That is the experience of the present writer, and it is one which your readers will find amply confirmed and illustrated, no matter in which direction they may turn. In the alternative of thoughts or drugs, they will find that the apprehension of Truth gained by a careful study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, will, as she states on page 575, "destroy forever the physical plagues imposed by material sense."

✧

[E. M. Ramsay in *Evening Express*, Aberdeen, Scotland]

It must not be supposed that Christian Scientists have any unkind or antagonistic feelings toward the medical profession. On the contrary, they have the greatest admiration for the devoted, unselfish lives led by so many doctors, and remember with gratitude the kindness they received from them in the days before they knew of Christian Science. Nevertheless they deplore the fact that so many eminent men, instead of investigating the claims of Christian Science in an open, unbiased, and scientific spirit, are content to accept the false conceptions of people who have no knowledge of this subject themselves, and can therefore only act the part of "blind leaders of the blind."

It will be universally conceded that drink and immorality are the direct or indirect causes of a very large proportion of the diseases from which the country suffers. Why, then, should it be thought an untenable position when we assert that other illnesses also have their origin in sinful or unhealthy mental conditions, and can be satisfactorily eliminated only in proportion as the morbid thoughts which produced them are eradicated from the heart of the patient? Again, what but true thoughts can rid us of false thoughts? And whence can true thoughts emanate but from God, the divine Mind, absolute Truth, unchanging Principle, the source of life, purity, peace? A clearer understanding of God's nature, a closer, more abiding sense of God's presence, a more just, generous, tender outlook on life, will do more for the health of the country than anything else can accomplish.

Editorial

"Let your light so shine"

In these days of breaking away from customs and traditions, Christian Scientists, like every one else, are confronted with the lure of the extreme in dress, in amusements, and in the exploitation of the sexes which is now so popular through newspapers, magazines, current fiction, and the stage. That these things constitute dangers to be guarded against, just as surely as the danger which Mrs. Eddy saw thirty-one years ago, there can be no doubt. At that time she wrote, speaking from the standpoint of editor and publisher of the Christian Science magazine, which had just been given to the public,—

"Looking over the newspapers of the day, one naturally reflects that it is dangerous to live, so loaded with disease seems the very air. These descriptions carry fears to many minds, to be depicted in some future time upon the body. . . . If we can aid in abating suffering and diminishing sin, we shall have accomplished much; but if we can bring to the general thought this great fact that drugs do not, cannot, produce health and harmony, since 'in Him [Mind] we live, and move, and have our being,' we shall have done more" (Miscellaneous Writings, p. 7).

That in the succeeding years much has been accomplished in the wide-spread dissemination of the "healing, purifying thought" which the Christian Science periodicals have carried into such a multitude of homes all over the world, there can be no doubt, nor should there be any doubt that much can be accomplished at the present time by bringing to the general thought the fact that "man is not material; he is spiritual" (Science and Health, p. 468).

Through the abandonment of much of that Puritan austerity and reserve which was so potent a protest against the sensuality and licentiousness of the seventeenth century, there has seemed to be a gradual drifting into the belief that modesty and purity are out of date, and no longer necessary to happiness and respectability. This belief has found expression in manners, customs, modes of dress, and forms of amusement which to say the least would have shocked an earlier generation. That these things will last only until there has been an awakening from the belief that man is material and that his happiness is in material living, in pride, material ambition, and incessant amusement,—this is the hope of the future, and the consistent living of the teachings of Christian Science on the part of its followers will have no small share in its fulfilment.

The *Quincy* (Ill.) *Herald*, in discussing this subject, concludes as follows:—

Happily we need not stop with the doleful decision that all is vanity or vice. If the senses are assailed by evil extremes, we may revert to another plane, and discover that the age is also extreme in the higher things; that there is a surprising advance in the quickening of conscience, in the aim for better morals, cleaner virtue, deeper religion. There never was a time in the history of the world when more people were reading the Bible and humbly striving to emulate the life of the sinless Nazarene. There never were so many sincere hearts growing into an understanding that the fleeting pleasures of the flesh are after all not wholly satisfying, and that a life of purity and honesty, of brotherliness and humility, of strict integrity in dealing with one's fellow man, of searching for the reality of religion, in the thought and in the deed, is the only true attitude and the only way to the supreme happiness. Never have creeds and forms and ceremonies, imposing and inspiring though they be, been so relegated to the background before the knowledge that the truth is only revealed to the honest heart that worships God in sincerity and in the uprightness and beauty of daily life. The extreme in devotion is the simple understanding of that long-neglected saying of the Saviour, "The kingdom of God is within you."

And so day by day more worthy souls are getting away from the bugbear of continual suffering and misery and punishment here below with the reward only to be found in some uncertain heavenly future. They are learning to know that God's constant presence, His infinite love, His unfailing supply of everything needed is here and now ready for our taking if we only accept and show by our freedom from evil tendencies and material follies that we are really striving for the spiritual blessings.

It is a joy to know that, if we are confronted by the extremes in the world of carnality, a large portion of mankind is moving into the higher extreme of studying the Bible daily and conforming their lives to its precepts. The follies of the world are but transitory. The fads of the day are ephemeral and soon forgotten, but the great truths of the soul life will shine brighter and brighter unto the perfect day.

To this conclusion we say, Amen.

Archibald McLellan.

Flesh and Spirit

There are a good many people who contend that they fail to find in the Bible any authority for Mrs. Eddy's teaching respecting matter, namely, that it does not express God's creation but is antithetical to it, hence is unreal. To this it may be answered that while the subject is not presented in Scripture under the term matter, the word "flesh," as it appears both in the Old and New Testaments, stands for the same thing. Thus we read in the fortieth chapter of Isaiah, "All flesh is grass . . . The grass withereth, the flower fadeth: because the spirit of the Lord bloweth upon it." Then the prophet repeats: "The grass withereth, the flower fadeth: but the word of our God shall stand forever." The perishable nature of materiality is here contrasted with the permanency of spiritual being.

In the beginning of the fourth gospel, and elsewhere in the Bible, it is declared that creation sprang from the word of God and expressed the divine nature; while it is also declared that lust and hate, sin, disease, and death, originate in matter, or what Paul names "the mind of the flesh" (Rev. Ver.). Paul is very emphatic about this when he says, "I know that in me (that is, in my flesh,) dwelleth no good thing;" and equally so in affirming that those who are in the flesh "cannot please God." This would be a hopeless prospect indeed if the flesh, or matter, were real and ordained of God to be man's abiding-place, even for a time. Paul does not, however, leave us in any doubt as to this question, for he at once adds, "Ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you." This is surely a close parallel with Mrs. Eddy's statement, "Man is not material; he is spiritual" (Science and Health, p. 468).

When we turn to the teachings of the Master, we find everywhere a demand that men shall turn from the material to the spiritual, and thus from error to Truth, to eternal reality. When Nicodemus came to Jesus to inquire about his wonderful works, the great Teacher went at once to the vital issue and said, "Ye must be born again;" and when Nicodemus stumbled over these words, Jesus went on: "That which is born of the flesh is flesh; and that which is born of the Spirit is spirit." As this learned man still groped in the dark, Jesus pressed home Truth's demand, and asked, "Art thou a master of Israel, and knowest not these things?"

How many are there today among the wise and learned who know the things of which Christ Jesus spoke, the spiritual realities which are the only foundation for health, holiness, and happiness? How many are willing even to listen when the claims of Spirit and spiritual law are presented, when it is found that these involve the giving up of belief in matter, or the flesh, with its false pains and pleasures, for what Mrs. Eddy calls "the imperishable things of Spirit" (Science and Health, p. 21)? Yet no real progress can be made until this

Digitized by Google

truth is seen and accepted. The very fact that the sick are healed and sinners reformed by the understanding of the allness of Spirit, God, and the consequent nothingness of matter, ought surely to lead all professed Christians to ponder deeply this subject and see whether the Scripture does not demand the surrender of belief in matter before one can do the "works" which Christ Jesus clearly expected of all his followers, works which can be done only as spiritual law is demonstrated and the asserted laws of matter, sin, and disease proved powerless.

In Revelation we read that all the gorgeous show of materiality is to vanish "in one hour," with cities, islands, and mountains, these all giving place to the heaven and earth of God's creating. St. Peter declares the same in his second epistle, and bids us "look for new heavens and a new earth, wherein dwelleth righteousness,"—the eternal realm of Spirit.

ANNIE M. KNOTT.

Things that Remain

THE more one thinks upon St. Paul's statement that "the things which are seen are temporal," the more he is impressed with the truth and fitness of this terse characterization of the objective world of mortal experience. From youth to age this life may be said to be a passing temporality. It is made up for the most part of awakenings to false estimates of value, of escapes from the enslavement of some distorted sense.

The little child finds entire self-forgetfulness in his play with a marble, and utter heartbreak, perchance, when it drops beyond his reach into some convenient hole. His judgment is all awry, unbalanced. In a kindred way, youth attaches great importance to affairs which not long hence will be seen to be amusingly trivial. Later the young man enters upon business or professional life with the conviction that now he has to do with serious matters, and relatively speaking he has. Nevertheless, as he grows more thoughtful, or is instructed in Christian Science, he gains a higher sense of spiritual selfhood and responsibility and vaster issues make appeal to his thought, for he has begun to see that all concepts, relations, and experiences of mortal belief are unstable; they are the play-acts of mental immaturity, of which the Preacher has said long since, "Vanity of vanities; all is vanity."

The path of history is strewn with dust-heaps which are all that remain to tell of what were thought of in their day as wonders of achievement. Cities and palaces, kingdoms and thrones, the greatest monuments men have built,—all have lapsed into nothingness! What was erected to an eternal permanency has vanished as a shadow, so that men have to dig through depths of débris to find the tracings of what was designed to be imperishable. Even the so-called physical elements are now known to be but the momentary phenomena of forces which are themselves a part of some vast unknown cycle of change.

Despite all this drift and instability, however, there are some things that remain. Men do not disagree respecting the staying quality of demonstrable truth. All are sure that the least verity is more permanent than the stars. We know, too, that pure affection is changeless and immortal, and that these constants, truth and love, may be assimilated, so that they shall constitute our abiding consciousness, our true selfhood. We know that we can feed upon, appropriate them, and live and grow only as this is going on; that they supply the woof and warp of true individuality.

The merest child knows that when the truths of the multiplication table are mastered, he can no more part with them than he can run away from himself. Understanding in the same way the metaphysical meaning of Jesus' words, "Because I live, ye shall live also," one realizes how Christian Science finds the immortality of man in the immortality of Truth. When therefore we have proven the correctness of our apprehension of Truth by healing the sick, as Christ Jesus commanded, the question as to whether or not our names are written in heaven is definitely settled. The immortality of man, of spiritual consciousness, inheres in the immortality of Truth and Love.

Death is now remanded to its own place. It is seen to be the end not of being, but of non-being. It too is an incidental, a phenomenon of falsity, and it must therefore disappear, as Mrs. Eddy has said, "with the disappearance of sin [erroneous belief]" (Science and Health, p. 426). This is the simple Science of being taught and demonstrated by Jesus and reaffirmed in Christian Science. The nature of man is determined by the nature of God, and salvation is but an awaking to the facts that forever remain. Demonstrably right consciousness supplies its own sufficient evidence of immortality. It cannot pass, because it is an expression of the infinite. To reach this sense of things is to "rest in the Lord." It is to know in whom we have believed, and be fully persuaded that He is able to keep us unto everlasting life. The things that remain are God and His manifestations, and we are of Him in Christ.

JOHN B. WILLIS.

Among the Churches

Current Notes

ROCHDALE, ENGLAND.—The new First Church of Christ, Scientist, which has been erected in Castlemere street, will be opened this afternoon [Jan. 31], when a thanksgiving service will be held. It is over ten years since the Rochdale people began to take a practical interest in Christian Science. A room was taken in December, 1903, and twelve persons attended the first service held there. Nine months later there was a growing congregation, and more commodious premises in Baillie street were obtained. A Christian Science Society was formed on July 10, 1906, and fortnightly meetings were started. Later the public hall lecture-room was utilized for the services, and in July, 1907, First Church of Christ, Scientist, in Rochdale, was formally organized.

The Rochdale Observer.

SOUTH PASADENA, CAL.—The need of a Christian Science church in a growing community like South Pasadena had been felt for a considerable time, and about two years ago a number of Christian Scientists, most of whom had been members of the Christian Science church in Pasadena, started First Church of Christ, Scientist, in South Pasadena. A hall was rented, and the first services were held there on Sunday morning, Jan. 21, 1912. The regular attendance has been large from the beginning, and has steadily increased.

South Pasadena Record.

UTAH.—During the year, approximately 23,500 pieces of literature were distributed throughout the state, consisting of *Monitors*, *Sentinels*, *Journals*, and local newspapers, in addition to the work of the local *Monitor* and distribution committees. Of this number, 13,747 were *Monitors*.

Correspondence.

DENVER, COL.—For thirteen months up to December, 1913, the committee for the distribution of literature has distributed or mailed 28,927 *Monitors*, 627 *Sentinels*, 208 *Journals*, and 36 *Heralds*.—*Correspondence.*

Digitized by Google

PASADENA, CAL.—On the twenty-fifth anniversary of Pasadena's "Tournament of Roses," held on New Year's day, with her two hundred thousand visitors, the distribution committee of First Church of Christ, Scientist, Pasadena, maintained a reading-tent centrally located at the corner of Colorado street and Los Robles avenue. Mrs. Eddy's complete writings, in the different editions, occupied a prominent position, and were in the care of an attendant. No literature was sold, but there were distributed during the day 1,158 pieces, including *Journals*, *Sentinels*, *Monitors*, pamphlets in the different languages, and editorial comments. The tent was open from eight o'clock in the morning until nine in the evening, and during these hours it was estimated that fully fifteen hundred people availed themselves of its comfort and convenience.—*Correspondence.*

PHILADELPHIA, PA.—Members of First Church of Christ, Scientist, met last night [Feb. 16] to make plans for a third church in Philadelphia. This church is at Forty-first and Walnut streets, and the other is on Germantown avenue. It was decided that the third should be erected in North Philadelphia, and the matter was referred to members in that section of the city, so that they could decide on a site.

Philadelphia Press.

LYNN, MASS.—On Sunday, March 1, services were held by First Church of Christ, Scientist, in the church edifice located on Chestnut street, near the corner of Broad street, and formerly occupied by the Congregational society. A lease of this building, which has a seating capacity for about five hundred persons, has been taken for a term of several years. Growth in the attendance made the change desirable.

Correspondence.

THE HAGUE, HOLLAND.—In January, First Church of Christ, Scientist, began to hold Dutch services in addition to the English ones. These Dutch services were well attended from the beginning, and have been much appreciated. We hope to enable many to follow the services better, now that these are held in our mother-tongue.—*Correspondence.*

BROOKLYN, N. Y.—Second Church of Christ, Scientist, corner of Fort Hamilton parkway and Eighty-sixth street, has removed its reading-room to 275 Seventy-fourth street, near Third avenue. The new location is most suitable for a reading-room of this character, as it is in a choice section.

The South Brooklyn Home Talk.

MINNEAPOLIS, MINN.—The dedication of Third Church of Christ, Scientist, of Minneapolis, took place on Dec. 28, as it was entirely free from debt. The church was filled at each service.—*Correspondence.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Sacramento, Cal.

In introducing Willis F. Gross, who lectured on Christian Science, Atty. Arthur E. Miller spoke in part as follows:—

Within the past three months I have taken up the study of Christian Science, and while I am only a beginner, yet already I have found it to be a most wonderful and fascinating study, with the greatest possibilities and probabilities for the good of mankind.

For years I have watched human development along material lines and have marveled at its seemingly wonderful accomplishments, only to pause with sudden doubt confronting me. What good has it all done? Have these marvelous achievements of the human race really made mankind happier or better? On their account has there been any less sin, sickness, suffering, or sorrow in the world? And persistently I ask myself, Of what real use, then, is all our material wisdom? If these gigantic attempts to add to our material comforts, to our material pleasures, to our material possessions, have brought little or no perceptible benefit to the human race, then there must be something radically wrong with it all. It must rest upon a false basis; its foundation must be of sand, and the search-light of aspiration must have been turned in the wrong direction.

Of recent years, in common with many other men and women, I have sought for the solution, for the panacea that would bring health and happiness, peace and harmony, to mankind. At last I think I have found it in Christian Science; in that which in my supreme ignorance I firmly believed to be the silliest nonsense, unworthy of even a serious thought, though I had begun to wonder more and more at the intelligent class of people who in ever-increasing numbers were turning to it with apparently instant relief and satisfaction. So it was with me. The moment I grasped the basic Principle of Christian Science, the great truth dawned upon me, and I saw at once why men have wasted, not days or weeks or months or years, but centuries in trying to find the road to perfect health and happiness. It remained for a woman, pure of heart and noble of purpose, to discover the secret which has since revealed to mankind, through her teachings, that the living words of Christ Jesus were the truth, and that his wonderful healings from sin and sickness were not miracles, but were in fact the natural results to be obtained by all who understand and apply the same divine Principle.—*Correspondence.*

Fitchburg, Mass.

About three hundred persons were present at City Hall to hear a lecture on Christian Science by the Rev. William P. McKenzie. Emerson W. Baker introduced the speaker, and said in part:—

We are all trying to be happy, and most of us are not succeeding because we are not going at it in the right way. We have raised up a false God, before whom only too gladly, it would seem, we fall down and worship. We have deified money, material success, and in so doing have lost sight of the fact, or forgotten, that the only real success cannot be built out of the things which are seen, but out of the things which are not seen. It is still true that "the things which are seen are temporal; but the things which are not seen are eternal;" but certainly never in this country was this truth so lightly regarded.

I am no pessimist, but it appears to me that this nation is

Digitized by Google

sick, and I am satisfied what the remedy must be. It must be found in the development of the spiritual side of the people. They must be taught that the spiritual life and the spiritual standards are the only true standards. In the schools more time must be devoted to instruction in the Bible. The churches must have a new birth of influence. This, as I understand it, is what the Christian Science churches are trying to do, to bring home to the people of the world the great truth "that the things which are seen are temporal," unsatisfactory and unreal.—*Fitchburg Daily News.*

✧

Los Angeles, Cal.

Clarence C. Eaton lectured on Christian Science for Eighth Church at Jeffers' Hall. He was introduced by John F. Manning, who said in part:—

This is peculiarly and essentially an age of inquiry and investigation. Never before in all its history has the world at large been seeking so earnestly for logical and satisfactory answers to the various problems that confront it. The evidence of this is furnished on every hand, both by the almost universal unrest and upheaval everywhere apparent, by the overturning on every side of ancient landmarks in things social, political, and economic, and by the earnest endeavor on all sides on the part of individuals and organizations to meet and alleviate the conditions brought to our notice by these problems.

You are the guests of those who, having failed to find permanent relief elsewhere, have experienced the benefits of the teachings of Christian Science, and have found in this teaching the answer to "all and sundry" problems before alluded to. For sickness they have found health; for unhappiness, joy; for hate, love; for discord, peace.—*Correspondence.*

✧

Jefferson City, Mo.

Bliss Knapp, lecturing on Christian Science in the County Court-house, was introduced by the Rev. R. A. Liverett, pastor of First Christian church, who said in part:—

There is just one thing that I want to say tonight, and that is, that this old world with all of its sin, sorrow, and suffering, is standing with outstretched hands ready to receive all the good it can get, from whatsoever source it may come. There are a great many institutions in the world that are standing ready to answer this great and crying need of humanity. Some are trying to answer it in one way and some in another; but if we are trying honestly, sincerely, and earnestly to do this old world good in some way, we are doing a work that is world wide. I want to say, however, that while much criticism may be heaped upon the work of different organizations in many and various ways, yet we must say that the church known as The Church of Christ, Scientist, is helping to alleviate the pain, anguish, and sorrow, the sins and sufferings of humanity, and for that reason we can say that as an organization it is accomplishing good in the world.—*Correspondence.*

✧

Fort Dodge, Iowa

Virgil O. Strickler appeared before a large audience to lecture on Christian Science. He was introduced by Senator William S. Kenyon, who expressed his great pleasure in having been in the Senate at the time of the famous speech of Senator Works on Christian Science. Before concluding his brief introduction he remarked that he had always observed that "Christian Science makes people happier, and anything that makes people happier in this life should certainly be encouraged."—*The Fort Dodge Messenger.*

Lectures to be Delivered

Attica, Ind.—Virgil O. Strickler, 8 p.m., March 22.

Bozeman, Mont.—Clarence W. Chadwick, Bozeman Opera House, 8:30 p.m., March 26.

Butte, Mont.—Clarence W. Chadwick, Auditorium, 8 p.m., March 27.

Carterville, Ill.—Bliss Knapp, M. W. of A. Hall, 8 p.m., March 27.

Carthage, Mo.—William R. Rathvon, High School Auditorium, 8 p.m., March 27.

Chicago, Ill. (Eighth Church).—Virgil O. Strickler, Church Edifice, Michigan boulevard and 44th street, 8 p.m., March 23 and 24.

Colfax, Wash.—Judge Clifford P. Smith, First Congregational Church, 8 p.m., March 27.

Connersville, Ind.—Virgil O. Strickler, Assembly Hall, Library Building, 8 p.m., March 19.

Danville, Ill.—Virgil O. Strickler, Fischer Theater, 3 p.m., March 22.

Eugene, Ore.—Judge Clifford P. Smith, Eugene Theater, 8 p.m., March 24.

Joplin, Mo. (First and Second Churches).—William R. Rathvon, New Joplin Theater, 8 p.m., March 26.

La Crosse, Wis.—Virgil O. Strickler, La Crosse Theater, 8:15 p.m., March 26.

Lewiston, Idaho.—Judge Clifford P. Smith, Temple Theater, 8 p.m., March 26.

London, England (First Church).—Bicknell Young, Queen's Hall, Langham Place, 8:30 p.m., April 3; New Cross Baths, Deptford, 8 p.m., April 6.

Manchester, England (First Church).—Bicknell Young, Free Trade Hall, 7:30 p.m., March 17.

McMinnville, Ore.—Judge Clifford P. Smith, Imperial Theater, 8 p.m., March 23.

Milford, Utah.—Bliss Knapp, Orpheum Theater, 8 p.m., March 16.

Muscatine, Iowa.—William R. Rathvon, Public Library, 8 p.m., March 23.

Norman, Okla.—Bliss Knapp, Franing Opera House, 3:30 p.m., March 22.

Richmond, Surrey, England.—Bicknell Young, The Hippodrome, The Green, 3:30 p.m., April 5.

Salem, Ore.—Judge Clifford P. Smith, Opera House, 3 p.m., March 22.

Savannah, Ga.—Rev. William P. McKenzie, Lawton Memorial, 4 p.m., March 22.

Seattle, Wash. (Fourth Church).—Clarence W. Chadwick, Hippodrome, corner Fifth and University street, 2:30 p.m. and 8 p.m., March 22.

Spokane, Wash. (Second Church).—Col. William E. Fell, Auditorium Theater, 3 p.m., March 22.

Trenton, Mo.—William R. Rathvon, Hubbell Theater, 8 p.m., March 24.

Valparaiso, Ind.—William R. Rathvon, Memorial Opera House, 3 p.m., March 22.

Wakefield, Yorkshire, England.—Bicknell Young, Picture House, 3 p.m., March 29.

Walla Walla, Wash.—Clarence C. Eaton, Keylor Grand Theater, 3:30 p.m., March 22.

Wells, Minn.—Virgil O. Strickler, Opera House, 8 p.m., March 27.

Wilmington, Del.—Rev. William P. McKenzie, Church Edifice, 8:15 p.m., March 20.

York, England.—Bicknell Young, Festival Concert Rooms, Museum street, 8 p.m., March 31.

Testimonies of Healing

About June, 1906, while living in Chicago, a physical condition was manifested which occasioned much suffering and fear; and later, it seemed advisable to have a medical examination. Four physicians gave their opinion at different times, and each diagnosed the case as one of malignant growths, but Christian Science treatment alone was given. Several Christian Science practitioners were called on from time to time, and very good work was done; but conditions apparently grew worse until October, when I became unconscious and death seemed imminent. Then, when all hope was abandoned, another Christian Science practitioner was called, and through his clear realization of God as the only Life, I was awakened to consciousness with the thought from Science and Health (see p. 312) that a mortal's belief that he must die occasions his departure. I cried aloud, "I cannot die unless I give my consent, for God is my life, and God cannot die. Therefore, in the words of the psalmist, 'I shall not die, but live, and declare the works of the Lord.' "

That was the beginning of a long struggle, but every material condition was overcome, every asserted law of mortal mind destroyed. One growth came away; the others, through the realization of the fact that they had only the substance of the thought which produced them (see Science and Health, p. 423), disappeared. In the following May I was practically healed, and by August I was better than I had ever been. We had to prove many, many times that God, good, alone is Life and power, for *materia medica* said there was no hope for me. At times, when the suffering seemed unbearable, the words of the ninety-first psalm, also the "Mother's Evening Prayer" by Mrs. Eddy, and the first verse of "Christ my Refuge" (Poems, pp. 4, 12), would bring peace and prove better than any anesthetic.

On one occasion, when it seemed that if there was not immediate relief death would be the victor, in a moment of weakness a hypodermic injection was administered,—indeed several were given before the lesson was learned,—but the result was additional suffering from the effects of the drug. Then every thought of material reliance was destroyed, and only by constant, absolute dependence on God alone was the victory won. One thought which helped us was that Jesus always thanked the Father before he made his petition. Our thanksgiving began long before any visible manifestation of healing was given, and continued until the end. Never for a moment did the disease seem to be any part of myself; it was always distinctly apart from the true self, hence there could be no possibility of surrender. We learned that all there is to death is surrender to false belief.

We feel deeply grateful to all the dear ones who helped us during that awful dream, for their patient kindness and selfless, loving service, and for the marvelous courage and tender compassion of the one who stood unafraid in the very presence of death, calmly conscious of the everlasting fact that God alone is Life; never for one moment losing courage, but standing until the healing was complete. I rejoice in being able to say that I can scarcely realize there was even a belief of such a condition, since not a trace of it is left. To do all that I have done in the past six years would require a great deal of strength; for in addition to doing my own housework I have helped others in Christian Science, and the last four years I have taught in the Sunday school and served otherwise in the church.

Words can never express my gratitude to our Leader, the one who, through her selfless love, her holy, consecrated life and revelation of divine Truth, made this healing possible. I feel that I truly know what it means to dwell in the "secret place of the most High," and like Paul I can say, "I know whom I have believed, and am persuaded that he is able to keep that which I have committed unto him against that day."

MARY JOHNSON CHEESMAN, Racine, Wis.

[In addition to Mrs. Cheesman's own statement of her experience we have the statements of two reputable physicians to the effect that the growths mentioned by her were of a malignant nature. They also state that she was in normal health when they saw her some months after they had made the examinations mentioned by her.—EDITOR.]

✧

For the past two years Christian Science has been our only medicine; we have also turned to it to solve all our daily problems, no matter what their nature, and it has never failed us. Over two years ago we came West, hoping that the purer air would help our baby boy, then three and a half years old. He had suffered from liver trouble since birth, and no food could be found which agreed with him. He had been treated by several prominent physicians, but none of them could give him any relief. At three and a half years of age he could not walk over a block, and he was also weak mentally, for he could not talk so that any one but myself was able to understand him.

We made friends in this part of the country among the Christian Scientists, and they advised us to try Christian Science for him. We did so, and after the first treatment he was able to eat whatever he wanted without any unpleasant result, something he had never been able to do before. This proved to us that there is something in Christian Science, so my husband and I took up the study in earnest. Our child was under the care of a practitioner for three months and was entirely healed. Today he is a strong, robust little fellow and is very bright. We have two older children who have had many beautiful demonstrations of healing in Christian Science. They all attend the Christian Science Sunday school and love to study the Lessons with us every evening.

My husband has turned to this truth for help in business worries and has always found relief. He has also been healed of catarrh of many years' standing, while I have been healed of a sense of overwrought nerves and female trouble. Christian Science has brought peace and harmony to our home, and our desire is that our lives may daily attest the sincerity of our thankfulness to God, and our gratitude to our beloved Leader, Mrs. Eddy, for this wonderful truth, the understanding of which enables us to solve all our human problems.—MARTHA JACOBS, Los Angeles, Cal.

✧

[Translated from the German]

In gratitude to God I herewith testify to my wonderful healing. One night I awoke with a painful sensation, which became so intense after a short time that I feared I might lose my reason. The pain started in the head, then spread all over the face. My husband and I held fast to the truth, but the attack seemed so persistent that we wrote to a Christian Science practitioner, asking her to take up treatment, as we were unable to cope with the ailment. After a short time the pain subsided somewhat, but abscesses formed on the gums. I kept entirely apart from other people, but a neighbor who saw me became distressed at my appearance and said that it was a case of poisoning, for the whole face showed a dark color besides being swollen. When my husband heard this, great fear took possession of him, and its effects were seen in this instance, for from the moment that he became

Digitized by Google

alarmed the pain increased in severity, and it was necessary to telephone the practitioner that same night.

It was surprising to see things take a quick turn for the better. The abscesses opened one after the other, though the discharge from mouth and nose was dreadful, but with a few more treatments I was completely restored. There was no physician in attendance, but the symptoms were indicative of a very serious condition. In this instance it became clear to me once more what the word of God will do for us.

Those who have gone through experiences such as the one just related will realize the impossibility of expressing one's gratitude in words, but he can exclaim with the psalmist: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases." I am profoundly thankful to God, and grateful to our revered Leader, Mrs. Eddy, for Christian Science; also for all the love and truth as well as the great blessings which we, including all our household, have received up to the present time.

FRIDA WIDMANN, Miedelsbach b. Schorndorf, Württemberg, Germany.

✧

In January, 1912, I was suffering from rheumatism, so I wrote to a friend who had often spoken to me of Christian Science, asking her to get a practitioner to give me absent treatment, as I did not at that time know of any one near by. My friend gave me the address of a practitioner only eight or nine miles away, but by the time I received her letter I was feeling better, and did not trouble about it. In May of the same year I was again feeling very ill, and this time I applied for help to the one whose address I had secured, and was healed in three days. I can never be grateful enough for the patient, loving help this lady gave me, as I was just a beginner in Science, having attended only two services at that time. Since then, however, I have read Science and Health and have been wonderfully helped. My husband is an invalid, and a very great deal depends upon me, but I find God a very present help in all times of need.

In 1912 I had attacks of abdominal trouble, and my husband, who is not a Scientist, became uneasy and sent for a doctor, who wanted me to have an operation as soon as possible; but I refused, and again had Christian Science treatment. I telegraphed for help, and the pain left me within an hour after the telegram was received. In a short time I was able to get up and attend to my household duties, and was absolutely well by the next day. I should like to say also, that I have had a good deal of financial worry; but the way has been opened, and I am not now anxious about temporal things in the way I used to be, for divine Love has met my every need.

I feel very grateful for all the help that has been granted me, and earnestly pray for a better understanding, that I may realize and know God's loving care. The truth of the promise, "There shall no evil befall thee," is indeed with us.

MARY HOPLEY, Wincham, Cheshire, England.

✧

In the summer of 1894 I was suffering greatly from rheumatism, stomach trouble, and what was diagnosed as gallstones. I was told by my physician that only an operation could relieve me, but he did not promise me a complete recovery. At that time I had two sisters who were living in the West, and they were Christian Scientists. When they learned of my condition, they wrote and asked me to try Christian Science; but I felt so much antagonism to what I thought it was, that I could not consent even to give it a trial. My sisters, feeling very anxious for me to be healed, and knowing that *materia medica* was almost powerless in such cases, invited me to pay them a visit. I was then living in the South, and my husband thought the trip would be too expensive were I to take the children with me; and strange to say, much as I loved my sisters and longed to see them, the dislike I felt for Christian Science seemed in a manner to overcome the disappointment of not seeing them, for I felt quite sure that they intended to induce me to try Christian Science. When they found why I could not come to them, however, they sent me a check to defray all expenses, with a request for me to come as soon as I was able. This I was very happy to do.

We arrived about tea time, loaded with medicines, which I began to take before the meal, though my sisters asked if I had not tried medicine long enough. After supper they began to tell me about Christian Science and what it had done for them and others. I listened with the greatest interest and seemed to forget all about my dislike for it, and in a short time I realized very clearly that Christian Science is the coming again of the truth which Christ Jesus taught and which he said would make us free. I was healed before we retired for the night, and "the physical senses" were forced to "give up their false testimony" (Science and Health, p. 192); then I realized so beautifully what Paul writes concerning our transformation through the renewing of the mind.

Prior to this I had reached the place where I could eat only the driest kinds of food, and a very small quantity of them; but the next day my sisters told me to eat anything I wanted, and I did, without any ill effects whatever. No one, without experiencing the change which such a spiritual awakening brings, can imagine the wonderful freedom from almost constant suffering,—the health, peace, and joy which I then realized. I had always been religiously inclined and seemed to have a clear thought of God as my heavenly Father, even in childhood. When old enough, I was an earnest worker in the church of which I became a member, but this beautiful new religion, this Science of Christianity, seemed a step nearer to the kingdom of heaven. No words can express the love and gratitude that fills one's consciousness after such an experience in healing,—love to God and love to man.

RUTH V. BROWN, Asheville, N. C.

✧

The truth of the Scripture that "the Lord's hand is not shortened, that it cannot save," has been proved in our family many times during the twenty-four years in which we have been striving to assimilate the teachings of Christian Science. A retrospective view of the time we have devoted to gaining an understanding of Christian Science, brings to mind many instances—some of extremely serious aspect, others not so serious—in which the discordant mists of material sense have been dispelled, and we have been lifted, as it were, from deep darkness and despair into the sunlight of Truth, and made joyful and grateful beyond expression that we have come to know, in a measure, the only true and living God, who heals all our diseases.

Twenty-four years ago we were hopelessly involved in the discords of the world. The old orthodox belief that God is a humanly circumscribed being, far distant from the immediate needs of mankind, was deeply rooted in our waning religious faith. In previous years, when the material environment was harmonious, and there were no fleshly discords to disturb our mental tranquillity, this belief in God as operating at a vague distance had remained unquestioned; but when physical distress came upon us, and we had no apparent means of getting rid of it, then the sufferer in our home instinctively reached out to the one God to whom we all turn for guidance and protection when every other means has failed.

Digitized by Google

It was then, too, that the fallacy of believing in a distant God gradually dawned upon us and we began to yearn for a God who was near, who not only had compassion upon us, but who would show the love of a father by removing our trouble. Thus we were forced to abandon the teachings and beliefs of a lifetime. This was not difficult to do, however, for the thorns of the flesh forced us on, and in our thirst for more practical things in religion we found Christian Science.

The difficulties which beset our home were numerous and varied, but perhaps the most serious one related to the health of the mother. Always of a rather delicate constitution, and threatened with serious ailments which were supposed to be hereditary, her life had not always been harmonious. After marriage, however, this latent weakness took a more serious turn, developing into organic inaction of the stomach and heart; and this trouble, together with other complications, threatened dissolution. At this point she learned of the miraculous healing through Christian Science of a relative who had been suffering from a physical disorder that was hopeless from the standpoint of *materia medica*. Upon inquiring into this wonderful cure, my mother was given the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, to read. Her mental condition was ripe for the acceptance of the truth contained therein, and the perusal of this book dispelled the diseased beliefs which had marred the happiness of our home so seriously; in short, she was healed.

From that hour our understanding of God, as we gain it in Christian Science, has been proving more and more effective and practical. Consistent study of the truths of this teaching, and vigilant practice of them, have seemingly wrought miracles for us. What a change! The vision of eternal peace and happiness is before us, never to be removed. As a distant scene grows nearer with each advancing footstep, so this vision of spiritual perfection is looming clearer and clearer out of the mists of material sense.

Some time since, my father, whose business requires considerable traveling, was very seriously injured in a railroad accident. The force of the shock when the coach in which he was riding left the track, threw him to the ceiling of the car, and he fell back violently, striking his left side against the projecting arm of the Pullman seat. Paralysis from the waist down followed as a result. This accident occurred when he was far from home, but by the aid of the telegraph we were advised of his condition at once. Kind physicians took charge of him temporarily, and did what they could for him, but he rapidly grew worse.

It was some time before we could reach his bedside; and when we did, we were greeted with the most discouraging news, and assured by those in charge of him that only an operation involving the spine, would restore the use of his lower limbs; and the success of even this was considered highly problematical. The physicians had resorted to the most heroic means known to them to start circulation in the paralyzed portion of his body, but without avail. They had administered a powerful drug till he was bloated almost beyond recognition. To a person uninstructed in Christian Science the outlook would indeed have been most discouraging, but the strong faith of a Christian Scientist, free from doubt or fear, calmly compasses the most trying circumstances. We had not been forsaken before, and we were confident we should not be in this trial. Upon reaching his bedside in the evening, we immediately dismissed the physicians and attendants, much to their surprise, and assured them that we would care for him.

To make a rather long story short, I shall simply record that under Christian Science treatment he had gained some use of his legs before morning, and in other ways there was a marked improvement, which continued gradually, and three days later we removed him to his home, a distance of fifteen hundred miles. The physicians, who had continued to show a friendly interest, declared this should not be done, and admonished us that the most serious effects might follow as the result of this trip; but we had assurances of which they were unaware, and were secretly mindful of the fact that this removal to the atmosphere of his own home was for his benefit. The trip was made without ill effect, and the journey was finished with the patient in better condition than at the start. From day to day the improvement was gradual and sure. Within two weeks he was able to walk, and within six weeks he was about his business again, as strong and active as ever.

Applied to the family as a whole, Christian Science is a great blessing. The difficulties incident to the rearing of a family are no small matter under the best of conditions; but comparing our experience before and after coming into Christian Science, the latter indeed has been the more harmonious and desirable. Serious emergencies which demanded quick and effective action have occurred, but we have found that in proportion to our alertness and sincerity in responding to the demands of divine Truth, we have been shown the way out of our difficulties and spared much suffering. To bring up a family for twenty-four years with only God to lean upon, may seem to require an amount of religious devotion and fervor that is decidedly unusual; but we have learned in Christian Science that it can be done. Indeed, it must be done, and without wavering, if we are to gain the greatest good from the exercise of our faith.

Let not the weary searcher for better things who chances to read this testimony, be too hasty to pass it over, but rather ponder on its significance, and remember that the disappointment, grief, pain, or whatever it may be that seems to be making a void in his or her life, has been encountered in its essence and overcome by some member of our family; also that those very conditions have happily wrought for us a solution of the problem of existence, confirmed our faith in the ever-presence and loving-kindness of God, and instilled in us a deep and abiding conviction that "the eternal God is thy refuge, and underneath are the everlasting arms."

J. Francis Stroup, Chicago, Ill.

It is with a heart full of gratitude for the daily blessings of Christian Science that I write this testimony. It has wholly changed my view-point concerning life in all its relations, and has given me a never-failing rule for solving the various problems which arise in human experience.

I came to Christian Science for help in March, 1911, after an accident which seriously interfered with locomotion and caused extreme pain. As a medical nurse of many years' experience, I was familiar with the remedies used to alleviate suffering, and believed that nothing but an opiate could relieve pain of this character. This, perhaps, more than anything else, caused me to turn to Christian Science instead of consulting a surgeon, as I had seen the most pitiful results from the drug habit, not only among the unintelligent and weak-willed, but among highly educated, strong-willed, and formerly self-reliant men and women who had first received the drug at the hands of a physician when nothing else seemed to be of any use.

For three weeks there appeared to be no pronounced change in my condition, although I was sustained so that I spent only the usual sleeping hours in bed, most of the remaining time being occupied in reading Science and Health,

Digitized by Google

except when the practitioner was present. At the end of that time, on awaking one morning, I suddenly became aware that I could walk naturally, and I almost flew out of bed and walked across the room with a sense of freedom which I had not known since the accident occurred.

I have never been tempted to return to material remedies, and I have found Christian Science sufficient to meet all my needs, both temporal and spiritual.

MARY ELIZABETH GORDON, Cambridge, Mass.

✧

It was through a student of Christian Science in Sydney that I first heard of its healing power. This attracted me, for I was a physical wreck, and was under a specialist for nervous breakdown, heart trouble, and a complication of ailments. I was most wretched, thinking I would be a trial to my friends; so when this student mentioned that healing was brought about through the understanding of the Scriptures as explained by Mrs. Eddy's text-book, "Science and Health with Key to the Scriptures," I was more than willing to be introduced to a practitioner for treatment, though I hardly understood about giving up drugs, as I had taken them for years, and each year they had been stronger and had become more obnoxious. When I learned that they had to be given up, I could not realize what it meant, but was assured that divine Love needed no help. From the first treatment I began to improve visibly; I may say that my help was instantaneous. To me it was wonderful. Before leaving for Queensland I went to say good-by to the medical nerve specialist, who looked at me in astonishment.

I can never be grateful enough for the many benefits which Christian Science has brought into my life and the great joy it gives me to help others. I have also had some beautiful demonstrations, in this way, of the power of Truth.

MRS. A. L. MYTTON, Sydney, Australia.

✧

[Translated from the German]

Two years ago I suffered with severe rheumatic pain. I attended the Christian Science services and read *Der Herold der Christian Science* assiduously, but I did not seem to get any relief, presumably owing to my lack of understanding. I therefore went to a practitioner, who very kindly explained things to me as viewed in Christian Science and gave me a treatment. I then had absent treatment for two weeks, when the pain left entirely. About six months later I became afflicted with a very unpleasant eruption round the neck, and this condition began to extend to the face. I wrote to the practitioner, and as she had gone to Austria, I again received absent treatment. This proved a wonderful experience, for within a short time the eruption disappeared completely. I am indeed thankful to God that I was led to Christian Science.—FRAU LOUISE KRIEG, Berlin, Germany.

[Written for the *Sentinel*]

Contentment

EVELYN SYLVESTER KNOWLES

To look upon the world with smiling eyes,
To view my lot with joy, whate'er it seem,
To know the truth, with all that this implies,
To live, to act, not sit and idly dream:
To envy none, to long for naught save things
Above the mortal, that shall satisfy,—
Thus knows my heart the song contentment sings,
And discontent shall pass unnoticed by.

From Our Exchanges

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

Our great social hopes turn to religion for confirmation. The social consciousness which is so characteristic of our age has been formed by supernatural inspiration. The great dreams which disturb our people—of emancipation from wage-slavery, suffering, and pain—are obviously due neither to economic pressure nor to the compulsion of conditions. They are as utterly unlike anything that we have ever seen or have the right to expect as the Messianic predictions of the Hebrew prophets or the millennial hopes of the early Christian. If there is not divine inspiration behind them, they can never face the facts of existence; and to recognize their origin is to recognize the only hope of their realization.

At present we are still hoping to bring these conditions about by education, by legislation, or by coercion. One by one we shall work through these delusions, and the utter futility of our methods will become apparent. What the plain man has said long ago is true, despite all the pathetic dogmatism of social democrats, namely, that we can only realize these hopes if we can change human nature. What we must have, therefore, is a new theory of human nature, a new understanding of the purpose of life, a sense of God, a realization of what Christ means, a belief that the Holy Spirit presides over the counsels of those who wait for His leading. Our social hopes depend upon the possibility of regeneration from above.

The depth of personal yearning looks to religion as the one remaining hope. The unconcern, the carelessness, the experiment of sin, the absorption in pleasure, suddenly break down in those who have carried things to extremes, and leave the whole nature clamoring and athirst. The slightest acquaintance with the inner life of people today will show that the old desires are still insistent.

Three things these souls will have. The religion that will meet their case must be a revelation. It must be something with the unmistakable mark of God, decipherable by their souls, and it must fit their need as the key the lock. It must be an incarnating religion, one that can express itself in human nature, history, and in social organization; not an unearthly spiritualism or philosophical idealism, to be kept pure only by being cloistered in the mind. It must be redemptive; that is, able to touch life wherever it is and yet able to lift it; able to break sin and fear, and to guarantee the soul against the threat of spiritual death. If our religion cannot do these things, we can take it elsewhere—it is of no use here; and we all come here sooner or later.

[Rev. Charles Stelzle in *The North American*, Philadelphia, Pa.]

The church is man's expression of his religious life and instincts; it is the organization which he has formed to permit him to serve best, for true religion means service. When the church ceases to serve, then it will undoubtedly be superseded by some other religious organization, or at least one with the religious motive.

The success of the church is not indicated by its great wealth; sometimes the great wealth of the church is a serious embarrassment. It is more important for the church to win the mechanic than the millionaire. Neither is the success of the church gaged by its enormous membership; the real character of the church is determined by the quality of its membership. Are these people like the Master whom they profess to serve? Are they actually carrying out the will of God for the redemption of the world? A handful of disciples, true to Christ's principles, "turned the world upside down." Are

Digitized by Google

the millions upon millions of church-members fulfilling their tasks to the same degree? Does anybody imagine that they are doing it even to a fraction of the devotion found in these pioneers? Frankly, if the men in the churches of America were to determine that the evil in their cities must go, what and who could stand in their way?

Let me repeat, the church, in order to make good, must direct religion so that it will be of social value. It is the business of the church to save the world, not itself. The church is simply a means to an end, and not an end in itself. It is not the business of the church to advocate any particular social system. The church is to preach the fundamental principles of Jesus Christ, but it must apply these principles courageously and specifically to the great social problems that perplex the people. The church has been telling the working man that it has the only solvent that can cure the social evils of our day; and the working man is asking the church to apply the cure. It will not suffice to say that if all working men were to become members of the church, then the labor problem would be settled. No doubt this would help,—but what about the other men? If the church is to make good, it must preach a gospel that is world wide.

[*The Watchman-Examiner*]

In these analytical and critical days there is an endeavor to find what may be regarded as the essence of religion. It must be that central and vital something which, being present, we have at least the living germ of true religion; and, being absent, we have no religion. The effort is to get hold of some principle of life in the soul, independent of the historical creeds, such as Hinduism, Mohammedanism, Christianity, and so on, whose possession shall make the man who has it a truly religious man, no matter when or where he may be found, in pagan or in Christian lands, today or ten thousand years ago. In this connection we may as well omit the adjective "true" before religion. In essence there cannot be a false religion. If it is false it is unreal, a counterfeit, a sham, assuming to be what it is not, and actually non-existent. That which is of the very essence of religion must be wholly and exclusively true, absolutely unique, without any competitor or substitute. There cannot be two essential principles of anything. To say that there are two is to say that one or both are fraudulent. This reasoning must be correct, whether we reason about God or about the simplest substance which the chemist examines.

[*The Christian World*]

Life's best business, in the church or out of it, is to work in this heady, tempestuous civilization of ours for the restoring of that line, now so largely left out, the line of the Christ-character, the Christ-life; to work for that, knowing it is the world's only health, its true sanity. And how shall we do that? How else than by having the lines of that glorious portraiture all reproduced and showing in ourselves? For so essentially divine is that portraiture, that wherever, and however feebly, men see it reflected in their neighbor, they see in it some hint of the heart of God.

[*The Advance*]

We must work out our own salvation, for God works in us. Why should we work if God works? We are beginning to realize in terms of the newer sciences that we must work that God may work; that our working is a method of the divine activity; that we are to give hands and feet and heart and brain to the working of that mighty power whereby God is subduing all things to Himself.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is to be issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75. This book is now ready for delivery.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

The more recent translations into Dutch, German, Norwegian, and Swedish pamphlets are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents, each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more 15 cents, each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

THE LAW OF KINDNESS.

BIRTHRIGHT AND DOMINION.

PRICE, POSTPAID: Single copy, 5 cents; twelve copies, ONE ADDRESS, 55 cents; fifty copies, $2; one hundred copies, $3.50. Orders for above pamphlets may be assorted as desired.

For table: English, German, Swiss, and French money equivalents, see inside front cover page.

Miscellaneous

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size, 6½ x 4¾ inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket edition of Science and Health, *Quarterly*, and above Bible, may be had at $1.25.

Text Bible. (01561 x), pica square type, Alaska seal, size, 7½ x 6¼ inches, 1½ inches thick. Specially adapted for use of Second Readers. Price, $7.25.

The Dennison Thumb Index will be added to any Bible in our catalogue for an additional charge of 35 cents.

Our latest Catalogue containing a selected list of Bibles will be mailed free on application.

EDITORIAL COMMENTS ON THE LIFE AND WORK OF MARY BAKER EDDY. 132 pages with index. Published in two styles of binding. Prices for paper covered editions: Single copy, prepaid, 15 cents; twelve copies to one address, $1.50; 50 copies, $5.75; one hundred copies, $10. Cloth binding: Single copy, 75 cents; by mail, 85 cents; six copies, prepaid, $4; twelve copies, prepaid, $7.50.

THE LIFE OF MARY BAKER EDDY (New Edition). By Sibyl Wilbur. 425 pages. Cloth, single copy, prepaid, $3; six copies, $16.50; twelve copies $32; *edition de luxe*, $5. Ten per cent discount to Reading Rooms on the *de luxe* edition.

CHRISTIAN SCIENCE AND LEGISLATION. 128 pages. Single copy, 10 cents; twelve copies, one address, $1; twenty-five copies, $1.85; fifty copies, $3.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Illustrated; 107 pages. Single copy, $1.50; six copies, $7; twelve copies, $12.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, single copy, $1.15; six copies, $5; twelve copies, $9. Half morocco, single copy, $1.40; six copies, $6.50; twelve copies, $12. Full morocco, single copy, $2.50. Levant, single copy, $3.50. Pocket edition, size 4⅝ x 6⅝. Full morocco. Single copy, $3; twelve copies, $30.

"PERSONAL CONTAGION" AND "WHAT OUR LEADER SAYS." By Mary Baker Eddy. Single copy, 10 cents; twelve copies, $1; one hundred copies, $7.50.

PHOTOGRAVURE OF MRS. EDDY, printed in three sizes on India paper and mounted on heavy plate paper ready for framing, is for sale at the following prices: 8-inch (mount 12 x 16), single copy, $1; six copies, $5.25; twelve copies, $9.50; 12-inch (mount 15 x 20), single copy, $2; six copies, $10.50; twelve copies $19; 16-inch (mount 21 x 29), specially adapted for Reading Rooms, single copy, $3.50; three copies, $9.50; six copies $18.50; twelve copies, $33.50.

PICTURE OF THE FIRST CHURCH OF CHRIST, SCIENTIST, in Boston, Mass., and the Publishing House of The Christian Science Publishing Society. Artist's proof with remarque on Japanese vellum. Size 18 x 24. Each, $5; on India paper without remarque, each, $3. Ten per cent discount to Reading Rooms. Smaller reproduction of the above picture. Size, 11 x 14. On Japanese vellum. Single copy, $1; six copies $5; twelve copies, $9.50. Photogravure Post Cards, reproduction of the large picture of the Church and the Publishing House, each 5 cents; twenty-five, $1.15; one hundred, $4.25.

QUARTERLY COVERS, in black morocco. Pocket size, 4½ x 6½, $1.15 each, or $11 a dozen. With change pocket, $1.40 each, or $14 a dozen.

MUSIC. Poems written by MARY BAKER EDDY and used by special permission, have been set to music as follows:—"THE MOTHER'S EVENING PRAYER," 75 cents; "O'ER WAITING HARPSTRINGS OF THE MIND," 27 cents; "SHEPHERD, SHOW ME HOW TO GO," 27 cents; "CHRIST MY REFUGE," 75 cents; COMMUNION HYMN—"SAW YE MY SAVIOUR?" 50 cents; "BLEST CHRISTMAS MORN," 27 cents; "LOVE," 40 cents. For quantity prices and further information see our latest catalogue.

The first four hymns are arranged for high and low voice in the same copy. The last three hymns are published separately in high and low keys. When ordering state key desired.

Remittances should always accompany orders, and be made by check, money order, or exchange on Boston or New York. Currency or coin should not be sent by mail unless registered. Please send no money or business letters to the Editor or Editorial Department.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

Hugh L. Cooper, builder of the big dam across the Mississippi river at Keokuk, Iowa, has been appointed consulting hydro-electric engineer for the Egyptian governor. He will have supervision of the construction of a dam across the river Nile, which it is said will be one of the largest dams in the world. This dam is part of a great irrigation project that is expected to result in tremendous cotton productivity in the Soudan. In order to grow cotton south of Khartoum, the Gizra territory, which lies between the Blue Nile and the White Nile, has been chosen to be irrigated. Here lie one million five hundred thousand acres of land between two great rivers, whose force and flow is sufficient to water the entire district if properly controlled. The proposal is to build two great dams, one across each river. The barrage on the Blue Nile will cost fifteen million dollars. The White Nile dam will cost approximately four million dollars.

Prizes amounting to almost fifty thousand dollars were awarded during the recent fat cattle show at Buenos Aires. The Argentine Rural Society, under whose auspices these annual shows are held, has been working diligently for the improvement of the native stock. Cattle are diminishing in quantity, owing to the export of beef, and prices have increased 50 per cent over those of two years ago. It is calculated that the number of cattle in Argentina today is between thirty million head. In the case of sheep, the stock has been reduced from one hundred and twenty million a few years ago to seventy million. The value of the export trade in 1913 was eight hundred and seventy-three million eight hundred thousand dollars, an increase of almost forty million dollars over 1912.

The Indian National Congress, a kind of non-official Parliament, in which the desires and aspirations and also the grievances of the educated Indian community are discussed, recently concluded its sittings at Karachi. A great many speeches were made and resolutions passed, but perhaps the most notable was the speech denouncing the press act passed by the government of India three years ago. This act empowers the local authorities throughout British India to require any newspaper of whose writings they disapprove to furnish heavy security for its good behavior, and if it is not in a position to do this, it is liable to be closed up and the press forfeited.

Ownership by the state of the bed of the Arkansas river to high-water mark was declared by the supreme court of Oklahoma. The decision, unless overthrown by the United States Supreme Court, gives the state complete title to the oil and gas deposits beneath the Arkansas and other navigable streams in Oklahoma, besides sand and gravel, to which the state also has asserted its right. The decision is worth millions of dollars to the schools of the state, since the state land commission will control the river beds for the benefit of the permanent school fund.

Thomas H. Mawson, honorable associate of the Royal Institute of British Architects and special lecturer in landscape design at the University of Liverpool, has been entrusted, on the personal recommendation of the King and Queen of Greece, with the drawing up of plans for the remodeling of the city of Athens. The population of the Greek capital has increased very much of late years, and it is believed that Athens will soon be inadequate to the demands made upon her. Mr. Mawson's plans will be such as to allow for the growth of the city during the next half century.

The House committee has favorably reported the bill providing that the historic botanic garden, located for many years at the foot of Capitol hill, Washington, D. C., be removed to Rock Creek park, in the far northwest section of the city, in order to make room for carrying out the landscape design in connection with the monument now being erected to General Grant. The garden, one of the most interesting and best equipped of its kind in the United States, was established in 1850, and is an outgrowth of the Wilkes exploring expedition of 1838-42 to the Pacific and the South seas.

A recommendation to reduce the Japanese naval estimates by twenty million dollars was recently carried by the budget committee of the upper house of the Japanese Parliament. This was done in spite of the protest of the premier, who expressed the opinion that such a diminution would seriously hamper the national defenses. This reduction was in addition to the curtailment of the naval estimates by fifteen million dollars already passed by the lower house.

The contract has been awarded for building what is supposed will be the largest artificial dam in New England. This dam will hold back the waters in the Nepaug valley, which is to be the water supply of Hartford, Conn., after 1917. The contract calls for the expenditure of $510,028. Several small towns will be destroyed. The dam will be 650 feet long and 130 feet high.

In sixty-three districts more than four hundred thousand individuals have made returns for the collection of taxes on incomes. From these individuals the American government will probably collect more than forty million dollars. Including the corporation tax, as amended in the present law, it is estimated that the annual revenue will amount to about eighty-five million dollars.

The civil engineer who was employed by the American National Red Cross to devise measures for restraining the devastating floods of the Hwai river in China, arrived in Washington last week, prepared to report upon his mission. The complete project, which has been approved by the Chinese government, calls for an expenditure of twenty million dollars.

The task of linking the Greek railway system with that of western Europe has just been begun at Papapouli. When this link is completed, the line from Athens and the Piræus, whose rail head at the outbreak of the war was at Larissa, will be carried through to Salonika and joined to the European system, so that the journey to Paris will be reduced to sixty hours.

The *Statesman* of India had an interesting article recently on the upheavals which are taking place in the Indian social system. This paper remarks that the rigors of caste have been softened in some degree almost everywhere and among all sections of society, but that Bombay is still more wedded to caste than Bengal.

As an experiment, the supervisor of the Beaverhead national forest is stripping the bark from the bases of a number of lodge-pole pine trees at various periods before they are to be cut for telephone poles. This girdling causes the trees to exude resin, and it is desired to find what effect this may have as a preservative treatment for the poles.

Official advance reports from the post-office department committee, named by United States Postmaster-General Burleson to investigate conditions and make recommendations for the betterment of the postal service, give general support to its former recommendation of government ownership of telegraphs and telephones.

The substitution of nickel for the whole of the copper coinage of France is to come into operation in June of this year. Ever since 1879 this question has been under consideration by the department of the minister of finance. In 1903 the initial experiment was made of issuing 25-centime pieces in nickel.

In general terms Argentina takes about 15 per cent of its imports from the United States, 31 per cent from the United Kingdom, and 17 per cent from Germany. Its total imports in 1913 were valued at $406,605,200, and its total exports at $466,581,888.

The new federal reserve system will begin business with a membership of nearly seventy-five hundred banks. Less than fifty of the seven thousand four hundred and ninety-three national banks of the country have failed to respond favorably.

A bill in the Massachusetts Legislature which proposes to save the song birds at the expense of cats, would require the owner of a cat which is six months old or over, to register it annually.

Cleveland, Ohio, will adopt Eastern time on May 1. The action follows a campaign of years to give working people "more daylight." Other northern Ohio cities are expected to take similar action.

Many of the forest fires attributed to railroads are caused, not by sparks from locomotives, but by cigar and cigarette butts thrown from smoking-car windows.

Canada has twenty-three million acres in timber reserves, as compared with one hundred and eighty-seven million acres in the national forests of the United States.

Apple wood is the favorite material for ordinary saw handles, while it is used to some extent in so-called brier pipes.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI March 21, 1914 No. 29

Giving a Reason

REV. JAMES J. ROME

BECAUSE of the rapidity with which the Christian Science movement has grown, and the general interest awakened thereby, it is not to be wondered at that Christian Scientists are so frequently questioned with regard to its teachings. Nor need they shrink from any responsibility attending their identification with such a cause, or from meeting any questioner fairly and openly, since they have their faith founded on a sure foundation and are able to say with Paul, "I know whom I have believed." On page 106 of Science and Health Mrs. Eddy says, "God has endowed man with inalienable rights, among which are self-government, reason, and conscience." It is therefore well to appeal to the reason and conscience in presenting to these inquirers the claims of Christian Science.

It is not unusual to have questions like the following asked: What is Christian Science? Why does it teach this or that? What do you believe about so and so? Do you accept the Bible just as it is? How do you reconcile such seeming contradictions? etc. To meet these inquiries the Christian Scientist should ever be ready to give a reasonable reply, following the injunction of St. Peter, "Sanctify the Lord God in your hearts: and be ready always to give an answer to every man that asketh you a reason of the hope that is in you with meekness and fear." It is true that there may be questions of a speculative nature which the Scientist, especially a beginner, may not feel able to answer. If so, he need never be afraid or ashamed to say so, and the most reasonable reply would be, "I do not know."

There is no more danger of any reflection being cast on Christian Science because one says he does not know how to answer a question, than there would be on mathematics because a person could not work out some problem. In fact, the open admission may be a great deal better than a confused attempt to explain what we have not yet demonstrated. However, a Christian Scientist should be able to give a good reason for every statement he makes, for he would not be a true Scientist that did not know why he believed what he adhered to as the truth; indeed, one can be a Christian Scientist only to the extent that he understands the reason of his hope. Having perfect assurance in our own thought with regard to the correctness of our position, we should be ready and willing to enlighten others and show them how this satisfaction can be obtained.

Replies to questions should be given with the right motive, not with any sense of controversy, self-defense, or self-justification, but with the loving desire to help another to understand the truth, so that he may avail himself of the blessings we enjoy. This end cannot be attained by making dogmatic or doctrinal statements with the expectation that they will be accepted without reason. For instance, it is not enough to say that Christian Science teaches so and so, and to quote some passage from the Bible or from Science and Health as authority, without showing the reasonableness of the statement. Above all, it should be shown how the correctness of every scientific statement can be and has been supported by demonstration. In view of this fact we may relieve ourselves of the necessity of justifying or defending the truth; it does not need it. Through the proof of demonstration, truth is shown to be self-supporting.

Since the object is to help the inquirer to gain an understanding of Christian Science, the answer or explanation should be presented in the way best suited to his comprehension. It may not be enough to present a reason with which one is himself satisfied, for that may not appeal to another's sense of things. Let us as far as possible look at the question from his standpoint. It is well to remember that the human mind is not usually accustomed to thinking along metaphysical lines, so that when we endeavor to present the great spiritual truths of Christian Science they may not be readily comprehended. Jesus met with this difficulty in his work and so had to resort to parables or short stories to illustrate his meaning, and he had to rebuke even his disciples at times for their dulness of comprehension. We should therefore be patient and persevering in our efforts to convey our meaning, which we should strive to do in a persuasive as well as a convincing manner. By thus endeavoring to offer a satisfactory line of reasoning, we will gain much ourselves and strengthen our own convictions.

It can be shown that Christian Science is most reasonable in all its presentations and demands; there is nothing strange or mysterious about its claims. It is reasonable, for instance, to be healthy and good and prosperous, and successful and happy; it is unreasonable and wrong that any right-minded person should be anything else. It is reasonable that good should be superior to evil, that truth should outweigh error, that love should destroy hate, and that perfect intelligence should be supreme. That this is the real and true state of existence is the underlying conviction in every human heart, and by a tactful appeal to the reasoning faculty men may be awakened to apprehend and take possession of man's divine rights.

Everlasting Joy

LUCY HAYS EASTMAN

FROM a human standpoint, joy is based upon that which is temporal, upon persons, things, and events, upon beliefs rather than facts, and thus it is at the mercy of both chance and change. The belief that joy is to be gained through material ways, ways without rather than within, leads to the mistaken conclusion that man's happiness, regardless of Principle, may come today but go tomorrow. This belief arouses emotions and hopes, while at the same time it excites fear lest these hopes be torn to pieces without fulfilment. Mortals build anticipations upon a foundation of sand, or plan for the fulfilment of some personal interest, and thus deceive themselves with a counterfeit sense of joy; counterfeit because they strive to attain the desired end only to find that, even if realized, it seldom yields satisfaction. And why? Because they have been looking for it in matter instead of in Spirit.

Through the teaching of Christian Science we learn that mortal existence is a dream. Therefore to believe that anything within human experience can of itself produce joy, is a

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

false belief. To illustrate: Suppose a man who placed wealth above all else, suddenly discovered that what he had believed to be his fortune consisted of counterfeit money. During the period in which he had believed the money to be genuine, was not his pleasure based upon a false belief, which, when the truth was discovered, revealed his satisfaction to be without a true basis, and therefore mistaken and temporary? Similarly, the so-called joy of human experience is made up of beliefs in the reality of the unreal, until we learn that true joy is found wholly in God. Never, until this great fact is realized, do we experience permanent and unvarying joy.

Joy is a vital element of life, of which it expresses the spontaneity and freedom. Because life is, joy is; and the very fact that we have life, means that we have joy also. This is the joy which the Master said "no man taketh from you." It is the joy that sparkles and radiates with the glow of unselfed interest and spiritual beauty. It is the joy of Soul, that is never found in meat and drink, but in righteousness and peace. It is the joy which is dependent upon that state of consciousness which knows no evil, and which is filled with the understanding of Love and Truth. Clearly, then, there can be neither ebb nor flow to sinless joy; rather is it a continuous experience of the progressive unfoldment of good and the bliss of living it.

Christian Science demonstrates this joy to be an ever-operative energy of the divine Mind, replacing selfish, morbid concepts of human thought with the true idea of Life. This in turn so awakens the heart to rejoice in hope and gratitude that the joy thus born is found to be as enduring as those mental qualities from which it springs. In the consciousness of such joy it may be said that the Christian Scientist is often happy even while he is troubled; or, as the apostle Peter expresses it: "Wherein ye greatly rejoice, though now for a season, if need be, ye are in heaviness through manifold temptations: that the trial of your faith . . . might be found unto praise and honor and glory at the appearing of Jesus Christ . . . in whom, though now ye see him not, yet believing, ye rejoice with joy unspeakable and full of glory." Thus he who in the midst of bitter persecution and sore trials is looking to Christian Science for help, finds a joy which the world can neither give nor take away.

How to obtain this joy, Mrs. Eddy clearly indicates in her sermon on "Christian Healing." "If you wish to be happy," she writes, "argue with yourself on the side of happiness; take the side you wish to carry, and be careful not to talk on both sides, or to argue stronger for sorrow than for joy" (p. 10). Yet how often do we listen to insinuations of fear or selfishness that argue reasons for unhappiness, then believe them to be true, and permit them to rob us of the harmony we so desire and to which as the children of God we are entitled. And how often do we insistently declare that this or that circumstance has power either to give or to deprive us of our joy, thus becoming a party in a mental sense to our own defeat. It is never a person, place, or thing which excludes us from our rightful harmony, but a wrong state of mortal thought. To be unhappy for one moment is never necessary; it is wholly voluntary, whether we believe it or not, because each is a law unto himself. The very agony resultant from seeking happiness in matter finally arouses us from the lethargy of such vain efforts and starts us on the quest for everlasting joy, even as the prodigal son, tired of the husks, sought his father's house.

As we learn how to forgive and to love our enemies scientifically, how to carry another's burden and thereby feel our own less, and how to make of every trial an ascension to higher thought, in this proportion are we ready to receive of that joy which Christian Science teaches is based upon spiritual thinking, and which may be made practical in every detail of human experience. With the attainment of this abiding joy, the scientific Christian is able to stand erect in the midst of mortal woe, and still to rejoice in the right as he demonstrates its omnipresence. Did not the Master declare that if we continue in the truth, and keep his commandments, his joy will remain in us, and that our joy will be full? Conscious worth and goodness are indeed the true source of all joy, for they lead to the infinite resources of Spirit, wherein the bliss of universal Love is gained, and the Father is found anointing His beloved children with the oil that is above all false belief, even the joy that is life-giving and everlasting.

Harmony

HERBERT ARTHUR HUTCHINSON

THROUGHOUT all time men have been searching for heaven on earth, and searching in vain. Mortals have dimly perceived that it is necessary to find the truth before heaven can be discovered, hence the question of all the ages has been, "What is truth?" Truth is now no longer a question, for Christian Science reveals it, "confirming the word with signs following." In Science and Health we are told that "spiritual understanding, by which human conception, material sense, is separated from Truth, is the firmament" (p. 505). Spiritual understanding shows us that the spiritual firmament is the sense of the forever presence of divine Love, God, and this sense is heaven, harmony. We cannot bear the light of spiritual understanding until, through purging and purification, mortal thought has given place in our consciousness to the truth.

Mortal mind can never reach heaven, for the carnal mind is the belief in evil. It is "the beast that was, and is not, and yet is," and before the presence of Christ, Truth, nothing which "worketh abomination, or maketh a lie," can stand, for evil has no basis in Truth. It is the uplifting of the Christ-idea which causes the disappearance of the sense of sin, suffering, and disease.

In one of Emerson's poems there is a tale of two Jews who sought "the gate of heaven." When one of them applied for admission, he was told that none may enter there alone, but every one must bring another with him. This poem points the moral that selfishness can never enter the sanctuary, "the secret place of the most High." So we, too, when searching for harmony, are asked, "Where is thy brother?" for "Love is reflected in love" (Science and Health, p. 17). We must therefore live unselfishly, and establish harmony within our own consciousness, before we can lead the thought of others to "where the young child" is.

Laziness has much to do with the shaping of a mortal's concept of heaven,—that is to say, when he thinks at all about what heaven is; whereas "God rests in action" (Science and Health, p. 519), so that idleness is an utter impossibility for those who would gain heaven. Christian Science reemphasizes the truth that there is only one way to heaven, and that is the Christ-way, by reflecting Love. In the parable of the talents, when asked by his lord to give an account of his stewardship, the servant who had received only one talent, replied that he "was afraid, and went and hid" his talent in the earth,—buried it. If the one talent is to be used in the healing of the sick and the sinning,—for all without exception have thus to demonstrate Life, Truth, and Love,—we must surely use our talent faithfully, and to the utmost of our ability, since only in this way can we "enter heaven with prayer." This is the reason why the world has never

Digitized by Google

found heaven, and why it cannot ever get that spiritual sense of harmony which constitutes heaven, save through the apprehension of Truth.

From "the valley of decision" we always travel upward, for in Christian Science there is no going back, but progression ever, until we reach the mount of vision where human hopes and longings are lost in spiritual sight, and the human sense of music disappears in a new song, the grand chorus of eternal harmony, "as it were the voice of a great multitude, and as the voice of many waters, and as the voice of mighty thunderings, saying, Alleluia: for the Lord God omnipotent reigneth."

Mansion Building

KATE W. BUCK

WHILE tramping through a wonderful section of country in western Massachusetts, on a glorious autumn day, the writer came quite unexpectedly upon the almshouse of the town. On stopping to ask for a drink of water, she was invited in to call upon two old ladies, the only inmates of the place. As she disliked to seem ungracious, the invitation was accepted, with the result that, when she left an hour later with a deep sense of humility and gratitude, there came to mind the words which Jacob spoke when he awakened from sleep, "Surely the Lord is in this place; and I knew it not." One old lady seemed quite satisfied and not to need anything beyond what she had; the other, however, a sweet-faced, silver-haired gentlewoman, needed a recognition of kinship and an expression of love, even human love, through which alone, sometimes, one can appreciate and comprehend the divine. After a brief conversation, this lady said, quite calmly but appealingly: "Will you kiss me, child? You seem like my very own, somehow." Thereupon her "very own" knelt down beside her, in thanksgiving that she had been so chosen; and then the thought of mansion building came up, born of a desire to blot out sad thoughts as to location.

She offered to be the dear lady's architect, recommending, however, that she choose her own building materials (explanation being given that this was to be a mental, spiritual dwelling). Of course, the first thing must be a foundation,—and what should it be? With smiling, uplifted face, almost instantly came the answer, "Why, love, of course;" and so the building began. Truly the house had a sure and firm foundation, for we looked well to the quality of our material, recognizing it as the one Love that never fails, never forgets, never is exhausted, never wavers. The walls were of truth, through which no poisoned darts of scorn or unkindness could penetrate, and so high that the occupant would be lifted far above the earth shadows into perpetual sunlight. The windows were of spiritual understanding, which the owner should prayerfully seek to keep clear and shining, that the radiance of that light which "never was, on sea or land," might flood her dwelling. Round about the house a wondrous garden was made, and the flowers of hope, faithfulness, peace, trust, and their kind, bloomed there, and so close together that no weeds could find a space in which to take root.

It took a long time to select a roof, but at length my "lady of the manor" asked if she might really choose anything she wanted, even if it seemed "queer." An affirmative answer being given, she finally said, shyly and a bit timidly, "I would like it of feathers, of wings, because I always loved the verse that says, 'He shall cover thee with his feathers, and under his wings shalt thou trust.'" So the roof—the shelter, the covering—was made, and then she entered in through the door, and of course there could be but one, since Christ Jesus said, "I am the door," the way to enter into harmony, love, and home, home meaning "a fixed abode of affection, peace, and rest." Having chosen this door, how joyously one can trust the all-embracing assurance of the Master, that ultimately "there shall be one fold, and one shepherd." Thinking of this, and that therefore she was already sharing her treasures with others (for she was a generous soul), the dear old lady took possession of this "house not made with hands"; and when her "architect" went away she knew, by the quiet smile on the placid face, that it was indeed "eternal in the heavens," the heaven of her consciousness.

In Science and Health Mrs. Eddy tells us that "we cannot build safely on false foundations" or graft "holiness upon unholiness" (p. 201). That the houses built on shifting sands must needs fall, but proves the activity of infinite wisdom, and thus can one learn to build better, more securely, and on firmer foundations; and the firmest of all is Love divine. It is only as we look to the "eternal builder" and use obediently the materials He gives, that we can even hope to enter into our Father's house and its many mansions. Christian Scientists come to know that the building is done in consciousness, and that only as evil thoughts are eliminated and replaced by good thoughts can they, by continuous, patient striving, build a mansion that may, in God's good time, be found worthy to be called a house of the Lord, one in which, having fought "the good fight of faith," they may dwell forever.

Watchfulness

MABEL SIMMONS

THE writer has often been impressed with the wisdom which placed the Master's words on the cover of our *Sentinel*, "What I say unto you I say unto all, Watch." Surely, none knew so well as did Jesus the importance of watching, for though "in all points tempted like as we are," by being ever watchful and alert to detect the suggestions of error as error, he had overcome the temptations and thereby had grown stronger in his knowledge of God, so that he was "without sin."

A Christian Scientist finds it needful to watch his thought constantly, for ofttimes the tempter would convince us that we cannot realize God's presence and power now, or that we cannot realize the truth and work out our problems in our present environment, but must wait until it has changed in order to do our work in Science. Error sometimes argues that human sympathy with our work in Christian Science is needed, but the promise of Scripture reads, "I will not leave you comfortless." God's tender love and comfort are ever at hand, if we will but "be still, and know."

Does the tempter try to convince us of the reality or existence of friction or discord in our home, our business, or in our church? Here we have an opportunity to prove our faith in divine Love and power by our works, and by knowing that there cannot be friction or discord between any of God's children, the reflections of the one Mind. Can we as God's children entertain anything but a thought of love and peace for all of God's ideas? Christian Science teaches us clearly that God is governing all of His children in perfect harmony, and that there is neither reality nor power in discord of any kind. Again, we may be tempted to believe in physical discord and our inability to overcome it, but if we are alert to the truth we shall know that "with God all things are possible," and that, as we read on page 393 of Science and Health, we are able to "rise in the strength of Spirit to resist all that is unlike good. God has made man capable of this, and nothing can vitiate the ability and power divinely bestowed on man."

Digitized by Google

At one time the writer injured her ankle quite severely, and the suffering seemed intense until the thought came that this was just the tempter trying to make her believe in a power apart from God. At that moment came the realization of the powerlessness of the discord and the allness of harmony, whereupon the suffering ceased. Mrs. Eddy has told us in Science and Health (p. 419) to "meet every adverse circumstance as its master," and we know that God enables us to do this. "Our sufficiency is of God" in all of our experiences as we journey from material belief to spiritual understanding, and we cannot be deprived of God's help, strength, and comfort if we are watchful of our thought and look to God alone at all times for guidance.

It is because of our beloved Leader's courage in meeting all seeming obstacles as their master, by knowing God's all-power, and by trusting in Him implicitly, that many thousands are receiving the blessings of Christian Science today. In the light of her example, as she has followed Christ, her followers will be enabled to pass on the word of Truth to others, and finally, through watchfulness and prayer, they will sing songs of gratitude for the health and peace revealed and realized in Christian Science.

Unity

ROBERT L. SAWYER

In his superb exhortation to unity, as given in the fourth chapter of Ephesians, Paul pleads for "one Lord, one faith, one baptism, one God and Father of all, who is above all, and through all, and in you all. . . . Till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ." That righteousness might become universal has been the purpose of every religious teaching; yet in the endeavor to approach spiritual perfection through the medium of materiality, mankind have "turned every one to his own way," thus losing sight of the very thing they so earnestly but misguidedly sought. Nevertheless we hear today, as of old, the desire expressed by people of every denomination, that there might be "one Lord, one faith, one baptism." The disintegrating influence introduced by Emperor Constantine in his effort to ally church and state, while seemingly successful, has developed into a rehearsal of the Babel story, wherein mankind must learn that "God is a Spirit," that His "kingdom is not of this world," and that there is no oneness outside this kingdom of spiritual truth. God's universe reflects one Mind, and the Mind of Christ can appear only as mankind cease to dwell in the dreamland of material sense and unite in an understanding of the real and eternal. Well said Christ Jesus, "Upon this rock I will build my church."

Mrs. Eddy saw clearly that no scientific unity could ever be attained until there was established in human consciousness a spiritual perspective and standard of values, both as to cause and effect, which would enable the individual to eliminate the fungus growth of false, counterfeit views of intelligence, and bring thought into perfect obedience to God, good. As in the case of the fruitless fig-tree, referred to in the thirteenth chapter of Luke, she began to dig about its roots, and her labor was not in vain. The tree soon unfolded anew; it blossomed in spite of attacks from pulpit and press, and bore fruit in righteousness and peace. Others, seeing her good works, were led to enter the vineyard, where they too, following the example of their Leader, soon became actively engaged. Many who at first said, "Cut it down," came to find peace and rest beneath the sheltering branches, and to them it became a veritable "tree of life."

This perfect order of unfolding growth was manifested by our Leader at every step. As the tree symbolized by The Mother Church was nurtured and cared for, its branches began to appear in every direction, as the outbursting of that indwelling energy of divine Truth whose first requirement is acceptance, then obedience. The increased demand for nourishment called into existence The Christian Science Publishing Society, that the vital currents of true thought might flow unchecked. The requisite strength of the tree and the symmetrical unfoldment of its branches was revealed in the Church Manual, while the committees on publication labored to protect the growing tree from the attacks of malice and ignorance.

With this convincing demonstration of the availability of Truth ever before us, how important that every branch, every individual twig, every leaf, should express that perfect unity presented by Christ Jesus when he said, "As the branch cannot bear fruit of itself, except it abide in the vine; no more can ye, except ye abide in me." The tenets to which every student of Christian Science subscribes, hark back, in the orderly unfoldment of our cause, to the source of all true blessedness, "one Lord, one faith, one baptism," as taught and demonstrated by the Master. In the natural channels of progress there can be no lack, nor can there be full corn apart from the blade and the ear. Were every student as faithful to demonstrated truth as was the Discoverer and Founder of Christian Science, there would be no vagrancy or variation of thought from the Christ-method as expressed in the text-book, "Science and Health with Key to the Scriptures," and other authorized literature of Christian Science. The strength of all that is true lies in its unity, while the temporary and seeming success of all that is untrue lies in its ability to counterfeit the good and true. In "Miscellaneous Writings" (p. 117) Mrs. Eddy writes, "Obedience is the offspring of Love; and Love is the Principle of unity, the basis of all right thinking and acting; it fulfils the law."

[Written for the *Sentinel*]

Eventide

EMILY HOUSEHOLDER

Weary of trying to soar,
Weary of flying and falling,
Nestlings are coming once more
Home to the mother-love's calling.

Home where the sore wounded wing
May be healed for the morrow's flight,
Home for the uplift to sing
New praise for the passing of night.

Weary of scaling the mount,
Weary of riotous leaping,
Back to the vale's cooling fount
The thirsty hart slowly is creeping.

O heart's intent and desire!
Plumed for the far sunlit peak,
Baffled 'twixt crag and the mire,
New life and freshening seek

Where there's no dawn or even,
Searing gust or burning ray,—
Only the peaceful haven
Of Soul's encloistered way.

Selected Articles

[Frederick Dixon in *Medical Times*, London, England]

In a recent issue of the *Medical Times* there is a note about a Christian Scientist who had scarlet fever, and who was chased from Wallington to Bexhill by two doctors in a motor-car. As this story has been circulated throughout the press in general, and as yours is the only paper, I think, which has been considerate enough to assume that the story may not be quite true, will you permit me to state the exact facts, which I have learned by prosecuting numerous inquiries in several places? The result of this investigation shows how the ordinary newspaper paragraph is generated.

A lady at Wallington was apparently told by a doctor there that she had scarlet fever. Questioning the diagnosis, she determined to consult her own family doctor at Bexhill. She accordingly went there and saw this gentleman, who advised her to avoid all chance of responsibility for spreading infection by spending some time in the isolation hospital at Hastings, in case the symptoms should prove to be scarlet fever. That is the story, as far as I have been able to learn it from the lady's family doctor. The lady herself is in the isolation hospital at Hastings, and we have been informed by the authorities there that she declares she is not a Christian Scientist. As we are in touch with the members of the Christian Science congregation in Wallington, and as we have made the most careful inquiries from them with respect to the subject, it is natural to conclude that this is the case.

As a matter of fact, no Christian Scientist would dream of running the risk of spreading infection. It is one of the strongest unwritten laws of the movement that the most absolute care shall be taken to respect the feelings of the world on this subject. Christian Scientists are not afraid of infection themselves, but they recognize the great part fear plays in the human consciousness, and the disastrous effects of unnecessarily filling their neighbors with fear. They are therefore peculiarly careful to obey the law with respect to infection, and immediately to report to the proper authorities any case in which there is even doubt or suspicion. In the present instance, the family medical attendant of the lady has expressed his opinion that the public ran no risk whatever through her action, and that in coming straight to him and taking his advice to enter the hospital, she acted with perfect discretion and propriety. Under these circumstances, it is difficult to see what is to be gained through frightening the public by filling the press with a report of this nature. Searching for a reason, one is driven to the conclusion that the sole idea is to prejudice people against Christian Science, which is not even concerned with the matter.

If you will permit me to drag in another incident in support of this, I should like to point out that for the last year several stories of the imprisonment of Christian Scientists on criminal charges in Switzerland have been told in the English press. On examination, every one of these stories has been proved to be a deliberate and malicious substitution of the words "Christian Scientist" for "herbalist," "masseur," or something of that nature. The thing is so persistent and so deliberate that it is impossible to doubt the fact that a campaign of misrepresentation is being carried on. Only within the last few days, a story has been told of a Christian Scientist who was imprisoned and fined at Zurich for a heartless fraud. When inquiries are made in Zurich, it is found that the name of the prisoner has been slightly altered, apparently to make it difficult to trace the case, and this, curiously enough, is a feature of each of these fabrications. The records of the case show that this particular prisoner was a masseur and a hypnotist, and had no connection whatever with Christian Science, nor was Christian Science mentioned in the case. It speaks volumes for the straightforwardness of Christian Science and the adequacy of its methods that it is necessary to descend to such pitiable means as these to prejudice it in the eyes of the public.

✧

[John L. Rendall in *The Mason City* (Iowa) *Times*]

Under the caption "Takes Issue with Christian Scientist," I find in a recent issue a series of objections to Christian Science by one who signs himself "Subscriber." It seems strange to me that the ordinary theological thought is so impregnated with the belief that the second chapter of Genesis contains the only account of creation as to ignore completely the account given in the first chapter. These two accounts are distinctly opposed to each other.

Christian Scientists reasonably conclude that the account given in the first chapter of Genesis is the one which is consistent with the thought of God as infinite Spirit. There we read, "And God said, Let us make man in our image, after our likeness: and let them have dominion over the fish of the sea, and over the fowl of the air," etc., and in the following verse, "So God created man in his own image, in the image of God created he him; male and female created he them." It is difficult to understand how the image and likeness of God could be "fallen man." The best authorities are practically united in the conclusion that the second chapter of Genesis, wherein the "dust man" appears, is allegorical, and written for the purpose of trying to account for the supposed "origin of evil."

Now, as a matter of fact, what the critic may believe or what a Christian Scientist may believe, unless this belief be based upon understanding, and therefore susceptible of demonstration, does not in the least alter or affect the infinite reality. The Christian Scientist contends that man, created in God's image and likeness, began in "original good" instead of in "original sin." That which Christ Jesus came to redeem is the false sense of man, calling itself sinful, sick, and unregenerate. The Bible said of Jesus that he came to "destroy the works of the devil." That is, his mission was to eradicate from human thought the sum total of evil, which comprises all there is of the devil. He recognized as part of this sum total of evil all the varied manifestations of disease which were presented to him, and which he destroyed or healed through his understanding of the absolute reality of being and of what man really is in his true relation to God.

Jesus understood man aright, and saw him as God's image and likeness. It was his understanding of this truth about man that healed sickness, and it is this understanding of the truth about man, demonstrated through Christian Science, that is again healing sickness and destroying sin. The apostle John states, "Beloved, now are we the sons of God, and it doth not yet appear what we shall be." This is exactly the Christian Science attitude.

Our critic fails to make the distinction made by Christian Science between the real man, who attains "unto the measure of the stature of the fulness of Christ," for which St. Paul was striving, and sinning mortal man, which never was the real and which is all that appears to be sick or sinning. When St. Paul stated, "By one man sin entered into the world, and death by sin," he referred to this mortal, sinful sense of things; but he also stated: "There is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit. For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Christian Science teaches this "law of the Spirit

Digitized by Google

of life in Christ Jesus." It teaches the certainty of God's protecting power; also, that God is omnipotent, omniscient, and omnipresent Love. And it teaches that in proportion as man relinquishes the false material sense of things, and gains a spiritual understanding of Truth, in that proportion is he coming into the full stature of manhood in Christ Jesus.

I agree with our critic that care should be taken as to what one accepts as truth. From the Christian Science viewpoint, there is only one positive proof, namely, demonstration. Mrs. Eddy states on page 323 of Science and Health: "We must recollect that Truth is demonstrable when understood, and that good is not understood until demonstrated." It is this scientific understanding of Truth to which Christian Scientists are endeavoring to attain. They at present may be constrained to say with St. Paul, "Not as though I had already attained, either were already perfect: but I follow after."

Answering the question asked by this critic, "What will this Christian Science do for a world like this; what results will be given to the whole human family?" I need only point out some of the things already accomplished, some of the results which have followed the introduction of Christian Science. The world is better today because of this teaching. Hundreds of thousands of people have been immeasurably helped because of its beneficent influence. Their whole lives and characters have been altered and bettered. There is, in consequence, more love for God and man, more Christian charity, more of that recognition of the brotherhood of man and the fatherhood of God, which is in itself essential and fundamental Christianity. Thousands of people have been freed from hopeless invalidism, have been restored to health and happiness, and have taken their useful places in the world. Surely these results are sufficient justification for Christian Science, and they furnish abundant proof of its efficacy as a redemptive teaching of Christianity.

If the critic will more fully investigate these facts, he will satisfy himself on the only basis laid down by the great Teacher and Saviour, Jesus Christ: "By their fruits ye shall know them."

✧

[Frank Bell in *The News*, Newport, Pa.]

No well-informed person would say that Christian Science denies the reality of sin, without adding the explanation that the term "reality," as used in this connection, relates wholly to things spiritual and eternal, and not to material life or human beings. The teaching of Christian Science is not that "sin is merely in thought," but that it originates in thought, which is an entirely different proposition. The universal testimony of those who have turned to this religion, is that it has greatly aided them in dispensing with sinful habits and overcoming evil tendencies. Such results do not come from ignoring sin, but from the Christian Scientist's better apprehension of the fact that an evil act presupposes an evil thought, and that the destruction of the cause of sin is much more effective than the mere effort to minimize its results. This teaching preeminently promotes clean, pure thinking.

It is no less unfair and incorrect to say that Christian Science shuts its eyes to human pain and suffering. Fully 75 per cent of the adherents of this religion were drawn to it because of its practical answer to their call for relief from sickness after other methods had been tried in vain. Christian Science could no more heal sickness by ignoring it than it could overcome sin by a like expedient, and it has been widely successful in both these directions. Therefore something is radically wrong with the reasoning of those who still think the practice of Christian Science consists in telling the invalid he is not sick, and the sinner he has done no wrong.

The ancient absurdity that Christian Science can correct functional disorders but is powerless in the face of organic diseases, is seldom repeated nowadays except by those who care not for, or will not have, better information on the subject. For years the testimonies published regularly in the official periodicals or given orally in the Wednesday meetings, have included large numbers of such cases. Usually these testimonies are given by well-known persons, whose statements may easily be verified. In any community where this teaching is well established, an unprejudiced inquirer can have no difficulty in satisfying himself that organic diseases, so diagnosed by competent and reputable medical physicians, have been healed by Christian Science treatment. This religion does not teach that mortal man is perfect. On the contrary, it holds mortality and imperfection to be synonymous terms. Its references to the perfect man are clearly explained as not applicable to the human personality, but to man's real, spiritual selfhood, which is neither physical nor mortal.

In the entire communication of our critic the one correct statement is that which credits Christian Science with denying that God sends sickness upon His children. Christian Scientists are happily innocent of belief in a God of that kind.

✧

[Henry Deutsch in *Pioneer Press*, St. Paul, Minn.]

Christianity is capable of accurate definition. It is the religion that was taught by Jesus, and the test is the fulfilment or the nonfulfilment of what he taught. The epitome of his precepts is found in the doctrine of love, in the extension of which he made no reservations, and for the absence of which he granted no extenuation. It is summarized in the Sermon on the Mount, of which two injunctions are particularly appropriate to the present discussion,—"Judge not," and that extreme of the doctrine of love which enjoined upon men even to love their enemies.

Jesus also left certain infallible proofs by which his disciples and adherents might be known: "By this shall all men know that ye are my disciples, if ye have love one to another." "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." Can our clerical critic qualify under these tests? Christian Science does. The cardinal underlying Principle on which it is founded is Love.

For more than forty years Christian Science has been performing the works of the Master, healing the sick, saving the sinning, giving sight to the blind, antidoting the effects of poison, restoring the lame, the deaf, and in many instances lifting from the bed of death hopeless cases afflicted with so-called fatal, incurable diseases. The growth of Christian Science tends to remove the need of hospitals, and the poor and needy are best cared for by showing them how to take care of themselves, namely, by faith in and the power of God. Thus we would make them upright, self-respecting citizens, instead of perennial paupers.

I positively deny our critic's statement that Christian Scientists are the overflow from his or any other church, and that they busy themselves in upsetting the beliefs of others. Practically all Christian Scientists were formerly members of other churches, who came to Christian Science because they had failed to find in their own church the fulfilment of the Master's promises, but did find it in the Christian Science church. They are particularly concerned about minding their own

Digitized by Google

business and not influencing the religious beliefs of their neighbors. It is true that through the unquestioned change that becomes so apparent in all who are touched by Christian Science, their neighbors and friends are led to inquire what produces such an effect, and Christian Scientists merely follow the Master's injunction to "preach the gospel," when, in response to such inquiries, they give to their friends "the cup of cold water" in Christ's name, by explaining what this new revelation of Christianity does toward bringing men into a closer unity with God and the Christ, in fulfilment of the promise, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

✧

["Observer" in *Kingston* (Ontario) *Standard*]

The "Observer" quietly dropped into a seat in the Christian Science church last Sunday morning and was charmed with the quiet character of the entire service. There was a sort of Christ-spirit in the atmosphere. The face of every worshiper was lighted with joy and beamed with gladness. It was impossible to get out without a hearty handshake and an invitation to return. The "Observer" does not accept the theology of these people, but has to admit there is something infectious about the sweet, practical lives of these Scientists. Human nature is not generally partial to religious refrigerators, but likes the place where there is a touch of tropical warmth in the hand that bids you welcome to the house of God.

✧

[Paul Stark Seeley in *Statesman*, Salem, Ore.]

The minister who has recently set forth the teachings of his faith through your columns, states with some show of satisfaction that the church for which he speaks has nothing new to offer in its doctrinal beliefs, and is therefore opposed to Christian Science, which, he leaves us to infer, is a religious makeshift of modern invention, unorthodox, and so of course untenable. In the testing time of the present, when thought in every direction is undergoing the most careful scrutiny, when science, dogma, and belief are being put to the test of demonstration to determine their real worth, the opposition to Christian Science based on such a premise might well look to its reason. It would better withdraw from the cloister of its own self-satisfaction, and through the light of intelligent investigation correct its warped perspective of a religion that is new only as spiritual truth is new to material belief, whether the time be measured by the Julian calendar or by that of Gregory.

The critic quotes with a tone of finality the statement of John Wesley that "anything new in religion is false." Yet we presume that neither he nor the founder of Methodism would, because it was relatively new, deny the religious truth declared by the master Christian in the words, "A new commandment I give unto you, That ye love one another," or the correctness of Paul's admonition to the Ephesians, that they "put on the new man, which after God is created in righteousness and true holiness." New, as good always is to evil, truth to error, was the Master's teaching of brotherly love and spiritual truth to the benighted sense of a world buried deep in the débris of selfishness, hatred, and sin.

Christian Science agrees with Wesley, that nothing new can be added to religious truth, a fact expressed by Mrs. Eddy in Science and Health (p. 518), where she says, "Nothing is new to Spirit." To religion pure and undefiled Christian Science adds nothing, for such is Christian Science itself. To a world asleep in the throes of belief in evil as power, in sin as indestructible, and in disease as God-ordained, it brings the message of freedom from earthly woe taught and practised by Jesus and his disciples. Through its teachings the Master's works of healing are seen to be the operation of natural, spiritual law, presently available to every individual who seeks aright. Christian Science is to the present age the call to that practical Christianity founded on a correct understanding of God and His laws as taught by the Galilean Prophet. Its only newness is the light of spiritual reality dawning in the consciousness of the individual sinner, sufferer, and agnostic, displacing sin with godliness, sickness with health, doubt with demonstrable truth, and revealing in some degree that harmonious state of existence discerned by John in Revelation and termed by him "a new heaven and a new earth."

Christian Science drives out evil beliefs with the knowledge of spiritual truth and proves its teachings by its works, even the works of which Christ Jesus said, "He that believeth on me, the works that I do shall he do also." It is demonstrating to a world hungering for righteousness, the imperative demand for each individual to turn from matter to Spirit, and from error to Truth, a demand epitomized by the apostle Paul in his second epistle to the Corinthians, "If any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new."

✧

[Richards Woolfenden in *The Rochdale* (England) *Times*]

The public of Rochdale and vicinity are indebted to the *Times* for the excellent report of the opening of the new Christian Science church in Castlemere street. In calling attention to the testimonies of healing given on that occasion, you kindly said, "The sincerity of the people who gave their testimony on Saturday, cannot be doubted. They believe that they have been healed through the medium of Christian Science."

This editorial tribute to the sincerity and belief of Christian Scientists is a welcome sign of our times. It is indicative of the growing tendency to respect a movement which is seen to be doing good wherever it goes. Since Christian Science has already spread over the globe, it augurs well for that happier day when "all men's good" shall be "each man's rule." In this spirit all your readers will agree with you that the need for controversy is avoided.

[Written for the *Sentinel*]

Inspiration

DAISY L. STWALLEY

At eventide I'm thinking of that night long years ago
When wondering shepherds watched their flocks and saw a vision glow;
And e'en to me their vision comes—a glorious angel throng;
My heart o'erflows with gladness, I hear the rapturous song;
And as I listen, rapt before the Truth, the Life, the Love, the light,
There surely now is born to me a Saviour dear tonight!

But with the morn the vision fades, the world unchanged appears;
Without, within, I seem to be o'erwhelmed by doubts and fears.
But no, there is a hope so bright no tongue can e'er express—
The vision shining in the night, the Love that stooped to bless.
So on I follow, day by day, the path of joy and health;
The star of Bethlehem guiding me, I gain enduring wealth.
From discord into harmony all changed my life must be;
That vision of the coming Christ from bondage set me free!

Editorial

"He that seeketh findeth"

One of the very encouraging signs of the times among Christian Scientists is that in the testimonies given in the churches and through the *Sentinel* and *Journal*, there occurs again and again some reference to the great good that has come to the persons giving these testimonies, through the study of the Bible and Science and Health. These experiences prove that God is an ever-present help in trouble, and that He is accessible to all who seek Him in sincerity and in truth; that He is not a far-off and vague personality, whose favor must be sought through a vicarious priesthood, but the loving Father-Mother, who has said, "And it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear."

On page 494 of Science and Health Mrs. Eddy has written: "Divine Love always has met and always will meet every human need," and this is an inspiration to Christian Scientists not only to turn to God for guidance in all their affairs, but also to expect that He will hear their prayer and guide them into that understanding of Himself which is life eternal. How they may thus turn to God is made clear in Science and Health, and the way to this knowledge is open to all, without fear or favor, who are willing to devote the necessary time and effort to its acquirement. It is a subtle temptation which urges Christian Scientists to get together and listen to the arguments and dissertations of those who set up to have opinions about this book and about their own ability to interpret it to others. This attitude of thought, however, is but another form of the belief that Science and Health is not clear and simple enough in its teachings to be readily understood by any one who takes the trouble really to study it. Such beliefs find a sharp rebuke in the Foreword to "The First Church of Christ, Scientist, and Miscellany" in the statements "(1) that Science and Health does not need to be interpreted to those who are earnestly seeking Truth; (2) that it is not possible to state truth absolutely in a simpler or more pleasing form."

One of the things which Mrs. Eddy has sought to impress firmly upon her followers is that Christian Science is an exact Science; that its Yea means yea and its Nay means nay, and that it can be used only in the demonstration of divine Principle. What this divine Principle is,—this is the essential thing that every Christian Scientist needs to know, and this he can learn only through the study of Science and Health. Whatever any one else knows of Christian Science has been acquired primarily from its Discoverer and Founder. Then why not seek the desired information from the authorized exposition of its teaching.

Mrs. Eddy has given those who are desirous of a clearer, more advanced understanding of Christian Science this sound advice: "Study thoroughly the letter and imbibe the spirit. Adhere to the divine Principle of Christian Science and follow the behests of God, abiding steadfastly in wisdom, Truth, and Love. In the Science of Mind, you will soon ascertain that error cannot destroy error. You will also learn that in Science there is no transfer of evil suggestions from one mortal to another, for there is but one Mind, and this ever-present omnipotent Mind is reflected by man and governs the entire universe. You will learn that in Christian Science the first duty is to obey God, to have one Mind, and to love another as yourself" (Science and Health, p. 495).

To the many who are seeking light on their problems, be they personal or church, we would commend this vital statement of truth. In our Leader's writings we have a correct and intelligible statement of Christian Science, and their faithful, prayerful study will bring a solution to the most perplexing problem. The wisest and best teachers can only offer what they have themselves learned in this way, can only refer the inquirer to what Mrs. Eddy has said on the subject. "Seek, and ye shall find," said the greatest teacher of all; and the reward is always commensurate with the endeavor of the seeker.

Archibald McLellan.

True Freedom

As generally understood, freedom means the possession of the unobstructed privilege and power to do as one pleases. It is thought of as exemption from restraint, the ability to gratify the dictum of desire. But wherever and whenever the light "which lighteth every man" has dawned in the world, it has meant an advance in the human thought of freedom; it has made men see that the happiness they have identified with it is not to be found in the gratification of appetite and impulse, but in the escape from their rule. Christ Jesus pressed this upon the thought of mankind as it had never been before. His great theme was that men must become responsive to a higher law, be supreme where they once were subject.

Devotion to this spiritual ideal was splendidly manifest in the early Christians; nevertheless, it is just here that the church has come short in all the later centuries. It has been said that Schiller "distrusted religious organizations of all kinds, fearing their tendency to fetter the human spirit," and that he "found the life of the Spirit to consist in the liberty to discover and assimilate the will of God," that is, divine law. In this the poet surely glimpsed the emancipating light of truth which is so apparent in Christian Science.

The Master came declaring and demonstrating the power of divine Truth, the knowledge of God, to free men from every form of limitation, and his immediate disciples proved this possible; but the cry of heresy awakened by Mrs. Eddy's reassertion of the gospel speaks volumes for the totality of the loss of his inspiring ideal. This is the more surprising as we remember that normally the sense of possible freedom should advance with every increment of its realization. Each successive elevation of consciousness can but enlarge in geometrical ratio the boundary of vision, and in entire keeping with this law of spiritual growth the Master said, "He that believeth on me, the works that I do shall he do also; and greater works . . . shall he do." The facts of history attest, however, that in the so-called Christian centuries human susceptibility to one of the greatest foes of freedom, namely, disease, and the consequent temptation to fear, have not been lessened but increased.

Today men are studying the asserted forces of disintegration and decay as never before. They are companioning in thought with the tabulated enemies of health, known as bacteria, germs, etc., and as the effort to forestall or resist their assault seems to grow more hopeless, increased fear of and subjection to them inevitably result. The investigation, differentiation, and placarding of abnormalities has come to be regarded as one of the most honored and important departments of the curriculum of Christian colleges, and it is prompted for the most part by the noblest purposes. Nevertheless, that this exploitation of physical ills weakens instead of strengthens the race for its fight for freedom, is beyond all question. "The flesh profiteth nothing."

It is here that Christian faith has suffered through the acceptance of a false sense of divine law. Material belief declares that God legislates for the existence and perpetua-

Digitized by Google

tion of that which enslaves men, and in so far as we are influenced by this belief and have consented to the normality of decay and death, we practically refuse to accept the freedom assured us when we live "the law of the Spirit of life in Christ Jesus."

Christian Science reaffirms the teaching of the Master that freedom means demonstrable at-one-ment with divine law, the realization of man's inherent nature as an expression of the activity of Truth and Love; that he has the same authority over sickness, sin, and death which light has over darkness, and that human sense may find and enjoy this liberty in the exercise of spiritual understanding. It teaches that evil, with all it embraces and includes, is not the manifestation of Truth, but of falsity, and that it has no power to fetter the Christ-man, who is forever free.

JOHN B. WILLIS.

Family Ties

IN the epistle to the Ephesians we read of "the whole family in heaven and earth," a thought so comprehensive as to make one pause and compare it with the ordinary concept of family ties. In presenting this larger view of the family, St. Paul begins with "the Father of our Lord Jesus Christ," or the idea of fatherhood offered to humanity by the great Teacher. It is true that the Hebrews were not ignorant of the divine fatherhood, for the psalmist speaks of the infinite One who pities His children in a way that as far transcends the human "as the heaven is high above the earth;" who removes their sins and transgressions, heals all their diseases, and crowns them with loving-kindness and tender mercy. Isaiah presents what Mrs. Eddy calls the "motherhood of Love" (Science and Health, p. 519), when he tells how God comforts His people, and the question is asked, "Can a woman forget her sucking child?" to which the answer comes, "Yea, they may forget, yet will I not forget thee."

In spite of all this teaching, Christ Jesus said, "O righteous Father, the world hath not known thee: but I have known thee." At every step of the way the Master gave proof that he knew God to be not alone his Father, but the Father of all and the very Life of all being. These proofs brought down to men the purity and power of the divine nature, and for this alone we owe Christ Jesus unending gratitude. The contemporaneous Greek and Roman concepts of divine fatherhood were at their best grossly sensual, with a crude sense of justice and power; and while no professed Christian would dream of entertaining them as models for conduct, it may be asked to what extent the earthly parent attempts to bring out in his human relations the ideal of fatherhood revealed by Christ Jesus. Happy indeed the child who first finds his way to God through the reflected goodness of an earthly parent, and who rests secure that God must be loving and just and pure because of what he sees manifested in his home. If any should think this too much to claim, we have but to listen to the inspired word: "Be ye holy; for I am holy."

It is soon discovered in Christian Science that the mortal concept of human relationships is a fruitful source of sorrow; indeed it is generally admitted that the greater the sense of affection, the greater the fear for the loved ones,—fear of sickness, of sin, and of death. Yet nothing could be so dreadful as the thought of a loveless existence, and nothing could be farther from the divine purpose as the Bible reveals it. If it is true that God is Love, then His children should all be loving, and the one important question is how we may become more so each day. If we consider the noblest characters presented in Holy Writ, we shall see that the most beautiful things in their lives were the purity and tenderness of their human affections, something wholly above the mere bonds of the flesh, "the accident of birth." This is wonderfully illustrated in the case of Jacob and his son Joseph. The passing of years seemed only to strengthen the tie. What a meeting that was between the prime minister of Egypt and his old shepherd father, after the long years of separation! Did not that rare friendship begin in pure spirituality, when Jacob taught his boy to know the God who had appeared to him at Bethel, and did not that teaching carry Joseph unsullied through all the trials and temptations of his unfolding manhood?

This is but a glimpse of what is possible to family ties, for our dear Leader says (Miscellaneous Writings, p. 100): "Pure humanity, friendship, home, the interchange of love, bring to earth a foretaste of heaven." Our Master, who refused to be bound by a merely material sense of human affection, did not hesitate to say to his followers, "Love one another, as I have loved you," and this was an oft-repeated command. To love as he loved is what glorifies character. It is the vital element in Christian healing, and while it may begin, should begin, with those who are nearest us, it should be an ever-widening, deepening influence, till it comes to include "the whole family in heaven and earth,"—all the children of our Father.

ANNIE M. KNOTT.

Among the Churches

Current Notes

NEW YORK.—The normal activities of the state committee on publication during the year 1913 have been greatly increased, so much so that the clerical force required to carry on the work has been more than doubled in the last twelve months. Our regular activities now include a direct supervision over matters growing out of state legislation, proposed or attempted, which would affect the Christian Science movement. Added to all this, the state office has systematically handled and looked after orders from all over the world for copies of the December number of *The North American Review*, and reprints of the article "Must Protestantism adopt Christian Science?" by "A Churchman." The reprints alone, ordered to date, number four hundred and eighteen thousand copies.—*Correspondence.*

NEVADA.—During the year 1913 the work of the committee on publication in Nevada has been about double what it was in the preceding year. This work can be classified under three heads: the work with the newspapers, the work for preventing unjust legislation, and the work of distributing literature.—*Correspondence.*

SACRAMENTO, CAL.—First Church of Christ, Scientist, had a booth at the state fair for the first time. It was attractive and in a fine locality, with appropriate signs. Besides the general distribution from the booth, the *Monitor* was personally presented to the exhibitors at their stands. There were given out some one thousand *Monitors*, five hundred *Sentinels*, two hundred *Journals*, and a few *Heralds*.

Correspondence.

ZANESVILLE, OHIO.—The Christian Science Society of this city filed application Saturday [Jan. 3] for a charter under the laws of Ohio, and it will be incorporated as First Church of Christ, Scientist, of Zanesville, Ohio.—*Times Recorder.*

Digitized by Google

WASHINGTON, D. C.—When Second Church of Christ, Scientist, was formed two months ago, it was thought that the temporary quarters selected in the Union building would be ample for a considerable time to come. Interest in Christian Science is increasing to such an extent that the hall was soon crowded, and now it has been enlarged by the removal of a partition. The room afforded in First Church through the withdrawal of those members who formed the new organization, is rapidly being taken by newcomers, and both churches are growing at a rapid rate.—*Washington Times.*

WILKINSBURG, PA.—First Church of Christ, Scientist, has just been organized by members of First Church of Christ, Scientist, of Pittsburgh, who have withdrawn for that purpose. The new church was formed to meet the growing needs of the Wilkinsburg district and to relieve threatened congestion at the Pittsburgh church.

The Pittsburgh Gazette-Times.

LEXINGTON, KY.—First Church of Christ, Scientist, which has been meeting in the banquet room of Merrick Lodge, is holding services in the beautiful auditorium which it has fitted up on the second floor of the new Union Garage building, at 159 East Main street. This room has a seating capacity of about two hundred and fifty.—*Lexington Leader.*

CONCORD, MASS.—First Church of Christ, Scientist, recently voted to proceed with the work of erecting a church building on the lot of land purchased some sixteen months ago. Plans are approaching completion, and it is hoped to break ground as soon as the season is favorable.

Correspondence.

PORTLAND, ORE.—Among the new buildings on the East Side, the most important is the edifice of Second Church of Christ, Scientist, which is being erected on the quarter block at the northeast corner of Holladay avenue and East Sixth street. Work is now being done on the foundation.

Portland Oregonian.

FORTUNA, CAL.—The members of the Christian Science church held services in their new building for the first time Sunday morning, Feb. 1, at eleven o'clock. As the church is not fully completed, the dedication service will be held later.

Fortuna Beacon.

DULUTH, MINN.—First Church of Christ, Scientist, is now pushing its new church building to completion, and expects to have it ready for service the latter part of June next.

Correspondence.

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

The Lectures

Boston, Mass.

William D. McCrackan, M.A., a member of the Christian Science board of lectureship, delivered a free public lecture on Christian Science under the auspices of The Mother Church, The First Church of Christ, Scientist, Boston, Mass., in the church edifice at Falmouth, Norway, and St. Paul streets. John C. Lathrop, first reader of The Mother Church, introduced the lecturer as follows:—

Nineteen hundred years ago Christ Jesus uttered these profound words: "It is the spirit that quickeneth; the flesh profiteth nothing." It has taken the intervening ages of earnest Christian development to prepare human thought to understand the true meaning of the significant distinction expressed in this utterance. The mission of Christian Science is many fold, and in the practical elucidation and demonstration of all of Jesus' sayings and promises, by revealing the sharp distinction between faith and spiritual understanding, matter and Spirit, which results in the complete healing of the sick and salvation of the sinner, Christian Science is fulfilling the universal demand of humanity for peace and purity, health and harmony.—*The Christian Science Monitor.*

❖

Moscow, Idaho

A most interesting address on the subject of Christian Science was given to an appreciative audience in Eggan's Hall. The speaker of the evening, Prof. Hermann S. Hering, was introduced by Martin S. Angell, Ph.D., professor of physics at the State University, who said in part:—

Perhaps the greatest need in education today is a clearer vision of the truth. We have a great many ideas on many subjects, but too often we are unable to distinguish between fact and theory. We have developed a free and easy manner of speech, which may or may not convey our ideas exactly. With this has come a loose method of thinking which often leads us far from the truth. I believe we need more definite knowledge, in short, a scientific education; for science means a classified knowledge, exact, clear, and logically formulated. Even in religion the same loose method of thinking prevails. I believe the average individual would have difficulty in expressing honestly, even to himself, his religious belief. We should have a reason for the faith that is in us.

We are here tonight to listen to a lecture on Christian Science; and Christian Science, if it is true to its name, must take account of all the facts and should present them clearly and logically. Unsupported assertion and mere statement of a thing as a fact has no place in a true science. These facts should also be capable of proof, for the characteristic of a science is its demand for proof. We should appreciate, then, this opportunity to learn the facts concerning Christian Science.—*The Daily Star-Mirror.*

❖

Oconomowoc, Wis.

In introducing Bicknell Young, who lectured on Christian Science at the Auditorium, the Rev. A. W. Stephens said:—

For the second time since I have been pastor of the First Baptist church in this city, I have been given the honor of presenting to an Oconomowoc audience a Christian Science lecturer; and I am glad to do so, for to my mind Christian Scientists are endeavoring to bring to mankind a larger view of life. We cannot dispute the fact that there is a feeling of unrest in the world, and everywhere we see evidences that

Digitized by Google

men are reaching out after the unseen, and a change has taken place in their thought regarding the Christian life. More and more the thoughtful man is coming to realize that the spiritual is the real and the material the unreal. For proof of this we have but to think of the great discoveries and inventions of the last twenty-five or fifty years. And have they not all been in the invisible world? Is it not true that men are playing with forces today that they do not understand? They can tell us that they are, also how these forces operate, but not what they are. It seems to me that these invisible forces are but the outlying fringes of the great spiritual world to which we all belong and of which we form a part; but "the god of this world" hath blinded us, so that we do not see these spiritual realities, and Christian Science is endeavoring to open our eyes.

Another thing that has impressed me in the teachings of Christian Science is, that it deals with the individual. God is One, and this unit idea belongs to God, for without Him man is a mere cipher. I believe that we as Christian workers have lost power in the work because we have held wrong ideals. Our ideal has been the multitude; we have magnified the kingdom, we have dreamed of the state, and this has been the goal of Christian workers in great measure, for these large things we have thought worthy, and thus have passed by the one for the many. God's method is the very reverse. He passes from the many to the one, and I believe we must swing back to God's method and initiative. Christianity deals with the individual. Jesus was the great specialist, always leaving the multitude for the individual. You know, and I know, that this method is revolutionary, and upsets men's doings as old as history, just as Christ overturned the tables of the money-changers in the temple courts. It seems strange that men do not know the first step of a constructive process; that they do not know how to initiate reform.

It has been said that Christianity's point of power is the individual. Out of individuals you can build a church, a society, governments, just as out of stones you can build cathedrals, bridges, and cities. Christ began at the very basis of society, and Christianity as taught by Christ has a message for the individual, and not for society as such. There is nothing in Jesus' whole method that so amazes and stimulates me, or so moves me to the supreme passion for the gospel's Christ, as when I stop to remember that the whole life and teachings of Jesus,—that he did as he did, taught as he taught, and wrought the miracles he did for the enlightenment and salvation of each of us,—summed up in one single statement, is, that I might have life, and that I might have it "more abundantly."—*The Oconomowoc Enterprise.*

✧

Ashland, Ky.

A large and attentive audience assembled in the Ashland Theater to listen to an address on Christian Science by Bliss Knapp. The speaker was introduced by Atty. J. B. Wilhoit, first reader, who said in part:—

All over the earth are thousands of people who are living witnesses to the truth that Christian Science heals the sick and cleanses the sinner; for it is a religion of love, ruling out of our lives all evil and filling our conscience with good. Christian Scientists are trying to obey the commands of their Master to "preach the gospel" and "heal the sick." The marvelous growth of Christian Science is proof that it does all that is claimed for it. If the world knew what Christian Science is, and what it has done and is doing for man, and would accept it and live it, then all sin and suffering would fall at the feet of divine Love.—*Ashland Daily Independent.*

Lectures to be Delivered

Albert Lea, Minn.—Virgil O. Strickler, 3:30 p.m., March 29.
Anaconda, Mont.—Col. William E. Fell, Imperial Theater, 8 p.m., March 24.
Calgary, Alberta.—Judge Clifford P. Smith, Sherman Grand Theater, 3 p.m., April 5.
Cedar Rapids, Iowa.—William R. Rathvon, Greene's Opera House, 8 p.m., March 30.
Charles City, Iowa.—Virgil O. Strickler, Hildreth Opera House, 8:30 p.m., April 2.
Cincinnati, Ohio (Second Church).—Francis J. Fluno, M.D., Music Hall Auditorium, 8:15 p.m., March 31.
Coalinga, Cal.—Willis F. Gross, Liberty Theater, 3 p.m., March 29.
Cœur d'Alene, Idaho.—Col. William E. Fell, Rex Theater, Shirman street, 3 p.m., March 29.
Denver, Col. (Fourth Church).—Clarence W. Chadwick, Woodman Hall, 3 p.m., March 29; First Church Edifice, 8 p.m., March 30.
Kansas City, Mo. (Third Church).—William R. Rathvon, Church Edifice, 40th and Walnut streets, 8 p.m., April 3.
Laconia, N. H.—Rev. William P. McKenzie, Unitarian Church, 8 p.m., March 31.
Lethbridge, Alberta.—Judge Clifford P. Smith, auditorium, Y. M. C. A., April 2.
Libby, Mont.—Judge Clifford P. Smith, Libby Opera House, 8 p.m., March 30.
Lockport, N. Y. (Second Church).—William D. McCrackan, M.A., Temple Theater, 3 p.m., March 29.
Luverne, Minn.—Virgil O. Strickler, Opera House, 8 p.m., March 30.
Madison, Wis.—Bliss Knapp, Woman's Building, 240 W. Gilman street, 8:15 p.m., April 2.
Manitowoc, Wis.—Bliss Knapp, New Opera House, 8:15 p.m., April 3.
Mansfield, Ohio.—Francis J. Fluno, M.D., Memorial Opera House, 2:30 p.m., March 29.

Testimonies of Healing

It is with deep gratitude that I write this testimony of my healing in Christian Science, for through the understanding of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have been lifted into such happy consciousness that it is impossible to do justice in describing such a blessing. When only a child, I was taken from my mother and instructed in the teachings of another church. I made a feeble attempt to accept that religion until I became a young man; but the good people who endeavored to guide me, were no doubt of the opinion that I was a hopeless case, for instead of becoming a Christian, I was fast becoming the worst kind of sinner.

I had never read two chapters of the Bible in my life (more than twoscore years) until eighteen months ago. Then it seemed as if I had reached that point in life where I had seen almost everything in the way of evil and was without any knowledge of God, except the belief that I had to pass from this earth to see Him. Being in ill health, and having visited a number of physicians who could do nothing for me, a friend directed me to a specialist in Chicago, thinking this physician would cure me of what I believed was the worst form of mental illness, an extremely nervous condition. I called on this specialist and was informed that I must give up my business of twenty years' standing, go to a foreign port, and stay there until I obtained relief. He said he could not give me any medicine, that nothing would cure me but a long trip abroad, together with absolute quiet. I hastened to comply with his request, and within two weeks was on the steamer for a European port.

Prior to leaving, however, I met a friend who handed me a copy of Science and Health, stating that I would be healed if I read it in the right spirit. Before I ended the trip to the old country this book had become my daily companion, as it has been ever since. What more could I ask, for it shows me beyond all question that God is All; and not only has it freed me from the belief that illness can attack me, but it has also led me to perceive greater possibilities in business and life. A Christian Science practitioner has aided me in realizing this great truth, and has guided me in the understanding that of myself I can do nothing, but that with God all things are possible. In traveling from the shores of the Pacific ocean to the Red sea, I have seen and participated in well nigh every known pleasure of the material senses, and I can say without reservation, I would rather have a few moments with God, as I now understand Him, than all that can be offered in a material way.

In the words of Mrs. Eddy, "I . . . plant myself unreservedly on the teachings of Jesus" (Science and Health, p. 269), and shall assist, in every way God may guide me, in imparting these blessings to others and in sowing the seed of Truth in the right kind of soil. Truly it may be said that our Leader's discovery will slowly change the world into what it really should be,—a state of true happiness, through a correct understanding of God, who governs us all.

FRANK J. BUCKLEY, New York, N. Y.

✥

After witnessing the healing of my mother by Christian Science I took up its study, for I realized that it must be the same truth which Jesus taught and practised. During the four years that have passed since that time, we have had numerous proofs of Truth's healing power, the most recent being at the birth of our little girl. The birth was painless, no one being present but myself and husband. After the first day I took all the care of myself and baby, while the fifth day I resumed the housework,—and I may say that we live on a farm. The baby was healthy and good, but all at once she began to be fretful and refused to nurse. After three days I discovered a hard white growth appearing under her tongue, and I applied the truth as taught in Science and Health. She immediately began to take her natural nourishment and to sleep well. The next day the growth had disappeared.

One of our little boys, aged two, was knocked down in a narrow gateway, and twelve cows fought and tramped over him until they had crowded through the gate; but although he was taken up unconscious, he was running about and playing in less than a half-hour. Our oldest boy had lung and bronchial trouble, before we came to Christian Science, and he was under the doctor's care continually during the winter months. Now, however, he is a strong, robust boy, without a sign of these ailments, and since we have been receiving the blessings of Christian Science his disposition has improved wonderfully.

We are certainly thankful to God for the understanding of Truth, gained through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

HATTIE G. KILBORN, Scotts Mills, Ore.

✥

My first acquaintance with Christian Science came about in letting furnished rooms eleven years ago in St. Louis, Mo. Among the applicants were a couple who appealed to me very much, although they had a child, which was an objection, as stated in the notice; still I preferred them to others who were looking at the rooms. They wore such bright and pleasing countenances, their conversation and manner were so different from what I had been accustomed to, that I was pleased with the thought of having them in my home. The day they took possession I was called out on a case of nursing, and was gone about three weeks. On my return a neighbor met me and said in a very agitated manner, "Do you know whom you have got in your house?" She then told me that these people were Christian Scientists, which she thought terrible; and I, too, at the time, felt very much disturbed about it, as our minister often warned us against Christian Science. I said, however, that I must make the best of it since they were in my house, but I decided to watch them; and in so doing I soon discovered wherein I was wanting. Daily these people read the Scriptures; they were always healthy and happy, never had any strife or trouble, were strictly honest in their dealings. I could see nothing but good in them and thought they must have a beautiful religion.

I became interested in their literature and accepted an invitation to attend their church on a Sunday morning. This experience I shall never forget. An inspiration came to me, such as I had not experienced before, though I had been a church-member for nineteen years. I was convinced that this was truly of God. My deepest longing was satisfied. I wanted to know what it was that brought such happiness to me, so then and there I procured a copy of "Science and Health with Key to the Scriptures," the reading-room being in the same building. This book I read eagerly day and night, and what I comprehended appealed to me as beautiful and wonderful. I often had to stop reading,—the tears blinded me. Here for the first time I realized that God is Spirit, and they who worship Him must worship "in spirit and in truth."

In Science and Health I read, "To be with the Lord"

Digitized by Google

is to be in obedience to the law of God, to be absolutely governed by divine Love,—by Spirit, not by matter" (p. 14), and this explained Eliphaz' counsel to Job, "Acquaint now thyself with him [God], and be at peace: thereby good shall come unto thee."

Just two weeks after this small understanding, divine Love was manifested to me in the healing of my son, who had been subject to throat trouble from the time he was a little child up to the age of twenty-two years. He had been operated upon by physicians, but with no relief; indeed, he was getting worse. He was out of the city at the time of his last attack, and came home, looking very pale and scarcely able to speak, but thought I might help him with material means. It surprised him to find me interested in Christian Science, and he could not see how it would help him. I explained Christian Science to him somewhat and the Scientist in my home also gave him a prayerful thought. As a result he began to improve right away, and ate a hearty meal, which astonished him, as liquid food was all he could take before. The next day a healthful color had returned and he was whistling and singing. Words can never express the joy I experienced at this healing. I praised God for His unspeakable gift, whereby only we can prove "what is that good, and acceptable, and perfect, will of God."

This proof follows me in the sick-room, even under *materia medica*, for "where the spirit of the Lord is, there is liberty." I cannot tell the many blessings that have come to me during these eleven years through the spiritual understanding gained in Christian Science, but I am very, very grateful for having been led to understand the Bible in its spiritual light, for thus the "signs" do follow. This pure and true knowledge of God has been attained by me through the inspired teaching of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Clara P. Hamill, Prairie Grove, Ark.

✧

I became interested in Christian Science in the summer of 1905 through the healing of friends. Since then I have had occasion to use it in some of the most trying human experiences, and have never failed to find Truth an ever-present help in time of need. I wish to give the proof of what I have just said in the case of a healing that seemed very wonderful and beautiful.

One Monday morning, early in December, 1911, my wife received a post-card from her sister in Richmond, Va., saying that their mother was suffering from a serious kidney disorder, and that word would be sent promptly if any change took place which might necessitate her coming. That afternoon a letter was received which said that the condition of the mother had become so alarming on the previous Friday that a specialist had been called in. He had pronounced the trouble acute Bright's disease, and advised her immediate removal to the hospital, where proper care could be given. She was then in a state of delirium. The doctor's orders were obeyed, but within twelve hours after she was taken to the hospital, acute lung trouble, in which both lungs were said to be involved, also set in, and the case was pronounced by the physicians beyond their skill.

In less than half an hour after receiving the letter my wife had a telegram, saying she should come at once if she wished to see her mother alive. It was to mortal sense a severe shock, but after reviewing the conditions, she decided not to go. She sent a telegram to her sister, saying that she could not come, but asked her to try Christian Science. Not feeling sure that her sister would consent to this, even as a last resort, I took up treatment here, and in twenty-four hours the disease was completely met. This was Tuesday. On the following Friday consciousness returned, and on the next Monday the mother was taken home. There was no relapse, neither were there any complications or ill effects of any kind. In the past summer she has enjoyed privileges that she never thought possible on account of her sense of limitation.

We are indeed grateful for all that Christian Science has done and is doing for us each day. We rejoice to know that "divine Love always has met and always will meet every human need" (Science and Health, p. 494), and that "all things work together for good to them that love God."

Frank B. Mathews, Washington, D. C.

✧

One morning I woke up feeling very unwell, my throat troubling me a good deal; but I went to business as usual, trying to realize the truth of being. I became worse, however, and being unable to do my work, I was sent to the doctor who was on the premises. On looking at my throat she said she was afraid I had contracted a malignant disease, but after consulting another doctor it was declared to be a milder form of the trouble. I was sent home immediately and went to bed. I then asked my mother to write to a Christian Science practitioner, who at once commenced to treat me. I gradually improved, and in three days was perfectly well, passed the doctor's examination, and was able to resume my work.

For this and many other blessings I am very thankful to God, who gives all things that are good.

Emily Cole, Croydon, England.

✧

[Translated from the German]

It is with a grateful heart that I wish to tell of the blessings I have received through Christian Science. A little over three years ago my five-year-old son was taken with rheumatism in a severe form, to which was added a serious heart trouble. When two years ago he again became dangerously ill with both ailments, the rheumatism manifested itself especially in the head and neck, so that the latter seemed twisted. He could not sleep either day or night on account of the pain, and he took hardly any nourishment. The physician called daily at first, then his visits became less frequent, although my son's condition did not improve in the least. When I voiced my discouragement and remarked that the patient was not gaining, I inferred from the doctor's manner that he was unable to afford help. A physician from another locality pronounced the heart trouble very serious, saying that the child would not live much longer. We were helpless and perplexed, not knowing what to do next. We had used all the remedies which had been recommended, but they were of no avail.

In dark and hopeless times such as these, one often comes to see that material means can afford no help, and then thought turns heavenward and seeks help from the all-loving Father. As if guided by divine Providence, our attention was then called to Christian Science. Fully trusting in God, I went to a practitioner, who gave me some literature on the subject. While reading this, my wife and I remarked to each other that we had found what we wanted. Some time afterward the practitioner asked us to bring our child to her within the next few days. I wrote to her, saying that it would probably be impossible to undertake the trip on account of the boy's condition, as he had become so emaciated, but a great change soon took place, for the child grew quiet, and sleep, which he had not had for weeks, returned.

Digitized by Google

When the boy awoke, he felt very much better, so that we thought we would venture to start on the trip. Whereas formerly the least movement would cause pain, nothing seemed to inconvenience him on this journey. The practitioner bestowed all care upon him in the most loving way, explained a few points to him as well as to his mother, and then treated him. He had been driven to the station in the morning, but when he returned in the evening, he said that he felt able to walk. After this, absent treatment was given for some time and there was daily improvement. His appetite and strength returned, and the heart action became more regular, but the head did not seem to get into its normal position. This condition, however, was overcome eventually, and I can say with a grateful heart that my son is completely restored, and he has had no other ailment since, although a considerable time has elapsed.

I have experienced many other blessings. Through reading, and through the growing understanding which I am gaining from the study of Christian Science, a new world has opened to me, for I know now that no evil proceeds from God, but blessings only; hence we need fear neither disease nor evil of any kind. I am very grateful to Mrs. Eddy for having discovered anew the truth which brings us such great blessings.—Emil Kühnhold, Einbeck, Germany.

✧

Gratitude for divine Love, made manifest through quick deliverance from pain that seemed to be unbearable, impels me to give expression to it in this testimony. As I think over the many blessings that have come to us since I began to learn of God's allness through Christian Science, my gratitude grows, and my desire to know more of God increases.

Perhaps one of the most impressive instances, to me, of God's nearness came while I was still young in this Science, and while I was going each day for help of which I seemed to be sadly in need. One evening while we were at dinner, we heard a noise as of a falling object in the kitchen, and a cry that caused us all to hold our breath. On reaching the spot I saw the kettle of hot lard overturned on the floor, and the maid standing in agony beside the sink, trying to wash the lard from her hands and face. For the moment, my extremity, in not knowing what to do, seemed to be as great as hers, but immediately the thought came to me that I must and could know the truth for her. She signified her desire to have Christian Science help, and as I stood there I realized clearly that God, infinite Love, could not let one of His children suffer as she seemed to be suffering. In a few minutes she stopped crying and said the pain had lessened, and as it was Wednesday evening I started out for church with a light heart. On my return I went to her room, and no one who has not had the joy of demonstrating Christian Science can know the happiness that I experienced when she said, rubbing the purple cheeks, "See, there is no pain there at all." It was nearly two weeks before the unnatural color from the burns left her face and hands, but the suffering was gone.

Although this instance stands out preeminently as a proof of the truth of Christian Science, yet as I recall the many blessings that followed, they crowd in upon my thought so fast it would be impossible for me to give expression to them all in one testimony. There is one healing in particular, however, that I should like to mention. It is of an injury which under ordinary circumstances would doubtless have kept me housed for many days. I wrenched my ankle in the morning, and about noon the conditions seemed to be so much worse that I asked a practitioner for help. At night the ankle was so swollen and so painful that I could not put my foot to the floor, but in the morning I thought I would at least make the effort to get up, and what was my joy to find the ankle well! I was on my feet all the following day, shopping, and experienced no further inconvenience from the sprain.

My prayer is that by more willing obedience to Truth, each day I may prove my thankfulness to God, the giver of every good and perfect gift, and my love for her who has brought to us this Science.—Annie Griswold Murison, Chicago, Ill.

✧

[Translated from the German]

In the spring of 1913 my brother was suddenly taken ill. As he is on his one year of military service, we had to call a physician, who pronounced it a case of typhoid fever. Despite the fact that Christian Science is as yet very little known here in Budapest, my mother asked a Christian Science practitioner in Dresden to give him treatment. The physicians predicted high fever, delirium, etc., but none of these conditions were manifested; on the contrary, my brother recovered quickly, and the physicians said, that although we had a patient with typhoid fever in our home, we really did not know what it meant.

On another occasion my mother returned from a journey suffering from a severe fever. As she did not seem to improve, I wired to the practitioner who had treated my brother, and on the next day the fever was broken, and my mother was completely restored within a short time. These are instances only of physical healing; as to our experiences along mental and spiritual lines, words fail to convey our sense of indebtedness. My wish is that all who are weighed down with sorrow and suffering may find that the Christ-way is the only way which leads to true happiness and peace.

Gisela Cserháti, Budapest, Hungary.

✧

With deep thankfulness to God for Christian Science, and with gratitude to Mrs. Eddy through whom this truth was again revealed to the world and made demonstrable, I wish to add my testimony. For some time I had had serious trouble with my teeth, which were very painful. Help was near, however, for when I went to my uncle, who is a Christian Science practitioner, I was shown the truth, and in a short time the pain and fear vanished. It was through his loving care and simple way of making this teaching clear to me that I came into Christian Science.

I am indeed grateful for the help I have received, and I wish to express my thankfulness to God, the giver of every good and perfect gift.

Abbie D. Vordermark, Los Angeles, Cal.

✧

I was troubled for a good many years with catarrh and related ailments, for which I had tried a number of doctors and all kinds of medicine. I also traveled about to various health resorts and springs, but these afforded no relief. When, however, Christian Science was taken up in our family, I was healed. We have now been studying its teachings over eight years, during which time we have depended on divine Love for all our help, and I can truthfully say that my entire family has been benefited in every way since taking up this truth.

We have had a good many problems to solve, but the one that confronted us in January, 1912, during extremely cold weather, was different from any of the rest in that it seemed more serious and tried our faith to the utmost. In order to reach a water-tank, I was climbing an iron ladder, the rungs of which were covered with ice, when I slipped and fell to a

Digitized by Google

gravel roof below, and was taken up in a badly injured condition. An ambulance and a doctor were sent for by the factory watchman, as it was Sunday, and I was taken home, where I lay unconscious for about twenty-five hours. The doctor informed my wife that my injuries were of an extremely serious nature and required special and prompt treatment; whereupon she told him that we were Christian Scientists and would not employ any material means, but would trust all to God. The doctor was persistent, however, in saying that the gravity of the situation demanded his services and that there was no time to lose; but my wife was implicit in her faith and sent for a Christian Science practitioner. The result was, that in a little over three weeks I was able to attend to my duties.

