries, and resources of the various states.

An extensive program tending toward the unification of the interests of the Central American republics was dealt with by the annual Central American conference, which met at Tegucigalpa, Honduras, on New Year's day, under the terms of a treaty signed at Washington on Dec. 20, 1907.

According to the recently published figures of the winter term 1913-14 there is another large increase in the attendance at German universities, the number of students at the present moment being sixty thousand. These include 3,686 women and about five thousand persons from other countries.

During the past year the production in shipbuilding in English shipyards has reached a record, the tonnage launched being over two million three hundred thousand tons, an increase of nearly two hundred thousand tons as compared with the year 1912.

South American republics will contribute about three million dollars to the Panama-Pacific international exposition.

INDUSTRIAL AND COMMERCIAL.

Automobile exports from the United States are twenty times as great as a decade ago. Reports of the value of automobiles and parts thereof sent out of the United States in the eleven months ended with November, 1913, justify the statement that the total for the full year just ended will approximate forty million dollars against less than two million dollars in 1903. The detailed figures for the eleven months show that 28,579 passenger automobiles and 921 commercial vehicles, valued at approximately twenty-five million dollars, were sent to foreign countries. The total value of automobiles and parts thereof imported in 1909 were nearly four million dollars, and in 1913 about one million five hundred thousand dollars.

Exports of canned goods from the United States during the year just closed approximated the twenty-million-dollar mark. Meats, fruits, vegetables, dairy products, and fish made up the principal articles of export. They were shipped to all parts of the world. Salmon, chiefly of Alaskan production, was the largest single item. Canned beef showed a marked falling off.

According to returns received by the United States geological survey up to Jan. 12, 1914, it is estimated that the quantity of Portland cement manufactured in the United States in 1913 was approximately ninety-two million four hundred and six thousand barrels, an increase of 12 per cent over the previous year.

According to official reports, there were 656 producing mines in Italy in 1912, which were divided as follows: Sulphur 358, lead and zinc 94, coal and oil shale 42, graphite 31, salt 31, iron 27, asphalt 15, pyrites 11, mercury 8, petroleum, gas, etc., 9; borax 7, copper 7, manganese 5; all others 11.

Vol. XVI February 7, 1914 No. 23

Neither Mystical nor Miraculous

WILLIAM D. MC CRACKAN, M.A.

STEP by step hostile criticism has receded before the irrefutable evidence of the healing power of Christian Science. It is quite common today to hear or to read the admission that the cures effected by Christian Science can no longer be denied. This admission, however, is apt to be followed by an attempt to account for the cures on so-called psychological grounds, to refer to them as resulting from the action of one human mind upon another. The statement is then frequently added that such healing is neither mystical nor miraculous, but scientific and rational.

Christian Scientists heartily agree with the wording of this last statement, while they repudiate the mistaken supposition that the human mind is a healer. Among the definitions for mystical given in Webster's dictionary is the word "unknowable," and as an explanation of the word miraculous we find, "performed by supernatural power." The fact that Christian Science can be studied and is being practised by growing multitudes, proves that its results are not unknowable, not above or beyond law, but in accordance with the immutable law of God.

Throughout her writings Mrs. Eddy clearly indicates the rational nature of Christian Science, and by connecting the word Science with Christianity she has once for all dissipated the supposition that spiritual understanding is supernatural or mystical. She writes, "Science dispels mystery and explains extraordinary phenomena; but Science never removes phenomena from the domain of reason into the realm of mysticism" (Science and Health, p. 80). The critics, then, who insist that the cures effected by Christian Science are neither mystical nor miraculous, are right so far as the actual wording of their comments is concerned, but they are mistaken if they suppose that these cures can be accounted for on the basis of sense-testimony or so-called physical law. The whole of Christian Science lies outside of material sense or physique, both as to its actual teaching and its *modus operandi*. It is absolutely metaphysical. Mrs. Eddy defines Christian Science "as the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1).

Christian Science is therefore not to be approached by way of physiology or material medicine, or by way of psychology, which confines itself to the study of the human mind; it can be understood only by those who seek to have the Mind of Christ; and that Mind is God, or divine Principle. It might be possible for a student of psychology to spend a lifetime in acquiring an expert knowledge of the human mind, even to its most recondite and subtle tendencies, and yet not be in possession of the slightest understanding of Christian Science. To remain within the range of operation of the human mind is to be enclosed in a fettering circle. Eventually such a one must cry out to be delivered, and his appeal must be directed to the divine Mind, God, "whom to know aright is Life eternal," as we read in Science and Health (Pref., p. vii). It were well that professed Christians recalled ofttimes the Master's declaration, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

It behooves students, if they would become practitioners of scientific Christianity, to notice how the words mystical and miraculous are used in their hearing, and to avoid the mental suggestions which these words carry with them. In proportion as the works of spiritual understanding began to disappear from Christian history, so the word miracle began to acquire a supernatural meaning. First of all, the works became exceptional, then they became so rare that they ceased to be expected at all, and eventually became altogether obsolete. So, too, the simple spiritual teaching of primitive Christianity which made the works possible was gradually denominated mystical, because no longer generally understood, and those Christians who caught glimpses of absolute spiritual facts were frequently called mystics, and sometimes they were persecuted.

The words miracle and miraculous should have no place in our vocabulary if taken to represent a violation or even suspension of divine law. Such a sense has sprung from a misunderstanding as to the essentially natural and normal character of all spiritual activity. Thus regarded the words are misleading. Behind them are still trying to take shelter the mistaken suppositions that the works of genuine Christianity are due to special interposition of Providence, or are exceptional gifts to exceptional people, or are confined to special periods in the world's history. These opinions are not applicable to Christian teaching or works, they enter neither into the gospel nor into the law of God, but Christianity scientifically perceived is practical, straightforward, clear, and of universal availability.

Right Discrimination

EZRA W. PALMER

RECENTLY, while looking over the long array of books on the shelves of a public library, a Christian Scientist was impressed with the valuelessness of much that has been written to aid in solving the problems of humanity, and he went back in memory to his impressions when first visiting a large library. As he passed through the long book-studded aisles, he thought that surely here, among these stored-up treasures of learning, he might find the panacea for human needs; that here the hunger for truth could be satisfied, the spiritual vision be attained.

Thus impelled, a number of years were spent in study; but the result was not what he had anticipated. Something had been gained of education and culture which was of value in later years, but the youthful faith that in the study of books he might find a remedy for the ills of mortal existence, had been rudely shattered. In place of poise of mind had come impaired health, a pronounced pessimism, and a cynical disbelief in the practical application of good to the betterment of human affairs.

It is a pleasant theory, a theory whose fallacy was exposed by George Eliot in one of her novels, that through intellectual grasp and mental might the really valuable of human knowledge, the highest good, can be acquired; genuine knowledge can be separated from the dross of human misconceptions and the golden goal of spiritual reality gained. But Mr. Casaubon's failure, with the failure of many another before and since, has made clear that this dream of intellectual supremacy is impossible of attainment; that no tower can be built upon the foundation of human knowledge to gain the heaven of reality. The search ends in disappointment and disillusionment, and like the workers on the tower of Babel the student becomes confounded. He finds that systems and theories for the improvement of humanity which are elaborated in text-books, frequently work badly in actual practise. He finds that the ills of mortal existence press upon him, as upon the community and the state, with an unremitting demand which his years of study and research are powerless to meet. The truth of this was borne in upon King Solomon, who, when surfeited with worldly knowledge, said, "Of making many books there is no end; and much study is a weariness of the flesh."

Many an earnest student, however, after experiencing the bitterness of defeat in mere intellectual striving for spiritual realities, has awakened to the great fact that in this day and age the golden thread has been found, the spiritual understanding made manifest which leads man from the labyrinth of human knowledge to the *summum bonum* vaguely idealized by philosophers, the spiritual reality visioned by seers and prophets, which gives not only true intellectual poise but health of body and mind as well. This golden thread is Christian Science, given to the world by Mrs. Eddy. The student of this teaching quickly learns to divide all literature into two classes,—that which voices spiritual truth, and that which merely echoes the human sense of things. He finds that the former leads him along the ascending path of spiritual reality, while the latter, if accepted, darkens his vision, impedes his progress, and intensifies false human beliefs. Guided by spiritual discernment, the latter class interests him less and less, until he finally turns from it entirely, fully convinced that only with the former will his aspirations for spiritual verities be satisfied.

This Christian Scientist, looking back over his disappointing quest for truer vision in the multitude of books of a great library, now sees clearly that his labor was largely futile because of lack of discernment. He had been taught that to arrive at the truth regarding any given subject he should attempt to absorb everything that was written about it, whether true or false. He did not see clearly that nothing of good was to be gained from the study of false or evil systems. He had read and striven upon the mistaken assumption that the study and comparison of good and evil would result in broader and clearer vision for the student, and in so doing he had overlooked the warning in Genesis, that death is the penalty of eating of the fruit "of the tree of the knowledge of good and evil." The result was, that his sense of truth became more and more clouded and his desires and aspirations for a freer and nobler life were in a degree stultified. In Christian Science he learned that the essential thing is to know the truth which alone illumines, and that erroneous views are of no value whatsoever; on the contrary, are a positive hindrance.

Because of his enlarged spiritual understanding, every honest student of Christian Science attains a discriminative sense of values which enables him to reject what is false and to confine his efforts to gaining that which is true, which has the ring of genuine merit. Armed with this weapon of right discrimination, his method of using books is immensely simplified. All the pure, the inspiring, and the good that has been given to the world by poets, philosophers, dramatists, scientists, inventors, historians, novelists, preachers, and prophets, is his rightful heritage. He uses their writings and their attainments for humanity, to strengthen his resolution, inspire his courage, enlarge his view-point, fortify his rightful position, and urge him on in the course marked out for him as an exponent of scientific Christianity.

On the other hand, the Christian Scientist turns away from the profitless study of those books which assail the truth, or which attempt to explain or defend false systems and exploded theories. In the quest for truth the study of error is valueless. For instance, no rational person would seriously argue that a student should employ his time in studying the archaic theories of the Ptolemaic conception of the stellar universe in order to understand astronomy. These theories have no value save to point a moral, to disclose vagaries of the uninstructed human mind. In like manner, the conception of the earth as held by the so-called learned men of the time prior to the discovery of America by Columbus, would not engage his serious attention. So also today, the emphasis placed by various schools on the belief that man is a physical being and the universe a material mechanism, no longer confuses him or leads him astray. He has seen the vision of the allness of Spirit, God, and before the mighty import of this all-inclusive fact he has seen the mortal concepts of material thinking shrink away like shadows before the light of day. He has learned anew to profit by the wholesome counsel of St. Paul: "Prove all things; hold fast that which is good."

In the public library above mentioned are the works of our Leader and the authorized publications of our Publishing Society. There are also on the shelves a number of works which assault, distort, and misrepresent Christian Science. What should be the attitude of the student of Christian Science toward these latter works? Would he gain anything of value by studying them? By no means. As well ask a student to study discord in order to learn harmony, or to investigate darkness in order to understand light. Truth is sufficient unto itself, and carries within itself the proof of its own genuineness. Likewise he who would gain the priceless gift of a scientific understanding of the Master's teaching, which heals the sick and saves the sinner, can gain its abounding fulness by the study of the Bible and Science and Health, together with other authoritative Christian Science literature. "Strait is the gate, and narrow is the way, which leadeth unto life," said Jesus, and he who would reach it must not look to human wisdom or human knowledge for aid in acquiring it. Mrs. Eddy clearly saw the danger to the student from allowing his thought to be contaminated by false and poisonous literature, and her remarkable wisdom is shown in safeguarding, for the benefit of humanity, both her writings and the publications of The Christian Science Publishing Society.

The greatness of Mrs. Eddy's work for humanity is more deeply impressed upon Christian Scientists as her life and utterances are better understood. Through her scientific grasp of spiritual things, her interpretation of the Bible and of the works and words of Jesus, her students today have a means of weighing all things in the scales of right discernment. They see that if theories and systems of thought are based upon the acknowledgment of the supremacy of Spirit, their rightful place is found, and they fit into the orderly and just arrangement of the universe. They see, furthermore, that if they do not harmonize with the spiritual basis of the universe, they violate the first commandment and are

Digitized by Google

found wanting; therefore, the student of true scientific discernment discards them and relegates them to the scrap-heap of the useless and unimportant. The good, the true, the eternal, remain to cheer and bless humanity in its upward march to God, and their beauty and luster are enhanced by the casting aside of "whatsoever worketh abomination, or maketh a lie."

Right Consciousness

WILLIAM W. PORTER

EVERY individual will admit a paramount desire for that which would be conducive to his own welfare and good, and also a willingness and purpose to contribute to the attainment of this end, so far as he knows how to do so; hence there must be recognized in extension a sincere universal desire for good, and this desire is greatly accentuated by an acquaintance with Mrs. Eddy's teachings, which ever point to the unvarying divine Principle of man's being. This done, one naturally finds the absence of desire for evil, and that evil can seem to be attractive or real only by simulating, as belief, the quality of good; in other words, by deceiving the individual with an assumed value which it does not inherently possess. The highest good of the individual, then, is preserved by guarding against the deceptive presentment of error, or evil, in the guise of truth or good.

The prestidigitator, standing upon the platform before his audience, leads the observer to believe that a coin or other object has disappeared from one place and appeared in another; and if it were not that the observer had learned from experience the fallacy of this seeming, he would act in keeping with the belief that the assumed occurrence had actually transpired, and in this case he could not do otherwise than run into countless difficulties and discords.

Shakespeare was more than partly right when he wrote, "All the world's a stage," and what Mrs. Eddy has denominated mortal mind is the prestidigitator on this stage of the world, while humanity, observing the seeming occurrences, accepts its subterfuges, tricks, and deceiving movements as real, actual, and inevitable. Thus, wherever the conclusions of a person, based upon the tricks of mortal mind and apparent as sin, disease, and death, touch the circumstances and activities of daily life, discord and distress cannot fail to result.

In fulfilling its mission of Love, Christian Science is educating individual human consciousness to the point where it will naturally and normally exercise at least the same degree of intelligence and discretion concerning the deceptive performances of mortal mind that one would exercise when sitting before the juggler who is carrying out his tricks. He is learning to reverse, in his thought-processes, the baseless assertions and seemings of sin, disease, and death, as readily and naturally as he would reverse the seeming flight of the coin or object from one place to another upon the stage.

The individual who detects the simulations of sin, disease, and death, and fails to discredit and disown them as such, or who, detecting these tricks of belief, accepts or sees in them something to be experienced, is in the position of the money clerk who accepts both good and bad money. Such a one would soon lose his place, because he would be without a fixed standard of values. Through the constant association with and the handling of good money, he is protected by his perception and actual acceptance of the genuine coin or bill; and in like manner the individual who is maintaining constant relation with good, is enabled to detect the subterfuges of sense belief, and is thus practically protected by associating with and accepting only the thought which measures up to the one fixed standard of good. This course necessarily entails the abandonment of the assumed phases of reality presented by sin, disease, and death.

That the subterfuge of belief, the travesties on reality, or life, may and should be laid aside, is indicated by the words of Jesus: "Greater love hath no man than this, that a man lay down his life for his friends;" and in the demonstration of this great love the words of Mrs. Eddy on page 261 of Science and Health are unqualified and helpful: "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts."

Obedience

BERTHA R. RUEDINGER

THE fact that our periodicals are not only for the help and healing of the beginner in Christian Science, but for the practitioner as well, was fully proved to me recently. During a busy week, the problems of others seemed to be lifting their voices very insistently, when one morning my eyes fell on the current number of the *Sentinel*, and the thought came to me strongly that I had not done my duty by this periodical. I took up the copy before me, and as I read, each article covered the demand in respect to some one's problem. With this new sense of the value of the *Sentinel* there came to me a great glow of spiritual uplift, and I felt the healing in my own thought!

I then marked and sent a copy of this issue to each one to whose problems the articles seemed so applicable, and in each case the response came back that things were much better, or that the problem had been solved. This was to me a clear proof that the beam in one's own mentality must first be cast out before we can cast the mote out of our brother's eye.

When reading the *Sentinel* and *Journal*, as they come to him each week and month, a Christian Scientist usually turns first to the editorials, to see what there is of instruction for him there. They are always timely and of great help in their clear perception of the need throughout the field. They make us feel grateful for the wide-awake workers at headquarters, who recognize the call of the hour. It is ours to cooperate with them in the work, and we are able to do this only as each in his own field of labor is watchful and alert in individual effort, gladly responding to the word given. In "Miscellaneous Writings" (p. 117) Mrs. Eddy says, "Obedience is the offspring of Love; and Love is the Principle of unity, the basis of all right thinking and acting."

Redeeming the Human

KRISTINE SCHIÖTT

No one can be blind to the sadness and sore bitterness evidenced on every hand as the result of unfaithfulness, lack of stability in the relations of men with each other; and undoubtedly those involved in such experiences and those who look upon them are one in their desire to have them healed. In every paradise of human relationship it is personal sense which is the serpent. To build upon personal considerations, unmindful of whether or no they are in line with the highest standard of right, leaves us with no surety of our own faithfulness and no Principle by which to demonstrate it.

The hermit's life does not bring about the kingdom of heaven, the unity of God's children. Moreover, living nor-

Digitized by Google

mally we all have some connection or relationship with our fellow beings, and we all want to see these relationships more harmonious, more free from friction, less subject to the assaults of personal sense; but we can never realize this desire until we see that it is impossible to be faithful to mere flesh and blood, that faithfulness is more than the attitude of one person to another,—it is each person's right attitude to God and His Christ, to the ideal, the right idea of all human relationships. If in our daily living we are meeting the demands of God, there is not a legitimate human demand upon us which is not also incidentally met.

In no human relationships are unity and faithfulness more desired and desirable, and unfaithfulness more desperately sad, than in those of the home. We all want a perfect home, but the personnel of a household is much less of a factor in determining one's opportunity to demonstrate the right idea of a home, and to enjoy its happiness, than we are wont to think. It is no sin to desire all the joy and peace, comfort and happiness possible in a home.

Jesus' counsel to the Samaritan woman was not to leave her present human relationship, but rather that, if she but knew better she would seek satisfaction in a different way, and be fully satisfied. The right way to find it, as he elsewhere describes, is in seeking "first" the kingdom of God and His righteousness. If we seek the attainment of unity through external means or modes, we shall "thirst again." If we have learned in Christian Science that unity is possible because God, the "adorable One" (Science and Health, p. 16), is All-in-all, we are drinking at the true well and will be healed of the sense of separation. Recognizing the true Father-Mother God, the "nursling father and nursling mother," as Carlyle calls human parents, will find access to all they need in order to fulfil their mission in the temple of the home, as will also the children, servants, and friends. The home is a place where one can find and improve countless opportunities of "happifying" existence for himself and others by enlarging and strengthening his recognition of universal brotherhood, and thus fitting himself for citizenship on the plane where human relationships give place to "unity of Principle and spiritual power" (Science and Health, p. 470).

Having been awakened through Christian Science to the realization of man as the son of God, we may all attain to that faithfulness against which the fears, temptations, and sensuous suggestions of these days beat in vain.

✧

[Translated from the German]

What is True Sympathy?

SOPHY ARGELANDER

THE student who takes up Christian Science and begins to assimilate the ideas set forth in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is often confronted with the question as to how, with his newly awakened sense, he should express his sympathy when error still presents itself in some one of its various phases, such as sin, disease, or a sense of lack. In many instances the false sense of sympathy has not fully yielded to a truer sense. It sometimes seems to the student who has been blessed by the touch of Truth, that he does not show himself to his fellow beings who know nothing of the teachings of Christian Science, in such a way as will make them feel convinced of the possession of true sympathy on his part. On the other hand, he is afraid that through silence he may be thought unloving.

In cases such as these we do well to consider the attitude of our beloved Master in all instances where error confronted him in the form of lamentations and false sympathy. In Matthew we read that when he "came into the ruler's house, and saw the minstrels and the people making a noise, he said unto them, Give place." Had not these people come to express their sense of sympathy? In the face of this false concept Christ Jesus had but a decisive "Give place" for the mortal sense. Mark, in his narrative of the same case, states that when Christ Jesus came to the house of the ruler of the synagogue he said, "Why make ye this ado, and weep?" and he "put them all out." In John's gospel we read that at the grave of Lazarus Jesus "groaned in the spirit, and was troubled," when he beheld the manifestation of sorrow in those around him. Speaking of this, Mrs. Eddy has said, "Had Jesus believed that Lazarus had lived or died in his body, the Master would have stood on the same plane of belief as those who buried the body, and he could not have resuscitated it" (Science and Health, p. 75).

Even though we have not yet in our pilgrimage reached the heights of spiritual understanding to which Jesus attained, and though our attempt to comfort those in sorrow may not at all times be accompanied by a visible sign, that is by the immediate destruction of the false belief, yet we must strive to gain a more correct sense of sympathy, which will gradually enable us to refute all false evidence based on mere sense-testimony, and to hold fast to the truth of being. In Science and Health (p. 207) we find this authoritative statement: "There is but one primal cause. Therefore there can be no effect from any other cause, and there can be no reality in aught which does not proceed from this great and only cause. Sin, sickness, disease, and death belong not to the Science of being."

In cases where we do not feel justified in speaking of the help we have received through a better apprehension of the truth as given us by Mrs. Eddy, we should not permit error to induce us to believe in the pitiful mental state of those who do not seek help in the right direction, that is, the spiritual. Would we not render better service to those who are governed by false beliefs, as well as to ourselves, by declaring that the true man is a perfect reflection of God, the source of his being? It is stated in Paul's epistle to the Romans: "As I live, saith the Lord, every knee shall bow to me, and every tongue shall confess to God."

When the writer first took up the study of Christian Science, she seemed unable to grasp the real meaning of the following verse: "Rejoice with them that do rejoice, and weep with them that weep." The apostle Paul was a stanch supporter of Truth. Having proven through word and deed his spiritual apprehension of Christ, the idea of Truth, he could not possibly lay down mere human sympathy as a Christian rule. May not this passage much rather imply that we, as followers of Christ, should evince efficient sympathy by perceiving our brother's need, and in the spirit of Truth and Love afford him help toward gaining the solution of his problem?

Only as we grow in the spiritual understanding of God can we express the true sense of sympathy as Jesus did. We need not, however, yield to discouragement. When the old sense of pity seeks admission to our consciousness and seems to assert its false claims, let us meet it with the firm conviction that as God is All-in-all, omnipotent good, nothing in reality occurs that can cause us sorrow or make us entertain a sense of false sympathy; and while manifesting kindly consideration for those who may not understand us, let us gratefully and joyfully acknowledge, with the apostle James, that "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning."

Selected Articles

[Frederick Dixon in *Weymouth Telegram*, Weymouth, England]

Our critic, as a controversialist, wanders, so to speak, from China to Peru in a few paragraphs. On the present occasion he deals with healing in one paragraph and miracles in the second. A third paragraph is devoted to Mrs. Eddy, the subject of creation, the nothingness of matter and evil, and the use of material means for healing. The fourth paragraph deals with the question of American teaching, and whether Christian Scientists eat or drink nothing or something, and whether they should go naked or clothed; while in the fifth he discusses the power of the imagination, with education and the architecture of Christian Science churches. In a final paragraph he announces that he does not say that he will get a satisfactory answer to these questions, which shows at least some realization of the situation.

Apparently I am asked to take up my parable and tell the critic what you have to pay for becoming a "healer," and where you get the instruction. That is among the least of this critic's demands. Well, the instruction can be obtained in the Bible, and if he can heal the sick in accordance with the teaching of Jesus, after reading the gospels, he need go no farther. Still, just as the various churches read their commentaries, and what is more, their innumerable commentaries, so the Christian Scientists read their commentary, which is Mrs. Eddy's book, "Science and Health with Key to the Scriptures," in order to learn from her, out of her experience and self-sacrifice, her explanation of the gospel teaching with respect to healing. In order to get this instruction, all that one has to do is to read Mrs. Eddy's book, and the critic can borrow that for nothing at any one of the numerous Christian Science reading-rooms in the country, and at a great many of the ordinary public libraries.

The critic is evidently under the impression that the teaching of the unreality of matter constitutes a statement that the human senses are not conscious of anything. He puts it like this: "Of course, as matter is nothing, Scientists eat nothing, drink nothing, do not want clothes or houses." Now, as he himself says, a few lines later on, "Very clever, this!" But has it never occurred to him that there is as much matter in a human being as in the food you eat, and that what he calls a Scientist eating nothing, is not something eating nothing, but nothing eating nothing? What the critic is really engaged in doing, if he had only suspected it, is calling half the great thinkers in the world fools for disagreeing with him. Does he imagine, when one of the greatest chemists in Europe stated to a brilliant assembly of natural scientists that matter was something the human mind had invented for itself, he meant that the pyramid did not exist to the consciousness of the Arab, or the Marble Arch to the consciousness of the Londoner? If he had not been in too great a hurry to think at all, it might have occurred to him that there were more things in heaven and earth than were dreamed of in his philosophy, and then, instead of asking sarcastically, How long would it take a fairly educated person to acquire this Science? he would have got somebody to explain to him what he did not understand.

Of course, what the whole body of philosophic and scientific thought, which is usually described as idealistic, teaches, is this, that matter, instead of being a reality, as the materialist teaches, is really an illusion of the senses; that is to say, that instead of, as Professor Symons says, the mind existing in the head, the head exists in the mind, or, as Professor Ostwald would say, energy is the only reality. Humor is a decidedly dangerous weapon sometimes. It has a way of hoisting the humorist with his own petard. Mrs. Eddy, knowing perfectly well the teaching of the centuries on idealism, accepted the idealistic interpretation of the unreality of matter as explaining more intelligibly than any other teaching the government of the body by the human mind. A man's leg, she held, in common with all idealistic thinkers, is the subjective condition of his own thought. If it is broken, all that happens is that the human mind has produced a picture of a broken instead of an unbroken leg. The way to heal it, then, is by mental action, and if splints and plaster of Paris are employed by a doctor, they are only the medical method of arguing with the human mind, and obviously a clumsy method at that. Gradually, as the world becomes more conscious of the power of divine Mind, the splints and the plaster of Paris will go the way which medicine is rapidly going, for the one, like the other, is simply a material method of convincing mortal thought.

Now, though Mrs. Eddy accepted the idealistic theory as far as this goes, she at this point parted company with it altogether. The idealist would have called mind, or energy, the noumenon, and matter the phenomenon. Mrs. Eddy accepted matter as the phenomenon produced by the noumenon of mind, or energy; but this mind and this energy she described in turn as equal negations of divine Mind and divine energy. The human or mortal mind, then, became the counterfeit, or lie, about the divine Mind, and the human body, in common with all other material phenomena, the counterfeit, or lie, about spiritual man and spiritual creation. The real man, the true image and likeness of God, was, Mrs. Eddy insisted, the creation of divine Mind, so that when she said that man could not be sick or suffer, she meant the spiritual man, the image and likeness of God, whereas she insisted that the human being, who was really the negation of this man, was perpetually, according to human belief, believing that he was sick. The healing of Christian Science, then, is directed to healing the human mind by teaching mankind what God and man really are; and this, Mrs. Eddy further insisted, was the teaching of Jesus the Christ. It is obvious that the healing of sickness is only the fringe of Christian Science healing. Healing in Christian Science takes place in the exact ratio in which the Mind of Christ is substituted for the carnal mind, for in the exact ratio in which this takes place, mortal man learns the truth, the absolute truth, and becomes free of the old ignorance which constituted the unreal knowledge that produced an unreal sickness and sin.

Of course, if Mrs. Eddy had been content with this as a general statement, she would have been in the exact position of those theologians who ask mankind to wait for a future life for the proof of their faith, in spite of the fact that Jesus himself declared that "the kingdom of God is within you," or of those natural scientists who demand that natural science shall be based on a theory of electrons which no one has ever perceived or an ether which no one has ever been able to discover. Mrs. Eddy demanded, in the words of the epistle of James, that men should prove their faith by their works, and declared, with the writer of that epistle, that a faith which could not be proved was dead. Consequently, she demanded that Christian Scientists should perform the miracles or signs which Jesus demanded that his followers should perform, and she declared that in the exact ratio in which these signs were performed, Christian Scientists had a right to consider themselves as followers of Jesus the Christ.

It is absolutely ridiculous to insist, as another of your correspondents does, that the miracles were the signs of an apostle only. Again and again, absolutely without regard to time or place, Jesus insisted that the miracles or signs could

Digitized by Google

be performed by those who believed on or understood his teaching, and so far from the age of miracles stopping with the apostles, the works of the Fathers for two or three hundred years are instinct with stories of healing as the natural effects of Christian belief. I do not know whether your second contributor, "M.A., Cantab.," means to suggest that the Fathers were not telling the truth about the healing, or that the healing described by them "was a sign of the great predicted apostasy." The gospel of Mark says, "These signs shall follow them that believe," and this cannot be twisted into meaning those apostles who believe, which would itself be a contradiction in terms. The gospel of Matthew declares that the disciples were commanded to teach the world all the things Jesus had taught them, and certainly among the things he taught them was healing; and those to whom they preached were certainly not apostles. Finally, the gospel of John declares that Jesus said that the works he did should be done by those who believed on him, and the phrase, "he that believeth on me," used as he used it, without any qualification, certainly did not mean the apostles. The fact is so plain that an enormous number of members of all the churches have long ago given up the futile plea that healing was confined to the first century, and your correspondent will have to deal with the admissions of the orthodox churches as a preliminary to taking exception to the teaching of Christian Science.

✧

[John Ashcroft in *St. Louis* (Mo.) *Republic*]

Nothing but a misapprehension could cause any one to confuse Christian Science Mind-healing with mental suggestion, or attribute the healing efficacy of the former to the latter. The Rev. Mr. ——'s identification of these opposites as one, in a recent sermon, illustrates a fallacy as old as the race. The Scriptures indicate that all who have ever contended for the omnipotence and omnipresence of divine Mind have done so in opposition to the belief in minds many. Moses encountered this in his conflict with Pharaoh; the Pharisees sought to attribute the healing work of Christ Jesus to Beelzebub; and the experience of Philip, Peter, and John with Simon of Samaria, further illustrates this phase of human nature.

Much of this misapprehension arises from ignoring the capitalization in Christian Science literature. When a Christian Scientist refers to Mind, he refers to God, the one supreme, infinite intelligence. When he speaks of mind or minds, he refers to the human sense of things. To Mind, God alone, does the Christian Scientist concede the power to heal. It should require no argument to prove that God is intelligence, and that there can in reality be no other Mind if He is infinite. The belief that there are minds many is the basis of the belief in the possibility of mental suggestion; the understanding that there is but one Mind, and that infinite, is the basis of Christian Science practise.

Mental suggestion is generally regarded as the vehicle of human will. There is no more emphatic declaration in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, than the following: "Every Christian Scientist, every conscientious teacher of the Science of Mind-healing, knows that human will is not Christian Science" (p. 451). Furthermore, the Manual of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., specifically prohibits the study of hypnotism by Christian Scientists.

Our critic's assertion that "the divine or supernatural element in all so-called divine healings is nil," would practically exclude the possibility of recourse to divine help if carried to its logical conclusion, and would leave humanity utterly dependent upon the human mind and its devices in the often hopeless struggle for health and peace. There are, however, quite a number of people in the world today who are grateful that through the teachings of Christian Science they have come to know God as "a very present help in trouble," who realize that they owe to Him their deliverance from organic as well as functional diseases, their redemption from sin and wretchedness of every kind; and they are the people who know whether it is Christian Science or mental suggestion that has healed them, whether it is Mind or mind that has wrought the much-needed change.

✧

[George A. Law in *The Morning Record*, Meriden, Conn.]

The writer of a communication published in your issue of Dec. 18 may be assured that the quotation from "Science and Health with Key to the Scriptures" of detached sentences and statements removed from their context, is no new or original method of attempting to show inconsistencies in Mrs. Eddy's writings and the teachings of Christian Science; on the contrary, the practise has been in vogue since the publication of the Christian Science text-book, though for some time past it has to a large extent been discarded.

Those who make this class of criticism, disregard the fact that, in order to make her premise that the spiritual is the real and the material is the unreal better understood, it was necessary to call attention to the claims of the material world, so called. Appreciating this, one is able at all times to discern from Mrs. Eddy's statements whether reference is being made to the spiritual or the material. Likewise, in studying the Bible, the view-point of the writer, and hence a correct interpretation of Scripture, is obtained by determining whether the material or the spiritual is being referred to. In Science and Health we read that "the universe, like man, is to be interpreted by Science from its divine Principle, God, and then it can be understood;" also, "Everything in God's universe expresses Him" (pp. 124, 331). In each of these quotations the spiritual world is referred to. Speaking of Jesus, Mrs. Eddy says, "The world acknowledged not his righteousness;" and, "The world feels the alterative effect of truth through every pore" (pp. 54, 224). In these instances the world of material sense is under consideration.

Mrs. Eddy by no means stands alone in the idea of the non-existence of matter. Such an authority as Professor Ostwald of Leipsic University said: "Matter is a thing of thought, which we have constructed for ourselves, rather imperfectly to represent what is permanent in the change of phenomena." Grant Allen said that "the universe as known to us consists wholly of mind, and matter is a doubtful and uncertain inference of the human intelligence." Hume, Stuart Mill, and Herbert Spencer have also denied the reality of matter and asserted that a knowledge of reality can be obtained only through reflection and thought, not in sensation and feelings. It will be seen that all this is in accord with the teaching of Christian Science; that what appears to our immature, imperfect sense of things is but temporal, transitory, unsubstantial, and must give place to the permanent, substantial, spiritual, and real.

Mrs. Eddy stands absolutely upon the premise that God is Spirit, that He created a spiritual universe and spiritual man; that He is infinite, divine intelligence, the one and only cause and creator, and that all His creation is good. This is the only rational deduction obtainable from the account of the creation in the first chapter of Genesis. There is no mention in this record of matter, evil, sin, sickness, death, suffering, or pain; therefore it is conclusive that such have no place in the true spiritual world; that God did not create them, and further that His qualities being good only, there was nothing

Digitized by Google

with which to create such. However, this in no way precludes the consideration of what is termed the material world; nor does it constitute an inconsistency to explain to the human sense the phenomena of mortal, material existence, comprising pain, sin, disease, death, and like experiences.

Jesus, the Founder of Christianity, healed sickness and sin, and thus eliminated these disturbers of man's peace and happiness. He also taught others to do likewise. Inasmuch as Jesus' mission was to teach by practise and precept the rules of right living, how to allow God's spiritual law to govern man's every thought and action, his treatment of sickness, sin, every phase of evil, which disposed of these abnormalities, is conclusive proof that they are not of God's creating, have no rightful place in the life of man, and are consequently unreal. If these were real, of God's creating, they would be impossible of destruction, for it is obvious that nothing absolutely real can be destroyed. It is also apparent that if this were not true, Jesus would not have engaged in the healing work which he did.

Our critic condemns Christian Science because all sickness and death have not yet disappeared from this world, and further says: "In spite of the Christian Science campaign against mortal ills and death itself, there is no appreciable diminution of these things." It might be well to remind him that Christian Science is less than fifty years old, while *materia medica* has some four thousand years to its credit, in view of which record he confesses he has not observed that sickness has diminished. Nevertheless, it is indisputable that from the lives and experiences of the unnumbered thousands who have been healed through Christian Science, for them, at least, both sickness and sin have greatly diminished. Of these a large number, failing to find relief from other sources, have, by means of Christian Science treatment, replaced sickness and despair with health, peace, and happiness. Christian Scientists at this period do not claim an understanding sufficient fully to demonstrate the divine Principle of Christian Science; however, they are thankful for the progress already made, and rejoicing for this, sincerely subscribe to the statement of St. Paul, who in his epistle to the Philippians said: "Brethren, I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

The intimation that Christian Science practise is mental suggestion is absolutely false. It is not the action of the human will, and has nothing in common with methods teaching the exercise of one human mind over another. On the contrary, Christian Science is the very antipode of such systems, for it requires the subjugation of mortal mind and the acceptance of the divine Mind in its stead. In operation it is, "Thy will [not mine] be done," thus having the "mind of Christ" referred to by Paul. The fact is, that Christian Science is a return to the practical, scientific Christianity of Jesus, which included spiritual healing. Therefore, claiming that Christian Science healing is produced by mental suggestion is equal to saying that Jesus was a hypnotist. Is this what our reverend critic wishes us to understand that he believes?

The Master instructed his followers to "preach the gospel" and "heal the sick," two inseparable admonitions. He also said, "He that believeth on [understands] me, the works that I do shall he do also," thus making the healing a test of the proof that his teachings are understood. And he added, "By their fruits [works] ye shall know them." In closing, it might be fitting to inquire of our clergyman critic if he is following these instructions of the Founder of Christianity, and if not, why; also where, in Jesus' life and teachings, authority exists for finding fault with those who conscientiously strive, according to their light, fully to follow Jesus, and who by "signs following" show that they to some extent understand and practise his teachings.

✧

[M. I. Whitcroft in *Clifton* (England) *Chronicle*]

In a report of the Rev. Mr. ——'s second lecture on the "Signs of the Fourth Gospel," reference is made to the teaching of Christian Science. If the lecturer has read the textbook of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, he will have found its teachings in strict accordance with the Bible. On the other hand, if he has not read Science and Health, he is scarcely in a position to state what it does or does not teach. The miracles performed by Jesus (and miracle merely means object-lesson or illustration) were in demonstration of the practical truth of his teaching, similar miracles being performed by the disciples and the early Christians in obedience to the Master's command, "Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; In my name shall they cast out devils; . . . They shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." Surely this was practical proof that the knowledge of Truth frees us from the bondage of sickness and sin. "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." It is strange that the reverend gentleman fails to see that perfect health must be the outcome of spiritual understanding, for one might quote numberless passages from the Bible that show health to be a condition of mind, not matter, the result of a knowledge of and obedience to divine law. In Isaiah we read, "They that wait upon the Lord shall renew their strength; . . . they shall run, and not be weary; and they shall walk, and not faint." To the sick man at the pool of Bethesda Jesus said, "Sin no more, lest a worse thing come unto thee."

In Science and Health (p. 69) Mrs. Eddy says, "Mortals gain the sense of health only as they lose the sense of sin and disease," and Christian Scientists the world over are daily proving the truth of these words, and that to the degree in which the sense of sin and disease is destroyed in mortal, or, as St. Paul calls it, the "carnal mind," does it cease to be manifested in the body. It is very certain that we cannot be "raised into a region where bodily health would not count" (to quote our critic) while still holding to the belief in the reality of a material body. But, through growth in spiritual understanding, we shall be raised into that region, or state of consciousness, that perception of the allness of Spirit and the unreality, the nothingness of matter, which Jesus possessed, and which enabled him to set aside every so-called material law and to walk on the water, feed the multitude, heal the sick, and raise the dead.

✧ ✧ ✧

"Give us this day our daily bread." Why do we use the words "our bread"? Because we do not pray for the common bread that even heathen partake, and which God gives to all men, but for "our" bread, the bread of those who are the "children" of the heavenly Father. And what then is this bread of God? It is Jesus Christ our Lord. "For the bread of God is he which cometh down from heaven, and giveth life unto the world." Therefore let no one be deluded. Whatever sermons and instructions do not exhibit and make known Jesus Christ cannot be the daily bread and nourishment of souls.—MARTIN LUTHER.

Editorial

Impersonal Correction

FREQUENTLY the editors of the *Sentinel* and *Journal* are asked to answer questions in regard to the teachings of Christian Science as applied to given phases of human experience. Generally the editors refer the questioner to his teacher, if he has one, or to an appropriate passage of the text-book, Science and Health, or some other of Mrs. Eddy's writings. Occasionally, the receipt of a number of letters of the same import from different parts of the field shows that there is a need for something to be said editorially which will tend to set right the wavering thought of quite a number who are eagerly and honestly trying to work out their salvation through the demonstration of Christian Science. In these instances, where the correspondence indicates that the questions are asked in good faith and for the purpose of spreading a clearer apprehension of the teachings of Christian Science, the editors endeavor to give the needed explanation through the periodicals, without, however, directly referring to the question which had been asked. This is not only what Mrs. Eddy expected the editors to do, but it is also what she instructed them to do, so that the periodicals might do their share in keeping the teachings of Christian Science unadulterated.

A few months ago several letters were received from different places, indicating that there was considerable misconception extant as to Christian Science treatment. One letter, for instance, mentioned a lady who was told that her hand was an idea of God, and therefore exempt from pain. Because of the manifest sincerity of this correspondent, and because of other letters which had brought up similar questions, the editor asked one of his associates, one of Mrs. Eddy's oldest and most trusted students, to write some editorials which would correct the false impression of Christian Science treatment which these letters indicated was abroad. These editorials appeared in the *Journal* for December, 1913, and the *Sentinel* for January 10, 1914. The erroneous views of Christian Science which were condemned in these editorials had never been taught by Mrs. Eddy, as was well known to the editors of the *Journal* and *Sentinel*, and it was not supposed by them that such views had been taught by any authorized teacher of Christian Science. They believed that these letters simply put into words some of the various vagrant misconceptions of Christian Science which pass current among many who call themselves Christian Scientists, but who have failed to grasp the true intent of the teachings set forth in Science and Health.

Imagine the editors' surprise, therefore, when letters began to come in which claimed that these editorials were regarded by some as having been written in condemnation of the teachings of a well-known and greatly honored and respected teacher of Christian Science. Their surprise was twofold. In the first place, because they had no teacher in view when the editorials were written, and were not knowingly condemning any teacher or teaching. In the second place, some of the editors had been taught by this teacher, and knew of their own knowledge that he did not teach the manifestly erroneous views of Christian Science which were condemned in these editorials.

The lessons which the field should draw from this incident are these: that the editors of the *Sentinel* and *Journal* are not taking part in any expressions of difference of opinion or any misunderstanding between individual Christian Scientists; that when they undertake to clear up some misconception of Christian Science which it is their duty to clear up, they are dealing strictly with the error to be corrected and not with any person. This is entirely in keeping with Mrs. Eddy's statement (Science and Health, p. 452) that "incorrect reasoning leads to practical error. The wrong thought should be arrested before it has a chance to manifest itself."

ARCHIBALD MCLELLAN.

✧

Truth's Sufficiency

To those who in fancied security looked down from the walls of Jericho, the strange doings of the undrilled, unmunitioned host of Israel must have seemed the folly of fools. Nevertheless there was an ominously patient persistence in their madness which surely gave pause to the ridicule of any who had seen the waters of the Jordan mount up, a great arrested flood, that this motley multitude might pass through.

Doubtless there was not a little laughter by the boastful and contemptuous, and many a derisive cry hurled from the parapets during this spectacular and seemingly insane performance, but at the end of the seventh day, when, as we are told, the walls "fell down flat" when "the priests blew with the trumpets," and the children of Israel "shouted with a great shout," then there was manifest the adequacy of that silent, unseen force whose power over the fortresses of materiality was revealed to the Israel of a later day in the healing of all manner of diseases by the hand of a gentler Joshua. This is the lesson of Jericho, and of every other overcoming of the strongholds of false sense, even the embittered prejudices that were banished for Saul "at midday" on his way to Damascus, the long-indulged sensualities that gave place through prayer in the hour of Augustine's mental agony, and the contented belief in pills and poultices which in this our time is rapidly yielding to the demonstration of the healing power of spiritual understanding in Christian Science.

Our immediate problem may not have the dimensions of a walled city, but if any least hindrance to our spiritual advance is removed, it will be by the same reliance upon the divine sufficiency which made the conquest of Joshua so irresistible. The acquisition of the habit of thus trusting Truth alone, is no less imperative than unusual, but happily in demonstrable Science this is not difficult. When in his experiments the chemist has demonstrated the unvarying certainty of a given reaction under given conditions, he notes the discovered order as a law upon which all chemists in all time can place a firm reliance. It becomes for him a fixed factor of consciousness, a truth which he can never question. Being scientific, the process of discovery is entirely satisfying. He has been awakened to another right idea, which he recognizes as invaluable because immutable and forever at command. This gives that sense of achievement and of expanding powers without which there is no freedom or joy, no true living. With the repetition of such experiences he becomes an enthusiastic and successful investigator, the insatiable seeker for that scientific truth which he thinks of as omnipresent, authoritative, final, and he is sure that if he becomes sufficiently acquainted with it, there is no chemical problem which he cannot solve.

And now, in a very kindred way, it is ours to come to know and profit by Truth's present sufficiency. We have, however, the supreme advantage of the fact that in the Christ-teaching, or Christian Science, the Principle and rule of spiritual being and its manifestation is revealed, and it is ours simply to apply and verify the divine order by faithful obedience thereto. Speaking of her Jerichos, Mrs. Eddy says, "I won my way to absolute conclusions through divine revelation, reason, and demonstration" (Science and Health, p. 109),

Digitized by Google

and our progress is made the simpler and easier by virtue of our command of the supreme discovery which she bequeathed to men. If in any moment, therefore, we are tempted to discouragement by the seemingly immovable walls that obstruct our way, we shall find both rebuke and heartening when we remember the seriousness of her handicap, the brave tenacity of her devotion, and the splendor of her achievement.

Joshua surely knew full well that the seven days' compass of the city meant nothing more than the learning of the lesson of obedience, while awaiting the action of divine law. Israel had no means of scaling the walls, but they could march about them and trust the God who had delivered them and their fathers, and like them we may have frequent occasion to do faithfully what we can while waiting in simple, unswerving faith for the divine appearing. It is to this course that we are counseled in Science and Health (p. 395), where we read, "The healer should speak to disease as one having authority over it, leaving Soul to master the false evidences of the corporeal senses." Really, to a Joshua, Jericho is not a serious problem after all.

JOHN B. WILLIS.

Faith versus Fear

MANY good Christian people have called attention to the numerous occasions where the command "Fear not" is found in the Bible, especially in connection with the teachings of Christ Jesus. At the very beginning of mortal history, after the spiritual creation was pronounced complete and perfect, we read the story, evidently allegorical, of the disobedience of Adam and Eve, and the fear which beset them when they were summoned to appear before divine Truth. Respecting this Mrs. Eddy says (Science and Health, p. 532), "Fear was the first manifestation of the error of material sense. Thus error began and will end the dream of matter." Daily experience shows us that fear is inseparable from the belief of life, substance, and intelligence in matter, and, as the apostle tells us, "fear hath torment," though he immediately assures us that "perfect love casteth out fear." The Christian Scientist then addresses himself to the task of attaining to the spiritual condition indicated by St. John, which results not in fear but in fearlessness, a synonym for true heroism.

It is true that we are sometimes enjoined in the Scriptures to fear God and keep His commandments. This, however, does not mean that we should fear evil, but fear to do evil. Our revered Leader tells us that we must gain spiritual understanding in order to overcome the belief in matter and disease, and, this attained, she says, "You will never fear again except to offend God" (Science and Health, p. 425). The remedy for fear can never come from anywhere but from God, from the spiritual side, and as we study the Bible we find again and again inspiring assurances of divine Love, such as the one spoken to Isaac in an hour of need: "Fear not, for I am with thee, and will bless thee." This shows us that faith is the antidote for fear, and long ago Habakkuk declared that "the just shall live by his faith," a text cited by Paul on several occasions, and which brought to Luther a great awakening to the power of good to overcome evil.

When we come to the ministry of the great Teacher, we ofttimes find him rebuking fear and calling for faith,—on the tempest-tossed sea, in the grief-stricken home of Jairus, and at the grave of Lazarus; but how many are there today among Jesus' professed followers who are willing to exercise the kind of faith which he demanded? This cannot indeed be done so long as it is held that matter is a solid reality and that material law rules the occasion. Whether it be a storm, a disease, or impending death that threatens, the command "Fear not" holds good. When the birth of Jesus was announced to Mary, these words were part of the angel's salutation, and the shepherds who were "sore afraid" when the light of spiritual being shone upon them, were reassured by the "Fear not" of the angel who brought to earth "good tidings of great joy." Again, when the glorious ministry of Christ Jesus was fulfilled, the guardian angel by the empty tomb said to the loving but sorrowing women, "Fear not ye," and erelong faith received its age-abiding reassurance, when the risen Lord said, "All power is given unto me in heaven and in earth," which as understood in Christian Science means that evil was proved powerless.

Very few outside of Christian Science ever pause to think that fear admitted is a denial of faith, a denial of the supremacy, ever-presence, and availability of God, infinite Mind, in every hour of need. It is seldom remembered that "the fearful"—those who indulge fear—are at the head of a long list of evil-doers which we find in the twenty-first chapter of Revelation. Well may we therefore ask ourselves whether we are among those who abjure fear and "live by faith," that which St. Peter calls "precious faith," which lays hold upon the promises and proves them as true today as when they were spoken. It was the Christ-idea that declared to the church at Thyatira, "I know thy works, and charity, and service, and faith."

ANNIE M. KNOTT.

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

SACRAMENTO, CAL.—First Church of Christ, Scientist, was crowded to its doors yesterday [Jan. 11] at three services of dedication, which marked its freedom from debt.

The Union.

Digitized by Google

San Francisco, Cal.—Another milestone was reached in Christian Science church edifices in this city Sunday, Jan. 4, when Fourth Church of Christ, Scientist, moved into its new building at 450 Arguello boulevard, near Geary street. This church began to hold meetings in March, 1912, in the Elks' Hall on Powell street, and continued there until they outgrew these quarters, when they moved to Native Sons' Hall on Mason street, where they remained until their new church edifice on Arguello boulevard was finished. Fifth Church of Christ, Scientist, began its services Sunday, Jan. 4, in Native Sons' Hall, continuing the services when Fourth Church moved out.—*San Francisco Bulletin.*

Tiffin, Ohio.—On Sunday, Dec. 28, 1913, opening services were held in the new church edifice, erected to replace the one swept away by the flood last spring. Through the generous contributions received from the Christian Science flood relief committee, and others in the field, we were enabled to purchase a new site and erect and furnish a new building. The members of the church and congregation wish to take this opportunity of expressing their deep gratitude to the field for the loving assistance rendered them.

Correspondence.

Berkeley, Cal.—Although the new fifty thousand dollar building of First Church of Christ, Scientist, has been occupied less than two years, it has been found inadequate to accommodate the membership of that denomination, and as a result a second church has been organized by residents of the North Berkeley and Northbrae sections. The first services of the new church will be held next Sunday morning [Jan. 4] at the Hillside club-house.—*Berkeley Gazette.*

Cocoanut Grove, Fla.—At seven o'clock Christmas morning the members of the Christian Science Society of Cocoanut Grove met to lay the corner-stone of their new church edifice, — First Church of Christ, Scientist,—beautifully located on the large plot, recently donated, near the park.

The Miami Metropolis.

Indianapolis, Ind.—Three services were held Sunday [Jan. 4], opening the new home which Second Church of Christ, Scientist, has erected at Delaware and Twelfth streets at a cost of one hundred and fifty thousand dollars. The auditorium seats about fourteen hundred.

Indianapolis News.

Gloversville, N. Y.—Last August First Church of Christ, Scientist, purchased a lot centrally located in the city. A church building was immediately started. It will have a seating capacity of about two hundred, and the first services are to be held Jan. 18.—*Correspondence.*

Dover, N. H.—First Church of Christ, Scientist, held its first service in its new church home, 604 Central avenue, last evening [Nov. 27]. It was the annual Thanksgiving service, and the auditorium was filled to overflowing.

Foster's Daily Democrat.

Calais, Maine.—Services were held Sunday [Dec. 7] for the first time in the edifice belonging to First Church of Christ, Scientist. The auditorium seats about one hundred and thirty persons.—*Bangor Daily Commercial.*

Colorado.—During the past year the publication committee sent out literature as follows: *Monitors*, 4,132; *Sentinels*, 2,426; *Journals*, 312; Colorado newspapers, 5,364.

State Committee on Publication.

The Lectures

Sioux Falls, S. Dak.

Virgil O. Strickler lectured on Christian Science at the New Theater. He was introduced by John A. Grose, who said in part:—

I think I can safely say that up to about ten or eleven months ago I could boast of as happy a home as there was in Sioux Falls, but then a serious cloud arose on my horizon. I returned home after a business trip to find that on two or three occasions my little family had attended the Christian Science church, and I learned from my wife that she had enjoyed the services very much. Three people whom I questioned about Christian Science gave me answers that made me very anxious, and realizing that I was the captain of that little home ship, I thought it was time for me to go on a tour of investigation; therefore at my first opportunity I attended the Christian Science church. I saw there the daughters, the sisters, the wives, and the mothers of some of the best men in Sioux Falls, and in many cases the men were with them. I attended another service, and I will admit that I have gone every Sunday since, and like it very much. The clouds have rolled away, and we have the same and more peace and love and harmony than we had before; and I feel like saying to all critics of Christian Science, and I say it kindly, that if they will study and investigate its teachings they will cease to criticize. And if you care to drop into that little church you will find a church stripped of all stage setting, a church as close if not closer to God and the Bible than any other church on earth, a church where the woman in gingham and the man in homespun are as welcome as the woman in silk and the man in broadcloth, a church where you will see more bright, happy faces than in any church in the world. But there is one great difference: Christian Scientists believe that when Christ commanded his disciples to go out into the world to preach the gospel and heal the sick, he meant precisely what he said; and there are hundreds of thousands of living witnesses all over this world who claim to have been cured through the teachings of Christian Science of some of the gravest maladies that flesh is heir to.—*Correspondence.*

Monrovia, Cal.

Clarence W. Chadwick lectured before a large and attentive audience in the Open Air Greek Theater of the Monrovia High School. He was introduced by Mayor C. P. Dorland, who said in part:—

Job declared: "There is a spirit in man: and the inspiration of the Almighty giveth them understanding." Because of the universality of this spirit, all men are religious, and hence religion is the life of God in humanity. The kind, the quantity, the degree of religion a man hath, is in proportion to his receptivity of that inspiration of God, for there are all degrees of religion, from fetishism to transcendentalism. Religious life, like all other life, is progressive,—"first the blade, then the ear, after that the full corn in the ear,"—and depends for its quantity and degree upon the food that nourishes it; the Indian mother fed her boy upon the flesh of the lion in order to make him strong, courageous, and brave.

Christian Science comes with the proposition of divine Mind as the source and perfection of all life; and if a man will open his heart to the thoughts, the influence, and the inspiration of this divine Mind, then he himself will be renewed in the spirit of his mind and become a partaker of the divine Life. If our lives are to be progressive, our minds

Digitized by Google

must be open, receptive. The narrow mind cannot have a broad vision, any more than narrow banks can confine a large stream. We all like to think that we are open-minded; and if we are, we can receive new truths and entertain them, and give them full and fair consideration. In so doing they will be meat and drink to us, and it will be proved to us that even the new may be true; that they are true even though they are new.

I am glad of the privilege of introducing a speaker who comes to us with a message about life, with the purpose of helping us to a larger life, of broadening our visual horizon, and of opening our thought to the eternal realities that lie not only beyond the stars, but that dwell here and now in our hearts.—*Correspondence.*

✧

Cincinnati, Ohio

Ex-Gov. Judson Harmon, in introducing Bicknell Young at the lecture on Christian Science held at Music Hall, said:—

I think public speakers often find their introductions somewhat of an affliction. They may get used to praise and compliment, but it is hard to have their subjects backed into and their time talked into. Having had some experiences myself, I shall not in any way afflict the speaker of the evening. I could not discuss his subject if I wished, and I lack the courage to stand for more than a moment between this fine audience and the man they have come to hear. I consented to act because the community at large ought, through some one, to show courtesy to a distinguished stranger and interest in a movement of pure motives and lofty purposes with respect to matters of supreme and universal importance, whose rapid spread throughout the civilized world has attracted general attention.—*Correspondence.*

✧

Seattle, Wash.

Judge King Dykeman of the superior court, in presenting Prof. Hermann S. Hering, who lectured for First Church at the Moore Theater, said in part:—

We are gathered here today to listen to a lecture on Christian Science. While I am a believer in the Christian religion, I am not, nor have I ever been, a Christian Scientist. I understand, however, that in the Christian Science church it has become almost a custom on these occasions to invite a member of the community outside of their church to introduce the speaker, and as such I feel highly honored today. This alone is an indication of the universality of the movement and its freedom from the prejudices that have too often characterized religious organizations. One cannot mingle with the members of this church in the material world without being impressed with the sweetness and purity of their lives, their freedom from the petty vices so common to the average mortal, and their strict adherence to the fundamentals of love, of truth, of justice, charity, benevolence, and forgiveness. They seem to possess a spirit of sunshine, a spirit that is graceful from its own gladness, and beautiful because bright.—*Correspondence.*

✧

Guernsey, Channel Islands, England

A lecture on Christian Science was given in the New Market Hall by Col. William E. Fell. The hall was nearly filled. The lecturer was introduced by Capt. N. Luxmoore of the Devonshire regiment, now stationed in Jersey, who said in part:—

Nearly two thousand years ago Christ Jesus stated the truth about God and man, showing how spiritual law can help us in our daily life, and proving the truth of his statements by healing the sick and the sinning. In the nineteenth century Mrs. Eddy, the Founder of Christian Science, through her spiritual perception, discovered the scientific Principle which governed Jesus in his teaching and works. She first proved the Principle to be true by healing the sick and sinning, as Jesus told all his followers to do, and then she gave her discovery to the world for the benefit of mankind. By the careful study of the Bible as interpreted by the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the spiritual law of God can be learned, and this law will destroy all moral and physical discords. It must, however, be understood and obeyed in the same manner as one would understand and obey the laws governing any science which one desired to put into practise.

Testimonies of Healing

As Christian Science is the greatest blessing which has ever come into my life, it seems fitting on this, the third anniversary of my recovery through its beneficence, that I should give my testimony to Truth's wonderful healing power. Several years ago, before coming into Christian Science, with a number of friends I attended a Sunday morning church service out of mere curiosity, and said afterward that Christian Science was not for me. Little did I then expect that I should return some six years later to that very same place to pray and to give thanks to God for His wonderful goodness to me.

Since childhood I had had very serious attacks of throat trouble, which would keep me in bed and under a doctor's care for a week or ten days each winter. We had been told something of Christian Science, and as these conditions continued year after year, my wife wished me to give it a trial. A practitioner was called in the morning during one of the worst of these attacks, and I shall never forget the sweet peace that seemed to fill the room as soon as she entered and told me of God's love for His children, and that it was not His will to afflict those who trust in His never-failing strength and help. Immediately after the treatment I rose from my bed and remained up the balance of the day, and on the second day I returned to my business in the city, much to the surprise of my associates, who fully expected me to be absent a week or more, as was customary when this malignant condition, with accompanying fever and general debilitating conditions, seemed to possess me.