The doctor called up the morning after the accident to find out what kind of a night we had, and expressed great surprise when told that I had a quiet and peaceful night. The day following, another doctor was sent to us by the firm. He stated that he had been sent to wait on me and give my case his undivided attention, but we told him that I was being taken care of. He called again later in the day with an assistant, and made an examination and took notes.

Surely this whole experience was a test that required absolute faith in divine Truth, and we are truly thankful to God for all our blessings, also grateful to our dear Leader for the rediscovery of this healing truth. I am happy to say that my healing has been permanent.

G. E. FISCHMAN, South Norwood, Cincinnati, Ohio.

✧

I wish to contribute my mite, hoping some one may be benefited by my testimony, as I have been by those I have read, year after year, in the *Sentinel* and *Journal*. I was entirely healed of semiinvalidism through the perusal of the text-book, "Science and Health with Key to the Scriptures," first loaned me in July, 1892. During the past twenty years, this wonderful book and the articles in the periodicals have been to me the bread of life. I am giving out copies of the *Sentinel*, *Journal*, and *Monitor*, to others, and am trying to listen as closely and obey as promptly as did our beloved Leader, Mrs. Eddy.—MRS. J. K. CALKINS, Goodes, Va.

✧

I am very thankful for the help I have received through Christian Science. For several years I was not able to use my sewing-machine on account of varicose veins, but since having treatment in Christian Science I can use it as much as I wish without any pain or inconvenience. I am enjoying the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and hope to profit by its study, as I am learning that fear is at the bottom of all the troubles of mortals, but, as we read in the Bible, "perfect love casteth out fear."—MRS. E. A. GARRATT, London, S. E., England.

✧ ✧ ✧

[Written for the *Sentinel*]

Love's Haven

CHARLES C. SANDELIN

TEMPESTUOUS winds do blow
O'er the angry, restless sea:
How sweet that I yet may know
Love keepeth mine and me!

And need I fear? Nay, nay!
Though the billows roll on high;
I'll steer for the haven of Love's calm bay,
There wait till the storm pass by.

From Our Exchanges

[Rev. Edward Glenfaun Spencer in *The Christian Register*]

What is the spirit of the time saying, to men, to nations, to institutions, to constitutions, to our much-vaunting Western civilization? Just what Jesus said to his own day and generation and to all succeeding time: Do not profess or protest or pretend. We shall not judge you so, but by what you prove to be. Produce, produce! Show us whether ye be food-bearing fig-trees or barren, hurtful thistles. Let us see your fruits!

Who that hath ears to hear will fail to distinguish in this challenge the voice of the divine-human spirit, awake, self-conscious, purposeful, and seeking in all existing forms and modes of life that which is as real, as vital, as permanent as itself? Who that hath the understanding heart will miss herein the accent of that wisdom engendered of disappointment, chastened by suffering, and apt at last to discern and swift to prefer the plain and artless true to the most alluringly bedizened false? This is the challenge of religion issuing out of the depths of our common human nature, where at last it is coming to its own. It has the clearness, the directness, the authority of that inmost center of reality, the attractive "pull" of which men feel when they yearn and turn toward God.

Nay, do not smile and shake the head. Men do yearn and turn toward God, each in his own time and in his own way, when the house of life he has built lies around him in ruins, if not in the smooth and prosperous days in which it stands four-square to wind and sun. Then, indeed, is no time for seeming. One feels that he must be real. He must find somewhat within himself to cling to, to trust in, and he finds it nowhere but in that one flawless thread of truth, of sincerity, of reality, which runs inward from the surface to the center of his life, and links his soul to God.

That is what religion is, yours, and mine, and the world's,—just so much of real life as is present in the varied web of unreality we are weaving day by day. It is what men feel who dare not lie,—the sense of being themselves of the very substance of the truth, so that in ceasing to be true they cease to be. What we call our moral and religious progress is the gradual expansion within us of this area of real life.

[Rev. W. E. Orchard, D.D., in *The Christian Commonwealth*]

Is there, then, hope for the revival of Christianity? This depends on whether the gospel can be proclaimed. Anything but a gospel is ruled out. That is, it must be a power which is able to take men where they stand and lift them higher, while at the same time it must be a truth which has application to every department of life and thought. It must be able to be announced in one liberating word, it must present a concrete example of its own realization, and yet it must provide a central point from which the whole history of the race and the whole science of reality can be interpreted. It must be able to meet the needs of peasant and philosopher, sinner and saint. This depends upon whether the absolute truth of existence can be gathered up in personality and transmitted through history. It is obvious now that nothing but a personality can do this, and if not to Christ, where else shall we turn? Moreover, this is just what the apostolic writers affirm of Christ, and it has been affirmed of no one else.

[*The Advance*]

To admit that God was once known in experience but now is to be known only in history, is to raise a double doubt,—one of the credibility of the history, and the other of the

Digitized by Google

value of the experience. We were in danger of losing God among the stars, of dropping Him out of sight in the mechanism of His own universe. We cannot spare Him. We need not only a God to create things, and a God to adjust the final balance, but a God who "worketh hitherto."

The older creeds said more about the sovereignty of God, and the later ones more about His fatherhood. To say that God is infinite in wisdom, goodness, and love, is the same as to say that He is omniscient, omnipresent, and omnipotent, for all this is implied in His infinity, and it is shorter and simpler, and leaves room to speak of His goodness and love. We cannot put everything into a short creed, even if we use the very longest and hardest words, and it is better to use shorter words, and to be careful that we omit nothing of such importance as the love of God. Some very long creeds have been too much occupied in telling about God's omnipresence, omnipotence, omniscience, invisibility, indivisibility, immensity, and incomprehensibility, to leave any room to speak of His goodness and love. But "God is love." John gives that definition, and is content to leave it so.

[*The Congregationalist and Christian World*]

We hear from many quarters that a new spirit of evangelizing is awake in the hearts of our church-members, and we thank God for it. It is a good day when the churches remember that they have something worth sharing with others and are the appointed heralds of good news. The time is ripe, the opportunity is great. Why not make Lent a special preparation and a special venturing for Christ along this line of hope and promise? As we draw near to God in private and in common prayer, the sense of His presence should remind us of His desire for the home-coming of His children. The good news is in our hearts. The love of man, which Christ put side by side with love to God, asks opportunity. From heart to heart the message runs; and heart by heart the kingdom of Christlike love and brotherhood must grow.

[*The Christian Intelligencer*]

The pure heart is a sure foundation for true happiness. No matter how indulgent fortune may be to us; no matter how many or how rich the possessions which we heap up, these do not have the power of imparting true happiness, nor does their absence necessarily mean that we must be unhappy. Dives, for all his wealth, was tormented; while Lazarus, whose chief friends were the pariah dogs of the street, was borne by angels into Abraham's bosom; and old Charles Cotton well declared that the real source of happiness resides in a clean, contented spirit.

[*Zion's Herald*]

Our whole earthly life testifies that we have not yet reached our fitting environment. The very utmost achievement of the ablest and most gifted man leaves him unsatisfied; the higher his flight, the vaster becomes the horizon which betokens the unattainable. It may easily be seen that the eager, hungry, insatiable mind and heart of man, aspiring day after day for larger things, for higher experiences, for greater victories, carries within itself, even in the moment when its best previous ambitions have been gratified, a testimony of its divine birthright, of its lofty lineage and inheritance.

[*The Christian World*]

We are at a point in the history of the world and of religion where we have to effect once more a transformation of values; to decide whether we will have the treasure or the vessel, the substance or the form. On that vital question Christianity is going to remodel itself and to remodel the world.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is to be issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75. This book is now ready for delivery.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Society

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

The more recent translations into Dutch, German, Norwegian, and Swedish pamphlets are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The site of the Pacific terminal of the Panama canal at Balboa, including the dry docks, shop facilities, wharves, and the one new commercial pier authorized at present, begins with the sea end and extends about one mile in a southwest to northeast direction. Its normal width is about nine hundred feet, and it will have an area of approximately one hundred and three acres. The accommodations for shipping at the terminals include a reenforced concrete pier, 1000 feet long by 800 feet wide, for handling cargo; a repair wharf, having an aggregate length of 2,960 feet, with average width of 50 feet; two dry docks, the larger 1000 feet long, 110 feet wide, and with a depth of 35 feet over the keel blocks at mean tide, the smaller 350 feet long, 71 feet wide, and with a depth of 13½ feet over the keel blocks at mean tide; and a coaling plant with facilities for handling and storing two hundred and ten thousand tons of coal.

British capitalists have just acquired fourteen thousand acres of land adjoining the town of Kinsella, Alberta, seventy-five miles east of Edmonton, where a model rural community and demonstration farm is to be established. The novelty of the plan lies in the fact that the principals, all men of affairs in England, will endeavor to attract particularly those who have had no previous experience in farming. This may well be called a "forward to the land" movement. The model farm of three hundred and twenty acres will be operated along strictly business lines, and at the same time the settlers in the district will have the advantage of its educational features.

With the filing of rights on the unappropriated flow of the Verde river by the Water Users' Association of the Salt River Valley, Arizona, the first step has been taken in a project which will add thirty-six thousand six hundred acres of irrigated land to the Salt river reclamation project. It is proposed to construct a large reservoir at Horseshoe Bend on the Verde river at an estimated cost of one million dollars. The Roosevelt reservoir and the normal flow of the Salt and Verde rivers will irrigate about one hundred and seventy-five thousand acres. The installation of twenty-one pumps and the construction of the Horseshoe dam will raise the total irrigable land to two hundred and eleven thousand six hundred acres.

The passing of the United States Express Company, which its directors last week voted to dissolve, will throw fifteen thousand people out of employment, about two thousand of whom work in New York and New Jersey offices. These employees received in salary and wages approximately six million dollars a year, of which seven hundred and sixty-five thousand dollars was paid to employees at Jersey City alone. The dissolution will affect express service covering 32,938 miles of railroad, with between five and six thousand stations. The period of time required to liquidate may be a year or longer.

The announcement was recently made by Postmaster-General Burleson of a change in the parcel post regulations that will be, in his opinion, a great boon to the farmers and truckers of the country. Under the new regulations, butter, eggs, fruits, berries, vegetables, dressed poultry, and other articles in parcels weighing over twenty pounds and up to fifty pounds, for shipment within the first and second zones,—approximately one hundred and fifty miles,—may be packed in boxes and crates similar to those generally used when shipping these products by express.

Since beginning the work of importing plants and seeds from various parts of the world with a view to their adaptation to economic uses, the department of agriculture of the United States has accumulated what really amounts to a literature covering the various phases of that question. More than thirty thousand plant importations have been made, and in no other country, so far as known, has this work been carried forward on so large a scale. Nowhere else has there been kept an authentic record of importations.

The convention of the Society of American Florists is to be held this year in Boston and will begin the third week in August. The society includes florists of every part of the world, and it is expected that not only every state in the Union will be represented at the convention, but almost every European country, as well as South Africa and the Hawaiian Islands. It is estimated that the convention will bring from four to five thousand flower lovers to the city for a period of ten days. Arrangements are being made with the city for a ten-acre display of shrubbery and bushing plants.

In the conference at St. Petersburg between Premier Goremykin and his cabinet ministers and the leaders of the chief parties of the Douma, the ministers fully explained the international situation and the necessity for increased naval and military credits. It is stated that the army will be increased by four hundred and sixty thousand men, making the total of the first line of defense one million seven hundred thousand men. The extra cost, it is estimated, will be twenty-five million dollars, spread over three years.

A convention opened at Pekin last week for the purpose of amending the provisional constitution of the Chinese republic. In an inaugural address President Yuan Shi Kai gave a sketch of the ill effects of the provisional constitution on both internal and foreign relations, owing to its restrictions on the government and its unsuitability to existing conditions in China. He felt assured that the convention would result in rectifications of the constitution which would bring about peace and prosperity for China and her people.

The triple-screw steamship Britannic, launched recently from the yard of Messrs. Harland & Wolff at Queen's island, is about twenty feet longer than the Olympic, her total length being about nine hundred feet. Her breadth at the extreme point is 94 feet, her height from keel to navigation bridge 104 feet, and her gross tonnage about fifty thousand tons. Her load-water draft is 34 feet, 7 inches, and her displacement at load-water draft over fifty-three thousand tons.

Efforts are being made by the Chamber of Commerce of Palo Alto, Cal., to have the Somers system of assessing property, in the modified form in which it is applied there, adopted for the whole of Santa Clara county, including the city of San José. The operation of the system has been generally satisfactory in Palo Alto since 1910, when it was put into force, and the opposition to it has gradually disappeared.

Recently, at Marblehead, Mass., Clifford L. Webster, aviator, gave a display of the Dunne automatically stabilizing biplane for twenty minutes. After a series of evolutions the pilot wound up by rounding a complete circle of a mile in diameter with his hands off the controls. For more than four minutes the aeroplane continued to circle without manual guidance, maintaining its balance perfectly.

The excavation incident to the mining of coal in West Virginia during the last three years is said to be greater than the excavation required in eleven years to dig the Panama canal, as the latter amounted to 295,328,000 cubic yards. Under conditions far more difficult, the coal miners of West Virginia in the same eleven years dug out 542,949,446 cubic yards of coal.

Exports of merchandise from the United States made a greater advance during the last ten years than in the thirty years from 1873 to 1903. In 1873 the total exports were valued at five hundred and sixty-eight million dollars; in 1903, one billion four hundred and eighty-five million dollars, and in 1913 two billion four hundred and eighty-four million dollars.

The world's record for a day's run by an east-bound Atlantic steamship has been broken by the Cunard liner Lusitania. A wireless from her on her recent eastward trip brought word that the vessel had covered 618 knots from noon to noon, an average speed of 26.70 knots an hour. This beats the previous record of 614 knots held by the Mauretania.

The society for the protection of birds in Germany has presented a petition to the Reichstag asking for a law to prohibit the importation of feathers or parts of the skins of wild birds. The petition explains that a great number of birds, including those in the German colonies, are threatened with extermination on account of the trade in ornamental feathers.

The announcement that the Pennsylvania Railroad Company will establish schools of electrical instruction at various places, is taken in railroad circles to mean that the division extending from Pittsburgh to Altoona, one hundred and nineteen miles, will be electrified soon.

Eight thousand trees will be given away by the city commissioner of Denver, Col., on Arbor day to citizens who will agree to set them out and take care of them.

In the Beirut plain of Syria the cultivation of orange and lemon trees is supplanting the cultivation of mulberry trees, and the change is found to be very advantageous.

Wellesley College recently suffered a loss by fire estimated at nearly a million dollars.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI March 28, 1914 No. 30

The Spirit Quickeneth

JUDGE SEPTIMUS J. HANNA

THE psalmist said, "Quicken us, and we will call upon thy name." Human consciousness apprehends man's relationship to God, Spirit, in the degree of its quickening through spiritual understanding. As men awaken from the belief that there is life, substance, and intelligence in matter, they begin to recognize Spirit, God, as the only Life, substance, and intelligence. This constitutes the quickening. Thus, in effect, spake Jesus when he said, "It is the spirit that quickeneth; the flesh profiteth nothing." He made plain the distinction between spiritual understanding and fleshly belief; that is, between the understanding of Spirit as All-in-all and the false belief that there is life and action apart from Spirit; yet, strange to say, many of his professed followers fail to see this distinction, or to apply the truth which it expresses to the problems of human experience. More than this, they refuse to accept Mrs. Eddy's teaching, which insists upon the quickening or life-giving power of Spirit and spiritual law as something wholly separate from matter or mortal belief. She says, "Jesus reasoned on this subject practically, and controlled sickness, sin, and death on the basis of his spirituality" (Science and Health, p. 356).

To know Spirit is to unknow matter. Strictly speaking, it is not possible to know matter. Mortals may believe in the existence of matter, but they cannot know that it exists, for its existence cannot be proved. In other words, matter is not susceptible of analysis. That which is not susceptible of analysis cannot, in any true sense, be known. If a thing cannot be known, it cannot be understood; hence the futility of attempting to understand matter, or the flesh. Such an attempt "profiteth nothing."

History fully proves the superlative wisdom of what Jesus taught. Every effort of human wisdom or mortal philosophy to prove the existence of matter has failed, has profited nothing. The most convincing evidence in support of Jesus' teaching is furnished by the physical scientists themselves in their conclusion that matter cannot be analyzed as particles of electricity. The supposititious electron has eluded the grasp of the physical senses even when aided by the most powerful microscopic lenses. Therefore the only fair deduction, so far as physical research is concerned, is that matter cannot be traced to any tangible origin, and hence that it has no origin. It is plain that any desire for aid or relief, whether of a spiritual or of a physical nature, through reliance on matter, is misplaced desire; hence if desire, sincere desire, is prayer, it is evident that in depending upon matter we are praying amiss. Such prayer, however earnestly or honestly uttered, "profiteth nothing."

In his outreaching for the true understanding of prayer, St. Paul said, "The Spirit also helpeth our infirmities: for we know not what we should pray for as we ought: but the Spirit itself maketh intercession for us with groanings which cannot be uttered." A careful analysis of the context shows that it is the outreaching of the human sense, that is, the human desire, for a higher understanding of God which constitutes the "groanings which cannot be uttered." The text implies that this was Paul's state of mind or consciousness. God, or Spirit, is not the intercessor, for did not Christ Jesus say that "the spirit indeed is willing," and that it is "the flesh," or rather the "fleshly mind" which is weak? The longing and prayerful desire of the human heart (consciousness) is the intercessor, and our "groanings" (that is, our intense desire for spiritual understanding) are met by the all-presence of divine Love, and thus we learn to pray aright.

✧

Belief Yielding to Knowledge

TILLIE J. ROBERTSON

ON page 450 of Science and Health Mrs. Eddy says, "The Christian Scientist has enlisted to lessen evil, disease, and death; and he will overcome them by understanding their nothingness and the allness of God, or good." This sentence was early accepted by the writer as the key to the successful solution of all the ills which beset mortals. All knowledge which is to serve mankind must be reduced to a working basis in order to be applicable to the needs of daily life. This is especially true of spiritual truth, which proves its value as it is practised rather than as it is professed. The laws which govern in science are exact and unchanging; they have always existed, and will continue to exist, and they will be understood only as evil is seen to be some form of ignorance. The Science of Christianity has come to prove that inharmony and unhappiness are unreal and unnecessary because they have no part in the divine consciousness.

The belief in evil, disease, calamity, and all unhappiness as things from which there is no escape, has grown up in the racial consciousness and has become solidified fear, because belief has so long held the place of understanding. But the fear of a thing does not imply the existence of that thing, as witness the terror of a child who has been told of ghosts. The child believes the story and suffers, and since the ghost does not exist it is nothing but the belief in ghosts that causes the suffering. Here the parallel is perfect for illustration. The suffering of humanity has always come from utterly groundless beliefs, and Paul manifestly understood this when he said so assuredly to Timothy, "God hath not given us the spirit of fear."

All sickness and sin begin in the belief that evil is a reality and has power, and the only way out of this tangle of illusion is through the understanding that all illusion is as baseless as the mist that dissipates before the morning sun. The mathematician knows when he makes an error that he does not have to learn something about errors before he can correct the one he has made, but rather that he must go back to the basic law upon which his proposition rests, and discover wherein he has departed from it. He knows he has something exact and dependable to rely upon, and therefore has no fear about the statement of his proposition.

Now, the Principle upon which the healing of the race depends has been revealed, and it needs only to be understood and applied in order that harmony may prevail, and this is

Digitized by Google

the work of Christian Scientists. The gratitude which they express in their testimonies is the result of this Principle in active demonstration. The truth about the facts of being is acting as a leaven in the consciousness of men, and the fear which has grown from ignorance is giving place to the peace and joy which always follows the understanding of God.

Awakening from the Mortal Dream

COL. W. K. FELL

On the threshold of Christian Science, when the glad tidings of possible release from the bondage of sense, with its fetters of sin, disease, worry, personal antagonism, and limitation, first dawn on the consciousness of the student of this teaching, and he earnestly begins the study of the textbook, "Science and Health with Key to the Scriptures," he finds himself so engrossed in the contemplation of good as the only reality, that he feels considerable unwillingness to handle error in any of its numerous phases. Having suffered so many things from the belief of evil in the past, he would greatly prefer to hear no more on that subject. Thought reaches out with a great longing for good, and more of good; and it may be asked, Where, then, is the necessity for knowing aught but good, God and His idea?

Assuredly there is no reason why we should know anything outside of good, inasmuch as there is nothing to know. Mortal mind, however, is not freed from evil by merely holding a pious wish to have nothing to do with it. Sooner or later the inevitable demand comes, and for the reason that mortal mind harshly obtrudes itself upon the student's vision of good with the imperative challenge, "What are you going to do about me, and the man who is mortal?" Startled and perhaps a little discouraged to find that a mere desire for good has not abolished evil, one steps down from the mount of vision to tackle and overcome the arguments of evil. A severe self examination ensues, with the discovery that in the earnest pursuit of good the novice has overlooked or illy divined what our Leader has said concerning the overcoming of evil. Fully awakened, he finds that the problem which mortal mind has propounded for solution must be bravely met, lest evil should continue to boast itself against good, claiming for itself an equal reality with God's idea.

"But why," as our Leader says, "should we stand aghast at nothingness?" (Science and Health, p. 563.) Let us for one moment examine this negation of God's allness called mortal, material man. Let us give him the name he had in the beginning, Adam, "nothingness" (Science and Health, p. 330). Mortal mind and its dream-man are one and inseparable; mortal mind and Adam are but the counterfeits of Mind and its idea. But how shall we detect a counterfeit? Webster says a counterfeit is "that which is made in imitation of something, with a view to deceive by passing the false for the true; a thing made to resemble something else; a forgery; as the bank note was a counterfeit." A counterfeit, then, in order to deceive, to pass for that which is counterfeited, must be as perfect as possible. Even so, it is utterly untrue and worthless, and can deceive only those who are ignorant of that which is counterfeited. Whoever, for instance, would counterfeit a bank note, must do so with the greatest accuracy, and the only way to insure accuracy is to keep the eye fixed on the original and closely copy it.

When Adam first makes his appearance in the allegory in the book of Genesis, he is accepted as a normal and natural counterfeit. All is harmonious in his relations, and his residence is the garden of Eden. There is no reality but God and His idea, mortal mind does not recognize Mind and its idea, and finitely apes God's image and likeness. While it continues to do so, its Adam-man is found to be relatively or finitely good; that is, the counterfeit note may be a good counterfeit, but it is in fact only a lie, and a liar.

Adam at first expressed normality as humanly conceived; but the allegory changes, and relates how a suggestion of evil came to the dream-man, persuading him that although God is All-in-all, He yet has an opposite. Adam accepts the plausible lie, and then there settles down upon his devoted head the suppositional hell of false appetite, false sense, and fear and sin open wide their doors to his self-mesmerized vision. Mortal mind and Adam being one, whatever is entertained in thought by the former, is mirrored forth upon the latter. According to this story, so long as Adam's eye was single, there being no impressions but those of good to receive, his experience was that of health and happiness, of normality, in the garden of Eden. Soon, however, false impressions of evil effected a great change. Adam is driven from Eden, and he suffers the pangs of punishment for consenting to know evil.

Just here let us remember that Jesus, sometimes called the "last Adam," becomes the Saviour of mankind. Steadfastly refusing to consent to a knowledge of good and evil, knowing nothing but the divine idea, his true self, and its divine Principle, though "tempted like as we are," he remained "without sin." In the wilderness of trial he overthrew the pretensions of evil to power, presence, or personality. The Saviour of the world, in every act and word of his life, he proved for all men the nothingness of matter and material law, and the allness of Spirit and spiritual law.

The way is now made clear to all. Our Leader's vision of the Christ, and how to approach him, has opened wide the gates to "the glorious liberty of the children of God." Human sense, illumined by Christian Science, knows how to escape from the slavery of false belief and its resultants, sin, disease, and death. It becomes more and more absorbed in the contemplation of Spirit and spiritual law, and in this process it begins to recognize man, to reflect God and exercise His power. Unable longer to assert its claims in the presence of demonstrable spiritual Truth, mortal sense fades away and disappears; without a witness it ceases to be, and there remains what has always been, God and His idea.

"I have called you friends"

LAURA K. TUCKER

It has been well said that spiritual growth is realized in keeping with the advance of our ideal, purified consciousness always bringing refinement of experience; that the higher the concept, the nobler the life. Mrs. Eddy said of Jesus, that "out of the amplitude of his pure affection, he defined Love" (Science and Health, p. 34), while St. John, who was closest to the Master, gives us an example of true comradeship in a unity of spiritual thought where unselfishness and purity afforded inspiration toward the highest expression of divine Love reflected in its idea.

We know that Jesus chose his followers from those who stood for the ideal, for the overcoming, those honestly and loyally working to define the true selfhood; and it was to these he said, "I have called you friends; for all things that I have heard of my Father I have made known unto you." Herein lies the key-note of friendship. You are my friends because I have given you of the highest that has been revealed to me; not that I have received of you, but that I have given to you. We are prone to measure values by the standard

Digitized by Google

of utility, of profit received. But do we always take the full measure of utility? We have been truly profited only in so far as we have been led to define the true source of good and give it forth to our brother. "Every good gift and every perfect gift," we are told, "cometh down from the Father of lights."

To enter into the meaning of friendship, then, with its privilege and peace, we have first to awaken to the call of the higher service, not forgetting to fulfil Love's larger ministry in the little ways of human every-day experience, the "tender word" and "pitiful patience" (Science and Health, p. 367) that our Leader admonishes; the courteous bearing toward others, thoughtfulness of their needs, the helpful hand extended; reflected love finding expression in the unselfish and the beautiful, which leads always to the illumination of uplifted thought. It was this tie which united David and Jonathan, a rare friendship, disclosing the nobler bond of spiritual apprehension and purpose and endeavor; reflecting the great Mother-heart healing in its expression of truth and love. Such hearts are not troubled, for, in the perfect companionship of the recognition of common need and aspiration and aim, the oneness that would think as God thinks, they "press toward the mark," and "work the works of God."

Spiritual Independence

LEON GREENBAUM

THE people of one of the world's greatest nations have set apart one of the days in the year as sacred, for the annual celebration of their political freedom; but there is now sweeping over the earth a great religious movement, stirring the hearts of mankind to the recognition of the universal and eternal Independence day, in which God said, "Let there be light." This great religious movement stands for the undivided vesture of the gospel, the healing of sickness as well as of sin, as revealed and demonstrated by Christ Jesus.

The Independence day of Christian Science which is just dawning upon the peoples of all nations and languages, is the day which Abraham rejoiced to see, in which absolute Truth is the light of man, and there is no error to make an argument for darkness. The world is beginning to realize that this great day is a state of illumined consciousness, a spiritual perception which is free from mortal beliefs, human opinions, and illusive knowledge. As Truth uncovers the false, self-destructive character of the material sense of things, confidence in and dependence upon it grows less. In the same ratio men are attaching less importance to their so-called human rights and beginning to investigate and use their divine rights. In this period of revelation and transformation, the hosannas of yore have given place to the hushes of prayer; while the palms which strewed the Master's pathway of old, have become symbolical of the leaves of healing literature which carpet the modern paths of the advancing Christ.

All the woe of mortal experience is traceable to the identification of the liberty to think good with the license to think evil. In the dawn of that primeval Independence day which gave birth to the perfect law of liberty, God conferred upon man certain inalienable rights,—the right to be holy, but not the right to sin; the right to be healthy, but not the right to be sick; the right to live, but not the right to die. The mortal sense of life, which believes it is privileged to sin, to be sick, and to die, is not man, but the absence of that right consciousness which constitutes man.

The light which God saw on the first day, was not different from the light He beheld on the sixth day; it was good on the first day, and "very good" on the sixth day, imaged and reflected by man. This holy light, "the revelation of Truth and of spiritual ideas" (Science and Health, p. 504), irradiates the day of Spirit with the declaration of man's divine independence; not independence of the taxes and other demands of Cæsar, but of tears and the devices of Satan. The true Independence day, now dimly perceived, is synonymous with the six-day period of spiritual creation, in which man's spiritual and mental powers are asserted in their right and might, and the "stature of manhood in Christ Jesus" (Science and Health, p. 350) is understood and demonstrated.

Having consciously entered upon it, the Christian Scientist rejoices in the significance of it and discerns in its fulfilment the pristine Sabbath, in whose exalted spiritual realm time and the objects of sense disappear, and a new experience ushers in "the things which God hath prepared for them that love him."

A Citizen's Duty to the State

FRANK M. SAWYER

A COMMON experience in every man's life is circuit jury service. No doubt it is often the case with others, as with the writer, that when the constable serves the notice there is a feeling of rebellion and resentment against courts, judges and juries as well, and one is disposed to ask, How can the time be spared and the financial sacrifice made? Notwithstanding, such arguments on the side of self are useless, for the summons must be obeyed. Here is where the Christian Scientist must do his first mental work; in fact, such work throughout the week's service is with self wholly. The fundamental duty of the courts of the land is to "render to Cæsar the things that are Cæsar's," and this without sentiment or dissimulation. Our Leader in her writings has many times admonished us that, under present environments and for time to come, Cæsar's laws must be obeyed; therefore, she gives us this axiom to work from: "Reason is the most active human faculty" (Science and Health, p. 327).

When one has reached the great panel room, where all the jurors are assembled, he will find many men of many minds, yet as a general thing the open mind prevails for the business at hand, as the malcontents are generally weeded out by the judge during the excuse period. Here again one can hold his proper mental poise, but the real activity begins when the panel is drawn. The undeniable law of right is at once opposed by the so-called law of wrong; but the lines of decision, when one is rightly equipped, are plainly distinctive, sharply drawn, and later can be followed with confidence in deciding on the evidence in a case.

There are many pitfalls laid for the juryman by the examining lawyers, and sometimes rather unexpectedly. The writer remembers one instance when the defense, in challenging, uncovered an experience in an accident of former years and tried to make it appear as being in direct opposition to a fair judgment in the case to be tried. The tilt was spirited and to the point. As I realized it was a test, I held my ground from a Christian Science standpoint, unvoiced, and was finally sustained by the judge on appeal from the counsel examining.

When the jury is finally seated and the case is being tried, the Christian Science student finds that his work in the past years, or perhaps months, comes to the front at once for present use. No amount of deception, acrimony, or evasiveness can hide the truth at any time or under any conditions, and the student's fine distinction of right and wrong should be perfectly natural and active. The real test of one's insight

Digitized by Google

with respect to the ramifications of the human mind, comes when the different lawyers are addressing the jury. One realizes the mesmeric tendency of the human mind, of one person over another, to convince or reverse judgment; but if one is equipped with the knowledge of what real Mind is, and what the real man is, there will be no confusion of the intellectual faculties when sympathetically appealed to.

The juryman who would take himself too seriously and would not enter into any of the ludicrous happenings of the week, would do himself an injustice. My experience in the past has been that a Christian Scientist can appreciate an amusing witness or a lawyer's barb of witticism to the fullest extent, for these are the things that somewhat relieve the tension; and this may recall our Leader's words in "Miscellaneous Writings" (p. 117), "I agree with Rev. Dr. Talmage, that 'there are wit, humor, and enduring vivacity among God's people.'"

✧

Awakened Thought

ANNA GREENE

Some years before I was fully awakened to the truth taught in Christian Science, a friend told me how she prepared hyacinth bulbs to bloom in the house during the winter. She gave me a very simple rule to follow, and her description of the joy and beauty which so abundantly rewarded her effort was so vividly impressed upon my thought that I at once secured bulbs and faithfully carried out the directions given. I planted them, and placed them in a dark corner of the cellar until they had made the growth necessary before they could bear the light. This part of my work finished, I had to wait many weeks for the blossom of my hope; but there was never a thought of impatience at what might seem a long delay. I held to the vision of joy and beauty that was developing for me, and no thought of the damp, dark cellar or the lifeless appearing bulb ever disturbed me. My faith looked up continually to behold the flowers that were soon to appear. Never did a thought of failure mar my vision, and in "the fulness of the time" the sweet unfolding buds came, and they were even more beautiful than my dream of them. A florist who saw them said, "Never have I seen such magnificent hyacinths, and I have been interested in their culture for years."

The next year I secured other bulbs of the same variety, as nearly as possible. I followed the rule just as carefully in planting and placing in the cellar, but there I left them. At long intervals I thought of them, but with indifference, carelessly dismissing the matter with, Oh, they will be all right, the others did so well. Success without understanding had put me to sleep, when the same faithfulness was needed in the case of the second planting as with the first. The result was indifferent bloom, lacking in every phase of its development, and the same conditions will prevail in the mental realm if unceasing faithfulness be lacking.

Today, with thought awake and seeking to be governed by reality, I was pondering in my heart the wonderful understanding of God that comes through the study of the Bible, in the light of Christian Science, when a great wave of desire swept my thought that I might realize more fully and hold perpetually this vision of the Christ. Then I remembered my experience with the hyacinths, and I saw clearly that the first planting was nourished and developed through continuous right thought, while the second was starved and dwarfed for lack of it. This, I thought, is humanity's experience, and I understood as never before the significant words of our Leader on page 17 of Science and Health, "Give us grace for today; feed the famished affections."

We are often told that earth is a preparatory school, and on page 254 of Science and Health Mrs. Eddy writes, "The human footsteps leading to perfection are indispensable." In earth's school we do not need the retarding evil thought. The human footsteps should be to humanity what the prepared soil is to the plant, and the process a painless and, with right understanding, perfect development. Jesus' life and works give a vivid impression of the beauty and joy of God's perfect creation, and with an "inner sight divine," Mrs. Eddy has made plain how thought may be uplifted and freed from the clouds of sense. May we waken early and fully to realize that God's kingdom is come; that He is ever present.

✧

Observing the Command of Love

CLARA I. COLBY

While the beauty of the day and the reign of peace and harmony were holding me in thrall recently, an occasion was afforded me for gaining a beautiful lesson in obedience. A dear little fellow about three years of age had been coaxing his mother to allow him to go to see a neighbor. Knowing that the neighbor was busy at this time of the day, his mother had forbidden him to go; but later, glancing out of the window, she saw him open the gate and start away. She immediately called to him, admonishing him not to go outside the gate. The little fellow, looking at her rather quizzically, asked her to go in the house, saying that he would not go through the gate. The mother did go back into the house, but as his tone and look did not express obedience, she watched a bit, and saw him quickly proceed to climb over the gate.

After gaining the sidewalk, which led straight to where his will called him, he paused, started, hesitated, looked about him, and hastily climbing back, ran around and into the house with arms held up to his mother, saying, "Me a good boy, now, mamma, a good boy."

What a lesson, thought I, for us older children! The little fellow had never been subjected to corporal punishment, but had been corrected in love. When error thought to tempt him, he listened, heard the call of Truth, and hastening with loving impulse to the one he wanted to please, he declared that he was a good boy. He thus demonstrated meekness, humility, confidence, obedience, and true affection. Here indeed was an expression of strength from that omnipotent source whose joy it is to give unto us. And we, as older children, when tempted to choose our own way, with thought fixed on the flesh-pots of Egypt, if we will but listen and heed the call, we too can return to our Father and in humility realize that "the love of Christ constraineth." Resting in the sweet assurance that Love's correcting rod will guide and govern us when we in humility seek the narrow way, let us strive for that Mind to be in us "which was also in Christ Jesus," and respond ever to his call, "Take my yoke upon you, and learn of me; for I am meek and lowly in heart."

✧ ✧ ✧

Sorrow, tears, complaint?
Dim lights and faint
Regrets for things long past?
Ah, no! at last
Thou'lt know the way
To hills and stars!
Sorrow, tears, dismay?
Ah, no!
But wings and stars, and lo,
Songs within thine heart—
And God!

Mary Christina Schmidt.

Selected Articles

[From *New Bedford* (Mass.) *Mercury*]

An agreement has been reached between the Christian Science church and the state board of registration in medicine on the provisions of law in Massachusetts relative to the practice of Christian Science in the treatment of the sick. This may end the annual contests before the Massachusetts Legislature over the rights of the Scientists to practise healing. The clause that they have agreed shall be inserted into the proposed law, reads as follows:—

"Nothing in this act shall be held to apply to registered pharmacists, registered dentists, or registered optometrists, or to restrain the practice of clairvoyance, hypnotism, or mind cure, or to apply to any person who ministers to or treats the sick or suffering by mental or spiritual means without the use of drugs or material remedy."

At a public hearing before the public health committee of the Legislature today [March 5], John L. Bates, as counsel for The First Church of Christ, Scientist, announced that he had come to an agreement with the board of registration in medicine whereby he will not oppose the new registration bill if the paragraph quoted above is inserted in section 9 of that bill. Dr. Walter P. Bowers, secretary of the board, confirmed this announcement. If the legislative committee also agrees to it, there will be no further contest with the Christian Science people, although the church does not agree to urge the passage of the bill. It merely will not oppose it.

What concession the state board made to the Christian Science cult when it agreed to this clause will appear from the phraseology of the clause as first recommended by the state board in its annual report. The line that was objectionable to the Scientists in that clause was the last, reading as follows:—

"Provided, they do not violate any of the preceding provisions of this act."

This line was held as a joker. The paragraph to which it was attached, and for which the state board agreed to substitute the provisions quoted first, reads as follows:—

"Nothing in this act shall be held to restrict the practice of Christian Scientists, so called, who are communicants in good and regular standing in any Christian Science church in this commonwealth, or to registered pharmacists or registered dentists, or to clairvoyants, or to persons practising hypnotism, mind cure, or massage; provided, they do not violate any of the preceding provisions of this act."

Had this been left in the bill that went before the legislative committee on public health, a bitter fight over it would have developed. The Scientists had mustered for a lively hearing. They went to the state house in such large numbers that they crowded the big room to the doors, and filled the halls outside far into the corridors. Ex-Governor Bates was there to represent them as counsel, and there was also an array of opponents. He stated that if the committee agrees to what the church and the state board have agreed upon, it will hear no more from them, but if it does not accept the compromise agreement, then the Scientists want to be heard.

In the new bill there are ten sections providing for the examination of physicians in anatomy, surgery, physiology, pathology, obstetrics, gynecology, practice of medicine and hygiene, and the registration of those who pass. Persons who practise medicine or any of its branches, or attempt to practise it without having qualified by such examination and registration, expose themselves to fines and imprisonment under section 8. Section 9 contains the modifications and exemptions, including the clause that has been secured in behalf of the Christian Scientists, and the last section also is regarded as extremely important in that it defines the practice of medicine. This is the first clear definition of medicine given, and Dr. Bowers explained that it is very important as an aid to the courts in medical cases that come up for adjudication. Judges have not before had any statutory definition and have interpreted the word differently. This section reads as follows:—

"Section 10. The word medicine, as used in this act, shall be regarded as referring only to that branch of science which relates to the prevention, cure, or alleviation of the diseases of the human body, and any person shall be regarded as practising medicine within the meaning of section 8 of this chapter who shall publicly assume or advertise any title or designation which shall show or tend to show that the person publicly assuming or advertising the same is a practitioner of medicine in one or more of its branches; or who shall investigate or diagnosticate physical ailments, defects, or conditions of any person, with a view to treat or modify the same, or does treat or modify the same, by use of instruments or external appliances or manipulations, or by the application or administration of any remedial agent or substance for either internal or external effect, except in so far as the provisions of this section do not conflict with the provisions of exemption in section 9."

Commenting editorially on the action of the state board, *The Cambridge* (Mass.) *Tribune* says:—

There is cause for deep gratitude for the position taken by the state board of registration in medicine, as announced at the hearing at the state house before the committee on public health on Thursday. . . .

The equity contained in the provisions of this amendment is apparent to all fair-minded and liberty-loving people. If we all depended upon the so-called "regular" practitioners for aid in retaining and regaining health, there could be little objection to the bill as proposed by the state board, nor can there be reasonable grounds for objecting to the provision that those who practise *materia medica* shall be under the supervision of the state board of registration in medicine. But the fact is, there are thousands in this commonwealth who, after exhausting every means held out by the various schools of medicine, have turned (many of them as a last resort) from material means and been restored from helpless invalidism to complete and absolute health "through spiritual means without the use of any drug or material remedy," to use the language of the proposed amendment.

To place under a board of registration in "medicine" those who use only spiritual means in their practice, and to attempt to say that no person can practise in this manner without the sanction of this board, is absurd on the face of it, and a serious infringement upon our liberty.

It is the boast of this nation that every person is allowed the right to worship God as he sees fit, provided he does not interfere with the rights or liberties of others. Since the greatest body of persons to be affected by the state board's recommendation of former years are the Christian Scientists, and since they have proved to their own satisfaction that the healing of sickness is inseparably allied with that of sin, it can readily be seen that the passage of any such law would deprive thousands of citizens of this state of the right to worship their creator in the manner dictated by their consciences. That this should occur in the state which about three hundred years ago welcomed to its shore that band of Pilgrims who came seeking "freedom to worship God," would

Digitized by Google

be a perpetual blot upon the good name of the commonwealth. The attitude of the state board, in this instance, would seem to indicate that the members have seen a new light, and are willing to allow a large body of citizens here that liberty which, heretofore, they would have denied them. It is devoutly to be hoped that such is the case.

Another editorial comment, this time from the *Boston* (Mass.) *Advertiser*, is also pertinent:—

The decision, reached before the legislative committee on public health, not to attempt legislation against the practice of Christian Science in this commonwealth, was wise and sensible. Whatever the opinion of the average man may be as to the efficacy of this method of treatment, the fact remains that tens of thousands of intelligent, self-reliant people in Massachusetts do believe in it, and that it is an essential part of their religion. The freedom of religion in Massachusetts is assured as a basic part of the principles of human government here. The law defining the practice of medicine does not relieve any citizen from his common-law liabilities and duties in connection with the care of the sick. That is a question, however, to be determined by the courts in each specific case, and the legislators acted wisely in refusing to inject into the proposed law any restrictions upon the practice of Christian Science in this commonwealth.

✧

[Frederick Dixon in *T. P.'s Weekly*, London, England]

In a recent issue of your paper there is a statement made with respect to broken limbs and healing by various mental methods. In this paragraph Christian Science is mentioned; will you, therefore, let me explain what the attitude of Christian Science with respect to broken bones really is. The writer of the paragraph put the matter very fairly, I think, from a general point of view, in the comment he inserts in his article, but that comment needs some explanation from the point of view of Christian Science. This religion teaches emphatically that broken bones can be healed without surgical aid, and it bases this statement on the fact that all material phenomena are in reality mental effects. If this is so, and it is the teaching of all the idealism of natural science, then a splint, like a drug, is merely a clumsy method of inducing the human mind to effect the change. It is obvious, therefore, that as perception of mental causation grows, the drug and the splint will alike be eliminated. Homeopathy has already, to a large extent, eliminated the drug, and modern medicine is doing away with it more and more. The difference, then, between surgery and medicine is solely one of degree, and it is simply a question of educating the human mind to an acceptance of facts. Berkeley proposed tar water as a universal panacea, yet on his own showing tar water was only a mental argument to convince the human mind.

The teaching of Christian Science pushes home the teaching of the idealism of natural science to its logical conclusion. In doing this it eventually separates itself entirely from natural science, inasmuch as it eschews suggestion, will-power, *et hoc genus omne*, and declares that these things are part of a belief in a material mind, and are themselves just as much unrealities as are material phenomena. It insists that the only power is divine Mind, and that a perception of this enables the demonstration of healing to be made on the lines insisted upon by the Founder of Christianity himself.

The ordinary man still prefers to go to a surgeon. To him Christian Science says, Go to a surgeon if you desire to have the bone set, and leave the destruction of the pain and inflammation and such things to the Christian Scientist. That was the advice, speaking generally, of Mrs. Eddy, but this does not affect the fact that Christian Science can, under proper conditions, heal broken limbs without a resort to surgical aid. Permit me to give a practical example of this. A month or two ago an accident occurred which resulted in a broken arm. The doctors who were attending the case set the bone several times but were quite unsuccessful in getting it to knit. After some weeks of failure they declared that another operation was necessary. The arm, they insisted, must be opened and the bone wired, this being, in their opinion, the only possible way to induce the bone to knit. Those responsible, however, declined to submit to the operation. They took the risk of what the doctors declared would be the inevitable result, namely, the arm being rendered useless for life, and fell back on Christian Science treatment. Within a few days the bone began to knit. In a week or two the arm was completely healed and is now just as perfect and as useful as the other. Here is an actual example of Christian Science bone-setting which is worth a considerable amount of mere theory.

[Editorial in *Pasadena* (Cal.) *News*]

Why the orthodox church is losing ground, may be explained by the fact that even church-members could not find in it the spiritual help they craved, because of the absence of an essential which they found in Christian Science. It is obvious, therefore, that to retain those who remain and to attract others, the orthodox church must supply the missing food for starving souls; but with the living Truth there must also be that other great lodestone, the open practice of healing, which is the lure for so many that have unsuccessfully tried medical science and turn to Christian Science healing as a forlorn hope. As they find relief through the "apprehension of Truth," to quote "A Churchman," for them this religion is identical with primitive Christianity. The testimony of thousands reveals that the orthodox church would not have lost these adherents had it been as Christian and as scientific as this teaching is.

Christian Scientists the world over, it is asserted, testify that to have the Mind of Christ is the goal toward which they are daily striving, and which they could not find as the aim of the churches they left. Is the church afraid to venture on the purely spiritual life which all people crave? it is asked. To save itself it resorts to every kind of attraction to interest people. It deals with social, civic, economic, and political reforms, recommends large schemes for evangelizing the entire world, and uses newspaper space freely to advertise its specialties. We commented recently on the case of a pastor whose bait for the crowd was expressed in the topic he advertised for his Sunday evening discourse: "The Automatic Calf, or Who'll Be the Goat?" Perhaps the spirit of Christ was exemplified in the discourse, but surely not in the garish headlines. How many persons who find spiritual exaltation in the wonderful mid-week meeting of the Christian Science church, fair weather or foul, would forego the communion there experienced to worship at the pedestal of the "automatic calf"? Look abroad and say in what denominational church ninety per cent of its members attend the weekly evening prayer-meeting, as is true of the Scientists. It is folly to ignore these phenomena. If the average churches cannot draw their people as the Christian Science church does, then it is time to search for the true germ, which the Scientists appear to have found, and inoculate the Protestant religion with its properties.

How the Christian Scientist rejoices in his affiliation! At the California Club in Los Angeles, not long since, a prominent member of the Progressive party, whose recent adoption of Christian Science has transformed his life, appeared trans-

Digitized by Google

figured by the new faith that obsessed him. What it had wrought for him was his sole topic of discourse at the dinner-table, and although he apologized for monopolizing the conversation, there was no apology for the subject-matter. We were impressed by the notable change in our friend's demeanor. What Christian Science has done for him it has done for countless others, and we are not disposed to scoff at a religion that has accomplished such wonders and is so powerful a factor in the lives of so many hundreds of thousands of people whose spiritual unrest and bodily sickness have been dissipated by the acceptance of the theology of Christian Science.

What an enthusiastic propagandist is the average Christian Scientist! Not that he bores you with his belief, but how he glories in its possession! As a student of humanity in all its phases this tendency among Scientists is to us one of the most interesting revelations of the cult. As sowers of the seeds of Truth every member is a modern apostle Paul. "A Churchman" observes: "The church and Christian Science agree that only through the atonement of Jesus Christ can man be saved. Against the numerous theories of the atonement we state the Christian Science interpretation as follows: God never needed to be reconciled to man, but the 'natural man' must be reconciled to God." Being at one with God, the Christian Scientist believes that his individuality is no more his independent entity than an idea coming into his consciousness can be an exclusive possession. His life, then, is simply an expression of the infinite Life, as an idea is the expression of universal truth.

✧

[Ezra W. Palmer in *Idaho Springs* (Col.) *Siftings News*]

Considerable publicity has been given to a lecture by a minister of your city on the topic, "Why I am a Christian and not a Christian Scientist," in which he assailed the religious views of many of his fellow citizens. The gentleman asserted that he is a Christian. He vehemently declared, however, that Christian Science is not Christian. The question, therefore, naturally arises, What constitutes the term "Christian"? Webster's International dictionary defines "Christian" as "one who believes, or professes or is assumed to believe, in Jesus Christ, and the truth as taught by him."

By what token does this critic assume to read Christian Science out of the pale of Christianity? Let him investigate the religious convictions of Christian Scientists and he will discover that they believe in "Jesus Christ, and the truth as taught by him." He will also discover that they lead clean Christian lives; that they strive humbly and earnestly to love God, and their neighbors as themselves; that they obey the precept and example of Jesus perhaps more closely than any other body of Christian people on earth today. They know that the Master demonstrated the power of God as a living, pulsating, regenerating force among men; not a religion of creed and words, but a mighty uplifting agency which cleansed the sinner, healed the sick, and raised the dead. "And these signs shall follow them that believe," said Jesus; "In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Christian Scientists know that Jesus gave no impossible commands for Christians to follow, neither did he demand of them to travel any road he himself had not blazed for them. He healed the sick and reformed the sinner by the power of God; he raised the dead by the might of omnipotence; and Christian Scientists are obeying the Master and doing likewise. This minister who would so presumptuously outlaw Scientists, should examine his own title to the term "Christian," to see that it is not clouded. Does he understand God sufficiently to heal the sick by the power of prayer? If so, all genuine Christians will rejoice with him. If he cannot, and is relying on drugs and inert matter to save humanity from disease and death, then by fair logic he cannot rightly assume the name of Christian, because he is not obeying the definite, explicit commands of Jesus. Christ Jesus used no drugs. He prayed to the Father to restore sinful and diseased men and lead them to God, and taught his followers that they should employ the same divine power.

In the face of the imperative commands of Jesus, mere protestations of Christianity avail nothing. "Faith, if it hath not works, is dead," said St. James, and no assaults on Christians who do the works of Jesus can change this invincible fact. Is it not time that a renaissance of primitive Christianity should come? Scholastic theology has proved itself inadequate. Only a revival of the exact, demonstrable teachings of Christ Jesus and the apostles is equal to the task of saving humanity from mortal ills.

This clerical critic of your city is doubtless aware of the great healing and regenerating work accomplished by Christian Science. Beyond question, Christian Science has quickened the religious aspirations of more people than any other religious movement since the advent of Christianity. The gentleman declared in his lecture that he would not be a Christian Scientist "under any circumstances." Would he not if he saw that Christian Science is the truth which the Master taught? A minister of the gospel of Christ Jesus should follow the truth wherever it leads. So imperative was Jesus in his insistence that the truth be followed, irrespective of dogma, that he urged the plucking out of the right eye or the cutting off of the right hand if these stood in the way of eternal life. Can this critic truthfully say that his concept of the Master's teachings bears the fruit that was the proof of the teachings of Jesus and the apostles? Does Christianity, as he demonstrates it, have the "greater works" which Jesus promised that his followers should have? If not, is it not about time he changed his views, and is not his refusal to accept Christian Science "under any circumstances" an evidence of bigotry, instead of a desire to know and prove the truth in whatever manner it may come?

✧

[Richards Woolfenden in *Blackpool* (England) *Gazette-News*]

The Vicar of Marton seems disposed to quarrel with his friends and neighbors, the local Christian Science practitioners, over the question of visiting the sick. It must surely have occurred to your readers that he might have chosen the better way. These workers claim no more than he would for himself, namely, protection in the discharge of their serious duties against interference or curiosity.

Whatever ground the Vicar may seem to have for his protesting, he will not be likely to take exception to the instructions of the Discoverer and Founder of Christian Science, Mrs. Eddy, who thus counsels her followers in "Retrospection and Introspection" (p. 87): "Christian Scientists are to 'heal the sick' as the Master commanded. In so doing they must follow the divine order as prescribed by Jesus,—never, in any way, to trespass upon the rights of their neighbors, but to obey the celestial injunction, 'Whatsoever ye would that men should do to you, do ye even so to them.'"

✧ ✧ ✧

From crag to crag I rose, sped on above;
About me shone a wondrous thing,—God's love.
I stopped, o'erjoyed, turned back from mortal quest
Into Love's haven, and there found rest.

Editorial

"White already to harvest"

In the four gospels we read much of the healing work of Christ Jesus among the lepers, those physical outcasts of his day and of ours. The old way was to drive these unfortunates "beyond the gates,"—to send them forth to fare as best they might without shelter and with no provision for food or raiment. The modern way is to isolate them from their fellows, but to shelter them, feed them, and clothe them. The care of these people has advanced in this regard very materially, but one may surely be pardoned for asking what has been done toward their healing.

So far as medical systems are concerned, the leper of today is no more advanced in his hope of healing, than were the outcasts of Palestine before they encountered the great Master, who healed so many of them and bade his followers do likewise. It was with the great Teacher's assurance, "He that believeth on me, the works that I do shall he do also," ringing in their ears, that the disciples did go forth to "heal the sick, cleanse the lepers, raise the dead;" and those who believed on him "through their word," did the same "works" for nearly three centuries. That this same Christ, Truth, is today the only hope for these helpless sufferers, incurable from the medical standpoint, which can reasonably be held out by those who are doing missionary work in the far East, is indicated by the following excerpt from the letter of a Presbyterian missionary, who, after spending years in this work in Japan, writes as follows:—

Every one of you would be interested in visiting the leper hospital—one of several in Japan. I visited it just before returning to America, and spoke to the one hundred and fifty patients who were able to assemble in the Hall of Religion—a place where Buddhists, Shintoists, and Christians have equal privileges. I have never felt so unworthy to speak to any one as to those same marred, defaced outcasts of humanity. After we came back, my young assistant said to me, "Sensei, there is some remedy, and the healing of the lepers by Christ was his call to us to find it."

I can understand how the great Christ just had to put out his hand in healing touch. If he realized that all power was given unto him, what a well spring of joy he must have had in his own spirit! I think the saddest feeling possible is to be unable to help when in the presence of suffering.

But I do believe that there are great forces in the spiritual world, which would yield as marvelous results there as electricity is doing in the material world. And yet we are old fogies—doubting Thomases—and do not reach out and possess and make use of these wonderful powers. We are all like men groping with only a candle light, when all the undiscovered blaze of electric light could have been theirs for the seeking. I wonder if we are not failing—all of us—right here. We are only dimly realizing the meaning of "all power is given unto me."

There is "food for thought" for every professed follower of Christ Jesus in this frank admission that there must be—is—something beyond what the present-day church has been able to offer the sick and suffering ones of earth. Nevertheless, it is the blindness of those who having eyes see not, since the works which the Master declared his followers should do, have been done in our midst for nearly half a century. Through the understanding of the power of Truth, made available to mankind in the discovery and promulgation of Christian Science, the apostle's declaration that the "effectual fervent prayer of a righteous man availeth much," is being confirmed daily.

What is needed, then, for the healing of not only the leprous, but also those who are in any manner sick and distressed, is a greater knowledge of the power of Spirit, a greater trust in God, and a more consecrated service to mankind. Surely there must be many more workers in the Master's vineyard who, like the missionary from whose letter we quote, have seen the need for Christian healing; and they have but to apprehend the "absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (Science and Health, p. 1),—to share in the fulfilment of the Master's promise that "these signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover." Such a glorious reward of one's faith in God is surely worth striving for.

The fact that Christ Jesus healed the leprous, proved for all time that leprosy can be healed. What was done once can be—is being—done again. What is needed for its accomplishment is to know just what the Master knew, and his knowledge was a knowledge of God. It was not through a knowledge of disease, but through a knowledge of its nothingness, because of the all-power of God, good, that all his work was done. Today as of old "the fields . . . are white already to harvest," but the laborers should no longer be few, for the Christ, Truth, is again manifest in Christian Science.

ARCHIBALD MCLELLAN.

Identity

There is no quest which so holds the interest of all humanity as that which promises to reveal man's immortality, or even continued existence after the change called death. Here it should be remembered that these are not the same, for mere continuity of individual consciousness would not in itself prove the attainment of eternal life. St. Paul says, in his first epistle to Timothy, that God alone "hath immortality;" yet he bids us "lay hold on eternal life." Taken together, these statements clearly imply that only that which expresses the divine nature can be immortal, and that all which does express God must of necessity be immortal.

While we seem to find little that is definite on this subject in the recorded words of Christ Jesus, one cannot help being impressed by the fact that he always took man's immortality for granted. When urged by his critics to explain the continuity of certain human relationships after death, he practically dismissed the subject by saying that to God all live; to Him none are ever dead. It was undoubtedly the Master's certainty as to this vital truth which enabled him to awaken the widow's son, Jairus' daughter, and Lazarus from the dream of death. Those who think most deeply upon this subject are concerned chiefly with the question of identity,—whether we shall know ourselves and those dear to us in what is called the future life. Here it may be asked whether we know either, in any true sense, at the present time. If one's identity means anything, it cannot be that which is affected by the mutations of time and sense. The real man cannot be a lisping child today, a gay youth tomorrow, and anon a sober, severe, and possibly disappointed mortal about to pass from the stage of human experience. No, Christian Science declares that "man was never more nor less than man;" also that "the identity, or idea, of all reality continues forever" (Science and Health, pp. 244, 71).

Mrs. Eddy has really a great deal to say about conscious identity, as we find by a careful study of our text-book, and she is ever urging us to find its spiritual foundation and thus come to understand why man as God's likeness is sure of immortality. That we ever fail to be sure is because we hold our concepts of identity, of individuality, within the narrow bounds of material belief, which is mortal because it fails to lay hold upon Life as God, as Spirit, as Truth and Love. The awful grief expressed by most of those whose dear ones pass from their sight, shows how all mortals are fettered by the belief of life in matter, and how we need to strive more

Digitized by Google

earnestly than we have ever done to gain our spiritual freedom, which includes more than the human heart can conceive, something before which the sufferings of this present time "are not worthy to be compared."

In pondering the subject of identity, we find many hints of it in the physical realm, so called, especially in the conformity to type manifested everywhere. A lily bulb brings forth a lily, an eagle an eagle, a lion the great creature of that name; but right here let us note that the lion of God's kingdom is to be a playmate of the little child, both expressing the identity which neither destroys nor can be destroyed. The saying of the oracle, "Know thyself," invites us to find our spiritual identity, which is God's likeness, and as such is incapable of experiencing sin, disease, death, or decay. What we as mortals associate with identity is at best very uncertain, and is constantly changing, whereas God's idea must express the divine immutability. In Malachi we read, "I am the Lord, I change not; therefore ye sons of Jacob are not consumed."

When Lazarus was called from the tomb, he answered to his name as spoken by the Master; and when Jesus rose on the third day, he addressed his friends by the familiar names. All that expresses man's spiritual identity must be more definite, vital, and beautiful than aught which mortals have conceived of as man; and though it "doth not yet appear," even to awakening humanity, the promise is that we shall see and know, and shall be "like him," the Father in whom we have eternal life.

ANNIE M. KNOTT.

Kind and True

ONE of the most markedly characteristic features of our Lord's life was his compassion. His judgment was always flavored by affection. He was fair in his criticism and kind even in his severities. How manifest this, in his treatment of the adulterous woman, of Judas, and of Peter! When one of his nearest and most trusted disciples dishonored every pledge of fealty, and in the crucial hour cravenly denied him, the offense was punished, and that sufficiently, with but a look. Surely the heart of the Master was a haven for storm-tossed men, whether they had been true to their compass and chart or no, and the poet did not overdraw his portrait in the familiar lines,—

> So meek, forgiving, godlike, high,
> So glorious in humility.

In a few instances, however, the recorded facts present a seeming contrast, and especially in that narrated in the twenty-third chapter of Matthew. Here the Master's condemnation is not only personal and severe, but its terms seem irritatingly sarcastic. Moreover, it is amplified and repeated, without a hint that the punishment threatened would prove corrective or remedial. On the contrary, the destruction forecast was to be swift, everlasting, hopeless.

An explanation of Jesus' words has been undertaken, by assuming that he had not yet reached that mature perception and spiritual supremacy over human impulse, which later on gave him perfect poise; that for the moment there was an assertion of outraged sense, which speaks convincingly for his kinship to men. In answer to this interpretation we do well to remember that it is only an exalted state of spiritual consciousness which can be thus instant in expressing "the vengeance of the Lord." Indeed no one is authorized to condemn the sinner who is not so spiritually illuminated, and so loving withal, as to be able to heal the sin.

Evidently these Pharisees were not only conscious, but self-satisfied transgressors, and this was the salient factor in the situation. Their self-righteousness was colossal. They must have known, before the Master thus named them, that they were heartless hypocrites. Glorying in their shame, they so fully identified themselves with evil as to need, not the treatment accorded the sorrowing Magdalen, but to be pierced to the quick of their "plush of pride" by a stinging shaft of righteous indignation. Nothing certainly but the goad could awaken them, and it was not cruel but kind in the Master thus to lay bare their iniquitous bigotry. What every stereotyped sinner needs is the resistless light of that Christ, Truth, which knows and tolerates no darkness at all.

The true explanation of these seemingly contradictory attitudes of Jesus is not found in any variation of the rule of right or of affection in his thought, but in the fact as to whether the individual was loathing or loving his sin. They who hate the sin to which they may have succumbed, merit gentle treatment; but they who have become so self-mesmerized by sin's indulgence as to be at-one with it, deserve to be "smitten of God," as the Old Testament writers were wont to say. Mrs. Eddy forcefully discriminates between these two conditions of thought when she declares self-love to be a part of the "adamant of error;" that "blindness and self-righteousness cling fast to iniquity," while the "evil which obtains in the bodily senses, but which the heart condemns, has no foundation" (Science and Health, pp. 242, 448).

In itself, the cancerous condition appeals to compassion, whether it be a physical disorder or a moral obliquity; but while men always want to escape from their physical ills, they not infrequently cling to and knowingly nourish their moral degeneracies, and it is this question of disposition which determines whether Truth is to be revealed to them as a loving Saviour or as a God of vengeance. Genuine affection corrects no less surely than it comforts. It both smites and heals, and we are to decide whether it shall come to us under the semblance of a "still small voice," or as a Babel-toppling convulsion. Truth is forever true as well as forever kind, and when we love enough to heal the sick as did the Master, then we shall be equipped to judge the sinning as did he.

JOHN B. WILLIS.

Among the Churches

Current Notes

PEORIA, ILL.—The first step toward the building up of another Christian Science church was taken Friday night [Feb. 27], when Second Church of Christ, Scientist, was organized. For a long time it had been evident that a second church would have to be built.

The plan of the work is, like all the operations of a Christian Science congregation, very simple and very quietly carried out. The method of growth in the Christian Science church is by budding, or swarming, it might better be called. When the congregation has grown to an unwieldy size, part of the body forms a separate congregation. This is done without friction. The decision of the congregation as to what section of the city should be left to the new organization, settles the whole matter. After that it is only necessary to find out who is in that district, and issue letters to them, so that they can proceed to organize themselves into the new church society. There is no discord. Nobody refuses to leave his old church home. He knows that the new one will be a Christian Science church, and that is enough. Nobody seems to be tied to the building.

In this case the territory of the new church was destined to be the West Bluff, and letters were issued to each member residing in that locality. These persons met on Friday night and organized Second Church of Christ, Scientist.

Peoria Journal.

NAPA, CAL.—During the past year, 2,358 *Monitors*, 1,011 *Sentinels*, 108 pamphlets, and 66 *Journals* were distributed in Napa. The ten copies of Science and Health, six of which are in the public library and four in our circulating library, are in circulation practically all the time. We have moved our reading-room to the Behlow Building, which is in a very desirable location in the business district. In the six months just past the attendance at the reading-room increased threefold, and the sale of literature increased more than one hundred per cent over the preceding six months.

Correspondence.

SAN BERNARDINO, CAL.—At the fourth national orange show, which was held in this city from Feb. 18 to 28, First Church of Christ, Scientist, maintained a *Christian Science Monitor* booth, which was the object of much favorable comment, and the reading-room was the delight of many visitors. During the show, about three thousand pieces of literature were given out, including over a hundred *Monitors* daily.

Correspondence.

CHAMPAIGN, ILL.—The Christian Science Society of Champaign, holding services at 59 North Neil street, reorganized Thursday evening [Feb. 19] as Second Church of Christ, Scientist.—*Champaign News.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Aurora, Ill.

A very attentive audience gathered in the auditorium of the East High School to listen to a lecture on Christian Science by Bicknell Young. He was introduced by Mrs. Lina B. Emigh, first reader, who said in part:—

Everybody loves the truth, and all thinking people are seeking for it. In chemistry, in astronomy, in mathematics, in all the physical sciences, nothing is ever accepted as true until it has been thoroughly tested and proved to be so. No man's belief has any weight. Between the covers of your own Bible, the same old Bible you and I have always loved, our revered Leader, Mrs. Eddy, found the truth about God and man; the truth which Jesus taught and practised, which has been and is being proved over and over again by healing, and is sweetening and purifying the blighted and benighted lives of countless people in all parts of the world.

Every word which Jesus uttered is deeply significant, and when he declared that a knowledge of the truth will make us free, he was not trifling with words. He plainly and unmistakably implied that without this knowledge you and I are in bondage. And what bondage could be more servile than the relentless control of a sick body; than the degrading mastery of a false appetite, a sinful habit, an ungovernable temper? What slavery could be more abject and hopeless than the continual struggle against poverty and want; what more depressing and disheartening than the never-lightened load of care and sorrow, of greed and hate, of superstition and fear, that make of this existence a very prison-house of suffering? All these things have been overcome by the knowledge of this wonderful truth; and in their place has come the peace which "passeth all understanding;" "clean hands, and a pure heart;" and "the glorious liberty of the children of God," manifested in harmonious bodies and sound minds.—*Correspondence.*

❖

Poughkeepsie, N. Y.

In introducing Clarence W. Chadwick at his recent lecture on Christian Science, Prof. S. R. Shear, superintendent of the public schools, said in part:—

I think, though I do not belong to the Christian Science church, that the reason men are thinking about your doctrine is because you are concerned with great fundamentals. Nineteen hundred years ago Pilate asked the question that we have been trying to answer during the succeeding centuries. You, I believe, have arrived at a pretty definite answer to this question, "What is truth?" One reason why I believe your answer is conclusive is because you have not quarreled with any other church or with any other belief or doctrine. I have never discovered a Christian Scientist quarreling with any other religion.

Another fundamental which has appealed to me from the outside is the fact that you are concerned in casting out fear. Only last Sunday I said to my Bible class: "Fear is the great curse of the world. We fear that we shall lose our health, or our friends, or our positions, or our prestige. We fear something continually." This fear affects our health; it minifies our mentality, dims our spiritual vision, increases our unhappiness, affects our relations with our fellow men, our belief in God Himself; and because you are concerned in casting out fear, people are turning thoughtfully to a consideration of your teaching and your practice. Not only so, but I believe that, better than any other people on earth, the Christian Scientists illustrate the golden rule: "Whatsoever ye would that men should do to you, do ye even so to them." I have never heard a Christian Scientist talk about his neighbor, and the *Monitor*, which is the best paper of its kind in the world, seems to preach the doctrine through its pages that pure thinking, with "Yea, yea" and "Nay, nay" for conversation, as well as pure aims and a holy motive, are necessary concomitants to right living.

Correspondence.

❖

Hull, England

In the Royal Institution, Col. William E. Fell delivered a lecture in connection with the Christian Science movement. The meeting was under the chairmanship of John W. Doorly of Leeds, who in his introductory remarks said:—

When Mrs. Eddy discovered Christian Science, or the Science of Christianity, nearly fifty years ago, it was received by the world with ridicule, and the coupling of Christianity and science was thought to be absurd. Every day, however, it is becoming clearer to humanity that Christianity and science are inextricably bound up in each other, and are, in fact, one and the same thing; that there is no science but the Science of Christianity, and no Christianity but that which is scientific. Mrs. Eddy realized that this Science must be proved to be exact before humanity would accept

Digitized by Google

it, and she therefore gave the first years of her discovery to demonstrating its scientific nature in the healing of sin and disease. She healed many so-called incurable vices and diseases, and it was through this healing that the Christian Science movement was started. She then wrote and published her text-book, "Science and Health with Key to the Scriptures," which is today perhaps the most widely read book in the world except the Bible.

At present this movement reaches to every part of the globe, and in many a village and town are to be found people who have proved for themselves that this scientific, fixed, unalterable law of God which Mrs. Eddy discovered, and which Jesus promised to humanity as the "Spirit of truth," does heal sin and sickness now, even as it did nineteen hundred years ago. The Christian Science movement, therefore, is not built on a theological belief, but on a practical perception of the nature of God and man's relationship to Him, and on the fact that this perception is with power to destroy any false human sense, be it sin or disease, and, when we have gained sufficient understanding, even death.

Eastern Morning News.

✧

San Francisco, Cal.

Dreamland Rink was filled to overflowing on the occasion of a lecture on Christian Science by Clarence C. Eaton. The lecture was under the auspices of Second Church of Christ, Scientist, in San Francisco. Peter V. Ross, first reader, introduced the speaker, saying in part:—

It has become a habit of thought in these times to apply to every theory or doctrine the practical test, What can it do? What does it actually accomplish? Even religion is being subjected to this test, and the demand is made that it produce results here and now, not merely promise salvation in a world to come. Mankind are seeking a religion which will lift them out of their distresses on this present plane of existence; they are coming to the conviction that heaven is a present possibility. This mental attitude should not seem remarkable in a civilization which styles itself Christian, since the Founder of Christianity demonstrated that God is available to heal the ills of the flesh and overthrow those forces which seem to stand in opposition to the happiness and well-being of humanity. If Jesus spake as "never man spake," he also did the works "which none other man did;" and then he left the assurance that others who understood the Science he taught, should do what he did and even more.

This assurance is being accepted today, and this Science is now being applied all about us to awaken men from their sins and sicknesses, and lead them beside the still waters of health and righteousness. Following the beneficent results of these efforts, comes the desire for information concerning this teaching, which Mrs. Eddy has so aptly termed Christian Science.—*Correspondence.*

✧

Leytonstone, England

At a lecture on Christian Science in Stratford Town Hall, by Prof. Hermann S. Hering, the introductory remarks of A. Hervey Bathurst, Esq., were in part as follows:—

Truth never changes,—it cannot change. If what the Founder of Christianity as well as his disciples taught and practised was true, that teaching, which has never altered, is as true today as it was when originally uttered. It is therefore as practical and demonstrable now as it was when the sick were healed, the sinner reformed, and the dead raised during the first few centuries of the Christian era. Christian Science, which was discovered less than fifty years ago, has come, not to give mankind a theory,—there have been theories enough and to spare,—but it has come to prove that a correct or scientific understanding of the teaching of Christ Jesus does inevitably result in those "signs following" of which the Master spoke when he said that those who understood his teaching would do the works he did.—*Correspondence.*

Testimonies of Healing

For many years the testimonies in the *Sentinel* have blessed me, and I desire to send my own that others may perhaps be helped as I have been. The reading of them has often healed, strengthened, instructed me, and uplifted my thought to a clearer perception of the truth. For a long time I was situated so that I could not attend the services of the Christian Science church, and many times the reading of a testimony by some isolated Christian Scientist has given me courage to press on and prove the power of Truth to overcome error. When I turned to Christian Science I was in great need of healing. Then and since, in proportion as I have yielded up cherished false beliefs I have been healed of many ills,—fever, acute lung and throat trouble, burns, etc., as well as the sense of lack, fear, and discord of various kinds.

Our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, says on page 494, "Divine Love always has met and always will meet every human need," and I am glad to give one proof of this statement. About three years ago, after passing through an experience of trouble and bereavement, I left my home in Pennsylvania to spend a few months with some relatives in Cambridge, Mass., where I had never before spent more than a few hours. A mutual friend sent a letter of introduction to a Christian Science practitioner in that city, and I received a loving welcome from her. As my visit was drawing to a close, I had made an appointment for a social evening call at her home. When alighting from the electric car near her house, I was thrown violently to the ground. Just a week before, I had had an interview with one from whom I had received class instruction, and as I left her she earnestly bade me remember that all is Spirit, that there is no matter. In one brief moment I seemed to hear those words, and there was just time to add the thought, that because God is our Life it can never be destroyed, when I lapsed into unconsciousness.

Two hours later I awakened to find my body stretched upon an operating-table in the Cambridge hospital, with a surgeon and nurse working over me. The surgeon was taking stitches in my head and face, which had been cut by the fall. One eye was so hurt that it seemed as if I should lose the sight, and my face was so badly injured as to make me almost unrecognizable. One hand was cut, while the other, which had grasped the guard-rail of the car, was wrenched and strained from fingers to shoulder, and there were other bruises on the body. My first thought was that I must go home; then I realized that my relatives were away, and I had expected to spend the night alone.

For a few minutes I was overwhelmed with the thought that I was practically alone in a strange city. Seeing my dismay, the nurse asked where I intended to go, and whether I would like her to telephone for me. I gave the name and address, and she returned with the message that my friend would send a carriage and some member of her family would come for me. Soon the carriage arrived and I was driven to the home of this practitioner, where I was ministered to with tender care, and Christian Science treatment was given me. I remained there until noon of the next day, when my relatives returned and took me to their home. With the continued help of this kind practitioner, and my own understanding, these conditions were overcome, so that three weeks from the time of the accident I was able to attend the Wednesday evening meeting at the Christian Science church, with no apparent sign of the experience through which I had passed. Ten days later, as soon as I had regained strength enough to travel, I went to make my home in New Jersey. Only those who knew of the cause of my delayed arrival detected any change in my appearance since I had been there before. About two weeks after this, the jaw-bone which had been injured by the fall went back into place.

When the surgeon of the car company came to examine me, he said he had never seen a quicker or more perfect healing than that of the wound in my mouth. I am deeply thankful for this convincing proof of the power and protection of that divine Love which met my need in this experience. I am also grateful for the ability to reflect sight and speech and activity, but I am more grateful for the understanding of Truth that has spiritualized my thought, changed my disposition, and enabled me to help others to know the blessings of Truth and Love. I feel that this gratitude can be expressed only in daily activity for the cause of Christian Science.—Carrie A. Maynard, East Orange, N. J.

✧

It was not physical illness alone which led me to Christian Science, but a mental hunger for something I did not find in the church I had attended from my youth. I was seeking a fortifying strength, a satisfying rest and happiness, a better knowledge of the Master, Christ Jesus, and of his teachings and example.

About five years ago I went to spend the day with a friend who had been healed in Christian Science two years before. From what she told me about this teaching and what I read in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I knew it was just the religion for which I had been hungering, so I asked her to send for a copy of the book for me. I was healed at once of female trouble and nervousness. I felt so happy to think I had found the truth, but after a little while, when people laughed at me for saying anything of Christian Science, like Peter I was ready to deny it, or rather I had not the courage to stand up for it. After several other demonstrations with myself and family, however, I gained a firm foundation, and realized that God is my strength. I read from the text-book each day, and through the understanding of Truth gained therein I am made a better woman. It helps me to work out the problems which in the old thought would often seem so difficult.

Through Christian Science I have slowly learned not to worry and not to fear, for God has all power, and He is Love. I am happy and contented, and am striving to be worthy to be called a Christian Scientist. I am deeply thankful to God, and grateful to Mrs. Eddy, for all the blessings I have received.—Minnie McCune, Norton, Kan.

✧

[Translated from the German]

It is with great joy that I express my gratitude for the blessings which I have experienced through Christian Science. In the winter of 1913 I suffered with rheumatism and a serious affection of the left knee-joint, so that I had to spend twenty-three weeks at a hospital. Medicines and poultices were resorted to, but they all failed to give relief. In the spring I heard of Christian Science and attended the church services several times; then through reading *Der Herold der Christian Science* assiduously, the truth of this wonderful teaching gradually unfolded itself to me. I finally asked a Christian Science practitioner for treatment, which was gladly taken up, with the result that after the first few treatments I felt very much relieved. My improvement was rapid, and in a short time I realized absolute freedom. Whereas for-

Digitized by Google

merly I was hardly able to walk, I can now perform the heaviest tasks without being reminded of the trouble in the least.

For this wonderful proof of the power of divine Love I am profoundly thankful to God, and also grateful to our revered Leader, Mrs. Eddy, who has shown us the way leading to Truth.—EDUARD SICKER, Mieste, Altmark, Germany.

✧

Christian Science came into my life thirteen years ago, at a time when everything else had failed me and I was a despondent, melancholy woman. I turned to this religion for physical healing, but when its spiritual side was presented to me, I seemed to lose sight of all else. It was just what I had been hungering and thirsting for all my life. I had been reared in the teachings of one of the Christian churches, but early in life I began to realize that this belief could not be made practical, that I could not make it a part of my every-day life, as it seemed to me we should be able to do. Through many doubts and defeats I made the best of my religion for some years, but finally came to the point where it brought me no peace whatever, and I was ready to do as Job's wife wanted him to do, namely, "curse God, and die." I do not remember to have heard the name Christian Science up to this time, when I witnessed a case of healing which interested me to such an extent that about a year later I turned to it myself for relief from physical ills.

I wish I had words to express the wonderful sense of peace, joy, and happiness that came into my life as a result of this teaching, which not only makes clear to us man's relationship to God, but also enables each one to prove it for himself. Many trials and difficulties have come into my experience since knowing something of this demonstrable religion, but I have always had the assurance of God's protecting love and care. For my physical healing I am thankful to God, but I am much more thankful that today it is my privilege to know Him as our loving Father-Mother. I am indeed grateful to that noble woman, Mrs. Eddy, who was willing to face a frowning world that we might have this wonderful message.

LAURA B. MCKENZIE, Los Angeles, Cal.

✧

[Translated from the German]

I gladly testify to the blessings which God has bestowed upon us through Christian Science. In 1909 I came to America, and was married the following year. As my husband had been healed in 1908 of severe stomach and kidney trouble through Christian Science, his desire was that I too might become interested in the subject, but since my health was good at all times, this teaching failed to attract me. I had been taught that it was wrong to read other religious literature than that of the church in which I had been reared, but after I went through a very trying experience which caused me great suffering, I began to read *Der Herold der Christian Science*. This gradually awakened my interest and led me to take up the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Although this book was published only in English at that time, and I had never before read English, it became possible for me to read it understandingly in a short time.

I was greatly helped through Christian Science at the birth of our second child, and I feel sure that we owe to God, whose power was manifested through the faithful efforts of a practitioner, the fact that our boy is a strong and healthy child. A few weeks after his birth, I had some painful ailments, but these disappeared quickly through absent treatment. I would also mention that since becoming acquainted with Christian Science I have had a good growth of hair.

The Bible, which I never read before knowing of Christian Science, now means daily bread to me, and through the regular study of our text-book in connection with it, there comes a growing sense of joy and harmony, and we are able to grasp more and more the meaning of these words by Mrs. Eddy: "Christianity as Jesus taught it was not a creed, nor a system of ceremonies, nor a special gift from a ritualistic Jehovah; but it was the demonstration of divine Love casting out error and healing the sick" (Science and Health, p. 135). We are grateful for the *Herold* as well as for the *Journal*, the *Sentinel*, and the *Monitor*, all of which bring us the blessed tidings of Truth.—HELEN BLOHM, Baltimore, Md.

✧

Many are the blessings that have come to me through Christian Science, and now I realize the meaning of the statement, "In all thy ways acknowledge him, and he shall direct thy paths." I have been led to see very plainly that unless we are willing to make just acknowledgment of blessings received, we are not ready to receive more. Christian Science is indeed the "pearl of great price." When I was about three years old, what were pronounced cataracts formed over the sight of both eyes. My dear parents, who at that time knew nothing of Christian Science, had everything done for me that could be done in *materia medica*, employing the best physicians in Boston, but all to no avail. I grew steadily worse, and was finally given up to go through life with sightless eyes.

At this critical moment my mother was advised to try mental treatment, and from the first it proved to be something better than *materia medica* could offer. Although this teaching was not the truth as taught by Mrs. Eddy in Science and Health, it served as a stepping-stone to it. I steadily improved, and today there is no trace of the cataracts visible on either eye, and I can and do rejoice in good eyesight. I have learned that sight was never material, and that, as we read in Science and Health (p. 215), "whatever is governed by God, is never for an instant deprived of the light and might of intelligence and Life."

Another instance of healing was in the spring of 1910. I was down-stairs, attending to the furnace fire, which needed kindling, and while engaged in splitting wood, the axe slipped and opened the large toe of my left foot to the bone. My little boy was with me, and he immediately rushed off with the news to his father. Meanwhile I declared the truth audibly. My husband insisted on seeing the foot and having a doctor dress it. I consented, knowing that it was the wisest way, since he did not know how to help me in Science. The doctor dressed the toe, but insisted that unless stitches were taken the wound would not heal within two months, and even then there would be a hard ridge; that the nail would come off, etc.; but in less than three weeks, with Christian Science treatment, the toe was perfectly healed, I was able to dress the foot naturally, and there is not a mark to tell the tale.

During that summer I was suddenly stricken down with what seemed to be inflammatory rheumatism. My suffering was indescribable, the joints being terribly enlarged. I was perfectly helpless, as I had to be fed, also moved on sheets part of the time. This continued several weeks. Is it any wonder that I am grateful for Christian Science when I can truly say that in less than a year I was perfectly healed,—all the joints natural and all conditions normal. I have a family of three children, and I have seen many of the ills which are prevalent among children, met and overcome in Christian Science. That Love is omnipotent has been proven to me recently, when error was manifested in the form of jealousy and dislike. In times past similar conditions have

Digitized by Google

lasted for weeks, but this time the error was mastered in four days by clinging steadfastly to eternal Truth.

My obedience to God's law enabled me to see as never before the truth of this Scriptural passage: "Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven." In Science and Health Mrs. Eddy repeats the command of the Bible that we "be not weary in well doing." She says also, "If your endeavors are beset by fearful odds, and you receive no present reward, go not back to error, nor become a sluggard in the race" (p. 22). To say that I am grateful for Christian Science is to speak the truth. Although I have long known of it, it is only recently that I have taken up the study in earnest. I have been faithful at times, but would allow myself to fall back again into the old deep ruts of mental laziness.

My heart is full to overflowing with gratitude for the Lesson-Sermons, the *Sentinel*, the Hymnal, and what other literature I have so far had to read, for through the study of Christian Science I am already a happier, healthier woman, mentally and physically. I know that all glory and honor belong to God, but I know, too, that gratitude is due to our dear Leader, that pure, self-sacrificing woman, ordained of God, through whose inspired teachings many are gaining the "glorious liberty of the children of God."

Edith Pierce Goodhue, Lennoxville, Quebec, Canada.

✧

[Translated from the German]

In November, 1910, I was suddenly taken severely ill with high fever and great pain in the throat. I was unable to swallow, and apparently my condition was hopeless unless an operation were performed. My husband and children wanted to get a physician, but I wished a Christian Science practitioner to come, so they sent for one. The first treatment relieved me, and after a few more treatments I was entirely well. This healing has made me realize once more how wonderful is the knowledge of true being which divine Love has given us through Mrs. Eddy, and for which my gratitude is unbounded. I shall strive to prove this through a constantly growing endeavor to follow the teachings of Christian Science.

Christiane Rau, Schorndorf, Württemberg, Germany.

✧

I remember that in my childhood I was frequently told that God is everywhere. That statement troubled me greatly at times for about forty years. Still I was lethargic, and I cannot remember that I was ever aroused sufficiently to make an insistent inquiry as to the meaning of it, until after I had been healed in Christian Science, which was four years ago. I am certain no one ever explained to me that God is good and is All, until Christian Science came to me in my extremity in August, 1908. I then lay sick and despondent, heart-broken with grief, and actually calling out loud for something, though then I knew not what; but I now know it was God whom I had wanted all my life. I was healed in the course of about fifteen minutes' conversation. In an hour I was back at my work in the telegraph office, conscious of the sweet peace "which passeth all understanding," and with a sense of having been wonderfully healed both in body and mind, but not knowing exactly whence it came.

Some time afterward I learned that my landlady, who had heard my moaning, and had come to my door insisting on being admitted and permitted to help me, was a Christian Scientist. Christian Science appealed to me from the beginning. Although my growth has seemed slow to me, I am being enabled to put off much of the old man and his false beliefs. I have had some assistance in working out my problems, but for the most part I have tried to work them out alone, and have always been quickly helped by realizing the truth of God's allness and by recalling the words of one of the songs in our Hymnal (p. 208),—

> But let me only think of Thee,
> And then new heart springs up in me.

I am indeed thankful to God for His word revealed to us in the Bible, and grateful for Mrs. Eddy, His messenger to this age, also for the understanding of God's oneness and allness as taught in Christian Science.

William Eugene Wakefield, Kansas City, Mo.

✧

I can truly say, with the psalmist, "He sent his word, and healed them, and delivered them from their destructions." Seven years ago, when living in a small town in the western part of this state, I awoke one morning almost entirely helpless.

For years I had been an invalid, a supposedly diseased condition of the spine having developed into paralysis. I had borne "many things of many physicians,"—and right here I wish to say that they did all within their power to give me relief, but material remedies seemed of no avail. I had undergone one serious and two minor operations, and was finally told by one physician that if I could muster up enough will-power I might possibly live a year. This was but slight consolation, in fact rather discouraging after I had tried for years to get well in this way; for I had closely followed the advice of some of the best physicians and surgeons in the state and had spent thousands of dollars. But man's extremity proved to be God's opportunity, for when every material means had failed, we turned to God for help in Christian Science, and it came.

Eight years previous to my healing I had heard of this truth. A friend who was in a hospital when I was there, became discouraged, left the place, asked help of a Christian Science practitioner, and was healed in a few treatments. The physician in charge of the hospital explained to me that this healing was due to hypnotism or mental suggestion, and that my friend was not seriously ill anyway; so I struggled on for eight years, seeking help from every source but the right one.

I was about a hundred miles from the Christian Science practitioner when treatment began, and was so suddenly relieved of the suffering that I called the attending nurse, for I thought I was about to pass on, as after falling asleep I awoke without any pain and lying straight in bed, something I had not done for years; indeed, for two months previous I had lain in one position. The nurse assured me that I was certainly looking better, and she was very kind and helpful. Neither of us knew that I was being treated in Christian Science, as a letter from my husband, informing me that a practitioner had taken my case, failed to reach me until the next morning.

No one, however, who has not passed through a like experience can understand the peace and restfulness that came to me. It was being raised from the grave of material sense. From the first I steadily improved, and now seven years have passed, and in all this time I have not spent one hour in bed because of sickness, whereas previously I was helpless for months at a time. Although I really wished to be, I was not a member of any church, because I could not subscribe to something I could neither understand nor believe. In looking back over those years of development, I can see the desire to know God; and when this prayer was answered, my healing was accomplished.

Digitized by Google

I can truly say that I am sincerely thankful to God for my healing, and that I am now strong and well, and I am also grateful for the understanding of the Bible which comes from the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am no less grateful for class instruction, and that I am able to help others in the way I have been helped.

JENNIE D. HOHAUS, Nebraska City, Neb.

It is with a deep sense of gratitude that I herewith corroborate the above testimony of my wife, for I know that nothing but the power of God is responsible for her present condition and perfect health. Anxiety and worry no longer rule within our home, since we have learned of this blessed truth which makes free. Material remedies, of which there were many, have been discarded, and divine Mind is now our only physician.

I am indeed thankful to the giver of all good, and I am likewise grateful to our revered Leader, Mrs. Eddy, for the many blessings which have come to us through the faithful study of the Bible and the Christian Science text-book.

C. W. HOHAUS, Nebraska City, Neb.

✧

I have felt for a long time that, in order to show my gratitude for what Christian Science has done in my family, I ought to send in this testimony. Five years ago my daughter, then sixteen years of age, was in very poor health, suffering almost constantly from her back or head. There were days at a time when she was obliged to stay home from school and lie in bed. I finally took her to a physician, who upon examination pronounced her case curvature of the spine, and advised me to take her to a specialist and have her fitted with a brace. Instead of doing this, however, I took her to a Christian Science practitioner. There was an improvement almost from the first treatment, and in seven weeks she was completely healed, and there has been no return of the trouble.

Since this healing, we have relied entirely upon Christian Science. We have had many minor ailments to meet, but they have always been quickly overcome. It is not only the physical healing for which I am grateful to Christian Science, but also the peace and happiness it brings, regardless of the material condition. To me it is the most beautiful truth ever given to mankind, and no matter how grateful we are, we cannot fully appreciate its blessings.

MRS. C. S. FINCH, Stamford, Conn.

✧

[Written for the *Sentinel*]

The Promised Land

CHARLES C. SANDELIN

APART from Love a desert is, despair,
With naught to kindle hope, no lasting peace;
Joy bides there not, for sorrow there hath lease:
A waste of weariness, and want, and care!
But in Love's presence all is sweet and fair,—
The joys of Spirit never know decrease;
And thus all claims of error quickly cease,
For Truth omnipotent reigns ever there!

This is the promised land that Israel sought:
The consciousness of Truth! O'er error's waste
They plodded on, and Love them daily taught,
Toppling the obstacles that error placed;
And, as Love guided them and wonders wrought,
The Christ-thought gently leads to vistas chaste.

From Our Exchanges

[*Christian Register*]

To have all the sincerity ever in man, and all the confidence of a heavenly revelation, avails nothing if the matter itself has no such mark. The day is not past when a sense of immutability, a demonstration of eternal reality, and an exhibition of those truths which have outlasted time and "shine today, forever new," are welcome and effective. The thing of which stone and graven words are the symbol, is the thing we need today, and it seems as if no time were readier for it and more open-minded. Such a demand and such a resort is the logical outcome of conditions which breed in some minds a deep despair. When confidence has been blighted, it is specious logic which says henceforth no one is to be trusted. When trickery triumphs, it is trumpery wisdom which says that to succeed every one has to play the same game. When hopes are disappointed and from the heights of exulting realization one is hurled down to levels of human nature, untouched by light, it is no real conclusion to say the struggle naught availeth. Sadder than the failures of a time to make good the pledges of its prophets, is the failure of the prophet to keep his faith bright and his ideals in commission.

To succumb to an agnosticism out of intellectual stress is unfortunate, but it has no such tragic regret in it as has the abandonment of God because so many needs of Him suddenly come to the front and deny spiritual realities and their eternal life, because one after another of the faiths in human nature have been dishonored. The more seems the moral law to be written not on stones, but in dust, the more should men and women write it on the tables of their hearts and lives. The more poor props fail, the more should we value and cling to those whose adoption we have tried, the more should we keep faith with those who remain faithful.

[*The Living Church*]

However we look at it, love of God comes to us by way of other human beings—through humanity. We first knew Him through the medium of the prophets; and the prophets, those great lovers of God, have always loved man greatly. The earliest prophecy came to most of us from the lips of the mother who loved us. The full revelation of the Godhead came only when the Word became flesh and dwelt among us. They who tell us of such things in the Scriptures were men, like ourselves. Thus, the avenue of approach to God is man. We must love God, first in degree, but man in time; for we know humanity before we know God, always; "Have I been so long time with you, and yet hast thou not known me, Philip?" To know that perfect human nature is to enter the threshold of knowledge of the divine.

In our individual and personal battle with evil and sin we need to keep the balance of the law, to love God and man. If our hearts are open to the entrance of our fellows, God is not far behind their feet; and He will enter if we close not the door too soon. If we would love God worthily, His dear ones are all about us, in the loving and serving of whom we may please Him. If we cannot resist sin for our own sakes, we may find grace to resist for the sake of others.

[*Western Christian Advocate*]

Jesus pointed out that the kingdom does not come with observation, but grows like a plant, increases like the light of dawn. A kingdom of love, it is the unfolding in individual lives and in society of this divine and irresistible sentiment. Paul boldly contrasts love with eloquence and faith and hope

Digitized by Google

and knowledge and sacrifice, and declares that it is greater than all, and that, having all else, without it we become as "sounding brass, or a clanging cymbal." Some men protest that Jesus' idea is impracticable. But we know that he himself, one of our race, whose virtues were all human virtues, carried out the law of love in the most absolute fashion, and that the world is filled with the aroma of his gracious deeds. All men recognize him as the great lover of humanity. And then we are not to inquire beforehand how we shall apply this principle in particular cases. It is a question of cultivating a spirit, not of keeping a law. Paul writes: "Love worketh no ill to his neighbor: therefore love is the fulfilling of the law." It is not necessary, either, to defend love. It proves itself as the light does when we open our eyes, as the rose does when we breathe its fragrance. Those first disciples hardly seemed suited to the work of founding a world-wide kingdom; but living with Jesus, their minds were invigorated by his conversation, their hearts were captivated by their divine Master, and his love constraining them, they overcame the world. The growth of this Christian love, which Jesus says attests his divinity, is the hope of the future, for "it stands to reason that only a fuller love can compete with the love of the world."

[*The Continent*]

The bigness and reality of Christian fellowship in Christ will some day crowd out completely all sense of division among those who follow him. Maybe the divisional names will remain, but they will be harmless when people have come to think first of the whole as spontaneously as they are now thinking first of the parts. Then, when strategy demands it, there will be no hesitation in passing over a congregation from one name to another among the various designations of Christians, for nobody then will think that anybody has lost anything or anybody gained anything. The congregation will be of the brotherhood of Christ as much under one name as under another. No one denomination will have any self-interest to serve, and therefore it will make no claim for the right to work in any particular place. All it will ask is enough work, some place to fill its hands full.

[*Zion's Herald*]

So many times the gracious word which might have been spoken is withheld! Some alien thought may stifle the prompting to utter it, or perhaps the very pressure of our work at the time arrests it, so the impulse to say what is brave or comforting or loving is repressed, and we conclude that we will say that word some other time. It is there that we deceive ourselves; that word will never be spoken. We may speak other words at other times, and people may be heartened by what we say, but the word which we failed to speak will never be given utterance.

[*The Christian World*]

The church won its triumphs of old by believing that the weapons of its warfare were not carnal, but spiritual. It proved, not for itself only but for the world, that the spiritual was stronger than the carnal; that the appeal to the higher in man is an irresistible appeal. Jesus believed that with publican and sinner it was safe to use the spiritual, and his faith was justified.

[*The Watchman-Examiner*]

The world is waiting for the hand that can touch its rocky heart so that out of it shall flow the river of life. But the man who can touch another man's heart is the man whose heart has been touched by the heart of the Son of man. Christianity does not have to stop to entrench itself in creeds.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is to be issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75. This book is now ready for delivery.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

The more recent translations into Dutch, German, Norwegian, and Swedish pamphlets are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 108 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The special bond attorney of the board of port commissioners of New Orleans will go before the Louisiana Legislature at the coming session and ask for legislation and financial support necessary to secure the construction of a railroad bridge over the Mississippi river at New Orleans. The plans for the structure call for a bridge proper, 2,280 feet long, although from the beginning of the approaches to the end it will be six and one half miles. The structure will be 105 feet above low water and 85 feet above high water, and the total length of steel construction will be more than two miles. The largest single span, as planned, will be 1,066 feet long. The bridge will be of the cantilever type of construction, and will require at least three years to build. Both steam and electric railway traffic will be handled over it, and it will also have a wagon road and a footpath for pedestrians. If built, it will be owned and operated by a joint commission from the dock board and the Public Belt railroad of New Orleans. The cost is estimated at six million dollars.

An arbitration treaty for a term of five years between the United States and Venezuela was signed March 21 by a representative of the Venezuelan government and the United States minister there. Under the treaty, all questions not capable of settlement by diplomacy shall be submitted to investigation by an international commission for at least one year. The convention, following the lines of that with the Netherlands, does not provide for the maintenance of the military and naval *status quo* during the investigation period, but, like all of the peace treaties, binds the two countries not to engage in hostilities until the investigating commission has made its report. It is the fourteenth of Secretary Bryan's peace treaties to be signed.

Twelve points in the United States have been designated at which Postmaster-General Burleson's new plan for utilizing the parcel post for marketing farm produce direct will be inaugurated. This is the administrative working out of the plans of the author of the parcel post act, who believes that through the medium of governmental transportation at or near cost, the small farming industry can be revived to the benefit of both producer and consumer. The postmasters at these points have been directed to receive the names of persons who are willing to supply farm produce in retail quantities by parcel post. These names will be printed and distributed to city and town patrons who wish to buy farm produce direct, thus putting the post-office department in the position of middleman.

The American government plans to go out of the reindeer business in Alaska as fast as it can train Alaskans for individual ownership, the policy being to encourage independence and initiative among the native population. Distribution of reindeer is in charge of American school-teachers, and it is expected that the government will dispose of all its reindeer within the next four years. On June 30 last, there were 47,266 reindeer in the sixty-two Alaskan herds, a net increase of 23 per cent during the fiscal year. Of this number, the government owns 8,833; the remainder, valued at $763,300, belong to the natives.

Plans to make the Massachusetts Institute of Technology an active force in the administration of state affairs were discussed at a conference between Governor Walsh, President Maclaurin, and a committee of five representing the institute. While the institute has always afforded the aid and advice of its experts and the use of its laboratories to the Commonwealth, this has been done on individual or departmental initiative. It has seemed to those connected with the institution that by coordination of effort still better results might be achieved.

The Japanese Diet was prorogued March 23 by the Emperor, owing to the inability of the House of Peers and the House of Representatives to agree on the appropriations for the navy. The lower house had reduced the naval estimates by a considerable sum, and the House of Peers afterward further diminished them; but this was not agreed to by the members of the House of Representatives, and a deadlock was brought about.

The combined capital of the gas and electric lighting companies operating within the state of Massachusetts aggregates $125,269,320. Gas and electricity are sold to the value of $26,438,623 per year. To manufacture and transmit these agents involves a yearly cost of $17,282,394. The gas and electric light companies pay into the treasury of the state in a year, in the way of taxes, the sum of $2,437,366.

Four new buildings, arranged to form a quadrangle on the site of the old College hall at Wellesley College, are planned by the administration officials. These plans have been under consideration for some time, but their execution will be hastened because of the recent fire, which removed nearly all of the hall and caused a damage of about seven hundred thousand dollars.

The Chinese concession to the Standard Oil Company is regarded in Japan as a most unfriendly act, if not as an absolute infringement of treaty rights. Diplomatic pressure, however, has failed to effect anything, and even the demands of Japan for separate concessions have been declined on the ground that they might lead to complications.

In view of the great value to Australia of the possible discovery of oil fields, the government has offered, with certain conditions, a bonus of five thousand pounds to the person or body corporate first obtaining from a bore or well situated in South Australia one hundred thousand gallons of crude petroleum which contains not less than 90 per cent of products obtainable by distillation.

The Greek minister of marine has announced in the Chamber of Deputies that the Greek naval program provided for three dreadnought battle-ships, one of which is now under construction, three armored cruisers, and a number of lighter craft. He declared that Greece is prepared at all costs to maintain the supremacy of the sea won in the recent Balkan war.

The superdreadnought Oklahoma, one of the largest and most powerful American battleships afloat, was launched, March 23, from the yard of the New York Shipbuilding Company, at Camden, N. J. Her principal weapons will be ten fourteen-inch guns, capable of firing a shell weighing fourteen hundred pounds.

A favorable committee report has been made to the Senate on the House bill to raise the limit of an account that may be carried in the postal savings banks. The law at present provides that an account may not exceed five hundred dollars. The Senate amendment raises the limit to two thousand dollars.

W. M. Leiserson, state superintendent of employment offices in Wisconsin, has been engaged by the United States commission on industrial relations to take charge of its investigation into irregularity of employment and to assist in formulating recommendations for remedial legislation.

In replacing a railroad trestle recently burned along the north shore of Great Salt lake, engineers have found that the piles are still perfectly sound after forty-three years of service. The preservation is due to the timbers being impregnated throughout with salt from the lake.

An agreement has been reached with the department of justice in Washington for the disposal by the New York, New Haven & Hartford railroad of its subsidiaries,—the Boston & Maine, the trolley holdings, and its water transportation service.

Sydney, the capital of New South Wales, is now the fifth largest port in the British empire. Excluding ships of war and vessels trading on the coast, 2,348 vessels of an aggregate tonnage of 10,257,002 entered and cleared this port during 1913.

Secretary Bryan announces that in the near future he will sign, at one sitting, peace treaties between the United States and Argentine, Brazil, and Chile, carrying the plan of investigation of difficulties that otherwise might lead to war.

An exhibition of considerable importance is to be held in Norway during the present year from May 15 to Sept. 30. It is generally described as the centenary of the country's national independence.

Laying of the keel of battleship No. [illegible] the last dreadnought authorized by Congress and still unnamed, began at the New York navy-yard with formal ceremonies last week.

The Llanos, or plains of Venezuela, are capable of supporting eighty million head of cattle, but up to now the stock never has exceeded two million head.

The Biltmore forest school, established in 1898, and therefore the oldest forest school in America, has been discontinued.

Boston proposes to spend five hundred thousand dollars this year in new construction and improvement of its streets.

Superstition versus Science

HON. CLARENCE A. BUSKIRK

LIKE other phases of mortal tyranny, superstitions govern men until their higher reasoning faculties rouse them to resistance. Superstition recognizes some fancied agencies of the invisible world in every fact and incident of human experience. Mystic presences seem to brood in the midnight skies, smile in the sunshine, rage in the tempests, smite with the lightning, eat with devastating fire, and frown in the gloom of the mountain cliff. In bygone days the altars smoked with sacrificial blood; anthropomorphic gods dwelt in the skies; Neptune and mermaids peopled the oceans; Vulcan stirred his fires in the volcanic caverns of the earth, and in the fields and woods Pan blew his tuneful reeds.

These superstitions of the centuries slowly waned as the rising sun of a better intelligence dissipated the vapors from sky and earth and increasing knowledge assembled its acquisitions into a crude and bewildered science, groping about in the twilight of a coming dawn. Men began to have a clearer vision and to formulate many theories respecting supposed sequences of cause and effect. Then began the long process, not yet finished, in which religious faith often suffers a cruel disenchantment, its fonder beliefs being torn one by one from its embrace by the relentless hands of increasing knowledge. This disenchantment continues until religious faith may stand like Niobe, forlorn and sorrowing, stripped of all the accessories of materialism and unclothed by spiritual understanding. Such has been the history of many religions, both in the Orient and the Occident. Meanwhile, ecclesiasticism sometimes steals a mantle from the shoulders of religious faith, assumes to be its champion, and with steel and fagot, ostracism and obloquy, wages from generation unto generation a strife still undecided.

Bigotry is a narrow-visaged vice whose every aspect is most odious, whether it be covered by the scholar's cap, the robe of the ecclesiastic, or the haughty turban of the Mohammedan. Nevertheless the world must hold both science and religion blameless for such errors. Furthermore, bigotry among the scientists is as odious as among the theologians. It is but demagogic sophistry to wage assaults on any creed for the crimes or follies of its votaries, as these have their fountain-head, not in the creed, but in the murky mazes of mortal mind. Atheism seeks and finds its fiercest weapons in the annals of bigotry and superstition, but true religion disavows all responsibility for such annals. When winds of sophistry blow fiercely, tossing the seas of controversy into commotion, it is needful to take careful bearings of where the stars shine steadfast and eternal.

The publication of "Science and Health with Key to the Scriptures" by Mrs. Eddy was both an epoch and an epic in religious history. Religionists can no longer find valid excuse for a teaching which presents a self-contradictory Supreme Being or an inconsistent universe. Her teachings have made clear the fact that true religion and true science are not enemies to each other, but are friends and allies in the search for Truth. They are not to be found in hostile camps, but under the same banner. The combined efforts of science and religion are surely destined to achieve glorious results for the betterment of humanity. Now that the physical sciences, after centuries of investigation into the supposed realms of matter, are at last standing somewhat aghast over the discovery that what has been called matter has no existence after all, save as the phenomenon of objectified mortal mind, and is resolvable in the last analysis into immaterial forces, the road of metaphysics is surely cleared of serious obstacles.

The source of all verities cannot be otherwise than self-harmonious; its energies and forces, which vitalize and control all things, are harmonious, never discordant, for Spirit, God, is the true and sole source of being, the only true substance and reality. What physical sense declares to be matter, may be likened to the tin-foil of the phonograph, whose indentations under the movements of mortal mind show facile and incessant changes; but the Mind whose logos rules the universe, is immutable and eternal. What men have called nature is destitute of moral traits, of intelligence, of spirituality, from the rock-ribbed continent to the tiniest grain of sand. Something never emanates from nothing; intelligence, spirituality, uplifting ideals and aspirations, and their like, can emanate only from divine Mind; therefore we trace the likeness of the spiritual man to God. Whence come all moral energies and initiative? It is proven that they come from a divine source when it is shown that what is termed the material universe is destitute of them and unconscious of their very existence. The Supreme Being does, and must do, all things well. Harmony, or good, is God's necessity because He is God; therefore, what men objectify as evil is men-made, never God-made.

After weary, waiting centuries, in humble guise the Messiah appeared on earth, with glad tidings and demonstrations of divine Love and Life; but men were still fast bound in ignorance, superstition, materialism. The assembling sinews of knowledge showed themselves, like unto Hercules in his cradle struggling with serpents, but it has taken physical science longer to know itself than it took Hercules to strangle the serpents. One by one, however, the serpents of superstition will be overcome. After still more weary and waiting centuries, a great seer and prophet appeared, again in humble guise. Mrs. Eddy renewed the glad tidings of the demonstrations of divine Love and Life, and rejoicing and gratitude are fast encircling our planet. A practical and provable religious philosophy, which meets all the needs of humankind, has already shown that it is capable of including all true science in its campaigns for enlightenment and beneficence.

Truth forever reigns, and through Christ, the pure, the true, and the good, every gentle, brave, and loving thought lives for all time to cheer the hearts of men and lead us to our Father!

> Not less the radiance of the flame
> Because too pure for mortal eyes;
> Not less a radiance from the skies
> Because men see through mists and shame.

In "Miscellaneous Writings" (p. 364) Mrs. Eddy says: "Christian Science refutes everything that is not a postulate

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

of the divine Principle, God. It is the soul of divine philosophy, and there is no other philosophy. It is not a search after wisdom, it *is* wisdom; it is God's right hand grasping the universe,—all time, space, immortality, thought, extension, cause, and effect; constituting and governing all identity, individuality, law, and power."

✧

Universal Consideration

JOSEPH W. REYNOLDS

To consider, as defined by the dictionaries, is "to think on with care; to have regard to; to pay due attention to." Most of us as mortals give thoughtful attention to everything that concerns our own welfare, or to things that pertain to personal desires and interests; but should we not extend our consideration to others in a way that will reach beyond the selfish sense of "mine" and include the whole world in thoughtful care? To fulfil the law of perfection, we must include all the world in loving consideration, even as our Father in heaven, who "so loved the world, that he gave his only begotten Son" for its redemption. To the human mind, such consideration is impossible, because its finite sense is so limited that it has no elements of Truth wherewith to be truly universal.

Christian Science, however, exchanges limited, selfish interests for universal regard by explaining the great truth that each exists for all, and *vice versa*. Because man reflects God, he reflects Love's universal regard for all His creation. This fact, once understood, can be demonstrated so practically as to enable every individual not only to love, but also to help humanity at large, and so we find that "a little leaven leaveneth the whole lump." Our small world, as compared with the universe, is perhaps of no greater relative importance than a grain of sand is to the earth. Thus, when we realize that thought can encompass both our world and the universe as easily as it does a single object, we need not be surprised if our thoughts of Truth reach over continent and ocean and destroy through their radiation many almost universal false beliefs. "Spiritual vision," we read in Science and Health, "is not subordinate to geometric altitudes" (p. 215). The realization of this fact breaks the bonds of circumscribed belief, and human consciousness, freed somewhat from its own finiteness, becomes receptive to the ideas of Truth.

As we perceive the far-reaching effects of Christian and scientific thinking, we also perceive our individual responsibility to the world, and so far as we meet this responsibility, we become world reformers and true followers of the Christ. Indeed, it is ours, as Christian Scientists, to deal with and heal the false universal belief in mortal mind that would keep men "of the earth, earthy." As we grow into this broader, fuller sense of consideration, we will come to think of races rather than persons, nations instead of townships, and world problems rather than personal interests. Provincialism, bigotry, and narrowness will give place to mental breadth and unrestricted vision. We shall radiate kindness and love upon all, regardless of person, even as the rose gives forth its fragrance alike to king and peasant, saint and sinner.

The self-centered interest that winds itself in and around national affairs, as well as amid the petty frictions of everyday life, that sets nation against nation and individual against individual, is common to mortal sense. Moreover, the ignorance and false education which are the cause of sin and sickness, greed and poverty, class distinctions and race prejudices, are not peculiar to any one race or nation, for they are all of the same mortal mind which is alike the world over. Christ Jesus, however, annulled every law of this so-called mind, and in our day Christian Science has come to show us how to emulate his example, so that we, too, may annul with the law of God universal and racial as well as individual false belief. Christian Science gives that breadth and depth of spiritual vision wherein the ideas of Truth are seen to operate in consciousness with such penetrating energy that they annul every form of universal and personal belief in matter. Thus we can understand why it is that the silent prayer of the Christian Scientist benefits the world at large as well as the individual, and works to bless all humanity.

A splendid example of this universal consideration is found in *The Christian Science Monitor*. Its correct accounts of world events, together with its messages of truth, are bringing good cheer to all peoples and uniting them in mutual interests. The cooperation in passing the *Monitor* along, gives us the blessed opportunity of taking part in the movement for clean journalism which is world-wide in its power for good. Through such consideration as this we gain a larger perspective of brotherly love, and this awakens in us an active, healing interest in all mankind. Thus we begin to understand the wonderful meaning of these words of Mrs. Eddy on page 13 of Science and Health: "Love is impartial and universal in its adaptation and bestowals."

With universal consideration established in his heart, the Christian Scientist enters the world's activities, and he finds in the consciousness of every individual the same redeeming characteristics of Spirit which in the hours of quiet meditation he had recognized as man's true selfhood. He knows that the good which God has provided for him, He has also provided for every one else, and that he cannot declare a blessing true of himself which he would not at the same time have true of his neighbor. Thus he becomes a world reformer, and well may he strive, through the cultivation of universal consideration, to understand and to answer these questions of our beloved Leader on page 238 of "Miscellaneous Writings": "Who should care for everybody? It is enough, say they, to care for a few. Yet the good done, and the love that foresees more to do, stimulate philanthropy and are an ever-present reward. Let one's life answer well these questions, and it already hath a benediction: Have you renounced self? Are you faithful? Do you love?"

"Break up your fallow ground"

ETHEL MUNRO GOSS

To a certain gray old hillside eager footsteps hastened every springtime at the first sign of awakening life. Sometimes it was the distant hoarse cry of a crow, or the deepening glow of the willows, or just "the faint stir of waking roots" that called. Whatever the invitation, spring's promise was not complete till, brushing aside the dead leaves and kneeling down where the dark earth sent up its moist fragrance, we used to find the object of our quest wrapped in silver gray, as the faint pink petals of the first hepatica smiled back at us. Drifts of snow still lingered in the hollows, but the river below was broken up, and swept down the valley, carrying with it all kinds of débris. The sky was softly, delicately blue, and the air alive with new sounds,—the joyous song of the sparrow, the vibrant note of the nuthatch, and the tender call of the bluebird. Every year repeated the same story, and always there was the same eager looking forward, the same joy when the sweet blossoms appeared.

On page 264 of Science and Health Mrs. Eddy says, "When we learn the way in Christian Science . . . we shall behold

Digitized by Google

and understand God's creation,—all the glories of earth and heaven and man." Some faint promise of this future possibility comes to us now in our changed concept of nature and all her moods. The message of the spring brings a great deal more now than formerly; it has become a clarion call which was phrased by the prophet in these words: "Break up your fallow ground: for it is time to seek the Lord."

In this spiritual seeking, the season of awakening life is not limited by the calendar. After some deep spiritual experience, when we have been forced to lay firm hold upon eternal things, upon reality, we have found that we are filled with a new sense of life, of regeneration, and have gained a new attitude toward our problems. Some "winter of our discontent" has been rebuked, and we break forth into songs of rejoicing; we feel akin to the song-sparrow perched on the budded lilac bush, pouring forth its ecstasy of joy. Channels long locked in the icy grip of suspicion and criticism become cleansing streams, for the joy of this new life is that it can always find expression. No longer inarticulate, dumb, the lover of the beautiful, when he has reduced his quest to spiritual seeking, finds each day opportunities for greater purity, consecration, order, and gentleness, and these redeem the ugliness and friction of human experience. The wistful tenderness of the first spring flower thrills us with a new pleasure as there dawns in our consciousness some understanding of these fruits of Spirit.

In "Miscellaneous Writings" (p. 15) Mrs. Eddy says: "The new birth is not the work of a moment. It begins with moments, and goes on with years; moments of surrender to God, of childlike trust and joyful adoption of good; moments of self-abnegation, self-consecration, heaven-born hope, and spiritual love." For the one who has been spiritually awakened, life has no gray days, for that one is actively alert to learn more of the things of Spirit. Any day may bring to us these moments of growth, the melting away of some old prejudice, the dawn of a new understanding of Love, to be expressed in more human tenderness.

Sometimes there seems to be a period of winter in our experience, when we feel that we are held in the grasp of merciless conditions; but if we steadfastly hold to the truth of being, know man's place in God's kingdom, our blossoming time comes at last, and we hear again glad bird songs of rejoicing. We are glad to break up our fallow ground and plant anew more graces of the Spirit, glad that God will turn, and overturn, "until he come whose right it is." Dwelling in more sunshine, we find that it is a false sense of selfhood which has been darkening our vision, and we blossom into greater spiritual activity. This activity is manifested in truly scientific living, in more radiant health, kindlier thoughts, and happier environment. These are our spring flowers, and every glad and growing thing sings to us of the new life of Spirit, and bids us rejoice that we too will see our vision blossom into deeds of noblest service.

✧

Good Always Available

EDITH B. M. YOUNG

THE people, seated in tiers in front of what was apparently a blank green wall, were assembled to see a panorama; but to one who had never witnessed anything of the kind, it was difficult to imagine that all the wonderful things which were promised could be forthcoming. It was doubtless all true as reported, but certainly present conditions promised little of interest or profit. Suddenly, however, there was a click. A rift appeared in the seeming green wall, and speedily it was rolled up out of sight, and a beautiful scene presented itself: sunlight on blue sea water, and sunlight on the shore; green fields, dotted with trees and peaceful farmhouses, stretched away from the water's edge to the far horizon, where earth met sky in a soft line, blue and unbroken. All this and more was behind that blank wall which seemed so solid, but yet had never been anything more than a mere curtain.

To the initiated it was only a simple incident, but with the raising of the curtain, the words in Revelation respecting the passing of all materiality, even the material concept of heaven, came to my thought,—"departed as a scroll when it is rolled together." As the material obstruction on the stage was removed by some hidden agency, so the unseen good destroys in human consciousness the barrier which the material sense of existence seemingly erects between us and the glories that are promised to God's children when they keep His commandments and obey His law. In that moment of insight, the material sense of self was rolled up out of the way, and the green fields of God's creation stretched fair and far, a safe abiding-place to all who love Him. Those green pastures had always been there, but they were invisible while we believed that material sense is something, and we are therefore shut off from the pleasure that is rightfully ours, so long as we hold to that belief. Material sense is a curtain, a wall to hide the real when we trust the testimony of the senses rather than the word of Truth that never fails.

Sometimes the faithful worker will reach a place in experience where his progress seems to be stopped by a blank wall of circumstance; but never is this more than seeming, and we may safely trust Truth to deliver us, to roll the false sense of life, substance, and intelligence in matter out of the way and open a plain path before us. No matter how blank or how solid the wall which mortal mind rears behind it, the sun of God's love is always shining and the green fields of truth are a blessed reality.

Even in darkest hours, when we are in our Gethsemane, and like the Master pray alone; when bitterest of all, perchance, we begin to feel that we are fighting a losing battle,—then through the eye of faith we may look beyond the veil of the flesh, which never was, and know that the "Lord God omnipotent reigneth," and the battle is not ours, but God's. Then, instead of striving with error, and so giving it power as something, we should rest our thought in God, omnipotent good. When we know that God is All-in-all, it is indeed well with us.

✧

Practical Value of Christian Science

ALFRED THORPE

IT should constantly be borne in mind that Jesus and his disciples proved the value of their teaching by healing all manner of sickness, and at the same time it should be clearly understood that the power to do so lay, not with them, but with God their Father. It is ours to remember this, and thus recognize the significance of Jesus' teaching when he said, "Ye shall know the truth, and the truth shall make you free."

Statists inform us that the average number of days in every year during which a man is laid up and unable to attend to his business or calling, is eleven. If this be so, we can form some estimate of the significance of these days of sickness to the community and the units of which it is composed. As we think of the doctor's bills incurred, the cost of drugs and other so-called necessaries, and then of the suffering endured by the victims of mortal belief, we may well ponder Jesus' words, above quoted. The many schools

Digitized by Google

and hospitals maintained at great expense for the education of physicians, on the one hand, and for the care and treatment of those who are sick, together with the vast sum expended for the upkeep of the thousands of beneficent institutions in all civilized countries, enable us to arrive at some faint idea of the cost to humanity of sickness and accident. In the light of their present knowledge, the physicians and nurses are carrying on a good and kindly work, but at what tremendous outlay to all concerned!

In contrast with this order of things, if discord of any kind assails a Christian Scientist, he can, by knowing the truth as Jesus declared, be quickly freed from his disability. I have been a student of this teaching for some seven years, and whereas heretofore my experience was quite up to the statistical dictum of eleven sick days a year, and sometimes many more, ever since I began to understand the truth of being I have had no days off as the result of illness, and I believe my case to be typical of that of the average Christian Scientist. This being true, the saving in expense and from suffering is immediately manifest. Multiply my experience by the number of units in a community and throughout the civilized world, and one can form a correct judgment respecting the practical value of Christian Science.

This movement is but in its infancy, and though great advance has been made in the few years since Mrs. Eddy made her discovery, there can be no doubt that its growth will be in the order of geometrical progression. As friend talks to friend of physical relief experienced and of the joy of the realization of God's love to men, the good news will spread, until the time will have arrived spoken of by Habakkuk when "the earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea." As this saving truth becomes more widely known and accepted, the ratio of sickness and suffering will constantly grow less. People will turn naturally to God, our Father-Mother, for healing; greater dependence will be placed in His overruling goodness and mercy, and it will become natural to trust and look to God for guidance and relief at all times. Let our constant prayer be, "Thy kingdom come. Thy will be done, as in heaven, so in earth," and let us know that because God reigns all is well.

✦

"Why weepest thou?"

J. THOMAS MUMFORD

In the eighty-fourth psalm we read of those who are named "blessed," because in "passing through the valley of Baca [they] make it a well." This valley of Baca was a dry, barren stretch of country, and because of the hardships which had to be endured in crossing it, it was called the valley of weeping. It seems that all who passed through this desolate region did so as quickly as possible, giving no thought to the sufferings which would beset those who followed; but he who was compassionately thoughtful and acted accordingly, was blessed, because he was interested in the good of others, and tried in some measure to lighten the burdens of those who were to come after him. Such a one is always blessed. This was included in the promise made to Abraham, to whom God said, "I will bless thee, and make thy name great; and thou shalt be a blessing."

There is no road more frequented than that which leads through the valley of weeping. "Why weepest thou?" the question asked of Mary by the angels on the morning of the resurrection, is the one query addressed to well-nigh every human heart. Most of our tears, however, are caused by troubles that never come, but which seem real and terrible, although they are in fact as the "vapor, that appeareth for a little time, and then vanisheth away." This valley of weeping is in the individual consciousness, and is narrow or wide according to the concept we have of life. With some it is easily and quickly passed; with others it requires most of their earthly experience to traverse it. We meet those who take a very gloomy view of existence; to them there is no bright side,—all is darkness and doubt. Said Queen Elizabeth, "This world is a bog, a quagmire, and those pass over it the best who tread lightly."

The mission of the Christian Scientist is to dig wells in this valley of Baca, to make it like a watered garden whose fruit fails not; to make it "rejoice, and blossom as the rose." Under Truth's beneficent influence "the parched ground shall become a pool, and the thirsty land springs of water." This is God's way of bringing all men into that state of consciousness wherein He "shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former [material] things are passed away."

The blessed mission of divine Science is to dispel the false material beliefs whence spring all the sorrows of this mortal life. Sin, sickness, and death are the causes of weeping, and without them there would be no tears. Christian Science dries our tears by bringing life and immortality to light through the gospel of health to body, mind, and estate. It supplies us the true philosophy of life. It brings us face to face with the loving Father and the saving Christ. It takes away the doubts and fears incident to mortal experience, and reveals man as the image and likeness of God, good. It teaches that the scientific knowledge of God embraces all reality. When one becomes a Christian Scientist, he feels that his true education has begun. Christian Science reveals our relation to one another as the sons and daughters of God. Herein lies the secret of loving our neighbor as ourselves, of doing to others as we would have them do to us. When its teachings are applied to social and business life, it removes the cause for tears, it digs wells in the valley of Baca, so that our brothers are made to rejoice.

As interpreted on page 578 of Science and Health, there is no place for tears in the twenty-third psalm. God is there revealed as infinite Love, doing all that needs to be done. Even in the valley of the shadow of death there is no occasion for tears, for the fear of evil is removed by the support and protection of the divine presence. In the wilderness of material life, and in the presence of enemies, a table is prepared, and the child of God fares bountifully. Like Jesus, he has meat to eat that the world knows not of. There is no place for tears. Weeping may endure for the night of mortal discord, but joy will come in the morning of spiritual understanding. When we awake in God's likeness, in a conscious knowledge of demonstrable truth, we are satisfied.

To come into our own in Christian Science is to let our light so shine before men, that they may see our good works, and glorify our Father who is in heaven. The way to dig wells in the valley of Baca is to think aright about God and His spiritual creation, including man. We thus put the cause of weeping far from us, and we at the same time open water springs for our thirsty fellow travelers.

✧ ✧ ✧

To purchase heaven, has gold the power?
Can gold remove the mortal hour?
In life, can love be bought with gold?
Are friendship's pleasures to be sold?
No; all that's worth a wish—a thought—
Fair virtue gives unbribed, unbought;
Cease, then, on trash thy hopes to bind,
Let nobler views engage thy mind.

DR. JOHNSON.

Selected Articles

[Paul Stark Seeley in *Herald*, Albany, Ore.]

The minister who has found time to condemn Christian Science so generously, as reported in a recent issue of the *Herald*, seems to be laboring under a sense of what he believes Christian Science to be. If the critic could find his way to an unbiased view-point of this new-old religion, he perhaps might not be ready as yet to accept its teachings, but he would, I am sure, avoid a repetition of the erroneous statements made in his recent sermon. Your readers have without doubt observed that he is not the first of his profession to attack Christian Science.

In all fairness, it is to be remembered that for nearly forty years Christian Science has prospered and grown in the face of the most bitter criticism. Today the movement numbers among its rapidly increasing membership, men and women of intelligence from every class of society and from all of the leading nations of the earth. A religion which in this comparatively short time has not only attracted but held the attention and loyalty of such a vast number of the world's people, will not be lightly dismissed as the "worst of all" religions, because the reverend critic, looking through his glass of ecclesiastical dogmatism, tells his hearers that that is what he sees. The time when men accept with blind faith their minister's opinions as gospel truth, is rapidly being supplanted by an age which demands a religion that is not one of words, but of deeds, a religion that can be practised and proved in daily life, whether the need be for power to overcome sin or to heal the body of sickness. Such was the religion taught and practised by Jesus and the apostles, and such is the religion that Christian Science is giving to the world today, some Christian ministers to the contrary notwithstanding. The Master said, "Ye shall know them by their fruits."

In the part of the sermon that was reported, vigorous exception is taken to the teaching of Christian Science that sin, sickness, and death are unreal. The objection is not uncommonly raised by hostile critics, and by those who are uninformed as to what Christian Scientists really believe in regard to this dismal triad. In the text-book of Christian Science, "Science and Health with Key to the Scriptures," Mrs. Eddy has plainly stated her position on this important question. On page 474 she writes, "If sin, sickness, and death are as real as Life, Truth, and Love, then they must all be from the same source; God must be their author." Again, on page 472, she says, "The only reality of sin, sickness, or death is the awful fact that unrealities seem real to human, erring belief, until God strips off their disguise. They are not true, because they are not of God."

Christendom, it seems, is in happy accord in regard to sin as evil and something to be resisted and overcome, though it differs widely on the way of doing this. How closely sin and death are correlated, the apostle made plain in his statement that "the wages of sin is death," following with those words of comfort, "but the gift of God is eternal life."

Sickness, the second of evil's trio, which the whole human race resists with methods as widely divergent as those of the Indian medicine-man, the modern surgeon, and the prayer of faith, was placed by Jesus in the same category as common, every-day sin, and treated by him on that basis. In healing the palsied man he expressed the gist of the healing in the words, "Thy sins be forgiven thee," and when later questioned by the scribes, he replied, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" After healing the impotent man he admonished him, "Sin no more, lest a worse thing come unto thee," thus exposing sin as the cause of disease, and so of death.

To a Christian Scientist, sin means wrong thinking, a wrong belief held in thought, that evil is more powerful than good. This wrong belief is eliminated only by letting into man's consciousness the light of Truth which comes through right thinking. The ability always to think only what is good, is God's gift to man, and when understood and practised, is seen to be God's means of destroying and forgiving sin. The third tenet of Christian Science, given on page 497 of Science and Health, states: "We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts."

Our responsibility for sin, and our salvation therefrom, is entirely individual, as Paul has clearly pointed out: "Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey; whether of sin unto death, or of obedience unto righteousness?" The Christian Scientist is therefore endeavoring to be obedient in his thinking to the law of righteousness; to let that Mind be in him "which was also in Christ Jesus," even the consciousness of Truth and Love. Man is thus enabled, through a correct understanding of God and spiritual law, to overcome all evil and to find the way for the fulfilment of the Master's promise to his followers: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

The destruction of sin and its natural corollaries, sickness and death, is shown by Christian Science to be a mental process. Thought must be turned away from the belief in mortal evil to the understanding of immortal good. The true man, God-created, perfect and pure, must be discerned in place of the sin-controlled man of material sense.

In proportion as mortals become, to use Paul's thought in his epistle to the Ephesians, renewed in the spirit of their mind, they are able to "put on the new man, which after God is created in righteousness and true holiness." Christian Scientists are proving this to be true, and in some considerable degree they are able to banish from their lives the despotism of disease and the tyranny of sin. In due time, as men learn to realize that there is but one real power, even God, who is good only, all evil will be destroyed. The Revelator's vision will then become a present fact, for "God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." Then will be realized the significance of the Master's mission to show mankind the way out of bondage to sin, disease, and death, into the light of life eternal, found in the understanding of God as Life, Truth, and Love, even the same understanding which enabled Jesus to rise superior to all the errors of mortal belief and to bid his followers do likewise.

✧

[John W. Doorly in *Times and Express*, Shipley, England]

In a recent issue a clergyman again brings Christian Science into his "Talks for a Quiet Hour." He remarks that to "believe in the active powers of faith it is not necessary to become a Christian Scientist." It would be well for this critic to recognize what the two words "Christian" and "Scientist" mean. To the Christian Scientist they mean one who follows the teachings and practice of the Master upon that absolute, invariable, scientific law which Paul called "the law of the Spirit of life in Christ Jesus," and which he declared made "free from the law of sin and death." Does the reverend gentleman suggest that there is another way? Undoubtedly his writings very clearly convey the fact that he

Digitized by Google

does, and this other way, which is to be better than the Christ-way or Christian Science, is a mixture of drugs and the changeable and uncertain action of mortal mind.

There are just two books in all the world that have taught mankind to heal the sick and the sinning on a strictly Christ-like basis; one of them is the Bible, and the other is the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. It is about time such writers as the critic woke up to the fact that while they are talking about healing in an aimless way, Christian Scientists are, through the daily study of these two books, healing on a systematic and scientific basis numberless cases of so-called incurable diseases, and this is accomplished through wholly spiritual means.

Our critic made one remark which interested me, although I hardly think he meant it in the way I take it, when he stated that "the physicians of the future will devote most of their time and powers to the study of health." This will indeed be a change, as the physicians of the past have devoted their time and attention to the study of disease, and not of health. If this clergyman wants to help humanity, let him humbly accept that system of healing which has proved itself to be Christlike in the healing and saving of a vast army of hopelessly sick and sinful people. He will then have the pleasure of knowing that he is following Jesus' teaching, "By their fruits ye shall know them."

No amount of medicine and no amount of what is even worse, mesmerism, popularly termed suggestive therapeutics, can heal the world of its sin or its sickness, because these are all finite, mortal methods; but what Christ Jesus termed knowing the truth, or understanding God's actual spiritual law, will inevitably free all men from sin, disease, and eventually from death. The way to demonstrate this law has been given to the world in this age through Mrs. Eddy's revelation, and this truth is being abundantly proved to be the Comforter which was promised nineteen hundred years ago. This is a day of deeds, not words, and humanity is rightly demanding proof of every man's faith.

✧

[R. Stanhope Easterday in *Morning News*, Shelbyville, Ind.]

Our critic laments that Christian Science teaches something different from his preconceived notion about sin and sinners. He has evidently overlooked the sweeping declaration of John in his first epistle, where we read, "Whosoever is born of God doth not commit sin; . . . he cannot sin, because he is born of God." In this same connection, however, we read also, "He that committeth sin is of the devil." But our Lord designated this same "devil," or "Satan," to be, in the last analysis, nothing but "a liar, and the father of it," and throughout the Bible sin is characterized as deceptive in its origin and nature. When, therefore, Jesus said that the afflicted woman was bound by Satan, he signified that her physical condition was the direct result of a false concept of life and its legitimate activities; and very logically, when he healed such a one, he substituted the true concept of God's perfect, harmonious, and purely spiritual creation, as chronicled in the first chapter of Genesis, for the woman's false or deceived sense.

It is perfectly clear, moreover, in such light of Scriptural interpretation, how this same master Metaphysician could heal a palsied hand by forgiving the man's sins. In other words, Christian Science deduces that if by sin came death, by sin also must come the preliminaries of death known in human experience as diseases, and as logically concludes that a correction of the sinful or false sense of all things, characterized as "the works of the devil," will alone heal the sick and effectually reform the sinner. John declares with due significance in this connection, "For this purpose the Son of God was manifested, that he might destroy the works of the devil." Nothing actually existent or emanating from God could ever be destroyed, hence the deduction in Christian Science that all phases of evil are, when reduced to the last analysis, unreal.

A reasonable study on the part of your readers of the real teachings of Christian Science will result in the comforting unfoldment of many such sublime truths from the pages of Holy Writ, and will make clear to them why the Christian Scientists became such, continue to be such, and are apparently so healthy, happy, and contented, having no time to denounce or criticize others while in the pursuit of their distinctly constructive sense of religion.

✧

[Frank Bell in *The Daily Democrat*, Lock Haven, Pa.]