Though I had gained some knowledge of Christian Science through the help given me at this time, I later went back to *materia medica*, as various attacks of sickness seemed to befall me and my family. This course was followed until the early fall of 1909, when I was taken with acute lung trouble, and was under the doctor's care for five weeks, and gradually grew worse. The doctor did everything he could for me, and I am grateful for all his earnest efforts; but he finally told me that he could do nothing further, and that unless I showed improvement during the following week it would be necessary for me to go to Colorado to regain my health.

We are told in the Bible that "a little child shall lead them." This was proven true in my case, for when the doctor's verdict was given, my wife and daughters burst into tears at the thought of my going so far from home, possibly never to return alive. One daughter, then sixteen years of age, who had attended the Christian Science services and had read Science and Health, said to my wife: "We won't let papa die. It isn't necessary for him to go to another climate to get well; he can be helped by Christian Science;" and it was so, for this was the truth spoken by a child. Medicine was discontinued from that moment, and none has been used by myself or family from that day to this, as Christian Science has met our every need. A practitioner began to treat me the next day, and with just five treatments I was healed and able to attend to my business as usual.

The physician who had charge of my case previous to my taking up Christian Science, wished to examine my lungs again the following Sunday, to determine whether or not I should be sent away. On the advice of my practitioner I went to the physician's office to have the examination made, but was advised not to tell him how my healing was brought about, as my knowledge of Christian Science was very limited at that time and a discussion of the matter would do me no good. He was astonished to see me walk into his office, and on examination found me a well man. He was also surprised to find my chest expansion three and one half inches, whereas on the previous Sunday it was but half an inch. The physical healing was so wonderful to me that I immediately took up the study of Christian Science and attended the Sunday and Wednesday evening services regularly. I am pleased to state that I am now in the fellowship of a local church and am also a member of The Mother Church in Boston.

For thirty years previous to my healing I had been a slave to tobacco, but after I was treated in Christian Science the taste was destroyed. Now I have no desire whatever for tobacco in any form, though for many years I had tried through will-power to give it up, only to return, after a short discontinuance, to its use. Moreover, the desire for liquor has vanished, and I am especially thankful for this, as previous to my treatment for lung trouble I found I was acquiring a taste for it. A bad temper has also been overcome, and for this additional blessing I am very grateful.

Since coming into Christian Science I have learned that "there is no power apart from God. Omnipotence has all-power, and to acknowledge any other power is to dishonor God" (Science and Health, p. 228). Before this wonderful truth came to me I knew little or nothing of the Bible, but now the Bible and Science and Health are my daily companions. One of the greatest privileges of my life is the early morning study of the Lesson-Sermon. This, the first pleasant duty of the day, enjoyed when there are no distracting sounds to mar one's closest attention to the spiritual truths to be learned, is a wonderful help, as it starts the day aright, and I find that the good there sought is reflected in my business.

There have been many beautiful healings in my family, and I wish to speak especially of one. My wife had for ten or twelve years been treated by three of Chicago's specialists for growths of the nose and throat. We were told by these surgeons that no cure was known for this trouble; that operations must continue at least once a year, but that they could promise no permanent relief. She was most miserable on account of this, having lost all sense of smell for a period of ten years or more, but shortly after my recovery she went to the same practitioner and was completely healed in two treatments.

My wife and two daughters are now in Christian Science, and we are so grateful for the blessings received through the understanding of this truth that we daily give thanks to God, who is our guide, companion, counselor, and friend. We are also grateful to our dear Leader, who has made the understanding of this truth possible to all the world, and it is our desire daily "to watch, and pray for that Mind to be in us which was also in Christ Jesus" (Science and Health, p. 497).—Harry Ainsworth Wilkie, Chicago, Ill.

✥

I first heard of Christian Science in January, 1906, and at that time I was in great distress physically and mentally. Four years previously I had a very serious internal operation, but instead of improving I slowly became worse. I was told later that mortification had set in before the operation was performed, and that poison had got into the system. If I walked a little, the inflammation and pain were much worse. At last the doctor said I must not try to walk, as he was afraid of an abscess forming; but the thing which he "greatly feared" came upon me. Another slight operation had to be performed (this was in December, 1905) shortly before Christmas. The doctor said I might go down for dinner on Christmas day, though I was to keep quite still; but I climbed upon a chair to get something, and fell and hurt my side. I suffered greatly before the doctor came. He said I had

Digitized by Google

broken a rib, and that I had a serious heart trouble. He feared this would be the end, but if I did survive I would ever after have to keep very quiet.

I had always tried to be good as far as I understood, and knew that this suffering was not of God. Like Job, I prayed, "Oh that I knew where I might find him!" and my prayer was heard. A friend learned of my condition and said to her mother, "Shall I tell her about Christian Science?" Her mother reminded her of the golden rule, so she brought me a copy of the *Journal*. She could not tell me much about Christian Science healing, but said that it was having faith that God would make us whole. I answered that I had no faith in anything but God, for the doctors had tried everything known to *materia medica*. She then said that Christian Science teaches us how to understand Him, and that was what I needed. Those words seemed to wake me up, and when she had gone I tried to read in the *Journal*.

I read that God is Love, that He is too pure to behold evil; then the understanding of these words concerning "the tree of the knowledge of good and evil" came like a flash of light: "Thou shalt not eat of it: for in the day that thou eatest thereof thou shalt surely die." I began to deny error at once. I knew I had found the truth, and the very room seemed to be full of light! I do not remember any more suffering, the healing having been instantaneous. The one Mind, all-wise, was leading me, and I kept silent. I did not even tell my husband, but blessing and praising God, and denying evil, I realized more freedom every day, and in three weeks the nurse and doctors were out of my home. I have never needed them since. Whenever any phase of error has crept into thought, with its resultant discord, divine Truth has been my physician. The first time I went out after my healing I had the money with me to buy a copy of Science and Health, and the Bible and our text-book have been my daily companions ever since. Meanwhile I try to show my gratitude to God and my thankfulness to our beloved Leader by using every opportunity to point others to Truth.

It is impossible to tell of all the blessings I have received since coming into Christian Science. I enjoy perfect health, and can keep on my feet all day long if necessary; and now my one desire is to love God and to do all I can in His service.

E. Annie Fish, Nottingham, England.

My wife's healing is as stated. I am thankful to God for Christian Science.—William W. Fish, Nottingham, England.

✧

With great joy I give my testimony of healing experienced through Christian Science, each instance proving to myself and others that the power of God is as potent now as it was centuries ago. I realize that we are freed from sickness and pain, as well as from the wrong thoughts which cause the suffering, just in proportion as we are willing to forget self and become conscious of the one Mind. I have been healed of severe bowel and stomach trouble, neuralgic headaches, distressing colds and throat attacks, also extreme nervousness, sensitiveness, and impatience, as well as many other ills. I should like to point out the contrast in the length of time and the suffering undergone during two attacks of one ailment under the treatment of *materia medica*, and that of another in Christian Science.

About twenty-one years ago I was suddenly stricken with great pain, and as my parents thought I was approaching the end, they sent for the nearest physician, who treated me for heart disease. In three or four days, not seeing any improvement in my condition, our regular family doctor was called, and for two weeks different remedies were applied, but they increased the agony. At the end of a month the doctor advised a trip to the mountains, thinking that might cause the ache to wear off. I well remember the weary stage ride to the camp near Shasta, when my father gave me stimulants at intervals to brace me up.

My second attack was in Los Angeles, about three years ago, and the suffering was so intense that I cried aloud to God to help me. My husband stood helpless, with tears in his eyes, waiting for our physician to arrive. When he came, he administered a hypodermic injection. I remained in bed two weeks, and during that time we were notified of a sudden business change which called us back to San Francisco, our former home, where I soon heard of Christian Science through friends.

The third and last attack came some time after, and I could hardly talk on account of the severe pain; but realizing that the old enemy must be destroyed, I telephoned to a Christian Science friend for treatment, and immediately came a confident response. My husband assisted me into another room and handed me my copy of Science and Health. After reading for twenty minutes I could straighten up, and in half an hour I went to bed and was perfectly comfortable. I awoke in the middle of the night in a profuse perspiration and felt warm and peaceful. The next day I arose as usual, attended to my household duties, and felt much better, with only a slight sense of soreness. The following morning, which was Sunday, I was perfectly well, and went to church.

I am sincerely grateful for all my healings and other blessings, including class instruction, as well as for the great privilege of being a member of The Mother Church. Then, too, whenever I think that this peace and rest is not only for a few, but is meant for all, my heart indeed rejoices. I am both glad and thankful to say that my healing has been permanent, and that I now understand better the meaning of Christian Science.

Florence G. Barnard, San Francisco, Cal.

✧

Some time ago I returned to London from the west coast of Africa, quite broken down with so-called malarial fever. For a long time I continued the ordinary method of treating this malady, with repeated and ever increasing doses of medicine, but with no good result. I then had Christian Science treatment, entirely leaving off all drugs, and got rid of the fever; but as I continued to be extremely weak I went to a hospital for tropical diseases. There the diagnosis was that I had not a trace of the malarial fever left, but they said I was suffering from another tropical disease and that my heart was affected by it, as I was nearly unconscious from heart attacks after the slightest exertion.

I remained two weeks in the hospital and was then allowed to go home for a fortnight, as the treatment was so drastic that it was thought this period should elapse before continuing same. I again had Christian Science treatment, and on returning to the hospital my heart was found to be all right and my general health much improved, so I remained only a few days. On leaving I was told, however, that I must take no form of violent exercise, and not even go up-stairs for some time; but within a week I was well enough to take charge of a friend's large garden, a task which entailed digging, mowing, etc., and I was able to play cricket and tennis with the boys who lived there. On my complete recovery the question of proper employment was taken up, and in a short time I got a good position, where I now am, and I continue in the possession of perfect health.

Although it is over a year since I had Christian Science

Digitized by Google

treatment, I have never once had any return of the illness or been sick for a single day. For the benefits I have received from Christian Science I here express my heartfelt gratitude.

J. G. MACFARLANE, Bournemouth, England.

✧

I wish to express my love and thankfulness to God, and my gratitude to our revered Leader, for the many blessings I have received through the understanding of God as revealed by the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I found Christian Science to be the "pearl of great price." I did not come to it for physical healing; I was led to investigate this demonstrable truth by reading articles against Mrs. Eddy and her teachings in one of the monthly magazines.

Over four years ago, while reading Science and Health, I was healed of chronic bronchitis, from which I had suffered every winter for years. I was also able to discard glasses which I had worn for several years, the physician having told me that I would always have to use them. These effective demonstrations proved to me that Christian Science is the Christ-teaching, that God is the great Physician, and that when we are healed by God, our healing is permanent. I have never had any return of these ailments.

I am very grateful for all the Christian Science literature which our revered Leader has so lovingly provided for us, and I cannot express my gratitude for the understanding of God as divine Principle. I have proved the power of Truth by applying this understanding, no matter what the problem was, and it has destroyed every sense of error.

MARY A. CHANNELL, Philadelphia, Pa.

✧

Words cannot express my gratitude to God for what Christian Science has done for me and my family. My children had whooping-cough and I did all I could for them, but being young in Science I could not overcome the ailment, so I called for help. There being no practitioner where we then lived, I sent to a friend in Guthrie, and we were helped at once. My children had been restless at night on account of the coughing, but after the first treatment they slept all night, and the next morning they were well. I knew that God was with His children, an ever-present help, and as I realized His power, my fear left me, and I was healed of a trouble that had been with me for four years.

I have made the Bible and Science and Health my daily study, and the Bible has been opened up to me. I read in Paul's epistle to Timothy that "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." I have proved that if we take God for our physician, He will always heal us. I cannot express my thanks to God, and I am grateful to Mrs. Eddy for bringing this great truth to help the whole world.—BESSIE SHANNON, Guthrie, Okla.

✧

I am thankful that I can testify to what God has done for me through Christian Science. After years of great suffering from a complication of diseases, I have been healed of intense pain in the head, from which I was not free for one whole day. I also had spinal trouble, supposedly caused by falling on ice. After suffering for ten years, at times unable to take a step without help, and being told by the doctors that I would never be any better, this healing was wonderful; but I have received many other blessings. I was said to have organic disease of the heart, and the attacks became so frequent that I was afraid to go from home alone, as I had several times fallen unconscious. Then there was a growth in the left side for which the doctor wanted to operate; but to this I would not consent. I wore glasses over fourteen years, but I am glad to say that for over two and a half years I have had no need of them. Besides these, several other ills have been overcome.

I shall never forget my first treatment in Christian Science. I was suffering terribly, as I had been for months, and was tempted to end it all; but when I saw my dear father and brother so worried, and doing all they could for me, I thought it was a sin even to think of such a thing, so I turned my thoughts to God and prayed to Him to help me. God answered my prayer. The practitioner who was treating a friend, kindly offered to help me, and before he left that afternoon I was so much better that I knew my life was saved. I am truly thankful to God for all that was done for me. My entire healing was slow, but this made me study the more, for which I am glad. Since then I have passed through sorrow and trouble, and there have been times when I was much discouraged; but I am thankful to say that my needs have been met through what little understanding I have of Christian Science and the help of the same kind practitioner.

In the summer of 1912 I was able to overcome for myself a case of poison and a very bad cold. I have also been able to assist my brother at different times when he has needed help. Once, when he met with an accident to his wrist and the ligaments of the arm, I did what I could for him, and then sent to a practitioner for treatment. Except for the first night, he suffered very little pain, although the arm was much swollen and he could not use it; but it came around all right. More recently I have had a wonderful demonstration of the power of Truth. I met with an accident by falling down a flight of stairs, and to material sense my injuries were very serious; but I am thankful to say that with the knowledge I had of Christian Science and some help from a practitioner I was soon free from any trouble.

We are truly grateful for these healings. I am thankful to God for Christian Science, and to all who had anything to do with bringing this blessed truth to me. Each day I am trying to learn more about it by studying the Lesson-Sermons, also by reading the *Sentinel*, *Journal*, and our other literature, so that I may be able to help some one else who is in need. How thankful I am for this healing truth that has again been brought to the world through our Leader, Mrs. Eddy!—ANNIE G. STEPHENS, Norwood, Pa.

✧

I first began to be interested in Christian Science four years ago, but being very skeptical and critical, I had not the slightest faith or belief in the healing, having unquestioningly accepted the idea that the Christ-healing belonged to a bygone day. The high moral teaching of Christian Science attracted me, however, and also the charitable and unselfish bearing of several Christian Scientists with whom I was brought in contact.

I had just been given glasses by a London eye specialist, and told that I ought never to leave them off if I wished to keep my sight from getting much worse. I wore them with great discomfort for several months, and then, after attending a Christian Science lecture, decided to experiment with my small understanding of the power of Truth. I bought a *Quarterly* and a copy of Science and Health, much astonished at myself for being willing to buy what seemed to me an expensive book, and left off my glasses. At that time I was in the country, removed from Christian Scientists, and when a great mental trouble come upon me I was most miserable and unhappy. A dear friend, on whose account I was looking into Christian Science, wrote and asked if she should get help for me from a Scientist. I had no belief that it could help me, but I told her she might do what she liked. To my

Digitized by Google

astonishment, two days afterward, a load seemed to have been lifted from me, and although none of the apparent causes of the trouble had changed, my view-point was entirely altered and I felt happy and light-hearted. Before that time I had been of an extremely critical disposition, but I thank God that since then I have never felt critical toward Christian Science and have always tried to eliminate the feeling of criticism of others from my thoughts.

I have had many demonstrations of the healing power of Truth, applied with understanding. I can see perfectly without glasses; but more than all else, I am grateful for the knowledge of God I have gained, and for a practical religion which can be applied to every problem in our daily life. Whereas four years ago I steered clear of anything approaching religion, I now have the great privilege of being an active member of the Christian Science church. I can never be too thankful to Mrs. Eddy for all she has done for mankind, and for the understanding of our Father-Mother God which I have gained in the study and practise of Christian Science.

BEATRICE WELLS, London, England.

✦

I send my testimony in the hope that some one who may feel discouraged will take heart and know that divine Love through the understanding of Christian Science does heal, no matter what the trouble may be. I have been healed of a disease commonly called "symmetrical gangrene" in its worst form in both feet and limbs. I had had several amputations, and for months thereafter was unable to get around.

In January, 1912, the doctors told me there was no use to amputate any more, but if I wanted to get well I would have to go to Cuba, where the disease had been contracted from exposure, wounds, and privation fifteen years before. After hearing this anything but cheerful news, I decided to trust God absolutely, though for several years I had been trying Christian Science, material remedies being used when the pain seemed more than I could stand; but the time had come when I was willing to give up material means. I called in a practitioner and accepted the truth as revealed to us in "Science and Health with Key to the Scriptures" by Mrs. Eddy.

I am thankful to say that both my limbs are now perfectly healed and I am able to walk without crutches or cane, better than for several years. For this and many other blessings I am indeed grateful to God, and also thankful to Mrs. Eddy, who has shown this age how to interpret the Bible so that we may receive its blessings.—JAMES PENNIE, Los Angeles, Cal.

✧

I am exceedingly grateful for Christian Science, which I began to study during my girlhood. At first I attended the church services to please my mother, as she is a Christian Scientist. Gradually, however, the beauty of this faith dawned upon my consciousness, and I felt confident that Truth alone could bring me permanent happiness. I have been able to overcome fear of speaking and playing in public through the knowledge that fear is but belief in a power apart from God.

I am now attending college, and by studying the Lesson-Sermon every morning I am better equipped mentally for the day's work. Besides my regular college studies I have done some teaching and other work along musical lines. I have remained well and strong by realizing that "whatever it is your duty to do, you can do without harm to yourself" (Science and Health, p. 385). I am very thankful for the great privilege of having class instruction, and my sincere desire is to reflect more of Truth and Love.

JULIA E. BROUGHTON, Little Falls, N. Y.

From Our Exchanges

[*The Christian World*]

Beneath all nature's endless varieties we see the working of one law, of one intelligence, of one primal force. Here, indeed, we find one of the great factors of that religious unity for which all good men are striving. It is the unity we are learning to see between the facts of the external universe and the facts of the Spirit. That is where science and religion are meeting. It is a reunion better and deeper than anything our church conferences can devise. It is along this line that the only church unity worth the name will eventually come about. It will be a slow process, slow as the evolution of the human spirit. The hope of it lies in this: that the best men everywhere, of every church and denomination, are learning the same things, and by the teaching of facts are thinking along the same lines. They are coming together under the guidance of the same light. That light has already, under the workings of spiritual freedom, reached the leading churches of Protestant Christendom. The effect of it is seen in the *rapprochements* which are the religious feature of today.

[*The Christian Register*]

Those who love their country and their kind have good cause to feel a modest assurance that the great needs, deprivations, and sufferings of the world are taking hold of multitudes of people who formerly were indifferent, because they were not awake and conscious of their duty. These people, some of them, were among the old sleepers who had their ears filled with old hymns and prayers, and believed them efficacious for the salvation of the world without personal effort or any special sacrifice of ease or comfort on their part. But the new movement for the salvation of the world has no dogma to promulgate, no ritual to establish, no ecclesiastical hair-splitting to advocate, but is a new method and spirit of practical love to man the brother, and woman the sister, and the little child. Jesus Christ still lives, and, so to speak, he is becoming more and more alive every day. When, after he had risen, the apostles met him in the way, they did not know him, but their hearts burned within them. When our hearts burn with the noblest ambition of service, though we see him not, we may be sure he is near.

[Thomas Cuming Hall, D.D., in *The Christian Work and Evangelist*]

It is not a question as to whether the kingdom is coming or not; the kingdom certainly is coming. The question is as to whether the church, calling herself the church of Jesus Christ, is really to be the instrument of God for the bringing in of the kingdom. The question of the arrival of the kingdom of God is not one that any faithful heart can answer in the negative; but every faithful Protestant heart should be asking the very serious question whether our broken and divided, quarrelsome Protestantism is not standing already before the historical judgment-seat of God and being asked the solemn and the heart-searching question, Are you ready to go about it and do your Master's task, bringing the kingdom of God to full fruition? Or will you be found seeking the prosperity of your little denomination, seeking the preservation of your selfish property interests, seeking conservation of your class values, seeking as the eternal life things that Jesus Christ has himself said are passing, temporal, and doomed?

[*The Congregationalist and Christian World*]

Let us, then, in our seasonable meditations, free ourselves from the tyranny of a calendar whose standards leave so much to seek. Substitute growth for age, life for existence, fruition

Digitized by Google

for duration, manifold and transforming experiences for the checkered spaces of an almanac. It is in some such fashion as this that the books of God are kept; we shall be better fitted for the great assize if we keep our little accounts in His divine fashion. Then we shall understand the contention of the philosopher that time is a form which the soul herself supplies; then we shall become the comrades of the mystics who have always proclaimed their high experiences to be timeless; then we shall at last know what Jesus meant when he said that those who share his temper and receive his word have already begun to live the ageless life.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

The first and last word of creation is Christ. He is supreme over all that befalls us. All else may change, but he does not change. Fleeting and ephemeral though the conditions of our mortal state undoubtedly are, he is just the same forever, and it is he who will have the last word, as he had the first. At the heart of all mutations, all that passing leaves its mark upon the soul, is Christ himself, Christ who is the one stable and reliable fact of existence, Christ who is superior to all vicissitudes, all contingencies, all privations, all revolutions of our lot, all sorrows and dreads, all death and decay. This is a beautiful thought, and as true as it is beautiful. It is the highest revelation ever given to the wistful spirit of man.

[*The Continent*]

We cannot do without Christ in our homes. We are trying to do so, some of us. We do not talk about him; we do not think about him; we do not consult him. Our children are sent to others for their training. President Nollen has recently been saying that American fathers, for the most part, are shirking their chief task by turning it over to others. It is true of many mothers also. Children will see the change it makes in a home; we will feel it ourselves. We may have chafed in our youth over the religious influences that surrounded us, but we have passed the chafing age long ago, and if we have come into a strong Christian life ourselves, we understand the value of it. No one who caught its spirit mourns it now; nor will our children mourn it in the coming years, when they remember that our homes did not try to do without Christ.

[*The Outlook*]

Society will never become thoroughly sound and sweet except by the moralization of its members. There must be a change of the heart of society before it will bring forth fruits meet for repentance. The right spirit is a thousand times more searching, exacting, and effective than the most rigid regulation. The prophetic function in the church is to declare steadily the will of God; and the will of God is written, not on tablets of stone, but on the heart and in the conscience of men. By all means let the outward reform be carried forward with zeal and courage; but it must be accompanied by the inward reform, which makes conscience a light to a man's feet and fills him with the spirit of Christ, and which imposes few laws, but sheds warmth and light on the whole world.

[*The Advance*]

The life that really is full has no room for sin, and it gives only the corners of its home to life's lesser interests. The expulsive power of a great affection has proved the eviction of many an evil that went not out by any other process. Be not content with the casting out of evil or with the sweeping and garnishing of the house. Let the life be filled with grace and goodness, and there will be no room for evil.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is to be issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75. This book is now ready for delivery.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $8. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

NATIONAL.

During January, customs receipts fell nearly six million dollars below the corresponding month of 1913. At the time of the enactment of the tariff act, treasury officials expected to see a customs falling off of about forty-five million dollars a year. For the month the excess of disbursements over receipts was about seven million dollars, while in January, 1913, the receipts exceeded the disbursements by nearly three million dollars. So far, however, there has been no return from the income tax, which is not payable until June, and it is probable that the excess of disbursements will continue until the tax comes in to offset the decrease in customs revenue.

Administration rural credit bills have been introduced in the Senate and the House by Senator Fletcher of Florida and Representative Moss of Indiana, members of the commission which President Wilson sent abroad last summer to study foreign systems. The bills are for long-term farm loans. Bills for short-term loans will be introduced later. These measures would establish in the treasury department a bureau of farm land banks under the direction of a commissioner and make provision for the formation of such banks in any state under federal charter and federal inspection.

Investigation of Argentine beef packing has been quietly started by the state department in an attempt to determine who controls the product; whether there is a combination among the Argentine packers, and to what extent American packers are parties to any combines that may exist. Orders have been sent from Washington to the diplomatic agents of the department in the Argentine Republic to make a careful inquiry into the Argentine industry, and particularly into the contracts which have been made for the delivery of beef to shippers who send it to the United States.

The seven naval powers of the world expended last year in construction the sum of $797,948,900, the United States standing second in the list, with appropriations of $140,800,643. Great Britain spent $235,713,489, while Germany was not far behind the United States, with an expenditure of $111,270,025. Japan took last place, having spent but $48,105,151.

As the result of an investigation disclosing the advantages of oil-equipped battleships, Secretaries Daniels and Lane, Chairman Padgett of the House naval affairs committee, and others, have been conferring over a project for government ownership of oil lands and pipe-lines for furnishing the navy with its own fuel.

Representatives of labor organizations in Boston and other Massachusetts cities have requested, before the committee on street railways, that the matter of public ownership and operation of street railways in the commonwealth be submitted to the voters of the state for decision.

Postmaster-General Burleson has issued an order providing that parcels of printed miscellany weighing more than four pounds may be mailed under the parcel post rates when within other parcel post regulations.

President Wilson has announced that he will use every legitimate influence at his disposal to have repealed the provision of the Panama Canal act exempting American coastwise vessels from the payment of tolls.

The United States has issued a call for the holding of the third peace conference at The Hague next year. The government took this action, it is understood, at the request of Queen Wilhelmina of Holland.

The nomination of Col. George W. Goethals for Governor of the Panama Canal Zone was confirmed by the Senate on Feb. 4. The appointment becomes effective April 1, 1914.

INTERNATIONAL.

The British colonial government of the Fiji islands is offering encouragement for the revival of the cotton industry there. During the civil war period in the United States, when England's supply of the staple was cut off, cotton growing was inaugurated in Fiji on an extensive scale. At first several thousand acres were planted by American residents, and within three or four years the area increased enormously. A price as high as one dollar per pound helped to make fortunes quickly. A restoration of the industry in the United States, however, caused a fall in prices and abandonment of the cultivation by Fijian planters. Now the prospective early opening of the Panama Canal, which is expected to give the islands a lower freight rate to Atlantic seaboard points, together with the recent discovery that Sea Island cotton is splendidly adapted to the soil and climate, is causing a strong agitation toward the planting of that staple.

The Society for the Protection of Ancient Monuments and Buildings has addressed a letter to the Paris *Temps* protesting against the widening of the Rue des Deux Ponts in l'Ile Saint Louis. To widen this street would mean the pulling down of many seventeenth and eighteenth century buildings full of historic association. It is all of five years since the project of widening was put forward. Since that time all the formalities connected with such a scheme have been complied with and the work is about to begin. It is very doubtful whether it will now be found possible to stop the project.

A semi-official statement lately issued, relating to the Russian troops in northern Persia, states that "the Persian government, in the endeavor to restore tranquillity in the country, especially in Teheran, recently adopted certain measures, such as the dismissal of the irregular troops, the so-called Fidais, the increase of the Persian cossack brigade to three thousand men, the organization of a police force in Teheran, and the removal of the Bakhtiari militia. In view of these steps the Russian government considers it proper to withdraw from Kasvin the greater part of the detachment sent thither at a time when there was reason to fear serious disturbances in Teheran, which threatened to endanger the safety of Russian subjects and others."

The American Red Cross Society has been granted by the Chinese government a year in which to obtain the necessary twenty million dollars to carry out a project for controlling the River Hwai, whose overflows have caused great loss of life and damage to property every year. A preliminary agreement to this effect was signed Jan. 30 by Paul S. Reinsch, American minister to China, and representatives of the Chinese government. The plan for obtaining the money is to float a 5 per cent loan.

The Tanganyika railway, which crosses German East Africa from Daressalam to Lake Tanganyika, was completed Feb. 2. The line is seven hundred and seventy miles in length and will enable the journey to the coast to be made in two days, instead of the usual forty-two occupied by a caravan. By means of steamships on the lake the Belgian Congo will now be linked up with German East Africa, having an outlet in the Indian ocean.

The aviator Brunolanger last week broke the world's record for an endurance flight. He remained in the air for fourteen hours and seven minutes. The best previous endurance record was made by the French aviator, Fourny, who, in September, 1912, at Etampes, covered six hundred and twenty-seven miles in thirteen hours and eighteen minutes without stop.

INDUSTRIAL AND COMMERCIAL.

In the agricultural districts of South Australia the actual yield of wheat per acre last season and the estimated return this season are both considerably above the average. This is a striking testimony to the improvement in the practise of agriculture in the state, and is the more noteworthy inasmuch as a large area of the land now under cultivation was a few years ago virgin land covered by a dense growth of indigenous timber. The quantity of wheat exported from the state for the last cereal year, which closed on Nov. 30, amounted to 18,338,496 bushels, and flour shipments for the same period totaled 54,188 tons.

That there is enough water-power in the commonwealth of Massachusetts to supply heat, power, and light to the whole state, is reported by the Massachusetts commission on water conservation. It is also said that not one quarter of the available power has been developed. The commission was created by the last Legislature, and was allowed five thousand dollars to expend in its investigations. With this fund it was able to investigate only Berkshire, Hampshire, Hampden, Franklin, and Worcester counties, but it was found that scores of available water sites were practically unknown or forgotten.

The mine production of gold in South Dakota in 1913, according to preliminary estimates, was $7,200,000, which is $691,870 less than the record yield of $7,891,870 in 1912. The 1913 output, however, is above the yearly average for the last decade. The silver production fell from 206,460 ounces to 164,800 ounces. A nominal quantity of lead and copper was produced.

The government has brought suit in New York against Theodore Haviland & Co., importers of china, to recover $1,220,849, alleged to be due on imports which were undervalued by fraudulent invoices.

Conservation of the Public Health

WILLARD S. MATTOX

THE attitude of Christian Science toward the broad question of health preservation is not as yet well enough known to have gained for it that measure of general approval and cooperation which it is safe to predict will be accorded it in the near future. Indeed, the views held by Christian Scientists on questions relating to public health have at times been so misconstrued that they have been charged with obstructing the efforts made to safeguard the community welfare. This they have never done. They have, however, objected to the activities of an element in the medical profession which has endeavored to pass restrictive medical laws under the pretense of promoting health legislation favorable to the people.

The Christian Scientist believes in good health. He wants it for himself and for his family. He wants it for all mankind, for one reason because he knows that the prevalence of health conditions reduces the liability of disease. The Christian Scientist values good health no less than does his neighbor whose theory and method of maintaining physical harmony are different from his own. Valuing his own well-being and cherishing the health of those dear to him, it is not to be supposed that the Christian Scientist would wantonly expose himself or others to disease, nor would he foster or promote conditions which make for disease. Self-interest alone, if there were no worthier motive, would prompt him to protect himself and his loved ones, and to aid whatever measures give promise of conserving the health of the community.

There is no difference, then, between the opinions of the Christian Scientist and those of all other sensible men as to the advisability of being well and remaining well. The only difference is as to the best method of accomplishing this "consummation devoutly to be wished." The trend of modern thinking indicates that while the necessity for material methods of health conservation is being agitated and the value of these methods greatly overrated in the minds of the people, there are yet hopeful and unmistakable signs that better methods are being considered and approved, and these will inevitably supersede the cruder theories of the past. Years ago Mrs. Eddy foresaw this change of base from a material to a spiritual modus, for she said: "We thank our Father that today the uncremated fossils of material systems, already charred, are fast fading into ashes; and that man will ere long stop trusting where there is no trust, and gorging his faith with skill proved a million times unskilful" (The People's Idea of God, p. 8).

The Christian Scientist has no quarrel with the doctor; it is the medical theory of the cause, prevention, and cure of disease to which exception is taken. The Christian Scientist is not an iconoclast, or a ruthless destroyer of health safeguards; he merely differs from the materialist as to ways and means, and offers in place of those now most in vogue that which he has proved to his own satisfaction to be a safer and wholly successful method of health conservation.

The Christian Scientist makes no objection to the study of health or to lectures on health. It is the study of disease and lectures on disease which he opposes. According to Christian Science, a mind impregnated with theories of sickness and filled with mental pictures of disease, will do more to make a diseased mortal than all the germs and bacteria that were ever propagated. That is why the Christian Scientist is conscientious in combating the medical propaganda which is spreading over the country today, and which can be regarded only as error's publicity campaign to exploit disease. That is why the Christian Scientist arrays himself, along with other good citizens, against enforced medical inspection of school children, the teaching of sex hygiene, and other phases of the medical program that are now being advocated throughout the country.

Cleanliness and all proper precautions against unsanitary conditions of public and private property are highly desirable; but these may be secured without promoting an epidemic of fear such as is being engendered today in the public schools, in the daily press, and wherever men and women are gathered who are willing to listen to a "scientific" discussion of the horrors of disease. If the medical education now being attempted is not checked, we are in danger of imitating the ancient Egyptians, whose chief aim during life seemed to be to prepare to be properly buried. The modern tendency to discuss the human body and its frailties, and to pass laws to regulate and control it, puts far too much emphasis on the material side of existence, in the opinion of many besides Christian Scientists. It inculcates habits of thought that are fatal to health, and quite remote from the simple, sanitary advice of Jesus, who said, "Take no thought for . . . your body."

The mental cause of disease is being more generally acknowledged, although it has always been apparent to the thinkers of the world. The greatest English dramatist makes one of his characters ask, "Canst thou not minister to a mind diseas'd," and on receiving no encouragement he says, "Throw physic to the dogs: I'll none of it." Jesus of Nazareth, the master Metaphysician, plainly declared this fundamental truth when he averred that it is "not that which goeth into the mouth" that "defileth a man [makes a man sick]; but that which cometh out of the mouth."

As the understanding that disease is a subjective state of the human mind gains credence among the people, it will be seen that the present methods of preventing sickness are radically wrong. It will indeed be acknowledged, sooner or later, that instead of protecting the public from disease, the misguided medical methods of today are actually responsible for most of the prevailing forms of ill health. What appear to be laudable precautionary measures of protection will be discovered to be little else than suggestions which create and perpetuate the mental image that is later externalized as disease.

With the changed understanding of the nature of disease and its mental propagation will come a change in the methods of guarding against it. The thought of the individual will be quarantined then as carefully as his body is isolated now. The mental home will be segregated from the intrusion of fear, ignorance, and belief in disease, just as attempts are now made to protect the material home from germ and microbe. Clean thoughts will be found to be as effective an

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

antidote against the spread of disease as the sanitary rules and regulations of health boards. The entire question of health conservation will be spiritualized rather than materialized, and the world will come to understand the significance of Mrs. Eddy's statement in Science and Health, "Much yet remains to be said and done before all mankind is saved and all the mental microbes of sin and all diseased thought-germs are exterminated" (p. 164). Who can doubt that the world will be grateful for the change in methods? "How beautiful upon the mountains," says the prophet, "are the feet of him that bringeth good tidings, that publisheth peace; that bringeth good tidings of good, that publisheth salvation." How welcome, indeed, is the message of hope, the evangel which declares to a suffering race, "Thy God reigneth!" And what a contrast to the dismal appearance of that other messenger abroad in the land, that brings no "good tidings of good," that precipitates and aggravates fear and disease, and that promises no salvation from human ills.

There is such a thing as preventive medicine, and Christian Scientists are firm believers in it; but it is a mental or spiritual remedy, and it has proved itself to be far more efficient than the drugging system or prevalent medical theories. There is an inoculation which is a surer preventive of disease than vaccination or typhoid serum. It is the activity and circulation of right ideas, which neutralize and destroy all "thought-germs." Mrs. Eddy sums up the whole question of preventive medicine and health conservation when she says: "At a time of contagious disease, Christian Scientists endeavor to rise in consciousness to the true sense of the omnipotence of Life, Truth, and Love, and this great fact in Christian Science realized will stop a contagion" (The First Church of Christ, Scientist, and Miscellany, p. 116).

✧

Comparison of Standards

SYDNEY B. GIBSON

NOTHING strikes the student of Christian Science more forcibly than the necessity of constantly comparing the standard of his thought with that demanded by Truth. Mrs. Eddy writes in Science and Health, "Substituting good words for a good life, fair seeming for straightforward character, is a poor shift for the weak and worldly, who think the standard of Christian Science too high for them" (p. 167). In the prophecy concerning the coming of the Christ, we read that the Lord "shall set up an ensign [*i.e.*, a standard] for the nations," and in the life of Jesus we have the Christ-idea with its high and perfect standard set before us, showing humanity the ideal man with his spiritual might and dominion.

A very helpful thought on these lines occurred to the writer while engaged in his professional duties. Among the various acts of Parliament administered by him for one of the great industrial counties of England is the weights and measures act, and in this particular department the comparison of standards becomes a matter of the most vital importance. There are kept at headquarters a set of what are called "imperial standards," which are perfectly correct in every detail. These repose at all times in velvet-lined cases, are treated with the greatest care, and are used only to compare and verify the sets of "working standards" which in their turn are used for testing all weights and measures throughout the county.

One can clearly see the importance of this careful and constant comparison, for if the "working standards" were incorrect, that would be the means of throwing into error the whole of the weighing plant in that particular district, and would affect thousands of people in the world of commerce as well as many others indirectly connected with it. Now, if comparison in this matter is so important, how much more so is it that we be constantly comparing our mental standard of thought with that of the "ensign for the nations"! Our standard of love, honesty, justice, purity, etc., needs constant watching, and it is necessary that at all times we remember what the real man reflects, namely, God's attributes, so that by careful consideration of our motives and aims we may bring "every thought to the obedience of Christ."

Let us pause to consider what attainment to the perfect standard means. To us it is dominion over sin, sickness, and death, "the glorious liberty of the children of God." To others it means help, by which the fetters may be loosed from their necks so that they may be free to work for the cause of universal freedom. But if our standard of thinking is deficient and erroneous, the result is not only disastrous to others but to ourselves. Our thoughts, words, and deeds are either helping or hindering our brethren, for, said the Master, "with what measure ye mete, it shall be measured to you again." The responsibility is no light one, and Cain's question comes again, "Am I my brother's keeper?" Can we live to ourselves? No! The whole duty of each of us is the attainment and realization of his true selfhood as a son of God; to grow, and to help others grow, into the full stature of manhood in Christ.

A great factor in the comparison of standards is the balance on which they are verified; this must be true, sensitive, and without error, the means of drawing a clear dividing line between the true and the false, between the right and the wrong. Such a balance has been constructed for us by our Leader, for in the text-book, "Science and Health with Key to the Scriptures," we find the line sharply drawn between truth and error, the spiritual and the material, and we get a full understanding not only of how to compare our standards, but also of how to adjust them.

We do well to remember that the Christian Science standard is spiritual, and not material; that it represents Mind, not matter. Mrs. Eddy writes, "If the scales are evenly adjusted, the removal of a single weight from either scale gives preponderance to the opposite. Whatever influence you cast on the side of matter, you take away from Mind, which would otherwise outweigh all else" (Science and Health, p. 168). We must abandon matter and material beliefs if we wish to attain the spiritual, for these alone stand in the way of progress; and so long as we cling to error we shall be "weighed in the balances," and "found wanting." Let us therefore "put off the old man" and at all times heed the imperative command of the Master, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

✧

Positive Authority

MARY I. MESECHRE

To the thoughtful student of Christian Science it is undeniable that Mrs. Eddy selected her words with definite design, and that due attention to her admonitions will obviate incorrect or strained construction thereof. Vexed questions are to be explained by Mrs. Eddy's own words, rather than by any private interpretation.

Occasionally a student of the Christian Science text-book, "Science and Health with Key to the Scriptures," is honestly blinded by a too circumscribed reading of the statements by which he is endeavoring to be guided. To such we may be privileged to enact the rôle of Aquila and Priscilla with regard to Apollos, to whom they expounded "the way of God

Digitized by Google

more perfectly," thus confirming faith by clearer perception of divine law. There are, however, some who seem unable to discriminate between negative permission and positive authority, and who thereby repeatedly make the good of our cause to be "evil spoken of." These may presume to translate the meanings of Mrs. Eddy's most profound sentences at sight, and awe the timid questioner into enforced and unillumined silence by an aggressive manner or a bold assumption of authority. They are wont to say that Mrs. Eddy makes no hard and fast rules; that everything is left to individual demonstration.

True, Mrs. Eddy did not "make" rules; she merely stated and elucidated the divine Principle which makes its own rules, the "Deity, which outlines but is not outlined" (Science and Health, p. 591); and so thoroughly did she work that in the pages of the Christian Science text-book and the Church Manual are found abundant guidance for every teachable Christian Scientist. As commonly used, the above statement is both fallacious and misleading. Individual demonstration has nothing to do with the making of rules, but rather with the acceptance and demonstration of Principle; it does not establish the way, but follows obediently. No least word from the pen of our revered Leader authorizes the assertion quoted, nor does her rich legacy to the world afford any justification for excusing one's defection from Principle on the ground of extenuating circumstances. We do not find the honest student of mathematics proffering such a flimsy excuse for an unsolved problem. Only two explanations can be offered,—either he lacks sufficient understanding of the laws involved, or he has neglected to apply his knowledge to the answer of the question involved. Neither ignorance nor laziness is accepted by a just teacher as an apology for faulty work.

To one who will earnestly apply himself to comprehend, no paragraph written by Mrs. Eddy presents insurmountable difficulties, for in most instances diligent study will soon dispel all seeming obscurities, so self-explanatory are her writings. This cannot be done, however, by separating one paragraph or one sentence from its context and relying upon it to sustain a contention which one desires to establish. This method, constantly employed by the self-constituted critics of our Leader, has as constantly proven a ludicrous failure, for no private interpretation that has been or can be placed upon her writings can stand before her own elucidation of her idealism. (See Science and Health, Pref., p. xii.)

A paragraph which seems to perplex many, and to offer special allurement to private interpretation, is found on page 464 of the text-book, and reads: "If from an injury or from any cause, a Christian Scientist were seized with pain so violent that he could not treat himself mentally,—and the Scientists had failed to relieve him,—the sufferer could call a surgeon, who would give him a hypodermic injection, then, when the belief of pain was lulled, he could handle his own case mentally." No obscurity is here, yet the writer has known of several instances where this paragraph has been taken by readers to mean permission for the habitual use of a drug to allay pain, and also the active care of a physician while ostensibly the sufferer is having Christian Science treatment. Of course no trustworthy practitioner would countenance such procedure, and it is very clear that the wording of the paragraph does not justify such construction as has thus been placed upon it, for negative permission is not positive authority. The term a "hypodermic injection" argues the purposed restriction of the drug to a single application, under the special circumstances named, and does not justify further resort to such material relief.

Any construction of this paragraph other than that comprised in Mrs. Eddy's own words would violate the unity of her teaching on this important point of distinction between Christian Science and other methods of healing. This teaching, reiterated and emphasized throughout her writings, is perhaps nowhere more clearly stated than on page 167 of Science and Health: "It is not wise to take a halting and half-way position or to expect to work equally with Spirit and matter, Truth and error. . . . Only through radical reliance on Truth can scientific healing power be realized." "Radical reliance on Truth" does not excuse unscientific practise with the plea that since a drug is not specifically forbidden it is negatively permitted; it is satisfied with nothing short of the strictest adherence to positive authority, and carefully avoids even the "appearance of evil" in its uncompromising obedience to him whose demand is, "This do, and thou shalt live."

✧

The Bees

MARION A. BIRCH

I HAD gone one day to call on a friend living near, and as she walked down the drive with me on my homeward way, she told me of a little difficulty which had arisen in her household and which was causing considerable inconvenience to some guests. A swarm of bees had settled under her roof, just over her spare-room. It was during a very hot spell, and though it seemed impossible to keep the windows closed against the fresh air, it seemed equally impossible to open them to admit the turbulent near-by troop. Here was a problem indeed! The guests, a clergyman and his wife, possessing, I suppose, some considerable experience of country life and its difficulties, had declared to my friend that she would need to have some of the tiles removed and the bees "smoked out" before she could hope to be free from them!

So, as we walked and talked, we tried to turn upon this problem what understanding of Truth we had each gained through the teachings of Christian Science. We recalled the fact that God's kingdom is now come; that all the creatures formed by Him are His, and obey His voice; that God has prepared a place for each and all, and that divine Love alone governs all, hence all must know and find their right place. On my quiet walk home I tried to realize these truths more fully in connection with my friend's problem, and I am quite sure that she, for her part, did the same.

For some days I heard nothing more of the bees, until at last, curiosity prompting me, I called to ask news of them. "Oh! they have gone," I was told; and here, for the seeing eye, was yet another proof of the effectual and practical help which the demonstration of Truth in Christian Science brings into all the details of our daily lives. There had been no inconvenience through having workmen about, no tiles taken off, and no "smoking," with its consequent suffering for the bees; the tiny winged workers had simply and naturally flown away to seek and find their right nesting-place!

We are told in the Bible that God gave man dominion over all the creatures that He had made, and I am truly grateful that through this teaching we are shown how to attain to our rightful dominion through the law of loving-kindness, and not through destructiveness and cruelty. As Christian Scientists we are taught not only that our imperative duty is to love our neighbor as ourselves, but we are clearly reminded that all the creatures about us are worthy of our loving consideration and care. As we love them, how quickly they prove themselves to be our faithful and intelligent friends and ever willing servants! The law of God designs that all His creatures shall work together for good.

Digitized by Google

The word of God comes, in all its direct simplicity, calling to us adown the ages, "They shall not hurt nor destroy in all my holy mountain," and the great, compassionate master Christian, Christ Jesus himself, declared that even a sparrow "shall not fall on the ground without your Father," for "not one of them is forgotten before God."

This experience brought to me anew a reverent appreciation of the truly Christian revelation of God's nature as divine Love, and of man's spiritual nature as the reflection of this Love. I thanked God with all my heart that in His great goodness He had inspired Mrs. Eddy to give an interpretation of being and its law so that the whole world may demonstrate the truth of those immortal words (Science and Health, p. 17), "Love is reflected in love."

✧

"If ye faint not"

ISABEL HILLIER

THE parable of the friend at midnight is probably one of the most imperative lessons in persistence that our Master ever gave us. It is particularly illuminating to any of us who may be trying to help others to destroy the various habits of mortal thought which have brought such dire results. It is made plain in this parable that the one who has come for the bread for his friend, knows the bread is there, and in spite of all objections presented, he continues to maintain his position until these apparent difficulties are overcome.

How often in our work does the suggestion of error come to us that it is of no use to try. Like the unwilling neighbor it pleads, "Trouble me not." It persistently argues that it is too late, that the habit has become too deeply embedded in consciousness, that "the door is now shut," and that there is not only one habit but many lesser ones as the result of the first; that, in fact, it is quite impossible to make the demonstration—"I cannot rise and give thee," it pleads. Suppose fear is the voice from within: what a vast number of unpleasant "children" immediately spring into evidence! One sees lying, deceit, want, sickness, jealousy, envy,—all these and many other discords as the result of fear.

Nevertheless, in spite of all this painful sense-evidence, how gloriously safe and sure is Truth's remedy; and after all how simple! Having grasped enough of the truth to be able to declare that "there is no power apart from God" (Science and Health, p. 228), all that remains for us is to maintain this position in spite of material evidence. It is this persistent clinging to what is true that absolutely wipes out all thought of any possible opposing power; and if we faint not, the patient is healed.

✧

"My presence shall go with thee"

EDWARD C. BUTLER

THE thought of being alone with God, which forms the theme of a well-known Christian hymn, may seem rather paradoxical, but it is not. This word "alone" is uncanny to many today, and it has terrified millions in the past. It has brought dread to those who have no sense of God as infinite, ever-present Love. The mother by the bedside of her child may fancy herself single-handed in the fight with sickness; even her kind-hearted physician may think himself alone in the effort to save the child. The business man may feel himself to be alone with his problem. These all forget that only God can enable us to solve life's problems aright. The problem of each is indeed his own, he has to learn his lesson for himself; but he must trust Principle to solve it, just as he trusts Principle to furnish the answer in mathematics. Since every problem, physical, financial, mental, or moral, must be solved by Principle, we are never alone with our so-called problem. The condition from which we are saved is an individual condition or experience, and our salvation is therefore individual; but the realization of Christ, Truth, with us as our Saviour, proves we are not alone. Were it otherwise, we could not be saved.

In Lamentations the prophet Jeremiah declares, "It *is* good that a man should both hope and quietly wait for the salvation of the Lord." Salvation is not through human effort, through lonely endeavor on our own part, "for it is God which worketh in you both to will and to do." Nor need we help God to fight error. God does not fight error or evil, any more than light fights darkness. All the darkness in the world, if condensed into one body, could not extinguish the light of a little candle, for though faint, it creates and sustains its own area of radiance. The only help we can give to God is in a childlike self-surrender. Jesus made this plain to those about him when he said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." He was the first to master evil,—not as concrete evil, nor as matter, but as a mistaken belief that human sense is alone in its struggle.

Jesus proved for all time that while one must walk on the level of individual experience, he can walk with God. He supplanted the terror of human isolation with the tenderness of inspired individuality. In "Miscellaneous Writings" our revered Leader says, "Whatever is possible to God, is possible to man *as God's reflection*" (p. 183). David did not stop to measure the giant whom he faced. He did not think himself alone or fancy he was about to engage in an unequal contest. Persuaded to try Saul's armor, he found it worse than useless; a shining pebble from the singing brook was enough. We find the armor of material sense a mockery, but, trusting in God, we find ourselves in the majority.

Birth in Truth

ROBERT WATSON

THE sun dips down behind the hills, far in the west;
A drowsy calm creeps o'er the land,—all is at rest.
Deep in a reverie I sit at close of day;
The ruddy glow of firelight holds a thoughtful sway.
Under its dreamy influence visions appear,
The flames reflecting fancy's flight, as year by year
I see, in panoramic view, a wasted past,
Caught in alluring pleasure nets, of mortal cast.
Forever doomed, bound hand and foot within the snare,
The gath'ring darkness seems to mock at my despair.
But through the gloom there dawns at last a glorious light,
Rending the clouds and shining forth, steadfast and bright.
Its radiance chases dismal doubt from out my heart;
I gaze enthrall'd, I scarcely breathe, lest it depart.
In voice of sweetest melody Truth stills my fears,
Pointing the possibilities of future years.
It blots from out my memory ills gone by,
Awakening thought to deeds that never die.
There springs anew within my heart a power for good,
Which I, with earth-born vanity, so long withstood.
I vow once more to take my stand against the tide;
No more shall thoughts of evil me o'erride.

The morning breaks, eternity has just begun;
In faith, with purpose true, I hail the rising sun.

Selected Articles

[Frederick Dixon in *Farnham Herald*, Farnham, England]

A recent issue contains an address by the Rev. Mr. ——, on the subject of mental medicines. In the course of this he refers, in a very kindly way, to Christian Science, but he confuses the healing in Christian Science with every other phase of mental healing under the general designation of "suggestion." The subject is so important and so interesting that I am sure you will permit me to refer to his remarks for the purpose of illustrating the difference between what may be termed spiritual healing and what is commonly known as mental healing, and of showing what, in the opinion of Christian Scientists, is the extreme danger of mental suggestion.

Healing by mental suggestion is the claim that it is possible for one person to suggest to another person a belief of health in place of a belief of sickness. The danger of this is that the suggestion, even when it is supposed to be efficacious, is quite commonly not permanent, and is followed by a relapse to an even worse mental and physical condition. This, however, is by no means the worst part of it. If suggestion is a possible thing, it is a claim that one person is able to dominate the mind of another person. The conclusion from this is unavoidable. If it is possible to suggest health, it is also possible to suggest sickness. If it is possible to suggest good, it is as easy to suggest evil, and the human mind, being much more prone to materiality and evil than to spirituality and good, it would necessarily be easier to impregnate the mind with evil than with good. Even supposing that a person who was sick could have that sickness removed by a suggestion of health, nothing would have been done to protect him from another attack of sickness, in the event of its supervening. As a matter of fact, the best that can be said for suggestion is that if it seems to do temporary good, it must inevitably do harm; while the worst that can be said for it is that it claims to give the worker in iniquity power over another person.

All this is really the complete antithesis of Christian Science treatment. Christian Science demands that a man shall be made spiritually better before he can be made physically so. It insists, in short, that a man's physical condition is the result of his mental condition; and that the only way in which he can be healed is by giving him an understanding of the omnipotence of good, which will not only destroy temporary physical disability, but will prepare him to face any future sickness with an understanding of spiritual action, which, as it develops in his consciousness, will enable him to defend himself against sickness and sin in every form. In plain English, it will be seen that the healing of physical disease is only a factor in this view of healing, which aims at healing the human mind from a belief in the reality and power of evil, and so producing a mental condition which will be reflected in harmony of mind and body. In order, then, to make a man whole, you must make him, so far as may be, holy, holy and whole being only different spellings of the same word, brought about in the development of the language.

Now, Christian Science teaches that the spiritual healing which Jesus taught to his disciples, and handed down to humanity through them, was absolutely devoid of mental suggestion, and was absolutely untainted by the influence of the human mind. A belief in the power of mental suggestion has always existed in the East, and existed largely in the time of Jesus himself. One of the most dominant notes of the monotheism of Israel was necessarily its revolt from the polytheism of heathenism. Polytheism included a belief in good and evil deities, and the necessity for propitiating the latter even more than the former. This led to the worship of idols, and it led also to the war waged by the prophets against suggestion in any form, whether known as magic, necromancy, witchcraft, sorcery, or any other of such things. In the time of Jesus the teaching of the magicians was largely embodied in the cult of exorcism. The exorcists claimed to be able to charm sickness out of their victims, and this was so well known that when the Pharisees and the high priests wished to find a handle to attack Jesus, they confounded his healing with that of the exorcists, declaring that he cast out devils by Beelzebub.

Jesus' knowledge that the Jewish hierarchy closed its eyes to mesmerism when it suited it, barbed the sting of his reply. He demanded that if he cast out devils by Beelzebub, by whom did their children cast them out? Nor did he stop here; he went on to prove the very thing which it has been the endeavor of this letter to bring out, that the so-called healing of evil by evil was an impossibility; in other words, that a mind limited by a belief in materiality and impregnated with a belief in sickness and sin could not possibly be a healing agent. A house, he said, divided against a house, could not stand. In other words, a mind believing in good and evil could not even suggest, much less scientifically declare, that there is no evil. Even if such a statement were made, it could be nothing but a repetition of the declaration of the book of Genesis, where it is described as the fruit "of the tree of the knowledge of good and evil," necessarily ultimating in death. What good it claimed or seemed to do, could be nothing but a mitigated form of evil, and so of little use to anybody.

It was not Jesus' habit, however, to deal in mere negations. True Christian healing he described clearly enough when he declared that if he "cast out devils by the Spirit of God," then the Spirit of God was come unto men. He could hardly have dismissed more peremptorily the claim of suggestion as a factor in Christian healing, and he could hardly have stated more specifically the fact that God is the only power, and that a knowledge of God, or Truth, is the only scientific way of destroying error. The Spirit of God never came to any man, and never can come to any man, by suggestion from a mind impregnated with a belief in sensuality and disease. The Spirit of God, and thereafter divine healing, can come to a man only in proportion as he gains the Mind that was in Christ Jesus. This is what Mrs. Eddy means when she declares in "Miscellaneous Writings" that "the student who heals by teaching and teaches by healing, will graduate under divine honors" (p. 358).

Fortunately evil is not power, and is not real. It is nothing but the supposititious absence of good. That it seems very real and very powerful to the human intelligence, there is no more question than that to the human intelligence the sun rises and sets. The word real, however, as used in Christian Science, means that which is all good, and consequently spiritual and eternal. To gain this understanding of good, man does not have to pass through the portals of death, since Jesus himself declared that "the kingdom of God is within you." The devil, or evil, he insisted, was a liar, or lie, "and abode not in the truth," because there was no truth in him. He could hardly have said more clearly that evil is a false belief which can be lost by the human consciousness only as a knowledge of good or God is gained. "Ye shall know the truth," he said, "and the truth shall make you free." In these words he claimed the right of humanity to know the truth, and so to gain the Mind of Christ, "and the peace of God, which passeth all understanding."

[John W. Doorly in *Huddersfield* (England) *Examiner*]

In a recent issue I notice that the Rev. Mr. —— again brings the subject of Christian Science and its curative power into his "Talks for a Quiet Hour." This time, however, he refrains from quoting directly his own views on the subject, but gives at length the views of a committee appointed by the Lambeth conference in 1908 to study the "Ministries of Healing."

When one proposes to quote another's opinion, it is usually considered wise to make sure how one's informant obtained his information, and it will undoubtedly interest this clergyman to know that the committee on whose judgment he places so much value, obtained its information solely from critics of Christian Science, and was in no way interested in or desirous of obtaining first-hand information from Christian Scientists themselves. The fallacy of judging a system from what its critics think of it, is apparent. The plain, unvarnished truth is this: that Christian Science is healing the sick and saving the sinner in strict accordance with Jesus' teachings, and at a rate that astonishes these good gentlemen; naturally, if the teachings of Christian Science are correct, then they will have to alter their views. This is not a pleasant prospect from their standpoint; therefore, the only thing left to do is to prove that Christian Science does not heal, and is not to be relied upon or accredited as our Saviour's gospel. Unfortunately for these critics it is becoming only too apparent every day that Christian Science does heal, and heals every so-called incurable disease and sin which every other system has failed to heal. More important still, it is beginning to be clearly seen that this healing is done through the simple process of knowing God aright, and then putting this understanding into daily practise. Eight years ago there was practically little or no Christian Science in Yorkshire. Today, every active town or city has a sturdy branch of this movement, and not a few villages, and this growth is in an increasing ratio.

The critic is quite sure that no healing except that of nervous cases ought to be accomplished without the aid of a physician. Does the gentleman intimate that Christ Jesus and his disciples, and others who were not his disciples, as, for instance, Paul, had to have the assistance of a physician before they could heal their cases? Does he think that the Christian church, which for three hundred years after the resurrection not only healed the sick but raised the dead, needed the help of a physician to perform this healing and the raising of the dead? The trouble is, that these critics fail to recognize that Christian Scientists are today understanding and utilizing God's immutable law, "the law of the Spirit of life in Christ Jesus," which makes "free from the law of sin and death," even as this law, which our Saviour described as "the truth," was utilized nineteen hundred years ago. Certainly if it is God's law, then it is the same today as it was yesterday and will be forever, and is indeed without variableness or "shadow of turning."

The clergyman, like all other critics of Christian Science, has failed to grasp the fact which Christian Science has made so plain, the fact of the omnipresence and omnipotence of the one Mind, or Spirit, which men call God, and that anything which seems to human sense to be in opposition to this one presence and power is only a suppositional effect of the carnal mind, an effect which can be dispelled or corrected through the understanding of the one Mind. When this is clearly understood, then what Mrs. Eddy has so aptly described will be consummated, for then it will be seen that the law of God is wholly spiritual, operating infinitely with intelligence, and needs no material cooperation, but rather operates in spite of every material condition. As Mrs. Eddy says on page 340 of "Science and Health with Key to the Scriptures": "One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

[From *Lewiston* (Maine) *Saturday Journal*]

While Christian Scientists, who are occupying their new church on College street, Lewiston, are not actively participating in the special local campaign for Sunday attendance, inasmuch as they affirm that here, as elsewhere, their churches are always filled with church-goers who seem to appreciate their privileges keenly, nevertheless, at the suggestion of the *Journal*, one of the adherents consented to the following statement covering some reasons why this condition prevails:—

The Christian Science interpretation of the gospels, the teachings of Jesus, makes religion so vital to the daily needs of people that they can take it into their home, their social relations, and even their business, as a solvent for every problem. This interpretation, highly spiritual in character, makes it possible to heal sickness as well as to destroy sin, and to demonstrate for one's self ample supply for one's needs from God's largess. It offers, not resignation to evil and consolation in sorrow, but power to overcome evil and triumph in the sense of life eternal. It holds the demonstration of spiritual life in the reflection of love and harmony and health to be the sufficient proof of Christianity, and it accepts nothing less. Profession of Christlike living, adherence to creeds, and attention to ritual and sacrament, are less availing than that quality of spiritual thought, that possession of the Mind "which was also in Christ Jesus," which lifts the sick from his bed of suffering, heals the bruised heart, restores peace in the home and in industry, and transforms the sinner into a loving student of the Bible and an example of pure, consecrated manhood and womanhood.

One cannot help being impressed, in attending the services of this church, by the simple Sunday morning service, founded wholly on Bible teachings, and with its hymns, so full of optimism and inspiration and strength; while at the Wednesday evening meetings the stranger must admit the sincerity, earnestness, and gratitude of those who testify to their own and others' healing and happiness, which has been gained through Christian Science. While the visitor is always welcome, we make no bid for publicity and do no proselyting in the ordinary sense of the term. Our doors are open to all, and there, weekly, we present the living water of Life. The truth needs but the statement and proof thereof. No one is ever asked to believe it, any more than one would seek believers in the principle of mathematics.

Christian Scientists are devout, happy in their religion, helpful to others, good citizens, law-abiding, minding their own business, and living in peace. Their regular attendance at church services is the occasion of remark by outsiders many times, but it is due to love for and appreciation of the message the church has to give; this, too, although the Lesson-Sermon read every Sunday morning is the same Bible text and commentary from "Science and Health with Key to the Scriptures" by Mrs. Eddy, which every member studies daily in his home. In humility Christian Scientists try to extend God's kingdom on earth through deeds rather than words. All who wish to join them in this are welcomed, and the history of this church is proving that human hearts respond to Truth, that they long for a real panacea from all

Digitized by Google

evil, a harbor of refuge in every storm. The twentieth century cries out for practical things, and it wants a practical religion. This Christian Science is, as any one may learn who probes deeper than popular prejudice or misunderstanding. These obstacles to a right understanding of the teachings of this church are being fast swept away, and today have little weight with thinking people. The church that best answers the needs of people will always be filled.

✧

[Thomas F. Watson in *Santa Rosa* (Cal.) *Republican*]

It is reported that Dr. ——, in giving his address on "Christian Science in its Relation to the Church," stated that "the church recognizes the Word of God as its supreme authority, while Christian Science practically makes Science and Health its authority." There is nothing in Science and Health to warrant such an assertion. In every Christian Science service the Bible reading is first, while the references from Science and Health follow to elucidate the text. The orthodox churches all have their reference books and commentaries on the Bible, and the Christian Scientists have theirs, and thousands have testified that through its study they have learned to love and understand the Bible better.

In this commentary we read: "The Bible contains the recipe for all healing" (p. 406), and this recipe is the Christ-method. "He sent his word, and healed them, and delivered them from their destructions." Christian Science teaches the Christ-method of healing, the method taught by Jesus to his disciples, for he said: "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." The critic greatly errs in stating that Christian Science heals through the law of suggestion; and this reminds us that there were some in Jesus' time who declared he cast out devils by the power of Beelzebub.

Christian Science does not ignore sin, as the critic states, but teaches us how the Christ-method overcame, and still overcomes, the belief in sin, sickness, and death. Jesus said nothing about "vibration" in his teaching, and yet the doctor tells us: "The things you most enjoy come from vibration. It was through these laws that the walls of Jericho fell down. Thought vibrations reach the vibrations of the healer." Paul said, "By faith the walls of Jericho fell down, after they were compassed about seven days." Jesus said, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you."

Mrs. Eddy taught her students to follow her only so far as she followed Christ. The critic says, in speaking of the orthodox church: "We have made a great mistake, for we have not given the whole gospel." This is undoubtedly true, for Jesus commanded his followers to preach the gospel and heal the sick, and yet here is a minister of the gospel criticizing Christian Science for doing just what the Master taught us to do. Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

✧

[Algernon Hervey-Bathurst in *Weymouth* (England) *Telegram*]

I have read the letter referring to Christian Science in a recent issue. "M.A. (Cantab.)," who signs the letter, has very kindly expressed his desire to draw the attention of Christian Scientists to certain statements in the New Testament with which, I will venture to say, every Christian Scientist is familiar. May I be permitted to say a word respecting his somewhat unusual interpretation of at least one of the passages referred to?

The meaning of the word apostle is "one sent forth," or "a messenger," and the signs the critic refers to, in Corinthians, are surely the signs demanded of every apostle or messenger professing to accept and practise the teaching of Jesus the Christ; for I fail to see by what possible method of reasoning it can be shown that these same signs were to be given as evidence of the truth of the teaching of the Founder of Christianity only for a certain period of time or by certain privileged persons. Nowhere in the New Testament is such teaching to be discovered, nor is it possible to find any confirmation of the remarkable statement of the critic that "the law of evidence took the place of miracles." The miracles were the logical and inevitable results of the understanding of the law of God, the law which Jesus came to fulfil, and in doing which he could not fail to expose the true nature of sin, sickness, and discord. The so-called miracles were therefore the proofs of the truth Jesus taught —the "signs following."

It does not require a very great effort to realize that truth is unalterable, and that therefore what was true nineteen hundred years ago is just as true today. If, then, a correct understanding of the teaching of Christ Jesus resulted in the healing of the sick and the destruction of sin a few centuries ago, a correct understanding of that same teaching will inevitably produce the same results today. Now, Christian Science is not a "new religion" by any means. It is the reiteration of what Jesus and his disciples taught and practised so successfully; it is no invention, but it is the reaffirmation of that truth to which the Master referred, declaring that a knowledge of it would make men free. A religion or system which enables its adherents to accept and practise the teaching of Jesus the Christ, can scarcely be called anything but Christian, and what better term could be used than science to designate that which proves its faith by its works in a way which has never been done since the first centuries of the Christian era?

The results which are accomplished by Christian Science today prove unquestionably that the teaching set forth by Mrs. Eddy in the Christian Science text-book, "Science and Health with Key to the Scriptures," is in absolute accord with the teaching of the Master. Just as definite results were manifested in the healing of physical trouble and in the reformation of the sinner by the early Christians, so today the same results are being obtained, in a measure at least, by the faithful understanding and practical application of the teaching of him who declared in such emphatic language, "He that believeth on me [*i.e.*, understands my teaching], the works that I do shall he do also."

✧ ✧ ✧

[Written for the *Sentinel*]

Press On

MARY HORNIBROOK CUMMINS

Press on, for the sake of those hungry ones
Who are looking to you for bread.
Press on, that the sick, the sinning, the faint,
To their Father's house may be led.
Press on, that the weaker brother who halts,
Nor deems the victory near,
Seeing your faith and your steadfast hope,
May conquer his doubt and fear.

Press on, for the love of the Master, who
A far steeper path hath trod.
Press on, as did he, to the fuller life
And the larger thought of God.
Press on, and the vision of the Christ
Shall bring to you and to me
That knowledge of Truth which shall cover the earth
As the waters cover the sea.

Editorial

"The prayer of faith"

MANY of the criticisms of Christian Science have been based upon the supposition that the healing work which characterized the ministry of Christ Jesus and the early Christians was simply a special gift for a limited time and a limited purpose. When Mrs. Eddy first announced her discovery to the world, the incredulity which tried to belittle her efforts, and disputed the possibility of spiritual healing in the nineteenth century, denied both the Christianity and the science of her claim that spiritual healing was not only possible, but also that it was a necessary part of Christianity. She, however, was so confident that the healing of sickness would again be recognized by all Christians as a vital part of Christian ministry that she said (Science and Health, p. 345): "As it is evident that the likeness of Spirit cannot be material, does it not follow that God cannot be in His unlikeness and work through drugs to heal the sick? When the omnipotence of God is preached and His absoluteness is set forth, Christian sermons will heal the sick."

The truth of this prediction has been acknowledged in a measure by utterances of many Christian ministers, but never more completely than by the words of several Episcopalian clergymen at the annual diocesan convention held in San Francisco a few weeks ago. We quote from the report of this convention which appeared in the *San Francisco Chronicle* of Jan. 30 as follows:—

"Rev. Edward Morgan, rector of St. Luke's, San Francisco, declared emphatically that he believed and knew that the church has the power of healing through prayer, and that its ministers are able to exercise that power. He cited instances where he had himself brought about recoveries through prayer, and asserted that it was the fault of the priests of the church if they did not exercise the power that belonged to them.

"Rev. Clifton Macon, rector of Trinity, Oakland, added the weight of his evidence, saying that he knew of many cases where the prayer of priests had been efficacious in healing, and that he knew his brethren could attest many more. The church, he said, has lost nothing of its healing power. Rev. E. W. Couper said afterward that the church yields nothing to Christian Science in healing ability, but because rectors are not given to advertising the fact, people have fallen away from the habit of calling them in.

"Speaking of Christian Science, the Rev. Mr. Couper's report continued: 'The demand upon the church is not imaginary; it is a real demand that we claim for ourselves and put into practise the healing power of the early church.'"

The significance of all this is that the truth of the claims which Mrs. Eddy made almost a half century ago, that "Christians are under as direct orders now, as they were then [in the Christian era], to be Christlike, to possess the Christ-spirit, to follow the Christ-example, and to heal the sick as well as the sinning" (Science and Health, p. 138), is gradually being admitted. That representatives of a large and influential denomination, officially assembled, should express the advanced views reported in the *Chronicle*, is a very hopeful sign of the times, and these views certainly are to their credit. As followers of the Master they tacitly admit, as one of their own hymn-writers has expressed it,—

> Thy touch has still its ancient power;
> No word from Thee can fruitless fall,

which is precisely what has been claimed for and demonstrated in the practise of Christian Science for more than forty years. We cannot but rejoice, therefore, that these men, when meeting in their official capacity, have pledged themselves to the doctrine that the healing of sickness is an essential part of Christianity rather than a closed incident of the first century.

ARCHIBALD MCLELLAN.

"Endless life"

IN the epistle to the Hebrews we read of the law of inheritance which prevailed in the Levitical priesthood, by which men "gave attendance at the altar" and participated in all the rites and ceremonies of the Jewish religion. In the seventh chapter we however read of one who was not of the tribe of Levi and whose priesthood was perpetual, one who was wholly above the earthward tendencies of human parentage, who was "made, not after the law of a carnal commandment, but after the power of an endless life." The whole of this remarkable epistle is vibrant with this tone which links itself so readily with the teachings and demonstrations of Christ Jesus. While many of the critics have questioned the authorship of this epistle, it has been generally agreed among Christian thinkers that it gives such evidence of true inspiration as to make it a question of slight importance whether it was written by Paul or by Apollos, or whether they labored together to give this message of eternal life to the human race. To the Christian Scientist its supreme value lies in its teaching that it is not God, but the devil, who is responsible for death, and that the mission of Christ was and is to "destroy him that had the power of death, . . . and deliver them who through fear of death were all their lifetime subject to bondage."

It seems strange indeed that the insistent demand of Christ Jesus, that his followers should claim the eternal life which was the central theme of all his teaching, should have come to be forgotten, so far as practical results were concerned. With the lapse of the centuries, eternal life came to mean unending existence after death had been experienced, and this belief was made for the many to include unending evil as well as good. The Master, however, plainly taught that to know God meant life eternal, while St. John, who has given us more of Jesus' declarations on this subject than any of the other apostles, tells us that "no murderer hath eternal life abiding in him." This would be explained in Christian Science by the fact that God, good, alone "hath immortality," as Paul tells us, that evil is self-destructive, as may be readily seen, and that he who lives the truth taught by Christ Jesus will not only have life "more abundantly," but, more than this, "he shall never see death."

At the time Jesus made this statement, he also announced the life which has neither beginning nor end when he said, "Before Abraham was, I am." It is not to be supposed that any professed Christian would question these words as relating to Christ Jesus, but few would admit that they must represent man as God's likeness whenever and wherever the divine nature is expressed by man as it was by Christ Jesus, that glorious type of divine sonship and of true humanity. Mrs. Eddy, who did not shrink from accepting all the teachings of the Master, takes up this profound subject of eternal life when she says (Science and Health, p. 429), "If man did not exist before the material organization began, he could not exist after the body is disintegrated. If we live after death and are immortal, we must have lived before birth." She then asks, "Do you believe this?" and goes on, "No! Do you understand it? No! This is why you doubt the state-

Digitized by Google

ment and do not demonstrate the facts it involves;" in other words, we forget what eternal life means, when we should remember it every moment.

When one is indulging hatred or any evil thought, he is not living at all, for God is Love and the only source of man's life. We are bidden to "lay hold on eternal life," and having grasped it, we are not to live intermittently, but ceaselessly and largely, until the narrowing mortal sense of selfhood is "swallowed up in victory,"—the triumph of Truth and Love in our consciousness. Thus we prove "the power of an endless life" which annuls the asserted laws of sin, disease, and death. St. John calls upon Christians to aspire to sonship in God, when he says, "That ye may know that ye have eternal life." This is the high privilege of all who are "born of God."

ANNIE M. KNOTT.

"Lift up thine eyes"

How illuminating and significant it would prove if one were able to discern the full content of the psalmist's exclamation when he cried, "I will lift up mine eyes unto the hills." To perceive all of the past and of the future for which it speaks, would be to look upon all that lies between the Bethlehem and the Olivet of spiritual consciousness.

Naturally the noblest, most radiant moment of any life is its moment of most exalted aspiration. Then the better self which is born, "not of blood, nor of the will of the flesh, nor of the will of man, but of God," and which is so unintelligible to mortal sense, surges to the front, as in the instance of Paul's appeal to Agrippa, and one is likely to be accounted beside himself sometimes, as was the great apostle. Such moments in any life are of universal value, for they bring assurance of one's responsiveness to, if not at-one-ment with, Him who is speaking ever "by the mouth of his holy prophets." We thus come to know something of "the communion of the saints," and can have that daring "confidence toward God" which is the essential equipment for an effective ministry.

The Scriptures are replete with these windows that are "open . . . toward Jerusalem," these outlooks upon that larger life whose horizon fades into the infinite. Through them, if we but lift our eyes, we may often gain a vision of the highlands of revelation that will enable us to interpret God, and nature, and history, and human life in a demonstrably right, and hence satisfying and saving way. This is the purpose and end of Christian Science, to spiritualize, "lift up," perception; to correct, beautify, and give healing power to thought. As Mrs. Eddy writes, "It is the spiritualization of thought and Christianization of daily life, . . . which really attest the divine origin and operation of Christian Science" (Science and Health, p. 272).

The level of ordinary mental vision is pitifully low, commonplace, and materialistic. Much of the time the average mortal sense is companioning with the prodigal and with the swine. It is recognizing, understanding, consenting to, and defining experience from an altogether unideal point of view. Belief in a fleshly origin and in the reality of material law, environment, and destiny, tends to keep the eye of thought content with earthly things and to fetter one with constant fear, when it is his privilege to know and find rest in the facts of spiritual being, as did Elisha when he prayed that the eyes of his servant might be opened to see the protecting hosts which surrounded them.

In Christian Science we speedily learn that the breadth and beauty of our outlook is always determined by the depth of our insight, by our power to penetrate the seeming. As we rightly define, we determine. Our material environment is always projected belief, hence subject to the divine idea. To know God, therefore, is indeed life, eternal because spiritual and true. The world of experience is to be made harmonious and happy through mental transformation, and this is the entire philosophy of Christian healing. The thought that embraces the true concept of God, follows on to know His universe and His man, to perceive the beauty and enter into the freedom of real being. The fact that consciousness is the basis and boundary of all real possession, is the sufficient voucher for the wealth and satisfaction of the right-minded. Socrates knew this well, and it abundantly accounts for his wondrous poise in that last conversation with Crito.

To learn to see things from the highest point of view is to become a Christian Scientist, a prophet, and a true physician. It is to find a blessing in all experiences; more than this, it is to become a blessing to all men. No one can reach an outlook which commands a sunlit summit of Truth, without bringing to his brothers, as did Simon to Andrew, an awakening and gladdening report of its glories. To learn to keep thought fixed upon the Christ-ideal, and to return to this vigil whenever we discover ourselves upon a lower mental plane, is the great lesson to which every worthy Christian Scientist is studiously devoting himself, and he is helped in his endeavor as he hears this loving call out of the unseen, "Lift up thine eyes."

JOHN B. WILLIS.

Suburban Lectures

Under the auspices of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., a lecture on Christian Science will be given by Judge Clifford P. Smith, C.S.B., member of the board of lectureship, at Roslindale, Mass., in the Methodist Episcopal Church, Ashland and Sheldon streets, Sunday afternoon, Feb. 15, 1914, at half past three o'clock. The lecture is free, and the public is cordially invited to be present.

Among the Churches

Current Notes

JACKSON, MISS.—A very attractive reading-room was built on the grounds of the recent Mississippi state fair by First Church of Christ, Scientist, of Jackson, with the cooperation of other societies of the state. This room occupies a prominent place on the grounds and will be for permanent use in the future. During the fair this room was daily supplied with *Monitors* and all other Christian Science literature. While much of this was given out, the left-over *Monitors* were distributed throughout the city, and many expressions of gratitude have been received for the good realized therefrom.

Correspondence.

INDIANA.—Fifty-four articles and corrections were published by Indiana newspapers during 1913. In addition, fifty-one special articles appeared, making a total of one hundred and five corrective and wholesome articles on the subject of Christian Science. These articles appeared in fifty-four different newspapers and in forty-one different localities in the state, while the total circulation of issues was 1,459,113. As a result of local effort 218,335 copies have been systematically distributed, and the state office has given out copies aggregating forty-eight thousand six hundred.—*Report of Publication Committee.*

Digitized by Google

STATEN ISLAND, N. Y.—First Church of Christ, Scientist, maintained a reading-tent this year at the Staten Island annual county fair, and all were shown every courtesy by the fair management. The tent was amply supplied with copies of all of our Leader's works and all Christian Science periodicals and publications. On a large table just outside the entrance was a pile of *Monitors*, which received much attention as samples of clean journalism, several editors evincing special interest and praising the paper very highly. There was an average daily attendance of about two hundred visitors at the tent, where were given out three thousand *Monitors*, four hundred and seventy-five *Sentinels*, sixty *Journals*, and sixty pamphlets. Much gratitude was expressed by visitors for the tent, as it filled a long-felt want at the fair, and many have requested that it be repeated next year.

Correspondence.

ABERDEEN, S. DAK.—One of the beautiful buildings to be constructed in Aberdeen this year will be the twenty-five thousand dollar church to be erected by First Church of Christ, Scientist, on the lots on the north side of Sixth avenue southeast, between Jay and Kline streets. The first floor will be occupied by a large auditorium with a seating capacity of approximately five hundred and twenty people. The possession of such a building has been the earnest wish of every member of the congregation in this city for several years. Four years ago the lots upon which this edifice will stand were purchased. It is hoped to have the church completed early next fall.—*Aberdeen News.*

PORTLAND, ORE.—Services were conducted yesterday [Jan. 4] for the first time in the new edifice of Fourth Church of Christ, Scientist, on Emerson street, between Moore street and Vancouver avenue. Just a year ago yesterday this church held its first service in an improvised hall on Killingsworth avenue, near the site of the present building. The organization's growth was so rapid that larger quarters became necessary, and last September ground was purchased and work begun on the present edifice. The new church will accommodate five hundred persons in the main auditorium.

Portland Oregonian.

DAYTON, OHIO.—On Thanksgiving day, First Church of Christ, Scientist, was filled to overflowing with the happy members and friends of both First and Second churches of this city in a joint service. The occasion was especially significant in that it marked the completion of the repairs and renovation made necessary by the great March flood and the final payment of a debt which had hung over First Church for some years, thus making the service a dedicatory one as well as one of special thanksgiving.—*Correspondence.*

SAN FRANCISCO, CAL.—The first services in the recently organized Sixth Church of Christ, Scientist, were held Jan. 4, in Majestic Hall, Geary and Fillmore streets. This church was organized to relieve First Church, which had become crowded. On the same day Fourth Church moved into its new building, 450 Arguello boulevard, near Geary street. This is a frame structure of mission style, with a seating capacity of seven hundred and fifty.—*San Francisco Examiner.*

KNOXVILLE, TENN.—First Church of Christ, Scientist, has purchased the old Central Presbyterian church edifice from the consolidated Fifth Avenue Presbyterian church congregation. The consideration is eight thousand dollars. The structure has been occupied by the Christian Scientists for two years under lease. First Church of Christ, Scientist, was organized in Knoxville in 1900.

The Knoxville Sentinel.

The Lectures

Melbourne, Australia

Long before the opening hour, the entrance to the auditorium in Collins street was thronged by the first comers of an audience of thirteen hundred, who listened with rapt attention to William R. Rathvon's lecture on Christian Science. The lecturer was introduced by Theodore Fink, member of a city law firm, who in the course of his remarks said that he had much pleasure in taking the chair, and as the Melbourne Christian Science church had followed the practise of selecting a chairman from outside its ranks, he was not speaking from the platform of Christian Science, but as one of Melbourne's citizens interested in hearing an authoritative exposition of Christian Science from one who came so exceptionally qualified for the task as the lecturer of the evening. Mr. Rathvon was not a self-appointed missionary to Australia; he came entirely at the invitation of the several Australian churches of the Christian Science body. He had had many years' experience in Christian Science work, and was a member of the board of lectureship of The Mother Church in Boston, U. S. A.

Mr. Fink went on to say that, whether Christian Science or any other religious belief, however firmly held, could be the means of conducting all evil of every description, including physical and mental ailments, to the edge of the universe, as it were, and dismissing them into void, remained to be demonstrated. He understood that it was claimed for Christian Science that such effects could be accomplished through the acceptance and practise of its teachings, and it was with these large claims that he understood the lecturer would deal. Doubtless much had to be done in order fully to understand the influence of either mental or religious attitudes upon bodily health, but there was an increasing tendency, alike in the medical profession and among the churches, to give patient attention to mental phenomena and their relation to health and disease. Some people regarded religion as an instrument of consolation and succor, others as the ultimate expression of the reality of things; and as he understood that the Christian Science religion claimed to satisfy both of these great needs of humanity, he was sure Mr. Rathvon's address would be listened to with profound interest and attention.—*Correspondence.*

Sioux City, Iowa

The introductory remarks of Miss Clara Shepard at the lecture on Christian Science by Bicknell Young in the Auditorium, were as follows:—

Ever since time began, God Almighty has, through His messengers,—the patriarchs, judges, kings, prophets, Jesus and his followers,—been urging humanity to know Him better, love Him more, and live as He has given them the capacity to live. Once in about every one thousand years since Adam, some one has arisen with a clearer view of God, and presented this view to the people for their betterment. So long as they lived this truth about God, and His idea, man, they were healed of all their diseases and forgiven of all their iniquities. History records this fact, that for three hundred and twenty-five years after Jesus was here, his disciples and their converts healed the sick and raised the dead. Then the way was again lost sight of, and remained lost until Mrs. Eddy in 1866 discovered the true view of God and man, and the way of salvation from evils to which flesh seems heir. By her understanding of God demonstrated, Mrs. Eddy instituted

Digitized by Google

ways and means whereby humanity may now acquaint itself with God and be at peace.

The text-book of Christian Science, "Science and Health with Key to the Scriptures," which Mrs. Eddy has written, is a full, exact, and complete statement of this subject. All who will study the contents of this book may know the truth which will make them free from evil thinking and evil speaking, the cause of all woe. One other means which Mrs. Eddy has arranged for giving the world an opportunity of gaining an inkling of Christian Science is the board of lectureship, members of which are invited by our churches yearly to tell the public of some of the good things they may gain by knowing Christian Science for themselves.—*Correspondence.*

✧

Long Beach, Cal.

Clarence W. Chadwick, who lectured on Christian Science in the edifice of First Church of Christ, Scientist, was introduced as follows by Charles Lynd Cowan:—

Your presence here tonight very clearly indicates at least one thing; namely, that here, as elsewhere, all over the civilized world, thinking people are desirous of learning, yes, are almost insisting upon knowing, more about this great subject of Christian Science. With a vivid recollection of my own beautiful healing, I, like thousands of others similarly situated, have taken up the study and practise of this religion of truth and love with a heart filled with gratitude toward Mrs. Eddy for having given her discovery to the world. It is gratifying to observe that not only the followers of Mrs. Eddy, but a vast number of others who are not now so well informed upon this subject, are not neglectful of opportunities to learn more of this new-old religion, this teaching that Christ Jesus taught.—*Correspondence.*

✧

Nelson, British Columbia

The Christian Science church was filled to its capacity when Clarence C. Eaton delivered a lecture on Christian Science. William Irvine, in introducing the speaker, said in part:—

While not a member of the Christian Science church myself, yet I beg leave to state that some of my warmest friends and many of our most esteemed citizens are affiliated in its work. From close observation one must concede that the work since its organization has prospered wonderfully, for since Mrs. Eddy discovered and founded this movement in the year 1866, it has spread and been established almost universally. The tenets of the Christian Science church, we are informed, are those of love and truth, founded upon the teachings of our Lord and Saviour Jesus Christ; the seeking to do good and to spread that good to others, making the work one of love and progress; the overcoming of sorrow, the healing of the sick, and the destruction of sin, thus uplifting one's fellow man. And there glows a fire upon the altar of innumerable hearts of those who have been benefited through their efforts, that being a proof that the members do not and have not lived for self alone, but that they have bordered the path of life with kind deeds and flowers of love.

The Daily News.

✧

Manchester, England

A large audience assembled in the Manchester Town Hall to hear a lecture on Christian Science by William D. McCrackan, M.A.

William Royle, the chairman, said Christian Science was of world-wide interest because it was proving itself a practical religion, a religion that could be used in every department of human experience. He himself had applied it and had seen it applied in business matters, as well as in physical and mental conditions. He could tell any business men who were present that he had seen it applied to the sick business, and there were businesses just as sick as the body could be; and he had seen those businesses healed just as much as he had seen the sick body healed. He had seen the maimed limb put straight, hearing restored to the deaf, and sight to the partially blind; he had also known many instances where men had been released from chronic vicious habits. These lectures, and the free literature distributed at them, were provided in gratitude by those who had found salvation through Christian Science from sin, sickness, and disease. Much misunderstanding existed as to what Christian Science was and what it taught, which accounted in great measure for the opposition to it and the reluctance of many to inquire into it for themselves.

Testimonies of Healing

It is with a heart full of thankfulness to God that I give my testimony of healing, through the aid of Christian Science, of what threatened to be total loss of sight. For quite twenty years I had held responsible positions which entailed much mental strain. I was the matron of a London hospital for ten years, and later held a similar position in a large public institution where the responsibility was equally great. In consequence I broke down completely in health, and one of the troubles which came to me was loss of sight in the left eye, through a complication of disorders followed by a cataract. I had the very best medical aid in London, and was advised not to undergo an operation for the removal of the cataract, but to be content with the sight of one eye.

In course of time the right eye grew weaker and weaker, and great pain came when I read or worked at my books. Time after time I consulted one of the best oculists in London, asking him to give me stronger spectacles (I had worn glasses for short sight all my life), but he said it was useless; and one day, after examining my eyes in a dark room, he told me very kindly that I must not expect to get better, for as time passed I would in all probability lose my sight entirely. He advised me to try to learn things which would amuse me when I could not see; in other words, to learn how to be blind. I did what he advised; I gave up all reading and all unnecessary writing, for I found both were straining my eyes. I learned to knit and to do certain kinds of work with my eyes shut, went about in the dark, and soon found that I could feel my way easily to places I knew. This continued for some years, and eventually I resigned my appointment to go to my friends and family in the North of England, with the thought in my heart that I might see them before my sight failed entirely.

One day, while visiting some friends, I heard Christian Science spoken of disparagingly, and also heard that a gentleman whom I knew a little had defended the work of the Christian Scientists, saying that his wife had been wonderfully healed of certain ailments of long standing by a Christian Science practitioner. This attracted my attention; and when I met the lady herself the same week, I asked her if it were true, and if so to tell me what Christian Science was, as I knew nothing about it. Later, she introduced me to a practitioner, and from that day I date the beginning of my recovery. The practitioner read to me from the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and then loaned it to me for a fortnight, saying that I was to read it. I replied that I was not able to read, my eyes being so weak. She then said that I could read this book and it would do my sight no harm.

Doubting this statement very much, I took the book and tried to read it day by day. I found that what she had said was true; I did not suffer from the reading as I had done before, and after two weeks I knew that this was the religion I had been seeking all my life. I asked to have treatment for my eyes, and received it from the same practitioner. After her second treatment I lost the sense of fear when crossing the roads, and my eyes lost all sense of the burning pain. I have entirely given up the use of glasses, except occasionally to see things at a distance, and I use them in church to read the hymns, but that is all. The recovery has been slow, and it is not yet quite perfect, but I live day by day knowing that man's sight is perfect, and each day anticipate that I may be able to prove it fully. In addition to this, I have received blessings too numerous to mention. My health, which was not good, is now splendid; I can walk for miles and not feel tired. I can read without any fatigue. But what is much more than all this is the spiritual help which has been given me, the understanding of the allness and ever-presence of God.

I can truthfully say that I never was so happy in my life, I am so sure of the love of God for me and for all. The teaching of Christian Science, and the daily effort to put in practise what I learn, has done this, though as yet I am only a beginner; but my gratitude and thankfulness for all these great blessings make me long for the opportunity to be a help, even in the smallest degree, to others who are situated as I was.

LOUISA C. EAST, Newcastle-upon-Tyne, England.

✧

In February, 1912, I entered a Christian Science practitioner's office in a confused, nervous state. I knew nothing of this teaching, but was anxious to try anything to get relief from a distressing physical condition which also affected me mentally. I had undergone two operations for the removal of several very large tumors. I also had a severe stomach and liver trouble and lived on a light diet; but after treatment was given me by the practitioner I went away much at ease, and afterward ate heartily without any ill effect. To my great surprise the ailment had disappeared in one treatment, and there was no return. I was also cured of a severe lung trouble by one treatment, and later had yet another beautiful demonstration of the power of Truth by knowing and declaring the allness of God.

MRS. JEAN E. HARDY, Chicago, Ill.

✧

It is with a deep sense of gratitude that I write of what Christian Science has done for me. Three years ago I was prostrated with what my doctor called locomotor ataxia. I had the best physicians, but continued to fail. After trying to help me for several months, they advised me to go to a hospital. I did so, and had a good doctor and a trained nurse, who did all they could for me, but there was no relief. I remained there for one year; then the doctor told me that my case was hopeless, that he could do nothing for me.

I was taken home a physical wreck, and my wife sent for three of the best doctors she could hear of, one at a time. They examined me, and all agreed that there was no hope for me; and they also told my wife that I had only a short time to live. I was helpless. I could not walk, dress or undress myself, but I thought that if I could get out in the country, away from the noise of the city, I would like it; so they took me to Laverne, near Mill Valley. The change agreed with me for a while, but I soon became worse again, so that my son got frightened. He told a neighbor how I was, and the kind lady came in and helped my wife to rub and chafe my limbs. I was groaning with pain, and she asked why we did not try Christian Science. I did not believe in it, but I was in such pain that I told her I was willing to try it, so she said she would telephone for a practitioner. It was then nine o'clock at night, and I told the neighbor that I disliked to call a lady out at night; but she said she would come, and she did. I thank God that she did, for I know that my life was saved by her coming.

The Scientist was soon sitting by my bedside, and although I had no faith, I asked her what was expected of me. She replied, after she learned that I had sent for her voluntarily, "I expect nothing from you until you are healed, when I will tell you what to do." Thereupon she read from a book which I supposed to be the Bible, and talked a little, but I

Digitized by Google

was in such pain that I did not sense what she read. She next sat a few moments in silent prayer, and I tried to keep from moaning, but was suffering so much that I must have failed. I will never forget how I felt when she said it was getting late, and that she would go, as I needed a good rest. I think I must have shown how little I expected to rest, for she said very emphatically, "You are going to have a good night's rest." I asked if she really thought so, and she said, "I know it." I said, "I hope so." Then bidding me good night, she said she would come the next day, when I would be in a better condition to understand. She went home, and I fell asleep and slept all night.

The next morning, when I awoke, I could hardly realize that I had slept all night and that I had no pain at all. It should be remembered that for three years I had had continuous pain, no relief at any time,—and can any one wonder at my gratitude to the practitioner, and to Christian Science and all connected with it? In the two months following that night I had no pain to speak of. I could walk, dress myself; in fact, I was nearly well. My friends and acquaintances said it was wonderful, and I could hardly realize it myself. I found the next day that the book from which the practitioner read was "Science and Health with Key to the Scriptures," and it is truly a key to the Scriptures, for it has unlocked the Bible for me. I used to read the Bible, but I did not understand it. I used to pray, but I did not know how to pray; now I am not only searching for, but I am finding, the light every day more and more. I shall try to do good the rest of my days to offset the errors of the past. I thank God daily for what Christian Science has done for me and others, for I know that all can be healed as I have been through Christ, Truth.

I wish to add that my healing is permanent. It has now been over a year since I called for help in Christian Science, and at that time I was helpless. Since then I have been able to attend to my business myself, going from Mill Valley to San Francisco almost daily, also to Stockton, Sacramento, and other places; indeed, wherever business called me. I have gained greatly in weight and am feeling fine. I am more interested in Christian Science every day, and so grateful for my healing that I want the whole world to know of it, as I feel that in this way other sufferers may be led to inquire into the subject of Christian Science. I knew that if they do, the blessing received will make them as happy as it has me. I cannot express how grateful I feel to God for Christian Science and for the good it has brought to me and to my family; and if I can in any way in the future say or do anything to help the good cause onward, it will be a great pleasure to do so.—C. H. Raymond, Laverne, Cal.

✧

I wish to witness to the help which Christian Science has brought me. I was cured of an abnormal growth, from which I had suffered for seven years, also of fever and headache. A short time ago the words of our Leader, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494), were made very plain to me. I retired at night feeling as well as usual, but about two hours later I awoke with a high fever and was in great pain, so that I could not even make a light. I vomited frequently, continuing to do so all night, and when dawn came I was startled to find I had been vomiting blood. I was entirely alone, and when my servant-boy came at about seven o'clock, he was so frightened that he ran for two native women, and they sent for a doctor; but I refused to take any medicine. I have a Christian Science friend at Huigra, one hundred and fifty miles from here, to whom I sent a message asking for help, and as soon as the message was received I was healed; the pain left, the vomiting ceased, and I went to sleep. By four o'clock in the afternoon I was up, and the boy and the two women were surprised to see me about as if nothing had happened. Truly it was nothing to God's idea, as had been proved with the help of my friend.

I am thankful to God for Christian Science, and grateful to Mrs. Eddy for showing us the way out of human ills.

Mrs. R. H. Hunter, Latacunga, Ecuador, South America.

✧

About two years ago I fell a victim to an automobile accident. I was so severely injured that I was unable to walk or use my right arm, so I was taken to a near-by house, where a physician was called. My legs were so badly swollen that the physician said he could not determine the exact condition for a day or two. After being bandaged I was taken to my home; but I had to be carried into the house. My sister, the only member of the household who is a Christian Scientist, aided me by declaring the allness of God, and about one hour thereafter there was heard a report which indicated that the bone in the leg had gone back into its place. The next morning the swelling was considerably less and the fever was gone. Christian Science treatment was continued, and at noon another report was heard; this time the bone in my right arm went back into place. In the short space of one week I was able to walk, and also to use my arm.

On another occasion, early one evening, something flew into my eye and seemed to lodge in the pupil. I tried to remove it, but to no avail. The eye soon became inflamed and caused me much pain and discomfort. I then called upon my sister for aid and was instantly relieved. I have also been healed instantly and permanently of many ills, such as sore throat and a rheumatic affection.

For my many healings in Christian Science I am indeed grateful, but words are inadequate to express my gratitude for the understanding that God is All-in-all, which has come to me and to several members of our household.

Hattie L. Becker, Detroit, Mich.

✧

In January, 1912, I was taken ill with what seemed at first a very severe attack of stomach trouble. I could retain no food and was in very great pain. After some weeks of suffering I consulted my physician, who is very eminent, and after treating me for two months or more without any change for the better, he sent me to a stomach specialist, who took a test, prescribed for me, and put me under the care of my physician again. After washing out the stomach several times, my doctor told me that owing to the catarrhal condition it would be necessary to do this daily, so the daily washing was continued for three months, but I got no relief, neither was there any abatement of the mucus. Early in July I had a slight hemorrhage of the stomach, and on the twentieth I became very ill, the attack terminating in a most severe hemorrhage. This left me very weak and in great pain. I telephoned to my doctor's office, and as he had gone abroad I spoke to his assistant, who told me I had no time to lose, for my condition was serious, and that I must go to a hospital at once. He also said I would have to remain there at least three weeks, perhaps much longer; that a hemorrhage of this kind was always an indication of a very grave condition. This statement was verified by another physician, a friend of the family, on Saturday, and I told the doctor that I would think it over until the following Monday.

As I was lying in bed, suffering intense pain and thinking of the eight months that I had been under the care of eminent physicians with no relief, knowing that I was growing thinner

Digitized by Google

and weaker and that I could not survive much longer under these conditions, I concluded to try Christian Science. We found the name of a practitioner in the *Journal*, one who lived in the immediate vicinity, and who called soon after we had telephoned. I told him of my severe illness, but added that if it was necessary for the patient to believe that Christian Science would heal, there would be no use in treating me, as I could not believe it. He then said the fact that a patient calls for a Christian Science practitioner when all material means have failed, is generally found sufficient. I was living at the time on an invalid's diet, and I asked the practitioner if I should step right out on the promises and eat anything I wanted. He told me to do just as I felt inclined; that food would not hurt me, but that if I feared it would do so, the fear might occasion bad results. Thereupon he read to me from the seventeenth chapter of John, and called my attention to the preceding chapters, in which Jesus dwelt at length upon his relation to God, and the relation of others to God and to himself, and he also explained the application of this to each one individually.

I read the chapters mentioned, also in Mrs. Eddy's writings as advised, and I then began to see the real spiritual man in God's likeness, free from sickness, sin, and error. I had treatment every day that week except Wednesday, when I attended the testimony meeting. On Friday night the practitioner asked me if I had partaken of any ordinary food, and on learning that I had not, he asked me why I did not try to eat something. I said I would, and that night I did so, without any serious results. From that time I have continued to eat whatever I like without any ill effects, and I have been gaining steadily. Within a few days after calling for Christian Science help I was healed.

As my physician had returned to the city, I felt it my duty to call on him personally to inform him of my state of health, and while waiting to see him I prepared myself for the ordeal through silent prayer, realizing that man is spiritual. When he came in, he inquired solicitously for me and was surprised when I told him that I had fully recovered. He turned on all the lights, and then he and the nurse both smilingly said, "You certainly look very much better than when we last saw you." I told them all the details of my restoration to health through Christian Science, and instead of ridiculing it as I had at first feared, the doctor said he was delighted to learn that I was well, and added that he had the greatest respect for Christian Scientists.

This healing is a great joy, for which I am truly thankful to God, also grateful to our dear Leader, Mrs. Eddy. But my greatest joy is that through all this I have found the truth; that my real being is not material, but spiritual, the reflection of God; and that therefore I am not subject to sin, sickness, and death, for they are not of Him.

KATHRYN M. MAYER, New York, N. Y.

I send this testimony with gratitude for the many blessings received in Christian Science. Several years ago I was stricken with what the doctors pronounced a nervous breakdown, and was told that I would not be able to do anything for a long time. I was sent away from home because it was thought that a change would do me a great deal of good, but I did not realize much benefit from that course. Nevertheless, I started to work again, though I did not feel as if I ought. I went on in that state for three and a half years, when I had to give up again, and was under the care of three doctors and took medicine for eighteen months, but did not improve at all.

While in a very confused and troubled state, not knowing where to turn for help, my wife met a dear friend, and in conversation about me she was told that my need was a better understanding of God, which could be gained by the study of Christian Science. A copy of the *Christian Science Sentinel* was given me; but although I found it good and helpful to read, I could not realize any benefit in the way of bodily healing until I sought the aid of a practitioner, when improvement began. Though I gained slowly at first, after a while I saw the error that was keeping me back; then I felt able to seek work again. I had been in a state of ill health so long that the firm for which I had been working did not at first think I would be able to do anything; so a friend gave me some work, and for this I was very thankful. Although it was an inferior position to what I had formerly held, I was glad to try anything. I then began to see that it was fear which had stood in the way of my getting on at the old place, but I realized that nothing could stand between me and my right work. I went to the old firm and got a place temporarily, and from that time I have remained there, soon getting back to my old work.

At the time of my breakdown my eyesight began to fail, but it has since slowly but steadily improved. I can now see to read for any length of time. I am able to and do overcome many difficulties in every-day life. A short time ago I had an attack of rheumatism, but with help from the same practitioner this was overcome, and I am now able to do even better work than I could before.

My heart overflows with gratitude to our dear Leader for bringing again to humanity, through "Science and Health with Key to the Scriptures," the truth which Jesus taught. I am specially grateful for the happiness that Christian Science has brought to my family and home.

JOHN PEPPER, Stoke-on-Trent, England.

I can fully attest the facts as set forth in my husband's testimony. I am truly grateful to God for the happiness that Christian Science has brought to our home in many times of trouble.

MRS. J. PEPPER, Stoke-on-Trent, England.

It is with sincere gratitude that I give my testimony to the wondrous power of divine Truth as revealed through Christian Science, hoping by a life of love to show my gratitude, so many have been the blessings received during the four years I have been studying its teachings. One by one old ills have dropped away, their falsity being laid bare in the light of Truth. Love's healing and protection, as demonstrated in every need, drive out fear and fill one's consciousness with confidence and peace. It was gradually that I came to understand this truth, as only by growth can we learn to lean entirely on God for everything.

I am thankful to Christian Science for teaching us how to overcome the greatest difficulties, for healing, supply, guidance, and all. We need turn nowhere else. The Bible has been made plainer than ever before, and I now realize that I never lived as I should until this great truth came to me. I take great pleasure in reading the Bible daily, and also "Science and Health with Key to the Scriptures" by our dear Leader, Mrs. Eddy. I thank God for the many blessings that have come to me.—AMANDA C. KOCH, Champaign, Ill.

St. Paul says, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Christian Science has enabled me to prove the truth of these words. It is now eight years since I began to study Science

Digitized by Google

and Health. At that time I was very delicate and a great sufferer from rheumatism, the pain at times being so acute that I had to have hypodermic injections. I tried baths, electricity, massage, and every material remedy, but nothing gave me any permanent relief. After a very severe course of treatment in California, I saw a specialist in London, who told me my heart was so weak that it was not safe for me to try any more of these remedies, and advised me to make up my mind to bear the rheumatism, as there was really no cure for it. Shortly after this I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was deeply interested, and absolutely convinced of the truth of its teaching, and after about three months' study of the book I was healed of the rheumatism.

About a year before coming into Christian Science I had also suffered from an internal complaint, and after a consultation with two specialists in London I was advised to undergo an operation, to which I consented; but when under the anesthetic it was found impossible to proceed, as the condition was too bad. Therefore instructions were given for me to be kept on a very low diet, just enough to keep me alive. After three months of this diet and rigorous medical treatment, I was pronounced well, but at the same time the doctor informed me that I would always be liable to a return of the trouble, when a repetition of the course I have described would have to be resorted to.

The illness did return, but at the time I was staying with a Christian Science practitioner, and although considerably alarmed by the recollection of the doctor's forebodings, especially regarding food, I decided to rely entirely upon Christian Science. The practitioner told me that the medical law of prohibition in regard to certain articles of food must be broken, and that I was free to take whatsoever I desired. The way in which this was spoken conveyed such understanding of the powerlessness of any asserted law but the law of God, that my fear was there and then destroyed, and I have never been troubled with any such conditions since. I eat anything without the slightest fear.

For this freedom from the bondage of belief in the supposed laws of *materia medica* I am indeed thankful, but find it impossible to express in words the gratitude I feel for this new understanding of God, and man in His image, which Christian Science has brought to my consciousness.

ELEANOR C. CHARLESWORTH, Manchester, England.

✧

I am impelled to write to tell others how grateful I am for my healing in Christian Science, which I consider a great manifestation of the power of God. I was relieved of pain and suffering, with all the indications of quinsy sore throat, in a comparatively short time; but I have a still higher, deeper sense and evidence of the unfolding of the law of divine Love in my home and business problems, which are being adjusted and worked out to the mutual advantage of all concerned. I am also sincerely thankful for the faithful work done for me in what seemed a serious difficulty. To me it was a positive evidence that Truth never fails us.

CHARLES G. FRITZ, East Orange, N. J.

✧ ✧ ✧

O thou eternal One! whose presence bright
All space doth occupy, all motion guide,
Unchangeable through time's devastating blight,
Thou only God—there is no God beside.
Being above all beings! Mighty One!
Whom none can comprehend and none explore,
Who fill'st existence with Thyself alone.

GABRIEL ROMANOWITCH DERZHAVIN.

From Our Exchanges

[*The Watchman-Examiner*]

More than one man who reads these lines will recall the day when there first came full and clear into his heart the consciousness that he was a Christian. It was literally the beginning of a new life, a new creation in Christ Jesus. The old things had passed away, and all things became relations. The aims, motives, purposes, aspirations, spirit, everything, was of a higher order, and included everything that could glorify God and benefit humanity. In those fresh experiences of the new life how clear was the purpose to do everything in our power for the salvation of our fellows! It was an exalted joy to think that we might pray and labor for the redemption of "every creature," from those who were nearest us in the home circle to those who were farthest off among the ignorant and degraded of Asia and Africa.

It did not occur to us then that there was anything burdensome in the golden rule. To our newly anointed apprehension it seemed the very essence of divine wisdom. To esteem others as better than ourselves and to count all men as our brothers was the refinement of true Christian courtesy. How we wanted to make the very utmost of ourselves for God, and to do the very utmost for others, that they might be as blessed as we were! Every faculty within us was to be developed by education and practise, and every opportunity without was to be improved to highest fruitfulness. How we repeated that inspired and inspiring injunction, "Whether therefore ye eat, or drink, or whatsoever ye do, do all to the glory of God"! We felt ourselves set apart for the recovery of the world, in all its concerns of every sort, to truth and holiness. And so we were.

But what has all this to do with business? Much, every way. Can the boy, with his high and generous glow of devotion, now grown to the man of principle and place and power in the world, shut out his business life from his religious life, and thus exclude Christ from those very things that dominate and control himself, when he had so joyously vowed that Christ should control him and everything he had? Verily, that must not be. Is the Christian man less a missionary, under appointment by Christ, because he is in service in America as a merchant or manufacturer or railroad manager or mine operator, than as a preacher or teacher or physician at a station in India or on the Congo? Is there one law for one class of Christian workers and another for the others?

[Prof. A. B. Bassett in *The Hartford Seminary Record*]

The Master was full of grace and truth. He had a message old and new for men. His teachings were saving truth. To heed his sayings was to build upon a rock; to slight them was to build upon the sand. But even when silent he still blessed. Compassion, love, strength, dwelt in him. He was full of grace. Men felt it, were braced and lifted by it. His love and power overflowed in miraculous deeds of mercy and relief, symbolic of God's constant, world-wide help and healing. He speaks of these two forces in the same terms: "Ye shall know the truth, and the truth shall make you free;" "If the Son . . . make you free, ye shall be free indeed."

[*The Christian Register*]

What an answer that was in the great debate when the crisis came between the old and the new! "Why do thy disciples transgress the tradition of the elders?" they demanded. "Why do ye also transgress the commandment of God by your tradition?" he rejoined. Never was there more skilful parry, more fatal thrust. That reply went to the heart of

Digitized by Google

the issue. It carried the appeal from authority of antiquity to authority of truth, from authority badly informed to authority well informed, from what men once thought God said to what men then thought God was saying, from a departed God to a living God.

It sounds presumptuous for any one to claim this right for himself. To do so is to shoulder a heavy responsibility. But to all men, in whatever communion, who are casting aside every weight in order that with unimpeded strength they may press forward toward the high calling of God, this right belongs and this responsibility appeals. They are entitled to all the inspiration of all high example. And no high calling of God is more truly of Christ Jesus than that which confides in his present leading and accepts as sacred every fresh impress of his grace.

[*The Christian World*]

We are never, at any moment of our lives, the victims of a mere necessity. Upon each event, as it follows, our personality can play. We can create it, as it were, after our own image. Let the image be a pure one, illumined, strengthened by faith and love, and it shall be, amid the crude elements of the outward, as the philosopher's stone, which turns the iron into gold. What is coming in the immediate succession of the years? Many sincere men take a pessimistic view. They foresee a slump in religion and morals as inevitable as the slump in trade, and perhaps with less chance of recovery. Certainly the times are difficult and some of the omens menacing. What, for instance, are our youth thinking about? We look into the eyes of so many to find there no reflex of "the vision splendid." Are materialism and skepticism, the struggle for existence, the lust of luxury and pleasure, to bring us, if we are not there already, to the decadent Roman world?

[*The Universalist Leader*]

The story is that Jesus, walking by the sea of Galilee, saw two brethren who were fishermen; he called them to come with him, and in that companionship those two humble fishermen became shapers of the world's life through all succeeding generations. What happened to them? In the brief time of that companionship, and with their matured minds, there could have been little of what we call education, certainly not enough to account for the results which followed. It is not too much to believe that there was some unique transfer of life and power through this companionship, a transfer which translated those men into a new world. Through the succeeding years and centuries other lives have come into spiritual companionship with Jesus, and have been transformed far beyond any accounting for by the ordinary processes of development.

[*The Advance*]

There is no one way in which God certifies the coming advent of the new era. In some way that they knew in their souls to be true, brave men received—yes, and they still receive—messages from God. God still speaks to men, and in different ways, imparting His truth to successive generations. Whenever His prophets have wisdom to understand, rightly to interpret, and fearlessly to proclaim the truth, and the people have grace and strength to hear and heed, history begins a new chapter.

[*Zion's Herald*]

The humblest helper of Jesus Christ, if he gives what he finds it within his power to give of strength and time and money, and gives it honestly and earnestly, should have the assurance that his efforts have helped the kingdom. Be they ever so insignificant, they have helped, and he should take courage and press forward.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is to be issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75. This book is now ready for delivery.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

The more recent translations into Dutch, German, Norwegian, and Swedish pamphlets are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, } Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

NATIONAL.

The rivers and harbors appropriation bill carries a grand total of forty-three million dollars for waterway improvements throughout the country. The bill, in addition to the large number of appropriations for continuing work already in progress in many states, provides for numerous new projects, chief among them being the New York harbor, for which thirteen million four hundred thousand dollars is provided as the maximum cost for developing the East river and removing Hell Gate and other ledges there that threaten navigation. It also provides for the purchase of the Chesapeake and Delaware canal between Chesapeake and Delaware bays, for one million three hundred thousand dollars, and its development and enlargement to accommodate ocean commerce, with seven million dollars' straight appropriation for improvement of the Mississippi from its mouth to Rock Island.

Only three states, Florida, Georgia, and South Carolina, may indulge in spring shooting of migratory birds this year, and that only for a part of the season. Before the end of the present month the ban will have been placed upon those states also, and then in the entire United States spring shooting of migratory birds will be forbidden. The new law went into effect in Maryland, Virginia, and North Carolina only a few days ago, and these were the last of the states that far north to apply it. The spring of the present year will be the first time since the country was settled by white men that birds have been permitted to go to their northern grounds without molestation.

A total of one hundred and six million dollars for the Appalachian and Atlantic regions, including New England and states to the south, is called for in the revised waterways bill introduced into the Senate by Senator Newlands of Nevada. For the first year after the passage of the bill, ten million dollars is to be appropriated for river conservation in the territory mentioned, this appropriation to be renewed annually for ten years. A million dollars is appropriated to be expended as provided in the Weeks Appalachian national forest act for fire protection and the prevention and extermination of insect pests. For the acquisition of forest lands by the national forest reservation commission as directed by the Weeks act, five million dollars is called for.

The Shackelford bill under which the federal government would distribute twenty-five million dollars for good roads among the various states, conditioned upon a dollar for dollar appropriation by each state, was passed by the House last week, by a vote of 282 to 42, and now awaits action by the Senate.

The recent legislation prohibiting the importation into the United States of wild-bird plumage for commercial purposes has given an impetus to the fight in other countries to save birds, especially in England, Germany, and Holland.

President Wilson has withdrawn from entry all the lands of the public domain which may be crossed by the conduit which San Francisco will build to bring its water-supply from the Hetch-Hetchy valley.

The United States Senate has passed the fortifications appropriation bill carrying $6,895,200 and increasing the House appropriations for artillery and ammunition by $2,000,000.

INTERNATIONAL.

An agreement between France and Germany is to be signed at an early date with regard to Asia Minor, according to report, by which France gives up to Germany her interest in the Bagdad railroad, promising to do everything necessary to link up this railroad with the system to the Black sea, conceded to France and Russia by Turkey. Furthermore, Germany will leave the construction of all railroads in Syria to France. The Bagdad railroad is to run under German auspices from Konia, in Asia Minor, to the Persian gulf.

The problem of the housing of the Paris population will shortly be in a fair way of solution. At a meeting of the cheap dwellings committee, an announcement was made to the effect that the municipality of Paris had borrowed twenty million francs from the national pensions office. Land had already been acquired costing nearly eleven million francs, on which eleven thousand lodgings will be erected at a cost of sixty-five million francs. It is computed that each lodging will house five people, and the building will, it is hoped, be ready for habitation by June, 1915.

The council of the Russian empire has adopted drastic clauses to the bill for the regulation of the sale of alcohol. The new clauses prohibit the sale of spirits in towns between eleven o'clock at night and nine o'clock in the morning, and after six o'clock in the evening in country districts. They prohibit entirely the sale of liquors in a number of public establishments, including government offices, refreshment rooms in theaters, concert halls, and moving-picture shows, and in public gardens.

The Swedish cabinet has resigned owing to a difference of opinion with the King as to the attitude taken by him in the speech he made to the peasants on the question of defenses. The cabinet's view is that the King has no right to anticipate any action on their part in a speech. The King has declined to accept this view, declaring that he cannot agree to the surrender of this constitutional right to address his people.

The crisis in regard to the naval scandal in Japan, as far as the Diet is concerned, is over. No serious results are expected. The government majority of forty-two, by which the vote of want of confidence was rejected, is regarded as security for the position of the cabinet.

The Japanese House of Representatives has adopted the budget which provides an appropriation of sixty-two million dollars spread over five years for the expansion of the navy.

The three smaller wireless stations on the north coast of Chile have recently been turned over to the government.

INDUSTRIAL AND COMMERCIAL.

The department of agriculture, in an Alaska agricultural bulletin recently issued, shows that approximately one hundred thousand square miles of the territory are suitable for farming, and that currants, strawberries, raspberries, and gooseberries are grown in large quantities. The mean annual temperature of Sitka is said to be about the same as that of Washington, D. C. Varieties of wheat, oats, rye, barley, potatoes, and many other vegetables, have matured every season since the department started its work at the two most northerly experiment stations. One of these is within seventy-five miles of the Arctic circle, another is in the interior, and two others are in the southeastern and southwestern parts. Chicken raising is also practicable in Alaska, and it has been proved that forage crops can be grown in the southwestern and central portions as well as vegetables.

Possibilities for the reclamation of sandy and semidesert lands by planting acacias, are considered so bright by the United States department of agriculture that it says that commercial cultivation in certain parts of the United States may become extremely profitable. Some species thrive where the rainfall is only three inches. These trees are also of considerable value for tannin and lumber. There are about four hundred and fifty species of acacias, three hundred of which are in Australia, while the others are scattered over the world, principally in Asia, Africa, and America. Australian acacias were introduced into California at about the same time as the eucalyptus, and have flourished there.

M. Duroquier, an electrician, declares he has reason to believe that wireless waves have been responsible for several recent catastrophes, notably the burning at sea of the Uranium liner Volturno, the Cardiff mine explosion, and the destruction of the French battleship Liberté at Toulon. He points out that the spot in the ocean where the Volturno caught fire was exactly in the zone of intersection of wireless waves from the Glacé bay and Paris, the Cardiff explosion at the intersection of those from the Paris and Clifden, and the Liberté, from the Paris and Bizerta stations. "It is absurd," was the reported comment of Prof. William Henry Eccles of University College, London, an eminent radio expert.

A bill designed to stop millions of dollars of waste in poultry and eggs and other farm products by establishing marketing departments in the agricultural colleges in the various states, has been introduced in Congress. "Each year there is produced in the United States more than one billion dollars' worth of poultry and eggs," said the author of the bill. "Of this amount 10 per cent is lost, 80 per cent additional deteriorates between the original point and the retailer and the consumer, and there is a waste altogether of four hundred million dollars. This is true of every product of the farm. This bill would provide for saving all this loss."