The decision as to what constitutes a Christian might safely be left, it would seem, to the test laid down by the Founder of Christianity. There is no record that he formulated a creed or required his followers to subscribe to certain set statements of their religious convictions. On the contrary, we are told that he denounced the doctrinaires of his day, denied the availability of mere profession, and gave his followers to understand they should be judged by their fruits. Those who were worthy to be considered as believing on him, should demonstrate the quality of their discipleship not only by preaching but by healing, as witness the declarations, "He that believeth on me, the works that I do shall he do also," and, "These signs shall follow them that believe."

The one preeminent command of the Master to those who would be his followers was that they teach all men the things he had commanded them. Our friend by a wave of the hand, as it were, would relegate Christian Science beyond the pale of Christianity; yet Christian Science is distinguished chiefly by the fact that it insists on the same test of Christianity today as was required nineteen hundred years ago. It utterly repudiates the idea of any saving grace in profession or confession of doctrines or dogma, and plants itself on the simple proposition that the best Christian is the one who is most Christlike in thought and deed.

Those who consistently follow the teachings of Mrs. Eddy find themselves, as a rule, so well occupied in helping their fellow men out of the bondage of sin and sickness that no time remains for criticizing the beliefs of others, even if they were inclined to indulge in that kind of recreation.

✧

[Frank C. Barrett in *Portland* (Maine) *Press*]

Christian Science does not teach that sickness and sin are only imaginary. The sinner is convinced that there is something in sin, while the sick man is convinced that he is sick, and neither the one nor the other can be helped until he is convinced to the contrary. The sinner is shown that there is nothing in sin, while the sick find that their diseases are not something, but the lack of something; that is, the spiritual realization of Truth which makes free from error.

Jesus said of a woman, that Satan had bound her, "lo, these eighteen years." He did not say that God had afflicted her, but Satan, whom he declared to be a liar. Now it is clear that the bond of a liar is a false claim. According to Jesus, therefore, the woman was bound, not by God, but by her ignorance of Him, and Jesus' understanding of God enabled him to do his Father's will and thereby release the woman from her physical infirmity. She was shown that Satan was a deceiver and the bond false. Thus did the Master

Digitized by Google

make her sickness unreal to her. All physicians are engaged in doing just that,—attempting to make sickness unreal to people; and if they do not succeed, their treatment is a failure. Would our critic have us make sickness real and let the sick continue in bondage to this unreal master? We prefer to follow Christ and the teachings of the Bible.

Christian Science is not "faith-cure." Faith may heal sickness in some instances, but those who have been healed do not know how to repeat the cures in other cases. Jesus, on the other hand, never failed in any case, and his followers as late as the third century even raised the dead. They not only had faith, but their faith was backed up by a knowledge of spiritual truth. Jesus' understanding was so exact as to amount to absolute Science. Mrs. Eddy says, "Jesus of Nazareth was the most scientific man that ever trod the globe" (Science and Health, p. 313). In Christian Science, results are obtained just in proportion to the student's understanding and application of Jesus' teaching, and not by mere blind faith.

As our critic says: "Christian Science took up what the church of God rejected, and has built upon it. The church of today can come back to its original position if it will." Mrs. Eddy wrote years ago in "Pulpit and Press" (p. 22), "If the lives of Christian Scientists attest their fidelity to Truth, I predict that in the twentieth century every Christian church in our land, and a few in far-off lands, will approximate the understanding of Christian Science sufficiently to heal the sick in his name."

✧

[Charles Forbes in *Manchester* (N. H.) *Union*]

An editorial in a recent issue of the *Union*, commenting on the failure of radium to cure a case of cancer, adds publicity to the experiments now being made with radium as a cure for this disease. Thus far the newspapers have given liberal notice to the few instances where this treatment has proven successful. Such events constitute proper news for publication in a live newspaper. Not every new system of treatment for the sick, however, is equally successful in receiving its deserved share of publicity in the public press, even though greater success has accompanied its application to this disease than has been achieved by radium.

Twelve years ago I resorted to Christian Science treatment for cancer, after I had undergone two operations and the surgeon had insisted that another would soon be necessary. Although I was quickly and, as it has been proven, permanently healed, to my knowledge no public acknowledgment as a news item was ever made in any newspaper. In spite of the well-known fact that similar cases are being frequently healed by Christian Science, for mine is by no means an uncommon case, I have yet to see an instance of healing of this kind reported in a newspaper, or Christian Science commented upon hopefully and gratefully as a possible cure for this ailment. Would not every such instance constitute a legitimate item of news, and why is there less occasion for public interest and newspaper comment in one case than in the other?

✧

[Willis D. McKinstry in *The Hutchinson* (Kan.) *Gazette*]

We notice in a recent issue of your paper that Dr. —— condemns Christian Science as a modern theory. For our critic to make this statement, shows that he is not well informed as to what this teaching really is; therefore he is condemning only his own misconception of it.

Christian Science is not a mere assumption or conjecture regarding religion. Its teachings offer a scientific Principle and rule of life which is capable of demonstration; it has neither subtracted "one jot or one tittle" from, nor added one iota to, eternal Truth. It is but a new name given to the ever-operative law of God, which always has existed, and will continue to exist throughout eternity. Christian Science has not given the world a new God, but its teachings enable mankind to know aright the one eternally true God, who is "the same yesterday, and today, and forever." Through this understanding mortals are finding salvation and redemption from the errors of the carnal mind.

The Scriptures say, "The wrath of man shall praise thee." Christian Scientists, therefore, do not feel unkindly toward the doctor, and they do not condemn him for his hard sayings, but rejoice that he is calling the attention of the public to this new-old truth which is making men free.

✧

[R. C. Love in *Shreveport* (La.) *Times*]

In a recent issue is an account of a talk by a clergyman at a Bible conference, in the course of which talk he takes occasion to express his opinion of Christian Science. If one understands a subject, he can demonstrate its rule; but failing in this, he should not find fault with those who are demonstrating it. Christian Science means right living and right doing, and as the thought is father to the act, it follows that a man must necessarily think right in order to act right. If our clerical critic is doing this, he is to this extent a Christian Scientist.

When it is alleged that the teaching of Christian Science is "a foe to the home" and that "it locks its heart against suffering humanity," we are forced to ask where our critic has found justification for his contention. Is it possible that a religion which has had the largest growth of any movement of modern times, whose members are numbered among the world's best citizens, and whose history has been that its churches are soon outgrown and larger ones become necessary to accommodate those who crowd its pews in search of its message of healing,—is it possible that such a religion can be a detriment to mankind?

Some expression of the public thought in this connection is afforded by the following extract from an editorial which appeared in a paper recently: "Our lives are no longer measured by our own individual standards; we look beyond our own cramped environments and try to see others as they see themselves, and not as they appear to our narrow and often selfish vision. The sincerity of the Christian Scientist is not to be questioned. The Scientists are entitled to their belief; they are entitled to the happiness and comfort it gives them, and it is a notable sign of the advance of civilization that those who disagree, dogmatically or otherwise, with the Christian Scientists, are unwilling to interfere with the development of the church."

✧ ✧ ✧

Resurrection

EDMUND K. GOLDSBOROUGH

"LAZARUS, come forth"!—the Christ-command was spoken;
The answer came, revealing life unbroken.
O law of Love! the sting of death is gone,
And shadows melt before Truth's glowing dawn.

"Loose him, and let him go"! then turn from mortal sense;
Awaken ye to Truth's omnipotence.
Knowledge of God illumes the darkest hour;
Man is sustained by Mind's eternal power.

Editorial

True Happiness

One of the things which seems particularly to impress and is frequently remarked by visitors at a church service of Christian Scientists, is the general air of peace and happiness with which they are surrounded. This was well expressed by a woman who, in describing her experience at the first Wednesday evening meeting she attended, said that her first sensation was one of astonishment, because on looking around her she saw fifteen hundred happy faces—more happy people than she had supposed there were in the whole city in which she was then visiting. This recalls to memory the expression so often heard, "I would know you were a Christian Scientist by your happy face," and the opening sentence of our Leader's Message to The Mother Church in 1900, "Methinks even I am touched with the tone of your happy hearts, and can see your glad faces, aglow with gratitude;" in fact, one might be justified in naming happiness as the hall-mark of Christian Scientists.

Now, it is fair to ask why Christian Scientists impress people in this way. Is it because they are in expectation of some great but unattained good that is to come to them, or is it because they have received such rich and bountiful blessings that they cannot help but express gratitude and joy? An answer may be found in the experience of the woman to whom we have referred, and her experience was by no means an exceptional one. She was a member of a Christian church in the small city in which she resided, her family relationships were such as should have brought her happiness, and her husband's business was on such a footing as to assure her comfort. She was, however, extremely unhappy. She was ill, and had been ill and in pain for years. She had been under the care of physicians who were kind and earnest in their efforts to help her, but without success. All that her church had been able to do for her was to counsel patience under affliction, and to hold out the hope that after this earthly existence she would enter into a realm of peace and joy, a realm in which she would suffer no more. She was led to believe that healing such as our great Master had done in far-off Galilee was not for her, nor for any one in this age. She was even taught to believe that God had sent affliction upon her for some good purpose of His own, and that she must bow to His will.

Fortunately Christian Scientists have proved for themselves the fallacy of these beliefs. Thanks to the teachings of Christian Science they have learned that "death is not the real stepping-stone to Life and happiness" (Unity of Good, p. 37), that "happiness consists in being and in doing good; only what God gives, and what we give ourselves and others through His tenure, confers happiness" (Message for 1902, p. 17). It is not at all surprising, therefore, that after this woman had seen these happy-faced people, and had heard them tell of their healing from all manner of diseases, that her own hope of health should have revived. Then and there she resolved to learn for herself how she might be restored to health, and to that happiness she had so long been denied. When, in a short time, her efforts were crowned with success, and she had learned that "God does not cause man to sin, to be sick, or to die" (Science and Health, p. 206), she became one of the happy-faced throng which had so astonished her on her first visit to a Christian Science church.

Through the study of the Scriptures in the light of Science and Health, Christian Scientists have been able to put aside their old belief about God, the belief that He is the author of sin and sickness, pain and death. In place of this belief they have learned that He is the creator of only that which is good; that He is the loving Father,—He who the psalmist declared "healeth all thy diseases," who is not afflictive, but beneficent,—and that man is indeed His image and likeness. They are happy not only because they have learned these things, but also because they are able through good works to bring these glad tidings to others; in *short*, that the acme of happiness is to be found in the daily exemplification of that greatest commandment: to love God supremely and one's neighbor as one's self.

Archibald McLellan.

Freedom from the Letter

The teaching of Christian Science respecting the unreality of evil has startled a great body of complacent thought into an activity which brings to many professed Christians a distinctly new experience. They have been in the habit of reading Scripture statements with little if any inquiry into their logical content and implications, and when awakened by Science to the self-evident proposition that all the manifestations of the Supreme Being must be consistent with His unchanging nature, such Scripture passages as "I [the Lord] . . . create evil," "I kill, and I make alive," etc., are likely to beget an assertive skepticism. People are thus brought face to face with the fundamental question of being, What is the nature of God, the infinite Spirit, and of His law and government? If their conviction respecting His justice and goodness remains undisturbed, then an explanation or interpretation of these passages which seem to make Him responsible for evil, or a party to its tragedies, is demanded, and in the instance of every honest truth-seeker a more satisfying apprehension is sure to be gained.

No one can read the Bible understandingly who is not mindful of the imperfections of the human-sense channels of revelation. We can correctly express only that which we perfectly understand, hence the factor of finite sense is and always has been a disability to the divine manifestation. Christ Jesus' exalted spiritual sense did not impede or distort the rays of Truth, and he therefore could speak "as one having authority." As none other he knew and expressed that Life, Truth, Love which is God. The seventeenth chapter of John speaks for his conscious at-one-ment with the Father, his apprehension of and conformity to the divine law which, as he said, he came to fulfil. In his words and works, therefore, we may find a corrective for the imperfect concepts of those Scripture writers who, though illumined and inspired, had not gained his clear, consistent vision. To him, beyond all question, God was infinitely good and perfect. Reflecting this deific nature, he proved not only that God does not create evil, but that He destroys it, and that the only cause and explanation of death, and the sickness which precedes it, is sin, false belief.

Here, then, in the Science of Christ, or Christian Science as Mrs. Eddy named it, we may find the "Key to the Scriptures," and this has been her great contention. Apart from the Master's disclosure and demonstration of Truth, the vision of the divine integrity is and ever has been incomplete. "In him [alone] was life; and the life was the light of men." Attaining to his point of view, we gain the spiritual significance of the "letter" of human statement, which otherwise "killeth." The surface significance of the words we have quoted from Isaiah authorizes the conclusion that God is the source of evil as well as of good, but in Christian Science we come to see that the prophet "referred to divine law as stirring

Digitized by Google

up the belief in evil;" that this law "uncovers so-called sin and its effects, only that Truth may annihilate all sense of evil and all power to sin" (Science and Health, p. 540).

Christian Science is emancipating and transforming the thought of the world by virtue of the simple fact that it accepts Christ Jesus' definitions of the divine nature, and dares to maintain their integrity. It does not hesitate to interpret all Scripture and all experience in that pure light of Truth which the Master focused upon the problems of being. It teaches that amid the confusions and contradictions of past and present human sense, we need but to "cling steadfastly to God and His idea," allowing "nothing but His likeness" (Science and Health, p. 495) to abide in our thought. Then the healing consistency of the divine order and manifestation speedily appears.

JOHN B. WILLIS.

The Fourth Commandment

IF people in general were asked which of the ten commandments they considered most important, there would probably be many different answers, though it is likely Christian Scientists would say that obedience to the first, "Thou shalt have no other gods before me," would include obedience to all the others. On the other hand, a good many people would say that the sixth, seventh, eighth, and ninth form the basis of all civil law, in that they aim at the protection of the life, property, and reputation of mankind, as well as the prevention of immorality, which is known to be the worst scourge of the human race. There are, however, but few in this day and age who recognize the importance of the fourth commandment, which provides for the observance of the Sabbath day, nor is it likely that a truer sense of its meaning would be gained by going back to the rigid rules of a bygone period.

It needs no lengthy argument to show that the intent of this commandment, which begins, "Remember the sabbath day, to keep it holy," is that mortals shall for one day out of seven be freed from the yoke of material servitude, with its false pains and pleasures, and this day be devoted to spiritual things. Christian Science places the utmost emphasis upon the fact that man is spiritual, both primarily and ultimately, but mankind have so forgotten this truth that they are called to "remember" it for one whole day out of seven. Mortals have perhaps concerned themselves most with its prohibitions as to labor, and have largely overlooked the statement that this day belongs to God, and that it should be given to the contemplation of the perfect activity of the divine Mind, who "spake, and it was done," creation springing from the divine mandate, not from material toil.

Mrs. Eddy says of the divine activity, "God rests in action. . . . No exhaustion follows the action of this Mind, according to the apprehension of divine Science" (Science and Health, p. 519). This great truth has almost been lost sight of by humanity, and so the Sabbath comes as a gentle invitation from divine Love to cease from our toilsome and imperfect sense of work and ponder awhile God's ways of working. Here it should be said that this offers no excuse for indolence, which Christ Jesus rebuked when he said, "My Father worketh hitherto, and I work." He also said that we must be perfect because our heavenly Father is perfect, and perfection in all we think and do is the unvarying demand of God's law every day of the year. Most mortals rob themselves to a large extent of the unspeakable privilege of the Sabbath in failing to "keep it holy" by the spiritualization of all thought and effort, with divine perfection held ever in view. We have been taught that a well-spent Sabbath meant six other days made better thereby, and this cannot be gainsaid; but it is equally true that six days well spent, with the highest ideal of life and work loyally obeyed, will bring a glorious Sabbath of spiritual contemplation and unfoldment, linking one period to another of higher achievement.

A glance backward to Moses' day tells of tremendous progress in a material way, with a luring promise through all the years of the good things to come from greater material possessions, promises which have all, alas, betrayed. Men now plead for rest from their labors, but it cannot come while the insatiable demand for more of the material dominates human thought; hence the need for at least one day in which to draw near to a loving Father, that we may learn how to think and work aright, no longer meriting the rebuke, "For my thoughts are not your thoughts, neither are your ways my ways, saith the Lord." As we learn to think more spiritually, the fulfilment of the divine intent of the first commandment, so splendidly presented by our Leader on page 340 of our text-book, will include fulfilment of all the others by the law of Love.

ANNIE M. KNOTT.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

HANNOVER, GERMANY.—First Church of Christ, Scientist, founded in 1898, is the oldest Christian Science congregation on the European continent, exclusive of the British Islands, and owns the first church building constructed in this country for Christian Science services.

Christian Science, which was at first entirely misunderstood, and therefore maligned here as everywhere by the majority of people, found, in spite of this, such an enthusiastic reception by many who were prepared to receive Christ, Truth, that after four years it was possible to build the church, by means of the gifts of those who had been healed through Christian Science. This church, which is situated in one of the best parts of the city, holds about five hundred and fifty people, and it is filled, especially at the Wednesday meetings. A circumstance which is noticeable for this part of the country, and I dare say for all Germany, is the fact that there is a large attendance of men, such as is found in scarcely any other church.

Thanks to the translation of our text-book, "Science and Health with Key to the Scriptures," into the German language, the sale of Christian Science literature has increased considerably. In 1913 authorized Christian Science literature to the value of two thousand and fifty dollars was circulated among the population by our reading-room, and the demand is constantly growing. *Der Herold der Christian Science*, too, has become a friend and aid in countless families. It was a very great pleasure for our congregation when they welcomed the first German lecturer in the spring of 1913. The attendance at this lecture was very large and evidenced a lively interest in the cause among all classes of people.

Correspondence.

The Lectures

Bridgeport, Conn.

Every seat in the Universalist church was filled at the lecture on Christian Science given by Bicknell Young. In introducing the lecturer, W. F. Stanton, first reader, spoke as follows:—

History teaches us that ever since the beginning of time, man has been conscious of the existence of a power which has been more than human; but owing to his inability to discern spiritual good through the material senses, he has not always comprehended its source, and for this reason he has often been misled and limited in his knowledge of God. We read in "The Acts of the Apostles" that when the apostle Paul visited Athens he found there an altar erected and dedicated "to the unknown God." Paul told the people of Athens that the God whom they ignorantly worshiped was the only creator, and that He was not far from any one of them. "For," said he, "in him we live, and move, and have our being." Christian Science declares again to the world today that God is the only creator; that He is omnipotent, omnipresent, and omniscient, in that He is Life, Truth, and Love.—*Correspondence.*

St. Louis, Mo.

At the lecture by the Rev. William P. McKenzie, Fourth Church of Christ, Scientist, which seats about a thousand people, was filled to overflowing, and practically five hundred more had to be turned away. The lecturer was introduced by Clarence H. Howard, president of the Commonwealth Steel Company, who said:—

It is with the greatest pleasure that I welcome you to this feast of Soul. I know of no subject or study which inculcates a greater or truer sense of friendship and does more for the establishment of the brotherhood of man than does Christian Science. At first I wondered, as many people do, regarding the coupling of the words Christian and Science; but when it was explained to me that Christian is Christlike, and Science means truth-proven, that is, the Christ-truth proven in every detail of our lives,—then it was that I saw the wisdom of the name.

It was at this point in my experience that a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy was handed to me, and it has opened up the Scriptures for me, as it has for many. It has made the Master's teachings practical for daily use, and I believe that there can be found within his words and teachings an answer to every problem that confronts the human race, whether in business, home, or elsewhere. I am convinced that there is not a man, woman, or child in the world who does not want what Christian Science really is, although they may not want what they think it is.—*Correspondence.*

✧

Bolton, England

In order to spread the teachings of Christian Science, a meeting was held in the Grand Theater. The lectures are not intended to proselyte, but rather, by giving a true exposition of Christian Science, to remove the popular misconception regarding it. The assembly was addressed by Col. William E. Fell. Twenty minutes before the advertised time for beginning, the theater [which seats twenty-eight hundred people] was packed in every part by an audience who throughout appeared keenly interested in the address. The chairman, John W. Harwood of Liverpool, who introduced the lecturer, declared it was the practical nature of Christian Science which appealed to him. His experience during the last ten years had been that in his family, where relations had been discordant, harmony and unity had been restored. One member, who had been practically useless in life because of valvular heart-disease, had been restored to activity and usefulness. The desire for intoxicants and other habits had been overcome. Every disease which had appeared during that time had been healed, and no material remedies had been used. He had proved that Christian Science healed both physically and morally, and he asked his hearers, in the words of Mrs. Eddy, "If such are the present fruits, what will the harvest be, when this Science is more generally understood?" (Science and Health, p. 348.) It is because of the blessings received through the ministrations of Christian Science that its adherents desire that all men should know of this great truth.—*The Bolton Evening News.*

✧

New York, N. Y.

Francis J. Fluno, M.D., lectured on Christian Science in Second Church of Christ, Scientist. He was introduced by Elbert S. Barlow, whose remarks were in part as follows:—

Reviewing the history of humanity, we find that every progressive step in religion has been taken when mankind has felt the bondage of oppression and has reached out for a higher and fuller sense of individual independence and freedom; but it was not until our Master's advent on earth, when his teachings were practised, that man's true responsibility toward God was fully expressed. These teachings iterated and reiterated themselves in substance in the Master's words, "By their fruits ye shall know them," and these fruits were known in the healing of the sick, the raising of the dead, the cleansing of the leper, and the casting out of demons.

The full import of these teachings was lost sight of after the third century, until our revered Leader, Mrs. Eddy, in 1866, found the Principle that governed these teachings and named her discovery Christian Science. When she had thoroughly demonstrated this Principle herself, she gave it to the world in the teachings set forth in the Christian Science textbook, "Science and Health with Key to the Scriptures." The truths contained in this book are available to all who will read it carefully and imbibe its spirit.—*Correspondence.*

✧

Fairfield, Iowa

Before a gratifyingly large audience, in the High School Auditorium, Clarence W. Chadwick explained the tenets of the Christian Science religion. He was introduced by Prof. J. P. Moorhead, who said in part:—

There is one point upon which all Christian nations agree,—that Christianity can in no way be separate from the teachings and the life of Christ Jesus; and most of us believe that all the sickness and disease which Jesus healed could not proceed from a God whom he taught us to know as Love. Jesus proved the truth of his statements by doing many wonderful works; and Christian Science, which denotes an orderly and systematic arrangement of Christian knowledge, has revealed the Principle by which those works were accomplished. We are thus enabled in this day and age also to prove the truth of the Master's statements.—*The Fairfield Tribune.*

✧

Newburgh, N. Y.

Christian Science was discussed before a fair-sized and appreciative audience in the Y. W. C. A. Hall by Virgil O. Strickler. The speaker was presented by the Rev. Alfred

Digitized by Google

J. Wilson, pastor of the Church of Our Father, who said in part:—

To those of us who believe in the world as a spiritual system, Christian Science has a spiritual significance; and in a world which is so largely dominated by material interests, the emphasis of the Christian Scientist is timely and illuminating. We cannot too strongly call attention to the life of the Spirit, or too often assert that the things which are not seen are greater and stronger than the things which are seen. We may not all think alike on these subjects, but we have many things in common. We have together outgrown the crudities and irrationalities of the old orthodox theology. You and I hold similar views on these matters.

The communion to which I belong has always insisted that freedom of thought is more important than uniformity of belief. It is of more consequence that we should all think, than that we should all think alike. We are seeking the truth, and we thank whoever can lead us a little nearer to the eternal verities.—*Newburgh Journal.*

✧

Abilene, Kan.

An attentive audience listened to the lecture at the Seelye Theater by the Hon. Clarence A. Buskirk. The speaker was introduced by C. S. Crawford, a prominent attorney of this city, who said in part:—

Truth is as eternal as infinity. The struggle of humanity has ever been upward, through ignorance, superstition, and error, toward the truth. This is true of our material, political, social, and moral development, and equally true of our religious advancement. Tonight you are to listen to a discussion of the asserted truth of Christian Science. Science is systematized knowledge; Christian Science is therefore systematized Christianity. We are all seekers for the truth, and whether you believe in the claims of this organization or not, we should give to the discussion an open-minded, free-hearted reception, to the end that we may arrive at the truth.

While not a Christian Scientist, it has been my good fortune in the past to have been more or less intimately associated with those who are, and I have never seen a more perfect exemplification of true Christianity than is displayed in this association. Whatever we may think of their belief, we are bound to admire and respect their practice.

The Abilene Daily Chronicle.

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

Testimonies of Healing

If any one has reason to be thankful to God for Christian Science, surely it is I. About eleven years ago I was overcome by the heat, and after that time and until I was healed in Christian Science, I was in misery during the summer months. About July 1 of every year I was compelled to go North, and could not return until the weather was cool, which was usually about Sept. 10. This meant not only neglect of my business and the loss of two months' salary, but my family and I were in constant fear of another acute attack and its probably fatal outcome.

During the hot weather, my skin, instead of being moist, was hot and dry; I felt as if I were being consumed by fire, and was relieved only by frequent cold baths and the application of ice to my head. Besides this I found it very difficult to breathe. Some of my relatives besought me to try Christian Science, as they had been benefited by it. I resisted vigorously, but was finally persuaded to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I could not, however, understand much of it, although it had the effect of somewhat changing my attitude toward this teaching.

In July, 1911, having suffered from a two weeks' spell of hot weather, I felt that I could not possibly undertake the journey on the appointed day, as I was completely exhausted and ready to give up. In my despair I requested my wife to call for help in Christian Science. The faithful practitioner came promptly, although I did not deserve any kindness on his part, as I had treated him rather rudely on two different occasions. I told him that I did not believe in Christian Science, but would try it, inasmuch as I knew nothing else could help me. I also explained to him that I did not understand how I could be helped by this religion, as I had always been an infidel. He, however, encouraged me, and told me I could not be expected to believe in something that I knew but very little about, and he then proceeded to give me treatment.

During the treatment, I experienced the chemicalization of which Mrs. Eddy tells us in Science and Health, and I thought that my last hour had arrived. I seemed to be in a great turmoil for about five minutes, but gradually the circulation became normal, perspiration broke out all over my body, and I immediately felt relieved. The healing was instantaneous and lasting. The thermometer in the car that we boarded, registered over one hundred degrees; still I did not feel uncomfortable, but perspired very freely, which I had not done in hot weather for over ten years. I carried in my valise a rubber ice-bag filled with cracked ice, but I did not use it once, nor did I feel as though I needed any material means to keep me from being overcome by the intense heat.

I did not go away in the summer of 1912, for the heat did not affect me in the least, though my neighbors shook their heads and hardly believed their eyes when they saw me cutting my lawn on the hottest days of the summer. I did not once resort even to an umbrella to protect me from the rays of the sun, and I put God's ever-loving kindness and His ever-present protecting power to a severe test by attending a gathering where I was jammed in by crowds of people in a hot, stuffy atmosphere.

Although the following summer was exceptionally hot, I remained at my post and felt no discomfort, though added responsibility and work was thrust upon me. Formerly it would have been out of the question for me to perform this task, but since I have learned to rely on God in solving all problems, I have been able to perform my duties with an ease and absence of worry that is astounding.

Whereas I was in bondage for over ten years, I am now free, and while in the past I had not much use for Christian Science, I now love it, also everybody and everything connected with it. Through changing my belief entirely, I have been able to master all fear of my old enemy, heat, and instead of being an infidel I am glad to say that I am now exactly the reverse. My disposition has also undergone a change, and now I do not look at everything from the dark side. For all these blessings, and for many more, I am unspeakably thankful to God, and grateful to Mrs. Eddy.

C. T. Beiderbecke, Davenport, Iowa.

✧

More than a year ago, after having suffered for many years with untold pain from poisoning and what was called a malignant disease of the stomach, I got up one morning, dressed, and went to see a Christian Science practitioner. I had been given up on three different occasions, with only a few hours to live, and had spent some time in the hospital with no apparent relief. I was so weak and exhausted that it took me nearly thirty minutes to go a few blocks, but I was so determined to try Christian Science that I kept on, knowing I would be helped. I rang the door-bell at the practitioner's home, and almost instantly the door was opened by a sweet-faced woman, who asked me in. I could scarcely stand, being so weak, so I sat down and told her how ill I had been for years without relief, and that I had no money with which to pay her, but wished her to help me. She said she would do so, then gave me a treatment, and told me to eat what was set before me when I got home, for it would not hurt me. I went home and ate the first real meal I had eaten for two months, and I have never missed one since that time. I also threw away all the material remedies in the house, and have never used any medicine since that first treatment. I was extremely wasted when I went to the Christian Scientist, but in less than a year I was in a robust condition and feeling fine.

I am very thankful to God for what Christian Science has done and is doing for me. My prayer is that I may be able to live so that I may show others the way to perfect health and happiness.—Edith M. Goodrich, Topeka, Kan.

✧

[Translated from the German]

In July, 1910, I was taken very ill with blood-poisoning caused by the sting of an insect. The physician who treated me gave up all hope with regard to my life, and I myself thought I could not live long. At that time I was advised by acquaintances to turn to Christian Science, so I applied to a practitioner for treatment, and she immediately called upon me. When she arrived, I was lying in bed, motionless, unable to move any of my limbs. She at once began to treat me, and to everybody's surprise and to the joy of my family, the next day I was able to sit up in bed without assistance and to take nourishment without help. Treatment was continued, and was attended by such rapid progress that within a short time I recovered my health completely and was able to pay a visit to the practitioner. I was then able to resume my duties as a police constable, and I have worked ever since without experiencing any ill effects. As I remarked before, from a material standpoint I would have been beyond recovery, had it not been for Christian Science and the loving help given by the practitioner.

I shall be glad to testify to this at any time; and I wish to express my thankfulness to God for this deliverance, also my gratitude to Mrs. Eddy, through whom this healing truth has again been made known to the world.

Emil Kuhn, Schwäbisch Gmünd, Germany.

Digitized by Google

My object in sending this testimony is to encourage some other poor sufferer. From childhood I was afflicted with a serious skin disease, supposedly inherited from my father. I suffered intensely, and at different times submitted to the removal of bone, as my whole body was said to be in a carious condition. One evening in the winter of 1905 I seemed to get stiff-necked, and it proved to be an attack of rheumatism. It shifted from place to place for over a year, when I was so disabled that we decided to break up housekeeping and go to live with a married daughter in another city. (We were then living in Logansport, Ind.)

It was at this time that Christian Science was brought to my attention by a kind friend. I had often heard of it before, but gave it no thought, being satisfied with my own church. However, Christian Science was presented to me in such a way that I loved it and felt it was the truth, so I engaged a practitioner and took up the study for three days. Then some friends who called ridiculed the teaching so much that I quit, though not without regret, for I loved it. I moved away and struggled on, but was getting worse all the time until 1906, when I stopped walking, and had to be waited on, washed, dressed, and even fed like a baby.

Early in 1909 kind friends persuaded me to study Christian Science again, and I began to see things more clearly. I then went to the hospital, as I was forced to have a limb amputated. While there, my prayer was based upon the "scientific statement of being" (Science and Health, p. 468), for it greatly appealed to me. After I returned home, error suggested that I again give up Christian Science, and I did. Though I had bought the text-book, "Science and Health with Key to the Scriptures," in May, 1911, I often wished that I had not thrown my money away. Nevertheless, Truth was leading me, and in an hour of exalted spiritual uplift I was instantly healed of a terrible soreness in the chest and lungs. Since then my growth has been rapid, for I know the unreality of sickness and sin. My problem is not yet worked out, but I do not suffer and am waiting for its perfect solution in Science. For Mrs. Eddy's wonderful life-work I cannot express my gratitude in words. I feel like exclaiming, How great a God is our God! I hope soon to record my perfect healing, for there is no failure in God's work.

Mrs. S. M. Swallow, Dayton, Ohio.

✧

I send this testimony, hoping it may be of help to others, and in order to show my gratitude for the many blessings which I have received from that eternal truth which was revealed to our beloved Leader, Mrs. Eddy, and which she in turn gave to a waiting and hungering world.

A little over a year ago, while working with a derrick on the roof of a three-story building in San Francisco, I fell about thirty-four feet. My partner and I were going to take an iron girder, which weighed about four hundred and fifty pounds, into the attic. After hoisting it up under the derrick, I went out on the steep roof to receive it, but the derrick broke loose and fell, pulling me with it. The girder not only fell on my left leg, but slid over it.

At that time I had been interested in Christian Science for eight years, and at the moment of falling I declared that God was my life. My head struck violently on a pile of lumber. Then I grew faint and almost lost consciousness, but through declaring the scientific statement of being, that sensation was overcome. My mouth filled with blood continually, due, as I afterward found out, to the fact that two teeth had been knocked through my lip. The people who gathered around took me to a receiving hospital, where I had my arm sewed up, also my hand, which was seriously hurt. Then I took the car and ferry and went home to Berkeley alone. I did not feel any pain, though I limped a little.

After going to bed in the evening, however, I was seized with intense pain in the leg, also in the right arm near the shoulder and head. This continued the whole night. Next morning the leg was more than twice its normal size, and discolored from the knee down. I could not move it, nor could I move my right arm, so I telephoned for a Christian Science practitioner, because I was unable to do anything for myself. After receiving treatment the pain left me. Upon further investigation it was found that the radius bone in the arm was broken, also the bones in the hand and shoulder, and my ankle was injured. It was predicted that I would have to remain in bed for a long time and would not be able to do any work for six months; and so to material sense it seemed. I had, however, treatment in Christian Science for about three weeks, and at the end of that time I was walking around. After six weeks I went back to work as well as ever.

On another occasion, shortly after I had become interested in Christian Science, I had my hand dragged into a planer, severely injuring four of the fingers. I used the little knowledge I then had of this teaching, with the result that I had no pain at all. The doctor where I worked dressed the fingers and told me to stop work; but I did not do so, and in three weeks I could work as well as ever. I had no more help from the doctor, who told me that I had strong nerves; but I did not tell him what was the source of my strength. I was also healed of the tobacco habit, which I had tried many times to overcome through will-power.

When I look back over these nine years since I came into Science and see the change that has taken place through this priceless gift which Mrs. Eddy gave to the world, I cannot be grateful enough, because through the study and practice of this teaching, man is brought nearer to his birthright.

Peter L. Green, Berkeley, Cal.

✧

More and more do I realize what Christian Science is doing for me, when I see the trials of those who know not the help and guidance of divine Love. I feel that I have been truly blessed, and I try to realize each day that God, good, is All-in-all. I was led to this teaching by reading Science and Health to a young lady who was not able to hold the book very long at a time. It seemed wonderful to me that we could have all the promised blessings and escape the ills of the flesh.

One evening a test came. Our little four-year-old boy became very sick to material sense with a rupture, which caused much distress and made it impossible to move him. We sent for a Christian Science practitioner, who came and stayed about fifteen minutes. Before she left, the child was asleep, and I carried him up-stairs without awaking him; at three o'clock in the morning he got up, walked across the room, and drank a glass of water with no ill effects. The next afternoon he walked seven blocks to the reading-room and back.

After the birth of this child I was in very poor health and under a physician's care most of the time. As I was advised to undergo an operation, I changed from one physician to another, until I became interested in Christian Science. I have studied this truth for five years and all the old complaints have vanished. The physical healing is wonderful, but the spiritual uplift is the greatest of all. Two years ago we had another beautiful demonstration, at the birth of a baby girl. Every material law was met and overcome, and

Digitized by Google

perfect harmony was manifested. Many remarks have been made by others as to her activity and obedience.

Words fail to express the gratitude and peace that fill my heart and home. I could not mention all the blessings that have come to me through my longing for truth and the study of Science. I am indeed happy in trying to live Christian Science, even with the little understanding I have. My earnest desire is that I may live the truth and let my light shine. My heart goes out for those that are in bondage, and I hope and pray that they too may know the truth that makes free. I am very thankful to God, and also grateful to Mrs. Eddy for this teaching.

MRS. C. A. BUNKER, Kansas City, Mo.

✧

[Translated from the German]

In December, 1912, my four-year-old son was taken ill with stomach trouble, and I immediately sent for a physician. The little fellow did not improve, however, and after a few weeks there were some evidences of hemorrhage from the bowels. The physician prescribed a still more rigid diet than the boy had been following, so that he cried from sheer hunger, but when two months had elapsed there was no improvement. The child was nearing death by starvation, and I was losing all hope of his recovery, when I heard of Christian Science for the first time, and in my distress I quickly gained confidence in it and asked a practitioner for treatment, which was lovingly taken up. There was an improvement by the next day, and when on the fourth day the physician came to look after the child, the little fellow met him, saying, "I am all right." These words seemed to make a strange impression on the medical man; he simply could not understand what it all meant, and after a short conversation he left. The boy was given everything to eat, was taken out of doors, and he recovered within a short time.

For this healing I am profoundly thankful to God, and I also feel that I owe a debt of gratitude to Mrs. Eddy, who has shown us the way to Truth.

BERTHA MEGWINOFF, Gatschina, near St. Petersburg, Russia.

✧

Christian Science has relieved me from the fear expressed in constant expectation of death. At times I was afraid to leave the house and walk in the street, owing to a serious heart trouble from which I suffered. Sometimes, too, I could not sleep at night on account of the irregular action of my heart and the roaring noise in my ears. I had had this trouble about ten or twelve years, when I went to see a Christian Science practitioner. I was treated for about three months, and as a result I am in almost perfect health today. I was a slave to the tobacco habit,—what is known as a "cigarette fiend." I had treatment for this, and although it was hard to overcome, it is more than a year since the habit was given up, and the desire for tobacco is gone completely. I have also lost all appetite for intoxicants of any kind.

About three years ago I had a distressing eruption on the face, but with treatment from a practitioner I was healed in a short time, and I have not a scar left. Some time ago I awoke one morning with severe pains in the chest, and also had great difficulty in breathing. I finally got out of bed, dressed, and made my way to a practitioner's home for treatment. After seeing him about half a dozen times, I was perfectly well. I did not ask the practitioner what the ailment was, but a medical friend, upon hearing the symptoms described, told me I had had an attack of acute lung trouble. Any one who has passed through this disease under *materia medica*, will realize what I was spared.

All these physical ailments that have been overcome since I became interested in Christian Science are little, however, in comparison with the mental relief I have received. I now realize the meaning of the word heaven as Mrs. Eddy explains it in Science and Health. I hope this testimony will help some one in need.—HENRY G. KRUKE, Milwaukee, Wis.

✧

I wish to express my gratitude to God for the instantaneous healing which came to us through Christian Science. My mother was taken ill with severe pains in her back, and in fact all over her body, so that she could not move or turn in bed without intense suffering. She asked for Christian Science help, so I telephoned to a practitioner, asking for treatment at once, and very soon my mother said she felt better, and later fell asleep. She slept soundly all night, and in the morning she rose bright and early, dressed herself, and came down-stairs. When I asked her how she was, she said that she was perfectly well, and had no sense of lameness after that awful pain. She was very grateful to have had an instantaneous healing. She had been subject to these attacks and was always confined to her bed for a week or so, but this attack was overcome with one treatment in Christian Science.—MRS. F. G. DEMENT, Berkeley, Cal.

✧

Until a year and a half ago I never knew what it meant to be well. From early girlhood I suffered intensely, and continued to grow worse. Six and a half years ago this prolonged suffering took the form of epilepsy, and for five long, weary years I had attacks of this nature. During the intervals, I went to business, or tried to do so, but alas! right in the midst of my work, wherever I happened to be, I would be seized with a spasm, and before I could be taken home it would be necessary to call in a physician, who would administer an opiate hypodermically and give me other medicine. Then, sometimes after hours of unconsciousness, I would be sent home. This happened countless times, wherever I might be employed.

In February or March, 1911, I had an attack, but on that occasion my employer, fortunately for me, was a Christian Scientist, and upon my return to the office, he advised me to go to a practitioner for treatment. This I did, but without the slightest idea of what Christian Science was and with little hope that there was anything which would help me. In this, however, I was mistaken, for my healing was practically immediate. I steadily grew better, and I can conscientiously say that I am now perfectly well, and happier than I can possibly find words to tell.

Since my healing I have had demonstrations through my own understanding of the truth, both in my home and outside of it. My mother has been healed of a stomach disorder by reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and of many other ills.

To say that I am thankful for these blessings and the increasing understanding of God's love and power, but poorly expresses my feeling.

FAITH AILEEN NEVILLE, New Brighton, Staten Island, N. Y.

✧

When the first message of Christian Science came to me, I was healed of a disease which my familiarity with hospital life told me was incurable, and that must eventually lead me into an insane asylum if I did not pass out during the conflict. At the time referred to I became convinced that God made everything that was made, "and, behold, it was very good." I had read this many times before in the Bible,

Digitized by Google

but Science brought me the light of spiritual understanding, and I was healed from that hour of my most dreaded foe. In less than one week, through the reading of the Bible in the light of the truth which had come to me, I was enabled to lay aside the glasses I had worn for ten years, though I had been ordered never to do without them. From that time to this, over seven years, I have had many beautiful experiences, for which I wish to express my deep gratitude.

It gives me great pleasure to testify to the permanency of my healing. I have never had any symptoms of a return of the disease above referred to since my first healing, but on the contrary I have steadily gained in strength and the ability to do whatever my hand found to do, to say nothing of the greater peace and poise that have come into my life through this experience. I can honestly say I am a well woman, with no fear of any return of old ailments or of acquiring new ones, since we are assured that God heals all our diseases.

I am very thankful to God for Christian Science, for Life, Truth, and Love as demonstrated by our Master, and also grateful for Mrs. Eddy and the spiritual understanding of the Bible, as gained through her teachings.

JENNIE PURCELL SCOTT, West Springfield, Pa.

✧

[Translated from the German]

A feeling of deep gratitude prompts me to testify to the quick healing which I experienced in Christian Science. I had been suffering with abdominal complaint, and in September, 1911, it became worse. This made it necessary for me to go to a physician, who stated that there were two growths which would have to be removed. He sent me to another physician, who advised an immediate operation. To this I consented, though with a heavy heart, and notified my relatives.

It was then that my brother-in-law came to see me and told me of Christian Science, as he had seen wonderful healing performed through its agency in the case of his nine-year-old son. I immediately applied to a Christian Science practitioner, who most willingly granted me the opportunity for a talk on the subject. After this first explanation I became so convinced of the power of divine Love and Truth that I felt as if I had been all made over. Upon returning home I had a sense of joy such as I had never experienced before, and from that hour I have been a well woman, with more endurance in working than I have known for years. I wrote the physician that there was no longer any necessity for an operation, as I had been healed through Christian Science.

My sincere desire is that all people may come to the recognition of the Christ-healing and join in the glorious words of the psalmist: "Bless the Lord, O my soul, and forget not all his benefits." I also wish to give sincere thanks for our Leader, Mrs. Eddy, who made known to us the truth which has taken the veil away from our eyes.

FRAU SOPHIE GANTER, Stuttgart, Germany.

✧ ✧ ✧

My heart's so bright with bloom
For love and spring are here!
I trow there's hardly room—
My heart's so bright with bloom!—
For one more lilac-plume
Or bluebird's silver prayer.
My heart's so bright with bloom
For love and spring are here!

MARY J. ELMENDORF.

From Our Exchanges

[*The Congregationalist and Christian World*]

We are constantly hearing complaints that men in the churches are not given work to do. The fact is, that in all this talk attention is turned in the wrong direction. The principal work, the all-important work for the men of the churches to do, is not within the organization of the churches, but in the world of which they are an essential part. The principal thing for the men of the churches to do for Christ and to promote his kingdom, is not what they can do under the roof of the church or by some delegated authority of the church, but it is what they can do in their places of business and in their social relation to men, in the wages they pay, in the goods they sell, in the votes they cast, in the men they elect to office. When will men learn that the kingdom of God on earth is a society on earth in which the will of God is being done by men in all their social relations!

There is no bigger task, no more important task, for the Christian business man to do than to try to Christianize his business. The man who superintends a Sunday school and is inhuman to his employees, is not serving God. If he thinks he is, it is because he is ignorant. The man who is diligent in promoting missions and at the same time is building up a fortune at the expense of his fellow men, is trying to serve God and mammon. It cannot be done. We will not harshly call him a hypocrite. His mistaken action may be partly due to misguided religious training, but his course of conduct is of the very same nature as that which called forth the condemnation of Christ on scribes and Pharisees. The great work for the Christian men in the churches to do, is to endeavor in every way in their power to make the life of the world which they create, a Christian life.

[Rev. Henry Utterwich in *The Christian Intelligencer*]

Our many creeds, with their minute details, all clothed more or less with authority of some kind and crowned with halos of tradition and preference, have caused or fostered our very deplorable church divisions. If these are to come to an end, and surely they must, there will be need of considerable creed reduction, both in number and in volume. Eventually we shall have to come down, not for uniformity's sake but for the sake of diversity in unity, to that rightly called common faith,—a faith in which we can stand and worship and work together; a faith sincerely professed and practically lived; a faith, not a set of mere beliefs or opinions, of speculations or interpretations, of traditions or observances, once officially approved and having no room for varying private convictions, but an intelligent and hearty acceptance of a few fundamental truths and duties.

[*The Watchman-Examiner*]

The study of theoretical ethics seldom leads to a study of humanity, but the study of practical ethics leads to the paths that converge on the social needs of our generation. He who pursues the former may be so eager in his quest as to be like the Levite who passed by the poor fellow that fell among thieves. Such a man neglects the struggling mass of humanity until he has settled his theory of religion. The other is a good Samaritan who lifts the load of sorrow from his brother's heart, and at personal inconvenience and cost takes him even to his own home. There is great danger that even ministers of Christ may drift within that arctic circle of philosophy where to navigate between the icebergs of doubt and unbelief is more dangerous than to sail among the human derelicts of the social seas.

Digitized by Google

What we need is the vision of God, and what is that but the vision of Christ going about among men, doing good? He did not theorize about God, man, and human destiny. He thrilled men by his touch. He purified them by his presence. He uplifted them by his love. Happy are we if we walk the paths he walked, and in the spirit that he showed; for if we forget ourselves and follow in the way he went, we shall some day surely reach the foothills of the upper country.

[*The Continent*]

Men talk much of having the courage of their convictions, but almost always they are thinking of such courage shown against evil men outside the church. The vastly harder place in which to make good on the courage of one's convictions is against tradition, prejudice, and self-interest embedded in the church itself. Particularly is it hard to stand fast without apology in places where church associates complain that denominational interests are being sacrificed which they are unwilling to give up. It is under stress of this sort that many Christian leaders with agonizing pains persuade themselves that the generous principles which they endorse in theory do not apply to specific cases, where pride, preference, and advantage would have to be surrendered. The shifts by which great men of the church wriggle out from practising in tight-fit instances their fine words about Christian unity, are among the least edifying examples of human infirmity that leave their mark on the church of today.

[*The Christian Register*]

Jesus turned the tables on the Pharisees, who counted him a heretic, by showing theirs to be the essential heresy. They attended scrupulously to petty matters of tithing, down to mint and rue and every herb, and passed over judgment and the love of God. Judgment and the love of God,—these make the true standard of measurement. To put fidelity to matters of doctrine, or undue attention to these matters, negatively as well as positively, ahead of fidelity to truth and love, is to be an infidel in the "household of faith." To draw the lines of fellowship with speculations about Jesus, instead of with substantial sympathy with Jesus, is to domesticate skepticism. To believe in God with such words as others cannot use, and then call them unbelievers, is to plant atheism in the heart.

[*The Living Church*]

Many people imagine that righteousness and sin may be imposed upon a man from without, forgetting that the whole question of sin and righteousness is individual. Environment encloses us with inspiration or temptation, it is true, but there its power ceases. The result depends upon what we do. Experience is still teaching the reformer that we cannot "legislate man into righteousness," or "make man good by removing temptation from him;" for no temptation becomes sin until it becomes a part of us, and no good becomes righteousness until it is exercised from within.

[*The Universalist Leader*]

In the hour when religion stirs the world again to zeal and self-sacrifice, some leader will pass this way, and as we mend our nets or fish from our boats or plow in our fields he will say to us, "Come, follow me," and we will leave all and follow him, not knowing whither we go, and only knowing, with the certain instinct of the soul, that this is the voice of the Spirit and that this is the eternal quest of those who are seeking God.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is to be issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75. This book is now ready for delivery.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $8. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Items of Interest

The coal investigating committee of the New Jersey Assembly has submitted a report to the House that eleven big railroad companies control 87 per cent of the total anthracite mined; that there is a general combination between these companies to fix prices, and that the coal sales companies are owned and controlled by the railroads and are devised by the carriers for the purpose of technically avoiding the commodities clause of the Hepburn railroad act. The report asserts that these companies also control a large proportion of the acreage of all the anthracite producing regions. The committee declares that the prepared sizes of anthracite coal, such as stove, egg, and chestnut, used almost exclusively by the small consumers, are sold at the enormous profit of upward of 800 per cent. The committee further asserts that the business of mining and selling this 87 per cent of hard coal is controlled by a combination of forty men.

The George Walter Vincent Smith art collection, valued at more than one million dollars, has been deeded to the city of Springfield, Mass., by Mr. Smith and his wife. The only conditions are that the collection shall be open to the public at reasonable times, that the donors shall have the right to make substitutions and additions, and that the gift shall be known as the George Walter Vincent Smith collection. This collection, which ranks as one of the best of its kind in the world, represents the life-work of Mr. Smith, and it contains ceramics, arms, bronzes, lacquers, paintings, textiles, laces, books, manuscripts, jades, and notable curios. Many of the objects represent the only examples in existence of certain phases of art, and have been unsuccessfully sought for famous collections in both Europe and America.

Connecticut has spent over fifteen million dollars in nineteen years on what Director Page of the Federal Good Roads Bureau calls, all things considered, the finest state roads system in the United States. The state has some fifteen thousand miles of roadways, of which about a third lend themselves to becoming part of the state system of improved highways. Approximately two thousand miles of the latter are included in the trunk-line system, which gridirons Connecticut, providing town to town communication.

The clerk of the United States court for the district of New Hampshire has received a check for $185,623.05 from the department of justice in Washington. This is to meet the award in the action brought by the United States against the Hastings Lumber Company and others, for the condemnation of land in the north county which is to become a part of the White Mountain forest reserve. The land taken is what is known as Bean's purchase in Coos county, and the tract embraces thirty-three thousand eight hundred acres.

One of the projects now engaging the attention of the Board of Trade of Portland, Maine, aims to obtain a government survey of the harbor and an appropriation of one million dollars for deepening the water and improving the approaches. A large appropriation for similar work was secured by the board in 1872, another of eight hundred and ten thousand dollars in 1896, and one of two hundred and fifty thousand dollars in 1911.

The growth and importance of British military aviation alone, may be gaged from the fact that the constructional and technical staff, apart from pilots, numbers thirteen hundred persons. The work comprises the construction of aeroplanes and spare parts, storage and transport arrangements, problems of design and standardization, depot organization and equipment, and training. There are one hundred and sixty-one aeroplanes now in the service.

Nearly fifty thousand Ohio bituminous coal miners were forced into idleness on April 1, and thirty-eight thousand Pennsylvania miners may be thrown out of employment later because of the failure of the recent Chicago conference between the operators and officials of the United Mine Workers of America to reach a new wage agreement to take the place of the one which has just expired.

Premier Asquith of England, after accepting the resignation from the cabinet of the minister of war, announced in the House of Commons that he himself would take the portfolio and go before his constituency for vindication of his course. These events are the result of the opposition of Ulster to the home rule bill for Ireland.

The move in the United States Senate to cut off the free telegraph privileges accorded senators failed because of lack of a quorum, consequently Senator Robinson of Arkansas has introduced a bill which would limit senatorial mail franking privileges to six hundred dollars in any one year.

The *Times* describes the discovery in a London chemical laboratory of a process for manufacturing synthetically a pure and wholesome milk of high nutritive value from a basis of casein obtained from the soya bean. Excellent cheese and butter, the *Times* says, have been made from this synthetic milk.

The population of the earth is slightly over 1,900,000,000, an increase of 140,000,000 in the past four years, according to the bureau of universal statistics which has just announced its figures for 1912. Asia now has 933,000,000; Europe, 484,000,000; Africa, 188,000,000; America, 187,000,000; Oceanica, 57,000,000.

The Senate of Belgium, by 58 votes to 10, has passed the bill for the preservation of the field of Waterloo. Some thirteen hundred and fifty acres of ground are scheduled for preservation, but the government has permission to acquire more compulsorily.

Statistics recently published by the statistical department of South Australia show the large increase in the area of land under cultivation in this state during the past decade. In 1902-3 the area under crop, fallow, and sown grasses totaled 3,137,175 acres, while in 1912-13 the total area was 4,631,164 acres.

An agreement has been signed at London by representatives of the Chinese government and the Bethlehem Steel Works of the United States, for a loan to China of twenty-five million dollars, and for the building of a naval base at Fuchow, the capital of the province of Fokion.

The so-called telephone trust, by which the Bell system dominates the lines of Washington, Oregon, and Idaho, was dissolved without a contest last week, when a decree accepted by the telephone interests and conceding the government's demands was entered in the federal court.

Virtually a one-way fare for the round trip to the Panama-Pacific exposition in San Francisco and the Panama-California exposition at San Diego, from all points west of Chicago, has been agreed on by the Trans-Continental Passenger Association.

A bill is before the Massachusetts Legislature exempting school children from vaccination on the presentation of a written request from the parents. The bill allows such children to be excluded from school in case an epidemic is declared.

A bill is being promoted by the corporation of the city of London for the formation of a body of trustees in order to acquire the Crystal Palace and the park and maintain them as a public resort and place of recreation.

The opening of the new Commonwealth fish pier at South Boston took place March 30. This marks a new era in the fish business of Boston, which for thirty years has been handled on historic T wharf.

The success of the *London Times* on its first issue at one penny has surpassed every expectation. It is stated that the applications for it exceeded its printing capacities by hundreds of thousands.

The House of Representatives voted to repeal the provision of the Panama canal tolls bill exempting American coastwise vessels from paying tolls. The vote stood 247 to 161. The measure is now before the Senate for action.

The port commission of Seattle, Wash., has determined to apply to the city council for a franchise to build a belt line connecting the various waterfront lines with the East Waterway.

Villa, the rebel leader opposing President Huerta of Mexico, has succeeded, after a desperate battle, in capturing Torreon, the key to the railroads of northern Mexico.

New Jersey has a timbered area of about two million acres, on which the timber is worth about eight million five hundred thousand dollars on the stump.

The superdreadnought Texas, the most powerful battleship in the world, has been delivered to the navy department at the Norfolk (Va.) navy yard.

The unveiling of the Confederate monument in the Confederate section of the Arlington National Cemetery will take place June 4 next.

Going to Heaven

CLARENCE W. CHADWICK

IN the light of reason and revelation the thought of going to a far distant heaven is no longer entertained as in the past. While Christian Science has already worked a radical change in the minds of many relative to the nature of the heavenly kingdom, there are still not a few persons who cling to the belief in a far-away place where all good people are supposed to go after what is called death. Because their ancestors believed in such a heaven they believe in it, and they get no farther until mentally aroused to the fact that heaven is not a material abode, but a state of spiritual consciousness, the consciousness of good, and good only. In Science and Health (p. 242) we read: "There is but one way to heaven, harmony, and Christ in divine Science shows us this way. It is to know no other reality—to have no other consciousness of life—than good, God and His reflection, and to rise superior to the so-called pain and pleasure of the senses."

The moment individual thought is aroused to the nature and requirements of the kingdom of heaven, one begins to "put off the old man," who is constantly looking forward to post-mortem achievements, and to "put on the new man," the understanding of spiritual creation. The spiritual man, God's image and likeness, can have no consciousness of material environment or limitation. Did not the great Teacher of mankind distinctly say, "My kingdom is not of this world"? In spite of popular belief, does not his ascension signify an exalted state of consciousness which transcends all mortal thinking? The wonderful story of Jesus ascending into heaven but expresses the spiritual exaltation which marked the closing scene of the Master's final demonstration of Truth over error. This demonstration should be an incentive to all mankind to begin the all-important work of so purifying human consciousness that it may become worthy of experiencing the joys of the kingdom of heaven on earth.

To wait for a post-mortem transformation, or renewal of the mind, is little else than a license to think as one pleases on earth, with the expectation of an inexplicable future atonement for wrong thinking and doing. Who could read Jesus' parables descriptive of the kingdom of heaven and for one moment imagine heaven to be a far-off abode? Is the stickler for a literal interpretation of the Scriptures satisfied to be told that the heavenly kingdom "is like to a grain of mustard seed, which a man took, and sowed in his field"? Does this point to a very commodious place somewhere in space for saints to inhabit? Is it any more comforting to him to be told that "the kingdom of heaven is like unto a net, that was cast into the sea, and gathered of every kind"? Do not these very parables, as well as the others pertaining to the kingdom, reveal unmistakably the thought of separation in individual consciousness between the tares and the wheat, of a mental purification, growth, development, and preparation for a present-day enjoyment of spiritual things? Do they not emphasize the fact that "the kingdom of heaven is at hand"? that it is something to be realized here and now, and that it is "within" and not without?

When questioned by the Pharisees as to "when the kingdom of God should come," Jesus replied, "The kingdom of God cometh not with observation;" and continuing he said, "The kingdom of God is within you,"—or "among you," to use the marginal rendering. If the kingdom was among them and they could not see it, was it a place or a condition? If heaven is a place, the physical senses would be cognizant of the fact. But being a state of pure or spiritual consciousness, the testimony of these senses cannot define or locate this "secret place of the most High." A careful study of the Bible in the light of Christian Science reveals no possible occasion for belief in a circumscribed heaven, much less for the belief that the arch enemy of mankind must be given the right of way in human experience before God's kingdom can be reached.

In Hebrews we read of those "who through fear of death were all their lifetime subject to bondage." Why this fear and suffering if death is the gateway to the kingdom? Because of the uncertainty of this experience which, according to Bible teaching, is wholly an invention of the father of lies; and because no human advocate of this invention has ever been able to furnish any convincing proof of a post-mortem paradise, mortals have entered into a state of uncertainty and fear which is today responsible for untold human suffering. The pure teachings of Christian Science, however, enable awakening humanity to clasp God's right hand and to go forth armed with the omnipotence and omnipresence of Life to conquer this gigantic deception of the ages, "the last enemy that shall be destroyed." This work may not be done in a day, but it can be begun at once, the door to the kingdom of heaven may be opened wide, and moral and physical healing speedily result. Christian Science has proven a thousand times over that a whole multitude of physical and mental disorders have taken a hasty departure the moment the true idea or conception of the kingdom of heaven has been revealed to individual consciousness.

To the Christian Scientist, "going to heaven" is purely a mental process, by which the tares, or wrong thoughts, are separated from the wheat, or good thoughts, in human consciousness. This process is advanced by the unceasing prayer of watchfulness, whereby human consciousness becomes purged of all thoughts of death, disease, suffering, poverty, and uncleanness, and the "peace, be still," of the sacred Word brings the realizing sense of the presence and protection of the power of God. Heaven is thus proved to be "not meat and drink," nothing which carnal sense can enjoy, "but righteousness, and peace, and joy in the Holy Ghost." The journey to be traveled is mental, and the more one travels the more does he find himself within the kingdom here and now. Christian Scientists are supremely thankful and happy because they have caught a glimpse of the new heaven and the new earth spoken of in Revelation, which reveals the "many mansions," or spiritual states of consciousness, in the Father's house. They are optimistic because they have positive assurance and proof that the goal of spiritual

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

perfection can and will in due time be reached. They are becoming more and more proficient in the seemingly lost art of looking for good, and good only, and looking for it here and now. This means constant progress in the mental realm; but never does an individual reach a place where he can cease being identified with the infinite activity of good. God's "dwelling place" is heaven, but this heaven is everywhere; it is the sum total of spiritual existence, the infinitude of divine Mind. Mrs. Eddy calls it "The atmosphere of Spirit, where Soul is supreme" (Science and Health, p. 590).

God saith, "Where is the house that ye build unto me? and where is the place of my rest?" Infinite Love has no local habitation or name. Divine Love is the All in all of being, and the real man is the image and likeness of this Love, coexistent with his creator. Awakening to this great spiritual truth, and laying hold of the unseen facts of eternal existence, is the only "going to heaven" that will ever take place. Awakening from the dry dream of mortal experience, we find ourselves to be the children of God and already within the heavenly portals.

Testing Time

KATHARINE W. PERSON, M.A.

Heaven has brought a season of tests. Consciously or unconsciously, whether we like it or not, each one of us is constantly being "tried out." The true builder is urged by unceasing words to test his every step, while through sickness and sinful days there is the test of every day success and every passion. In many matters [illegible] when apparently few doors appear open, every hour's work is the test of character and purpose. Character and purpose express the deepest and most [illegible]

[illegible]

[illegible]

[

ter's purpose in not questioning those he healed as to their disease or its symptoms, and his marvelous skill in demanding neither obedience to hygienic law, nor prescribing drugs to support the divine power which heals" (p. 25).

While the Christian Scientist is striving, in accordance with the Manual of The Mother Church (Article 30), to demonstrate by his or her practice that the truth taught in Christian Science heals the sick, the state laws and municipal ordinances in regard to what are deemed infectious or contagious conditions demand recognition. To ignore them is to invite criticism and undesirable publicity, if not prosecution. The majority of adults who consult a Christian Science practitioner have failed to find help in *materia medica*, and they are, as a rule, only too familiar with the names and details of their ailments. But when conditions appear to be present, or are suspected, which ordinary judgment or past experience would suggest as coming within the scope of these statutes, the latter should be scrupulously complied with. In this connection we should carefully weigh our Leader's counsel in the article "Wherefore?" which appears in "The First Church of Christ, Scientist, and Miscellany" (p. 227), wherein she says, "Christian Scientists should be influenced by their own judgment in taking a case of malignant disease. They should consider well their ability to cope with the claim, and they should not overlook the fact that there are those lying in wait to catch them in their sayings; neither should they forget that in their practice, whether successful or not, *they are not specially protected by law.*"

A Christian Scientist does not "treat" a patient in the ordinary sense of the word. His practice is the use of prayer, the "prayer of faith" which the apostle James declared "shall save the sick;" the prayer which Christ Jesus indicated when he said, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." This is the prayer of which Mrs. Eddy writes in the opening lines of the first chapter of Science and Health, and experience has amply proved this metaphysical practice to be efficient and sufficient for all human needs.

It should not be forgotten that the practice of Christian Science is the practice of the tenets of The Mother Church, The First Church of Christ, Scientist, in obedience to the command of Christ Jesus to "heal the sick," and in faith in his promise that "these signs [the healing of sin and of sickness] shall follow them that believe." Nor should we, as Christian Scientists, ever fail to realize that the measure of our success in this practice is dependent especially upon our fidelity to the last of these tenets, wherein "we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure" (Science and Health, p. 497). Obedient to our Leader's instructions, we practise our religion within our constitutional rights, observant of our obligations and appreciative of our priceless privileges.

Courage and Faith

ALICE EDMUNDS

THE dictionary describes courage as "the quality that enables men to meet dangers without fear." But such an explanation is ambiguous, and may even be misleading to the seeker after Truth; for unless courage is the outcome of spiritual strength and not merely a human quality, it tends to engender an arrogant, headstrong, unlovely character, besides being liable to fail at any point for lack of divine authority. Indeed, a material sense of courage may easily become a veritable snare to tempt men to break the first commandment, "Thou shalt have no other gods before me," and as such it is a danger to one's "mind, body, or estate." If a man believes that because of any personal intelligence, will, position, or power he is fitted to face the dangers and difficulties of human experience, he is gravely mistaken, and will find it out sooner or later, probably at the price of some bitter experience. Fortunately, such experience is not necessarily the lot of any one of us, for man, made in the image of God, is endowed by Him with the inalienable right of "dominion." It is through this God-given right to govern and control all the conditions of our own life, as revealed and demonstrated in Christian Science, that each of us can lay claim to courage. Courage, then, to be legitimate and reliable, must be born of faith in God, faith that He can and will maintain His own law in and through man. In Science and Health (p. 423) we are told that when one relies upon divine Mind, he works "with the stimulus of courage and conscious power."

Now, if any one doubts the effect of spiritual courage as a help to solve his difficulties, of whatever nature they may be, he has only to refer to the Bible to find almost endless proofs of what it has already achieved for mankind. Let us review three notable instances. First, we may recall how Shadrach, Meshach, and Abednego, though seemingly helpless and at the mercy of a ruthless tyrant, yet had the courage, when threatened with death by fire, to declare, "Our God whom we serve is able to deliver us from the burning fiery furnace, and he will deliver us out of thine hand, O king." In undeniable proof that their courage was justified and in direct accordance with the will of the Almighty, we further read: "And the princes, governors, and captains, and the king's counselors, being gathered together, saw these men, upon whose bodies the fire had no power, nor was a hair of their head singed, neither were their coats changed, nor the smell of fire had passed on them."

Again, perhaps one of the most dramatic descriptions of courage ever written is that of the historian Josephus, in recounting the crossing of the Red sea by Moses and the Israelites. Having described the hopeless position into which the Egyptians had driven Moses, he tells how, "though the multitude looked fiercely at him," he "despised all danger, out of his trust in God." Then follows Moses' bold avowal, or prayer to God, clearly showing the source of his courage, beginning, "Thou art not ignorant, O Lord, that it is beyond human strength and human contrivance to avoid the difficulties we are now under, but it must be Thy work altogether to procure deliverance to this army which has left Egypt at Thy appointment," and ending: "We are in a helpless state, but still it is a place that Thou possessest; still the sea is Thine, the mountains also that enclose us are Thine, so that these mountains will open themselves, if Thou commandest them, and the sea also if Thou commandest it, will become dry land. Nay, we might escape by a flight through the air if Thou shouldst determine we should have that way of salvation." Do we wonder that such heart-whole confidence resulted in the triumphant victory of Moses and his whole army over otherwise insurmountable obstacles?

For a further illustration let us turn to one of many incidents in the life of Jesus to find an example of that lofty courage which recognizes neither hindrance nor danger as aught but an opportunity to prove the omnipotence of God and the reflected dominion of His Son. Lazarus had been dead four days, and his sister seemed to imply that Jesus was to blame for not preventing his death, while others either doubted or resented his asserted power to raise up those who

Digitized by Google

had died. Oblivious to all threatening and hostile conditions, Jesus looked to God alone for strength as he rejoicingly said: "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." Then in unequivocal demonstration of divine power he turned and commanded the dead to arise, and "he that was dead came forth."

With examples such as these before us, we surely should not be guilty of underestimating the vital value of a courageous faith as the true motive power with which to meet and master life's problems. If any further incentive is needed to inspire and incite us to a more alert realization of this, we have but to remind ourselves of that individual God-given dominion which it is our right and duty to claim, to which St. Paul referred when he wrote, "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." It was the attainment of this sense of privilege and power which enabled Mrs. Eddy to stand so nobly before men and bravely face those situations and issues which both tested and established the clearness of her understanding, the tenacity of her faith, and the strength of her courage.

The Inner Temple

CASSIUS M. LOOMIS

Home building, like the building of a city, has its problems of deepest significance. A new house, for example, is carefully planned, the architect gives of his best, the builder tries to excel in his calling, and the owner finally takes possession. Nothing that skilful handicraft can devise is omitted. Because of its newness, its appointments, its outlook, the place is a model in design and workmanship. Still, there seems to be something lacking, something that brings to remembrance the home which has just been vacated. Perhaps it was old fashioned, the windows and doors time-worn and sagging, the thresholds paintless, but within that old home, the scene of countless struggles, victories, and defeats, a character temple had been builded of rarest worth.

Homes that constantly reflect the spirit of divine Love are living evidences of God's word made manifest. One needs no other shrine of domestic loyalty. The most searching, just, and rational laws known to men have been enacted to protect, uplift, and perpetuate the home. But can any human law, however drastic, do this? God's law requires no reenactment; it needs but to be lived. A lavish display of riches, rare works of art, liveried servants, or high social standing, have little in common with the temple we build within our homes, however humble or stately they may be.

To carry this line of thought farther, what of our church edifice? Frequently do we hear the regrettable remark: "Oh, but we used to have such dear heart to heart gatherings in our little church over yonder." Yes, we do truly miss those old-time associations, when our warmest desires and fervent prayers were united in the memorable struggle of building our first house of worship. That early undertaking seemed almost like an untimely venture; some shrank from it, while others forgot fearfully afraid, but at last the simple chapel was dedicated. So long and earnestly had we striven to make the dedication clean that even before the work was complete there had been at once for us the birth of love, forbearance, unity of purpose and unwavering faith in God. Perhaps it will take us many years to build again as inner temple, but it must be and more valued a church of love.

The same logic obtains in church building as in home building. In both instances Christian Science is the solution for every problem. In our decisions and words carefully guarded we endeavor to exhibit love and kindness to all, assuring freedom and fellowship to every worker and thinker, thus expressing the one Mind in all that comes to our hands to do, we may lay the foundation-stones upon which the true home or church is builded. Only when our thoughts and acts are truly Christian can we avoid the jealousy and envy which so hinder all good work. When this inner temple is found to tower above the mass of brick and mortar, we will truly have "the structure of Truth and Love," for it "rests upon and proceeds from divine Principle" (Science and Health, p. 583).

Christian Science has made many a home happy and prosperous, but not through mere church polity or religious formulas. Every earnest worker in the field of healing has witnessed the change which has come into families when any of their members have asked for treatment. Truly it is the leaven that worketh wonders. The husband or brother drops his habits of profanity or tobacco using, perhaps, or the irritable sister or mother ceases gradually to complain, for these things do not seem to fit into the amended family relationships. Not a word upon Christian Science need be advanced, not a word of advice offered, yet somehow a change for the better is taking place hourly. The inner temple is not builded of words, but of constant right thinking and doing. While building thus, our dependence upon the kind of material structure grows less, and we feel that we are profiting by the Master's injunction, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

When our altar fires burn brightly and lovingly, then the stranded wayfarers enter our gates more eagerly and become grateful recipients of healing and consolation. Our church doors open wide to those who are truly seekers for the truth; but the complete demonstration cannot be made if any personal conflict is present. A single word of inharmony or manifestation of self may turn away a dozen seekers of the light. Can we afford to let self-interest or self-assertion creep in and hinder the upbuilding of the inner temple "not made with hands"? Many a poet and philosopher has stolen away from the Babel of worldly pomp and display to worship quietly and alone at the shrine of the inner temple, where only the sunlight of divine Love can enter. For such worship no stately church edifice or luxurious home is needed. It is ever a comfort to know that in one's domestic or church home there is a retreat where thanks to a loving Father can be daily offered, each word being but an expression of the real substance out of which the inner temple is builded. When Shakespeare wrote,—

> If circumstances lead me, I will find
> Where truth is hid, though it were hid indeed
> Within the center,—

surely his thoughts must have strayed toward this holy place and deep down in this inner sanctuary of worship.

[Written for the Sentinel]

Spring

MARIE RUSSELL

Today the gentle violet
A soft assurance bears,
Because the morning sun arose,
And dried her dewy tears.

Today this grateful heart of mine
Exhibits a joy supreme,
Because the truth has come to me,
And swept away the dream.

Selected Articles

[Frederick Dixon in *The Telegram*, Weymouth, England]

A recent critic says, with the courtly grace which distinguishes all his letters, that I see evil in matter because I have an evil mind, and then he adds, "Blessed are the meek: for they shall inherit the earth." This critic will have it that matter is real. He says I argue that it does not concern whether a man is personally clean or not. Surely he is mixing me up with Sir Almroth Wright, who has been telling an awestruck audience of materialists like the critic, of the dangers of washing, and how the microbe respects only the thoroughly dirty. After all, if the image and likeness of God was made out of dust, he must at least be dusty. Yet the critic speaks of "God manifest in the flesh, the express image of His person," which if it means anything as he uses it, means that God, too, was made out of dust. As a matter of fact, if the critic would give up, as I have already explained, running together unrelated texts from different parts of the Bible, he might learn, by reference to the Revised Version, that it is not "God was manifest," but "He who was manifested." Then he might pursue his studies as to how that alteration came about.

Possibly the most extraordinary of all the critic's arguments in support of the reality of matter is his use of the text, "The kingdom of God is within you," which, he ingenuously insists, proves Mrs. Eddy to be wrong, by proving that God does dwell in matter. Now he insists that the human being is the image and likeness of God; consequently God, in the inexorable logic of Matthew Arnold, is a huge non-natural man. This infinite man dwells, however, within the separate bodies of millions of finite human beings, and moreover he has taken up his abode in the flesh, which Jesus says "profiteth nothing," and Paul says cannot be pleasing to Him. The critic, in short, while striving to prove Christian Science pantheistic, reveals himself a paragon among pantheists; for if an infinite Deity dwells in matter, He must dwell in all matter, and here indeed is pantheism naked and unashamed.

And now, putting aside the critic's extraordinary arguments, may I try to explain something of what Christian Science does teach on the subject of the unreality of material phenomena? First of all, it is necessary to define the word "real" as it is used in Christian Science, and, having defined it, to remember that in dealing with Christian Science you are compelled to adhere to that definition. If, for instance, you were allowed to alter Euclid's definitions, there would be no difficulty in proving that he wrote an almost unthinkable amount of nonsense. The word "real," then, is used by Mrs. Eddy in Christian Science as a synonym for spiritual. The only reality is God, divine Mind, and the spiritual creation. The mortal or carnal mind, with all the material phenomena produced by it, Christian Science teaches, is nothing but the negation of the spiritual or real. A lie is never a truth, and consequently never a reality, though, so long as it is undetected, it may pass for such. In order, however, to tell a lie, you must have a truth to tell it about, and consequently the delusion of materiality is the lie about the spiritual reality. Now, the only way in which a lie may be known for a lie, and so cease to exercise even a suppositious relative actuality, is by a knowledge of the truth. That was why Jesus said, "Ye shall know the truth, and the truth shall make you free,"—free from what, except the belief in the lie which was binding the world with the chains of sorrow, sickness, and sin?

I know that the critic has nearly as great a contempt for scholars as he has for Christian Scientists, but if it were not for the knowledge of Greek and Latin possessed by the scholars, he would not have that English version of the Bible from which he quotes so copiously. I know also that he has a great contempt for bishops, but there have been bishops who have been great scholars, and one of these is Dr. Westcott, who, with the help of Dr. Hort, prepared the text which was the basis of the revision of the King James Version. Now, Dr. Westcott, speaking of the peculiar use of the definite article in the Greek text of the gospel of John, shows that in translating the text just quoted, a line is drawn between absolute and relative truth, and that when John recorded the words of Jesus, "Ye shall know the truth, and the truth shall make you free," he meant that Jesus had said, Ye shall know the absolute truth, and that knowledge shall make you free,—again free from what, but a belief in relative truth? Certain exponents of natural science have never hesitated to declare that man's knowledge must be confined to secondary or relative facts, and that primary or absolute facts are beyond discussion. Such a dictum confines science to secondary facts, yet, once again, the Greek text of the Bible speaks constantly of scientific knowledge as opposed to ordinary knowledge, and it sums this up in the epistle of Peter in the phrase, a scientific knowledge of God. A scientific knowledge of God is necessarily that absolute or scientific knowledge of the absolute which Jesus declared would make the world free.

Now, the teaching of the idealistic school of natural science is that matter is unreal, inasmuch as it is merely a phenomenon produced, as the Berkeleians insist, by mind, or, as the later idealists insist, by energy. This teaching of the unreality of matter is as old in Europe as Plato, and it has been handed down through the Conceptualists by Abélard, and through bishops of the Church of England, like Berkeley, to the present time. If Christian Science, therefore, stopped here, Mrs. Eddy would have added nothing to mankind's knowledge of Spirit, but would have joined the ranks of that great body of natural science idealists who, while proclaiming the unreality of matter, act consistently on the supposition that it is real.

What Mrs. Eddy did was to insist that the theory of the unreality of matter should be carried to its logical conclusion, and that its logical conclusion was to be found, not in the treatises of Plato, of Abélard, of Berkeley, or of Ostwald, but in the words of Jesus of Nazareth, "Ye shall know the truth, and the truth shall make you free." That is to say, not only is matter merely a product of the material mind or energy, and so unreal from the point of view of natural science, but this material mind or energy is itself the negation of divine Mind and spiritual activity. Just as the natural scientist then declared material energy to be the only reality, Mrs. Eddy insisted that spiritual energy is the only reality, and that this spiritual energy is the divine Mind, or God.

Jesus came to teach humanity the scientific truth which was to free the world, and the demonstrations of the truth of his teaching were the miracles or object-lessons in support of Christianity. He certainly did not walk on the water, feed the multitude, or raise the dead because he believed matter to be real. He did these things because he knew that matter was nothing but a mental effect, and that that mental effect was nothing but the lie about a spiritual actuality. His teaching, then, was to give mankind his own understanding of Truth, the Mind of Christ, or the Mind that was in Christ Jesus. That was why he said, "The kingdom of God

[illegible]

able to put into practice in proportion to their understanding of spiritual causation. This method of healing, which was discovered by Mrs. Eddy in 1866 and is fully explained by her in the Christian Science text-book, "Science and Health with Key to the Scriptures," is entirely scientific, being based on definite knowledge of spiritual law, and it can be learned by any one who is prepared to follow the commands of the Master.

What we would especially like to refer to now, are these two sentences from your reflections: "Christian Scientists have a simple method of curing colds and other maladies. They merely affirm that they are not suffering from the special disease which deluded people believe them to possess." With the first of these sentences we entirely agree. There is no method of healing at all comparable with Christian Science in the matter of simplicity. It can be used by children when they learn it. They can apply the Principle that heals, just as they may work out a problem in arithmetic when they know the rules underlying the problem, but not until then. With regard to the second sentence, a Christian Scientist would never think of expressing it that way. Let me quote what Mrs. Eddy says quite pertinently on page 460 of Science and Health, "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction." She adds, "It is therefore to be dealt with through right apprehension of the truth of being."

The mere denial of suffering will never heal suffering. The patient's thought has to be directed away from the false material sense of things, which is at the root of all the world's misery, to the spiritual understanding of reality as it pertains to God and himself. He has to learn about the perfection of spiritual being, about the omnipresent harmony which this being manifests, and that the inharmony which he may believe is afflicting him, under the name of whatsoever disease known to man, is not of God, has no mandate from the Divine Being, and is supported by no law of God's appointing.

Thus all healings in Christian Science come about through the knowledge of absolute truth, to which Jesus referred in these words of tremendous import: "Ye shall know the truth, and the truth shall make you free."

✧

[Nellie Granville in *Pittsburgh* (Pa.) *Dispatch*]

Mankind has not yet arrived at that state of perfection demanded by Christ Jesus, "Be ye therefore perfect, even as your Father which is in heaven is perfect," but we are daily striving for that Mind "which was also in Christ Jesus," knowing that through that Mind alone it is possible to attain perfection. Our critic says, if we accept one half of a Biblical statement, we must also accept the other half. We agree with him in this respect. Therefore, when Christ commands his followers to preach the gospel and heal the sick, why should we ignore the latter half of that command; and why should we be cruelly abused by the critic for trying to obey it?

✧

[Willis D. McKinstry in *The Hutchinson* (Kan.) *Gazette*]

In a recent issue we notice that Dr. —— continues his stock abuse of Christian Science. It is clear that sermons filled with vindictiveness and ridicule are sadly lacking in the one thing needful,—the spirit of brotherly love. Christianity is a vital subject, and its truths are not imparted through a spirit of revengefulness against those who do not follow the old beaten paths of sectarianism. Today as never before, humanity is seeking divine wisdom, desiring a true knowledge of God and His Christ. This hungering for righteousness can be satisfied only through the full understanding of scientific truth, the whole garment of the risen Christ, which heals sorrow and disease as well as sin.

As God is Truth, He is knowable, and those attending church services, who are honestly and earnestly seeking to know Him, are entitled to that scientific and demonstrable explanation of the operation of His law which will meet their human need. Christian Science imparts to mankind a knowledge of our spiritual relation to God, and lifts us above a blind trust into the faith of understanding, which assures us that prayer and its answer coexist. Jesus said: "Therefore I say unto you, What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them."

Christian Science is capable of proof. Any one who lays aside his human prejudices and honestly studies the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, can prove for himself that this religion is both Christian and scientific; also that to be a genuine Christian one must necessarily be a Scientist. Webster defines the term Christian as an adherent of Christianity, one whose inward and outward life is conformed to the doctrines of Christ. He also defines science as knowledge classified and made available in work, in life, and in the search for truth.

✧

[Thos. MacPeat in *Philadelphia* (Pa.) *Telegram*]

Some years ago I picked up in a library a *Christian Science Sentinel* that contained these words: "Truth and love: there is no other healer." Could we not all begin the practice of these qualities at once? Suppose we all practise truth and love on our wives, and the wives practise truth and love on their husbands, and both practise these qualities on the children. If we all keep up the practice till it becomes a fixed habit, and we practise it unconsciously on every one, would this not result in a bloodless revolution that would stagger the world with its swiftness and beneficence?

City of the King

DAVID E. ANTHONY

O ROYAL city of the glorious King,
Thy radiant splendor, born of Love divine,
Nor sun nor moon to thee can changing bring,
Since God's own everlasting day is thine:
As boundless are thy beauteous jasper walls,
Thrice iridescent as the shimmering sea
When on each crest the noontide sunbeam falls,
And limitless as His eternity.

Thy massive gates do ever stand ajar,
That he who o'er life's troubled sea may roam,
Shall see, take heart, and though he journey far,
Within thy welcoming walls may find a home,—
There find a King whose love doth compass all,
And where the terror of the night's alarms
Can never come, for night can never fall,
And rest within His everlasting arms.

O Love divine, teach me to know Thy ways,
To feel that perfect love which casts out fear,
To voice a hymn of everlasting praise,
And prove that Love and Truth are ever here!
Then from my mortal eyes the veil shall fall,
Then shall I see and, seeing, understand
That Thou, immortal Love, art All-in-all,
The Father, Mother, King in that blest land.

Editorial

"Our Father"

WHAT seems to be the chief stumbling-block in the minds of many people, when it comes to the acceptance of Christian Science, is an unwillingness to trust God, to cut loose from all material dependences and lean wholly on the divine promises. Just as the little child who has been nurtured in love instinctively turns to father or mother for the supply of every need, for the quieting of every fear, for the soothing of every sorrow, why should not we, as professed followers of him who taught us to say "Our Father," turn to our Father-Mother God with the same confidence that He will hear and answer? Are we not His children, and have we not our elder brother's assurance, "Your heavenly Father knoweth that ye have need of all these things,"—need of health, happiness, and provision for daily bread?

Surely, if we may accept the apostle's declaration that "he is faithful that promised," there is no reason why we may not continually rest in the security of divine protection and guidance, always providing that we fulfil the conditions under which they are granted. Why should we be anxious or troubled about the future, if we can claim for our own the promise which reads, "Trust in the Lord, and do good; so shalt thou dwell in the land, and verily thou shalt be fed"? or that of the Master: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you"?

What we most need, then, is an unswerving trust in God as veritably our Father, more loving and tender than any earthly parent could be, and one who bestows on us only good and perfect gifts. This is the trust which Christian Science teaches, and it is the fruit of obedience to that all-comprehensive commandment, "Thou shalt have no other gods before me." We are not to acknowledge or believe in any other power than God, omnipotent, omniscient, and omnipresent good, because it is when the door is opened to fear and doubt, when we have neglected to be clothed upon with "the panoply of Love" (Science and Health, p. 571), that we find ourselves in difficulties and remember too late our Leader's wise counsel to bar out these would-be destroyers of our peace.

One reason why the child thought is so quickly responsive to Christian Science treatment is because of its innate trustfulness, its ready acceptance of what Mrs. Eddy, speaking of the tractability of children, characterizes as "the simple verities that will make them happy and good" (Science and Health, p. 236). It is not always easy for the adult whose thought is imbued with the beliefs and prejudices which have been handed down from one generation to another, to break away, to become as a little child, but once he has done this and proved for himself, in even the slightest degree, that God is "our Father" and that it is his privilege to claim as did David, "The Lord is my shepherd; I shall not want,"—it is then he wonders he could ever have doubted or feared.

The Scriptures abound with proofs of God's loving care for His own, and that He has no need of carnal weapons or material dependences for the overcoming of everything that is unlike good. To those that yield obedience to divine law, whose trust is in Him who is without "variableness, neither shadow of turning," God is indeed a "refuge and strength, a very present help in trouble." Blessed indeed are those children of the present generation who from their earliest years have been taught to "have no other gods," for they will be spared much that their elders have had to learn in the hard school of experience,—to trust God with their every need. Surely there is abiding comfort for every Christian Scientist in the strong assurance which Mrs. Eddy gives us when she says (Miscellaneous Writings, p. 307): "It is enough that divine Love is an ever-present help; and if you wait, never doubting, you will have all you need every moment." Why should we hesitate, then, to trust omnipresent Love,—"our Father"?

ARCHIBALD MCLELLAN.

"Who maketh thee to differ?"

IN the fourth chapter of I Corinthians, Paul warns his readers against being "puffed up," and then he asks the searching question which we may each ask ourselves with profit, "Who maketh thee to differ from another? and what hast thou that thou didst not receive?" This was addressed mainly to recent converts to Christianity, some of whom were Jews, others Greeks, and it is very likely that the former may have prided themselves upon their greater morality, as inculcated in the teachings of Moses. Be this as it may, Paul impersonalizes his query by making it tremendously individual, appealing as it were "to every man's conscience in the sight of God," as he says elsewhere.

At a first glance it might seem as if individual responsibility was repudiated in the question asked, but this is far from being the case, as we see in the light of Christian Science. A fundamental proposition of Mrs. Eddy's teaching is that God, infinite good, is the only creator, and that the real man possesses nothing which he does not receive from God. The Bible tells us that God made nothing which does not express the divine nature; hence man could never receive anything from God which is not good. Then let us slightly change Paul's question, and make it read, What maketh thee to differ from another? That there is a difference between men, to mortal sense, and a great difference, is undeniable. Some are sick and others sinful, or rather all mortals are sick and sinful at times, thus falling short of the divine standard, which always demands perfection.

The one, however, who is above the plane of gross wrongdoing, perhaps never pauses to ask himself what it is that makes him different from the brother that is held to be a criminal. If he thinks it is goodness inherent in himself, he is greatly mistaken. He has nothing which he has not received, either as the divine nature reflected through spiritual understanding and coming to him in the process called the "new birth," or as an improved belief of morality which is the result of early training and favorable environment. This means that one differs from another in so far as he has in some way received an understanding of divine law and lets it govern his thoughts, words, and actions. He may not be known as a religious man, but just the same he was fortunate enough to have inculcated in the formation of his character a love of what is right, and this can no more be shaken than can the eternal hills.

Here be it said that a genuinely good man would never pride himself upon his superiority to others; his very sense of justice would make this impossible! He would admit that he had in the truest sense "received" all that he possesses of sound morality, and instead of being vain he would be thankful, a discrimination which should apply equally in the case of health. Some people pride themselves upon a kind of health which they regard as a personal possession, but a higher sense is gained as we ponder these words of our revered Leader: "The pure and exalting influence of the divine Mind on the body is requisite" (Science and Health, p. 383). As this is realized we know that health is a gift of divine Love which all may "receive" when they surrender the belief that health

Digitized by Google

is dependent upon matter. The one who understands the divine source of health and holiness undoubtedly differs from the one who does not, but his joy is to help the brother who has not grasped the true ideal, to do so, and thus be a man, reflecting health and holiness.

Paul said he was willing to be considered a fool so he could do this,—so he could help to make the weak strong and the despised honorable, and all this "for Christ's sake." The same privilege is ours, when we see what makes us, at our best, differ from the mortal counterfeit, and gladly acknowledge that all the good we have, comes from the Love that loves and blesses all.

ANNIE M. KNOTT.

"The salt of the earth"

NOTHING is more noticeable, in studying the words of Christ Jesus, than the fulness and finality with which he expressed himself in a few words, and this is well illustrated in that remarkable saying to his disciples, "Ye are the salt of the earth." The knowledge of the preservative nature of salt is as universal as its use, and to make it a synonym for the virtues of Christian character is at once to open the door of thought to many interesting analogies.

To the Christian Scientist the intimation that the earth is to be saved by something unlike itself is perfectly intelligible. He has learned that all earthiness is made up of the latent or assertive false beliefs of human sense, and that it is expressing the substanceless instability of its nature in the disease and decay which are forever featuring its history. He understands, therefore, that salvation means the appearing in consciousness of that light of Truth which dispels the darkness of its past untruth, and that in this declaration Jesus was addressing purified human sense, or man.

All mankind are confronted today with tremendous problems. In every land men are earnestly seeking relief from the fact or fear of disease, want, and war. Singly or together, these have constituted the reef on which human hope and happiness have usually been wrecked, and though the heroism of the effort which is being put forth to save the situation is very splendid, it is discouragingly futile. Unless, therefore, one has come to realize in some degree that there is no sufficient reason for believing in the substantiality and power of evil, and that it can be defeated in the way which Christ Jesus came to exemplify, it is simply impossible for him to look upon life's tragedy, in its world-wide proportions, and escape a sense of despair. The moment one enters the day-dawn of Christian Science, however, and perceives that the earth-clouds are vanishing before the steadily advancing light of spiritual apprehension, then he can take heart. He perceives that man, the Christ-consciousness, can become the savior of men, of doubting and dismayed human sense. To truth, error has no place or power, and it is this fact that crowns and commissions the truth-loving.

"Ye are the salt"! There is no denying the predication here, though we may shrink from identifying ourselves with the "ye," hesitate to assert the prerogatives and power of the true selfhood. If so, we do well to remember that the Wayshower affirmed he could not deny himself, that he was at-one with Truth. And how this speaks for the difference between his sense of selfhood and that which would hinder our entry into our place and privilege as "joint-heirs with Christ"! The assertion that spiritual consciousness is "the salt" that will save the race, identifies it as the Christ, and this is one of the most significant of all the Master's teachings. The narrative of individual consciousness thus becomes the epitome of history. "The earth" is the belief of good and evil which is to be redeemed, and the Christ is the divine idea which dispels error, establishes the selfhood of right consciousness. This is salvation. How intelligible and inspiring!

Greater public spirit, greater statesmanship, greater unselfishness, more enlightenment for the masses, a better administration of justice,—all these are to be approved and encouraged. They express in some degree the corrective activities of Truth made manifest through the channels of human sense; but it is the demonstrable knowledge of God, the "Christ in you," as St. Paul has said, which is to solve our problem, and so the world problem. The proof of the verity of Christian Science in the defeat of disease bases the philosophy of human redemption, the recognized universality and persistence of truth thus becoming the assurance of ultimate freedom and eternal life. This is our gospel, and it will become our demonstration in the measure that we escape from the self-negation of false sense, and in daring humility realize and exercise that spiritual authority which was supreme in Christ Jesus, and which he honored in us when he said, "Ye are the salt of the earth."

JOHN B. WILLIS.

Among the Churches

Current Notes

LONG BEACH, CAL.—The magnificent temple of worship erected by First Church of Christ, Scientist, of Long Beach, now stands complete. The members of the church are happy in the fruition of their hopes and plans in the ownership of one of the finest edifices in southern California. The classic structure speaks eloquently in itself of the progress made since the first Christian Science Association was formed at Long Beach in a little hall at Third street and Cedar avenue. The edifice, located on the east side of Elm avenue, between Fourth and Fifth streets, stands upon a site valued at more than ten thousand dollars, and the structure itself, including the pipe-organ and furnishings, represents an additional expenditure of eighty-five thousand dollars. The seating capacity of the Sunday school department is one thousand, while the auditorium seats twelve hundred.

The Daily Telegram.

CHICAGO, ILL.—At a meeting held for the purpose last night [March 10], a new Christian Science church was organized, which will be known as Thirteenth Church of Christ, Scientist, of Chicago. By-laws were adopted and officers elected. Services will be held in the near future at some point on "The Ridge," between Beverly hills and Blue island. The new organization, which consists of members who withdrew from Fourth Church of Christ, Scientist, was made necessary because of the overcrowded condition at the services of that church for some time past.—*Chicago Tribune.*

EUGENE, ORE.—An option on a site has been taken and plans are being considered for a church home for First Church of Christ, Scientist, and it is hoped that the building will be erected this summer. The former place of meeting for the Scientists was destroyed by fire five years ago, and since that time services have been held in rented halls. The church now has an active membership of nearly fifty.

Portland Oregonian.

SAN DIEGO, CAL.—A unique feature of the industrial fair was a booth occupied by the local representatives of *The Christian Science Monitor.—San Diego Union.*

The Lectures

Manchester, England

A very large audience assembled at the Manchester Town Hall to hear an address on Christian Science by Prof. Herman S. Hering. Dr. Gilbert Fowler presided, and in his introduction said:—

The nineteenth century will probably always be known as an era of great developments in physical science. These developments have been accompanied by much questioning of old religious beliefs, but both scientific and religious thinkers are more and more becoming conscious of an underlying unity in all things. It is becoming clear that the true reconciliation of science and religion is not to be looked for in a denial of well-established facts on either side, but in the acquirement of a new point of view from which the facts may be regarded. This point of view is found in Christian Science.

I have been a keen student of physical science all my life, but Christian Science has given me what physical science could never give. It has given me an understanding of the real meaning of life itself, of what is meant by infinite, immutable Principle, Principle which is at once manifested through law and love. I have found in Christian Science a religion which is scientifically demonstrable, and which can be applied to all life's problems, from the smallest to the greatest. I have myself seen the healing of serious cases of sickness and disease through Christian Science.

Physical science has its place in the world as we know it, but it is relative and human; Christian Science is absolute and divine. It is commonly assumed that it is vain to look for absolute truth, and yet Jesus said, "Ye shall know the truth, and the truth shall make you free." There are in the world today hundreds of thousands of people of all sorts and conditions who have proved in their own lives that in proportion to their knowledge of the truth as taught by Jesus of Nazareth, and as restated and reinterpreted to this age in Christian Science, they have found freedom from discord of every sort. A great joy has come into their lives, and they have been uplifted physically, morally, and spiritually. The Christian Science church is composed of such people, and its purpose is to bring the truth in its purity, as taught by the Master and his disciples, with "signs following," once more before the minds of men. We have only to read our daily paper to see how sorely the world is in need of this healing message.—*Manchester City News.*

Fort Scott, Kan.

The Hon. Clarence A. Buskirk lectured to a large audience at the Pictureland Theater. Superintendent Ramsey of the city schools, in introducing the speaker, said in part:—

Not being a Christian Scientist, I hesitated to attempt these few introductory remarks. As I understand the basis of the teachings of Christian Science, it is that man is a spiritual and not a physical being; that God, the creator, being eternal, good, and spiritual, the product of the creation must also be eternal, good, and spiritual. It follows from this that there is no sin, evil, or death; that these are only apparent, and are caused by a misunderstanding of the divine nature of all creation. But, after all, we are more interested in the results of this teaching, for we know that those who live up to its precepts are happy and contented.

The doctrine of peace, harmony, and contentment, which is practised by the Christian Science people, is the all-important consideration; and whatever may be our belief, all Christians must rejoice in the emphasis placed on the idea of universal love and peace toward all mankind, for the only way we can effectively serve God is to serve our fellow man. Good, rather than evil, should be emphasized. In this day of restlessness and discontent, we rejoice in the continued growth and prosperity of those who practise this doctrine of love, in which sin and suffering have no place.—*The Fort Scott Tribune.*

Hornell, N. Y.

There was a large attendance at the Woodbury Universalist church to hear the lecture on Christian Science by Bicknell Young for Second Church of Christ, Scientist. The speaker was introduced by the Hon. Milo M. Acker, who said in part:—

Two thousand years ago the religious world was surrounded with darkness and gloom. The coming of Christ brought a ray of hope,—a beam of sunshine and days of pleasure to the early Christians. Step by step the message of Christ Jesus found its way around the world and made its influence felt in nearly every part of the globe. The dark spots are few, and they are growing brighter.

In the splendid march of Christian civilization no step has brought to its believers a sublimer faith, a brighter hope, or more happy hours, than the Principle of Christian Science. Mrs. Eddy, in her New England home, thought out and sent into the world her message of faith. Surrounded by New Hampshire hills of granite, she laid the foundation of the Christian Science faith. It is now practised in nearly all civilized lands.—*Evening Tribune-Times.*

Baltimore, Md.

Judge Clifford P. Smith, who lectured for First and Second churches on Christian Science, was introduced by Charles G. Baldwin, who said in part:—

It is now generally conceded that modern science has wrought wonders in nearly every relation of our daily lives. False methods have not yielded without a struggle, but scientific methods have won the day. The century that has gone is justly distinguished by the successful application of scientific thought to the problems of daily living. So when we come to look at the condition of Christianity in the middle of the last century, and ask what the application of scientific methods has accomplished in this important field, we find that the adherents of Christianity were at that time apparently opposed to modern science. Finally came the discovery and demonstration of Christian Science, bridging the seeming chasm between Christianity and science. Then thousands found that the opposition was over, and that Christian Science is the treaty of peace between these conflicting forces, bringing peace not only to the mental conflict, but to the body as well, and "the oil of joy for mourning, the garment of praise for the spirit of heaviness."—*Correspondence.*

Lawrence, Kan.

The Rev. William P. McKenzie, who lectured on Christian Science in the Bowersock Theater, was introduced by Ralph W. Cone, who said in part:—

The physicist or the chemist, studying the laws and properties of matter, finds it necessary, in his search for the final facts and forces, to go beyond the material and physical into the metaphysical. The philosopher, studying man and the

Digitized by Google

world, finds that he too, in his efforts to understand mankind and his environment, must go far beyond the limits of these material things which we see and feel. Christian Science also finds the ultimate explanation of man and his life in the superphysical or spiritual realm. The Christian Scientist goes farther than the physicist and the philosopher, however. He seeks to put into practice the conclusions he has reached, to live according to the theory that "man is not material; he is spiritual" (Science and Health, p. 468). In his efforts to do so, the Christian Scientist has met with a surprising degree of success, a success that has challenged attention.—*Correspondence.*

Iowa City, Iowa.

Francis J. Fluno, M.D., gave an address on Christian Science in the local church. Miss Kate Close, first reader, introduced the lecturer, and said in part:—

Christian Scientists are not trying to force their religious beliefs upon those who are unwilling and unready to hear them. Their desire is merely to have Christian Science correctly understood, that all may avail themselves of its blessings. In the Preface of "Science and Health with Key to the Scriptures," Mrs. Eddy says, "In the spirit of Christ's charity,—as one who 'hopeth all things, endureth all things,' and is joyful to bear consolation to the sorrowing and healing to the sick,—she commits these pages to honest seekers for Truth" (p. xii). It is in the same "spirit of Christ's charity" that this lecture is given this evening to "honest seekers for Truth."—*Iowa City Republican.*

✧

Jackson, Miss.

Clarence W. Chadwick, lecturing on Christian Science at the Century Theater, was introduced by P. S. Merrill, who said in part:—

Those of you who have looked into Christian Science with serious thought, know that many blessings come to those who have a practical understanding of it through the teachings of Mrs. Eddy. To many, however, Christian Science is something mysterious and incomprehensible. For such, this will prove an opportunity to hear a logical discussion of the simplicity of this religion, of its foundation upon the teachings of Jesus. It will enable them to learn of the health and happiness which the truth brings to a multitude of people, and will show our duty toward our neighbor, thus bringing all into closer communion with the love of God.

Correspondence.

Testimonies of Healing

My profession is that of attorney-at-law, and I have been practising law since 1872. When I was forty-one years of age I was told that I was used up with hard work, and had what is called a nervous breakdown. This kept me idle nearly half the time. Then a Christian Scientist treated me, and I learned enough of Science to pursue my profession until about two years ago. At that time my legs and feet were in such a condition, owing to muscular rheumatism, that I could scarcely walk. I had been gradually growing worse for more than a year, and the old nervousness had returned. I had treatment, however, from a practitioner in this city, and I am now in the best of health and able to perform more work than I have ever before been able to do.

In the spring of 1910 a tooth troubled me, and I was told that I was getting old enough to lose my teeth. An abscess had formed and my face was swollen. I had no pain, but I went to a dentist, who told me there was nothing in dentistry that could save the tooth, and it must be extracted. I then asked him if God could not cure it, and he replied, "He can if you can get Him to help you." He said he had never been able to get God to do this. I told him I would try Christian Science, and I applied to a practitioner for help. She told me she had never worked on a case of this kind, but that God was as well able to heal my tooth as any other part of the body, so she began to treat me, and we both did all we could to know the power of Truth. I began to improve at once, and when I went back to the dentist, he said that it was not necessary to extract the tooth, for it was cured.

Words cannot express my gratitude for the knowledge I have gained from reading Science and Health, as well as for the spiritual uplift it has given me.

L. C. Barrett, Amarillo, Texas.

✧

[Translated from the German]

Deep gratitude impels me to write this testimony. Before I became acquainted with Christian Science I was a wreck in every respect. Bankruptcy was but a question of weeks, and the difficulties I had gone through, in addition to poverty, fear, and despair, had greatly affected me physically and mentally. Help, however, was nearest when my extremity seemed to be greatest. I heard of Christian Science and became acquainted with a practitioner at the bedside of an invalid.

I was under the impression at first that the help derived through Christian Science applied to sick people only, but my great sense of need caused me to tell the practitioner of my distressing circumstances. Those who have had similar experiences will understand how glad I felt at being able to go home with the assurance that such conditions were indeed responsive to the truth. The practitioner lovingly gave me the necessary information and took up treatment for me, and within a few days all notices which I had received were withdrawn, even though the term of some of them had already expired; then with a sense of new courage I undertook to grapple with my problem.

To be sure, I went through many dark hours, but divine Love never failed either in the smallest or in the largest of my problems, and it never has failed when I have turned to it with singleness of heart. There was much that had to be adjusted, as my affairs were in a chaotic state, and when I look back, it seems to me as if a wonder had been wrought. In the measure of my discernment of the fact that God, divine Love, is the creator, maintainer, and sustainer of man, my affairs were straightened out. Fear and doubt had to be overcome, as I lapsed time and again into the mistake of fixing my gaze more upon material conditions than upon God; but I was steadily shown the right way. Infinite Love made it possible for me to fulfil my obligations and to give full satisfaction to my creditors. I now live in orderly circumstances, and I know that divine Love amply supplies all my needs.

I must also tell of my healing of severe headache and goiter, both of which were supposed to be inherited. The former ailment was declared incurable by the physicians, and I was expected to submit to an operation for relief from the latter. Today I am healed of both ills, and this is due solely to Christian Science. I have also been freed from a very painful skin disease of ten years' standing, which extended over the whole body and for which I had consulted various physicians. The bodily condition improved in proportion to the purification of thought, and it took great patience on the practitioner's part to lead me to the point where the degree of spiritual understanding was sufficient to overcome all these difficulties. I am very grateful to Mrs. Eddy for showing us this way, and it shall be my endeavor to give a practical proof of my gratitude.

Fräulein Emma Veil, Schorndorf, Württemberg, Germany.

✧

I have long felt that I must express my gratitude for Christian Science. Seven years ago I was growing deaf, as the result of a diseased condition of the ears. For two years I had one of the best specialists in the city. Then he said he had done all he could do for me, and advised me to try Christian Science; but I was not ready for it. I gradually grew worse, and I could not eat, hear, or sleep, so at last I asked my brother-in-law, who is a Christian Scientist, to treat me. This he did, and that night I slept. In a very short time I was healed, and when I went back to the specialist about six months later and had him examine my ears, he said my healing was a miracle. At the same time I was healed of female trouble, and when my child was born two years later my life was saved.

When the baby was five months old she was poisoned by her food, and because of the father's disbelief in Christian Science a physician was called. He came regularly for nine days and then said he could do nothing more for her, that she might pass away any minute. When my husband came home from his work I told him something would have to be done,—either call another physician or allow Christian Science treatment for the baby. When he consented to have this treatment, how glad I was! I telephoned to a practitioner at six o'clock for help. All night and all the next morning the little one lay in my arms in a very weakened condition, but in the afternoon, about three o'clock, when the practitioner called to give her another treatment, she turned around and began to play. She was healed from that hour. She was also healed of a contagious disease three years later.

For these and many other blessings which have come to me and mine through Christian Science, I am most thankful to God, and also deeply grateful to our dear Leader, Mrs. Eddy.—Lillian Geary, Chicago, Ill.

✧

In May, 1912, when a business trip took me to Dallas, Texas, the change of climate was marked, and the unusual heat affected the digestive system. Before reaching home a week later, a very severe attack of dysentery had made its

Digitized by Google

appearance. From the time I reached my house on Friday until the following Sunday morning, the pain increased to what seemed an unbearable degree, so that my efforts to help myself were futile. Sunday afternoon, about four o'clock, a Christian Science practitioner was called, and a half-hour of silent treatment was followed by an audible declaration of the truth. I was told that I could "rise in the strength of Spirit to resist all that is unlike good" (Science and Health, p. 393). By five o'clock I was dressed for dinner and that evening ate a substantial meal. On Monday I returned to work at the usual hour.

Gratitude for relief from excruciating physical agony impels this rather tardy acknowledgment of the help that divine Love has given me.—Lucius E. Wilson, Detroit, Mich.

✧

I wish to express my thankfulness to God and my gratitude to Mrs. Eddy for the new hope that has sprung up in my heart since coming into Christian Science. After traveling from the South to the far West in the search for health, and being under a doctor's care, I was told that I would never be well again. I was ready to give up, when a friend came to me and advised me to try Christian Science. As she was leaving she said that she was going to ask her mother to treat me, and I replied that I did not care what she did; but to my surprise, in three days I was much better. In three weeks I was out of doors and walked over two miles, completely healed of a tubercular condition of the bowels and lungs. Thus we learn through the blessings we receive that God is our strength at all times, and nothing can hinder our progress.

I am most happy to say that my healing has been permanent, for nearly twelve years have passed since then, and my earnest desire is to be more humble and grateful for the blessings that have come to me during this time. I am very thankful to say that Truth is daily guiding me, and helping me to be more awake to the helpful lessons in our daily reading. I hope this testimony will help some one to realize that the best is still before us, that the past has nothing to do with the work of today, so we must work out our problems with a cheerful heart, realizing that Love lights our way.

Inez Snow Mapel, Toledo, Ohio.

✧

I send my testimony with an earnest prayer that it may bring a bright hope to "such as sit in darkness and in the shadow of death, being bound in affliction." I was such a one, having suffered many years with severe stomach trouble, for which I had tried the different schools of medicine, besides sanitariums and springs. While at times I was benefited by these methods, and the doctors were as kind to me as friends, yet I was never healed; always there was a relapse and I would be down in the depths again. I had to diet rigidly, and at one time took nothing but milk for five months. Christian Science was recommended to me, but I thought I was too sick to risk trying this treatment, and I turned to it only when I knew of nothing else to do. I was completely healed of the disease in three weeks. I believe I was really healed in the first treatment, but I had so much fear of food that it took the rest of the time to remove this fear. I gradually added certain things to my meals, till I found that they could not hurt me, and since then I have eaten what I wished.

I was a church-member and Sunday school teacher, and had pondered a good many things in my heart, finding no satisfactory answer until I studied Christian Science. I had always prayed to be directed to the best material means for health; but when through repeated struggles I grew broad enough to cry to God for light from whatever source, so long as it was His will for me, then I was led to Christian Science and was healed. My heart sings praise to God for my deliverance, and thanks to Mrs. Eddy, who was brave enough to teach us the truth.

Mrs. H. W. Montgomery, Skidmore, Mo.

✧

My gratitude for Christian Science is unbounded. I became interested in this new-old truth after ten years of physical and mental suffering. Three or four years of stomach, liver, and bowel trouble had made me a nervous wreck, and I suffered also from intense fear, sleeplessness, and weakness of the heart and eyes. As I was always in dread of physicians, I endured all I felt was possible before asking for medical aid. The doctor who helped me the most was a specialist that gave me no medicines and prescribed no strict and limited diet, but said he believed in giving nature a chance to do the work. His advice gave me confidence in myself, and I improved so that I was soon well enough to take up the work which I had not been able to do for more than a year and a half.

I was not, however, relieved mentally. The darkest side of everything was continually before me. I could see little else but evil and suffering, and I began to wonder if there was a God. Then I lost interest in my old church and attended other churches, also read various kinds of religious literature, hoping that somewhere I might find comfort. While I had gained sufficiently in physical strength to resume my work, I was far from well, and it was with interest that I heard of Christian Science as a healing religion, for now I was without either health or religion. But I was not ready to accept this teaching, and I spent an additional time in doubt and misery.

After a while, however, having heard that Christian Science appealed strongly to people of discerning thought, I went with a friend to a Sunday morning service, with the result that I attended the church services quite regularly for several months. That was in 1909. In December of the same year I left Chicago to come to the state of Washington. Upon my arrival here, I found that those with whom I came in contact would not tolerate Christian Science. In order to avoid any unpleasantness, therefore, I concluded to drop it for the time being, thinking that perhaps it was not the right thing for me to have, since I seemed to encounter so much opposition.

During the following year, physical ills took greater hold on me, and I became greatly discouraged. I could not understand why I should have to suffer so, and decided that there could be no God or I would at least find mental relief. I again sought medical aid, but found that nothing could be done for me. Then, without hesitation, I turned to Christian Science for help and took up the study in earnest. Improvement began immediately, but my healing was slow, more than a year having elapsed before I was quite well; but I am happy to say that during that time the phases of error designated as sensitiveness, fear, criticism, self-will, etc., were to a great extent overcome, and since then some of them have vanished.

I wish to add that I am now well. To me a wonderful change has taken place. In a number of instances since the time of the healing above mentioned, a cold has manifested itself, but each time it has been readily overcome, sometimes so quickly that no one but myself was aware of it. Besides this I had some trouble with the eyes about a year ago, but this was overcome without resort to the use of glasses, though my work required close application. In solving mental prob-

Digitized by Google

lems the work is done with greater dependence on God and the efforts grow less arduous.

It is impossible to enumerate the blessings I have experienced since taking up the study of Christian Science, but the greatest of all is the knowledge gained that God is Love. What this has meant and now means to me, no words can tell. As a child I had been taught that God sends disease and suffering, and it is needless to say that I could not love such a God, but spent much time in intense fear of dreadful things He might do, thus unconsciously, and it would seem unavoidably, breaking the first commandment. What a joy to know that God loves us, and that we can truly love Him! I am more grateful than I can express for all of Truth's messengers.—Alma Madsen, Seattle, Wash.

✧

I wish to express my gratitude for Christian Science. Words are inadequate to measure such a great blessing, but those who have felt the uplift and regeneration which this truth brings to all who turn to it, can understand the gratitude it also brings. I would like to tell of one out of many blessings which have come to me.

About two years ago, when I found that I was again to become a mother, there immediately ensued a period of great depression and discouragement. This condition was due to the fact that on two previous occasions, before I had come into Science, I had gone through such harrowing experiences that the memory of them cast the deepest gloom over me. Sometimes it seemed as though I could not endure what I thought was the inevitable experience attendant upon the birth of children. I could see another three years of sleepless nights, such as I had already passed through, stretching out before me, for my two little ones had slept very little at night, and what with weary days of care and work, and a constant train of sicknesses, there had been practically no freedom or recreation.

With the help of a faithful Christian Science practitioner, however, this mental condition was overcome several months before the time when the birth was expected, and I continued to improve until I felt that I could hardly wait to hold the little one in my arms, my sense of welcome and joy was so complete. When my husband saw my happiness, he also looked forward with pleasure to the newcomer. The birth was very harmonious, and there have been no sleepless nights, no weary days full of care and toil, and no train of sicknesses. Through improved financial circumstances, I have been able to keep help; the baby has been a joy to all of us, each day a pleasure; and I feel that my cup surely runneth over.

I have been studying Christian Science for some time, but my problems have been slow in yielding, though this has brought about an attitude of steadfastness and earnestness for which I am most grateful. For what I have received, for what I know is yet in store for me and all those who love God, I am most thankful to divine Love; and I am also deeply grateful to our dear Leader, Mrs. Eddy, for showing us the way.—Carrie P. Keller, Los Angeles, Cal.

✧

[Translated from the German]

About the middle of November, 1909, I suddenly became afflicted with acute rheumatism of the joints, and upon my physician's advice I at once went to a hospital. My condition, however, grew steadily worse, inflammation of the chest and dropsical heart trouble being added, and I was given up by the physicians because of the irregular heart action.

My wife then heard of Christian Science and immediately communicated with a practitioner, who took up treatment for me. There was a noticeable change in my condition, and the high fever abated considerably during the night, to the astonishment of the nurse. This marked improvement encouraged my wife, and she decided that I should be removed from the hospital. On the following day she came, accompanied by a gentleman, a friend of ours, to take me away, although the physicians were emphatic in their remonstrance, as my condition was said to be hopeless and the removal might mean death. After my wife had signed a bond releasing the management from all responsibility, I was taken home, and I immediately began to gain in strength. I became brighter every hour, and was sufficiently restored within a few days to be able to leave my bed. In a short time I was completely healed and able to attend to my business. I write this testimony with deep-felt gratitude to Christian Science and its Discoverer.

Willy Bergmann, Berlin-Charlottenburg, Germany.

[Translated from the German]

About three months ago my eldest daughter was taken ill with pain in the abdomen. At first we did not consider the condition of much consequence, but when the little girl, who naturally was lively, lay quite still and began to have high fever, I consulted a physician. After a few days he urged an immediate operation, as he pronounced the trouble a severe case of appendicitis. The child was in such a serious condition, however, that I consulted another physician, whom I knew to be very competent. He examined the child, and judging from what he told us, the prospects with regard to her life seemed dark indeed. He said that with constant medical attendance she might possibly be saved, but would have to undergo an immediate operation, otherwise she would probably not live three days.

The blessings I had experienced through Christian Science then came to mind, and after discharging the physician, I asked a Christian Science practitioner with whom I was acquainted to take up treatment. We informed the practitioner of the physician's verdict, and with treatment in Christian Science there was a decided improvement after a few days. Today our child is entirely well, happy and active all the time. She shares our deep thankfulness to God for this healing, and for the many other manifestations of the power of Truth which we have had the privilege of experiencing through Christian Science.

Luise Bergmann, Berlin-Charlottenburg, Germany.

✧

After reading the many testimonies in both the *Sentinel* and the *Journal*, I deem it my duty, as a student of the truth as taught in Christian Science, to give my experience in the healing of disease.

It is about four years since I came into Science. I had completed an engagement with a military band (music being my profession), and had gone to live with my brother and his wife, who had accepted Christian Science some time before and had had several demonstrations. They told me of the healing, and when Sunday morning came, I was invited to go to church. Although I had gone to many churches, religion had never appealed to me very much, because I had not found a scientific, demonstrable teaching, and hence looked upon churchgoing as merely a form or habit. The kind invitation, therefore, was not accepted at first, though it was finally, as my brother would otherwise have had to go alone that morning. Then, too, I wished to hear the beautiful music. Not only did I hear good music, but, best of all, I found the truth for which I had been searching many years. Until

Digitized by Google

this time I had been wearing glasses for quite a number of years, being treated nearly all of the time by *materia medica*, from which I received only temporary help. Now, however, I was told to lay aside the glasses; that God's man did not need them to see with, for sight is perfect in God. This I did, and I have never had any need of them since.

I have had many other demonstrations, one of which I shall mention. For many years I had been troubled with a skin disease, from which I received only temporary relief; in fact, I was told it was incurable, but it has completely disappeared through the power of Truth. I cannot tell in words how thankful I am to God for all the blessings that are ours, but I shall try to live the truth and help others to find Him.

CLARENCE WAGEN, Madison, Wis.

I wish to testify to the truth of the above statement which my husband has made, and will add that I also have been helped by Christian Science.

MARTHA WAGEN, Madison, Wis.

✧

It is several years since I began the study of Christian Science, and they have been the best and the happiest years of my life. I came into this truth through the wonderful healing of my mother. She had been an invalid nearly all her life with stomach and liver trouble, and she also had an abnormal growth. She spent the summer of 1908 in Portland, Ore., with her sister, and all the time she was very sick and kept getting worse. One of the most prominent physicians there said that she could not live six months. She was finally persuaded to try Christian Science as a last resort, and the result was that in just two weeks from the time she took her first treatment she started for home a well woman. When she arrived here, and I saw what a change had been effected, I was angry at first, for I was very antagonistic to Christian Science; but I soon began to see that if it could bring about such a change as it had in her, there must be something in it. I therefore decided to try it for myself.

I was considered by all of my friends to be delicate, for I dragged around half sick all the time. I had undergone three operations, and was doctoring with one physician after another, but as a result of Christian Science treatment I am now strong and well in every way. After reading Science and Health for about three months, I laid aside glasses which I had worn, when reading, for over fifteen years. I can now read for any length of time without them. I was also healed about the same time of acute throat trouble, which I have never had since, although I had previously been subject to it.

That for which I am especially grateful, however, is the healing of discontent and unhappiness. I now have the peace "which passeth all understanding," and words cannot express my gratitude for that alone. I could not live now without Christian Science, and I am indeed thankful to God, the giver of all good gifts, that it has come to me.

MRS. WILLIAM C. HOERTZ, Grand Rapids, Mich.

✧ ✧ ✧

To develop yourselves, and act and live according to your law, is your first or rather your sole duty. God gave you life; God therefore gave you the law. God is the sole Lawgiver to the human race. His law is the sole law you are bound to obey. Human laws are only good and valid in so far as they conform to, explain, and apply the law of God. They are evil whensoever they contrast with or oppose it, and it is then not only your right but your duty to disobey and abolish them.—MAZZINI.

From Our Exchanges

[Rev. P. Gavan Duffy in *The Homiletic Review*]

It needs no pointing out that we sorely and sadly lack the experience of faith in our modern corporate and individual religious life, and lacking the experience, we are of necessity without its understanding and apprehend only in some small measure its almost unlimited potentialities. The evidence for this statement abounds in the religious world. We have only to recall the pitiable dependency of corporate Christianity upon money as the basis of operations, our helpless attitude in the face of disease which baffles medical skill, and the suffering and injustice, the misery and wretchedness, that grow out of our social and economic conditions, to find that it is our deathly inactivity which has led countless men to dissociate themselves from the Christian organism as in their regard the first essential step both for ultimate reform and the constructing of programs for remedial measures. The truth is, we are so powerless because we cannot tell of, or apply to the world, the powers of faith which are outside our own experience.

No wonder we are mystified when the words fall upon our ears, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." It is when we recall the facts of our spiritual condition as they really are, that we cease to marvel when, hearing the words, "Whatsoever ye shall ask the Father in my name, he will give it you," we realize that the theologians and preachers in demand are those we send into our pulpits with the very latest "thought-out" reasons which are to explain the failure of prayer to the hearts of the listeners—as unconscious as the instructors of the existence of their doubt. It is no longer surprising that when we speak of the "means" for the prosecution of a spiritual campaign, we understand, not the spiritual means, but the wherewithal of mammon. Entrenched as we are with modern tradition as to the "how" of work, unthinkingly convinced that without a well-filled treasury achievement is impossible, we have cut away as a calamity the most salient feature in what makes venture possible, viz., absence of material riches. Yet the day will come, nay, the dawn is at hand, when faith will come into her own again, and our Lord's words, finding meaning in experience, will cease to be dishonored.

[Rev. W. Duxbury Woods, M.A., in *The Christian Commonwealth*]

Now I want you to see that this same Christ continues to be the life-giver to humanity as he continues to live the life once lived in Jesus over again in us. It is as the Christ who then came so wondrously in Jesus, still comes in you and me, that his atonement is being completed. It is ours to realize the same divine Spirit within, and make the life of Jesus history again within our own lives. The great Christ-message of Jesus is that we too are here to live forth God, to manifest the divine Spirit to the world. If this be true religion, life lived in terms of the divine, then there is little need for the dogmas and accretions that have gathered round this sublime truth. It is not difficult to see how some of these arose from mistakes made in good faith, such as the belief that Christ would return in bodily form in a very short time; neither is it difficult to trace the source of dogmas utterly alien to the spirit of Jesus, and which would have been offensive to him. It is not anything akin to his teaching that gave the world the dogmas of everlasting torment, or permitted the arrogant claim to the possession of exclusive right of entrance into the kingdom, or substituted in place of the authority of God speaking direct

Digitized by Google

to the soul of man the supposed infallibility of church or book. It is the things that Jesus neither believed nor taught that have delayed the coming of the kingdom, and to this very hour cause the divisions within the church.

When are we going to have faith enough to declare that the only Christianity that is worth preaching and worth living, is that with which Jesus began his work nineteen hundred years ago, the divinity of humanity, the kingdom within, the living forth of the Christ-spirit? It is so simple that it requires no more doctrine than Jesus gave utterance to, which was so plain and so simple that a little child may understand.

[*The Christian Work and Evangelist*]

Let us keep clear the distinction—faith in Jesus Christ is not synonymous with belief in certain things about him. One can believe all the orthodox doctrines about Jesus Christ and be in no respect influenced by him. What one believes intellectually does not necessarily signify or save. But when you come face to face with his personality, and feel the constraining influence of his life upon you; when you stand in reverence before his courage, his purity, his unselfishness, his disinterested love, his godlike manliness; when what he was and what he did calls out in you so intense a faith that you can say, "I may not understand all the theology, I cannot frame all the definitions, I am not able to explain the atonement or the incarnation or the trinity, but I know that here is a character worthy of my following, worthy of my faith, worthy of my best, and I yield myself to his leadership"—then the real life of faith begins for you. Our faith in him is not credulity, it is not hypothesis, it is no mere intellectual belief; it is this inner vital force by which we launch our life in the direction he points out. We must all believe something about him, if we think at all, and if we seek to solve the problem which his life presents in history; but what we need to see is that back of all our theology about Jesus Christ lies the one essential need, viz., the faith that makes us faithful to him.

[*The Advance*]

It is possible for people to be spiritually rich who are commercially poor. There can be no monopoly of any of the Christian graces. If my neighbor is rich in the possession of a particular dollar, I must be poor to this extent, that so long as he has it I can never possess that dollar. But my neighbor cannot possibly have any monopoly of faith. There can be no "corner" on hope. No man can have so much of love as to diminish the possibility of his neighbor's loving God and loving his fellow men to the full limit of his spiritual capacity.

[Rev. Charles H. Morgan, Ph.D., in *The Christian Intelligencer*]

For two or three decades large numbers of men and women of spiritual temper have been looking for a new age of faith, for a swing of the pendulum away from criticism, unbelief, and agnosticism to a constructive and active certainty of God, a fresh passion for Christ, and a new confidence in the salvability of men. We can now rejoice in multiplied evidences that the pendulum is so swinging.

[*Christian Register*]

The sign of God in human life is in the two immutable facts of experience,—the living God in daily creation and in the ideals of the soul, and the living soul which feels that life and sees those ideals. They are what make commandments sacred and righteousness firm and faith unshaken. In them is the word of the Almighty, written not on "tables of stone, but in fleshy tables of the heart."

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder
of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. ***Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.***

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

"The time is likely to come when the deposited phosphates in our western lands will be regarded as of almost priceless worth. Few appreciate how very extensive these deposits are. They run for hundreds of miles through Wyoming, Utah, Montana, and Idaho, and in other states similar deposits of lesser extent are known to exist. We have millions of acres of phosphate lands which are estimated to contain several billion tons of phosphate rock; undoubtedly the world's largest known reserve." These are the words of the secretary of the interior. A bill has been introduced in Congress which is intended to make available for immediate development the phosphate deposits of the West. It is a bill to authorize exploration for and disposition of oil, gas, potassium, phosphate, and coal owned by the United States and not otherwise reserved. Not only does the bill provide for the leasing and development of these public lands, but it also guards in the most stringent fashion against monopolization.

After July 1 next, no alcoholic liquors will be served on any warship of the United States, nor can they be obtained in any naval station ashore. Secretary Daniels of the navy department has made public the order to banish alcoholic drink from the United States navy. This order was issued upon the recommendation of Surgeon-General Braisted. Its concluding words are: "Commanding officers will be held directly responsible for the enforcement of this order." In a statement Secretary Daniels said: "I am in hearty agreement with the views expressed by the surgeon-general in his paper accompanying the recommendation. There should not be on shipboard, with reference to intoxicants, one rule for officers and another and a different rule for the enlisted personnel."

The United States court has filed an opinion at Trenton, N. J., dismissing the suit of the United States government against the Delaware, Lackawanna & Western Railroad Company and the Delaware, Lackawanna & Western Coal Company for alleged violations of the commodities clause of the Hepburn law and the Sherman antitrust law. The court holds that there is no United States law or decision prohibiting the same set of individuals from holding stock in two distinct corporations, even though they may be engaged in kindred business. The case in all probability will go direct to the Supreme Court of the United States.

A syndicate of influential men in Scotland has been formed to encourage the revival of the cultivation of flax, and several experiments have been made in the south of Scotland. The climate and soil are suited to flax and it was grown in that country half a century ago, but gradually went out of cultivation owing to the labor and expense of the retting process, whereby the flax was steeped in water to separate the fiber. Those who are seeking to revive the flax industry have acquired the rights of a new kind of machine which does away with this process.

The twelve cities chosen for the regional reserve banks are New York, Boston, Cleveland, Atlanta, St. Louis, Kansas City, Philadelphia, Richmond (Va.), Chicago, Minneapolis, Dallas (Texas), and San Francisco. Although various steps must be taken before the new federal reserve banking system begins operations, treasury officials expect that the banks will open for business within three months, and that the revolutionary change in the nation's financial machinery will be an accomplished fact within that time.

Premier Salandra of Italy, as head of the ministry, has asked a special military credit of two hundred million lire for additional expenses incurred by the war in Libya. The administration of Libya would, he pointed out, exhaust the surpluses of the next year or so, and it would therefore be necessary to add to the taxation. With a view to this he directed the attention of the members to the progressive income tax as a method by which funds might be raised if necessary.

The scheme for amalgamating the post-office and telegraph department in India has been sanctioned by the secretary of state. This scheme has been prepared on the lines of the experimental amalgamation under trial in the Bombay and central circles since 1912. The director-general of post and telegraphs will be assisted at headquarters by a chief engineer and a deputy director-general for telegraph traffic. All traffic work throughout the country will be transferred to the control of the postmasters-general.

Arrangements have just been made for the sale of forty million feet of timber on the Tongass national forest in Alaska. This forest is cut up by bays and inlets, some of which give an opportunity for taking the timber from the mill to the decks of ocean-going steamers. The Tongass forest is now self-supporting, its lumber product being used largely in local industries, much going into boxes for canned salmon.

The United States government has won in the Supreme Court its suit to cancel patents of two thousand eight hundred and forty acres of coal land in Uinta county, Wyoming, worth five hundred thousand dollars, held by the Diamond Coal & Coke Company. Irregularity in securing land by "dummy entrymen" was the government's charge. The court held the applications were plainly irregular.

The distinction of being the largest ship in the world is now held by the Vaterland of the Hamburg-American line. While closely resembling her sister ship, the Imperator, the new "queen of the seas" exceeds her in all dimensions. The Vaterland measures nine hundred and fifty feet in length, one hundred feet in width, and has a tonnage of fifty-eight thousand.

The Kaiser recently opened at Berlin the new buildings of the Royal Academy of Sciences and the Royal Library, of which he laid the foundation stone ten years ago. Three institutions, the University Library, the Royal Library, and the Royal Academy of Sciences, are now under one roof. The Royal Library is of vast dimensions, with room for thirteen hundred workers.

On April 1, Col. George W. Goethals became governor of the Canal Zone, but in conformity to his wishes no ceremony marked the occasion. Early in the morning Colonel Goethals issued his last circular as chairman of the Isthmian canal commission and his first circular as governor, the latter promulgating the establishment of a permanent form of government in the zone.

The members representing the Center party on the commission appointed to discuss the proposed bill regarding German oil monopoly are anxious for the matter to be settled by a legal treaty, whereby the import of and the trade in illuminating oil, benzine, and other products shall be regulated with a view to preventing the formation of a private monopoly.

There are in the United States 6,278 local building and loan associations, with a total membership of 2,517,000. Pennsylvania has the largest number of associations, aggregating 1,629, and about one thousand of these are in Philadelphia. Membership is four hundred and seventy-five thousand, and assets two hundred and fourteen million dollars.

Twenty-nine foreign governments have signified their intention of participating in the Panama-Pacific exposition at San Francisco next year. Although Great Britain and Germany are not officially represented, there is every assurance that there will be thousands of British and German exhibits contributed by individuals.

Ghent, Belgium, furnishes practically all of the potted specimens of the symmetrical Araucaria, or Norfolk island pine, used as an ornamental foliage house plant in Europe and America. The United States imports at least two hundred and fifty thousand of these plants in five or six inch pots each year.

Controlling interest of the New York, New Haven & Hartford railroad in the Merchants & Miners Transportation Company has been sold to the minority interests headed by the Mercantile Trust & Deposit Company of Baltimore, after conferences covering some two months.

The last spike on the Grand Trunk Pacific railway main transcontinental line was driven at noon Tuesday, April 7, near the Nechaco river at Ft. Fraser, British Columbia, two hundred and twenty miles east of Prince Rupert. The line will be ready for operation in August.

Twenty-five million dollars is the amount that the United States agrees to pay to Colombia for the partition of Panama and the acquisition of the Canal Zone, in the treaty signed in Bogota by American Minister Thompson and the Colombian authorities.

Premier Asquith again became a member of the House of Commons on the 8th instant, when he was returned unopposed by his old constituency of East Fife, Scotland.

Vol. XVI April 18, 1914 No. 33

Honesty in Business

SAMUEL GREENWOOD

ONE of the ancient writers is quoted as saying, "Where you are is of no moment, but what you are doing there." Whether one's duties take him into a counting-house or a store, a professional office or on a judge's bench, into a schoolroom or a factory, does not matter so much as what he is doing there. If he is obeying the divine law of love, dealing with his fellows on the basis of the golden rule, seeking first to be governed by good, then his place of daily activity becomes a sanctuary, a literal vestibule to the kingdom of heaven. If, however, he is not doing these things there; if he is not working to bless his neighbors as well as himself; if he is not loyal to his declared concept of God and to the love that should be in his own heart, it is because he is submitting to evil, and leaving God largely out of his affairs.

A Christian Scientist obeys the moral law, not merely from a sense of business honor or duty, but from love for his fellow men. His enlightened thought, which recognizes and declares that man is the son of God now, and that he is in truth that man, recognizes also that honesty lies in being faithful to that high ideal. To be honest because honor bids us be so is commendable, and is indispensable even to the human standard of manhood; but to be honest because we love our fellow men is the ideal motive, and is the essence of square dealing. We cannot conceal our true selfhood from others if we have ourselves awakened to it. When the heart is actuated by love for God and man, it will be as apparent in a commercial transaction as in a church meeting. If the Christ-spirit is not manifest in our business affairs, it is because we do not possess it. A genuine Christian must, by every rule of consistency, be a genuine Christian everywhere alike.