True Conversion

CLARENCE W. CHADWICK

"TRUE conversion does not consist in being turned from one set of opinions to another, but in being turned from darkness unto light." The author of this quotation voiced no uncertain sentiment. He was evidently not in sympathy with the prevalent theory that the mere profession of belief in a certain creed and the uniting with a church constitute conversion. He knew that the thoughts and intents of the human heart must be reckoned with; that there must be a turning from the opinions of men to the spiritual knowing or understanding of God and His laws before true conversion can be experienced.

Turning from darkness to light involves practical repentance and radical reformation, both of which lie wholly within the realm of consciousness. Without a change of thought there is no repentance and no reformation. In the light of Christian Science this change of thought comprehends vastly more than many people imagine. Our revered Leader says (Science and Health, p. 272): "It is the spiritualization of thought and Christianization of daily life, in contrast with the results of the ghastly farce of material existence; it is chastity and purity, in contrast with the downward tendencies and earthward gravitation of sensualism and impurity, which really attest the divine origin and operation of Christian Science." It will thus be seen that it is not the voluntary or involuntary exchange of one human thought for another human thought, for this is not overcoming, and where there is no overcoming of evil with good there is no genuine repentance. Simply thinking and declaring that one is not sick when he feels that he is sick, is neither Christian nor scientific, because such a process involves no repentance or reformation, consequently no conversion. Trying to think and to declare that one is not a sinner when he knows that he is sinning, is still more erroneous, and if persisted in would be fatal to one's happiness and success.

Christian Science means vastly more than the forsaking of one human belief for another, else it would be powerless to prove its divine origin in healing disease and sin. A mere proselyte who outwardly turns away from one church to unite with another denomination, may experience no radical change of heart. He may even profess belief in Christian Science without any adequate grasp of the healing power of divine Love. Moreover, to discontinue the taking of medicine does not constitute one a Christian Scientist, and no outward observance or form will make him one. Reformation lies within human consciousness. How to purify finite consciousness is the problem confronting every would-be Christian. This alone leads to true conversion or redemption through Christ, Truth. Believing in the actuality of sickness and sin while trying to believe in the reality of their opposites, health and holiness, has signally failed to Christianize humanity.

No formulated creed or human doctrine has so separated the tares from the wheat as to enable the most devout of Christian believers to experience the Christ-healing. Some of these very people, though devout, sincere, and honest, have been educated to turn away from the ever-present healing Christ-idea to experimentation with all manner of human devices. When Christian Science assures them that the Christ-method is at their disposal and that omnipotent Love is awakening all mankind to turn from matter to Spirit, they are still unwilling to be converted. Ultimately, through sore travail and tribulation, they may be divinely driven to appeal to Christian Science and find help. It is then that they begin to distinguish between the human and the divine, and through spiritual enlightenment to put off the material and to put on the spiritual. In the language of Scripture they can now truthfully say, "Old things are passed away; behold, all things are become new."

Christian Science makes it unmistakably plain to the world that blind human belief, alias the thoughts of the human or mortal mind, must be replaced by spiritual understanding, alias the thoughts or ideas of the Mind of Christ. It is this normal and lawful exchange of current human thought for God's ideas that brings about true Christian conversion. It goes without saying that any thought which opposes the operation of God's law must eventually be relegated to the realm of unconsciousness as a constituent part of what is termed mental darkness. In this category are included all of the erroneous beliefs of the human mind which are not inspired of the one infinite Mind, otherwise the consciousness of good alone. The mental rejection or refusal to accept or to express such thoughts as are not predicated of God, good, opens the door of consciousness to receive the impressions of the one perfect divine Mind.

The tacit or audible admission of human thought upon the shallow pretext that one is obliged to accept the testimony of the physical senses, may effectually bar the entrance of spiritual or godlike thoughts into human consciousness. Many good people are fast awakening to this fact, and Christian Science stands ready to explain to them how to distinguish between right and wrong thought, and thereby to separate the tares from the wheat. This purely mental process applied in daily living makes true converts to the Christian religion. How one can profess belief in the saving efficacy of the Master's teachings and at the same time uphold and accept the evidence of the very senses which crucified and still crucify the Saviour, is anomalous to the Christian Scientist.

By way of illustration: These senses testify that a man is sick. A doctor, learned in the knowledge of good and evil, is called in to confirm such testimony. He not only confirms it, but frequently gives the malady a name the very mention of which strikes terror to the human heart; he then prescribes material remedies, which were neither employed nor recommended by the Saviour, and lays down rigid rules for the conduct of the patient. When the Saviour was called upon to heal such a case, instead of assenting to the material evidence before him, he immediately resorted to the operation of an unrecognized spiritual law, which wiped out all evidence of the malady, whether called physical or mental. The work performed was purely mental, though the very antipode of

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

so-called mental suggestion. It was the hypnotic influence of the senses which suggested the presence of disease; it was the influence of the divine Mind which obliterated all such evidence. Which method ought to appeal to one who is truly converted to Jesus' teachings,—the blind acceptance of sense-testimony, which ignores the Christ-method of healing, or the intelligent rejection of such testimony, which results in health and happiness?

An honest analysis of this subject leads to the inevitable conclusion that no believer in the truthfulness of the gospel teachings is truly converted until he can prove in some degree the ever-present healing power of divine Love, acting independently of any material means. The refusal of Christian people to investigate the lost art of healing, as revealed to the world in Christian Science, is today the most lamentable fact of modern civilization. This art is the stone which the builders of a man-made theology have for centuries rejected, but which has been made the head stone of the corner in Christian Science. The great Teacher and demonstrator of Christian healing is saying to all mankind today as forcefully as two thousand years ago: "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." God speed the day when such childlike humility and love of the good shall so permeate the thought of all mankind that they will gladly welcome the approach of the saving Christ-idea, and find in divine Science that alone which can satisfy the higher cravings of the human heart!

Gratitude and Realization

LEWIS C. STRANG

It is self-evident that in order to perceive the presence of a condition one must become conscious of it; therefore in order to know that good is here, one must become conscious of the presence of good. For countless years, great possibilities for good in the way of fertility and productiveness of the soil were present in the arid sections of the far West. No one recognized this to be true, however, because of the absence of the moisture necessary to make this productiveness available; but today irrigation is literally making the desert to bud and "blossom as the rose."

We may well liken human consciousness to the arid desert. This consciousness holds within itself the God-given ability to know good as the reality and to bring forth an hundredfold of the blessed fruits of this knowing; but in too many instances the possibility of such desirable fruition is not recognized, because the factor is not present which makes the realization of good possible. Consciousness needs to be watered with ever-flowing gratitude in order that it may bud and blossom with joy, peace, and confidence.

It is only through appreciation of the good we have that we really know we have any good. A child upon whom toys and attention have been lavished his whole life, who has been receiving all and giving nothing in return, is apt to be selfish, discontented, continually seeking satisfaction and happiness in some new thing and never finding it. Not having been taught to appreciate the good he has, he does not know that he has any good. His material things bring him little or no happiness because his mental state prevents him from being cognizant of the reality and presence of good.

In Christian Science practise it is found that gratitude for the good one has is an essential factor in preparing thought to receive more good in the way of physical and mental healing. Respecting this Mrs. Eddy says, "If pride, superstition, or any error prevents the honest recognition of benefits received, this will be a hindrance to the recovery of the sick and the success of the student" (Science and Health, p. 372). The reason for this is clear. Gratitude is the evidence of appreciation, and appreciation is necessary in order to know that one has the good desired. Consequently, one has good, or good is real to one, just to the extent that he is grateful for good. The good which is real in one's thought must inevitably become real in life and experience; therefore to the extent that one is grateful for the good he has, one is healed of his belief in the reality of evil.

How can one be grateful? If not a sparrow falls to the ground without Love's knowing, if all the hairs of our head are numbered, if our heavenly Father does not disdain to take note of little things, surely we on our part should not feel that taking cognizance of these things is beneath us or too petty for us. In fact, life itself is but the multiplication of little things. So-called material living is the multiplication of little misconceptions, little mistakes, little false beliefs, and little sins. Spiritual living expresses the multiplication of gratitude, faith, confidence, and spiritual realization, based on habitual, persistent correction of moment to moment thinking and doing.

It is useless to try to be grateful for all the good we have, for love as an abstraction. There is no such thing as abstract good, any more than there is such a thing as an abstract God. The existence of God is either a concrete fact or it is nothing at all. We must begin to water our consciousness with gratitude and appreciation for some little thing, some human kindness which possibly we have become so accustomed to that we have hardly recognized it as having taken place,—for the friendly touch of the hand, the loving greeting, the little kindly act of a stranger. All these are matters of daily experience, in which we fail to find satisfaction and comfort because we fail to be grateful for them. These are, however, some of the evidences of ever-present good, and we fail to recognize God, good, as ever present because we do not appreciate the manifestations of good.

As the water in the desert softens the crust of the hard-baked soil, penetrating to where fruit-bearing seed is ready to pulsate into life at its invigorating touch, so gratitude breaks through the crust of materiality in human consciousness, finds there the seed within itself, the reflection of the divine, which breaks forth in human living with a miracle of glad experience, the evidence of the Mind "which was also in Christ Jesus," spiritual knowing, spiritual healing, spiritual living.

No Concessions to Error

J. CLIFFORD HARRISON

The directness of speech which characterizes the utterances of Christ Jesus is perhaps nowhere more beautifully set forth than in the Sermon on the Mount. The more this wonderful discourse is studied and analyzed in the light of the understanding gained through Christian Science, the more apparent is the simplicity and intense practicability of what the Master taught. Well-nigh every sentence is of deep significance, containing such a wealth of meaning that the inspiration and help gained from the careful consideration of each separate verse will amply repay our efforts. When we are beset by any sense of difficulty, the silent repetition of even one of these sacred sayings will both calm and strengthen us, while often its truth will uncover and destroy moral error and at the same time heal the resultant physical discord.

Above all, the Sermon on the Mount teaches us to be honest and pure in thought, desire, and purpose. Moreover, these injunctions of the Master bear as directly upon our

Digitized by Google

present-day conditions as they did on those existing nineteen centuries ago, and the healing truth contained in them is just as operative today as it was then, if we will but avail ourselves of it by complying with the conditions. An instance of this may be illustrated. Jesus said: "Agree with thine adversary quickly, whiles thou art in the way with him; lest at any time . . . thou be cast into prison. Verily I say unto thee, Thou shalt by no means come out thence, till thou hast paid the uttermost farthing." The wisdom of these words was clearly shown to the writer by a recent experience which to him signified that we must not temporize.

On account of a corn on the foot it was difficult to walk with comfort, and various expedients which were tried only prolonged the struggle, until he saw the necessity of faithfully sticking to his task and making the demonstration complete. The act of temporizing in any way creates a false sense of security, which in turn fosters indolence, and in this case a lesson had to be learned before freedom was realized. After a while he was reminded by the sense of pain that there was work to be done, but again he yielded to circumstance, this time using material means for the removal of the excrescence. This brought no permanent relief, however, for the discordant condition seemed to increase rapidly, and with it a sense of physical suffering.

A Christian Science friend was then asked to give treatment, but the writer knew all the time that it was his own task. It was not exactly an honest appeal, and he did not realize any gain from the friend's faithful efforts. Early one Sunday morning, sleep having been broken by an acute sense of pain, comfort was sought in recalling past blessings, and a testimony of healing which had been heard in church was remembered, the key-note of which was gratitude for a "still small voice" that seemed to say, Be faithful; be faithful. Then the words of Jesus, quoted above, flashed into memory with a healing influence, and I asked myself: Have I been faithful? Have I agreed with my adversary? These two searching questions called forth a sorrowful negative. I immediately saw that a mistake had been made in temporizing, and when my mental home was purified and honesty of purpose restored, then, and not till then, I found relief. As the error was mentally corrected, the sense of pain vanished, and in a few days complete and permanent freedom was realized. Truly has our beloved Leader written, "The sharp experiences of belief . . . turn us like tired children to the arms of divine Love" (Science and Health, p. 322).

We cannot shelve our problems indefinitely; we must patiently work them out, and faithful work will bring its reward. If the small difficulties of daily experience are left to run their course, or if we allow error to suggest that our time is too fully occupied with work of greater importance, how can it be said of us, "Well done, thou good and faithful servant: thou hast been faithful over a few things, I will make thee ruler over many things"? It is a subtle error which would tempt us to use the simple means at hand with the argument that it is easier. Temporary means will never solve a problem. If we have the smallest understanding of God as infinite good, and of man as His perfect, spiritual idea, governed only by divine Principle, is it not wise and best to apply this knowledge to destroy every sense of discord, without waiting for a greater difficulty to be overcome? If what appears to be a slight manifestation of error is allowed to remain in consciousness without challenge, the passive inaction will tend to produce the apathy which should always be guarded against.

It is imperative for us to agree with our adversary, but it makes a great difference whether we let Truth dictate the conditions or whether we comply with error's demands. The former course would be governed by the law of harmony, and would be agreement by destruction of the error; *i.e.*, the law of God, good, would destroy the sense of all that is unlike good. If, however, error is allowed to rule, to make conditions for our acceptance, we shall sooner or later have to learn how to exert man's God-given dominion in order that we may escape from the prison into which error has cast us, and from which we shall not be released until we have "paid the uttermost farthing;" in other words, until we have won forgiveness by humbly uprooting and destroying the falsity which has obscured our vision of the true, the real. St. Paul says that we are the sons of God, and yet it is believed by many that we are "the sport of circumstances." Such a phrase dishonors God, and we should blush to think of using it when we begin to understand God as infinite good, the only cause, man's divine Principle. But do we not unconsciously admit this falsity when we temporize with error? To temporize means to yield to circumstances. Our Leader says: "At all times and under all circumstances, overcome evil with good" (Science and Health, p. 571).

Let us then apply our knowledge of the laws of Truth, claim our freedom, and realize our immunity from the beliefs of sense. Let us never harbor the desire for material remedies, for it will be seen that such a desire admits the belief of their power to heal, and is therefore alien to the demands of Spirit, God. Let us be faithful to our ideals by striving honestly and patiently, and by being willing to learn how to overcome our difficulties in the Christ-way. These difficulties will then cease to be troubles, but instead will become stepping-stones to a greater and fuller knowledge of God's purpose for His child. God will never fail us, and we should gratefully remember Love's omnipresence, for in the words of the Persian poet,—

in every "Oh, my Father,"
Slumbers deep a "Here, my child."

✧

"I am with you alway"

ADAH M. JANDT

In Science and Health Mrs. Eddy says, "When the omnipotence of God is preached and His absoluteness is set forth, Christian sermons will heal the sick" (p. 345). That this is indeed true has been proved many times in Christian Science churches, and instances of healing during the services have often been related in our Wednesday evening meetings. I had a beautiful experience of the truth of this statement when attending The Mother Church in Boston one Sunday morning some time since. I had awakened with a sense of weakness and pain so intense that I began to fear I would be unable to attend the service; but I had come many miles in order to have this privilege, and determined not to admit for an instant that I could be kept from the blessing.

I was able to get to the church, but the pain seemed to increase until the time for the Lesson-Sermon. Then, although still suffering, I was able, through divine strength, to lift my thought and to hear most of the Lesson, when I was suddenly impressed by these words of Christ Jesus, which were being read from the Bible: "If thou canst believe, all things are possible to him that believeth." I said mentally, "Yes, I do believe that all things are possible to God, for I have had many proofs of His power." Then these words were read: "If I may but touch his garment, I shall be whole." And I said, "I have touched the hem of Christ's garment, for I have begun the study of Christian Science."

Immediately I began to feel a greater sense of freedom, and then, as I heard these words from Science and Health:

Digitized by Google

"Spiritual strength wrestles and prevails through the understanding of God" (p. 567), I knew that I was perfectly healed through this inspired Christian sermon to which I had been listening. My gratitude was indeed great, not only for the freedom from pain, but for the added proof of God's nearness and the realization that His power and goodness are ever available to those who seek divine aid in the Christ-way.

✧

Every-day Overcoming

EUGÉNIE REEVES

THAT the promise "I will show thee what thou shalt do" may be proved true, has been demonstrated in a recent experience, which though in itself void of all romance, was fraught with meaning to me, and perchance it may be to others who are learning in Christian Science of the ceaseless availability of Truth.

My son was away on business and would not return for some hours, so I was alone on the farm. The thermometer registered seven degrees below zero and the snow was drifting. Looking out of doors, I noticed that the horses which had been free on the prairie, were pawing the snow in quest of the grass underneath, and thinking that possibly they had come home on account of the cold, I went out to put them in the stable. One of them fell down while running over a snow-drift, and there he remained, struggling. Going to him, I saw that one hind leg was caught in a grain drill over which the snow had drifted. The leg was cramped in the spokes of the wheel, and the hoof was held fast by the ironwork below. Fear took hold of me. What could I, a woman, do in such an emergency? Oh, for some one to pass by to whom I could call for help!

I started to go to the nearest house, half a mile away, but at every step I sank knee deep in the snow. Then I remembered that the people were away, and at the same moment recalled the promises contained in the ninety-first psalm; so with all the strength of my heart and mind I called aloud to God to help me, for I wished to save the horse from suffering as well as to preserve his life for us. All fear at once passed away, and I had a sweet sense of the divine presence and power.

Returning to the animal, I soothed him with voice and hand, also covered him with a rug, for he was shivering with cold. I then sawed through the spoke of the wheel in two places to lower the leg; and by placing bricks, one at a time, under the hoof, I managed to raise it and work it by degrees out of the ironwork, so that when the animal gave a jerk the leg was free! When I tried to get him up, however, I discovered that the other hind leg, which was hidden under the snow, was also fast. Digging away the snow, I found that it was caught in a fork-shaped part of the ironwork, and error at once suggested that I could not cut through iron. Nevertheless, Truth affirmed that both iron and wood are amenable to Him who was guiding me and giving me strength. Accordingly, I again set to work, and by gently drawing the leg outward its full length and upward, the horse was set free. The poor animal was numb and stiff, for the work of releasing him had occupied nearly two hours, but I managed to get him up, put him in the stable, and feed him. He shivered for a short time, and one leg was slightly skinned, but he is now as sound as ever he was.

After this experience I returned to the house, lit a fire, and removed my wet clothing. Then I sat down to thank God for this overcoming, through reliance on ever-present divine Love. To sense I had been in a dangerous position, kneeling in the snow with my head close to the animal's heels, and I would have been helpless had he plunged or struggled violently; but he seemed to know that his part was to be still, for animals respond very quickly to the truth held for them in Christian Science. Since this experience in applying the truth to such a commonplace but pressing problem, I have had a much more vivid realization of the ever-presence and power and love of God, which are so clearly presented in Christian Science, and my heart overflows with compassion for those to whose ignorant belief the many phases of error which assault them seem real and unconquerable. Very frequently indeed do I breathe these words from the daily prayer given in the Manual (p. 41): "May Thy Word enrich the affections of all mankind, and govern them," and strive to demonstrate them.

✧

Disease not Inherited

MILTON B. MARKS

CHRISTIAN SCIENCE is freeing mankind from the belief that disease is lawfully inherited, and is unfolding the real and available inheritance of man in God's image and likeness. That which is not the truth of man is found to be but a supposititious inheritance, the spurious nature and unreality of which are gradually exposed as Christian Science is demonstrated. We need not be in bondage to the belief that disease is ineradicable because inherited, since disease is never the truth of man.

Mrs. Eddy says of this belief, "Disease is always induced by a false sense mentally entertained, not destroyed" (Science and Health, p. 411). In proportion as this fact is understood, the belief in inherited disease resolves itself into the proposition that false beliefs and sin—satisfaction in which is always illusion—do not belong to our inheritance. Whether such illusions account for themselves on the ground of being inherited or acquired, it is evident that the effective remedy for them is the truth which God unfolds to man and which dispels these errors, relieving mankind from all fear, and also from all sinful desires.

It is not, then, so much a question of what one has inherited of an evil nature, as of how much of it one is accepting as real or God-given. If mortal man, by reason of the doctrine of inheritance, manifests sinful tendencies, appetites, and passions, vain intellectual conceits, undemonstrable doctrines, physiological and medical theories and fears which tend to obscure the truth of God and man set forth in the first chapter of Genesis, or if these errors have been impressed upon him through association, or through instruction, education, and training based upon a misconception of what true knowledge is, the fact remains that all this is but "the old man with his deeds" to be "put off," while "the new man" is to be "put on" through right knowledge of God and its daily application. The individual is a free moral agent, and freedom from so-called inherited sinful tendencies and disease is wholly a question of right mental activity now.

In every effort to overcome evil it is helpful to remember the words of our revered Leader: "Be of good cheer; the warfare with one's self is grand; it gives one plenty of employment, and the divine Principle worketh with you,—and obedience crowns persistent effort with everlasting victory" (Miscellaneous Writings, p. 118). In fulfilment of the Master's teaching and in keeping with the Master's practise, Christian Science brings to mankind today the healing message of spiritual understanding which is man's real inheritance, and wherewith we are able to quench "all the fiery darts" of erroneous belief.

Selected Articles

[John M. Henderson in *The Seattle* (Wash.) *Times*]

In a recent issue is the report of a sermon delivered by Dr. —— on the subject, "Assassinated by Isms," in which the speaker is quoted as classing Christian Science with pantheism, Mormonism, etc., and branding it as an influence "arresting the development of the orthodox church" and "denying every fundamental principle upon which the hope of salvation rests."

The general public is familiar with the fact that it is seemingly very difficult for theologians of different denominations to be fair to one another—the theological breach separating the various so-called orthodox churches being admittedly the cause of much confusion among earnest seekers after the truth in all ages. One of the strongest temptations to the human mind is to be content to travel in a groove which has been formed by early training and education. In nearly all the older churches, "My father's religion is good enough for me," is the slogan of many laymen, teachers, and preachers. It was so in the olden time. The Pharisees were "orthodox," and they cried out against Jesus, even though his teaching was everywhere supplanting sin and suffering and sorrow with joy and peace, health and holiness. The law and the prophets were good enough for them. The worshipers of Diana feared that her temple "should be despised," that "her magnificence should be destroyed," and, rejecting the teachings of Jesus, they continued to cry, "Great is Diana of the Ephesians." The same mental habit obtains in our own day, and it is therefore easily explainable why it is difficult for one whose mind is absorbed in the effort to win the world to certain creedal enunciations, to see good in Christian Science, even though the elevating and purifying influences of this Science are as present in every community as the sunshine.

The writer was born and raised in the Presbyterian faith, and even studied one year in the divinity school of a Presbyterian university. In "The Shorter Catechism of the Westminster Assembly" he learned that "man's chief end is to glorify God, and to enjoy Him forever;" also that "God is a Spirit, infinite, eternal, and unchangeable, in His being, wisdom, power, holiness, justice, goodness, and truth." With this early training no ordinary circumstances could have induced him to investigate Christian Science, of which he knew little, but which he ridiculed and criticized much. But there came a time when he was in sore need. The good family physician said he could not live. The prayers of relatives and friends proved unavailing. As a last resort, and under protest, a Christian Science practitioner was called, and he was speedily restored to health. The practitioner insisted on the patient making a daily study of the Bible in connection with "Science and Health with Key to the Scriptures" by Mrs. Eddy. The patient was amazed that he should be expected to find physical healing by gaining a better knowledge of God and man's relation to Him; it was so contrary to his early education. Yet through this knowledge the transformation from sickness to health was accomplished, and with health came a higher understanding of the ever-presence and helpfulness of the one infinite God.

A specific statement of the teachings of Christian Science appears on page 1769 of "The Popular and Critical Bible Encyclopedia." We quote: "The term Christian Science, or Divine Science, designates that apprehension and scientific statement of truth which embraces all right ideas, all that is good, beautiful, and true. It is the fulness of divine consciousness, the wisdom of God. . . . Christian Scientists believe in God, in the divinity of Christ, in the inspiration of the Scriptures, in unceasing prayer, in the highest morality of thought and conduct, and in the practical possibility of a present overcoming of sin and all its effects through spiritual apprehension of the Christ, Truth." Surely in this statement of doctrine there is no room for the vagaries of pantheism, which the Standard dictionary defines as the "form of monism that identifies mind and matter, the finite and the infinite," or for any ism that teaches or tolerates evil of any description or degree.

It seems scarcely necessary to refer to the doctor's declaration regarding the child who died of diphtheria, supposedly under Christian Science treatment, since it is a well-known fact that annually hundreds of children die of this disease, although they have the best care the "regular" physician can give them, and although every "scientific antidote" known to the "regular" physician has been applied.

✧

[M. L. Whitcroft in *Clifton* (England) *Chronicle*]

In reply to your correspondent who writes over the pseudonym of "A Churchwoman," let me say that the Christian Science teaching on the Trinity is simple, clear, reasonable, and absolutely in accordance with the Bible; whereas that of the church, with all due respect to those who formulated the creed, is utterly vague, even to those whose orthodoxy compels them to accept it. Many clergymen of the Church of England today avoid using the Athanasian creed, for there is without doubt, on their part and on that of many churchmen and churchwomen, a strong tendency to strike out on a broader line of thought than they have followed in the past. Therefore what is considered orthodoxy today, may be heterodoxy in the near future, as "progress takes off human shackles" (Science and Health, p. 256). Jesus never taught, as your correspondent claims, that God is three persons in one, but in sending his disciples out to teach all nations and baptize them "in the name [nature] of the Father, and of the Son, and of the Holy Ghost," he gave them a practical, intelligible command to demonstrate man's unity with his eternal, divine Principle, "Life, Truth, and Love," which "constitute the triune Person called God" (Science and Health, p. 331). Through this understanding of God, Jesus wrought his mighty works, and through the same understanding, though at present but faintly reflected, Christian Scientists are yielding obedience to his command in healing the sick and the sinful.

Your correspondent is evidently one of those who take such a wholly material view of the teachings of the Bible that they fail to grasp the spiritual meaning which underlies its statements; hence her failure to perceive the contradictory nature of the two accounts of the creation given in the first and second chapters of Genesis. If we admit that God is infinite, eternal Spirit, the first and only cause, we are bound to admit that all He creates must be in His own image and likeness, spiritual, coexistent, and coeternal with Him. As Mrs. Eddy so ably expresses it: "God, without the image and likeness of Himself, would be a nonentity, or Mind unexpressed. He would be without a witness or proof of His own nature" (Science and Health, p. 303). To believe that God first created man spiritual, and then recreated him out of the dust of the ground, is to believe that God created the flesh of which Paul wrote, "They that are in the flesh cannot please God," and which Jesus declared "profiteth nothing."

When Paul, speaking in the usual metaphor employed in the East, referred to the body as being "the temple of the Holy Ghost," he showed the necessity for purifying consciousness of every belief of material sense, for spiritual consciousness

Digitized by Google

alone is the "temple of the Holy Ghost." It was St. John's spiritual consciousness (while still on this material plane) which gave him that wonderful vision of the holy city which he describes as having "no temple [body] therein," for "the kingdom of God is within" us, in spiritual consciousness. Through Mrs. Eddy's inspired interpretation of the Scriptures this great truth has again been revealed to this age, bringing to countless thousands freedom from the bondage of sin and disease, and giving them the peace "which passeth all understanding." May it not be, therefore, that it is not Mrs. Eddy's writings which are "fantastic theories, false to Christianity," etc., but that your correspondent, like the scribes and Pharisees of old, is too full of materialistic thoughts about God, of creeds and dogmas, to recognize this reappearing of the Christ, Truth.

✧

[Thomas F. Watson in *Palo Alto* (Cal.) *Times*]

A certain speaker, in an address on "A New Religion," is reported in a recent issue as saying that Christian Science is "illogical; it cannot stand an intelligent test applied to it, according to known facts of life." Jesus gave us a test whereby we should know the truth, when he said, "If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." He also said, "By their fruits ye shall know them;" and Christian Science is willing to be judged by its fruits, namely, the healing of sin and sickness. This is not a new religion, but rather a new discovery of an old truth, and that is the Christ-truth, for it comes, as of old, to bring "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness."

The gentleman says that Christian Science "throws too much emphasis on physical preservation;" but the beauty of the healing in Christian Science is, that it not only lifts humanity out of sickness, but out of sin, fear, anxiety, worry, and all other false beliefs of the carnal mind. The Bible says, "Work out your own salvation," and this work must be mental, since in order to do right it is necessary first to think right.

We must take issue with our critic when he says, "The fact is, it is impossible to know what is good without first knowing what is bad." In Genesis we read, "And God saw every thing that he had made, and, behold, it was very good"; and John says, "All things were made by him; and without him was not any thing made that was made." Therefore we find it is as impossible for man to know evil as for him to know that two plus two equals five. He may believe in evil, and he may believe that two plus two equals five, but it is impossible to know that which is not true. It is this false belief against which God warns man, for we again read in Genesis, "But of the tree of the knowledge of good and evil, thou shalt not eat of it: for in the day that thou eatest thereof thou shalt surely die." The critic's assertion that "good and bad are relative terms, and in life are constantly interchangeable," receives a rebuke in the Master's statement, "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." A fountain cannot send forth sweet and bitter water.

Our critic mistakenly supposes that the end and aim of Christian Science is to preserve the physical; but this is not true. Paul said, "We are . . . willing rather to be absent from the body, and to be present with the Lord." Mrs. Eddy tells us in "Science and Health with Key to the Scriptures" that "to be 'with the Lord' is to be in obedience to the law of God, to be absolutely governed by divine Love,—by Spirit, not by matter" (p. 14). In Romans we read: "So then they that are in the flesh cannot please God. But ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you. Now if any man have not the Spirit of Christ, he is none of his." Therefore the one end and aim of the Christian Scientist is to know God, for Jesus said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

✧

[George A. Law in *New Haven* (Conn.) *Times-Leader*]

My attention has just been called to a communication which appeared in a recent issue, wherein the writer, after enumerating some twenty-five or more diseases which he terms "parasite diseases," asks whether such "are a proper field for Christian Science practise." The best answer to this question is the fact that all the diseases mentioned have been healed repeatedly through Christian Science. The evidence of this is on every hand, for at the present day there is hardly a hamlet in which cannot be found those who stand as living testimonies to the efficacy of Christian Science to heal all these types of disease.

With respect to the list of ailments mentioned, the communication further says, "An abundance of conclusive experiments has proved the named diseases to be due to parasites." Notwithstanding this statement, it is common knowledge that doctors do not all agree upon the causes of the diseases named, nor are they agreed as to the proper treatment of them. It is likewise well known that physicians do not always agree in their diagnosis of a case, and that many such cases are lost under medical treatment. It is becoming better understood that Christian Science is often effective in cases of this kind after *materia medica* has failed to bring the desired relief.

The dilemma which seems to appear to the writer of the communication, over the question, "If Life and God are synonymous terms, how can life in man nullify life in the parasite?" indicates a failure fully to apprehend the fact that Christian Science recognizes God as Spirit and man as spiritual, God's idea; that man as God's idea, or as the Scriptures state it, His image and likeness, reflects and expresses God, His qualities and attributes. It must follow, then, that in so far as we understand and realize this basic truth concerning man's relationship to his creator, we are able to partake of and manifest the divine nature or omnipotence, and thus the "dominion . . . over all the earth" conferred upon man, as recorded in the first chapter of Genesis, is demonstrated. The utilization of divine power is possible when man's birthright is understood.

Experience proves that the truth, so clearly set forth in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, if applied to the problems of life, is able to destroy discordant conditions of whatever nature, whether of sin or physical disease. To the extent of the demonstration of divine Principle, peace and happiness are established where inharmonies existed, and this tends to reveal an harmonious creation, including man, spiritual and perfect, all governed by spiritual law.

✧

[John W. Doorly in *Bradford* (England) *Telegraph*]

In a recent issue I notice Dr. ——'s remarks on pain and her reference to Christian Science. She states that "if Christian Scientists remove pain without understanding its cause, they may do serious harm." Perhaps the critic will be surprised to hear that Christian Scientists agree with her, only they probably regard the cause in such cases in quite a different way from what she would. To a Christian Scientist the healing of disease is not merely the removal of a

Digitized by Google

disturbing effect, but the eradication of the whole trouble, even to the wrong thinking which produces that effect. To illustrate: The doctor declared that pain was a state of the mind. Now suppose that pain was produced by a human belief termed a burn. The ordinary medical practitioner would apply a material remedy to that material effect, whereas the Christian Scientist would deal with the belief in the human mind which declares that there is a power or presence apart from God which can work evil to His creation, even as did the three Hebrew children in the furnace. Thus he would deal with the condition in a much more thorough way than the materialistic remedy would do. Again, if a man's suffering were caused by sin, Christian Science would destroy his sense of sin and thus heal his suffering, while the physician on a materialistic basis might allay his pain or sickness and leave him with the same desire to sin and the possibility of being sick again.

If pain is wholly mental, as the critic admits, it must be of the carnal mind, for if we believe that the divine Mind produces pain, then, as this Mind is infinite wisdom, it would be right for us to have pain and wrong for us to try to get rid of it. But if pain is an error of the human mind, then it can be removed through the action of the divine Mind, or that Mind "which was also in Christ Jesus," since it was solely through the action of this Mind that our Saviour healed sin and disease. Material healing systems are today forsaking their material drugs and are rushing pell-mell into the byways of mental healing, such as mesmerism and suggestion. But this last error is even worse than the first, since it is but another state of activity of the same carnal mind which produces the disease, and is in fact a "house divided against itself."

Christian Science teaches, and proves clearly, that all sin and disease are the results of belief in the carnal mind, and can certainly be thoroughly destroyed through the understanding of God, or the divine Mind. "Ye shall know the truth, and the truth shall make you free;" in other words, Ye shall know the facts of the divine Mind, and this knowledge or understanding of these facts shall make you free. This fact has been proved during the last fifty years in the Christian Science movement in hundreds of thousands of cases, and is being recognized more clearly every day by spiritually-minded men and women.

✧

[R. Stanhope Easterday in *Warsaw* (Ind.) *Times*]

According to published reports, both the evangelist and the Rev. Mr. —— have departed from the regular orderly "preaching of the Word" to denounce Christian Science. They have apparently been guilty of revamping old, hackneyed, and oft-refuted criticisms of this system of Christian teaching.

The first-named gentleman, in one of his early efforts, assigned himself to a large task when he declared himself "set in defense of orthodoxy," inasmuch as the broadest and most generally accepted meaning of this word is "correct in doctrine." It will therefore be necessary for the critic in this instance to determine which of the various interpretations of our Lord's teaching is the strictly correct one. The only practical test in the matter of thus determining true orthodoxy is logically the results, or fruits, or "signs following," which the great Founder of Christianity declared should be the only logical criterion of true discipleship. Such a test takes time, and the present indications are that Christian Science is forging rapidly to the front, if a large and ever-increasing volume of incontestable evidence in the healing of all manner of diseases and the reforming of sinners is to be the basis of judgment. The same gentleman gave utterance to this statement: "Whenever you hear criticism and fault-finding, you know the devil is around and God is doing something." With this statement Christian Scientists are entirely agreed, and on this basis they account for this critic's unreasonable arraignment of Christian Science.

The gentleman says that Christian Science "with one stroke of the pen does away with atonement." Let us see what Mrs. Eddy, the Discoverer and Founder of Christian Science, says in this regard. On page 18 of "Science and Health with Key to the Scriptures," the text-book of Christian Science, Mrs. Eddy begins her lucid chapter on the subject of atonement with these words: "Atonement is the exemplification of man's unity with God, whereby man reflects divine Truth, Life, and Love." She goes on to explain, among other things, that "the atonement of Christ reconciles man to God, not God to man." (See also the definition of "atonement," New Standard dictionary.) This critic also raises objection to the Christian Science conception of "devil," or "evil," as in the last analysis "unreal." Our Lord himself referred to all manner of evil, including disease as well as sin, as the work of the devil, and then designated this same devil, or Satan, as "a liar, and the father of it." It takes no far stretch of logical reasoning to deduce that a lie is literally unreal, and it is upon the basis of such reasoning that Christian Science deduces the unreality of evil and eliminates it from human experience, thus healing the sick and destroying sin.

✧

[John W. Harwood in *Blackpool* (England) *Herald*]

A correspondent in a recent issue had noticed a remarkable feature of journalism, in its attitude respecting First Church of Christ, Scientist, which, he says, is being boomed in Blackpool just now. If this correspondent, who wrote over the name of "Curious," had been curious enough, he would not have needed to ask why the *Manchester Courier* reports a Christian Science lecture verbatim, or why the Blackpool papers report the proceedings of the recent Thanksgiving service, where testimonies relating to the healing of disease through Christian Science were given. No, he would have found that what is booming Christian Science is the fact that through its loving ministrations people in increasing numbers are finding healing from their diseases, freedom from the bondage of sin, happiness instead of sorrow, joy for mourning.

It is because Christian Science is proving itself practical, and is fulfilling the Bible promises, that the newspapers which are awake are giving as the most interesting "news," that which people of all grades are looking for. One would have thought that such a "curious" correspondent would have found that the report of the Christian Science lecture was given verbatim, not only in the *Manchester Courier* but in other important Manchester papers, and that even the *Manchester Guardian* did not refrain from giving its report.

✧ ✧ ✧

I leave with God tomorrow's where and how,
And do concern myself but with the now.
That little word, though half the future's length,
Well used, holds twice its meaning and its strength.
Like one blindfolded, groping out his way,
I will not try to touch beyond today.
Since all the future is concealed from sight,
I need but strive to make the next step right.
That done, the next! and so on, till I find,
Perchance, some day I am no longer blind;
And, looking up, behold a radiant Friend,
Who says: "Rest now; for you have reached the end!"

ANON.

Editorial

"Ask of God"

We have been asked to republish an editorial which appeared under the above title in the *Sentinel* of Oct. 14, 1911, and this we are glad to do. Mrs. Eddy has taught us in Science and Health and her other writings how we may "ask of God," and we cannot be too often reminded that this is the one thing which Christian Scientists should do in every time of need. The editorial was as follows:—

As we study the writings of Mrs. Eddy we cannot fail to note that she is continually admonishing Christian Scientists to turn to God, to seek divine guidance in each and every problem that presents itself, rather than to depend upon fallible human personality. This divine guidance is what she ever sought for herself,—she could say with the psalmist, "The Lord is my strength and my shield; my heart trusted in him, and I am helped: therefore my heart greatly rejoiceth; and with my song will I praise him."

It was, therefore, but consistent with Mrs. Eddy's own practise and faith, when her students, recognizing in her the one who had set their feet in the heavenly way, sought to make her their conscience, to place upon her the burden of decision as to the right or wrong of any question, that she should remind them of the counsel of St. James: "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him;" that she should strive to turn their gaze heavenward, to seek of God.

It seems, sometimes, that we must talk over our own particular perplexities with some one else, but he is our true friend who points us rather to the infiniteness of divine wisdom; that there is no problem that can confront Christian Scientists which is not possible of solution through the turning to divine Mind, the unchanging God whose ear is ever open to them that put their trust in Him, who ask aright, "nothing wavering." Where we are most likely to err is in thinking that it is only when sickness and sin beset us that we have any need to "ask of God;" but the same Principle that heals and saves is equally applicable, equally available for the solution of the problems which come to those who feel themselves responsible for the proper conduct of their local church affairs, yet make the mistake of leaning upon mortal judgment rather than omniscient and omnipotent Mind.

There is, however, one important and essential factor in this turning with our every need to Him who is Life, Truth, and Love, and that is that we must seek Him, as the Master declared, "in spirit and in truth;" must recognize that God is Spirit and that His creation is spiritual and good only. We read in Science and Health (p. 13): "If we pray to God as a corporeal person, this will prevent us from relinquishing the human doubts and fears which attend such a belief, and so we cannot grasp the wonders wrought by infinite, incorporeal Love, to whom all things are possible." We must know that true prayer, as taught in the chapter on that subject in Science and Health, is efficacious for our every need, that the Principle of Christian Science is illimitable and unchanging, and thus realize that harmony to which we are entitled. We must demonstrate the supreme power of omnipotent Mind in all our affairs, also that God is not a respecter of persons and that He is revealed to those who seek Him aright, who do not ask amiss.

If, on the contrary, we depend upon human opinions and advice as guides to our actions and to bring about harmony in our affairs, we lose opportunities to prove the omnipotence of God. Like the disciples we may toil all night fruitlessly, be tossed hither and thither on the restless, ever-changing sea of mortal theories, until the dawn breaks and we hear the Christ bidding us, "Launch out into the deep." If we heed his command, cast aside the material dependences and conflicting human opinions that have profited us nothing, put our trust wholly in Him who is able to save even to the uttermost, without whom not a sparrow falleth, we shall not find our confidence misplaced. We shall know of a surety that God, good, alone governs, and the problems that have so perplexed us in the darkness of doubt and despair will have found their only possible solution in the clear light of unerring wisdom.

Archibald McLellan.

Faith and Works

No highway into the heart of the Andes is more noteworthy than that which leads up the valley of the Rimac. The walls between which the river lashes its way are often well-nigh perpendicular, always precipitous, and yet here, there, and everywhere, upon even the steeper inclines, one finds unnumbered stone-faced terraces, where the teeming Inca people raised their sufficient food. Each peon evidently had his patch, and in this rainless region every little plant from the base to the summit of these tremendous acclivities must have been nourished by water carried day after day from the stream far down below. The seeds were dropped in every least plat of soil, and until the harvest time they were watched and watered unfailingly. And this is the lesson of faith and works which these so-called pagans, who later became the victims of the avarice and cruelty of so-called Christians, have traced upon these Andean slopes for our inspiration.

The management of the mental conditions with which Christian Scientists today have to do call for no less trustfulness and patient labor than did the physical difficulties confronting these simple Indians. True, the adamant of material belief is being disintegrated by many forces, and the débris is abundant at the base of every cliff of dogma; but the bulk of this human sense which has thus broken away from creeds and traditions supplies a relatively scant soil of spiritual responsiveness, and its cultivation demands the same patient continuance of effort which won a rich and richly merited return for these denizens of the Rimac. Happily their valley cradles a continuous summer, and what with the unfailing flow from far-away snowfields, nature brought them a compensation for every disability. The sufficient ground of their industry and assurance was their faith in these heaven-sent gifts. When this is true of us, when, "having done all," we are relying unhesitatingly upon the divine presence and power, we too shall reap, "if we faint not." As Christian Scientists, we have come to know with St. Paul that, despite our human inadequacy, God "is able to do exceeding abundantly above all that we ask or think, according to the power that worketh in us."

The seed of Truth planted in the little experiences and contacts of every-day life, and nourished by that ministry of love which is always knowing and expecting the good,—this constitutes the true harvest asset. From the possibilities of doing what would be called great and impressive deeds, we may be quite separated by the simplicity and retirement of our service. Nevertheless, the fruitage of a life devoted to the expression toward all of courtesy, compassion, unselfishness, and loving good will is measured by the phrase, "an hundredfold," and its influence grows to be as broad as it is beneficent among men.

Faith and faithfulness seem to have summed up the secret of these gentle Inca people, and in this same mastery with respect to truth and duty, it is ours to win. He who treasures

Digitized by Google

and cultivates every trace of good in human nature, speedily learns that the little sifting of silver, if followed up, may lead to a "pot of ore" of incalculable worth. Those who are familiar with the life of our Leader will remember how amid the most unpropitious circumstances she cherished and wisely utilized every least show of receptivity to the truth she declared; how, despite the wearying resistance of obtuse or wilfully obstructive mentality, she held her way with a grip of faith that could not be broken, an energy of endeavor that acknowledged no defeat. This is always the spirit of the divinely quickened, and it is irresistible. They falter not nor fail, because they have learned it is divine Truth that overcometh in and through them.

When this concept of ministry rules us in our every least relation and opportunity, when we are quick to discern the promising place to drop the good seed, and are wise and trustful in planting and watering it, then once desert hearts all about us are sure to become as watered gardens.

JOHN B. WILLIS.

"Durable riches"

ALL through the recorded history of the human race, as found in the Scriptures, are many references to wealth and riches, all of which point to the metaphysical significance of these terms above and beyond the mere belief in material possessions. It is interesting to note that the word "wealth" is derived from "weal," hence we have "well;" while its synonyms are "welfare; prosperity; good." As for riches, it seems that the word originally signified power, and its application is very wide. We speak of a rich soil, of rich food, a rich voice, a rich character, etc., but it is sadly true that most mortals base their concepts of riches upon worldly possessions, though the wise man said that these "make themselves wings" and fly away. It is he, however, who tells us of "durable riches and righteousness," which he declares to be better than the finest gold and the choicest silver.

As we ponder the great characters of sacred history, we discover that many of them were not only "rich toward God," to quote the Master's words, but Abraham, who forsook all in a worldly way, became very rich. This was also true of many of his descendants, notably so of David and Solomon, and of some at the present day. Abraham was further told by God that all the nations of the earth were to be blessed through his seed, and Paul, in spite of his own Jewish prejudices, declared, "If ye be Christ's, then are ye Abraham's seed, and heirs according to the promise." Mrs. Eddy's definition of Abraham as given in Science and Health (p. 579) greatly illumines this statement. It reads: "Fidelity; faith in the divine Life and in the eternal Principle of being," etc.

All of this indicates how durable riches may be gained, but we have the final word in this declaration of Christ Jesus: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." This statement has a remarkable illustration in the nineteenth chapter of Luke, where we are told of Zacchæus, who was so eager to see Jesus and whose sincere desire was quickly perceived by the Master. It seems that Zacchæus was rich, but so humble withal that he would not have dared invite the great Teacher to his house. Jesus went there, however, in spite of the taunts of the self-righteous, and in the gentle sunshine of Love the timid Zacchæus was emboldened to tell of his vast charities; and what was even more, of his keen sense of the demands of justice. He said: "If I have taken anything from any man by false accusation, I restore him fourfold."

Well might the Master declare salvation for Zacchæus and his house, and pronounce him a true son of Abraham. The others who were present "thought that the kingdom of God should immediately appear," but they were not all ready for its righteousness, which does not include injustice or indolence, envy or malice. It is possible that some of those present at this feast may have thought that Jesus favored Zacchæus because of his riches, but if such was the case their rebuke came in the parable which followed. We may be sure that not all of the so-called rich men in Jerusalem would have received the commendation bestowed upon this tax-gatherer, for the Master measured men by what they were, not by their material belongings. Zacchæus was clearly one of the "poor in spirit" who coveted durable riches, and who must have had the mental qualities described in Science and Health (p. 514) as "diligence, promptness, and perseverance," which "carry the baggage of stern resolve, and keep pace with highest purpose."

There are few who do not desire riches, but not all are willing to work and wait for their possession. Likewise, very few mortals would be satisfied with the prospect of spiritual things alone, yet in the divine order these should come first and increase daily. For the outward manifestations of good, we have the assurance of Christ Jesus that they will be "added," their permanent possession being dependent upon righteousness, which is inseparable from wisdom. Well may we bend all our energies to gain these "durable riches," for with them we shall, as St. Paul says, make many rich.

ANNIE M. KNOTT.

Lecture in The Mother Church

The First Church of Christ, Scientist, in Boston, Mass., announces a free public lecture on Christian Science by William D. McCrackan, C.S.B., a member of the Christian Science board of lectureship, in the church edifice, Falmouth, Norway and St. Paul streets, Boston, Friday evening, March 6, at eight o'clock. The public is cordially invited.

Among the Churches

Current Notes

CITY OF MEXICO.—The unusual conditions in Mexico during the last three years have given an opportunity for testing the stability of our faith and for proving, through the proper understanding and daily application of the truths taught by our beloved Leader, that God is "a very present help in trouble."

It seems fitting that we should report, for the encouragement of the field, that only one service has been missed during these years, and the congregations have but slightly decreased, although many, in fact a majority, of the Americans have left the country. In no way have we been compelled to reduce our expenses, and all obligations have been promptly met. The sale and distribution of literature have decreased but little. We have recently succeeded in placing the *Monitor* on sale in ten towns outside of this city and in two stores within city limits, and have arranged for its sale on many of the railroad trains through the republic. The Mexican *Herald*, the only American daily newspaper, publishes Christian Science articles from the *Monitor* several times each month, and these are being read by people of all nationalities who speak English. Surely some of this good seed will find lodgment in prepared soil and will bear fruit to the glory of God.

Best of all, however, there is undoubted proof of rapid spiritual growth in our members, almost without exception. Then we remember the divine assurance, "When thou passest through the waters, I will be with thee."—*Correspondence.*

DURBAN, SOUTH AFRICA.—The fourth annual report of the society shows a marked all-round growth in every branch of its activities for the past year, and progress a good deal in advance of any previous year of its existence. The sales of literature during the year were as follows: Science and Health, 84; Mrs. Eddy's other works, 44; pamphlets, 261; Hymnals, 22; Quarterlies (per quarter), 150,—figures considerably in advance of those of last year. Various public institutions, numbering in all fourteen, have been pleased to accept Christian Science periodicals. These institutions are visited by the distribution committee weekly and fortnightly, and during the six months ending Oct. 31, 1913, a total of 178 *Sentinels*, 236 *Monitors*, and 10 *Journals* were delivered to them.—*Correspondence.*

ALTOONA, PA.—During the last year the distribution committee gave out 2,942 *Monitors*, also 1,048 pieces of other literature, including copies of the *Sentinel*, *Journal*, reprints, etc. These were placed in hotels, barber shops, fire stations, public reading-rooms, rest rooms in department stores, in the jail, the county home, the Salvation Army Industrial Home, the offices in the city building, and one *Monitor*, daily, in the offices of the Chamber of Commerce.—*Correspondence.*

WASHINGTON, D. C.—At a business meeting of First Church of Christ, Scientist, it was voted to present last Sunday's [Jan. 11] collection to the recently organized Second Church as a "love offering." The amount of the collection was about six hundred dollars. The new church is growing so rapidly that the auditorium in which the meetings are held must shortly be enlarged.—*Washington Times.*

COLUMBUS, OHIO.—A home for Second Church of Christ, Scientist, to be erected at Park street and First avenue, at a cost of thirty thousand dollars, is expected to be finished by next Thanksgiving day. The building will seat six hundred.—*The Columbus Sunday Dispatch.*

LOS ANGELES, CAL.—Four services were not sufficient to accommodate all who wished to attend the formal opening of the new edifice of First Church of Christ, Scientist, Alvarado street, Alvarado terrace, and Hoover street, Sunday [Jan. 4].—*Los Angeles Record.*

MANCHESTER, N. H.—The members of the Christian Science church on Harrison street held a special meeting last evening [Jan. 6], at which it was voted to enlarge the edifice in such a way that the seating capacity may be doubled.

Concord Patriot.

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Paris, France

William D. McCrackan, M.A., who gave a lecture on Christian Science in French, in Washington Palace, 14 rue Magellan, was introduced in French by Prof. Williamson de Vismé of the Château de Soisy. The introduction as translated was as follows:—

In 1866 Mrs. Eddy made a discovery, called Christian Science, which upset the world of thinkers. Convinced that she had found the source of life itself, she had the courage to explain, demonstrate, and teach this Science, insisting patiently and earnestly that "there is no life, truth, intelligence, nor substance in matter" (Science and Health, p. 468). It was the dawn of a new era.

If I had been told fifteen years ago that some day I should make remarks in public in favor of Christian Science, I should have replied without hesitation, "Never!" And yet I can say that I was really born the day I understood for the first time that sentence cited above. Today Christian Science is known all over the world. Pamphlets have been translated into several languages; theses and articles have appeared; the press has been hospitable; and all who follow carefully the great intellectual and religious movement have read Mrs. Eddy's book, "Science and Health with Key to the Scriptures."

The Frenchman likes to investigate, to analyze, to understand; he carries into his investigations that clear, orderly, and logical way of thinking which is characteristic of the race, and when he finds the truth, he accepts it at any cost. French history proves this. Tonight, for the first time since the great discovery by Mrs. Eddy, a lecturer, speaking with authority, will explain in French to French people what Christian Science is.—*Correspondence.*

Sydney, Australia

William R. Rathvon lectured in Protestant Hall, Castlereagh street, for First Church of Christ, Scientist. The audience was a large and appreciative one. The introductory remarks of Charles H. Gibbs were in part as follows:—

Christian Science is not always understood, and there are numerous misconceptions of its teaching and practise which are frequently expressed through the pulpit and the press. The object of these lectures is to remove false conceptions and to enlighten the public about Christian Science and its results. We are delighted to see this magnificent audience of intelligent people, indicating that many are taking an interest in this subject, and that others are seeking for more light on the greatest of all problems,—how to gain health and happiness here and now. Liberal-minded people, no matter what their religious beliefs may be, cannot fail to recognize the good which is being done by Christian Science in healing the sick, reforming the sinner, and comforting the sorrowing.—*Correspondence.*

Colorado Springs, Col.

Bicknell Young lectured on Christian Science before an audience that taxed the capacity of Burns Theater. He was introduced by R. L. Chambers, who said:—

About forty years ago there was born, by revelation, through the agency of a woman, a new interpretation of an old religion, now termed Christian Science. From that time until the present its growth has been phenomenal; churches have been builded throughout the land, while thousands and

Digitized by Google

tens of thousands have had the direct benefit of that revelation. The interpretation was based upon love, and necessarily brought a new, distinct, and decided education of mankind in thinking rightly.

Today the advocates of this new religion are found in all parts of the world, and its advancement and accomplishments have been phenomenal. Before its onward progress it has successfully met the criticism of older religious believers, and has even been attacked unsuccessfully by the law, and from all these it has come forth brighter, better, more progressive, and more successful. By its tenets of love, faith, and right thinking, it has dispelled mental darkness, and made happy homes and families of mere places of habitation; has healed the sick and afflicted; has caused the blind to see, the lame to walk; and has even stayed the hand of Father Time in death. With such a magnificent record as this, and from what I know of the results of its teachings, I should say that the adoption and practise of its precepts would be a benefit and a blessing to all who accept it, and likewise to all mankind, and that without regard to past, present, or future religious beliefs.

As a man of the world, without religious affiliations and without a knowledge of these precepts, except from observation, I cheerfully commend and recommend them to the careful consideration of all.—*The Gazette.*

✧

West Chester, Pa.

In introducing Prof. Hermann S. Hering, who lectured on Christian Science, Miss Isabel Darlington said in part:—

The members of First Church of Christ, Scientist, have experienced in varying measures the beneficent and healing offices of Christian Science; to each one of us it has demonstrated itself as preeminently practical and helpful in daily experience, satisfying as well our hunger and thirst after righteousness. The purpose of our public lectures is to extend in the community a more accurate knowledge of the Principle and practise of Christian Science, and of the life and work of its illustrious Discoverer and Founder, Mrs. Eddy. There is no desire to persuade any one to accept this teaching, except through conviction of its logic, its Christianity, its science, and its demonstrability.

In the hour of need, when the sentence of an incurable disease has been pronounced, poverty oppresses, loss of loved ones impends, or domestic and civic feuds and dissensions are rife, we ask those of you who are not already convinced of the truth of Christian Science, to remember that this religion holds out the assurance of help and healing for all ills. These blessings are vouched for by hundreds of thousands of credible witnesses, among whom are your neighbors, who have found through Christian Science the great Physician "who healeth all thy diseases," even infinite, efficacious, divine Love.—*Correspondence.*

✧

Oakland, Cal.

The remarks of Oscar O. Cozad, in introducing Clarence W. Chadwick, who lectured for First Church on Christian Science in the Macdonough Theater, were in part as follows:—

Christian Science is God's message to man, for in Psalms we read, "He sent his word, and healed them, and delivered them from their destructions;" and Moses declares in the seventh chapter of Deuteronomy, "If ye hearken to these judgments, and keep, and do them, . . . the Lord will take away from thee all sickness." Now since God promised six thousand years ago to "take away all sickness," and the Scripture says, God is "the same yesterday, and today, and forever," then that promise is true today; and since that message from God to man healed the sick centuries ago, it can and does heal them today, for what Christian Science says is true of any one is always true of every one. We are in no way responsible for Christian Science, since our Master has said: "My doctrine is not mine, but his that sent me. If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself."—*Correspondence.*

✧

Cedar Rapids, Iowa

Willis F. Gross, lecturing on Christian Science in Greene's Opera House, was introduced by Earle G. Killeen, director of the conservatory of music at Coe College, who said in part:—

When the truth of a religion is better demonstrated by works than by words, it is quite clear that misapprehension of that religion should be eliminated, so that its adherents may the sooner guide their lives by its truth. Christian Science is such a religion. The marvelous spread of its teachings during the last two decades is due immeasurably to the wise method of presenting the truth upon which the life of Jesus was based. It was the policy of its Founder, Mrs. Eddy, to present the facts of "Science and Health with Key to the Scriptures" in a manner as free from error as the book itself, and one of the efficient agencies for so doing is the board of lectureship, of which the speaker of the evening is a member.—*Cedar Rapids Republican.*

Testimonies of Healing

From this beautiful land, in the very heart of the Andes mountains, I send this greeting and a message of good cheer. Twelve years ago Christian Science found me a physical wreck, after years of vain effort to obtain relief through *materia medica* and when rapidly approaching that degree of hopelessness which I realized would be fatal. The ills from which I suffered are too numerous to mention here, but among them were stomach trouble, nervous debility, and severe headache.

At this time a neighbor who was a Christian Scientist brought me a copy of Science and Health, and I began to study it at once, without being aware of what the book could do for me; but at the end of a few weeks I found myself free from all my ills and rejoicing in a condition of health such as I had never known before. The change was so apparent to my neighbors that one of them, a stanch member of the orthodox church, and also a constant sufferer, came to my home and asked what had brought it about. I assured her that Science and Health had been my only help, and reluctantly allowed her to take my copy for a few days. She became interested very soon, receiving much benefit, and today is a practitioner and loyal worker in the vineyard of Christian Science.

In the past six years business interests have brought me to this far-away land, and I cannot be grateful enough for the help which Science proved to be in overcoming the pain of separation from loved ones on each occasion. It has also helped me to meet the changes of climate, and has been my support through all the periods of residence here, under conditions entirely different from those to which I had been accustomed. On one of the voyages I was able to overcome a severe attack of seasickness in a very few hours, and later on enjoyed a voyage of twenty-five days without an hour's illness.

When the necessity of this change of residence was at first presented to me, I was overwhelmed with the thought of going away from my church, and from ever-helpful friends in Christian Science to a strange land whose people did not even speak my own language. All this was effectually met, however, and I have been given the understanding to prove that God is as able to save here as elsewhere, while I have not lacked congenial, loving friends. Divine Love has given me a beautiful mountain home, with sunshine, flowers, and balmy air perennially, where each day seems lovelier than the preceding, and so far from losing anything by the change I have been blessed beyond measure.

Shortly after my arrival here the first time, I was told that all new residents in the village had to undergo an illness in the nature of a fever. Evidently I was too certain of my immunity without doing the needful work to insure protection from harmful suggestion, for in a few days I was attacked with severe chills and high fever. My husband had gone on a visit to the capital, the better part of a two days' journey, and I was alone among people who were strangers to me and who knew nothing of Christian Science. However, I began rather feebly to try to help myself, but the illness continued, and when my new acquaintances came to call upon me, I was obliged to hold fast to the arm of my chair to control myself. Several days passed, but I was able to keep up and mingle with the people just as if in my usual health.

Finally I was confronted with the necessity of telegraphing my husband to return and of cabling to the United States for help. I was very much averse to cutting short my husband's visit, as it would interfere with important business affairs, and I did not care to arouse comment in our colony by despatching a cablegram which they would not understand, so after prayerfully considering both of these questions, I decided that it was not necessary to do either. That evening, after dinner, I sat down with my books, and with a renewed sense that "man's extremity is God's opportunity," I studied the Lesson-Sermon for the week. At nine o'clock I retired as usual, slept well, and when the morning came I awoke healed. There were no days or hours of recuperation, but I was perfectly well, and when I realized that the work was done, my eyes overflowed with tears of joyful gratitude.

On another occasion I awoke one morning with my face and eyes in a very painful state, apparently from contact with a poisonous insect or plant. The appearance was certainly alarming, but I clung to the comforting assurances in the ninety-first psalm, and to the truth as given in our text-book, "Science and Health with Key to the Scriptures," and again proved that God is an ever-present help, for in a short time the trouble had entirely disappeared. Some time later I again suffered from what was apparently a sting, and the effects not being removed for some months, to satisfy my husband I had the case diagnosed by a regular physician, who stated that the condition was apparently due to infection of some sort, and at once recommended the services of a surgeon. I had no intention of appealing to material methods after all the years spent in futile effort to obtain help from that source, and I am thankful to be able to say that the growth has entirely disappeared, although it meant prayerful work, and a considerable time elapsed before the error yielded to Truth.

These are only a few of the many blessings which the understanding of Christian Science has showered upon me and mine. All Christian Scientists give thanks and praise to God, the giver of "every good gift and every perfect gift," and they are also glad to express heartfelt gratitude to their beloved Leader, Mrs. Eddy, who has so followed the Master in loving humility and purity of heart as to be the one chosen to give this Christ-teaching to a famishing world. Today mankind are lifting weary eyes and gratefully exclaiming, "Mine eyes have seen thy salvation"!

NINA M. HENDERSON, Huigra, Ecuador, South America.

✧

[Translated from the German]

It has long been my desire to make public acknowledgment of the many blessings which I and my family have received through Christian Science. The glad tidings reached me after I had gone through a period of four years' suffering caused by a painful and so-called incurable eye trouble, which seemed to increase in severity despite conscientious efforts on the part of several physicians. Some copies of *Der Herold der Christian Science* were then handed to me by a Christian Science practitioner, and their contents filled me with great joy. Doubts soon arose, however, as to the soundness of the doctrine propounded, yet an inner voice asserted itself, carrying with it the conviction that there could be nothing wrong about a teaching that made me love and prize the Bible. I had read the Bible but little formerly, and without the interest derived from my present study, as it is now my most sincere desire to gain an understanding of this teaching.

At this time our three-year-old daughter was taken with whooping-cough. I asked the practitioner for help, and with a few treatments the child was healed. I, however, still went to the physician, impelled by extreme fear of losing my sight. When I finally saw that the skill of the physicians was inadequate in my case, I turned to the Christian Science

Digitized by Google

practitioner for help, the condition of my eyes then being such that I was unable to distinguish one letter from another. I did not realize that fear and the belief that evil has power, bring about the very conditions which alarm us. It took a great deal of love and patience on the practitioner's part to enable me to look once more into the future with a sense of hope and courage, and it was not easy to rid myself of the fear of a chronic trouble which was constantly inducing pain and inflammation. It was my privilege, however, to prove that the power of God is mighty to strengthen those who are weak.

When I reached the point where I could read and write without any trouble, the opportunity was afforded me to have English lessons with a few other students, in order to be able to translate for our own use the text-book, "Science and Health with Key to the Scriptures," and my thought has always gratefully reverted to that time. I recovered the happiness and buoyancy of my school-days, and this helped me to overcome my sense of fear, so that with a growing understanding of the power of Truth, light shone into my consciousness. In Christian Science I learned the great truth that vision is spiritual and therefore eternal, unchangeable, and indestructible, and that it is impossible for me to lose the faculty of seeing, for with God, who is my light, there is "no variableness, neither shadow of turning."

An injury which dated back to a fall in childhood, and which caused me much trouble, especially in lifting, disappeared while I was under treatment, although I had not mentioned it. In many other cases the truth so clearly stated in our text-book has proved the most potent means in the overcoming of difficulties. In this connection I would like to mention another case. One night when I hurt my arm severely, I immediately turned to Science and Health, and through the realization of the truth expressed therein the pain disappeared instantaneously, and in a week's time my arm was healed.

For these benefits we give heartfelt thanks to God, the giver of all good. I also wish to express my gratitude to Mrs. Eddy, whose self-sacrifice and pure living enabled her again to make known to humanity the pure Christ-teaching. I know that divine Love inspired her in so doing, and I will strive to show my gratitude through loyalty to her teachings and through obedience to God.

Frau Emma Braun, Schwäbisch Gmünd, Württemberg, Germany.

✧

It is with great pleasure that I write this testimony of my healing through Christian Science. One day, about five years ago, my right knee began to be very painful, but for a time I went about as usual. After coming in from a walk the pain was very bad, and I found that an abscess had formed in the middle of the knee-joint. The knee continued to be more and more inflamed, and was dreadfully swollen. I suffered intensely, and although I tried to treat myself, I could not get my thought away from the pain.

My husband and sisters proposed all sorts of things for me to do, and considered it almost criminal that I did nothing (as they thought); but I wrote to a lady who had already helped me in Christian Science, and who lived a few miles from where we were then living, in Wiltshire. I knew she would get the letter about seven o'clock the next morning, and I also knew that I should get relief then. Accordingly I went to bed, and got through the night as best I could, longing for the morning; for I was unable to sleep because of the intense pain and the immovable condition of the swollen leg. My friend could not have had the letter more than half an hour before all pain ceased, and within an hour the abscess burst, although there had been no appearance that it would break. All inflammation gradually went away, and the knee became much smaller within two or three hours. I got up, went about the house as usual, feeling no pain at all, and in the afternoon walked six miles as if nothing had been the matter. I think this a splendid demonstration, and feel most thankful to God for it.

About two years ago I was seized with a violent cough, and for two nights I could not lie down. I felt full of fear, so wired to the same kind practitioner, who again treated me at once. The cough ceased immediately, and the healing was complete in three days. Had I not had relief in Christian Science, I could hardly have lived through the week, the attack was so severe.

I feel very grateful to Mrs. Eddy, who, through her discovery of the healing power of Truth, has made it possible for this help to be given to us.

Mary E. Musgrave, Exmouth, Devon, England.

✧

I have long wished to express my gratitude to God, also my thankfulness to Mrs. Eddy for all the benefits I have received through Christian Science. To those suffering from disappointment and despair as I was when this healing truth found me, I can safely say, There is no case, however hopeless it may seem, that cannot be saved and healed through Christian Science. It is now nearly three years since I began the study in earnest, although I had had a copy of the text-book, "Science and Health with Key to the Scriptures," a long time previous to that; but while I thought it was the truth, I could hardly understand it until divine Love sent me a practitioner. I shall never forget how hard she worked through the long dark hours to awaken me from my fears and false beliefs, always faithfully pointing me to divine Principle, God, until I began to get a faint gleam, and since then I have had many demonstrations.

I have had, and still have, much to overcome, but I am thankful for the understanding which enables me to begin to see the nothingness of error and the allness of God, good, for the inspiring truth that destroys all fear in bringing up our children in God's loving care, and for the spiritual uplift I have experienced. Since writing the foregoing I have had the great pleasure of listening to a lecture on Christian Science delivered in Seattle, and of attending the services there, also of hearing two lectures and attending the services here in San Francisco. Words cannot express my joy, and my gratitude to God for all the blessings that have come to me through Christian Science. My healing has been wonderful, for I am sure that I would have died but for the power of Truth. The physical healing, however, is of small importance in comparison with the wonderful regeneration, the changed mentality. Irritability, pride, selfishness, have been overcome to a great extent, besides sinful habits, and in place of revenge I have learned that "Love is the liberator" (Science and Health, p. 225).

That Christian Science is a practical religion I have proved in countless ways, both in business and in daily life, and I have also proved its efficacy in healing our animals while living in Alaska. Serious ills were successfully met, not by any material means, but through the realization of the truth of Mrs. Eddy's words in Science and Health (p. 550), "God is the Life, or intelligence, which forms and preserves the individuality and identity of animals as well as of men." One case of distemper had reached a serious stage, to all appearances, before I had noticed it, but the animal was healed in one day.

Digitized by Google

I am deeply grateful to Mrs. Eddy, who, like Paul, has declared to us "the unknown God" we so ignorantly worshiped, and of whom Jesus said that to know Him aright is life eternal. Through Christian Science God has become to us a living presence, and we are able at least to begin to realize Jesus' words, "Lo, I am with you alway."

Mrs. M. McKenzie, San Francisco, Cal.

✧

I take this opportunity to tell others of the help I have received in Christian Science. Twelve years ago I was healed of asthma by reading Science and Health. Two years ago I fell in the cellar, striking on my head, and was to sense badly hurt; but through the help of a kind practitioner I was soon well. Again, I was healed of severe headaches, which I had endured for several years, while a bad attack of sore throat was also overcome by the power of Truth. For all this help I am truly grateful to God.

Mrs. C. O. Hammett, Lincoln, Neb.

✧

It is with great pleasure that I write to express my gratitude for what Christian Science has done in my home. My little daughter was very sick, but with treatment from a Christian Science practitioner she was up and running about after three days. She had medical aid for a former attack of exactly the same nature, but was not able to get about till after much prolonged suffering and two weeks of medical care, therefore her quick relief in the second instance caused much gratitude.

Previous to this experience she had suffered all one afternoon with very painful toothache, but upon being taken to the practitioner for treatment she was completely healed in a few minutes, and has had no return of the trouble during the many months which have followed. At another time she suffered from a severe bleeding at the nose, which refused to yield to the usual home remedies and had continued long without any cessation. She was taken to the practitioner, and very soon the trouble entirely ceased. My little girl has had no recurrence of the old complaints to which she was subject, and is now in the best of health.

John Aldred, Beechview, Pittsburgh, Pa.

✧

I would indeed be ungrateful not to give thanks to God for what Christian Science has done for me and mine. Words are inadequate to express the gratitude I feel for all the benefits I have received, both physically and spiritually. In January, 1912, I was taken very ill with acute lung trouble, complicated with an abscess, so that to mortal sense I was for several days down in the dark valley, and to make matters worse we were without servants. There was no one to care for me, so my husband telegraphed to a distant city for a sister who had been in Christian Science for many years, and she came as nurse and maid. With loving-kindness she worked under the instruction given by a faithful practitioner, and with their understanding of the power of Truth the disease was met and overcome in less than six weeks. The abscess broke at the end of two weeks, and at the beginning of the seventh week I was fully dressed and en route for Pasadena, California. I traveled without an attendant, for I realized that I had with me a physician who was adequate to meet every need, even divine Love.

Upon my arrival at Pasadena I was met at the train by my brother, who took me for a thirty-mile drive in his automobile before taking me to his home, and every pleasant day I enjoyed a long ride. In a stay of two months I was not obliged to lie down once during the day. I have proved that this blessed truth will heal all our diseases and restore us mentally and spiritually. It teaches us to love our neighbor as ourselves; and if we follow the teachings given in Science and Health, Love will meet our every need.

For over thirty years I had held the thought of bitter hatred toward certain parties who to mortal sense had done me what I considered a great wrong. This sense of hatred, however, had been overcome to such an extent that I invited them to our home; but on the evening when they were to arrive, fear of meeting them crept into my consciousness. Just then the *Monitor* came, and as I turned to the Home Forum page, the article that first met my gaze was "The Art of Forgiving," and after reading it I found that all my fear had been destroyed. I was able to meet these people with love, and no inharmony crept in to mar our evening's pleasure. For these and many other blessings which I have received through the understanding of Christian Science, I am indeed grateful to our dear Leader, whose teachings have shown me the way to overcome evil with good.

Florence Geraldine Shefler, Chicago, Ill.

✧

It is now something over five years since my attention was directed to Christian Science. The published testimonies have proved of great benefit to me, and to many whom I know. Like thousands of others who turn to Christian Science, I came for the physical healing, which I received wholly and completely. About twelve years ago I contracted what specialists pronounced an incurable organic disease. My physician told me I would have to use drugs for the rest of my life, but that a permanent cure was not within the range of possibility. This verdict weighed upon me to such an extent that at the end of two years I was a wreck physically and mentally.

I had heard through friends that Christian Science would heal cases like mine, but knowing more about the physical condition than the method of cure, I was not a little skeptical. I consented, however, to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and shortly afterward I found that certain symptoms with which I was familiar failed to present themselves. Even then I was reluctant to believe that I was actually cured, but subsequent events have removed every doubt and fear. I now rejoice in the best health it has ever been my good fortune to know, and sufficient time has elapsed without a return of the trouble to justify the statement that a cure effected through Christian Science can experience no relapse.

For the sake of those who perhaps have gone through a similar experience, or have been dissuaded from reading the text-book because of failure to arrive at what they assume to be a necessary and satisfactory understanding of it, it occurs to me to say that I was forced to the acknowledgment, after reading Science and Health, that I had not at first the faintest conception of what the author was trying to impart; but since studying this most remarkable book, I know that what I lacked was spiritual discernment. This has been acquired since my healing.

It will be noted that, as in the case of many others, my cure was effected without the aid of a practitioner, and simply by reading the text-book. Since that time Christian Science has been our only physician. Among other experiences was the birth of a baby, now three years old. We had determined to have nothing but Christian Science treatment, and the result of this positive attitude toward the truth fully justified us in this course. All through the entire experience

Digitized by Google

there was a total absence of any of the conditions that are supposed to attend this event, and some comprehension of the sense of harmony which prevailed may be gained by saying that the mother was about her duties the following day. We had thought that it would be necessary to have a physician, but matters so shaped themselves that this was found unnecessary.

We find that Christian Science helps us daily in our work and in our home life in the most practical and efficient way, and my endeavor will always be to prove that I am grateful in the fullest sense. My own life has been made brighter, happier, more healthful and helpful than it ever could have been without this knowledge of God, and we have been assured that the promises are fulfilled.

W. G. Finley, Ridgewood, N. J.

✧

After attending many of the beautiful Christian Science services in London and on the continent, likewise the Wednesday evening testimony meetings, from all of which I have derived much help and understanding, I feel it a privilege to send my own experience. It is now some five years since a great desire came over me to attend a Christian Science service. I may say that from my early childhood I had been seeking for the truth, never being satisfied with my religious belief and experience. I had studied the various "isms" for years, but gained little help therefrom.

On entering the Christian Science church, I was to mortal sense in a very bad state of health, and although I understood nothing of the teaching, I was much impressed with the simplicity of the service, and the earnest, happy-looking faces of the congregation. I had not gone more than a hundred yards away from the church before a great bodily change came over me, and suddenly I felt perfectly well. This wonderful healing caused me to procure a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and on reading its pages I found what I had been seeking for years,—an understanding of man's relation to God. It also made clear many things in my own religion. The questions that had always puzzled me were answered.

I indeed found Science and Health to be the key to the Scriptures for which I had long sought. It explained the Bible to me spiritually, and answered the questions which had puzzled me even as a child. To say that I am grateful to God for this wonderful truth, and thankful to the one who has given it to the world, is to put it poorly. My great hope is that I may so progress in its understanding as to help others, and thus sow the good seed wherever I go.

Alice May Wittenberg, London, England.

✧ ✧ ✧

The little cares that fretted me,
I lost them yesterday
Among the fields above the sea,
Among the winds at play,
Among the lowing of the herds,
The rustling of the trees,
Among the singing of the birds,
The humming of the bees;
The foolish fears of what might come,
I cast them all away
Among the clover-scented grass,
Among the new-mown hay,
Among the hushing of the corn
Where drowsy poppies nod,
Where ill thoughts die and good are born,
Out in the fields with God.

Anon.

From Our Exchanges

[Rev. Cavendish Moxon, B.A., in *The Christian Commonwealth*]

The churches are being transplanted into a new world of thought, and once more what is old and ready to perish must die in order that the church may live and serve as an organ for the Spirit in the coming age. But why should we doubt the power of the Spirit to readjust and reembody the Christianity of the past? And if we have this faith in the supremacy of the Spirit of truth, shall we not hear His voice in the world-wide, modern, and liberating movement in all the churches? Shall we not pray above all that the churches may not expel the only power that can preserve their life and fashion a body that will be a truer and fuller expression of the Spirit of Christ?

[*The Christian Advocate*]

It is the marvel of Hebrew literature that it so nearly approached the Christian conception of a redeemed world. While the Jewish prophets, as we now understand better than did our forefathers, were in many instances political reformers whose activity seemed to be centered upon national problems interpreted in the light of the moral law, nevertheless they were always lifting their eyes from the page of current history to see afar off the day of Israel's spiritual redemption. Though the symbols and figures which they employed were frequently physical and material, it is impossible to escape the impression that they read into these rhetorical images a much profounder meaning than their contemporaries were inclined to attach to them.

O Christian reader, bear in mind that the hope of Israel is not yet fulfilled. The spirit of the prophets must abide in the leaders of this generation. It is true that the Messianic Prince has come, but it is not true that his mission has been completed. The world has indeed swung into a brighter zone of light, and society has been imbued with loftier aspirations, in consequence of the Christian gospel; but from the vantage ground we occupy, the distance yet to be traversed before the ideals of Christ shall have been realized, must appear almost as great as that which stretched from the earliest dream of the ancient Hebrew to the hour of Christ's arrival on this planet.

[*The Universalist Leader*]

Whenever the kingdom of God shall have come on earth, "as it is in heaven," one thing at least will be true. The broad conditions under which men live will express in some way those elemental conditions of righteousness which run deep in the human soul. There are those who are working hard to patch up old evils so that they may float a little longer. There are others who shudder whenever the great institutions of society are put upon the rack and are cross-examined by the moral judgment of humanity. There are those for whom the case is closed, so far as primary human institutions are concerned. They accept as final our present state of family, political, and industrial life. This wage system, which is a thing of yesterday in history, is to them the last and perfect expression of doing the work of the world. The church is a finality to them, as it now exists. They do not even allow themselves to think, backward or forward, beyond the boundaries of the world in which they live. That these human institutions may be only stages in the evolution of a divine society has never entered their calculations. They are shocked and tormented whenever some iconoclastic rebel shouts that the whole business ought to be revolutionized.

Digitized by Google

And yet, in the face of all this timidity, and without leaning too far toward iconoclasm, there is a growing suspicion in the minds of many that things are somewhat out of joint, and some of them must be radically mended or completely ended if we are ever to see the day of the Lord. It is unthinkable that the new world should come and righteousness reign and peace dawn, so long as the interests of large groups of men are so far apart that they look upon one another as natural enemies.

[*The Christian Work and Evangelist*]

If it is unchristian for me to let my neighbor starve, it is wrong to have industry on such a basis that many must continually be on the verge of starvation. Oppression, injustice, exploitation, indifference, are just as wicked for society to practise as for an individual. Governments must not indulge in revenge any more than Christians. One standard of ethics in the kingdom of God, as the basis of the civilization to be wrought out in the twentieth century, is the impulse to much of this wide-spread awakening to social service. The growing sense of the brotherhood of man, and the consciousness of obligation to all classes which follow it, is also a factor in the movement. Two thousand years of Christianity have also at last some fruit in a new sense of justice and a larger pity.

All this is splendid. It makes us all rejoice. It portends the hastening of the kingdom of good will, with love as its law, which lay on the heart of Jesus. It means the removal of much pain and suffering from the masses of the world,—and who that knows how little children suffer, will not rejoice? It also takes away the occasion of the scoffer who says religion has not been practical nor justified itself by deeds, and has no doubt won many indifferent ones to the church.

[*The Watchman-Examiner*]

Love is the purifier of the heart, and removes the dross of selfishness, pride, ambition, and all those secret and hidden characteristics that make religious hypocrites. Love in the heart is alone well pleasing to God, and those who love as He loves are worthy of His fellowship. Love to God and man introduces one into immediate and intimate relation with God, and removes all fears in their base influence and deeds of righteousness for merit. Love alone can produce holiness of heart, purity of life, ardor of service, sincere and self-sacrificing devotion to the salvation of men. Love alone can bring to God those fruits in heart and life and service which are acceptable to Him. Love is the last test applied to the soul in eternal judgment of deeds done in the name of Christ, and love is the completion of Christian perfection; for if faith begins the Christian experience, love gives the finishing touches. Love far surpasses fear as a motive in its purity, in its sincerity, in its self-devotion, in its boundless service, in its effect on character, life, and accumulative results in time and eternity.

[Rev. Charles G. Ames in *The Christian Register*]

As we go on living, and living simply and truly, the solution of most of our perplexing questions comes unsought. Fulness of life—the life more abundant of which Jesus speaks and which the Christ-spirit brings in growing measure—will carry us over difficulties as wings carry the birds above all obstructions. The soul requires for its health and vigor something more than knowledge: it must have loving interests and inspirations. We are happily finding how large and richly various are the supplies that match our demands.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is to be issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75. This book is now ready for delivery.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

The more recent translations into Dutch, German, Norwegian, and Swedish pamphlets are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $1.00; two to eleven copies inclusive (cloth only), each $[illegible]; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10x7, and Addendum, single copy $3.00; six or more copies, each $2.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-Laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science, its fundamental ideas and growth. Library edition, cloth, 95 pages, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.50; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1895. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. Exception is made [illegible] to the exception to this rule which is made in the case of Science and Health, and of Miscellaneous Writings, as given under these titles in the above list.

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, } Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

NATIONAL.

On a rough estimate, a newspaper with an average circulation of sixty thousand copies and an average edition of twenty pages, uses each day the product of about four acres of spruce forest. When this figure is multiplied by the great number of newspapers published in the United States, many of them with much larger editions, and when this is further multiplied by three hundred and sixty-five, because many papers are issued every day of the year, it can be seen that the drain upon the forests is enormous. In the national forests there are many woods considered inferior by lumbermen. The forest service, in its desire to utilize to the best advantage all of the resources of the federal timber holdings, has been seeking proper uses for these trees, and has experimented in making pulp from them at its pulp laboratory at Wausau, Wis., an auxiliary of the forest products laboratory at Madison. The paper from the new woods must fulfil many conditions as to color, finish, and strength. In these trial runs most of the paper is made from various western firs, which show considerable promise.

Reorganization of the department of agriculture by 1916 is proposed in the agricultural appropriation bill just made public. Abolition of many bureaus and consolidations is planned. The bill authorizes an appropriation of eighteen million nine hundred thousand dollars for the department next year, and despite opposition from Secretary Houston, money is provided for free seed distribution. Leasing of forest reserve land for hotels, stores, and summer residences is a new feature.

Navigation of the waters of the Warrior and Tombigbee rivers from the bay of Mobile to the iron and coal fields in the mountains of northern Alabama has just been made possible after fifteen years of work and an expenditure of nine million dollars by the government. A large fleet is planned, and when all are in service it is promised that a boat will leave New Orleans or the coal fields every six hours.

Two more suits under the Sherman antitrust law, begun within the last year, may be settled out of court by Attorney-General McReynolds. Representatives of both the American Can Company and the Corn Products Refining Company, have appeared at the department of justice, and have begun negotiations which may lead to agreements without further legal proceedings.

A bequest of three million dollars has been left by will for the establishment and maintenance of an industrial school in Minneapolis, Minn. The donor, a prominent miller, had observed the tendency of graduates to seek the office end when entering the milling business, and he felt that this practise threatened the future of the industry as a whole.

Eleven members of the so-called poultry trust, all of them wealthy, began last week to serve sentences of three months in jail for violation of the New York state antimonopoly law. The court of appeals has granted a certificate of reasonable doubt in these cases, and they may be released on bail for thirty days, pending a final decision by the court of appeals.

Strengthening of the work of the public schools to make them more practical and effective will be the chief aim of the Boston school officials during the coming year. This is to be accomplished through the adoption of definite minimum standards for the pupils, individual training in essential subjects, and a simpler and more definite course.

The offer by the New York Chamber of Commerce of seven hundred thousand dollars to build and equip a college of commerce and administration has been presented to the board of estimate. The board is asked to approve a bill to be sent to the legislature as an enabling act.

Preservation of Niagara Falls so that the waters may not be diverted for industrial purposes was a prominent topic of discussion before the American Society of Landscape Architects at its annual meeting in Boston last week.

A bill is before the Massachusetts Legislature to transfer the censorship of motion-picture films from local authorities to the department of the state police.

Morton F. Plant, who has maintained a three-thousand acre game preserve near East Lyme, Conn., has offered it to the state fish and game commission and it has been accepted.

Aliens to the number of 1,197,892 entered the United States in the last fiscal year.

INTERNATIONAL.

The Great Eastern Railway Company of England has decided to enlist an American executive officer in order to bring its system thoroughly up to date. The directorate announced the appointment of Henry W. Thornton, general superintendent of the Long Island railroad, as general manager. The chairman remarked that the company had been obliged to go to the United States for a new general manager, as at the present time there is a great dearth in the British Isles of proficient men for the more prominent positions on railways. He also said that he thought there was something paltry in the British system which tended to interfere with the mental activity of employees, who were reduced to automata, as merit was sacrificed to seniority.

A successful experiment of exploding torpedoes from a long distance, by means of the ultra-violet rays discovered by Giulio Ulivi, was carried out at Florence, Italy, last week. Signor Ulivi having handed over his secret to the Italian government, preparations were made for an experiment. Admiral Pietro Fornari placed in the river Arno two torpedoes charged with smokeless gunpowder and two others with black gunpowder. The ultra-violet ray apparatus was posted on the tower of the Palazzo Capponi, about two miles away, where Signor Ulivi waited the signal from the naval officers in charge of the experiment. When the signal was given the apparatus was put into operation, and in less than three minutes all four torpedoes exploded.

Railway construction in Canada during the past year shows that a total of 3,086 miles of single track has been laid, while actual construction work has been carried on upon at least 8,000 miles of additional right of way. The Canadian Northern laid 1,275 miles of track, the Canadian Pacific 764 miles, and the Grand Trunk Pacific and National Transcontinental, which together extend from Moncton on the Atlantic coast to Prince Rupert on the Pacific coast, laid 570 miles.

The announcement has been made that the King and Queen of England will make a visit to France, in return for that paid by the President of the Republic in June of last year. This will probably take place before the French elections in May.

The first all-Russian congress on the education of the people to be held in St. Petersburg was opened recently, many thousands of teachers from all parts of Russia taking part.

British interests have more than two billion dollars invested in Argentine railways and public works.

INDUSTRIAL AND COMMERCIAL.

In Mexico in 1912, the output of silver, which is said to take first rank in the world, was 76,500,000 fine ounces. The copper production, which was 158,691,695 pounds, ranks second, and is preceded only by the United States. The output of gold, amounting to 22,500,000 fine ounces, takes fifth place, and is preceded by the Transvaal, the United States, Australasia, and Russia. The precious metal mines are scattered widely through the whole country, and are often small and isolated.

Recent tests by the Pennsylvania railroad of a highly improved brake system showed it is possible to stop a train of twelve steel passenger cars and a locomotive, all weighing nearly one thousand tons, within one thousand feet, or the length of the train, when running at a speed of sixty miles an hour. With an emergency application of the high-speed brakes in general use, the same train could be stopped in a distance of sixteen or eighteen hundred feet.

Exports of meats from the Argentine Republic to the United States increased during the past week, shipments amounting to twenty thousand quarters of frozen and chilled beef, three thousand carcasses of mutton, and eight thousand carcasses of lamb. During the week previous, only ten thousand quarters of frozen and chilled beef were exported.

The annual summary of the world's shipbuilding for 1913 was issued lately by Lloyd's Register of Shipping. During the year 1,930 vessels, including warships, totaling 4,009,791 tons, were completed in the shipyards of the different countries, and of this total Great Britain built 737 vessels, with a tonnage of 2,203,529 tons.

"What I say unto you, I say unto all--WATCH" Jesus

Vol. XVI February 28, 1914 No. 26

As a Man Thinketh

SAMUEL GREENWOOD

To one accustomed to view existence from a purely material standpoint, it may seem that Christian Science lays undue emphasis upon what one thinks; but when it is remembered that nothing can enter human experience except through some medium of thought, this objection should vanish. We have not been educated to find the connection, or even to look for it, between our thought-processes and our moral or physical conditions; but that the connection is there is as certain as that mathematical figures do not adjust themselves of their own accord. Mrs. Eddy clearly understood this, and taught Christian Scientists to look into the so-called human mind, instead of into matter, for the cause of disease and discord, and to the divine Mind, or a divine mode of thinking, for their cure. Throughout the Christian Science textbook, "Science and Health with Key to the Scriptures," she urges mortals to improve their thoughts. She writes: "Stand porter at the door of thought. . . . Exclude from mortal mind the offending errors; then the body cannot suffer from them." Again, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (pp. 392, 261).

The supposition that man is governed by material conditions, irrespective of his mental state, would leave Mind out of the universe and make man the victim of chance. The theory that life is a series of adventures and misadventures is but the attempt on the part of mortals to shirk the responsibility for their wrong thinking. The fact that nothing happens without an antecedent, shows how important it is that the thought which precedes action or experience shall be good and worthy. St. Paul evidently had this in view when he counseled the Philippians to think of good, pure, and virtuous things; and to have the same Mind "which was also in Christ Jesus." The apostle's injunction naturally means that we should be found having the same things in mind that Jesus had, or, in other words, should think the same things. The logical inference from New Testament teaching would seem to be, that the distinguishing mark of Christians lies in their having this Christ-mind; and in the degree that they have this Mind they will manifest the Christ-life and the Christ-power. Every person can picture to himself the effect upon his life and conduct of always having the same things in mind that Jesus had, the same thought regarding God and man; and the background of this mental picture is the fact that the capacity to think good thoughts is always present with him.

It is plain that one who continually contemplates unholy things is unequal to living a pure life until his state of thought improves; and he whose thoughts are filled with fear cannot be truly happy. There is always a mental avenue through which sin and disease enter consciousness, and the first step in working out one's salvation is to close these avenues with opposite thoughts. The fact that disease or sin or any error cannot enter through a good thought, should awaken us to the wisdom and the advantage of never thinking evil. Sin could not possibly enter consciousness through thoughts of goodness, or hatred through thoughts of love, nor could any other error enter except through love of evil or fear of it. Good thoughts open the door to good experiences, and this confirms the teaching of Christian Science that right thinking is the only means of salvation.

To hold evil in thought is to have the mind which was not in Christ Jesus, the "carnal mind," full of iniquity and all uncleanness, which outlines itself in whatever opposes the kingdom of heaven in man. One's experience cannot remain permanently higher than his mental state. What one is in the secret of his own thoughts is the only foundation upon which he can build, either for time or eternity. Truth is not deceived by professions or outward appearances, but weighs the thoughts of men. It is written, "There is nothing covered, that shall not be revealed; neither hid, that shall not be known." Are we ready to face this uncovering of our secret thoughts? Would we continue to think unlovingly or impurely if our inmost thoughts were to be laid bare? What but self-indulgence, blind to its doom, would lead us to think after a manner we would be ashamed to have known? What but moral indolence would allow that which is ungodlike and unworthy to engage our attention, while the things that are lovely and "of good report" are waiting to bring their blessings into our consciousness? We alone are the guardians of our thoughts, and it is within our power to keep them from defilement, whether we acknowledge it or not.

On page 242 of Science and Health Mrs. Eddy points out that the only way to heaven lies in having "no other consciousness . . . than good." The brief Scriptural account of our Master's life and works would indicate that he possessed this consciousness, and that his power to do good was the outcome of that fact. Had his attention been occupied with evil or sensuous thoughts, he could not have understood God and His allness sufficiently to have destroyed the belief in death, and thus become the Wayshower for mankind out of mortality and its ills. Evidently the only way to follow his example is to have the same Mind, to care for the same things; then we shall begin to do the same things.

The most exalted example of the influence of divine thinking upon humanity is found in the history of Christ Jesus, so that the highest mental model which St. Paul could hold up to the Philippians, and to all Christians, was the Mind which the Master manifested. There is no material Christianity. Matter has no intelligence with which to worship God or to understand and follow the Christ. Only in the realm of spiritual consciousness can we be his disciples, and we begin by casting out or ceasing to think unworthy thoughts. It is only as we rise to higher mental planes, and as God rules in all our thoughts, that we can overcome sin and its effects, lay off mortality, and fully realize man's divine origin. Unless our Christian discipleship is leading us to think divinely, it is not leading us toward the goal of Christianity as Jesus taught it.

Even human wisdom teaches that if one would follow a prescribed course, his thought must apprehend and indicate the way. To avoid dangerous places, or the wrong road, the right road must be kept in view, as the experience of every

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

cyclist or motorist will testify. If we would likewise avoid the snares and pitfalls of a false and evil sense, we must keep thought fixed upon God and the truth of His allness; that is, we must be found minding only the good and the true and having these things in mind. It is certain that if mortal man, with his sins and frailties, is our model, we shall not see the perfect man as Jesus saw him, or have the spiritual discernment by which he healed the sick. (See Science and Health, p. 477.) This applies to all the phases of one's problem. Only as we keep our attention on the truth can we know how to detect and correct error. We always see what we are looking at, and what we look at most, becomes our model. We cannot bring out a sense of abundance while thought fills itself with a belief of lack, nor can we establish the consciousness of peace while our thought is rent with strife and enmity. If we would have plenty, we must look to the divine source of supply, not to the human demand; for when we look to God we see that our supply is boundless, but while we look at the sense of need we see nothing but lack.

Human belief, ignorant of mental causation, and not discerning the human capacity to understand and reflect divine Mind, would surround one's endeavor with doubt and discouragement; but Christian Science, revealing man's true relation to God as His idea or expression, has opened to all mankind the way to think and act rightly. It is cause for rejoicing that we are not compelled to follow the beaten track of the ages' erroneous thinking, nor to be held in the stocks of wrong education, but that, guided by Christian Science, we can "form perfect models in thought and look at them continually" (Science and Health, p. 248); and we know, because we have proved it, that always the result will be in proportion to our earnestness and fidelity.

✧

Let Your Light Shine

HUGH P. SMITH

EVERY student of Christian Science should constantly bear in mind the admonition given by our Master when he said, "Let your light so shine before men, that they may see your good works," for it is impossible to calculate the immense amount of good that is wrought by the example of one who earnestly strives to live in the knowledge and love of God, of good. Unknown to the individual the example of his life may be shedding a ray of light upon the path of one who is blindly groping his way in darkness, suffering, and doubt, who does not know the power of good and the nothingness and unreality of evil, but to whom, on the contrary, evil has appeared very real and more powerful than good. To such a one, the example of the daily life of a Christian Scientist will come as a message of hope, like a beacon light to a storm-tossed mariner. He will wonder why Christian Scientists are so happy, so full of love for all mankind, so willing to hold out a helping hand to those who like himself are being tossed about by the tempestuous waves of material doubt and fear; he will wonder why love is showered upon him where formerly he was an outcast, unsought, uncared for, and despised by his fellow men. He sees the light shining in the darkness, and it leads him out of the wilderness of sin in which he has so long been groping, into the light and security of Truth, Life, and Love. Then he ceases to wonder, for he has learned that God is Love and man is His image and likeness, that as such he can reflect only Love, and that in the light of this understanding there can be no fear, sorrow, or pain.

The writer has very great cause to be grateful to Christian Science. Before he first heard of it, he was dwelling in the depths of misery, and to all appearance there was no hope of his ever becoming free from the chains of sin which had tied him down for many years. There was no happiness in life, and his only conception of God was of a being to be dreaded, who sent all the misery and sickness which was met with on every side as a punishment and for the good of mankind. It was not until he became acquainted with some Christian Scientists that he began to realize that the God he had feared was a God of love. It was the example set by the lives of these people, which first made him stop for a minute in his downward course. He watched them and listened to their conversation, and he there found a peace which he had never known before. Sin and disease were treated as unrealities, as having no power or presence, since God is All. He learned that these evils were not sent from God, as he had supposed, but were the outcome of mortal sinful thoughts and beliefs. He found that love for one's fellow men took the place of the constant malice to which he had been accustomed, the unkind and uncharitable words about others were conspicuous by their absence, and peace and harmony reigned in the place of strife and discord. Is it to be wondered at that a better understanding of the religion which could bring about such results was earnestly desired? Now, God no longer appears to him as a dread and fearful personality, but has been proved to be omnipotent Love, the Father-Mother God whose arms are always outstretched in loving protection over all who put their trust in Him alone.

What Christian Science has done in this one instance, it is doing every day. It is sowing its seeds of truth and love in many troubled hearts in all lands, and every student of Christian Science, no matter what his position may be, can do his share in this glorious work. To the outward sense one may not seem able to do very much, but if by an example of never-failing kindness, unselfishness, and purity, he can give a "cup of cold water" to the thirsty, he will have added to the number of those who, having seen the good works of Christian Scientists, glorify God and give thanks for the inestimable benefits which they have received. As one of our hymns so beautifully phrases it,—

So let our lips and lives express
The holy gospel we profess;
So let our works and virtues shine,
To prove the doctrine all divine.

✧

Opposition Conquered

M. G. KAINS

THE tendency to oppose any new idea is one of the most striking peculiarities or vagaries of the human mind. It is almost always observed whenever any new line of thought or effort is presented, or when some work is to be done which is not strictly in accordance with the established order. For instance, should a person who is familiar only with English, desire to learn French or German, the human mind would be characteristically and instinctively opposed to such a departure from the usual order, and would resist continuously, even after a fair working knowledge of the language had been acquired by the application of a stronger desire or determination. The acquisition of knowledge under such circumstances is neither more nor less than one force quelling another. It succeeds in the very face of opposition, because the attack continues until the original resistance can no longer defend or maintain itself effectively.

If we were to view the illustration from a different standpoint, or rather if we were to replace the factor of age by that of youth, we would see a very different state of affairs. The child, not yet set in the grooves of habit, at least not to the same degree as the adult, would easily acquire a knowledge of French or German, or even of several languages, at

Digitized by Google

the same time that he was acquiring a knowledge of English. He would accomplish this, too, with no more apparent effort, provided he was associating with those who made constant use of the foreign tongue or tongues, and who likewise required the child to converse in these languages, and also provided they did not instil opposition in the child's mind by means of ridicule or otherwise.

The same kind of opposition characterizes the acquisition of a working knowledge of Christian Science. Very many adults are instinctively opposed to its teaching, mainly because their habits of thought have become fixed to a greater or less extent, and they are therefore less receptive than children. In addition to the novelty of the new ideas, which because of their mere newness must meet the challenge of the mind to which they are presented, there must also be met and overcome the opposition of the prejudices, perhaps entrenched behind many years of creedal acceptances and reenforced by a personal sense of stubbornness; for, as Moore has said,—

Faith, fanatic Faith, once wedded fast
To some dear falsehood, hugs it to the last.

Strange as it may seem, it is nevertheless characteristic of the human mind to cling unreasoningly to what it has, to accept only such new ideas as harmonize with its mental possessions, whether these be false or true, and to oppose all others. The reader may object to the word "unreasoningly," because he may think that the human mind does weigh new ideas before accepting or rejecting them. But unless this mind has been subdued by Truth sufficiently to make it teachable, it will do all this so-called weighing with the biased scales of opposition and the false weights of prejudice. Especially is this the case with the one who seeks pleasure in any other than a spiritual direction. He is so afraid that he will lose his sense of pleasure. that he closes his mental ears to the voice of Truth, and thus unwittingly deprives himself of the truest of all pleasures. How shall he be reached? Mrs. Eddy replies: "Through human consciousness, convince the mortal of his mistake in seeking material means for gaining happiness. Reason is the most active human faculty. Let that inform the sentiments and awaken the man's dormant sense of moral obligation, and by degrees he will learn the nothingness of the pleasures of human sense and the grandeur and bliss of a spiritual sense, which silences the material or corporeal" (Science and Health, p. 327).

Opposition in the realm of human experience, hinted in the opening paragraph of this article, always implies the exercise of will-power, whether it be for or against the acquisition and utilization of a new idea. To be sure, there are all grades of this so-called will-power, from the base to the sublime. Will-power, therefore, is not of itself the director, but the servant of that stronger force called the intellect, the human mind or reason, because it can be guided to do either good or ill. How then shall it be guided away from the wrong paths it has perhaps hitherto pursued, and into those of rectitude? By appealing to reason; for, as Mrs. Eddy declares, "reason, rightly directed, serves to correct the errors of corporeal sense" (Science and Health, p. 494).

It must not be expected, however, that opposition will always cease with the first instruction. On the contrary, it will continue in some form or other until every lesson is learned and the law of God is understood and obeyed in its entirety. Until this stage of development is reached, it will be necessary to use the reasoning faculties, as well as the dawning spiritual sense, "in casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ."

When so directed, the earnest seeker after Truth will little by little overcome the opposition of the mortal or carnal mind declared by St. Paul to be "enmity against God," and in due course of time will become the ready servant of the God-governed conscience, always ready, calmly, steadfastly, and surely, to put down the opposition of the carnal mind and to work for the establishment of that spiritually-minded condition which the apostle characterized as "life and peace."

Concerning Habits

EVELYN L. WEBB

If we analyze our mode of living, we will find that our sense of existence is made up largely of habits, some good and some bad. No habit of course is good which has not grown out of our conformity to the law of Truth. Mrs. Eddy tells us that "Truth not error, Love not hate, Spirit not matter, governs man" (Science and Health, p. 420); hence, he who is approaching spiritual manhood is governed more and more by divine intelligence and less and less by unintelligent habit.

A curious incident which came under my notice lately, goes to prove what a large part mere habit has in the animal nature and how absolutely unreasonable it is. My brother usually takes his dogs with him every day to his place of business, where they are housed in a big box until it is time to start for home again. On one occasion, when they had got themselves into a very wet and muddy condition on the way to the office, he tried to change them from their accustomed place to another near-by, where there was a supply of straw. These dogs are setters and trained to absolute obedience; they are also good-tempered and devoted to their master, but from their puppyhood they had been in the habit of going to that particular box, and they absolutely refused to change to another. Both kindness and force were used in the effort to move them, but to no purpose; when my brother undertook to compel them, they showed fight, and would have attacked him rather than give up their habit. Thus we see something of the domination of habit in the animal kingdom, and we do well to inquire how largely it governs us.

In Christian Science we learn that our sense of intelligence and of right should govern our habits, rather than allow them to govern us. Then we should always be ready to give an intelligent answer as to why we do so and so, rather than to say, "Oh, that is my habit!" We have all had experience in different ways as to the effect of a new idea, when proposed to a community of people by one who, from an outside point of view, sees clearly how a change of method would be for the advantage of every one concerned. To our surprise we have often found that the proposal was opposed by the greater part of those whom it would benefit. Perhaps we tried to show them how reasonable and logical the proposition was, but, whether we knew it or not, the trouble was that we were at war not with reason but with habit,—possibly the outgrowth of a long past course of action which may have been wise at the time and has been accepted as right ever since, without question as to its need or propriety. Seeing so clearly ourselves that what is recommended is an improvement on the old method, that if adopted it would be for the betterment of the situation, and feeling too that we are not opposed by reason, we may try to force the issue. In such a case we are using one animal force to oppose another, and are likely to meet with resentment not unlike that exhibited by the dogs in our illustration.

Let us watch carefully that we be not among those who blindly resist what may be for our advantage, or those who try to thrust a new idea, however good it may be, upon such

Digitized by Google

as are not prepared to receive it. When we find ourselves strongly opposed to some measure that has been offered for our acceptance, it is a good rule, before voicing our opposition, quietly to know for ourselves that no unintelligent habit of thought has any right or power to control us or warp our judgment. So doing, we will be in a better position to give an unbiased opinion. When in church work or other associations we have a proposal to make which if accepted would entail the doing away with some method or course that has become a habit, it is well, after we have done our best to realize God's guidance and that He never leads into temptation, to know that if our proposition is not best, not of God, it cannot stand; and if it is of God, or is bringing us nearer the divine ideal, that no non-intelligent belief of habit has power to withstand it. Then, if we can present our plan with a thought humble enough to be willing to receive as well as to give, we shall find God's children able to "reason together." Though the plan may not be accepted at once, we may be sure that in time it will work its way through the bonds of habit and be manifested, perhaps in an even better form than we had given the idea when it was first voiced, always provided that the proposed change is wise, and we leave it without attempting to force it upon others, knowing that God prospers all right desires.

A habit quite prevalent among many good people is that of going to church. Let us go to church by all means, both to the Sunday and the Wednesday evening services, the whole year round, but let us not go simply from force of habit; let our reason for going be more intelligent and more worthy than that. In this we shall do well to remember the true significance of "church" as given us in our text-book, and to express this nobler sense to the "weary wanderers, athirst in the desert" (Science and Health, p. 570), who have come into our church home for crumbs of comfort. We cannot afford to neglect to turn the search-light of reason upon every habit we have acquired, for thus only will we "be ready always to give an answer to every man that asketh" for the "reason of the hope" that is in us.

✧

Transition

M. A. FELTON

In searching the field of human experience to find helpful illustrations for the new-found truths of Christian Science, one may turn to mathematics and discover therein apt comparisons in the statement of general laws. It is a habit of the average man to attempt to attach a new truth to a well-known fact, and in that way become acquainted with it quickly and surely. Recognizing this to be the case, Jesus, the master Metaphysician, always made use of parables, figures and facts of familiar scenes and incidents, in the effort to awaken an understanding of the spiritual truths he sought to teach.

The relative value or significance of the human concept of man, over against the thought of man as a divine idea, greatly puzzled the writer until he perceived a comparison in the so-called "theory of limits" in mathematics, which altogether harmonizes with Mrs. Eddy's explanation of the development of the human concept as given on page 115 in Science and Health. This so cleared certain points for him, that he feels impelled to give a brief statement of them, in the hope that some one else may gain a little more of the light of truth therefrom.

The "theory of limits" has to do with two kinds of quantities, the "variable," whose value is continually changing, and the "constant," whose value always remains the same. A variable may change in a given direction; that is, its value may continually increase or it may continually decrease. In either case, the constant is the point of value toward which the variable is approaching, and it is called the "limit" of the variable. If the variable is increasing in value, the constant is said to be its "superior limit." Now a variable can never quite reach its limit, but of necessity must always be separated from it by a decreasing variable whose limit is zero; for it is plain that the variable can be a variable only so long as it is changing in value. If its value could reach that of its limit, or in other words could assume the value of a constant, then its variableness would have vanished entirely, and the only value remaining would be that of the constant, which is already there, and always has been.

Now it is immediately perceived that in Christian Science the divine idea is the constant, that it is subject to divine Principle, and by that Principle held unchangeable forever. On the other hand, the human concept is the variable; being mortal in part, it is not subject to immutable law, and is therefore ever changing. By the application of spiritual truth, however, its value increases, it becomes better, and approaches the divine idea, which is its "superior limit." In Mrs. Eddy's statement of the "Scientific Translation of Mortal Mind," above referred to, she has explained this advance of human sense and the degrees through which it passes in its increase in value.

This variable, the human concept, may approach indefinitely near to its limit, the divine idea, but it can never quite reach it, for as it becomes less and less material or more and more spiritual, it finally approaches so near the true consciousness of being that it has reached the border line, spirituality. (See Science and Health, p. 116.) Human sense cannot, however, like Moses of old, enter the promised land; it can see it, but can never enter. When consciousness has entered the promised land of spiritual being, the human concept of man has forever vanished, and behold instead the divine idea which has already appeared.

This point of transition in consciousness from the imperfect, variable human concept to the divine idea, is illustrated by the translation of Enoch and Elijah and the ascension of Jesus, experiences which support Mrs. Eddy's entire teaching as given in Science and Health, especially "the scientific statement of being" (p. 468), that "Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual."

[Written for the *Sentinel*]

Eventide

LAURA E. SARGENT

The fading glow of roseate light
Still lingers in the distant west;
It touches gently haze-clad hills
And glimmers from their opaled crest.

A brooding hush comes softly down,
And homing birds now seek their nest,
While nature breathes her vesper song—
So full of quiet, peace, and rest.

O Love divine, we lift our prayer
In unison with nature's hymn,
And enter Thy most holy place,
Where glory crowns Thy cherubim;

Then face to face commune with Thee
Of things unseen, though just at hand;
Which here and now to us belong,
As we Thy word do understand.

Selected Articles

[Frederick Dixon in *Dulwich Post*, London, England].

In a recent issue, under the heading of "The Superman and the Human Race," a contributor insists that a subject like Christian Science "is of no use unless taken seriously in hand." Now it is sufficiently obvious that no serious subject can be safely approached from the standpoint of dilettanteism, and least of all can Christian Science. That is a mistake which the average critic makes. To a copious ignorance he adds a generous prejudice, and then, from the summit of the nearest intellectual hillock, opens the flood-gates of his invective like the sausage seller of Aristophanes. The abuse of the ignorant, says Anatole France, is something to rejoice over, and if there is any truth in the epigram, Christian Scientists should be rejoicing all along the road.

This, however, makes it all the more necessary that they should devote themselves whole-heartedly to the demonstration of the teaching they have accepted. "The Christian Scientist," Mrs. Eddy writes in Science and Health, "has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good" (p. 450). What it means to accomplish this she explains on page 3, where she writes, "But to understand God is the work of eternity, and demands absolute consecration of thought, energy, and desire." One of the essential differences between Christian Science and other religious teachings is the fact that it has accepted the demand of the Founder of Christianity that religion should be proved by demonstration rather than by profession. When the epistle of St. James declares that "faith without works is dead," it certainly alludes to this, and the writer can scarcely have had any other words in mind than those recorded in the fourth gospel, when Jesus declared, "He that believeth on me, the works that I do shall he do also." The faith, then, of the Christian, was to be proved by the works Jesus himself had done, and these works were very largely composed of physical healing. For this reason the necessity for healing disease has been peculiarly insisted upon by Mrs. Eddy. Not that the healing of disease itself is the be-all and end-all of Christianity, but because the healing of disease means the overcoming of mental inharmony, and so, indirectly, the destruction of sorrow, of want, and of sin.

When once the fact is grasped that sickness is mental, the corollary must dawn upon any man that every phase of inharmony is mental also. The way, then, to heal the sick is the way to heal the sinner, and a man is made physically whole in precisely the same ratio that he is made mentally holy. The simple fact is, that whole in its original sense is merely an archaic form of holy, and a man is made "every whit whole" exactly as the belief of sorrow, of sickness, or of sin, in fact, of everything unlike God, is obliterated from the human consciousness. It will be seen from this how absolutely true it is that if a man desires to progress in Christian Science he can do so only by approaching it in a most serious manner.

✧

[Willis D. McKinstry in *The Daily News*, Wellington, Kan.]

In his sermon as reported in a recent issue, our critic touches upon some vital questions of Christianity and says many good things which should hasten the awakening of human consciousness to the pitfalls of materialism and to a desire for a fuller knowledge of the Christ, Truth. We would not question the doctor's sincere desire to be a bringer of glad tidings of truth and love to mankind, yet it is to be regretted that such a messenger should indulge a spirit of religious intolerance and thereby forget the Scriptural injunction, "Speak not evil one of another, brethren." To denounce Christian Science signifies quite clearly that its teaching is misunderstood.

We agree with the doctor that faith is an essential element in one's spiritual growth, yet to progress into a fuller knowledge of the truth of being, faith must advance to understanding, that the problem of life may be demonstrated. There is a vast difference between a blind faith and the faith of understanding. One might have absolute faith in the infallibility of mathematics, but without an understanding of the principle and rule of numbers he could not solve the simplest problem in arithmetic; so, too, a mere faith in God is insufficient to enable mankind to solve the problem of life. The Galilean Teacher was able, not through faith only, but through his understanding of spiritual law, to prove the truth of his teaching by demonstration, and he said it is through a knowledge of God and the Christ that mankind enters into eternal life; hence it is clearly seen that the process of regeneration is purely mental, or spiritual. Paul recognized this fact, for in his letter to the Romans he said: "I beseech you therefore, brethren, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service. And be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God."

The doctor's statement, "Christian Science teaches there is nothing to see and nobody to see it," is most absurd, to say the least. Christian Science does not teach that man is a nonentity, without full possession of his faculties, nor the destruction or annihilation of even the least of God's ideas; but it declares, as do the Scriptures, that God is the one and only creator, that without Him was nothing made, and that His creation is as spiritual and eternal as its creator. Webster says, to see is "to perceive by mental vision; to form an idea or conception of; to note with the mind; to observe; discern; distinguish; understand; comprehend." Hence to have a true apprehension of the Scriptures they must be interpreted spiritually; in other words, mankind must see and understand their teaching from a spiritual view-point. In "Rudimental Divine Science" Mrs. Eddy defines Christian Science "as the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (p. 1). Man created in the image and likeness of God is a conscious being; he possesses the capacity or ability to think, to comprehend, to understand, and thereby to differentiate between the false material sense of existence and the spiritual facts of being.

[John W. Doorly in *Sheffield* (England) *Telegraph*]

A recent issue contains a letter signed by "A Psychical Student." This correspondent claims to be in possession of wonderful truths which are to help mankind, and yet he is too bashful to put his name to them. But what really interests me is his remark about Christian Science, which he describes as "wishy-washy." He has really done the Christian Science movement a very good turn, as for some years Christian Scientists have been persistently trying to make the public realize that there is nothing in common between Christian Science and spiritualism. Now your correspondent has helped us not a little in this matter.

Christian Science is a practical, demonstrable religion, which is teaching men the present availability of God, as a God at hand. It is taking the old truths of the Bible, which have so long been static, and revealing them as essentially dynamic. It makes no promises of some wonderful occurrence in the unknown future, but reveals to mankind the kingdom of

Digitized by Google

heaven, or law of God, at hand. On the other hand, "A Psychical Student" is hoping to convince his readers that spiritualism is going to reveal to mankind some wonderful way of redemption beyond "the dreams of scientists and theologians."

Unfortunately for "A Psychical Student," humanity is sick of these nameless promises, and is today demanding proof of all religious and scientific teaching. Christian Science, with its vast army of adherents who have been healed of some sickness or redeemed from sin, is its own answer to these critics.

✧

[Editorial in *The Tucson* (Ariz.) *Citizen*]

Before Christian Science was understood by the masses, those who followed the tenets of this new teaching were regarded as somewhat peculiar, and in some states they were even persecuted for following their system of healing; but today the world takes an entirely different view of this religion. The change in view-point has been brought about by the results which the general public have seen accomplished through Christian Science in the healing of both sickness and sin, and today those who believe in its teachings have the respect of those who do not. They themselves respect the beliefs of others. Christian Scientists are no longer regarded as fanatics. They obey the laws, and observe sanitary and quarantine regulations. In this state, their right to follow this particular system of healing has been recognized by statute, and they have been exempted from the medical laws.

Christian Scientists are not at war with the medical fraternity. They have no more use for the quack than has the licensed physician, and they believe that the man who wants a physician should get the best to be found, professionally and morally. Christian Science is primarily a religion; healing sickness is only a part of its tenets. The God of Christian Science is not afar off, but ever present, and Christian Science is an every-day religion. It emphasizes the good in life rather than the evil, which it looks upon as unreal. Today, those who do not agree with its teachings admit that its general purpose is to uplift humanity; that its followers are improved in mind and body through its influence, and carry it into their every-day lives.

✧

[M. I. Whitcroft in *Bristol* (England) *Times and Mirror*]

The review of Canon McClure's book in a recent issue, appears to be just another instance of the truth of that old saying, "Fools rush in where angels fear to tread." This is not meant in a personal sense, but it is expressive of that condition of thought which, failing to understand the great truths taught in Christian Science, rushes in a hasty and unreasonable manner to denounce its teachings. To say that "the author has completely exposed the idiotic nonsense with which the Reverend Mother's writings abound," is a little rash. Mrs. Eddy's writings are so widely known and read nowadays, in every quarter of the globe, by such a vast number of intelligent people, that the author is likely to find that the public will consider (if it reads his book) that it has merely exposed "the idiotic nonsense" (I quote from the review) of his own misconception of those writings. One would have thought that, if for no better reason, the utter failure of former attempts of "envy, hatred, and malice, and all uncharitableness" to overthrow Christian Science and vilify its Discoverer and Founder, would have been sufficient to deter any one from making similar futile efforts, especially as such attempts invariably defeat their own purpose, resulting instead in drawing many more thoughtful men and women to inquire into and adopt its teachings. Mrs. Eddy, by the way, is never known or spoken of as "the Reverend Mother" of the Christian Scientists by her adherents. May I suggest that it would be well if critics of Christian Science would accept our Lord's standard as the proof of Christianity, "By their fruits ye shall know them."

✧

[Frank Bell in *The Butler* (Pa.) *Eagle*]

There is abundant evidence that the speaker is mistaken in his opinion that Christian Science is a product of the devil. There is Scriptural and much other authority for the assertion that an evil tree does not produce good fruit, and the fruit of Christian Science is invariably good. We do not know which of the many varying descriptions of the devil is accepted as genuine by our friend, but we have yet to hear the devil described as habitually engaged in making men and women better, physically, mentally, morally, and otherwise. Unless there be a devil who causes his adherents to give up sinful thoughts and practises, to obey the golden rule, to come out of various physical distresses and disorders, to be clearer and cleaner thinkers, better workers, and more upright, honest, sober, and industrious citizens; unless there be a devil devoted to the promotion of all the Christian virtues,—then there is no devil who could have originated Christian Science; for, depend on it, nothing that produces, encourages, or tolerates evil in any form is Christian Science.

Only those undertake to condemn Christian Science who judge it from a mistaken sense of what it teaches, rather than from an unbiased observation of the good it has wrought in the lives of its adherents. That is why all the criticism which has been hurled at it for a generation has not interfered with its steady growth throughout the world.