It is self-evident that an individual has no more of real Christianity than is operative in his association with his fellows. Christianity is a state of consciousness, a rule of thought, and not an external belonging; it cannot, therefore, be laid aside at will. A purely theoretical religion may be ignored or forgotten at one's convenience, but a real live Christianity is as inseparable from its possessor as is the act of breathing to a mortal. It is ever radiating its own nature, or it is not there at all. No one can silence or prohibit the operation of the law of Love, the ever-present activity of God's being, but one may in his blindness turn his back upon it. So one may in blind belief exclude the divine appeal from his consciousness, but if he heeds it, it will operate of its very spontaneity. A man could as easily separate himself from his own mentality as from his awakened consciousness of goodness.

The errors of the business world, its deception, dishonesty, and hard dealing, must be healed by the Christ-spirit in the hearts of business men. Here a splendid opportunity is open to Christian Scientists who are engaged in business pursuits. A sacred, insistent privilege is theirs to demonstrate the reality and substance of brotherly love, to prove the guiding presence and supply of divine Principle, and to make the desert of fear and distrust blossom as the rose. The belief that one cannot be honest and truthful, loving his competitor or his customer as well as himself, and succeed in business, is false to man in God's image and likeness, and it is the peculiar privilege of Christian Scientists to prove this. Declaring for the omnipresence and omnipotence of good, and resting their hope of health and heaven thereon, what else can they honestly do than to let this truth govern them in their business as well as in their home?

"Honesty," writes Mrs. Eddy in Science and Health, "is spiritual power. Dishonesty is human weakness, which forfeits divine help" (p. 453); also, in "The First Church of Christ, Scientist, and Miscellany," she writes of dishonesty that "it is a sure precursor that its possessor is mortal" (p. 203). It should not be hard to decide which is the better foundation for a commercial or professional career, or the safer guide to prosperity. The too general impression that a concern is prosperous merely because it is accumulating money plentifully, has not been found an infallible test of success. It is, indeed, this very thought of money-getting which prompts mortals to dishonest means and methods. Appropriating what is not one's just due may sometimes be considered legitimate according to human law, but it is never so in divine law. One may, in what he believes to be his own interest, disregard the rights or the interests of others, and he may be said to do it legally; but it does not follow that he can do it honestly. Who would think of calling that "spiritual power" which would fill one's coffers at the expense of others' welfare? Honesty means vastly more than taking or giving what the law allows. It means to do right to all concerned, if it means anything at all. Using dishonorable means in conducting one's business is equivalent to acknowledging that under some circumstances evil is superior to good. God is the only source of man's supply, and to distrust His care is as unchristian in one case as in another.

There is no such thing as temporary success, for whatever is bad can never really succeed at all. A bad business, or a badly conducted business, may seem to prosper financially for a time; but we are reminded that "though the mills of God grind slowly, yet they grind exceeding small." Business methods must be purged of their evil before they can become safe guides for Christians to follow. A false sense of what constitutes right business or right methods is as harmful as a false sense of what constitutes health and life. Opposite qualities do not mingle in God's man. Love of money and supreme love of good are not found in the same consciousness; neither should greed, dishonesty, or selfishness find a breathing-place in the thoughts of one who declares himself to be a Christian Scientist. Christian Science is concerned with making men successful in righteousness, in making them honest, loving, and helpful, rather than in making them financially prosperous. Success in goodness is the divine standard in every line of activity, and when this is intelligently acknowledged and adhered to as the first essential, the financial element in every case will be taken care of.

Christian Scientists stand before the world as exponents of the Science which declares good to be all that is real, all that is power, all that is substance, all that makes up real living. They stand also for the correlative truth that evil, in all its forms and claims, is unreal, without power or presence or intelligence. We cannot, however, know this truth of the allness of God for ourselves alone. By virtue of their demonstrable knowledge of God as divine Principle, Christian Scientists become the stewards of His goodness; and by the same rule they are their brothers' keeper. In face of these palpable facts can we do less than strive to measure up to the demand of Christian Science for right thinking and right acting in all our relations with others? Merely because a transaction involves dollars and cents is no reason why it should not be carried out on the basis of righteousness and brotherly love. We are not working just for today or tomorrow, hence our need of remembering that in the end right always triumphs.

The chief thing is to be honest in our selves, in our own thoughts, then we cannot help being honest in business. Wherever they are, Christian Scientists will be known and distinguished for the love they manifest toward God and man, and no selfish considerations should persuade them to evade that obligation. Even common sense teaches mortals that "honesty is the best policy;" how much more, then, should we learn of Christ to "love one another"!

Health Legislation

JUDGE CLIFFORD P. SMITH

WHEREVER the people have gained the right of self-government, they have been obliged continually to defend this right against encroachments. The time was when this vigilance was required only or mainly toward enemies from abroad. Today the people who would be free, are awakening to the fact that the greater dangers are within their own borders. They are beginning to perceive that the just liberties of the people are threatened chiefly by too much government and by the perversion of government. Hence, today as never before, the tendency and effect of laws are being scrutinized with a view to reducing the detriments and increasing the benefits of human government.

Health is a subject in regard to which legislators may do certain things wisely and thus promote health and the general welfare, or they may attempt too much and thereby do more harm than good, not only to the injury of health, but with harmful effect on other subjects of equal importance. It should be noticed, moreover, that the general desire for the government to do only what is wise and right concerning health is peculiarly liable to be frustrated, for there is a numerous class which has built up a complex and far-reaching organization for the very purpose of procuring and controlling governmental action on this subject. Therefore the rights of the people in relation to health, more than with respect to most subjects, need to be vigilantly guarded against subtle encroachments.

Among the reasons which lately moved the American people to put their government in the hands of President Wilson and his party, none was so prominent as the conviction that certain revenue laws were having a pernicious effect on social and industrial prosperity. One of the first official acts of the President was the calling of a special session of Congress to consider the conditions to be remedied and the constructive policy that should guide remedial action. The message which he delivered at the opening of that special session was largely devoted to this subject. The pith of it was in these sentences:—

Consciously or unconsciously, we have built up a set of privileges and exemptions from competition behind which it was easy by any, even the crudest, forms of combination to organize monopoly, until at last nothing is normal, nothing is obliged to stand the test of efficiency and economy in our world of big business, but everything thrives by concerted arrangement. Only new principles of action will save us from a final crystallisation of monopoly and a complete loss of the influences that quicken enterprise and keep independent energy alive. It is plain what those principles must be. We must abolish everything that bears even the semblance of privilege, or of any kind of artificial advantage, and put our business men and producers under the stimulation of a constant necessity to be efficient, economical, and enterprising, masters of competitive supremacy, better workers and merchants than any in the world.

It is to be observed that the social and economic principle thus defined by President Wilson, is of wider scope than the special application of it which he then had occasion to make. If true and applicable to the promotion of efficiency in manufacturing and commerce, it is no less true and equally applicable to other vocations wherein efficiency counts for success. If calculated to stimulate the energy and enterprise of those who serve the community by means of production and distribution, it is likewise designed to quicken the efforts of those who work in behalf of health. If exclusive privilege or artificial advantage is unwholesome in the world of business, it is also against public policy in the domain that includes the art or science of dealing with disease. The knowledge of how to prevent or cure disease is typically a field wherein the community, collectively and individually, have the right to demand the benefits which will result from normal, free, and active development.

The soundness, as a general proposition, of the doctrine expressed by the President is not denied by any political party, and the contentions against its application to particular industries or vocations have no relation to the position occupied by the medical profession. Under the light of unprejudiced analysis, nine tenths of the reasons given for conferring exclusive privileges or artificial advantages upon "regular" physicians, merely voice a preference for their system and insist upon the right to choose it. The right to prefer and to choose another system is equally entitled to preservation, not only as an individual right but because it cannot be denied or abridged without creating a condition adverse to the general welfare.

Now that the world is beginning to compare the sum total of disease with the amount of it that ought to be prevented or cured, citizens and statesmen should get their eyes open to the fact, and the meaning of the fact, that artificial advantages already have been conferred upon one school of therapeutics in many states and countries, and that this school is making a determined effort to obtain additional privileges. In several of these United States the members of the preferred school already have the sole right to charge for their services, and nearly everywhere the people have "consciously or unconsciously" clothed them with some form of legal privilege or sanction. Therefore the people of all parties and their representatives in all law-making bodies would do well to scrutinize the laws and bills that have been enacted, or are proposed, in the name of health.

"A natural monopoly is based on the admitted inequality of mankind; it is the inevitable expression of superiority in the open field of competition. . . . This is the only kind of monopoly that is legal, and whose position is likely to be permanent. . . .

"An artificial monopoly is a control of supply due to exceptional privileges, such as special legislation, patent or copyright laws; or to undue influence, duress, unfair discriminations, unjust treatment, and the like. That is, the kind of monopoly which has excited universal disapprobation is the one founded on unjust suppression of competition and

Digitized by Google

forcible ways of driving out competitors. Recent trust decisions have been based on that claim.

"Whatever objections exist to monopoly have peculiar urgency against these forms of artificial monopoly; although it must be remembered that certain kinds even of artificial monopoly may be justified on the ground of some desirability to the state, such as a business artificially created by a patent, or a copyright. *But, as a whole, a monopoly due to special privilege, or to unfair or forcible suppression of competition, cannot for a moment hope for support from a fair-minded people like ours.*" (From an article in the *Atlantic Monthly* by Prof. J. Laurance Laughlin, professor of political economy at Chicago University.)

The Rock of Truth

GRACE SQUIRES

Possibly every Christian Scientist has at some time in his experience reached a period of calm when, instead of indulging the tendency to rest on his oars, he has been sufficiently wise to work with unremitting perseverance and trust. This course has begotten a sense of assurance which seemed entirely adequate; but when, as not infrequently happens, a sudden storm breaks out of the clear sky, the encounter proves to be peculiarly trying. Perhaps the anguish of such an hour is not half so much its own measure of evil, as is that shock to his trust which dissipated the sense of protection and justice and left him struggling with the doubt as to whether he had reaped the good he had tried to sow. In such an experience he may feel that he has not deserved it, and may try to solace his resentment with the mental resolve that he will make no more effort, since both ignorance and understanding, faithlessness and faith, seem to bring about the same result.

At least one Scientist has passed through this vortex. After months of peace and health, when his faith and love grew daily stronger, he was, at what seemed a most inopportune time, confronted with an experience that swept over him like a tidal wave. Though he clung to his faith while the tempest was on and successfully fought his way out, nevertheless when the skies cleared he suffered a mental recoil which carried his pain into weary months, until it seemed as if his faith was all gone. That he had won did not much matter. The point was, Why had he suffered at all? He had supposed that spiritual understanding averted just such blows; but this experience proved otherwise.

Since there was so little to gain, one might as well drift, he thought; and so he closed his books, laid them aside, and nursed a sense of injured indifference that did not bring him the sense of liberty which he had anticipated. At length, feeling the tension of this apathy unendurable, he cried out in his misery, "Lord, I believe; help thou mine unbelief." Mechanically picking up the Bible, he opened to the seventh chapter of Matthew. He had read it many times, though never with any special discernment, but in the spiritual light of that pleading prayer, its answer suddenly illumined his consciousness. "Therefore whosoever heareth these sayings of mine, and doeth them, I will liken him unto a wise man, which built his house upon a rock: and the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not: for it was founded upon a rock. And every one that heareth these sayings of mine, and doeth them not, shall be likened unto a foolish man, which built his house upon the sand: and the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell: and great was the fall of it."

The point was clear. Because he had built his house upon the rock, he had with a large measure of complacency expected only gentle zephyrs to be wafted over it. In this new reading he found he had asked for that which had no basis in the promise of the Master. On the contrary, Jesus had in this parable fully taught his followers to expect that the same violence of evil which had confronted the foolish man would confront the wise man also, for the descriptive words were identical. "The rain descended, and the floods came, and the winds blew, and beat" upon both houses with equal vehemence. It was not, then, a difference of conditions, necessarily, that Truth was to bring, but a decided difference in results, for one house stood and the other fell, "and great was the fall of it."

He had stood through the storm, he knew this; but instead of rejoicing in that preservation, he had rebelled that the winds should beat against his house at all. Healed of his distress of doubt, he crept back into God's protecting presence with thanksgiving, and now, when the floods come and the winds beat against him, he is secure in his trust, knowing that he who is daily laying a foundation in Truth cannot fall. It is the privilege of each one who has gained the spiritual sense of the Master's teachings, as illumined in Christian Science, to know that there is no law of evil, nothing that can pluck him out of his Father's hand or trespass against him; and to know, too, that the law of Truth is the rock upon which he stands.

"Shibboleth"

CHARLES T. ROOT

In the twelfth chapter of Judges is found an account of the test applied to the fleeing Ephraimites, who by denying their nationality sought to escape from the victorious soldiers of Gilead and regain their own land. Each fugitive was commanded to speak the word "Shibboleth," but the alien tongues had not been educated to frame these syllables aright, and none who attempted it could get sufficiently near the correct pronunciation to deceive the Israelites. It is not recorded that the unfortunate men recognized the difference in sound or knew wherein they had failed; but to the trained ear of their judges the slight fault of speech instantly exposed the attempted deception and convicted the culprits of being enemies of Gilead. Thereupon, under the unmerciful code which governed the wars of that period and decreed the execution of captives, they were put to death.

Is there not in this episode a lesson for all who seek enrolment under the banner of Christian Science? Are there no Shibboleths by which thoughts can be accurately tested, whether they be loyal to Truth or emissaries of the enemy? Doubtless many such can be drawn from the Bible and Science and Health, but one in particular presents itself and seems of striking appropriateness. "Thy will be done" is a phrase frequently on the lips of every professing Christian; but according to the thought from which it arises, it is capable of meanings wider apart than the extremes of the solar system. Is it glibly spoken, with wandering thoughts, a bit of hackneyed ritual, the mere utterance of habit? Then it is simply inert, having no more power to win divine favor than have "moonbeams to melt a river of ice" (Science and Health, p. 241). Is it murmured in bereavement, with bowed head, in token of broken-hearted submission to the stern decree of a God too powerful for resistance, too remote for appeal, and too arbitrary in judgment for either anticipation or comprehension? Then it is only the maimed and meaningless "Sibboleth" of the trembling Ephraimite. It has no virtue to heal or to console.

Digitized by Google

It is an acknowledgment of the reality and power of evil, a denial of the God of Love, "with whom is no variableness, neither shadow of turning." Is the thought from which it springs, bound in the rusty shackles of a creed outworn? Then it also richly merits the fate of the foes of Gilead.

If, however, in time of fiery trial, this prayer is uttered with lifted face, in confidence, yes, even in triumph, in manifestation of that understanding of Truth, that reliance upon Love which Christian Science inculcates, and in proof of the ability, even while surrounded by the menacing clouds of mortal existence, "to know,—as in heaven, so on earth,—God is omnipotent, supreme" (Science and Health, p. 17), then the challenge is satisfactorily met. Here, at last, is heard the fully rounded "Shibboleth" which acquits the speaker of any complicity with those who seek after the gods that are no gods, and which is the password of the citizens of the kingdom of God, revealed in Christian Science.

✧

Divine Intelligence Ever Available

HELEN G. YERGER

THE following incident is one of many that have come to me during the six years of my study of Christian Science, and illustrates the difference in results between wrong methods and right. During these years I have been blessed with many physical healings and the overcoming of various forms of fear both for myself and for my children, so that my gratitude to God for Christian Science is unbounded. My first healing from lung trouble was a revelation to me, and remains a source of daily thankfulness. The following incident, however, rather than one of physical healing, is given as my first grateful testimony to the operation of divine Truth, because it is to a certain extent different from many others, while it furnishes specific points of proof of this operation in human consciousness.

I was recently under the necessity of taking a teachers' examination in subjects which I had neither studied nor had occasion to use for more than fifteen years. The time for review of the subjects was brief, and many family duties seemed to absorb what time might otherwise have been available for the purpose. Several physical ailments manifested themselves during this time of hurried preparation, until on the day before the examination a practitioner's help was necessary. On the morning of the appointed day these ills were not entirely overcome, though the help was apparent, and no sense of discouragement or fear of failure had entered my thought; rather was I conscious of perfect mental clarity and confidence.

The subject in which I was least prepared was algebra, and I had been informed that this would be taken up first. As I descended from the street-car in front of the building in which the examination was to be held, I was almost startled by the fact that, through no avenue of the senses, I was fully informed that a certain topic which in the course of my preparation I had deemed of insufficient importance to require study, would form one entire question in the examination. Arrived at the hall set apart for the examination, I found myself very much ahead of other teachers as to time, so much so that I considered going into an anteroom, in which I had left some text-books, to make a hurried study of the subject, which I knew to be a simple one to master. I was not obedient to this prompting, however, though the failure to respond to it disquieted me, and I idly waited the expiration of the time until the questions should be given out. When this was done, I was in no sense surprised to find that one of the ten questions was on the subject already spoken of; but so rebuked was I by the realization of the result of my failure to respond to the inward prompting, that I began to work with a sense of self-condemnation which seemed to shut up the avenues of mental activity and to make a certainty of failure.

After working blindly for a while at the easier problems with the sense of failure strong upon me, I came to one which involved a point of reasoning that I had never encountered in my previous experience, though I recognized the fact that it had to do with the application of a mathematical principle with which I was somewhat familiar. As I pondered this problem, apparently as far from the solution at the end of an hour as at the beginning of it, the "still small voice" of Truth spoke to me again, and brought the realization that I was working from a purely material sense of intelligence, and so was insuring my failure. Taught by my former disobedience and stumbling, I laid down my pen, entered into the "closet," as Christ Jesus bids us, and worked mentally to know that "infinite Mind . . . governs all, from the mental molecule to infinity" (Science and Health, p. 507). When the fear of failure and the sense of self-condemnation were entirely destroyed, I took up my pen again, and found that not only the problem which up to this time had seemed so impossible of solution was now unfolded without effort, but also that the others in which the results had before seemed uncertain were now solved with an ease and certainty that made their accuracy unquestionable.

I was interested to learn later that I was the only one out of the forty or fifty teachers that were taking the examination who solved the problem which had been worked for me by scientific demonstration. This experience gave me a renewed sense of gratitude to Mrs. Eddy, the Discoverer of Christian Science, for the wonderful teachings of our text-book, which not only heal the sick, but give the mental illumination needed in the working out of all our human experiences. Moreover, this contrast in the results, even in small matters, between obedience and disobedience, has taught me a lesson which I shall not soon forget.

[Written for the *Sentinel*]

Fidelity

JAMES N. HATCH

A ROSEBUSH grew by a crumbling wall
  At the end of a lonely lane,
Where a solemn silence ruled o'er all
And the tangled grass and the weeds so tall
  Withered for lack of rain.
But the rosebush bloomed all the summer through,
With each chalice upheld for the morning dew.

Away from the world was the rosebush there
  And for years it had bloomed alone,
With no one to welcome the blossoms fair
And no one to breathe the fragrant air
  Or to watch how the branches had grown.
But the rosebush heard not discouragement's call
And the blossoms hung thick on the moss-grown wall.

'Twas enough for the rose that the sun shone bright
  And the dew fell soft and warm.
Its mission it was to reflect the light,
To gather sweet fragrance out of the night,
  And strength from the buffeting storm.
To a higher power 'twas left to decree
What the blossoms should find as their destiny.

Selected Articles

[Albert E. Miller in *North Shore Breeze*, Manchester, Mass.]

Considerable interest seems to have been aroused by the reference to Christian Science which appeared in the *Breeze* some weeks ago. It referred to an article contributed by "A Churchman" to *The North American Review* under the heading, "Must Protestantism adopt Christian Science?" In commenting upon this article, your paper dealt quite frankly with the subject of Christian Science, but, as I believe, not entirely in a spirit of justice. For example, the use of the term "charlatanism," as applied to Christian Science, would seem to the well-informed reader to be without excuse. As a matter of fact, there is no more justification for applying this term to Christian Science than to the efforts of our Saviour and his disciples to heal those who appealed for help. Christians who seek to follow in his footsteps and fulfil his command that the sick be healed as well as the sinner reformed, naturally resist the effort to designate them in this way.

Your article states: "What is needed is an abandonment by Christian Science of its narrow and bigoted opposition to real and scientific attainments." A close examination into this subject discloses the fact that Christian Science places no obstacles in the way of "scientific attainments," but on the contrary, tends to promote such attainment. It is generally well known that the Christian Science movement embraces among its membership many men and women who are actively contributing, through various walks of life, to the achievement of what is highest and best for humanity. The possibilities which Christian Science constantly unfolds in the line of human achievement, are apt to be overlooked in taking an antagonistic attitude toward this teaching.

Christian Science is not engaged in making warfare upon other churches, neither does it oppose medical practice for those who desire it. In attracting, as it does, favorable attention from other believers, it shows the practical utility of its teaching. This is evidenced in the recent contribution to *The North American Review*, which it should be remembered was written not by a Christian Scientist, but by one who is described as a priest in the Episcopal church. Should not such effort be recognized as a significant sign of the times, and sober reflection rather than abrupt dismissal be given to the thought which it presents for consideration? Does not the Bible admonish mankind to "prove all things; hold fast that which is good"? Christian Science teaches exactly this, and asks to be judged by its fruits. Those who accept this religion have had, as a rule, considerable training in other churches, and this should enable them to discriminate between the true and the false; hence the significance of their determination, after honest investigation, to adhere to this teaching because of its practical Christian worth. The ranks of the Christian Science movement have been recruited from the great mass of humanity who have constituted, in part at least, the so-called incurables and those adjudged hopelessly afflicted. Are such to be condemned for believing in that which has afforded them the relief they were unable to find elsewhere?

The literature of the present hour voices a spirit of unrest, an asserted claim of the insufficiency of modern religious teaching to meet mankind's essential needs. "The peace of God, which passeth all understanding," which should be available to all who seek through familiar paths to secure it, is apparently withheld in large measure from many earnest seekers. This being so, why should individuals be condemned for pursuing a course of investigation leading beyond the older paths? This question one hears asked on every side. Then should not the attempt of our friend "A Churchman" to answer this question be taken seriously and be given profound consideration instead of being met with stubborn resistance? Let us not assume that a departure from that which is purely traditional and dogmatic means retrogression. Whatever is good will endure, and whatever we have of truth, if adhered to, will eventually lead humanity into all truth. Progress demands that the torch of investigation should not be extinguished, or the investigator upbraided for his diligence in seeking a newer and better way out of human dilemmas.

✧

[Frederick Dixon in *Newcastle Daily Chronicle*, Newcastle-on-Tyne, England]

A sermon recently printed in your paper declared that Mrs. Eddy dropped her dictum, that matter is unreal and temporal, into an astonished world, instead of seeking, as scientists did, first to investigate the statement. I am afraid the clergyman cannot have realized, when he made this statement, where it was going to lead him. The unreality of matter is necessarily coincident with its temporality, therefore it is not necessary to trouble about that distinction. What is interesting, however, is the fact that the theory of the unreality of matter is almost contemporaneous with the history of the world, so that there should be no room for astonishment by the twentieth century of the Christian era. This teaching of the unreality of matter was preached in the East for centuries before Christ. It found its way into Europe in a very different form in the teaching of Plato; and it seems to me strange that this critic does not know that the Platonic philosophy is based on the teaching of the unreality of matter. From Greece the teaching spread westward, and was taught in medieval days in the University of Paris by Abélard, and throughout the universities of Europe by the whole body of the Conceptualist philosophers. In its modern form it was put forward by a famous bishop of the Church of Ireland, named Berkeley, and in our own times it has been taught in its latest form by a number of great Christian philosophers.

Now, the philosophy of the unreality of matter is known in natural science as idealism, in opposition to the contrary statements of materialism. Mrs. Eddy, face to face with the statements of the New Testament that "the flesh profiteth nothing," and that "they that are in the flesh cannot please God," came naturally to the conclusion that God could scarcely have created man in a form which was not only unprofitable but could not be pleasing to Him. She realized also that God is Spirit, and that man made in the image and likeness of God must be spiritual, and not material. Therefore, she arrived at the idealistic conclusion that the real universe must be spiritual, and not material. She saw, in short, that the idealism of the New Testament was not the idealism of the schools, and she found the answer to her inquiries in the pages of the gospel.

In Mrs. Eddy's efforts to arrive at a full understanding of the gospel teaching, she advanced by a process of experiment. She turned from allopathy to homeopathy, and from thence she turned to Mind itself. Gradually demonstrating every inch of her way as she went along, she ultimately put forward her conclusion in the text-book of the Christian Science movement, "Science and Health with Key to the Scriptures." This book teaches the unreality of matter, which has been proclaimed through countless centuries; but it teaches it from an entirely different point of view from the schools, and of this fact the schools are perfectly aware.

Digitized by Google

Spirit, she showed, was the only reality, and the only creation that of divine Mind. Matter, therefore, could be nothing but a negation of Spirit. Just as great natural scientists have accepted their premises of atoms and electrons as a basis to work on, so Mrs. Eddy accepted the unreality of matter for a like process, and through years of the most careful experiment she proved the unreality of matter through an understanding of spiritual law.

✧

[Marie Hartman in *Nunspeets Nieuws en Advertentieblad,* Nunspeet, Holland. (Translation.)]

Christian Science is not medicine, but theology, and it is founded on the Bible alone, more especially on the teachings of Jesus. It was not medical knowledge which gave Jesus power to destroy sin, sickness, and death, but his knowledge of God as the great and only cause of all that is, the God of whom James writes: "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." To all who follow his teachings, Jesus points out the way to obtain such an understanding of God that everybody shall say, as he did: "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always."

Christian Science teaches that prayer is answered when men have learned to understand and obey God's law and will. Prayer, therefore, is listening to God, and is not trying to change a decree of God, the all-wise and omniscient. Some reflection will quickly show the presumption of such trying. Communion with God enabled Jesus to destroy sin, sickness, and death, and the signs, or the works he did, are in fulfilment of God's law, not the interference with, or change of, the laws which govern the universe. Jesus possessed this knowledge of God in all its fulness, and nowhere is it written that this knowledge is not obtainable by each child of God. On the contrary, Jesus says, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also." Christian Science teaches us so clearly how to become conscious of what it means to be God's child, and thus be able to understand the Father and to express Him, that it has saved thousands upon thousands from sin and sickness, and has taught them also to give this knowledge to others.

As the foregoing will show, the only purpose of Christian Science is to serve and love God under all circumstances; and Jesus himself said that faith must show itself in deeds. Any Christian must admit that in such a teaching there is no danger or quackery. The great growth of the Christian Science movement is the best proof of the truth of this religion and of the blessings it brings. By far the greater part of the Christian Scientists came to it because they were ill or had been pronounced incurable. It is not surprising that they are thankful for the teaching which brought them liberty.

✧

[Frank Bell in *The Derrick,* Oil City, Pa.]

The assertion in a sermon quoted in a recent issue that nine tenths of the Christian Scientists have become such in order to be healed, is substantially correct, although seventy-five per cent is perhaps more nearly the actual proportion. This being the case, it must follow that the statement, "There is no such thing as sickness," does not correctly present the teaching of Christian Science on the subject. Sick persons are not healed by telling them they need no help, nor would they be likely to turn for relief to a system whose practice consisted of ignoring illness. The large and growing membership in Christian Science is made up of those who have found in its teaching and practice a substantial response to their need for better health and morals, for relief from the blighting effects of fear and superstition, for a larger knowledge of the vital things of life.

Reference has been made to the philosophies of India, and it is asserted that they should be judged, not by the beautiful phrases in which they may be expressed, but by their fruits, their effects upon their adherents. Why then attempt to reverse this order of reasoning and judge Christian Science by what some careless persons have mistakenly assumed to be its teachings, instead of looking into the great good it has done and giving it due credit therefor? If the well-nigh invariable effect of Christian Science is to heal the sick and cleanse the sinner, to promote the Christian virtues and to make of its adherents better men and women in all respects, why should professed opponents of evil waste their time trying to misrepresent and discredit Christian Science?

Christian Scientists are taught to go quietly about their work of doing good. They do not thrust their opinions into unready ears; they do not proselyte, nor do they seek to build up their religion by pulling down others. They never hold evangelistic meetings to gain adherents. They believe the best influence in a community is a pure-minded man or woman, the most effective sermon a genuinely good life. They see much that is good in other religious beliefs and they are never found on the housetops shouting the shortcomings of their fellow men. They ask, and usually receive, like consideration. On page 354 of Science and Health, Mrs. Eddy says: "The opponents of divine Science must be charitable, if they would be Christian. If the letter of Christian Science appears inconsistent, they should gain the spiritual meaning of Christian Science, and then the ambiguity will vanish. The charge of inconsistency in Christianly scientific methods of dealing with sin and disease is met by something practical, —namely, the proof of the utility of these methods."

✧

[John H. Wheeler in *The Sedalia* (Mo.) *Democrat*]

Jesus once said, "By their fruits ye shall know them." The author of Christianity referred to the fruit of the Spirit as being expressed by an exemplary Christian life. This must explicitly include a full obedience to the ten commandments, literally, morally, and spiritually, together with a spiritual sympathy for our Saviour's Sermon on the Mount. These qualifications are necessary in order to appreciate and obey Jesus' command that every man love his neighbor as himself, which is the "fulfilling of the law."

Our critic claims that Mrs. Eddy taught there is no hell, which hardly accords with her teaching as she understood the subject. True, she did not picture a black, literal hell, an abode of terror, where the eternally damned shall never find relief. The Christian world has long since refused to accept these teachings without reserving the right to form its own conclusions, especially when the Bible declares that God is Love, and Jesus preached and practised what he taught, that we must forgive our enemies. Christian Science teaches that the word of God and His whole law must be obeyed literally and spiritually; that the word of God is absolutely sufficient for man's guidance and full redemption from the flesh and all kindred evil,—these being but a sinful sense peculiar to the carnal mind. Jesus came to show mortals how to lay off, or overcome, the human will and all the desires of mortality through the spiritual understanding of man's true relationship with God, the Father of all.

Once when the Jews demanded of Jesus "when the king-

Digitized by Google

dom of God should come," he replied: "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you." That is, it is within the mental realm of each individual who obeys or lives the law of God, and who sincerely loves his neighbor, which includes the act of regarding his fellow man as the child of God, and doing this compassionately and spiritually, even to the degree that he considers necessary for his own good. He must steadfastly refuse to let evil defile either himself or his spiritual vision of his neighbors. This act is genuine only as he patiently forgives and forgets the seeming carnal nature of his fellow man, and as he prays and spiritually strives to overcome the errors of human kind. He must continue to hope for all mankind's redemption and the overcoming of sin, which he knows to be the opposite of God's nature, as well as powerless to influence goodness in mortal existence.

Jesus taught that the cardinal point in spiritual freedom lay in being pure-minded, for he said, "Blessed are the pure in heart: for they shall see God." And Christian Science reveals to the human mind the spiritual power of communion with God, to the exclusion of the ills common to all mortal existence when men do not mentally walk by faith with divine Love or God, and believe that God is a "rewarder of them that diligently seek him," as we read in the eleventh chapter of Hebrews.

Hell is a belief in the absence of divine Love and law in the human mind, and the reign of selfishness in this mind instead. This is why Paul demanded, "Let this mind be in you, which was also in Christ Jesus." Good and evil cannot both reign in or control the mortal thoughts of any one. So the ten commandments were received by Moses from God and given to His people, to be a guide to them throughout life, to enable them to avoid hell and gain heaven, the fruit of obedience.

✧

[John L. Rendall in *The Fairfield* (Iowa) *Journal*]

In a recent issue I find under the caption, "The Bible and Christian Science," the full text of a sermon delivered by a clergyman, in which he presents his opinion of what Christian Science teaches. He states, "We shall for the most part treat the subject by the deadly parallel method." The critic's method certainly kills every sense of justice and truth, and distorts, perverts, and misrepresents as no other method possibly could do. For one to take a passage from Science and Health, and regardless of its significance in relation to its context, arbitrarily to dispute it with a carefully selected Bible quotation likewise used regardless of its context, is about as inexcusable a method of "enlightenment" as could be devised.

In following the quotations made from Science and Health as given in the report of this sermon, and reading them in connection with their context, I find that the significance given by the critic is in most instances a positive perversion of what these passages are really intended to convey. I will cite one instance which illustrates my meaning. The clergyman states, "The Bible teaches the reality of sin: 'By one man sin entered into the world.' Christian Science says, 'Sin is but an illusion.'" The latter statement in its completeness, as found on page 480 of Science and Health, is as follows: "God, or good, never made man capable of sin. It is the opposite of good—that is, evil—which seems to make men capable of wrong-doing. Hence, evil is but an illusion, and it has no real basis. Evil is a false belief. God is not its author. The supposititious parent of evil is a lie."

Because of the limitations of space it is impossible for me to take every quotation made by our critic and give its context, but suffice it to say that were I to do so, it could be clearly shown that he has no fair or legitimate Christian reason for his attack on Christian Science. It is true that Christian Scientists have a different concept of theology than that which he entertains, and it is true that they take a different position with regard to what constitutes reality. It is also true that in Christian Science, demonstration is requisite to the acceptance of any teaching as real and true.

There are more than one hundred and fifty varying definitions of what constitutes real Christianity. There is one that will stand the test of eternity, and that is the one given by Jesus: "These signs shall follow them that believe; In my name they shall cast out devils [evils]; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." At every point in Jesus' teachings he demanded proofs rather than professions of Christianity. It is a very easy matter for theologians to say, Jesus taught this, or Jesus taught that. It is, however, a little more difficult to follow his real teachings and to emulate his example, not only in casting out evils, but also in healing the sick.

The abstract statement made by our critic that "Christian Science contradicts the Bible on the reality of matter, the reality of sin, the reality of sickness and disease," etc., is simply an opinion, which does not take into cognizance the full meaning of reality or the Christian Science definition of what constitutes reality. Science and Health clearly and logically explains that from the ordinary mortal view-point matter, sin, disease, etc., seem real. On page 460 of Science and Health Mrs. Eddy states very clearly: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being;" and on page 270 she writes: "Mortals think wickedly; consequently they are wicked. They think sickly thoughts, and so become sick. If sin makes sinners, Truth and Love alone can unmake them."

It is true that Christian Science "has never built a hospital." It is also true that Christian Science has saved hundreds of thousands of people from going to hospitals, and that the ultimate of its teachings will bring about the fulfilment of that glorious vision of St. John, "And there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." I can imagine our critic saying, "But that does not mean now," and I will respectfully ask, "If not, why not?"

Assurance

TEDA M. EARLE

I HEARD a nestling crying in the dark;
The mother hid it 'neath her brooding wing
And quickly hushed the frightened little thing.

I heard an infant crying in the dark;
The mother pressed it to her loving breast,
And soon the troubled child was hushed to rest.

I heard a sad heart crying in the dark;
The Father-Mother God, compassionate and mild,
Took gently by the hand the trembling child,
And lo! the night was changed to glorious day.

Editorial

"Holy to the Lord"

It has occasionally happened that Christian Scientists, in changing from their old beliefs about religion and the observance of certain forms and ceremonies belonging thereto, have become just a little bit unsettled in regard to the proper observance of the Sabbath day. They have taken too literally, or rather construed too liberally, Jesus' statement that "the sabbath was made for man, and not man for the sabbath." In their early enthusiasm some have been inclined to make the day very secular, with the exception of that portion in which they attend church service. It is only another instance, however, of the harm that results from taking a passage of Scripture and adapting it to suit conditions which must be bolstered up in some fashion in order to be at all justifiable, and this with an utter disregard for the context which gives the true meaning.

When we come to analyze it, there is nothing whatever in the incident which called forth this rebuke from the Master, that would in any sense sanction the practices for which this text has been made the excuse. The Pharisees, with their strict observance of the letter, would have haled Jesus before the authorities for doing a deed of mercy in healing the man with the withered hand, or for satisfying the hunger of himself and his disciples on the Sabbath day, and he simply exposed the fallacy of their contention by putting to them the unanswerable question, "Is it lawful to do good on the sabbath days, or to do evil? to save life, or to kill?"

Jesus proved the spirit to be above the letter in his assertion that it is lawful to do good on Sunday as well as any other day of the week, and if as Christian Scientists we are careful to do on Sunday only that which is good, which will bear the Master's test, there will be no difficulty in maintaining a proper observance of the Lord's day. In whatever lapses there may have been, it must be admitted that Christian Scientists have but followed in the footsteps of many other professedly Christian people. They should bear in mind, however, that there is a great difference between liberty and license, and that simply by changing their religious beliefs they are not absolved from the proprieties of what is regarded as the Christian Sabbath.

In the essentials of Christianity there is but one standard for every day of the week, that of the highest morality, and this is not violated by any good person. It should not be forgotten, however, that side by side and more or less interwoven with this standard there is another, a standard of respectability and conventionality. While it is true that sometimes the observance of accepted conventions is made a cloak for a line of conduct which does not conform to morality in any respect, this does not absolve the really conscientious moralist from strict observance of those customs and practices by which the good opinion of the community may be secured and retained.

Because of a general ignorance of what the teachings and doctrines of Christian Science are, it has been the experience in many communities that Christian Scientists were looked upon with coldness and suspicion, and only by their blameless conduct and strict regard for conventionalities were they able to overcome the impression that they were "queer." In fact, one of the chief reasons for their good works being "evil spoken of," has been that they were regarded as not quite normal and as holding peculiar views on almost every subject. It goes without saying, however, that the true Christian Scientist is entirely normal in everything, carefully observant of the world's standards of propriety and good taste, and scrupulously regardful of the rights and even of the feelings of his neighbors.

There is one point to be kept closely in view, namely, that because the world is holding up Christian Scientists to both the letter and the spirit of their profession, it is especially incumbent upon those who have taken this name to be extremely careful that they acquit themselves in such a way as will earn and command the respect of all. As Christian Scientists we are prone to quote Jesus' saying, "By their fruits ye shall know them," and we must not forget that the world is now largely basing its opinion of Christian Science not only upon the healing work which is being done by "the name of Jesus Christ of Nazareth," but also by the conduct of Christian Scientists themselves. Mrs. Eddy reminds us that "a desire for holiness is requisite in order to gain holiness;" and that "if we desire holiness above all else, we shall sacrifice everything for it" (Science and Health, p. 11). Remembering this, surely there can be no difficulty in keeping every day "holy to the Lord."

Archibald McLellan.

One Good versus One Evil

Mortal belief is forever at war, not only with our sense of unity but with the achievements of unity. It precipitates division and consequent strife in the individual thought, in the home, the community, the church, the state. Selfish and dogmatic, it loves to wrangle, and grows quite vain over its power of disputation, its capacity to disturb and destroy. It is greatly given to idolatry, to the positing of secondary causes to which it assigns the government of definite areas of influence. The mythologies of the East were the direct outcome of the deification of such centers of authority. Hathor, Athena, Venus, and all the rest of them, were believed to have their specific realms over which they ruled with jealous regard for their rights, and thus the lively contentions of the gods, as well as those of other folk, were fully provided for. In all this, mortal belief is opposed not only to the teaching of the Master but to those higher intimations of nature which have always appealed to the sages and poets, and in its divisive falsity we may find an explanation of the constant increase in the varieties of human affliction.

In theory all Christian people aver that life emanates from the one God, but in their every-day beliefs most of them make it the product of the activities of many so-called vital organs. They live in their heart, lungs, stomach, nerves, etc., any one of which, it is believed, is able, through inaction or overaction, to disturb and destroy all the others. Physical organs are thus given a distinctive relation to life, and specialists in the practice of medicine are appealed to with the same longing hope that impelled the Athenians to seek to placate their gods. Thus men have come to think that the harmony and peace which constitute health, are dependent upon the varying states of various things, most of which can only be guessed at.

Under these circumstances the hazards of health naturally come to be thought of as very numerous indeed, and preventive hygienic requirements are correspondingly increasing. Today, he who undertakes to provide for all the advertised possibilities of peril, is necessarily solicitous about so many material things as to have little if any time for the cultivation of the spiritual life. This is the saddening side of the devotion of well-meaning physicians and others to the exploitation of disease in the public school and the public press. Misdirected zeal to a good end has become the greatest hindrance to its achievement. Humanity's material efforts to secure freedom

Digitized by Google

are doubly riveting its chains, and this because men have quite forgotten the Master's words, "I am come that they might have life, and that they might have it more abundantly." He recognized God, Spirit, as the only basis of life, and Truth, revealed and loved, as the only physician.

And now Christian Science has come to preach again this long-neglected gospel, to rebuke disintegrating and destructive belief, and to declare and demonstrate, as did Christ Jesus, the unity of being, of law, and of life. It teaches that life is the manifestation of, and dependent upon, not many things, but just one thing, the activity of infinite Mind. From this basic verity it reaches the logical conclusion that there is and can be but one ailment, one explanation of all mortal distresses, namely, this false belief in many powers, many vital centers, many causes of sickness, many means of cure.

Christ Jesus was always denying and defeating division. He was always relating himself, his activity, efficiency, power, peace, and joy, with every other real thing and right state, including health, immediately to the one infinite Life. Singleness and simplicity thus characterized his philosophy, his aim, his preaching, and his practice. He recognized but one source and explanation of disease, to wit, the mental dominance of error; and but one means of cure, namely, conformity to Truth, and this is the one appeal and impulsion of Christian Science. "Unity of the faith, and of the knowledge of the Son of God," is to prove the panacea for all sicknesses, and so present the perfect man. This at once simplifies the human problem, it focuses attention upon the verities of being, and it begets the wise determination which led St. Paul to say, "This one thing I do."

JOHN B. WILLIS.

Light

IT is deeply interesting to note the many references to light which are to be found in the Scriptures, the word being constantly used therein to express the presence of Deity. We are told that when Egypt was in deepest darkness there was light in the dwellings of the Hebrews, and this light, this symbol of the divine presence, was with them in their desert journeyings as "a pillar of fire by night." Many times does the psalmist make use of this figure, as in the forty-third psalm, where a sorrowful plaint of deceit and injustice breaks out into an appeal for the infinite help: "O send out thy light and thy truth: let them lead me"! This is followed by a vision of "exceeding joy," and the question, "Why art thou cast down, O my soul?" Why indeed should any one be cast down when God is declared to be "the health of [man's] countenance"?

This subject is wonderfully presented by Mrs. Eddy when she says (Science and Health, p. 191): "As a material, theoretical life-basis is found to be a misapprehension of existence, the spiritual and divine Principle of man dawns upon human thought, and leads it to 'where the young child was,'—even to the birth of a new-old idea, to the spiritual sense of being and of what Life includes. Thus the whole earth will be transformed by Truth on its pinions of light, clearing away the darkness of error." When the aged Simeon took up in his arms the child Jesus and beheld with spiritual vision the glory of Truth's ministry which was to unfold with his advancing years, he spoke of it as "a light to lighten the Gentiles, and the glory of thy people Israel." That he spoke by divine inspiration is supported by the fact that Christ Jesus did not hesitate to say, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." That this light was universal and not limited to any personality is shown by his statement respecting John the Baptist: "He was a burning and a shining light;" in other words, John was a transparency for the light of Truth and Love, and gave out all that he could understand of Truth's purifying and uplifting power.

Again and again in the religious history of the olden time and of our own day, has this light pierced the darkness and revealed, even if but for a moment, the things of God's kingdom. On a lonely mountain height, when the light of day had departed, Peter, James, and John saw their Master transfigured, his face shining with the radiance of Spirit. They also saw, through the transparency of his divinely pure consciousness, Moses and Elias, who lived to God, though material sense declared them dead. That this light was always present to Christ Jesus, explains his healing of the lunatic boy when they descended from the mountain, and it was the same light which burst upon Saul of Tarsus on that momentous journey to Damascus. Well might he say later, "Let us put on the armor of light." Again it came to Peter when he was in prison awaiting execution, the divine idea loosing his chains and guiding him anew to freedom. The woman in the parable who had lost her piece of money lighted a candle, and though it was only a tiny gleam it met her need; but the great need ever is "more light."

No professed Christian questions these Bible stories, but how many are there who today believe, yes, know of a certainty, that the light of Truth shines on with undimmed radiance, and that when we see it as it is, there will be for us no need of sun or moon, for, as St. John tells us in Revelation, "the nations . . . which are saved" shall walk in this light. Jesus said that those who love evil will shrink from the light; but its compelling power will bring all within the range of its influence, and mortal delusions of every name and nature will lay down their vain pretensions before divine Truth and Love. Whatever the perplexity, the fear, or the sense of suffering, we have but to lift up thought with the living faith which cries, "O send out thy light and thy truth," and the clouds will vanish.

ANNIE M. KNOTT.

Among the Churches

Current Notes

NEW ROCHELLE, N. Y.—The members and friends of First Church of Christ, Scientist, are expressing gratitude for the removal of all debt on their church property on Locust avenue, the whole mortgage having been satisfied of record during the past month. It is pleasing to the members to note that in the effort made to raise the necessary money to pay off the mortgage, the subscriptions for the purpose amounted to more than enough, and the substantial balance is to be devoted to a fund for a permanent Christian Science edifice in this city. The steady and natural growth of the Christian Science movement in this community evidences a growing interest in this much-discussed religion among New Rochelle's citizens.—*New Rochelle Standard.*

SAN DIEGO, CAL.—Second Church of Christ, Scientist, has been organized, having received its charter from the state, and it will meet for the present in the Masonic Building, Fifth and Ash streets. For a long time the auditorium of First Church has been filled to overflowing, and the move became imperative. This is in keeping with the rapid growth of the Christian Science movement in every civilized land. The increase of adherents on the Pacific coast has been particularly noticeable, while Chicago leads all other cities of the world with its thirteen churches.—*San Diego Union.*

Digitized by Google

PUEBLO, COL.—The members of First Church of Christ, Scientist, completed the purchase yesterday [Feb. 3] of the northwest corner of Twelfth and Main streets, one of the most desirable sites in the city, on which they plan to erect a church.—*Pueblo Chieftain.*

✧ ✧ ✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

The Lectures

Reading, Pa.

The remarks of W. Morris Deisher in introducing Judge Clifford P. Smith, who lectured on Christian Science at Rajah Temple, were as follows:—

About ten years ago Mark Twain wrote a criticism of Christian Science, and it was published as a serial in one of the popular monthly magazines. I read portions of this criticism, so called, and regarded myself as fully qualified to pass judgment upon the merits and demerits of the doctrine. Within the past two years I was asked for an expression of opinion on this religion. Up to that time I had not read one line of Christian Science literature, but being armed with the jibes furnished by Mark Twain, I did not hesitate to reply accordingly. I instantly recognized that my answer was not only unfair but also dishonest. To right the wrong, I bought a copy of "Science and Health with Key to the Scriptures," as I now recall, the very next day. I read it, and to my utter amazement learned that it contained very few statements to which I could not fully subscribe. I met with stumbling-blocks, of course, but these will probably be removed for you by the lecturer tonight, as others kindly removed them for me.

The world is making progress. Prejudice is giving way to understanding, fear and hate to hope and love; justice and charity are replacing injustice and avarice. It is not claimed for Christian Science that humanity is indebted to it for all of this progress, though a little leaven may leaven the lump, but it cannot truthfully be denied that Christian Science is a decided factor in the issue. I scarcely need tell you that I am not a member of the "little white church" on North 5th street. If I were, I would not be ashamed to confess it, proclaim it from the housetops if necessary; but I realize that to be honest with myself more than a mere confession of faith is required for consistent membership, and some of the old thoughts have not yet been fully overcome.

My association with members of the Christian Science church, whether in Boston, New York, Philadelphia, Washington, Chicago, or elsewhere, proves conclusively to me that there is that in their lives which indicates that they have found a key to the door of everlasting life, and that unconsciously they radiate this peace and joy in their every thought and act. We are surely sailing, in the good old ship which bears the motto "God is love," on the sea of time, whose waves are wearing away the rocks of fear, hate, envy, superstition, and malice. These have hidden from us the view of the shore of eternity upon which we will surely land, and enter into and possess the heritage of Life, Truth, and Love, vouchsafed us from the beginning.—*Correspondence.*

London, England

The introductory remarks made by Colonel Carter, C.M.G., M.V.O., at the first of two lectures on Christian Science given by William D. McCrackan, M.A., in Third Church of Christ, Scientist, were in part as follows:—

In an audience such as this there must be many different standpoints from which the lecture will be viewed. First of all, there is the Christian Scientist who has got beyond the stage of simple inquiry and has reached the knowledge of the efficacy of Christian Science in sickness and in health; then there is the inquirer who has heard enough of Christian Science to know that it is worth while to study it; and last but by no means least, are those who have no precise knowledge yet of what Christian Science really is, and have come perhaps for the first time to listen to a lecture on the subject. Yet there is a bond of union between all these conditions, and that is a knowledge that there is something new to learn about this vast subject, something to take home and think over, something to understand rather than believe. Whether we accept or reject Christian Science, there is always one main fact that will remain in our minds, namely, the simplicity of its premises and the directness and simplicity of its conclusions.

At the second lecture O. L. Parsons said in part:—

To those who are not Christian Scientists I would say: We, as Scientists, are a people who have seen a great light, which comes from the presence of God and has been revealed to our understanding through Christian Science. This light we are following, and it is destroying in us the darkness of fear, sin, organic and functional disease, and death. We invite you to come into this light, to share it with us, and to enjoy the full benefits of it.—*Correspondence.*

Grand Rapids, Mich.

Willis F. Gross lectured on Christian Science in Powers' Theater, where the seating capacity, which is about fifteen hundred, was taxed. The lecturer was introduced by Malcolm C. Hopper, who said in part:—

It is the purpose and aim of Christian Science to give to the world a scientific and therefore demonstrable knowledge of eternal Truth, that knowledge which in Old Testament days delivered men from the fiery furnace, from the den of lions, and in fact was designed to give them dominion over all the earth. A study of the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, shows clearly that if truth were ever applicable to the needs of man, it must be so now, for truth, like the Christ, is "the same yesterday, and today, and forever."

Early in my experience as an investigator of this teaching, it was my privilege to attend a Christian Science lecture during which three sufferers were healed and made free. I myself was one of them. In speaking of this experience to a Christian Scientist afterward, he replied in the language of Scripture, "He sent his word, and healed them." That

Digitized by Google

the word of God is available today as of old, is no longer an open question to progressive Christians, but is an accepted fact, and for this reason I again welcome you to hear one who bears record to this truth.—*Correspondence.*

✧

Ithaca, N. Y.

At his lecture on Christian Science in the Conservatory Hall, Bicknell Young was introduced as follows by Arthur N. Gibb:—

At least once each year every Christian Science church throughout the world offers to the public a free lecture on Christian Science. This is done to eliminate the erroneous beliefs of many as to just what this religion really is. In all ages of the world's history, people have been eager to know more of the truth, but have been slow to accept it without conclusive and demonstrable proof. Christian Science is a demonstrable truth. Nearly all of the opposition to it is but the result of ignorance. I am sure the men and women in this audience are here out of no idle curiosity, but rather with an earnest desire for enlightenment.—*Correspondence.*

✧

Croydon, England

Prof. Hermann S. Hering, who lectured on Christian Science at the Large Public Hall, was introduced to the audience by Algernon Hervey Bathurst, Esq., who said in part:—

Is the teaching of Jesus the Christ being practised today as it was during the first few centuries of the Christian era? There is surely room for improvement. The day must come when his teachings and his commands will be accepted in their completeness and entirety, including the command to "heal the sick, cleanse the lepers, . . . cast out devils." Christian Science was discovered forty-seven years ago, and it has already encircled the globe. With its advent came the reminder and the proof to mankind that what Christ Jesus and his disciples taught and practised nineteen hundred years ago is true, just as true and demonstrable today as then.

Testimonies of Healing

That Christian Science is equal to the solution of every difficulty and the overcoming of every evil, has been proved to me many times. Colds, of frequent recurrence, resulting in long periods of hoarseness (which proved most detrimental to my daily work, since it depends on a constant use of my voice), have entirely disappeared. Periodical attacks of illness, accompanied by extreme weakness, would keep me in bed from one to three days, but these are also among the illusions that have been dispelled. Glasses worn for eight years, on account of what several eye specialists and opticians pronounced an unusually complex and incurable case of defective vision, were left off during my first six weeks' study of the Lesson-Sermons, and they have not been needed since, though that was five years ago. Teeth that were formerly filled at least twice a year, have needed no dentistry for the past three years. They have recently been examined by an experienced dentist, who said they were in perfect condition.

I could continue to tell of the innumerable blessings I have received, but it is of a recent demonstration that I wish particularly to write, because it shows so clearly how Christian Science casts out "devils" now, as the truth did when Jesus demonstrated it in Palestine so many years ago. For four weeks I suffered intense and almost incessant pain in the stomach. I knew I ought to be able to analyze the wrong condition of thought and cast out the error without the help of a practitioner, but days passed and I seemed to be making no progress, in fact the discomfort was increasing, when gradually I began to realize that I was, and had been for some months, holding a feeling of intense resentment against a friend. To sense this friend had been rude, unreasonable, unkind, besides many other things that do not express Love and Truth, and instead of denying these errors and knowing that they did not belong to my friend because they could be no part of God's child, I had told myself and others that they were characteristic of that friend. Furthermore, I was keeping some letters this friend wished me to destroy, and thereby was deliberately cherishing a sense of retaliation, thus entertaining a desire to do my friend an injury. When I saw the sin, I got the letters and burned them, and before they were consumed the physical suffering left me, and it has not returned. That was several months ago.

It is for the spiritual regeneration resulting from such experiences that we, as Christian Scientists, are most thankful, and because of it that our churches are springing up in every part of the world; for the Science movement goes triumphantly on in spite of any and all efforts on the part of those seemingly actuated by the carnal mind to thwart its development. When I consider my own struggle of four weeks against the sense of evil in just one instance, I pause in awe at the thought of the immeasurable spirituality and love and self-abnegation which must have been necessary in our beloved Leader, Mrs. Eddy, to enable her to give to the world this priceless treasure, the systematized and wisely expressed statement of the truths of Christian Science. This Science is giving its students an understanding of God, and of the life and works of Jesus, which makes it possible for them to overcome evil in others by first casting it out of themselves.

Surely "Science and Health with Key to the Scriptures" is a pearl of great price, since its study leads to an illumination of the Bible that makes it not only possible for us to love our enemies, bless those that curse us, and pray for those that despitefully use and persecute us, as Jesus said we should, but it shows us that this is the most beneficial and practical course to follow. With each victory my joy and courage are strengthened, and I press on, hoping some day to be worthy of the high calling of those who are truly Christian Scientists.

HELEN L. T. BADGLEY, Vancouver, British Columbia.

✧

[Translated from the German]

In the winter of 1908 I had a severe attack of influenza. It manifested itself especially by pain in the chest, difficulty in breathing, etc. I wrote to some relatives whom I had expected to visit, telling them of my condition, at the same time requesting them to ask one of my friends, a Christian Scientist, to give me treatment. I soon felt better, though I was unable to leave my bed. In the mean time a letter came from this friend, and it was so filled with truth and love that, while reading it, I forgot all about the discordant conditions, and I was able to get up immediately. I then packed my things and started on my ten hours' trip at the appointed hour, reaching my destination in a state of such well-being that it was a matter of surprise to myself; the illness seemed to me like a dream from which I had awakened. It became clear to me that disease, worry, and trouble are indeed only a dream which seems real, but which disappears as we awake in God's likeness, as we understand that we are children of ever-present wisdom and Love.

I am deeply thankful to God for the light of Truth which has often protected, strengthened, and comforted me in times of trouble.—MARIE TRIEBEL, Kempen, Rhein, Germany.

✧

I want to add my tribute to the power of Truth as revealed in Christian Science. After a long period of invalidism of a most pronounced type, I have once more been placed upon my feet, a strong man, able to meet the duties of every-day life, when for years neither myself, the members of my family, nor any physician thought there was anything in store for me but the grave.

In December, 1910, after having been sick for about seven years, during which time I had walked with crutches, when I was able to walk at all, and after I had exhausted almost every known material healing agency, as a last resort I went to a Christian Science practitioner. At that time I was just able to be out of bed and to get about a very little. I was despondent in a pronounced degree, skeptical of ever again being well, and yet determined to live if it were possible. In this state of mind I went to one who knew the truth, determined to stay by him to the last, because there was nothing else that I could do.

While I had read Christian Science, talked it, and been with those who had attempted to aid me, my attitude toward its teachings was not right. I wanted physical healing that I might again go out and follow the bent of my own mortal will. So actuated, Science and Health was a closed book to me, and in no degree had I been able to grasp its teachings; but I was led gently, lovingly, and kindly. For several months there was no perceptible improvement. During the following March I was, if possible, worse than I had been for a long time, and so utterly despondent that only my natural affection for those who had so kindly ministered to me during the years of my sickness, restrained me from a desperate step.

Shortly after this, however, through surrender of my own weak will, which had never brought me aught but pain and misery, the first faint flickerings of the truth began to dawn. By the middle of April there were some signs of decided

Digitized by Google

improvement, and by the middle of the next month I threw away the crutches that I had leaned upon for seven years. Two weeks later I accepted a position that demanded continuous and at times arduous labor. From that day to this I have never missed a moment's work through physical disability, and very little time, in fact, from any cause, though I have had to work six days in the week, several evenings each week as a rule, and not infrequently all night as well. Whereas for years I was so weak that to walk a few rods beyond my tether would so exhaust me that I would be practically prostrated for days, I was able, almost from the first treatment in Christian Science, to walk several miles each day. Now I can swing off several miles and feel refreshed for the exertion.

Spinal trouble was said to be one of the causes of my long illness, although there were several other complications, of which a terribly weakened digestion was one. I had worn a plaster cast for months; had lain in bed possibly a year, all told; and much of the rest of the time I had been able only to sit up. For several years I lived upon a very light diet. I took medicine of almost every kind; in fact, not a little of my later trouble was due to some of this dosing. I was in sanitariums, and consulted some of the ablest and most earnest physicians in the country. Nothing did me one particle of permanent good,—my life was simply prolonged until I was ready for the truth.

The medicines have long since been cast aside, and now for every trial I am happy to say that Truth is my only support. I owe and feel a debt of gratitude to Christian Science that humble devotion to its teachings alone can repay.

RALPH L. KLINE, Youngstown, Ohio.

✧

[Translated from the German]

In the summer of 1912 I was taken with severe nervous debility and rheumatism. I felt very miserable, had no appetite, and became subject to spells of mental depression and fear. Having been an adherent of Christian Science for several years, I did not send for a physician, but tried to realize for myself the power of Truth. The sense of fear did not yield, however, and I therefore requested a friend who is a practitioner in this locality, to treat me. She did so, with the result that after the second treatment I felt better and was able to get up, and my appetite returned. With a few more treatments the pain gradually disappeared, so that at the end of the vacation time I was able to take up my profession. When suffering with similar nervous conditions in former years, and medical treatment was resorted to, it would at times take months for me to recover.

My heart overflows with thankfulness to God, and with gratitude to Mrs. Eddy, when I consider the many blessings which I have received both spiritually and physically, in addition to the healing experienced in the above instance, through the application of the truth as revealed in our text-book, "Science and Health with Key to the Scriptures."

NATALIE LÖRCHER, Schorndorf, Württemberg, Germany.

✧

It is with a deep sense of gratitude that I give this testimony. I was healed of what is known as lockjaw in less than two hours after a Christian Science practitioner was called in. When she came, my jaws were locked, my throat and tongue seemingly paralyzed, and I was suffering intense pain. The work was done so beautifully, and such a wonderful transformation took place, that I realized there had been a mighty struggle with error.

Thinking that some one may profit by this testimony, I send it for publication.—IDA WOOD, St. Paul, Minn.

For over eight years I and my family have received many benefits from the truth as taught in Christian Science, and I am more grateful than words can express that our Leader, Mrs. Eddy, was spiritually minded enough to perceive the truth of being. I had a small growth on my eyelid that was very annoying on account of its unsightliness, as it caused the lid to droop until it partly closed the eye. I also had severe organic troubles, headache, etc. A lady who was boarding in the hotel with us, asked me why I did not try Christian Science, and she kindly consented to treat me. In less than a week there was not a vestige of the growth on the eyelid, and I was also healed of the other ailments at the same time; in fact, I was like a new being. Since then every illness that has made its appearance has been quickly met and destroyed by knowing the truth and applying it as we are taught in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. My husband and daughters have also been healed of many ailments.

My heart is filled to overflowing with thankfulness that we have found God and His great goodness, through the study of Christian Science. My greatest wish is to know more of this truth.—ANNA CORNEAU, Janesville, Wis.

✧

Three years ago I turned to Christian Science for physical healing. I was asked to attend a Wednesday evening meeting, and did so. There I heard a testimony which was so earnestly and convincingly given that I was led to take this treatment as a last resort. I had tried everything that *materia medica* could advise. Three physicians diagnosed my case as appendicitis, and for several years attacks would recur, causing terrible suffering. For weeks after each attack my skin would be as yellow as if I had jaundice. Each doctor recommended an operation, and finally I consented to have one performed. The organ was removed, and I was told by the nurses who witnessed the operation that it was not so much appendicitis as adhesions from which I was suffering, and that it was the worst case of this kind they had ever seen.

I did not care what they had found, so long as the supposed cause of my suffering was removed, but I was very ill from the effects of the anesthetic, and for eight days was unable to retain any food. On the tenth day I ate a little, whereupon I experienced an attack such as that for which I had been operated on. When the doctor came to see me, an expression of defeat passed over his face; he had failed to find the real cause of the trouble, and he knew it. For a year and a half after the operation I had these attacks more frequently, and relied principally on an opiate for relief; but I kept the same doctor, as he is an old friend and I knew he would do all that could be done for me. I had to go to him for a prescription for the drug, and he saw that I was nearly insane from fear.

When the doctor asked me one day how I felt, I told him I was going insane, and his advice was not to think about myself, but to go to the theater and otherwise amuse myself. I told him, however, that one night I had been taken ill in the theater and subsequently was afraid to go there. Then, after a long pause, he advised me to try Christian Science. At first I was angry, and it was six months before I took his advice. During those months I went through the worst period of my suffering. A physician who is considered an excellent diagnostician was therefore called in, and he pronounced the trouble either an abnormal growth or gall-stones, and recommended an operation. My husband then told my regular physician, who said he would not advise another operation, and he did not agree with the diagnosis.

It was from this despairing condition that I was driven to

Digitized by Google

Christian Science. When I had been reading the text-book, "Science and Health with Key to the Scriptures," about ten days, I was awakened one morning about three o'clock with the worst spell I had ever had. I turned for relief to the drug, but I had taken so much that it had lost its effect. Between ten and eleven o'clock I felt the end was near, and finally agreed to let my husband call the Christian Science practitioner that I had met at the meeting. When my husband told her over the telephone about my condition, she asked him to have me read the text-book, and said she would treat me. I was unable to lie in bed at the time, and was sitting all bent over in a chair. I was still hugging a hot-water bag when I realized that it was a material means; then the thought came to me that I had tried everything else, so now I would rely on God. Relief came immediately, and in half an hour I was asleep. That evening I was able to get my husband's dinner, and after three weeks' treatment, I was completely healed.

Just to say I am thankful to God does not make it true, but I am trying to prove it in my daily life.

ADELE C. FERGUSON, San Francisco, Cal.

✧

I wish to express my thankfulness to God for what Christian Science has done for me in the past five years. I was very miserable in health; in fact, after undergoing an operation in one of the best hospitals in this city, the doctors said there was no hope whatever. At the end of five weeks, when they had done all they possibly could, they sent me home to die, telling my relatives that I could live only four weeks at the longest. I then turned to Christian Science, and although my healing was slow, I gained a little each day until I was completely healed. I have had many wonderful proofs of the power of Truth as revealed in Christian Science. Among these was my healing of poisoning of the face and ears. This was brought about in three days.

I am so thankful we can prove that if we are faithful to the truth of being as taught in the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we shall be freed from every discordant condition. I thank God that we live in the day when the healing can again be demonstrated as in Jesus' time. I am also very grateful that through the understanding of this truth I have been able to help others.—LOUISA A. WELSH, Philadelphia, Pa.

✧

It is with a feeling of deep thankfulness to God that I give this testimony. My son, on his way home from school one day, tried to jump on to an auto truck. He missed his footing, however, and fell, the back wheel of the truck passing over his knee and legs. A few days previous to this, there had been a boy killed in this neighborhood by a wagon, and the schools were so aroused that various reports of my boy's death or permanent injury were speedily circulated.

The boy had been in the Christian Science Sunday school for four years, consequently he and I went to work to realize that "matter cannot be inflamed," and "in Science, no breakage nor dislocation can really occur" (Science and Health, pp. 414, 402). His whole body seemed bruised and discolored, but he felt no pain or fever, and he slept and ate normally. The next day was cold and rainy, so he did not try to go to school, but the following day, after dressing, he went for a ride on his bicycle. He missed one day and part of an afternoon from school, but he prepared the lessons in bed. He limped for a couple of weeks, but did not feel any pain, although the knee was seemingly twice its size and both legs were badly bruised. This condition, however, was also overcome, and the healing was perfect and permanent. When fear tried to creep in, this thought came forcibly to me, "Be still, and know that I am God."

I consider it a privilege to have had this experience, as it brought out much good, both for the boy and for myself, by proving to us God's omnipotence and care. Our gratitude is unbounded for our understanding of this truth, made possible through the study of the Bible and our Leader's writings.—MRS. J. A. JAMESON, South Omaha, Neb.

✧

Before Christian Science awakened my thought to a true understanding of God, I doubt if a more unhappy individual could have been found anywhere, owing to constant physical inharmony and a great fear of what might await me at the time of so-called death. How I could ever become good enough to go to heaven, was a problem so far beyond my comprehension that before I was twelve years old I had decided that if I were doomed to go to the "bad place" eventually, I might as well go as wait to be sent. This resulted in an almost unceasing thought of self-destruction.

A little more than three years ago Christian Science came to my rescue, releasing me from the terrible bondage of fear of the future and bringing healing for numerous physical ailments. I had been studying Science and Health two or three months when I experienced a severe attack of blood-poisoning. For about three days I tried to help myself, but my understanding was so slight that the condition grew steadily worse, and seeing the need of immediate relief I called a Christian Science practitioner. At that time my entire system seemed to be affected. I had fever, nausea, also pain in every part of my body, and extreme sleepiness; and in addition, the affected limb had a most angry appearance. It was on Wednesday afternoon that I called for help, and on Saturday afternoon of the same week the healing was complete.

A slight spinal curvature had supposedly been straightened by the careful efforts of a specialist when I was about twelve years old, but the severe pain remained to be destroyed through Christian Science treatment. Besides these ills, a New York specialist told me six years ago, that unless a catarrhal growth which was giving me much trouble was removed, it would become a serious matter; but Christian Science has also overcome that difficulty. The same specialist faithfully treated me for four different ailments in an unsuccessful attempt to learn the cause of severe headaches. These, too, have disappeared with my study of Christian Science.

My gratitude goes forth not only for many experiences of healing from physical weakness, but from sinful tendencies. My sincere prayer is that by daily living this truth in thought and deed I may prove my thankfulness for divine Love, and for all that Christ Jesus did and taught, also my gratitude to Mrs. Eddy for teaching us to know God aright.

LAURA S. DOW, Marshall, Mich.

✧

I wish to express my thankfulness to God for the good health which I now enjoy as a result of Christian Science treatment. For about fifteen years I suffered from rheumatism, sometimes so severely that I could not straighten up for weeks. During that time I was attended by three prominent physicians of the city in which I lived (Manchester, N. H.). When I asked one of them to change the medicine, as it was not helping me, he replied that it was beyond his power to help me.

Three years ago I became interested in Christian Science. I had absent treatment for a week at two different times, and I now feel so well that I sometimes forget that I ever had such an ailment.—ETTA A. PEASLEE, Bedford, N. H.

Digitized by Google

I beg the privilege of stating, through these columns, the rather remarkable manner in which I embraced Christian Science. Through environment and a lax code of morals, I became addicted to the liquor habit when a mere lad. Despite the prayers and entreaties of my family and friends, I continued in this course for twenty-five years, going from bad to worse. Six years ago I asked a friend for something to read, and in looking through his library I noticed a small black book entitled "Science and Health with Key to the Scriptures" by Mrs. Eddy. Never having heard of this book, I supposed it to be a medical treatise, but on examination I found it to be a religious work. I then started to ridicule its teachings, but finding something therein which held my attention, I continued to read. From that hour the desire for liquor left me for all time, and with it profanity and all the attendant evils which beset a man that drinks.

Two years ago I fell on an icy walk and seriously injured my right arm. I called in a prominent surgeon, who diagnosed the case as a compound fracture. He set the bones, and then informed me that it would require six weeks, at my age (forty-six years), for the arm to mend. On his departure, I stepped to the telephone and told one of our Christian Science practitioners to go to work on the case, the result being that in ten days, with three treatments, the arm was out of the splints and perfectly well. Besides the above cases of healing I have had, in six years, four substantial and unsolicited advances in salary.

I believe there comes a time in the life of every man whose career has been tempestuous, when he feels a longing for things spiritual. I had not attended religious service since boyhood, but years afterward I thought I would try the church in which I was reared. I was, however, chilled by the pomp and vanity in evidence to my sense. I tried another one, but was held aghast by the threat of eternal punishment, and at last, after tossing hither and thither on the sea of uncertainty, I was led by the clear white beacon-light of truth into the calm, safe anchorage of Christian Science.

Having thus garnered a wonderful harvest of spiritual, moral, and physical benefits, I wish to make known the limitless gratitude I feel to God, and also my thankfulness to Mrs. Eddy, whose teachings have made all good possible to humanity.—W. T. Hewett, Grand Rapids, Mich.

[Written for the *Sentinel*]

Rejoice

SAMUEL JOHNSTONE MACDONALD

When the good you desire seems so far away
That your hope grows dim in your heart
And your faith less clear, it is time to pray,
And awaken and do your part.
Do not think there is naught you have failed to do,
While your problem stands incomplete;
The solution can only be wrought by you,
And you cannot afford defeat.

It is time to rejoice when you meet a test
Which will try your faith and your hope,
For you never can prove what is purest and best
Till with trials you bravely cope.
Then rejoice and be glad you are called to prove
That your faith is clear and strong,
And with patience rely on eternal Love,
And no discord will mar your song.

From Our Exchanges

[*The Universalist Leader*]

We want to save society, so that through it the individuals, all individuals, can be saved. Others want to save the individual, so that society may be made over into the kingdom of heaven. That is, the ultimate goal is the same, but people are approaching it from different sides. The *Outlook* now comes out with the proposition that "society will never become thoroughly sound and sweet except by the moralization of its members. There must be a change of the heart of society before it will bring forth fruits meet for repentance. The right spirit is a thousand times more searching, exacting, and effective than the most rigid regulation. The prophetic function in the church is to declare steadily the will of God; and the will of God is written, not on tablets of stone, but on the heart and in the conscience of men." This is all true, and simply introduces another word. We have had "socializing the individual," and "spiritualizing the individual," and now "moralizing the individual;" and they all mean the same thing. They all stand for salvation, enlarged beyond its old meaning. Today the effort is to save the individual, not apart from other men, but as a part of other men; the word is enlarged, the individual is saved only as he is spiritualized, moralized, socialized. But the point of contact through which this larger work is done is the heart, is the conscience, is the soul of the man. The way to do the work of the day is to get the man. But that is not all. Still further, the *Outlook* says: "By all means let the outward reform be carried forward with zeal and courage; but it must be accompanied by the inward reform, which makes conscience a light to a man's feet and fills him with the spirit of Christ, and which imposes few laws, but sheds warmth and light on the whole world."

[*The Congregationalist and Christian World*]

The true life of the church on earth is quite unthinkable without its fruitage in ministrant and beautiful lives. How is the succession, the true succession of the apostles, to be maintained? The individual passes; the work of the church goes on. No question that is before the churches can for a moment compare in importance with this problem of influence through the bringing forth of Christlike character. The main business of Christ's church is to give Christlike people to the world. By this its real success is measured. Its true life must be expressed in terms of quality or it cannot be expressed at all. We have failed if we have not shown the world that the beauty of the Christ-spirit may be reproduced and manifested in each succeeding generation wherever the good news of Christ is preached to men.

The business of the church, then, is to nourish the highest, that is, the Christlike qualities of character, to expect them, plan for them, contribute what we can to their growth and exercise, recognize and reverence them when they appear. For this we invite men to join themselves to Christ in membership with us. It is not the mere salvation of their own souls for which we plead in our evangelism. There never was a soul saved except in order to grow like its Redeemer. There never was a saint who did not reach his high place through service.

[*The Christian Work and Evangelist*]

Jesus Christ is doing wonderful things. Revolutions are in silent process in the lump of our civilization, for the leaven implanted by Jesus Christ is permeating it, and before we are aware the whole lump will be leavened. Have we ever

Digitized by Google

thought of what it means to be a Christian, fully to accept Jesus Christ, take him at his word, believe the New Testament? It means that we believe that wars are to be utterly banished from the earth, universal brotherhood supplant the reign of strifes and hatred; injustices to be supplanted by justice, hardness of heart by mercy and compassion; poverty to be somehow conquered; the degrading of one soul by another to be unheard of forever; mutual helpfulness to supplant individual rapacity,—these evils and a thousand more all lie doomed between the covers of the gospels. If you accept the gospels, you accept their doom. If you really believe in the teachings of Jesus Christ, then you must believe in the triumph of his love over all these ancient evils. If you are prepared to follow him, you must also see, with him, Satan falling from his throne.

[Rev. W. Duxbury Woods, M.A., in *The Christian Commonwealth*]

Life is now the master word in every realm of thought. Whatever else may fail to make an appeal to our interest, life is at any rate something that concerns us all. It is the one thing we are all seeking to understand and have to deal with. Thinking men and women are focusing their attention upon this subject as that which is of supreme importance, the one thing that really matters. We are living in days when such far-reaching changes and forces are at work that, in spite of ourselves, we are all being driven to the examination of the foundations of life. It is patent that in the religious, philosophical, and political world men are manifesting a growing reluctance to rest content with the old ways of looking at things, or even with the old explanations. What does it all mean but the hunger for more abundant life?

[*Zion's Herald*]

Faith in God, faith in men, faith in the right, faith in the ultimate triumph of good,—that is the crying need of the age. There is the hope of the race. People are hungry for the certainties of religion; they do not care a straw for the things that can be shaken. *Terra firma* is what they want,—a something to cling to that storm and adversity cannot shake or destroy. The colleges and churches and, indeed, the theological seminaries, had better stop enumerating with emphasis the things they do not believe, and lead the way to the things of God, that time cannot change or eternity destroy. If you have faith, preach it; if you have doubts, keep them to yourselves. We have something to preach,—a tremendous, unchanging, never-failing message,—"God . . . in Christ, reconciling the world unto himself," the living Lord a companion in life's journey.

[*The Watchman-Examiner*]

A Christian is always interested in the things that interest Christ, and he will follow his Master, not only in his efforts to save others, but in his habit of personal devotion. He will, like the Saviour, go away from the multitude to rest a while and fortify himself by prayer upon the mountain for service in the valleys. If we believe in Christ, we believe in the principles and plans he announced,—and who can doubt that these clearly indicate that we are to tell every other man what we know, to keep nothing secret, but proclaim the good news everywhere and in all lands, and thus each man be a missionary?

[Rev. John S. Bunting in *The Homiletic Review*]

Men do not need to hear today new teaching or brilliant ideas, novel doctrines or unique applications of truth, so much as they need to hear a voice that deeply awakens them to the consciousness of the divine, strongly stirs them to attend to the eternal. And what they clearly hear, they will clearly respond to.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 86 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Postage required for remailing this copy: 1 cent domestic and Canada; 2 cents other countries.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

The rare collection of works of art belonging to the Marquise Arconati-Visconti, and valued at three million francs, has been given in its entirety to the Louvre museum. The bequest was made some time ago by testament, but the giver wishes to supervise, herself, the arrangement of the collection in a special hall which is to bear her name, and it is to be hoped that the state will authorize, with the least delay possible, the expenditure of the thirty or forty thousand francs necessary to effect the installation. This collection, of which each piece is a masterpiece, is one of the best known in the art world, and is especially noted for its homogeneity. It consists of paintings, sculpture, furniture, and other works of art of the middle ages, the renaissance, and the eighteenth century. The Italian as well as the French renaissance is particularly represented.

The post-office receipts of Great Britain in respect of telegrams, telephone rental, and fees, the rentals of private wires and of newspaper wires, during the year ending March 31, 1913, amounted to £9,656,671. The expenditure included £7,003,180 in salaries, superannuations, and maintenance of the telegraph and telephone systems; £981,698 on annuities payable to the commissioners for the reduction of the national debt in repayment of sums advanced for development purposes; £1,000,000 for interest and part repayment of the purchase of the National Telephone Company's plant; £17,399 on the purchase of sites, and £12,107 on extensions. The value of the telegraph and telephone services performed free of charge for the other public departments was £106,670, and the balance of expenditure over receipts was £377,846.

The corn harvest in the Rosario territory promises to be the largest in the history of Argentina. There is anticipated throughout the Argentine corn belt a crop of almost four hundred million bushels. The exportable surplus now is estimated at more than half this quantity. Placing corn on the United States free list had the effect of bringing many inquiries for this article, and a number of steamers are preparing to take thousands of bushels of the product to the northern country. Chicago is reported ready to use large quantities. One recent order is for two hundred and fifty thousand bushels, to be shipped via Montreal. While this great distance is a factor in the price, it is yet stated that Argentine corn can be laid down in Chicago at less cost than the western article demands.

Evidence of the extent of the traffic which may be expected to pass through the Panama canal is given in figures made public by the department of commerce. This statement shows that in 1913 two small Isthmian railways carried $130,500,000 worth of merchandise brought by vessels from the United States and later shipped to other ports in this country and foreign countries. Of this trade, two thirds moved westward, and the remainder moved eastward. Only a few American ports participated in the traffic, New York leading with $84,000,000, San Francisco coming second with $21,800,000, and Hawaii third with $18,200,000.

Without debate, the Massachusetts House agreed to an amendment to the constitution which provides that "the General Court shall have power to authorize the commonwealth to take land and to hold, improve, subdivide, build upon, and sell the same, and do any lawful act in relation thereto, for the purpose of relieving congestion of population and providing homes for citizens: provided, however, that nothing herein shall be deemed to authorize the sale of such land or buildings at less than the cost thereof."

Naugatuck Valley (Conn.) manufacturers are about to build a huge storage reservoir in a part of Thomaston known as Poverty Hollow, for the purpose of storing the flood waters of the spring for use in their plants and for flushing the Naugatuck river during the dry season. The plan includes a great dam which will confine the waters of three large feeders of the Naugatuck, and the resulting reservoir will have a capacity of fifteen billion gallons, which is far larger than that of any reservoir for any purpose in that part of the country.

Capitalized at two million dollars, the Seaboard Lumber Company has been incorporated at Savannah, Ga. This company merges the South Georgia Lumber Company, the Georgia-Carolina Lumber Company, and the East Georgia Sawmill Company, and will have a daily capacity of several hundred thousand feet of lumber. Its properties include extensive areas of timber land reported to include three hundred million feet of timber.

During the past few weeks Secretary Lane of the interior department has recommended to the President several orders of restoration and withdrawal of public lands. The secretary has also opened to entry, under the enlarged homestead act, large areas in a number of western states,—600,000 acres in central and eastern Oregon, 2,470,000 in Montana, 300,000 in New Mexico, 100,000 in Wyoming, 250,000 additional in North Dakota, and 220,000 in California.

The city of Chicago will receive three million two hundred and ninety-nine thousand dollars as its share of the net earnings last year of the surface street railways. Under the terms of a franchise granted the surface lines some eight years ago, the city receives fifty-five per cent of the net earnings. The traction fund which has accumulated since the franchise became effective, and which is now in the city treasury, amounts to about fourteen million dollars.

The new Italian cabinet, under the premiership of Signor Salandra, has announced in the Chamber of Deputies and Senate the introduction of financial measures to meet the situation created by the cost of the recent war in Tripoli, and the further amount of forty million dollars necessitated by raising the peace footing of the Italian army to two hundred and seventy-five thousand men, besides the colonial troops.

The arrest of some American marines who went ashore at Tampico, Mexico, to procure gasoline, was the culmination of a number of affronts offered the United States government by the Mexican government *de facto*, and has resulted in a demand that the American flag be saluted and the issuance of orders for a mobilization of war vessels in the immediate neighborhood.

Reforestation of land owned by the commonwealth of Massachusetts has started. The forestry department has in its nurseries more than seven million little trees, one fourth of which are ready to be transplanted this spring. About eight hundred acres accepted since last spring will be planted, and probably three hundred more will be taken.

The first meeting in Germany of the world conference movement for promoting concord between all nations was held at Charlottenburg guildhall in the west of Berlin. The chair was taken by the eminent pacifist Geheimrat, Professor Foerster, and a number of prominent men and women interested in the race problems were present. The primary object of the meeting was to form a permanent German center.

Appropriation of one million dollars toward making the Merrimac river in Massachusetts navigable from the sea to Lowell, dependent on an appropriation by the national government for the same purpose, is provided for in a resolve filed at the State House by the committee on harbors and public lands. At present the Merrimac is navigable to Haverhill.

More than half a billion dollars' worth of fruits and nuts passed into and out of domestic ports of the United States during the last decade, three hundred and sixty-five million being imports and two hundred and twenty million exports. The trade in each direction has about doubled in the last decade.

Possibility of a congressional investigation into the Colombia transaction, now that the treaty has been signed with Colombia, is being discussed in Washington. Some members of Congress say that the twenty-five million dollars payment will not be appropriated until a thorough exposition of the facts is secured.

The agitation against the recent transfer of the capital of India from Calcutta to Delhi is steadily gathering force. Calcutta has always been against it, but Madras has now joined in the protest, and even in Bombay, which was the principal center favoring the change, opinion is beginning to be modified.

A government bill has been presented to the French Chamber providing for the alteration of the composition of the administrative board in Algeria. The bill aims at introducing a larger number of native representatives. Since 1870 the number has been limited to six.

The total tonnage of coal mined in Nova Scotia during the past year is the largest ever recorded, amounting to 6,285,000 tons, as compared with 5,815,000 tons the year before.

The Mississippi river commission, which met at St. Louis recently, agreed to recommend that Congress appropriate twelve million dollars for the improvement of the river next year.

Representing the German government immigration bureau, Franz Appel arrived in America recently to study immigration methods.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI April 25, 1914 No. 34

More Light

WILLIAM D. MC CRACKAN, M.A.

THE cry goes up from many sides for more light. The sinner, terrified by the assault and confused by the ambush of error, echoes this cry. It comes from the dark chamber of bereavement, from the bed of agony, from those philosophically inclined, those who have the love of wisdom but who have not yet found wisdom itself. The cry for more light is heard wherever bigotry and arrogance have not stifled this spontaneous appeal. There may be will-o'-the-wisps to lead astray, to delude momentarily the unwary, but deep down in every human heart is the desire which can never be satisfied except by that one "true Light, which lighteth every man that cometh into the world."

This light for which every one longs is divine. It is not physical, but metaphysical; not ecclesiastical, but spiritual. It comes to each one individually; not to nations or communities as such, not necessarily to families as a whole, but to the individuals composing these groups. Every sincere seeker must learn to follow the rays of this light for himself, taking for his guide "the inspired Word of the Bible" (Science and Health, p. 497). When he finds this light, it will illumine his darkness, and he in turn will radiate light to others and live in a reflected glory which will never grow dim. To radiate means also to enlighten; but in order to be one's self a reflector of the light, there must needs be first a perception of the light itself. The great service of Mrs. Eddy to mankind has been the discovery, not only of the light itself, but also of the method by which all may learn to become reflectors of it.

At the entrance to the harbor of New York stands a monumental statue entitled "Liberty Enlightening the World." The artistic purpose of this work is obvious and essentially noble. It is an attempt to personify the second of that triad of "unalienable rights" mentioned in the American Declaration of Independence, namely, liberty. Personified liberty stands at the doors of the western world for a constant reminder and inspiration. The torch of the statue is symbolical of light. But the Christian, scientifically trained, recognizes that more than the light of political liberty is requisite for complete character building, whether of the individual or the nation. Much as this liberty is prized, and the atmosphere of liberty recognized as favorable to spiritual growth, yet its rays will not suffice to lighten the world and satisfy a deep-seated desire after God. Nothing less than Life, Truth, and Love can do this,—Life standing for adhesion and cohesion, Truth for potency, and Love for attraction, as explained on page 124 of Science and Health by Mrs. Eddy.

These "three statements of one Principle" (Christian Healing, p. 3) explain the Godhead. They are not inscrutable mysteries, but an understanding of them may be gained by all men who are willing to comply with God's commands, to set aside self-will, self-indulgence, self-righteousness, self-justification, self-condemnation, and the various other forms of selfishness which argue for a man apart from God. This spiritual understanding does indeed lead to liberty, but it is the "liberty of the children of God," the liberty whose torch lights the fires of inspiration and shines upon the path that leads to a knowledge of Truth and Love.

Those who long to do right, but do not see the way; those who are ready to give up the human will, yet think they have not enough spiritual understanding to discern God's will; the perplexed, the distrustful, those temporarily darkened or benumbed by mesmerism, by "the prince of this world," cry out for more light. Underneath this feeling of helplessness will usually be found the assumption that man is a healer, a creator, or an originator, that he must conquer in his own name or rely upon his own abilities. Once the recognition of God as the only creator and healer has come to the Christian student, the load of personal importance can be cast aside, and to such a one the glorious message of Isaiah rings true and clear: "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee."

Throughout the Scriptures, darkness is used to typify evil, and this definition of evil is helpful and encouraging. Darkness is obviously not an entity or reality, but a negation. It is clearly the absence of light, and so is incapable of terrifying mankind when its essential nature is laid bare. Sin is darkness, so are sickness, sorrow, fear, false desire, envy, jealousy, hatred, revenge, and kindred false beliefs and mortal notions. They are to be destroyed by the opposite of darkness, namely, light, the light of spiritual understanding which descended upon the apostles at the feast of Pentecost, when Jesus' personality having vanished from their presence, they were able to understand the true meaning of his career, his self-sacrifice, and his resurrection.

Sooner or later this spiritual understanding is destined to flood the consciousness of every one with its penetrating rays. The dark corners of doubt and rebellion are even now being illumined; the lurking places of disease are being purified; misunderstanding of God's true nature, and suspicion concerning His real motives, are yielding to a joyous recognition that He is all good and all powerful at the same time, and that man in His image and likeness lives and moves and has his being in good. The appeal for more light is receiving a final answer, and the "kingdom of heaven is at hand."

Truth is Practical

EARL J. STEVENSON

THE question "What is truth?" has confronted humanity throughout all ages. Pilate asked this question just before the crucifixion of Jesus, and at the present time it is paramount among thinking people the world over. Furthermore, the mere fact that this question is asked, the correct answer to which would mean the solution of all life's problems, presupposes the existence of its answer.

The writer has many times been confronted and confounded with this same question, which had perhaps been borne to his thought as he read from the Bible the assuring statement, "Ye shall know the truth, and the truth shall make you free." Never, however, until after becoming interested in Christian Science, did he have the least real under-

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

standing of the nature of this truth, nor did he realize the import of the promise of reward for this knowing. During many years he had listened to the preachers of the various churches in their eloquent defense of the gospel which was to set humanity free, but always with death as the threshold over which men must pass into this blissful state. Great stress was laid upon the world-wide and age-lasting commission as recorded in the sixteenth chapter of Mark, beginning with the fifteenth verse, yet in the face of their declarations as to the endurance of this great commission, the latter part of it, relative to the healing of the sick, was never considered applicable to the present age.

Thus the perplexing query regarding truth was left unanswered until after the writer became interested in Christian Science, when it was answered through demonstration. After beginning the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with the Bible, the message of Truth began to unfold to his consciousness, and as a result the fear of certain ills, which were fast driving him to the brink of an open grave, began to loosen its grasp, leaving him free. Then he began to see and to know that there did exist an answer to these stupendous yet heretofore mystifying questions and statements regarding truth.

For about a year prior to this time the writer had been suffering from a general physical breakdown, and there seemed no possible escape from this distressing state. He was treated by physicians of the various schools, and they did their best for him, but all to no avail. Later, he tried exercise, various climates, baths, and waters of so-called curative springs, but through it all he steadily grew worse. In the midst of his suffering, Christian Science was presented to him, and with his acceptance and application of it came the dawning of a new light, the light of Truth, before which the darkness of discord could not stand. Thus the question, "What is truth?" was answered in a practical and scientific way.

The study of Christian Science brought the revelation that all physical manifestations of disease are but the result of a false, material sense of existence, a sense which, not being of God, can have no part or place in God's perfect creation. An erroneous concept of God and man, in other words, human ignorance of the truth, produces all suffering. As Mrs. Eddy says, "It is our ignorance of God, the divine Principle, which produces apparent discord, and the right understanding of Him restores harmony" (Science and Health, p. 390). Through the study and application of the statements of absolute truth found in our text-book, thought is lifted to see the unlimited possibilities for good to those who put all their trust in an omnipotent, omnipresent God. It shows the meaning of the Scriptural statement, "Now are we the sons of God," and enables us to discern that harmonious relationship which exists between God and His perfect, spiritual creation. Again Mrs. Eddy says, on page 492 of Science and Health, "For right reasoning there should be but one fact before the thought, namely, spiritual existence."

Just in the degree that we apply these truths, cling to them and claim man's birthright, even in the face of opposing sense-testimony, our freedom is established, burdens are lifted, clouds are dispelled, and joy becomes our conscious possession. Is it not indeed great cause for rejoicing to be the possessor of a life-giving and ever-satisfying understanding of the omnipresence of infinite good, instead of our former fearful, distorted, and miserable beliefs in disease and limitation? Surely the question "What is truth?" is being divinely answered, not in the way of the world, but after God's own appointing.

Throughout the ages, though at times dimly seen, truth, when understood, has been active in dispelling sickness and sin. It is today being acknowledged by countless thousands throughout the world as the only practical and effective remedy for their every-day problems, and their awakening to this fact is beautifully portrayed in the lines of a well-known hymn,—

Theories, which thousands cherish,
Pass like clouds that sweep the sky;
Creeds and dogmas all may perish;
Truth herself can never die.

Supply and Its Source

JEAN DANIEL LEWIS

No false mortal concept has been attended by more appalling disasters than has the wrong sense of supply. To believe that material possessions or a human business is the source of man's supply, has always brought the believer worry and fear and heavy burdens. Through human experience for ages, the pathway of this false concept of supply has been strewn with wrecked homes and lost happiness. The world has said that these sad results were caused by business worries and financial losses, but these were only the effects of the belief that supply is material and can be lost. The race has long groaned under the bondage of this destructive thought-influence at work in human consciousness, and there is an unspeakable need of help to lift humanity out of its awful grasp.

For thousands of years the Bible has been proclaiming the truth about supply, and that the remedy for all our fears is ever at hand; but it was not until Mrs. Eddy made known the Principle and rule by which the availability of this supply may be demonstrated, that men in our own day were able to find escape from their lifetime enslavement. In "Miscellaneous Writings" (p. 307) she says, "God gives you His spiritual ideas, and in turn, they give you daily supplies."

To one who had a small understanding of Christian Science, much of the help and quiet assurance that lay hidden in these words was lost. To say that God gives "spiritual ideas," and they in turn bring daily supply, when there was need of fire and food and clothes, seemed rather cold comfort to this unillumined thought. It seemed very much like saying, "Be warmed and fed and clothed," when there was nothing in sight with which to provide these things. "Spiritual ideas" seemed so intangible and inadequate to meet practical, every-day needs. Groping about in mental darkness and seeking for more light, the meaning of these words at last dawned on the seeker's thought, and ever since they have brought her a practical helpfulness all their own.

It was seen how it is continually proven, even from the worldling's point of view, that what are known as ideas do indeed give men their "daily supplies." The men with the best and cleverest "ideas" get the largest salaries, the highest positions, and the most fame; and when these are very valuable to a business, to scientific enterprise, or to art, the inventors can command their own price. Millions of dollars have been laid at the feet of one who has had an effective idea, an invention which has been patented, because it proved to be a means of supply. When, on the other hand, through accident or disease mortals lose their grasp of man's mental equipment, the ability to work out valuable ideas, how speedily their salaries and positions of trust flee away! One who is known as a man of ideas may lose his entire material possessions without suffering any real loss, for his mental capacities can soon win back all that he seemed to lose. If, how-

Digitized by Google

ever, he should be bereft of his ability to work in the mental realm, this would indeed be a calamity, for without it, as we all know, he could not earn a penny.

On page 79 of Science and Health we read, "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us." This is seen to be manifestly true the moment we perceive that the divine Mind, not matter or mortal mind, is the real supply. In giving money "in the service of our Maker," we do not part with the ideas which brought us all we have. These have lost none of their earning capacity. So long as we have spiritual ideas, our supply is undiminished, though we give freely of our material possession, which is but an outward expression of these ideas.

Far above the most valuable human thought, and with the ability to reach "over continent and ocean to the globe's remotest bound" (Science and Health, p. 559), stand God's spiritual ideas. These wonder-working ideas are given us of God, to bring to us our "daily supplies." Man, God's idea, exists ever at the standpoint of receptivity; he is always receiving from God's exhaustless storehouse the affluence of good, and never does he have to lose anything of this infinite supply in order to give in the service of his Maker.

Science

HARRIET MITTS ROSS

I OFTEN wonder how many of us realize, in more than a passive sense, that Christian Science is scientific; that it is not only capable of demonstration, but that the right result is inevitable when its rules are rightly applied. If we add two objects to two other objects, the result is four objects, and nothing can make it otherwise. Similarly, if we cast out of our lives all that is unlike God, good, and bring out the perfect reflection of Life, Truth, and Love, we can but draw unto ourselves all the harmonies which the word heaven implies. In his prayer for his disciples, Jesus asked that they might be one with the Father, even as He was one, and not only they, but all who should believe on Him through them; therefore, as we become one with the Father, as we make the kingdom of heaven first in our lives, all things are added unto us.

In order to become one with the Father, to reflect Him perfectly, we must know what He is; and to show us what He is we have the example which Jesus gave, also the inspired Word of the Bible, as well as our text-book, which is indeed a "Key to the Scriptures." Lack of a knowledge of Truth does not free us from the penalty incurred by wrong-doing. When we realize that it is by gaining a knowledge of divine law and shaping our lives in accordance therewith that we are made free, then we shall be willing to devote time to study and to give the desire for the kingdom of heaven first place in our hearts.

On page 390 of Science and Health Mrs. Eddy says, "It is our ignorance of God, the divine Principle, which produces apparent discord, and the right understanding of Him restores harmony." Jesus said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." Each day as we study and better understand the truth, we take one step out of inharmony into harmony, mental, physical, and financial. So long as there is inharmony in our lives, whether with respect to our physical condition, our supply, or our association with others, this fact indicates that there is work yet to be done, and we must not "be overcome of evil," but must "overcome evil with good."

In this effort the motive may seem selfish, but it is not; for when an individual gains and manifests a knowledge of divine Love, the whole world is benefited. We are all God's children, and there is no limit to the happiness which He provides for us. As St. Paul said, "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him." God is always the same. His goodness and power are always at hand for us to draw upon, and it is not only our right, but it is our duty to those who follow us on the way, to show an outward manifestation of divine Love to man. We should follow Paul's instruction to Timothy, "Study to show thyself approved unto God, a workman that needeth not to be ashamed."

Our Periodicals

MAJ. H. C. FAITHFULL CUMBERLEGE

THERE is so much for which to give thanks after Christian Science has come into our lives, that one hardly knows where to begin. As a result, some of the less obvious blessings are apt to be overlooked, even belittled, unless we are reminded of them. But we must not forget to include the periodicals issued by The Christian Science Publishing Society. The writer has gained so much from their systematic perusal that it is a great pleasure for him to adopt this method of discharging a little of his debt of gratitude, by giving appreciative recognition where it is due.

Since the writer began to read the periodicals regularly, he has perused carefully all but half a dozen or so of the articles on Christian Science that have appeared in the *Monitor*, *Sentinel*, and *Journal*. While all have not appealed to him, simply because they did not fall in with his train of thought, he has come across many articles, paragraphs, and sentences which have been of incalculable value to him for the reason that they have cleared away forever some fog that was obscuring his view of the truth. Consequently, he feels a thousandfold repaid for the time and effort expended in their study.

Those who through ignorance place no value on the periodicals, or who may allow themselves to be hindered from reading them for other insufficient reasons, do not know what they miss. The serious seeker for the truth finds it everywhere, although nothing can displace in his affections the Bible and Mrs. Eddy's writings, as these constitute the only authoritative standard whereby to judge of the writings of others. The shining light of Truth gleams through all work conscientiously performed, and through every word spoken or written from a right motive, no matter who the author may be. The onus lies on the hearer or reader to hear or read aright, that is, spiritually, instead of from the material standpoint. The word and deed of the Christian Scientist, be he ever so lowly, are entitled to consideration because of the fact that he has become "a better transparency for Truth" (Science and Health, p. 295). Truth is behind them and will bring him his reward.

"The old order changeth"

F. W. S. BLOXHAM

THERE is no greater proof of a poet's genius than his capacity to pierce the darkness of human strife and struggle, and to see that it signifies, after all, but the breaking up of old beliefs and the dawning of an era of more hopefulness for mankind at large. Why such a change should be accompanied by so much fear and sense of suffering is due to the generally accepted belief in the power and tenacity of evil, and the corresponding necessity for meeting its onslaughts

Digitized by Google

with fire and sword and all the paraphernalia of materiality. Thus it has ever been throughout human history, and thus it is today, in spite of the admitted progress made by civilization; in spite, too, of the Master's warning that they who take the sword shall perish by the sword.

For those who have eyes to see, however, those who have gained the vision of Truth in Christian Science, the present time is full of promise. Even among those who have not yet recognized that "the weapons of our warfare are not carnal," but spiritual, there is a mighty awakening to a consciousness of great issues, before which all worldly considerations count as nothing, so that they move as inspired through the noise and din of battle,—soldiers fighting in the cause of humanity.

Grand as this spectacle is, there is something which stirs the Christian Scientist still more deeply, namely, the consciousness that it is the "still small voice" of Truth calmly but persistently making itself heard, and causing this breaking up of time-honored beliefs, overturning and overthrowing till the reign of righteousness be established in the consciousness of all men. With what gratitude should we strive to play our part in the world's redemption, equipped as we are with the knowledge that even when the senses clamor loudest of discord and woe, the kingdom of heaven is here and now, and that in the ratio of our receptivity to spiritual truth we become partakers of this kingdom here on earth.

In the realm of absolute Truth there is no strife, no discord, for the activities of Mind are eternally harmonious and all Mind's ideas are under the governing influence of the Father-Mother God. This is clearly indicated in Mrs. Eddy's spiritual interpretation of the Lord's Prayer as found on page 16 of Science and Health. The practical application of this truth, known in Christian Science as demonstration, causes the mists of sin and discord to vanish into their native nothingness. "The old order changeth," sang the poet, foreseeing in the seeming defeat of his ideal knight simply a greater and mightier victory at hand for those who are beginning to realize the power of Spirit, the everlasting triumph of God. Thus the loyal Christian Scientist, looking on at the strife and clamor of error's so-called life, rallies his spiritual forces and rejoices in the midst of seeming darkness and turmoil, hearing again the Master's ringing cry of triumph: "Be of good cheer; I have overcome the world."

✧

Encouragement

MAURICE KENNEDY

One day the writer was at work in Christian Science upon a case which mortal sense declared to be well-nigh impervious to the divine idea. Discouragement persistently suggested: "Your spiritual understanding is but a flickering spark after all. How can you hope that its feeble glow will ever warm and expand your brother's thought, and light in it that undying fire of Truth which will make him free indeed, and independent of your help and support?"

Presently the writer's attention was attracted to the fire, which had just been lighted, by the sound of a sudden collapse, and he soon saw that a spiritual lesson was being worked out among the coals. The paper and firewood had seemingly all burned out, after a brave show of crackling warmth and light; and the heavy lumps of coal, deprived of their support, had fallen, and lay all around in cold, disconnected, and irresponsive lumps. Away in one corner of the grate, however, so feeble as to be at first almost imperceptible, was a little jet of flame supported by a remnant of unburnt wood. With an intentness which apart from its spiritual significance would have been almost absurd, the writer watched this little flame, as steadily, unwaveringly, it burned on, applying its modest warmth to what was nearest to it, the unpromising bulk of a huge lump of coal. Long and persistently the flame caressed it, as if striving to liberate that which could and would unite with its inherent energy, become self-sustained, and ultimately arouse the whole mass to needed activity. Would it succeed? Could it succeed? Or must it give up, discouraged, without awaking in the dull, dark mass the least responsive sign? Presently, just above the little flame, a jet of gas sprang out, caught, flickered, died down, then increased in force and volume, and—finally—became a steady flame.

The watcher's thought glowed with joy and gratitude, as he saw the lesson given by that coal fire. There was, then, latent activity in that hard mass, and that little flame could call it forth! Higher leaped the blaze, and brighter and warmer it grew; other jets sprang out, caught, increased in force and volume, and became flames. Presently the whole grate was one mass of heat and light. With joy and encouragement the watcher realized afresh the omnipotence of good, and that inevitably "victory rests on the side of invincible truth" (Science and Health, p. 453).

The message of the coal fire is clear and needs no exposition. It sounds a joyous note of assurance to all who are honestly trying, in the words of our Leader (Science and Health, p. 242), "to dissolve with the universal solvent of Love the adamant of error."

✧

A Lesson from the Clouds

DOUGLAS H. HUNTLY

When on a visit to Switzerland, my companion and I started early one morning to climb the highest mountain in our neighborhood. A path was pointed out to us which we were informed was the only one leading to the summit. After proceeding on our way for some time, we walked into the clouds, which soon became so dense that we could not distinguish objects more than a hundred paces away. Now on the one side and now on the other would appear precipitous slopes, down which a fall would probably have meant destruction. Often cattle tracks, running in the same direction we were traveling, branched off from the main pathway, and it was only by keeping to what we believed to be the true path that we were enabled finally to walk out of the clouds into the bright sunshine and look down upon a sea of mist and up to the towering summit which we now saw for the first time, and which we scaled later on.

It seemed to me that I might learn a spiritual lesson from this walk, and I was comforted by the thought that if I faithfully kept to the straight and narrow way which the Master pointed out, and which our revered Leader has shown afresh to a waiting and hungry world, I too would escape the many snares and pitfalls besetting my pathway, and would emerge from the surrounding clouds of sense into the sunshine of Soul, "the glorious liberty of the children of God," and finally reach the summit of spiritual perfection. This hope is not based upon blind belief, as was the case in climbing the material path leading up the mountain. Rather is it the faith which unfolds into understanding. Like the schoolboy who, having worked out the simpler sums in mathematics, knows that with due application he will be able to solve any problems confronting him, because he has grasped the basic law of mathematics, so I, having proved a few minor demonstrations in Christian Science, know that if I strictly abide by the rules given us by our beloved Leader, I will in time come to a full understanding of the truth, of which God Himself is the Principle.

Selected Articles

[Charles E. Jarvis in *Riverside* (Cal.) *Press*]

The Portland clergyman whose article entitled "Review of Christian Science Claims" appeared in recent issues, might have directed his efforts to better advantage than by attacking the teachings of a movement which has to its credit the accomplishment of as much permanent good as has Christian Science, whose adherents are earnestly striving to reduce the sum total of the world's sin and misery. His remarks disclose not only a regrettable spirit of intolerance, but indicate also the failure on his part to grasp the import of Mrs. Eddy's teachings, in spite of his professedly long familiarity with the subject. It may readily be suspected that our critic has based his conclusions on the adverse opinions of the enemies of Christian Science rather than on a consideration of the only logical source for information on the subject, namely, the Christian Science text-book, "Science and Health with Key to the Scriptures." Had he even taken pains to refer to the text-book when quoting it, he undoubtedly would have gained a clearer understanding of at least a few of the points which he has misrepresented in so far as the actual teachings of Christian Science are concerned.

It should be understood at the outset that Mrs. Eddy's teachings, as set forth in the text-book and her many other writings, are based entirely upon the Bible, and they constitute a spiritual interpretation of the Scriptures which enables those who become familiar with them to solve their own problems and to help others solve theirs. It is manifestly impossible to explain such a system from a material standpoint, but this is what our critic has attempted to do. To begin with, he informs us that a Christian Scientist will tell you "there is no such thing as sin and no such thing as death." We will have to refer him to Science and Health, where on page 210 he may read, "To mortal sense, sin and suffering are real," and on page 188, "Passion, depraved appetites, dishonesty, envy, hatred, revenge ripen into action, only to pass from shame and woe to their final punishment;" and again on page 404: "A corrupt mind is manifested in a corrupt body. Lust, malice, and all sorts of evil are diseased beliefs, and you can destroy them only by destroying the wicked motives which produce them." In fact, the Concordance to the Christian Science text-book reveals more than one thousand references condemning sin in its various forms, but at the same time showing how it may be destroyed in strict accordance with the laws laid down by Jesus and the prophets.

We have the Master's authority for regarding death as an unreality. He proved it to be so not only in his own case, but also in the case of the daughter of Jairus; and in another place he said, "Verily, verily, I say unto you, He that heareth my word, and believeth on him that sent me, hath everlasting life, and shall not come into condemnation; but is passed from death unto life." That the terms employed by Mrs. Eddy in elucidating the truths set forth in her works, and quite naturally in use by Christian Scientists, should be regarded as "peculiar" or "strange," is quite unimportant in view of the fact that so many people after years of suffering from various forms of discord have been restored to health simply by reading the book.

Our critic complains because Mrs. Eddy does not agree with him that all is matter, and goes even so far as to misquote her by asserting that "on page 424 of the Christian Science text-book we read, 'Everything is mind: on this statement I stand.'" No such statement appears on the foregoing page or anywhere in the book, but on page 492 we find: "*God is Mind, and God is infinite; hence all is Mind.* On this statement rests the Science of being, and the Principle of this Science is divine, demonstrating harmony and immortality." Here again the gentleman has failed to discriminate between the carnal or mortal mind, which is "enmity against God," and the divine Mind, "which was also in Christ Jesus." It is this state of consciousness which the Christian Scientist is constantly striving to attain, for he realizes that in proportion as this Mind is acquired, the "old man," the human sense of intelligence, with its fears, its limitations, and its false concepts, is "put off," and he becomes the "new man, which is renewed in knowledge after the image of him that created him." It was his spiritual concept of this truth that enabled Jesus to express his God-given dominion over the claims of evil, or matter, manifested as sin, sickness, and death. Christian Scientists do not claim to have attained to the sublime heights reached by our Master, but they are demonstrating beyond a doubt that the same Principle, or truth of being, manifested in his mighty works, is operative "yesterday, and today, and forever" with those who believe his promise that the works he did we should do also.

On the other hand, it was Thomas alone of the immediate followers of Jesus who failed to recognize the risen Christ until convinced by physical contact with the body of Jesus that it was he. Likewise, in support of our critic's contention in favor of the reality of matter, he names several eminent thinkers who in their day entertained views similar to his own; but modern idealists in the domain of physical science have reached conclusions which utterly dissipate the former theories. Professor Huxley defines matter as "the name of the unknown hypothetical cause of the states of our own consciousness;" while Sir Oliver Lodge, one of the greatest authorities on questions pertaining to so-called natural science, announced recently that matter, in the last analysis, is nothing more than force, energy, or power, none of which, to use our critic's own words, may be expressed in "pieces" or "held in the hand."

While admitting that Christian Science has worked a great many cures, the gentleman goes on to say that "of this there can be no reasonable doubt. To the mind of the Christian Scientist, and of those who think vaguely, this seems to be absolute proof of the whole system." As a matter of fact, this feature of Christian Science, while the least important, seems to have aroused a general stir, and we are not sure but it is the fly in the ointment with the critic in the present instance. Writing on this subject, a minister of another faith quite recently remarked, "Men do not condemn a movement unless they feel its influence penetrating their prejudices and false positions and awakening them to unwelcome truth." The healing feature of Christian Science not only constitutes the "works" which Jesus said his followers should do, but it conforms to the test applied by him to those who profess to believe on him. Those who are free to criticize Christian Science and its accomplishments, should bear in mind that James once said, "Faith without works is dead."

The gentleman has cited three failures under Christian Science, and tells us that "it has just as many cures and just as many failures as other systems." It might interest him, and other readers, to know of an investigation conducted a few years ago in two states, one in the extreme north and the other in the extreme south, when it was found that seventy per cent of those who applied for Christian Science treatment during a period of one year had failed to recover

Digitized by Google

or to receive permanent benefit under medical treatment. Ninety per cent of this number recovered, or received permanent benefit under Christian Science treatment. The critic's untenable and unwarranted assumption that Christian Science rejects the fundamental truths of the gospel, or that it is not the gospel of Jesus, is daily being refuted, not only by members, but by clergymen in his own denomination.

Christian Science is exact, demonstrable knowledge about God, and man made in God's image and likeness. It is absolute in its premise and admits of no error in hypothesis or conclusion. It is the Christ-teaching come to this age "with healing in his wings." It has survived the severest tests applied during the forty-eight years of its existence, and it stands today vindicated on every count and recognized and respected as a great religious movement.

✧

[W. C. Williams in *The Evening Capital*, Annapolis, Md.]

A most remarkable statement by the dean of St. Paul's, London, England, was quoted in a recent issue of *The Evening Capital*. One quotation states, "It is quite clear that God does not consider death to be an evil or an injustice, and it is equally clear that He intended His creatures to suffer pain." It is inconceivable that a conception could obtain that would place God on a lower level than His offspring—man.

One is usually characterized as a human brute who wilfully inflicts pain on others, and he is considered as far removed from God as it is possible for a human being to be, and yet this English divine, who teaches the example of the loving, merciful Jesus, whose very presence banished pain, declares that "pain is a condition that is most precious in this world." Jesus plainly taught that sin, not God, is the chief cause of suffering, and he also taught that death is an enemy. The Bible teaches that God is Love, but such an interpretation of love as given by the reverend doctor above quoted is not an inducement to human beings to know God better. The "revolt against pain" is an enlightened revolt, as it appeals to common sense that suffering and disease is not the law of divine Love, and that the image and likeness of God would not suffer any more than the Father suffers, if man did not allow himself to be the image and likeness of evil instead.

If pain is God-ordained, we have no right to try to evade it, but the world-wide and continuous effort to overcome it, proves that there is little faith in such a theory, even if this defender of pain welcomes it. If pity and charity depend upon a painful world, it would certainly be a blessing to eliminate them, but, on the contrary, true charitableness would find a larger field in the uplifting of thought and endeavor to the higher plane of moral and intellectual rectitude. Fear and pain have never been proved to be preventives of crime and other immorality, and no real reform has ever been accomplished through their instrumentality. Love is the only reformer, and it was through love that Jesus achieved his hold on mankind.

✧

[Thomas F. Watson in *Emanu-El*, San Francisco, Cal.]

As a recent edition of *Emanu-El*, referring to Christian Science, states that "according to that creed matter is nonexistent and an illusion of mortal mind," it may be said that Mrs. Eddy never taught that matter was unreal to the material senses. In Science and Health we read: "That matter is substantial or has life and sensation, is one of the false beliefs of mortals, and exists only in a supposititious mortal consciousness. Hence, as we approach Spirit and Truth, we lose the consciousness of matter" (p. 278). The Bible declares, "For the things which are seen are temporal; but the things which are not seen are eternal."

Even some of the material scientists have disagreed as to the exact nature of what is called matter, some teaching that it is "an idea," others, "a mortal phenomenon," and still others, "a result of energy." Professor Ostwald, a great chemist and one of the leading scientific thinkers in Germany, stated some years ago in an address to a congress of material scientists, that "matter is only a thing imagined, which we have constructed for ourselves very imperfectly to represent the constant element in the changing series of phenomena."

The editor of *Emanu-El* commends the "courageous pastor" who discredits the "miraculous birth of Jesus," and then goes on to speak of the Christian Science superstructure, which, he says, "has been reared upon the absolute belief that Jesus was God." In her book, "Retrospection and Introspection," Mrs. Eddy says, "We do not question the authenticity of the Scriptural narrative of the Virgin-mother and Bethlehem babe, and the Messianic mission of Christ Jesus;" while in Science and Health she states, on page 361, that "Jesus Christ is not God, as Jesus himself declared, but is the Son of God. This declaration of Jesus, understood, conflicts not at all with another of his sayings: 'I and my Father are one,'—that is, one in quality, not in quantity. As a drop of water is one with the ocean, a ray of light one with the sun, even so God and man, Father and son, are one in being. The Scripture reads: 'For in Him we live, and move, and have our being.'"

✧

[Paul Stark Seeley in *Oregon City* (Ore.) *Courier*]

A recent issue contains an article on "The Light of Faith," in which the writer condemns the teaching of Christian Science, that material phenomena are unreal, as wholly fallacious, and upholds the contrary belief, that there is in the universe a "phenomenal as well as a noumenal reality." In other words, the article supports the theory that God, who is Spirit, is expressed through material phenomena, and because Christian Science does not agree, its metaphysics is disapproved.

The critic correctly says, "The man who knows nothing save that which is physical and sensory is out of touch with his times," also, "The man who knows only the physical sees but the world of change and decay and unreality." If he had not quite forgotten these deductions in his later reasoning, and had refused to surrender his logic for the sake of agreeing with commonly entertained belief, the conclusions which this critic condemns Christian Science for adopting would have been his also.

When the master Christian told his followers that they could not serve two masters, he exposed the fallacy of trying to cling to spiritual reality with one hand and of holding to materiality with the other. "It is the spirit that quickeneth; the flesh profiteth nothing," he said, thus leaving no room for material phenomena in the consciousness which is wholly of God. When physicial science today admits matter to be "immaterial energy" it approaches a step nearer the conclusions reached by Mrs. Eddy more than forty years ago, that "matter is nothing beyond an image in mortal mind" and that "matter and mortal mind are but different strata of human belief" (Science and Health, pp. 116, 293).

When Jesus addressed the materially-minded Pharisees, he exposed the nature of all mortal consciousness in the unequivocal statement: "Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth; because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it. And because I

Digitized by Google

tell you the truth, ye believe me not." Present-day orthodoxy agrees that transient, evil thought is not of God, while material phenomena, which to the material senses seems more constant, is held to be God's creation, though it evidences none of the perfection and permanence of spiritual existence. The Christian Scientist understands that there is but one God and one creator, who is expressed by the spiritual universe and spiritual man.

Christian Science agrees with Paul that we for the present "see through a glass, darkly." But by demonstrated proofs of disease healed and sin cast out, Christian Science is pointing the way to the destruction of all materiality through the individual understanding of spiritual truth, which Jesus pronounced the one way to life and peace when he said, "The kingdom of God is within you."

✧

[George Shaw Cook in *The Progressive Thinker*, Chicago, Ill.]

Mrs. Eddy does not claim to have originated anything in giving Christian Science to the world, but only to have discovered the Principle and rule on which the healing work of Christ Jesus and the early Christians was based. Through this discovery and its practical application to the needs of humanity, she has reestablished primitive Christianity, and founded thereon a great movement which has extended to every part of the civilized world. This is all that Mrs. Eddy's friends have credited her with doing, and no amount of unfriendly criticism will serve to deprive her of the credit and gratitude to which she is entitled for this great work.

The critic argues for the reality and usefulness of pain, which he says is a "beneficial manifestation of intelligent goodness." If by intelligent goodness he means God, his process of reasoning is about like saying that God created man subject to inevitable suffering and death and gave him pain as a sort of danger signal to warn him of his impending and unavoidable doom. Christian Science has freed hundreds of thousands from the fallacy of believing that a good cause can result in an evil effect, and has shown them that God, who is all good and always good, could not and did not create evil or anything capable of directly or indirectly causing pain or suffering.

✧

[Ezra W. Palmer in *The Denver* (Col.) *News*]

A writer in *The News* confuses healing by divine Mind with the false, evil action of the human mind in attempting to emulate the divine. Healing the sick in Christian Science is accomplished by the divine power of Mind, God, Spirit. Jesus healed on this basis. He declared that his meat was to do the will of God, the Father, and he manifested that will by destroying the unlikeness of God, known to mortals as hate, malice, sin, sickness, and death. When, therefore, Mrs. Eddy speaks of the Science of Mind-healing, she means the spiritual healing which the great Bible worthies employed, and which Christian Scientists are again employing with marked success all over the civilized world.

In Jesus' time, as today, there was the antipode of genuine spiritual healing, and it was known as human mind-healing. It claimed that through the action of one human mind upon another, evil and sickness could be eradicated. Simon Magnus, Elymas, and the sons of Sceva, among others, used this method. Paul, in his denunciation of Elymas, uncovered the evil nature of this human, carnal mind-action when he said, "O full of all subtilty and all mischief, thou child of the devil, thou enemy of all righteousness."

So well known was this voodooism of the human mind in the days of Jesus that the Pharisees conceived the plan of charging Jesus with this false method of healing, thinking thereby to discredit him with the people. They declared he cast out devils "by Beelzebub the prince of the devils." By this they meant that he used necromancy, witchcraft, or, to employ the modern term, hypnotism. Jesus in reply pointed out the inability of evil to destroy evil, and declared that he "cast out devils [evils] by the Spirit of God," and brought to the consciousness of men the "kingdom of God."

✧

[Frank C. Barrett in *Lewiston* (Me.) *Journal*]

In a recent issue a writer inadvertently quotes some one as saying that men have gone mad "on religious errors, such as millennial dawn, Christian Science, spiritism, annihilation, etc." Christian Science cannot be included among the religious errors mentioned, because it is the antipode of those beliefs. Furthermore, true religion has never made any one mad, but on the contrary, as taught and practised by the Master, it restored men so that they became clothed, and in their right mind. Christian Science is repeating the works of Jesus and his disciples in our midst today; and while I am personally acquainted with several people who were once insane from one cause or another, but who are now well and sane through Christian Science treatment, I have never heard of any one's being made insane by Christian Science.

It is a proven fact that an understanding of Christian Science can do only good, and any failure to obtain the good results of which it is capable could be due only to a lack of understanding on the part of the student. Jesus' disciples once failed to do what he accomplished. When they asked him why they had failed, he said it was because of their "unbelief," plainly implying that if they had had his understanding of God, his Father, they too could have done the same works. Jesus said, "By their fruits ye shall know them," which is the only test of religious teaching and practice he required, and it is as safe an indication of the truth or falsity of religious tenets today as it was nineteen centuries ago.

[Written for the *Sentinel*]

True Comradeship

ELIZABETH EARL JONES

CLIMBING a rugged road,
Bowed down by sorrow's load,
Doubting the end,
I turned from dark despair;
My hands reached out in prayer,
When, lo, heaven's help was there,—
A friend.

A friend to climb with me,
A friend to talk of Thee,
A child of Thine!
Quickly the hours sped on;
We reached the rising sun;
We sang till night was done
Of things divine.

Oh, sweet the upward road,
Oh, light the old-time load,
Glorious the end!
When heart to heart can speak,
Another's good we seek,
And we unwounded keep
Our friend.

Editorial

Concerning Medical Legislation

So much has been said in a fragmentary way in the newspapers about the proposed changes in the medical registration laws of New York and Massachusetts, that there may be doubt in the minds of some of our readers as to the actual status of these laws, in so far as they might apply to the practice of Christian Science. It may not be amiss, therefore, to present at this time the following summary:—

About fifteen years ago the medical societies of Illinois caused to be introduced in the Legislature of that state a bill which so defined the practice of medicine as to include within this term every effort to heal the sick, whether by the use of medicine or in any other way. This definition was so inclusive that, had the bill become a law, no one but a registered physician could extend assistance to any sick person, even in the slightest degree. The proposed law was in fact so drastic that a member of the Legislature declared that, with such a law in force, were Christ Jesus to come to Illinois and do the works which he did when on earth, he would be accounted a felon. The Christian Scientists of the state immediately opposed the bill, and its sponsors thereupon agreed that the bill should be so amended as to exclude from its operation "any person who ministers to or treats the sick or suffering by mental or spiritual means, without the use of any drug or material remedy."

With this change the bill was passed, thereby becoming in fact what it purported to be, namely, a law to define and regulate the practice of medicine, and during the fifteen years this law has been on the statute-books of Illinois, it has worked satisfactorily. Those who have in reality attempted to practise medicine without complying with the law have been restrained, and the rights of those who desire to be healed by mental or spiritual means have not been interfered with.

Since this law was passed in Illinois, laws which by somewhat similar phraseology declare that the practice of Christian Science is not the practice of medicine, have been passed in other states, and on Dec. 26, 1911, President Taft, upon the request of Christian Scientists, modified the intended effect of an executive order governing the practice of medicine in the Canal Zone, by adding to it the following words: "*Provided* that nothing in this order shall be construed to prohibit (a) the practice of the religious tenets of any church in the ministration of the sick or suffering by mental or spiritual means without the use of any drug or material remedy, whether gratuitously or for compensation, provided that such sanitary laws, orders, rules and regulations as now are, or hereafter may be, in force in said Canal Zone are complied with."

In 1907 the medical societies of New York state secured the passage of a law defining the practice of medicine in the broad and inclusive manner which they desired, but only after the protests of Christian Scientists had been heeded to such an extent as to cause to be inserted the proviso that it should not apply to "the practice of the religious tenets of any church." It was understood and agreed between the representatives of the medical societies on the one hand and the Christian Scientists on the other, that so far as these medical societies were concerned this clause should be understood to exempt the practice of Christian Science from the provisions of the statute. Since the passage of this law, however, there have been several arrests of Christian Scientists, upon the allegation that they were practising medicine in violation of its provisions, and the arrest and prosecution in each case has been at the instigation and on behalf of the medical societies, action on their part which, to say the least, is scarcely in keeping with the understanding reached in 1907.

At the session of the New York Legislature just closed, there was passed a bill by which the law enacted in 1907 was amended by substituting for the words "the practice of the religious tenets of any church," the same phraseology as that of the Illinois law, namely, "any person who ministers to or treats the sick or suffering by mental or spiritual means, without the use of any drug or material remedy." This bill passed both the Assembly and Senate, and is at the present writing awaiting the signature of the Governor. Because of the opposition of the physicians to this bill, Governor Glynn arranged for a public hearing, at which arguments in favor of the bill or in opposition to it might be heard. The hearing was attended by something like two thousand persons, practically all of whom were in favor of the bill. The opposition was made up of physicians and those allied with them, and their "arguments" consisted largely of vituperation of Christian Science and Christian Scientists. On the face of the showing made at this hearing, it is assumed that Governor Glynn will sign the bill.

At the present session of the Legislature in Massachusetts, a bill was introduced by the state board of registration in medicine, which proposed to incorporate in the existing law a definition of the practice of medicine, and by agreement with the Christian Scientists the provision of the Illinois law above referred to was incorporated in this bill. The position of the Christian Scientists in the matter was, that although they were not at all dissatisfied with the present law, which has given the practice of Christian Science ample protection, if any change was to be made, they would prefer to have this clause incorporated. Because of opposition to another section of this bill, dealing entirely with the previous training of those who desire to take the examination for a license to practise medicine, the bill was defeated, and the law in Massachusetts remains just as it has been for the past twenty years.

On the whole this year has seen fewer attempts than heretofore to secure legislation which would interfere with Christian Science practice, and so far nothing has been accomplished along this line. When the New York bill has become law, a distinct gain will have been made toward assuring the liberty of every citizen.

ARCHIBALD MCLELLAN.

Causation Spiritual

A GOOD many seekers after truth are puzzled by the questions asked them respecting Scriptural topics, some by friends in the older churches, and others by students of Christian Science. Thoughtful people are often troubled by the seemingly contradictory statements found in the Bible, most of which are satisfactorily explained in Christian Science; but if difficulties come up, it always simplifies the process greatly to go back to the fundamental teaching of Christian Science, that God is the only cause and creator, instead of dwelling upon the thought that sin is the cause of all disease. It cannot be denied that on the plane of mortal belief sin and disease do appear to be closely related, and Mrs. Eddy says that "God has sentenced sin to suffer;" but she also says that man as God's idea "can neither sin, suffer, be subject to matter, nor disobey the law of God" (Science and Health, pp. 322, 372). This coincides with what is taught in the first epistle of John, especially the statement, "We know that whosoever is born of God sinneth not."

Digitized by Google

As we read the ninth chapter of John's gospel, it is evident from a question asked by the disciples that they held a strong belief in sin as causation, also in heredity, and their question gave the great Teacher an opportunity to lift thought to the plane of spiritual causation, when he refused to consider the prevailing belief as to sin and its effects, and declared for "the works of God." Now if the man in this case had possessed the usual material sense of sight, it would not, from the Christian Science view-point, have been one of the works of God, for it would, like all material things, have been destructible. All that God creates expresses divine perfection and cannot be destroyed, and the belief that man is separate from God is of itself sufficient to account for all the suffering in the world, without reference to any specific phases of sin.

This, however, offers no excuse for sin, which is its own proof of belief in separation from God, and which tends to perpetuate the false sense of existence through a belief that evil has power. It does not, however, follow that the same mental conditions obtain in the case of two or more persons suffering from the same physical ailments, but all disease is the result of error, of belief that man is material and governed by material law rather than by spiritual law. Strange as it may seem, it is usually much easier to lift mortals out of sin and disease than to have them give up the error of belief in materiality, and this was recognized by Christ Jesus when he declared that it would be more tolerable in the day of judgment for Sodom and Gomorrah,—the most grossly wicked cities of ancient days,—than for the people who rejected the healing truth which he was offering humanity. In Science and Health (p. 472) we read, "Error is a contradiction of Truth," and whether it is manifest as sin or disease it is always this. It denies constantly that man is spiritual and declares him to be material, and when this lie is destroyed by Truth, salvation is realized.

It goes without saying that to the human sense, so long submerged in the belief of life in matter, the process of complete redemption may seem slow, and we should therefore seize every opportunity to take all the stumbling-blocks of sin out of the way. This will undoubtedly hasten the healing work in many cases, but we must ever strive to exercise "righteous judgment" and, like the Master, make "the works of God" manifest. The disciples seemed ready to fasten the belief of sin upon the blind man, and it is a question whether they could have healed him. The Pharisees, who would not even have attempted to heal the man, did not hesitate to say to him, "Thou wast altogether born in sins." Then they cast him out. But Jesus, who had healed him, asked the one vital question, "Dost thou believe on the Son of God?" and the man was ready not alone to believe but to worship! To the Pharisees, still rejecting the truth, Jesus could only say, "Your sin remaineth."

When we understand and strive to demonstrate in Jesus' way the fact of spiritual causation, there will be no hiding-place for evil. The light of Truth will shine through the densest forms of error, and all pain, sin, and sorrow will vanish before its radiance.

ANNIE M. KNOTT.

Heroism

ALL those who are well acquainted with themselves, have come to know that there are quite enough discouraging factors in the average man's make-up to provoke the feeling that his redemption is a rather hopeless undertaking. It is possible, however, to grow enthusiastic over the latent nobility even of the seemingly debased, when one witnesses or recalls the superb heroism with which in the event of a mine-catastrophe men hazard their lives in the effort to reach their entombed fellows, or calmly accept death, as in the instance of the Titanic, in their devotion to what is largely but a sentimental ideal, namely, consideration for womanhood. The story of Scott and his four comrades, suffering unspeakably without groan or complaint and going on cheerily to the last in fidelity to the traditional thought of what becomes an Englishman, makes it easy to ignore mortal weakness. They have given us another glimpse of what it means to be an immortal, a man. Their heroism speaks for that divinity within which is able, when honored, so to subdue the fear and unworth of mortal sense as to make it possible for one to attain to Jude's ideal of human faultlessness "before the presence" of the divine glory.

Christian Science both evokes and calls into requisition the spirit of manhood described by Browning in his reference to

> One who never turned his back, but marched breast forward,
> Never doubted clouds would break,
> Never dreamed, though right were worsted, wrong would triumph,
> Held we fall to rise, are baffled to fight better,
> Sleep to wake,—

and no one can fail to appreciate the exhibition of this spirit which is found in the life of Mrs. Eddy. Something of the strenuousness of the demands upon her, and of the fine abandon with which she met them, is revealed when she says, "I saw before me the awful conflict, the Red sea and the wilderness; but I pressed on through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science" (Science and Health, p. 226).

When one remembers the tremendous proportions of the tide of material sense, and the height of the waves, he can form some estimate of the crushing weight of their repeated blows, and of the deep anchorage of the rock which is unmoved thereby. Error aroused is a seeming fury, and he who takes his stand against its assaults and thus challenges the world's enthroned beliefs in sin and sickness, if he makes good, will surely inherit the promise of Love's greatest reward, "I will give thee a crown of life."

More than once St. Paul presents in dramatic form the call of Truth for that capacity to endure with rejoicing which marked his own ministry and which must characterize the conduct of every true Christian Scientist. Pride or the love of distinction is constantly prompting men to the exhibition of a so-called bravery which often is little more than bravado. The genuinely brave take no unnecessary risks, and are never considerate for applause. They instinctively reverence truth and goodness and beauty. They are cool and confident when the many are nervous and fearful. They are loyal to the Christ-ideal when the many yield to the seductions of fleshly appetite. They are honest when the many equivocate and take advantage. They are reserved in judgment when the many smite with condemnation, and they preserve their integrity when the many would say, "No one seeth me." For such to live "is Christ."

Generous impulse and human affection often prompt to noble deeds, but the real test of one's bravery is his trueness to Truth, and this also determines one's competence to rebuke error and heal the sick. The spirit of conquering heroism cannot be gained apart from spiritual understanding. Faith must have gone on to demonstrable perfection before we can know no fear. Splendid deeds are of perennial value as prophecies of an attainable human greatness, and the practitioner who calmly confronts the frightening claims of sickness and the threats of outraged prejudice, is not only solving a present problem in his victory, but is supplying a ground of hope and assurance which means the world's redemption. With the Master, he is again defining heroism as the rule of Christ, Truth, in human consciousness.

JOHN B. WILLIS.

Among the Churches

Current Notes

SYDNEY, AUSTRALIA.—The directors, at the final meeting held for the purpose of winding up the affairs of Third Church of Christ, Scientist, Sydney, feel that in gratitude the following should be sent for the information of others throughout the field: At a full meeting of members held early in December, it was unanimously decided that the cause of Christian Science in Sydney would be best served by dissolving Third Church and the members thereof uniting with First Church. It also seemed fitting that their first attendance should be on Christmas day, as that is the day on which the Thanksgiving service is held. At this service feelings of gratitude were expressed for the practical demonstration of the larger sense of unity in the work in this field.

Correspondence.

OAKLAND, CAL.—During the year 1913 First Church of Christ, Scientist, through its several committees, was instrumental in placing Christian Science literature in the hands of the general public as follows:—

Sent out in free distribution: 2,824 *Sentinels*, 2,931 *Monitors*, 270 *Journals*, 27 *Herolds;* miscellaneous pieces given out at three lectures and by ushers at the church, 4,755; special distribution of *Monitors* containing articles about Oakland, 500; total number of pieces sold at the church reading-room from April 1 to Dec. 31 (nine months), 3,493. Total number of pieces distributed and sold during the year, 14,800. Yearly subscriptions: *Monitors* 65, *Sentinels* 4, *Journals* 4, *Herolds* 2.—*Correspondence.*

✧ ✧ ✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

✧ ✧ ✧

The Lectures

Greeley, Col.

Sterling Opera House was well filled by an audience who came to hear the Rev. William P. McKenzie lecture on Christian Science. J. M. B. Petrikin, of the First National Bank, presented the lecturer. He said:—

As you all know, this is a great age of progress and achievement in all matters, spiritual as well as material. The Christian Scientists, in their endeavor to better the human race, have done and are doing a work second to no other organization. The time for the scoffer has long since passed, and the person today who does not recognize the beneficial results of this organization, is either indifferent to the processes for the advancement of good in this world or is absolutely unwilling to admit the truth. The evidences are all about us, and are therefore easy of ascertainment. It is always a great pleasure to listen to those who are thoroughly conversant with their subject; and we have with us this evening a gentleman who will speak with full knowledge.—*Correspondence.*

✧

Sevenoaks, England

There was a good attendance in the Club Hall, Sevenoaks, at the lecture given by Col. William E. Fell. Lady Victoria Murray briefly introduced the lecturer, and said it was a great pleasure to come there that evening on behalf of the Christian Science Society in Sevenoaks. There was abroad today a deep and far-reaching interest in Christian Science, an interest awakened by the works, the "signs following" this new-old understanding of God and His creation. More than twenty years ago the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, was given to her to read. She studied it, gained some little understanding of the truth, and was healed after *materia medica* and all other means had failed. Since then she had led a very active life, full of happiness and health. Such freedom was indeed precious, and yet there was in most of them a persistent desire for something more,—for something beyond and above the freedom from mere bodily ills,—a desire for that true knowledge, that understanding, which constituted the reality of things and by which alone man might dispel the ignorance and consequent fears which were ever conspiring against his success, happiness, and peace. This understanding was the Science of the Word, the Christ understood, the Saviour that redeemed. On this point the Scriptures counseled thus: "With all thy getting get understanding. Exalt her, and she shall promote thee: . . . She shall give to thine head an ornament of grace: a crown of glory shall she deliver to thee."

The Sevenoaks Chronicle and Kentish Advertiser.

✧

Council Bluffs, Iowa

The lecture by Willis F. Gross was attended by a large and attentive audience. James Baldwin, first reader, introduced the lecturer, and said in part:—

I think it can be truthfully said that the problem of human existence here and hereafter, the question of man's origin and destiny, has been given more thought and serious consideration than any other subject known. To comprehend the purpose of existence, or to learn somewhat of the meaning of life, is a universal desire, extending from the lowest to the highest type of the human race. The activity of this desire has pushed its way through hope and faith and expectation to a higher realization and a broader basis. The limited beliefs and dim views of one generation found their doom in the clearer mental vision of the generation that followed, and so it continued, until the basic truth of this progressive mental activity reached its culmination of expression in the scientific and practical understanding of the meek and lowly Nazarene.

Through Jesus' perfect understanding of Pilate's question, "What is truth?" he wrought for himself a complete salvation, overcame the world, the flesh, and all evil, became the Wayshower for all time to come, and went forth a conqueror. His method of salvation was to demonstrate the divine oneness or unity of God and man. He gave the highest possible proof that God created man and gave him dominion.

Digitized by Google

Now, the mission of Christian Science is to awaken mankind from the dream of mortal existence in order that man, created in the image and likeness of Spirit and given dominion, may be manifested to the world, his rights and capabilities be demonstrated, and his divine purpose be learned and fulfilled. That the whole world might know of this truth and the freedom and dominion it brings, was the great life-work of Mrs. Eddy.—*Correspondence.*

Temple, Texas

Judge Clifford P. Smith addressed an appreciative audience at the Gem Theater on the subject of Christian Science. He was introduced by Judge Sam D. Snodgrass, who spoke as follows:—

If I am to deal fairly with the audience assembled here this afternoon, I must confess to you that personally I do not know what the Science of divine metaphysical healing, as discovered by Mrs. Eddy in 1866, is, except in a very general way. I do not know what are the claims, or what is the belief, of our Christian Scientist friends, but I do know that the great majority of men in this country—and I believe that I would be justified in saying that practically all men—want to be better. I believe that they want to be better morally and religiously, as well as stronger physically and intellectually. I also know that when one is sick, or when one thinks he is sick, he almost invariably has a deep longing for help; he wants to get well. Hence, if there is a science that may be presented to the world which will make men better morally and religiously, when they take hold of it and believe in it, if it will tend to strengthen them intellectually and physically, one could not be blamed for taking hold of this science and believing in it. I am here upon this occasion, as I assume you are, for the purpose of learning more of the faith and belief of our Christian Scientist friends.

Testimonies of Healing

About three and a half years ago, when in my junior year at college, I became interested in Christian Science. My health had been miserable for over two years, and it was having an effect upon my work. A severe bowel disorder had given me the most trouble, although I had also been affected with granulated eyelids and catarrh of the nose and throat, the latter condition supposedly inherited. To those who are now having Christian Science treatment, I want to speak a word of encouragement, for it was only after months of study and treatment that the bowel complaint left me. I thank God for this, however, as it has made this wonderful healing method more dear to me, and has necessarily resulted in a careful study of the books and literature, instead of the superficial reading I might have given them if I had been instantaneously healed.

Today, I am in the best of health, and I have been for months past. My healing has been complete, and I am rid of all my old complaints. I have cheerfully recommended Christian Science to all who were afflicted, and have had the satisfaction of seeing many of my business and college friends benefited as greatly as I have been.

ALLAN T. ARCHER, Los Angeles, Cal.

In May, 1907, while coming from the Philippine Islands, I was taken very sick. Each day I became weaker, until by the time we arrived at San Francisco it was thought I would pass on. As soon as the boat was docked my husband telephoned to a Christian Science practitioner, who came and worked for me, with the result that in a few hours it was decided I could be removed on a stretcher to her house.

I continued to improve for a few days, then grew worse. While alone one day, I decided to call in a physician to diagnose the case, as we did not know the exact trouble. Two physicians came, and they said that I had a serious organic trouble, also that I had better be removed to a hospital, where I could have constant care. I had suffered a great deal and the thought of relief was pleasant to me, so I was taken to a hospital. (As we knew no one in San Francisco, this seemed for the best.) At the hospital another doctor examined me. When I had been there several days, the severest pains I had yet experienced seized me, and after an examination the doctor told me that I would have to undergo an operation; that I would otherwise never be able to get around and would be an invalid all my life. My first thought was to have the operation performed, but immediately it came to me that I had studied Christian Science for years, had advocated it, given it to others, and that now was the time to prove that God can heal all our diseases.

My husband told me he would not influence me one way or the other; and that if I wanted *materia medica* I could have the best to be had, but if I wanted Christian Science he would try to find another practitioner. All I said was, "I want Christian Science." He then reported my decision to the doctor, who said I would have to be removed immediately, as he would not have Christian Scientists coming to the hospital, or words to that effect. The nurses tried to persuade me to change my mind, but I had decided, and I felt at peace after the decision. The pain gradually left. I afterward found out that the nurse in charge of me that night had been instructed to give me opiates if I began to have the least pain; but that was not necessary, for there was no pain. I continued to improve, except for one condition, which was obstinate.

After one week of treatment I expressed a desire to go to my home, which was in Cincinnati, Ohio, over two thousand miles from San Francisco. I was therefore taken in the hospital ambulance to the depot at Oakland. One of the nurses went with me, and just before getting on the train she felt my pulse and was very much surprised to find it normal, although I had been jolted a great deal. She told me while going to the train that she had never expected to ride in an ambulance with me, as she did not think I would live to go out again. We had to change depots and trains at Chicago, and then on to Cincinnati, a trip of four days' duration in all. I never saw the last practitioner, as she gave me absent treatment, but it gives me great joy to be able to say that I am healed. One of the laws that had been laid down for me was that I could never go to the tropics again. I have been there, however, and with no return of the trouble. I am perfectly well, being able to take long walks with no ill effects.

This is only one of many blessings which I have received. The constant help of Christian Science, the "Lo, I am with you alway," which had been hidden so many years and has been revealed to us through the unselfish searchings of our Leader, is another cause for gratitude. I know that only by putting into practice what I understand of Christian Science, and by striving to learn more each day, can I prove my thankfulness to God and my gratitude to Mrs. Eddy. The periodicals are a great help, and I am grateful for them.

SYLVIA M. MCDONALD, Huntington, W. Va.

In corroboration of the above testimony, I will add the following from my experience in connection with my wife's case. On arrival at San Francisco, Cal., my wife was very sick, as she has stated, and the authorities on board the boat would not permit her to remain there, so an effort had to be made to have her removed as soon as practicable. A Christian Science practitioner was called and came to the boat at the dock. She worked four or five hours, and then we saw it would be possible to take my wife ashore. This kind and Christian practitioner willingly took the patient into her own home, and under her care and treatment good results ensued. At the end of a week's time I left San Francisco alone, for a town in the north of the state, thinking that all was well, but after being absent three days a telegram was received telling me to return at once, as a relapse had occurred. On my return, I found my wife in a hospital, and a few days thereafter she was reported to be in a critical condition. The surgeon informed me that she must be operated on at once, before growing weaker, but as I abhorred operations, my disapprobation was soon shown. I, however, wanted results, so I asked the surgeon what assurance he could give, but he said he could not give any. He went on to say that the operation was necessary anyway, for without it she would be an invalid, even if she should recover from her condition at that time.

Then I went to my wife and put this proposition to her: "Choose you this day whom ye will serve." Thus we turned to God, divine Love, and came out with colors flying. The practitioner was not permitted to go to the hospital, but I reported to her in person once or twice every day, and we were brought out of the trying circumstance, showing that "divine Love always has met and always will meet every human need" (Science and Health, p. 494). Through this experience and subsequent study and observation, Christian Science has opened my eyes somewhat to the error of drugs and the unreliability of the decisions of medical men in contradistinction to the teaching of Christian Science. My advice to others passing through a life and death struggle and

Digitized by Google

who may have given doctors a fair trial, is that they reflect on their case and turn to the Science of Christ for instruction, as Mrs. Eddy did, and as many other thousands have done since, that they also may find in Christian Science the truth that heals.

J. E. McDonald, 1st Lieut. U. S. A., Huntington, W. Va.

✦

For a long time I have felt that it was my duty to give my testimony to what Christian Science has done for us. It was in 1898 that I had the first attack of epilepsy, and for a while I had one about once a month. I tried the best specialists in the country, also electrical treatment, but with only temporary relief, for the trouble continued to return more frequently and in an aggravated form. Before coming into Christian Science I had as many as three attacks in one day. Finally, I was told by one of the best doctors in this part of the state that there was no hope whatever for me.

Some time after this announcement a friend who had been healed through Christian Science asked me to try it, and as I had tried everything else, I said I would. She gave us a copy of the text-book, "Science and Health with Key to the Scriptures," saying that I would surely be healed by reading and studying it. I was not, however, quite ready for the truth and would not read the book, but my wife started to do so, and in about a week she was healed of a chronic bowel trouble of over six years' standing. Her healing opened my eyes somewhat, and I began to read also. I then called on a practitioner. The result was, that the attacks grew less severe and came less frequently, until they finally disappeared, and it is now over three years since I had the last one. I was also healed of rheumatism, with which I was greatly troubled every winter.

I am grateful for the physical healing, but it is little compared with the spiritual benefit which is gained through the study of the text-book. Words cannot express my thankfulness to God for what Christian Science has done for us.—G. Klopfenstein, La Grande, Ore.

I would like to say that every word of my husband's testimony is true. I was the first one in our family to be healed through Christian Science, for I was freed from chronic bowel trouble through reading Science and Health. Seeing the change in me, my husband took up the study more earnestly. He had treatment for some time, but as the practitioner moved to California, he continued to read and treat himself to the best of his understanding. He improved all the time, and it is almost four years since he was healed. We have relied on Christian Science ever since, and have had many blessings, for which we are very thankful.

Mrs. G. Klopfenstein, La Grande, Ore.

✧

It is with deep gratitude that I express my thanks for the many benefits which have come to me through the study of Christian Science. This truth was brought to my notice six years ago. At that time my eyes were weak and I was told by an oculist that I would always have to wear glasses. A friend who had just been investigating Christian Science advised me to read Science and Health, so I borrowed a copy from the public library and began its study.

For at least ten years prior to this I had great fear of lung trouble, as two of my immediate family had passed on with it, and a few years before taking up Christian Science the symptoms began to be manifested in my case. When I was told that this teaching could heal my eyes, I thought it might also help the other condition, so I began its study in earnest, and within two weeks both eyes and lungs were healed. My two children had become very irritable and cried a great deal, but as soon as I was healed of my great fear, they became quiet.

Last winter my six-year-old boy had whooping-cough, but through Christian Science he was healed in two weeks, with not a trace of the cough remaining. The other two children did not have it, and I know this was because I held steadfastly to the truth. For this wonderful teaching, and for all the literature, I am indeed grateful.

Elizabeth Jaeger, Mankato, Minn.

✧

[Translated from the German]

A few years ago we struggled with much sickness in our home. I myself was taken ill with a severe lung trouble and stayed in a sanitarium for some time, experiencing only temporary relief; in fact, the physicians said that I had but one year to live at the most. Besides this, our four-year-old daughter became afflicted with a sore foot, the case being pronounced a tubercular affection by the physician. After one year of medical treatment the condition had grown worse, inflammation of the kidneys was added, and we all thought the end might be expected. But "man's extremity is God's opportunity," as we learned on becoming acquainted with the teachings of Christian Science. We asked a practitioner for help and some explanation of the subject, with the result that I was soon able to take up my work again. With a few treatments the discharge from the foot, in the case of the child, stopped, and her general condition improved daily, until now she goes out on errands without experiencing fatigue.

For the many blessings which we have received, both physically and spiritually, since coming to Christian Science, we are profoundly thankful to God, and grateful to Mrs. Eddy.

Christian Wörner, Schorndorf, Württemberg, Germany.

✧

Christian Science has brought so much strength, love, and peace into my life that I feel it incumbent upon me to add my testimony to the many which have already appeared in the periodicals recording thankfulness for benefits received, and for the ever ready source of joy and gladness which eliminates all error and discord from our lives.

Before becoming acquainted with Christian Science, I suffered for many years the excruciating pains said to be due to gall-stones, although I sought the aid of the best physicians. The first doctor treated me for neuralgia of the spine and ordered a vegetarian diet, to which I strictly adhered for over two years without any decrease in the periods or the intensity of the pain. The treatment of another physician gave me some relief for a while, but in a few months the pain returned in a still more aggravated and acute form, making life one long and weary pilgrimage. I was never entirely free from pain and was often completely prostrated.

At this time my attention was drawn to Christian Science by the comment which a friend, who was not a Scientist, made on a case of healing. This led me to ascertain when and where the church services were held, and I attended a Wednesday evening testimony meeting in Blackpool. The testimonies given interested me very much, and I was also surprised to find that I had many friends among those present. At the close of the service one of these friends, whom I afterward found to be the second reader, asked me if I would like to read the text-book, "Science and Health with Key to the Scriptures," and offered to lend it to me. I accepted it more out of curiosity than with any idea of seeking help from this source, as the teaching and the method of healing appeared to be so impossible. On my return home

Digitized by Google

that evening I opened the book and began to read the chapter on Prayer. My attention was arrested, and I then began to realize that I had never known how to pray in the fullest sense. I continued to read Science and Health, and the discovery that sickness and affliction of all kinds was not imposed on us for our good by the God who is Love, was a revelation to me.

Within two months after attending the Wednesday evening meeting I had another very violent attack of pain. This so alarmed my family that they sent for the doctor, who told me that unless I immediately underwent a surgical operation I had but a few days to live. His verdict did not excite in me any sense of fear, but I at once sent for the Christian Science practitioner who had lent me the text-book. She lovingly came to my aid and remained with me for seven hours. When she had been with me three and a half hours, I fell asleep and slept for nearly three more. I awoke free from pain, and feeling so well that I dressed at the usual time and went out next morning. Nearly five years have passed since then, and I have had no return of the pain, and every ailment and discord has been overcome by knowing the power of Truth.

It has been my great privilege to receive class instruction, and this has revealed to me more and more the great value of what Mrs. Eddy taught so thoroughly and constantly. Her steadfastness in so doing has brought to thousands freedom from their burdens, and has directed their thoughts to the realization of a truth which has enabled them to live a higher and holier life, full of thankfulness for the joy and brightness which fills it with love for their fellow men. I can best show my thankfulness to God for all the blessings brought to me in Christian Science by daily living the prayer our Leader has given us in the Church Manual (p. 41): "Let the reign of divine Truth, Life, and Love be established in me, and rule out of me all sin; and may Thy Word enrich the affections of all mankind, and govern them!"

ISABELLA WALLIS, Wallsend-on-Tyne, England.

✧

I feel very thankful to God for the many blessings which have been revealed to me in Christian Science, both for the physical healing and the spiritual uplift. Fifteen years ago our first baby, one year old, was very sickly. The local doctors gave him up, telling my husband that nothing could be done for him. I then took him to a Christian Science practitioner, who was the first one I had ever seen or heard of. In two weeks the child was completely healed, and an eruption on his head soon disappeared and the head was covered with beautiful curls. To me this seemed the most remarkable healing done since Jesus' time. I felt impressed that I ought to write a testimony, but I was afraid that if I did I would lose my standing in my old church and be eternally lost, for so many said that Christian Science was anti-Christ. When eight years old, this boy was taken suddenly sick with spinal meningitis, and because we were then five hundred miles from a Christian Science practitioner, we had a doctor and lost the boy. This, however, showed us that we needed a better understanding of the truth.

At my second baby's birth I had absent treatment and was perfectly free the second day. Thus we went on year after year, receiving treatment but without understanding Christian Science, until about two years ago, when another child was being treated. I was utterly miserable and discouraged, until one day new light came to me, and a clearer realization that God is Life. Since then I have not had a moment's doubt, but steady growth. I wish to speak particularly of one experience that occurred while this baby was having treatment. One night I was suddenly awakened by the thought, accompanied by the greatest happiness, that he was the child of our Father-Mother God. Then quietly the peaceful assurance came to me that he was cared for, and even as the loving Father kept Isaac from the altar of sacrifice, so He would keep me and mine if I would obey Him. I have learned that it is not church or creed that saves us, but as Christ Jesus has said, "Ye shall know the truth, and the truth shall make you free."

ANNIE B. SHANLEY, Deer Lodge, Mont.

✧

This testimony to the value of Christian Science is given with a heart full of thankfulness to God, and of gratitude to our Leader, Mrs. Eddy, for the benefit of those who may think that Christian Science is not effective in healing organic disease. Eighteen months ago I was depending entirely upon *materia medica* for relief from a condition which according to medical opinion is incurable, and which today is causing physicians more trouble than any other single ailment. Like every one who is depending on material means for relief, I think I read everything I could find that had bearing on this particular disease. One day I saw that a certain German chemist had made a great discovery which could be used for the cure of this illness, and which would be of the greatest benefit to humanity. I went to the local physician and talked to him about it. He advised me to go to Chicago and consult a certain doctor there. I went, but the verdict was, that owing to the fact that I had been suffering from the disease for about fifteen years, the doctor would not advise me to use this method, as the result would probably be fatal. I also made three trips to Hot Springs, Ark., but got only temporary relief.

My discouragement at this point can be imagined; but after all, it was for the best, since "man's extremity is God's opportunity," for I was thereby led to turn to Christian Science, and was healed. Since then, through the slight understanding I have of the truth, I have been able to give up tobacco, which I had used for twenty years. I have also been able to give up wearing glasses.

While I am very grateful for the physical healing in Christian Science, I am even more thankful for the spiritual understanding of the Bible which I have gained through studying the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am also grateful for all the Christian Science literature. My daily prayer is to know more of divine Truth and to be a worker in the vineyard, and I hope this testimony may be the means of bringing others who are suffering from the same disease to the truth that makes free.—GILBERT P. GALLAHER, Danville, Ill.

✧

I should like to express a little of my deep thankfulness to God, and gratitude to Mrs. Eddy for Christian Science. Before knowing of this glorious truth I was full of fears, and weighed down by a dreadful sense of responsibility over our children. Christian Science is teaching me that there is nothing to fear, that the children are not mine, but God's, so I need only to give them daily into His care, and to know that they are safe.

Many beautiful proofs of the truth of Christian Science have come to our home. When my baby was born, peace and harmony prevailed, and I was able to be up and about as usual in a few days. This seemed wonderful to me, as on previous occasions I had suffered much, and weary months of weakness and depression had followed. Coughs, colds, and children's ailments quickly disappear now that we begin

Digitized by Google

to see them for what they are,—illusions of material sense; and best of all, life is filled with joy that comes from the consciousness that God is infinite good, omnipotent, omnipresent, omniscient. I feel especially grateful for class teaching, which has helped to make this plain to me, for the kind friends who have helped me, and for the Christian Science literature, which is such a constant source of strength, inspiration, and guidance.

MARGARET A. C. LOCKET, Horley, Surrey, England.

✧

[Translated from the German]

Deep gratitude impels me to tell of the great blessings which we have received through Christian Science. When a baby came into our home some two years and a half ago, we had to secure the services of a physician at the birth. He doubted whether it would be possible to save the child's life, as to sense it was born prematurely. It screamed day and night, and no kind of food would agree with it; also, as a result of the crying, an umbilical rupture was added. I had heard from my sister in Dresden, who had been healed through Christian Science, of the rich blessings which this truth is bringing to many, and we therefore applied to a Christian Science practitioner for help for the child. She immediately began treatment, and we at once became aware that the little one was growing quiet. Within a short time all bad symptoms disappeared. I immediately discarded all material means which had been prescribed by the physician for the rupture, as they only added to the child's suffering, and the trouble was soon overcome. From that time our child began to grow and gain in strength, to our great joy.

About a year and a half ago, to material sense I contracted blood-poisoning. My face was wholly disfigured by the swelling, and I suffered greatly with it. We, however, put all our trust in God and soon experienced His help. We asked the same practitioner for treatment, which was lovingly taken up, and the pain immediately subsided. In one week's time I was completely healed, and there has been no return of the trouble.

I thank God for this great revelation through our beloved Leader, Mrs. Eddy, who has again made known to mankind the nature of Truth. It shall be my greatest endeavor to grow in the understanding of this teaching.

FRAU KLARA BITTERLICH, Zittau in Sachsen, Germany.

[Written for the *Sentinel*]

True Freedom

MARY G. SCRIBNER

Know you the song of the captive bird
Finding itself set free,
Soaring aloft into freedom glad,
Singing in ecstasy?

Know you the smile of the waking earth
Greeting the morning light,
Calling the world to a glad sweet day
After the long dark night?

Know you the fragrance of flowers sweet
After the summer rain?
Know you the joy of a heart at peace,
Freed from all sin and pain?

What freedom means to the captive bird,
The shower to leaf and tree,
What sunlight means after darkness drear,
The truth now means to me.

From Our Exchanges

[Rev. J. W. Kramer as reported in *Los Angeles* (Cal.) *Examiner*]

He who preaches that God sends sickness is a poor comforter. Many say, "It is God's will," when it is the devil's will. Many complain of God visiting them with evil, troubles, and other afflictions, when these things are often the result of carelessness, extravagance, or bad judgment.

Does God take the stout husband and leave the sickly wife with little children to struggle with the pinches of poverty? Does He let the cyclone blow down the church on one corner and leave the saloon standing on the other? A man under the influence of liquor falls in front of a train, or kills his wife—was it God's will? What glory could God get out of that? If I believed that God spread scarlet fever among little children, that God made idiots or lunatics or cripples for life, I would hate Him. "God is love." If God is responsible for all the sorrows of earth, who would care for His consolations?

No prophet or apostle ever blamed the Lord for his sufferings. It was the devil who afflicted Job. Paul calls his thorn in the flesh a message of Satan. David calls his pains "the pains of hell." God even takes an oath He has no pleasure in death, and the Bible refers to Him as the God of the living, and not of the dead. God forgive any man who charges up to the Almighty what should be charged to the devil.

[*The Independent*]

Back to the gospel source go those whose faith in human possibilities and courage for unmeasured tasks must needs be renewed in some life-giving stream. Not only in the buds and blossoms may we see the victory of life, but also in the story of Calvary and the garden, where we find goodness and righteousness eternally triumphant over villainy and injustice, non-resistance over aggression, humility over pride, holiness over sin, love over hate. We are assured that though evil may hold the reins for a season, dominion and power belong ultimately to justice and right. However complete may be the temporary defeat of truth, error shall not always abide.

Easter proclaims that man shall overcome all his foes, including death itself. His pathway may lead him through the sorrows of Gethsemane, the pain and darkness of Calvary; nevertheless his winter of distress will yet turn to the spring of delight, defeat will be forgotten in the joy of final victory, and the life of the spirit will rise in glory from the shadows of the grave.

[*The Continent*]

The way it is ordinarily said is, "I am doing the best I know," or, "I am doing the best I can," which practically always means, "I am doing what is prompted by any vagrant impulse that happens to filter into my mind," or at best, "I am doing what habit makes the way of least resistance." No man really has any right to plead with God that he is doing the best he can unless his way of living is a way he has seriously thought out.

The gigantic fatal enemy of splendid living in the world is that idle dulness of mind which will not make effort to form and hold fast great, broad thoughts of splendid ways to live. It takes stout mental grit to maintain big ideals in residence within the soul. He who will not make the effort to lift up his eyes to the hills, soon forgets the hills are there. And this is the whole explanation of the lean and colorless personalities seen in so many of us,—not bad, but far from being

Digitized by Google

fine. Cherishing no ideals and thinking on no higher things ahead, we manifest only a growthless, stunted morality, making from year to year no character gains.

[*The Universalist Leader*]

We all have more or less of religion. Even those who deny its existence yet conform in some measure to its unacknowledged requirements. But there are some who have a great deal of religion, which they hold as a small man holds wealth, just as a sort of nest-egg for more, which means that they have missed the soul of the thing altogether! Religion, to bless, must be shared. We cannot possess it unless we give it away. Here is the heart of all evangelical and missionary movements,—we want to share something good with others. Too often we come at these enterprises from the wrong end; we give the idea that we want to get the people, to get something out of them, when religious activity should be expressive; we are to give, give, give. We have something good which we would share.

[*Northwestern Christian Advocate*]

To walk humbly with God, involves a recognition of one's living in God's world as a child of God. There is no temper so hard to cultivate in our day as the spirit of dependence. As a people we are prevailingly and presumptuously self-reliant. It is not so much that we deny God as that we are indifferent to Him. We do not walk humbly with Him, because in the main we do not walk with Him at all; we feel abundantly able to take care of ourselves. In this way we have many things, good things, delightful things, but never the best of anything. It is only as we enjoy a thing as a veritable gift from God that we enjoy it at its best. By such a temper every gift is enriched and ennobled, and in the light of our gratitude and adoring love the simplest of blessings is transfigured.

[*The Standard*]

For us, Easter day is the annual reminder of what ought to be a daily commonplace in the thought of every Christian,—Jesus is alive! This Saviour is not one who once was, and is now dead, but one who says of himself, "Behold, I am alive forevermore." It is not the dead Jesus of Matthew Arnold, upon whose grave "the Syrian stars look down," who is the object of adoration, and who can inspire us today only by the memory of his brief life of self-forgetfulness, suffering, and death. It is rather the Christ, who is alive at the right hand of God the Father, whose living and ever-present spirit draws all men today toward himself, as it has in every age that is past.

[*The Congregationalist and Christian World*]

Have we so lived in little things that the hour of the trial of our faith shall find us strong to overcome? It may be the opening of a wide door of opportunity. Have we been faithful in little things, so that we are fit and ready to be made ruler over greater things? It adds an ennobling touch to our commonplace experiences if we regard them as preparations for possible great hours of service and experience. It is worth while to be drilled and ready; since the time when the experience on which our life depends may come without warning.

[*The British Congregationalist*]

Our Lord and Master was too human and knew poor humanity too well not to realize that faith called for reward, and that a continuance of it could scarcely be looked for unless the answer came. As a German writer has put it, "Faith is the great driving force of the highest form of human attainment," and yet another writer refers to it as "the mainspring of all endeavor of a spiritual kind."

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

The more recent translations into Dutch, German, Norwegian, and Swedish pamphlets are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

At the invitation of the government, a parliamentary party, which included several members of the ministry, recently journeyed to Loxton, a township on the River Murray in South Australia, where three events which markedly illustrate the rapid development and settlement of the agricultural lands south of the river were celebrated. Chief of these events was the opening of a railway running to Loxton from Alawoona. Other lines already constructed will, it is anticipated, give rich returns. The new line to Loxton is twenty-two miles in length, and will serve an area of about two hundred and ninety-six thousand acres, most of which is good wheat-growing land. Second in importance to the railway was the opening of new waterworks designed to serve the town and surrounding districts. The third ceremony was the official opening of the new post-office, which has been erected at a cost of nearly two thousand pounds.

In the current issue of *Land Values*, the official organ in England of the movement for the taxation of land, appears a vigorous leading article dealing with Mr. Lloyd George's recent pronouncement on the subject at Glasgow.

The working men are ready, says the writer, for the chancellor of the exchequer to take as his text the statement he made at Glasgow,—that there is one great underlying principle of all sound land laws, namely, that the land in all countries exists for the benefit of all those who dwell therein, and that any privileges, rights, or interests attaching for the time being to the ownership of land that are inconsistent with this great right, ought, in the interests of the community, to be ruthlessly overridden. This, the writer declares, is a principle deep-rooted in the minds of the Scottish people. They are determined that the land shall be used for the equal benefit of all men.

Prince Erik of Denmark, the youngest son of Prince Valdemar, and a cousin of King George V., will soon return to Denmark from England, where he has been making a practical and theoretical study of agriculture on a farm. The prince has always taken a great interest in farming, and this pursuit is his own choice. He first of all went to an agricultural school in Fyen, but as there was a considerable sensation created when he was seen plowing, or performing other menial tasks on the farm, he asked the permission of his father to study in another country. This was granted, and the prince has since taken part in all the ordinary work of a farm. It is thought that he will shortly settle down to farming in Denmark.

An agreement has been entered into between the harbor and land commission of Massachusetts and the state forestry department for cooperative work in reclaiming the "province lands" on the tip of Cape Cod. The shifting sand-dunes on the cape have constituted a problem for state and federal authorities for many years; the theory that the sand can be harnessed by beach grass and trees is on trial. The grass will bind it to some extent, and if the trees can be made to grow in it they will gradually establish an effective shield against the prevailing northwest gales that have been whipping the dunes into changing drifts and hollows for centuries.

Development of adequate dock facilities at Havana, Cuba, is of such a character that ample accommodations for traffic will be provided, giving the sort of equipment for shipping which has been much needed. The concession for constructing docks, which after fifty years would become the property of the government, was given to Sylvester Scovel and his associates by decree of President Tomas Estrada Palma in 1905, and after nine years the second of the docks is now about completed. The Port of Havana Docks Company, present owner of the Scovel concession, is an American corporation, having, however, many stockholders in Cuba and elsewhere.

The recent anonymous gift of five hundred thousand dollars to the building fund of the Washington Episcopal cathedral of SS. Peter and Paul in Washington will enable the building committee to proceed at once with the work of laying the foundations in their entirety. It is assumed that the structure will ultimately cost about five million dollars. The cathedral is to be about the size of that at Salisbury, and larger than the cathedrals at Gloucester, Durham, or Lichfield in England. It will stand four hundred feet above the Potomac, covering an acre and a half of ground.

The sluiceway in Foley's dike, connecting Cape Cod bay and Buzzards bay, was opened April 21 and the waters intermingled. The actual destruction of the intervening dike will not take place until late in June, as there is still a small section which is not dredged down to the stated depth of twenty-five feet. It is hoped that on July 4 the canal may be opened for ships drawing not more than ten or twelve feet of water.

The Conservative party in Chile comes out squarely in favor of the sale of the dreadnoughts which that country is having constructed abroad. *La Union*, the organ of the party, says that it is extravagance unwarranted by existing economic conditions; that it is not necessary to have large battleships as complements of the fleet, and that instead of being messengers of peace the additions to the navy will prove irritants elsewhere.

The *Journal of Commerce and Commercial Bulletin* says that a group of capitalists in London, interested in plantation rubber, now declare that they have secured a process whereby the latex can be brought direct from the trees to London and treated upon a scale which will give evenness of grade and quality. Hitherto it has been considered impossible to bring the unprepared latex direct to market without deterioration.

Reorganization of the work of the United States department of agriculture is proposed in an amendment to the agricultural appropriation bill, reported by the Senate committee. Under this amendment the secretary would be instructed to submit to Congress a plan for the complete reorganization of the department, and to prepare his estimates for the fiscal year 1916 along the lines of the recommended plan.

The imperial assent has, it is stated, been given to a bill which will do much to elevate the status of women in Russia. Until now the law made it impossible for married women to hold property, to enter any business, or to be employed for a wage. It also forbade them to hold a passport separate from their husbands, and afforded the married woman no sort of protection from domestic wrongs.

The world's output of coal in 1912 reached the total amount of one billion one hundred million English tons. The output of the United States was greater than that of any other country, being four hundred and seventy-seven million tons; the United Kingdom was second, with an output about half that of the United States, and Germany third, with an output of one hundred and seventy-two million tons.

The Chinese government has secured the services of Professor Anderson, at present director-general of mining in Sweden, as adviser in mining questions and undertakings in the republic. The authorities of China are really desirous of securing foreign capital and profiting by the advice of foreign experts in the development of the mining resources of the country.

In northern Arizona, Utah, Nevada, southern Idaho, and western Wyoming, the fires on national forests set by campers have decreased in four years from nearly a third to approximately one fifth. Fires caused by lightning have increased from less than one fourth to nearly one half. The relatively larger proportion from lightning, however, is due partly to decrease in other causes.

Great sums of money must be expended to improve the rivers and harbors of Massachusetts if the state is to utilize adequately the opportunity for the development of water transportation that will follow the opening of the Panama, Cape Cod, and New York barge canals. This is the conclusion of the harbor and land commissioners of that state.

As Huerta, president of the *de facto* Mexican government, did not give the unconditional salute to the American flag, President Wilson, acting under authority of Congress, ordered the seizure of the Mexican city of Vera Cruz. American marines were in full possession of the city on April 22.

A consignment of eggs from China recently arrived at Vancouver on the steamship Empress of Russia. The shipment, weighing one thousand tons, contains 6,792,360 eggs. Most of them are consigned to points in the United States.

The Union Pacific railroad has placed an order for nearly one million dollars' worth of locomotives for delivery before the opening of the San Francisco exposition. Fifty-four locomotives are included in the order.

Imports of paper for use in printing newspapers and books aggregated two hundred and thirty-seven million pounds in the first five months under the new tariff, doubling the total for the corresponding period a year ago.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI May 2, 1914 No. 35

"The last shall be first"

IRVING C. TOMLINSON, M.A.

SPEAKING to his disciples of the laws which govern the true man, the Master said, "The last shall be first, and the first last;" and reasoning along similar lines, St. Paul writes, "The things which are seen are temporal; but the things which are not seen are eternal." Mrs. Eddy has comprehended these statements of truth in her declaration that "by reversal, errors serve as waymarks to the one Mind, in which all error disappears in celestial Truth" (Science and Health, p. 267). The neglect of these fundamental facts of being is responsible for the continued reign of discord among mortals. Adherence to their divine behests is proving to loyal students of the Scriptures that health, wholeness, manifests the law of God, and that peace is man's heritage.

These considerations have recently been brought to notice by the inquiries of some who were seeking help in Christian Science. They asked: "Is it honest to seem joyous when one feels discouraged?" "Is it right for one to claim to be well when he feels sick?" These and kindred questions indicate that the words of the Master, "The last shall be first," have been forgotten; that the inquirers have failed to heed the teaching of Christian Science, that we are to reverse the false evidence of material sense, and rely wholly upon the testimony of spiritual sense for a knowledge of the facts of being. One who faithfully does this, soon learns that divine resources are ever close at hand, increasing in abundance as we use them and so make them our own.

Those who desire to experience the Christ-healing should remember that in dealing with the physical conditions of the human body, it is needful to test the evidence of the five senses with divine Science, even as in viewing the celestial bodies we correct the testimony of the eye through the science of astronomy. The eye declares that the earth is at rest, and that the sun and the stars revolve about it. The science of astronomy reverses this false testimony of material sight, and thus the facts as to the solar system are revealed. In like manner mortals must look to the Science of the Christ for the facts of being, and if disobedient to this demand, they are sure to remain in serfdom to error. Obeying the law of God, they throw off the false shackles of sense and rise to "the glorious liberty of the children of God;" and to this liberty, our possible freedom from false concepts, no limit can be set.

Science makes this helpful assertion to one suffering from false claims of disease or discouragement, but it demands that however one may feel according to sense-testimony, he shall ever manifest courage and good cheer. It is always right to hold to the presence of health, despite contrary indications, because God's man is forever free from disease. Thus to resist the temptation to feel downcast or sick is to work in harmony with God, to have that Mind which was in Christ Jesus, and so recognize and apply the healing truth. We are told by Christ Jesus that the joy which comes from knowing the truth, "no man taketh from you," and in what seemed the darkest hours of his earthly experience he said, "These things have I spoken unto you, that my joy might remain in you, and that your joy might be full." It would therefore seem that no apology is needed on the part of a professed follower of the Master for declaring at all times that he is joyful, provided he is realizing his true selfhood and inheritance as a child of God.

Scripture and Science quite agree in saying that while it is usually true, because of long years of education on the wrong side, material sense first testifies to mortals, yet in order to understand the facts of being, they must reverse the spurious testimony of the flesh, and look to spiritual sense for the revelation of eternal verities. When this method becomes habitual, errors are removed and truth is established, and so the first testimony (that of the material senses) becomes last, and the last witness (that of truth and harmony) obtains first place in consciousness.

Many incidents in the life of the Master stand as exemplifications of the truth that the first must be last, and the last first. On the stormy sea of Galilee, it was the material senses that first testified through the disciples, as evidenced in the startled cry, "Master, master, we perish." Later the spiritual sense of Jesus declared, "Peace, be still," and there was a great calm. The coming of the spiritual destroyed the material. When he entered into the home of his loyal disciple Peter, and found the latter's mother-in-law sick with a fever, the material senses announced only gloom and discord, because of the belief in sickness. Jesus reversed this condition through his spiritual understanding of the Science of being, with resultant peace, health, and rejoicing. At the grave of Lazarus every evidence of the false senses asserted that death was the victor over life, and that there was sufficient reason for the grief and suffering of the sisters Mary and Martha. When Lazarus came forth, it was proven that where a recognition of omnipotent Truth reigns, the first, or false, is last, and the last becomes first, for the truth reflected by the Master made clearly manifest the fact that life is the victor over death, and Spirit is supreme. "God alone is man's life" (Science and Health, p. 203), and man can never be separated therefrom.

It is in full harmony with this line of reasoning that Christian Science healing is wrought. When sickness is manifest, we are bidden to deny the false testimony of material sense and affirm the eternal presence of health, that which is good; and this insistence upon the harmony of being establishes strength and freedom. However severely the winds may blow, however high the waves may dash, spiritual sense will declare to those who attentively listen, as it did to Jesus, "Peace, be still." There is indeed neither time nor occasion for one to agree to the reality of discord, since at all times and under all circumstances he must assert the harmony of being and claim it as his lawful possession, steadfastly knowing that "the things which are seen are temporal; but the things which are not seen are eternal." Each earnest seeker thus proves for himself that "the last shall be first, and the first last." Material sense, with its

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

sin and sickness, is put aside as spiritual sense, with its health and harmony, becomes first in our consciousness. The alert student of Christian Science will constantly give heed to the explicit exhortation of our revered Leader in "Retrospection and Introspection" (p. 28): "Our reliance upon material things must be transferred to a perception of and dependence on spiritual things. For Spirit to be supreme in demonstration, it must be supreme in our affections, and we must be clad with divine power."

The Pillar of Salt

RICHARD P. VERRALL

THE experiences through which Lot passed after leaving Abraham in the land of Canaan, were varied and numerous. He had chosen for his home that fertile plain known as "the garden of the Lord," situated twelve hundred feet below the Mediterranean, in the valley of Jordan. The rich pasturage of this well-watered oasis was already supporting the population of five small cities, but in spite of this Lot seems to have found no difficulty in securing sufficient grazing land for his extensive flocks and herds. As a crowning feature of the picturesque beauty of the scene, there stretched through the valley an inland sea or lake forty-seven miles in length, fed by the river Jordan, which undoubtedly tempered the climate and lent softness to the air. This lake, which is now called the Dead sea, is the lowest body of water on the earth's surface. It has no outlet, but as the result of evaporation it retains about the same level and this vapor in turn is condensed in heavy dews.

It was among these most attractive surroundings that Lot and his family had determined to live. They were apparently unsophisticated people, quite unaccustomed to the wickedness of city life. At first Lot pitched his tent outside the walls of Sodom, but later we find him living in his own house inside the city. St. Paul's words, "Evil communications corrupt good manners," had not then been written; hence, we must make suitable allowance for Lot's apparent apathy to the demoralizing conditions of his environment.

After the battle of the kings in the vale of Siddim, when Abraham came to the rescue of his nephew and recaptured his property, Lot seems to have again settled down to his old way of living, and one evening, as he was sitting in the gate of Sodom, we read that two angels approached and he rose to meet them. These angels told Lot that they had been sent to destroy all the cities of the plain on account of their wickedness, and that he must at once gather up his belongings and escape to the mountains. Lot found difficulty in arousing his family to the seriousness of the situation, and we are told that he seemed to his sons-in-law "as one that mocked."

At length, however, Lot set out, accompanied by his wife and two daughters, with only such things as they were able to carry. The angels had given them express orders not to look behind them or to stay in the plain, but to flee to the mountains. Lot, however, pleaded so persistently with the angels that he was permitted to take refuge in the little town of Zoar on the outskirts of the valley. Just as they were about to enter the town a catastrophe occurred. Lot's wife, unmindful of the order given by the angels, looked back once more toward her old home in the valley, and we read that "she became a pillar of salt." Just what the actual significance of this metaphor is, it may be hard to determine, and it makes very little difference, since we are concerned only with the moral of the story. The spiritual lesson which rises unmistakably from this Bible narrative must be apparent to all.

Lot and his family had not shared as they might in former days in the spiritual life of their kinsman, Abraham. They were well-meaning materialists. They had made their home in the most attractive, sensuous surroundings which they could find. They were not hungering and thirsting after righteousness; hence, they were not willingly obedient to the call of the "celestial visitants" (Science and Health, p. 298). Even Lot's so-called righteousness was not so much the result of his own understanding, but rather the effect of his early association with his uncle, Abraham. When called upon to stand the test of individual demonstration, he was not fully prepared, but argued against the demand of the angel, saying, "Oh, not so, my Lord."

Thanks to the teachings of Christian Science, we can now see more clearly than ever before that the values of Bible history are found when it is interpreted in terms of mental experience. We find some of the same tendencies that governed Lot and his wife still claiming control over our own habits of thought. While we are not always ready to profit by the experience of others, it is perfectly legitimate to do so if we can and will. There is no longer any excuse for being turned into metaphorical pillars of salt for looking back longingly to our old materialistic beliefs, no matter how beautiful or attractive they may appear. We may, if we will, accept joyfully the invitation to escape to the hills whence cometh our strength. There is something far better than the valley of the Dead sea, or the lowest mortal thought, to dwell in, in spite of its sensuous inducements.

The meaning of Sodom is "secret," and Gomorrah is defined by Cruden as "a rebellious people; or the people that fear." Surely we do not want to abide in such a mental atmosphere, nor can we afford to associate with those who do, unless it be, as our Leader says in Science and Health (p. 452), "in the attempt to purify it."

Life-savers

CLAUDE W. WOODRUFF

AT one of the life-saving stations on the Great Lakes the captain asked a new surfman this question: "If, while standing on the pier, your attention should be drawn to a man in the water, apparently drowning, what would be your first duty?" The novice's prompt reply was this: "To swim to the rescue immediately." "That would be wrong," said the captain. "You should first remove your shoes, divest yourself of all superfluous clothing, and loosen any remaining garment that might form a bag and so gather and retain water. If you yourself are hampered in your movements, how can you expect to render assistance to one who is in a similar plight?"

Then the captain asked what the surfman's second duty would be, but to this question no reply was given. "The rescuer should, when within hailing distance, assure the drowning man in a commanding voice that there is nothing to fear, as assistance is at hand," the captain told him. "Furthermore," he continued, "never approach a person who is frantically struggling, for in that case the chances are only one in ten that either the drowning man or the rescuer will be saved. Wait until the man has exhausted his strength, but be at hand to grasp him before he sinks."

Are these rules not paralleled in the Christian Scientist's duty to his brother man? Should we not at all times be so divested of the supposition that there is life in matter, or that there is any power or mind apart from God, that in going to the rescue of one who is seemingly about to go down in the waters of belief, there shall be nothing in our con-

Digitized by Google

sciousness to which error can cling and thereby drag us, with the one we would help, beneath its surface? If we are prepared by reason of having "put off the old man with his deeds," will the result not be so apparent to the outsider that we can speak "as one having authority," and in so doing convince the one whom we would save that there is nothing to fear?

If, however, he who seeks assistance still grasps at the straw of material succor, hoping thereby to be saved, or to supplement the work of the infinite One who alone is able to save, it will be better that we stand a little way off till he has learned that there is no power in matter to sustain him. Then may we go to his rescue, and, understanding the powerlessness of the waves, bring our brother to the shore, helping him to plant his feet upon the solid rock of Truth, where the waves of error cannot reach and the warm rays of infinite Love are all-powerful to resuscitate.

✧

Law

CLARA PARK

LAW in its highest sense signifies an established, irresistible rule of action emanating from divine Principle and governing the whole universe. Divine law is not subject to legislative amendment or enactment, but remains as unchangeable throughout all time as God Himself. As the planets move through the universe in accordance with a prescribed rule of action, never deviating from their regular course, so each of God's ideas acts in accordance with the direction of infinite wisdom and Love, and every so-called material condition is subject to the authority of spiritual law.

Blackstone evidently caught glimpses of the truth when he said, in referring to divine law, "It is binding over all the globe, in all countries and at all times; no human laws are of any validity if contrary to this; and such of them as are valid derive all their force and all their authority mediately or immediately from this original." Thus it will be clearly seen that since human laws derive all their validity from divine law, any provisions of our statutes contrary thereto are null and void. Nevertheless, it would not be in accordance with the direction of infinite wisdom for one to attempt rashly to abolish or act contrary to the provisions of human law which at the present time are subserving the needs of mankind until human thought has outgrown the conditions which render these provisions necessary. Nothing destructive is authorized by infinite Love. Jesus said, "Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil." Still it is necessary for any one engaged in the practice of law to be awake to the truth that justice is not dependent upon the provisions of human statutes, the decision of a court or the verdict of a jury. There is in reality but one lawmaker and one judge. It is necessary to know and affirm this fact constantly, for if we do not we are held in subjection to mortal provisions. Mrs. Eddy says on page 445 of Science and Health, "You render the divine law of healing obscure and void, when you weigh the human in the scale with the divine, or limit in any direction of thought the omnipresence and omnipotence of God."

What does it mean to fulfil the law? The following quotations from the Bible seem to answer this question fully. In his epistle to the Romans, Paul says, "Love worketh no ill to his neighbor: therefore love is the fulfilling of the law." Again, he says to the Galatians, "For all the law is fulfilled in one word, even in this; Thou shalt love thy neighbor as thyself;" "Bear ye one another's burdens, and so fulfil the law of Christ." In the epistle of James we read, "If ye fulfil the royal law according to the scripture, Thou shalt love thy neighbor as thyself, ye do well." Then the very substance of law itself is based upon this one word, namely, love, and if there were enough love manifested between men there would be no need of either mandatory or prohibitory provisions; no need for codes and statutes, for every one would be seeking the universal happiness of all mankind instead of his own selfish interests. But this word "love" must have a higher and more spiritual meaning than that commonly accepted. It must lift the human thought to the contemplation of something higher than itself and to an altitude and atmosphere where it can see only God's reflection.

We cannot truly seek our own happiness without contributing to the happiness of every one else, nor can we seek the happiness of another without increasing our own. Our textbook tells us that "happiness is spiritual, born of Truth and Love. It is unselfish; therefore it cannot exist alone, but requires all mankind to share it" (p. 57). Happiness can be attained only through the right perception of and strict obedience to law. Blackstone in writing on this point said: "He [God] has so intimately connected, so inseparably interwoven the laws of eternal justice with the happiness of each individual, that the latter cannot be attained but by observing the former, and if the former be punctually obeyed it cannot but induce the latter. In consequence of which mutual connection of justice and human felicity He has not perplexed the law of nature with a multitude of abstract rules and precepts referring merely to the fitness or unfitness of things as some have vainly surmised, but has graciously reduced the rule of obedience to this one paternal precept, 'that man should pursue his own true and substantial happiness.'"

This reduces obedience to law to a natural and easy process, that of pursuing our own true happiness; so we can clearly see that any wrongful action comes not from malicious intention or wilful disobedience to law, but from ignorance of the intent of law. No one would intentionally do anything that would injure himself, and when we begin to see that all wrong action or thinking comes from dulness of perception, we will be able to think kindly toward the so-called criminal and help him to understand the meaning of true law; and when he arrives at this understanding, he will be as glad and willing as ourselves to obey it. Christian Scientists learn from all of their Leader's writings, which are based upon the teachings of Christ Jesus, that divine law is ameliorative and constructive; hence they can say with the psalmist, "O how love I thy law! it is my meditation all the day."

✧

"Let us not sleep"

ADELA S. HAWLEY

IT was recently said to the writer by one who was just beginning to investigate Christian Science, "If Christian Scientists would only speak and live, or show that they are trying to live, the pure, simple truths which are found in Science and Health, how quickly the world's prejudice, criticism, and misunderstanding would disappear! The wrong impression I had of its teachings, which prevented me from looking into it, grew out of the misstatement and misrepresentation of these truths by those who were counted as its followers." The one who made this comment was led to see that Christian Science does not instantly transform into perfect beings those who come to it for healing; that many who come into its ranks have not outgrown their old impulsiveness, and, with a zeal "not according to knowledge," often make statements and use expressions which are very ill advised and unfortunate. That this comment was made, and that it was, even in a degree, a true comment, caused

Digitized by Google

the writer to study the situation more closely, and thus to note some mortal tendencies to which we all need to be awake, thereby to be saved from expressing in either word or deed that which would misrepresent the cause we all love.

On page 547 of Science and Health our Leader has said, "The Scriptures are very sacred. Our aim must be to have them understood spiritually, for only by this understanding can truth be gained." It must follow that Christian Science is "very sacred," since the text-book of this Science is a "Key to the Scriptures." Because of her rare spiritual insight Mrs. Eddy was able to discern the spiritual truth of the Scriptures, to apprehend the Principle of being, and to state the provable rules for its demonstration so intelligibly as to make it possible for each one to prove the truth for himself. Well may we ask ourselves, as we ponder her great achievement: Am I thankful? Am I improving every opportunity afforded me to gain a larger understanding of this teaching? Am I doing aught to hinder or obstruct the stately advance of this great movement? Surely it is well for us to reason with ourselves on this subject, to find out what errors of omission or commission have been ours in the past, and then set about correcting them.

It is the duty and privilege of all Christian Scientists to speak "every man truth with his neighbor," according to his highest understanding of God; to let this light of Truth so shine in his words and deeds that men may be attracted, not repelled, thereby. If we maintain a state of consciousness wherein the Christ-ideal is uplifted and "love for God and man is the true incentive" (Science and Health, p. 454) for thought and action, we will immediately help to supply an atmosphere wherein the weary and sin-sick will find rest and health. There will be a pure, spiritual thought pervading the place, and this will make itself felt and bring to all that sense of peace which dissolves mortal resistance to Truth into its native nothingness.

Our business meetings can and should be conducted, not only according to the demands of Truth, but also in conformity with the best business methods the human mind can present. Let us look at this matter for a moment. What wise, wide-awake business man of today would fail to acquaint himself with the ways, methods, and appliances which enable him to deal and cope intelligently and advantageously with the business world? What man of judgment would place even his dearest relative or friend in an important position without first satisfying himself as to his ability to fill it, or would employ a person simply because some one asked him to do it, unless he first ascertained his fitness for the place? Further, no man of affairs would leave his offices or mercantile house and go on a summer vacation or a trip abroad without assuring himself that every department of his business was in good condition and under proper management for uninterrupted activity. Should we be less alert, less careful, or less watchful in caring for the affairs of the spiritual kingdom?

As church-members we should attend all the business meetings, if it be at all possible, and take intelligent interest in the business in hand; be awake and alert to the needs and conditions of the church, and to our "rule for motives and acts," given on page 40 of the Manual, as we take part in the election of all officers and committees. Thus only can we fulfil our obligations as members of the church and make it possible for its affairs to be conducted in keeping with the requirements of Christian Science and with the business methods which command the respect of those with whom we daily have to do.

In choosing those who are to conduct the public services of the church, we do well to remember that the by-law in the Manual (p. 32) is explicit in regard to the qualifications of readers, and act accordingly. Throughout the entire round of activity for the cause we should do our part well; we should carry to our services thoughts that will help and heal. In reading our periodicals and attending our lectures, we should refrain from thinking or voicing personal likes or dislikes, complaint or criticism, or making undue comparison, lest we mar, becloud, or hinder these messages of Truth and Love in their healing mission to all mankind.

Nevertheless some may ask, "How may we know that we are working aright?" Let us listen to the words of our Leader on page 109 of Science and Health: "I won my way to absolute conclusions through divine revelation, reason, and demonstration." Mrs. Eddy has accurately stated this divine Principle and its rules; and in regard to our ability to understand, she says (p. 462), "Any student, who adheres to the divine rules of Christian Science and imbibes the spirit of Christ, can demonstrate Christian Science, cast out error, heal the sick, and add continually to his store of spiritual understanding, potency, enlightenment, and success."

Unfoldment

LOUISE C. MARTIN

THE sweet odors of spring perfumed the air. Birds were flitting gaily from branch to branch, and the glad sunshine bathed the earth in smiles. Near our house stood a large magnolia tree, its strong arms full of lavish blossoms shining through the glossy leaves. A bud from this tree had been given to a member of our household, and it was put in a vase of water on the mantel. For two days and nights it showed no signs of unfolding, and its velvety petals were wrapped snugly about it. Then one day, while pondering why the bud did not open and display the glorious center within, some one called me from the room, and I remained away about ten minutes. When I returned, a veritable marvel met my eyes, for a full-blown magnolia beamed upon me. The big, tight bud had yielded to the sunlight and the coaxing breeze. The sepals had released their determined grasp and a most magnificent blossom was revealed, with myriads of delicate parts, lapped and overlapped, about a wondrously perfect stamen.

The lesson thus taught by the simple flower has remained with me. How wont we are to look upon the closed bud of our own or another's thought, and question its tardy development! It appears to be closed; in other words, unresponsive, unyielding, uncompromising. Impatiently, perchance, we conclude that it will never open, never blossom out in beauty, and it seems like folly to keep and water it. But wait! let us spare the bud, for it will surely burst and disclose the celestial secret that lies concealed within. The divine hand has not been idle. Love is active, preparing beauty and loveliness within, in accord with God's eternal law, for, as our Leader tells us, "growth is the eternal mandate of Mind" (Science and Health, p. 520). Development is taking place, consciousness is being transformed; and when Love's work is finished and Truth's law is fulfilled, the petals of the bloom of a new and nobler life will open and reveal the miracle of grace.

Patience must have her perfect work. What to our stupid sense seems indifference and unresponsiveness, to the sunlight of Truth may prove but the "preparing time." The heart is being transformed by a power unseen, the whole nature is being enriched from the divine source of all beauty. Some day, when perhaps we have least expected it, the hour of unfoldment will come, and "none can stay" the mighty hand of the infinite One that doeth the work, nor can any say to Him, "What doest thou?"

Selected Articles

[Frederick Dixon in *Woodford Times*, Woodford, London, England]

Christian Science, as a recent clerical critic has quite truly said, claims to be a restatement of the Christian religion as preached and practised in the first century of that era. For this very reason Mrs. Eddy based its requirements on the teaching of the gospel, and the gospel emphatically teaches that men not only should preach but should practise, or, as Jesus declared, that their faith should be tested by their works. It is this demand for scientific demonstration that, more than most other points, has distinguished Christian Science from the teaching of orthodox theology. It is for this reason that its opponents have so bitterly attacked the healing element, for they have seen that if the justice of the demand for healing was once admitted, it would be necessary in future for the churches to preach with "signs following" and to prove their dogmas by demonstration.

This clergyman says that Christian Science can point to some success in obscure cases, but that it has been responsible for painful failures which might have been successfully treated if well-tried means had been adopted. Now, Christian Science healing extends all around the world, and has been practised for something like half a century. In the course of this time, thousands upon thousands of cases, running into millions, must have been treated. It may be guessed what an infinitesimal percentage of these cases the critic knows anything about, yet he dismisses the whole of this healing as a few obscure cases. In plain English, he could hardly have explained more conclusively his utter inability to discuss the subject. More than this, he says that if the failures had been treated by ordinary methods, they might have been healed. They certainly might have been, but then they might not have been. The history of ordinary medical practice is not quite so scientific as to warrant its believers in concluding that any case might be healed if treated by it. It is precisely because of its innumerable failures that the sick have turned to Christian Science.

Does the reverend gentleman really believe that if the healing of the ordinary medical schools had filled the world with confidence, Christian Science would ever have gained the opportunity for the demonstration of spiritual healing? It is because the world is tired of the failures of the medical schools that it is turning more and more to Christian Science. Unfortunately, in an enormous number of cases it turns for help only at the last moment, and then Christian Scientists are blamed if they are not successful. As, however, this critic says that Christian Science healing has been confined to a few obscure cases, you will perhaps allow me to quote the words of a London physician, who is probably a much better witness on this point than he is. Dr. Saleeby, lecturing not very long ago in London, declared that the doctors were coming to see that the Christian Scientists had got hold of an important part of the truth, in proof of which there were cases, too numerous to be denied, where doctors' methods had failed and Christian Science had actually cured the patient. Having quoted a case of locomotor ataxia within his own experience, Dr. Saleeby declared that in the face of such cases, it is no use to say that Christian Science is a fraud.

When, however, one turns from this clergyman's criticism of the practice to the theology of Christian Science, it is equally difficult to justify his strictures. Christian Science is the attempt, as he admits, to restore primitive Christianity to the world. Now, primitive Christianity made a Christian's power to heal sickness the test of his theology. There is no question about this at all. Again and again, Jesus insisted in unmistakable language on this, declaring, in the gospel of John, to take a single example, that those who believed on him would be able to do the works he had done. It is obvious, therefore, that the only guaranty that the truth preached is the truth Jesus taught, is the ability to do the works he did. If the Christian Scientist in some measure accomplishes the works which Jesus accomplished, it is surely a greater proof that his teaching on the subject of the incarnation, to choose the instance our critic has selected, is correct, than any number of assertions of orthodox theology, supported by nothing more convincing than dogma. The orthodox teaching of the incarnation is sufficiently incomprehensible. It is comprised in the assertion that infinite God was manifested in a finite material body. It does not explain this, but asserts it, and when it is asked to prove its theories on the basis demanded by Jesus, it calmly declares that demonstration of that nature disappeared with Jesus and his apostles. Now, as a matter of fact, Christian healing did not come to an end with the apostles. It lingered on, in an ever-decreasing ratio, up to the time of Constantine; and even after that, in a more and more spasmodic way, it manifested itself throughout the centuries which followed. Anybody who will read the writings of the early Fathers or the journals of such men as Fox and Wesley, must admit the truth of this.

Christian Science teaches that in order to heal the sick it is necessary to imbue a man, to some extent, with the Mind of Christ; indeed, it insists that he is only positively healed in the proportion in which the carnal mind gives place to the Mind of Christ. Jesus asked, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" and thus he showed the intimate connection between mind and physical disease. Now, what is the incarnation but the manifestation of the Mind of Christ by the human being? It was not a spiritual body thrust into a physical body that constituted Jesus the Christ; it was the fact that Jesus, the son of Mary, manifested that perfect knowledge of spiritual life which made him Jesus the Christ. None who follow in the footsteps of Jesus the Christ, no matter how much they may let the Mind of Christ be in them, as Paul demands, can ever claim to be more than followers of the Wayshower. Every one of these followers may, however, manifest in varying degree the Mind of Christ, and in the exact proportion in which they manifest this Mind, they will understand the theology which Jesus the Christ preached, and understanding it, be consequently able to demonstrate it as he demonstrated it, in the healing of the sick and in the other miracles.

The word miracle never meant anything supernatural, and cannot by any possibility be strained into meaning anything supernatural. The miracles of Jesus were the object-lessons of the truth he taught, and can be repeated, as he said they would be, in the exact proportion in which this teaching is assimilated. In the proportion, however, in which his teaching is assimilated, the carnal mind gives place to the Mind of Christ, and the mystery of godliness is seen incarnate. "Only purity," Mrs. Eddy writes, on page 332 of Science and Health, "could reflect Truth and Love, which were plainly incarnate in the good and pure Christ Jesus. He expressed the highest type of divinity, which a fleshly form could express in that age."

This is the teaching of Christian Science with regard to the incarnation, and this teaching is supported by the healing of sorrow and sickness and sin which is being accomplished by Christian Scientists today. The orthodox church itself is revolting against the old teaching of the atonement. Let us take an example. The vice-principal of the Theological College at Lichfield has protested against the immorality of the Miltonic dogma. The Christian Science teaching of the

Digitized by Google

incarnation comes to explain what the atonement really means,—in plain English, the at-one-ment of God and man. In proportion as the Mind of Christ is attained, the carnal mind vanishes, and the image and likeness of God begins to be faintly manifest. The definition of atonement as expiation, is as purely a piece of theological word-snatching as the definition of a miracle as supernatural. The word at-one-ment is an Elizabethan word, and means simply to make as one, and this is the meaning of the Greek words of the same nature in the New Testament. In proportion as the carnal mind gives place to the Mind of Christ, the human sense does become at-oned to God, divine Principle, and one begins to understand how it was that Christ Jesus could claim to be a Son of God, and could call those who believed on him also sons of God, and bid them pray to "our Father, which art in heaven." It was Christ Jesus himself who demanded that his followers should strive to be perfect, as their Father which is in heaven is perfect; and in the exact proportion in which the carnal mind gives place to the Mind of Christ, does incarnate error give place to incarnate Truth.

[Ezra W. Palmer in *Pueblo* (Col.) *Star-Journal*]

Telegraphic reports quote an officer of B'Nai B'Rith, a Jewish fraternal order, as stating that it is impossible for any person to be a Christian Scientist and remain a Jew. Christian Science teachings contain nothing which prevents a Jew from being loyal to his race or the teachings of the Old Testament. As a matter of fact, Christian Science reconciles Jew and Christian on the basis of monotheism and adherence to the first commandment. The testimony of Jewish people who have become Christian Scientists is that Christian Science merely teaches a more spiritual concept of God than present-day Judaism presents. Nothing is lost to the faith of the Jew by Christian Science. His grasp of God, the great I AM, is made clearer, and he sees more definitely the grand reality of Spirit which governed Abraham, Isaac, and Jacob, and the great lawgiver Moses. He sees that as these patriarchs demonstrated the ever-presence of God as protection, peace, and prosperity, so today the same God and the same blessings are made manifest through Christian Science.

✧

[John W. Doorly in *Yorkshire Gazette*, York, England]

In a recent issue I notice the account of Mr. ——'s address to the Cawood Wesley Guild, in which he is reported as coupling Christian Science, spiritualism, mesmerism, etc., and is also reported as stating that "the human being has two minds, —the subjective and the objective."

May I, as a Christian Scientist, state that Christian Science has absolutely nothing to do with spiritualism, mesmerism, etc., and also that Christian Science is engaged in teaching mankind the ever-presence and omnipotence of that one infinite Mind whom men call God, and is in no way engaged in teaching any theory of two minds such as the critic puts forth. In fact, Christian Science shows clearly that all of mankind's troubles have come from these very mortal theories of more than one Mind. Christian Science is, however, teaching the reality and supremacy of this one and only Mind, and is proving to mankind the availability and practicality of this teaching in the healing of multitudes from sin and sickness.

Christian Scientists no more believe in the action of the mortal mind to confer harmony than Christ Jesus did, because Christian Science is simply the teachings of Jesus understood and made practical, and the basis of his teaching was, "Ye shall know the truth [*i.e.*, the infinite fact of the one and only Mind], and the truth shall make you free [from the belief in another so-called mind]." As Mrs. Eddy says in her text-book, "Science and Health with Key to the Scriptures" (p. 340): "'Thou shalt have no other gods before me.' (Exodus xx. 3.) The First Commandment is my favorite text. It demonstrates Christian Science . . . it signifies that man shall have no other spirit or mind but God, eternal good, and that all men shall have one Mind." Evidently, therefore, the critic, who believes in the action of two minds, was not in any way capable of explaining Christian Science, which teaches unswervingly that there is but one infinite Mind, and that all true being must be the effect of this one Mind.

✧

[Norman E. John in *The Evening Journal*, Wilmington, Del.]

It would have been difficult for our clerical critic to have selected a more appropriate text than the fifteenth verse of the seventeenth psalm as an introduction to his discussion on the subject of Christian Science. The Scriptures inform us that "God is a Spirit;" therefore the text, "As for me, I will behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness," would logically emphasize the verity of the teaching of Christian Science that man shall be satisfied when he awakes in God's likeness—that is, the likeness of Spirit—and finds himself to be spiritual. The reported extracts of the sermon, as found in a recent issue, state that "the doctor gave a short history of the development of Christian Science, and briefly reviewed its principles as laid down in the text-book, 'Science and Health with Key to the Scriptures.'" As this was not given in your report, we are not at all sure what the reverend critic considers the basic teaching of Christian Science, but we certainly take exception to the deductions which he has drawn, as given in the evening paper.

The good doctor says that "the philosophy, the theology, and the theory of Mind-healing in Christian Science was advanced ages ago." In the brief wording of the statement we quite agree with him. The philosophy, theology, theory, and even the practice of Christian Science, were fully expounded and emphasized by Christ Jesus centuries ago, and we make the broad and unqualified statement that the teaching of Christian Science today does not depart one iota from Jesus' teaching. Christian Scientists are very well satisfied that the philosophy and religion of Jesus the Christ were epitomized in the Sermon on the Mount, and the teaching of Christian Science and its application coincide with the spiritual teaching therein enunciated. That the theory and practice of spiritual healing was advanced centuries ago may be verified by the recorded statements of Christ Jesus to his followers, and by his practice and theirs in accord with them. Christian Scientists today are endeavoring, up to their highest light and understanding, to obey these commands and to follow the example of the Master.

If, as one would infer from the printed report, the good doctor insinuates that by Mrs. Eddy's advice Christian Scientists are to shift the responsibility in contagious diseases, and that in cases not quickly healed a regular physician should be called, we must conclude, either that he does not understand the advice and the practice of Christian Scientists, or that he is presenting an incorrect interpretation thereof. It is true that Mrs. Eddy has advised the submission to vaccination and the reporting of contagious diseases when required by law, and Christian Scientists are adhering to this custom; not that they wish to shift the responsibility, but that they sincerely respect the rights of their fellow citizens in regard to those requirements. It is to be further stated, that in obeying these requirements the Christian Scientist by no means turns his cases over to *materia medica* for healing, for

Digitized by Google

as a general rule the Christian Scientist is allowed to continue his work, with the proper isolation of his patient as required by quarantine laws, until the work is finished.

Mrs. Eddy does not advise that a regular physician be called in cases which have not yielded quickly to the treatment of Christian Science. She does advise, however, that the patient shall always and at all times be free to exercise his choice as to what method of treatment he shall receive; and likewise that he be left entirely free to decide when one form of treatment shall be given up in preference to another. From the report it would be inferred that our critic attempted to disprove the teaching of Christian Science because its adherents have not fully demonstrated in all cases the results which might be expected from its teaching. This inference, it would seem to the writer, is wholly illogical and a very poor way to bolster an argument. It would be just as logical to state that preaching the gospel and conducting revivals are failures because all who are converted do not demonstrate the fulness of Christian faith; or to say that the teaching of mathematics could not be proven because a large percentage who profess to be mathematicians do not prove all that could be expected of them.

Is it not strange that five thousand persons should have had the desire to crowd the Metropolitan opera house in Philadelphia recently (and two thousand more outside attempting to gain entrance), to hear a simple lecture on Christian Science, if its philosophy were "crude, incomplete, and a jumble of confused and contradictory statements," as the doctor as reported claimed it to be?

✧

[Frank Bell in *Venango Herald*, Franklin, Pa.]

The one approximately correct statement in the platform attack on Christian Science, as quoted in your issue of March 6, is that "the average Christian Scientist has never dreamed that these awful things were true of his belief." The average Christian Scientist has better control of his dreams. As a matter of fact, no Christian Scientist, or any other unbiased investigator of the subject, has discovered that Christian Science resembles in any way the foolishness our friend puts forth as descriptive thereof. The literature of Christian Science is obscure to those who prefer that it should so appear. Its meaning has been found to be perfectly clear to countless numbers of sensible men and women who have turned to it with an honest desire for help in time of trouble. Any one capable of exhausting the vocabulary of offensive adjectives in criticism of that which is accomplishing so much genuine good as Christian Science, is of course incapable of grasping the meaning of its teachings.

For the benefit of those who might have taken seriously some of the statements made in the above-mentioned address, it should be said that Christian Science does not deny that humanity is afflicted with sin and disease. In fact, its adherents are actively and consistently engaged in an effort to help mankind out of evil of all kinds, and, incidentally, are enjoying marked success in such effort. There is not the slightest excuse for attempting to attach to Christian Science any teaching that would ease the conscience of the wrongdoer. On the contrary, the fact is emphasized throughout Mrs. Eddy's writings that the penalty not only for evil doing, but for evil thinking, is swift and inevitable. Christian Science does not even favor the unrighteous with the common clerical assurance that they may escape punishment until the "next world." It teaches nothing with regard to evil that is not borne out in the experience of mankind.

"Animal magnetism" is not disturbing any one who understands Christian Science. Mrs. Eddy selects this as "the specific term for error" (Science and Health, p. 103). Such use of the term is helpful in emphasizing the important point in Christian Science that evil is primarily mental, must be thought before it is acted, and is a product of the human mind and not of God. Mrs. Eddy gives her students much valuable instruction with regard to protecting themselves from injurious mental influences and tendencies, but the belief in and the practice of hypnotism are well understood to be inconsistent with Christian Science; and individuals who have so misconstrued the teachings in this respect as to attempt to incorporate something of that sort in their work, have been dismissed from the Christian Science church with Mrs. Eddy's sanction and approval.

Mrs. Eddy makes no mystery about the "revelation" of Christian Science to her. She says specifically that she derived all of it from her study of the Bible. The highest claim she makes for the text-book is that it is a "Key to the Scriptures." Christian Scientists use this text-book as their commentary on the Bible, in their private reading and in their public services alike. Certain clergymen are accustomed to consider themselves "called of God" to proclaim their opinions of what the Bible teaches, and nobody charges them with sacrilege, though they might have difficulty in establishing proof that the call is anything more than a sincere conviction. Why deny this privilege to another?

Mrs. Eddy is accused of charging too much for her teaching and her books. But the accusation is by one who says he believes her teaching useless and her writings nonsense, and to whom, therefore, any price would be excessive. The invariable testimony of Christian Scientists is that the value of these teachings and writings is to them beyond computation in dollars and cents. More copies of Science and Health have been printed and sold than of any other book written except the Bible. Evidently it is worth the price. Was ever anybody denied the teaching or the book who could not afford to pay? Mrs. Eddy's fortune was the direct fruit of her individual labor. There was in it not one involuntary dollar. She did not lavish her wealth upon herself, but gave it to the church and the cause that was dear to her. "Looking into her life, we see nothing but unselfishness," wrote Clara Barton, founder of the Red Cross Society.

Other alleged extracts from Mrs. Eddy's writings as given are either so misquoted or so separated from their context as to present nothing better than a burlesque on the real meaning. Take, for instance, the statement, "You may gash the body with an axe, pound it to a pulp with a club, and experience no more pain than a wounded tree." Now what Mrs. Eddy actually says is this, as found on page 393 of Science and Health: "Your body would suffer no more from tension or wounds than the trunk of a tree which you gash or the electric wire which you stretch, were it not for mortal mind." In other words, a body without mind, a dead body, feels no pain. Mrs. Eddy uses this simple illustration in a discussion of her conclusion that since matter itself without mind has no sensation, the direct relationship between a painful condition of the body and the mental state is something that should not be ignored. Even if one cannot accept her conclusion, it is not necessary to distort her statement.

By such inexcusable liberties as indicated above, the discourse is made to place the teachings of Christian Science in an entirely false light. Assertions with regard to conditions in eternal life and spiritual man are held up as though written with reference to material existence and human beings. The result may serve the purpose of raising a thoughtless laugh, but it adds nothing to the hearer's actual knowledge, and is certainly out of place in an enterprise professedly committed to the cause of truth.

Editorial

"Which passeth all understanding"

In these days of wars and rumors of wars, it is well for us all to remember that evil is never made good by the seeming necessity for its employment. The fact that mankind appears to think there is no other way by which it can rise out of or overcome certain human conditions, is the only excuse for an appeal to force; but even this does not change the fundamental truth that there is but one power and this power is good. Christian Scientists especially should be entirely clear in their thought about war, because they are endeavoring to stand for righteousness at all times; and as Mrs. Eddy has so clearly answered the questions now being asked as to what shall be the attitude of Christian Scientists on this subject, it seems fitting to bring these answers directly to the attention of our readers by republishing some quotations from her writings. Most pertinent of all, perhaps, is the following sentiment from her letter of March, 1898, the period of the Spanish war:

"The characters and lives of men determine the peace, prosperity, and life of nations. Killing men is not consonant with the higher law whereby wrong and injustice are righted and exterminated. . . . But if our nation's rights or honor were seized, every citizen would be a soldier and woman would be armed with power girt for the hour" (The First Church of Christ, Scientist, and Miscellany, p. 277).

Again, on page 286 of the same volume, she writes:—

"For many years I have prayed daily that there be no more war, no more barbarous slaughtering of our fellow beings; prayed that all the peoples on earth and the islands of the sea have one God, one Mind; love God supremely, and love their neighbor as themselves.

"National disagreements can be, and should be, arbitrated wisely, fairly, and fully settled.

"It is unquestionable, however, that at this hour the armament of navies is necessary, for the purpose of preventing war and preserving peace among nations."

In another letter, which appears on page 278, she writes:—

"Nothing is gained by fighting, but much is lost.

"Peace is the promise and reward of righteous. Governments have no right to engraft into civil nations the barbarous code of personal encounter. War is in itself an evil, barbarous, devilish."

Pondering these truths voiced by our revered Leader, our desire can but be that the peace "which passeth all understanding" may hover over this and every other nation until discord of every kind shall cease. Above all else, we must be careful to resist the clamor which at a time like this attempts to sway public feeling by appeals to prejudice and sentiment rather than to divine justice and love.

Alexander McLellan.

Job and Others

The world of human sense is the scene of continuous struggle. With the poet it is the fight for existence, while many of those who have abundance are the slaves of that lust for more which generates the fevers of finance. They have entered the mad race for wealth as the guaranty of honor and power. Of the disharmony of many homes, societies and even social institutions, the source is the personal government, the selfish aim which controls a legislative body, the struggle which would control the business of the country, and the demand of capital that there should be no peace unless it be on the well-doing or the wicked, even though insurrections, revolutions, and international wars were at an end. When, moreover, we remember the unnumbered assaults of disease to which the young and the old, the rich and the poor, are alike subject, it is made apparent that the lot of those subject to these false material beliefs is cast in the mold of conflict.

And yet all these occasions of human unrest sink into relative insignificance in the presence of another struggle, namely, that of Job, the struggle for light upon the human problem, to escape the confusions and contradictions of experience and of much religious teaching. It is an effort to find a rational interpretation of the ways of God to men.

The coming of Christian Science is largely responsible for this turmoil of thought which is afraid lest it lose something of value, while beginning to rejoice in a new point of view which is recognized as revolutionary. In this transitional state the feeling often obtains that it is impossible to be sure of anything. Goaded by the fear of want or of the loss of good standing in the old paths, men are impelled to resist that skepticism which is the beginning of faith; and feeling in turn how discreditable this is, they are made utterly miserable.

Thousands of ministers and other thoughtful people are passing through this travail of sense today. They "have seen a great light" in the teaching of Christian Science: they can no longer be dominated by authority, and they honestly want to know, but not having gained as yet the inspiration and assurance which attends the demonstration of the word of God as "quick, and powerful," they are startled and made to tremble when called upon to exhibit that practical faith which they have so long commended to others. Sometimes, indeed, in the agony of their hearts, they are impelled to cry out, "My God, my God, why hast thou forsaken me?"

This is the greatest struggle of all times. It antedates and is prophetic of the new birth, of the gain of a veritable apprehension of Christ, Truth, and they who have entered upon it can never go back to dwell among the dry bones of a fruitless professionalism. Job was not comforted or helped by the words of his condemnatory friends, nor will these be. With every struggling heart, they need, as Mrs. Eddy has said, "a priceless sense of the dear Father's loving-kindness" (Science and Health, p. 366), and this it is ours to bring them, in tactful and loving address, in the inoffensiveness of our humility and true brotherliness, and in the demonstration of a healing apprehension of the Master's teaching.

That people are growing dissatisfied with things as they are, speaks for their responsiveness to that new vision of God's kingdom which is dawning upon the Christian world. It speaks for the movement and might of the new social impulse, and it immediately brings to the front the resistance of tradition and privilege to Truth's eternal progress. It precipitates fundamentally in individual consciousness, and phenomenally in every department of social life, the human struggle between Christian democracy and ecclesiastical domination, between the spirit of brotherhood and entrenched selfishness. Men cannot see all the future, but they must go forward and find salvation. The aspiration, the insistent striving which impels them to protest and to undertake, justifies itself and gives sure prophecy of ultimate victory. Let us know that Job and his kind are sure to come to their own.

John B. Willis.

Home and Heaven

A good many people think of home and heaven as places far removed from each other, separated indeed by a space called death. But Christian Science presents a different view of the subject and finds authority for it in the Scriptures. In Christian Science we learn to think about things heavenly

Digitized by Google

ically, and so both home and heaven are understood to mean mental and spiritual states, as must be admitted by every one who is willing to go beyond a superficial view of the subject. The very first statement in the Bible is that "God created the heaven and the earth," and again and again we read that He is present everywhere, guiding, governing, and sustaining all His creation, and thus we come to link together heaven and home as mental states in which dwell the children of the all-loving Father. This does not, of course, mean that there is no outward manifestation of these divine ideas, but the all-important consideration is to seek "first" their spiritual significance, and then we shall begin to see them, like God, ever present. One who was marvelously healed by Jesus prayed that he might go with him on his journeys, but the Master told him to go to his home and prove to them there what great things divine Love had done for him, a requirement which is no less for us today.

In Science and Health (p. 589) Mrs. Eddy lifts thought above the mortal and material concept of Jerusalem, and calls it "home, heaven." Again she says (p. 58), "Home is the dearest spot on earth, and it should be the center, though not the boundary, of the affections." While it is true that some might dispute the identification of home and heaven, yet do not all who love their homes insist that the spiritual qualities which represent heaven shall be enshrined in the home,—such qualities as purity, truth, and love,—and would not all admit that without these there could be no home? Mortals have even felt justified in taking the life of one who would invade the purity of their homes, when perchance they did little themselves to keep it sacred. Because of mortal blindness, because mankind have failed to see that heaven should be established and maintained in the home, they have looked to death, the enemy that is to be destroyed, to bring them to the abode of purity and peace. Alas that it should ever be so, when Christ Jesus so plainly taught that the kingdom of God is not a distant place, but "within," and that when it comes down to our apprehension we shall realize that neither sin, disease, nor death has any place in our heavenly home.

Long ago, a young man left the home which was very dear to him, although it was most likely a tent; but it was truly home, because he had begun to know God there. As he traveled alone over the Syrian wilds, night came on, and he lay down to sleep with a stone for his pillow. Then came a vision of the ever-present Father-Mother, God, and of a ladder letting down divine ideas from spiritual heights, with promises which today enrich the lives of all who lay hold upon them as did Jacob. Under the silent stars he awaked to know that God had been with him all the time, though he knew it not, and in deepest awe he exclaimed, "This is none other but the house of God, and this is the gate of heaven."

Thus spoke Jacob at Bethel, and as we pause to ponder his wonderful experience we cannot deny that God is as ready to let down the ladder any night, any morning, into our earthly abode and to send to us the angels who can best aid us to make that abode home and heaven. What matter the walls which mortal sense beholds? The real walls are "garnished with all manner of precious stones," and "the glory and honor of the nations" enters it through the channels provided by divine Love, if we are alert to shut out whatsoever defileth "or maketh a lie." The walls of our real home must be strong enough to exclude sin, disease, and fear, and the doors guarded night and day so that only the divine ideas can enter. There, too, "his servants shall serve him" in the clear light of Truth, and to every child of God home and heaven are, to use our Leader's words in Science and Health (p. 574), "a present possibility."

ANNIE M. KNOTT.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

GREAT FALLS, MONT.—First Church of Christ, Scientist, was organized Dec. 28, 1904. The first meeting was held on Jan. 5, 1905, in room 19, Conrad Block, and on that day it was incorporated under the laws of the state of Montana. This room soon became too small, and Conrad hall in the same building was used for that purpose. In March, 1906, the congregation moved to the lecture hall in the Great Falls public library. They worshiped there until May, 1911, when they moved to the Valeria Public Library Building. At that time the congregation purchased the lot on the corner of First avenue north and Eleventh street from the Great Falls Townsite Company. In August of the same year, ground was broken for the church building, and on Aug. 28 the corner-stone was laid. The building was completed in November, and on Thanksgiving day of 1911 the first church services were held there.

Christian Scientists in Great Falls dedicate their church today [March 29] free from debt.—*Great Falls Tribune.*

FOSTORIA, OHIO.—The members of this society have just completed their incorporation under the laws of the state. During the past year they secured a site for a church home at the junction of Perry, High, and Wood streets. This is one of the most desirable locations in the city, being directly opposite the high school and the new public library. The lot is 85 by 182 feet and has two dwellings on it. The larger, made of brick, has already been rearranged and refinished for a church and reading-room. The seating capacity is about a hundred.—*Correspondence.*

CARBONDALE, ILL.—Property on the corner of West Elm street and South Normal avenue has been purchased by the local Christian Science organization, and it will be remodeled in such a manner as to serve as a church home for the congregation. The society began to hold meetings in private homes nine years ago, and in a year or so rented the I. O. O. F. Hall for services. For the past few years it has occupied the hall in the Smith Building on West Main street and has maintained a reading-room at the same location. Their new church home will be ready for occupancy in a few weeks.

The Daily Free Press.

BEXHILL-ON-SEA, ENGLAND.—The members of this society desire to announce with heartfelt gratitude that they have been enabled to secure a very desirable lot in Cantelupe road, one of the best residential thoroughfares in Bexhill, for their future church building. A larger structure has become necessary, owing to the increased number of residents and visitors attending the services.—*Correspondence.*

Digitized by Google

ERIE, PA.—Next Sunday morning [March 29] the congregation of First Church of Christ, Scientist, will assemble for the first time in that part of their new church edifice which has just been made ready for occupancy on the west side of Sassafras street, between Sixth and Seventh. This building is the first unit of a larger structure soon to be erected, and will be the Sunday school of the finished church. The main church edifice, which will rise above the present building and occupy that part of the lot now vacant, will have a seating capacity of over six hundred. Its estimated cost, with the land, will be about sixty thousand dollars.

First Church of Christ, Scientist, has had a place among the religious bodies of Erie for nearly twenty years. In 1894 a small group of Christian Scientists who had been studying and reading together, took the first steps toward forming a church, and later a charter for the organization was granted by the commonwealth. The meetings were first held in rooms and small halls hired for the purpose, one after another giving place to larger quarters as the congregation increased in size, until 1905, when the opportunity offered of renting the Unitarian church on Sunday afternoons and Wednesday evenings. The continued growth of the congregation having rendered another move imperative, the present church site was purchased a year ago.—*The Erie Daily Times.*

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

The Lectures

Chicago, Ill.

Clarence W. Chadwick delivered three lectures on Christian Science in the auditorium of First Church of Christ, Scientist. On each of these occasions the seating capacity of the auditorium was taxed to its utmost and hundreds were turned away. The great number of strangers and the large proportion of men were noticeable features, and a markedly close and absorbed attention was paid to the lecturer. Mr. Chadwick was introduced by Ernst F. Heyd, first reader, M. H. Lincicome, and George F. Towne, in turn. Mr. Heyd spoke in part as follows:—

The chief mission of Jesus Christ was as the Wayshower. For three centuries or more after the close of Jesus' earthly career the way was kept marked by his disciples and followers through the healing of the sick and the reforming of the sinner. Then the way began to grow dim, and was finally lost in isms, theologies, and materialistic theories. But with the Bible as her compass, Mrs. Eddy set out to find, and did find, the path trod by Jesus, which had been lost to mankind for so many centuries. With the unselfishness of true love, and that the way might never again be lost, our Leader made a chart thereof, and this can be found in the Christian Science text-book, "Science and Health with Key to the Scriptures."

Mr. Lincicome said:—

Jesus assuringly says to every faithful disciple or student, "Ye shall know the truth, and the truth shall make you free." You are here tonight because of an unanswered prayer, an unsatisfied desire in the human mind for the knowledge of the truth which makes free. You have come here to learn, from one who speaks with authority, about the fundamental teachings of Christian Science, which is at this time receiving more consideration from people who think for themselves than any other movement, and which is freeing suffering humanity from its self-imposed bondage.

Correspondence.

❖

Fort Collins, Col.

The Majestic Theater was well filled for the lecture on Christian Science, delivered by the Rev. William P. McKenzie. L. D. Crain introduced the speaker, saying in part:—

Just what Christian Science is, it is not my purpose to tell you, even if I knew. I have, however, seen some remarkable results of its teaching. I have seen the sick made well, the vicious made peaceable, the profligate made industrious, and the licentious made temperate. To those of us who are not members of the Christian Science church, it appears that this religion is endeavoring to make a practical application of the teaching of that great Teacher who blessed this earth nearly two thousand years ago.—*Fort Collins Express.*

❖

Glasgow, Scotland

A lecture on Christian Science was given by William D. McCrackan, M.A., in the Queen's Rooms. On introducing the lecturer, Wallace Smith of Edinburgh said in part:—

What the world is so much in need of today is a thoroughly practical religion which can be proved to be true in the ordinary affairs of daily life. It is an admitted fact that humanity is finding in the healing and regenerating ministry of Christian Science a spiritual remedy for all manner of sickness and radical relief from evil and distress of every kind. Christian Scientists are to be met with all over the globe who will tell you that they have experienced this spiritual healing both mentally and physically.—*Correspondence.*

❖

Franklin, Pa.

Bicknell Young, lecturing on Christian Science, was introduced by H. W. Breckenridge, who said in part:—

The injunction, "Be ye therefore perfect, even as your Father which is in heaven is perfect," uttered by Jesus, the divine Exemplar of Truth, to his disciples on the shores of the Galilean sea two thousand years ago, and the further commands, "Go thou and preach the kingdom of God," "Heal the sick," were not conferred upon a favored few of his followers or limited to the early centuries of the Christian era. It was a message for all humanity, to be exemplified in the lives of the children of men in every age and clime. The great heart of Jesus the Christ understood the needs of mankind better than any one who has ever lived. He knew their temptations, desires, failures, aspirations; and his assurance of man's perfectibility, and of man's ability to carry on the healing power of Truth, was full of hope and encouragement. These commands were a positive declaration of man's glorious heritage.

Digitized by Google

Jesus' ministry on earth was to comfort, heal, and save, to bring peace, love, and good will to men. He saw the sick and the sinning on every hand, and healed them. He also instructed his disciples to do likewise, adding, "Greater works than these shall he do." The need of mankind for salvation from sickness and sin did not cease three hundred years after Jesus' time; yet because of unwillingness to be guided in God's way, the world witnessed, after the third century, the complete failure of the power of divine healing as taught by the Master, and only after a lapse of sixteen hundred years was this healing ability restored. It was in the year 1866 that one who had touched the hem of Christ's garment and received a vision from on high, was enabled to interpret in a new way the rich promises of the Scriptures, and to give to the world a message of light. This message, which today stands as a bright beacon, guiding along the pathway of life the foosteps of many an earnest seeker after Truth, was given by Mrs. Eddy, Founder of the great Christian Science movement and author of its text-book.—*Correspondence.*

✧

University of Illinois, Urbana-Champaign

Prof. Hermann S. Hering lectured in the chapel on Christian Science. He was introduced by Dr. A. J. Todd, who said in part:—

I shall not anticipate, I am sure, the message of the speaker of the evening in calling to your attention the fact that the great religious body which he represents offers a basis of unity to mankind, and grounds the validity of this basis in practical works of healing the sick, ministering to the needy, and reforming the sinner. Christian Science claims the attention of every thoughtful and honest student, for it is without doubt the most dynamic and rapidly moving force in religious philosophy, practical religion, and medicine today.

The Daily Illini.

✧

Lakewood, Ohio

A lecture on Christian Science, by Clarence C. Eaton, was given in Gordon Square Theater. The lecturer was introduced by Leslie P. Strong, first reader, who said in part:—

The world is hungry for truth. It is looking for a higher, broader concept of life, for freedom from the discords, both mental and physical, which are so prevalent on every hand. Jesus said, "Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein;" that is, unless we come with the open, unprejudiced thought of the child, with a willingness to learn, we cannot know spiritual truth. Christian Science is the truth, explaining the relation between God and man. It is a demonstrable religion, one that we can prove in our daily lives, and it can be understood by any one who comes to it with an open mind.—*The Lakewood Herald.*

Testimonies of Healing

If tongue could tell or language depict the inmost experiences of mortal man, surely the written page could at best but feebly express a condition of consciousness which has come to every Christian Scientist. It is not, therefore, with a thought of lending embellishment to actual experiences that I am moved to voice my gratitude for having lived in an age when it is possible to understand, even in an elementary degree, some of the attributes of an infinite God, who is really, wholly, and infinitely good; but every man who lays righteous claim to the title of Christian Scientist, has in a measure touched the hem of the Saviour's garment, and to some extent has experienced a gratitude that yet remains inexpressible in the face of the most fluent vocabulary. This, then, is not the real story—only an indication of it.

It is just about nine years since it was my misfortune to be suddenly overtaken with a serious collapse, which came wholly unannounced and entirely unexpected. For many years a business career, not materially differing from those of my business acquaintances, had almost completely occupied my attention to the exclusion of nearly all spiritual considerations. Indeed, now in retrospect I can see how the dollar had become my god, its capture and possession my chief aim and purpose. Indwelling, deep down among my real convictions, however, I was conscious of a respect for the Principle enunciated in the golden rule, and my transactions were somewhat guided by its potency. My early years were spent in an environment of religious thought that was very much mixed, ranging as it did all the way from spiritualistic legerdemain to the most uncompromising creeds of modern belief, with a liberal sprinkling of agnosticism thrown in. It is not strange, therefore, that manhood's estate found me with few if any fixed notions of a spiritual nature. In a way this was well, for when my need came I was not hidebound by a lot of inherited theological opinions, and my mind was more open to the flood-tides of Truth.

The cause of the breakdown was ascribed to overwork and strain, incident to the responsibility of important public duties which had been undertaken as the result of the choice of my fellow citizens, by whom I had been elected to a responsible position. Among my cherished friends were a couple of fine men whom I learned to look up to with all the esteem and regard that attaches to one's family physician. One of these was sent for in the night, and he immediately called the other in consultation, with the result that for months following, one or the other was a constant visitor and adviser. After some months it was determined that a change of climate was essential, so I was packed off to the Southland with its new scenes and new faces, only to return in a few weeks poorer in both flesh and pocket. Official cares had been turned over to competent hands, that nothing need be worrisome, but with it all I could not seem to mend. My doctor friend was constant and persistent in an effort to relieve a condition that I could see he feared for me, and with a nobility of purpose which I heartily appreciated, he was giving me of his best effort unselfishly and unsparingly.

To the original bowel difficulty with which I had first been attacked, there had been added a soreness in my side, which alarmed me greatly because of a tenacious belief in a law of heredity. It seemed that I too must soon pass on, a victim to the so-called incurable malady from which several of my immediate relatives had passed to the great beyond. The situation was a desperate one, when an old-time friend and business associate called upon me, a man in whose judgment and opinions I had the utmost confidence. He advised me squarely to try Christian Science, and there was no equivocation in the advice. He told how his wife, a lady I had known for years as an invalid, was being made a well woman under Science treatment. Though I was rebellious, the information touched a responsive chord somewhere, and I was interested though still unconvinced that it was what I needed. I determined, however, that I would test out the doctor at his next visit, so when he came I asked him flatly whether or not my trouble was malignant, and demanded an answer. Knowing that his regard for me would have made an emphatic negative most desirable if he could have conscientiously used it, my feelings can better be imagined than described when, calling me by name, he replied, "Don't shake hands with the devil until you meet him." Had he been sure, how gladly would he have said the simple "No" that I so strongly wished to hear!

That answer was the climax and my decision was then easy. I told my friend that I was ready for Christian Science treatment, and I was put in communication with a practitioner in Boston of whom I had never before heard. Following his instructions, although with much misgiving, my medicines were laid aside, and in an incredibly short time I was under absent treatment. The experiences of those first few days simply baffle all description. The most terrible and hideous aspects of the disease were one by one met and conquered, until finally came the grand surrender of self, with all its pride of knowledge and all its pride of importance, to absolute Truth, and I was becoming as a little child with its willingness to learn. I was under absent treatment for some months, until every last vestige of the soreness had disappeared. While I fretted somewhat that my healing seemed slow, and while there were many unpleasant little experiences, I have since learned that the healing came as fast as I was ready for it. I am grateful that there was time, for the spiritual unfolding was continuous, constant, and laden with a wealth of experience.

I have mentioned the fact of public service, and perhaps I may be pardoned for referring as briefly as may be to a rather unusual experience associated with it. The long-continued absence from my desk at the City Hall seemed to demand some recognition by the daily press of the city, and I was subjected to the publication of frequent bulletins calling attention to my physical condition. These bulletins, well intentioned though they were, continued until the prevailing opinion among the people seemed to be that the mayor was doomed and would not live long. After being under Christian Science treatment for a little time, the physical condition began to mend so much that I was again about the streets with a general appearance showing marked improvement. The change in the thought of the people was so abrupt that I could tell not only the day, but almost the hour, when the preponderating weight of public opinion tipped the scale past the balancing point and in my favor. There was an uplift to it that cannot be expressed in words. The hand-clasp of old friends, who no longer dodged into hallways or around corners because they could not find conversation for a friend they soon expected to follow to the cemetery, was now warm, firm, and told more eloquently than words of the sentiment that yet lived and loved.

The "everlasting arms" were surely about me and my advancing thought was finding reflection in my physical being. I had been born again, had become a new man, thinking new thoughts, living a new life, and finding in myself untouched depths that yielded new surprises every day. In short, I was beginning to get acquainted with myself as a child of the infinite. The spiritual healing of the past few years outstrips the physical, and I would again express my gratitude for

Digitized by Google

having been led, through these experiences and a study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, to a rational and reasonable concept of God, who is none other than good.—HARRY D. SISSON, Pittsfield, Mass.

✧

Before coming into Christian Science I made the remark one day that there could not be a God who would send such suffering as I endured, that there was something wrong somewhere. Since coming into Christian Science I have found the right understanding of God, man, and the universe, and peace, comfort, and security which I had never found in the old thought. It is not only the healing from physical ailments, but it is the spiritual uplift that we have received from this teaching which makes it mean so much to us. As we study and gain in understanding, we know more and more surely that we have found the right road in Christian Science. We cannot be too thankful to God, and grateful to Mrs. Eddy, for our literature and our churches, and for the good they have done and are doing for mankind.

I had many ailments, hereditary and other, and had been in the hospital several times for operations. Christian Science, therefore, came to me as a last resort, since nothing more could be done for me from a material standpoint. I have not been one of those who are instantly healed, for although a good many ills left me immediately, others seemed to take more time. I have had to study Christian Science very earnestly and stick to it, but it has given me the assurance that I know what I have found, and it is for all if they will only accept it. I have been in Science between three and four years and have not resorted to material remedies in that time, but have relied solely on Christian Science and the understanding gained through studying the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

LOUISE THOMPSON, Los Angeles, Cal.

✧

I first became interested in Christian Science through the healing of my mother in April, 1912. She had been seriously ill for weeks with a complication of diseases. She also had acute lung trouble, besides severe hemorrhage of the bowels. The doctors stated that they could do no more with the case. We then called in a Christian Science practitioner, with the result that the hemorrhage stopped after the first treatment, and in about four weeks she was practically healed. Since then she has had better health than she had experienced for twenty years. In May I requested treatment for myself, as I had been suffering for years with female trouble, bowel disorder, and rheumatism in the hip. In two weeks I was entirely healed.

In July my husband was taken with a very severe attack of acute throat trouble. He had the best physicians, and one throat specialist who lanced his throat four times. For several days he was unable to swallow even water, and the operations did no good. Finally he called for help in Christian Science about five o'clock one evening. By eleven o'clock the next day he was able to eat a hearty meal, and he has had no trouble with his throat since.

For these and various other demonstrations, and especially for the spiritual enlightenment received, we are deeply thankful to God.—MRS. WILL PIEPER, Amarillo, Texas.

✧

It is a sacred privilege to be able to testify to the truth of God's many gracious promises to heal and to save. During the early spring of 1908 I was, to mortal sense, in a hopeless condition, due to organic heart trouble with all its complications,—extreme weakness, nervous breakdown, depression, sleeplessness, etc. The doctor's words on one occasion were, "At the bottom of the ladder, mentally and physically." Relatives and friends had been informed that I might pass away at any moment, and although I lingered many months in a distressingly helpless condition, receiving the best aid possible from *materia medica* and from those around me, the verdict was, "Incurable." Man's extremity, however, proved to be God's opportunity, for in a seemingly miraculous manner Christian Science came to my aid. By diligent and prayerful study of the Bible and of our text-book, "Science and Health with Key to the Scriptures," followed seven months later by the other Christian Science literature, I am now able to say that I am perfectly well. In fact, I have no recollection of ever possessing such real health, peace, and joy as have been mine during the last twelve months.

For thirty years I had suffered much from severe headaches, which would continue days at a time. These have disappeared completely; and the need of glasses has also been overcome, although I had worn them daily for ten years as a preventive. Quite recently an optician of repute assured me that I required no aid for distant sight. I have also been freed from a tendency to bronchial ailments, although these were said to be hereditary. The consciousness of omnipotent, omnipresent divine Mind to direct and sustain me in all my ways, has banished fear of various kinds, particularly the fear of fire. The use of medicine ceased with the introduction of Christian Science, and sleeplessness left me during the first week of my study of the text-book. My complete healing was seemingly slow, but the spiritual understanding which has come with it, is indeed a glorious inheritance.

I am very grateful for all the kindness received from Christian Scientists when I was so irrepressible, so determined to see many of the persons who had been healed, although the nearest one, to my knowledge, was twenty-six miles away. A very happy privilege was class instruction! The various demonstrations in connection with it have given me great joy and confidence. During the last twelve months the truth has been put to the test in innumerable ways, but I realized that the seeming obstacles were just opportunities for demonstration, and so they have proved to be. Truth has triumphed over error, solving even domestic problems satisfactorily. I subscribe for all the Christian Science literature, which brings me rich mental food daily, and enables me to share it. My earnest endeavor is so to live as to be worthy of the name "Christian Scientist."

BARBARA WILD, Uplands, Hest Bank, near Lancaster, England.

✧

A little less than five years ago Christian Science found me a physical wreck, after undergoing a very serious operation on the stomach that I could have avoided if I had only had a ray of this wonderful teaching at the time. God was so far away, as I thought, and I believed that my suffering came from Him.

It was only after I awoke in Christian Science that I was healed by the realization of His divine presence and love. The suffering I went through previously is beyond human conception. I lived on a liquid diet for almost a year; not one scrap of solid food entered my stomach, or what was left of it after the operation, in all that time. Now, after almost five years of patient study of Christian Science, I am completely healed physically and greatly benefited spiritually. I eat everything that I wish for, and experience no ill effects whatever. It was not until I eliminated from my thought the

Digitized by Google

many little roots of malice, envy, jealousy, ill temper, and ungratefulness, and watched at the door of mortal mind, that my health was restored. My healing was slow at first, but I am glad it was, because only in that way, and by daily living the life taught and exemplified by Christ Jesus and explained through Christian Science, did I gain any headway.

I have also experienced a very wonderful healing from a growth in my throat that appeared about the time I was operated on for my stomach. At first it was very small, but it continued to grow until last fall it was so large that I could hardly swallow. I went to a Christian Scientist, and after three treatments it entirely disappeared. Not one vestige of it is to be seen today, while before the healing it was in plain sight.

These and many other ailments have been dispelled by this great truth. I thank God, and am very grateful to Mrs. Eddy, for the many benefits I have received through Christian Science. I have learned to turn to God, and He has kept me from sin and sickness. He has sent me the peace "which passeth all understanding," and has shown me that He is my constant supply in every way. He has given me strength and wisdom to meet my problems, and has shown me that there is nothing in life outside of His divine love.

ELIZABETH SETTEL, New York, N. Y.

✧

[Translated from the German]

Sincere gratitude prompts me to testify to the quick relief which I have experienced through Christian Science. For eleven years I suffered with abdominal complaint. I had been at a clinique three times, and then I heard of Christian Science; but I could not believe that healing was possible on earth today as in Jesus' time. In October, 1912, the difficulty manifested itself again, and I was expected to go to the clinique for the fourth time. I had completely lost faith in the physician's ability to relieve me, as he had guaranteed at three different times that the trouble would not return; therefore on this occasion I went to a Christian Science practitioner in Berlin for treatment, and after three weeks I was able to inform her that my healing was complete. For this, as well as for many other benefits, I am deeply thankful to God, and grateful to our dear Leader, Mrs. Eddy.

FRAU LUISE SCHULZE, Woltersdorf b. Gross Wusterwitz, Prov. Sachsen, Germany.

✧

I am grateful to Christian Science for what the understanding of Truth has done for me. I was led to this healing by picking up a *Sentinel* in a hair-dresser's shop. I opened at a page where a testimony was given which told of the help the writer had received in business affairs.

I was suffering from a nervous complaint, brought on through constant worry, anxiety, and other troubles, and this condition was taking all interest out of my life. It was during April, 1912, that things seemed to be coming to a crisis, as my health and business both seemed hopeless. A doctor was called in, and after the fourth visit he told my wife that I must be put in an asylum or he could not be responsible for the consequences. I am glad to say, however, that my wife would not hear of my being put away. I had been treated by a Christian Science practitioner, and as he called at the house after the doctor had left he was told what the latter had said. He then came into my room and spoke to me with a voice full of cheer, and immediately the condition which had seemed to hold me in such bondage fell away. I was at the same time suffering from heart disease and great weakness, but with the constant application of divine Truth I have been enabled to overcome these discords, and I am now healthier and stronger than I have ever been. I am also proving by this understanding of God, that in divine Love is my supply, as our Saviour said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." My sincere desire is to become more and more like a true Christian Scientist and a constant follower of our faithful Leader.

I am grateful for the physical healings, but these are nothing in comparison with the spiritual uplift I get from the Bible as interpreted through our text-book, "Science and Health with Key to the Scriptures." I send this testimony with the hope that it may help others, as this understanding of God as divine Love has helped me.

FRANK POWELL, Leicester, England.

✧

It is now several years since I experienced a wonderful healing through Christian Science, and words cannot express my gratitude to Mrs. Eddy for her tireless effort to spread this truth throughout the world.

For many weary years I suffered terribly, and was told by physicians that an operation was necessary; but feeling that no lasting benefit results from operations, I would not consent to have one performed. I had suffered from bowel trouble most of my life, and my kidneys were badly affected. Last but not least, in my breast there developed what the physicians told me was a malignant growth. For this I was given medicine for external application, also drugs to take internally; but the latter were so nauseating that I was compelled to give them up, and then all hope fled. My father and two of his brothers had passed away from this same disease, so the outlook was very dark for me.

I had suffered greatly for over two years, when my husband heard of the wonderful healing wrought through Christian Science and insisted that I should try it. I could not believe it would reach my case, however, so I did not take treatment until a friend was healed of heart trouble by this teaching, and I saw what a miracle was performed in her case. This friend also gave me some literature, which was indeed a great revelation to me, for I had no idea of what Christian Science was.

Finally, to please my husband, I went to a practitioner, and after the first treatment I returned home free from pain, —the first peace I had known in many years. In a little more than three weeks I was entirely healed, and the truth of Mrs. Eddy's words came to me, for I knew that truly "man is not material; he is spiritual;" also, that "every law of matter or the body, supposed to govern man, is rendered null and void by the law of Life, God" (Science and Health, pp. 468, 380).

There has never been any return of the trouble from which I was freed nearly five years ago. I am now in good health, arise at the usual hour each morning, do all the work for my husband and myself, take frequent long walks and mountain-climbing trips, and am, as many declare, "the picture of health." The malignant growth of which I was healed, has never again appeared. No soreness, pain, or swelling remains, but there is one unmistakable evidence remaining to prove there has been such a growth, and it is one upon which all physicians rely as conclusive. Upon this proof an old physician who met me in my practitioner's office, and who was searching for such evidence, was convinced.

I am still living within one block of the apartment house in which I resided at the time of my healing. I have the same associates, and they will all verify the truth of these state-

Digitized by Google

ments, as well as testify to my splendid health since taking up the study of Christian Science. Through the work of the same practitioner, all my immediate relatives, also my husband and his parents, have been wonderfully helped.

I am deeply thankful to the divine, infinite Mind for these blessings.—LILLIAN GLANDOR, Los Angeles, Cal.

I can vouch for the correctness of the foregoing statement as given by my wife, and words cannot express my gratitude for her marvelous recovery. I can also testify that I, too, have received much good and almost immediate help through Christian Science.—VERNON GLANDOR, Los Angeles, Cal.

✦

It gives me great pleasure to tell what Christian Science has done for me. One morning I noticed that my left eye was inflamed. I paid no attention to it, thinking that perhaps there was something in it. About a week passed, however, and it became worse, so I went to our family physician. He treated the eye for three months and then both eyes became affected. When he found he could do no good, he sent me to a hospital, where I received one month's treatment without obtaining any relief. I then went to another hospital, with the same result. My mother thereupon took me to an eye specialist, who said I had a foreign disease of the eyes. He treated them for about six months, but without helping me. I wore dark glasses all this time.

When all material aid had been proved of no avail, I came to Christian Science, and after reading Science and Health and having treatment for six months, my eyes were well and I no longer needed to wear any kind of glasses. I also received many other blessings. I am very grateful for this truth which has been given to us through Mrs. Eddy.

LAWRENCE MEIER, Pittsburgh, Pa.

✧

[Translated from the German]

The help which I have received through Christian Science has filled me with deep gratitude and prompts me to give the following testimony. Two years ago, just before Easter, I was about to draw the curtain of the show-window, when the ladder on which I was standing slipped, and I fell to the ground. Passers-by picked me up and carried me into the house, as I seemed helpless. I was in great pain, and had difficulty in breathing; then my neck became stiff. I lay in this condition, without expressing a desire for anything, while my dear wife read in *Der Herold der Christian Science*. As no change for the better took place, we asked a practitioner to treat me. With the first treatment my neck improved, so that I was able to turn my head, and during the following three weeks the pain gradually disappeared, until I recovered completely. For this I give thanks to God, the great Physician, and I gratefully remember our Leader, Mrs. Eddy.

DIEDRICH PAULSEN, Berlin, Germany.

✧ ✧ ✧

The incense of the orange bloom
Invades the desert air,
And so a happy thought makes room
Within a heart of care.

The orange tree bears golden spheres
When blossom time is past;
And so a happy thought appears
A golden deed at last.

ROSE TRUMBULL.

From Our Exchanges

[Rev. A. H. Moncur Sime in *The Christian Commonwealth*]

The Bible, through the examples it presents, through the history it traces, and through the eternal principles of conduct which it lays down, lifts the veil and shows us certain great verities. And these verities are accepted by us as verities because they commend themselves to our reason and conscience, and we know we are listening to the voice of truth, and that we are face to face with moral and spiritual facts. In order to increase the influence of the Bible we must get behind all theories of inspiration, behind all theological formulas, to the Book as the record of a life and experience which are of supreme value.

All history, it is true, is pervaded by the divine presence, and is full of spiritual instruction for all who have the hearing ear and the understanding heart, but no other to such an extent as that of the Hebrew people. The Bible differs from other sacred writings in the larger revelation it contains. "The Jews and the Christians saw more of God and His purposes than any other people, and therefore the Bible, which contains a record of what they saw, is superior to all other sacred writings." In the life story of Israel there are two outstanding facts: the moral idealism of Israel in its search for God, and the self-revelation of God in the consciousness of Israel. The primary value of the Bible is that it creates in us that same magnificent idealism and sends us in search of God, and it convinces us that God is searching for us and revealing Himself in us and our experience.

[*The Congregationalist and Christian World*]

There are men to whom it has been given again and again to render the last full measure of devotion to holy and accepted causes, who through it all have walked in ever-increasing fulness of life and in ways seemingly remote from the bitterness of Golgotha. None the less they bore their crosses and were comrades of the Christ. Nay, they were prophets of what Christ meant cross-bearing should be in those diviner and ampler days which he died to make possible.

Most men who follow great causes to grave and consistent ends, find themselves, at least once, called to those roads of loneliness which lead across the slopes of the hill of crucifixion, or even to its crest. The world is not yet so constituted that we can be wholly true to the ideal without paying the price; yet even then the cross is not merely the lonely, tragic culmination of hostility between far-seeing love and short-sighted hate. Even then our crosses are the supreme tasks of our life, the great work of love and service to which we have long been committed. Whether on ways of light or hills of pain, to have served is to have borne the cross, to have been true to holy love is to have shared the secret of the Master.

[*The Universalist Leader*]

What does the average man or woman really know about foreordination or free will as a theological dogma? Absolutely nothing. At best it is a guess. But this or that great philosophic-theological opinion or dogma happened along just as this or that soul was passing through a great experience, and the result was that whichever opinion or dogma happened to be associated with that experience, even by accident, became the lifelong religious belief of the convert.

It is in this haphazard way that ninety-nine out of every one hundred conventional believers get their theology. And when they get it they come to think of it as inseparable from their spiritual illumination. Therefore they assume that

Digitized by Google

belief in their opinions is divine, and unbelief in them is devilish. We are not complaining. We are explaining why it is that in so many minds so much virtue attaches to belief and so much vice attaches to unbelief. In the last analysis one's opinions are in some way the result of one's experience. Often the connection is crude. Sometimes it is arbitrary. Often it is preposterous. But the truth remains that if we are going to change the opinion or the belief, we must begin with a change in experience. For the only beliefs, opinions, or convictions which are real in any soul are those which grow in some vital way out of what has been lived and felt.

[*The Living Church*]

The religion that is Christian cannot pass away, although men's views of it change daily. What has so felt the overwhelming power of change as religious belief? None today could hold the beliefs of our forefathers unless he were grossly ignorant; and few of us could hope to escape the fire and stake had we lived a hundred and fifty years ago and believed as we do about many things. The fundamentals are still the same, of course; but man has seldom bothered about fundamentals,—he has fought his sectarian battles too constantly to think much about the divine realities, or else he has insisted upon his own explanations of such truths as he has been able to accept. Along with his faith has grown up his theology, with the dogma his philosophy; and while the faith and the dogma are eternal, theologies and philosophies are temporal, the working tools of the hour.

[*The Christian Register*]

We get providence in life when we get clear and consistent ideals. We demonstrate providence in so far as we dominate our doing with the largest and truest measure of perfection. If our hold on the greatest is strong enough to control our use of the least in life, if we make all things according to some pattern on a mount, we are showing a divine will. There is no success in any part that is not connected with a great whole. It is only the love of God that makes all things work together for good, because no lesser love is competent for such wide endeavor. When that love is intimate and is put into all doing, a faith in providence is made. According as we see life whole are we likely to make our part of it correct and lifelike, and nothing but a religion is competent for such vision.

[*The Advance*]

The disciples kept together; they reminded each other of what Jesus had been to them, and what he still was. They silenced jealousies and discord in their own company; they waited for the message which was to equip them for larger service; they continued to tell one another and to tell the world the story of Jesus and his love, and they changed the history of the world. When we consider how many things they might have done and remember the simple thing which they actually did, and what a difference it made, we can but rejoice in their wisdom and steadfastness whereby the ambassadors of Christ carried his message to the ends of the earth.

[*The Congregationalist and Christian World*]

The eagerness with which large congregations are listening to ministers declaring themselves on the great themes of religion—God, Christ, Bible, sin, salvation, immortality—shows that the multitudes yearn, not for a nebulous hypothesis or a beautiful guess, but for solid, definite convictions, plainly stated. Surely we who have for years tested for ourselves the religion of Christ and seen its workings in the world, ought to be able to say modestly but firmly, "Christianity is no longer a question to be reopened every morning; I believe in it with all my heart."

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

An interesting ceremony took place lately at Shalma, in the Gharbieh province, Egypt, when Lord Kitchener formally distributed plots of reclaimed land to the fellaheen. This is the second distribution of land in connection with Lord Kitchener's policy, the first having taken place about fifteen months ago at Biala.

At Shalma an area of about eleven hundred and thirty acres has been reclaimed, the land is being thoroughly drained and roads are being cut. A village numbering one hundred and eighty buildings and covering an area of about two hundred and thirty acres has been created, one hundred and sixty-nine houses of two rooms, with a yard, are being given to the fellaheen. The rest of the land has been divided into plots, of which there are one hundred and sixty-nine, each having an area of about five acres. For the first three years the fellaheen will pay a merely nominal rent, but during the following fifteen years they will be required to pay back with interest the total capital, amounting to ten thousand pounds, spent on the settlement. When this is done and the various other conditions have been fulfilled, the land will be the property of the fellaheen.

Since the production of rubber in Brazil has declined, attention has been directed to the greater utilization of the many fiber-producing plants. It is considered that one of the greatest sources of wealth in that country is still the least exploited, but that with proper care and the introduction of systematic methods these plants can be made most important revenue producers. In comparison with *canhamo* (hemp), it is considered that the *guaxima vermelha* plant might rival it if properly prepared. In Sao Paulo more than twelve thousand acres are under cultivation, and the eight hundred tons produced annually is used by one factory in the capital of the state. The principal use of the fiber is for making bags, as many as seventy thousand being made monthly. Brazilian hemp constitutes the chief fiber-producing plant in the republic. Cultivation on a large scale has begun at Rodeio, in the state of Rio. Each acre of this hemp produces in the neighborhood of three thousand pounds, and the earnings per acre are said to be three hundred dollars.

St. Petersburg is to cease obtaining its water from the Neva and is to be supplied from a better source. The project of the Russian engineer, S. P. Pjata, has been accepted by the government, and work will be started in the autumn. By his project, the water will be obtained from Lake Ladoga, twenty-five miles distant, and thence transported to St. Petersburg by means of pipes. The work entailed is enormous, and it will be at least ten years before it is completed, as a tunnel must also be made under the Neva. The estimated cost is forty-five million nine hundred and forty thousand rubles, and there will be sufficient water to supply a population of three million five hundred thousand people.

Important changes in musical instruction in the public schools of Boston have been decided on for next year, with a view to raising it to a vocational or avocational subject. It is to be introduced into all of the high schools, with the possible exception of the two Latin schools, as a required study for all pupils during the first year and an elective during the remainder of the course, while points on outside work will be given for graduation. The orchestras, clubs, and musical classes now organized as after-school activities in many of the elementary schools will be organized as a regular department of school work, pursued under the direction of a supervisor and in school hours.

Increase of the national expenditure in South Africa has necessitated the finding of new sources of taxation. In introducing the budget recently, General Smuts caused some surprise by stating methods adopted. It was necessary, he pointed out, to meet increased demands by fresh sources of taxation, and he found these in an income tax and in a tax on undeveloped land. In the former case incomes under one thousand pounds will be exempted. On incomes over this there will be a sliding scale of a sixpence to one and sixpence. In the latter case, all undeveloped estates of upward of twenty-two thousand acres, or of ten thousand pounds in value, will be taxed.

Upward of twenty million dollars is the amount represented in improvements now being made on the harbor of Seattle. By the expenditure of this sum it is expected to increase the present dock frontage of nine miles to a length of over thirteen miles, as well as to provide merchandise sheds, storage sheds, and all the most modern devices for handling the millions of tons of merchandise which each year pass over Seattle's water-front. Beyond this there are being opened up almost unlimited possibilities for further dock expansion as the needs of a growing commerce shall demand.

After years of negotiation with the railroads centering at Dallas, Texas, work has begun on the actual construction of what will be one of the largest and most elaborate passenger terminals in the South. More than ten acres of land has been secured in close proximity to the business center of the city at a cost of over three million five hundred thousand dollars, and a contract for the construction of the building of the station and yards has been let. The agreement calls for the completion of the whole plant within eighteen months.

Commissioner Osborne of the internal revenue office has taken steps to detect evaders of the income tax. He has called upon all corporations and joint stock companies for lists of their stockholders, with the amount of dividends received by each during the period of 1913 covered by the income tax law, and for the names of all officials or employees receiving salaries high enough to bring them within the operation of the law. These reports will be used in checking up returns.

Plans to erect a twenty-five million-dollar group of buildings for the exposition of many subjects, ranging from aviation to gardening, were discussed at the first meeting of the "Association for the Establishment and Maintenance, for the People of the City of New York, of Museums of the Peaceful Arts." The chief purpose of the organization is to establish and to maintain permanent and useful memorials of the century of peace that has followed the signing of the treaty of Ghent in 1814.

The United States exports over three hundred thousand fountain pens per annum, and more than one half of these were sent to England. Important markets for this class of American manufactures are Germany, the Netherlands, and Austria-Hungary in Europe; Cuba, the British West Indies, and Panama in North America; Brazil, Argentina, and Chile in South America; India and Japan in Asia, and Australia and the Philippine Islands.

A jury in the United States court at Syracuse, N. Y., decided, in effect, that the occupant of an automobile who is injured by the breaking of a certain part of the car, can recover damages from the company which assembled and sold the automobile rather than from the manufacturer of the part that broke. This was a test case and the outcome was awaited by automobile makers throughout the country.

Germany now uses between forty and fifty million gallons of denatured alcohol a year, of which over thirty million gallons are sold to the general public for burning purposes. Denatured alcohol is not only gaining in favor for general burning purposes, but a determined effort is being made to find a way of using it as a motor fuel in place of the high-priced gasoline.

A decision has been rendered by the Panama supreme court that oil fields are national property and can be disposed of by the nation. The court sustained the recent law, by which the government reserves for itself the right of ownership to such natural resources as mines of gold, silver, or other metal, also of coal and oil which might be found in waste lands sold to private individuals by the government.

At sunset on the 25th of April, the bronze yacht Resolute, owned by a syndicate of members of the New York Yacht Club and being constructed at the Herreshoff yards, was launched into Narragansett bay, the first of the three cup defenders to take the water.

The United States is now a country of one hundred and nine million people, according to the bulletin containing the estimates of population for the years subsequent to the thirteenth census, soon to be published by Director Harris.

By making its own flour bags, the Rio de Janeiro flour mills and granaries were able to pay an extra 5 per cent dividend in addition to the regular dividend of 15 per cent.

White Wolf, the Chinese political bandit, has issued a proclamation denouncing the President, Yuan Shi Kai, and announcing himself as the champion of the republic.

The best forested area of China is in Manchuria. The principal tree varieties are pine, cedar, larch, fir, yew, oak, ash, elm, walnut, and birch.

Almost two hundred cotton mills are now operating in Brazil. The manufacture of jute bags is becoming an important industry.

Christian Science Practice

JUDGE CLIFFORD P. SMITH

STATUTES which are really designed to regulate the practice of medicine and surgery—which contain no curiously wrought definitions of this phrase, extending it beyond its ordinary and natural meaning—do not apply to the practice of Christian Science. This has been decided by several courts; for instance, by the supreme court of Rhode Island (State *v.* Mylod, 20 R. I. Reports 632, 41 L. R. A. 428). But when a medical bill is under consideration, account should be taken of the fact that if it is passed the enforcement of the law will not be left to disinterested officers. Members of the profession from which all such bills emanate are always clothed with power to construe and administer the law and institute prosecutions. Therefore the language of a medical act needs to be carefully guarded in order to preserve the rights of the people, and the presence of broad and drastic terms calls for an express statement that the act does not affect the practice of Christian Science in particular or religion in general. A saving clause of this nature is valid and constitutional. This has been decided by the supreme court of Kansas (State *v.* Wilcox, 64 Kan. Reports 789) and the California court of appeals (*Ex parte* Bohannon, 14 Cal. App. Reports 321, 1111 Pac. Rep. 1039).

The sponsors of a medical bill sometimes try to prevent the insertion of a clause designed to preserve the rights of citizens who may prefer Christian Science, by arguing that such a provision would confer a special privilege on Christian Scientists. It should be observed, however, that the necessity for such a clause arises out of the effort of organized medicine to prohibit the practice of other systems of healing. The practice of medicine does not need to be defined by law, as more than one court has remarked; and it is mere effrontery for those who are asking for a monopoly to say that an effort to limit that monopoly constitutes a request for special privileges. No artificial advantage should be allowed; no monopoly should be established; the medical and surgical system should be made to stand or fall according to its merits. On the other hand, Christian Science is a distinct and well-known system, and it has rights as such; that is, those who can practise it have the right to do so, and those who may want Christian Science have the right to employ its practitioners.

Christian Scientists rely on the practice of their religion to prevent and cure disease, and for very good reasons. The principal reasons which obtain with most of them are these: 1. They have had need of relief from sin or sickness and have failed to obtain it by other means. 2. They have found Christian Science to be a superior curative agent, even curing the diseases which other systems deem incurable. 3. They believe it to be the divine curative agent which Christ Jesus used and commanded all his followers to use. 4. They believe that the practice of Christian Science will ultimately overcome and abolish evil and its effects and thus deliver the human race from sin and mortality. For these reasons and others—such, for instance, as the fear of ill effects from other alleged remedies—a large and ever-increasing number of intelligent and law-abiding citizens rely on Christian Science to prevent or cure disease, and others are constantly turning to it after other methods have failed to heal or relieve them.

We submit to all fair-minded persons that the facts just stated ought to preclude the enactment or existence of any law calculated to forbid or hinder citizens from relying on Christian Science or employing Christian Science practitioners in case of sickness. Aside from the constitutional questions which are involved, we assert that the use of drugs, surgery, and serums is experimental in practice, uncertain in results, and its product is liable to be a harm instead of a cure. Forty centuries of earnest efforts have not developed the medical system to the point of reliability. If this system were scientific in its practice and certain in its results, the patronage of the medical profession would be assured and a law to compel people to employ medical aid would not be considered necessary.

The question whether Christian Science is more or less efficacious or beneficial than the medical and surgical system, is one which no group of citizens should undertake to decide for another. It is a question which each citizen is at liberty to decide for himself. At present the majority prefer to rely upon material remedies rather than upon the prayer of spiritual understanding; but there is a time in every stage of human progress when wisdom is with the minority. A true idea is always perceived by one person, then received by a few, and afterward accepted by a substantial minority before it finds favor with the majority. Christian Science has now advanced to the third stage in this course of progress, and who can say that it will not be adopted by the majority, or even universally? Whatever the future may bring forth, the majority have and will have neither moral nor legal right to impose their preference on the minority. A minority of the people have the same right to choose Christian Science as the majority have to choose something else.

The protection of the individuals who constitute a minority from the tyranny of the majority is the criterion of good government. This is the test of liberty. The settlement of this country and the form of its governments, national and state, witness the soundness of this proposition. The main contribution which America has made to the science or knowledge of government is a means of securing such protection; that is, the written constitution, which is a compact between the people and every one of their number by means of which the protection of certain rules and principles is assured to every citizen. (Curtis, Constitutional History of the United States, Vol. 1, p. 317.) Therefore, as said by Judge McClain of the supreme court of Iowa on page 11 of his work on "Constitutional Law": "The fundamental rights of liberty and property should be as fully protected against the will of the majority of people as they are against the action of the departments of government."

The case is thus stated by the supreme court of California: "Our institutions are founded upon the conviction that we are not only capable of self-government as a community, but, what is the logical necessity, that we are capable,

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

to a great extent, of individual self-government. If this conviction shall prove ill founded, we have built our house upon sand. The spirit of a system such as ours is therefore at total variance with that which, more or less veiled, still shows in the paternalism of other nations. It may be injurious to health to eat bread before it is twenty-four hours old, yet it would strike us with surprise to see the Legislature making a crime of the sale of fresh bread. We look with disfavor upon such legislation as we do upon the enactment of sumptuary laws. We do not even punish a man for his vices, unless they be practised openly, so as to lead to the spread of corruption or to breaches of the peace or to public scandal. In brief, we give to the individual the utmost possible amount of personal liberty; and, with that guaranteed to him, he is treated as a person of responsible judgment, not as a child in his nonage, and is left free to work out his destiny as impulse, education, training, heredity, and environment direct him. So, while the police power is one whose proper use makes most potently for good, in its undefined scope and inordinate exercise lurks no small danger to the republic; for the difficulty which is experienced in defining its just limits and bounds, affords a temptation to the Legislature to encroach upon the rights of citizens with experimental laws, none the less dangerous because well meant." (*Ex parte* Jentzsch, 112 Cal. Reports 468.)

"Christian Scientists, whether rightly or wrongly, believe it to be a sacred religious duty to heal the sick by spiritual means, as they understand the Scriptural command to heal the sick and the mode of healing pointed out by the Master in his teachings and example.

"This being their attitude, founded upon sincere and earnest conviction, the question at once arises whether a law that denies or abridges their right to heal in their own way, or to receive such ministration as they feel to be the proper one, is not a violation of the express provisions of the Constitution of the United States designed to protect the people of the country in the observance of their religious rights. In the settlement of this momentous question we must consider the case of both the one who administers to the sick and the one who seeks and desires this mode of treatment.

"Is the practitioner of this mode of healing, in which he has supreme faith and confidence, to be denied the right to practise? Again, is the man who has equal trust and confidence in this remedy to be denied his right to resort to it for help? If so, why? Only because some other people do not believe in it. This is the sole foundation for any and every effort that has been made to prevent or abridge such practice, unless we take into account the selfish desire of those practising other modes of healing to uphold themselves by the prohibition of this mode of healing." (From a speech delivered by Senator Works of California in the United States Senate.)

✦

Perseverance

GERTRUDE TWIGGS

It often happens that one coming into Christian Science for physical healing firmly believes that it is the truth, knows that thousands have been healed through its teaching, and is convinced that it is the healing which Jesus practised; and yet to understand life spiritually and to reverse the testimony of the physical senses, seems to call for an effort which at times threatens to overwhelm him. Some of us who have been healed in Christian Science could tell of moments which we now smile to remember,—times when error presented itself with such seeming force that we could not see one ray of hope; when struggle as we would to remember that Christian Science is not a theory, not a philosophy, but absolute truth, the voice of reason seemed to be drowned by the louder cry of sense-testimony. One in the grip of such a struggle may be assured that as he holds steadfastly to the truth, as he gains in understanding, these hours will become less frequent and will pass more quickly, until finally they will cease entirely and the spiritual harmony which expresses itself in physical healing will be his. Often just a glimpse of Truth will heal one person, while it may take months of persistent effort in another. This is not because God is a "respecter of persons," for in every case God's work is already done. He is unchanging Love, and the work to be done must begin in one's own mentality.

Christian Science practice is not the use of a formula, and certainly the mere repetition of another's words, however sacred, will not heal. These have to be spiritually understood in order to benefit one. We can, however, sometimes be brought back to peace and harmony by clinging persistently to a clear, fundamental statement of Truth, as this, for instance: Life is not in matter; or, God is Love. Many beginners will find that while repeating these words or reading explanations from our text-book, they thereby gain a measure of spiritual understanding which they are unable to reason out for themselves, especially when confused by a sense of fear and pain. Our Leader's perception of the truth was so clear, her expression so perfect, that in dwelling upon her words we find it easier to "cling steadfastly to God and His idea" (Science and Health, p. 495).

The Christian Science Hymnal abounds in beautiful and helpful statements of the truth. It is easy to remember at least some lines from these songs and to hold them in thought, and this practice will bring us an enlarged sense of Truth. While repeating (p. 150), "Day by day the manna fell," we can hardly hold doubt or fear for the morrow, and while striving to know (p. 84) that

> In atmosphere of love divine,
> We live, and move, and breathe,

we certainly cannot have much room for bitter thoughts. Many of us do not have church privileges, and some others cannot sing, nevertheless the great hymns are well worth studying.

I shall never forget reading years ago of how Helen Keller, the remarkable deaf and blind girl, learned her first word, namely, water. Her devoted teacher held the child's hand over her mouth and throat while she spoke the word and spelled it. Then she poured water on the child's hand, and guided her finger as she wrote the word in the dust, also in the child's hand, and finally, after days of persistent effort, the little girl comprehended the word; it was hers, and the key to written and spoken language had become her possession. Likewise I shall never forget the patient labor of the one who first brought to me the healing in Christian Science. For weeks I had studied our Leader's writings while I crept slowly back to what I believed had been an abandoned life. I read them with avidity, as a fever patient drinks water, and with some degree of understanding, but when I would drop the book from sheer weariness, my courage and faint understanding would go with it. Over and over again this dear, patient teacher would remind me of what it means to be God's child, that all God made is perfect, and I was His child. At last the vision came with a burst of light,—the spiritual creation, God and His ideas,—never to grow dim again.

Anything, everything that is worth doing, takes steadfast work and patient waiting, and what else is so well worth while as this demonstration of our way into the truth of being? Here we have absolute assurance that as a man sows,

Digitized by Google

so shall he reap. Let us remember how patiently our dear Leader labored that she might give us this wonderful truth. She tells us that she found the path less difficult when she had the high goal always before her thoughts, than when she counted her footsteps in endeavoring to reach it (see Science and Health, p. 426), and surely none knew better than she of struggles against what seemed mighty odds, of endless patience and perseverance.