✧

["Indignant" in *Wilkes-Barre* (Pa.) *Record*]

"A lecture on Christian Science, the first of a series on 'Modern Humbugs,'" was the startling thesis in huge letters that greeted the eye last week in front of one of our churches. This placarding reveals clearly that "on earth peace, good will toward men," does not long endure after the glad holiday season, and as a working ideal for a workaday world is not wholly successful. Indeed, this advertisement at the portals of a church whose basis is love, seems a proof of the failure of its great purpose, at least in so far as this particular branch of a great church is concerned. It signifies an intolerance as bigoted as that of the dark ages of religion, and implies that in this great world, where with seven primary colors the landscape is decked in varied beauty of myriads of shades, man, the paragon of creation, shall paint his aspirations after God in but one color.

To set ourselves up as watchmen of the night, empowered to distinguish between truth and error, seems in these days an arrogation of authority very disputable. The writer is not a Christian Scientist, but a lover of humanity who believes that truth, like beauty, dwells in the eye of the beholder.

✧

[John L. Rendall in *The Tribune*, Fairfield, Iowa]

The subject taken by the Rev. Mr. ——, as reported in a recent issue, "What Christian Science Does for the Bible," is a big one,—too big to be properly elucidated from a biased standpoint. Will you kindly permit me to cite from my experience some things I know that Christian Science has done for the Bible?

A Christian Science practitioner of this city was recently called to see a man who was sick. As is the custom, this practitioner cited God's promises of healing as given in the Bible. The family, however, had no Bible, so they sent to the home of the wife's parents for one, but found that they too

Digitized by Google

were without a copy. Both families immediately purchased Bibles. This illustrates what has happened in thousands of instances through Christian Science. In 1895 Mrs. Eddy ordained the Bible and "Science and Health with Key to the Scriptures" as the "Pastor" of the Christian Science church. The Bible has been given the principal place, therefore, in all Christian Science church services, and Christian Scientists are close students of it. They believe its teachings, and believing, practise them, even to the healing, which is a very plain teaching of the Bible. It is said that "the pastor treated the subject by the parallel method, quoting from the Bible and Science and Health." In plain words, this means that he took a passage from Science and Health and, regardless of its significance in relation to the context, arbitrarily disputed it with a Bible quotation carefully selected for that purpose, and likewise used regardless of its context. I can imagine nothing more unfair or misleading. Even two Bibles of the same edition can be made to dispute each other by this reprehensible method.

The abstract statements made by this critic that "Christian Science contradicts the Bible on the reality of matter, on the reality of sin, and on the reality of sickness and disease," leave too much that is unexplained as to what constitutes "reality." Science and Health clearly and logically explains that from the mortal view-point matter, sin, disease, etc., are relatively real, but that the only absolutely real is that which is eternal, that which belongs to the "kingdom of God." It is true that Christian Science "has never built a hospital." It is also true that Christian Science has saved hundreds of thousands of people from going to hospitals, and that the ultimate of its teachings will obviate any necessity for hospitals in the fulfilment of that glorious vision of St. John: "And there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." I can imagine our critic saying, "But that does not mean now." In which event I will respectfully ask, "If not, why not?"

The reverend gentleman states: "The Bible says that God made man from dust. Christian Science says that man did not originate from dust." Let us consider this. In the first chapter of Genesis we read, "So God created man in his own image, . . . male and female created he them." If God is dust, then man, His image and likeness, is also dust; but if God is Spirit, as Jesus stated, then man, His image and likeness, is spiritual. In the second chapter of Genesis there is introduced "the Lord God," a humanly circumscribed and materially outlined concept of God, and it is supposed that "the Lord God" found it necessary to make man of dust and woman of a rib, notwithstanding the fact that God had already created man in His own image and likeness. Now dust is not man, never was, and never will be. Dust is nothingness to nothingness, and that is all there is of any material concept.

In Science and Health (p. 476) we read: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick." If our critic will kindly explain how God can at the same time be one person and three persons, how He can be at the same time finite and infinite, and at the same time dust and Spirit, he will confer a great boon by removing the distressing and perplexing theological tangle of this age. Christian Science teaches that God is One, and this accords with the Scripture, "Hear, O Israel: The Lord our God is one Lord." It teaches that God is "Person" only as infinite personality and not in any anthropomorphic sense. Despite our critic's assertion to the contrary, it teaches that Christ Jesus is the Son of God.

The reverend gentleman also makes the statement, "The Bible teaches that the devil is a person. Christian Science does not." What he should say is, "According to the theory which I accept, the Bible teaches that the devil is a person." This theory, however, is antiquated, and has been relegated to the theological scrap-heap by up-to-date theologians, including some good brethren of practically all denominations. With reference to the judgment-day, Christian Science teaches, "The judgment-day of wisdom comes hourly and continually, even the judgment by which mortal man is divested of all material error" (Science and Health, p. 291). Furthermore the critic states, "Christian Science says that prayer to God for the sick has no effect." Christian Science emphatically does not say any such thing. What Science and Health states is as follows: "A mere request that God will heal the sick has no power to gain more of the divine presence than is always at hand" (p. 12). On page 11 we read, "Prayer cannot change the unalterable Truth, nor can prayer alone give us an understanding of Truth; but prayer, coupled with a fervent habitual desire to know and do the will of God, will bring us into all Truth." The views held by this gentleman in regard to the Christian Science attitude toward marriage will necessarily change when he acquaints himself with facts instead of theories. He will at the same time learn that only the highest possible ideals of morality are countenanced by Christian Scientists.

Our critic's opinion that "Christian Science is only a fad," which will be "relegated to obscurity by onmarching truth," is rather amusing to Christian Scientists, especially in view of the fact that one hundred and three new Christian Science churches were organized last year. In marked contrast to this opinion is that of an Episcopal clergyman, who in the December issue of *The North American Review*, stated: "If we study the relation of the church to its work of salvation, the need of the adoption of Christian Science becomes imperative. Our failure successfully to apply Christianity to existing conditions is preventing its function of regenerating the world."

✧

[From *Los Angeles* (Cal.) *News*]

Four services were not sufficient to accommodate all who wished to attend the formal opening of the new First Church of Christ, Scientist, Alvarado and Hoover streets, Sunday [Jan. 4]. There must be an extraordinary power in a movement that is not sensational, sentimental, sensuous, or striking in any of its doctrines or observances. It has survived the passing of its Founder, Mrs. Eddy, from earthly life and seems stronger than ever. Its devotees are apparently not only healthy, but thoroughly happy; they are close Bible students, yet read between the lines messages of modern philosophy and science. It seems to be simple, practical, and very helpful.

✧

[Editorial note in *The Watchman-Examiner*]

Christian Scientists at home are Christian Scientists abroad. When they go from city to city, state to state, and country to country, they are to be found the very next Sunday in the church of their own faith.

✧ ✧ ✧

Kind thoughts are flowers in hearts of men,
Whose perfume is the word soft-spoken,
And oh, how sweet their fragrance when
It gently greets the heart that's broken!

CHARLES C. SANDELIN.

Editorial

"Be watchful, sober, and vigilant"

A TABULATION of the diseases which Christ Jesus healed during the three years of his ministry, as recorded in the New Testament, shows them to have been as follows: palsy, paralysis, leprosy, deformity, blindness, fever, dropsy, hemorrhage, violent insanity, epilepsy. These are but the more notable and special instances, and we read that when the people brought to him those who were sick with "divers diseases," or "all manner of sickness," "he healed them all." It is worth noting, too, that some of these diseases are even to this day considered incurable by medical practise.

The recorded cases of healing by the immediate followers of our Master are summarized as follows: a man lame from birth, paralysis, lameness, fever, hemorrhage, insanity, the sting of a poisonous serpent; while the book of Acts records that "by the hands of the apostles were many signs and wonders wrought." It is also well known that for the first three centuries Christian healing was as much a part of Christianity as was the preaching of the gospel. After these early centuries, however, Christians lapsed into the common belief that some form of medical treatment was necessary in order to heal the sick, and this belief continued, with rare exceptions, until Mrs. Eddy discovered Christian Science in the latter half of the nineteenth century.

In the years since this discovery was first promulgated to the world through the publication of Science and Health, the Christian Science text-book, in 1875, hundreds of thousands of cases of healing without medicine or surgery have been reported, and over ten thousand of these have been published over the names of the persons healed. These cases include not only so-called incurable diseases, but also supposedly curable diseases which had advanced to the hopeless stage where certain death was predicted. Not only is there this volume of printed testimony, but every Wednesday evening, in The Mother Church and its more than fourteen hundred branch churches and societies, all over the civilized world, testimony is borne to the healing of all manner of physical discord. This even at a low average would mean that between four and five thousand spoken testimonies to the efficacy of Christian Science, either through treatment or the reading of the text-book, are offered to the public every week.

Notwithstanding all this, the belief of the majority of mankind is that medical treatment is necessary for the prevention and cure of disease, and it is this belief that is being worked upon and fostered by the doctors in their efforts to secure legislation which, if it should become effective, they hope will intrench them in their present dominance for many years longer than would otherwise be possible. It is, however, inevitable that this belief should change, and the rapidity with which it is changing is one of the most gratifying signs of the times. Christian Scientists can largely help along this change by the simple process of showing to the world the results of their daily living of Christian Science, and by supplanting the prevalent erroneous beliefs about Christian Science with the truth about it, which so many are eager to obtain. The means of making known the truth about Christian Science were very wisely established by our Leader, and they include the lectures, the periodicals, the work of the committees on publication, and the Sunday services and Wednesday evening meetings. Some measure of support of all these activities of the church can be given by every member, and just to the extent they are made use of, to that extent will the erroneous beliefs about Christian Science be brushed aside.

And while this educational work is going on, Christian Scientists must not neglect another duty which is incumbent upon each and every member of the church, namely, to oppose every attempt to pass laws which would interfere with their right to choose and practise the healing system which they have proved to be safe and efficient. Mrs. Eddy writes on page 357 of Science and Health: "If mankind would relinquish the belief that God makes sickness, sin, and death, or makes man capable of suffering on account of this malevolent triad, the foundations of error would be sapped and error's destruction ensured." When the majority understand this simple and profound statement, not only their rights, but the rights of all mankind, will be safe from invasion by an interested minority. In the mean time Christian Scientists should not neglect Mrs. Eddy's advice on page 324 of Science and Health: "Be watchful, sober, and vigilant."

ARCHIBALD MCLELLAN.

Humility

WE have it on the authority of Christ Jesus that he who humbleth himself "shall be exalted," and the psalmist prays, "Keep back thy servant also from presumptuous sins." In the book of Numbers we read that when the people were bidden to go up to view the promised land, they did so, but they brought back an evil report of it and murmured against the divine Love that had led them and fed them in the wilderness. Then, as if ashamed of their cowardice, they suddenly announced their intention to go up to the top of the mountain, moved, it would seem, by human will. We are told that Moses warned them against this step, and declared that their enterprise would not prosper, for, said he, "the Lord is not among you." In spite of this warning, however, we read that "they presumed to go up unto the hilltop," although Moses remained below with the ark of the covenant, awaiting divine guidance.

This incident has many lessons for us today, and its metaphysical significance will be understood if we ponder our revered Leader's words in "Miscellaneous Writings" (p. 117): "The disobedient make their moves before God makes His, or make them too late to follow Him." To this she adds, "Be sure that God *directs* your way; then, hasten to follow under every circumstance." A number of years ago, two little girls whose parents had accepted Christian Science, decided that they could do without food, and they abstained from it for several days without informing any one of their experiment. These children were, however, in deep earnest, and were humbly seeking divine guidance; so they were shown that this step was in advance of their understanding, and they retraced their steps to the foot of the mountain, glad that they had learned a lesson without incurring the penalty which follows disobedience.

A different case was that of some older people, who refused to work for their own support on the ground that their entire time must be spent in looking into and studying about spiritual things. They had not, however, taken a single step toward the spiritual realization which would enable one to subsist upon even less food than formerly. They simply demanded that others should carry the burden of their support, and did not see that this was one of the "presumptuous" sins from which the psalmist prayed to be delivered. In no case have we the right to demand that others shall make our demonstration for us. Christian Science also makes it clear that no one can hinder us from doing our own work in obedience to God's law, or hold one back from ascending "into the

Digitized by Google

hill of the Lord," if he has "clean hands, and a pure heart," his consciousness untainted by selfishness or sensuality.

The prophet Isaiah tells us that "the high and lofty One that inhabiteth eternity," dwells with him who is "of a contrite and humble spirit," to revive such a one. In this age, when mortals are apparently accomplishing wonders in the material world, the ancient temptation to pride and self-glorification ofttimes presents itself. The one who listens for the voice of divine wisdom, however, cannot take a wrong step, and although his path may seem rough and steep, he will, as our Leader's much-loved hymn (Hymnal, p. 195) assures us,

follow and rejoice
All the rugged way.

A profound thinker reminds us that if we cherish humility we shall be spared humiliation; more than this, the Master said we should be exalted. This must mean that we shall be uplifted spiritually, so that we can prove first to ourselves and then to others, that we are doing God's work in the Christ-way; that we are glad to give up materiality when we are bidden to go higher. Peter counsels us to be "clothed with humility," and the attached promise is that God will exalt the humble in due time; that He will enable them to advance not merely to the borders of the promised land, but to ascend the heights of holiness and dwell there, undismayed by doubt or fear.

ANNIE M. KNOTT.

✧

A Broadening Horizon

SOME one has said that when you turn a thought loose among men, you can never tell what may happen. Like light, truth is vital, aggressive, self-communicating. In Christian Science we perceive that the Christ-idea is divinely commissioned to universal conquest, and can understand why Mrs. Eddy should have gained and expressed such boundless expectations respecting the growth of the movement inaugurated by her in the demonstration of the verity and practical value of the Master's teaching. She perceived that no limitation can be placed upon the possibilities attendant upon the going forth of a ray of divine light. Its native and inevitable career is to run and be glorified, and no darkness can be found, much less abide, in its presence. This explains her enthusiasm, even as it should awaken ours. It explains, moreover, the larger though less defined range of the influence of Christian Science in all the world. Human sense calls for organization and cooperation, the embodiment of a mental movement, but beyond all these visible expressions the truth is constantly finding and cleansing avenues of advance.

It is interesting in this connection to note Mrs. Eddy's statement that until she learned "the fixedness of mortal illusions, . . . she cherished sanguine hopes that Christian Science would meet with immediate and universal acceptance" (Science and Health, p. 330). Her thought was thus hopeful and expectant of the revitalization and redemption of the universal Christian consciousness; and although the time came when the antagonism of religious prejudice rendered Christian Science church organization imperative, this was a human incident of that unlimited ministry of truth which must make all believers one in the demonstrable apprehension of the divine law and order. That Mrs. Eddy continued to cherish this thought of the larger influence and efficiency of the Christ-idea which she declared and demonstrated, is seen in her later words on page 22 of "Pulpit and Press": "If the lives of Christian Scientists attest their fidelity to Truth, I predict that in the twentieth century every Christian church in our land . . . will approximate the understanding of Christian Science sufficiently to heal the sick in his name. . . . Christendom will be classified as Christian Scientists."

Truth is radical, and in a sense intolerant; but it is not ruthlessly destructive of human form and sense of need. It is gently reformative, because it is Love. Everything that is inadequate and unfit must necessarily pass away, but the good and beautiful and true is to be conserved. The redemption of the rose does not involve the annihilation of its charm of form, color, and fragrance, but only of the false-sense substance which mortal belief has imposed upon it. The truth is destructive of nothing but error, and every relic and result of the spiritual illuminations of the past is preserved and beautified by an increase of light. Today, apart from the growth of Christian Science in the number of its churches, etc., the truth it declares is finding its redemptive way into the thought of the church universal. Unnumbered ministers and laymen of every name are being quickened, sermons are made more appealing, services more helpful; and in all this Christian Scientists greatly rejoice, as did St. Paul when he wrote to the Philippians, that, regardless of its human circumstance, he was greatly gladdened by the fact that Christ was being preached. The husks of religious difference, the sectarianisms which have so hindered Christian growth and effectiveness, must fall away, give place to the ever-burgeoning life and beauty of Truth as expressed in divine Science.

Thought of as a human organization, Christian Science coordinates with other denominational activities, but recognized as the totality of right consciousness, that divine wisdom which saith, "Whoso findeth me findeth life," Christian Science is seen to be all-inclusive and all-redemptive. This is the inherent nature of Science; it is omnipresent and omnipotent because it is omniscient, the activity of Mind, the wisdom and glory of God, which saves unto the uttermost.

JOHN B. WILLIS.

✧ ✧ ✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

Among the Churches

Current Notes

ST. LOUIS, MO.—During the year 1913, First Church of Christ, Scientist, through its reading-room and the distribution of literature committee, sold literature as follows:—

Science and Health, English edition, 268, German edition, 40; Bibles, 81; "Miscellaneous Writings," 26; "The First Church of Christ, Scientist, and Miscellany," 52; Manual, 35; Concordance, 18; Hymnal, 54.

During the last nine months of the year the following literature was mailed:—

Monitors, 19,094; *Sentinels*, 12,910; *Journals*, 301; pamphlets, 2,173; miscellaneous, 2,927; total, 37,405.

Correspondence.

The Lectures

Walla Walla, Wash.

Clarence W. Chadwick delivered a lecture on Christian Science to a large audience at the Keylor Grand Theater. Prof. W. R. Davis of Whitman College in introducing Mr. Chadwick said:

"Prove all things; hold fast that which is good," is an exhortation as vital as it is difficult to obey. It points to a road that is hard to hit. It requires on the one hand, an open, clear mind, free from prejudice and the illegitimate bonds of tradition; it requires patience, sympathy, and sincerity. On the other hand, it demands firmness, decision, steadfastness, loyalty. To prove all things, holding fast nothing, is easy, and there are many in our day who do it. To refuse to test the truth of anything, holding doggedly that which is supposed to be good, is also convenient for multitudes of people. But neither is the way of successful, fruitful living. It is in the spirit of the better though more difficult way, I take it, that the Christian Scientists have invited me, a member of another faith, to introduce the speaker of the evening, and it is humbly, in the same spirit, that I have come for that purpose. *Walla Walla Union.*

✧

Grants Pass, Ore.

In introducing Willis F. Gross, who lectured on Christian Science, Will Scoville made the following remarks:—

No human being in this age has come to a full understanding of Christian Science, but each day witnesses greater numbers striving to enter into this understanding. Those who oppose Christian Science, oppose not what it is, but what they think it is. Either they do not believe in all the teachings of Jesus Christ, or they do not understand what Christian Science teaches. The nearer we succeed in applying these teachings in our daily life, the nearer will we come to the realization of "on earth peace, good will toward men."

Daily Rogue River Courier.

✧

Bristol, England

William D. McCracken, M.A., lecturing on Christian Science in the large Colston Hall, was introduced by J. S. Brachwaite, who said:

It is not unusual nowadays to hear people say about questions which most vitally concern humanity at large, that they are in the melting pot; indeed, this expression was used only recently at the church congress. Now, admitting this to be a correct view of what is taking place, I do not regard it in any sense as an argument for pessimism, but on the contrary as an argument for optimism. The Scripture says, "The words of the Lord are pure words: as silver tried in a furnace of earth, purified seven times;" so that we may surely expect this melting process to go on while our thinking and we are led into all truth, as Jesus Christ promised that we should be. Out of this melting have emerged two words I have selected together, Christian Science. They are never again to be separated, because as Christian Scientists well know, they present different aspects of the same thing.

What a subject for test as to whether the teaching is true! The same book, as I have said, that Jesus Christ gave to [illegible] says, "We shall know them by their fruits," and I believe it is true that Christian Science will stand or fall in the world's judgment today. The fact is that all over the world today Christian Science is healing the sick and reforming the sinner, and perhaps the best proof I can offer you of the truth of this statement is that our lecturer of this evening has only just arrived from a lecture tour in South Africa, where he has been addressing just such crowded audiences as ours is tonight. Then on his way to this country he gave two lectures in the French language, one in Geneva and one in Paris. Surely this is proof enough of the wide-spread nature of the mission of Christian Science, and that it is filling a very real need among men.

Correspondence.

✧

Wichita, Kan.

Virgil O. Strickler lectured on Christian Science in the new Crawford Theater. The remarks of Martin E. Casto, who introduced him, were in part as follows:—

Christian Science is not a new religion, but a scientific restatement of primitive Christianity. Our Saviour said, "By their fruits ye shall know them." Meekly accepting the Master's standard, Christian Science boldly makes its appeal to the sinful, the sick, and the heavy-laden in all the world, and is daily proving to an ever-increasing multitude of grateful people that the so-called miracles of Jesus and the early Christians were not peculiar to a dispensation now closed, but were the phenomena of an ever-operative divine Principle. God is no less able or willing to save and to heal men today than He was when the great Master said, "I knew that thou hearest me always."—*Correspondence.*

✧

Boulder, Col.

The Curran Opera House was thronged at the lecture on Christian Science delivered by Bicknell Young. J. A. Davis presided at the meeting, and spoke in part as follows:—

Without assailing the belief of any one, the teaching of Christian Science is becoming a world-force. This teaching is clean and honorable in all things, quiet and unassuming, strong and steadfast in its adherence to the good and the true. No current from the outside world ruffles the perfect harmony; no carping envy disturbs the peace of this church family. There are things that ought to be shaken out of existence, wiped away, and this age has dared to do it, in many cases wisely and well, both in God's service and in man's. Our day has no confidence in formulas as such; it cares little for a faith done up in a dusty bundle of logical statements and called a confession of faith; but it does care a great deal for a faith that lives and works, and helps men on and heals the world. The time has passed when men can be deceived with words or put off with platitudes and formulas, no matter how logical. Our age is one of questions, and they are real ones, serious and earnest. We stand today with inquiring hearts, unsatisfied and restless. Christian Science is not a surrender to unbelief, but is an earnest seeking for the truth, for light. It is the cultivation of a life in tune with the infinite, a life in harmony with the divine.—*Daily Herald.*

✧

Sydney, Australia

A lecture on Christian Science was given by William B. Rackow in Warrings Hall, Neutral Bay, in connection with Second Church of Christ, Scientist. There was a large audience. The Rev. G. Martel, who introduced the lecturer, said:—

We are met here this evening to hear something about Christian Science, about that which in this world [illegible] described as "the most remarkable movement of the centuries" and one which is destined to exercise a mighty influence in

Digitized by Google

solving the world's problems." Looking at Christian Science in its religious, missionary, ethical, or practical aspects, it is in every way remarkable. The signs of the times clearly indicate that human thought is rapidly changing its base,—from things to thoughts, from the physical to the mental, from the material to the spiritual; and I have no doubt whatever that this mental uplift is being brought about through the teaching and work of Christian Science.

Because of the metaphysical nature of Christian Science, it is often misunderstood. A week or two ago a well-known educationalist of this city published a book entitled "Ancient Heresies in Modern Dress." Many of his statements with regard to Christian Science are both absurd and untrue; nevertheless, they will be regarded by some as true because of the standing of their author. Now it is in order to explain what Christian Science really is, thus meeting and correcting such misrepresentations as I have spoken of, that the board of lectureship of The First Church of Christ, Scientist, in Boston, Mass., U. S. A., lecturers who by long experience are qualified for this work, are sent out.—*Correspondence.*

Burlingame, Cal.

In presenting Clarence C. Eaton, who lectured on Christian Science in the Masonic Temple, Mrs. Clara I. Colby said in part:—

Our Master confirmed his words by his works, and today Christian Science teaches that the fulfilment of these prophecies is a present possibility. I know that this is the healing gospel as preached and practised, as taught and demonstrated, by the Galilean Prophet on the plains of Judæa centuries ago. I know this because it has been my privilege and blessing to realize the fulfilment of that comforting promise given in the book of Jeremiah, "I will restore health unto thee, and I will heal thee of thy wounds." It matters not to divine Love whether the wounds be mental, moral, or physical, for Truth heals all who seek its aid.—*Correspondence.*

Wenatchee, Wash.

Over four hundred people comfortably filled Masonic Hall to hear a lecture on Christian Science by Judge Clifford P. Smith. He was introduced by the Hon. W. O. Parr, mayor of Wenatchee, who said in substance:—

We have observed unnumbered thousands of our best citizenship rallying around their Leader to form their organization. They have erected splendid church buildings, which are filled with large congregations. Their zeal and earnestness command our admiration. We have also observed their high standards, and the membership seeks to share with others good cheer and glad tidings. We are present this evening to hear more about Christian Science.

The Wenatchee Daily World.

Rome, N. Y.

The introductory words of Fred J. Smith in presenting Francis J. Fluno, M.D., who lectured on Christian Science, were in part as follows:—

The humble Nazarene on the shores of Galilee preached the divine doctrine of Love,—"On earth peace, good will toward men." Ever since that time it has been the hope, desire, and prayer of all humanity to get at the vital spirit, the regenerating attitude of mind and heart that actuated Jesus and governed him in all he did, and to find if possible its counterpart actuating ourselves.

Christian Science asks us to consider that if Christ's message was the truth in the first century, it must still be the truth in the twentieth; and that if its right apprehension then could set men free from sin and suffering, its right apprehension now must be able to do the same. We should bear in mind also, that Jesus' ministry included the practise of healing as well as preaching, and the disciples were made to feel and understand the inseparability of the two. It invites us to closer and more intimate searching of the Scriptures, in the light of its exposition, giving us a scientific interpretation of Christianity, so timely in its appearance in this scientific age.—*Correspondence.*

Lectures to be Delivered

Aberdeen, S. Dak.—Judge Clifford P. Smith, Mcdiarmid and Slater building, 422 South Main street, 8 p.m., March 13.

Alameda, Cal.—Col. William E. Fell, Unitarian Church, Grand street, near Santa Clara avenue, 8 p.m., March 10.

Brighton, Sussex, England.—Bicknell Young, Hove Town Hall, 8:30 p.m., March 20.

Cumberland, Md.—William D. McCrackan, M.A., City Hall Auditorium, 8 p.m., March 10.

Dublin, Ireland.—Bicknell Young, Abbey Theater, 8 p.m., March 26.

Testimonies of Healing

[Translated from the German]

It is in gratitude to God that I wish to tell others how I was led to Christian Science. My husband had suffered severely for two years and a half with what was pronounced tubercular disease of the lungs, and soon after he passed on, in the latter part of October, 1911, a copy of *Der Herold der Christian Science* fell into my hands while at the home of an acquaintance. I began to read it, and as a number of things appealed to me, I borrowed this copy. I did not merely glance it over, but read it through most carefully, until it gradually became evident to me that God was leading me in order that I might help my child, a ten-year-old boy, who, according to the medical opinion, had inherited lung trouble from his father. He had been taken ill three times with inflammation of the lungs, besides frequent attacks of bronchial trouble. Shortly before my husband passed on, I had the boy examined once more by the physician, who told me that he must be taken to a southern climate in order to save his life. After reading the *Herold* I soon communicated with a Christian Science practitioner, who referred me to another one. This lady took up treatment for my son, and the following winter proved to be the first during which he was exempt from lung trouble. He has remained in good health ever since, and has also grown much stronger.

Soon after treatment was begun, an eruption appeared on the boy's feet. The practitioner assured me that Truth would overcome this condition, and this was realized in about six months. My thirteen-year-old son had a severe attack of rheumatism, and the lady of the boarding-house where he lived informed me of his illness and asked me to come to see him. At four o'clock in the afternoon I found him suffering much pain, especially in the knees and ankles. I went at once to the practitioner, who began to treat him about five o'clock. I expected to take him home in a carriage the next day, but I received a postal card from him, telling me that half an hour after I had left the day before the pain suddenly disappeared. On the second day, after the second treatment, the swelling subsided, and on the third day he was able to go back to school.

With regard to financial conditions, I may say that God has provided for me and sent me what I have needed, and cares and worries are things of the past. Truth has established within me a sense of peace and joyfulness for which I will be thankful all the days of my life, and I will pray that He may lead me onward to a growing understanding of the power of Truth. I am also deeply grateful to our revered Leader, Mrs. Eddy, who has shown us the way to salvation, to peace and joy, the way of right understanding.

Frau Helene Dressler, Zabrze, Oberschlesien, Germany.

✧

In gratitude to God I would like to tell of some of the many blessings which Christian Science has brought to me. For several years there had been much suffering in my home, my mother being an invalid, and I was in bondage to fear and anxiety on her account. Although there had been much outward religion in my life, it failed me when I really needed help. One morning, when I found a dear old servant in pain and could do nothing for her, I went into the garden, where I generally took my troubles, saying to myself that there was nothing but sighs and groans wherever I went, and that God seemed to be of no practical help to us in any way. That unspoken prayer was answered, for soon afterward I met some one who knew of Christian Science, and I asked her to lend me the text-book. From that time "Science and Health with Key to the Scriptures" has been my daily study, a guide to the practical understanding of the Bible and of the one infinite God, who is now my help in every need. My great desire was that my mother might be healed, but she could not accept the teachings of Science. I, however, was greatly helped, and friends whom I had not seen for some time remarked that the anxious look had gone from my face.

Soon after this the doctor told me that my mother could live only a few months. I knew that I must overcome my own fear, and I spent two nights wrestling with it and reaching out to God, but the third night it was conquered, and when I awoke in the morning I was astonished to find that my eyes were healed. (I had been troubled with weak eyes all my life and neither the doctor nor the oculist could help me.) My mother lived four years longer, and though she did not fully accept Christian Science, she was much helped. Even the doctor said that this was a wonderful case and asked me what I did to relieve her.

Lately I was attacked with gout, supposed to be hereditary, but by trying to realize that in Science "both man and woman proceed from God and are His eternal children, belonging to no lesser parent" (Science and Health, p. 529), I was soon free. I am grateful to our dear Leader for having given to the world this knowledge of Truth whereby all the miseries of human existence, which used to weigh so heavily on me, can be remedied. Christian Science has changed my outlook entirely, and given me peace and joy and happiness, spiritual blessings for which I can never be grateful enough. I see much work to be done before the human self is "evangelized," but I am trying to accept lovingly this task today.

Alice Burton, Sutton-on-Hull, England.

✧

By far the greater number of people who come to Christian Science, enter through the doorway of physical healing, either of themselves or of some one near to them. In this line wonders have been wrought, as is proved by the thousands of grateful testimonies given every week in our Wednesday evening meetings,—going like a great wave of thanksgiving around the whole earth,—or published from week to week and month to month in our *Sentinel* and *Journal*. Nevertheless, this is only one of the ways by which Christian Science is benefiting the world. I know and most gladly testify that the Science of Life as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, heals heartache as well as physical ills; that the shadows of loneliness, discouragement, and dissatisfaction, an unhappy disposition, a sense of loss and separation, all flee when the sunlight of Truth is allowed to enter the human consciousness.

Something over sixteen years ago I was led, through what I then thought was mere curiosity, to read this wonderful book to see what there might be in it, never dreaming that here I would find that for which I had always been seeking, that which would answer all my heretofore unanswered questions about God, man, the universe, and their relation to one another. But I soon knew that I was being led by our ever-present Father, in answer to my long search and earnest desire for the truth.

From earliest childhood I had been carefully trained in a Christian church, with which I united in early girlhood, and I remained in it, an active member and worker, until clearer light was revealed to me in Christian Science. For all the good I derived from the teaching and associations of this church I am truly grateful; but as the youth has laid aside his child-toys, and as we have all given up the tallow candle and the coal-oil lamp and appropriated the electric light, so

Digitized by Google

in accepting this purely spiritual religion I took what proved to be a step forward and upward. Old and familiar passages from the Bible which belonged to my grandfather were illumined and took on new meaning. In place of a far-off God, sitting on a lofty throne, Christian Science has given us a "God at hand," for "closer is He than breathing, and nearer than hands and feet," a God to whom we can go for help in any need, a loving Father who does not give a stone when His children ask for bread. I now know that He who watches over and cares for the sparrow, also guides and protects each one of His children.

In Science and Health the way is pointed out and made so plain that "the wayfaring man" cannot miss it, for there we have rules for our guidance, and a chart not only to eternal life, but also to the solution of the many problems that come into our every-day experience. Our text-book points to a scientific way of living and acting which is as exact as any of the demonstrable sciences; nevertheless I am led to say with St. Paul, "I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark." While perfection is still in the future for me, I do rejoice and daily give thanks that I have made some progress in this direction in the dropping of many doubts and fears, and that unrest and dissatisfaction are being replaced by peace and trust, the knowledge of God's care and universal government.

ANNIE JESSEN, San Diego, Cal.

✧

I was healed through Christian Science of suffering due to a fracture of my limb at the knee-joint. For thirty-nine years I was obliged to wear a bandage nearly all the time, and the doctors informed me that I would never be well again, as there was no cure for my trouble. At last it grew so much worse that I was unable to walk about the house without help. Christian Science then came to my rescue, and I was healed within a few weeks.—SOPHRONIA PHILLIPS, Omaha, Neb.

✧

About eight years ago my testimony of a wonderful case of healing was published in the *Sentinel*, but since that time I have had further demonstration of the power of God through the teaching of Christian Science.

About one hundred yards from my house there was a bridge without any railing, and one night, in coming home when it was very dark and foggy, I met with a serious accident. I had crossed the bridge so often that I thought if I could get my foot on the first plank I would be all right, so I kept feeling my way; but half-way across there was one plank a foot shorter than the others. I happened to be on that side of the bridge, and when I reached that point, over I went, striking my shoulder on a large rock. I lay there, unable to move or even to cry out, but my thought was active, and I called on God to give me power to get home, and He did. I could not open the door, but my daughter came and opened it, and seeing my condition, sent for a doctor. By the time he arrived I could speak. The doctor said that my shoulder was dislocated, also broken in two places, and two of the upper ribs and the collar-bone were broken. He said he would have to use an anesthetic in order to set the bones, but I would not consent to this. He said he could not set them otherwise, but I told him I would allow him to handle the bones without giving any trouble, so he did the best he could. The next morning my sons sent for another doctor, and the two came together, the second one resetting my shoulder.

My daughter then sent to the nearest Christian Science practitioner, thirty miles away, and got help at once. I raised blood for a week, but in six weeks I was able to visit the practitioner, and in the course of two months I insisted on the county commissioners railing the bridge; but they claimed they had no right to do so. I then sued the county for damages, and the county employed a doctor to see how much I would be affected in the future by the injury. The two doctors who had set my bones, and the one employed by the commissioners, each stated under oath that I could never use that shoulder as before. The court gave me damages and ordered the bridge to be railed.

I am a blacksmith, and in three months' time I was working in my shop. It is eight years since this happened, and I want to tell others how God healed me through the teaching of Christian Science. I am now in the eighty-fourth year of my age, and last October I shod eight horses, thirty-two shoes, in one day, and had time to shoe one more if I had had the opportunity. The farmers let their horses run as long as the shoe stays on, so I had to cut a good deal from each foot. I am working every day in my shop, and when I have no helper I have to use a short-handled eight-pound hammer, and I can do so easily with the shoulder which was injured. I do not get tired, as I have learned from the teachings of our beloved Leader, Mrs. Eddy, that if we trust in His power, God gives us all the strength we are willing to use, and I wish to honor God in my work.

I also wish to state how I became a Christian Scientist. I was for twenty-two years an elder in the Presbyterian church, and manufactured medicine for thirty years, but when I became acquainted with some Christian Scientists, and saw how cheerful and happy they were, I concluded that they had spiritual understanding which I did not possess. I then got a copy of their text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and after I had read it I found where their cheerfulness and happiness came from,—that it was by understanding man's relationship to God, our Father,—and since I began to practise its teachings I am as happy as they are. I stopped manufacturing medicine at once, and for eighteen years I have used no remedy for myself and family but the truth revealed by Christ Jesus, who commanded us to heal the sick. I thank God that I have the honor to be called a Christian Scientist, and I keep on working in my shop, proving daily that we can get strength from God as we need it.

CHARLES MCKAY, Friday Harbor, Wash.

✧

About five years ago our niece had one eye injured severely. When I was called, the eye was so badly swollen that it was shut. We then sent to a Christian Science practitioner to treat her, and she was relieved immediately, and was soon asleep. When she awoke, her eye was normal, and the next morning we could not tell which one had been injured. We have always been very grateful for this healing, as it was a proof to us of the power of Truth as revealed through Mrs. Eddy in "Science and Health with Key to the Scriptures."

MARY F. REYNOLDS, Guthrie, Okla.

✧

Since Christian Science led me two years ago out of the darkness of mortal beliefs into the light of ever-present omnipotent Love, I have every reason to be grateful for the treasures which Truth has revealed to me. At that time I was a physical wreck. For two years I had been suffering from hemorrhage of the bowels to a serious extent, and had been in two of Sydney's well-known hospitals for eight

Digitized by Google

months under leading medical men. I also underwent two critical operations, which proved of no avail in stopping the hemorrhage. After these weary months of lying in the hospital I was discharged as incurable, and was given to understand that I could not last much longer.

A short time after this a bad hemorrhage occurred, and the doctor who was summoned said to the messenger, "There is no use in my going to that woman, for I can do nothing for her; tell her to take a double quantity of the drug." A dear friend in the house, a student of Christian Science, knowing the doctor's verdict, then came to me and asked if I would read her book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was so weak that I could read only one line at a time, but I continued to read on in that way until I finished the beautiful chapter on Prayer. I can never adequately tell of the light and peace that seemed to surround me as I read. I thought Science and Health the most beautiful book I had ever opened, and I felt stronger after reading it. The next day, Tuesday, I was able to get up and walk across the room, while on Wednesday I attended the testimony meeting. On the following day I consulted a practitioner, and after the first treatment had been given the hemorrhage ceased.

I continued treatment for a week, as I was still weak, but during that time I was able to take exercise, which was impossible before. I have been a perfectly well woman ever since. I shall always remember those words the practitioner said to me when I called on her: "God is your life." They have been with me continually. I can say with truth that were it not for Christian Science I would not be here today, for I owe life, health, and happiness to this teaching. Even recently I have had many demonstrations through my own understanding of Christ, Truth, and these have meant so much to me.

This truth is everything to me and my family. For all the benefits received I am deeply thankful to God, and grateful to our beloved Leader.

Ethel Bergin-Ewart, Sydney, Australia.

Only the power of God could do what has been done for my wife, and the above testimony is a true statement of her healing in Christian Science. I also have received many blessings through the knowledge I have gained of Christian Science, and I am deeply grateful for them.

Albert Bergin-Ewart, Sydney, Australia.

✧

These words of Jesus, "Ye shall know the truth, and the truth shall make you free," have proved most precious and true to me in my healing through Christian Science over two years ago. For ten years prior to that time, my health had been constantly failing. The last three years I was almost a complete invalid, a burden to my family and a misery to myself. My troubles were many, but the three which were the dread of all of my physicians were so-called Bright's disease, a malignant growth in the breast, and fainting spells which would last from one to three hours. Besides these there were various other ills, though not so serious as the ones mentioned. I traveled a great deal, seeking relief through change of climate and water, and in search of medical aid that would offer me some encouragement. I had some of the most skilful physicians in five different states, but grew steadily worse under the best treatment they could give me.

Two years prior to my healing in Christian Science, I was operated on in the city of Los Angeles for the growth in the breast; but in a short time I was worse than before, and the doctors offered me no hope whatever. They told me that one of these diseases was bad enough, but that a complication like mine could not be met by medical skill. In addition to *materia medica* I tried electricity, magnetism, and practically everything brought to my notice, but all to no avail. As a last resort I was advised to try Christian Science, and though very much opposed at first, my condition was such that something had to be done quickly, and there was absolutely nothing else within my knowledge to try; consequently I turned eagerly to Christian Science, even as a drowning man grasps at a straw.

I was at once taken to a practitioner, whose gentle voice and loving words soon won my heart, and step by step I was lifted out of that dark and bottomless pit of despair and error into the light of Truth. I seemed to be born again as I learned to know God in a new way, as a God who is Love and Life, and of a heaven that one does not have to die to reach. Oh, the sweet peace that filled my heart as I was led onward and upward from sickness into health, from death unto life!

How sweet it was to know the allness of God, good, and to know that He is a very present help in trouble and will always meet our every need; that He is the one great Physician who heals mentally and physically, who is no respecter either of persons or diseases. Christ Jesus said, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you." My healing came slowly but surely; and today my heart is filled with gratitude to God for this wonderful revelation of divine Love given us in Christian Science. I am deeply thankful to Christ Jesus, our Wayshower, for his beautiful demonstrations of this truth; and I am grateful to our Leader, Mrs. Eddy, who so wonderfully proclaimed it in this age.

For over two years not a drop of medicine of any kind has been used in our family of five. On many occasions severe attacks of illness, as well as injuries, have been met and overcome through the truth. It has been fully demonstrated to us that divine Love does meet our every need, and the sincere desire of my heart is to live a life consecrated to God, and to prove the works and words of our dear Wayshower, who said, "He that believeth on me, the works that I do shall he do also."—Louise Cagle, Needles, Cal.

✧

Christian Science came to my help at a time of great need, when my life seemed full of doubts and fears. Although a strict adherent of the Church of England, I longed to be able to prove the truth of my creed, and when constant adverse criticisms of Christian Science were appearing in the daily papers, I determined to hear the other side, having noticed the happy lives of some friends who belonged to that faith.

On attending a Wednesday evening meeting at First Church, London, I felt convinced of the power of Truth, and was healed of an hereditary fear of cold water, so that the next morning I was able to take a cold bath for the first time in my life. I continued this through the winter without experiencing the old attacks of illness. I also discontinued using glasses, though they had been ordered by a well-known specialist, who stated that my eyes had been strained through constant reading and advised me not to work by artificial light. Since then I have been able to study during the evening, after teaching all day, without any headache or other discomfort. The fear of lack which constantly haunted me before, has been overcome, and I have come to understand that "divine Love always has met and always will meet every human need" (Science and Health, p. 494).

Soon after beginning the study of Christian Science, I passed through the bitterest experience in my life, unex-

Digitized by Google

pectedly discovering that a most trusted friendship was false. The sense of grief and loss at first seemed overwhelming, but with one treatment from a practitioner I realized the joy of knowing something of eternal Love, and the trying circumstance proved a great blessing.

I owe deep gratitude to our beloved Leader for the new light on the Scriptures given us through our text-book, for class teaching, and for our periodicals, which never fail to supply a need. The *Monitor* is especially helpful to teachers in many ways. Truly I can say with the psalmist, "What shall I render unto the Lord for all his benefits toward me?"

IDA F. GRIFFIN, London, England.

✧

[Translated from the German]

I gladly testify to the blessings and the wonderful instances of healing which I have experienced through Christian Science. Not long ago I became afflicted with a disease known as "shingles," which was accompanied by great pain. Believing this to be some infectious trouble, I called the physician that same night, and he informed me that two weeks might elapse before the healing would be complete. On the next day my mother asked a Christian Science practitioner for help, and through her treatment not only did the pain immediately disappear, but a general restoration of the body took place within a much shorter time than the physician had said, and I became fit for service after a few days.

Shortly after this experience I was taken ill with severe inflammation of the throat. I had to consult a physician in order to comply with business regulations, and he told me that this was an illness not to be regarded lightly, that I must stay in bed, and so forth. On the same day the kind practitioner was again called upon to assist me, and within a very short time I ate solid food, which I had not been able to do previously, and it soon became possible for me to resume my duties.

For these blessings I am deeply thankful to God. I also feel greatly indebted to our Leader, Mrs. Eddy, whose teachings enable us to obliterate the errors of mortal sense that they may be replaced by the truth.

CARL FIEDLER, Berlin, Germany.

[Written for the *Sentinel*]

Desire

LAURA GERAHTY

IF God we could but understand
  Instead of just believe,
And take from out Love's proffered hand,
  What gems we might receive!

Did we but know His gentle sway
  Destroys the power of sorrow,
We'd find His care of yesterday
  Is just the same tomorrow.

Did we but always pray aright,
  Our answer would be sure,
And all the way, though dark the night,
  Our path would be secure.

When Love divine is understood
  Instead of just believed,
Then heav'n is here,—omniscient good,—
  And Christ alone received!

From Our Exchanges

[*The Christian Work and Evangelist*]

The modern world has crowded God out; it seldom names His name, for it is not thinking about Him—remember, we are speaking of the common consciousness, not of individuals. To speak about God in connection with every-day pursuits, is to run the risk of being accused of cant or bad form; but that fact alone shows where we are. It would be neither cant nor bad form if it were real to the great majority, if it were felt to be essential to all true living; but it is not, and that is just the danger of the situation.

To call this a materialistic age is hardly a full account of the matter, however. All ages are materialistic, more or less; it is only a question of degree. But, as a shrewd observer of the trend of things remarked the other day, people do not seem to know how to enjoy the benefits which increase of material wealth has brought within their reach. The soul is ignored; it is the flesh that is pampered. The leisure of the workers in all ranks of society has little about it that is spiritual; it is mostly of the nature of physical or mental excitement; it is an animal delight, whether it be golf, football, or the picture palace.

Once again, we are not condemning these tendencies of our time wholesale; we are only pointing out that they are on a par with our other occupations in the thoroughness with which they ignore the deeper needs of the soul. It is not to be wondered at. Life is largely strain and worry for the great majority. We have made it so; we have made it artificial, fierce, exacting. There is no need for the rush, and wear and tear of brain and nerve; if we were not fools we should not have it, only we are afraid of what will happen if we stop, so on we go fighting for our own hand individually instead of getting together. Why in the world have we made life so artificial and complicated?

[Rev. Robert J. Dogan in *Baltimore* (Md.) *News*]

Vital relationship with God is the supreme good of all religion. All else in religious life is subsidiary to this one great fact. Church-membership is good, but unless it means vital connection with God it is as empty as a "tinkling cymbal;" it is the shadow without the substance; the theory without the fact. Too many people in this age live to speculate on a religious theory rather than to cultivate a religious life. They grope in the shadows of religion, rather than utilize the substance thereof.

Vital religion is taking strong hold on the public mind and heart. More and more the people of God are awakening to the fact that religion is not merely a speculative hypothesis or a theoretical code of sublime ethics, but a practical fact and a life-giving substance. So long as people live in the shadows of religious theories, so long will our services be insipid and our churches half filled with worshipers, and special appeals be made for church attendance; but when we move out of this shadow of religion into the real substance by entering into vital relation with God, there will no longer be a necessity for special days or questionable methods to induce church attendance, for all worshipers will count it a joy to enter the public sanctuary and devoutly "praise God, from whom all blessings flow."

[*Western Christian Advocate*]

The Christian life ought to be so lived that people would covet its joys and contentments. Christ said it was the "pearl of great price" for which men, properly appreciating

Digitized by Google

it, would sell all they had that they might possess it. Theoretically we accept it as different, extra, apart, and something altogether to be desired. However, our presentation of it today is not embarrassing us by the great multitude rushing to possess it. Indeed the opposite seems to be true. Somehow people do not seem to think we have anything that is worth making a rush for. We stand in the market-place and pipe unto them, and they pass on, merely giving us a careless glance. Why is it we cannot present Christianity in that attractive manner which will compel men and women to cry out, "Oh, that I were a Christian"?

The Christian ought to live so gloriously that he would be the envy of the world; he ought to live so triumphantly that men would rate him as the most fortunate man on earth; he ought so to live that those seeing him would sicken of the life they live outside of Jesus Christ. Why do we not live a better life? We ought to know how to present the Christian life in such sublime proportions that men everywhere will be delighted with it. If we lived better, the world would love our Christianity more.

[*The Christian World*]

The Bible is not addressed primarily to the intellect: it is not specifically the food of the reason. It did not come from that side, nor is its appeal mainly there: one could speak easily of its poverty, of its omissions in that region. You find there no mathematics, no philosophy, no science, in the modern sense; and in its own special sphere it offers nothing in the way of logical demonstrations. It never tries to prove the existence of God or of the soul; it has no arguments on these points in the style of Plato or of Aristotle. It is throughout a book of the heart's reasons rather than those of the head; and we are now beginning to discover the meaning of all that.

The heart's reasons are incomparably, of all others, the strongest, the most convincing. It is there the grand affirmations lie; affirmations which, the moment we hear them, carry their own truth, their own conviction. When there is presented to us, as the Bible presents them, the law of love, "the beauty of holiness," the denial of self, the supremacy of duty, the call to uttermost service, to uttermost forgiveness; when all this is given us as constituting the one and only blessed life,—when all this opens to us, our weapons of mere logic fall to the ground. We feel here in the presence of life's final judgment, against which there is no appeal. If we try to go against it, to disprove it by a contrary experience, the proof only comes back upon us in a form more overwhelming,—the form of our own misery and defeat.

[*The Advance*]

One humble village gave the world Mary, Joseph, Jesus. Who knows what Nazareth has yet to give to the world? Nazareth still exists. If out of its life came into the life of the world such contributions to the betterment of mankind, who dare say that Nazareth has nothing more to contribute? And who dare say that Nazareth is the only place from which God can produce Christlike lives? Out of very humble places God has called His prophets. The Nazareths of history have been full of surprises for the world.

The world has need of its Nazareths. We never can be sure from which of them God will raise up some wonderful gift to men. We never are justified in coining a proverb by which we declare it impossible for God to give to men some wonderful and abiding gift, bestowed upon us as through some humble vehicle, some quiet and obscure locality, some little known and perhaps despised personality.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is to be issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75. This book is now ready for delivery.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Society

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

The more recent translations into Dutch, German, Norwegian, and Swedish pamphlets are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

NATIONAL.

Federal aid for improvements on the Illinois and Mississippi rivers, to carry out the Great-Lakes-to-the-Gulf waterway plan, is recommended to Congress by Secretary Garrison. Participation by the central government was urged, upon condition that the state of Illinois will make, without cost to the United States, and with all federal interests safeguarded, that part of the proposed improvements from Lockport to Utica on the upper Illinois. With this stipulation, the federal government proposes to provide a navigable channel eight feet deep in the Illinois and Mississippi rivers from Utica to St. Louis, Mo. The cost of this project is estimated at four million seven hundred and sixty thousand dollars. The state's proposed improvement work contemplates water-power developments at four sites between Lockport and Utica, and the construction of five locks twenty-four feet deep, to utilize for power purposes the water flowing through the Chicago drainage canal.

Cities which are situated on international water along the Great Lakes, have a special interest in the meeting of the international joint commission in Detroit on March 9. At that meeting, in addition to the hearing on the question of the level of Lake Superior, plans will be made for the next step in the inquiry regarding the pollution of international waters by American and Canadian cities. It is asserted by the specialists of the international joint commission that the treaty between the United States and Great Britain regarding the pollution of these waters is being violated at every point of contact from Lake of the Woods, in northern Minnesota, to the St. Lawrence. The situation has now become serious. It is said to be probable that the use of these waters for the deposit of sewage will be forbidden.

Without any amendment to limit their scope, the Senate of the United States, by more than a two-thirds vote, ratified general arbitration treaties between this country and Great Britain, Japan, Italy, Spain, Norway, Sweden, Portugal, and Switzerland. Attempts to exempt the Panama canal tolls question, or questions, of immigration and public education, which were related to the treaties with Great Britain and Japan, were defeated, and the conventions go into new force in the same general terms as existed before they expired.

Nine more railroads having water lines have applied to the interstate commerce commission to be permitted to retain them after July 1. The Panama canal law gives the interstate commerce commission authority in certain circumstances to permit the roads to continue the operation of water lines. Among the applicants were the Southern Pacific company, the Grand Trunk railway, the Erie railroad, the Chicago & Erie railroad, the Rutland railroad, the Spokane, Portland & Seattle railroad, and the Pennsylvania company.

Col. George W. Goethals says that, barring unforeseen delays, the Panama canal will be open for merchant ships July 1. He adds that he has always been opposed to the exemption of American coastwise shipping from the payment of tolls, because that would decrease the revenues of the canal, and in his opinion would not accrue to the benefit of consumers, but merely increase the profits of the shipowners.

Plans by which the American Telephone & Telegraph Company will dispose of its twenty-nine million dollars of Western Union Telegraph stock, have been approved by the department of justice.

INTERNATIONAL.

Following a meeting in Honolulu, during which taxation reform was discussed and explained from numerous angles, it was decided to appoint a committee of five to outline a campaign to secure more equitable taxation locally and to propose an appropriate name for the organization. While the meeting was originally called for the purpose of organizing a single tax league, it was decided that some other name would be more appropriate, for the present desire is for a quick system of equalization of taxation. Prominent single taxers and tax reformers read papers and outlined the system for which they eventually hope to secure economic freedom, and they also answered numerous questions.

"We find that the Transcontinental Railway Company, the Grand Trunk railway, and those having charge of the construction of the Pacific Coast extension, did not practise economy, and that, without including the money unnecessarily expended in building the railway east of the St. Lawrence river, forty million dollars at least was needlessly expended." This is the conclusion reached by the commissioners appointed by the Canadian government to investigate the Transcontinental railway. They found that the estimate of the late government for the road was $61,415,000, whereas the cost to date was $161,800,000, and eventually would reach $237,651,521.

The government of Uraguay is considering plans for the conservation of the fur seals found on the islands near the mouth of the Rio de la Plata. Formerly private interests leased the islands, but the Uruguayan government thought it advisable to do its own exploiting, principally for the purpose of controlling the number of seals taken each year. Two species of seals are found in these waters,—the sea lions and the fur seal. In a period of thirteen years, from 1896 to 1908, no less than 201,694 skins were sold by the sealing companies. It is said that a closed season of at least ten years will be needed in order to keep the species from becoming extinct.

A commission has been formed in Ecuador for the purpose of installing wireless apparatus in several sections of the country. The principal points to be covered are the Galapagos islands, for international communication with the west coast from Central America to Chile and to Honolulu; the Guayaquil-Quito division, for communication with other parts of Ecuador, including the Galapagos islands; Esmeraldas, Bahia, Manta, Puerto Bolivar, and Puna, where there will be smaller stations.

Dr. Douglas Mawson, the Australasian explorer, returned to Adelaide, Australia, last week from the Antarctic on board the Aurora. He said his expedition had been eminently successful. He declared that dredging had yielded the best collection of biological specimens ever obtained in the Antarctic. Many mineral deposits had been exposed, some of them rich. Their extent, however, was not traceable, owing to the ice. Occasional exposed rocks indicated the existence of a vast coal bed.

It is reported that a plan for the nationalization of all the oil lands in Mexico is to be forced through the next Mexican Congress, April 1, and that it is the intention of the federal government to transfer the oil lands to Lord Cowdray for fifty million dollars gold after they have been nationalized.

The British House of Lords has unanimously adopted a motion by the Earl of Selborne that contributions to party funds should not be considered in awarding honors. The House of Commons will be asked to concur.

INDUSTRIAL AND COMMERCIAL.

The agreement which the Standard Oil Company has just concluded with the Chinese government for the exploration of the oil fields of the province of Shensi and the northern port of the province of Chili, provides for the construction of railways and the laying of pipelines necessary for "the development of the fields and the refinement and marketing of the product." The contract is not limited as regards time. The Chinese government will receive 87½ per cent of the stock of the Chino-American Company, with the privilege of purchasing an additional 7½ per cent within two years after its formation. The American company will retain a minimum of 55 per cent of the stock.

The Chicago municipal markets commission, after an investigation lasting for several months, has reached the conclusion that the establishment and successful operation of retail municipal markets or cooperative stores must be preceded by the establishment of municipal wholesale terminal markets with several branches. A large part of the produce and fruit that comes to Chicago is handled through South Water street, the business approximating two hundred and fifty million dollars a year. The business conditions of South Water street are said to be wasteful, uneconomic, and unsanitary.

Increases in wages approximating one hundred thousand dollars annually have been granted five thousand trainmen of the Chicago, Burlington & Quincy railroad, by a board of arbitration which has been sitting for three months. The award granted full payment for all services performed, either in miles or hours, but denied in almost every instance requests for extra payment for service incidental to regular duties. No reductions in pay were made. A minimum wage per month was established for the first time for passenger trainmen.

The world's wheat crop passed the four billion bushel mark for the first time last year, when it reached a grand total of 4,125,658,000.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI March 7, 1914 No. 27

Christian Science and Human Law

JUDGE CLIFFORD P. SMITH

"As ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

"Go ye therefore, and teach all nations, . . . teaching them to observe all things whatsoever I have commanded you."—Jesus the Christ to his disciples, according to Matthew x. 5-10 and xxviii. 16-20.

"And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."—According to Mark xvi. 14-18.

"He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."—According to John xiv. 12.

"There is a law of God applicable to healing, and it is a spiritual law instead of material."—Mary Baker Eddy in "Science and Health with Key to the Scriptures," page 468.

"Christian Science teaches: Owe no man; be temperate; abstain from alcohol and tobacco; be honest, just, and pure; cast out evil and heal the sick; in short, Do unto others as ye would have others do to you."—Mary Baker Eddy in "The First Church of Christ, Scientist, and Miscellany," page 114.

For the government to "establish criteria where opinions are far apart," as with respect to the curative effects of medicines, would be "to distort the uses of its constitutional power."—From the opinion of the Supreme Court of the United States in United States *vs.* Johnson, 221 U. S. Reports, 488, 498.

"Only the most settled and established truths and principles of action are proper subjects for legislation; and everybody knows that in medical science these are exceedingly few and far between. Hence, as we have said, there is a strong element of reasonableness in the appeal made to public sentiment by the cults and sects against the enactment and enforcement of medical opinions into laws, however well intentioned such attempts may be."—From an editorial in *The Medical Brief* for June, 1912.

"It is proper, therefore, to compel by legislation, and the more stringent the better, all who offer or render services in the way of medical help to abstain from every false holding out as to their education, competency, or society connections; but not worthy to be tolerated to preclude any human being from proposing to do, or doing, honestly and under no untrue pretensions, what he can for the sick, or a sick man from employing whatever well-meant offices he chooses."—Joel Prentiss Bishop in Commentary on Statutory Crimes, section 988a.

"The right of the individual to select his own physician is a right of conscience, and as sacred as that which enables the citizen to worship God as he may desire. Indeed it is the same right manifesting itself in a parallel direction."—From a veto message delivered by Governor Thomas of Colorado.

"In the Christian Science religion the ideas of worship and of divine healing are so intermingled that it is impossible to draw the line of demarcation, and hence interference with the one or the other is an interference with the rights of conscience and thus becomes an infringement of the constitutional guaranty of religious freedom."—From a veto message delivered by Governor Mickey of Nebraska.