Sometimes when the healing is slow we are tempted to disbelieve in instantaneous healing. But why should not healing be instantaneous, and why should this not come to us at any moment? The healing is just the waking from a dream, just the destruction of an enshrouding mesmerism of mortal sense. Let us then be patient and of good cheer. We have eternity in which to work out our problems, and absolutely nothing can keep us from making our demonstrations if each day we do our very best. Isaiah says, "Precept must be upon precept, precept upon precept; line upon line, line upon line; here a little, and there a little," and we are assured in the book of Revelation, "He that overcometh shall inherit all things; and I will be his God, and he shall be my son."

✧

Belief versus Understanding

W. H. CAHOON

During a conversation with a member of a Christian church, I asked the question, "What do you understand is the relative proportion of the devil's power as against God's power?" and the reply was that they are equal and opposite, that is, the devil is fully as powerful for evil as God is for good. To the question, "So, then, you do not believe in a Supreme Being?" came the reply, "Why, of course I do." Attention was then called to the self-evident fact that if it be true that the devil's power equals that of God, God cannot be supreme, and the reply to this was, "I cannot help it; that is what I believe."

The foregoing has since recalled my first attendance at a Christian Science church and the subsequent visit at my home of an old acquaintance whom I was surprised to meet at that church; and I was even more surprised to learn that he had been a student of Christian Science for several years. During the two hours of that visit I asked all the questions which I had always considered "stickers," and every question was satisfactorily answered, not one being evaded in the least. I had at last found a man who could give me a sound reason for the hope that was in him.

Most of the statements made to me on this occasion were directly contrary to the teachings I had received in my own church, and were consequently quite amazing; nevertheless, they appealed to my sense of reason as nothing else ever had. I had always believed that God is infinite, and it was not difficult to grasp the idea that infinite good could not possibly possess an element of evil; that the infinite creator could not possibly possess an element of destruction; that infinite Love could not possibly possess an element of hatred or anything akin to it; that God is infinite good (not infinitely good), and that therefore all good is in God. These truths, with many others spoken of at that time, showed me that God's power, which Jesus said did the works, being unchanging and eternal, must be just as available now as it was two thousand years ago; that as the kingdom of heaven "is within," it is therefore not a place, but rather a condition of thought; that eternal life consists in knowing God, and that the knowledge of God "is life eternal," not shall be. Another very important point which was brought out was the fact that beliefs do not give us anything substantial to rest on, that what we require is an understanding by which we can put our beliefs to the test; for when they are tested and found to be correct, they become positive knowledge and are no longer beliefs.

Referring again to the conversation mentioned in the first paragraph, my orthodox friend expressed the belief that spiritual healing is impossible, premeditatively, and also that it is sacrilegious to attempt it. The study of Christian Science shows us that healing is the direct result of a mental condition. Did not Jesus say, "These signs shall follow them that believe"? Our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has clearly pointed out to us that if Jesus meant his statement only for those within hearing of his voice, the pronoun used would have been in the second person instead of the third. (See p. 328.) Again, with every command to "preach the gospel," Jesus coupled the command to "heal the sick," and more stress was laid upon the healing than upon the preaching. In the epistle of James we gather that faith, or spiritual-mindedness, is evidenced by what one can do with it. This is seen again as we read the fourteenth chapter of John. Furthermore, we see that Jesus did not at any time limit his teaching to a few people or to any particular period of time, but it was for all mankind and for all time. Again, we see that it is possible and right to do the things which he did, since with his perfect sense of justice he never could have commanded us to do things which are impossible to us. It is not difficult to see, therefore, that to attempt to heal as Jesus did, is not only not sacrilegious and impossible, but it is an absolutely essential Christian requirement.

So much for our belief; and when we read in history that spiritual healing was one of the most important factors in the early Christian church up to the third century, and when we see the healing which is being accomplished by earnest Christian Scientists all over the civilized world, we are convinced that Christian Science is true, and that it is not based upon mere belief; for to the one who accepts this teaching, belief has given place to understanding.

"As a little sanctuary"

M. EVELYN LINCOLN

In the eleventh chapter of Ezekiel we learn that the prophet had been sent to tell the children of Israel that their idolatry and the presumption of their princes would destroy them. While he was prophesying, one of the princes, "Pelatiah the son of Benaiah," passed on. Falling on his face, Ezekiel cried with a loud voice, saying, "Ah, Lord God! wilt thou make a full end of the remnant of Israel?" and the protecting answer was, "Thus saith the Lord God; Although I have cast them far off among the heathen, and although I have scattered them among the countries, yet will I be to them as a little sanctuary in the countries where they shall come." This prophecy remains true to this day. God has kept His promise. Always divine Love is as a sanctuary to those that understand the all-power of Truth and Love.

A sanctuarium in the olden time was a church, an abbey, or an asylum, where the criminal could take refuge. Here the law of the land could not reach him. In these days also there is a "little sanctuary" which God has prepared for each one of His children, and to which we may escape from the assaults of error. Moses declared that the Father dwells in the sanctuary, and to his disciples the Wayshower made this statement: "In my Father's house are many mansions: if it were not so, I would have told you." These mansions, therefore, or sanctuaries, as we may call them, are in the "secret place of the most High," for God is our refuge and

Digitized by Google

our fortress, and will always hide us from the assaults of material law. This sanctuary is not of vast dimensions to overpower us with its grandeur, but is a little one, and we find our loving Father dwelling there ready to welcome us. He is close to us, and all fear is destroyed where He is. It is our privilege and our right to go to Him with every problem.

When God commanded the Israelites to build Him a sanctuary, He put such wisdom and understanding into their hearts that they wrought all manner of cunning work, and there was such an outpouring of love from those who could not work that they brought more than the workers could use and had to be restrained from giving. They made a free-hearted offering of every choice thing they had which would grace the sanctuary. The privilege of bringing the best of one's possessions is shown again in Isaiah, where he says that the "glory of Lebanon" shall come to "beautify the place of my sanctuary." The slopes of Lebanon were covered with a luxuriant growth and the cedar was renowned far and wide; it was a symbol of all that was rich and beautiful.

Thus may we too find on our Lebanon choice gifts to bring to the Lord, who is "as a little sanctuary" to us. The fairest of fair offerings are there, but we may have a long and weary climb for them. The way up the mountain is steep and rugged in places, and the path may often be obscured. There may be seeming beasts and Goliaths to encounter, but if we rise from every fall with renewed vigor through our understanding of Truth, and overcome our fear and doubts, we will gather here and there along the way the "fruit of the Spirit," which is "love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance." We may have to strive diligently for this fruit, but if we persevere we shall gather these precious gifts and may bring them as tithes to our storehouse of Love.

Mrs. Eddy shows us the way to reach our Lebanon when she says: "In the quiet sanctuary of earnest longings, we must deny sin and plead God's allness. We must resolve to take up the cross, and go forth with honest hearts to work and watch for wisdom, Truth, and Love. We must 'pray without ceasing'" (Science and Health, p. 15). As we ascend in spiritual consciousness, we will come to know that the offerings we bring to our Father are gifts which He has prepared for us, and we will humbly give thanks with the psalmist, saying, "All things come of thee, and of thine own have we given thee."

✧

"Love one another"

C. L. BOSTWICK

He who spake as never man spake, said, "A new commandment I give unto you, That ye love one another." The rabbinical law had insisted upon love for God, and at the same time had taught "an eye for an eye." The Master's teaching was in striking contrast to this, for he emphasized the fact that we must have not only love for God but also love for man; that, as Paul later declared, "love is the fulfilling of the law." John fully understood this teaching, for he said, "He that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?" implying that with any thought or feeling unlike love in our hearts it is impossible for us truly to love God. Paul declares that without love one is as "sounding brass, or a tinkling cymbal;" also that love "is not easily provoked, thinketh no evil." He who loves his neighbor as himself does not take offense easily.

In "Pulpit and Press" (p. 21), Mrs. Eddy says: "Christian Scientists, their children and grandchildren to the latest generations, inevitably love one another with that love wherewith Christ loveth us; a love unselfish, unambitious, impartial, universal,—that loves only because it *is* Love. Moreover, they love their enemies, even those that hate them. This we all must do to be Christian Scientists in spirit and in truth." She does not say that we "should" do this, but that we "must" do it,—that upon no other condition can we truly be Christian Scientists. She also declares that "the vital part, the heart and soul of Christian Science, is Love. Without this, the letter is but the dead body of Science,—pulseless, cold, inanimate" (Science and Health, p. 113). It therefore necessarily follows that if we are entertaining any unloving thought or voicing anything unkind or uncharitable about our fellows, we are not worthy to bear the name of Christian Scientist; much less can we hope to heal according to its Principle.

The world is watching us, listening to our words, and judging us. Are we voicing criticism? Are we resentful? Are we "taking up a reproach" against our neighbor, repeating unkind things which may have been voiced to us about some person? If we are, let us stop now, before we forfeit our right to the name we bear. We are required to give the same proofs which the Master gave. Mere profession counts for nothing; but as we manifest Love and bring it more and more into our consciousness, so that we begin to approximate the Mind of the Master, our healing work will be sure and quick. If at any time our demonstrations are slow or uncertain, it will be well for us to pause and consider whether our "brother hath aught against" us, and if so, act according to the rule laid down by our great Wayshower, "be reconciled" with our brother, and then take up the work again. Surely it behooves us all to let our light so shine before men, that they may see our good works (the manifestation of Love), and glorify our Father which is in heaven. It is not possible to overestimate the results which can be attained in Christian Science if we keep ever before us and obey the command of Christ Jesus to "love one another."

✧

[Written for the *Sentinel*]

Aspiration

F. WINIFRED S. BLOXHAM

Nearer "the great heart of Love"* I longed to be.
The road seemed rough, no pathway could I see;
Dark were the nights, no daylight chased the gloom,
To my sad sense of things, a living tomb.

The golden sunshine others saw and praised;
Its splendor dazzled, but it never raised
My drooping hopes, for shadows deep were cast,
Which seemed to say: Joy comes when life is past.

What comfort was there here? For peace I sighed.
Nearer "the great heart of Love" my footsteps guide,
Was still my prayer, when lo! the answer came:
Here, now and always, Love is still the same.

As nearer "the great heart of Love" your steps you trace
Through sorrow's night, heaven's joy will then efface
From mem'ry's tablets all that giveth pain:
Press on undaunted, for the end is gain.

There is no waiting; Life and Love are one.
What lacks completion, since God's work is done?
The dream of sense alone is blinding thee;
Love's crown is thine. Awake! and thou art free.

*Science and Health, p. 448.

Selected Articles

[Albany despatch to *The Christian Science Monitor*]

Governor Glynn yesterday vetoed the McClelland-Thorn bill, which was favored by Christian Scientists and others who are not practising medicine. This bill was endorsed by the Christian Scientists because the medical societies are trying to have the present law, which says, "This act shall not be construed to affect . . . those who practise the religious tenets of any church," defined as prohibiting the practice of Christian Science.

The McClelland-Thorn bill provided for the striking out of the above clause, inserted in 1907, and the substitution of a clause similar to that in the Illinois law. The bill passed by the Senate and Assembly and vetoed by Governor Glynn read as follows: "This act shall not be construed to affect . . . any person who ministers to or treats the sick or suffering by mental or spiritual means, without the use of any drug or material remedy."

Governor Glynn gave the following as his reasons for not signing the bill:—

"If the bill simply allowed Christian Science healers to practise among the followers of Christian Science, there might not be serious objection to it; but it opens the gates to all kinds of medical pretenders, who, as a matter of fact, 'administer to or treat the sick or suffering without the use of any drug or material remedy,' and who, if this bill were approved, would swarm across our borders and pretend to practise medicine upon our citizens.

"Under the phrasing of the proposed law, I am precluded from passing upon the claim of the sincere believers in Christian Science, and I am, therefore, constrained to disapprove the bill."

✧

[Frederick Dixon in *Weymouth Telegram*, Weymouth, England]

On page 29 of Science and Health Mrs. Eddy says, "The Holy Ghost, or divine Spirit, overshadowed the pure sense of the Virgin-mother with the full recognition that being is Spirit." There is the full explanation of the Christian Science position. As the perception of Truth dawns on the human consciousness, the human mind frees itself from the trammels of so-called material law in discovering that the only real law is the law of Spirit. The limitations of ignorance have bound men for centuries in the belief of the dominion of matter, from which it was Mrs. Eddy's aim to set them free. Jesus had said, "Ye shall know the truth, and the truth shall make you free."

This knowledge of the truth was the knowledge of the absolute spiritual law which was to banish from men's minds the limitations of material sense. In the exact proportion in which the old belief of material dependence gives place to the new understanding of spiritual dominion, man repents, for the Greek word translated repentance simply means a complete change of mind.

Now, as the body is only the subjective condition of the human mind, in proportion as the human mind is permeated with the understanding of Truth, the subjective condition alters from a condition of inharmony to a condition of harmony, and in repenting, we find the kingdom of God at hand. It was so that, as Mrs. Eddy says in the passage above quoted, the divine Spirit, overshadowing "the pure sense of the Virgin-mother," brought forth her child by the revelation of Truth, and it was this, as she says later in the book, on page 534, which enabled "the Son of the Virgin-mother" to unfold the remedy for error, in healing the sick, raising the dead, walking on the water, and destroying the sins of the world. "The illumination of Mary's spiritual sense," Mrs. Eddy says on page 29 of Science and Health, "put to silence material law and its order of generation," but there can be only one immaculate conception, as there can be only one Christ Jesus. The work of the followers of Christ Jesus must be to fulfil his commands, in the effort to walk so closely in his footsteps as to be able to repeat his works in the healing of sorrow and sickness and sin.

Christ Jesus healed sorrow and sickness and sin, not because he believed these things to be real, and therefore indestructible, but because he knew they were false human beliefs which could be obliterated from the human consciousness and so prevented from manifesting themselves in the flesh, in the exact proportion in which men realize the spiritual truth and permit the Mind of Christ to be in them instead of the carnal mind. It is, however, of very little use for a man to make professions. What is required is unemotional, scientific demonstration. This was why Jesus demanded that his followers should prove their Christianity not by their words but by their works. He put his demand, again and again, with the utmost clearness, in the requirement that professing Christians should prove their Christianity as he had proved his, by the healing of the sick and the other great demonstrations of divine power.

It follows, consequently, that a man's claim to be considered a Christian must run concurrently with his power to demonstrate his knowledge by Christian healing. This power cannot be attained by payment, cannot be received merely through teaching. It is attained by the hourly, momentary effort to endeavor to destroy in one's self the carnal mind and to walk in the footsteps of Jesus the Christ. Its teaching is contrary to the wisdom of this world, its demonstration a defiance of the dominion of matter, but it is a power which, in the proportion in which it is once attained, can never be confounded.

✧

["An Observer" in *The Herald*, Duluth, Minn.]

I was very much surprised and disappointed, coming down on a street-car this week, to see that one of our local pastors had on his church bulletin-board this sign: "Religious Fads —Eddyism, or Christian Science."

I had thought the religious world too far advanced to have one denomination occupying the whole service in denouncing another. Fads—well, there certainly are thousands who must enjoy fads, to note the number who have identified themselves with Christian Science and the rapid growth of that faith in Duluth and all over the world. I have no particular sympathy with Christian Science, not understanding it thoroughly (and I also question whether this pastor does), but I do admire the Christlike spirit in which its adherents go about their work, and the toleration they have for all who do not believe as they do. My personal belief is, that if God is back of the Science movement it will succeed, and if not, it will fall to the ground, and no amount of such preaching against it will prevail. I sincerely hope the time will soon be here when all those who preach unity of churches and denominations will actually practise what they preach, and give a message from the pulpit that shall be constructive to the best interests of all God's people.

✧

[Thomas F. Watson in *Fresno* (Cal.) *Republican*]

My attention has been called to an article entitled, "Fresno Clergyman Says Healing is Church Work." The reverend author who says that "it is impossible for the 'healing by faith' to be practised to its fullest extent by every rector of

Digitized by Google

the church, for the reason that peculiar mental equipment with a knowledge of psychology would be necessary," should be reminded that Jesus made no such distinction in commanding his followers to preach the gospel, heal the sick, and "teach all nations . . . to observe all things whatsoever I have commanded you," and no one believes the humble fishermen of Gennesaret or their followers had any knowledge of psychology. The Bible states that "faith cometh by hearing, and hearing by the word of God," and the only mental equipment necessary is an understanding of and reliance upon God. "Science and Health with Key to the Scriptures" by Mrs. Eddy states (p. 1), "The prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love."

Our critic says, "In matters of organic trouble the doctor is the best physician," etc., but this is not the teaching of the Bible, and Jesus and his early followers made no distinction between nervous, organic troubles, or those purely functional, but healed them all through an understanding of the law of God. Paul wrote, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." That law has never been repealed, and is just as available today as it was in Jesus' time.

Our critic first talks of "healing by faith," then adds that "peculiar mental equipment with a knowledge of psychology would be necessary." He then goes on to state that "healing is a matter of suggestion, with the aid of [illegible] Jesus stated the whole law when he [illegible] prayer." my word, then are ye my [illegible] said, "If ye continue in the truth, and the [illegible] disciples indeed; and ye shall know follows that [illegible] truth shall make you free." It therefore [illegible] in order to be free from all error, sin, sorrow, poverty, disease, and death, we need a spiritual understanding of God and His Word, for that alone will free us from all forms of bondage. Again, Jesus said, "Father, I thank thee that thou hast heard me," but there was nothing of suggestion in his prayer. The Bible teaches that "the carnal mind is enmity against God," and it follows that no suggestion of the carnal mind, or will-power, can heal.

We learn in Christian Science that it is the false beliefs and fears of this carnal, or mortal mind, which cause disease, and it is only as we lay off this false consciousness and "put on the new man," or that Mind "which was also in Christ Jesus," that we can grasp the right understanding of God which frees us. The Master said, "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

◆

[R. Stanhope Easterday in *Lafayette* (Ind.) *Journal*]

I note in a recent issue the report of a sermon by a reverend gentleman, in which he touches upon Christian Science in a manner that may be misleading to your readers. So nearly, indeed, does the minister in the general outline of his sermon approximate the teachings of Christian Science, that we are surprised to have him speak in sweeping disparagement of these same teachings in the latter part of his discourse. The apparent confusion at least indicates that the speaker does not understand Christian Science teaching at all; hence, of course, his misrepresentation of it.

Contending stoutly for such fundamental points of Christian theology as the fact that man and not God is to be reconciled, that "God hates sin but loves the sinner," that "sin is self-destructive," etc., it would seem to require no far stretch of reasoning to deduce the further teaching in direct conformity with Christian Science,—that sin and the sufferer should not be confused in our reasonable effort to "judge righteous judgment," in dealing with the broad theme of sin and salvation. In Christian Science, reasonable effort is made, in conformity with Scriptural teaching, not to judge in such matters after the sight of the eye or the hearing of the ear, but to follow the Master's more wholesome sense of the proposition, as evidenced in his persistent effort to separate the sin from the sufferer.

A careful analysis of this process of impersonalizing evil in effecting its destruction, will be found to conform more reasonably with our critic's contention that "even so it is not the will of your Father, which is in heaven, that one of these little ones should perish." Evil being thus impersonalized and tending logically to self-destruction, all that is hateful in the sight of Deity can be destroyed and yet leave real being absolutely untouched. Such a logical view of evil and its final elimination is in direct conformity with the divine plan of atonement made plain in the Scriptures and championed in Christian Science. One can suffer from misconception; and as we are taught in the first chapter of Genesis, that God created all and pronounced it good, while evil was designated by Jesus as emanating from "a liar, and the father of it," being manifested first in the uncertain atmosphere of "a mist," "a deep sleep," and a "dream," why not concede that Jesus, in bringing the truth into the world, simply eliminated the fatal results of a gigantic misconception of spiritual being by recalling the true sense of all things? Thus Jesus was crucified, buried, and rose again to prove that all phases of evil, including sin, disease, and death, can be eliminated from human experience, can be "destroyed" or "lost" by the process of lifting consciousness above the erroneous material sense into the true spiritual concept of all real being.

✧

[Frank Bell in *The Truth*, Scranton, Pa.]

The author of a sermon quoted in a recent issue declares that he disapproves of Christian Science, and he then proceeds to describe the object of his disapproval in terms which show that it is not Christian Science to which he objects, but his own mistaken impression of it. If Christian Science taught that matter is unreal or non-existent to the physical senses, or that mortals are immune from sin and sickness, as our friend professes to believe, he might add considerably to his array of deprecatory adjectives and still be fairly conservative in his denunciation; but, as every one knows who understands the subject, there is no such teaching in Christian Science.

Nowhere in the literature of Christian Science are there statements more radical with regard to matter than those of the Founder of Christianity, who said, "Take no thought for your life, what ye shall eat, or what ye shall drink," and, "Be ye therefore perfect, even as your Father which is in heaven is perfect;" and who yet found sickness to be healed, sin to be overcome, and material food to be provided. The assertions in the Christian Science text-book, "Science and Health with Key to the Scriptures," concerning the essential unreality of matter and its conditions, relate to spiritual life and not to the phenomena of so-called physical existence. Mountains are as high, oceans as broad, and skies as blue to the consistent Christian Scientist as to any one else. But the Christian Scientist is better instructed than some others in the knowledge that his real life is not in materiality, and that he is not required to wait until he is dead to acquire some apprehension of his true spiritual selfhood.

Our friend is no less mistaken as to other phases of the subject. He seems to think Christian Science denies that "Jesus is the Christ, the Son of God;" yet the tenets of the Christian Science church, to which all members subscribe, in-

Digitized by Google

clude such statements as these: "We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ . . . We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus, the Wayshower. . . . And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus" (Science and Health, p. 497). Any one who says Christian Science teaches that prayer is idle, proclaims his inability to speak of Christian Science at all.

✧

[Ezra W. Palmer in *Denver* (Col.) *Post*]

The Rev. Mr. —— is quoted in a recent issue as stating that "not until the church rejects the Bible will it have anything to do with Christian Science." This opinion is directly contrary to the conclusions of a number of prominent members of his own church, who see that if Christianity is to be a paramount factor in the redemption of humanity, it must practically adopt the fundamental features of Christian Science.

It is well to remember that the truths of Christianity appeal to the individual. At the present time no one is much inclined to follow the lead of any ecclesiastic who is apparently more intent on defending his particular brand of theology than he is to know and prove the healing and redeeming potency of Christ's teachings. The religious leaders of Jesus' time refused to heed his teachings or to credit the confirmation of them by the healing of human ills, but the common people heard him gladly. In like manner, while some religious leaders continue their anathemas against Christian Science, many continue to come to it, seeking and finding healing of body and mind and the spiritual insight which comes from genuine knowledge of the Holy Scriptures.

For a number of years this clergyman has thundered against Christian Science. Has he succeeded in destroying its firm foundations? Not at all. I wonder if he has ever summed up what he has gained by his bitter attacks. Certainly he has done no apparent injury to Christian Science, which today is more prosperous and efficacious than ever before.

✧

[Eugene O'Neill in *Lewiston* (Idaho) *Tribune*]

In a published article it is stated, "Judge Smith may know law as a judge, but he is out of his province in theology." Christian Science is not a discussion of theology; it is a presentation of the truths that Jesus taught and demonstrated with "signs following." The scribes and Pharisees sat in Moses' seat and interpreted the Mosaic law, being well versed in the Scriptures; but Jesus did not select his disciples from the scribes and Pharisees. He called the tax-gatherer and the humble fisherman. These men imbibed the truth that Jesus taught, and they were afterward able to do the works that he did. Jesus' command was to preach the gospel and heal the sick, and these early Christians lived up to the command. History shows that they raised the dead until the end of the second century, and healed the sick until the end of the third.

It is necessary to understand the distinction drawn by Christian Science between the human personality of Jesus and the Christ. In "Science and Health with Key to the Scriptures" by Mrs. Eddy (p. 332) we read: "Jesus was born of Mary. Christ is the true idea voicing good, the divine message from God to men speaking to the human consciousness. The Christ is incorporeal, spiritual,—yea, the divine image and likeness, dispelling the illusions of the senses; the Way, the Truth, and the Life, healing the sick and casting out evils, destroying sin, disease, and death." As Paul says, "There is one God, and one mediator between God and men, the man Christ Jesus." The corporeal man Jesus was human. Christian Science does not deny that Jesus was divinely inspired, nor does it deny the divinity of Christ, but rather declares (Science and Health, p. 25), "The divinity of the Christ was made manifest in the humanity of Jesus."

It is said that Christian Science is infidel. If healing the sick and the sinner is infidelity, then Jesus was infidel, as were his immediate followers. A Christian Scientist can only say in the language of Paul, "After the way which they call heresy, so worship I the God of my fathers." The claim made for the Christian Science concept of God and man's relation to Him is that it heals the sick and reforms the sinner as the Master said should be done by those who believed on him. This is brought out plainly in Jesus' last words before the ascension: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover. So then after the Lord had spoken unto them, he was received up into heaven, and sat on the right hand of God. And they went forth, and preached everywhere, the Lord working with them, and confirming the word with signs following."

The general opposition to the Christ-healing, and denial of the same, is not new. Jesus had this to contend with, according to the account in the ninth chapter of John's gospel. Christian Scientists can say with the blind man quoted therein, that whereas they were blind, now they see.

✧

[Henry Deutsch in *Fergus Falls* (Minn.) *Journal*]

Permit me to correct a certain statement made by a clergyman in a lecture reported in a recent issue. Christian Science is the exact antipode of suggestion, hypnotism, or their allied subjects. The healing power, as manifested through Christian Science practice, is the result of a demonstrable faith in God, and the effect, not of the human mind, but of the divine Mind, or Spirit, upon which all churches rely for the saving power of the soul, as they put it, and to which Christian Science adds also the healing power of the body. Mrs. Eddy says, in the Christian Science text-book, "Science and Health with Key to the Scriptures": "They regard the human mind as a healing agent, whereas this mind is not a factor in the Principle of Christian Science" (Pref., p. x).

Christian Science heals on the same basis that Jesus healed. Its followers accept literally the fulfilment of his promise, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

[Written for the *Sentinel*]

From out the Mists

MINNIE TINGLE

The day, to mortal sense, was dark and drear;
A mantle gray enveloped earth and sky;
From o'er the dim and distant mountains high
The rain-clouds swept, dispelling light and cheer.
All suddenly from out the rain I hear
A wild, sweet strain of gladness trilling nigh:
A little bird—his brown coat snugly dry—
Burst forth in song that knew nor gloom nor fear.

Ah, prophet bird, that plainly saw the light
Tho' yet concealed behind the darkling cloud!
Thus we, who walk by faith and not by sight,
Behold, while mists the senses still enshroud,
The bow of promise stretched above the clod,
And know that all is light and love and God.

Editorial

"Human will-power is not Science"

Occasionally we hear a testimony given at a Wednesday evening meeting in which the speaker refers to "the financial demonstration" which he has made; whereas the facts as stated clearly indicate that this so-called demonstration was nothing more than the exercise of will-power, or to use the more recent term, psychology. If the reader in charge of the meeting is clear enough in his understanding of Christian Science, and courageous and loving enough to explain what a great gulf lies between Christian Science and psychology, no harm will have been done; but unless this explanation is made, it is possible that some may go away from the meeting with a very erroneous concept of Christian Science.

In Science and Health (p. 206) Mrs. Eddy writes: "In the scientific relation of God to man, we find that whatever blesses one blesses all." Therefore, a demonstration in Christian Science can have no other effect than to bless not only those who are most intimately connected with it, but also all mankind. It does not impoverish one person to enrich another, nor does it invade the rights of any one. This is in complete contrast to the effects of the exercise of human will-power, concerning which Mrs. Eddy writes on page 104 of Science and Health: "Christian Science goes to the bottom of mental action, and reveals the theodicy which indicates the rightness of all divine action, as the emanation of divine Mind, and the consequent wrongness of the opposite so-called action, —evil, occultism, necromancy, mesmerism, animal magnetism, hypnotism." Again, on page 144, she writes: "Human will-power is not Science. Human will belongs to the so-called material senses, and its use is to be condemned. . . . Human will-power may infringe the rights of man. It produces evil continually, and is not a factor in the realism of being."

The one paramount purpose of Christian Science is to enable mankind to know God aright, and the one paramount duty of Christian Scientists is to seek first the kingdom of God. When they really do seek *first* this kingdom, they cannot help being blessed with health, intelligence, and substance. Christian Science neither buys nor sells, and its prayer is not, "My will be done," but "Thy will be done." Men are not given power through Christian Science to enforce their will upon other men, but, through the understanding of God which true prayer gives them, they are enabled to deal intelligently, justly, compassionately, and unselfishly with all mankind, and every business problem thus solved is a blessing. On the other hand, every business transaction founded on the basis set forth in the following excerpts from a recent article by a distinguished exponent of psychology, in a popular magazine, not only blesses no one, but must be ultimately demoralizing in its effects. We quote from this writer as follows:—

"In a hundred thousand stores of this country men and women are employed to sell goods to the customers of the stores. Every employer expects his salesmen to know as much as possible about the wares they are to sell. But curiously enough, nobody expects them to know anything about the much more important part of their business, namely, the minds of their customers, and the way to influence those minds in order to impress them and to awake in them the desire to buy."

"More often the salesman has to force upon the customer's mind the decision to select and to buy."

"This is the most valuable method of influencing him—you can make his mind more suggestible."

"If we can make a person a little more suggestible, he will resist our request less vigorously; and the fact is, we can do that."

"The opposing ideas become feeble, and he cannot help doing what we ask."

It is easy to see that salesmanship of this kind is will-power, the influencing of one human mind by another, the dominance of the weak by the strong, and emphatically not a demonstration of the teaching of Christian Science. One of the prevalent misconceptions of Christian Science is that it is suggestion, but nothing could be farther from the truth. Its practice is free from even the faintest taint of human will, and only as this point is made clear in the testimonies given on Wednesday evenings, will these meetings fulfil their mission, which is to afford an avenue whereby those who have been healed morally, mentally, and physically through the ministry of Christian Science may publish abroad "how great things God hath done" for them.

Archibald McLellan.

New Blessings

Christian Science brings to mankind a demand for unceasing progress, and this is a surprise to some, who think that because God's work is perfect and complete, there is no need for us to press forward. There are, however, few if any who can claim to have already reached the condition expressed by the psalmist's word "satisfied;" hence the demand for progress. It is quite true that, as we gain clear glimpses of the infinite goodness of God, we are satisfied with it; but this is quite different from being satisfied with our own present attainment. This truth comes to mortals when they are in great darkness as to the future, if not the present, and this was expressed by the wise man when he declared, "Thou knowest not what a day may bring forth." This sentiment in most cases has been regarded as a prediction of impending evil, but even in the book of Lamentations we are assured that God's mercies and compassions fail not, that "they are new every morning."

The unfoldment of the spiritual senses through the understanding gained in Christian Science, means much to the student of Mrs. Eddy's teachings, but it should mean much more. It makes possible each day discoveries of new blessings; indeed, of "a new heaven and a new earth." Our revered Leader says of her own emergence from the old ways of material belief: "The divine hand led me into a new world of light and Life, a fresh universe—old to God, but new to His 'little one.' It became evident that the divine Mind alone must answer, and be found as the Life, or Principle, of all being; and that one must acquaint himself with God, if he would be at peace" (Retrospection and Introspection, p. 27).

It thus inevitably follows that, as we grow better acquainted with God, each day brings forth wonderful discoveries of the glorious things awaiting us in the realm of infinite Mind, things we had not even dreamed of when thought was held fettered in the dreary domain of mortal belief. Now we can say joyously, Who knows what a day may bring forth in the way of new blessings, the clearing away of clouds and shadows, till we can see in Truth's glad sunshine, "new regions blest, new powers unfurled"! It rests with us to know that God has all good for us, if we are only ready to take possession of man's eternal heritage.

The apostle John, exiled from native land and loved fellow workers, saw through the dark shadows of mortality the same vision which dawned upon Mrs. Eddy in the light of divine Science, and he heard that "great voice out of heaven" which is never silent, proclaiming the overcoming of sin, sorrow,

Digitized by Google

pain, and death, and divine Love wiping away all tears. Then he beheld the vanishing of sorcery, idolatry, and impurity, followed by the spiritual uplift typified by "a great and high mountain." After this, John saw the glories of the spiritual universe, and they were so new to him that he could only describe them to others as rare, beautiful, and imperishable gems and gold. Then, as if the vision had almost dazzled his unfolding sense, he was shown another new blessing, the ever-flowing river of the water of life, and the leaves which were then and are today "for the healing of the nations."

Here it may be asked for whom all these blessings were provided. Were they meant for a favored few? Clearly, no! But there are a few conditions given, one being the keeping of the commandments, another that those who are "athirst" shall come and bid others come. More than this, the invitation extends to "whosoever will," to all who are willing to avail themselves of the boundless blessings which are "new every morning"!

ANNIE M. KNOTT.

Giving No Offense

No habit is more easily acquired than that of speaking without knowledge respecting the character and purpose of others, and yet those who thus thoughtlessly contribute to the circulation of unloving and unfair if not slanderous comment, are guilty of an offense which receives quite as much attention at the hands of the Mosaic decalogue as does the crime of homicide. "Thou shalt not bear false witness" is a definite and absolutely uncompromising mandate of divine law, and its violation would find legitimate place on the list of sins concerning which, in his counsel to professed Christians, St. Paul has said, "Let it not be once named among you, as becometh saints."

Very often the making of unwarranted statements or insinuations regarding men and motives and movements, is simply an ignoble byplay of thoughtlessness, but none the less surely does it result in a dissemination and growth of distortion, if not downright falsity, which effects an outrageous wrong and which is as harmful to the defamer as to the defamed. Those who thus give a lease of life to unsavoriness, may not be actuated by personal enmity, and would resent the intimation that they merit classification with liars and thieves; nevertheless, they are certainly committing the crime described by Iago when he said:—

> Who steals my purse steals trash; 'tis something, nothing;
> 'Twas mine, 'tis his, and has been slave to thousands;
> But he that filches from me my good name,
> Robs me of that which not enriches him
> And makes me poor indeed.

How strange it is that, as the result of custom and familiarity, a given act seen in one form is recognized as robbery and abhorrent; seen in another form, which is far more hateful and serious perchance in its effects, it is regarded as a privileged pastime and constantly participated in by "thoroughly respectable people." Standing before the court to hear his sentence, a criminal is often treated with great leniency because it has been shown that he was born and reared under conditions which fully account for his evil propensities; but what can be said by way of extenuation for professed Christians who repeat derogatory statements or insinuations about others which they do not know to be true, and any reference to which is quite unnecessary? We have all been tripped by this error. Indeed it is one of "the sins of the world," being found in many a record of conduct which is otherwise sweet and wholesome, and yet no man was ever guilty of it while making an honest effort to show himself "approved unto God, a workman that needeth not to be ashamed."

All who read the Selected Articles columns of the *Sentinel* can but be no less pained than amazed to note how frequently the prejudices of good men, and many of them ministers of the gospel, impel them to make derogatory statements which they do not know to be true and which they have evidently made no effort whatever to verify, though the facts are easily accessible.

Christian Scientists have come to know full well that the successful resistance of the temptation needlessly to criticize, or repeat discreditable remarks, the fictions of the evil-minded, depends largely upon the degree to which one has awakened not only to the exceeding sinfulness of sin but to its oneness in kind, the utter hatefulness of its every least expression of ignorant and unrighteous judgment, and it is here that they have not only the greater vantage but the greater responsibility. Christian Science lays supreme emphasis upon the fact that stumbling of every type and degree, all error, is sin, and points out that one of evil's subtlest manifestations is found in that pretentious solicitude for imperiled good which asserts that it is impelled by a disinterested desire to conserve the truth, while zealously disseminating error!

Among the sins against which St. Paul counsels that we be constantly on guard, "as becometh saints," is that of "foolish talking," and it is well to remember that in the whole catalogue of idle habits there is none more out of keeping with Christian profession and more blighting to character, than that which without verification and without need contributes to the circulation of wanton disparagement.

JOHN B. WILLIS.

Among the Churches

Current Notes

LIVERPOOL, ENGLAND.—Owing to the steady growth of Christian Science in Liverpool, First Church of Christ, Scientist, are extending their premises in Leece street. For some time past there has been only standing-room at the Wednesday evening testimony meeting, and the Sunday services have been crowded. The premises are now being enlarged and redecorated, and when the alterations are completed the hall will hold considerably over three hundred. In connection with the church there is also a reading-room at 11 Old Postoffice place, which is open daily and is free to the public.—*Liverpool Courier.*

OKLAHOMA CITY, OKLA.—During the year 1913 the *Monitor* committee and the reading-room and distribution committee, by sale and free distribution, have circulated approximately 7,864 *Sentinels*, 9,555 *Monitors*, 777 *Journals*, and 1,550 pamphlets. In addition to this the reading-room sold 174 copies of "Science and Health with Key to the Scriptures," 23 of "Miscellaneous Writings," 17 of "First Church of Christ, Scientist, and Miscellany," 6 Concordances, 22 Mother Church Manuals, and 86 copies of other writings of Mrs. Eddy, besides 38 Bibles, 32 Hymnals, and 1,953 *Quarterlies*, making a grand total of 22,097 pieces sold and distributed.—*Correspondence.*

DURBAN, NATAL, AFRICA.—Much has been said and written on the subject of Christian Science, but the fact remains that the interest and number of its adherents continue steadily to increase. It is a little over six years since Christian Science was introduced into this town, but it was not until March, 1910, that the Christian Science Society of Durban was formed. Since then the cause has steadily progressed. The

Digitized by Google

new reading-rooms on the ground floor of Brunton's Arcade were opened today [March 2]. We are informed that these rooms will be open in the daytime as well as in the evening, and here the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and all other literature bearing on the subject, may be read or purchased.

The Natal Mercury.

✧ ✧ ✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 13, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk*,
105 Falmouth Street, Boston, Mass.

✧ ✧ ✧

The Lectures

Hongkong, China

A lecture on Christian Science was delivered by William R. Rathvon in the Theater Royal before a large audience. Charles E. Richardson, chairman of the local First Church of Christ, Scientist, said:—

Christian Science comes with a message of loving help to all mankind, a message of health, of abundance, of peace, joy, and happiness to you and to all mankind. The members of the local organization, having been so greatly blessed in their slight understanding of Christian Science, desire to lay before you some of the teachings of Christian Science which they have tried and found good. St. Paul wrote, "Prove all things; hold fast that which is good." The purpose of this lecture is to present for your consideration, from an authorized source, statements of Christian Science upon which some of you may be holding erroneous opinions, and thus to dispel incorrect views.—*Overland China Mail.*

✧

Macomb, Ill.

Judge Clifford P. Smith delivered a lecture on Christian Science before a large audience at the Opera House. P. E. Elting introduced the speaker, and said in part:—

The recognition of a Supreme Being, with the hope of immortality, is the great fountain of happiness. Two thousand years ago the preacher by the shore of Galilee taught the existence of a God, the immortality of the soul, the brotherhood of man, exhorting us not to be afraid, and assuring us that this was the whole "law and the prophets."

Christian Science, as I understand it, is a revelation to mankind of the power and strength that comes to the Christian faith, by which man may meet the every-day problems and perplexities, understand health and the real purpose of life. The influence of good and truth in the lives of men is not a discovery; but the scientific statements that God is All-in-all, that truth always conquers, that good always prevails, that Love is sufficient for every human need, are contributions to the religious thought of the world made by the Founder of this great movement.

Christian Scientists claim for their system that it is the exact Science of Christ, by which each one may with certainty fulfil the ancient admonition, "Know thyself," and recognize his true relation to God and his fellow men. Without this recognition of the brotherhood of man there can be no abatement of selfishness, no relief of the oppressed, and consequently no progress. We who are not members of this church feel a particular gratitude for the effort and thoughtfulness which have given us this much-desired opportunity to hear a lecture on this important and interesting subject.

The Macomb Daily Journal.

✧

Reno, Nev.

The Rev. William P. McKenzie, who lectured on Christian Science in the Grand Theater, was introduced by the Hon. Samuel Belford, who said in part:—

History has taught those who study its deeper meaning, that the progress of mankind has been marked by the development of its spiritual ideals. Europe struggled through fifteen centuries of darkness toward the light of the Reformation, through spiritual paralysis to religious liberty, through mental bondage to the right of man to do his own thinking; and this freedom brought with it its responsibilities and its unrest. Our reason could not accept an interpretation of God which associated Him and His purposes with the perpetuation of sin and sickness, evil and death. It could not reconcile this condition with a creator whose beneficence enfolded all living things, nor could it regard with satisfaction any religious dogma which consigned His children to eternal torment instead of visiting upon them that gentle mercy which is a godlike attribute. The church became a laggard, because it would not be a leader, and men turned from it when they could not find in its teachings those blessings which the Master had so often promised.

The intellectual freedom we enjoy was the precursor of a religious freedom, and both will be remembered as the glory of the age in which we live. Out of them have come a new faith and a new understanding of the relation between God and man. We have seen the decadence of a doctrine that sought to exercise its sway through fear, and we are now witnessing the triumphant progress of a truth which wins its followers through love. The past taught us the dominion of evil over man, while the present and the future will speak of the dominion of man over evil. The one held up to our vision the remoteness of God, the other brings into our daily lives the nearness of God.

It is said that we are created in God's image, but this cannot mean that we are mere counterfeits, a semblance without reality, bearing His likeness but without His powers. Rather does it point a truth, that we are like unto Him so long as we obey His laws. That is the only limitation He places upon us. All other limitations we place upon ourselves. And why should we do this? Why should we not reach out and grasp the fulness and richness of life, rather than its narrowness and poverty? Why should we not realize its blessings, rather than its disappointments? Both are vouchsafed to us in just that measure in which we prepare ourselves to receive them. Is it the part of wisdom to yield to fear and failure, when courage and success are as easily our own; to say that we cannot, when we know that we can bespeak our own happiness, regulate, direct, and control our own destiny?

Christ has said that the kingdom of heaven is within us, here in our midst, in each one of us, already prepared for our acceptance, and yet mankind for twenty centuries has been searching for it everywhere else. If we cannot believe that ills and error are ever a part of that kingdom, why should we believe they can become a part of ourselves? And this philosophy should direct us to create a condition in our own lives where there is no room except for good, and

Digitized by Google

into which, therefore, no wrong can enter. And how are we to create this condition? By the simplest of all ways,—love one another; return good for evil; do unto others as we would have others do unto us; be sincere in our search for truth and fearless in its utterance; dispel the shadows of life by sending happiness into the abodes of sorrow. What better religion can there be than this, whose conquests are those of love and helpfulness, whose aim is to banish evil that man may come into a finer realization of his own capacity and his likeness to God? It manifests His works by working in His spirit for the good of humanity. It makes us know that, in the ultimate analysis of life, we retain only what we have freely given, for whatever influence emanates from us is the influence which comes back to us.

Such is the philosophy of Christian Science, as I understand it, and such is the reason why it has spread with marvelous rapidity over every part of the world, steadfastly bearing its message of hope and good will to all the children of men, and gaining a dominion over their hearts and minds that no other faith has ever had or exercised.

Correspondence.

Belfast, Ireland

The introductory remarks of J. H. O'Loughlin, who introduced Prof. Hermann S. Hering at a lecture on Christian Science in Ulster Minor Hall, were in part as follows:—

Christian Science has been before the world for less than forty years, and during that time it has made marvelous progress in the face of tremendous opposition and misrepresentation, and it continues to make progress at an unprecedented rate.

When it is understood that this religion has become established in almost every civilized country in the world; that its adherents are drawn from almost every creed and school of thought in existence; that its followers are to be found in every walk of life; that Christian Scientists publish an international daily newspaper, which is admitted on all sides to be constructive, clean, and impartial,—then the public, realizing that Christian Science has come to stay, naturally desires to learn the reason for this progress. I am sure that in a city like this, with a world-wide reputation for practical progress, the representative of a religion of this kind will receive a patient and sympathetic hearing.—*Correspondence.*

Lectures to be Delivered

Atlantic City, N. J.—Judge Clifford P. Smith, Apollo Theater, May 10.

Auckland, New Zealand.—Prof. Hermann S. Hering, King Edward's Hall, Symonds street, 8 p.m. (June 23?).

Batavia, Ill.—Virgil O. Strickler, Baptist Church, 8 p.m., May 15.

Belleville, Ill.—William R. Rathvon, Liederkranz Hall, 8 p.m., May 21.

Berlin, N. H.—Bliss Knapp, Gem Theater, 3 p.m., May 17.

Chariton, Iowa.—Clarence C. Eaton, Temple Theater, 8 p.m., May 19.

Charlotte, Mich.—Francis J. Fluno, M.D., Church Edifice, 8 p.m., May 22.

Cleveland and Lakewood, Ohio (joint lecture).—Virgil O. Strickler, The Hippodrome, 3 p.m., May 17.

Delavan, Wis.—Bicknell Young, Opera House, 8:15 p.m., May 21.

Duluth, Minn.—Col. William E. Fell, Auditorium, corner Third avenue east and First street, 8 p.m., May 18.

Eau Claire, Wis.—Bicknell Young, Church, corner Gray and Farwell streets, 8 p.m., May 16.

El Reno, Okla.—Clarence W. Chadwick, El Reno Theater, 8:30 p.m., May 18.

Exeter, N. H.—Judge Clifford P. Smith, Town Hall, 8 p.m., May 18.

Fortuna, Cal.—Prof. Hermann S. Hering, Church Edifice, 8 p.m., May 12.

Geneva, Ohio.—Virgil O. Strickler, Armory, 8:15 p.m., May 18.

Greenville, Mich.—Virgil O. Strickler, High School Auditorium, 8 p.m., May 22.

Guthrie, Okla.—Clarence W. Chadwick, Guthrie Opera House, 8 p.m., May 19.

Janesville, Wis.—Bicknell Young, Church Edifice, corner Pleasant and South High streets, 8:15 p.m., May 19.

Lansing, Mich.—William R. Rathvon, Gladmer Theater, 8 p.m., May 18.

Lebanon, N. H.—Judge Clifford P. Smith, Town Hall, 8 p.m., May 19.

Mankato, Minn.—Bicknell Young, Mankato Opera House, 8 p.m., May 15.

Maplewood, Mo.—William R. Rathvon, Maple Hall, 7314 Manchester avenue, 8 p.m., May 9.

Montclair, N. J.—Judge Clifford P. Smith, Montclair Theater, Bloomfield avenue and Valley road, 4 p.m., May 17.

Oklahoma City, Okla.—Clarence W. Chadwick, Overholser Opera House, 3 p.m., May 17.

Pittsburg, Kan.—Clarence C. Eaton, City Hall Auditorium, 8 p.m., May 22.

Redlands, Cal.—Prof. Hermann S. Hering, Wyatt Theater, 8 p.m., May 22.

Red Wing, Minn.—Bicknell Young, T. B. Sheldon Memorial Auditorium, 3 p.m., May 17.

Richmond, Ind.—Jacob S. Shield, Gennett Theater, 3 p.m., May 17.

Riverside, Cal. (Second Church).—Prof. Hermann S. Hering, Loring Opera House, 8 p.m., May 18.

San Bernardino, Cal.—Prof. Hermann S. Hering, Opera House, 8 p.m., May 19.

San Francisco, Cal. (Fifth Church).—Prof. Hermann S. Hering, Dreamland Rink, Steiner street, between Post and Sutter streets, 3 p.m., May 17.

Sedalia, Mo.—William R. Rathvon, Sedalia Theater, 8 p.m., May 22.

Sterling, Ill.—William R. Rathvon, Academy, 8:15 p.m., May 19.

St. George, Staten Island, N. Y.—Rev. William P. McKenzie, Curtis Lyceum, Stuyvesant place and Wall street, 3:45 p.m., May 17.

Stillwater, Minn.—Clarence C. Eaton, Auditorium, 3:30 p.m., May 17.

Stroud, Okla.—Clarence W. Chadwick, Opera House, 8:30 p.m., May 16.

Terre Haute, Ind.—Jacob S. Shield, Zorah Temple, 8 p.m., May 21.

Tomah, Wis.—Bicknell Young, Unique Theater, 8:15 p.m., May 18.

Traverse City, Mich.—Virgil O. Strickler, Grand Opera House, 8 p.m., May 21.

Waco, Texas.—Hon. Clarence A. Buskirk, Auditorium, corner Sixth and Columbus streets, 3 p.m., May 17.

Warsaw, Ind.—Virgil O. Strickler, Circuit Court Room, Court-house, 7:45 p.m., May 19.

Waterloo, Iowa.—Col. William E. Fell, First M. E. Church, corner W. 4th and Randolph streets, 8 p.m., May 15.

Waukegan, Ill.—William R. Rathvon, Parish House, 410 Grand avenue, 8 p.m., May 8.

Winona, Minn.—Bicknell Young, Masonic Temple, 8:15 p.m., May 17.

Testimonies of Healing

It is said that each one comes to Christian Science in his own way. In my case it was not because of any material need, nor indeed was I at first conscious of any great spiritual lack. Scientific and professional success, foreign travel and other means of culture, hosts of friends, and not least, a happy home life,—all were mine. In addition I held a position of growing responsibility in a religious body to whose traditions I was attached by every tie of family and habit of mind. But through all this, deep down, was the longing for the truth, truth which should satisfy, which should be effective. I looked for something which should save men, regenerate them without the whip of fear or the stimulant of an unreflective emotion.

I knew many earnest social workers, some well known among all who care for the welfare of others, and I knew also many kind and gentle-minded people who in less prominent ways were devotedly striving to help their fellow men. Yet the core of the problem seemed to elude them all. Like my good friends in the medical profession, they appeared to be dealing with symptoms, not causes. My own religious conclusions were useful enough as a fair-weather philosophy, but I had had painful evidence of their ineffectiveness in times of trial. One could talk about the truth and hear much talk about it, but the truth itself seemed far off.

When my wife began to read "Science and Health with Key to the Scriptures" and her health and spirits visibly improved, I wondered if it could be possible that this religion from America would prove to be what I was seeking. Just then I chanced to have a painful abscess on the jaw. After talking the matter over with my dentist, I went to see a Christian Science practitioner about it, with the same state of mind in which I would approach any problem in my professional work. Besides giving me treatment, the practitioner talked to me, and I saw at once that some of my preconceived ideas about Christian Science were wide of the mark. The abscess disappeared, and other things with it, particularly feelings of contempt and resentment in regard to certain individuals.

Thus I began to see Principle at work. The healing of the abscess was a little thing, but so was the fall of an apple. Might it not be that the power which healed the abscess was the power which could heal the nations? So I went on reading and studying, a fiercely critical intellect fighting every step of the way. With the growing understanding which was coming to me, however, deep-seated faults of character began to come to the surface and reveal themselves as noxious weeds to be uprooted and cast out; and I knew that only the truth could have done this.

It all seemed to me so wonderful, if it was true, that I feared lest the will to believe should becloud my critical judgment. I therefore read everything I could lay my hands on that endeavored to show the falsity and absurdity of Christian Science. I discussed it with those who said they had looked into it and knew all about it. The only result was that I became convinced that here at last was the truth I sought, while the attacks seemed to be distinguished by a quite surprising lack of intelligence. They never touched the question at all, for the simple reason that not one of the critics evidently had the faintest notion what he was trying to attack.

Since those days I have seen proof upon proof of the healing power of Truth. Ordinary family ailments and accidents, such as colds, sore throats, swollen glands, cuts, and burns, have been readily and quickly destroyed. A serious trouble with my younger boy, which was diagnosed by our doctor as a septic infection of the lung and for which he recommended (as he carefully said it was his duty to do) a specialist and a curative remedy, was successfully met through the unwearied work of a practitioner. I shall not forget how the deadly fear was first cast out of my own consciousness, and how under all the trouble and human anxiety there was a note of joy. Truly, as Mrs. Eddy says, "the effects of Christian Science are not so much seen as felt" (Science and Health, p. 323).

Besides physical healing, there is scarcely an occurrence in life, from little matters of daily happening to large affairs of wide import, to which I have not seen Christian Science successfully applied. In fact, Christianity is here evidenced, not by this or that result of a confused and in some cases crudely materialistic historical criticism, nor by the *ipse dixit* of a church or of this or that gifted individual, but by daily demonstration, the way to which is open to every honest heart. Here, then, or nowhere, seems to me to be the hope of the world. One can conceive of no more splendid opportunity than to be the means, even in a small degree, of aiding in the spread of this new truth, which is indeed but a better understanding of the old truth which the Wayshower said should make us free.

GILBERT J. FOWLER, D.Sc., Manchester, England.

✧

At the first Wednesday evening meeting I attended, a little over five years ago, I was healed of a serious bowel trouble. Previous to this, I had been operated upon a number of times, and these operations had left my bowels in a paralyzed condition. Material remedies were resorted to, but without much relief. Seated there that night, listening to the various testimonies of healing through Christian Science, I felt that I would never need these remedies again, that God would help me, as He had helped others; so I went home and threw away the medicine I kept at hand for myself and family. Truth has been the only physician in our home from that evening, and it has never failed.

I am thankful to God, the giver of all good, and grateful to our Leader, Mrs. Eddy, for showing us the way to this healing truth.—LYDA F. MEYER, San Francisco, Cal.

✧

I send this token of my gratitude in remembrance of the great blessings of help, strength, and guidance, which have been so bountifully bestowed upon me through the healing and saving power of Christian Science. I knew nothing of this teaching when it was recommended to me as a means of relief from a severe attack of sciatic rheumatism. I had tried everything that seemed to offer a hope of betterment, but to no purpose.

When I went to see a Christian Science practitioner, I had been unable to sit in a chair for some weeks. At the first treatment I was told that God is Love, that He has all power, and that I could be healed through a knowledge of Him who heals all our diseases. When I went home I threw away all my material remedies, and God has been our help ever since. My healing was not rapid, but it came slowly, as the light was revealed to me. After a few weeks I was told by the practitioner that I could do something for myself through the study of the Bible and a careful reading of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I continued to read and study, for I was convinced that my freedom from disease was to be obtained in proportion to my understanding of the truth.

I have been a member and an officer of the fire department for a number of years, and before the healing power of Truth was fully realized we had a call one night for a fire. It was

Digitized by Google

extremely cold, and a severe storm of wind and snow made the conditions seem very serious. As I ran along I tried to realize God's protecting care. We had to stand on the roof of an adjoining building, directly facing the heat, the smoke, and the storm. A number of the firemen were overcome by the conditions and had to be carried home. There was much for me to attend to, but whether on the roof or on the ground, whenever there was a spare moment I realized that indeed God was taking care of us, and that we needed to trust Him fully. It was not until morning that our work was finished. I went home covered with ice, yet I realized a sweet sense of help and joy and strength, with no sense of fatigue. I felt as refreshed as though I had not been through such a night's work, and I continued to work the following day and a portion of the night.

I am glad to say that my healing has proved complete and permanent. It took place eight years ago, and there has been no sign of any relapse. My case attracted considerable attention where I live and was the means of bringing a number of people to a knowledge of Christian Science. I feel deeply thankful to God for this revelation of the truth, and I am very grateful to our beloved Leader, whose devotion and faithfulness to God enabled her to show us how we may come to an understanding of Him in whom "we live, and move, and have our being."—Henry A. Jones, Adams, Mass.

✧

I heard of Christian Science several years ago, when all medicines had failed to relieve me. This truth was brought to me by a faithful practitioner, and with her help, together with the reading of Science and Health, I was soon a new person. I was suffering from many ailments. My father and many others in the family had passed away with lung trouble, and I was being treated for the same disease, also for nervousness, liver complaint, and other ills; but I was completely healed through Christian Science.

I have just passed through another trial and wish to say that although I cannot yet overcome all the discordant conditions that arise, I feel deeply grateful for the understanding of Truth which I have already gained. At times it has seemed that I could not endure any more, but with Christian Science treatment my needs have been met by divine Love. During the past few years, others in our home have also been healed. I am very thankful to God for all these blessings, and I want to learn how to become more Christlike every day.—Bettie M. Cavett, Macon, Miss.

I also have been healed through Christian Science. An oculist of Atlanta, Ga., told me that I would be blind in six months, and that I must give up my work. I, however, went to a Christian Science practitioner and did not quit work; in consequence, I can now see better than ever before. It has been seven years since my healing. I hope this testimony will be of benefit to some one.—W. M. Cavett, Macon, Miss.

✧

I have many times wished to write of my experience since I came into Christian Science, and I can no longer refrain from expressing my gratitude for the blessings I have received through this teaching. I hope these few words will be useful to others who may be in need as I was, and that they may be led to the one true and living God and His Christ.

Before coming into Christian Science I had been under the care of one of the best physicians in this city for two years and had been in very poor health for about five, suffering day and night. After two years' treatment my physician told me he could do nothing unless I underwent an operation, to which my family objected very much. After this I tried another form of treatment which promised relief, but this also failed. I was very much discouraged and hardly knew where to turn. We had a niece in our home who was trying Christian Science for nervous trouble, and I noticed she was improving under the treatment, so one day I picked up the text-book, "Science and Health with Key to the Scriptures," and began to read. I became so interested that I could hardly leave off, and the following day I looked up a practitioner and purchased a copy of the book.

After six weeks' treatment I seemed to be no better and became greatly discouraged, but at this time a friend who had had a wonderful healing called me up on the telephone, and when I told him I was discouraged, he said he knew Christian Science could and would heal me if I followed its teachings. I began at once to improve, and in about six months I was entirely relieved of the suffering. Eye trouble was the first to yield to treatment, and this healing proved to me beyond a doubt that Christian Science is the truth. I can honestly say I am stronger today than I have ever been in my life. The physical healing was truly wonderful, and it is much to be grateful for, but the spiritual light, joy, and peace which I experienced at the same time is beyond words to express. It has been eight years since this healing took place, and I have not had the slightest return of the old ailment. My prayer is that by more willing obedience to Truth each day, I may prove my thankfulness to God, the giver of every good and perfect gift, and my love for our Leader, who brought us this Science.

Minnie Fallbush, Sharpsburg, Pa.

✧

Christian Science has been so much a part of my life for the last five and a half years that I wonder how I ever existed without some knowledge of it. The blessings I have received from it are countless. This teaching was brought to my attention by a friend, who knew how much I needed it both morally and physically, just after I had undergone a very serious operation, and at a time when I realized that the continual use of drugs and stimulants for four years (to relieve pain) had become a habit which I seemed powerless to break. With Christian Science treatment, however, this habit was completely overcome, and any one who has suffered in this way will understand that for this alone I owe Christian Science my deepest gratitude.

Before coming into Science I had suffered very acutely from eye trouble, and about a year after hearing of this teaching I had such a severe attack that I lost my sight completely. The pain seemed very intense and tenacious, but the truth was stronger still, and I have waited until now to be able to testify that this truth, as taught in Christian Science, has healed me. I can now read, write, and sew with comfort, and I have no pain whatever. I have also been healed of a recurrence of the abnormal growths for which I had been operated on, and of many other physical troubles. But far above and beyond all physical healing I am grateful for the knowledge of God as Love, for the joy and peace and the broadened outlook on life it has given me. It has indeed brought me into "a large room." When Christian Science came to me, I was passing through a phase of great sorrow, and it seemed as though happiness had fled forever; but with even the small understanding of God that I have gained through this teaching, all that sense of sorrow has passed away, and my life is now full of contentment and love.

I thank God daily for our revered Leader's purity of vision, which enabled her to see the truth, and so to express and reflect it that eventually all the world must see.

Mabel Gordon-Inglis, London, England.

I wish to express my gratitude for the great blessings that have come into my life and home through Christian Science. I was educated for the Christian ministry, and served six years in one Christian church and six years in another more liberal, but throughout these years of study and work I was restless and dissatisfied. I had no conviction of the truth and no real message to give. Christianity seemed to have no spiritual meaning, and no interpretation of its teachings would rouse or inspire the people. The pulpit was a place for the discussion of ethics, social economics and philanthropies, educational problems, literature, etc.

I believed there was spiritual truth which would mean blessing and power for men if discovered, and because I did not find it in the church and its creeds I finally turned my back on Christianity and the Bible. I investigated most of the theories of the day, especially the metaphysical and the occult, but I only learned the emptiness and futility of mere philanthropy or of social reform from a material basis. Still holding to the belief that God is manifest in creation, assuming that all that appears to human sense is real, I argued that evil was a part of the divine plan and must be good. This confusion of good and evil led to the seeming justification of every selfish and sensual impulse, the logical outcome of which is non-resistance, carelessness, self-gratification, and moral chaos.

While in this mental state, seeing no light but with no consciousness of need, I was led by divine Love, at the recommendation of a friend, to go to a Christian Science practitioner. I had decided opinions about Christian Science. I thought it was largely hallucination, but recognized certain phenomena which I did not understand, and I went, as I supposed, to learn what was the secret of the faith and enthusiasm of these people and the growth of the movement. The practitioner would take me only as a patient, and after some hesitation I gave her the right to work for me, little understanding what this meant—I had no thought or expectation of receiving practical help. After a number of interviews in which I did a great deal of talking, I began to see something of what Christian Science means. Slowly the idea was borne in upon my consciousness that God could not create matter or be manifest in matter, since He is Spirit, and that "man is the reflection of Soul" (Science and Health, p. 249). Was this spiritual understanding of God the secret of Jesus' power? I asked, and is this the truth which he taught would make men free, and which is now being demonstrated by Christian Science? As I saw the boldness, the immensity of the claim, I was hushed and said to myself, It is all or nothing.

With eagerness and dawning hope I took up the work, and for two years I have been retracing the weary, wandering steps of previous years, every day receiving larger faith, clearer vision, and wonderful experiences of God's love and care. My first surprise came in the healing of stomach disorder and malnutrition, from which I had suffered since childhood. I had been poorly nourished and limited in strength, but when the stomach trouble disappeared, in a few months I gained greatly in weight. Since that time I have been able to do more hard mental and physical work than I ever before thought it possible for me to do. Besides this, a serious sense of inharmony in my home was healed, and for this I am especially grateful. My business, which was on the edge of disaster, has also been clearing up and growing better. Within two years, attacks of acute lung trouble, hay fever, headaches, colds, and other physical ills in the family, have been quickly healed by the understanding of the truth; but greater than all else is the faith in God, the understanding of life and of man that has come through Christian Science. The Bible is a new book of inspiration and promise; the problem of evil is no more a problem, for evil does not exist. The future life is no more a mystery, for man is the child of God, "the same yesterday, and today, and forever."

I thank God for the truth, with all that it means to me and to all men,—it is truly the Christ, the Saviour,—and for the Christian Science church, harmonious and helpful, standing as it does for the truth, and the truth alone. I am grateful for the literature, which brings light, love, and truth into the home every day and every week. I acknowledge with love and honor my debt of gratitude to Mrs. Eddy, who was pure enough to see, and brave and loving enough to stand, holding aloft the banner of truth till men could read its meaning. I am also thankful for the loving, patient help I have received and for the privilege of instruction in Christian Science. I am striving daily for a greater understanding and a larger service.—Robert C. Bryant, La Grange, Ill.

✧

Christian Science came to me at a time when all was dark. I did not know which way to turn. At eight years of age I became afflicted with what the doctors pronounced an incurable disease of the kidneys, and for years I underwent a process of doctoring and dieting which amounted almost to starvation, but without benefit. My parents were told I would never be healed and would never grow to womanhood. I became weak and miserable, and in the course of a few years throat and lung trouble developed, besides stomach disorders and neuralgia in its worst form. I would be confined to my bed for days, suffering untold agony. The least exposure to cold would bring on these attacks, and I could not be on my feet for any length of time without suffering. In spite of the doctor's predictions I grew to womanhood, but I was never quite free from suffering.

Three years ago, when a great affliction came to my home, a relative told us about Christian Science and sent us some of the literature. We read it all, and then I purchased a copy of Science and Health and began its study in connection with the Bible. I never doubted its truth for one moment, and as its teaching was opened up to me my ailments began to disappear. The nervous trouble was not so easily reached, but after having absent treatment for a time, this too yielded to the truth. Fear and discouragement have passed away, and truly the peace that passeth understanding is mine.

I became a member of a Christian church at an early age and read the Bible a great deal. Whenever I read of the wonderful works done by Christ Jesus, I had a great desire to be able to do these works also. I would think of it for days, and would talk with others about it, but none seemed to see as I did or think it possible that these works could be done today. I thank God that Christian Science has shown me that they can be done today; that just as I let that Mind be in me "which was also in Christ Jesus," I too may do at least some of these works. I have recently passed through what to mortal sense was a great sorrow, but the protecting power of divine Love has been with me through it all. There is a realization of security and harmony that cannot be taken away.

I am thankful to God for Christian Science, and I am also grateful to our dear Leader, who gave this teaching to the world.—Mamie F. Miller, Hagerstown, Ind.

✧

I want to express my gratitude for the blessings received through Christian Science. This teaching came into our home when I was a child, and I accepted it all, with never a doubt as to its being the truth. Although I have never lost my faith in it during these twenty-five years, still I have had to prove through demonstration the things that I believed.

About five years ago I was attacked with bladder trouble in a severe form, and as I found I could not help myself, I asked for aid from a practitioner. I was soon relieved, but after two weeks' treatment I was not healed. I began to see, however, that there was work for me to do, as I had been harboring a nest of serpents in the guise of self-pity, hatred, and resentment. I therefore dismissed the practitioner and began to treat myself. I received word from my mother, who lived in Kansas City, that there was to be a lecture there soon, and she asked me to attend it. I consented, knowing there was help for me, somehow, in some way. I went to the Wednesday evening meeting, and the next morning attended the Thanksgiving service, both of which were feasts of love. There was a prayer in my heart constantly. When we started for the lecture on Thursday evening, I was suffering a great deal. The speaker announced that his subject was the overcoming of fear, and every word seemed meant for me. I was not conscious of my surroundings, so eager was I for the truth. When he spoke of Mrs. Eddy, saying that the world was beholding the unparalleled spectacle of thousands of grateful men and women who had been blessed by her teaching, I caught a glimpse of Christian Science and its Discoverer that I had never had before, and my whole heart went out in desire to be a better woman, to follow more closely the footsteps of our Master. The thought of physical healing was completely wiped out, and my consciousness was filled with love for God and man.

When I left the church that night, I was hardly conscious of walking, I was so free from physical distress; and the sweet communion that I held with God was an experience never to be forgotten. I was completely healed. I was on my feet all the next day, shopping, without experiencing any ill effect, and I have never had a return of the trouble, although several years have elapsed since then. It was my first realization that disease is not a physical sensation but only a mortal belief, and I had learned that "the prayer that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love" (Science and Health, p. 1).

ETHEL MCCANDLESS, Topeka, Kan.

[Written for the *Sentinel*]

The Widow's Son

PERLEY A. CHILD

THROUGH darkness to the underworld I sank,
And all the way was thronged with those who there
Made outcry, as of some long-dead despair,
That one again was come to join their rank.
Then you came. On a sudden I was 'ware
Of you, who drew me upward to the air.

Yet by what rites soe'er you made the soul
Quicken the body lying cold and white,
I know not; but I know a great delight
Ran through me, such as thrills the silent pole
When the aurora breaks the icy night.
And, Master! I cried, and leaned upon your might.

I saw a strong, grave face with smiling eyes,
And in a tender vision seemed to see
The quiet shores of sacred Galilee,
And hear a voice like silver citherns: "Rise,
Take up thy bed." Then healing fell from thee,
For lo! I knew the Christ was come with life for me.

From Our Exchanges

[*The Christian Register*]

We are too far away, too cold and passionless, to conceive what that hope meant to the early Christians, and how the heart grew faint with waiting and yearning for the appearance of the loved and adored one who was to give them, the elect, all that their hearts craved or imaginations conceived. Nor can we conjure up the sick sense of disappointment and hope deferred that must at times have chilled their faith as years rolled round and he came not. Did it ever occur to them that they had mistaken the true tenor of his words when he spoke of mysteries above their understanding, he who ever strove to impress on them spiritual truths by means of parable and vivid image? They were literalists as we know, and the mistakes they made as to his purpose and meaning were in line with the level of their intelligence and insight. He loved and trusted them for the simplicity and honesty of their natures, but it is apparent that he was often grieved by their inability to enter into the secrets of his thoughts.

The hope of the great Easter, when Jesus would be known and recognized by the whole world, has not departed altogether from the minds of men. There are those who still yearn to see their Lord returning in the clouds of heaven. They are in the thrall of the early disciples, who had not conceived the spiritual Christ, but longed for a spectacular display of his power and majesty. The great Easter of his supremacy in the hearts of men has been deferred for ages. But we may still hope for its coming in the only way it ever could have come,—a rebirth, a new pentecostal baptism of pure and undefiled religion.

Not in the clouds of heaven, but in the new consecration of human souls to humanity, the passionate love of truth and justice, the new conception of service, of devotion to all the higher and nobler interests of life, will Christ manifest himself in the great Easter; not as king and ruler, but as brother, helper, friend, the inmate of our homes, the companion of our lives.

[*The Continent*]

So it came about that while Christ himself preached for three years and won the following of fewer than a thousand believers, Peter could preach of the crucified and ascended Christ under the power of the Spirit and in one day see three thousand brought to belief. The fact is, that Peter had more to preach than he could have had before the crucifixion and resurrection. Our ministers ought to be mightier than the seventy or the twelve during the earthly life of Jesus. They have weightier argument for the love of God and the saving power of Christ than there was then. God has not simply made His gift; He has given it back again, after we had cast it aside. Easter is the day of assurance for that.

Is it not, therefore, the day for regaining any lost gift of God, in assurance that He is ready to restore what we may have cast away? If we have lost our courage, this is the time to regain it. There is evidence in the Easter fact that God's power is at work. Why should we lose heart?

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

When, with some of the best literature on the subject in my hand, I wandered at Pompeii, Ostia, and Rome among the ruins of the grandiose pagan civilization of old, and let my imagination feed upon what it must have been in the days of its greatest pride and glory, I could but stand amazed at the audacity, the sublime faith of the humble men and women of the apostolic church in thinking it could ever be overthrown. And what a power was that which could overthrow it, with

Digitized by Google

nothing at its command but a spiritual message addressing itself to a spiritual need, and with everything venerable, imposing, and outwardly authoritative against it! Gibbon and other historians have attempted to explain the success of the Christian propaganda in the early days of the Roman empire on naturalistic grounds, but the more light thrown upon the matter by present-day research the more futile is all such reasoning seen to be. It was a spiritual victory and nothing else; in fact, the very force which made it worth the while of the state at length to recognize and court the good will of the Christian church, lost something and gained nothing by that alliance. The Christian evangel had a stronger appeal before it mounted the throne of the Cæsars than it had afterward. I will even dare to make the sweeping and comprehensive statement here, that if Christianity had never become a state religion it would long ago have conquered the world.

[*The Christian Intelligencer*]

It is as true now as it ever was that what souls by millions are starving for is the bread of life; and it is mockery of the deepest wants of the human soul to offer it for bread a stone, for an egg a scorpion. Preachers of Paul's stamp scorn the preaching that shuts the Bible as if it had no use for it, and draws its material from Emerson or Shakespeare or from human sources alone, the preaching that excels in everything except in magnifying the Holy Scriptures, the preaching that glides into brilliant essays on philosophical theories, on systems of ethics, on popular literature, or is habitually occupied with the signs of the times, the social and political problems of the hour, or the horoscope of the future, failing to exalt in human esteem the Word of God and the Christ of Revelation, which never wakens the inquiry, "What must I do to be saved?"

Pastors in the pulpits should have a controlling sense of the fact that the people in the pews want them to preach the Word. Men immersed in business cares and the arduous duties of workaday life, find on Sunday neither rest nor profit in listening to pulpit discussions—no matter how timely and eloquent they be—on secular and state questions which have occupied their minds the whole week through. Their desire is for respite from all that, and their craving is for bread other than that which they have been constrained to feed on, —the bread from heaven, the bread of life, and not that which is forced upon them out of the maelstrom of trade and politics. For this they go to church on the Sabbath day, and nothing short of this they reasonably expect and should receive from those who minister at her altars.

[*The Universalist Leader*]

Must we not enlarge our conception of church work? Should we not emphasize the fact that the greatest and best church work is done outside the church? There is no more vital factor in the commercial world than the man who is putting the goods on the market, though he may never appear at the central plant! The largest and most vital part of church work is being done by the men who, having received impulse and direction, go out into the world and deliver the goods. "Now, what can I do?" You have proclaimed yourself a Christian,—not meaning that you are perfect, but that you are headed right. Go out in the world and keep going! You have the chance to preach the gospel far more effectively than your pastor; the appeal of the life you are living is far more winning than pulpit eloquence. There is your church work in your home, in your business, in your social life, in your politics, where all your human relations are tempered and sweetened by the refreshment of your soul at the altar; and when you realize the connection, you will find ways in which to maintain and glorify the altar.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY." —A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six to eleven copies inclusive, each 85 cents; twelve or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six to eleven copies inclusive, each 42 cents; twelve or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; twelve or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six to eleven copies inclusive, each $1.25; twelve or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; twelve or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; twelve or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six to eleven copies inclusive, each 50 cents; twelve or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; twelve or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; twelve or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; twelve or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

Figures have been compiled from public documents to prove that the actual cost of war between nations in the nineteenth century amounted in all to forty thousand millions of dollars. That sum of money would buy the French nation complete. Everything that the French people possess,—lands, houses, shops, ships, gold, silver, jewels, mines, merchandise,—everything that thirty-nine million Frenchmen possess could be duplicated for the sum of money spent by the world on war in a single century. Such a sum would buy the German empire entire. It would purchase the great Russian empire and leave five billion dollars to spare. It would buy everything possessed by Italy, Belgium, Spain, the Netherlands, Portugal, and Switzerland, and leave six billion dollars to spare. This sum is equivalent to nearly one-half of all the wealth possessed by the United States.

The growing importance of the French-African colonial empire has led to serious consideration as to whether or not there should be created a new department for the colonies of North Africa with a minister having the sole direction of Tunis, Algeria, and Morocco, of which so large a percentage of the population is white. At the present time each colony is directed by a separate minister. Tunis comes under the minister of foreign affairs, Algeria the minister of the interior, Morocco the minister of war, and Central Africa the minister of the colonies. This anomaly largely accounts for much of the existing difficulty in dealing with French colonial administration in northern Africa by blocking the way to the needed reforms.

In 1905 the timber sold from the United States national forests aggregated ninety-six million board feet, which brought the government no more than eighty-five thousand dollars. Three years later the amount of timber sold increased to nearly three hundred and ninety million board feet, and the money received rose to seven hundred and thirty-five thousand dollars. In 1911, eight hundred and thirty million board feet sold for more than two million dollars, and in 1913 more than two billion feet brought in contracts amounting to four million five hundred thousand dollars. Not all this money was received in any one year, because national forest timber is sold on contracts which range from one to twenty-five years, and it is paid for as cut.

The treaty between Colombia and the United States, settling the long-standing dispute over Panama, has passed its first reading in the Colombian Senate. The Colombian-American Panama treaty was presented to the Colombian Congress May 8 for ratification. It was signed in April by representatives of the Colombian state department and T. A. Thomson, the American minister at Bogota. The convention has not yet been sent to the Senate at Washington. The treaty provides that Colombia shall enjoy freely and in perpetuity free passage through the Panama Canal for her troops and warships, and stipulates also that six months after the exchange of ratifications the sum of twenty-five million dollars shall be paid to Colombia.

The effect of land taxation in Australia is shown in the breaking up of the Australian Agricultural Company's fine estate known as Warrah, near Quirindi. An area of fifty-five thousand acres will be subdivided into blocks of from four hundred to four thousand acres. The demand for land is in excess of the amount offered, and the government is now resuming leases from the landholders for the purpose of closer settlement. The government contemplates putting on an additional state tax on all lands not under cultivation within fifteen miles of existing railways, and this, if done, is sure to unlock many thousand acres of first-class agricultural land now devoted to stock raising.

In chancery court at Mobile, Ala., a bill has been filed seeking dissolution of the Fairhope colony in Baldwin county, the principal experiment of the single-tax theory in the United States. The bill alleges that the corporation has failed, "because the single-tax theory never can be carried out in any jurisdiction where laws deny the essentials of that theory." The single-tax colony was established eighteen years ago, and was populated largely by single-tax pioneers from Iowa. A large tract of land on the eastern shore of Mobile bay was purchased, the corporation paying all taxes to the state and levying on its members and lessees only a single tax—for land.

The British prime minister last week received a deputation of twelve Liberal, twelve Unionist, and six Labor members, representing three hundred and sixty-six members of the House of Commons, in favor of the participation of the United Kingdom in the Panama exposition. It is believed that the deputation made little impression on the prime minister, and it is understood that no alteration of their previous decision will be made by the government.

It is declared by Commissioner of Corporations Davies, in a report to President Wilson, that nation-wide price fixing in the lumber industry has never ceased. Before 1906 price fixing was open; then it changed to more clandestine methods,—first the publication of "market reports," or "prevailing prices," and later the employment of "basis lists," and "discount" or "concession" sheets, according to the report summary.

The revised constitution of China has been promulgated. The cabinet has been abolished and the administration handed over to a body of secretaries. The change makes Yuan Shih-Kai complete dictator of the country. He is now commander-in-chief of all the naval and military forces, is enabled to declare war or conclude peace without consultation with anybody, and empowered to veto absolutely any legislation he may choose.

The Chinese national conservation bureau is considering reforestation at the headwaters of the Yellow river. The government report shows that this will ameliorate the torrents and cause a more regular flow from the now denuded uplands. It is acknowledged, however, that this reforestation may not have an appreciable effect within the lifetime of the present generation.

Residents of Cleveland, Ohio, last week moved their clocks forward one hour in compliance with the ordinance recently passed by the city council adopting Eastern time for the city. Railroad and interurban lines are arranging their time-tables to suit the new schedule. Youngstown, Canton, and Conneaut also began to operate under Eastern time.

Directing the Pullman Company to correct numerous conditions in its service in California, the state railroad commission emphasized the inattention of employees to patrons and criticized the corporation for paying only $27.50 a month to porters, who thereby "are compelled to look to the traveling public for their principal income."

Governor Goethals has decided to begin a barge service through the Panama Canal, thus bringing it into commercial use much earlier than had been anticipated. This decision was brought about by the interruption of the Tehuantepec railroad route. The first freight to be towed through will consist of Hawaiian sugar.

A two-year-old plantation of Douglas fir on the Oregon national forest shows 94 per cent of the trees living. Extensive plantings of young trees in Washington and Oregon are costing only eight dollars an acre. Direct seeding of lodgepole pine has been successful without exception on the Arapaho national forest, Colorado.

The "Congress for the economic defense of the Amazons" has added an interesting and important chapter to the history of agricultural Brazil. One paper urged strongly that there should be established in the country a number of agricultural training stations along the line of those in the United States.

A treaty providing that any question between the United States and Italy which cannot be settled by diplomacy shall be submitted for investigation to an international commission of five members, was signed last week by Secretary Bryan and Marquis Cusani Confalonieri, Italian ambassador.

A constitutional amendment has been proposed empowering the Legislature of Colorado to create a state board of arbitration to handle industrial disputes and providing for enforcing its decisions.

Redwood sawdust is being used by vineyardists in California for packing fresh table grapes. It takes the place of the ground cork used for imported Spanish grapes.

The French minister of commerce has proposed that a bill shall be brought in to protect the plumage birds in order to prevent their extinction.

In preparation for the coming fire season in California, one hundred and ten miles of fire lines have been built on the Sierra national forest.

The imports of matches into China greatly exceed in value any other wood product. Most of the matches come from Japan.

Long Life

ROBERT NALL

In the book of Job we read, "If thou prepare thine heart, and stretch out thine hands toward him [God]; . . . thine age shall be clearer than the noonday." Mortals have always associated the thought of decrepitude, disease, suffering, and decay with old age; and death, it has been assumed, is the most welcome form of relief. The writer of the book of Ecclesiastes drew a mournful picture of the "evil days" which come to man when all is dark, when the body is feeble, when the faculties have nearly faded, just before he goes to his "long home." And there is a correlative passage in Shakespeare's description of the "seven ages," where the mortal drifts helplessly into the "last scene of all," into "second childishness, . . . sans everything."

What is outlined in the above passages is the general belief which mankind holds with regard to mortal man. It is true that philosophers have sought to soften the picture by describing old age in a less repulsive way, with a pleasant retrospect and a joyous hope of better things to come, "like a Stradivarius," as one described it, "whose tone has become so sweet that its value has increased a hundredfold and it seems almost to have a soul." But they leave everything to be desired; they never even intimate that possibly the basis upon which the fear of old age is built is entirely wrong. It is only when we turn to Christian Science that we see this.

In the text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy uncovers the cause of the trouble, and with unerring skill and spiritual insight reveals the way to all who desire to be freed from this enslavement. What is the error? It is, as she says on page 246, that of "measuring and limiting all that is good and beautiful." But for this, she adds, "man would enjoy more than threescore years and ten and still maintain his vigor, freshness, and promise." On the preceding page she gives a remarkable illustration of an Englishwoman who retained the thought of perpetual youth, so that even at the age of seventy-four, "she had no care-lined face, no wrinkles nor gray hair, but youth sat gently on cheek and brow," making it "plain that decrepitude is not according to law, nor is it a necessity of nature, but an illusion."

Unfolding so clearly the wonderful effect of right thinking, Christian Science has a distinct message to humanity on this problem of old age. It teaches that man is not material, subject to all the incidents of mortal existence, but spiritual; not both matter and spirit, not a mixture of truth and error. Made in the divine image and likeness, man can never depart from it, and he is therefore the reflection of all that is perfect. When thought is centered upon the mortal, the result can only be mortal. The constant dwelling upon that which is material and therefore transient, produces results in accordance therewith; these are the beliefs of sin, sickness, and death. But these can be overcome by that knowledge of God which is in harmony with all His works. Mortal thought is invariably circumscribed. It places a limit upon time, and declares, with an emphasis which misleads the unthinking, that man is the creature of circumstances, and that it is impossible for him to avoid manifesting the signs of disease and decay. How such thoughts act upon the human body and create the illusion of fear from which humanity suffers, is everywhere painfully in evidence.

The error in all this is a misconception of God and His creation. In the light of the fuller revelation of Truth which the world now has, past concepts of the giver of every good and every perfect gift seem like a caricature. It is impossible to conceive that infinite Mind, the Principle of the universe, could have created man to be the poor creature which mortal thought has pictured him to be; that he is powerless against the host of deadly enemies with which he is apparently surrounded. It is with a sense of relief that humanity is awakening to the falsity of material belief and proving that there is freedom from the bondage of fear. This applies to the depressing forecast of old age just as forcibly as it does to poverty and disease and every other human woe.

When the testimony of the corporeal senses is accepted as true and reliable, we accept as real many things that have no inherent claim to reality; but as we learn the truth of being, thought becomes transformed. Then we begin to dwell more in the spiritual than in the material. We look at life in a different light, and focus it from an entirely new standpoint. We must destroy the belief of life in matter if we would get the victory over physical and mental disabilities. We come to recognize the power of Spirit over the flesh, and we learn to bar the door of thought against the entrance of every intimation that the passing years must necessarily be attended by signs of dotage.

As thought is spiritualized, it is brought into harmony with all that is pure and holy, and we find that Truth is doing its work in us. Its effect is seen in the healing of the sense of fatigue, of the belief in sickness and in every inharmonious condition. As false sense is overcome, we begin to see the spiritual, eternal man, who knows neither birth, growth, nor decay, but is as God made him. We are thus awakening from the mortal dream of existence as material instead of spiritual, and acquiring spiritual understanding, which will give us power to demonstrate that error of every kind can be and must be destroyed by Truth.

Mrs. Eddy says, "If man is governed by the law of divine Mind, his body is in submission to everlasting Life and Truth and Love" (Science and Health, p. 216). He cannot be mesmerized by a false sense of existence and of the limitation of life; rather, he will know that as he enters into and abides in the consciousness of good as the only reality, he will effectually exclude all thought that does not reflect the nature of God. Moreover, he will recognize that divine Love is unceasingly making for his peace and happiness, and that the abundant life which is given to all who follow Christ, Truth, in sincerity, is an unfaltering conviction of the truth of man's immortality.

So, therefore, if it happen that one has become enslaved and is dominated by the fear of evil days, it is a wonderful consolation to learn that the Saviour is here; that one may know

Digitized by Google

the truth that gives freedom; that one may so demonstrate that truth—revealed as it is in all its sacred beauty and power in Christian Science—that every belief which is not based on the spiritual law of Love will perish. It is in this way only that we shall cease to measure life by time. Life is eternal, immortal, divine, and man, conscious of his spiritual individuality, can never be anything but the perfect reflection of his perfect creator.

The Chrysalis

LOUISE KNIGHT WHEATLEY

TWICE a year announcement is usually made in the branch churches of Christ, Scientist, that persons desiring to unite with the Christian Science church will be given an opportunity to do so at the forthcoming communion service. No solicitation or personal effort is put forth to persuade any one to become identified with the organization. The simple fact is stated, and the rest is left to the individual and to Him who knoweth the hearts of all.

The reading of this notice is frequently a time for earnest thought on the part of many in the congregation who may have been attending the services regularly and yet have apparently hesitated to take their stand before the world as Christian Scientists. They are familiar with the idea expressed in the Manual of The Mother Church (p. 17), which thus states the intent of this church, in Mrs. Eddy's words: "A church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing." These people have practically identified themselves with the movement in every other way, for they believe in Christian Science, and publicly acknowledge that it has healed them; but when it comes to a question of actual church-membership, they seem to be much like the one of whom the poet wrote,—

> Standing, with reluctant feet,
> Where the brook and river meet,—

not quite ready to decide to take the crucial step.

At such times, countless arguments assail, adroitly varied to suit each individual, but all adapted to prolong indefinitely that period of irresolution at the meeting-place of the brook and the river. Perhaps one of the most common of these is the argument which appeals to the loyalty of the would-be Scientist to old and time-honored associations. It tries to make him think that it is a very serious thing to give up a respected and well-established church for any "new" religion, however high its ideals. It tells him that to sever his connection with it would be like repudiating some old and faithful friend. Is not "the church of your fathers" good enough for you? it asks. Why run after this strange new doctrine, upon which the church as yet frowns?

Especially do these arguments appeal to the man whose early education has been in a church whose stately formality, impressive liturgy, and elaborate ritual are so linked with dear and sacred associations that to leave it would seem like leaving behind a part of himself. Although he has reached the point where outward accessories mean very little to him, and in his inmost heart he really finds a certain undefined relief in the sunny, sweet simplicity of the Christian Science service, yet—"old thoughts they cling, they cling." Gently tenacious as the ivy that climbs to its crumbling towers, are the memories of those quiet hours in the Sunday twilight when he heard, with childish awe, of the antiquity of his church, its authority, its history blood-stained with martyrdom, its tradition intertangled with medieval mysticism. Notwithstanding his realization that, in spite of all this, it never really satisfied the great heart-hunger which came as childhood merged into maturer years, he asks himself if he can actually turn away from it forever without a pang.

There was a woman, once, to whom these questions came in all their disquieting insistence. Born and bred "under the shadow of the church," as the saying is, she one day awoke to find that she could no longer stay within its walls and be happy. In name, she was "a churchman;" at heart, a Christian Scientist. Communion season was drawing near. Why prolong an anomalous position? To be strictly honest, should she not step out and join the ranks of those under whose flag she was really marching? The struggle was on, and in the midst of it she went one day into the woods, moved by a sudden impulse to get away from everything and everybody, and to try to decide, once for all, the momentous question. Her books were with her, but she did not read. Instead, she tried to pray, but being still very young in the study of Christian Science, she hardly knew enough of its letter to express herself in words. All she knew was that her whole heart went out in a deep, unspoken longing, which would, if expressed audibly, have perhaps taken some such form as this: O heavenly Father, I want to do right. Help me to see that when I leave my dear church I am not leaving anything, but just getting nearer Thee.

With childlike faith she felt sure that in some way God would understand. And He did, for "desire is prayer" (Science and Health, p. 1); and though its phrasing may be crude, a cry like this, coming out of the darkness of human need, cannot fail to find its way to the great heart of Love. As she sat there, thinking, a butterfly flitted past, its yellow wings glinting like gold in the May sunshine. In spite of her troubled mood, she felt a sudden swift delight in its beauty. Who would imagine, she thought, that it was once shut up in a dull, dark chrysalis! Then, as she idly watched it flutter out of sight, she added, How happy it must have been when it found its wings!

And then the light came upon her problem. As that greatest of teachers, Jesus the Wayshower, often made use of the simplest things in nature—the flowers, the birds, the grass of the field—to symbolize his most profound sayings, so did the passing of that golden butterfly awaken in her consciousness "a white-winged angel throng of thoughts" (Poems, p. 12), by means of which she found the answer to her prayer; for she suddenly saw that the beloved church of her childhood had been her chrysalis, nothing more. All the chrysalis had ever done for the butterfly was just to hold him close while he was waiting for his wings. In its quiet embrace he had slept through those early spring days, unconscious of the green loveliness outside, of the stars, the dew, the sweet May winds; yet they were there all the time, just waiting for him to find them.

Then, by and by, a gleam of light crept through a tiny rift in the darkness, and the butterfly awoke and stirred uneasily in his narrow cradle. After a while, he hardly knew why or how, he found himself at last outside in the sunshine, unfolding his big soft wings, and looking down in wonder at the strange, empty thing beside him. Could he have felt any sorrow at leaving an old association? Did he stand and gaze wistfully at that which was so obviously outgrown? There may have been a brief moment when he lingered, uncertainly fluttering his wonderful new wings; then a blur of gold in the distance told that he was on his ascending way; nothing lost—oh, miracle of Love!—nothing left behind, just gratitude for the sunshine and joy in new-found freedom.

The woman picked up her books and went home. The struggle was over. A few days later she had occasion to pass the familiar spot which had once been her church home, but

Digitized by Google

that last look was taken without one pang of regret. My chrysalis, she thought, just my dear chrysalis! I love it, but—how could I stay in it after I had found my wings? Did not Paul say, "If ye then be risen with Christ, seek those things which are above"?

Looking Upward

LULA ARMSTRONG

THE wisdom of pressing onward, with no backward look at evil, is an unquestionable advantage to the Christian Scientist. Not long ago I said to a Scientist, "I am searching myself to find the cause of this discord." She replied, "Suppose now you search to find your true being in God's image, or how good you are as God's reflection." This dispelled a sense of self-condemnation and I felt a great measure of freedom. I would like to add that this experience made me willing to look squarely into the face of a faulty past and led me to know that God was holding my hand all the way, that no mistake had ever had any power but to destroy itself, and that there was much good for which to be grateful.

Having a natural fondness for children, and there being a necessity for some effort to support myself, I became a teacher. I tried to make every pupil feel that I was a friend and interested in every detail of his life, for I loved a child the moment he entered my schoolroom. I recall, too, that the pupils seemed to know that I loved them all alike. This was evidently the prompting of that divine Love which made Jesus the teacher he was and Mrs. Eddy the leader she was. When we remember Jesus' application of the truth he taught to every detail of human life, with his eye ever fixed on the Principle of being above it all, can we doubt his love? The teacher under whom I studied Christian Science, told me that when she first went into Mrs. Eddy's presence she felt that she was with the best friend she ever had. After coming into the light of this truth, and learning better what Love is, and how to reflect it, I found much joy.

A little girl in my school said very seriously, "My mother says she could never learn the multiplication table, so you need not try to get me to learn it, for I can't." Through my understanding of the one Mind I was able to refute this lie of limitation, and the pupil soon became as ready and active in her use of the tables as any one in school. In further pondering my work, before I came into Christian Science, I see where I was enabled under Love's guidance to feel a great sense of compassion for the so-called stupid child, and to work patiently in helping him up to a normal standard. I remember once, while laboriously yet lovingly trying to get two "dull" boys to understand a lesson, using my own time out of school hours, an older pupil said, "Don't work with those boys, for they cannot learn, and the teacher in the other school just let them go and did not bother with them." I continued this faithful labor, however, with little encouragement; but after getting an understanding of Christian Science fine results followed, with less labor and greater joy.

If the teacher is governed by Christian Science, the child somehow feels that every detail of his life interests her. I saw this in numberless instances, when pupils would relate the most trifling details which love had enhanced. A little boy came in one Monday morning with a beaming face, which showed plainly he had something to tell me. I said: "What is it? Let me hear all about it." "Well," he began, still breathing fast, "on Saturday I was down in our pasture, and I looked up and saw a very wild bull coming after me." "What did you do?" I asked. "Well, I just shut my eyes and said, 'What time I am afraid, I will trust in thee,'" and when I looked again the bull was going the other way."

The same little boy came in one day leading his younger brother, whose eyes were closed and his face terribly swollen and inflamed. The two came up close to my desk, and the older one said, "Mama says she's got an engagement to have this boy's picture taken Saturday, and I wish you'd look at him, just covered with poison-oak! Please treat him, and mama won't do anything herself if you'll treat him." The result was that not a vestige of the poison was to be seen on Saturday, and the picture was perfectly satisfactory.

Sometimes, in working over the harder problems of mathematics, the pupil may feel a chilling distance between himself and his teacher, who knows so much more than does he. At such times Love prompts the teacher to say, "I was once a little child like you, learning this same lesson." This at once brings the teacher and the taught into nearness. Similarly, when we are struggling with some seemingly hard problem of sin or disease, we are prone to think what a distance lies between us and the great Teacher, Christ Jesus; we feel that we are not worthy to be called his students, that our problems are too hard, that we cannot solve them.

In the schoolroom I should say to the discouraged one, Yes, I was tempted as you are to think I could not work aright, until I looked away from myself to the basic law and studied the rules enough to apply them. Jesus was tempted in all points "like as we are, yet without sin." He never claimed that he could of himself do anything, but his eye was single, always clearly discerning the divine Principle of being, God, who gives man no problem that he cannot solve and clothes him as He does the lilies.

Can we not in the light of Christian Science say as did Paul in the face of every manifestation of ignorance,—limited health, a limited purse, limited intelligence, limited purity, limited joy,—"I have all, and abound."

Bearing False Witness

JOHN M. DEAN

VIEWED in the spiritual light of Christian Science, it is natural and logical for things to take on a much deeper meaning than is generally attached to them, and thus the definition of sin comprehends far more than is meant by the ordinary interpretation of that word. This larger way of looking at things at once impresses the beginner in Christian Science, who inevitably realizes a constant widening and deepening of his thought; and this expanded understanding not only takes in the round of daily experience, but it revitalizes the sacred pages of the Bible to such a marked degree that the student begins to wonder why its transcendent truths were not always apparent. A study of the ten commandments through this scientific method is peculiarly interesting.

Time and again, by her compelling logic Mrs. Eddy has driven home the thought that the first of these commandments is the key-note of all, for to have "other gods before me" is not merely to bow down before a carved image of wood or stone. It is done every moment of the day by teeming millions of people throughout Christendom, who in countless ways, by thought, word, or deed, ascribe place or power to aught beside God, infinite good. In "Science and Health with Key to the Scriptures" (p. 340) Mrs. Eddy vividly shows the all-pervading influence of this commandment in the affairs of men and throws a wonderful light on these words of James: "Whosoever shall keep the whole law, and yet offend in one point, he is guilty of all." All the other commandments are thus seen to be elaborations of the first, and serve simply to forbid the various phases of idol worship which mortal mind has subdivided to suit its own whims.

Digitized by Google

In line with this spiritual mode of reasoning, it becomes plain that the command, "Thou shalt not kill," cannot be confined to the ordinary conception of physical murder with a material weapon, for it must be evident that one who thinks harmful thoughts of his fellow man,—thoughts of malice, hatred, jealousy, revenge, and all the hideous train which human thinking ofttimes, and always vainly, attempts to clothe with respectability,—is, in a greater or less degree, a murderer. It is impossible to separate from the thought the intent or desire to injure. Indeed, they are one and the same, for the thin partition dividing thought from action is removed. In a similar manner, Christian Science enables one to perceive the deeper meaning in each of the commandments, so that the act of stealing, of breaking the Sabbath, of dishonoring one's father and mother, etc., becomes imbued with a nearer significance, and each positive and negative command stands out like a beacon-fire to light the dark nooks and crannies of human consciousness, and to govern one's relations with his fellow men.

At this particular period of growth in Christian Science, however, it would sometimes seem that special emphasis should be placed on the meaning of the command, "Thou shalt not bear false witness," for this command possibly involves even finer shades of meaning than do the others. To lie about one's neighbor, in the ordinary acceptance of its meaning, is bad enough, but the Christian Science interpretation does not stop here; it goes all the way and includes every conceivable angle or phase of the subject, applying even to our testimony regarding ourselves. In short, to use the legal term, Christian Science stands for "the truth, the whole truth, and nothing but the truth" regarding God and His entire creation. This is the goal set before us, and the time spent in reaching it depends upon the faithfulness of our endeavor.

Sense-testimony is always untrue, and is therefore now and always a false witness. To speak of our neighbor or of ourselves as ever being anything less than God's image and likeness, is out of keeping with absolute Science. To bear false witness is to give power or reality to that which is unlike God, good, and it logically follows that to think, say, or do anything wrong, is thus to bear false witness. In the prophecy of Isaiah, we read: "Ye are my witnesses, saith the Lord," and to be a witness for God is to know the truth about Him and mentally to contradict every suggestion of evil or material thinking about His creation,—to declare as untrue every subtle insinuation regarding the moral, spiritual, physical, or financial shortcomings of our fellow man. This does not signify the overlooking of the claims of false sense. Lies can never be corrected by simply ignoring them; they must be overcome by knowing the truth concerning them; and the only truthful thing to be said about a lie is, that it is unreal. So long as we see our brother's manifested faults as pertaining to man, as attached to real personality, so long are we bearing false witness.

The query "Am I my brother's keeper?" is often voiced in real earnestness by those who would blush to propound it did they but stop to consider by whom and under what circumstances it was first uttered. While it is absolutely true that each one's problem is purely individual, it is none the less true that the individual would have fewer obstacles to overcome did not his neighbors ignorantly or maliciously place many of them in his path. Little do some of us realize how much we are responsible for the shortcomings of our brother, and every thought thrown into the right side of the scale helps to adjust the balance in his favor. With what care, then, should our slightest thought be guarded!

In Science and Health (p. 453) Mrs. Eddy says: "Honesty is spiritual power. Dishonesty is human weakness, which forfeits divine help." Thus a man may be honest in those superficialities which the world regards as the sum total of honesty, yet because he lacks the spiritual requirement, may be essentially dishonest. This should admonish us to pay little heed to what the world thinks of good or bad, for from its material basis of thinking, what the world says, matters little so long as we have the inward assurance of our own integrity. Garfield once said, "I had rather have the respect of James A. Garfield than that of all the world besides," and, taking this in its higher sense, the sentiment is good.

It is better for a man to be honestly mistaken in his course than to be on the side of right through any motive lower than the love of right for its own sake. Then if he is wrong, he will get right far more quickly than will the opportunist. One who is fundamentally honest can never stay on the wrong track for long, for Truth always compels such a one to come to its standard; and he will come through love of Truth alone. "Fear of punishment never made man truly honest" (Science and Health, p. 327). Shakespeare says,—

> To thine own self be true,
> And it must follow, as the night the day,
> Thou canst not then be false to any man,

while one of our hymns (Hymnal, p. 38) follows this thought to its spiritual conclusion in these words:—

> If true to God, and God is Love,
> Then true to Love deduce we then;
> "Be true" means, true to God above,
> To self, and to our fellow men.

"Freely give"

JOSEPHINE GRAY HOLDEN

THE writer has noticed frequently that those who have received benefits through the understanding of Christian Science are much more willing to relate their experience to a friend than they are to give testimony of the same at the Wednesday evening meetings. Of course, no word of gratitude should ever be withheld if voicing it will bring good to one's listeners, be they few or many; but inasmuch as these midweek meetings have been established for this specific purpose of bearing testimony, there is no legitimate reason why any honest acknowledgment of benefits received should remain unspoken.

The writer recalls an incident where during one afternoon six testimonies of healing were given in a private home by as many different persons. It was thereupon remarked that these and similar testimonies should be given at the Wednesday evening service. It was learned that the experience meetings attended by these same people frequently passed without a single testimony being given by any of them. The reasons assigned for this very unusual condition were varied, but not one was able to stand when the search-light of Truth was turned upon it. No subtle argument of limited ability in any direction, or of what some certain person or persons might think, should in any way hinder our giving voice to the truth which has set us free.

Memory holds a picture of a spot once seen in which a single pansy blossom lifted its perfect face to the bright sky above, with not a single companion but weeds in all the remaining plot of ground. So one word of truth, though it be couched in the simplest language, stands out so clearly and with such beauty that everything else is of little consequence. All of us have been benefited by the testimonies of others; then let us remember these words of the Master, "Freely ye have received, freely give."

Selected Articles

[Frederick Dixon in *Newcastle Illustrated Chronicle*, Newcastle-on-Tyne, England]

It is impossible to go over the ground covered by the Rev. Mr. ——, for the simple reason that I do not see any good in doing what he has done, that is, making assertions without definite proof. I am therefore selecting the particular subject in his sermon which the head-lines of your report select as the dominant issue, namely, that Christian Science is neither Christian nor scientific.

Now this critic, though he made this statement, did not attempt to prove it in any way. In order to be Christian it is not necessary to father the opinions of those who call themselves orthodox, and in order to be scientific it is not necessary to accept the views of a particular school of natural science. With your permission I will make this good. The word Christian, as everybody may see by a reference to the Oxford dictionary, simply means some one who accepts the teaching of Jesus the Christ. Now Jesus the Christ made the test of an understanding of his teaching a scientific one, namely, the healing of the sick. Therefore, the only way in which it is possible to prove that any definite teaching is Christian, is the way demanded by Christ Jesus, namely, the demonstration by "signs following." If this were otherwise, you could not possibly say there was such a thing as Christian teaching.

From the beginning of the Christian era, the various sects which have claimed that their teaching is Christian, have been persecuting and murdering one another because they taught fundamentally different things as Christian. The curious thing is that, time after time, orthodoxy, having failed to extirpate heterodoxy by persecution, has taken it to its bosom, with the result that the two have combined to rend the next exponent of heterodoxy.

Mrs. Eddy accepted the demands in the Bible as the test of Christianity. She realized that Jesus had said that those who believed on him would be able to do the works he did, and therefore she made no mere verbal claim that Christian Science was Christian, but offered the scientific proof demanded by Jesus, that those who believed on him should do the works he did. The history of science is very much the same as the history of orthodox Christianity. The orthodox scientist, especially when he has been a doctor, has persecuted the unorthodox with all the powers at his disposal. In spite of all this, no wisdom comes to mankind, and the spirit which burned Bruno for preaching the plurality of worlds, and imprisoned Galileo for explaining that the earth moved, is equally determined to attempt to suppress Christian Science for declaring divine Mind to be omnipotent, and that men can be healed, as Jesus declared, by an understanding of spiritual law.

I have said that Mrs. Eddy accepted the New Testament test that theology must be proved by demonstration. In that she made Christianity scientific, and if the critic will turn to the Greek text of the New Testament he will discover, in a phrase constantly mistranslated, that this is the exact claim made for Christianity. Mrs. Eddy insisted that the miracle was the object-lesson in proof of Christianity, and that it could be repeated today because it was not supernatural but the divinely natural demonstration of spiritual law. She proved this by innumerable cases of healing, and her followers have been proving it also by innumerable thousands of cases of healing, running into millions, stretching over the last fifty years.

This critic wants to sweep away a religion which today stretches round the world, and which contains in its ranks numbers of men who have been clergymen, and numbers of men who are teachers of the relative virtues of natural science, on the ground that none of those people know what science or Christianity is.

✧

[Marie Hartman in *Eenheid*, The Hague, Holland. (Translation)]

I was much interested in reading Mr. ——'s remarks on the article from *The North American Review* entitled "Must Protestantism Adopt Christian Science?" and on Prof. Hermann S. Hering's lecture. It is not quite clear to me how the critic can frankly admit that apostolic, living Christianity has been revived in Christian Science, and yet oppose the proposition, submitted in the article from *The North American Review*, that "Protestantism must substantially adopt the faith and practice of Christian Science if its churches are to fulfil their mission to the world." It seems to me that to admit the first point necessarily requires the acceptance of the second.

Christian Science does not pretend to be something new; it admits that in all ages some people have found help for soul and body through drawing near to God in prayer. This only confirms its teaching,—that God's law is immutable, the same as when Jesus demonstrated it in his life and works, his resurrection and ascension. Spiritual understanding enabled Jesus to do all these works, which are no violations but fulfilments of God's eternal laws, and the existence of these laws carries with it the necessity to obey them. Christian Science teaches that those people whom the critic calls the "specially endowed," did not receive more than others, but did accept more of what proceeds from God. Christian Science shows the way to the discernment that all men belong to the "specially endowed," because all have the privilege of becoming "heirs of God, and joint-heirs with Christ." This Truth—the healing and saving Christ—is the gospel which Christian Science explains and works out, and its "scientific, philosophic frame" is probably of greater value than many suppose.

The critic thinks that Professor Hering is mistaken when he speaks as if to know and to will are identical; but does not absolute knowing always carry with it the willingness to act accordingly? Is a special action of our will necessary to solve our mathematical problems according to the rules which we know to be unchanging? Does not the unwillingness to obey what we know to be true show that the knowing is still so defective or the insight so clouded that we believe it possible that right results or satisfaction may be obtained along some other way? When one acts against his conscience, he has a vague expectation to attain something or to experience joy, and a slight hope in some way or other to escape punishment, viz., the results.

The clear knowledge that there is but one cause, and that true laws are unchanging and cannot be disregarded, spontaneously makes one willing to act accordingly, because in such a case there is no matter of choice. In "The First Church of Christ, Scientist, and Miscellany," Mrs. Eddy writes on page 4: "When, by losing his faith in matter and sin, one finds the spirit of Truth, then he practises the golden rule spontaneously; and obedience to this rule spiritualizes man, for the world's *nolens volens* cannot enthrall it." When Professor Hering says, "When the truth of being is known and applied," he does not speak of two different conditions, but of indissolubly connected ones, for it is not possible to know the truth without applying it. As regards the second statement to which the critic objects, where Professor Hering says, "Sin causes suffering as long as it is believed

Digitized by Google

and indulged in," it is not difficult to see that to believe in sin and to indulge in it are synonymous. To indulge in sin proves that one believes in the illusion; to forsake it shows that one has learned to know something that is true.

Christian Science regards so-called unwillingness to obey what we know to be true as wilful unwillingness, which through knowledge of the truth is changed into willing obedience, into unity with the divine Mind. As the spiritual, real man is one with the Father, he is one with Truth, with Love, with good, and the consciousness of this fact helps him to "put off . . . the old man" and to "put on the new man, which after God is created in righteousness and true holiness."

✧

[Charles E. Jarvis in *Santa Ana* (Cal.) *Register*]

I note in a recent issue the account of a discussion of hypnotism and mesmerism before the Philosophy Club of your city, in the course of which the speaker attempted to explain that the "essential principle of healing is identical in Christian Science, New Thought, and the Emmanuel movement." Now the only possible way in which Christian Science may be explained intelligently is from the view-point of its Discoverer and Founder, Mrs. Eddy, author of the text-book, "Science and Health with Key to the Scriptures." This book may be obtained at the public library in your city, and any one disposed to investigate the subject will find therein an entire chapter, beginning on page 100, devoted to mesmerism and hypnotism, showing how antipodal these agencies are to the teachings of Christian Science. Every system of therapeutics employing mesmerism, hypnotism, suggestion, or auto-suggestion, involves the influence of one human mind over another, and is therefore the antithesis of Christian Science, which recognizes one supreme, infinite intelligence, or Mind, which Christian Scientists demonstrably understand to be God, the source of man's true being, who alone "forgiveth all thine iniquities; who healeth all thy diseases."

✧

[Algernon Hervey Bathurst in *The Chronicle*, Northwich, Cheshire, England]

Unless I misunderstand the critic whose letter I have read in a recent issue, he has given the most logical reason possible for his friend's having turned to Christian Science. Would his friend have studied Christian Science unless it had appealed to "the man's understanding"? Did not Christian Science obviously offer him something more tangible and attractive than he had found elsewhere? And would it not be natural for a man to accept that which appeared to him most practical and afforded the most logical proofs of man's ability to overcome evil, sin, and sickness, here and now? I quite agree that "this is the history of many" who turn to Christian Science.

The critic implies, however, that to turn to Christian Science is the same as "to leave Christianity." The question then occurs, What is Christianity? It is surely the practical application, with "signs following," of the teaching of Christ Jesus. Now there is no body of people on earth who accept and practise these teachings in a more practical or scientific manner than do Christian Scientists. What is filling the Christian Science churches, many of them to overflowing? It is the fact that Mrs. Eddy has given to the world the Christian Science text-book, "Science and Health with Key to the Scriptures," the most remarkable commentary on the Bible ever published, because the apprehension of spiritual truth which this book awakens is enabling Christian Scientists to heal themselves and others of sickness, sin, evil habits, and all forms of discord. "Faith without works," the apostle said, "is dead." And Jesus the Christ said that his followers who understood his teaching would do the works he did. This is what the Christian Scientists are doing, in some measure at least, today.

The critic also complains of the price of the text-book, but he appears not to know that at most, if not all, of the Christian Science reading-rooms the book may be borrowed free, added to which it is to be found in practically all the public libraries,—and more than one copy in some cases. He will, I hope, sometime join the many thousands who are saying today that Science and Health is the cheapest book they have ever purchased, the best investment they have ever made.

With regard to the critic's remark that he has never yet "met a working man who is a Christian Scientist," I am compelled to wonder where he has been, for it so happens that there are a large number of Christian Scientists among the working classes, especially, perhaps, in the north. Too many people know what Christian Science is, and what it is accomplishing, to take seriously statements such as these made by the critic. If, however, he wishes to criticize Christian Science, there is but one course open to him, namely, to heal the sick more quickly and more effectively than it is being accomplished by Christian Science today.

✧

[John W. Doorly in *Times and Express*, Shipley, England]

In a recent issue I notice in your report of Dr. ——'s lecture at Shipley on the prevention of disease, that he speaks of the "misnamed Christian Science."

It would be interesting to know why the doctor considers Christian Science to be misnamed. That its teachings are essentially scientific has been proved in the healing of a multitude of so-called diseases where the critic's own therapeutic system had been tried without avail, and this healing is based wholly and solely on the understanding of the fixed and unalterable law of God. That material so-called science is simply a conglomeration of theories is apparent to every thinker today, and that the only real science is the science of spiritual facts which Christ Jesus understood and demonstrated, is daily becoming more apparent. That Christian Science is essentially Christian has also been clearly proved, since it has relieved mankind from many of its sins and has made good men and women of innumerable people who were formerly drunkards and slaves to sin in many other phases; and this also has been done through the understanding of Christ Jesus' teachings.

All Christian Scientists agree with the doctor that we cannot be too cleanly in our homes and persons, in our food, etc.; but if Christ was not in the thoughts of men, even if all rules of cleanliness were fully carried out, this alone would neither heal disease nor destroy sin. That which needs to be cleansed primarily, and not secondarily, is the human mind, and Christian Science is redeeming mankind by teaching them the nature and availability of that Mind "which was also in Christ Jesus," for this is the only way in which the human mind can be cleansed. This process is, in fact, the transformation of the body by the renewal of the mind.

Perhaps the critic recognizes the following statement, which was made nineteen hundred years ago by the best healer of disease who ever appeared on earth, and who certainly healed in the only scientific and the only Christian way: "Not that which goeth into the mouth defileth a man; but that which cometh out of the mouth, this defileth a man. . . . For out of the heart proceed evil thoughts, murders, adulteries, fornications, thefts, false witness, blasphemies: these are the things which defile a man: but to eat with unwashen hands defileth not a man." Christian Science is teaching and proving that

Digitized by Google

to a clean mind, that is, a mind which understands and utilizes God's laws of health, holiness, and harmony, there can be only a clean and healthy body, and inevitably all mankind will recognize that the cure for disease is not in matter, but in conscious unity with the divine Mind. Thus Christian Science is essentially scientific and Christian.

✧

[Campbell MacCulloch in *The News*, Newburgh, N. Y.]

The Christian Scientist effects the healing of both sin and disease without any dependence upon the "faith" of the patient in his efforts, and most emphatically without the aid of the action of the human mind either upon the mind or the body of the patient. This healing is performed through the understanding of the teachings of Jesus the Christ as manifested in his works throughout Palestine, and by that alone. Moreover, Christian Science makes no claim to be the sole agent, nor to have an exclusive monopoly of divine healing, but endeavors to show that all churches and all individuals may, and should, approximate the same work in the same way if they will allow that Mind to be in them "which was also in Christ Jesus."

To our clerical critic is attributed the statement that Mrs. Eddy denies the usefulness of such sanative measures as pure food, air, and water. This is wholly a mistake, and there is no part of her writings that can be made to bear out any such assumption. On the contrary, Christian Scientists are insistent upon proper sanitation, and purity of food, air, water, environment, and thought, and they will be found in the forefront battling for these as firmly as do others whose religious beliefs and practices differ from theirs. In writing of the influence of Christian Science upon the character of those who live and practise its teaching, Mrs. Eddy says in "Retrospection and Introspection" (p. 70): "The right teacher of Christian Science lives the truth he teaches. Preeminent among men, he virtually stands at the head of all sanitary, civil, moral, and religious reform."

The speaker's comment upon the Christian Science teaching of the unreality of matter places him at variance with such eminent world thinkers as Lord Kelvin, Sir William Crookes, Sir Robert Ball, Prof. Wilhelm Ostwald, Prof. Noah K. Davis, Professor Bowne, and practically every physical scientist in the world today. Moreover, this teaching is not now the exclusive property of Christian Science, but it is a portion of the curriculum at all the leading seats of learning throughout the world.

In conclusion, while the critic may be unable from a cursory glance to see how the Christian Science movement is to be used to promote the establishment of law and order and the stamping out of oppression and injustice, he will not long suffer from this lack of understanding if he will but realize that one of the main tenets of the Christian Science church, and a part of the daily life and practice of its adherents, is the golden rule.

✧

[A. H. Skinner in *The Detroit* (Mich.) *Times*]

A recent issue of your paper contained a clergyman's curious comment on Christian Science. With your permission I will give the first tenet of this religion, which is: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life" (Science and Health, p. 497). In "Rudimental Divine Science" by Mrs. Eddy, is this definition of Christian Science: "The law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (p. 1). And yet this critic says that "Christian Science is founded upon absurdities through and through." An absurdity cannot be built on the foundation just given.

Christian Science has reported no cures which cannot be verified, and there is no disease that has not yielded in some instance to Christian Science treatment, although this critic speaks unpleasantly of the "unqualified claims of a panacea for all ills." We admit that we do consider the true understanding of God, the loving, tender Father, a panacea for all human ills. Has the gentleman read the one hundred and third psalm, which says, "Bless the Lord, O my soul, . . . who healeth all thy diseases," and also that passage in Exodus, "I am the Lord that healeth thee"? We heartily agree with him that "throughout the universe there is an ever-active healing principle that continually operates in mighty power to cure and heal in body, mind, and soul, whatever is weak or sick or broken." We know past all doubting that God is that Principle. Of ourselves we can do nothing, but relying wholly on God, to whom all things are possible, we know that healing, physical, moral, and spiritual, can be accomplished.

This critic also says: "There are no cases too hard for Jesus to heal." No one claims to equal Christ Jesus in spirituality, but Christian Scientists are earnestly trying to follow him. Has our friend forgotten that this same Jesus said, "He that believeth on me, the works that I do shall he do also"? Christian Scientists are striving to obey his command to preach the gospel and heal the sick; not half of the command, but all of it. The healing of physical sickness is the smallest part of the Christian Scientists' work. Our Leader has taught us that the emphatic purpose of Christian Science is the healing of sin, and Christian Science practitioners are endeavoring to lead to God those who come to them, teaching them to put off "the old man with his deeds," and to put on "the new man."

Recently a minister, in a sermon preached in Detroit, said that the explanation of the lack of interest in the church and attendance on its services was that the Bible had been put on the shelf and left there. It will not be found that the Bible has been left on the shelf in the Christian Science home. Our religion has given us the key to the Scriptures, and the words of the Bible are living words to us. We go to it for direction, for comfort in sorrow, for help in every difficulty, having learned that God is indeed "a very present help in trouble." We know that nothing is impossible to God, and that it is never too late for Him to heal the sick or the sinful and to redeem the life.

[Written for the *Sentinel*]

"The Prince of Peace"

FRANCES A. HALDANE

He comes! The world may clamor as it will,
And war's wild tumult sound its loud alarms,
Till nation after nation hears the shrill
Insistent echoing, "To arms! To arms!"
He comes! Already that fair morning's charms,
When Spirit's mandate bade the darkness flee,
Unfold, dispersing every mist that harms,
And fear that gendereth dread enmity.
Then sing! Ye happy islands of the sea,
Ye stately nations, join the loud acclaim!
While greed and envy bend a stubborn knee,
And lust of domination shrinks in shame.
Eternal Principle, whose laws ne'er cease!
"The King of glory" and "The Prince of Peace"!

Editorial

"Seeking his own in another's good"

EVEN in the early days of Christian Science, Mrs. Eddy found there was need for means by which the many prevalent misconceptions of this Science might be destroyed, and that the most effective plan which could be adopted was of simply and correctly stating the truth about its teachings and its practice. With the end in view of gradually educating the public out of its mistaken beliefs in this regard, she established three distinct agencies through which they might be reached for this purpose.

The first of these agencies was a series of periodicals, commencing with *The Christian Science Journal*, which she personally published and edited. As the Christian Science movement grew in size and importance, she established other periodicals, which were intended to supplement the *Journal* in its mission of correctly setting forth a true concept of her teachings, thus supplanting error with truth. The next of these three agencies was the board of lectureship, which was shortly followed by the committee on publication. Of these latter agencies it is difficult to say too much in their praise. The committee on publication has had much to do, and has done it so efficiently that it has largely checked the publication of ignorant and malicious attacks upon Christian Science, and upon Mrs. Eddy as its Discoverer and Founder. The work of this committee, in the very nature of its functions, has been somewhat personal and specific in character, and has been practically confined to the preparation and publication of articles in newspapers and magazines, in response to and in refutation of statements in contravention of Christian Science which had previously appeared in these same periodicals. This work has been particularly effective, in that it has so largely reached the great body of people who are not Christian Scientists, and therefore not students of its official literature.

Greatly different from the work of this committee has been the work of the board of lectureship, because the lectures are not intended to be in reply to the specific statements of any particular person or persons, but rather to meet in general the misconceptions and misapprehensions of Christian Science which have kept so many from turning to this Science in their dire need. Through devious ways many persons have been led to believe that Christian Science is neither Christian nor scientific; that it is godless and prayerless; that it denies the divinity of Christ; that it does not heal the sick as did Christ Jesus, and that it is intimately associated with mental suggestion and other occult and harmful means of influencing those who come within its range. The members of this board have worked well and faithfully to counteract these false beliefs, and as long ago as 1899 Mrs. Eddy was prompted to say of their work, "I have only to dip my pen in my heart to say, All honor to the members of our board of lectureship connected with The Mother Church. Loyal to the divine Principle they so ably vindicate, they earn their laurels" (The First Church of Christ, Scientist, and Miscellany, p. 125).

Splendid as have been the results of the lecture work, much more could be accomplished by it if Christian Scientists would bear in mind that those who primarily are to be reached and benefited by this work are not the men and women who have already become Christian Scientists, but rather those who are on the border-land of inquiry, those who wish to know what Christian Science is, and whether it can bring them the health, peace, and spiritual regeneration which they have vainly sought through other channels. This does not mean that Christian Scientists are not welcomed to these lectures. What is to be understood is that they should not occupy seats to the exclusion of those for whom the lectures are primarily intended. These people do not usually think of going to the place where the lecture is to be delivered until about the hour named in the announcements, and if upon arrival there they are turned away because the hall or church is already filled, they are greatly disappointed. If the Christian Scientists were to refrain from taking seats until the visitors and strangers are seated, much more opportunity would be given the lecturers to reach many who are now unable to hear them, and the good which Mrs. Eddy intended to be done in this way would be more nearly accomplished.

Were any precedent for this action on the part of Christian Scientists needed, we have but to turn to Section 2 of Article XVI of the Manual, to find a rule whose spirit is surely that desired by the great apostle when he wrote, "Be kindly affectioned one to another with brotherly love; in honor preferring one another." It is likewise in keeping with our Leader's counsel on page 518 of Science and Health: "Blessed is that man who seeth his brother's need and supplieth it, seeking his own in another's good."

ARCHIBALD MCLELLAN.

Come Ye Apart

CHRISTIAN SCIENTISTS who have awakened to the disabling effects of the mesmerism of massed personality, can understand why Christ Jesus should have said to his disciples, "Come ye yourselves apart," and why the good and great have ever been impelled to withdraw from the world at frequent intervals, and find in meditative solitude the poise, inspiration, and strength they may need.

When St. Paul realized that the crisis of his life had come, and foresaw the tremendous moral and spiritual requirements about to be laid upon him as an unwelcomed prophet and apostle, he "conferred not with flesh and blood," as he says, but immediately went into Arabia; that is, into the wilderness, or open country, fairly to face and finally to solve his momentous problem. It was under a kindred impulsion that for three years after her perception of the Principle of Christian healing, as Mrs. Eddy writes on page 109 of Science and Health, she "kept aloof from society, and devoted time and energies to discovering a positive rule" by which the truth she had discerned could be demonstrated.

This necessity of escape from the confusions of the world, its absorption in the things of material sense, makes appeal in due time to every sincere Truth-seeker. The Master was thus wont to get away from things, now and then, to take a new hold on scientific right consciousness and to shake off the enslaving impress of material environment and experience. Following him, we do well to betake ourselves to the great sky-domed out-of-doors, to nature interpreted at its best, that we may find God, and be wedded by His grace to the white-robed duty awaiting us at this tryst.

Endeavoring to bring to his disciples a sense of the practicability of that higher life of understanding and trust which he was living, Christ Jesus directed their wondering thought to the lilies! to the suggestive symbolism all about them which if spiritually understood would reveal to them "the glory of God;" and Tennyson was responding to this call when he wrote to a friend, "I hear there are larger waves there [at

Digitized by Google

Bude] than in any other part of the British coast; and I must go thither to be alone with God." Surely, as another poet has said:—

> The only atheist is one
> Who hears no voice in wind or sun.

The tides of the world set strongly today toward the centers of physical excitation, activity, and noise. The glare and blare that speak for the indulgence of the extravagance of appetite, seem quite irresistible to the crowd, and there was never a time when the call to come apart, to flee material mesmerism and cultivate the habit of being alone with God, was more significant and imperative for those who would "put on Christ." Nature as understood and interpreted in Christian Science becomes our friend and helper here, for it voices, as Mrs. Eddy has said, "spiritual law and divine Love . . . The floral apostles are hieroglyphs of Deity. Suns and planets teach grand lessons" (Science and Health, p. 240).

The lure of fields and flowers, as the Christian Scientist is taught to think of them, leads into paths of quietness and peace. In contrast with the character and ways of men, there is nothing bizarre and cheap here, no pretense, no cheat, and no least flavor of sensuality. For those who have ears to hear, the fragrant cloisters of the woods and the honeyed recesses of the flowers speak for the truth and beauty of Him whose "going forth is prepared as the morning." Wordsworth wondrously glimpsed this, and established in his great art the kinship of poetic insight and spiritual intuition. Nature thus interpreted becomes the retreat of the spiritually aspiring. They find in it the symbolic disclosure of the things of Spirit, and here they gather day by day the sweets of solitude. For all such, spring is not only the gladdest but the most inspiring time of the year, since it voices best the glory and infinity of Life.

Today in our northland, a thousand delicate tints are deliciously hazing the horizon. The feathered choristers are heard in every nave of the forest and every bush-framed chapel of the wayside, and blessed indeed are they who enter these courts to pray, even as did the Master, when at the close of his crowded days he went out into the mountain, or sought the companionship of the stars.

John B. Willis.

✧

"The measure of a man"

In the twenty-first chapter of Revelation, where we find a description of the ideal city, we read of "the measure of a man." An angel was showing John this city as it was coming down to the apprehension of men, and John was also shown its measurements, the city representing the consciousness of the redeemed. This undoubtedly points to the exactness of the demands of Principle, by which all things are judged, nothing being left to chance or uncertainty, men and things being measured continually.

Even on the material plane men are measured by standards political, educational, social, and religious, but above and beyond all human standards is the divine requirement which nothing less than perfection can meet, and this applies to all that one thinks and says and does. One may think he measures up fairly well because of his strength, either physical or intellectual, while another may choose to measure himself by those who seem to be beneath him morally, and he may grow self-satisfied and pharisaical in the process; but "the measure of a man" is lacking, and the sooner the individual knows this, the better for all concerned.

It is too true that the present standard of mortals is success, and the weightier considerations of justice, purity, and mercy are largely lost sight of in the frenzied effort to "make good" in a material way, but all the while the hand of Truth, invisible to material sense, is writing upon the wall, "Thou art weighed in the balances, and art found wanting." This is, however, no plea for inefficiency. Daniel, who read the decree against enthroned worldliness and wickedness, attained success in all his undertakings, and this in spite of the covert and open attacks of error. The secret of his success we find stated by the queen, when Belshazzar was paralyzed by fear because of the handwriting on the wall. The queen had seen in Daniel the measure of a man, and she told of it in glowing words, as "light and understanding and wisdom, . . . an excellent spirit, and knowledge, . . . dissolving of doubts." Had the king shared these mental and spiritual qualities, he would have been prepared to meet bravely any ordeal, and to emerge from it unharmed as did Daniel.

Christian Science has come to point ceaselessly and insistently away from all false standards to the divine requirement, which has never varied to meet the demands of mortals, but is ever the same: "See . . . that thou make all things according to the pattern showed to thee in the mount." This lifts thought above the mortal sense of insufficiency, up to the true ideal of man as a child of God. Mrs. Eddy says, "The Science of being furnishes the rule of perfection, and brings immortality to light" (Science and Health, p. 336). With this rule the apparent difficulty of measuring up to true manhood and womanhood vanishes, for the reason that we have come to know what it means to have God working in and with us, and that "of his good pleasure."

It is therefore a joy to find the health and holiness—or the wholeness—which indicate conformity to the spiritual standard. God does not deny us health, but provides it, and Science teaches that there is no other power to rob us of what divine Love gives. Right here, however, we need to remember the commandment, "Thou shalt have no other gods before me." If we believe in other powers than the one good, we shall suffer for the false belief until we are willing to give it up.

Each day we are being measured, even by our fellow beings. Their estimate may be very faulty, but this is of small consequence if we are coming nearer to the requirements of Truth and Love. The angel was ceaselessly at work measuring the city which was filled with the glory of God, and would we choose to be passed over and forgotten? Would we not rather welcome the severest tests, so that we may have a right to enter the city through the gates which admit only the divine ideas, expressed by those who love to do God's will?

Annie M. Knott.

✧ ✧ ✧

Among the Churches

Current Notes

Richmond Hill, N. Y.—Five years ago a little band of earnest Christian Scientists began to meet informally in the home of one of their members. After nine months they organized the Christian Science Society of Richmond Hill, meeting in their room in Arcanum Hall. Some months ago the incorporation of the church was deemed necessary on account of the steady growth in membership and attendance. As they had sought in vain for a larger meeting room in Richmond Hill, it seemed expedient to erect a small church to meet the present need. On April 4, at sunrise, the cornerstone of the new edifice was laid at Greenwood and Lexington avenues in the presence of the officers and charter members of the church. The auditorium will have a seating capacity of two hundred.—*The Richmond Hill Record.*

Digitized by Google

READING, MASS.—Years of planning, loving endeavor, and generous giving came to a culmination last Sunday [April 5] in the dedication of the new, dignified, and beautiful edifice of First Church of Christ, Scientist, situated at the corner of Lowell and Sanborn streets. Services were held at eleven, three, and seven o'clock. In the morning and afternoon the full capacity, six hundred in all, including the Sunday school room, which opens into the main auditorium by two sets of triple sliding doors, was completely taken up and chairs were placed in the foyer. In the evening the auditorium, floor and gallery, was filled.

From the historical sketch read at the dedication we note that "the building committee has completed (within the appropriation of $35,000) its apportioned work of construction and furnishing the new church edifice, also the reading-room. During the construction of the edifice the building committee has brought numerous propositions to the trustees, who have at all times heartily and lovingly cooperated in the work, and much credit is due them. At no time has there been other than a unanimous expression of thought and approval, from the beginning of the building to the assembling of its furnishings. Our church is paid for, with sufficient money in hand to meet all obligations when properly presented, and any and all who may come within its doors will be heartily welcomed to our services."—*The Reading Chronicle.*

✧ ✧ ✧

Admission to Membership in The Mother Church

The next admission of candidates will be June 5, 1914. Application blanks may be obtained by addressing the Clerk of The Mother Church, and should be returned to him on or before Wednesday, May 20, 1914.

An application sent to the Clerk does not constitute the applicant a member. Notice of election will be sent to those who are admitted to membership.

Those who have made application for membership prior to Nov. 7, 1913, and have not received notice of election, may communicate with the Clerk if they so desire, and are especially requested to do so before sending in a second application.

JOHN V. DITTEMORE, *Clerk,*
105 Falmouth Street, Boston, Mass.

✧ ✧ ✧

The Lectures

Albuquerque, N. Mex.

Before a large and representative audience at Elks' Theater, Dr. Francis J. Fluno delivered a lecture on Christian Science. He was introduced by Atty. M. E. Hickey, who said in part:—

Some of my closest personal friends are Christian Scientists. From my knowledge of them, and from observation of others of that belief, I know that Christian Scientists are cheerful, hopeful, and optimistic, qualities that enter largely into one's success in his chosen work. They assure us with all confidence that it is possible for them to be thus cheerful, hopeful, and optimistic under all circumstances, because their faith and belief are founded on the truth.

Civilization has been an evolution, a growth. In fact, civilization marks the path of the human race in its groping, its struggles, and its aspirations to reach the ultimate truth, because it is the truth that makes us free. As we turn the pages of history and look back at the progress man has made, we see the way all strewn with discarded beliefs. Each age has held certain things as true; but as time progressed, as the human mind became freer and threw off the old beliefs and superstitions, as it became stronger and more capable of discovering new evidence and weighing it, those things held sacredly true have been discarded as false, and the succeeding ages have accepted the new truths, so called, which in turn have likewise been discarded. Progress has been possible, because the mind of man has been capable of giving up its old beliefs when convinced that those beliefs were not founded on truth.

The lecturer will present tonight some of the facts and evidence upon which Christian Science is based. An appeal will be made, not to your faith or your prejudice, but to your reason. These facts and proofs should be weighed carefully, and if you are convinced that this doctrine is based on the truth, the lecturer simply asks you to do as mankind has done all through the ages,—discard the false beliefs and faiths and accept the truth. As Paul said, "Prove all things; hold fast that which is good."—*Albuquerque Journal.*

✧

McAlester, Okla.

The largest audience that ever greeted a Christian Science lecturer in this city, listened with close attention to Judge Clifford P. Smith at the Busby Theater. He was introduced by Oscar M. Anderson, first reader, who spoke in part as follows:—

On this occasion many of us will recall the time when we attended our first Christian Science lecture. To our surprise, possibly, it impressed us as being a reasonable statement of the truth, for we heard nothing that could be construed as an intent to ridicule or deride any of our own cherished beliefs. We were not asked to listen to any slanderous vilification of the characters of reformers of any other religious denomination; and we then and there began to realize that after all Christian Science has no quarrel with any other church. A little later we learned Mrs. Eddy's own counsel on this subject, namely, to "love all Christian churches for the gospel's sake; and be exceedingly glad that the churches are united in purpose, if not in method" (The First Church of Christ, Scientist, and Miscellany, p. 18).

We have invited you here tonight because we know from our own experiences that Christian Science has a healing message for all who have human problems to meet, and we bid you welcome in the hope that you, as well as ourselves, may learn a little more of what that message really means.

Correspondence.

✧

Camden, Maine

Bicknell Young, who lectured on Christian Science, was introduced by Robert N. Coates, whose remarks were in part as follows:—

Jesus commanded his followers to go "into all the world, and preach the gospel to every creature;" also to "heal the sick." We often find this to be a twofold command in the Bible. Christian Science is based wholly upon this twofold command, and is found fulfilling its mission. Jesus said, "Did ye never read in the scriptures, The stone which the builders rejected, the same is become the head of the corner?" He also said, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life."

The Christian Science church is established upon a spiritual foundation. It is built upon "the stone which the builders rejected," and this same stone has become "the head of the corner." Today we have overwhelming proof that where

Digitized by Google

materia medica has failed, thousands have been restored to health by the study and application of this great truth as taught and demonstrated by Christian Science.

The Camden Herald.

✧

Birmingham, England

In introducing Prof. Hermann S. Hering, who lectured on Christian Science in the Town Hall, J. W. Doorly said in part:—

When nearly fifty years ago Mrs. Eddy discovered Christian Science and coupled together the words "Christian" and "Science," the world scoffed; they thought it was blasphemous. Today, mankind is recognizing clearly that if Christianity is not scientific, then it cannot be of God, who is "the same yesterday, and today, and forever;" and if Science is not Christian, then it is not worth having. Mrs. Eddy discerned clearly that she must prove her discovery before the world would be willing to accept it, and so she spent the first years in healing the sick and the sinning in a practical, demonstrable way, and thus proved that Christian Science was that truth which Christ Jesus had promised to the world nineteen hundred years before. Men and women today are thinking clearly and distinctly; they are refusing any longer to be bound down by theological dogmas, but are demanding proof; and there is no religion which was ever so practical as the religion of Christ Jesus. People are demanding Christ, not dogma; they are demanding that clear and scientific understanding which enables them to utilize the power of God to overcome evil.—*Correspondence.*

✧

Gary, Ind.

Bliss Knapp was introduced to one of the largest audiences that have filled Commercial Club Hall of recent date, by Frederick W. Carr, managing editor of the *Gary Tribune.* Mr. Carr said:—

The progress of Christian Science is somewhat like the progress of our city, which we proudly term the "Magic City of Steel." Forty-five years ago there was but one Christian Scientist in the world, that spiritually-minded New England woman, Mrs. Eddy. Today, as many of you are aware, Christian Science is known and practised in every corner of the globe. Is this growth substantial? is the question that is asked both of Christian Science and of Gary. In replying for our city, we point to its magnificent steel plants and their excellent product. In replying for Christian Science we point to its practical demonstration in the healing of every disease known to the flesh. Christian Science is more than a cure for physical ills, however; it is a religion, the scientific, demonstrable religion of the prophets and of Jesus. As Christ Jesus established the truth of his ministry by his healing works, so does Christian Science, the Science of the Christ, prove its faith by its works.—*Correspondence.*

Testimonies of Healing

It is two years since I first became interested in Christian Science, and it seems an opportune time publicly to relate some of the many blessings that have come to me and to my family during this time. It has often been said that "opportunity knocks once at every man's door," but it would probably be nearer the truth to say that opportunity knocks continually at the door, sometimes coming in and awakening one from his dream state.

Christian Science found me at a time when everything seemed to be wrong. It took me greatly against my will to a Wednesday evening meeting, but during this first hour everything spelled "peace." The following Sunday found me there again, presumedly to hear the music, but as I now know, it was the call of Truth. This led to my going to a reading-room in search of literature. I was most courteously treated by the librarian, who ever since that time has been most kind in patiently advising me and answering my many questions. I often wonder if we really appreciate the very serious and important positions occupied by our librarians. Oftentimes they are the first ones to meet those in search of the truth, and what they say may be the very thing that either directs the inquirer to or turns him away from this great light which is doing so much for humanity.

Later on I took treatment, and this leads up to a case of physical healing of which I wish to speak. One of the things that perplexed me most in Christian Science was why Christian Scientists should ever be sick. In questioning the practitioner on this point she said: "Christian Scientists at this time are not perfect Scientists; if they were, they would never be sick. All of us at this stage are struggling along, some being more advanced than others. The only difference between a Scientist and a non-Scientist is this: a Scientist knows that when error, under whatever name it may be masquerading, whether sickness, disease, poverty, sorrow, or inharmony of any kind, appears in his consciousness, he has a remedy at hand which, if he will but apply it earnestly and conscientiously, will effect a cure." This made a great impression upon me, and it was but a few days before I had an opportunity to put it into practice.

One morning I was obliged to fix a gas-bracket which had been broken. I heated it over a stove to solder the joint, and after the process was completed I held one end of it under cold water to cool it, and then put the other end between my lips to blow through it, forgetting that this end was still extremely hot. The result was that my lips were burned to a white blister. The first thing that came to my thought was, "You are entitled only to what you can demonstrate." My family recommended some of the conventional remedies for burns, but I went off by myself and worked as well as I knew how. I took the "scientific statement of being" (Science and Health, p. 468) and proceeded to declare the truth for myself, and to my great delight, and perhaps surprise, I found after a little time that the intense pain produced by the burn was growing less. I continued my work for a time until the pain was almost gone, and then went to my business. The blisters disappeared, and apart from a slightly swollen condition and a sensation of badly chapped lips, I suffered no inconvenience whatever.

Another time I fell and hurt my ankle severely. The thought that came to me was this: "He shall give his angels charge over thee, to keep thee in all thy ways. They shall bear thee up in their hands, lest thou dash thy foot against a stone." This injury was most persistent, the ankle troubling me for several weeks, not by any sense of pain, but by giving out at unexpected times. All this was also overcome by the power of Truth.

Space will not permit a detailed account of the many blessings that have come to me as well as to my family since this blessed truth came to me, but for it all I am most sincerely thankful. I also find that I am much happier when I follow out what our Leader says on page 571 of Science and Health: "At all times and under all circumstances, overcome evil with good. Know thyself, and God will supply the wisdom and the occasion for a victory over evil. Clad in the panoply of Love, human hatred cannot reach you." Formerly to hate one's enemies was a natural thing, but in Christian Science it becomes very easy to refrain from hating those who have injured you, and by persistent effort a sense of love soon follows.

All of us can best show thankfulness to God, as well as gratitude to our Leader, and to those who have given us a helping hand, by living the life, putting in daily practice what we know, and honestly endeavoring to qualify to call ourselves Christian Scientists.

DUDLEY T. GREENE, Newburgh, N. Y.

✦

In the course of the last four years I have proved to the satisfaction of myself and family that Christian Science heals not only sickness but all forms of unrest. All my life I had been considered delicate, and for approximately eight years I was an almost constant sufferer. About seven years ago I seemed to have been greatly benefited by a critical surgical operation and came to California hoping for still further improvement; but instead, a serious bladder and kidney trouble developed and I was compelled to enter a sanitarium. The acute symptoms were overcome, but there was no permanent relief, and I gave up all hope of ever being well, for nervousness, weakness, and irritability appeared to have taken full possession of me.

During those years of suffering I frequently heard of Christian Science, but as I had at one time taken a course in suggestive therapeutics, I believed myself to be very wise and was sure that I knew practically all about Christian Science. About four years ago, however, some of our friends began to take an interest in Mrs. Eddy's teaching, and I decided to read the text-book, "Science and Health with Key to the Scriptures." I started to read conscientiously and carefully, at the same time wondering if I would find anything worth while. I had been raised in a Christian faith, and while I was always religiously inclined, yet during the last twenty-five years I had drifted away from all orthodox teaching, holding fast to only one thing,—that there was an all-wise and all-loving God who was in no wise responsible for the evil in the world; and in a blind, helpless way I always turned to Him in times of greatest stress. I thought that even though I did not now understand, still some time, somewhere, presumably in another world, things would all be made clear to me.

As I read in our text-book that wondrous chapter on Prayer, the day began to dawn; and as the following chapter, Atonement and Eucharist, unfolded before me, my gratitude and joy were unbounded. I felt that my former doubts might be cast aside, for I now began to see scientifically that Christ is indeed our Saviour. I immediately became a regular attendant at the church services. Then I bought the *Quarterly*, and began a systematic study of this wonderful doctrine. In a short time the corrected thinking began to manifest itself in better physical conditions, and in the course of a few months the thought of using material remedies had become a thing of the past.

Digitized by Google

I am glad to say that my healing has been permanent, and that I have grown stronger in every way as I have progressed in my study of Christian Science. Today we are all in perfect health. My husband has been cured of lifelong bowel disorder with its attendant serious results, while our little daughter, who had always been delicate, is well and strong. Now, when I say "Thine is the kingdom, and the power, and the glory," I know it is demonstrably true.

I shall never forget the kind friends in the church here who so patiently and lovingly helped me to untangle the threads of false conception which I seemed to have woven for myself. Church-membership, class instruction, the Sunday school work, and the joy of helping others, are immeasurable blessings, while our periodicals are illuminations along the pathway reminding us always to "stand porter at the door of thought;" and I am proving daily that "Love and Truth are not at war with God's image and likeness" (Science and Health, pp. 392, 19). Words cannot express my thankfulness to God, and my gratitude to Mrs. Eddy for giving us the understanding that God is All-in-all.

MARY E. PLATT, Los Angeles, Cal.

✦

Words fail me when I endeavor to express my thankfulness to God, and my gratitude to our Leader, for the blessings which Christian Science has brought to me and mine. In the month of August, 1911, our youngest daughter was instantaneously healed, by this wonderful truth, of what *materia medica* calls St. Vitus' dance, from which she had suffered some three or four years. She had violent attacks at times, and finally was not able to use her left hand at all. She would have sudden and sometimes serious falls, and on one of these occasions it was thought that she was dead. These symptoms continued for about four years, and as we were not able to demonstrate over the condition ourselves, we called a Christian Science practitioner. The little girl was healed with the first treatment, and she has been perfectly well ever since.—EDWARD C. OERTEL, Pittsburgh, Pa.

✦

I take much pleasure in expressing my thankfulness for help received in Christian Science. Before I knew of this teaching, I was subject to attacks of lumbago, with which I would be laid up for a week or more, and on some occasions I felt the effects for quite a long period afterward. When I had the last attack, however, I asked for Christian Science treatment and experienced almost immediate relief. In a short time the trouble had entirely disappeared and I felt quite myself again. This to me was a wonderful demonstration of the power of Truth, for I was not laid up a single day or hour, and was able to attend to my business duties as usual. I am very grateful for my healing.

I. A. POOLER, South Norwood, S. E., London, England.

I am truly grateful for the almost immediate relief I experienced through absent treatment from a Christian Science practitioner when I was suffering from pleurisy in July, 1912. Before coming into Science I had been ill for six weeks with the same ailment, and was in bed a fortnight or more with a doctor attending me. I am thankful to say, however, that on the last occasion, although the attack was very sharp and I could breathe only with great difficulty, yet in a few hours after I sent for help in Christian Science I was feeling much better, and that night I was able to sleep almost undisturbed. I had scarcely been able to lie down at all, as the cough was so troublesome, and sleep was quite out of the question; but thanks to the healing power of Truth, the symptoms were soon destroyed and overcome. I was able to keep about and perform all the duties necessary for me to do, and I was quite my normal self in a week or less. I am very thankful to say that the healing has been permanent.

I am more than grateful for this and other proofs I have had of the power of Truth.

ADA C. POOLER, South Norwood, S. E., London, England.

✦

[Translated from the German]

I suffered for years and went to many physicians, none of whom were able to help me,—they did not even agree as to the nature of the disease. I was usually treated for stomach trouble, as I had pain in that region. In the mean while I continued to grow weaker and more miserable, until one day my attention was called to Christian Science, and in my need I decided to give it a trial. I went to a practitioner and asked for help, which was lovingly given, and the result was that after a few treatments I became well, and now I am a very different woman. When discordant conditions are occasionally manifested, I am able to prove the powerlessness of evil through the realization that God, good, is all-power; and for this understanding, which has been given us through divine Love, I am indeed very thankful. I am also grateful to Mrs. Eddy, whose obedience to the will of God has again made possible for us the discernment of Christ, Truth.

FRAU PAULINE SCHMELZER, Schorndorf, Württemberg, Germany.

✦

During the past six years we have thoroughly tested the healing power of Truth as revealed in Christian Science. To be well and happy, strong enough to help others and to keep so day after day, has seemed in my case sufficient proof that Christian Science does all that Mrs. Eddy claimed for it. All my life I had lived in bondage to the belief that I had inherited a frail constitution. In the study of Christian Science I gradually awakened to a perception of the "inheritance incorruptible, and undefiled," and a great burden of fear has been removed, for which my gratitude is beyond expression.

Recently I experienced what seemed to be a very serious case of infection, supposed to be caused from not protecting a slight cut on the finger while nursing my father during a protracted illness. I was away from my own home and surrounded by relatives and friends who were not at all in sympathy with Christian Science, and who did not approve of leaving to it what seemed to them such a serious condition. The healing was accomplished by absent treatment, the practitioner being five hundred miles away. Even when the finger was swollen to more than twice its normal size, there was almost no pain. The thought came that in order to avoid serious results the finger should be lanced, but thanks to a testimony heard many months before, I was able to see plainly that no hand had produced the condition and no hand was required to remove it. Only a process of true thinking could possibly remove discord which was entirely the result of false belief.

The finger opened twice of its own accord, and at the end of two weeks much of the old discolored skin had peeled off, revealing the perfectly healed finger beneath, with absolutely no sign of a scar. I had kept it covered in order to avoid attracting attention, and continued to do so until all of the discolored skin was gone. My husband and I really took the healing for granted, as we had become so accustomed to the sure results of Christian Science treatment; but we have been aroused to a keener sense of appreciation of this particular healing since learning of the experience of a relative who at the same time, and with apparently the same trouble,

Digitized by Google

suffered many weeks of agonizing pain under the care of two excellent surgeons, having had the finger lanced four times and finally amputated. As we realize what we have been spared we exclaim with the psalmist, "Who is so great a God as our God?"

The physical healing is sure to come to the student of Christian Science, and it is cause for great rejoicing; but the joy unspeakable comes from the fact that we are daily able to prove many times, even in the midst of seeming confusion and discord, our beloved Leader's statement, on page 506 of Science and Health, "The calm and exalted thought or spiritual apprehension is at peace."

IDA N. LOCKWOOD, Kansas City, Mo.

✦

Christian Science came to me with help, just like the good Samaritan of old, at a time when I was a physical, mental, and moral wreck. Having been afflicted during my life with almost every disease it is possible for one man to have, and having been a believer in *materia medica*, I had spent a great deal of money in doctors' bills and medicines with no permanent relief. Three of the ailments which had a strong hold on me were rheumatism, stomach disorder, and sleeplessness, with which I had been troubled for years; and added to all this I became a slave to the liquor habit. Owing to the hold the desire for drink had on me, I became separated from my family; and for a year before coming into Science I was unable to do any work.

At this time a friend mentioned Christian Science to me, and as I had been given up by the doctors, I decided to give it a trial, and therefore went to see a practitioner. He gave me a treatment, and that night I had a good sleep, and I felt refreshed the following day. Having made up my mind to look into the matter thoroughly, I studied earnestly day after day, although it was a difficult task, as I am a foreigner and at that time, eight years ago, was not very familiar with the English language, but I kept on working and studying, and discovered that Christian Science fulfilled all my hopes. I sought relief from all my troubles and found it. Christian Science meets all my needs, both spiritually and materially, and has made a new man of me. For this wonderful regeneration I am thankful to God, and grateful to our Leader, Mrs. Eddy, who has shown me the way.

CHARLES W. ROSENIUS, Chicago, Ill.

✦

It is now two and a half years since I first learned of Christian Science through a neighbor who had been wonderfully healed by its treatment. At that time our little girl, an only child, was suffering from bowel disorder, for which we were continually administering drugs. She had also undergone an operation for nasal growths, and the attending surgeon had told me that she would have to endure another and possibly two more similar operations. I told my neighbor these things, and he said, "You read the first and second chapters of Genesis, and learn your birthright."

After that I quit giving my child material remedies and determined to trust God, with the result that she was perfectly healed, and has never had the other predicted operation or any return of the troubles. Under Christian Science treatment she was also healed of diphtheria in its worst form. The third day after the practitioner was called the fever broke; the fourth day she sat up in bed and played with her toys; and the fifth day she went out to the table for her dinner. This was on Sunday. On Wednesday evening I went to meeting through a terrific storm to give thanks to God for His love and power demonstrated to us. At another time my daughter suffered a fall, which resulted in concussion of the brain. Her father evinced much fear and hurried for a doctor; but the child refused to take the medicine which the physician prescribed, and the same neighbor that had interested me in Christian Science, told me that now was a favorable opportunity to prove the efficacy of Truth's healing power. A practitioner was called, and in fifteen minutes the child was sleeping normally. When she awoke, she sprang up in her crib and with a laugh said, "There is nothing the matter with me, mama."

When I took up the study of Christian Science I was abnormally fleshy and was growing more so. I also had five abnormal growths, and hemorrhoids which my physician pronounced incurable without an operation; but under Christian Science treatment I was made perfectly whole without the aid of surgery, and have remained so.

Since coming into the truth I have received manifold blessings and have experienced a great spiritual uplift. I have also been enabled to help others break the bonds of erroneous thinking. In January, 1912, I was asked to treat a lady in Akron, Ohio, for tuberculosis of the bone. Her doctors had said that she could not live more than three weeks; but in two weeks from the time treatment was begun she went to church with her sister and gave the testimony of her healing. I did not see or know this lady until two months ago, when she moved here. This demonstration proves that time and distance are no obstacles to Spirit. This healing has also been permanent.

For all these blessings I am grateful to Mrs. Eddy, whose wonderful discovery of the Science of Christianity made them possible. Jesus said, "Ye shall know the truth, and the truth shall make you free."

IDELL SCHOONMAKER, Lexington, Ky.

✦

I have often had a desire to make public what Christian Science has done for me, but I could not tell of all my blessings. Some five years ago I had an abnormal growth. At that time I was living in Omaha with my daughter, and she wanted me to try Christian Science. I began to take treatment, but did not get any better while there. Later on we went to Los Angeles, Cal., where I resumed treatment, and in January, 1910, I was healed. In the spring of the same year I went back to my old home in Iowa, where there were no Scientists. In the following autumn I returned to California, this time to Palo Alto, feeling that I needed help for something else that was troubling me.

That winter I was taken ill with very serious bowel disorder, and again I turned to Christian Science and was healed. I have enjoyed the best of health ever since. I am now seventy-six years old, and people often remark upon my good health and vigor. I study the Lesson-Sermon faithfully, have the *Sentinel*, and sometimes the *Journal*.

ELIZABETH ALBERSON, Sigourney, Iowa.

I would like to verify the above statement of my mother, and I would also say that for these and many other blessings received we are more thankful to God, and grateful to Mrs. Eddy, than we have words to express.

JOHN ALBERSON, Palo Alto, Cal.

✦

It is seventeen years since I heard of Christian Science, and twelve years since I first had a practitioner treat me. I have received treatment from the same practitioner several times since then, and have invariably experienced almost immediate relief. When I applied for treatment, the Scientist

Digitized by Google

said I should get a copy of Science and Health and study it with the Bible. This I did before leaving Austin, and I continued to read these books every day, and also at night. I am still studying, and expect to do so in the future. I have never received class instruction, but by reading the Bible and our Leader's writings in explanation of it, I have been helped many times. I realize that God can and does heal the sick.—Mrs. E. K. Hampton, Austin, Texas.

✧

[Translated from the German]

I feel that I cannot refrain from giving my testimony. In 1911 I met with an accident, a motor-cycle running into me. According to the testimony of eye-witnesses, I was thrown against the curbstone. I sustained severe internal injuries and contusions of the feet. As there was no one at home except my twelve-year-old daughter, the manager of the house thought it best to call in a physician, who made an examination and gave his instructions. Soon afterward, when my oldest daughter came back from the office, I requested her to go to a Christian Scientist and ask for treatment for me, since the daily study of the Lesson-Sermons had left no doubt in my mind as to the truth of the Biblical statements in regard to healing. With two treatments I improved perceptibly, and in a week's time I was able to attend to my household duties.

I am deeply thankful to God, who heals all our diseases and bestows His benefits upon us, and I am also grateful to our beloved Leader, Mrs. Eddy.

Frau M. Sauermann, Berlin W., Germany.

✧

I feel it my duty to contribute a testimony of the healing power of Truth. As I have rejoiced in the testimony of others, may some one rejoice in mine. Words cannot express my thankfulness to God, and my gratitude to our Leader, who discovered this healing truth of Christian Science.

I had suffered for eighteen years from female troubles, stomach trouble, and severe nervousness, besides other disorders. My relief came slowly, but I can say that through Christian Science I have been lifted from sickness to health, from sorrow to peace, from darkness to light.

Bertha Dowd, Oroville, Cal.

✧ ✧ ✧

[Written for the *Sentinel*]

In the Mountains

GWENDOLYN THOMAS

I heard a lonely shepherd wind his horn
Upon the stillness of an alpine morn,
And heavenly fantasies from rock and dell
Poured down in echoes to his humble cell,
As though upon some organ strange and fair
A seraph played, in the pure upper air.
So music waiteth, thought I, from the dawn
Of earth's first hour, the call of man forlorn,
A symbol of the harmony that sways
Beneath, around, about us, all our days;
Only men hear it not, or do not know
The path up to the mountains from below.
There was a time, when out of very hell
I lifted up my eyes and heard Truth tell,
Up in the hills of heaven, how all is well.
Then I, who dreamed in dreaming sleep alway,
Awaked and sought the heart of Love, to pray.
And He a shepherd down the mountain sent
To guide my steps, because I darkling went,
Who brought me where I heard Truth's music blow
Among the hills of Life, sweet, soft, and low.

From Our Exchanges

[*The Christian World*]

When we fully recognize our responsibility for all our words and actions, then it will be a good thing if we can say of any wrong we have done: "It was not on the main line of my character; the deepest and the best in me, and that which I most want to realize, condemns it." That will lead to bitter weeping, but clearer vision and steadier life will follow. Peter will know his denial as a thing to repent of and to leave behind; and this same Peter will stand like a rock against heavier temptations later on. He who said to the maid, "I know him not," will stand before the Jewish council and say, "We cannot but speak the things which we have seen and heard." While it is important that we should not try to shuffle out of our responsibility, it is also important that we should not despair of victory.

Our religious faith is that we were made for God and for goodness, and that they must claim us through all falls and failures. We can make that life our own in which God is working out the contradictions, taking away the blemishes, and weaving all into harmony and beauty divine. The Christ whom Peter denied drew him back into service, and took the weakness out of him. There came a time when that same Peter, from the heights of victory, rang down encouragements upon men who were "in heaviness through manifold temptations." Whatever may have happened to us of fall or failure, we must revert to our standards, get back to our Christ, and in the "service royal" remain to grow strong and steadfast, with Christ to conquer, with God to live forever.

[*The Advance*]

Joseph and Mary supposed that Jesus was in the company [when they were returning from Jerusalem]. They did not look so as to be sure. They were having so much else that needed attention, were having so good a time with old friends, that they took for granted the presence of the Christ-child. And he was not there. They awoke to the bitter discovery that he was missing.

They had other things to attend to. They had come a long journey and were about to return. They had to say many farewells, make several purchases, perform several neglected social obligations, and do all the last things that must be done before such a departure; but they overlooked the one supremely important interest. The Christ who had come to abide with them twelve years before was their one most glorious responsibility; and him they forgot,—not for very long, but long enough to lose him.

Men do the same still. They have so many interests, and many of them good and important. They cannot be thinking of religion every minute. Before they know it they have lost it among the baggage. It has come to be one of many miscellaneous interests, as important as many others but not more so. Then in some fatal moment they let their faith get mislaid, and in the hour of need it is not there.

[Rev. Vivian T. Pomeroy, B.A., in *The Christian Commonwealth*]

The persistence of the influence of Jesus upon mankind is one of the most astounding facts we can face. There is something inescapable in the power for which his name stands. During the centuries which have passed since his words were spoken and his works were done, creeds claiming his authority and sects claiming his name have multiplied, and still they continue to multiply. They differ from, and even war against, one another; yet they all refer themselves to what Jesus said and was nineteen centuries ago. One might have thought

Digitized by Google

that today the world would be so sickened by the division and strife associated with the name of Jesus that men would try to forget his story and sayings, and find an altogether fresh ground. But no! Many of the wisest and most earnest men of modern times are working to uncover the meaning of his personality and message, believing that hitherto this meaning has been only partly understood, and that in its clear truth it still offers the open secret of human welfare and happiness. Even when men today express contempt for the church, they are careful to explain that the church has been untrue to the teachings of its Master. The most unlettered and the most learned unite to find in the fact of Jesus their supreme interest and hope. There is something seen in him which makes a common center for people of all times and classes.

[*The Universalist Leader*]

Over and over again men have felt unrest welling up in them, until it has overflowed the banks of peaceful rivers of life and has flooded whole continents and nations. A thousand times has humanity reached forward to pluck the golden fruit of an earthly paradise, only to find that all is not gold that glitters. The world is strewn with the ruins of civilizations which have been cast aside because they did not satisfy the spirit in man. Each of these civilizations marks a spot where humanity planted its hopes and grouped its anticipations in the vain belief that when once established there the race would find its paradise. Alas, each memorial to this futile hope was corroded by the ages as the world moved on. Some of these monuments stand today where the simoom of the desert drifts the piling sand about it, or where in the fastnesses of the hills only the screeching owls or howling wolves break the awful monotony of silent desolation. Such is the story of man's endless search for peace in his long journey through the world.

[*The Watchman-Examiner*]

The work of evangelism in the present day is not so simple as it appears upon the surface, for false notions have arisen as to the meaning of Christianity and as to the method by which men become Christians. Sacramentarianism teaches that men become Christians by submitting themselves to external ordinances. Ecclesiasticism says that the way to salvation is through the portals of the church. There are others who believe that Christianity is a matter of the intellect, and that men become Christians as they become evolutionists, by giving the assent of their minds to a certain system of truth or philosophy. There are still others who believe that men become Christians by an earnest effort to follow in the footsteps of Christ, forgetful of the fact that it is the assimilation of Christ rather than the imitation of Christ that makes a man a Christian. The work of evangelism is therefore complicated, and much rubbish must be cleared away if men are to be brought to the knowledge of Jesus Christ; but this is the very task to which the church should give itself with boundless enthusiasm.

[*The Continent*]

If one has only a very little of the spirit of Christ, and by much struggle succeeds in working up to the point of forgiving some slight from a careless friend, he is almost sure to count it a mighty achievement and inform his neighbors of his victory, expecting praise and congratulation. But a man saturated with the spirit of Jesus will overlook, cheerfully forgive, and utterly forget a long series of really malicious indignities, and never give a second thought to his generosity; in fact, he won't even realize that it is generous. For any man to be highly appreciative of his own piety is a sign that he has not any very great amount of piety. If he had a liberal supply of it, he would not think it a matter of remark.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 15 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The general leasing bill for oil, coal, gas, phosphate, potassium, or sodium deposits has been ordered favorably reported by the House committee on public lands, but is still under consideration in the Senate committee. Of the bill Secretary Lane says:

"The bill provides for the opening of the coal lands of reasonable in the public domain now largely withheld from use. Vast areas of coal and oil lands have been withdrawn from entry to save their exploitation by monopoly. Great national stores of phosphates and potash, needed for our agriculture, developed to the greatest advantage of the people, are withheld from use. The present laws [illegible] the people of the United States. The people [illegible] and [illegible] the [illegible] [illegible] [illegible]

What Constitutes Friendship?

M. G. KAINS, M.S.

In one of the New York daily newspapers there recently appeared an editorial concerning "the harm that is done by our friends." The editor has taken as his text a quotation from an Italian writer, who several centuries ago declared: "Man is commanded to forgive his enemies. Nowhere is imposed on him the far more difficult task of forgiving his friends."

In developing his theme the editor has made some statements which accord in some degree with the teachings of Christian Science, more especially as follows: "How little your enemies can hurt you! How little harm they do, even when they try! You are warned against them and on your guard. The world knows they are your enemies, and discredits what they say. It is quite easy to forgive our enemies, for they do us comparatively little harm; but to forgive our friends would be hard indeed if we could realize how much harm they do us." In these words the writer shows that he has held to "the street" definition of the term friend, for he illustrates these sentences by popular examples which show that the drunkard is dragged down and the ambitious young man is prevented from attaining success by his so-called friends.

From the standpoint of Christian Science neither the enemies nor the friends in such cases are persons, though persons may seem to manifest friendship or enmity. In the article "Love Your Enemies" (Miscellaneous Writings, p. 8) Mrs. Eddy queries, "Can you see an enemy, except you first formulate this enemy and then look upon the object of your own conception?" The word friend as applied by the writer quoted can be substituted for enemy with equal propriety. Each is a mental concept manifested more or less by persons. Nothing could be more succinctly stated concerning the true concept of enemy than Mrs. Eddy has declared on the page above referred to: "Simply count your enemy to be that which defiles, defaces, and dethrones the Christ-image that you should reflect. Whatever purifies, sanctifies, and consecrates human life, is not an enemy, however much we suffer in the process." These sentences may with equal propriety be recast to state the true idea of friendship, thus: Whatever purifies, sanctifies, and consecrates human life, is a friend, however much we may suffer in the process.

Every student of Christian Science who has had opportunity to put these rules into practice, has proved their efficacy in eliminating enmity from his thoughts. In proportion as this has been accomplished, and his heart has been filled with love, the manifestation of enmity in persons has become less and less frequent and distressing, and the true idea of friendship established in their thoughts has resulted in the manifestations of friendliness by countless people and in most unexpected ways,—little kindnesses have been done by strangers, acts of courtesy by people who apparently had no manners, nuggets of piety revealed by the most unpromising-looking persons; encouragements, warnings, praises, corrections; in short, loving-kindness from all quarters.

An instance that will illustrate the folly of establishing enmity, and also the importance of learning to love one's enemies, may be cited with profit. A young man who held a good but secondary position, believed he had occasion to doubt the sincerity of his senior in office; but instead of giving this man the benefit of the doubt and asking an explanation, he allowed enmity to seize upon "trifles light as air," with the result that an altercation arose and he was obliged to resign his position and seek another. In his new field of labor he became interested in Christian Science and found it to be the religion he had desired from his youth up. After studying Science and Health for three or four months, his mental attitude became so completely changed that he was prompted to write his former "enemy" a letter of apology with a request for forgiveness. The apology was gladly accepted and the forgiveness freely granted. Some months later the two men met, and such had been the change due to the rectification through Christian Science, that they shook hands and conversed with the utmost cordiality. Better still, there has since been no return of the former animosity, but each has been able to help the other in business and social ways, and has taken pleasure in so doing. All the time these men were meaning to be friends, but mortal sense had come in to reverse this relation temporarily, so that they probably thought of themselves as enemies; but as soon as the source of enmity was drained and refilled with love, their friendship was established.

Christian Science begins a work of rectification in the mentality of every one who studies it honestly and applies its rules intelligently. It presents the divine image as the ideal which every man and woman is capable of bringing into manifestation, even as did "the man Christ Jesus." It teaches the student how to recognize the Christ-idea in himself and in every one with whom he comes in contact; or, as St. Paul puts it, "Christ in you, the hope of glory." Christian Science does even more than this, in that it formulates the rules whereby this Immanuel, God with us, can be manifested by whosoever will apply them. And upon the basis of proof through the exhibition of increasing Christlikeness, it predicts the steadily approaching advent of that kingdom of heaven to which prophecy has so assuredly referred. The appreciation of what constitutes the fatherhood of God and the brotherhood of man as revealed by this new-old religion, enables each student to establish in himself and to recognize in others the Christ-image which this fatherhood and brotherhood necessarily imply. This being realized, old things do indeed pass away, and all things, including our relations with our fellow men, are made new.

The Calendar of Mind

LUCY HAYS EASTMAN

The Scriptures imply that Truth is God and lives forever. Thus the duration of Truth can never be measured and all of its ideas must have a like existence. Life also is of endless duration; its continuity is dependent upon neither matter nor time. To suppose, then, that a certain number of the earth's revolutions measure life or register its beginning and ending, is as irrational a mistake as to suppose that

Digitized by Google

the multiplication of numbers could in any way exhaust the basic law of mathematics. In Christian Science the continuity of being has nothing to do with solar days or years, nor do mortal calculations of time affect the substance of life, or cause it to pass through different stages, periods, or forms of material development.

Real life is a state of conscious harmony. Do harmony, love, goodness, honesty, and other attributes of Mind which man reflects, wear out because of age or time, and are their manifestations and activities registered by the stars in their orbits? No; and neither does the life of which these mental qualities are the essence deteriorate or cease according to solar revolutions. In Science, Life's ideas remain undisturbed by "the clanging bells of time," and all the material ages put together can date neither a beginning nor an ending of man's true being. In the immortal years of God's child there is neither age nor youth, neither time nor circumstance to be recorded, for life is found to be the endless duration of Truth, the continuity of its activity.

According to the calendar of Mind it is always day, and there is no night, no darkness, doubt, or fear to overshadow the irradiance of Life, because in divine Science the light of intelligence is ever shining. Real days and real years, then, are the records of the impressions of Truth upon uplifted consciousness, the unfoldment and activity of spiritual law. Verily, a thousand solar years is to infinite Truth only as a day,—a state of consciousness in which may be revealed an understanding of such facts as would perhaps take a thousand years for the human mind to discern. As we enter upon such a day as this, the errors of yesterday may be put behind us a thousand years, until eventually we learn that these same errors never really existed, and therefore were never dated.

How sharp the contrast between this calendar of Mind and the calendar of time! The one depends upon the permanency of Truth, the other upon the imaginary activity of material law; the one records the divine events of Love, the other the fleeting dreams of mortal sense; the one leads to immortal life, the other to old age and decay. "The periods of spiritual ascension," we read in Science and Health, "are the days and seasons of Mind's creation, in which beauty, sublimity, purity, and holiness—yea, the divine nature—appear in man and the universe never to disappear" (p. 509). Clearly, then, it is the unfoldment of good in the individual consciousness, and not periods of time, which marks our growth and registers the days and years of Mind.

The use of this calendar in human experience might be illustrated by the Christian Science Lesson-Sermons. These Sermons deal with a given subject every six months. During this interval it is fair to assume that every earnest student has ascended to a higher state of spiritual discernment, if he has thoroughly assimilated and applied each intervening lesson, and is thus prepared to receive a new and clearer light when yet another aspect of the subject is presented. In this way, revelation and reason awaken the heart to a realization of God which leads to an ever-increasing expression of harmony in human experience. Such are the days in which there is no hurry, no driving sense of necessity, no tumultuous rush to accomplish something in a given time. Instead, they are the days which, when multiplied, disclose to man the fact of immortality, wherein his life is found to be wholly dependent upon the laws of Spirit, not matter. They are the days that record the deeds of good, and prove that the more Truth is loved and obeyed by the human heart, the more life that heart receives and the more the endless continuity of being is demonstrated. They are the days in which growing older simply means coming into a fuller, deeper understanding of Spirit, which in turn brings to human consciousness the freshness of love, the rejuvenation of hope, and the reconstructive activity of pure Mind.

Why then should it be thought incredible that existence is eternally continuous? Rather let us turn from material sense, which limits all things with its finite measures, and look into the vast forever. Then will the new year that never ends be born today in our consciousness. Then will we exclaim in fervent praise, O infinite conception of spiritual sense, what are countless ages in thy sight! and sympathetically understand these words of the prophet: "Why will ye die, O house of Israel? For I have no pleasure in the death of him that dieth, saith the Lord God: wherefore turn yourselves [from matter], and live ye."

Song of Truth

ALMUS PRATT EVANS, M.D.

SOME two years ago, while in one of the larger towns of Missouri, the writer met a Presbyterian minister who resided there. The introduction came through a Christian Scientist, who said in a jocular way, "This is another one of those heretics." The conversation turned quite naturally to the subject of religion and the church, and during the course of his remarks this minister said: "The religions of the world have been largely overridden and bound down by creeds and dogmas. The children of Israel had a creed which was continually repeated by them, and it became dry and tiresome, but they had no song to sing. During the early history of the Christian church it was entirely free from creeds and dogmatic influence; but after the first few centuries creeds began to creep in, and for hundreds of years the members of the various Christian denominations have been saying their creeds, though they have had no song. Christian Science came singing a song which is attracting hundreds of thousands to its fold."

What a blessed truth is here voiced! Christian Science is a song of freedom, a song of Life, Truth, and Love, which is freeing all those who are accepting its teaching. It is the same song which, when sung on the shores of the Galilean sea, healed the sick, gave feet to the lame, sight to the blind, hearing to the deaf, cleansed the leper, and raised the dead. For many centuries it seemed as though this song had been irrevocably lost, but there finally came one whose hearing was so acutely attuned to the voice of Christ, Truth, that she caught the refrain, and it may be well said of her, that for this cause was she born, to give again to the world the Master's message of truth. At first, no doubt, the tones were indistinct and scarcely perceptible; but by patient, prayerful adherence to Principle she heard the glad tidings of great joy, and gave it to the world. In Science and Health (Pref., p. ix) she tells us (quoting from a certain poet) that she "'lisped in numbers, for the numbers came.'"

It has been less than a half-century since Mrs. Eddy heralded this song of redemption to the world, and in this relatively brief period it has conveyed this message of "on earth peace, good will toward men" to the people of many tongues and nations. Today the benign influence of Christian Science is being felt in all the greater activities of life. If it were in any way possible to weigh or measure this influence, it would greatly astound even its most ardent supporters.

Christian Science is teaching the world that the golden rule is not a dead letter, but is for our personal guidance in every activity and relation. It is giving to the world a more perfect understanding of "God and His Christ," as it is reiterating the fact that "the kingdom of heaven is at hand."

Digitized by Google

It is the little leaven of which the Master spoke, which is leavening the whole world, healing the sick and regenerating the sinner. Jesus rejoiced over the recovery of one who seemed lost; and in Science and Health (p. 568) Mrs. Eddy says: "For victory over a single sin, we give thanks and magnify the Lord of Hosts. What shall we say of the mighty conquest over all sin? A louder song, sweeter than has ever before reached high heaven, now rises clearer and nearer to the great heart of Christ; for the accuser is not there, and Love sends forth her primal and everlasting strain."

"Passing through the midst of them"

KATE W. BUCK

WHEN, after the temptation in the wilderness, Jesus returned to Nazareth, and, upon going into the synagogue to read, claimed that the words of the prophet Esaias were that day fulfilled in him, it aroused the wrath of those who heard, that he should claim with so great confidence such mighty things for himself. Was not this the carpenter's son? Had he not grown up among the other boys of Nazareth? Was he not one of them, and quite as humble in origin, education, and environment? Without "honor in his own country," and despite the evident resentment of his auditors, Jesus continued to affirm that he was, in truth, the one sent to "heal the broken-hearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised." Marveling at his gracious words, even though incensed by them, the record tells us that they, with human emotions of jealousy, envy, suspicion, and malice seething in their thoughts because he claimed superiority to them, his own townspeople, "thrust him out of the city, and led him unto the brow of the hill whereon their city was built, that they might cast him down headlong." But we further read that he passed through the midst of them and went his way.

The very simplicity of the latter statement brings with it a sense of power and confidence that gave to the writer, when she read it in connection with one of the Lesson-Sermons, an illuminated perception of the quiet grandeur and dignity of the Nazarene as, saying nothing, fearing nothing, he quietly, steadily, safely went his way, knowing who it was that went before him. Undisturbed by the attempt to destroy him, or the treachery of those who, humanly speaking, should have been his most devoted supporters and friends, he went about his Father's business, serene in the consciousness that His will would in any case be done, and that there was no other will. Alone with God was this true child of His, absolutely at-one with the power that produced him; hence, he feared neither scorn nor misunderstanding. How often the human cry goes out: "If people only understood me! How can I endure to be so misjudged and misunderstood!" Yet Emerson writes in language clear as crystal: "Is it so bad then to be misunderstood? Pythagoras was misunderstood, and Socrates, and Jesus, and Luther, and Copernicus, and Galileo, and Newton . . . To be great is to be misunderstood."

Jesus came to Capernaum, and wholly unshaken by what would have been a severe ordeal to most men, spoke to the people there with such power that "they were astonished at his doctrine." Beginning his healing ministry even in the synagogue, in fulfilment of the prophecies which had been made concerning "he that should come," he went his way without question, and it was the way of gentleness, peace, love, and rightness. Continuing to heal those that were "sick with divers diseases," what a sense of assurance and courage comes to us as we read the simple unembellished words, "He laid his hands on every one of them, and healed them." It mattered not to him what the form might be in which evil vaunted itself, or in what manner of man expressed,—it was just a lie, because not of God, without whom nothing was made that was made. The narrative states too that the "devils" as they departed from many, cried out, saying, "Thou art Christ, the Son of God." They knew (to continue the personification of evil) that he was the Christ, the truth, before whose power they must needs go down. Knowing, therefore, that their time was short, the evils, one by one, left those that they had seemed to hold in such fearful bondage and, sometimes throwing down the one tormented, and sometimes crying "with a loud voice," they none the less disappeared and "hurt him not."

Ever passing through trials, persecutions, desertions, "a man of sorrows, and acquainted with grief," yet rejoicing because of the faith that was in him, the glorious, steadfast Master of us all went his way,—"the best man that ever trod this planet" (Science and Health, p. 364),—though that way led him to the cross on Calvary. Even there he trusted the one power by which he had been guided through every troublous situation, to win his victory. Surely a knowledge of the glory to be revealed sustained him in this supreme test of his career, to be revealed not only to him but to all those that believe on him and listen to his earnest bidding,—"I am the way," "Follow thou me." No complaints, no regrets, no looking back with a sense of self-pity that he had endured so much, but just "Thy will be done;" and later, free from all thought of the ingratitude, treachery, and jealousy that had brought him where he was, he prayed with sublime self-forgetfulness for those who most needed that for which he prayed, a realization of the infinite, universal fatherhood of God,—"Father, forgive them; for they know not what they do." Was there ever such forgiveness, ever such complete setting aside of the human self?

All those who believe on the Master are commanded to follow and obey. Then indeed are absolute consecration and watchfulness demanded, as Mrs. Eddy so well knew, if we are even so much as to touch "the hem of his garment." Yet listen to the wondrous promises: "Greater works than these shall he do; because I go unto my Father." "I have overcome the world." "Lo, I am with you alway." Awed by the sublimity of such self-effacement and unchanging love; realizing, even humanly, the recompense and reward so indisputably belonging to such complete renunciation, one likes to look beyond the scene on Calvary to the resurrection morning, when the stone was rolled away and the risen Christ was revealed to those who sought. Also to the glory of the ascension when, every remembrance of materiality left behind, Jesus disappeared from the wistful gaze of those who still saw with imperfect vision; and what a solace it is to read that he said, "And I, if I be lifted up from the earth, will draw all men unto me"! All men, he said, and he never spoke vainly; so that universal salvation, accomplished by the setting aside in each individual consciousness of all false material beliefs, is to be achieved.

It is something even to have started toward our Father's house, to know that He comes to meet us when we are a great way off; and that the forgiving love of God is always at hand when we really seek it. Truly we none of us know what we do when, blinded by human opinions, we entertain, if only for a second, a thought of suspicion or condemnation toward a brother man. "Ye know not what manner of spirit ye are of," Jesus once said to his disciples, and it is to awaken mankind to a realization of what they actually are, here and now, as "sons of God" that Christian Science stands. Acting as a leaven, it is steadily working to turn humanity back from the long search for happiness and health in material things,

Digitized by Google

to the deep things of the Spirit. Here alone salvation lies from all the evil doubts and fears that spring from a belief in a power apart from God.

There is, then, a sure rule for him who would follow the Master (forgetting those things that are behind, and turning away from the perishable things of matter to the imperishable things of Spirit), and it is this: Pass through the midst of them and go thy way. Though jealousy, malice, hatred, envy, suspicion, and their kind, raise their heads to hiss and sting and overthrow, still go thy way unscathed. They have no power except as you fear them. In the book of Isaiah these words are found to strengthen us: "No weapon that is formed against thee shall prosper; and every tongue that shall rise against thee in judgment thou shalt condemn. This is the heritage of the servants of the Lord, and their righteousness is of me, saith the Lord."

"My presence shall go with thee." Clearly conscious of that omnipotent presence, one can be cognizant of nothing else; and it goes without saying that what one is not conscious of does not and cannot exist for him. Through the very midst of error, recognizing only spiritual being, for others as well as for himself, one can see false consciousness at the coming of the true, even though it cries out at recognizing its master, vanish utterly, as all lies must when they are no longer believed in.

Unfettered Truth

JULIA WARNER MICHAEL

SITTING in a Christian Science service one Sunday morning, the writer heard the words, "uncontaminated and unfettered by human hypotheses," read from *The Christian Science Quarterly* (p. 4), with a new and enlightened understanding. Then and there was unfolded the consciousness that not only on Sundays do Christian Scientists listen to a sermon "uncontaminated and unfettered by human hypotheses," but every time they study the Bible and their textbook, "Science and Health with Key to the Scriptures," every time divine Mind spiritually interprets for them a Bible text, they are listening to "divinely authorized" statements of fact. What a blessing it is to mankind to find the truth of being freed from the fetters of mortal interpretation!

In proportion as we listen daily and hourly to such sermons and seek honestly and earnestly to reflect their teaching, we can pass through daily experiences along the path of life feeling the joy and dominion of God's offspring, instead of yielding to the belief so widely held, in some form or other, that this situation or person or climatic condition or family circumstance fetters our efforts toward better things. Surely the phrase above referred to is a declaration of independence to all the inhabitants of the earth. Its contemplation and mental digestion will eliminate from many lips the all too frequent utterance, "I could be a better man [or woman], a better Christian Scientist, if conditions were different, if it were not for my family, if my bringing up had been different," with all the other "ifs," which in fact are but rusty fetters forged by a false sense of intelligence and ready to break and release their victims at the first blow of Truth.

Since power belongs unto God alone, and God is infinite good, His reflection, man, must express unvarying harmony, which never stirs before the storm, never breaks under the blow, never fails in times of temptation, but before whose serene majesty all error cowers and disappears. Mrs. Eddy tells us that man's "birthright is dominion, not subjection. He is lord of the belief in earth and heaven,—himself subordinate alone to his Maker" (Science and Health, p. 518). With this consciousness ever alert, matter and mortal mind can no more fetter man's progress than can a leaf imprison the wind; evil beliefs can no more contaminate him than can dust soil the stars.

On page 227 of Science and Health our dear Leader has most earnestly called our attention to this privilege of understanding in the words, "Citizens of the world, accept the 'glorious liberty of the children of God,' and be free!" As we obey this behest, our daily lives will surely become more and more sermons "undivorced from truth, uncontaminated and unfettered by human hypotheses, and divinely authorized."

✧

Christ

JOHN E. FELLERS

ON page 583 of Science and Health Mrs. Eddy defines Christ as "the divine manifestation of God, which comes to the flesh to destroy incarnate error." This manifestation is as old as God. It is because God is. It is the constant and eternal truth about God. If it should cease to be, the universe would at once become extinct. It can never be uncertain or variable. It is endless, deathless, infinite, eternal as God. If it were thinkable that at a certain moment away back in the day-dawn of time God began at that moment, Christ, God's manifestation, also began.

The sunshine, that common phenomenon of daily observation, is the manifestation of the sun, and corresponds with Christ, the divine manifestation of God. The sunshine comes to the physical world, wooing the frozen buds out of winter into blossom, and bloom, and fruit. Sometimes quickly, but often slowly, the buds yield to the winsome call of the sunshine, and at last the earth gives its harvest answer. If the buds had refused to accept or hear this beneficent call, or had sought other means by which to express their messages of beauty, perfume, and fruit, there had been no harvest answer, no more seed-time.

In a kindred way, Christ, "the divine manifestation of God," comes to sick and sinful humanity, dissolving its doubts and its fears, healing its woes; and men and women of all nations and races come forth from the winter of discontent and suffering, regenerated, harmonious, blessed, as naturally as the frozen buds unfold into bloom and fruit.

[Written for the *Sentinel*]

Truth's Ministry

D. E. JACKSON

I SOWED a little plot of life with weeds,
Nor ever dreamed that they would bring me sorrow,
But fateful winds arose and blew their seeds
Far out across the fields of my tomorrow.

O life! how brief the hours my hands did sow
Those seeds which bore so much of bitter weeping,—
How long the years, how sadly did they go,
Which, unrelenting, called me to the reaping!

Then came a day—a gladsome, golden day—
When one with face alight with Love's bright glory,
Into my hand a little book* did lay
That told anew redemption's sacred story,—

The story of the truth that maketh free
From sin's dark thrall with all its pain and sorrow;
Oh, how its light doth gladden me today,
And free from fear the fields of my tomorrow!

*"Science and Health with Key to the Scriptures" by Mary Baker Eddy.

Selected Articles

[Frederick Dixon in *Camberley News*, Aldershot, England]

A recent article on healing by suggestion raises many points of great interest. I should not, however, ask you to permit me to refer to it, were it not for its references to Christian Science. These references are extremely kind ones, but Christian Science is so far removed from healing by suggestion that I should like to make the difference clear, and to show why Christian Scientists do not believe in and cannot support any such method. The writer points out very exactly and very truly the enormous power exercised by the human mind over the body. In doing this he is, of course, merely alluding to a fact which has been common knowledge, especially in the East, for untold centuries. The human body, it is beginning to be more and more admitted, is nothing but the subjective condition of the human mind; therefore, if the human mind, as he says, determines to awaken itself at a certain hour, the body naturally responds to this determination. It would seem to follow from this that the power of healing lies also in the human mind, but the fact that the body is manifesting sickness is really an indication that the human mind itself is holding the belief of sickness; therefore, in order that the body may be healed, the human mind must be healed first.

Now, what is going to heal the human mind? Not will-power, which is an expression of the human mind, nor the human mind itself, which has accepted the belief of sickness. The Romans, with full-blooded material-mindedness, had a proverb, *Mens sana in corpore sano.* They believed that a healthy mind was the result of a healthy body, and consequently devoted their attention to the culture of the body. Really, as natural science has come to see, this was putting the cart before the horse. The Greeks of Plato's academia would have put it differently, *Corpus sanum in menta sana,* a healthy body in a healthy mind, for, as Professor Symonds and the whole race of idealistic philosophers would state it today, the body is contained in the mind, and not the mind in the body.

The philosophy of Huxley was a compromise between the material philosophy of Locke, itself derived from Aristotle, and the idealistic philosophy of Berkeley, in turn derived from Plato; but he declared that if he were to be driven to take sides either way, he would be compelled to associate himself with Berkeley and the idealists rather than with Locke and the materialists. The weakness of the purely idealistic philosophy, Huxley picked out in the phrase that it must end in "undiluted pantheism." In plain English, it made the first cause, or God, responsible for and conscious of the evil and sickness in the human mind, which was in turn manifested in the subjective condition of that mind, namely, the body. This meant that you had to proceed to cure evil with evil, and sickness with a knowledge of sickness, a fact of which the writer of the Jehovistic document of the book of Genesis was perfectly conscious when he spoke of the fruit of "the tree of the knowledge of good and evil," and declared that the eating of that fruit would produce death. The conclusion of the Hebrew writer is a tolerably obvious one. If the divine consciousness really was conscious of good and evil, believed in life and death, then the death of phenomena could be only a matter of time, and eternal life would be an impossibility. The tree of life, the writer insisted, stood in the midst of the garden, and so the allegory plainly pointed to some other solution of the great problem of evil.

Some of the greatest students of the Hexateuch have pointed out the fact dwelt on by Mrs. Eddy in the text-book of Christian Science, "Science and Health with Key to the Scriptures," that the two principal manuscripts of the Hexateuch, the Jehovistic and the Elohistic, are the result of a varying spiritual perception. The Jehovistic document, Professor Sayce insists, was based on a more materialistic and anthropomorphic conception of creation than the Elohistic, which was in turn based on a more idealistic view. The two documents, he argues, were placed side by side, by one of the redactors of the Hexateuch, with the deliberate intention of contrasting them. As the Pentateuch, or Torah, began to be studied, there grew up the books of the earlier and later prophets, as the rest of the Old Testament came to be called, and the struggle between monotheism and polytheism, between idealism and materialism, began to develop among the Hebrew people. The schools of the prophets produced the great defenders of monotheism. On the other hand, there grew up those other prophetical cults which took the side of polytheism and all its works. The struggle between the two was incessant and uncompromising. When the kings were on the side of the great prophets, the altars to other gods were overthrown, and the groves which covered all the licentious rites of polytheism were cut down. In the ranks of the prophets of polytheism there sprang up the whole race of astrologers, necromancers, enchanters, diviners, *et hoc genus omne.* These wonder-workers claimed to heal through the medium of the human mind, through some process or another of suggestion. Thus, throughout all the days of the kings there went on the struggle between the prophets who relied on suggestion and the prophets who relied solely on the divine Mind or God.

After the return from the captivity, the hosts of necromancers and astrologers gave place mainly to the exorcists, and though the chief priests and scribes condemned exorcism in theory, they shut their eyes to it in practice. The dishonesty of this was manifested in their efforts to discount the healings done by Jesus, which they declared were wrought through exorcism, or as they put it, through Beelzebub. The reply of Jesus, therefore, when he demanded if he cast out devils through Beelzebub, by whom their children cast them out, was overwhelming, and silenced them in an instant. Jesus, however, went on to carry the war into the enemies' country. Alluding to the Torah, which was always on the Pharisees' lips, he revived the statement about "the fruit of the tree of the knowledge of good and evil;" in other words, he demanded how a house "divided against itself" could stand. He was speaking in the metaphor of his time and country, but he was asking how healing could endure which was brought about through the medium of the human mind, a mind itself conversant with and believing in good and evil. His conclusion amounted to an announcement that this was impossible, and so he set his foot forever on the belief that healing could be accomplished through the human mind, torn by passions and animated by fear.

The claim that healing can be effected by mental suggestion comes to this: that it is possible for one human mind to dominate another human mind. Now, if it is possible to suggest good in this way, it is just as possible to suggest evil, and seeing, as the apostle of Taoism points out, that there is very much more of the fruit of evil than of the fruit of good eaten by the human mind, it may be imagined what the result must be. For a time the pressure of suggestion may turn thought into a different channel, but the moment that pressure is withdrawn, the old belief reasserts itself. This is the very antithesis of Christian Science healing, for it demands that the very *fons et origo* of evil shall be attacked and destroyed, and healing thus rendered permanent. This can be done only in proportion as the carnal mind gives way

Digitized by Google

to the Mind of Christ; in other words, by the means Jesus insisted upon when he went on to declare, "But if I cast out devils by the Spirit of God, then the kingdom of God is come unto you."

Jesus saw that a mind instinct with materiality was not going to destroy the materiality in another human consciousness. He saw quite clearly that the only way in which that destruction could take place was in proportion as man gained that understanding of divine Principle which is described in the epistles in a phrase translated "knowledge of God," but which should admittedly be translated scientific knowledge of God. This scientific knowledge of God is necessarily a knowledge of absolute Truth. As this knowledge of absolute Truth comes to the human consciousness, a man gets that knowledge of the truth which Jesus himself declared would make him free, —free from the ignorance of believing in the reality and power of evil. The composers of the Biblical manuscripts, themselves Easterns, writing for an Eastern people, adopted the metaphor of their environment; consequently, as a great commentator of the Church of England has pointed out, they scarcely wrote a paragraph without introducing a metaphor. The result was that they personified evil in innumerable forms, from the serpent of Genesis to the dragon of Revelation, and they impressed into their service a common substantive like the word "satan," or adversary, or an ordinary adjective like the word "belial," or worthless. It never occurred to them that the Western people of another century would take this literally, and that a devil with cloven hoofs and a tail would be embedded in the Christian theology of Europe. Evil to them was a mental phase which could at any time be banished by the understanding of God, or absolute Truth, when a man permitted that Mind to be in him "which was also in Christ Jesus."

Jesus put the whole thing plainly when he declared, "Ye are of your father the devil, and the lusts of your father ye will do," simply meaning that the carnal mind governed those to whom he was speaking so completely that their thoughts were evil, and their actions typical of their thoughts. But he went on to insist, speaking of this same personified evil, that he "abode not in the truth, because there is no truth in him." Convert the Eastern imagery of that sentence to the plain, matter-of-fact English of Western Europe, and what does it amount to but this: evil has no abiding-place in truth, because there is no truth in it and so no reality.

Evil is undoubtedly terrifically real to the human consciousness which believes in the power of the human mind and claims to be able to operate either for good or for evil through suggestion. To the man, however, who has gained, even in some slight measure, the Mind of Christ, evil appears as nothing but the supposititious lie which it truly is, a lie which can always be exterminated by a clearer knowledge of God. The way, then, to make a man physically better is to make him morally and spiritually better. As the human mind surrenders its belief in materiality, sensuality, and selfishness, the body, which is its subjective condition, necessarily and naturally changes with it. The truth has been learned, and with that gathering perception of the truth has come some freedom from a belief in evil and sin, and with this some perception of the reason why Jesus said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?"

✧

[W. C. Williams in *The Laurel* (Md.) *Democrat*]

A sermon on "Jesus, the Teacher and Healer," recently published, contained many points of excellence, especially the contention that man's reasoning did not take the place of inspiration and revelation of God. When the reverend writer claims that Jesus more than once expressed the fear that men might be tempted to make healing the most prominent part of his work, I think he is drawing on his imagination and not on the Bible. Jesus always included the healing with his other commands to those who believed on him, and did not consider it a miracle, but the birthright of all the children of God, to be "every whit whole;" and he declared this truth for all men and for all times.

This does not mean that the healing of physical ailments and diseases was the end and aim of Jesus' work; in more than one instance he told the one healed to "sin no more," indicating plainly that in the last analysis sin is the cause of disease, and therefore if abandoned, health will not be destroyed. He not only healed, but he explained that to preserve health you must know the truth, and the truth will make you free. "Soul-saving" is coincident with divine healing. When the healing is done through the understanding of divine Mind, an impetus is given toward entire salvation. When we heed Peter's advice in his first epistle, we begin to realize that the healing of sickness is but the result of the healing of sin and error. Peter says: "Wherefore laying aside all malice, and all guile, and hypocrisies, and envies, and all evil speakings, as newborn babes, desire the sincere milk of the word, that ye may grow thereby."

✧

[Duncan Sinclair in *Courier and Herald*, Dumfries and Galloway, Scotland]

A recent issue contains a report of a sermon preached not long since by the Rev. Mr. ——. We are interested to observe that he took as his text the command of the Master as given in Matthew: "Heal the sick, cleanse the lepers, raise the dead, cast out devils; freely ye have received, freely give." As far as we can make out, his audience did not seem to get much guidance for their task, but instead a criticism of Mrs. Eddy and what the preacher thought was Christian Science. Let me say that it is the command just quoted which Christian Scientists are endeavoring to carry out today; and the extent of the Christian Science movement, world-wide as it is, is positive evidence that no inconsiderable success has attended their efforts. One is surely justified in thinking that Gamaliel's remark applies especially to men who have the regeneration of mankind at heart: "If this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

We would like to put before your readers certain points which the critic's address raises. And first, let me say that Mrs. Eddy stands a unique figure in religious history today, as the Founder of a world-wide movement, whose adherents are drawn from all grades of society, among whom is a host of men and women of refinement and culture. Like many another, her pathway was far from being a smooth one; she had more than her share of the world's suffering and sorrow, and for years after her discovery of Christian Science was subjected to almost every form of indignity and persecution conceivable; and, strange to say, much of it came from people who called themselves Christians. If one studies her life (and there is an excellent biography of her by Sibyl Wilbur), one finds her to be possessed of an intensely religious mind, which struggled ever against the sense of injustice, evil, and disease, with, however, wonderful sweetness and endurance. It is true that in her search for Truth she experimented widely and variedly. Not only did she exhaust the skill of the ordinary allopathic medical schools, but she even studied and practised homeopathy for a time. In fact, it was the latter that indicated to her the explanation of the so-called power of a drug in the treatment of disease. She reasoned that if results could be obtained on a patient by a "medicine,"

Digitized by Google

the presence of which chemical analysis failed to detect, there must be an explanation of the result outside the generally accepted view.

Mrs. Eddy's association with Quimby, an avowed mesmerist, was of an exactly similar nature. Mrs. Eddy was brought in this case into touch with another "phenomenon of the mortal mind," and for a while she tried hard to find a relationship between these hypnotic results and those healings of Jesus Christ recorded in the New Testament, which so freely testify to the working of spiritual law; but in this she entirely failed. It was later, when she was healed instantaneously from a condition which had been brought about by an accident, and which had been declared incurable by the physician attending her, that the great spiritual truth dawned upon her that sickness had no mandate from God, that it was not created by Him, that therefore there is no law sustaining it, and that consequently it is, in the absolute sense, false. This spiritual perception healed her.

Her trials, her associations with different systems and people, her sickness, coupled with her essentially religious nature, forced her, as it were, to this point; and undoubtedly the Christ, the absolute Truth, came to her finally as a revelation, just as all discovery may be quite rationally looked upon as revelation. Mrs. Eddy based all her teaching on the Bible, and Christian Scientists unreservedly do the same. They are not unreasonable when they use "Science and Health with Key to the Scriptures" by Mrs. Eddy as their commentary upon the Bible, because they have found that this book has illumined it, made it a veritable mine of spiritual knowledge, enabling them to understand as never before the life and works of Jesus Christ, and to such an extent as to enable them to do what he himself did, and asked his followers to do, in the exact measure in which they possess the Mind of Christ. Healings in Christian Science are not faith-healings in the sense in which the term faith is generally used, since not one of them is haphazard or empirical, but entirely scientific, being the outcome of the application of unerring divine Principle. And this Principle may be understood by all who take the trouble to study Christian Science.

The critic takes exception to the position of Christian Science that matter and evil are unreal. Now, one needs to be quite clear as to what Christian Science means in this. It begins by declaring that God is infinite Mind, or Spirit, and that He is infinitely good. As you cannot "gather grapes of thorns, or figs of thistles," neither can Mind create its opposite, matter. Mind is expressed in ideas, and in nothing else; and so matter is not God-created. It is phenomenal sense-perception. Christian Science is not alone in this way of looking at matter. Many of the leading natural scientists today are idealists in much the same way as Plato and Bishop Berkeley were; and there is not a single one of them who does not more or less support some theory of a subtle character such as, say, the electronic, which resolves matter ultimately into electrical energy. They are far removed from the materialism of Herbert Spencer; and perhaps Faraday, great electrician as he was, would have ranked himself with them were he among us now. The idealism of the schools, however, is far remote from that of Christian Science, which adheres to the allness of God and strives to understand everything in its relation to Him.

Christian Science, again, is strictly logical when it adheres to the statement that "evil is unreal" (Science and Health, p. 447). It affirms that God, the infinitely good Mind, did not create His opposite. Then if not, evil can be but false sense entertained as truth. When this is apprehended, one sees how it can be overcome, for that which is unreal in the sight of God can have no permanence or power. Christian Scientists know very well how strangely mortals believe in evil and practise it to their own detriment. It would indeed be a hopeless world if such inharmony were traceable to God, for it would then be real; and surely reality is eternal. Christian Science at the present day is calling forth the most heroic efforts of mankind. The problem its followers have before them is to hasten the coming of Christ's kingdom upon earth, and to fulfil the command, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself."

✧

[Clinton B. Burgess in *Erie* (Pa.) *Herald*]

The right note was struck in the editorial of a recent issue, entitled "The Glad Smile," and it will doubtless have the effect of spreading the contagion of cheerfulness broadcast in our city. Its statement, however, that Christian Scientists have taught the cultivation of cheerfulness by will-power, needs revision, for one who uses the human will-power to produce that or any other effect in himself or others, cannot truthfully call himself a Christian Scientist.

The true artist or musician does not paint or compose by will-power, but from the impulsion of an idea within him that demands expression; and for the same reason the Christian Scientist does not radiate good cheer because he purposes and undertakes to do so, but because he must. It is because his consciousness is filled and illumined with the most hopeful, helpful, cheering idea the human mind is capable of grasping; namely, that on the side of good, of love, of right, of health and happiness, is all the power and law and reality that exist; that evil is powerless where the omnipotence and omnipresence of God is understood and acknowledged; and that as the falsity of evil's claim to power, life, and reality is exposed, it is bound to shrink and shrivel like a mist before the blaze of day into its native nothingness. It is because he understands and is daily proving the grand culmination of the Lord's Prayer: "For thine is the kingdom, and the power, and the glory, forever."

[Written for the *Sentinel*]

"In quiet resting-places"

LUMAN A. FIELD

WITHIN Thy gentle solitudes,
O Love, I come and wait and rest,
Knowing Thy pure beatitudes
Will well reward my weary quest.

Within Thy secret ways of peace,
Where strife and turmoil ne'er appear,
I find a sure, complete release
From sin and pain and anxious fear.

The tempest-beaten heart, dismayed,
Turns hither to this stillness deep,
And hears the words, "Be not afraid,"
For Love His child doth safely keep.

Our faith and hope Thou dost renew,
Our thought Thy presence doth refine,
All mortal sense Thou dost subdue,
Within this stillness so divine.

With doubt removed and vision cleared,
With purpose strong,—with gratitude
I gird myself for service, cheered,
O Love, in this sweet solitude.

Editorial

So-called Preventive Medicine

THE aggressiveness of the demand on the part of the advocates of so-called preventive medicine, that all mankind must, willy-nilly, be brought under their control and subjected to examination, was recently rebuked by *The Evening Post* of New York as follows:—

Whether Dr. Goldwater, or Dr. Biggs before him, or the estimable and distinguished gentlemen who are the backers of the Life Extension Institute Movement, look upon *compulsory* medical examination of all persons as their goal, we cannot positively state. It looks very much as though they did. Dr. Biggs has been quoted as advocating medical examination of all "citizens," which points very strongly that way. No unmistakable statement of such an object has yet been made, so far as we have observed; but we are as yet only in the first beginnings of the movement. Dr. Goldwater's article closes as follows:—

"The next great task of preventive medicine is, therefore, the inauguration of universal periodic medical examinations as an indispensable means for the control of all diseases, whether arising from injurious personal habits, from congenital or constitutional weakness, or from social and vocational conditions."

If we see this in the green tree, what may we expect to find in the dry? Will it be much of a step from "universal" examination to compulsory examination? Will it be much of a step from that to compulsory heeding of the results of that examination? Is there any limit that can safely be set to the extension, not of life, but of the meddling with life, which this whole movement promises?

But it is by no means on the score of legal compulsion alone that the proposal of "universal periodic medical examination" is open to objection. Whether brought about by legal requirement or by the pressure of general opinion, the benefits to health, and the prolongation of life, which it might bring about, would be purchased at a tremendous price. What that price would be it requires some power of imagination, perhaps, to realize, but some idea of it may be obtained from the very facts which Dr. Goldwater adduces. Take but a single one of them. "In a recent examination of the employees of a New York city bank," he says, "100 per cent of the employees were found to be abnormal and on the sure road to diseases of heart, lungs, kidneys, or blood vessels." Very likely this examination will have been the means of stopping the progress of disease in the case of some of these men; but if the fact is as stated, the whole body of them were suddenly converted from a group of normal men, nearly all of whom were doubtless going about their work and their play with no thought of sickness, into a solid body of semiinvalids. Who shall say that the addition of two or three years to the average duration of their existence will outweigh, in the scales which measure real human values, the freedom, the elasticity, the unconsciousness of the trammels of the body, which have been impaired or destroyed by this intrusion?

And even from the standpoint of medical results, in the narrowest sense, there is room for grave misgivings. Not all diagnoses are correct; not all alarms given by medical men are well founded. It may be said in reply that we must do the best we can. So be it. Let every man who feels that he has some reason to suspect that there may be something wrong, get medical advice by all means and get it early. He must take his chance of a certain average percentage of error. But whatever that percentage of error may now be—and it is not insignificant—would be a mere trifle in comparison with what the new program bids fair to furnish. "The task before us," says Dr. Goldwater, "is to discover the first sign of departure from the normal physiological path, and promptly and effectually to apply the brake." With this as the ideal before them, will not the false alarms of the physicians outnumber those of today ten to one, or fifty to one? Will not thousands of persons who might have lived happily and comfortably to threescore and ten before that "first sign of departure" had developed into anything serious, be called upon to exercise care, to be solicitous about their bodies instead of ignoring them, and, in no one knows how many cases, have their lives not only dulled, but actually shortened by hypochondria?

"Those to whom the care of delicate mechanical apparatus is entrusted," says Dr. Goldwater, "do not wait until a breakdown occurs, but inspect and examine the apparatus minutely, at regular intervals, and thus detect the first signs of damage." This is the favorite simile of the health-enthusiasts. But in it are embedded two fatal fallacies. In the first place, the working of a machine is not affected by our concern over it, while our body may be. And secondly, the only interest we have in the machine is that it shall function well as a mechanism; while in the case of our bodies we may deliberately choose to sacrifice perfection of the mechanism to other objects which we prize more highly—indeed, we must do so, at some point or other, if we wish to keep out of Bedlam.

"Universal periodic medical examinations" could be brought about only by compulsory measures, if at all, because it is quite certain that there are thousands, and possibly hundreds of thousands, within the borders of the state of New York, of which state Dr. Goldwater is commissioner of health, who would not submit to medical examination except they were forced to do so. This fact must be well known to persons of ordinary intelligence, therefore there need be no uncertainty about what Dr. Goldwater is advocating. Then the question is whether a majority of the people will stand by and see their rights taken away from them by such legislation as would make this demand of the doctors an accomplished fact.

The *Post* asks, "Will it be much of a step from that [compulsory examination] to compulsory heeding of the results of that examination?" It would have to be a very optimistic man who would answer "No" to this question. Yet Dr. Cabot, a man of high standing in his profession, has stated that in one thousand cases diagnosed by himself in the Massachusetts General Hospital, which afterward came to autopsy, the post-mortem examination proved the diagnosis to have been correct in only about fifty per cent of the cases. In the face of so frank an admission on the part of a physician of Dr. Cabot's repute, what confidence can the public have as to correctness when these diagnoses are made perfunctorily and by the wholesale!

It is well that the public should know just what the agitation for so-called preventive medicine means and what it would logically lead to. Thanks are due to the *Post* for the light it has thrown on the subject.

ARCHIBALD MCLELLAN.

"Search the scriptures"

IN the fifth chapter of John's gospel we read, "Ye search the scriptures, because ye think that in them ye have eternal life; and these are they which bear witness of me; and ye will not come to me, that ye may have life" (Rev. Ver.). It is indeed significant that in Jesus' time his fellow countrymen were seeking to find life through the Scriptures, and it raises the question how many, today, are doing this outside of the ranks of Christian Scientists. Many doubtless would fain make sure of salvation, or eternal life, to begin after death, but Christian Science teaches that life, spiritually understood, has neither beginning nor end, for, as Mrs. Eddy declares, "Eternity, not time, expresses the thought of Life, and time is no part of eternity" (Science and Health, p. 468).

In the older Scriptures we find much about the endless years of the Almighty, but little to show that man's divine heritage is eternal life. It remained for Christ Jesus to make this clear by his more spiritual interpretations of the Scriptures, as well as by the proofs which he gave, in healing the sick and raising the dead, that his interpretation was based on divine Truth. That Jesus was a deep student of the Scriptures is evident from the many passages quoted by him, used indeed as weapons of defense against the assaults of evil; as, for instance, his declarations from Deuteronomy and from the ninety-first psalm during the temptation in the wilderness. As students of Christian Science learn the power of the Word, they instinctively come to use the same means that our Master did, knowing, as St. Paul declared, that these spiritual weapons are "mighty through God to the pulling down of strong holds."

It matters nothing that others, even professed Christians, may doubt the power of the Word to destroy both sin and sickness, and may deride our efforts to prove its power; the fact is established forever and will not fail us when we put it to the proof. We have but to read the nineteenth chapter of Revelation to discover that the world's salvation is to come from "The Word of God." Truth known and declared against every manifestation of evil; and we need not wonder when we

Digitized by Google

read that Truth's representative wears "a vesture dipped in blood," so great is the conflict, but glorious the victory.

It is not possible for Christian Scientists to study the Bible too closely, provided always that they seek its spiritually scientific meaning. When the scribes and Pharisees were seeking to entangle the great Teacher with a question of human relationships and their possible continuity after death, he unhesitatingly said, "Ye do err, not knowing the scriptures, nor the power of God." Now there is no passage in the Bible which deals with this question in a material or personal way, but with irresistible logic Jesus went direct to the very heart of the question, and declared that to God no one is ever dead, that "all live unto him." His opponents claimed to be seeking eternal life in the Scriptures, but they were not willing to accept it if it did not accord with their materialistic views, and therein they differed not from the multitudes of today. What we need is to have "the letter and the spirit bear witness" (Science and Health, p. 330).

A mother who had begun to know the truth as taught in Christian Science, was sitting one night by the bedside of her child, who according to sense-testimony was very ill. With a heavy heart she opened the Bible at the passage of the Red sea, and read on, page after page, until the chamber became luminous and the whole night passed as an hour. When morning came it was found that the cloud had vanished. There had been no intercession, nothing but a life-giving realization of the divine presence which had guided the children of Israel through their seeming perils and which, Isaiah tells us, is to be in "every dwelling place of mount Zion" by day and by night. Let us then "search the scriptures," that we may have life and have it more abundantly.

Patriotism

THOUGHTFUL people cannot fail to be impressed with the exhibition of so-called patriotism upon every occurrence of actual or even prospective war. If the invasion of one's country is threatened, its rights and dignity dishonored, or even a trivial international issue is precipitated, there is an immediate manifestation of a practically universal impulse, which is sometimes blind and unthinking, sometimes thoughtful, self-forgetful, and heroic.

The individual may know relatively nothing of the facts, or of the questions at issue, and the weightiest considerations may demand his undisturbed devotion to his customary duties; nevertheless, not only is all regard for family and financial interests set aside by unnumbered men, but they face the certainty of a hard life, of exhausting labor, poor and insufficient food, sickness and suffering, together with the possibility if not likelihood of wounds or sudden death, without hesitation and without reserve! All their lives they have been guarding against the things they now seem to welcome, and the power of this impulse to dominate mortals is one of the most significant facts of human history.

Patriotism is universally understood to mean love of country, and one would logically and consistently expect, therefore, that a patriot would exhibit the spirit of resistance to every enemy of the public weal, every influence that is known to be inimical to the general welfare and progress of the people. Indeed, a little thought makes it clear that the true patriot is one who is ready to sacrifice and suffer that the liberty and welfare of his family, his friends, and his countrymen may be conserved. In a word, he is a Christian idealist. He recognizes the brotherhood of man; no state or national boundaries can limit the unselfishness of his interest. In the event of war, he feels no less compassionate toward the men in the enemy's trenches than toward the comrades at his side. Moreover he is no less alert to the presence or threatened approach of an impersonal enemy, the rule of injustice or greed, of appetite or passion, of caste or superstition, than he is to the approach of an invading army.

These are the tests which Christian Science leads us to apply to our asserted love of country: It must be loyal to right and to truth, not simply to class or self interest, and it must embrace humanity in the fraternity of its good will. Though not unaffected by the local situation, it must always be considerate for the higher interests of the race, and that all the time. It must also be as heroic in private as in public, in the home as on the battle-line.

The moment one begins to understand the meaning of Christian brotherhood and of fealty to Truth, that moment he begins to be not less devoted to the interests of his own country, but more intelligently devoted to the interests of all mankind. His patriotism is now freed from mere impulse, selfishness, exclusiveness, and every other unideal quality. Indeed, in Christian Science one comes to realize that true patriotism marks the appearing of the true man. He is the champion and the embodiment of the Christ-idea, and he finds his field of battle wherever he finds an entrenched falsity or wrong. This attitude finds its opportunity in every situation, and it enrols one among those who, as President Wilson has just said, are "brave enough, steadfast enough, steady enough in their principles to go about their duty with regard to their fellow men, no matter whether there are hisses or cheers;" and he has well added, "The cheers of the moment are not what a man ought to think about, but the verdict of his conscience, and of the conscience of mankind."

To be a true patriot is to be equipped for every experience and every demand of duty; it is to be superior to the excitations of the moment and the movements of the multitude; it is to be free from fear; it is to stand for God and the right; it is to be a Christian Scientist.

JOHN B. WILLIS.

Lecture in The Mother Church

The First Church of Christ, Scientist, in Boston, Mass., announces a free public lecture on Christian Science, by Clarence C. Eaton, C.S.B., a member of the Christian Science board of lectureship, in the Church Edifice, Falmouth, Norway, and St. Paul streets, Back Bay, Boston, Friday evening, May 29, at eight o'clock. The public is cordially invited.

✧ ✧ ✧

Among the Churches

Current Notes

DISTRICT OF COLUMBIA.—As an index of public thought the press testifies to a changing public sentiment toward the modern religious movement that is steadily exerting an influence for good along all lines of human activity. Articles favorable to Christian Science are now frequently found in newspaper columns. Especially is the spirit of fairness toward this teaching in evidence among the newspaper men of Washington. The files of this office show that in the last year not a single criticism of Christian Science has appeared in any of the Washington papers. A few unkind sermons have been preached against it, but the newspaper men in every instance have been too just and too generous to be a party to an attack of one religious denomination upon another.

Digitized by Google

The pulpit as a whole is showing an increasing interest in the Christian Science movement. Recently a Washington minister, preaching on the subject, said: "Before I have finished this sermon I hope you will understand that I want to have Christian Science in this church." Since Christian Science is "the law of God, the law of good, interpreting and demonstrating the divine Principle and rule of universal harmony" (Rudimental Divine Science, p. 1), this minister's wish is probably the wish of other ministers.

Report of Publication Committee.

DES MOINES, IOWA.—The Christian Science church is negotiating for the purchase of a lot on which it expects in the near future to erect a new church building. The present edifice on Eighth street, between School and Crocker streets, is already filled to its capacity at the Sunday and Wednesday evening services, and at the present rate of growth it is believed that the building will not long be able to care for the congregation. A number of changes are to be made in the present building to provide more room.

The Des Moines Capital.

✧ ✧ ✧

The Lectures

Memphis, Tenn.

Clarence W. Chadwick delivered two lectures on Christian Science in the edifice of First Church. At the first lecture he was introduced as follows by Prof. F. M. Hedges:—

Nineteen hundred years ago there came into this world the Christ-spirit as a manifestation of God's enduring love. It brought gladness to the sorrowing, relief to the afflicted, health to the sick, repentance to the sinner, and resurrection to those who were dead in the spirit. Today there is cast over the world the seeming gloom of unhappiness, pain, and sin. There is no heart that has not been shadowed with anguish, no one that has not felt the sting of pain, no one that has not been bowed in grief. If there is any teaching which will help to make that Christ-spirit a potent force in mitigating the overshadowing gloom of today, ought it not to find a ready response in every human heart? While not a member of the Christian Science church, I am in close enough accord with its teaching to know that it does offer such hope to those who are in sorrow, pain, or sin. In the teaching of "Science and Health with Key to the Scriptures" by Mrs. Eddy, the church affirms that divine Love is as efficacious today as yesterday in meeting every human need. The beginning of the way which leads to this glorious realization is through a proper understanding of the Science of being. May this lecture bring to you some knowledge of a teaching that is doing much to relieve human sorrow, sickness, and sin.

The introduction by John M. Dean at the second lecture was as follows:—

Thinking people are practically agreed that the greatest thing in the world—the one thing of transcendent importance to every man, woman, and child—is the salvation of mankind. I think there can be no doubt of this, and yet the attention given to this all-embracing subject is vastly out of proportion to that usually bestowed upon matters of far less importance. Too many have been content to concentrate thought and energy upon the fleeting things of worldly life and to ease their consciences by perfunctory church attendance or by unthinking acquiescence in man-made dogmas, while at the same time refusing to recognize religion as a vital, dominant force in every possible phase of daily living. This habit of thinking and doing has too long obscured the understanding of God as the controlling power in even the smallest problems of humanity; it has largely made of religion a mere code of morals, having little or nothing to do with actual salvation from sin and sickness here and now.

Men talk of the sciences,—of exact rules applied to problems of mathematics, of music, and of other things,—and have even sought to attach the name of science to empirical theories without a shadow of claim to the name; and yet many of them are ready to scoff at the intimation that the truths of religion are susceptible of proof, and thus justify its claim to recognition as a science. Is it conceivable that the all-wise creator would or could have made possible the unerring demonstration of the smaller things of life, while the one thing before which all else fades into insignificance is left at the mercy of speculative opinion, or to chance or accident? If such a thing could be true, then life is indeed a lottery, and man the football of every passing whim which flits for a moment across the stage of mortal action.

Surely God never intended that such a monstrous anomaly should be! And so, in spite of all the ages of material thinking, this Science of religion has continued to exist, although unseen and unsuspected, until brought to light by one who had sufficient spiritual insight to apply the unchanging rule of good to those vital truths of the Bible which had become warped and twisted to suit the constructions of materiality and theological misapprehension. Thus, through Mrs. Eddy, Christian Science has again come into the lives of men, and is placing a logical and provable construction upon the words and works of Jesus, as well as upon those of prophets and apostles who preceded and followed him. This rule of right thinking has nothing of guesswork in its composition, and even in its primary application is producing a marvelous change in the lives of unnumbered thousands everywhere, by giving them some glimpse of Jesus' real meaning when he said, "Ye shall know the truth, and the truth shall make you free."—*Correspondence.*

✧

Portsmouth, England

There was a large attendance at the Albert Hall to listen to a lecture on Christian Science by Prof. Hermann S. Hering. The chair was taken by J. S. Braithwaite, first reader of First Church of Christ, Scientist, London. All must admit, he remarked, that Christian Science came to them that day with a distinct message, and the fact that so many wanted to hear about it, proved it was meeting a need of the times in some way or another, whether they believed it or not. The questions most frequently asked about this religion are, he said, "Can I be healed by Christian Science?" and, "How is the healing work done?" When he first heard of this teaching, about ten years ago, he was a director of the largest and most up-to-date hospital in London, and it was part of their duty there to keep informed of everything that happened in the nature of advancement in medical practice. Consequently, when the claims of Christian Science came to his notice, he determined that it was right for him to investigate those claims and the teachings of Christian Science. He told the chairman of his determination, and that gentleman said, "Do you suppose we may have a Christian Science ward in the London Hospital?" At that time he knew little about the question, and the chairman knew still less. He proceeded with his investigations, and the two things that struck him very forcibly were the honesty and

Digitized by Google

the justice of its teaching,—honest, because it did not slur over any question that ought to be answered; and just, because it handed back to every individual the right that he should work out his own salvation, physical as well as spiritual; and, as a matter of fact, nobody else could do it for him. That was a big thing which they all must realize, but when once it came to them, they were on the right road to an understanding of Christian Science, and they would understand it. They would see that their spiritual as well as their physical welfare was not the concern of a few privileged people, to whom they had to pay fees, but was their own concern entirely.—*Portsmouth Times.*

Fort Worth, Texas

The remarks of J. F. Wellington, Jr., in introducing Francis J. Fluno, M.D., who lectured on Christian Science, at Byers' Opera House, were in part as follows:—

The question has often been asked, doubtless by many here this afternoon,—What is Christian Science? If it were what most of us once thought it was, we would still be its opponents. We who have some knowledge of its teachings, however, know that this religion has influenced our thought for good more than anything that has ever come into our lives. As the apostle Paul was anxious to tell how his blind eyes had been opened to the truth, so we who have been benefited by Christian Science, are glad to tell others of the good we have received.

To countless thousands of diseased and troubled people, Christian Science has brought health of body, and that peace of mind "which passeth all understanding." Such a power as this, whether you believe in it or not, is entitled to the earnest consideration of all mankind; for anything that lightens humanity's burden, deserves your encouragement. This religion asks of the world today only honest investigation, with an unprejudiced and open mind.—*Correspondence.*

Oakland, Cal.

The Rev. William P. McKenzie, who lectured on Christian Science for Second Church, was introduced by Robert Arnold Hunter, who said in part:—

The healing which results from Christian Science treatment, as well as the happiness and increased capacity for right mental activity manifested so generally by the adherents of Christian Science, are constantly attracting the attention of those seeking a present, practical salvation. Because of the simplicity of the teaching of this religion, the new student is sometimes tempted to doubt its power and efficacy in meeting the seemingly complex problems of human experience; but we must remember in this connection the words of Jesus, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." Therefore, only as we approach this subject with open-mindedness and humility can its deep meanings and lessons be revealed to us.—*Correspondence.*

Testimonies of Healing

I should like to tell of my healing of a skin disease through Christian Science. Early in June, 1912, I became aware of a few small spots on the palm of my right hand. These caused a slight irritation, but I did not trouble myself about them, though I was very conscious of them. One day, however, glancing at my hand, I observed that the spots had formed a ring, and instantly I thought of ringworm. I am a teacher, so the next morning I consulted the school doctor, who recommended a certain drug, and this I accordingly used. I tried untiringly every remedy that I heard of, but the rings increased in size and number, until I had four on each hand.

About three months before this a friend had interested me in Christian Science, and on July 16, while I was thus suffering, I attended a lecture on that subject in London. At its conclusion, I applied for a practitioner and left my name and address. On the following day I received a letter from a practitioner, whom I met at the service that same evening. She talked with me for a little while, but did not treat me then, promising to give me absent treatment later in the evening. When I reached home, I read for a time in Science and Health, went to bed at the usual hour, and kept my thoughts off the complaint. While in bed, I was suddenly conscious that the irritation in my hands had ceased, and that they were pleasantly cool. Though I was sure they were healed, I did not look at them until the middle of the next day, when I saw that my right hand was perfectly free from the ringworm, while only a very slight trace remained on the left. When I wrote to the practitioner in the evening, as requested, this trace had entirely disappeared. The practitioner afterward acquainted me with the time when she treated me, and it coincided with my realization of healing.

In March, 1913, a spot appeared on my hand, causing some irritation. I was immediately filled with fear that I had again contracted the same disease, so sent at once to the practitioner. In a few hours, about as long, I judge, as it took the letter to reach her, the spot and irritation disappeared. I was, however, still under some apprehension, so she continued to treat me for this fear for two or three days. Since that time, about a year ago, I have been free from fear of a return of the trouble.

Those who have ever suffered in mind and body from an unclean disease, with no apparent prospect of healing, will realize with what gratitude I give this testimony. Since July, 1912, I have never employed any other method of treatment for physical ills than Christian Science, and I have experienced its benefits on various occasions and in many different ways.

Helen M. Ayres, Wood Green, London, England.

✧

When I went to a Christian Science practitioner for relief from a serious eye trouble, also near-sightedness, I was told to lay aside the glasses that I had worn for twenty-four years. One week's treatment relieved the inflammation, and led me to seek in the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, the law that made possible this help which oculists and physicians were unable to give. Over five years have passed since then, and I have never used glasses in all this time.

My daily work at present requires cutting and measurement of metal to the ten thousandth part of an inch exactness. Formerly, when I used glasses and was without any understanding of the truth, I had discomfort and sickness; now all day and six days every week my work is done with no trouble. Whereas I used to suffer almost constantly from neuralgia and rheumatism, now I have simply occasional symptoms, but symptoms only. As I apply Christian Science to daily life there is great gain, and I have been able to prove many teachings of the Bible. Especially have I been shown that I must follow Christ Jesus' instruction and become as a little child if I would gain a demonstrable understanding of this truth.

Many erroneous beliefs have been easily laid aside, though others were more strongly entrenched, but all have gradually been displaced by the truth. Many proofs of the power of Truth have come to me in the overcoming of general poor health and the demonstration of abundant employment. I would like to tell of the help I received at the time of a serious accident, in which I sustained severe injuries. While my understanding did not enable me to rise above this condition immediately, yet with help received from others there was proof of the healing efficacy of Christian Science. A hospital physician pronounced the nose broken and stitched the flesh together, but after twenty-four hours it had so healed that he stated it could not have been broken. The shoulder healed about two weeks ahead of the time predicted. Of the leg wound it was said that "sometimes such wounds never heal," but these material laws were set aside by the truth.

Practically the only remaining evidence of the accident is a callous formation, which gives an appearance of distortion to the leg. This is, however, straightening, as it must under Truth's law. I have walked ten and twelve miles on a stretch a number of times in the last three years. Seeking to live Christian Science is teaching me how to acknowledge God in all my ways, making more plain each day the prompting thoughts from divine Mind, and this I know is the real healing, my heritage forever.

The trouble with my eyes had made me rather sensitive in regard to them. Work in a machine shop brings many occasions for removal of particles of matter from the eyes, but this was something I always avoided doing. A man who worked near me and always did this for the men, was transferred to another part of the building, so the men came to me. When the first one came for help I tried to make excuses, but now when I recall Jesus' words, "I can of mine own self do nothing," the work is done by the power of Truth.

The right understanding of God as All-in-all has come to me through Christian Science. I know not how to express adequately my thanks, except by continued seeking to reflect Love and Truth, and to follow him whom Mrs. Eddy has so well taught and proved to be "the Way, the Truth, and the Life" (Science and Health, p. 332).

Edmund J. Bowers, Los Angeles, Cal.

✧

A long time since, while living in California, I fell in the dark with all my weight against a sharp corner of a bureau. My side pained me so through the night that I had to sit up many times to get ease, and in the morning my husband drove down the hill to ask a Christian Scientist friend and practitioner to give me treatment. Two days later she came up to see me, and while I was resting on the bed she talked to me and gave me treatment, when all at once I felt something click (indeed, I seemed to hear it), and I said to her that the bone had gone into place. I was surprised, although I do not see why I should have been, knowing how all-powerful is our heavenly Father, and how our Leader, Mrs. Eddy, had taught us to rely upon God's aid. I walked about and attended to my duties, though slowly, until about five days afterward, when a terrible pain came back, intermittently, and for several seconds I felt as if something were tearing

Digitized by Google

at my heart. This kept on during Saturday, and through the night I suffered terribly the few moments that the pain lasted. I startled my son, who came to see me, when I turned so white. He said, "Oh, mother, cannot some one come to you?" As soon as I could speak I assured him that I would soon be better and that his father would go for our Christian Science friend.

I can only conclude that a broken bone had caused that dreadful suffering, for such it was, a few moments intermittently, for two days and nights. The practitioner came up the next day, although it was a very long way, and I was deeply grateful to her for doing so, as I was unable to dress to go to her. She treated me, and I was indeed thankful to feel the pain go, and that was the last time I felt it.

ELLEN JANE WILDING, Westbury-on-Trym, Bristol, England.

I am happy to say that my mother's healing has been permanent, as there has never been the slightest bad effect from the accident. She is perfectly healthy and wonderfully strong and well for her years.

HEPHZIBAH H. WILDING, Westbury-on-Trym, Bristol, England.

✧

About eight years ago I turned to Christian Science when in deep distress. Although brought up in a Christian church, where I was a regular attendant, and though I was a Bible student, my understanding of God was not sufficient to sustain me in the hour of need, so I turned to Christian Science. From that time until now it has been my pillar of cloud by day and of fire by night, guiding and sustaining me through many trials. It has led me out of bondage to sickness, worry, and fear, into a land of glorious liberty. Since I first began the study of Christian Science, Truth has been my only physician. Before I became interested in this teaching, I had been a semiinvalid, subject to severe headaches, and many days were spent in a dark room on account of them; but as my understanding has grown, these have gradually disappeared, and it has been more than three years since I have been troubled with one.

Christian Science is the greatest blessing to me and to my family. My youngest daughter was quite young when we came into Science, and it has protected her wonderfully from contagion, accidents, etc. Recently we had an experience which has made us more grateful than ever for this saving truth. Near the end of the school term, the little girl came home from school with a card from the examining physician saying that her eyesight was very defective, also that her throat needed attention. In a few days the school nurse called to urge the necessity of our giving this matter immediate attention, and later two men called, one of them the school physician. We were leaving for the country the next day, and I immediately took up treatment for my daughter. I also had her declare the truth as she is taught to do in the Christian Science Sunday school. The day after we returned from the country, the physician again called. I invited him to come in and examine my daughter, which he declined to do, saying that he did not have his instruments with him, but when leaving he told me to be sure to have her eyes attended to that week. The next day, I took her to the physician to whom we went before coming into Science. I explained my reason for coming to see him, and told him the verdict of the school physician. He examined her thoroughly, and then said, "This child is in perfect physical condition." He also gave me a certificate to that effect. A few days later the same school physician examined my daughter and did not recognize her. Later, the nurse called and I showed her the certificate. She caught sight of *The Christian Science Monitor*, which was lying on the table, and from her expression I think she could understand why my daughter was well. The little girl has never had a return of the inflammation of the eyes, and although she reads from the time she is up in the morning until she retires at night, the sight seems to be entirely normal.

We have had many instantaneous healings in our home during the past eight years. I realize that the most sincere gratitude is expressed in the daily life, therefore I am trying to show by my life what Christian Science has done for me.

ELIZABETH HATCH, New York, N. Y.

✧

[Translated from the German]

Four years have elapsed since I heard of Christian Science. A friend gave me a copy of *Der Herold der Christian Science*, and upon reading it I immediately saw that it contained the truth that makes free. I secured the text-book, "Science and Health with Key to the Scriptures," and began to study it, but I understood little of what I read. I was, however, healed of bowel trouble in three weeks' time, after having had to take medicine for years. In several instances of severe illness a Christian Science practitioner was notified by telephone, and I experienced quick healing. My daughter also was healed of a serious throat affection with three treatments.

For all these blessings I am deeply grateful, as well as for the realization that God is our physician.

LUISE WILD, Van Wert, Ohio.

✧

Christian Science was brought to my attention nearly twenty years ago, and I was the first man to accept it in the city in which I then resided. I purchased my first copy of Science and Health when it was published in two volumes and before it came into use as a text-book to any extent in Illinois, except possibly here in Chicago. The weekly meetings were held in a private residence, and I was the only man present. I recall that some of my friends sought to ridicule me for identifying myself with a movement which was confined almost exclusively to women at that time; but this did not deter me in the least, for whenever I met with these faithful pioneers in the Christian Science movement, less than a dozen in number, I realized that I was in good company.

I pursued the subject far enough to convince me that Christian Science is true, and I made some progress in the healing; but I was absorbed in the exacting duties connected with the publication of a daily newspaper, and thought I could not spare the time that it was necessary to give to Christian Science. So, through neglect, I soon drifted back to the starting-point, and continued in the backward course, getting farther and farther away from this healing truth.

Seven years ago I united with Third Church of Christ, Scientist, of this city, took up the subject in earnest, and have since applied myself to it with the success my limited understanding would permit. I find that with the aid of Christian Science I do my work in much less time and with far greater ease than I ever did before, and this gives me ample time to attend service regularly, study the Lesson-Sermon daily, read all the Christian Science publications, including the *Monitor*, and still have leisure for some other things which interest me.

I feel the beneficent influence of a Christian Science atmosphere and spend as much of my time in it as possible. During my membership in the church I have attended service every Sunday when service was held, and have been absent from only one Wednesday evening meeting. Although I do

Digitized by Google

not hear all that is said in these meetings, I enjoy them, and realize that I am benefited by attending them.

I have succeeded in overcoming all my infirmities except two,—impaired hearing and eyesight. These are supposedly organic disorders of more than forty years' standing and have offered more stubborn resistance than the others, but they are yielding slowly, and I feel sure that I shall be able to master them fully. I have made substantial progress and continue to gain. If with a limited understanding I can go a part of the way in overcoming these life-long infirmities, it is not unreasonable to assume that if I persevere in the faith I can go all the way. Christian Science does not take one a part of the way on the journey through the wilderness and leave him there.

In all my experience I have found nothing which yields such large returns of health, happiness, peace, and harmony as Christian Science. But I find, as others have found, that one's progress is just in proportion as he heeds our Leader's admonition on page 495 of Science and Health to "study thoroughly the letter and imbibe the spirit." It was only by a life of patient research and devout consecration that Mrs. Eddy discovered and gave to the world this healing religion which the Saviour taught and demonstrated. For this priceless heritage the world owes her a debt of gratitude which it will never be able to pay.—Alexander Stone, Chicago, Ill.

✧

As I look back over the last three years and see the steady progress made in overcoming discordant conditions, I am filled with thankfulness to God. I have been lifted out of such an awful sense of fear and insecurity, to a certain consciousness of the nearness of God, that I can say with Job, "I have heard of thee by the hearing of the ear: but now mine eye seeth thee."

I had no thought of physical healing when I began to study Christian Science, but I had a great desire to obtain a more satisfactory understanding of God, and of life. After reading the literature for two or three months, I realized that I was healed of a chronic bowel disorder, from which I had suffered for about nine years, and several minor ills disappeared as the truth dawned upon my consciousness. I am glad to state that my healing has been permanent. Since then, moreover, I have been healed of other ills, including an acute affection of the throat, which was overcome in one night through the study of the Lesson-Sermon and periodicals.

My husband and our two little daughters have felt the healing power of Truth many times during the past two years and a half, and we are grateful for this physical betterment, as it is the proof of a correct understanding of divine Principle; but the consciousness of God as our Father-Mother is more than anything else to me. I have had the great joy of helping others, and I feel very grateful to Mrs. Eddy for teaching us how to use this Christ-teaching in overcoming the evidence of mortal sense by proving the all-power of Truth.

Mae T. Van Horn, Oakland, Cal.

✧

For several years I have desired to acknowledge through the *Sentinel* the benefit received through Christian Science, as this teaching has given me sufficient proof of the truth of God's creation. I had been a church-member for over fifty years; and while I loved my church, I realized that it was lacking in many things, one of which was the healing truth.

For eighteen years I was afflicted with rheumatism and could not walk without some material support. I also suffered regularly with bilious attacks and severe headache. All this, together with the sorrows I had passed through, made life seem hard; but God was with me all the way. I had just returned from a visit to my daughter in San Antonio, Texas, where I had been under medical treatment for what the doctors pronounced a malignant growth in the stomach, when a neighbor, a dear friend who had become interested in Christian Science, brought the glad tidings to me. I accepted this teaching with joy, since it was just what I had been waiting for, and as I was a Bible student, it was easy for me to see that it was the truth.

This was four years ago, and although my healing was not instantaneous by any means, I am gaining slowly but surely. All my diseases have been entirely healed except the rheumatism, and that is being overcome so fast that I do not have to use any material support, for I now realize the care of a loving Father and that He abundantly supplies everything needful. I feel that I have won back many years of my life since I have known of Christian Science. My health is excellent, although my hearing and memory are not so good. Being so far advanced in age (eighty-six years), I may not realize complete restoration at once, but I know that God can and will heal me if I continue to know the truth.

Sarah Tullis, Alexandria, La.

As I am the friend who told Mrs. Tullis about Christian Science, I can truthfully verify her testimony. She was always a sweet Christian woman, but since she has been in Christian Science, I have never seen such a change in any one. At the age of eighty-six, and having been crippled so long, it seems wonderful to see how well she walks, and I know that she would never have experienced this healing if she had not accepted the truth of Christian Science.

Eunice Fincher, Mansfield, La.

✧

It is with a sense of gratitude deeper than words can express that I wish to acknowledge the many benefits I have received through Christian Science, hoping that others may be led to seek this blessed truth which makes all free. I have been healed of chronic stomach trouble, so serious that every particle of food I ate distressed me. When I learned through the study of Science and Health that food has no power, for God is All-power, I was healed. For years I could not ride even a short distance on the train without being dreadfully car-sick, and I always dreaded a journey; but since coming into Science I have traveled thousands of miles and enjoyed every minute spent on the train. I have also been healed of an eye trouble by the reading of Science and Health. I never feel the need of glasses now, although I had worn them for years. To me one of the most beautiful demonstrations I have had is the overcoming of fear. I have proved that divine Love casts out all fear; that God is my protection and an ever-present help in trouble. Christian Science has also cured me of severe headaches; in fact, I have had continued proof for two years of the healing power of Truth. I am not only kept well physically, but I am gaining that correct understanding of God, and man's relation to Him, which is manifested in health and harmony.

The Bible and Science and Health are my daily companions. I thank God for the understanding I am gaining day by day, and my daily prayer is to know more and more of this healing truth. My heart is full of gratitude to our dear Leader, Mrs. Eddy, who was pure enough to see this great truth which Jesus revealed to humanity many centuries ago; and I am also grateful for all the literature it is my privilege to enjoy.

Estella Laraba, Long Beach, Cal.

Digitized by Google

Seven years ago I was what might be termed a materialist. My parents were faithful workers in a Christian church and I was reared in a religious atmosphere. It was therefore quite impossible entirely to outgrow the reverential fear I was taught regarding God; nevertheless, I early had a strong feeling of antipathy toward the Bible, also a dislike for the church and all pertaining thereto. The only reason for this was that I could not understand the Bible or see any sense of justice in it. It seemed to me contradictory in almost every detail, and in later years it was never opened.

Finally, my right arm became useless through a severe attack of neuritis. This was treated almost daily by my physician for about four months. At each treatment the arm was placed in an oven heated to a temperature of nearly three hundred degrees, and baked for an hour, but it became worse instead of better. In sheer desperation I then consented to try Christian Science. In one treatment almost complete relief was experienced, and in a very few treatments the arm was normal. I was indeed grateful to be relieved, after the months of sleepless nights and constant pain, and would have been glad to know how this wonderful result was brought about. Still I did not believe the solution was in the Bible, and so that book remained closed to me as before.

After some months I was called upon to watch a very dear and valued friend breathe his last. When his body lay still and lifeless, perfect in every detail, yet with no power to move, or speak, or look toward one who was also dear to him, I then and there questioned this change. My one inquiry seemed to be, What is this life which is here today and gone tomorrow? My eagerness to learn knew no bounds. Instinctively I felt the solution to be in Christian Science, but thought I could discover what it was without the help of the Bible. I visited the practitioner who had helped me before, and thought I could learn through conversations with her. I continued in this method for a long time, occasionally reading the Lesson-Sermon and as often going to the Christian Science meetings. Finally, as the letter of this Science began to dawn in my consciousness, there seemed to grow a longing for the spiritual understanding; then came a sincere and honest desire and willingness to try to help myself by reading and studying the Bible and "Science and Health with Key to the Scriptures," its spiritual interpretation by Mrs. Eddy. They became my constant companions, and my love and reverence for them knew no bounds.

Since then I have had the privilege of bringing many into this same truth, and have done some healing work. My gratitude is greatest for the mental change, which has shown me what the Bible really is: the Word, that makes all things new, that proves that God is Spirit, the Truth which always saves, the Life which never ends, the Love which creates the desire to say, "Not my will, but thine, be done."

My healing has not only proved permanent, but by its permanency has enhanced and strengthened my determination to study and work for greater unfoldment, in consciousness, of the truth of being. Our Leader has said on page 192 of Science and Health, "Whatever holds human thought in line with unselfed love, receives directly the divine power." This requires constant watchfulness, but each day brings its mite of added proof that the reality of life is spiritual.

JENNE MORROW LONG, New York, N. Y.

When thou prayest, let thy words be few, but thy thoughts many and deep. The less thou speakest the better thy prayers. Few words and much thought is a Christian frame. Many words and little thought is heathenish.

MARTIN LUTHER.

From Our Exchanges

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

To my perceptions it is perfect goodness, and that alone, which can transcend all limitations and overcome all antagonisms; in fact, the very thought of limitations and antagonisms implies imperfection, it is part of the very nature of evil, it is what evil is. So when Jesus rose from the tomb in which his murderers had laid him, he but revealed in power a truth which belongs to the very essence of the life divine,—namely, that all gates fly open and all barriers fall down before a love which knows neither lack nor limit. It is not possible for such an invincible fact to be holden of death in any form; it dies to self only to live to all; it gives itself away only to find itself more fully; it lays itself down in absolute surrender only to rise again in limitless power and glory.

Acting from within the conditions of poor, burdened humanity, shut within the prison-house of the flesh, and operating consistently from the standpoint that human life is somehow one and indivisible, and that none can find his own soul except in sacrificing it to the larger life of the race, Jesus emerged victorious—the first fruits of them that sleep, and in so doing gave us a foreglimpse of what will happen when all mankind is governed by his spirit. The bands of death were loosed for him; material conditions could confine him no longer; the flesh ceased to be a bondage; he was as free of all his former hampering restrictions as though they had melted into nothingness. And that is just what is coming when all our race is perfectly conformed to his likeness and becomes one with him in a fellowship which nothing can ever dissolve. "There shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." They will have to go, be sure of that; not one of them can remain when the love of Christ is all-in-all. "For he must reign, till he hath put all enemies under his feet. The last enemy that shall be destroyed is death."

[Rev. T. Rhondda Williams in *The Christian World*]

The churches have not sufficiently emphasized the importance of the listening function, have not sufficiently attuned the inward ear for life's inward message, nor the inward eye for the vision of those depths where the truth of the permanent life is revealed, where man escapes from the turmoil and the tumult and the everlasting debate about things, into the hush and the peace of the eternal, where he finds himself beyond discussion, in the region and realm of certainty. In the deepest soul of man the eternal Spirit is ever bearing witness with his spirit to the deepest truth concerning him, but the witness is borne in a "still small voice," and we must hush the strife of words and analyses to hear it. Man leaves his greatest possibility unrealized if he confines his attention to the world of sense-impressions and their intellectual interpretation.

[*The Christian Work and Evangelist*]

The apostolic church took Jesus at his word and spoke with the authority of their Lord. One has only to read the Acts of the Apostles and St. Paul's epistles for constant corroboration of this. The early church healed diseases, spoke as for the Lord himself, and forgave the sins of repentant men. Indeed, it seems to have conceived itself as having been ordained for this purpose. It was this note of authority which gave it power, which made the ancient empires pause and give heed.

We believe that what the church just now needs to regain is the sense of authority, of divine appointment to be Christ's

Digitized by Google

representative in the world and speak in his name. We believe that many do not take her at supreme valuation because she does not put this valuation upon herself. If she takes herself as simply one society among many others, an organization for reform, as lodges, societies, leagues, settlements, and libraries are, then the people will take her in this same impartial way. The church then becomes a society of people on a level with any other philanthropic organization. Such a society has no resemblance, though, to the apostolic church, nor ought it to call itself any longer a church of Christ; for it is not the church he appointed. He ordained a church to be in the world in his place, endued with authority to do all he did and to say all he said.

[*Northwestern Christian Advocate*]

Jesus contrasts the ideals of the kingdom of God with the ideals of the kingdom of this world. Men might approve the conduct of the unfaithful steward, but it is doubtful whether they would ever employ him. The Pharisees were unfaithful stewards. To them had been committed the great trust of religious leadership, and this trust they had grossly betrayed by using their positions of leadership in the community for personal aggrandizement. They were "lovers of money." They gave alms, not because they were generous, but because by giving alms they thought themselves sure of placating God and of getting a place in Abraham's bosom. And such Pharisees abound everywhere to this day. They are outwardly religious, not because they love God but because they fear hell; they part with their money, not because they love to do good but because they hope in this way to make atonement for sin and put God under obligations to them. To all this Jesus has the one swift, direct, unmistakable rebuke. There is no heaven for the dishonest. A change of location does not involve a change of character, and it is character, and character only, that determines destiny.

[*The Continent*]

Spiritual experience is the life-blood of Christianity. Christianity languishes only when spiritual experience pales. The religion of Christ differs generically from all religions besides in offering personal communion between the soul and its creator. If it can make good that offer to men to try it, nothing can shake its strength in the world or hinder its progress. On the other hand, if conscious experience of fellowship with God ever fails among Christians, neither grandeur of past history nor orthodoxy of present theology can maintain the church's power.

[Rev. Robert F. Coyle as reported in *Denver* (Col.) *Express*]

If I were just beginning my ministry, instead of ending it, I would strive to unite all Protestant faiths into one great catholic church, united and all-embracing. Creeds and dogmas are relatively unimportant. It does not matter whether a man believes in foreordination or immersion or infant baptism; if he believes in Jesus Christ he is a Christian, and he should be in the church, and it is a crime to keep him out of the church simply because he refuses to accept all the doctrine.

[*The Christian Register*]

As the sky is no longer the realm of angels, but the earth, so it is no longer the abode of "the spirits of just men made perfect." They are in a spiritual realm, and we shall join their noble company according as we learn and practise the laws of that realm. As it was said of old, though not yet realized, "The kingdom of God is within you."

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

The more recent translations into Dutch, German, Norwegian, and Swedish pamphlets are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1887 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Direct all orders for above works, and make remittance by New York or Boston draft or money order, to

Items of Interest

The Senate territories committee has ordered a favorable report on a bill restoring to the public domain the Chugach national forest in Alaska. There are eighteen million acres in the forest, created several years ago by presidential order. The bill would not affect lands withdrawn for the conservation of coal. Hearings on the Alaska railroad bill, members of the committee say, developed that the timber in the Chugach forest is not merchantable, that there is enough rainfall in the territory to take care of agricultural lands without conserving the forest as a rainshed, and that as a reserve it costs the government about sixteen thousand dollars annually.

Denmark is to have a museum of shipping and commerce. It is to be arranged at Kranberg castle, in the rooms which have until now been used as picture galleries. This castle was built in the time of Frederick II, from money paid as Sound dues, and has therefore always been associated with the history of trade and navigation in Danish waters. It is expected that the beautiful situation of the castle and its many attractions will be highly advantageous to the museum. All the Danish dependencies—Iceland, Greenland, the Faroe islands, the Danish West Indies—will be represented.

The first reports of forest fires have begun to come in to Washington from the national forests, and they indicate to the federal officers an early start of the fire season, with unfavorable weather conditions from the very beginning. In the Northwest there was less snow on the mountains at the end of the winter than for many years past. Railroad rights of way which were last year deep in snow, are reported clear now, and dry enough to burn readily. From the Canadian border to Mexico the reports are similar, and there have already been extensive fires in California and Arizona.

Motion-picture film exports from the United States, which have been increasing rapidly during recent years, scored a remarkable advance during March, the total for that month having been twenty-three million linear feet, as against three million in March of the preceding year. During the nine months which ended with March the exports aggregated one hundred and forty-six million linear feet, or four times the amount exported in the corresponding period of 1913, and nearly treble the amount exported in the same period of the former high-record year, 1912.

In the course of a memorandum drawn up for presentation to the dominion royal commission by a committee representative of the Oudtshoorn (Cape Colony) Chamber of Commerce, Farmers' and Fruitgrowers' Association, and town council, it was stated that Oudtshoorn holds the position of being the chief ostrich feather producing district in the world. In 1880 the export of ostrich feathers was 168,065 pounds, valued at £883,632; in 1912 it amounted to 999,704 pounds, valued at £2,609,683.

A report states that certain well-known railroad magnates are making plans to establish at Harvard a professorship of railroading in honor of James J. Hill. A fund of two hundred and fifty thousand dollars will be raised. The proposed professorship will be created in the Graduate School of Business Administration, which now offers six courses in transportation, two each in railroad operation and railroad rate-making, and one each in railroad organization and railroad accounting.

In addition to pursuing a vigorous policy in regard to the preparation of irrigation settlements on the river Murray, the government of South Australia is rapidly pushing on with the work of reclaiming the overflow swamps on the lower reaches of the river. Of these there are approximately twenty-five thousand acres between Lake Alexandrina upstream to Mannum, the whole of which can be cheaply drained and made available for cultivation. The soil of these swamps is exceedingly rich.

The Peruvian government, which in years past has shown great interest in explorations of its hitherto unknown sections of country, is preparing again to assist in bringing to light what lies hidden beneath dense jungle growth and accumulations of centuries. It is not expected that any considerable territory can be investigated thoroughly until better railway facilities are provided; but while construction is only gradual, exploration will be continued with the facilities at hand.

In connection with the celebration this year of the tercentenary of John Napier of Merchiston, inventor of logarithms, a committee, representing all the Scottish universities and other bodies and institutions of educational importance, has been formed to make the necessary arrangements for a congress to be held in Edinburgh, Scotland. A general invitation has been given to mathematicians throughout the world, and many well-known professors at home and from abroad expect to take part in it.

The Robertson district in the Cape province of South Africa is reported to have agreed to the scheme worked out by the government director of irrigation, by which, at a cost of four hundred and fifty-seven thousand pounds, water will be taken out of the Breede and Hex rivers and distributed to farmers through a new canal at a rate of fifteen shillings per acre per annum. It is estimated that under water the yield per acre in this district should approximate twenty-five pounds sterling in value.

It was planned to turn on the electric current over the wires of the new electrical construction of the New Haven road between Stamford and New Haven, Conn., on May 15 for the preliminary tests. It has already been turned on for tests west of Bridgeport, but the entire length of the new construction has not previously been thrown into use. It will be several weeks after May 15 before any regular traffic is operated by electricity.

The Queensland government geologist some time ago carried out investigations with a view to ascertaining the coal resources of the state. He put Queensland reserves at thirteen million tons, but since that time a remarkable development has taken place in the Bowen district, and he estimates that there is a reserve of about two million tons of coal in that district which was not taken into account when making his first estimate.

Nearly seventeen thousand acres have just been added by act of Congress to the Caribou national forest, Idaho. This is one of the first of such additions through congressional action, and is the largest so far made by direct legislation, most of the forests having been created through presidential proclamation, which set aside, for timber growing or for water protection, certain areas of the public domain.

The average condition of winter wheat in the United States on May 1 was 95.9 per cent of normal. On the estimated area to be harvested this would produce a final crop of 630,000,000 bushels, compared with 523,561,000 bushels harvested in 1913, 399,919,000 bushels in 1912, 430,656,000 bushels in 1911, and 434,142,000 bushels in 1910.

With authorization for two new battleships, six destroyers, and eight submarines, and other important legislation, the naval appropriation bill passed the House last week. It was the first time in two years that a two-battleship program has been successful in the lower House of Congress. The bill carries a total of $139,560,334.

Australian wool shipments since the commencement of the present season to Feb. 28 last, show an increase of 178,399 bales compared with the corresponding season of 1912-13. The great pastoral state of New South Wales sent 779,955 bales out of a total of 1,732,507.

It is declared in an official statement that the Mexican government had not purposely closed the Tehuantepec railway to international traffic. The line was torn up for a few days near Salina Cruz, the minister explained, but traffic has been reestablished.

A recently issued report of the German consulate declares that for agricultural machinery Egypt is becoming a better market. Trade, however, is rendered somewhat difficult by the very long credits and protracted payment by instalments.

A scheme has been completed to exploit the great beds of sponge at Thursday island, Australia. The firm expects to start operations before June next, and they hope within the first year to produce sponges to a value exceeding one hundred thousand pounds.

Nearly four thousand acres were reforested in Montana and northern Idaho during 1913, at an average cost of seven dollars and a half an acre.

The three yachts for defending the America cup are now in the water, being Resolute, Defiance, and Vanitie.

The woman's suffrage bill was rejected last week by the House of Lords by a vote of 104 to 60.

Peace that Passeth Understanding

WILLIS F. GROSS

MANKIND steadfastly cling to what they believe to be good, and never willingly submit to evil or the results of evil. If in his blindness one clings to evil, it is because he believes there is good in it. If he submits to evil, it is because he knows of no way of escape. A discordant condition is never desirable, and no one is content to abide therein. It is true that the effort made to get rid of discord, many times only results in greater confusion; but this is because mortal man has a false sense of existing conditions and is ignorant of real causation. Nevertheless, his desire to escape is sincere, and doubtless he would do better in a majority of cases if he only knew how.

The desire for peace and harmony is well-nigh universal. If there appear to be those who find satisfaction in strife and contention, this is but a flickering sense, and by no means an abiding consciousness. We believe it can be truthfully said that all men wish to be at peace. The desire is not always strong enough to inspire the effort that is necessary to achieve success, but it shows that the human heart turns naturally to good. If mortal man seems to be more prone to evil than to good, doubtless it is because no effort is required to drift into evil, while, from the human point of view, a great effort is required to pull against the current of erroneous belief and gain the consciousness of good.

The great Teacher said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." In Science and Health (p. 390) Mrs. Eddy writes, "It is our ignorance of God, the divine Principle, which produces apparent discord, and the right understanding of Him restores harmony." We thus learn from this word of Scripture, as interpreted in Christian Science, that to know God and obey His law is the only way out of discord, the only way to lasting peace and enduring harmony.

When Job was sorely tempted to complain because of the hardness of his lot, Eliphaz the Temanite said unto him, "Acquaint now thyself with him [God], and be at peace." Later, when Job had learned to rejoice in the spiritual fact of existence, he declared, "I have heard of thee by the hearing of the ear: but now mine eye seeth thee." It is recorded that this higher understanding of God brought to Job greater peace and harmony than he had ever known, and his earthly possessions were increased a hundredfold.

Jesus once said to his disciples: "Peace I leave with you, my peace I give unto you . . . Let not your heart be troubled, neither let it be afraid." Earlier in his ministry he had said, "Think not that I am come to send peace on earth: I came not to send peace, but a sword." There is a false peace, a sense of harmony and security in mortal belief, which may seem to satisfy, but it cannot long endure. Concerning this false sense of safety the prophet wrote, "They have healed the hurt of the daughter of my people slightly, saying, Peace, peace; when there is no peace." It was Jesus' purpose to provide a full salvation from evil, hence it was necessary to point out the false belief which was at peace in error. To false sense he "came not to send peace, but a sword." His teachings, and especially his demonstrations of Truth, so disturbed false consciousness that he at first encountered the bitter opposition of the people, who little realized how great was their need of what he had to give them. Those who were not "at ease in Zion," but who truly hungered and thirsted after righteousness, heard him gladly, and they gained "the peace of God, which passeth all understanding." With this peace came healing, —the healing of sickness and sin. Many rejoiced that they were made "every whit whole," and were no longer in bondage either to sin or the infirmities of the flesh.

The peace which Jesus promised to his disciples is for all mankind, for there is no respect of persons with God. Isaiah caught a glorious glimpse of this peace and how it is to be attained. "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee," was the prophet's message of loving assurance. Here it is clearly set forth that if one would enjoy the peace "which passeth all understanding," thought must be stayed on God.

From the human point of view there are many things to disturb one's peace of mind, but fear seems to have the most power to rob us of a sense of harmony. There is the fear of disease and suffering, of losing earthly possessions, of want, of unseen troubles, and greatest of all, the fear of death. The burden of anticipated troubles is far heavier than the load one feels called upon to bear today. Some one has said that it is only when tomorrow's burden is added to that of today that it becomes unbearable. "Sufficient unto the day is the evil thereof," was the wise counsel of him who taught men to love God and live in the present.

To the extent that one's thought is stayed on God, he lives in good, and the only possible effect of good is harmony. It is always an error of mortal belief which produces discord,—it matters not what may be the manifestation thereof or what may appear to be the immediate cause,—and the effectual remedy is that which will correct the evil. There is but one remedy for error, and that is Truth. It follows that in every instance the first and all-important requisite is for one to see that his thought is stayed on God; it matters not what it is that seems to cause him to suffer. Most persons have learned from experience that things from without have little power to disturb when harmony reigns within, and many have learned also that outward things do not have the power to produce or maintain a sense of harmony that most people believe they have.

Christian Science presents the true idea of God and teaches how to keep one's thought in harmony with divine Principle. The kingdom of God is universal, eternal harmony, and it includes nothing that can result in or produce discord. When thought is stayed on God, it is lifted above the material sense of things, and it cannot be disturbed by mortal belief, which is the only cause of inharmony. One has no sense of darkness when he walks in the light, neither can he be conscious of discord when he understands that the things of Spirit are the eternal and only reality of existence.

If we really desire to be at peace, we should give earnest

heed to the counsel of St. Paul, "Let us therefore follow after the things which make for peace." The things which are true, honest, just, pure, lovely, and of good report, lead to peace, while the opposite errors of mortal belief produce discord and suffering so long as they are indulged. The only way to escape the consequences of evil is to cease indulging in evil, and the only way to gain the health, happiness, and harmony which endure, is to "let this mind be in you, which was also in Christ Jesus." Finally, "To be carnally minded is death; but to be spiritually minded is life and peace."

Gratitude

ABBY BEECHER ROBERTS

GRATITUDE has long been considered a passive virtue, and one that, as expressed among mortals, often presupposes superiority in the recipient and inferiority in the giver. In ordinary human intercourse, gratitude has too small a place, even as a spoken word. As an active motive-power, its expression often seems so rare as to cause surprised comment when discovered, and it has not seldom been the lot of those who have been moved to grateful action, to find their motives misconstrued and subjected to suspicion.

In Christian Science we learn the virtue of gratitude as an active force leavening every act of life. It is the transmission of good received, one of the "channels for the streams of love" (Hymnal, p. 89) which broaden with use, and irrigate the plain of daily living so that every hour blooms into fragrance and ripens into seed for increase. Gratitude quickens into joyous expression by word and deed, the happiness that comes to every student and seeker after Truth and causes all to wish to share in common the blessedness of each thought of Love perceived by any one. Gratitude upholds our first steps along the way. It protects our demonstrations of Truth with humility, incites us to guard thought and action so that no selfishness or inertia may creep in to dim our sense of what is due the cause of Christian Science and the workers for it. It is gratitude that fills our churches, furnishes material for our periodicals and spreads them broadcast over the face of the earth. It is gratitude that inspires our readers, musicians, directors, and congregations to uphold one another's work in honor and love.

The gratitude of each church-member, expressed, builds our beautiful church edifices, maintains our reading-rooms, and supports enthusiastically each separate church organization as a branch of The Mother Church. In true gratitude there is no jealousy or envy to retard the growth of an individual or an organization, no exaltation of personality, no personal condemnation. Attention to one's own problem, and love for all coworkers, lead the honest student to the fullest sense of thankfulness to God for His loving-kindness to His children, and this removes all sense of jealousy toward those who manifest superior wisdom, foresight, decision, comprehension, or demonstration, and enables one to share the blessing of their good work.

Further, gratitude is genuine praise to God, freely and spontaneously given, and is expressed by the earnest contribution of our best to strengthen and increase the knowledge of the truth that makes men free. Whatever we possess that can be used for the church, be it time, money, talent, knowledge, strength, material things, or mental qualities,—all good having been freely given us by God,—should be consecrated gratefully to His service, without looking for either praise or reward, because gratitude for good received demands expression. Without gratitude we could have no Wednesday evening meetings, and obedience to our church tenets and rules would become impossible; our individual lives would drop into chaos, mistaking personality for Principle, and selfishness and self-will for Truth's guidance.

By our gratitude to Mrs. Eddy, who showed us the working rule of life as a Science which is demonstrable and complete, and to those entrusted with authority in our churches; by our gratitude for the weekly services and the daily opportunity for applying what we receive from them, we may fairly judge of the genuineness of our thankfulness to Him who meets our every need. It is necessary for us to be aware of the benefits received in order that we may continue to receive and progress. By gratitude's actual expression toward those around us who are engaged in the work of spreading the knowledge of the Science of Life, Truth, and Love, we can best fit ourselves to help on the great work, and measure our progress and activity as "lively stones" in the "structure of Truth and Love" (Science and Health, p. 583).

Resisting Evil

HENRY LEIGHTON UPTON

JESUS said, "Resist not evil," but James taught, "Resist the devil, and he will flee from you," a thought which Mrs. Eddy has reexpressed when she says, "Resist evil—error of every sort—and it will flee from you" (Science and Health, p. 406). To the superficial reader the first passage might appear to be a direct contradiction of the other two, but to the student who is willing to examine each passage separately in connection with its context, taking into consideration the point of view of the author and the circumstances under which Jesus' words were uttered, much light as to the true way in which to overcome evil may be gained.

Previous to making the statement, "Resist not evil," Jesus had done a very humble thing: he had come to John to be baptized of him in the Jordan, and as a result of his meekness and obedience "the heavens were opened unto him," in proof of his understanding of divine Science. Immediately following the spiritual manifestation which had laid bare the nothingness of materiality, Jesus learned, as many of his followers have learned since, that the revelation of the truth is not its demonstration, for he spent forty days and forty nights while being tempted of the devil, before he proved to his own satisfaction the truth of what he had perceived. To test still more thoroughly his understanding, he "went about all Galilee, . . . healing all manner of sickness and all manner of disease," also, all the afflicted that were brought to him from the surrounding country. Not until he had thus convinced himself of the infallibility of divine metaphysics did he go "up into a mountain" and deliver his famous and only recorded sermon,—the Sermon on the Mount,—in which occurs the admonition, "Resist not evil."

After outlining in unmistakable language the infinite blessedness and divine compassion contained in the gospel of peace which he taught, he told his hearers that unless they were more righteous than the scribes and Pharisees, they in no case could enter the kingdom of heaven. Taking up various sections of the Mosaic law taught by rabbi and priest, he explained the real meaning of the divine law of Love in contradistinction to the stern rabbinical law. When he came to the part which reads, "An eye for an eye, and a tooth for a tooth," he took issue with such teaching by instructing his auditors to "resist not evil." By this saying Jesus did not mean that evil is not to be overcome, for shortly before this he had been victorious over the tempter, but he did object to the "eye for an eye" and "tooth for a tooth" method, or human resistance to evil. All through the ages the effort has been

Digitized by Google

made to subdue the sins of the human mind by means of the human mind, to fight evil with evil; nevertheless the Master knew that it is the light of spiritual understanding, not the exercise of the human will, which effectually destroys all evil, —sin, sickness, and death.

On one occasion in the early morning hours, when Jesus had entered into the temple to instruct the people, the scribes and Pharisees brought to him an adulterous woman, informing him that Moses in the law commanded that such be stoned. What a rebuke to their self-justification, as well as a sharp censure to the self-deceived sense, must have been his simple remark, "He that is without sin among you, let him first cast a stone at her." Convicted by their own conscience, they slunk away one by one, from the eldest to the youngest, leaving the woman weighed down with self-condemnation, alone with Jesus. The great Teacher, with his ever-compassionate apprehension of the human problem, said, "Woman, where are those thine accusers? hath no man condemned thee?" She answered, "No man, Lord." Jesus replied, "Neither do I condemn thee: go, and sin no more."

As Jesus brought out in the foregoing incident, that it is not only ineffectual but actually injurious to personalize evil and to try to master it by force and cruelty, so James showed, in line with the words of the Lord to Zerubbabel, that it is "not by might, nor by power," but only as we draw nigh to God, and submit ourselves unreservedly to His loving care, that we reflect enough of the one Mind successfully to "resist the devil." True to the teachings of the great Wayshower, Mrs. Eddy makes it very clear that the mortal, fleshly, or human mind is the source of all discord, while God or the divine Mind heals every phase of error. In order, therefore, to annihilate the ills or fables of mortal mind, we must rise not in human strength but "in the strength of Spirit to resist all that is unlike good" (Science and Health, p. 393). In many passages Mrs. Eddy distinguishes between the correct and the incorrect way to resist evil. On page 446 she says: "Resisting evil, you overcome it and prove its nothingness. Not human platitudes, but divine beatitudes, reflect the spiritual light and might which heal the sick. The exercise of will brings on a hypnotic state, detrimental to health and integrity of thought. This must therefore be watched and guarded against."

This change from the human to the divine way of handling error does not mean that we are to assume a lethargic attitude toward evil or be less active in our efforts to work out our salvation; on the contrary, it brings with it renewed activity, for it reassures those depressed with the delusion that evil is real, and quickens them to see that "having done all," they can stand for Truth. St. Paul was right when he wrote to the Corinthians, "(For the weapons of our warfare are not carnal, but mighty through God to the pulling down of strong holds;) casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ."

Lessons from a Garden

VIVIAN M. KUENZLI

A YOUNG Christian Scientist, who was also an ardent gardener, was at work in his garden one evening, when a teacher in the Christian Science Sunday school, who had been watching him for some time, asked him how it was with his garden. The young gardener recognized that the words had a double meaning, and replied, that if it were only as easy to get rid of the weeds in the mental realm as it was in the case of those with which he had just been grappling, he might joyfully answer that all was well. The teacher regarded him thoughtfully and replied, "Perhaps if you were to tackle them in the same way, they would disappear as rapidly."

This reply furnished food for thought, and the young man began to wonder just where lay the difference in method that could seem to cause such different results. First he took up the question of the tools. He never went into his garden without the proper tools. He knew that he had used them, that they were in good condition, and also the specific use to which each should be put. Was he always as careful to equip himself with the word of God which is needed in order to destroy all that is unlike God, good? Then, too, was the work ever neglected so long that the weeds became of rank growth, or were they arrested immediately upon their appearance? Was he always as watchful to "suffer no claim of sin or of sickness to grow upon the thought"? (Science and Health, p. 390.)

Again, it was admitted that it is not necessary to be acquainted with the name and characteristics of every weed that might spring up, but enough to know the plants he would have remain. So no time was lost in wondering where the weeds came from, how they got there, etc.; in fact, they never seemed to enter his thought at all, and herein he began to see the great difference in the treatment of his gardens. Mrs. Eddy says on page 407 of Science and Health, "Let the perfect model be present in your thoughts instead of its demoralized opposite." This in the one case had seemed easy, for the plants he was fostering had filled his thoughts rather than the weeds he was destroying, and their number troubled him not at all, for he began with the nearest at hand, and so worked through the garden,—not wandering here and there, not lamenting because they were there, but working cheerfully and patiently, until they had disappeared.

One more thought: The gardener never wasted precious minutes trying to discover if his neighbor had the same kind of weeds to uproot; he realized fully that his work lay in his own garden, and there was never any curiosity or criticism regarding his neighbor's method of work. Here, perhaps, was the greatest difference after all. It should cheer us all to remember the Master's words, "The Son of man shall send forth his angels, and they shall gather out of his kingdom all things that offend. . . . Then shall the righteous shine forth as the sun in the kingdom of their Father."