THROUGHOUT the ages in which the human race has been liable to suffering, disability, and death, those attacked by disease have claimed the right to try to get well, and to succeed if possible. This right has always been conceded, and by common consent as well as necessity it has included the right of the sufferer to choose the curative agency which he considers likely to do the least harm and the most good. There never was a time when this right was not important to him, nor when he was willing that it should be molested.

For many centuries the majority of people have lived or died according to the theories of the remedial system longest in the field, whatever those theories might be, even though its remedies plus the most skilful efforts of its practicians always have been palpably uncertain and inadequate. The familiarity of succeeding generations with the failure of material remedies to cope with disease induced the majority of people to accept this lack of success as inevitable or even natural. If drugs, surgical operations, or inoculations had been used without avail or with disastrous results, philosophy advised patient resignation to what could not be avoided, while theology would try to console sufferers with the view that the Father's will had been done.

Since Christian Science entered the field in the latter part of the last century, it has become increasingly evident that there is a better and more dependable method for both prevention and cure of disease. Although the practitioners of this Science have not been successful in every case, they are developing the mental and spiritual qualities which make for success in this ministry; other men and women of desirable character are enlisting in it, and measured by present results the practice of Christian Science has already become the most effective and reliable curative agent known to mankind.

Moreover, the work of healing through Christian Science is accompanied by religious instruction or spiritual teaching which is calculated to destroy the foundation of disease. Already the general acquiescence in mortal belief has been broken. The knowledge of immortal Truth is spreading. People are seeking and finding here and now a state of being that is much less subject to the common forms of evil, while hope is becoming a conviction that disease can be overcome and abolished. In short, the faith of the ages in material remedies has been displaced with a majority of people by greater devotion to hygiene or sanitation, and with a substantial and growing minority by reliance on Christian Science.

In this situation the holders of degrees from the various schools of medicine have been divided in their courses. Some of them have become Christian Scientists, in name and in fact. Others are going on as before, trying to develop their system into a science and faithfully rendering such service as they can to the people who voluntarily choose to employ them. Another and quite numerous section of the medical profession, not inaptly described as "political doctors," are putting forth their utmost efforts to have their system adopted as a state institution and to have Christian Science healing suppressed by law.

If this scheme were to succeed, the bulk of the medical profession would be on the public pay-rolls, while the rest of the people, referred to in some of the bills as "the laity," would be the subjects of medical inspection, regulation, and practice; no one's person or property, no occupation or business, no item of personal conduct, no relation of human life, but would be subject to the scrutiny and authority of an official having the degree "M.D." from a "regular" school of medicine.

Coextensive with the expansion of the germ theory, every citizen would be obliged from time to time to present himself with his children to an official doctor, who would be equipped

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

with an assortment of syringes and would make the inoculations demanded by the theories then in vogue. In case of illness the citizen could be treated in the "regular" way or not at all, although the latter alternative would not be approved, nor always allowed. Even in the case of diseases which orthodox medicine has never cured, the victims would not be permitted to employ the exponents of other methods, particularly not the one method which has cured those very diseases. All these things would be done in the name of constitutional government and ostensibly for the promotion of human welfare.

Of course such a perversion of government could not endure. It would become intolerable even to those who are now the voluntary patrons of the different schools of medicine. They would find a vast and irksome difference between "We advise you" and "The law compels you." But if such a scheme were legalized, its hold would not be easily broken. Its plan is to suppress competition by laws which act indirectly, to get authority gradually, first by one law and then by another, and not to insist overmuch on using the power thus gained while "the laity" is getting used to the possession of legal authority by the medical profession.

Every one who has had experience in public affairs knows that such a system once established by law would to a large extent be fortified against disestablishment. It is much easier to create an office than to abolish one. Many offices are created, more are enlarged, but few or none are abolished. This is true of offices created singly; much more would it be true of many offices held by the members of a numerous profession acting in combination.

An incidental but direct result of giving exclusive recognition to one system of medicine (and all schools of medicine may be spoken of as one) would be the deterioration of the system thus artificially relieved from the stimulus of competition. Taken out of the natural law of supply and demand, wherein service is sought for its merits and "the laborer is worthy of his hire," the privileged service would inevitably retrograde. The medical profession, given official warrant as being sufficient for the health of the people, would be confirmed in its habitual attitude toward all that originates outside its own ranks, and if possible this attitude would be intensified. By no means loath to assume authority when privately employed, much more would this honorable profession be subverted by the possession through law of mandatory powers.

Far-seeing members of the medical profession have more than once warned their fellows that such results would be sure to follow the laws in question, and some of them have expressed these opinions before legislative committees.

Moreover, there is such a thing as a human right, the right of an individual. In a state or nation under constitutional government, the citizen is a factor and the main factor. In any country, respect for law is inculcated by laws that are worthy of respect, and every invasion of the just rights of the citizen is inimical to the general welfare. Hence the legitimate objects of government cannot be attained by trying to compel people to conform their conduct to any standard of belief concerning the presence of God and the availability of divine law. In other words, the general welfare cannot be promoted by any scheme which would in effect forbid the people to think and act independently concerning such subjects as are involved in Christian Science healing. According to original Christianity, as well as Christian Science, health and life depend on spiritual understanding, spiritual worship, spiritual power; they depend on full, exact, or scientific knowledge of the only true God and the real man. As to such subjects the liberty of each citizen to believe and do as he thinks best is bounded only by the equal rights of all others.

When human government, by attempting too much, unjustly forced the early Christians to choose their paramount allegiance, they said, "We ought to obey God rather than men;" and the statesmanship then voiced in their behalf by the learned Gamaliel has stood the test of the centuries from that time until this. (See Acts v. 24-39.) The necessity for such a choice ought never to be put upon law-abiding citizens. Unless the true province of human law is far exceeded, all well-disposed people may heed the precepts and emulate the example of him who said, "Render to Cæsar the things that are Cæsar's, and to God the things that are God's."

The two allegiances to which he referred, the human and the divine, are inherently consistent; else the great Teacher would not have spoken as he did, nor acted as he did. While human conditions exist, needing to be made better and better until they disappear by giving place to the divine reality, there will be occasion for human law; but the just scope of human government can never be extended so far as to forbid one person from aiding another with the power of divine Mind acting through spiritual law. It is to be noticed that Christ Jesus continued to heal the sick, although the ruling class declared that it was not lawful for him to do so as and when he did it. (See, for instance, Luke vi. 6-11.)

The great mass of the people have respect for their neighbor's faith in God; they despise injustice disguised as law, they dislike monopoly, they favor equal rights and privileges, they value the right to choose for themselves. The only law on this subject which the people need or want is a plain and simple law which will forbid a man to hold himself out to the public as a medical doctor or surgeon, or to accept employment as such, without having the education and training appropriate to that profession. Any law which goes farther than this must be based on the claim that the people do not possess sufficient intelligence to choose for themselves.

Where there are several different curative methods known to men, the people have a right to choose and employ any of them. A law which discriminates between known methods, approving one or more and condemning all others, deprives the people of such right, creates a monopoly, and in effect establishes a state system of healing. The exercise of a religion being involved, it practically establishes a state religion. Such a law cannot in the very nature of things be a legitimate exercise of political power; it cannot be consistent with the institutions of a country whose coinage bears the inscriptions "Liberty" and "In God We Trust."

Christian Scientists are law-abiding citizens, well disposed toward the legitimate functions of human government, and active in the promotion of social welfare. They have no wish to force any one to adopt their views. They respect the motives and attainments of the better class of physicians. They only claim the right to do Christian work and to be free from constraint in respect to their choice of religion and therapeutics.

Christian Scientists assert that the spirit of modern government forbids any group of citizens, however preponderant in point of numbers, from passing laws which would enter into the relations between God and men and set limits to His salvation by implying that it does not include the cure of disease. They assert that every citizen has the right to choose the method or system which he shall employ to preserve his health, and the right to have the aid, if he so desires, of a practitioner of that system. Such rights pertain directly to the preservation of life; they belong most vitally to the pur-

Digitized by Google

suit of happiness; and, when the citizen chooses to rely on the practise of a religion to prevent or cure disease, they are inseparable from both civil and religious liberty. When the American people assumed the power of self-government, they declared such rights to be God-given and inalienable.

The "Storm Fool"

MYRTLE B. S. JACKSON

Among the Indian legends, which have been forever crystallized in Longfellow's "Song of Hiawatha," is the one which tells how Pau-Puk-Keewis, the "Storm Fool," found Hiawatha's wigwam unprotected one morning, and having done all the mischief he could in the house, went on to kill all the birds that fluttered round about the dwelling.

As it sometimes happens that we leave our mental dwelling-places unprotected, and the "Storm Fool" of error gets in, strangles our raven of wisdom and our birds of joy, and for the time being sets our home or our community in wild confusion, it may interest us to see how Hiawatha set to work to exterminate the enemy, and what experiences confronted him in his undertaking. The "Storm Fool," true to the nature of error, at once began to change forms. First he became a beaver, then a big fish, then a gigantic bird, lastly a serpent, but Hiawatha killed him in each of these forms, and finally, after many adventures, he is caught in his own natural shape, and rushes to the mountains for shelter, where the storm, the wind, the thunder, and the lightning rend the rocks, and they fall on him, and he is crushed in the ruins,—a very good picture of error falling into its own snare, and rushing to its own self-destruction.

The part of the story which particularly concerns us is the fact that not until Hiawatha had driven the error out of its different masks and shapes could he really get rid of it. As Mrs. Eddy has so adequately explained on page 209 of "Miscellaneous Writings," "Divine Love, as unconscious as incapable of error, pursues the evil that hideth itself, strips off its disguises, and—behold the result: evil, uncovered, is self-destroyed."

But for all our learning about its impersonal nothingness-to-nothingness nature, error seems very cunning and subtle in its disguises, and we may be deceived in all sorts of unexpected ways to believe in it, and to endow it with fictitious power which it cannot possibly exercise if we are alert and wide-awake. One of its most alarming dress-ups is to masquerade in the garments of our fellow workers. We feel tempted to think, when we see it looking out from under a familiar hat, that good has changed its eternal nature and become evil, that love has ceased to exist, and there is in its place only weakness, mutability, and malice. The cry is wrung from us as it was of old time from David, "For it was not an enemy that reproached me; then I could have borne it: . . . but it was thou, a man mine equal, my guide, and mine acquaintance. We took sweet counsel together, and walked unto the house of God in company."

Until we realize that our difficulty lies, not in the task of bringing goodness and love and their expression back to a standard from which they have fallen (since goodness and love never have fallen, cannot fall), but simply in our need to detect the "Storm Fool" of impersonal error, pretending that it is a friend who can injure and betray, we shall still go on suffering, and mourning over the seeming tragedy. After all, we need not be so horrified that error should attempt to deceive the very elect, or that it should prance about assuming to be their individuality, for the lie of evil does not stop at pretending to emanate from God Himself. Our Leader points this out in "Unity of Good," page 17, where she says: "Evil seeks to fasten all error upon God, and so make the lie seem part of eternal Truth. . . . evil ties its wagon-load of offal to the divine chariots,—or seeks so to do,—that its vileness may be christened purity, and its darkness get consolation from borrowed scintillations." Our deliverance, therefore, lies in our instant recognition of error for what it is. Whether it claims to be a god or a devil, it is still nothingness, unreality, and this knowledge alone will destroy all its suppositions and presumptions.

It is axiomatic that good never changes; conversely, the characteristics of error have not changed. Whenever we see the desire to lead, to dictate, and to pursue the letter to the exclusion of the spirit; wherever we see rivalry, and hypocrisy, and self-righteousness, and callousness to the feelings of others, we may know such ebullitions to be the old "Storm Fool," which is not to be given any more consideration because it happens to break out in a supposedly sacred locality. In Isaiah the promise stands, "Judgment also will I lay to the line, and righteousness to the plummet: and the hail shall sweep away the refuge of lies." Mrs. Eddy has tenderly testified to the ever-presence of the eternal goodness and unchanging truth of being when she writes in her "Poems," (p. 36),—

Stay! till the storms are o'er—
The cold blasts done,
The reign of heaven begun,
And Love, the evermore.

Signs Spiritual

HELEN R. DEMING

Our work in Christian Science should be governed by divine Principle, and every treatment should so rise above material conditions that we consciously enter into the kingdom of heaven, where the peace and health sought for are inevitably found. Yet how often do we allow ourselves to become doubting Thomases, and look for a sign, some material evidence that our work is done! Even when some manifestation appears, we often interpret it materially instead of taking it in its true significance.

A great lesson along this line came to me some time ago. My baby, twenty months old, was taken with bowel trouble. I immediately began treatment, and while she soon manifested greater strength and normal appetite, the one discordant expression peculiar to the ailment still continued. I was much puzzled, but worked on without conscious fear. One day a lady came for help, and in presenting the truth to her, my thought was so uplifted that after she left I continued to work for her, and then took up the thought for baby.

About two in the afternoon, however, the child manifested such a condition that had I known nothing of Christian Science, fear would have completely unnerved me. It certainly looked as though the situation was most serious, and it seemed that some one else must take the case, since the human sympathy of motherhood was keeping me from doing effective work. I asked my husband to call up a practitioner, and then I went up to my room to think out the meaning of this sudden sign of discord. How could it come just after that clear and certain vision of the truth?

Mrs. Eddy says in Science and Health: "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (p. 476). I had been striving earnestly for that Mind to govern me which was in Christ Jesus, and why had I failed to heal? Suddenly the meaning of it all flashed

Digitized by Google

over me. Truth had not failed; it could not. The healing was done, but I was on the point of robbing myself of its blessing by misinterpreting its sign. Now the symbol stood out in all its spiritual meaning and significance, the rainbow of promise. What had seemed so appalling in the manifestation was but the complete surrender of error, not the beginning of greater trouble. This was now seen by me as the surest sign of the complete victory of Truth, the final annulment of every belief of error; and so it proved. I went to my husband with joyous heart and shining face. He had called up a practitioner, but could not get her. "There is no need," I said. "Our little one is already healed, and I know it now." This was indeed the case, for every other manifestation was quite normal, and that was the end of the whole trouble.

How I rejoiced! It was not alone because the babe was safe and sound, but because I had learned just a little more of Principle and how to see things spiritually. This knowledge, or insight, would help me to win many another battle, yet how near I had come to surrendering just at the moment of victory! How much we miss by not recognizing these divine visitants! We see them as material because of our own material thought. As soon as we look to the spiritual and know that it alone has power, then the light comes, bringing with it clearer vision, larger views. We must learn to rely more fully upon the truth we declare. Not only must we give it out, conscious of the kingdom of God as here and now, but we must remain undismayed though the heavens seem to fall. But God and His heaven never do fall or fail, and neither does the word of Truth given in His name.

How to Trust God

MAURICE KENNEDY

In the course of conversation on the subject of trusting God, a Christian Science student once said to the writer, "Yes, but how do you trust God?" and in seeking for words in which clearly to convey a sense of that active trust in the all-presence and power of good which we gain in Christian Science, a trust which is a vital, operative, and intelligent thought-process, rather than a mere passive acquiescence, the following passage from Science and Health came to mind: "Your true course is to destroy the foe, and leave the field to God" (p. 419). Surely no words in our text-book state more succinctly the scientific way to trust God, the way which is an industrious mental activity, disposing of all that is false and obstructive in thought, and offering free, full, and loving hospitality to the divine idea or Christ.

Pondering the mental history of many satisfying demonstrations, one sees that in dealing with error the right thought-modus in Christian Science is mentally to declare, and entertain to the best of our ability, the absolute truth governing the situation. The effect of this is, that our fear of and belief in the arguments of evil, of whatever form, at once begin to disappear. Through persisting in this mental declaration and entertainment of the truth, we steadily destroy our fear; and in the proportion that this is done we gain a quiet, calm, and correct state of mind, capable of perceiving and receiving the right idea, which is eternally expressed.

In thus denying the error and declaring the truth, we do not, and should not, outline or try to outline when, how, or in what way the truth is to be manifested in human experience and the demonstration made. We simply need to destroy the foe, and trust the infinite Mind which "governs all, from the mental molecule to infinity" (Science and Health, p. 507), to supply ourselves with the specific right thoughts respecting all concerned in the problem, seeing to it that we keep our thought always receptive to the right idea by excluding from it all belief in the reality or power of any evil suggestion which the situation, whatever its nature, may seem to involve, to material sense.

Let us take a concrete case by way of illustration. Suppose we have to meet a public demand which fills us with nervousness, anxiety, or dread; we have, for instance, to make an important public speech. In working over this, and making due and proper preparation for the task, we are authorized in Christian Science to know and to declare for ourselves the absolute truth governing the situation; that as the perfect reflection of the perfect Mind, man is always harmonious, fearless, and self-possessed; that he is eternally conscious of the right idea of the divine Mind; that he possesses power to think and act rightly; that he lives, moves, and has his being in divine Love; and that the one Mind always holds all His ideas in the right relationship to one another. So doing, we are able to exclude from our consciousness all anxious thoughts and speculations as to exactly how we shall act or what we shall say in any crucial moment, and destroy, through the realization of Truth, the fears and evil suggestions which might present themselves, such as that we shall break down, fail in some particular, or experience inharmony.

Thus we may reach a calm, receptive, trustful, and thoroughly alert state of consciousness and command of mental resources. The right way to act and the right thing to say will be made perfectly clear to us when the time for speech and action comes, because we will be able to perceive the right idea, which is and always has been perfectly expressed through the real man, who is in practical, vital at-one-ment with divine Mind. We have destroyed the foe and left the field to God, and this surely is the way to trust Him.

[Written for the *Sentinel*]

The Christ-idea

MADGE M. ELDER

Not only to a few
  Lone shepherds of the field
The night with glory shone,
  The heavenly anthem pealed;
Not only to one age
  That peace on earth, good will;
Not only to one race
  Was Christ born to fulfil.

Is there no darkness now,
  No need of peace on earth?
Is there no sunken sense
  That waits a Saviour's birth?
Is there no ear to list
  Truth's gentle, sweet appeal?
No sinful now to save,
  No suffering to heal?

But there are those who watch,
  As Jesus taught, and pray,
Who keep faith's lamp alight,
  And then await the day;
And on these longing eyes
  Shall break the Christmas morn,
And in each waiting heart
  The saving Christ be born.

Selected Articles

[Frederick Dixon in the *Paignton Observer*, Paignton, England]

Under the heading "Spiritualism" in a recent issue, there is a letter in which the writer states that not long ago a series of lectures was given by a Christian Scientist in Paignton, at Deller's café. The large placard of this meeting was sent to me, together with a copy of your paper in which the letter appears. I am sure, therefore, you will permit me to say that the lectures in question had nothing whatever to do with Christian Science, but were given on the subject of theosophy. With regard to the teachings of theosophy it is not my intention to say anything, as it is a rule of the Christian Science movement never to criticize the beliefs of those who differ from it. I shall be obliged, however, if you will permit me to point out that the two movements are absolutely distinct and antithetical in their teaching, and have absolutely no connection with each other.

Christian Science sets forth the means whereby the teaching of primitive Christianity is made practical today. That is to say, Mrs. Eddy, in her book "Science and Health with Key to the Scriptures," shows that the command of the Founder of Christianity was not merely to preach the gospel, but also to heal the sick; in plain English, that theory and practice cannot be separated from each other, and that the only guaranty anybody has that the gospel preached is the gospel of Jesus the Christ, is the proof demanded by him that the works he did should be repeated. When Jesus said, "He that believeth on me, the works that I do shall he do also," he made the ability to perform those works in some measure the test of the claim to be a Christian, and the ratio of any person's Christianity is in exact proportion to that person's ability to repeat Jesus' works. For several centuries after the ascension, the healing of the sick was regarded as a natural part of Christian practice. The prayer-book of Edward VI contained a service for healing the sick, which is a proof that even as late as the sixteenth century the claim had not been utterly abandoned. Gradually, however, the preaching of the gospel became separated from the healing of the sick, and the responsibility of the latter was thrown upon the medical profession.

In explaining Christian Science to the world, Mrs. Eddy demanded that Christians should reassume the responsibility placed upon them by the obvious teaching of the gospel. At the same time, Christian Science is not merely the attempt to heal the sick. It is essentially the effort to overcome sin in the human consciousness. For centuries, the connection between sin and sickness has been loosely and theoretically admitted. It is only in the teaching of Christian Science that in modern times the scientific relation of the one to the other has been fully understood; and as this relation is understood, the world begins to realize why Jesus said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" The teaching of Christian Science is aimed, therefore, not merely at the healing of the physically sick, but at the healing of those who are sick with the belief of sorrow or want or sin, indeed of those who are sick from believing in some power other than God. In short, as Mrs. Eddy says (Science and Health, p. 150): "Now, as then, signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

It is just forty-eight years since Mrs. Eddy first gave Christian Science to humanity, and during that time it has spread itself entirely around the world. The cause of its success is not difficult to understand. It is bringing to men not merely a religion of words but a religion which is scientific, a religion whose Lesson-Sermons, when they are preached, heal the sick in trespasses and sins as they were healed in the time of Jesus.

✧

[Charles D. Reynolds in *The Union*, Manchester, N. H.]

The Christianity that healed the sick in the first century and proved itself a health-giving power, is the Christianity which Christian Science is making operative in the twentieth century. The healing accomplished by Jesus and his followers in the early centuries is being repeated today, and proves that sanitation and hygiene are terms that apply as properly to mental conditions as to physical. This is no new doctrine. The Founder of Christianity proved that the most important department of the science of life and health is not in the physical but in the mental. According to his teaching, therefore, to exclude the human mind and character and limit the work of sanitation and hygiene to mere physical cleanliness is superficial. The one-sidedness of such a course was criticized by the Master himself when he chided the Pharisees because they limited their efforts to keeping clean the outside of the cup and platter and neglected "that which is within."

Christian Scientists are today strictly following their Master's injunction to "cleanse first that which is within." This teaching is now being applied by them as Jesus applied it, with the result that sickness and disease are being prevented and healed by scores and thousands of cases. The method may differ from the ordinary means, but the results are undeniable, as the statistics gathered from time to time will prove. No one denies today that it is in the human mind that the worst forms of sickness and disease originate, in appetite uncontrolled, passion, anger, fear, and the myriad forms of selfishness. Any teaching that enables humanity to overcome and eradicate evil from consciousness is essentially therapeutic. Every sin destroyed is so much sickness destroyed or healed. On this point Mrs. Eddy writes in the text-book, "Science and Health with Key to the Scriptures," on page 135, "The same power which heals sin heals also sickness." The Christian Science movement is a complete verification of that statement. It is correct to say that any system which does this is sanitary and hygienic, though it be mental and not physical. Pure food, pure air and water, and a clean body and environment, are indispensable to health at this period, and they are not inconsistent with the Christianity of the Christ; but let us not think that this is the whole of the problem of health.

There is plenty of occasion for closer cooperation and mutual understanding between those who work by differing methods. While many other well-intentioned people are trying to cleanse "the outside of the cup and the platter," Christian Scientists are devoting themselves to what they understand to be the vastly more important task of cleansing the human mind by eliminating from consciousness all that is contrary to divine Truth, which Jesus taught and practised with such healing success. The spiritual is above the material, and he who follows the former will find himself made free from bondage to the latter. He who consistently practises the teachings of Christian Science, to that degree finds himself freed from evil conditions; he cannot be the victim of those failures which tend to fill our prisons, jails, almshouses, and reformatories.

If it is true that from within, out of the heart of men, evils proceed, murders, thefts, drunkenness, hate, and fear, and this was what Christ Jesus declared, then it is evident

Digitized by Google

that more attention must be given to mental sanitation and hygiene. Our health problems will never be successfully solved upon a material basis; the relation between religion and health is now clearly recognized, and no substitute for scientific Christianity is possible. This explains the great interest Christian Scientists are taking in the observance of health day. Having experienced so much health themselves by this means, they naturally feel that the subject is one which concerns the public welfare.

✧

[From *Leslie's Weekly*]

Recently I related in this column the facts about the refusal of a leading life insurance company to issue a policy to a Christian Scientist unless he would agree in case of serious illness to call in a regular physician. According to Mr. H. Cornell Wilson of the Christian Science committee on publication for the state of New York, all the companies do not take a similar stand. He writes me:—

"Several at least of the prominent insurance companies look upon Christian Scientists as 'preferred risks,' so called. That is to say, the knowledge on the part of these companies that the man is a Christian Scientist, gives him a standing which will, all other things being equal, secure a policy for him every time. And this, notwithstanding the fact that the Christian Scientist does not agree to have recourse to *materia medica* in case of serious illness. The reason for this is readily found. These organizations, as *Leslie's Weekly* says, are interested in keeping the death-rate as low as possible. Their actuaries know full well that, given a body of people whose tendency is to live lives of purity, abstemious as to liquors, tobacco, and drugs, whose habits are being formed or reformed by a close study of the Scriptures, the death-rate is certain to be low. This, be it known, is the case with Christian Scientists, a fact generally acknowledged in insurance circles. The added fact is known in these same circles, moreover, that the health of those who embrace Christian Science is fully as safe while entrusted entirely to Christian Science as is the health of others who rely upon medical treatment."

The point I chiefly sought to enforce was, that there was no religious prejudice in the rejection of the Christian Scientist as an insurance risk. The company in question acted according to its light, and the companies referred to by Mr. Wilson doubtless believe that they are safe in granting policies to Christian Scientists on the same terms as to other people. Persons who lead correct lives certainly ought to be better risks, even if they will have nothing to do with doctors, than are persons who patronize doctors but frequently violate the laws of health.

✧

[William S. Campbell in *Washington* (D. C.) *Post*]

Christian Science for more than a generation has been calling attention to the fact that God could not have made man out of the dust of the ground, for the reason that God "created man in his own image." It is high time that humanity gave up its belittling thought of God, which assumes that He bears some resemblance to a man made of dust. As understood in Christian Science, God writes His commandments upon the "tables of the heart," where they are as enduring as though chiseled in "tables of stone."

To read the Bible from an historical or even from a literary view-point, has a certain value, though not the highest. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, states this concisely in the single sentence, "Take away the spiritual signification of Scripture, and that compilation can do no more for mortals than can moonbeams to melt a river of ice" (p. 241). The value of Bible study, whether the subject covered be historical, allegorical, or didactic, can be found in the answer to these questions by the student: What does this mean to me? How does this apply to my individual experience? We may read of Adam's fall and think of the misery and the suffering that would never have been, had Adam not been so weak; but the practical line of thought is, What about the Adam in me? Am I overcoming the temptation to sin and be sinful, and so doing my part to annihilate this stream of sin?

A scientific understanding of the Bible helps to answer these questions aright, for it makes clear that the Adam—antediluvian and postdiluvian—is the man of dust, of which it is said, "Dust thou art, and unto dust shalt thou return." It makes it clear that this dust man is not God's man described in the first chapter of Genesis. This scientific understanding opens the way of redemption—not by trying to make dust into spirit, nor by imputing intelligence or power to dust, but by knowing that dust or matter is no part of God's creation, for the record reads, "God saw every thing that he had made, and, behold, it was very good."

The scientific reading of the Bible will lead to the positive conclusion that since God is Spirit, and man is Spirit's image and likeness, therefore man is spiritual instead of material—not *to be* spiritual, but *is* spiritual. From this premise one can begin to discern what God has already wrought. This process requires mental application to the solution of the problem of being. It is not so easy as drifting with the tide of theological theories in the expectation of touching the shore of eternity, there to become transformed, but it has the advantage of being practical, of affording blessings along the way, and of enabling the student to be "ready always to give an answer to every man that asketh you a reason of the hope that is in you."

✧

[Charles E. Jarvis in *Orange County Tribune*, Fullerton, Cal.]

It seems strange that a Christian clergyman who professes to be a follower in the footsteps of the meek and humble Jesus should prefer to devote his time to attacking Christian Science, rather than pointing his hearers to such better means of salvation as he may have to offer. There is a lot of illness, poverty, misery, and woe in the world that humanity is striving to be freed from; therefore why not help in trying to lighten this burden by pointing the way upward to God, instead of attempting to tear the faith of another to pieces?

Christian Science is not what the reverend critic would have your readers believe. If it were what he evidently thinks it is, it would have disappeared long ago. If suggestion or hypnotism were employed in its practice, it would not differ from many other movements which have started from time to time and as often failed. Admitting that suggestion and hypnotism are "common property," and that they are as old as the hills, they are simply the operation of one human, or "carnal," mind over another, and Paul not only tells us that the "carnal mind is enmity against God," but that "to be carnally minded is death."

Webster's International dictionary defines Christian Science as "a system of healing diseases of mind and body which teaches that all cause and effect is mental, and that sin, sickness, and death will be destroyed by a full understanding of the divine Principle of Jesus' teaching and healing." During the years that the writer has been identified with this movement, he has witnessed the healing of many diseases, the destruction of sin, and the overcoming of grief. Peace, happiness, and prosperity now reign where discord, impatience,

Digitized by Google

and poverty once prevailed. These transformations have been wrought as a result of the conscious realization of the true fatherhood of God and of man's relationship to Him as set forth in the Bible and elucidated by the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. The cases above referred to have been repeated in varying form and in thousands of instances all over the world during the past forty odd years, and constitute the proof that Christian Science, both in theory and practice, is positively antithetical to any teaching, system, or method bordering upon or involving hypnotism, mesmerism, or suggestion.

The "working force" in Christian Science is prayer. James tells us that "the effectual fervent prayer of a righteous man availeth much." On the first page of Science and Health we read: "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love. Regardless of what another may say or think on this subject, I speak from experience. Prayer, watching, and working, combined with self-immolation, are God's gracious means for accomplishing whatever has been successfully done for the Christianization and health of mankind." That Christian Scientists have in a measure apprehended and successfully applied their understanding of this sense of true prayer in daily experience, is evidenced by their lives, and it is because of this living proof of the efficacy of the teaching that the attention of the world is being drawn to the movement.

✧

[Thomas F. Watson in *The Pacific*, Berkeley, Cal.]

The one thing which Christian Science teaches and emphasizes is "the law of God," and its availability in this and every age. The Christian Scientist can say with the psalmist, "How love I thy law! it is my meditation all the day." This law of God understood and demonstrated brings harmony, for it is the law of Spirit, of Life, Truth, and Love. Paul said, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." This spiritual law which we find in the Word has nothing in common with suggestive therapeutics, or mental suggestion. The Bible states, "He sent his word, and healed them, and delivered them from their destructions." When Jesus was here, he spoke the word and they were healed.

Our critic states, "We cannot find in all the story of the apostolic church a single record of a meeting where the disciples discussed their ailments or talked about their cures;" yet they considered these things of sufficient consequence to record them carefully, and the gentleman has overlooked the fact that when John the Baptist sent a messenger asking, "Art thou he that should come? or look we for another?" Jesus answered, "Go . . . and tell John what things ye have seen and heard; how that the blind see, the lame walk, . . . to the poor the gospel is preached." Likewise Christian Science should be judged by its fruits.

✧

[David Anderson in *Ovens and Murray Advertiser*, Beechworth, Australia]

Christian Science is not the faltering faith which rests on a blind belief; it is the faith which is an enlightened understanding of God, Spirit, and of man's relationship to Him. Christian Science healing is attained through the understanding of an infinite and ever-operative divine Principle. The prayer of Christian Science is not "a mere request that God will heal the sick." "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love." "Until belief becomes faith, and faith becomes spiritual understanding, human thought has little relation to the actual or divine" (Science and Health, pp. 12, 1, 297). It will be seen, therefore, that Christian Science healing has nothing in common with what is usually known as "faith-healing," any more than it has with hypnotism or mental suggestion.

The cure through Christian Science of what are generally recognized as organic complaints, is now a well-established fact and has been attested by medical men of standing and repute. Experienced Christian Science practitioners have been known to say that they often meet more difficulty in healing complaints of a neurotic type than in curing diseases in which the physical organs have been distinctly affected. Jesus, the great healer, made no distinction between nervous, functional, or organic diseases. He healed them all, and he has given the assurance that those who believe on him shall be able to do his works.

✧

[A Subscriber in *The Dayton* (Ohio) *Journal*]

When Jesus began to preach the gospel, he healed all manner of disease. When he sent the twelve out, he commanded them to heal the sick; and when he sent the seventy out, he also commanded them to heal the sick. When Peter found the crippled man "at the Beautiful gate of the temple," he commanded him "in the name of Jesus Christ" to "rise up and walk." When Philip went down to the city of Samaria, he healed the sick. The apostle James says (speaking to the church), "Is any sick among you? let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord: and the prayer of faith shall save the sick, and the Lord shall raise him up; and if he have committed sins, they shall be forgiven him. Pray one for another, that ye may be healed."

Now, will some one tell me if the command to the church to heal the sick has been revoked? If so, when and by whom? I am not a Christian Scientist, but Christian Science is growing rapidly. I learn that there are sixteen churches in Chicago, all prospering. Why? Simply because they heal the sick. [This correspondent has been misinformed as to the number of Christian Science churches in Chicago. At present there are twelve churches and a society.—EDITOR *Sentinel.*]

Love's Bounty

MINNA MATHISON

THIS is the feast of Love, to know
The Father's bounty all doth feed;
That peace and joy forever flow,
All unconfined by doubt or creed.

Each claim of warring sense must melt
In the glad warmth of grace and praise;
No more the pang of hate be felt,
With Love the guardian of our ways.

When error speaks in thunder tone,
The clearer clarion Truth doth call;
For we are led by Love alone,
And Love is ruler over all.

And if we walk in pleasant ways,
Life's blessings hourly greater grown,
To the All-giver be the praise,
Since Love is mindful of its own.

Editorial

Seeking at the Source

SINCE the publication of "The First Church of Christ, Scientist, and Miscellany," many letters have been received at headquarters expressing great gratitude for this book, and for the opportunity it has given to Christian Scientists to become more familiar with Mrs. Eddy's teachings on various subjects more or less intimately connected with the healing and regenerating work of Christian Science. In this book there is gathered practically all of our Leader's published writings since 1896; and when we stop to consider the great numerical growth which has taken place in the Christian Science movement since that date, we can readily understand that its publication has meant the opening up of a mine of information to the many who have become Christian Scientists within the past few years, and to whom the publications in which these articles first appeared were inaccessible.

One can but be impressed, indeed, as he turns the pages of this new treasure, this fresh store of garnered wisdom, with the multitude and variety of problems which the development of this great movement presented to its Leader for solution, and how lovingly and wisely, under divine guidance, every obstacle was removed and the crooked made straight. Then it matters not what the future may have in store, for it has been proven, again and again, that whatever problem may present itself, somewhere in Mrs. Eddy's writings, in either the letter or the spirit, will be found the key to its solution, for in her own experience they had each and all presented themselves, in one phase or another.

In the Foreword of the new volume is the statement that no one "knows anything about Christian Science except as he has learned it from her [Mrs. Eddy] and from her writings." Just to the extent that Christian Scientists realize this statement to be true, are they saved from the perils of certain literature purporting to be Christian Science, which seems to be on the increase. When one is seeking information on a subject which vitally concerns his well-being, it is the part of wisdom to seek that information at its source, rather than to get it second-hand and colored with the personal bias of the purveyor. If, then, we are desirous of gaining that fuller understanding of Christian Science which will bring to us a realization that the peace of God, the richness of life eternal, is possible here and now, there is but one place in which it may be found, and that is in the writings of its Discoverer and Founder and none other.

On page 495 of Science and Health Mrs. Eddy answers the question, "How can I progress most rapidly in the understanding of Christian Science?" by saying: "Study thoroughly the letter and imbibe the spirit. Adhere to the divine Principle of Christian Science and follow the behests of God, abiding steadfastly in wisdom, Truth, and Love." In these succinct directions she has pointed out the only safe course for Christian Scientists to take in regard to every matter upon which they may be in doubt. There is little or nothing to be gained by seeking to obtain from other persons their opinions about Christian Science and its teachings. Both the letter and the spirit of these teachings are to be found in Mrs. Eddy's writings, especially in Science and Health, and it is to these writings that we should go for that understanding which will enable us to solve all our problems. Whether they be problems of church government or problems of association with other Christian Scientists, problems of business or problems of social intercourse with those who are not Christian Scientists, he that seeks the answer at the right source will find it. For instance, who that has studied thoroughly the letter and imbibed the spirit of the last fifteen lines of page 340 of Science and Health, or "A Rule for Motives and Acts" (Church Manual, p. 40), will need to seek the opinion of any other person on these subjects?

Throughout Mrs. Eddy's writings Christian Scientists are implored and exhorted to turn to God for guidance in *all* their affairs; and why they should do this is so fully elucidated in these writings that there should be no misunderstanding. To those who have imbibed the spirit of Christian Science, the Bible has been illumined, and God is no longer unknown or ignorantly worshiped. Mrs. Eddy has emphasized the fact that the Bible was her only text-book in gaining that profound understanding of "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1), to which she attained, and by this interpretation and demonstration she has proved beyond the possibility of refutation the truth of her discovery. Christian Science as taught by Mrs. Eddy stands securely on the test first imposed by Gamaliel: "If this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it." Only refined gold can withstand the crucible fires: the dross has lost even the value which association lent it.

ARCHIBALD MCLELLAN.

✧

"Grow in grace"

THE moment one recognizes the metaphysical fact revealed in Christian Science, that all real life is a manifestation of the activity of infinite Being, that moment he must realize that the phrase "an unprogressive life" involves a contradiction of terms.

Intelligence is forever alert, and to awaken to this inherent nature of every manifestation of Life is a primary requisite of spiritual progress. Said the Master, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." In other words, we live as we apprehend and manifest the divine Life. This truth is constantly emphasized in Christian Science, and a great nature student became so convinced of it, even by the intimations which he found in every-day experience, as to declare that "life must be a progressive revelation of truth, each generation must hold an original relation to the universe, each age have its own prophets and take destiny into its own hands."

Surely no one can observe the growth process of the flowers of the field without being impressed with the fulness, freshness, and fecundity of the forces to which they give expression. Every moment and at every point their movement is no less prodigious than clever. The nature expressed through "natural, spiritual law" (Science and Health, p. 240), offers no covert for inertness; indeed, nothing in the universe is still for an instant. The activities of the so-called atom, no less than those of "Arcturus with his sons," are telling ever of tireless Mind. From the heights to the depths of being a goal is forever in view, growth is the universal mandate, and even error simulates activity as a part of its deception.

Now mystery can attach to life only when we think of it as an expression of materiality. We are convinced that Mind is absolutely unfettered by our consciousness of the spontaneity of the imagination, and as the bud noiselessly but irresistibly crowds away the lifeless bark, thought is directed to the great nourishing Father-Mother, the Life which is beneath and behind all real being, and thus the beauty and sweetness of the lily's unfoldment speaks for the manifestation of Truth. We are looking away from matter to Spirit.

Digitized by Google

The naturalness of growth obtains in the fact that it is indissolubly associated with life, and consent to its absence in our own religious experience is therefore consent to death. Every truly Christian man must grow; he cannot escape it, for, as Mrs. Eddy has said, "Life is the law of his being" (Science and Health, p. 63). The question of our normal growth and efficiency is simply a question of our realization of man's relation to God. Given an infinite source of spiritual intelligence to which each of us is directly related in his higher nature and capacity, and an unprogressive spiritual life is seen to be abnormal, its continuance an unpardonable sin. When, therefore, Peter calls on us to "grow in grace" and in knowledge, he is naming not the fulness of Christian achievement, but the minimum requirement of Christian consciousness. Nevertheless, how easily have we been induced to let the years go by without any sensible spiritual advance whatever.

This lack of spiritual advance has been both the gross incongruity and the pitiful weakness of Christian profession. The Master's declaration, "And greater works than these shall he do," together with St. Paul's expectant thought of our attainment of "the measure of the stature of the fulness of Christ," and kindred Scripture declarations, compel us to think of the legitimate but unrealized expectations of the early church. What great things would Christian history have chronicled had the inheritance embraced in Jesus' words, "I give unto you power," been entered into and utilized instead of being buried in the earth and forgotten!

"But," some may ask, "what can we do?" This: Awaken out of our sleep, and be no longer content with fruitlessness and inefficiency. What lesser ideas may express by instinct, it is ours to express by conscious effort and alert responsiveness to the call of Truth and Love. Growth in grace is not a bestowal, it is an achievement.

JOHN B. WILLIS.

✧

"The full program of Christianity"

ONE of the most thrilling passages in the New Testament is to be found in the fourth chapter of Luke, which records the first public appearance in Nazareth of Christ Jesus as a religious teacher. The full significance of this passage is not grasped, however, unless we relate it to the preceding account of his temptation and great victory in the wilderness, an experience from which he returned to Galilee "in the power of the Spirit." We are told that he went to the synagogue on the Sabbath day, as was his custom, and stood up to read what were probably familiar words from the prophecy of Isaiah, but which took on a new meaning when followed by the impressive statement, "This day is this scripture fulfilled in your ears." The passage itself, coming to us through the Greek, reads: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised, to preach the acceptable year of the Lord."

This passage, which some one has called "the full program of Christianity," must have awakened high hopes on the part of some who were present, when they were told that all its gracious promises were awaiting fulfilment in their very midst. Had not the psalmist also said that God "healeth the broken in heart, and bindeth up their wounds"? It is not likely that any one had ever questioned the power of Him whose "understanding is infinite" to do all this, but the very fact that Jesus' auditors "wondered" at the words which he spoke, shows that their mental attitude was exactly the same as that of the many today. Even in this age there are those who would stoutly resist any attempt to curtail these passages of Holy Writ, but would as strenuously deny their practical application to the healing of human woe, whether it be mental or physical. We read that some of those who were present were so filled with wrath when Jesus spoke of the cleansing of lepers, that they attempted to take his life when he sought to bring to them life "more abundantly."

It is, however, good to know that evil cannot overpower the divine purpose. Although there were some long centuries of silence between Jesus' day and our own time, the healing word is again heard, accompanied by the "power of the Spirit" as in his ministry. Humanity could not and should not be content with a partial and incomplete statement of Christianity, and as our revered Leader reminds us, God's angels bring anew the message of the ever-present Christ, "whisper it, through faith, to the hungering heart in every age" (Science and Health, p. 482). Those who are satisfied with materiality, or in bondage to it, fail to hear or heed the message, although the word ever is, "Today if ye will hear his voice, harden not your hearts." Why should any one harden his heart against the gracious offer of complete deliverance, whether the need be mental or physical? In the Psalms we read, "The Lord is nigh unto them that are of a broken heart." Christian Science is proving this statement true today, even where sentence of death has been passed, when the sense of sin and sorrow has done its utmost, and the learning of this world declares that the physical organism manifests the condition indicated by the psalmist's words. If God, the infinite power, the only power, is nigh to one, can sorrow crush that one, or kill him by controlling the action of his heart? It is not possible.

Jesus read from the good book that God, divine Love, had sent him "to heal the brokenhearted," and shall any doubt or question that divine Love is as ready to do this now as when Jesus announced it in the synagogue at Nazareth? True, there were centuries of doubt and denial between Isaiah's day and that of the Master; but this mattered nothing to him, nor does it matter that many more have intervened between that day and ours, for "one day is with the Lord as a thousand years." Again, we read in the Christian Science text-book (p. 45), "Glory be to God, and peace to the struggling hearts!" Is not this the message which we should carry with us into the duties, the cares, and the toils of each day, that peace and new strength may gladden the eventide? God has all this, and no less, for those who will accept it.

ANNIE M. KNOTT.

SANTA MONICA, CAL.—In July of last year our distribution committee started taking the *Monitor* weekly to the quarters of the county chain-gang, situated in Topango canyon, about five miles from here. The guards were very courteous and willing for the paper to be left, and gradually *Sentinels* and *Journals* were added. Then we were given permission to hold services there. On Jan. 4 we held the first service, and our first reader and another gentleman conducted it. We had our regular form of service, with the omission of the singing and the collection. Announcement was duly made that we would hold service every other Sunday afternoon at three o'clock. Out of forty-one prisoners, twenty-four listened to the service.

While washouts on the road have made traveling very difficult, Love has led us, and yesterday, Feb. 1, there was more interest than ever manifest, many of the men joining in the responsive reading. We were greeted one Sunday with the men singing "Nearer, my God, to Thee." The *Monitor* made possible our being able to reach these men, and we know the seed of Truth is being sown.

About three miles up the coast is the "101 Ranch," or Broncho Film Co., and we also started at the same time to take *Monitors* there. Today the manager stated that there had begun to be a great interest displayed, and that before the literature was taken to the club-room many would go and pick out what they wanted. We have gradually been adding lectures, pamphlets, *Sentinels*, and *Journals*. Our work is increasing continually, and we are grateful for the opportunity to serve in this cause.—*Correspondence.*

OMAHA, NEB.—Christian Scientists are extending to the public a cordial invitation to attend the dedicatory service of their church to be held today [Feb. 1].

In 1903 the ground at the northeast corner of Twenty-fourth street and St. Mary's avenue was purchased as the site for the church home to be erected, and on Oct. 6, 1909, the corner-stone for the new edifice was laid. Services were held in the new building for the first time on Sept. 3, 1911. The church building, including grounds, cost approximately one hundred and six thousand dollars. With the seating capacity of the church taxed at the Sunday morning and the Wednesday evening services, plans are already being freely discussed for the organization of a second church, which will no doubt be located in the north part of the city.

The Omaha Sunday Bee.

AUGUSTA, MAINE.—Sunday [Feb. 1] the Christian Scientists worshiped for the first time in a church edifice of their own.—*Kennebec Journal.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Trinidad, Col.

Clarence W. Chadwick delivered a lecture on Christian Science to a large and representative audience that crowded Armory Hall. He was introduced by Mayor W. P. Dunlavy, who said in part:—

I want to say that my attention has been called to the subject of Christian Science and its wonderful results. I have noticed also that this society is made up principally of our very best people,—thinking people, who study, are enthusiastic and in earnest. The professed Christian Scientists number hundreds of thousands, while those who are investigating it, aggregate many millions more. Surely this proves that it is founded upon the truth, and that there is good in it for all.

In early ages, healing was considered a miracle, and when I studied about these things a few years ago in Sunday school, there was some doubt in my mind as to the truth of miracles ever having been performed; but since then I have seen just as wonderful results through the medium of Christian Science, showing that God still remains with us, watches over us, and is always the same.—*The Chronicle-News.*

Vancouver, British Columbia

A Christian Science lecture was delivered in the Orpheum Theater by Clarence C. Eaton. The speaker was introduced by Dr. Elliott Rowe, commissioner of the Progress Club, who said in part:—

I am an optimist, and believe that many of the evils that beset us are due to our mismanagement of the world in which we have been placed. Any intelligent man who is at all observant can but see that many of the undesirable things in the world are the product of our own misconduct. I, for one, cannot reconcile myself to the idea that these evils are necessary, or are in the order of a good Providence; on the contrary, they persist because of darkness, of ignorance, and of lack of disposition to seek for a solution of the problems they involve. I have pleasure in expressing, so far as I can by my presence here, my appreciation of the sincere efforts of Christian Scientists toward a remedy for the ills which afflict us.—*Correspondence.*

Portland, Ore.

Judge Fred L. Olsen, in introducing Prof. Hermann S. Hering, who lectured on Christian Science, spoke in part as follows:—

I hardly know why I should have been selected for this great pleasure of appearing before you this evening. It is not because my name is enrolled as a member of any Christian Science church, for it is not. Having been given this opportunity, however, indulge me for just a moment, that I may tell you as a student of Christian Science, which was promulgated and so graciously given to us by that most wonderful woman, Mrs. Eddy, that I have taken a new lease on life. Hopes have been renewed and much strengthened; the many indisputable evidences of God's great goodness are being brought to light; the heavy load of worldly troubles is being slowly but surely lifted; and revenge and unkind thoughts are being displaced for kinder feelings and a more serious consideration as to the welfare of my fellow men.

Digitized by Google

I know of no message of modern times that has brought so many blessings, so much sunshine and happiness to the many human souls crying out for peace and assurance from our God that all is well, as the beautiful teachings of this God-loving woman.—*Correspondence.*

✧

Oskaloosa, Iowa

Bliss Knapp lectured on Christian Science in the new church edifice. He was introduced by Miss Carrie Baughman, who said in part:—

The Scriptures record that when Peter and John were inquired of concerning the healing of the impotent man, Peter replied, "By the name of Jesus Christ . . . even by him doth this man stand here before you whole. . . . Neither is there salvation in any other: for there is none other name under heaven given among men, whereby we must be saved." Christian Science has brought to a sorrowing and suffering world the glad message that Christianity, now as anciently, includes salvation from sickness as well as from sin, and that man has recourse to the divine for deliverance from all human woe.—*Oskaloosa Daily Herald.*

✧

Pueblo, Col.

Judge R. A. Crossman, who introduced Bicknell Young, the Christian Science lecturer, at the Grand Opera House, said in part:—

We are living in an age of intelligent truth-seeking, when more thought is given and greater effort expended for the development of human character; when love for humanity is stronger; when more people are seeking to come nearer to nature and to nature's God than ever. So we are here tonight, many of us, to hear and to learn if there is a better way of living than that to which we have been accustomed; to learn if we may come closer to nature and to God. We want to know what Christian Science really is; what it means for us and for the human race.—*Star-Journal.*

✧

Palo Alto, Cal.

Willis F. Gross delivered a lecture on the teachings of Christian Science at the Armory. C. W. Marwedel of Menlo Park made the address of introduction, and said in part:—

In the gospels we have the record of Jesus bringing to sorrowing, suffering humanity the message of deliverance. We learn that he drew to him certain disciples and followers, who learned the truth he taught and did the same good works. As Jesus left the earth, he gave them the commission to "preach the gospel." Coupled with this is the promise to all succeeding believers: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." This same healing work is being carried on today, and is known as Christian Science.—*Daily Palo Alto Times.*

✧

Rochdale, England

A crowded audience listened to an address on Christian Science by William D. McCrackan, M.A., in the Town Hall. G. J. Fowler, D.Sc., of Manchester, who presided, said that there was no more important subject claiming the attention of mankind than Christian Science. In less than fifty years it had become a world religion. It comprised among its followers men and women of every class and type and many nationalities, and they would all tell the same story of better health, greater happiness, and a fuller sense of life. As a student of physical science, he came to Christian Science with a great amount of prejudice and suspicion, but his training as a physical scientist told him it was his duty to follow the truth and understand it, from whatever direction it came. After four years' experience, he could say with absolute confidence that Christian Science is the truth that must ultimately make all men free. He had found it to be an eminently practical religion. He had seen all kinds of discordant conditions remedied through a knowledge of it, and had seen professional and business problems dealt with through right thinking as learned through its study. He had seen serious illness healed through the ministrations of Christian Science, both in his own family and among his immediate acquaintances.—*Rochdale Times.*

Testimonies of Healing

[Translated from the German]

I wish to express my deep gratitude for the many blessings I have received through Christian Science. Until about six years ago my mother was afflicted with diseases of all kinds, such as gall-stone, stomach and kidney trouble, etc. She consulted physicians from one year to another, but instead of improving she steadily grew worse. Friends who had been healed through Christian Science then gave my mother copies of *Der Herold der Christian Science* to read, and invited her to attend the Wednesday evening meetings. She did so, and was greatly impressed by this teaching, for she saw that God would be her help. She asked a practitioner to treat her, and after the first treatment she felt much better. In a short time these distressing ills disappeared completely, and my mother no longer needed to confine herself to any particular kind of food. About this time my dear father passed away, and we went through great financial stress; but this has also been overcome through the understanding that God provides for us. A serious eye trouble, which according to *materia medica* is very obstinate and painful, was healed with four absent treatments.

Some two and a half years ago I was led through my mother to investigate Christian Science. I was very skeptical at first with regard to this teaching, and I went to the meetings only to please my mother. After the third or fourth time, however, this wonderful Science awakened so much interest in me that I began to read the *Herold* diligently, besides taking English lessons with a view to becoming better acquainted with these teachings. Within a short time I was changed into a new person, to the surprise of those who knew me and who could not account for it. Whereas formerly I was inclined to be melancholy and gloomy and to worry about the future, I now grew perceptibly into a buoyant cheerfulness, looking upon this beautiful world with a changed vision. I applied to the faithful practitioner for help, as I had been suffering for years with bowel and stomach complaints, and with three treatments these ailments vanished.

Christian Science has brought me unnumbered blessings within the last months. Owing to unfavorable conditions I was obliged to give up my position; but having learned in Christian Science to put my trust in divine Love, to rely upon the infinite goodness of our Father-Mother God under all circumstances, I was not uneasy about other means of supply, and asked the practitioner to help me. Ten days before I gave up my position I had an opportunity to talk personally with her, and it became clear to me that through divine Love I could start a business of my own. Though I felt the lack of means for such a purpose, she assured me that God, divine Mind, is the only source of supply, that Love had helped me thus far and would continue to help me. I endeavored to hold the right thought, and a Christian Scientist very kindly put at my disposal the money needed and offered me a place in which to make a start. This was three days after my talk with the practitioner, and one week later I was running my own business. Deep gratitude filled my heart. Every day brings me new orders, and thanks to divine Love, I have more business than I ever dared hope for in the past.

I am daily gaining a better understanding of divine Love and omnipotence, and it shall be my most sincere endeavor to evince more and more gratitude for the grace bestowed upon us by our heavenly Father. In daily prayer I beg to be made more humble, meek, and strong, and to increase in spiritual understanding. My feeling toward our revered Leader, Mrs. Eddy, is one of deep gratitude, for she has shown us the way to the Christ, Truth, and in her wisdom provided for a German version of the text-book, "Science and Health with Key to the Scriptures." Words fail to express my deep thankfulness to God for all the blessings we have received.

HEDWIG DZIABAS, Berlin-Steglitz, Germany.

✧

I became interested in Christian Science through the healing of a member of our immediate family of a chronic bowel difficulty of twenty-five years' standing. I realized that there had been a healing, and as I could not shut my eyes to that fact, I started my search for the truth.

I had had no church for five years before that time, having found no satisfaction in the one which I had joined as a young girl. That is eight years ago, and since then I have had many beautiful experiences in Christian Science. Many discordant physical conditions, such as constant colds, sore throats, etc., have passed away. But best of all is the mental change, and the improvement in disposition; for in place of restlessness has come peace; in a degree at least, quick temper has given place to gentleness; impatience to patience, and gradually I see a change for the better as I more fully realize the inseparability of "perfect God and perfect man," as taught in the Christian Science text-book, "Science and Health with Key to the Scriptures" (p. 259).

After losing two babies at birth under *materia medica*, I had a little son born in Christian Science,—a beautiful child. No drugs were used, and it was a comparatively painless birth. I now know the difference between the spasmodic relief of anesthetics and the absolute peace of Christian Science in such an experience. Our boy is four years old, and we have had very few of the usual ailments of infancy to meet. I do not remember when his teeth came, nor do I remember losing one night's sleep.

More beautiful than the physical healing, however, except as a demonstration of the one Mind, is the growth in the understanding of God as Love, our apprehension of a practical, demonstrable religion. I am indeed thankful to God for His many blessings, and grateful to Mrs. Eddy, through whom Christian Science was given to us.

MAUDE K. HARRISON, Berkeley, Cal.

✧

When I first took treatment from a Christian Scientist some five years ago, I was a physical and mental wreck. I had been forced to abandon my business, after being treated for more than two years by nerve specialists in several large cities without appreciable improvement. I was suffering from nervous breakdown, a supposedly tubercular condition of the stomach and bowels, partial paralysis of the left limb, and a pain at the base of my head which did not cease for more than two years. I gave up every employment and impatiently awaited death. I became so weak I could scarcely walk, and my spinal column was so affected that I could not look to the right or the left without turning completely around. In addition, I was in constant dread of self-destruction, for I did not think it possible to endure my terrible sufferings much longer. I was haunted by the thought that I would live just long enough to forfeit insurance policies which I had carried for over twenty years, and which seemed the only possible escape from poverty for my wife and children. In short, it would be impossible to imagine a condition more deplorable than mine. I was not permitted to drink even water until it had been medicated.

In this condition, in response to my wife's desire, I called in a Christian Science practitioner, and after three treatments, found my appetite and digestion restored. Ten days

Digitized by Google

later I resumed my position as a traveling salesman, and have been gaining ever since. I at once experienced so great a change that there was no longer any doubt as to my healing. I did not lose all my many diseases immediately, but gradually one after another left me until all have gone, and my health is completely regained. I am today, after thirty-four years on the road, better qualified than ever before to discharge my every duty. My spiritual, mental, physical, and financial conditions have steadily improved, and nothing could tempt me to forsake the truth which has done so much for me and which for years has met every need in my family of six.

I am deeply grateful to our revered Leader, Mrs. Eddy, who has pointed the way, and, above all, thankful to Almighty God, who healeth all our diseases and giveth us that peace "which passeth all understanding."

W. A. Battaile, Lawrence, Kan.

✧

Before hearing of Christian Science, in March, 1911, I had been ill for several years with what was pronounced a malignant growth. An operation was arranged, but when the doctors came they said my condition was too critical to venture on it, and they would try another method. This proved beneficial to a certain extent, but it left me so full of weakness and fear that I was not expected to live many months. Indeed, I had no desire for life if it was to mean only a repetition of the terrible sufferings, so I came to Christian Science just to learn more of heaven and to prepare for a future life.

After studying Science and Health for about a fortnight, I was completely healed of sleeplessness, from which I had suffered for years. This convinced me there was something in Christian Science of which I did not know, and I determined to find out about it. I then began a thorough study of the Bible and the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and for nine months I gained daily in health and happiness.

In December I became very ill; the old symptoms returned, also an attack of congestion of the liver. I tried to meet the case myself with the slight knowledge I had gained, but fear made me unable to do so. I then asked for the help of a practitioner, and she pointed out the truth to me so clearly that I was much better when she left me, and was completely healed in about a week.

I had worn glasses for about twenty years, when I underwent two operations for ulcer at the back of the eyes. These operations, however, were not successful, and I could not see to do anything without glasses. In January, 1911, my eyes were in such a bad condition that a specialist told me I would eventually lose my sight; but in Christian Science I had learned that with God all things are possible, and though it seemed almost too good to be true, I was to learn that it is only the good which is true. I was told to wait, nothing doubting, and all would come right. I did so, and six weeks later a wonderful thing came to pass.

At a Wednesday evening meeting, during the reading I experienced a feeling of quietude and completeness, and when, after the service, my practitioner came up and asked me to take off my glasses, I immediately realized that during the meeting divine Truth had restored my sight. When I reached home I took off my glasses, opened the text-book, and found that I was able to read better than I had ever been able to do with glasses on. My sight is now perfect! Until last February I was unable to see beyond the distance of two fields, and this only with my glasses on, but during a recent holiday in our lovely lake district, I saw the mountains, valleys, lakes, and waterfalls quite clearly, and at first I found it hard to believe that the world could be so beautiful and wonderful.

Words fail to express the gratitude I feel for what Christian Science has done for me. It is glorious to have the freedom from bondage and to know something of the meaning of the Scripture, "Ye shall know the truth, and the truth shall make you free."

Bertha M. Coffey, Manchester, England.

✧

It is my desire to give a cup of cold water to some one in need, by offering my testimony to the *Christian Science Sentinel*. I know not how best to express the deep gratitude and love I feel, for words poorly convey spiritual thoughts. In our family, Christian Science has healed severe illness, in teething, acute lung trouble, rheumatism, colds, and burns. Then an abscess behind the ear, which was pronounced dangerous by a doctor, was treated by a Christian Science practitioner for about two weeks, when no trace of it remained. The child has been well and has grown rapidly ever since. Not long ago he fell and cut his lip severely. By the next morning, however, there was nothing left but a faint scar, and this was healed with the slight understanding I have of the truth.

For the physical help we are indeed grateful, but much more so for the spiritual uplift, the knowledge that "God is a very present help in trouble," and that as we are able to put our trust in Him, He does indeed make us free from all sin and suffering. My children all look for the *Sentinel* each week, and the little ones ask for the "helpings," as they call the testimonies, to be read first. I thank God that He gave Mrs. Eddy the understanding which enabled her to bring this truth to the world in such a form that we may have it always. My daily prayer is to gain more wisdom, and a clearer understanding of the truth as given to us by Christ Jesus.—Florence M. Melder, Rathdrum, Idaho.

✧

As it is considerably over two years since I was healed by Christian Science treatment of a so-called incurable type of heart-disease, it occurred to me that a statement from me for our publications might, in a small measure, help to pay the deep debt of gratitude I owe to this cause, as my experience would in this way reach, and perhaps influence, some others who may need Christian Science as much as I did.

At the time I took my first treatment, I was practically helpless on account of a serious and aggravated form of the disease above mentioned. I was almost constantly under medical treatment from the time I was stricken until I was healed in Christian Science, a period of about six years and a half. When I went to a Christian Science practitioner for treatment, I was like a drowning person that grasps at a straw. I had tried prominent doctors of both schools, and "hopelessly incurable" seemed to be the only verdict. They were all good, kind men, who did all they could for me, and I have always been grateful to them for their efforts.

While in this hopeless condition my attention was called to Christian Science by a friend who was not himself a Scientist, and I soon decided to try the treatment. I remember he stated that it could not harm me in any way. When I applied for help I felt utterly worn out, life seemed so dark and dreary and hopeless. To end it seemed cowardly, however, and so terrible; yet I often wished I had never been born. No words could ever tell how much I suffered. I had not walked any distance for so long that my legs seemed to have lost their former strength; yet under Christian Science

Digitized by Google

treatment I was practically well in less than three weeks, and could walk for miles. I shall never forget how grand those walks seemed. In less than six weeks I accepted the position that I had given up over six years and a half before on account of being stricken with this terrible disease.

How grateful we ought to be for the progress that has been made, and is still going on! I am thankful to God, and deeply grateful to Mrs. Eddy, not alone for the physical healing, but more especially for being able to realize so much better now than formerly the power of the Master's teaching, and to understand, at least in some measure, what he meant when he said, "Heaven and earth shall pass away, but my words shall not pass away."

I know of a great many physical healings through Christian Science, and have witnessed one, a case of kidney disease, which was almost as remarkable, though perhaps not quite so well defined, as was my own. The physical healing in Christian Science is only a proof of Truth's power, the "signs following." The healing of sin and the many impurities of mortals, and the spiritual uplift and cleansing that it is bringing to the world, are the great blessings by which we may know that this Science is "not of men," and that "the gates of hell" cannot prevail against it.

JOE G. PETRUCKY, Tonopah, Nev.

✧

[Translated from the German]

Words fail to describe the manifold blessings which have come to me through Christian Science. The more I become acquainted with its wonderful and profoundly religious teachings, the deeper grows my gratitude to Mrs. Eddy and my admiration for her who was pure and unselfish enough to be the means of bringing again to the world the truth of spiritual law and causation as taught by Jesus.

I had been a great sufferer in years past, and had consulted many specialists without ever experiencing any lasting benefit. Then ill fortune came upon me, and in these hours of deepest sorrow I was led to Christian Science. I had long talks with a practitioner; and although it soon became clear to me that healing and comfort could be found here, yet I was assailed by many doubts. The practitioner answered my questions with untiring love and patience, and elucidated the subject to me so that I gradually discerned the fact that man in the image and likeness of God is indeed His "offspring," as St. Paul says, and that under God's providence and protecting care we have nothing to fear. I earnestly endeavored to bring my thoughts and actions into harmony with Christian Science, but after about a year had elapsed, one of the old ailments, nervous debility, attended by great fear and spells of [illegible], again [illegible] itself again. I immediately began to work in Christian Science, but seemed unable to cope with the trouble, so finally I had to ask the practitioner to assist me. With two treatments the debility was overcome, and I have been well during the five years which have since elapsed.

We had a beautiful demonstration several years ago in the case of my son. One morning a foreign substance got into his eye, causing great pain. I was away on a trip, and the boy, thinking to relieve the pain, went to a physician. The latter, however, not only did not succeed in removing the substance, but it was found to be so far beyond the eyeball, and the pain became much more severe. It then occurred to my son to go to the local Christian Science practitioner. Unfortunately the boy was away on a trip, and he therefore drove to a neighbor, who took him at his suggestion, and told him that I would look at the case in the right way for an hour or two each day, and that the eye would always remain a source of gladness.

When I returned home on the following day, I immediately tried to help my son, and felt quite peaceful for a couple of days, when a sudden fear came upon me, which became so intense that it seemed impossible for me to continue the treatment. With the consent of my son, I then drove to the practitioner and asked her to take the case. A few treatments brought healing, and after ten days my son was dismissed by the physician, who expressed his surprise at this unexpected result, saying he had never seen so quick a healing in such a case. No weakness remained, and my son's vision is as good as before.

To us this was an added proof of the healing power of Truth, for which we are most deeply thankful to God. It shall be our endeavor to be more and more obedient to His voice and to do that which is right in His sight.

MARIA LIESCHING, Schorndorf, Württemberg, Germany.

✧

Nine years ago I had my first talk with a Christian Scientist while on a short visit with some friends in Milwaukee, Wis., U. S. A. That day stands out as a red-letter day in my life. I was with the Scientist only one hour, but I learned a great deal in that time. I believed in material remedies in those days, but she soon showed me that it was only my faith in drugs which produced the apparent result, so I determined to do as she advised and put all my faith in a loving God. I have done so ever since, and have never given another dose of medicine or used material remedies of any kind.

As time went on and I tried to follow Mrs. Eddy's teachings, my whole outlook on life changed. I became a better wife, mother, and neighbor by trying to be more patient and loving. I used to be troubled with an eruption on my face, but it has disappeared, and great nervousness has almost left me. Four years ago, what seemed the greatest trouble of my life came to me. My husband, one of the best and most indulgent, suddenly passed away. At first I was staggered and could not understand. Then Christian Science whispered "Peace" to me, and taught me how impossible it was that God should have sent this to me; so I lived on, and have been led most wonderfully through financial difficulties, trouble with lawyers, and many other problems.

No words in the English language can express my gratitude for all that Christian Science has done for me and mine. In one of her hymns (Poems, p. 3) Mrs. Eddy says—

> My prayer, some daily good to do
> To Thee, for Thee.

and this expresses my most earnest desire.

TAMAR LAMBERT, Bradford, England.

✧

To tell of all the blessings that Christian Science has brought me would be impossible, but I shall endeavor to enumerate a few of them. From the age of five I had taken medicine almost daily for bowel trouble, every known medical treatment having been tried until it seemed as though I would be held in constant bondage; but a few days after my sixteenth birthday Christian Science was tried, and since then I have not taken any medicine or used any sort of medical treatment. That was over four years ago, and I am entirely cured.

Before taking up Christian Science it seemed as though nothing good was meant for me. I suffered from sensitiveness, sickness and self-pity, these seeming to be my companions; but now my disposition is just the opposite of what it was. I now know that good is natural, permanent, and that "Love is impartial and universal in its adoration and rewards"

Digitized by Google

(Science and Health, p. 13). If in our effort to attain habitual right thinking we always remember that gratitude and obedience are essentials of Christian Science, we will surely progress.

When I think that if it were not for Mrs. Eddy, our Leader, all these things would not be possible for me, it makes me very grateful to her, and deeply thankful to God that I have the privilege of knowing even a little of Christian Science.—MAE ANDEREGG, Pasadena, Cal.

✧

[Translated from the German]

I desire to give public expression to my gratitude for the blessings received through Christian Science. For six years I suffered with severe stomach trouble, which increased in severity despite all the medicines taken upon the physicians' advice. Believing that hard work was detrimental to my health, I grew weaker and weaker. Later on I was taken with abdominal complaint and lay in bed for over three months, alternately at home and at the hospital. At the hospital I improved slowly, though only temporarily, and I was again obliged to seek medical aid. I went from one physician to another without being healed, and finally, after nine months had elapsed, I made up my mind to undergo an operation. This I did, but I was dismissed with the verdict that I would remain a sufferer all my life. To appearances this seemed true indeed, for I was confined to my bed for three months and hardly able to take even the lightest nourishment. During that time I was told that my lungs also were affected.

When I came home from the hospital, I found a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures," also copies of *Der Herold der Christian Science*, and upon reading these it became clear to me that healing would come only through the understanding of these teachings. After one treatment in Christian Science I was able to eat everything and to work without feeling that I was under a strain. I am very grateful indeed for all the good that has come to me through Christian Science.

AUGUSTE SEEBER, Aalen, Württemberg, Germany.

[Written for the *Sentinel*]

Humility

LOUISE KNIGHT WHEATLEY

WHEN Andrew found the Christ, so long ago,
He went to where his brother, on the sand,
Mended the nets, and, Come with me, he said,
A wondrous thing hath happened! Hand in hand
They hurried back until they reached the place
Where Jesus sat. This is the Christ, he cried,
And then, with tears of gladness, turned away.
It was enough. He well might step aside,
For Andrew's part was done, his work complete—
There sat his brother at the Master's feet!

He must have stayed a moment, just to note
The rapture on his brother's upturned face,
His eager voice, the Master's low replies.
And then methinks he softly left the place,
Content to be forgotten; asking naught
But just that he might help some other one
To find the Christ. Oh, rare humility!
The sweetest part, indeed, when all was done,
The crowning glory of that golden day,
Was that he knew 'twere best to slip away.

From Our Exchanges

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

Those who believe that religion is gradually to leaven mankind, will discern in various movements the vindication of their hopes; while those who hold that the world must first get worse and worse until, beyond some catastrophe, the kingdom of God is inaugurated by some divine manifestation, will be able to find ample evidence that things are tending toward the great apostasy. All that we can expect to do is to contribute our own particular view and hope, and leave these to be corrected by those with wider sympathies and outlook.

The first impressive fact is that the great bulk of people seem to care nothing at all about religion. Acute theological controversies, church divisions, aggressive movements, leave the great mass of the people utterly unconcerned. Whether this unconcern is deeper and more wide-spread in our day than in a former generation, is open to question, but it confronts religious propaganda inert and impervious. The movements which do affect the people are those which hold out some hope of political or economic emancipation, though even these fail to attract large sections.

Perhaps it is the increasing provision of recreation and amusement which touches the largest area; the music hall and the picture palace have the widest hold today. But these things may be indications in themselves of something more hopeful. They show that there is a deep discontent with life as it is lived, and the feverish rush after exciting pleasures is an effort to balance a life which is unsatisfied with its monotony and lack of adventure. Beneath the common mind there is evidently some disturbing force at work; content is being broken up; there is little hope that the immediate ends of reform or recreation will meet that discontent, and this seems to indicate that the field is open for some great religious movement.

[*The Christian Work and Evangelist*]

A new spirit is filling the hearts of many in all communions. Separation is death; cooperation is life. When the church—my church, your church, and every other church—shall see the program of God for the redemption of a lost world, we will not be slow to stand at our post, however costly may be the stand, for we will remember that the principle of the apostolic days was, "The love of Christ constraineth us." These are days when we are dealing in big undertakings; national and international movements are the order of these times. Denominational shibboleths belong in the yesterday; it is a world problem that faces us. Whether our denominational tenets survive or fall is a matter of secondary importance. The great question is, whether God shall be vindicated, whether the program of Christ shall be executed, whether a lost world shall be saved. Only a united church can answer these questions with satisfaction.

[*The Continent*]

Will there ever be a great revival again? Answers are largely denying, dubious, or evasive. Some say that the world has lived completely past the era of religious mass movements, and will see no more of them. Others affirm that the revival, the real modern revival of religion, has come already and the church knows it not. These latter, declaring that religion takes on varying forms in successive ages of the world, hold that for the twentieth century the characteristic mode of religion is social; conscience has become social, and therefore men nowadays convicted of sin, bring forth fruits worthy of repentance in acts of social justice. This, it is averred, is

Digitized by Google

revival, and all the revival the church has reason to expect. According to this conception, "a better world here and now" is the only "good news" to which the modern time can be counted on to respond.

The calm truth is, however, that none of these various superficial confusions of the appearance of things with the fact of things, gets down to the bottom of the revival question. Studied more deeply, the history of the church will support these fundamental statements: Revivals of religion are normal phenomena of the world's advance in righteousness. They come to humanity in regularly recurring cycles. The length of such cycles is measured not in years on the calendar, but by the revolution of certain experiences of mankind which sometimes turn swiftly and sometimes slowly. But whether quick or slow, the wheel will turn. Revivals are not out of date. There must be another in the world ere long. But only God knows when. "Times or . . . seasons, . . . the Father hath put in his own power."

["Statement of Faith" made by the Congregationalists at their last Conference]

We believe in God the Father, infinite in wisdom, goodness, and love; and in Jesus Christ, His Son, our Lord and Saviour, who for us and our salvation lived and died and liveth evermore; and in the Holy Spirit, who taketh of the things of Christ and revealeth them to us, renewing, comforting, and inspiring the souls of men.

We are united in striving to know the will of God as taught in the Holy Scriptures, and in our purpose to walk in the ways of the Lord made known or to be made known to us. We hold it to be the mission of the church of Christ to proclaim the gospel to all mankind, exalting the worship of one true God, and laboring for the progress of knowledge, the promotion of justice, the triumph of peace, and the realization of human brotherhood. Persevering as did our fathers upon the continual guidance of the Holy Spirit to lead us into all truth, we work and pray for the transformation of the world into the kingdom of God; and we look with faith for the triumph of righteousness, and for life and glory everlasting. Amen.

[*New Church Messenger*]

Through the Word, God sends the creative power to the minds of men, and through it He breathes upon them, that they may receive life. Daily it is forming the human family into its likeness, not the likeness of the mere letter, but of the spirit of the creator that inspires it. The Old Testament was fulfilled in the New, as a rose comes out of the bud, and Jesus Christ is the fulfilment of both. The coming of the Lord, then, is the doctrine taught by Jesus, the sight of and acknowledgment of God in Jesus, the life manifested in the life of Jesus; in short, the coming of God is the coming of Jesus Christ Himself in spirit and in truth.

[*The Christian Intelligencer*]

Many answers have been given to the question, "What is wrong with the church today?" We venture still another. It is this: The religious and business of great numbers of professed Christians and the spiritual ignorance of the church in general prove, by their fruits, that the living Christ and his gospel, the power which moves it and is taking [illegible] of Christians as I have not been experienced in the hearts of Christian people. They do not live and move and have their being in the atmosphere of Christian realities. They do not draw their inspirations and motives from supernatural power, and their whole life is not [illegible]

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is to be issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75. This book is now ready for delivery.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herald*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chretienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

A translation into Spanish has been made of the pamphlet "The Providence of God" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DENTON, Clerk, 115 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members entering in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 115 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

Administration bills have been introduced in the House and Senate at Washington to make available for immediate development the coal, oil, phosphate, and potash deposits of the West along the lines of the Pinchot conservation theories. To guard against monopoly and to insure full development, the bills provide for the leasing of the public lands under conditions set forth therein. In regard to oil land, it is provided that the federal government shall issue a permit for two thousand five hundred and sixty acres, which permit will give the possessor the exclusive right to explore for oil in this territory for a period of two years. During this time exploration work aggregating two thousand feet in depth must be done. If oil is discovered, the permittee is entitled to one fourth of the land in fee, the other three fourths to remain with the government and be subject to lease in small tracts upon a royalty basis. This, it is believed, will provide a liberal return to the explorer for his tenure. Under the leases or patents granted, no drilling of wells can take place within two hundred feet of the outer boundaries of the lands leased or patented, and provision is made for general regulations requiring precautions to prevent waste of oil or the entrance of waters into the oil sands or oil-bearing strata. Forfeiture of the lease is the penalty for violating these conditions, and this can be effected through court procedure.

A promise to withdraw all the oil lands in German New Guinea from private exploitation, pending investigation of their nature and extent, has been given by the German minister for the colonies. An appropriation of one hundred and twenty-five thousand dollars was passed for the purposes of survey. The companies bidding for the concession had all demanded the exclusive rights of exploitation. The government was opposed to this, as a plan for the operation of the oil fields by the government was under consideration. It was pointed out in the lobbies that the discovery of oil in German New Guinea might lead the government to enter into the business of producing oil in order to facilitate the establishment of the proposed oil monopoly in opposition to the Standard Oil Company. The main obstacle to this, hitherto, has been the difficulty of guaranteeing an adequate supply of oil from independent sources.

During the period intervening between the foundation of the German empire and the present day, German schools abroad have increased from forty to twelve hundred, with an attendance of approximately sixty thousand pupils. These institutions are established more especially in those parts of the world where German colonies are of particular importance. Their aim is to provide instruction on patriotic lines to the children of German colonists, and secondarily to spread the German language and German influence among other nationalities. In South America, especially, German schools are numerous. In Constantinople, Bucharest, Antwerp, and Brussels are German colleges. Other schools are to be found in Italy, Belgium, Roumania, Turkey, and even China. There are also about forty primary schools distributed through Russia, Spain, Asia Minor, Egypt, and China.

The British government would be ready to enter into any agreement for the limitation of the dimensions of warships if it could be arranged, according to Winston Spencer Churchill, first lord of the British admiralty. Replying to a question put to him recently in the House of Commons concerning a statement made by Admiral von Tirpitz, the German minister of marine, to the effect that Germany would welcome a general reduction in the displacement of warships, Mr. Churchill made this admission. He said the displacements of the latest British battleships were considerably smaller than almost all of those under construction for foreign powers whose dimensions had been made public.

Intoxicants are under the ban of various plants of the American Sheet & Tin Plate Company. Thousands of employees in the company's plant have been notified that they must withdraw from external organizations which maintain sideboards or cease to be employees of the company. Employees are also prohibited from signing applications of persons seeking liquor licenses. The order affects all plants of the company located in various parts of the country as well as upward of thirty thousand men. The American Sheet & Tin Plate Company is a subsidiary of the United States Steel Corporation.

A steadily growing fear of the intentions of Russia, which has been accentuated by the policy of that power in Finland, culminated in a monster demonstration of peasants recently at Stockholm, Sweden, in support of the policy of increased national defenses. For some time past the liberal ministry, which is disinclined to increase the expenditure of military forces, has found itself more or less out of touch with popular opinion. The King has been known to be in favor of an advanced military policy, and it was to strengthen his hands that the demonstration took place.

Settlers in western Kansas are cutting and marketing soapweed, or Spanish bayonet, to supply the demands of soap manufacturers. For a long time this weed has been made into a soapy decoction which the Indian and Mexican women have used. It contains no alkali. Present-day soap manufacturers use it for toilet and wool soaps. Its qualities have been known for a long time, but the harvesting of soapweed is only now becoming commercially important.

From the small beginning of ten tons of sugar produced sixty years ago, Natal, South Africa, today can boast of an industry whose capital reaches four million pounds. It employs six hundred Europeans, eight thousand Indians, and four thousand natives, whose combined wages reach an amount of some two hundred thousand pounds. The estimated yield this season is ninety-five thousand tons.

The value of the products of all the mines in Wyoming in 1911 was $11,488,877, of which the coal output, amounting to 6,744,864 short tons, represented $10,508,868. The other mineral products are asbestos, clay manufactures, gems and precious stones, gypsum, iron ore, lime, mineral waters, natural gas, petroleum, phosphate rock, sand and gravel, silver, stone, and sulphur.

Customs receipts for the entire United States for February, as compared with the same month of 1913, fell off slightly more than ten million dollars. This is by far the most marked discrepancy in such receipts from the months of 1913 that has been noticed since the new tariff became law.

Hearing of the Elgin board of trade case in the federal court at Chicago may never come up, as it is understood that the question of a compromise has been considered in the case of the government against the alleged improper methods employed by the Elgin board in fixing the price of butter.

During 1913 the forces on the United States national forests fought four thousand five hundred and twenty fires, or nearly twice as many as started in 1912, the best year the forests have ever had. The aggregate loss in timber is estimated at nearly fifty-nine million board feet.

President Wilson personally appealed to Congress, assembled in joint session, on the 5th inst., to sustain the national honor of the United States in upholding treaty obligations by repealing the Panama tolls exemption, against which Great Britain protests.

Minnesota has a forested area of twenty-eight million acres, the largest of any state east of the Rocky mountains. There are approximately four million acres of timber land in New Hampshire, about half of which is in farmers' wood-lots.

The reorganization plan of the Chilean railways involves an expenditure of $22,385,000 within four years. The minister of finance announces that propects are bright for raising the necessary funds abroad.

The government of Chile is offering prizes of twenty thousand and ten thousand dollars for the best plans of model workshops for the Chilean railways. The final date for submitting plans is May 1.

Electric passenger trains will be running between New York and New Haven late in April or early in May, and they may be running to Bridgeport before that time.

Juniper from the Indian reservations of New Mexico and Arizona may prove an excellent source of material for lead-pencils. Manufacturers are searching the world for pencil woods.

The arbitration treaty between the United States and Denmark was ratified by the lower house of the Danish Parliament last week, amid a scene of great enthusiasm.

Forest fires in the United States have caused an average annual destruction of twenty-five million dollars' worth of timber.

The state vote shows that the referendum for direct primary in Vermont has passed by more than ten thousand majority.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI March 14, 1914 No. 28

Following Christ

ROBERT NALL

WHETHER we realize it or not, we are the arbiters of our own destinies; we are daily making our eternal choice. If always conscious of this, would any Christian Scientist ever flag in loyalty to Christ, the impersonal Saviour, or overlook what that loyalty involves? Our Leader never sought to accelerate the growth of Christian Science among mankind by picturing that it would strew the path of life with roses; on the other hand, she uttered many words of warning that the approach of Truth would mean the activity of error, until all error was proved to be powerless. She says, "Jesus spares us not one individual experience, if we follow his commands faithfully" (Science and Health, p. 26). It sometimes seems a mystery that those who are the most earnest and sincere in demonstrating the truth should apparently be called upon to pass through fiery trials, but so it will be until the full stature of manhood in Christ is reached. The evil one, or the one evil, will not be destroyed until the last enemy is overcome.

The Wayshower has exemplified to us what we can do if we follow in his steps,—not that the most faithful are to be the most tried, but that every product of the carnal mind must be proved to be illusion in the light of the knowledge which is revealed by spiritual law. It may be that we are tempted to be a little rebellious about the purifying process, and we think that if we are able to talk in easy freedom about the gracious results that would follow if we constantly knew the truth about everything, all our crooked paths should quickly be made straight, and the "way of the Lord" plain. But how little do we know about the nature of the thought which is being cleansed and purified, and about the operation of the divine Principle in transforming mortal consciousness! If we are seeking to peer into the realm of the infinite, to bring our human intelligence to bear in discovering how to solve daily problems without complying with all the conditions of God's rule and law, nothing but failure can result, and then we shall acknowledge, with tears of repentance that complete regeneration of self and sense is the divine way of salvation.

Having arrived at this understanding, we may be confident that, if we are true to this enlightened faith, we shall not in our demonstration be called upon to submit to any test beyond our strength to bear. None of us wish to remain where we are spiritually; we possess a healthy desire to advance. Every moment we spend in prayer and in reading the words of Truth, in the Scriptures, in Christian Science literature or elsewhere,—in all Christly work, and in our quiet times of meditation, when divine Love always seems so near to us,—should bring a hunger akin to impatience for deeper consecration, for greater faithfulness, for a firmer grasp of spiritual reality, for a clearer sense of revelation. Yet there is often a sense of dissatisfaction. May it not be that in the Valley of Decision we have not made our fixed choice between matter and Mind; that personal sense still governs, and that the necessity for anything like self-effacement has not occurred to us as a condition precedent to spiritual receptiveness?

Spiritual steadfastness stands for our unfoldment in Truth. Abiding in Christ brings us rich spiritual food. This is beautifully natural; it is the law of the divine economy. We reflect the spirit of the realm in which we mentally dwell. Our standing as Christian Scientists can be gaged by the support to which we cling. The direction of our aspirations today determines the distance that we shall have traveled by tomorrow. The milestones of life indicate not only our road but also our progress. There are climbing plants which are wonderfully sensitive to continued contact with their supports, and always move and flourish in response to the stimulus thus gained; and do not our growth and achievement, our answers to prayer, our usefulness as witnesses to the power that comes from the recognition of spiritual selfhood, depend upon our abiding in Christ? If we cannot completely apprehend what Christ, Truth, means to us, we have at least some measure of understanding which will enable us to live up to our convictions.

Christian Science has been revealed to the world that there may be witnessed a higher order of Christianity, which shall be the fulfilment not only of the visions of the old prophets, but of the mission inaugurated by Christ Jesus. We may well be amazed, as Christendom always has been, at the kind of men whom Jesus chose to be his students and exponents of the truth. But he knew man; he saw it was possible to show that the qualities for effective service to humanity are not those which the human intellect would select. Simple faith and spiritual receptiveness become mighty weapons for razing the stronghold of sin. To those disciples (as to us today) it was necessary to graduate in the school of experience, with Christ always as Master. There, in this school, were rolled away the stones that hindered resurrection to newness of life. There the light of the knowledge of Truth streamed through the cleansed thought. Every pure desire, every uplifted look, every effort to reach out for the living water of Truth, was a step along the shining way.

We of today may well follow in their path. The Christ has never left us; he is risen, and is drawing every dissatisfied heart to the life that is hidden from material sense, in God. We are to look to God, not to ourselves. Our advancement will be an ascent, in the conscious strength of divine Love. There will not be complete attainment yet, it is true. "My students are at the beginning of their demonstration," wrote Mrs. Eddy; "they have a long warfare with error in themselves and in others to finish . . . They cannot in the beginning take the attitude, nor adopt the words, that Jesus used at the *end* of his demonstration" (Miscellaneous Writings, p. 215). But what of that, if we are seeking to do the works which the Master did! That is all God wants us to do. We should live today in the spirit of pure and holy purpose, and not be alarmed because happiness seems to elude our grasp. When it does so, it is because we have sought to materialize it. Our real world is spiritual, and it is the spiritual life that we have to live. On this foundation we shall not suffer disillusionment if some of the things of sense upon which our

Digitized by Google

hearts have been dried up. Our seeming losses will be turning to our gain. What Christian Scientist regrets anything he has had to give up? Is he not rejoicing in a bounteous portion? And if error is not yet wholly vanished, does he not know that never again will he be left to fight the enemy alone, since God is always at his right hand, his strength and shield?

If we are discovering ourselves that we are exempt from sickness, or from grave loss, or from the stress of poverty, let us then be grateful for it at the same time always in the warm. "When I am weak, then am I strong," was Paul's experience. To trust in the flesh is to forget the Spirit. The psalmist declared, "In my prosperity I said, I shall never be moved." There is the peril of a false belief, a hope-lessness has been left in the spiritual armor, and error has entered in. The heart may be lifted up in a sense which means one is relying upon material prosperity and defying God. The way of Christ is not that of self-complacency or conceit; it is the way of humility and trust and obedience, not in self, but in God. Would we be always prepared for whatever testing time may come? Then we may well remember that "fidelity to the Christly precepts and prayer is the only passport to his power" (Miscellaneous Writings, p. 27). It is this power, divine, spiritual, absolutely infallible, which is more and more needed to present Christian Science to a waiting world in all its immortal purity and redemptive force.

❖

Compassion

BY THE RIGHT REVEREND

Compassion may be called the fragrance of love. As when upon entering some room a delicate perfume reaches the visitor's senses or whether one's attention is drawn to a cluster of beautiful white flowers in some quiet corner, so does he who enters the presence of the divine heart of love live for God and feel the atmosphere of heavenly compassion which breathes through every word and act. One realizes it instantly, and yet to attempt to analyze it would be much like trying to wrest from the rose the secret of its sweetness. Those who possess it in the most marked degree seem least conscious of it so naturally and spontaneously does it go forth, expressing itself not so much in words as in a look, a smile, or a clasp of the hand. It is the essence of unspoken things. It is patience, confident to wait. It is forbearance, ready to make allowance. It is forgiveness, willing to forget. It is tenderness, yearning to be understood. It is love, reaching out to heal.

No man of whom the world has ever heard possessed this quality as did Jesus of Nazareth, because no man ever lived as did he. He was continually "moved with compassion" at the sight of human misery; yet it is a significant fact that the touch of sympathy in no way impaired his ability to correct the discordant condition which had called it forth. Indeed, compassion seemed often to be but the first step toward that instantaneous healing which is the ultimate goal of every true Christian Scientist.

When the leper knelt at his feet, beseeching to be made clean, "Jesus, moved with compassion, put forth his hand," and "immediately . . . he was cleansed." When the multitude followed him into a desert place, he "was moved with compassion toward them, because they were as sheep not having a shepherd," and he not only fed them spiritually with the bread of Life, teaching them "many things," but he also supplied, by the loaves and the fishes, the material food which at the moment constituted their sense of human need. When the two blind men implored that their eyes might be opened, "Jesus had compassion on them," and a moment after they received their sight and when he met the funeral procession of him who was "the only son of his mother, and she was a widow," he "had compassion on her," and bade the young man arise. "And he that was dead sat up, and began to speak."

Remembering these things, let us follow in the Master lowly path and identify ourselves in our feelings with those who come to him for help. His eyes are sometimes wet with human tears. Did not Jesus himself also weep at the tomb of Lazarus? Surely it was not because he doubted Lazarus to be dead, or to be, and the next moment have restored him. Surely they must have been tears of compassion, rather than of grief, arising from him at sight of the loneliness and misery of those about him. Many of those whom he found standing about the grave must have already heard the message of the Christ, for Jesus was no stranger in Bethany, yet they were all mourning, as those without hope in the world. Martha's first words must have told how little she had ever understood his sayings, for her lament, "Lord, if thou hadst been here, my brother had not died," proved that she had been looking to the human personality of the man Jesus to save her brother, and not to the ever-present Christ. Even Mary, to be spiritually minded as was Martha, was not responding at the feet of Jesus, because in the house, stricken and silent, and when at Martha's loving call she at last came, it would seem that all she could do was mechanically to echo her elder sister's words. Is it any wonder that Jesus wept? Nevertheless, with the tears still wet upon his cheeks he spoke the word and raised the dead.

Let those who are today trying to raise those "dead in trespasses and sins" ponder these things. What is it that brings out the verdant buds of spring, making each seemingly lifeless bough with promise of loveliness? Is it the cold of November, the benumbing snow of December, the ice-bound cold of January, the cutting winds of February, the empty showering of March, or is it the soft showers of April and the gentle waking of the May sunshine? Let us not forget to be compassionate. It is Love's reflection that heals. Let us warm and pray that in our efforts to see the suffering need of human humanity, we lose not that fine and tender sympathy which is one of the sweetest qualities of him who would truly serve his fellows. Our Leader says in Science and Health, p. 367, "The tender word and Christian encouragement of an invalid, joyful patience with his fears and the removal of them, are better than hecatombs of gushing theories, stereotyped borrowed speeches, and the piling of arguments, which are but so many particles of legitimate Christian Science, aflame with divine Love."

Coldness is not Christian Science. Neither does this Science teach an icy aloofness, which seems to say, Keep your troubles to yourself. Some persons may unfortunately gain the impression that, in order to be consistent Christian Scientists they must not betray the slightest emotion at anything. No matter how trying may be the experiences through which friends and dear ones are passing, they should wrap themselves in an impenetrable mantle of stony silence, steel their hearts into a semblance of indifference which they are far from feeling, and thereby imagine that they are scientific. When one is really scientific, however, he is never unhappy; but in cases such as this it would be hard to tell which one is more thoroughly miserable, the hurt, disappointed, bewildered friend, or the would-be Scientist. The Scriptures tell us to "rejoice with them that do rejoice, and weep with them that weep." Then let us be normal, natural, unaffected, loving men and women. Tenderness is not weak-

Digitized by Google

ness, nor is it making a reality of error to say, "I am sorry," to a friend in trouble. Are we not truly sorry that he knows no better than to be in trouble? Browning once wrote,—

Such a starved bank of moss
Till, that May-morn,
Blue ran the flash across:
Violets were born!

There is many a "starved bank of moss" in our midst today, just waiting for the sunshine. It has passed through many phases of experience during that long, cold winter of its discontent. First of all, in a mental mist, thick and dull as some November fog, it lost sight of the light of Truth, and quickly after that the December snow buried it in fear, remorse, suffering, self-condemnation, and shame. Then it was seized in the ice-bound grasp of pride and resentment, growing ever more hard and stubborn and bitter, after which the cutting winds of criticism blew upon it, and the empty blustering of idle tongues lashed it into fury.

Then, one day, it came about that a wonderful thing happened. A compassionate look fell upon that shrinking, suffering one, followed by a gentle word of encouragement, and the poor starved consciousness responded, just as the cold earth responds when the showers of April fall upon it. Then the light of Love shone upon it, and it was strangely warmed and comforted. It felt a sudden new desire to move, to grow, to put out wee white fibers from its shriveled roots, to wake out of its long sleep, to be something, to do something. And at last came "that May-morn" when there was no longer any starved bank of moss, but just a velvety green slope, starry with violets, lifting their blue eyes in silent gratitude to that Love which had brought them into being, to that Love which is God, and which, like the sunshine, makes glad "the wilderness and the solitary place," causing even the desert to "rejoice, and blossom as the rose."

✧

A Retrospect

JOHN ASHCROFT

THE semiannual recurrence of the Lesson-Sermon on Substance in "The Christian Science Quarterly," is an unfailing reminder that the first gleam of spiritual light which broke upon the present writer's thought came through Mrs. Eddy's declaration on page 468 of the Christian Science text-book, "Science and Health with Key to the Scriptures," where she says, "Substance is that which is eternal and incapable of discord and decay." Years of skepticism, succeeding earlier years of bondage to creedal belief, had not begotten a disposition to accept without proof this definition as correct; but as other lines of research had failed to yield satisfaction, thought immediately began to measure with this unfamiliar rule objects cognized by the senses.

It was readily conceded that the material world and its man could not be made to conform to this standard of measurement; that they were only too apparently capable of both discord and decay. With belief in their substantiality somewhat shaken, search was begun for evidence in support of the newly found premise. To this end healing was sought in Christian Science, but in the somewhat ungenerous attitude of demanding proof before credence would be accorded,—an attitude undoubtedly responsible for the unsatisfactory results attained, which led to the temporary abandonment of the effort. When later the needs of others, near and dear, inspired fresh endeavor, it began to be seen that pride of intellect was a poor foundation on which to seek to build spiritually; and as this was slowly superseded by willingness to become "as a little child," progress became possible.

About this time it became necessary in a business way to witness a demonstration of the possibilities of the X-ray machine, and the writer was invited, with others, to test the power of the light. With great interest it was noted that the flesh, blood, nerves, etc., which seemed so substantial, had practically disappeared from the picture on the screen, showing only faintly around the darker shadow of the bones; and as there flashed into remembrance the teachings of our text-book, it was with something akin to awe that one contemplated the possibility that in the stronger, purer light of spiritual understanding the material man might disappear from view entirely. Thought was becoming more receptive, more willing to relinquish its confidence in the testimony of the senses. Still reasoning in a somewhat halting fashion from effect to cause, however, it gradually became apparent that while the seemingly substantial objects around us might be entirely destroyed, the ideas they represented were indestructible; that a chair, for instance, might be reduced to ashes, but that one could not destroy the idea of a chair; that the figure on the blackboard was only the human sense of the number in mathematics, and that no matter how often it might be used or erased, the idea or number remained forever untouched, unchanged.

At this point thought was directed to Mrs. Eddy's requirement, that reasoning from cause to effect, we begin with Mind, and from this basis effort was made to apprehend reality. The question at once arose, Where is the idea of infinite Mind to be found,—in matter, the phenomena before the physical senses? The further study of Science and Health revealed unmistakably the fact that Mind's idea must be sought in the mental realm. It was gradually seen that intelligence, wisdom, understanding, goodness, patience, faith, were enduring realities, though unappreciable by the physical senses, which take cognizance only of effects; and with this recognition came some perception of the truth that all of God's gifts to man must be spiritual, instead of material.

From the newer view-point it became clear that man in the image and likeness of Spirit, God, could not be less than spiritual; that the infinite nature of Spirit precluded the possibility of the actual existence of aught else; that the material universe and matter man were but erroneous concepts of spiritual realities. In the light of increasing understanding the Scriptures were read more profitably. Paul's statement in his letter to the Philippians, regarding the ability of the Christ to "change our vile body, that it may be fashioned like unto his glorious body," took on a new and beautiful meaning when it was seen to refer, not to some impossible transformation of matter, but to the correction of the false concept of man's being by the operation in human consciousness of Christ, Truth. Another stumbling-block, the apostle's statement, "There is a natural body, and there is a spiritual body," vanished before the understanding that the material concept of self must eventually be superseded by the spiritual understanding of eternal individuality. Gratefully it was admitted that when John saw "a new heaven and a new earth," the change was in his consciousness, and not in God's already perfect creation. (See Science and Health, p. 573.)

As little by little the former modes of thought were supplanted by the new, it became possible to grasp more of the teaching of Christian Science respecting man as God's idea, and the substantiality of his being as spiritual, not material. With this came also some perception that in present experience man's substance, in a possessive sense, is not in material accumulation, but in what he understands of divine Truth. Appreciating more fully the truth of the apostle's statement that finite sense is incapable of perceiving "the things which

Digitized by Google

God hath prepared for them that love him," and encouraged by the multiplying evidences of harmony in daily life, the writer has pressed on, assured that it is no vain promise that they who seek understanding will indeed "inherit substance."

Remedy for Ghosts

MARTHA BURR BANKS

In the early history of the world, the indications of unseen power that men noticed about them seemed to them mysterious and supernatural, and they came to believe that the movements or the changes that they observed in wind, water, weather, sun, moon, stars, trees, flowers, or seed, were the effect of what they called "spirits."

Owing to lack of acquaintance with the spiritual universe and to ignorance of man's dominion over all the earth, mankind regarded these forces as fraught with more harm than helpfulness to humanity, and they were considered absolute and irresistible. So it was not strange, therefore, when any one vanished from mortal vision, that it was taken for granted he now belonged to the unknown realm of which the people stood in awe, and that he should become an object of fear and dread. It was supposed that his soul or spirit still lingered about places familiar to him in his earthly existence, or hovered near the spot where his material body had been laid to rest, and naturally those who believed in the reality of such specters would be likely to deceive themselves into thinking that they did sometimes see them.

The old word for spirit was ghost, and among the definitions of the term, Webster and the Standard dictionary give the following: "A disembodied spirit." "The spirit of a deceased person." "A spirit of any kind." "Apparition, shadow." "A shadow or semblance." The first phase of faith in ghosts has largely disappeared from human consciousness through the understanding, due to advancing enlightenment, that there is no such thing as a ghost of this kind; but the race has not yet outgrown all its ghostly superstitions. It still expects manifestations of evil in human experience and looks for the appearance of ghosts in the shape of fear, doubt, poverty, loss, sorrow, strife, misfortune, catastrophe, pain, sin, sickness, and death. Happily, however, through the illuminating teachings of Christian Science we are learning that these things, too, are unreal.

On page 187 of the Christian Science text-book, "Science and Health with Key to the Scriptures," we are told that "material sense creates its own forms of thought, gives them material names, and then worships and fears them;" and on page 418 we read that these are "dark images of mortal thought, which flee before the light of Truth." When we can prove this for ourselves, we begin to appreciate the reality of the statements of Christian Science—that these images have no more substantiality or authority behind them than had the ghosts of olden days. Then we are somewhat freed from bondage to them.

Among a group of children who once played together there was one amusement which held for them a fearful but an abiding fascination. One of them owned a book that they called "the ghost book." It was filled with pictures of vague, weird figures painted in pale, ghostly colors, and this small volume was often taken into a room having light-colored walls and illumined by a single gas jet. There it was opened at some especially frightful favorite in the line of a picture, and held under the single point of light in such a way that all the children might fix their gaze steadily upon it for several moments. Then, at a given word, they would suddenly lift their eyes and glance hastily in any direction at the surrounding walls. There, at any spot on the white surface at which any of the number might look, would appear some figure at which they had all been staring. If they turned their backs upon the specter, it jumped up on the opposite wall. If they fled for safety to a corner, it smiled mockingly into their faces there.

In a sense they had made this specter their own, and it went with them wherever they went. Even when the laughing, shrieking youngsters rushed headlong into the adjoining hall, the ghost was not left behind. It pursued them through the house, and it was not until they found themselves in the full sunshine that the vision melted away and all became clear about them. Then they discovered that that which in the darkness had seemed real and everywhere present was, in the daylight, nothing and nowhere. Later in life, when some of these playmates came to know of the truth of being through the study of Christian Science, the memory of this pastime would come to them as an apt illustration of that which seems to be and is not, and as a reminder of the one way of escape from the delusions that take form in the darkness.

Education, custom, and habit of thought have placed before us images of sin, sorrow, disease, and death, and our gaze has been so steadily fixed on these human concepts that they have become deeply impressed upon our thought. We have accepted them as true and permanent, and so have continued to meet them everywhere. Change of scene or of climate, resistance, or efforts to erase these distortions by physical means, will not separate us from them so long as they are in our eyes; but when we ourselves come out into God's sunshine, "the blaze of Truth, spiritual sense, and the actuality of being" (Science and Health, p. 296), we are enabled to recognize these ills as nothing but evidences of wrong thinking, and not of God's creating. Then they cease to alarm or to sway us and fade away from our consciousness. Thus we may gradually come to realize the phantom character of every ill, and learn to abide in the blessed confidence of the absolute allness of God, good.

[Written for the *Sentinel*]

Only a Dream

ELIZABETH EARL JONES

Adam slept, and dreamed that space, all vocal with joy and song,
Took form as birds that peopled the air and silenced the serpent of wrong.

They sang of a life not doomed to toil, of man as the image of God;
And the message was balm to the wounded heart, winning away from the sod.
They sang of a bounty embracing all, of a heaven at hand alway;
The shrill, sweet notes died away like a dream, but the message had come to stay.

Adam dreamed that a fatal blast from the cruel world of fear
Tore from their nests the gentle birds and silenced their songs of cheer:
But man awake in the image of God, the voices of Love in his ear,
Knows the falling sparrow is only a dream,—the joy and the song are here.

Selected Articles

[Frederick Dixon in *Birmingham News*, Birmingham, England]

A recent critic goes out of his way to explain that the healing of Christian Science is not the healing of the New Testament. The healing of the New Testament, he says, was the direct intervention of God, not merely for the purpose of conferring creature benefits, but for the purpose of proving the divinity of Christ's claims, establishing the reality of the resurrection, and confirming the teaching of the apostles. Will you permit me to point out that, as a matter of fact, this theory is opposed not merely to the teaching of Christian Science, but to that of a very large proportion of the churches. Reduced to plain English it means simply this: that the healing of the first century was supernatural, and that it was confined to Jesus and the apostles. Now, literally, this is incorrect, if the words of the Bible are to be accepted as accurate. Historically it is incorrect, if the evidence of the fathers and later historians is to be accepted. Traditionally it is incorrect, if we are to accept the traditions of the church of the middle ages; and exegetically it is incorrect, if we are to accept the teaching of an enormous body of the clergy of the various churches of today. Finally, it is not merely an incorrect statement, but an entire misstatement of the teaching of Christian Science.

First, then, to take the literal text of the Bible, there is no possible way of escape from the fact that Jesus' commands to heal the sick were given to humanity, and not merely to a specific handful of individuals. As a matter of fact, it would be easier to argue that the command to preach the gospel was given only to the disciples, and therefore should have come to an end with them, than to attempt the same argument with regard to the healing of the sick. In the gospel of St. Matthew, in almost his last recorded words, Jesus directed his disciples to teach whatsoever things he had commanded them. No one, presumably, will pretend that the healing of the sick was not one of the things commanded them, since this healing constituted a very large portion of his teaching. Then in the gospel of St. Mark there is once more the command to heal the sick, coupled with a statement that those who believed in Jesus' teaching would not be hurt by poisons or serpents; and finally, in the gospel of St. John there is that extremely broad statement of Christ Jesus that those who believed in him would be able to do the works that he had done. Now, these commands were spoken without reference to time or place. There is no pretense that they were delivered especially to the apostles, or that they were confined to any age, and it is only by deliberately altering the clear meaning of the Greek text and the English translations that it is possible to maintain the ground which this critic has taken up.

Next, the word miracle has no supernatural meaning, and never had any. It is the arbitrary translation of two Greek words, one of which means an act of power, and the other, a sign. The miracle, in short, was the act of power, or sign, in demonstration of the truth of Jesus' teaching, and it is a mere abuse of the Greek language to give it a supernatural significance.

Then, again, with respect to history, the works of the fathers make it perfectly clear that the healing of sickness continued long after the time of Jesus or his disciples. A simple reference to the writings of Tertullian, Justin Martyr, Irenæus, or half a dozen others, will readily prove this. This healing continued, though in an ever-failing degree, to the time of Constantine, and has continued in a more or less sporadic way ever since. The prayer book of Edward VI contains a service of healing. The journals of Fox and Wesley contain numerous stories of healing, and unless the critic is prepared to deny history wholesale, he will have to admit this. Traditionally the evidence is as strong, since from one end of Christian tradition to the other there are innumerable stories of the healing of sickness, so innumerable that it is unnecessary even to begin to mention them; while exegetically we have the declarations of commentator after commentator of the present day in witness of the fact that the healing of disease must be regarded as a lapsed part of Christian practice, and the demand for its restoration as that which the world owes to the teaching of Mrs. Eddy.

Now, we come to the teaching of Christian Science, and it would be impossible to express what Christian Science does not teach more clearly than in the assertion of the critic that it teaches healing for bodily comfort. Christian Science insists that when Jesus declared that those who believed in him would be able to do the works he did, he, and no other than he, made the repetition of those works the test of a man's right to be called a Christian. Indeed, it says that his right to the name of Christian is exactly proportionate to his power of performing these works, and that just exactly in the ratio in which he gains the Mind of Christ, he will gain the power not merely to heal the sick, but to walk upon the water and to raise the dead.

The teaching of Christian Science, then, is this, that Jesus made the power to heal sickness the demonstration of the truth of the believer's theology. That is to say, that exactly in proportion as a man gains the understanding of absolute Truth, he gains a knowledge of the Word of God, which is the same thing as theology. As he gains this knowledge, he gains, as Jesus foretold, freedom,—and freedom from what but the belief of the power of evil, manifested in sin, disease, and death? In order, however, to gain this knowledge of Truth, he must destroy his own belief in the power of evil; and as he succeeds in destroying this belief, the carnal mind gives place to the Mind of Christ.

✧

[Editorial in *Bisbee* (Ariz.) *Review*]

The bill recently introduced in the Massachusetts Legislature to modify the strict terms of the present compulsory vaccination law, is commendable for several reasons. The measure provides that children whose parents declare they are opposed to vaccination, shall not be required to submit to inoculation as a precedent to admission to the public schools, says *The Christian Science Monitor*. Objections to the bill on the ground that it might open the way for the spread of disease, are disposed of by the proviso that in times of threatened epidemic, children exempted from vaccination under this bill would be debarred from school. The proposed change in the Massachusetts law is not unlike the so-called "conscience clause" of the California statute, which has worked satisfactorily for several years. Similar exemptions have been adopted by local school boards in various parts of the United States, with satisfactory results, so far as can be learned.

In commenting on the bill, we do not wish to be construed as taking any part in the long and too often heated discussion as to the merits of vaccine virus as a preventive of disease. Mrs. Eddy advised her followers to submit to the law whenever the law compels vaccination. Christian Scientists are law-abiding, but they need not be debarred from rejoicing when hopeful signs appear, indicating a more liberal and a more enlightened sense of the functions and powers of government.

One of the best reasons why the proposed change in the vaccination law is commendable, is found in the fact that it

Digitized by Google

may rightly be considered a symptom of the upward tendency of human thought to a more individual sense of self-government. Until the golden rule is universally established, the majority will no doubt continue to rule; but the majority are beginning to recognize that the opinions of two men are as sacred for them as the opinions of three men are for them. The time has gone by when the physically strong man ruled simply because he was strong. The growing understanding of the brotherhood of man is already diminishing political, medical, and theological despotism. One need not be an antivaccinationist in order to find satisfaction in the proposed modification of the statute, by which the rights of the individual are acknowledged without in the least imperiling the general public health. It is to be hoped that Massachusetts will have developed a true progressivism, which will make possible the enacting into law of H. 1018.

✧

[George A. Law in *Manchester* (Conn.) *Herald*]

Christian Science does not claim that to the human, mortal, and immature senses men do not sin, suffer, and die. Indeed the Christian Science text-book, "Science and Health with Key to the Scriptures," abounds in instruction how to overcome these disturbers of human peace and happiness, which instruction fully accords with the teachings and demonstrations of Jesus the Wayshower, whose mission was to teach this very thing.

Christian Science maintains that the true man, the spiritual man, whose creation is recorded in the first chapter of Genesis, can no more sin or suffer than can God, his creator, in whose likeness man is created; and it will appear that in this Christian Science does not essentially differ from the teaching of other Christian denominations. By a realization of this scientific fact, this truth relative to man and his relation to his Maker, many a "poor fellow pinched with hunger, shivering with cold," has risen out of such a condition of disorder and inharmony into peace, happiness, and a return to usefulness.

It is obvious that if evil and its results are real, in the absolute sense, they must be God-created, for He created all; and if of God's creating they would thus be impossible of destruction. That they can be destroyed and eliminated from man's experience, also the fact that Jesus taught how to dispose of them, are proofs of their unreality.

✧

[Frank Bell in *The Record,* Wilkes-Barre, Pa.]

Nothing could be farther from the fact than that the healing in Christian Science resembles any of the phases of belief in faith-cure or the efficacy of incantations. Christian Science claims no supernatural authority or action; its results are due to the operation of simple and natural law. It is not "mind over matter" in the ordinary sense, but it is good over evil in the broadest and most comprehensive and effective sense. Like mathematics, it cannot be learned by reading a book, nor can its precepts or rules be understood by any who refuse to try to put them into practice. Necessarily, then, it cannot be disproved by a mere theorizer. Its critics always shoot wide of the mark because they aim not at actual Christian Science, but at their own mistaken conception of it; and their criticism appeals to those only who, like themselves, have not given it a trial.

If our friend has really persuaded himself to believe Christian Science teaches that mortals do not sin, suffer, and die; that there is no incarnation, no Holy Spirit, and that Christianity is a failure, he is warranted in assuming the Bible and Christian Science to be irreconcilable. In view, however, of the well-established fact that Christian Scientists are diligent Bible students and that there is more reading from the Bible in Christian Science church services than in those of his own or any other denomination, it is a fair presumption that either his facts or his logic are faulty. Christian Scientists will be especially surprised to learn that they have been denying "the healing power of the gospel," for if there be one thing above all else they have supposed they were affirming and demonstrating, it is that.

Christian Science does not deny that God is Person in a spiritual sense. Christian Scientists, however, are not required to profess belief in a manlike personal deity sitting on a great throne in the sky and dealing with his children in a manner that would be intolerable in a human parent, rewarding some and punishing others for doing things he is supposed to have made them capable of doing. Christian Scientists are taught to question the accuracy of any description of God that does not conform to the highest standards of justice, mercy, and love, to say nothing of intelligence.

Our friend intimates that "very little" has been said of the suffering of those under Christian Science treatment. Judging from the rapidly increasing popularity of this sort of treatment, most of the little that has been said could not have been true.

[William S. Campbell in *Washington* (D. C.) *Post*]

As reported by the newspapers within the last few days, considerable interest has been aroused over the utterances of the venerable president emeritus of Harvard University regarding religious subjects. It is stated that he would abandon the use of the term "God." It appears from the despatches, however, that Dr. Eliot's dissatisfaction is not so much with the word itself as with the meaning that is so commonly attached to it. The *Post* quotes him as saying that he would take away the term "God" and use in its place "our Father." This he considers the right name in approaching the Almighty.

Perhaps no harm would come if this recommendation were adopted, and yet it is a proposition that will hardly meet with approval. It would seem wiser to retain the word and give to it its generally accepted meaning, good.

The roots of our twentieth century civilization have been fed by the literature of the Greeks and Romans. These people recognized a power beyond mortal ken, but they had not the insight to perceive the full meaning of the word "divine." Hence we have in the classics mention of the gods of those times,—gods with human attributes, gods of war, and gods of pestilence; gods who could be placated and who needed to be appeased; gods both good and bad. A practical result of this teaching was the giving of scant attention to the good gods and of paying special attention to appeasing the whims of the gods of wrath.

Before the literature of Greece and of Rome made its impress on civilization, a humanized sense of Deity was common. Far back in the dawn of history, as recorded in Bible narratives, patriarchs and prophets here and there along the pathway of time received a true sense of God, but the material sense of the times in which they lived obscured to some degree the proper sense of Deity. God is to each individual just what his thought pictures Him to be; hence it is that in the primitive times of Old Testament history the high sense of God perceived by patriarch and prophet was sometimes clothed in the material word vestments of the scribe. So we have pictured in the writings of that early time a God who is often cruel, changeable, and prone to wrath.

It is an interesting and significant fact that many men who have repudiated the Old Testament portrayal of God

Digitized by Google

and who have led careless and indifferent lives, have become changed men through the interpretation of the nature of God that is given in Christian Science. This interpretation is in strict accord with Jesus' teaching. On one occasion he said, quoting from the Mosaic law: "Ye have heard that it hath been said, An eye for an eye, and a tooth for a tooth: but I say unto you, That ye resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also." He threw the light of a clear understanding upon the Old Testament record in a way that revealed both the law and the Lawgiver as being very different from the teaching of that time.

It was Jesus who gave the true sense of God as "our Father," and who by word-picture and by exhortation sought to impress upon his hearers a better and truer sense of the Supreme Being, a sense that John expressed in the statement, "God is love." Nearly forty years ago Mrs. Eddy called the world to recognize the God that Jesus described. It has seemed a hard task for scholastic theology to give up its vengeful God and its brimstone hell, but it is being forced to do so, and the God who is "our Father" will eventually be not only the God of Christian Scientists, but the God of all Christendom.

[David Anderson in *Geelong* (Australia) *Advertiser*]

In a recent issue of the *Advertiser* reference was made to Christian Science as a religion which grips by its immediate solace and which is growing in numbers in Australia. For these reasons, will you permit a brief correction of the statement that "the guaranty of an ideal heaven to come, and of the absence of all ills here and now," satisfies Christian Scientists.

The presence of abounding ills in mortal experience is fully recognized in Christian Science. The overcoming of these ills constitutes its *raison d'être* and explains the fact that it brings solace. The heaven of the Christian Scientist is not what a modern versifier expresses as "an upper flat, with Credo on the front door mat." In the text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy has written, "Heaven is not a locality, but a divine state of Mind in which all the manifestations of Mind are harmonious and immortal" (p. 291); and on page 40 we read, "To enter into this kingdom, the anchor of hope must be cast beyond the veil of matter into the Shekinah into which Jesus has passed before us." To the Christian Scientist, therefore, heaven represents harmony, and Christian Science shows that this harmonious condition of mind is attainable here and now in proportion as man attains to the conscious recognition of the ever-presence of God, or in other words, in proportion as he attains the Mind "which was also in Christ Jesus."

May I also say, if by "everlasting and unvarying liturgy" is meant that the subjects of the Christian Science sermons are treated with cast-iron similarity, this is not true. These subjects cover a very wide range of theology, and no one of them is ever treated twice in precisely the same way. The provision in the Christian Science Manual, which provides that the Bible and the Christian Science text-book shall be the only preachers of the denomination, is nothing more than a wise precaution that the representation of Christian Science set forth in the church services should always be that of absolute accuracy, and of this the text-book is the only standard.

[Richards Woolfenden in *The Southport* (England) *Guardian*]

In a recent issue the Rev. —— writes: "The science of mental healing need not be concerned with any special cult. To believe in the active powers of faith it is not necessary to become a Christian Scientist or to attach one's self to any church in particular; neither is it necessary to leave any church."

From this it is quite evident that your contributor is laboring under fears which he finds it difficult to conceal. The fact of the matter is, that many today can see no other alternative than the course indicated; and for that reason great numbers are finding their way into the Christian Science church. There is only one explanation for this. It is to be found in the purpose of the Discoverer and Founder of Christian Science, Mrs. Eddy, as stated in the "Manual of The Mother Church" (p. 17), "to organize a church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing."

That this purpose is being fulfilled successfully is proved in the lives of vast numbers who are finding health and happiness that no other church and no other healing agency could supply. Moreover, there are those who have taken the very course advised by the critic, that is, in reading the books written by the clergyman who started the Emmanuel movement, and yet have found all this to lead them straight into Christian Science. We would like to have your correspondent explain to your readers how it is that the Emmanuel movement has not grown in this country, and how it is that the attempt to bring it into the Church of England has apparently failed. Is it not because Christian Science already occupies the field, and provides for poor suffering humanity's needs in a way that leaves nothing to be desired?