✧

Renewal

ELINOR F. EDWARDS

"I AM living only one day at a time, and throwing off the old man of error each day with the word of Truth," writes a fellow traveler in Christian Science. From this statement one catches an inspiring echo of the fact that whatever is old and erroneous may be cast off, discarded like a worthless garment, by right thinking and acting. Error, that ancient belief in the reality and power of evil, is seen in the light of Christian Science to be the only thing that is old, and it is indeed broken, helpless, and decrepit. Error is old and dying. Its days are numbered, but Truth is forever new and regenerative.

It is a misuse of words to say that man is old, after it is learned in Science that he is the reflection of Mind, "neither young nor old" (Science and Health, p. 244). This law of renewal is always operative. It is the law of Life, whose continuous activity is indicated in the returning spring, and it is no less applicable to man than to the earth upon which he lives. "Thou renewest the face of the earth," is the psalmist's statement of this law; and Isaiah significantly

Digitized by Google

says, "Let the people renew their strength;" also, "They that wait upon the Lord [this unfailing law of regeneration] shall renew their strength." David wisely prayed, "Renew a right spirit within me," and St. Paul more than once refers to the transformation of the body by the renewal of the mind, showing that the operation of this law is carried out through a mental process.

Regeneration or renewal follows the acceptance and activity of Truth in human consciousness. Weakness gives place to strength, sickness to health, and sin to righteousness, as false beliefs, traditions, and superstitions are replaced by the truth, and we spring up from their hold like a young tree that has been unbound. "If any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." Science and Health says (p. 222), "Truth regenerates this fleshly mind and feeds thought with the bread of Life."

A happy application of the word "old" is seen in the frontispiece of one of the current magazines. It is called "Old Age and Youth." Here is pictured the base of a grand old forest tree, and close to its rugged side stands a little girl five or six years old, holding her baby Teddy bear in her arms. The tree, a veritable monarch of the woodland, is every inch a king, and the word "old" simply indicates majestic strength, nobility, endurance, patience, rugged grandeur, vitality, victory. It recalls Mrs. Eddy's lines to "The Oak on the Mountain's Summit" (Poems, p. 20), which express a similar beautiful thought and comparison:—

> Faithful and patient be my life as thine;
> As strong to wrestle with the storms of time;
> As deeply rooted in a soil of love;
> As grandly rising to the heavens above.

As we become aware of the fact that man is wholly mental and not physical, immortal and not mortal, the present use of the word "old" will be obsolete; for when things divine are continually in our thought, governing all our habits and actions, we shall rejoice in a continuing life which is not subject to decay and dissolution. Then shall it be said in the words of Isaiah, of one governed by this law of renewal, "Thou shalt be like a watered garden, and like a spring of water, whose waters fail not."

✧

Putting Away Lying

REV. G. WARRE CORNISH

Paul tells the Ephesians in the fourth chapter of his epistle to "put off . . . the old man, which is corrupt according to the deceitful lusts." He continues, "Wherefore putting off the lie [to follow the original more closely], speak every man truth with his neighbor." The connection of thought is obscured by the translation in the Authorized Version. "Wherefore putting away lying" is the rendering in the King James Version. From the Greek text it is evident that Paul is resuming the words he has just given, "put off . . . the old man," for he continues with the very same word, "Wherefore putting off the lie."

Students of Christian Science sometimes make use of the phrase "the lie" in a wide and extended sense to mean falsity, all that counterfeits God's creation. Though this is strange English, it is good Greek, and exactly translates the words Paul uses here, and also the words John uses when he says, "When he speaketh the lie." It is a more inclusive phrase than "when he speaketh a lie," as it is translated. For the most part both the Authorized and the Revised versions are splendid and true renderings of the Greek text, but in the more metaphysical rendering of words and phrases, they sometimes fall short of the ideal.

Mrs. Eddy says (Science and Health, p. 537), "Inspired writers interpret the Word spiritually, while the ordinary historian interprets it literally." It is our privilege to apply our understanding of Principle, that we may gain the spiritual sense and utilize it in working out our problems, not in mere discussions as to the letter, although this too should become more luminous to us each day.

✧

"Thine, O Lord, is the greatness"

IDA MAE FIANDER

In reading another's experience as given in the *Sentinel* some time ago, the thought came to me how long I had remained silent respecting the many beautiful demonstrations I have had in Christian Science. Now I would speak of one experience which showed me that all who are working to establish God's kingdom on earth must be ready at an instant's notice to declare divine law, as we know not when the call to voice the truth will come to us.

One day, as I was going out of an office building, I heard behind me a heavy thud, as of a body striking. This was followed by loud cries, and excitement prevailed. For an instant, just an instant, my heart stood still, and then I was made aware that some one had fallen down an elevator well. I did not move or look to see the one who had fallen, as I could have done by taking a few steps, but remained quietly where I was, with the crowd rushing past me from all directions, and declared that there are no accidents in divine Mind, that God is ever-present Life and intelligence, and that in Him all is harmonious. These thoughts of Truth, and many more, came to me as I stood there, working to the best of my understanding of God and His law.

About fifty people had gathered, and finally a fireman pushed his way through the crowd, dragged a person out to the sidewalk, and lifted the seemingly limp and helpless body on his shoulder. Then for the first time I saw that the one injured was a boy about fifteen years of age. I did not know how serious the accident might have been to mortal sense, but I started on my way, holding to the thought that harmony and the allness of God were everywhere, so that when I reached my place of business the occurrence had almost been forgotten, though I did mention it to my husband.

The next day I picked up a morning paper and read that a boy sixteen years of age had fallen three stories down an elevator well, and had received no injuries, not even a scratch. Then I realized again, as I had many times before, that God's word "is quick, and powerful, and sharper than any two-edged sword," and that we should all rejoice together in one great family, one grand cause, knowing that our Leader wished us to be ever ready to do our works and prove God's allness, not by talking about it, but by proving it for ourselves and others. We have simply to avail ourselves of the treasures of Truth, and then we can follow the Master in meekness and power, never doubting and never fearing. Thus we shall be ready to declare, "Thine, O Lord, is the greatness, and the power, and the glory, and the victory, and the majesty: for all that is in the heaven and in the earth is thine."

✧ ✧ ✧

> Yes, spring has come! I too must wake
> And with the birds glad music make.
> Sweet flowers—God's smiles—are everywhere,
> And "why should I dark visage wear?"
> Nay, I'll give thanks, rejoice and sing,
> And thus fulfil th' eternal spring.
>
> A. Gertrude Hulley.

Selected Articles

[Frederick Dixon in *Middlesex and Buckinghamshire Advertiser*, Uxbridge, London, England]

A recent critic tells us that "the basal folly of Eddyism is that matter is non-existent." Now the basal statement of Christian Science is necessarily not a negation, but an affirmation, namely, that "God is All-in-all" (Science and Health, p. 113). If the unreality of matter were, however, the basal folly of Christian Science, it would be a folly it has shared with the thousands of the greatest thinkers in the world who have had the misfortune to differ from our critic. It is the basal folly of the philosophy of Plato, of the whole body of the medieval Conceptualists, of Berkeley and the Berkeleians, and of Professor Ostwald and the idealists of today. Certainly some people do indulge in wild words. Modern idealism, said Mr. Balfour to the British Association, at Cambridge, has not only explained matter, it has explained it away; and he has just spent a week or more in Glasgow, in the course of delivering the Gifford lectures, in explaining what it all means. And here is a critic dismissing all these thinkers as fools in just a few words! Christian Science does differ, and differs fundamentally, from the idealism of natural science; but if this critic had wished to choose a particularly thin piece of ice through which to disappear into the waters of Lethe, he could hardly have done better than select the unreality of matter.

Finally, the critic embarks on the attempt, the deferred hope of success in which has made the hearts of so many others grow sick, of disposing of Christian Science healing. Now Christian Science healing has been practised for almost fifty years, and during that time millions of cases have been treated. It is just because of the success of this treatment that the movement has spread throughout the world and is causing the critic so much irritation today. Does he seriously suppose that all these people have been deceived by what he so politely terms people "tuning their little fiddles for a dance of death, at four shillings a visit"? Let him remember that while the Pharisees of the first century were assuring the blind man that Jesus was a sinner, that man was sending down the centuries the contemptuous rejoinder, "One thing I know, that, whereas I was blind, now I see."

✧

[D. M. Ely in *Elyria* (Ohio) *Chronicle*]

It was with surprise and disappointment that we read in the *Oberlin Review* the résumé of an address by the president of Oberlin College, in which he assailed Christian Science and even sought to reflect on the character and motives of Mrs. Eddy. Surprise proceeded from the evident fact that he presumed to speak with freedom about that with which he was lamentably unfamiliar; while disappointment was experienced because one occupying a position where he is supposed to stand as an exemplar of high ideals before a student body of young men and young women, should resort to unfair and wholly unwarrantable representations as to the teachings of a great and growing religious organization with which he does not happen to be in sympathy, and especially that he should stoop to try to ridicule and bemean a woman to whose memory multitudes of all creeds and of no creed, throughout the world, have paid highest tribute. Unfortunately his remarks in their entirety were not given, otherwise they might be reviewed in regular order. Evidently only fragments were reported, but more especially such portions as stood out prominently by reason of their denunciatory characteristics.

Manifestly, as in the case of many others who have essayed to expose the alleged faults of Christian Science, the critic made the mistake of judging this teaching according to his own peculiar understanding of it or the contentions of certain of its enemies, rather than from first-hand information from authorized Christian Science literature. It is noteworthy that this concession was made: "This new faith does have a message for health as well as for moral and religious life. Some genuine Christian people have, through healing, gotten a new relationship with God." This is actually a wonderful testimony, since it shows the fruit of the teaching. For what other church can more, or even as much, be said? But how this statement could be given out as truthful, and then be followed by declarations derogatory of that same system, is inexplicable.

The critic is credited with saying, "Christian Science, however, as a consistent system is indefensible;" also, "Intellectually, Science and Health is ridiculous, and no one could better stultify his intellect than by believing it." Such general and sweeping allegations are what are denominated in law procedure, "merely surplusage." Nothing definite is set forth, much less offered as provable. To the thoughtful they are only as "sounding brass." It is doubtful whether there had been any previous calm and deliberate reflection on the possible reactionary effect that such criticisms might have for the speaker. The history of religious doctrine furnishes warning for those who are disposed to call things "ridiculous" or to describe them as calculated to "stultify the intellect," merely because they have not accepted them. Practically the same things were said about the teachings of Jesus Christ by schoolmen of his times. It is true, as the critic confessed, that multitudes through Christian Science have found God and have experienced all manner of healing; and these beneficiaries have come from all walks in life, thousands of them being identified with the so-called learned professions. More than that, and what is highly significant, in this cloud of witnesses are a great number who were revered and prized members of other churches, who testify that they were unable to find the spiritual help they craved until it was gained by them in Christian Science.

When the critic cavils and talks of inconsistency because Christian Science denies materiality and then proceeds to heal the physical, astonishment is excited and the query addressed by Jesus to Nicodemus is recalled: "Art thou a master of Israel, and knowest not these things?" It does not require unusual erudition and profound thought to discover that in place of inconsistency there is an impressive consistency in the teaching and practice of Christian Science. To the ordinary mind the practical results are a conclusive demonstration thereof. If the president has a clear understanding of what he terms "reality," and entertains a belief therein, he is in the unique position of being at variance with a multitude of the world's great thinkers of these times. It is a safe conjecture that to not a few the thought has come, If Christian Science is so grossly faulty and stultifying, and yet in all lands and among all peoples it is productive of the same fruits, why do not the critics explain how this can be, and also tell why their systems of teaching do not in a similar manner meet the yearnings and needs of mankind? A bitter and polluted fountain will not give out sweet and clear water.

The charge is made that "Christian Science has never been willing to submit to the crucial test of work in the slums, and it flourishes always among the rich and well-to-do." Surely it cannot be that the critic intended it as a fault, that Christian Science is adapted to attract and to bless the rich and well-to-do, those who are commonly viewed as far removed from religious interest. This allegation that Chris-

Digitized by Google

tian Scientists avoid the slums, was not original with the president. It is one of the stock objections. As this critic ought to know, however, the workers in slums, or the underworld, represent no one church organization,—often the most effective service is rendered by such as do not act under the auspices of any church,—therefore recourse to the charge mentioned was merely a misleading assumption. But Christian Science has not held itself aloof from the "slums;" on the other hand, as is demonstrated, it has gone there, and without a flourish of banners has quietly wrought a healing work, rescuing men, women, and children from sin, wretchedness, and degradation. It has made the sick whole, the lascivious chaste, the thief honest, the inebriate sober, and the indolent industrious, transformations which happy and grateful people joyfully acknowledge in the Christian Science Wednesday evening testimony meetings. Any one who has an honest purpose to learn the truth, has only to look about him to discover that Christian Science is a religion for people of all sorts and conditions.

The president seems to be disturbed because Christian Scientists do honor to Mrs. Eddy. As for his unfair and unchristian references to her, they require no further reply than that supplied in the life she lived and the work she did. Under the circumstances the use of those old and often answered innuendos evidenced a paucity of argument. However, we have reason to know that in the halls of Oberlin College there are certain names of men and women frequently mentioned, with the purpose of according them highest respect and praise for deeds done; why, then, should there be any question when the adherents of Christian Science seek to pay like tribute to Mrs. Eddy? It is not true that she ever claimed to be on an equality with Jesus Christ, and Christian Scientists do not so associate her; but those who have a knowledge of her unselfish, pure, and fruitful life, particularly such as have partaken of the blessings rendered attainable by her discovery and patient unfoldment of spiritual truth as found in "Science and Health with Key to the Scriptures" and other volumes, delight in expressing their love and gratitude to her, as it is only right and proper that they should.

As for the critic's peroration, "Thus morally, religiously, and intellectually Christian Science is not worthy of the place given it," we are content merely to array in juxtaposition thereto the conclusions of "A Churchman," "a priest in the Protestant Episcopal church," which are found in a just, intelligent, and forceful article elucidating the question, "Must Protestantism Adopt Christian Science?" in the December issue of *The North American Review*. He says: "The writer would submit the proposition that Protestantism must substantially adopt the faith and practice of Christian Science if its churches are to fulfil their mission to the world. This conviction is the result of several years' critical and philosophical investigation of the doctrines and practice of Christian Science compared with the experiences and observation of many years as a priest of the church." Also, "If we study the relation of the church to its work of salvation, the need of the adoption of Christian Science becomes imperative." Again: "Healing sickness is with them as much a religious duty as destroying sin. Both are simply a manifestation of the inner spiritual life which they are constantly striving to have more abundantly. This practice of primitive Christianity by the disciples for nearly three hundred years, which was lost to the church when the Holy Spirit was driven out, is now undoubtedly restored in Christ or Science. If the church should adopt it, there would be manifest the strongest evidence of the renaissance of Christianity." Further, "The theology of Christian Science is more scientific than that which is popularly accepted by the churches."

Deeds and fruits, not mere words, are what men of thought demand today. Christian Science welcomes this test.

✥

[W. C. Williams in *Ledger-Enterprise*, Pocomoke City, Md.]

A most remarkable statement by the dean of St. Paul's, London, England, was quoted in a recent issue. One quotation states that "it is quite clear that God does not consider death to be an evil or an injustice, and it is equally clear that He intended His creatures to suffer pain." It seems inconceivable that a conception could obtain which would place God on a lower level than His offspring—man. One is usually characterized as a human brute who wilfully inflicts pain on others, and is considered as far removed from God as it is possible for a human being to be; and yet this English divine, who teaches the example of the loving, merciful Jesus whose very presence banished pain, declares that "pain is a condition that is most precious in this world." Jesus plainly taught that sin, not God, is the chief cause of suffering, and he also taught that death is an enemy.

The Bible teaches that God is Love, but such an interpretation of Love as given by the reverend doctor above quoted is not an inducement to human beings to know Him better. The "revolt against pain" is an enlightened revolt, as it appeals to common sense that suffering and disease are not the law of divine Love, and that the image and likeness of God would not suffer any more than the Father suffers, if man did not allow himself to be the image and likeness of evil instead. If pain is God-ordained, we have no right to try to evade it; but the world-wide and continuous effort to overcome it, proves that there is little faith in such a theory, even if this defender of pain welcomes it.

If pity and charity depend upon a painful world, it would certainly be a blessing to eliminate them; but on the contrary, true charitableness would find a larger field in the uplifting of thought and endeavor to the higher plane of moral and intellectual rectitude. Fear and pain have never been proved to be preventives of crime and other immorality, and no real reform has ever been accomplished through their instrumentality. Love is the only reformer, and it was through Love that Jesus achieved his hold on mankind.

✥

[John W. Doorly in *Bradford* (England) *Argus*]

In a recent issue I notice the kindly inquiry from "Mortal Man" in reference to the teachings of Christian Science with regard to matter. He seems to feel that Christian Scientists, because they deny the reality of matter, also deny the existence of birds, flowers, trees, etc., and asks if they do not believe in the first chapter of Genesis.

Your correspondent will undoubtedly be pleased to know that Christian Scientists believe absolutely in the first chapter of Genesis and understand it so clearly that they find it to be one of the most powerful arguments in favor of Mrs. Eddy's teaching that being is "very good" and is spiritual. They are convinced that the first chapter of Genesis and the first five verses of the second chapter are the revelator's record of his perception, through spiritual sense, of the true facts of being, of being in its true and perfect state, facts which had always coexisted with God when the "Lord God had not caused it to rain upon the earth, and there was not a man to till the ground."

The very next verse in the second chapter, that is the sixth verse, will give your correspondent the only explanation there is of material being: "But there went up a mist

Digitized by Google

from the earth." This mist is the ignorance of false material sense which records a second account of being, into which matter enters, and man, the image and likeness of infinite Spirit, is cooped up in a belief of finite dust, while Adam the sinner, that is, the type of mortal man, has the supposed privilege of naming the birds, beasts, etc., which God had already created and called "very good." This suppositional false sense of true being is the only hell there is or can be, and it is the so-called material sense of creation. Jesus gave the remedy for this false sense when he said, "Ye shall know the truth, and the truth shall make you free." Undoubtedly the truth of being can make free only from a false sense of being.

Because Christian Scientists do not believe that material objects are any part of true being, does not mean that they do not believe there are such things as birds, beasts, etc., but rather do they understand that the material sense of these things is a false sense, which must be corrected by looking, not "at the things which are seen, but at the things which are not seen." Christian Science, however, does not take the creation and label it at one fell swoop as nothing, but it teaches men slowly yet surely to correct a false sense of being through the perception of true being, or of that which God saw and, "behold, it was very good;" and this perception must be gained wholly through spiritual sense, or by knowing the truth and then living it persistently. That matter is a mortal concept is recognized today even by physical scientists, as Mr. Balfour clearly indicated when he declared recently that in explaining matter we explain it away. The clearest proof in Christian Science that matter is wholly unreal is today obtained in the healing of disease, where material conditions are dispelled by the understanding of man's true being, or by understanding that which God has really created.

To sum up, Christian Science teaches that the birds, beasts, etc., are not material objects except to the false mortal sense, but that they are, in their true state of being, God's ideas, perfect and indestructible; that this recognition of true being is the kingdom of God here, now and forever, which dispels the false or material sense of being.

✧

[Thomas F. Watson in *Fresno* (Cal.) *Herald*]

It seems strange that a minister of the gospel should malign and misrepresent Christian Science, which has healed thousands of sin, sickness, and sorrow, and turned them to God, when he should be preaching the gospel and healing the sick in accordance with the command of the Master. The Bible says, "Judge not, that ye be not judged;" and if our friend the minister has anything better than Christian Science to offer the world, he will find people hungry and waiting for it; nor is it necessary to tear down another's religion to build up his own. That is not Christianity. The Master said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

Christian Science does not ignore sin, but teaches how it may be overcome. Science and Health (p. 404) states: "Healing the sick and reforming the sinner are one and the same thing in Christian Science. Both cures require the same method and are inseparable in Truth. Hatred, envy, dishonesty, fear, and so forth, make a man sick, and neither material medicine nor Mind can help him permanently, even in body, unless it makes him better mentally, and so delivers him from his destroyers." The Bible tells us that God is Love, that God is Spirit, also that He is omnipotent and omnipresent, and this is just what Christian Science reiterates. The definition of God, as given in Science and Health (p. 587), is this: "The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence."

Our clerical critic states, "The church does not assume the function of medicine or the practice of medicine; it fulfils the Word of God by trying to bring into effective cooperation the physician and the patient;" but the fact remains, that the Master commanded his followers to preach the gospel and heal the sick; he also instructed them to preach to all nations, —teaching them to observe all things whatsoever he had commanded them,—and this command was never revoked. The early Christians for three hundred years after the Christian era were all healers. Jesus said in the gospel of John: "For I have not spoken of myself; but the Father which sent me, he gave me a commandment, what I should say, and what I should speak." God's law never changes, for it is "the same yesterday, and today, and forever."

✧

[John L. Rendall in *Sioux City* (Iowa) *Tribune*]

In a recent sermon delivered in your city, the Rev. Mr. —— pays his respects to Christian Science and other teachings which differ from the so-called orthodox theological view-point. He assails the teaching of Mrs. Eddy as lacking in the knowledge of correct theology. How true it is that history is continually repeating itself! The above accusation was repeatedly made against Christ Jesus and his disciples by the high priest and those in ecclesiastical authority. The history of the Christian religion from the time of Jesus to the present is replete with instances of the persecution of individuals who have dared to think for themselves. Those who arbitrarily claimed to possess and to practise correct theological teachings, have been the persecutors. At the present time there are more than one hundred and fifty different varieties of theology, all of which claim to be based upon the Christian religion.

Just why our clerical critic should assume that his particular brand is the "correct" one, to the exclusion of those teachings which he attacks, is not very clear. If the life and example of Christ Jesus is the criterion, and we naturally assume that it is, the question at once occurs, Why omit from theology that which Jesus gave as positive proof of one's Christianity when he stated: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover"?

The woman mentioned in the Bible, to whom the critic refers, who had "suffered many things of many physicians," was healed through the spiritual understanding possessed by Jesus. Likewise hundreds of thousands of people, who found themselves in the same condition, have found surcease from their sufferings through Christian Science. They have gained happiness, health, and harmony, because they, too, have touched the "hem of Christ's robe" (Science and Health, p. 569), in its spiritual significance, and have learned that the same Christ, Truth, which heals and saves, and which Jesus demonstrated so thoroughly, is with us today, accomplishing its healing mission.

It is a sad commentary on so-called orthodox Christianity that its denial of the possibility of Christian healing is accompanied by abuse of those who practise it. Did not Jesus say of such, "Woe unto you, . . . for ye have taken away the key of knowledge: ye entered not in yourselves, and them that were entering in ye hindered"?

Editorial

"Until the harvest"

When the Master explained the parable of the wheat and the tares to his disciples, they must have been greatly impressed with his wisdom. His explanation showed the reason for the temporary toleration of the tares, but he counseled this necessary delay without in the slightest degree departing from his condemnation of the tares, or of the one who had sown them. He made it perfectly clear that the principal thing to be taken into consideration was the wheat, and that nothing should be done which might injure the growing grain. What he had in view was not that the tares were deserving of consideration,—they were not there of their own responsibility,—but that "the children of the kingdom," whom he had symbolized by the wheat, should "shine forth as the sun in the kingdom of their Father."

To permit the tares to remain until the harvest, when they could either be uprooted without damage to the wheat, or else when cut down easily separated and thrown aside to be burned as refuse, would require much patience and much forbearance on the part of the owner of the field; but the results would justify the wisdom of this course. Not only would the tares be destroyed, but the wheat would finally be free from them and its usefulness and value be undiminished. On page 300 of Science and Health, Mrs. Eddy has made apt use of this teaching of the Master in drawing the distinction between mortal man and the real or spiritual man of God's creating. She says: "The temporal and unreal never touch the eternal and real. The mutable and imperfect never touch the immutable and perfect. The inharmonious and self-destructive never touch the harmonious and self-existent. These opposite qualities are the tares and wheat, which never really mingle, though (to mortal sight) they grow side by side until the harvest; then, Science separates the wheat from the tares, through the realization of God as ever present and of man as reflecting the divine likeness."

Probably no other teaching of Christ Jesus expresses such sublime patience as does this parable of the wheat and the tares, and certainly none other expresses in a greater degree the necessity for singleness of purpose in our efforts to realize the kingdom of heaven. Christian Scientists must not, however, overlook another lesson to be gained from this parable, namely, that it is necessary for them to be so familiar with the product of the good seed that they will be able to discard the tares. Should they fail in this, the whole harvest would be wasted and famine would result.

On yet another occasion our Master taught his disciples still another lesson of patience and toleration in his reply to John the Baptist, who protested his unworthiness to baptize the one whom he had previously declared should on his coming baptize the people "with the Holy Ghost, and with fire." Jesus' answer was, "Suffer it to be so now: for thus it becometh us to fulfil all righteousness." It is quite clear that he said this, not because the water of Jordan had power to bestow righteousness or the reward of righteousness, but because it was expedient at that time that he should be baptized; not that the rite of baptism was of itself efficacious, but because the neglect of this rite by him might injure the faith of some one who had not yet learned the futility of material means to gain the kingdom of heaven.

The lesson of these sayings would seem to be that not only is patience requisite in all our affairs, but we must also possess the larger view which will enable us to see beyond the present and guide us safely through the tangle of human will and human opinion up to the gates of the kingdom. Nor can we forget that consecrated labor is also necessary. Mrs. Eddy writes on page 340 of "Miscellaneous Writings": "There is no excellence without labor; and the time to work, is *now*. Only by persistent, unremitting, straightforward toil: by turning neither to the right nor to the left, seeking no other pursuit or pleasure than that which cometh from God, can you win and wear the crown of the faithful." The way may seem long and arduous; but what matters it, if we gain the goal! The promise is "to him that overcometh."

Archibald McLellan.

"As a lamp that burneth"

In his teaching that God is Love, the Master spoke not only for the essential nature of Deity, but, since love is revealed and discerned only in loving deeds, he spoke for the fact that this nature is disclosed in its activities. Thus he made his own life a continuous illustration of the attractive and redemptive power of compassion. He preached by practising, and thus he became "the light of the world." As he apprehended and lived it, life is not only potential, but dynamic. It is a self-giving, Spirit-revealing activity. St. John seems to have apprehended this as did none other of the disciples. For him life's first privilege and duty was the radiation of the light of Love, and in his ever-reiterated counsel, "Little children, . . . love one another," he commended his followers to the realization of the efficiency as well as the need of affection.

Again, in the call of the Master, "Let your light so shine before men, that they may see," the truth was practically phrased that love lives and has its being in manifestation. The unlighted lamp is darkness itself. Neither the receptacle nor the oil that fills it counts for anything if there be no flame. Following the beatitudes, this is the first truth which is enlarged upon in the Sermon on the Mount; and how striking is the parallelism thus presented to the great initial assertions of Scripture, "In the beginning God," who "moved upon" the deep of darkness, and said, "Let there be light"!

Christian Science enables us to see a further parallelism in the statement, "There was a man sent from God." Man, a divine idea, the projection of infinite Mind, must radiate the light of "the knowledge of the glory of the Lord." Divine intelligence naturally expresses itself in love as the oil expresses itself in light. This is the philosophy of being as apprehended in Christian Science, and we obey the Master's command, "Let your light . . . shine," when we accept the fact of man's "spiritual identity in the likeness of the divine" (Science and Health, p. 51), his spiritual equipment or capacity to love God's way and thus do His work, so that whatever he looses on earth is loosed in heaven.

For me to know that intelligence and Love are manifested in and through man, and that I am that man,—this is the highest crest of consciousness. The light which we are to let shine, the capacity to do the Master's works which we are to exercise, being man's by nature, becomes ours as we awaken to true selfhood. This is the great discovery of Christian Science.

That word "let" in the Master's phrasing is very short but very suggestive. It hints of privilege, of self-discovery, and of the possible expansion of influence. It hints too, as we must sadly allow, at self-limitation, the denial of our true nature and the consequent defeat of good. What human wreckage, what unrealized growth and gladness have attended the failure to understand and work out the content of these little words "your light." Here is a possession which is

Digitized by Google

unmeasurable. Said St. Paul, "All things are yours." Linked inseparably to God, our resources become infinite; the oil cannot fail, and to shine continually involves no hazard of exhaustion. Indeed, the law of our increase is here determined by our habit of expenditure. No one can love largely without finding it possible to love more, and the only requirement laid upon us is that of consent. "Let your light . . . shine,"—this is the all-inclusive mandate, and one is surprised to find how frequently it is reiterated by our Leader in Science and Health. "Let us accept Science," "Let us learn of the real and eternal" (pp. 249, 208),—these and kindred appeals are found on well-nigh every page. The significance of consent to Truth is thus lovingly emphasized.

Christian Science not only awakens thought to the store of oil at our command, the wealth of individual endowment in Christ, but to the fact that unless our lamp is trimmed and burning, this store is rendered ineffective, so far as we are concerned. As the song exists not in the notes or symbols but in the singing, and as the lamp is radiant, a light, only in its flame, so love is itself only in loving.

JOHN B. WILLIS.

Thought and Thinking

STUDENTS of Christian Science soon become familiar with the fact that thought represents the activity of mind, and that as a man thinketh, "so is he." They may find that those outside of Christian Science are disposed to ridicule them because of the importance which they attach to thought, but this does not disturb them, for they know that their health and harmony depend upon right thinking. They also see the intense significance of these words in the prophecy of Isaiah, "My thoughts are not your thoughts, neither are your ways my ways, saith the Lord." They learn, too, that as their thoughts become more spiritual, hence purer, and their ways in accord with God's ways, these are found to be ways of pleasantness and paths of peace.

Very few would venture to dispute the correctness of Mrs. Eddy's statement on page 270 of Science and Health, "Mortals think wickedly; consequently they are wicked." They would not, however, so readily agree with her when she goes on to say, "They think sickly thoughts, and so become sick." Yet these statements describe accurately the results of the thinking of mortal mind. It is quite possible for one to accept both of these statements, and yet know little or nothing respecting the kind of thinking which results in health and holiness. Most people are agreed that to think means to live, but not so many are aware that right thinking leads to eternal life, with all that this implies in the way of present blessedness. To be consistent in striving to think rightly, no phase of evil—sin, disease, or death—should be a factor in our consciousness, nor should it ever have a place in our plans or purposes, except that which would annihilate all belief in evil.

It is simply astonishing to note or to experience the results which follow when one ceases to believe in the power or reality of disease, as we are taught to do in Christian Science. The Master's cheering words, "Fear not," spoken on so many occasions, echo continually in thought and tell of the perpetual presence of divine Love. Then, when surrounded in the busy ways of the world with those who advocate disease theories, our Leader's admonition, "Stand porter at the door of thought" (Science and Health, p. 392), may well be heeded. Christ Jesus did not fail to warn his followers against "evil thoughts," but many there are who quite forget to do what he commanded, namely, to watch unceasingly against the mortal foes that would invade our mental realm, which should ever be guarded as the kingdom within, where Truth and Love are enthroned.

It is too true that evil thoughts of all kinds pervade the atmosphere of mortal mind, and even little children may respond to fear and hate unless they are early taught the ceaseless protection of the pure thoughts which proceed from the one perfect Mind. Thus it follows that men and women seem to be helpless victims of evil thinking, a habit which is far more insidious and harmful than any outward habit, and much harder to overcome until the absolute demands of Truth are recognized and Truth's power to deliver is declared as often as the error presents itself. Well were it for us if every time an evil thought knocks at our door for admittance, we would say, in the Master's words, "I never knew you: depart from me, ye that work iniquity."

We should never forget that continuous right thinking, not spasmodic or unrelated mental activity, is what brings harmonious results, leads us into the land "flowing with milk and honey,"—our promised land. We must know God well enough to love Him with all our heart and all our might, and we must so think upon all the activities of infinite Mind that all we do shall reflect divine intelligence, and "the beauty of the Lord our God be upon us." Daily duty will thus become a sacrament, and without fear or doubt we shall pray as did the psalmist, "The work of our hands establish thou it." All this is possible to the one who reflects the Love that "thinketh no evil."

ANNIE M. KNOTT.

Among the Churches

Current Notes

GARY, IND.—The advent of Gary's handsome playhouse as a place of worship was marked yesterday [March 1] in its use for the first time by the congregation of the Christian Science church, First Church of Christ, Scientist. Starting five years ago with a little band of eight members, the local organization has kept pace with the growth of the city of their adoption. Beginning in a room of the Victoria Hotel, they have been forced to move repeatedly in order to accommodate the ever-increasing number of attendants,—first to rooms on Broadway near Seventh avenue, then to others on Fifth avenue, then to a store-room at 608 Massachusetts street, followed by the move two years ago to a double store-room at 612 on the same street, and this last change to the theater, where the congregation will probably remain until they can have permanent quarters in a church edifice of their own.—*Gary Post.*

LIMA, OHIO.—Second Church of Christ, Scientist, recently moved into their own church home at 545 West High street. The lot contains two houses, and for the present the main part of the larger house has been remodeled for use as a church-room. This marks progress and achievement for this organization, as Second Church was formed and received its charter only a little over a year ago.—*The Lima Daily News.*

NEW ORLEANS, LA.—First Church of Christ, Scientist, will hold the opening services in its new edifice, at Nashville avenue and Garfield street, Sunday morning [April 12]. The entire cost of the structure, including the land, was fifty-five thousand dollars. A large balcony seats one hundred and fifty persons, while the auditorium seats about five hundred.—*Times-Democrat.*

Digitized by Google

SAVANNAH, GA.—At a joint meeting of the congregations of First and Second churches of Christ, Scientist, recently, it was decided to unite under the name of First Church of Christ, Scientist. Hereafter there will be meetings at only one place, the church at Whitaker and Thirty-first streets. The members believe greater good can be accomplished by one strong body.—*Savannah News.*

✧ ✧ ✧

The Lectures

Honolulu, Hawaii

Speaking to an appreciative audience that filled the Opera House, William R. Rathvon gave an interesting lecture upon Christian Science. He was introduced by Judge Henry E. Cooper, who said:—

Christian Scientists never proselyte and do not argue, but they are always ready to assist all who ask, and to make known to those who are willing, the truth as revealed in Christian Science. Sooner or later nearly every mortal comes face to face with a crisis. Usually the first effort is to battle against the condition by mere force of will or by reliance on a blind faith in God. In many instances victory seems to be won. Time, however, proves that in either case the result is not permanent, and the next test shows that the relief was only temporary. It was simply the casting out of one belief with another. Deep despair often follows the realization that there was no foundation to the support relied upon, and that it was a reed shaken in the wind.

It is here that Christian Science solves the problem after all other helps have been found wanting. There are many devout thinkers who would rejoice if they could but make God their confidence and demonstrate that it is possible for men and women to walk with God and talk with Him now as aforetime. For centuries this relationship had been lost. But the message came again, and we should be thankful that we live in this day, for through divine Love the way has been opened to us by a noble woman who through years of patient and loving work has established the rule by which we are enabled to recognize the sovereignty of Soul and have an abiding ability to understand God. The world owes much to Mrs. Eddy, the author of the Christian Science text-book, "Science and Health with Key to the Scriptures," for the blessings that have already been made manifest, and for the great uplift that is to come with the "signs following" described by Christ Jesus. The knowledge that man, created in the image and likeness of God, Spirit, is not subject to the passions and appetites which mortal experience tends to fasten upon men, comes as the dawn of day after the darkness of night,—first the faint rays of hope, and then the fulfilment of the risen day. The serenity of life which attends a correct comprehension of the Science of being, is the "pearl of great price,"—that peace "which passeth all understanding."

Honolulu Star-Bulletin.

✧

The Hague, Holland

Prof. Hermann S. Hering lectured on Christian Science at Pulchri Studio. The hall was well filled and the audience was attentive and interested. Jonkheer A. W. den Beer Poortugael, major of the artillery reserve, who introduced the lecturer, said in part:—

In the last months some of the leading papers in our country have published articles in which Christian Science has been confounded with magnetism, and it has also been called a method of healing. I have studied this teaching for several years, and have had plenty of opportunity to experience and observe its salutary influence on myself and others.

Christian Science is the Science of being, a religion based on the Scriptures, on the words and teachings of Jesus. It can no more be called simply a method of healing than we can apply these words to the teachings of Jesus. Just as the healing takes a predominant and indispensable place in the doctrine which Jesus taught nineteen centuries ago, and proves that doctrine and results cannot be separated, in the same way it is an important feature in the Christian Science teaching, whose mission, however, is not primarily one of physical healing, but the healing follows as the result of the understanding of eternal Truth.—*Correspondence.*

✧

Sheffield, England

A thoughtful exposition of Christian Science was given by Col. William E. Fell in Montgomery Hall. There was a crowded assembly, representative of all denominations. J. W. Doorly of Leeds, in opening the meeting, remarked that the *Sheffield Daily Telegraph*, in its "Current Topics" column, had in a kindly criticism mentioned that not enough was made by Christian Science of the healing of sickness and disease. Criticism had usually been quite the other way, and it was often complained that Christian Scientists made too much of the healing of disease. The truth was, that their lectures were given primarily to correct false notions about Christian Science. Healing was the result of a consecrated life and the correct understanding of God, and it was not possible to explain it in one hour, or, in fact, many hours. It could only be explained to the man who desired the truth.

Sheffield Daily Telegraph.

✧

Elgin, Ill.

At a lecture on Christian Science at the Grand Theater, the speaker, the Rev. William P. McKenzie, was introduced by George B. Walter, who said in part:—

The lecturer's subject is one of vital interest to every man, woman, and child, for, as the Master said, it is the truth which makes free. We find in this Science of religion that love for God and man is the one indispensable element of all true and lasting success. As a student of Christian Science, I have found, as have countless others, that this teaching heals, cleanses, regenerates,—substitutes the ever new things of the Spirit for the old things of the carnal mind,—because it is the operation of divine Principle in the heart and consciousness of mankind. In this process of liberation the individual at once begins to know God, infinite good, and as a natural consequence victories are won hourly.

Lewistown, Mont.

Francis J. Fluno, M.D., delivered a lecture at Culver's Opera House on the subject of Christian Science. Atty. Burton R. Cole, first reader of the local Christian Science Society, introduced the lecturer, saying in part:—

The history of the human race from the earliest known period down to the present time, reveals the fact that men and women generally have accepted the phenomena of physical disease, calamity, and dissolution as necessary incidents to the experience of human life. Of these experiences they have said, "They are a part of life;" "It is God's will;" "We must bow before the inevitable;" in other words, they have been accepted as the manifestations of God's law. History, however, both Biblical and secular, has given us the record of certain persons who have proved the falsity of such be-

Digitized by Google

liefs. In the Scriptural writings we read of Moses, the prophets, and afterward of Jesus of Nazareth, who demonstrated in the most practical and convincing manner that the laws of God do not involve the experiences of physical and mental suffering and destruction, and that the real laws governing the world are the laws of health and harmony.

It is probably true, nevertheless, that the works of healing and beneficence performed by the Galilean prophet and his predecessors and followers were supposed by the beneficiaries to have been done through a temporary suspension or setting aside of the laws of God. So, while the works of healing were performed by apostles and their successors, as we are told by contemporary history, for a period of some three hundred years after the passing of Jesus, it has been one of the mysteries and apparent inconsistencies of the Christian religion that Jesus said to his friends: "These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." "He that believeth on me, the works that I do shall he do also," and other assurances of similar import.

It has remained for the Discoverer and Founder of Christian Science to discern and prove what those words mean to us. She discovered or discerned anew that, because of his absolute adherence to the law of God, or good, no other law or laws existed for Christ Jesus; that to those who exemplify the laws of purity, unselfishness, and love, the phenomena of physical limitation are eliminated from human experience; and that any one may prove this in a practical manner in whatever measure he is willing to live the life of the Master. She discovered that this, and this only, constitutes the belief in him which Jesus required of his followers as a condition precedent to the works of healing and helpfulness.

Since this discovery, it has been proved in our own time and country, by thousands of witnesses, that suffering, disease, and mortality are not the manifestations of the laws of God, and that the destruction of these so-called phenomena is not a violation of God's laws, but the natural consequence of the right understanding of those laws. The understanding of spiritual law Mrs. Eddy has called Christian Science, or the exact knowledge of Christianity, the truth of being.

Lewistown Daily News.

St. Cloud, Minn.

Clarence C. Eaton lectured on Christian Science at Unity church. He was introduced by the pastor, the Rev. Paul Dansingberg, who said:—

Some time ago, before the Recipe Club, I tried to say a few things about Christian Science. As I am not a Scientist it was presumptuous, I admit, but the remarks were intended only as an exposition. This evening you are to have an interpretation and appreciation of Christian Science by one qualified to speak on the subject. In the gospels we hear about loving God with our whole heart and soul and strength. We are to love Him with the mind, and to love with the mind means not to criticize, not to derogate, not to detract, but to interpret and explain. We have heard Christian Science praised and lauded; we have heard it criticized and derided; this evening we are to have the great privilege of having it interpreted by one who sees this faith with the loving mind of a disciple and devotee.—*Correspondence.*

✧

Rutland, Vt.

H. S. Way spoke in part as follows in introducing Virgil O. Strickler, who lectured on Christian Science:—

It is not so often, perhaps, as you ought to wish, that the opportunity is afforded you to hear an eminent lecturer on a subject so little understood and one that the general public, press and pulpit, still persists in misunderstanding. While I myself am not a Christian Scientist, I wish to say that I have seen much of the beneficial results of Christian Science in my own home and in my travels throughout the southern half of this state and New Hampshire for several years past. I have frequently met living witnesses of the truth as taught by Mrs. Eddy; once these people were morbid and discouraged, but now they are radiant, and their problems are met with a calm trust and faith that is almost divine. Is it not worth while to investigate this truth that can change a doleful countenance to a happy one? It has been called a religion of love, and I believe it is.—*Correspondence.*

✧

Jersey City, N. J.

Bicknell Young, in lecturing on Christian Science at the Bergen Lyceum, was presented by Edwin G. Morse, who said in part:—

Christian Science is occupying the attention of thinking people of this age, because it is fulfilling the promise given us by our Master. It is not a new religion, but a restoration of the teachings of Jesus, and is based entirely upon the Bible. Jesus once said to the Jews that believed on him, "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free." His mission was to show humanity what this truth is that makes men free. Christian Science is offering suffering humanity the same sure salvation. This truth lifts mankind out of the depths of all evil,—physical and mental suffering, sorrow, fear, false appetites, discouragement, hatred, and all that is unlike good. It is showing the way to universal peace; it is bringing about the common brotherhood of man.—*Correspondence.*

Testimonies of Healing

I wish to express my gratitude for the blessings I have received through the study of the Bible, and "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have found freedom from sickness and pain, while the consciousness that God is truly "a God at hand," and not "afar off," helps me to overcome material testimony, and gives the peace that passeth understanding.

I can tell of many discords overcome. At first a sense of great physical weakness oppressed me, and I had treatment from a Christian Science practitioner. I remember when I wrote asking for help, I got the reply, "Have started treatment," and it brought a flood of sunshine into thought. I fell asleep, and awoke about three hours later free from pain. The treatment was continued for a week, and I then wrote that I was quite well and would not require further help. I had to do a lot of mental work for myself, however. I found that fear was the origin of the discord, and one by one I had to meet and master its different phases, and know that "he that feareth is not made perfect," for divine Love being all, there is no room for fear in thought. Rest came with the remembrance that the eternal God is our refuge, "and underneath are the everlasting arms." "Love, joy, peace" are glorious guests, staying longer and ever longer, and making us know that they bring to us eternal life here and now.

Last year I was able to overcome a discordant condition without the aid of a practitioner. The succeeding cough was, however, very troublesome, and another student came to my help. In three days I was completely healed, and my gratitude for yet another proof of the presence of divine Love, which "always has met and always will meet every human need," as Mrs. Eddy tells us in Science and Health (p. 494), is sincere. Financial difficulties have been overcome. Then my little son has been healed; in fact, I made my first Science demonstration on his behalf. He had been very poorly all the night, so I gave him treatment and we both fell asleep. He awoke better, and I continued treatment until dinner time. He slept most of the time, and when he awoke he said, "I am hungry, and I am quite well and want to get up and play." All could see he was in perfect health, and next morning he went to school as usual. All mothers will understand the joy and gratitude I feel at this proof that an understanding of Science and Health will give to us the power to overcome error (and sickness is error) for our dearest possessions, our children.

My thankfulness to Christian Science for all it has done for me is sincere. To Mrs. Eddy, and to all who are working in and for this great cause, I again express my grateful thanks.—Agnes Spence, Cape Town, South Africa.

✦

In the fall of 1901 I had what *materia medica* calls a shock. I was sent to the hospital, where an operation was performed, and after being there about four weeks I was sent home, and was then attended by a doctor well known to my family. At this time I was a mental and physical wreck, and had no desire to live, as I could see no future before me.

I returned to business in February, but my health was very poor, and I had hard work to stay in the office. As I did not appear to gain very fast either mentally or physically, I asked the doctor how my health was to be restored. At that time no medicine was given me, but he advised me to be out of doors all I could and to exercise by walking. I followed his directions for over four years; every holiday and every Sunday, and other days when possible, found me on the highway walking miles and miles each day. It appeared to strengthen me very much, and my relatives and friends thought I was gaining fast.

This brings the time to February, 1906, when another shock came. I had the same doctor and the same treatment,—was in bed three weeks without taking any solid food. Each morning I was given medicine, and had milk to drink. A consultation of physicians was held, and it was decided that I should get up and have something to eat. I realized then how weak I was, and along with it came the thought of what I had passed through for nearly five years; worry and fretting came, and I was indeed a mental and physical wreck once more. The time came when I again asked the doctor how my health was to be restored to me, and he said all he knew was that I should be out of doors all I could, and he recommended the same treatment as before.

In April my eyes were examined and new glasses ordered, so that I could begin work again. When on the way to get my glasses, my wife and I stopped at the Christian Science reading-room and heard for the first time something regarding Christian Science. We talked to the lady there, and when I told her I was on the way to get my glasses, the remark was made, "If you had Christian Science treatment, you might not have to wear glasses." Thanks be to God, I found this to be true, for in a short time divine Love proved to me that I could get along without them; after having worn glasses for over thirty years, I was completely healed. I was also cured of the tobacco habit, although I had smoked for over forty years; and the paralysis and many other ills have been healed through divine Love.

I am indeed thankful to God for all these blessings, and for the Bible, which was a closed book to me for many years but is now a source of peace and joy. I am also deeply grateful to Mrs. Eddy for Science and Health, which has given me a knowledge of God and our relation to Him.

Simeon Adams, Roxbury, Mass.

✦

My coming into Christian Science led up a rugged path of trials and tribulations, and now from the heights of joy and clear vision I look back over the way and think that my testimony may help some one else to climb and rejoice. Six years ago my little daughter had an attack of typhoid fever, which was followed in less than a year with scarlet fever and a serious throat affection. Every attention from the medical fraternity of our home town was given her, as my father, grandfather, and uncles had all been physicians. She recovered from the contagious disease, but with a verdict from the doctors of organic heart trouble. She could not bend over without having a flow of blood from ears and nose, and the outward manifestation of the heart disease was distressing to witness. My many friends and physicians tried to prepare me to give her up, but I fiercely rebelled and constantly sought new doctors and advice.

One day, when a lady whom I knew to be a Christian Scientist, asked me why I did not try Christian Science, I felt insulted, and changed the subject to avoid hurting her feelings. The seed had been sown, however, and one night I slipped into a testimony meeting, then afterward went often; but fearing to leave my little one very long, I stayed only a short time. I also borrowed a copy of Science and Health and kept it hidden under the mattress of my bed, but I could not keep my thought from the child long enough to understand what I was reading. Nevertheless, I felt that the truth was there, and that I must have it, so I mentioned it to the family, but was met with such a storm of protests

Digitized by Google

and opposition that I shrank from speaking of it again. Finally I decided to take my little girl and go to a city where I could have the truth demonstrated. When my intentions were learned, my friends and relatives thought I had become insane with worry and grief, and extreme measures were taken to keep me from going; but as God was leading me, the opportunity came, and I was soon in Kansas City, Mo.

Before going to a practitioner I took my little girl to a very fine specialist in children's diseases, more as a tribute to my father's memory than from any hope that he might help me. His verdict was the same as that of the others,—she might, with the greatest care, live for a year; she might die any day. My own health was so greatly broken that I weighed less than eighty pounds, and the kind doctor wanted to take me to his own home; but I refused, and the next day I took my child to a Christian Science practitioner.

The result was wonderful. In one treatment the heart was normal; in a few days the pinched look and the blue veins in the little face were gone. She went into the Christian Science Sunday school and greedily drank of the life-giving truth, then hurried home to share it with me. She is now seventeen years old, happy, healthy, and an ardent student of Christian Science. Through this healing my mother, who had been bitterly opposed to this teaching, and also several friends, have accepted it, and many blessings have been added since we have known how to think and live aright.

Words and space fail to express my thankfulness to God, also my gratitude to our beloved Leader, Mrs. Eddy, who so lovingly and patiently pointed out the way for us to know God and receive the blessings of our inheritance, and to all who have helped me climb the way to sweet rejoicing.

Mrs. M. K. Spilman Kipp, Los Angeles, Cal.

✧

It is because of my gratitude for what has been done for me that I write this testimony. It is about five years since I became interested in Christian Science, and I have been reading and trying to the best of my ability to understand it. In August, 1912, I was taken with a severe cough. I did all I could to try to help myself, but grew worse all the time until Oct. 25, when I had a bad fall, injuring my spine, bruising my hip, etc., so that I could scarcely walk. I coughed almost constantly day and night, had severe hemorrhages, and could not eat or work. On Oct. 27 I called a Christian Science practitioner, and in less than three weeks was perfectly healed. With the little understanding I have of this truth, I am able to do the work in a fourteen-room house with seven roomers. I enjoy reading the testimonies in the periodicals, and hope this may be a help to some one.

Mrs. N. H. Noren, Beloit, Wis.

✧

It is with a heart full of gratitude that I wish to tell publicly what Christian Science has done for me. Six years ago I was almost a physical wreck. From childhood I had suffered from bowel disorder, and always had to be careful what I ate. As I grew older the trouble became worse, and at the age of fifteen this, together with female trouble and incessant headache, made life almost unbearable. At that time I went to another city to attend an academy, as there was only a small school where I then lived. I had not been there more than three months when my eyes, which had always troubled me, gave out completely. I went to one who was considered the best oculist in the city, and was told that my eyes could be helped for a while, but it would be only a short time before I would be completely blind, that nothing could save my sight. I was also told that nothing but an operation would give relief from the female trouble, but I would not consent to have one performed.

I went home at once. To mortal sense I was becoming blind very fast, though the kind oculist had treated my eyes for about three weeks before telling me that they could not be helped. I could not bear any light without dark glasses, and the pain was so great I could not sleep nights. At this time Christian Science was recommended to my mother as a means of relief for me, but for a while I objected to it strongly. As I grew worse daily, however, and could not read a word, I consented to take treatment, saying it could not hurt me even if it did not help me. It was with a joyful and humble heart that I could say I was healed with four treatments, and not my eyes only, but the disorders previously named, also catarrh of long standing; and I am thankful to say that this healing has been permanent.

Since my healing I have never taken a drop of medicine, but have relied wholly on Christian Science, and I have had many beautiful demonstrations. Every day brings added proof of God's love and care, and words cannot express my thankfulness to Him, also my gratitude to Mrs. Eddy for the truth contained in Science and Health, which is indeed a "Key to the Scriptures."—Myra I. Henley, Outlook, Wash.

✧

[Translated from the German]

About two years ago I manifested the first symptoms of a most serious though painless disease. I immediately consulted a very able specialist, who after stating definitely that it was a case of diabetes and a very serious one at that, gave me all sorts of prescriptions and imposed all manner of restrictions. Although I observed these strictly, my condition grew worse with every day, and it seemed that I must expect death in the near future.

At that time I heard of Christian Science through a family with whom I was on friendly terms, and was told that healing was possible for me through the power of Truth. I could not, however, make up my mind to turn to it, but continued having treatment from the specialist, who now gave me hypodermics, and resorted to a great many other experiments. To make the measure full, I had "a stroke," which affected the right side of the body and robbed me of the use of my limbs. My tongue also was paralyzed, making it very difficult for me to communicate with those around me. In this state of distress I decided to apply to a Christian Science practitioner for help. It was most readily given, and after the first treatment my condition improved so much that it became possible for me to undertake a trip to Braunschweig in order to call on the practitioner. In four months' time I was completely healed and able to attend to all my work. No longer is there any need of a physician. I have also been healed spiritually through Christian Science. I have found God, and am striving to obey the Master's command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," in order that I may not only draw nearer to Him but may be found more and more in His likeness.

I give thanks daily to God for this wonderful salvation, and above all things that I may now call myself His child. I am grateful also to that admirable woman who rediscovered this truth and presented it to the world.

Frau Charlotte Winterfeldt, Magdeburg, Germany.

✧

Words cannot express my thankfulness to God for Christian Science. I had suffered for years from heart disease, pronounced incurable by the doctor. I had tried the medicines known to medical science, but with no good results. In December, 1911, I had a nervous breakdown, which was the

Digitized by Google

result of poor heart action and the strong drugs that I had taken. I was under a physician's care for over ten weeks, but there was no sign of improvement. He then said that medicine would not help, that a change of climate was needed. This too, however, proved of no avail. I was becoming weaker all the time, and the doctors had no hope of my recovery.

A friend then advised me to try Christian Science, and in my condition I was willing to do so as a last resort. With less than a week's treatment I was able to walk about my room. Now I am completely cured of both nervousness and heart trouble. My life was saved through the truth as taught in Christian Science, and I am indeed grateful.

IDA C. SIEFERT, Bellevue, Pa.

✧

The gratitude that I feel for even my slight understanding of Christian Science, cannot be expressed in words. I was healed of tubercular disease of many years' standing, sleeplessness, stomach disorder, and extreme nervousness. I was never well until I came into Christian Science. From early childhood I suffered, and was unable to enjoy the things that make life pleasant for most children. My school work was wearisome and much of the time impossible. Three physicians pronounced my case incurable; also, the law of heredity was strongly held over me, as my mother, two sisters, and a brother had passed on with that disease.

I was healed by reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had lost all faith in or desire for medicine long before I began studying this book. While my physical healing was wonderful, and caused much surprise among my friends, to me the most remarkable part was the overcoming of worry and fear. The peace and comfort which the understanding of Christian Science has given me while passing through the greatest trials of my life, is a glorious proof of the practicability of the promises contained in the Bible regarding God's presence and His power to govern our daily affairs. I earnestly desire to become a better Christian Scientist, that I may be a living testimony to this great truth.

KATE M. TUCKER, Oroville, Cal.

✧

My heart goes out in gratitude when I speak of Christian Science. My attention was first called to it by the healing of a cousin in Ottawa, Ill. His arm was poisoned and the doctors told him it would have to be amputated. He then gave up medical treatment and turned to Christian Science, with the result that his arm was entirely healed.

Even after hearing of this wonderful case of healing, I still had my doubts of Christian Science. While a student at the Illinois State Normal University I gradually went down in health, until I lost my mental faculties completely, and grew so bad that I had to be removed to a state hospital. Shortly afterward I was taken home, but before I had been there long I felt the old symptoms beginning to appear again. I then turned to Christian Science and sought help from a practitioner at once, with the result that in about two weeks I felt better than I ever had in my life. I could eat well and sleep well at night, and all the other old symptoms disappeared. Previous to my healing the doctors told me never to go back to school or study again, but I have since finished a course in elocution, passed a teacher's examination, enrolled in a Chicago law school, and hope in time to pass the bar examination. I did all this in addition to my work on the farm.

Through Christian Science I find all things are possible if we only abide in Truth and Love. I can sincerely say it is God who deserves all the honor and glory. All that I am and all that I hope to be, I owe to Christian Science.

STANLEY E. MAHANNA, Emington, Ill.

✧

Having received so much help from reading in the periodicals about the healing of others, I want to add my mite in the hope of encouraging some one. My people do not believe in Christian Science, so when my baby was expected I had to go to a hospital. Twenty-four hours after the baby's birth, the doctor told me he could do nothing more to save the little one, for they had been working with him all night, giving him oxygen, etc., without my knowing it. I asked the doctor if he would allow me to have Christian Science treatment for the baby, and he replied that I could have a dozen practitioners if I wanted them, but that they could not come to the hospital. Knowing that God is ever present, my husband telephoned for absent treatment at eight o'clock, and at ten o'clock the special nurse who was with the baby said he became normal. So we see that no matter how much we are surrounded, to material sense, by adverse conditions, the healing is always available.

My own healing has been slow, but every day I learn something, and we can remove mountains if we take a little away every day. I am grateful for Christian Science, and to the dear Leader who labored to make it known to the world, and for all our publications.

MRS. S. A. SEATON, Wilmette, Ill.

✧

Being deeply grateful for what Christian Science teaching has done for me, I cheerfully give this testimony, thus to fulfil the law of Love, with the hope that I may encourage others who are in sickness and sorrow to study Science and Health and be made free.

My coming into Christian Science was through the healing of an illness which the doctors called a serious stomach trouble and bronchial asthma. I had suffered for over a year, and had tried every material remedy brought to my notice, also several doctors, but received no relief; on the contrary, I continued to get worse. When I heard of Christian Science, I decided as a last hope to give it a trial. Before I went to a practitioner I had suffered severely, had not been able to lie down at any time for several weeks, and had been unable to eat anything but light food. After visiting this practitioner three times, I was able to lie down to sleep, and have done so every night since. With not more than six treatments I was entirely healed of both ailments. The only hope of relief which doctors had for me was to leave this climate for a warmer country; but after reading in Science and Health, I began to see my error in trusting to the material instead of in God, who is ever-present Love.

From the day when I took my first treatment from a practitioner I have not used any medicine. Christian Science has brought me back to health, peace, and joy. More than that, it has given me a God who is with us at all times, in all places, and always a God of love. It has also taught me the value of right thinking, of honesty, and of truthfulness in speech and conduct. While I have not yet worked out my full salvation, I have received other blessings since my first healing. The tobacco habit and the frequent use of profanity have been overcome; also proneness to lose my temper. These later healings have not come to me through any special treatment by a practitioner or any effort on my part, but they have resulted naturally from reading the Christian Science literature, and studying the daily Lesson-Sermon with

Digitized by Google

the Bible and the text-book of Christian Science, "Science and Health with Key to the Scriptures."

My heart goes out in gratitude to Mrs. Eddy for enabling us to understand God and to gain the benefits that come to us through the study of Christian Science.

PETER F. SCHILLER, Milwaukee, Wis.

✧

When I came into Christian Science five years ago, I had a severe stomach trouble which the doctors said nothing but an operation would relieve. I could not digest my food, and in consequence was put on the strictest diet. At that time my husband had what *materia medica* calls locomotor ataxia, and he could walk only a very short distance without resting. We had the very best doctors, and they all said there was no hope or help for him, as there had never been a case of that kind cured in medical history, but that he might possibly live one year.

It was at that dark hour, when all earthly hope had fled, that a letter came from a cousin who had been healed of tubercular disease, asking me to try Christian Science. At once I turned to God for help, and at the end of a week I was entirely healed, and the healing has been permanent. I am today a well, healthy woman. Since that time, I have not taken a single dose of medicine or had a doctor. My husband, in due time, came into Christian Science, and he is now almost well. He attends to his business and can walk as far as any one. We have both taken a strong stand for Truth, and Truth alone governs our home. Our blessings financially as well as spiritually have been many, and we are striving each day to live closer to God, ever feeling that His arms are around, above, and beneath us.

MARY BARTON REISINGER, Memphis, Tenn.

✧ ✧ ✧

[Written for the *Sentinel*]

Awakening!

CHARLES C. SANDELIN

How harsh the din of worldly strife!
  How grievous mortal hate and fear!
  But 'mid the tumult, calm and clear,
A voice awakes to holier life.

Thy struggles end, unsatisfied
  With the unworthy aim thou hast;
  Thy prize a phantom seen at last,
Which seeking e'er thy hope belied.

Ah, well that thou didst cease at length
  To chase the fancies of thy thought!
  Ah, well that thou wast gently brought
To know the source of life and strength!

To know the truth that ne'er doth fail
  To guide thy onward course aright,
  In happy day or gloomy night,
Till thou the heights of Spirit scale.

And that sweet voice which wakened thee?
  'Twas Love that spake unto thy heart;
  That bade thee from earth's paths depart,
And made thine eyes the way to see.

Aye, Love! A friend forever near!
  What joy, what peace indeed is thine,
  Since thou didst erring ways resign
And sought Love's guiding voice to hear!

From Our Exchanges

[*The Universalist Leader*]

Those people who crowded about Jesus on the hills of Galilee, or by the sea, or in the village street, and listened to the words of grace and truth which fell from his lips, did not come to hear learned or abstract utterances of fine philosophy; they came with the burden of their day's work and their tears. Sickness and death, selfishness and lust, passion and prejudice, love and hate, all played their discords or their harmonies in those little neighborhoods. It was to such as felt all these influences, and more, that Jesus spoke. The ecstasy of sweet human devotion and the despair of moral defeat were there. Women with broken hearts, men with lives embittered by the struggle for existence, mingled with the rest.

And what these people took away with them was what the scholar misses, unless he is more human than he is scholarly. What those common people took away with them was something they could use each day in their own lives. This man who stood in their midst spoke their vernacular, spoke their moral and spiritual vernacular. They understood him. He was one of them. At Jerusalem the high priest spoke with authority, but out here in the open, where only the soul of the world presides over men, this comrade speaks with an authority which is greater than that of priests or kings. It is the authority of life, of the soul of their souls who listen.

[*The Christian World*]

God has always been entering into our world, leading men by a way that they knew not, reinforcing their dim vision, their uncertain strivings, their partial victories, and ever brooding creatively over the tragedy of their failures, so that wherever a fresh beginning of progress has taken place it has always been a little ahead of the previous. And is not this the world into which Jesus entered,—the greatest recorded fact of time? Those who deny the promise of future progress and who utter jeremiads over the perils of our age, prophesying the same sad end to modern civilization as befell those of ancient times, surely forget that he is a permanent factor to reckon with. Has he not been the determining factor of all history since his coming? Is he not the most potent of all the social as well as spiritual influences of our time? The ancient Christologies may be discredited, but the person they strove to explain still has the name that is above every name, and the ideal social order he came to reveal is the one indubitable order of the future. Let us never forget, when we compare the old world with the new, that the new is one in which he is energizing by his spirit as never in the old, and that many of the reformers who never acknowledge his lordship are still swayed by his spirit and are carrying out his program.

[*The Advance*]

We study this growing self-revelation of Jesus, this enlargement of the appreciation on the part of the disciples, but we must not stop without reminding ourselves that this represented to them a series of grievous disappointments. Jesus was indeed a prophet, but not the kind of prophet for whom they had been hoping. Jesus had come to bring in the kingdom of God, but to bring it very differently from the manner of their desires. Jesus had come, perhaps, even as the Messiah, but if so as a very different Messiah from the Messiah of their hopes. So all this assent of faith in him was in order to make a new readjustment, in which they were to discover that nearly all that they had believed was the mere scaffold-

Digitized by Google

ing for a faith more personal and definitely spiritual than they had yet conceived. It was no small thing that under these conditions they confessed him to be the Christ. It was a great thing that with this word upon their lips they set themselves steadfastly to discover what was his meaning of the thought which lay behind the word that Jesus was the Messiah.

[*The Christian Register*]

Strong men in high position can sometimes hold a breadth not representative, though they are prominent. They stand alone in the greatness of their strength. But when it gets easy and frequent for men of lesser power of independence to do the same thing, we can be sure that the growth of a better Christianity is too far along to be harmed by early frosts.

The encouraging thing about it all, we repeat, is that theology is getting the benefit of human experience. When we lament that the race is not enough with the swift nor the battle to the strong, in that invincible reasons have such little weight and the leaders of thought have small following, we must look farther afield and see reenforcements coming from unlooked-for sources. We have deplored the tendencies to decry theology, the superficial estimate of its force and effects, and have wished that a revival of old-fashioned reliance on theology could come. But what has seemed neglect and indifference proves to be transition and change of base. Men think less on great themes now than in old times, only because they do their thinking differently. They think less abstractly, but more concretely. They think less with speculative interest, but more with matter-of-fact interest. They are less concerned with consistency, with schemes of salvation hereafter, than with working plans of salvation here. Not so many men can be interested in discussion merely theological, but many more men are interested in discussion of matters truly theological, but aimed toward welfare and effective methods. The necessity that a faith shall work well, as well as think well, is what people feel; that it shall do things clearly worth while, as well as think things worth while clearly. In the broadest sense of the word, missionary usefulness is the ultimate test of a theology, and the compulsion of experience in actual living will carry the great convictions where truth in closest words shall fail.

[Archdeacon Wilberforce in *The Christian Commonwealth*]

Could God bear to live if one of His wandering children was in hell forever? What are we men but infants "crying in the night," infants "crying for the light," "with no language but a cry," lost on the trackless prairie of the world, in doubt, uncertainty, and fear? Our very need is an inarticulate prayer; our wrong method of seeking our Father is in itself a cry for help. We are justified in inferring that God is love, from our experience of the love in human hearts. When we see tenderness, self-sacrifice, devotion, compassion in a human life, we are seeing God. God is showing Himself in that life, and we know that God is love.

[*Christian Work and Evangelist*]

"I am come that they might have life, and that they might have it more abundantly." That is the true church of Christ which imparts most life to men, regardless of any form of organization it may have assumed. The church which is taking weak, hungry, empty souls; dwarfed, anemic wills; victims of spiritual famine, reared in environments where no bread of life is, and gives rich, filling, invigorating, abundant life to these, is the true church of Jesus Christ. The church which feeds the people with the bread that produces great, forceful, rich character and soul, is Christ's church, for this is what Christ did.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

The more recent translations into Dutch, German, Norwegian, and Swedish pamphlets are listed as follows:—

Dutch: "De Goddelijke Natuur" ("The Divine Nature"). Thirty-six pages.

German: "Die Christliche Wissenschaft: Die Wiedergeburt" ("Christian Science: The New Birth"). A lecture by Bicknell Young. Thirty-six pages.

Norwegian: "Den guddommelige natur" ("The Divine Nature"). Thirty-six pages.

Swedish: "Det Godas Försyn" ("The Providence of Good"). Seven articles, thirty-six pages.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE. POSTPAID: For the United States, Canada, Mexico, and Cuba, $1 a year, 60 cents for six months. In all other countries $1.25 a year, 75 cents for six months.

SALE PRICE, POSTPAID: Single copy, 10 cents; twelve copies, ONE ADDRESS, $1. Foreign rate, single copy, 12 cents; twelve copies, ONE ADDRESS, $1.25.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Items of Interest

The provisional committee charged with perfecting plans for the national exposition to be held near Valparaiso next year, has issued a statement setting forth the reasons the republic has for undertaking a work of such a magnitude as the enterprise in view. "The traffic of the world," reads the report, "will undergo tremendous changes with the coming of the Panama canal. Intercommunication between many nations is to be facilitated. The coast of Chile, for example, will be nearer the Atlantic coast of the United States than is Argentina now. On the whole, the republic is to get in much closer touch with the civilized nations. Many strangers will want to visit Chile when the new route is opened up."

Wonalancet, N. H., residents and summer colonists, who have feared that the eastern slope of Whiteface mountain would be "logged" by the Publishers' Paper Company, may find reassurance in the fact that the United States government has just secured an option on approximately three thousand acres of land covered by primeval timber, mostly spruce. The tract has never been cut over. The trees are probably three hundred years old and rise thirty or forty feet before a branch appears. The price asked by the company for the tract is fifty thousand dollars.

Much interest is being evinced in St. Petersburg over the result of observations which have been taken during the past few years of the water level of the Caspian sea. It is now officially stated that since June, 1910, the surface of the Caspian has been continually sinking, and that now a point has been reached when great inconvenience is being occasioned to navigation, owing to the fact that steamers in many places cannot reach the landing-stages. The general opinion, resulting from investigation, seems to be that the water at present flowing into the great inland sea is not sufficient to compensate for the loss caused by evaporation.

Despite the fact that nearly five years ago the United States assumed control of what are considered the greatest and most wonderful natural bridges in the world, the mighty stone arches in southeastern Utah, not more than fifty people, it is said, visit these attractions in the course of a season. That is why the people of Utah are seriously considering the building of a state automobile road connecting the proposed Lincoln highway with the natural bridges.

The Norwegian Society for the Restriction of Emigration held its annual meeting in Christiania recently. One of the measures taken by the society to prevent young men from emigrating, is to induce them to settle by offering them cheap land. Several hundreds of acres of bog-land have been drained, and the society intends to build houses and to dispose of the land in small holdings.

"The problem of flood control of the Mississippi river is no greater than the problem which confronted us when we began the control of the Nile floods and harnessed its waters for irrigation purposes, changing the desert into a paradise." Thus testified Sir William Willcocks, one of the most eminent engineers in the world and builder of the Assouan dam, before the rivers and harbors committee of the House of Representatives at Washington.

The reporter of the finance committee of the French Senate has issued a statement to the effect that it is necessary to raise six hundred million francs within the next two months. He proposed several ways to accomplish this,—one by a national loan, another by a fortune tax, and a third by an increased tax on alcohol. As the money must be raised, it is thought that the new chamber will resort to some of these methods.

The new terminal station of the Santa Fé railroad at San Diego, Cal., promises to be one of exceptional design and finish, and is expected to be one of the finest in the state. The final plans contemplate a picturesque building of the mission style, six hundred and fifty feet in length. It is in close proximity to the city's wharves, upon which one million dollars has been expended.

The United States post-office department has just repeated, in the current postal guide supplement, the instructions through which rural carriers are to report forest fires to the proper authorities during the coming season. These instructions were first issued in May, 1912, and during the past two years the cooperation has resulted in the detection and suppression of many fires.

Three barges, laden with thirteen hundred tons of sugar from Hawaiian steamships at Panama, arrived at Cristobal at seven in the evening of May 19, after passing through the Panama canal. The sugar was transferred to the steamships Colon and Oregonian for conveyance to Philadelphia, Pa., thus completing the first commercial use of the canal.

According to a report in the *Zionist Gazette*, the orange crop of Palestine the present year has been most satisfactory, and as the prices on the world's market have been better than in former years, a good profit is expected. Over two million boxes of Jaffa oranges have been exported to Liverpool, to Egyptian ports, to Constantinople, to Australia, and to Germany.

The Japanese Privy Council has ratified the arbitration treaty with the United States. The treaty between the two governments expired on Aug. 24, 1913. Last June the Japanese ambassador in Washington advised Secretary of State Bryan of Japan's willingness to renew the understanding, but final action was delayed.

In New South Wales is seen the rapid progress of closer settlement and the increase of the small holder during the past ten years. The area of the state is 198,684,880 acres, of which 54,290,188 acres were alienated in areas of one acre and upwards in the year 1912. With the coming of the small holder, the small holdings under thirty acres are nearly 50 per cent more numerous today than they were ten years ago.

The Brazil nut industry is growing very rapidly. At least thirty million pounds will be shipped this season. The crop now terminating is one of the best in years. The quantity is above normal, and improved methods of handling have eliminated the question of poor quality.

The tomb of Aristomenes, the celebrated Messenian hero of the second Spartan war in the seventh century before Christ, was discovered a few days ago at Rhodes by Italian excavators. Numerous antiquities were found in the sepulcher.

"The Burgess-Dunne aeroplane solves the problem of inherent stability and represents an important development in American aeronautics," says the official report of the Aero Club of America committee, which witnessed the trials of the machine on May 2 at Marblehead, Mass.

Work on the buildings which are to constitute the Connecticut College for women at New London, Conn., has begun, ground having been broken for an academic center with administration offices, dormitories, and lecture halls arranged on the quadrangle system.

The Marconi station at the Wanamaker building, New York city, recently talked with Philadelphia, Pa., and steamers at sea by wireless telephone for the first time in this country in a commercial message way.

Zentaro Kawase, professor of forestry at the Imperial University of Tokio, Japan, has been making a tour of the national forests of the United States to learn the government's methods of selling timber and of reforestation.

According to a report, in spite of the disturbance in normal conditions, the commerce of Mexico with other countries has been to no appreciable extent affected, and for the year 1912-13 it was the largest in its history.

The republic of Panama is making ready on a considerable scale its celebration of two important events,—the discovery of the Pacific by Balboa four hundred years ago, and the opening of the Panama canal.

An English concern underbid an American company on the annual contract for supplying the United States army and navy with ornaments for the caps and collars of soldiers, marines, and sailors.

A freight barge line through the Panama canal was inaugurated May 15, when five empty barges were towed from Colon to Balboa to carry a cargo back.

Last year the fire loss on the Canadian timber reserves was the smallest ever known, only one fiftieth of 1 per cent of the area being burned over.

More than eight hundred and fifty-eight thousand young trees are being set out this spring on national forests in Utah and southern Idaho.

Eight aeronauts have entered for the national balloon race to start from St. Louis, Mo., on July 11.

The United States bought of Chile in 1913 twenty-one million dollars' worth of nitrate, an increase of six million dollars over 1912.

Angora goats have been used with profit to keep fire lines clear of inflammable vegetation on national forests in California.

Reality versus Unreality

SAMUEL GREENWOOD

REALITY and unreality are terms which call for correct definition to be scientifically understood, that is, in their relation to the absolute. Reality, in the sense of eternal permanence, can be defined only in terms that relate to God and His reflection; it can have no proper definition in relation to what God is not. Christian Science acknowledges reality only in the spiritual realm and as discerned spiritually; while in human belief reality is that which is cognized through a physical sense. Turning to the Scriptures, we learn that those things which are materially seen are temporal, while the things which are not materially seen are declared to be eternal. Looking at this question, therefore, in the light of eternity, it should not be difficult to determine which are the real,—the things of Spirit or the things of matter. The inability to see spiritual things with the human eye is no argument against their reality or substantiality, in view of the admittedly transient and unreliable nature of sense-perception.

The difference between what is real and what is not real is naturally the difference between Truth and error. Christian Science covers the whole ground in showing that it is the difference between good and evil. When this fact is accepted, and good is recognized to be the final and only test of reality, it will be seen that the establishment of Christ's kingdom on earth means the establishment of the kingdom of Truth, the reign of what is divinely true, and the disestablishment of belief in evil, or the divinely untrue. Jesus plainly declared this when he said, "Every plant, which my heavenly Father hath not planted, shall be rooted up," and also illustrated it in his parable of the wheat and the tares.

Strictly speaking, there is of course no unreality; there is only the supposition of it. There is no such thing as an unreal man or an unreal creation, any more than there is, in the relative sense, an unreal house or an unreal tree. The term unreal is used to designate that which to an unenlightened sense may bear the semblance of reality, but which in absolute Truth is non-existent. When we speak, therefore, of the real man, it does not imply that there is such a being as an unreal man, which would be as absurd as to say a true untruth, but that there is in human belief a mistaken or ignorant sense of what this real man is. Jesus definitely proved that the mortal concept of man is not true; therefore in Christian Science the term sick, sinful, or dying man is a misnomer, because it does not correspond to man's divine origin or Principle. If it were clearly seen that sin and disease are but wrong statements believed concerning man, even as the error that two and two are five is a wrong statement concerning numbers, their unreality would be recognized and corrected in order that the truth concerning man might appear.

Speaking of Jesus, Mrs. Eddy writes that "the perfect man . . . appeared to him where sinning mortal man appears to mortals" (Science and Health, p. 476). Obviously the Master did not judge by outward appearance, but regarded human imperfections in much the same light as a mathematician would regard errors in numbers; and in healing he disposed of them as scientifically and effectually. Matter in its very nature, possessing no spiritual qualities, is incapable of expressing a perfect man, that is, a godlike man. If matter were the divine medium of creation, there would be no need to look farther for the perfection and divinity of things; but St. Paul's statement that "the things of the Spirit" must be "spiritually discerned," would indicate that, in the absolute and divine sense, material evidence is not true. It is the looking to matter instead of to Spirit that prevents mortals from seeing man as Jesus saw him; but this would not be the case if the man formed "of the dust of the ground" is the man whom God created. The search of the ages into material atoms for the solution of the problem of being, or to find a remedy for human woes, is as far from success as in the beginning, not because mankind have not worked hard enough in that direction, but because Truth, or God, is not in matter.

To the physical scientist, so called, evil is as real as good, disease as real as health, and death as real as life. To him reality is what can be physically seen, felt, or weighed, without respect to its intrinsic properties. The question whether a thing is beneficent or baneful does not, from that standpoint, enter into the case at all. The physicist, though he may see the physical effects of an error in numbers, considers it to be unreal, because it is untrue to the basic law of mathematics; the point which he does not see, however, but which is apparent to the student of Christian Science, is that disorder of any kind is equally unlawful and devoid of truth.

Granting that there is a universal Principle, or divine intelligence, which has created and which regulates all things, only that could be accounted real which is true to or manifests this Principle and its government. Life is real because it is the outcome or manifestation of God; death, on the contrary, does not express God, but is a manifest abnormity, an outrage on the nature of Life, a violation of divine law. Death is a claim of destruction, and destruction is not an element or quality of reality, or Truth. Goodness, purity, justice, harmony, joy, love express the nature of God and are true to His creation and government; they are divine realities; whereas their immoral opposites, disease, hate, strife, poverty, vice, etc., are untrue to God, and to man in His image and likeness, therefore can have no claim to divine recognition. These supposed opposites of divine creation, law, and order, the distortions and deflections of human belief called mortal man, judged by Jesus' standard of the perfection of the Father and the Son, are only the things that seem to be, like errors in numbers; and a Christian Scientist denies them as positively as he would deny the assertion that two and two are five.

"The testimony of the corporeal senses," Mrs. Eddy writes, "cannot inform us what is real and what is delusive" (Science and Health, p. 70). We do not rely upon this testimony in accepting what is best in our friends. It does not tell us what the nature of God is, or where mortals may find Him. Physical sense affords no knowledge of divine Love, Life, Mind,

Spirit; but on the contrary, it declares the whole universe, including man, to be under the control of evil. It gives us a picture of humanity as the medium of all that is base and miserable and discordant. To say that all this is true and real, that is, a part of Truth, is as logical as to say that every error in computation is a part of the science of numbers. It should be as clearly recognized in all that relates to human welfare, as it is already recognized in mathematics, that whatever can be improved, or that is capable of correction, is not the truth. Hence the position of Christian Science, as thus clearly stated in Science and Health: "Perfection underlies reality. Without perfection, nothing is wholly real." "That only is real which reflects God" (pp. 353, 478).

Christian Science presents the correct or true figure of man, in his infinity of number, as the reflection of God, and the orderly arrangement of His ideas or creation as manifesting only good. That which declares the opposite of this divine perfection is the mortal, imperfect, finite sense of things, in which divinity, or eternal reality, plays no part. The difference between a disorder in one's concept of mathematics and a disorder in one's concept of being as expressed in a human body, is in education only. In reality there is no difference, for both errors disappear as the truth is understood and applied. Christ Jesus abundantly demonstrated that the true understanding of God and of His government would remove every physical, mental, or moral disorder in human consciousness; and if we accept his teachings and their proofs, we can have no reasonable doubt that the things which he destroyed, the insanity, disorder, infirmity, disease, tempest, sin, death, were but the shadows of ignorance and misbelief, and not manifestations of God's will or the realities of His kingdom.

Christian Science: Its Legal Status

JUDGE CLIFFORD P. SMITH

CHRISTIAN SCIENCE, as its name indicates, is an interpretation of the religion that was taught and practised by Christ Jesus. Any one who, without hostility, reads the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, will find it to be based on the Scriptures, and will find in it a more obvious correspondence or plainer consistency with the Bible than is furnished by any of the more popular interpretations. Such a reader of this book will see that it contains a statement of knowledge or science concerning God, man, and the universe, with which he may or may not agree, but which is plainly ethical, scientific, and religious in character. Be it called orthodox or heterodox, when compared with either primitive or recent Christianity, the system of thought presented as Christian Science is plainly Christian in basis and purpose. If this be true, it would tend to promote the health, morals, and spiritual welfare of its adherents; and it is a matter of common knowledge that a multitude of intelligent people bear witness to these benefits from this teaching.

Independence within the field of science is favored by enlightened public opinion, because such independence is essential to progress. There would be small hope of advancement if those who endeavor to extend the scope of human knowledge, or to correct it, were obliged to square their views with the beliefs which for the moment are prevalent. It is largely from the teachings of original and independent thinkers that the world gains more knowledge and true knowledge.

The fact, therefore, that Christian Science differs from the opinions which are at present held by the majority of people respecting the cause and cure of disease, furnishes no reason why the government should attempt to hinder or suppress its practice. It is generally known that the medical theory and practice with respect to this matter has been profoundly modified since the teaching and practice of Christian Science began, and at least in part by reason thereof. In these forty odd years the use of drugs has greatly diminished, various drugless systems have gained a wide vogue despite ridicule and opposition, and the mental element in the cause and cure of disease is more and more taken into account by all schools.

While the various schools of medicine differ from each other as to the nature and cure of disease, Christian Science differs from them all by regarding it as primarily and essentially mental (as a product of false belief, an image of material sense, a state of mortal thought), and by curing it with a method that is at once mental and spiritual; that is, with the power of Truth, in accordance with the law of Mind, through the prayer of spiritual understanding. These points also mark the line between the practice of Christian Science and the use of suggestion or hypnotism; in other words, Christian Science uses truth as such, and utilizes the normal, natural, and incessant action of spiritual law in human affairs.

It is to be observed, however, that one of the propositions just stated is to some extent acceptable to what the world calls science, and that both of them are fully authorized by the teaching and practice of the only infallible physician known to history. Natural or physical science admits that the nature of matter is unknown, the one thing definitely known about it being that it is not what it seems. Philosophy of the idealistic kind holds that matter is a subjective state of the human mind, while Christian Science takes the next and final step by explaining that things seem to be material only to a material sense of things, and by declaring that this material sense is the false element of human consciousness.

Of course everybody recognizes that the so-called human consciousness includes what is partly true and partly false: this is proved by universal experience; but Christian Science has declared anew the Principle of true consciousness,—the source, substance, and power of true thoughts. Absolute Truth is known spiritually. The knowledge which knows is derived from God; it is the spiritual reflection of the Mind that is Life, Truth, and Love. Therefore, whatever is most unlike divine Life and Love is most contrary to Truth, is most unreal. Such is the nature of disease; in the words of Mrs. Eddy, in "The First Church of Christ, Scientist, and Miscellany" (p. 349), "Disease is a mental state or error that Truth destroys."

The nature and cure of disease, as now made known by Christian Science, was first taught and illustrated in the work of Christ Jesus. His treatment of disease as primarily and essentially mental is shown, for instance, in the case of the woman who "was bowed together, and could in no wise lift up herself." She had been in that condition for eighteen years, and the disorder was as physical as disease can be, yet he spoke of it as mental. He said that Satan (evil) had bound her, and he "loosed" her by annulling the false law of evil with the absolute law of God. (See Luke xiii. 10-17.)

So also in the case of the impotent man at the pool of Bethesda, "which had an infirmity thirty and eight years." After healing him, Jesus said, "Behold, thou art made whole: sin no more, lest a worse thing come unto thee." (See John v. 1-15.) At another time, when his method of healing was questioned, the Master said that he "cast out devils" "with the finger of God," which is to say that he cast out evils by the power or law of God. (See Luke xi. 14-22.) Evil, of course, is mental: it is the evil element in the so-called human mind; and its identity with disease was plainly implied by the question, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" (See Matthew ix. 2-8.)

Digitized by Google

Jesus' prescription for all personal disorder was tersely stated in these words: "Cleanse first that which is within . . . that the outside . . . may be clean also." Paul summarized the practice of Christianity in similar terms: "Let this mind be in you, which was also in Christ Jesus." So did Peter: "Arm yourselves likewise with the same mind." There is no reason for limiting the scope of this practice, since its Principle is universal. The great Teacher applied it to physical healing; so did Peter, Paul, and others; such was the practice of the early Christian churches (see James v. 13-16); and the results which followed in the first centuries are again being shown in the twentieth century.

In the final analysis, sin and disease consist alike in a lack of mental rightness. Although suffering from sin does not always take a physical form, it may do so; and if it does, the physical effect follows the mental cause. Prevention or cure must therefore deal with false or evil causation, and must do so by means of true or spiritual causation. Any means short of this can result in nothing better than palliation or temporary relief.

From these explanations, it should be evident that the issues between Christian Science and the various schools of medicine are questions of both religion and science; and it should be equally evident that the state ought not to decide them for its citizens, and has not the power to do so, unless the state ought and has the power to establish criteria of religious and scientific truth. In other words, a statute designed to interdict the practice of Christian Science would necessarily rest on the assumption that the majority of people, acting collectively as the state or government, may rightfully determine for all citizens what shall be considered actual knowledge, true science, or ultimate truth with respect to such topics as the character and attributes of God, the nature and substance of being, the mode and efficacy of prayer, the nature of health and disease, the relations between mind and matter, and similar subjects. Surely such legislation would be wholly outside the scope and province of civil government. No one would think of passing a law to accomplish such results directly; nor should the same be done indirectly.

In many countries where this article will be read, state religion in its most rigid form is a thing of the past, and there is no public sentiment in favor of state medicine. But let us inquire what constitutes a state religion. We are apt to forget the lessons of history. State religion in its most rigid form results from the recognition by the government of one system of religion to the extent of forbidding outward or practical dissent from it. In a modified form state religion signifies the giving by the government of preference or privilege to one system of religion.

And what would amount to the adoption of a state medicine? State medicine corresponding to the most rigid form of state religion would result from any law that would recognize one system of medicine to the extent of forbidding outward or practical dissent from it. For example, this would result from a law that would recognize medicine to the extent of forbidding a purely mental and spiritual system to be practised. This is precisely what American and Canadian legislatures have been besought by political doctors to do, and in some states laws have been passed which were designed to have this effect. In fine, state medicine like state religion is an accomplished fact when the government approves one or more systems of healing and tries to compel the people to accept it or them to the exclusion of others.

Compared with this, a more suitable means for staying the wheels of progress cannot be imagined. Where it has been applied to religion, the truth of the subject has been best known to dissenters; and the same would undoubtedly come to pass in the case of medicine or healing. The attempt to circumscribe knowledge or science by law would be ignorant, and it would tend to promote the consequences of ignorance. State medicine, so far from promoting health, would foster disease, for it would tend to limit and retard the means for gaining dominion over disease; therefore enlightened public policy does not merely tolerate independence of authority in religion and science, but demands it as essential to progress.

Stories for Children

MANA WILLIS FISHER

One of the dearest memories of childhood is that of the mother as a story-teller, and in thought the narratives still stand, just as clearly as when she told them; every detail, every thrilling event, remains with us. Because of this indelibility of the impression given, the story told should be true in every sense, and its object be something deeper than mere entertainment for the child. The mother's incentive may be but a pair of bright, expectant eyes, clasped hands, and speechless silence, and these will stimulate her best effort in the art of inventing or repeating a story for the applause of the audience. The easy plan for the story-teller to follow is to turn back to childhood and repeat the stories she is sure to find on memory's shelf. But is this the wise way? Were the stories true? If not, did the discovery of their untruth bring joy? Did they do any good?

A problem that frequently confronts the teacher of an infant class in Sunday school is that connected with the old-time fables which are often poured into the child-thought. Teachers have many times been assured by their children that Santa Claus is God, that God is good, and that Santa Claus is good; and when the teacher lovingly tries to tell them the truth, they want to find mother to prove that there is a Santa Claus, and sometimes to prove that he is God. When children discover the untruth of this tale, they sometimes question the truth of the story of the babe of Bethlehem, and their doubt is logical, for in the story Santa Claus comes to celebrate the birthday of the babe in the manger, and when the falsity of the one is known, the truth of the other is naturally doubted.

In an article on "Christmas for the Children" our Leader gives us definite advice on this subject when she says, "The children should not be taught to believe that Santa Claus has aught to do with this pastime [Christmas]" (The First Church of Christ, Scientist, and Miscellany, p. 261). Christian Science does not deprive us of anything good, but it does "deliver us from evil;" therefore the child will gain much and lose nothing by being told the true Christmas story.

Another fable in general circulation which is not only false but absurd, from foundation up, is the one connected with the Easter season. Imagine a Sunday school teacher's predicament when during the lesson a little one said: "Teacher, what do you think my mama saw in our yard? She saw a big white bunny looking for a place to lay Easter eggs for me!" How long would it be before the child knew that this was not the truth? Perhaps he would feel justified in telling his mother just such a wonderful occurrence, and if she failed to see the similarity she would be grieved and might even punish him.

A practitioner was once asked to treat a little boy who persisted in telling falsehoods. He would come home with wonderful tales of enemies conquered, dog and boy fights, and unbelievable things about his teacher, etc., and the family were greatly distressed about these stories. The practitioner was an intimate friend of the family, and he knew that when

Digitized by Google

the lad retired the mother spent an hour with him, making up stories of the thrilling adventures of imaginary boys and girls. This was pointed out to the mother, and she was shown that her boy in turn was inventing stories for the entertainment of the family, and doubtless missed the expected applause. The character of the bedtime stories was then changed, and after some explanation to the child and careful watching, his desire to tell actual experiences soon began to overcome the unnatural desire to be an author of fiction, which so often led to disgrace.

There are many instructive and helpful stories with which to replace the old untrue ones, and they can be found with the right kind of searching. The Bible stories which occur in our study of the Lesson-Sermons are made very interesting to children by selecting the part best adapted to the child's understanding, and by imparting its spiritual meaning as it is unfolded. Mothers will thus find that their own as well as the child's understanding is increased. The character of Daniel is a favorite with children, for his fidelity to God can be explained, showing its effect on the king, on the people, and on Daniel himself. The entire life of Moses is also most interesting and helpful to children; so too the story of Joseph, of Samuel, of David, and especially of Christ Jesus.

The *Monitor* devotes a page twice a week to clean, wholesome amusement for the little ones. The *Sentinel* and *Journal* frequently contain touching stories of the healing of children through the power of Truth. Jesus was a wonderful teller of tales which we call parables, and if we turn to the gospels to learn all we can about his work, we find that he communed with God before he taught the people. This should be a helpful hint to us. His stories were told for another purpose than for the applause or entertainment of the multitude, and our stories should be for the same uplifting purpose; namely, to aid the child's spiritual growth and to educate instead of confuse his thought. In the article on "Christmas for the Children" above referred to, Mrs. Eddy says: "Too much cannot be done toward guarding and guiding well the germinating and inclining thought of childhood. To mold aright the first impressions of innocence, aids in perpetuating purity and in unfolding the immortal model, man in His image and likeness."

❖

Feeding the Five Thousand

BELLE F. KERR

In no one of the miracles of Jesus was man's divinely bestowed dominion more clearly manifested than in the feeding of the five thousand, which occurred toward the close of his second year's ministry and immediately following the tragic death of John the Baptist. The great heart of the Master had turned forever from the fickleness and caprice of human favor, which had terminated in bitter intolerance and the destruction of Truth's herald. With clear discernment of the instability of human affection, Jesus' vehement protest against mortal methods must needs be expressed in just this manner, the feeding of the multitude proclaiming the eternal spiritual fact that the provisions of divine Love and wisdom, for human need, are infinite.

In all the demonstrations of the divine power which animated Christ Jesus,—in stilling the tempest, healing the paralytic, the leper, the blind,—each act emphasized his joyous interpretation and apprehension of man's sonship in God. While these successes had won for him fame and the plaudits of the beholders, after the beheading of John all this was for the time seemingly canceled by the weight of evidence of the treachery of mortal ambition and selfishness, the enormity and effrontery of impersonal evil which culminated in the execution of John. The gospel states that Jesus spent the night following the announcement of that event on the mount with God, then on his return to the disciples there was accomplished his great victory over error by his walking on the sea,—a glorious prelude to the miracle where substance was made manifest at that hillside banquet, the holy afterglow of his own communion in a night of prayer.

Besides the Master and the twelve, there was a throng of wayfarers,—many earnest, honest ones, who listened eagerly to Jesus' gracious words, so tender and so forceful, reviving and restoring their trust in an almighty God. As they accepted the Master's teachings, they believed that this was he who should redeem Israel. No doubt certain others were assembled in a mood of indifference or cynicism. When Jesus told his disciples to bid the company sit down upon the grass, that the lad's five loaves and two fishes might be distributed to the hungry host, this requirement was significant of its deep metaphysical import to the Master,—that obedience and humility were essential preliminaries to such a refreshment as he had provided. In Jesus' hands the five barley loaves afforded a sustenance which was a refutation to that of the senses, upon which these needy ones had hitherto subsisted, each participant perceiving the symbol of that spiritual bread which should forever satisfy all clamor and longing. As many as would, received the fishes, the fullest measure of a spiritual repast.

The gathering up of twelve basketfuls of fragments was a significant object-lesson to the querulous throng, manifesting as it must the limitless store of a loving Father, even as Jesus had indicated in the beginning of his ministry, when he said, "I am come that they might have life, and that they might have it more abundantly." It may also have been intimated that all Israel, the twelve tribes, were proffered at will the bounty of heaven. Paul's reference to those to whom this gospel is hid, makes plain that human platitudes, mortal superstitions, and man-made prejudices are accountable for those who are lost,—lost in the mazes and pedantry of the pride of scholastic learning.

In this conservation of truth is again emphasized Jesus' exhortation not to cast the pearls of understanding before the unprepared consciousness of those who would thereby impugn divine Principle. Our Leader's ringing denunciation of those who, having eyes, see not, is reiterated in the watchword: "Principle is imperative. You cannot mock it by human will" (Science and Health, p. 329). Our text-book, "Science and Health with Key to the Scriptures," glorifies the rich bestowals in both message and example of him who spake as never man spake, for "through the magnitude of his human life, he demonstrated the divine Life. Out of the amplitude of his pure affection, he defined Love. With the affluence of Truth, he vanquished error" (Science and Health, p. 54). The reenactment of this miracle must be possible in a degree to every disciple of Truth. There are now, as there were then, the essential prerequisites, the soil of an honest and good heart, embodying obedience and humility. The bread is for all; and so are the fishes,—the fullest supply available for all who will.

❖ ❖ ❖

Father in heaven, the only one I know,
All that I am or have is Thine; to Thee
A loving, grateful heart each day I bring.
And for the joy of life in Thee I sing:
Pray that my brothers, sisters, all, may be
Blest, e'en as I am blest, in knowing Thee.

J. Douglas Gosney.

Selected Articles

[Frederick Dixon in *Wallasey and Wirral Chronicle,* Seacombe, England]

In a recent article there is a reference to the views of a gentleman whose services are described as being in great demand to expose modern counterfeits of Christianity, such as spiritism and Christian Science. In these circumstances, I am sure you will permit me to point out that while he may not approve of Christian Science, this does not prove it to be a counterfeit of Christianity. It is an unfortunate fact that the Christian sects for centuries have disapproved of one another so thoroughly that they have persecuted and murdered one another by way of attaining conformity with their own particular views. Christian Science has learned the lesson of this through Mrs. Eddy's wisdom. It never goes out of its way to abuse its neighbors for doing the best they know to accomplish the best they can. It devotes itself, on the contrary, to the effort to demonstrate its own teaching so thoroughly that those who come to it may find in it a practical religion. If this critic can give those who come to him a more practical religion, and one which will bring them a greater understanding of God, he will have no occasion to attack the teaching of anybody else.

It is the very fact that Christian Scientists are devoting their whole energies to the demonstration of the truth of Christian Science, rather than to criticism of somebody else, that is spreading this teaching in an ever-growing ratio entirely around the world. The demand of the Founder of the Christian religion was that men should preach the gospel and heal the sick. Bitter sectarianism has changed this into something perilously near the Mohammedan attitude of presenting the Koran in one hand and the sword in the other. In medieval days, men were denounced and burned if they dissented from the teaching of Rome. In later days, they lost their civic rights, and were frequently in danger of their lives, if they dissented from the Church of England. Later still, if they dissented from dissent, they were in danger of the prison cell and the branding-iron. Today, they are preached against and denounced by gentlemen who frequently seem to imagine that the violence of their invective is a proof of the strength of their Christianity.

I have never before heard of this critic, therefore I am not thinking of his methods, but I am pointing out that if he will add the healing of sickness to the overcoming of sin, he will approach nearer the demands of the gospel than by the simple requirement of a protestation of faith. Jesus of Nazareth knew the exact value of protestations, and therefore, presumably, he required that those who believed on him should do the works he did. In the exact proportion in which these works are done, a believer obviously can alone claim to be regarded as a Christian. That is the test, not of the Christian Science movement, but of the Bible itself, on which the Christian Science movement is founded. At the same time, it would be a mistake to imagine for a moment that the healing of disease is the ultimate aim of Mrs. Eddy's teaching. The healing of disease, she has insisted over and over again, is the very alphabet of Christian Science practice. "Now, as then," she writes, on page 150 of Science and Health, "signs and wonders are wrought in the metaphysical healing of physical disease; but these signs are only to demonstrate its divine origin,—to attest the reality of the higher mission of the Christ-power to take away the sins of the world."

The teaching of Christian Science is that material phenomena are produced mentally. This, up to a point, is also the teaching of natural science, but Christian Science goes beyond the ordinary orthodox teaching of the natural scientist, and insists that the only true idealism is the idealism of the New Testament. This idealism demands recognition of the fact that the only reality is God and the spiritual creation, and that the material universe is but the counterfeit of this. It therefore takes issue at once with the medical reliance upon drugs, and demands that healing shall be accomplished by showing a man how he may attain the understanding of Mind that was in Christ Jesus. In proportion as he attains this, his whole being will respond to his vision of the truth, the knowledge of which Christ Jesus declared would free the world. He becomes better physically in proportion as his spiritual discernment is enlarged, and he learns to begin to appreciate what the Founder of the Christian religion meant when he asked, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?"

✧

[L. H. Jones in *The Times,* Louisville, Ky.]

A recent issue of *The Times* contained a review of a pamphlet by one of our local ministers, attacking Christian Science. This pamphlet exhibits a misconception of Christian Science and its teaching, but, according to your reviewer, it "answers" Christian Science. Now, Christian Science has been thus answered (?) scores, perhaps hundreds, of times by doctors, both of medicine and of divinity, men of as great ability as any of our local talent may reasonably be supposed to possess. The trouble with Christian Science seems to be that it will not stay answered; for about the time it is supposed to be finally and completely answered, some influential member of the "answering" minister's congregation, who probably has also been a perennial source of good fat fees to the family physician, likewise a member of the "answering" minister's flock, whom neither the minister's prayers nor the doctor's medicines have been able to heal, wanders off to Christian Science and gets healed of some distressing malady, and forthwith Christian Science has to be answered all over again!

We are told that in this pamphlet the minister shows that Christian Science is contrary to the teaching of the Bible, and the question immediately arises, Does our good minister know what the teaching of the Bible is? So far, the ministers of the denomination to which he is accredited have succeeded in convincing only a very small fraction of Christian believers and ministers that they really know what the teaching of the Bible is. The rest of the Christian world—everybody but members of his denomination—are overwhelmingly of opinion that the Bible does not teach what this good brother thinks it teaches, and until he can persuade his brethren of the so-called orthodox churches that he knows what the teaching of the Bible is, his opinion that Christian Science is contrary to its teaching is not likely to have much weight, even with them. Indeed, until the various Christian denominations can agree among themselves as to what the Bible teaches, it seems gratuitously absurd for one of them to say that the teaching of another is contrary to the Bible.

No doubt the author of this pamphlet has proven many times, to the entire satisfaction of himself and his congregation, that the teaching of the Presbyterians, Methodists, etc., is contrary to the teaching of the Bible, but what has it ever amounted to, pray? He simply succeeds in reassuring the Presbyterians, Methodists, etc.,—if reassurance were possible, —that he does not know what the teaching of the Bible is. What, therefore, does his opinion, or his efforts to show that Christian Science is contrary to the Bible or the teaching of Jesus, amount to? If it is evident to the rest of the Christian world that he does not understand the teaching of the Bible, which he has been studying all his life, it is

Digitized by Google

no less evident to the Christian Scientists that he does not understand the teaching of Christian Science, which they as devoutly believe to be the teaching of the Bible. It is even more evident that neither he nor his reviewer understands the most rudimentary teaching of natural or secular science, for it is evident that both of them believe, as devoutly as they believe their creed, that things exist all around them in chunks of matter as they seem to see them! The mental attitude of such people is not of a nature to invite scientific discussion of any kind.

Contrary to the statements of the pamphlet as quoted by the reviewer, I wish to say that Christian Science teaches that "the world all about us, with its rivers, mountains, and plains, fields, orchards, flowers, and fruits, birds of the air, and beasts of the field," were created by God, as the Bible teaches, and that they exist around and about us in infinitely greater profusion, variety, and perfection than mortals have any conception of. "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him." They are all here, but can the natural man (that is, the human mind) see them as they are, as God sees them? Paul says no! God is an infinitely perfect workman, and to behold an infinitely perfect creation, such as God must be accredited with having created, requires a mind capable of forming infinitely perfect concepts and percepts, of which the human mind is not capable. Since the days of Immanuel Kant, and long before, there has not been a thinker of note who supposed the human mind to be capable of beholding the objects of nature as they really are, or who supposed any of the objects we seem to see as constituting a physical universe have any existence or reality other than as phenomena or creations of the human mind. One who claims other reality for these objects is flying in the face of this fundamental truth, which is the metaphysical basis of all modern scientific thought,—that is, if he is sincere; otherwise, he is simply willing to take advantage of a lack of information on the part of his audience.

[Charles E. Jarvis in *Enterprise*, Compton, Cal.]

In the recent sermon on Christian Science reported in the *Enterprise*, the clergyman has displayed a regrettable spirit of intolerance which can only be accounted for by his evident failure to grasp the import of Mrs. Eddy's teachings. Will you therefore kindly allow me to say a word by way of correction, and in so doing to call the attention of your readers to the text chosen by our friend on the above occasion. It was taken from Paul's admonition to the Thessalonians: "Prove all things; hold fast that which is good. Abstain from all appearance of evil." It would be difficult to put into fewer words the entire philosophy of Christian Science. Every Christian Scientist is endeavoring to conform his daily life to these very rules, for he realizes that only as he does so can he be accounted worthy of the name.

Throughout his sermon our critic has discussed Christian Science from his concept of it as a therapeutic agent, but has failed to recognize its appeal to mankind as a religion. While it is true that the majority of people have turned to Christian Science for relief from physical ills, for the very simple reason that freedom from sickness and pain is greatly to be preferred to a condition of bondage, it is not true that the healing feature is the most important one. On the contrary, mankind in seeking relief from physical ills very quickly finds, after turning to Christian Science, that his freedom is dependent upon his willingness to "put off . . . the old man, which is corrupt according to the deceitful lusts" and to "put on the new man, which after God is created in righteousness and true holiness." This putting on of the new man is the spiritual regeneration which takes place in the life of the one who seeks surcease from sin and suffering through the study of the Bible in the light of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Our critic tells us that "the chief place to study its claims is at the meetings of testimony." If he were to attend one of these meetings, or if he were to read the testimonials appearing weekly and monthly in the *Christian Science Sentinel* and *The Christian Science Journal*, respectively, he would very soon realize that the gratitude expressed is for the spiritual and moral uplift in the individual consciousness, the result of a better understanding of God and of man's relationship to Him, and the importance of physical healing is relegated to second place.

The gentleman questions the use of the terms "final" and "absolute" as employed in the text-book, but overlooks the fact that they refer to the divine Principle, God, to whom Christian Scientists invariably look for a solution to every problem. It is just because they have applied their understanding of God and of His laws, and have thereby been enabled to "prove all things," that after years of experience with other systems of medicine and theology they are satisfied that in Christian Science they have found the better way, and are therefore endeavoring to "hold fast that which is good."

✧

[Norman E. John in *Wilmington* (Del.) *Morning News*]

After carefully reading the published sermon of the Rev. Dr. —— in a recent issue of your paper, the writer was filled with gratitude that no place is provided in the Christian Science service for a prejudiced discussion, misrepresentation, or perversion of any religion. He rejoiced that the reading of the Holy Scriptures, and an exposition thereof, has been found more satisfying to thousands of worshipers than to have the opinions of many minds on many subjects exploited by not a few of those filling the positions of ministers of the gospel. It has not been a great many years since, among those who occupied the pulpits, some found sufficient Scriptural authority, as they thought, to uphold with religious vehemence human slavery; and it is regrettable that all the religious strife of the ages has been over the question of doctrines, whereas all the exhortations of the Master implied that the test of Christianity is in works and not in professions.

If there were more of the preaching of the gospel, as called for by the Lord's commission,—"Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover,"—would not the result be today, as it was of yore, "And they went forth, and preached everywhere, the Lord working with them, and confirming the word with signs following"?

Before attempting the correction of some of the presentations made in the sermon, let it be stated that a large number of those who have accepted Christian Science had earnestly sought and endeavored to be satisfied with what they had been taught in the various denominations. They attended the services, read their Bibles, prayed earnestly, took communion, conferred with their pastors, and for all these privileges they are not lacking in gratitude. They are not ungrateful for the earnest, faithful efforts on the part of

Digitized by Google

their former teachers, as well as their own, to find the way to the divine power that should meet their spiritual, mental, and physical needs, or for the good they found in their previous religious teaching. But these hungering and thirsting ones needed something that their religious experiences had not been able to satisfy, and with joyful and glad hearts they testify to the clearer light, the more spiritual interpretation, the better understanding of the efficacious life of Christ Jesus, and through Christ a closer walk and communion with their God. Whether or not it has come within the good doctor's observation, there is abundant published testimony outside of the publications of the Christian Science movement, that Christian Scientists are a happy, healthy body of people; that taken as a whole they are good citizens, and that the world is better for their presence and their activities.

The Christian Scientists themselves, one and all, will tell you that they are better men and women than before they knew of Christian Science; that they are healthier and purer in thought; that they love and understand God and His law better, and have a greater love for their fellow men; that they are more systematic in their study of the Bible, and more earnest in their endeavors to manifest Christian lives. Christian Science does not teach that God revealed Himself to only two persons. On the contrary, it teaches that God is forever revealing Himself to all those prepared to receive a knowledge of Him. Mrs. Eddy writes, on page 333 of Science and Health: "Throughout all generations both before and after the Christian era, the Christ, as the spiritual idea,—the reflection of God,—has come with some measure of power and grace to all prepared to receive Christ, Truth. Abraham, Jacob, Moses, and the prophets caught glorious glimpses of the Messiah, or Christ, which baptized these seers in the divine nature, the essence of Love."

The critic was also unwarranted in deducing the conclusion that Paul, Augustine, Athanasius, Ambrose, Clement, the Gregorys, Basil, Cyprian, of the early church, and likewise Luther, Calvin, Knox, Cranmer, Wesley, Edwards, and others, were under a delusion; for it is very clear to Christian Scientists that these, and many more, had wonderful perceptions of spiritual truth, and each in his turn did much to offset the misconceptions and ignorance that went before him. But it is quite pertinent to ask right here, why it was, if Luther, Calvin, Knox, Fox, Wesley, and all the others had the same "key" and understood how to give it clearly to mankind, that their followers should be found in so many divergent denominations in all the years since. Today worshipers come from all of these denominations and find themselves united in their understanding of God in Christian Science.

Before our critic occupied so much time in his sermon and so much space in your paper, dwelling upon his incongruous conclusions as to the unrealities taught by Christian Science, he should have clearly defined to his hearers what Christian Science teaches in regard to the terms "real" and "reality." The doctor is certainly familiar with the absolute and relative meanings of words. Jesus dwelt upon the absolute meaning of "good" when he said, "Why callest thou me good? there is none good but one, that is, God." In that absolute sense Christian Science uses the words "real" and "reality" as pertaining to God and the things of God. Paul described material sense in his saying, "Now we see through a glass, darkly;" and the spiritual when he added, "but then face to face."

The critic takes exception to the teaching of Christian Science that the majority of believers throughout the world have entertained wrong conceptions of God. The writer ventures to make the assertion that if the doctor were to ask one hundred persons to define what they know God to be, he would find a large percentage of the answers unsatisfactory both to himself and to those questioned. And the answers would probably differ more widely than those to any other question he could propound. In no field of thought, perhaps, would he find the imagination playing over a wider scope or with less sense of directness, and this in contrast with the Scriptures. "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent," as the Master said. He will also find that a large proportion of these people believe that God is the sender of sickness and of calamities; that another large number do not believe that God sends sickness. Therefore we believe the burden of proof is with the doctor to show that the "vast majority of believers throughout the world" have a true conception of God.

The critic is troubled because Christian Science enlarges the conception of God to an infinite being, boundless, limitless, the only cause and creator, omniscient, omnipotent, and omnipresent, without beginning and without ending, and therefore eternal; unchangeable, "the same yesterday, and today, and forever," therefore the divine Principle whose creation is as perfect and eternal as the creator. Especially does it trouble him that, God being infinite, omniscient, and omnipresent, it necessarily and logically follows that God and His perfect creation is the only reality, and that in this conception he cannot find a place for the manifestation of pain, sin, sorrow, disease, death, devil, and hell, just as this conception has troubled every theologian who has tried to find an origin for evil and an abiding-place in the universe for it.

Christ Jesus said of evil that it was a lie and always had been, and Christian Scientists get more comfort and accomplish better results by so placing it than by pleading for its reality. Especially so in view of the explicit utterances of the Master: "I am the way, the truth, and the life;" "For this cause came I into the world, that I should bear witness unto the truth;" and, "Ye shall know the truth, and the truth shall make you free."

If the doctor expects that sometime in the cycles of the future all the sin and misery of the world is to be overcome (as he certainly does when he prays, "Thy kingdom come"), he must logically accept the premise that it does not now, and never did, have a divine origin; that without a divine origin, it was never really created by God, and that if created by another power than the divine, there is another creator, another God, besides the one who "created the heaven and the earth," finished His work, and "saw every thing that he had made, and, behold, it was very good."

As a lie is the absence of truth and without foundation, as darkness is the absence of light and without an origin, Christian Scientists prefer to think of evil and its woeful enormities as ignorance of God and His perfect creation.

[Written for the *Sentinel*]

The Pine

WARWICK JAMES PRICE

COMMANDING and rugged rises the sturdy shaft of the pine tree.
Lacking the grace of the birches, it seems to embody endurance;
Withstanding old Boreas' buffets, it yet gives shelter to nestlings;
Its roots sunk deep in the hillside, it still points upward to heaven.

Surely there is a preachment held in the hands of its branches,
A sermon written in needles, pointed and haunting and fragrant.

Editorial

Shifting Sands

ONLY a few years ago, people were taught to believe that sewer-gas was a dangerous and dreaded foe to the health of mankind. Today a physician who is a professor of epidemiology in a leading Western university, is quoted in the *Berkeley* (Cal.) *Daily Gazette* as saying:—

"The methods of health departments have changed materially in the last few years, though they cling to many antiquated practices. These practices are legacies from a time when even health officers believed that sewer-gas was dangerous and that diseases were transmitted through the air. In accordance with this belief, measures for the control of disease formerly dealt with the environment. Our plumbing ordinances require many feet of needless vent-pipe, since these ordinances are based on sewer-gas superstition."

This is simply another proof that the theories of the medical profession are as the shifting sands of the desert, so frequently changing as to be unsafe guides for legislation which would bar every person from seeking to preserve or secure his health by means other than those prescribed by this same medical profession. There never was a time when so much attention was given to the study of disease as at present, nor a time at which the physician was more helpless in the presence of certain diseases than he is today; yet the clamor for legislation which would make doctors of medicine the only legalized healers of disease, is becoming more and more insistent,—a clamor raised not by the people, but by the doctors themselves.

Until these doctors of medicine can show an unbroken record of success in healing even one disease, and until their theories of the cause and cure of disease become more permanently settled than at present, it becomes them, it would seem, to be more modest in their efforts to bring every person, whether he be sick or well, under bondage to them. Will legislators take the responsibility of passing such laws as have been demanded of them, when faced with testimony that hundreds of thousands have been healed by Christian Science, many of them after all medical means had failed? Would they have a right to take this responsibility, if even only one person should prove that Christian Science had healed him? Every week thousands of persons all over the world are publicly declaring that Christian Science has healed them. Thousands of testimonies have been given to the reading public through the columns of the *Sentinel* and *Journal*. To cite one instance, a lady wrote to this office some time ago: "It is through the understanding of Christian Science as taught by Mrs. Eddy that I am living today. I had reached that stage where the physician said I was dying and would probably be gone in an hour's time. . . . The physician said, 'Nothing in this world can save her; she is beyond all human aid.'"

This is plain and simple testimony to the efficacy of Christian Science over medical methods, yet there are still those who refuse to believe there is any other recourse for a sick person than to depend upon medical aid. They would even, as did the Pharisees of old, when Jesus healed the blind man, try to convince such a one that there is some mistake, that either he never was sick or else he only thinks he is healed. But there is no gainsaying that triumphant refutation: "One thing I know, that, whereas I was blind, now I see."

Christian Scientists have no quarrel with the physicians of any school. They have been taught never to be aggressive, to obey the law, and in all things to strive to observe the golden rule. It does not necessarily follow that they are to acquiesce in or submit without protest to efforts to make laws which would deprive them of their inalienable rights, especially when such measures are advocated by a system whose fallibility is frankly admitted by its own exponents. It is one of the unexplainable things that in the face of these fallacies the public should be expected to adopt unquestioningly each new theory that is promptly advanced to take the place of the one exploded.

The day has gone by for accepting a dictum from any source when unsupported by facts. Christian Scientists have proved the efficacy of the truth discovered by Mrs. Eddy to their own satisfaction. Yet they do not proselyte; they do not seek legislation to force this teaching upon their fellows, however confident they may be that it would work for their betterment. They ask, and have a right to expect, that the same liberty be accorded them which they are ready to extend to others.

ARCHIBALD MCLELLAN.

Church-membership

IF applicants for membership in The Mother Church of Christian Science, or in any of its branches, were asked to give their reasons for seeking membership therein, the answer in most cases would be that they desired to get all the good that is possible in this way. Now there is nothing wrong with this mental attitude, but very few appreciate the fact that the privileges of our churches are free to all,—the Sunday services, the Wednesday evening meetings, the reading-rooms, where those who choose may study the literature without charge, also the lectures, where all inquirers are made welcome. It is not necessary to be a member of a Christian Science church in order to have access to all these blessings.

Here it may be asked whether there are not some other things which are the special privilege of the members of our churches, and to this an affirmative answer may be given. To receive blessings is good, but we have it on the authority of Christ Jesus that there is something even better. He said, "It is more blessed to give than to receive," and this may well be applied to church-membership in Christian Science. When inquirers after truth begin to desire citizenship in the kingdom of God, they should examine themselves as to their fitness therefor. The mother of James and John came to our Master with a request that her two sons might be accorded the highest places in this kingdom, and to this Jesus made response by asking them if they were able to drink of his cup and be baptized with his baptism. He even said, "Ye know not what ye ask:" but he also gave assurance that they would be privileged to share his cup and partake of his baptism, with all that this implies. As for the high honors which they craved, these must come in God's own way and time.

Those who aspire to membership in the Christian Science church should go deep down into their own consciousness, to find whether they really desire to achieve the greater blessedness of giving themselves and all they possess for the establishment of Christ's kingdom on earth, with its healing ministry as instituted by the Master himself. Our revered Leader says (Science and Health, p. 55): "Whosoever layeth his earthly all on the altar of divine Science, drinketh of Christ's cup now, and is endued with the spirit and power of Christian healing." This is unmistakable, and it is a test which each member should apply to himself. At the very start of our membership we have the privilege of helping to provide the bread of Truth which is to feed the hungry, and if this brings down upon us even the fiercest condemnation of mortal mind,

Digitized by Google

we must take it meekly and rejoice that we are counted worthy to drink of our Master's cup.

Another thing to be considered is the Master's injunction to his disciples when he sent them out to heal the sick. He said, "Be ye therefore wise as serpents." Mrs. Eddy reiterates this counsel throughout her writings, and if Christians had always heeded it, they would doubtless have been spared some hard experiences. To rush into the fray without the needed armor and weapons, betrays untempered zeal. God never leaves us unprotected, but it rests with us to demonstrate this fact in the Christ-way.

It is therefore of the utmost importance that all members of our church should possess and study diligently its Manual, which defines the duties, obligations, and privileges of membership. They are taught therein what they should do, and shown what they should not do, while striving to advance our cause, and this study will be no vain expenditure of time or thought. It will, on the contrary, inspire them with new wisdom in working out their individual problems, and as they in this way seek "first" the advancement of God's kingdom on earth, they will find the most direct path to true prosperity.

Ignorance of Christ's teachings and of the strict demands of Christian Science, furnishes no passport into our church. Only those who do God's will have the right to enter the city through the divinely provided gates, and to do God's will we must know it. Then we shall be as tried links in the chain of truth which is fast encircling the world.

ANNIE M. KNOTT.

The Note of Authority

IT has been well said that "no institution can exist without a basis, center, or principle of authority;" and what is true of institutions is true of men. God is the only being who is absolutely self-centered and sufficient unto Himself. All other beings are dependent, hence naturally and rightfully in subjection to Him who is superior to them, their creator, and to His laws. Their normal and healthful attitude is therefore one of obedience, and when this is apprehended the one great question, the answer to which must determine character and destiny moment by moment, is this, To whom or to what am I now subject? If it is to Truth and Love alone, then manifestly every true interest of life is being conserved.

Mortals are lazily disposed to be dependent. They are prompted by purposes of self-gratification and readily yield obeisance to anything that promises to satisfy desire. They are therefore easily enslaved by falsity and deception, and though they often fancy themselves the very exponents of freedom, unscrupulous error is ever profiting by their obedient weakness. The subserviency of ignorance and fear is very easily exploited, and this has been the serious offense of that unspiritual ecclesiasticism which has dominated and still dominates a large proportion of the race. On the other hand, assertive indisposition to recognize any authority begets an individualism which makes for social and moral disintegration, because in its pride over its scientific, matter-of-fact devotion to physical law, it becomes wholly unethical and uncompassionate. He, for instance, who honors the law of heredity as legitimate, can but steel his heart against the cry of those who are being crushed by its juggernaut wheels. The character of the devotee is naturally determined by the character of that to which he pays his devotion. Men become what they worship, and they who accept the authority and finality of so-called physical law, can but drift toward that state described by St. Paul as "having no hope, and without God in the world."

In all its teaching Christian Science recognizes and honors Spirit, the infinite Life, Truth, Love, as the only basis and source of authority, and declares that one's right to rule is always measured by his obedience thereto. It teaches that authority is never separated from divinity; hence, that Christ Jesus could say to his disciples, "I give unto you power . . . over all the power of the enemy," by virtue only of his at-one-ment with and their obedience to Spirit. It teaches that dignity and rightful dominion are indissolubly associated with humble conformity to divine law. This is its ever-reiterated note of authority.

In Christian Science we perceive that the explanation of the efficiency of the early church is found in its consciousness of spiritual command, and this consciousness was not to be an exclusive hierarchical possession, but was to be gained by every true follower of Christ Jesus. This is the secret of the overcoming of sickness and sin, whether in the first or the twentieth century. So-called orthodoxy was astonished when Christ Jesus spoke "as one having authority," and it is no less astonished now that one should have dared, in Christ's name, to say that "Mind is the master of the corporeal senses, and can conquer sickness, sin, and death. Exercise this God-given authority" (Science and Health, p. 393),—a counsel which comes as a vitalizing stimulus, a veritable breath of life into the deadness, the inertia, and the inefficiency of much theological teaching and all materialistic belief.

In its declaration of man's spiritual freedom and power, Christian Science is a call, and in its effect an impulsion to do and dare for God. It means an awakening to and the fulfilment of "the great commission." It is a demonstration of the sole and sovereign authority of Truth, the redemptive realization of which is being regained in all the world today.

JOHN B. WILLIS.

Among the Churches

Current Notes

BOSTON, MASS.—The First Church of Christ, Scientist. Services: 10:45 a.m., 7:30 p.m.; Sunday school, 10:45 a.m.; Wednesday, 7:30 p.m. In the church edifice, Norway, Falmouth, and St. Paul streets. The church is open to visitors Wednesdays and Fridays from 10 a.m. to 5 p.m.

Reading-rooms: Berkeley building (suite 306-307), 420 Boylston street; open daily, except Sunday and Wednesday, from 9 a.m. to 9 p.m., and on Wednesday from 9 a.m. to 5 p.m. International Trust Company building (second floor), southwest corner Devonshire and Milk streets, opposite post-office; open daily, except Sunday, from 9 a.m. to 5:30 p.m. Coolidge Corner building, 1316 Beacon street, Brookline; open daily, except Sunday, from 9 a.m. to 6 p.m.

OSSINING, N. Y.—A special service was held in the [prison] chapel on Easter Sunday by members of First Church of Christ, Scientist, of Glens Falls. The chapel was filled with an attentive audience. At the close of the regular service testimonies to the healing and helpfulness of Christian Science were given by visiting Scientists. Some questions relating to Science, which had been asked by interested ones, were answered. The service closed with a song and the benediction.

Commerce, First Church of Christ, Scientist, provided a booth for the distribution of our literature, which resulted in much good to many. During the exposition there were given out 65 *Journals*, 338 *Sentinels*, 564 *Monitors*, and 357 pamphlets.—*Correspondence.*

ZANESVILLE, OHIO.—The initial service of First Church of Christ, Scientist, in its new home in Monumental Building, will take place Sunday morning [April 12]. The entire north end of the second floor of Memorial Hall has been transformed, and it presents one of the most attractive chapels in the city. Three rooms have been thrown into one.

The Lectures

Dover, N. H.

In spite of disagreeable weather the banquet hall in the City Building was the scene of a large gathering of representative citizens of this city who are interested in the worthy Christian Science movement. William C. Henderson introduced Governor Felker, who in turn presented the speaker, William R. Rathvon, as follows:—

It is both a duty and a privilege for me to introduce your speaker. It is both a duty and a privilege for the executive of a state to be identified with those things which attempt to abolish sin and elevate human lives. Our forefathers were a religious people. They believed in a personal God from whom all blessings come. They believed and attributed the sin of the world to their own misdeeds, and with that belief they went on through the years. Those that sow sorrow shall reap joy, was their notion.

Now they may have had a misconception of the sorrow and sin of the world, and so may not have looked on it in the right light to abolish it. As one thinks, in a measure so he is. "By their fruits ye shall know them," and it is by the fruits of the church of Christian Science that we know it. An organization which in the last fifty years, or less than fifty years, has fifteen hundred churches and a million and a half adherents, has certainly done a wonderful thing, and I trust that when you come to your semicentennial, two years hence, you will have doubled your number of churches.

Mrs. Eddy, a native of this state, who has brought forth such a blessing to human kind, said that if we can lift mankind, if we can abolish sin, if we can abolish evil, happy are we all. I have noticed that in the past we have said men were blessed who have done good work for the country, but it has occurred to me, and undoubtedly also to you, that now we are receiving the blessing from men of mark, men who have perfected the ideas of today, men who are strong in their mental power, who are strong in their convictions, who are impressing themselves on the age. In our two institutions, the college at Durham and the college at Dartmouth, we have many men on the campus who are leading the thoughts of the year.—*Daily Democrat.*

✧

Minneapolis, Minn.

Clarence C. Eaton lectured twice at Second Church on Christian Science. The first evening he was introduced by Prof. John N. Greer of the Central high school, who said in part:—

Christian Science means many different things to many different people. To those who have understood a little of its teachings and practices it means everything. It means the healing of diseases, not only once, but again and again, until by experience they know the Bible speaks the truth when it says that God heals all our diseases. It means the destruction of fear, the removal of sin, the uplift of the spirit. It means a more definite and exact knowledge of truth, a wider and broader understanding of God, His goodness and His allness. It means that life is a joy; that its daily work, whatever its problems may be, is a delight, and not only brings happiness but destroys the shadows and the sorrows of life.

Elbert E. Stevens, first reader, in introducing the speaker at the second lecture, said:—

Men have died to promote what they believed to be the truth. They have pursued their fellow men, sent them to torture and the stake, because they would not accept what their persecutors insisted was the truth. But none who fought those wars, none who went to their death, none who suffered those persecutions, were able to prove that they were right by doing the works which Jesus did. Today, however, in every section of this country and in some portions of every civilized country, men, women, and children are being raised from beds of pain and are having their loved ones restored to them from the very mouth of the grave, having peace, joy, and happiness brought into their lives where before there was only sorrow, suffering, and misery. Thus thousands all over the world believe that in Christian Science they have found the answer to the question "What is truth?" and that this is indeed the truth which makes men free; and they wish to bring to others this word which heals and saves. Jesus said, "By their fruits ye shall know them," and Christian Science is willing to be judged by this test. It asks only to be judged by its works.—*Correspondence.*

✧

Kingston, England

A lecture on Christian Science was given in the Assembly Rooms, Surbiton, by Prof. Hermann S. Hering. A large audience gave the lecturer a most attentive hearing. S. Harding of Oxshott presided over the meeting, and said that the lecture which was to be given that night would fulfil two purposes: it would enable the lecturer to explain and advocate Christian Science, and it would also enable him to dispel any false impressions and ideas as to its teaching. Owing to the vast growth of this religion today, it was being better understood and appreciated.

Christian Science, continued the speaker, came to him personally some nine years ago, and he had since then seen what Science had done in many of the great cities in different parts of the world. It had been brought home to him very forcibly, owing to its great and good work, not only in healing the sick, but also in uplifting, reforming, and regenerating many of those who had stumbled or fallen during life's journey.

The Surrey Comet.

✧

Berkeley, Cal.

Before a large audience in the High School Auditorium the Rev. William P. McKenzie spoke on Christian Science. He was introduced by William H. Sinclair, who said in part:—

The seeming obstacles which beset all, make salvation a universal desire. Many today who have not yet been induced to investigate Christian Science, and the satisfactory solution that a knowledge and correct application of it brings to our difficulties, are opposed to what they believe it to be. The object of a public presentation of this teaching is to tell of its beneficent influence and to promote inquiry into its real nature.

Digitized by Google

Others, while understanding that its teachings are founded on the Bible, regard the Christian Science interpretation of those sacred teachings as too marked a departure from the interpretations which have been accepted as correct for so many centuries. It is this very marked departure from interpretations which even up to the present time have proved barren of the longed-for results, and the return to the former simple and natural interpretation, that has restored Christian healing and brought about the marvelous results of happiness and harmony in this present state of existence, imparting joy to unnumbered thousands.

The spread of the Christian Science interpretation of the Bible leads to the conviction that Jesus' works were based on a divine Principle which he understood; hence his promise, "Ye shall know the truth, and the truth shall make you free."

Berkeley Gazette.

✧

Portsmouth, Ohio

The address of Atty. Mark Crawford, in introducing the Hon. Clarence A. Buskirk, who lectured on Christian Science, was in part as follows:—

It seems to be the nature of man to look forward, not only to a better, purer, and more beautiful way of living in this world, but to hope for life after death in order that the sufferings and injustices of earthly life may be atoned for in some future state of existence. After the advent of Jesus Christ, it was thought by many religious philosophers that the problem had been solved; and indeed if all the world were Christianized and every one were willing and able to live up to the precepts of Christianity as revealed in the gospel, it is probable that the problem would be solved. Human nature is, however, so weak, and the exigencies of human life are so hard and complex, that the majority of human beings do not have the moral strength to live up to these precepts without the outward help of close association with some of the various religious organizations representing the Christian church.

Here we come to the parting of the ways between the church and the great masses of humanity, because—and I say it with all kindness but with a feeling of certain conviction after long observation and considerable personal experience—the preachers and priests and influential laymen of the Christian church have always failed, and are still failing, to adapt the doctrines of the church and the precepts of Christianity to the needs of humanity. Until some new adaptation of Christianity to the needs of the people is found and used, the proportion of active and conscientious members of the church to the whole number of the world's population will become less year by year, until the Christian church will become a failure in maintaining and improving the good morals and daily life of mankind.

Christian Science offers a new adaptation, of which little is known except by comparatively few, and nothing is known by the great masses of humanity. As rational beings, it is our duty to ourselves and to our fellow beings to learn what we can of this adaptation.—*Correspondence.*

✧

Brockton, Mass.

Bicknell Young lectured on Christian Science in Hathaway Theater. He was introduced by William H. Dawes, first reader, who said in part:—

As Christian Science is based on the life and teachings of Christ Jesus, Christian Scientists are trying to follow his commandment to his disciples to "preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils," and are attaining the results which he promised: "These signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover." Again, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

As the truth in Jesus' day met opposition and persecution, so today Christian Science has experienced opposition, misunderstanding, and misrepresentation; but we remember again the words of Jesus: "Even so every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit. A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit. . . . Wherefore by their fruits ye shall know them." By this standard must Christian Science be measured.—*Correspondence.*

Testimonies of Healing

When I was quite young, my mother, who was afflicted with a malignant growth, inquired of a Christian Scientist relative as to the healing of this disease, and from discussions at home my young thought was impressed with the idea that Christian Science was not sound doctrine. Launching out into the world at an early age, I experienced changes of environment which led me to altars and slum missions, to both sides of the liquor bar; I was house-help with the best people, and hobo with the worst. I early became convinced that if I would have better conditions, I must work out of the present ones, for hope, so common with mortals, had quite failed to lift me out of them.

Landing in a certain city about the time of a campaign, the slogan of which was "Bringing this city to Christ," I was again induced to seek the penitents' altar; but the evangelist's pleading and my friends' prayers failed to awaken an affirmative response to their inquiry, "Don't you feel that Christ has saved you?" I then sought personal interviews with clergymen of prominence and questioned them as to why they maintained a given faith, and the answers were practically the same, "Because my parents brought me up in this church." The answer did not satisfy me, but nevertheless I was baptized and united with a Christian church. Later I lost my interest in the church on account of its theoretical teaching, but soon after became deeply interested in the Bible, and perused it many a midnight hour. The books of Job, Proverbs, Psalms, and Ecclesiastes gave the most enlightenment, and I began to be convinced that God was not a person, but intelligence, of which man's mentality is the image and likeness.

On a street-car one Sunday morning, a number of people left at a certain street, and some one inquired who they were. The conductor answered, "Christian Scientists." Some unkind remarks were made, a discussion followed, and from some things said about practical religion, I decided to find out for myself, and shortly after I became an earnest student of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

I was addicted to the habitual use of drugs for stomach trouble. One night, after purchasing a new supply, I decided to give God a trial, as the study had increased my faith in His power; so I threw all the medicine away, and it has never been renewed. I could not work without glasses, but after reading Science and Health one evening without them, I became convinced that I need never put them on again. During the panic of 1907 our office was abolished, and being at the head of it, I presumed it would be easy to secure another position. Look where I would and strive as I might, however, it proved of no avail. I stopped striving, with the understanding that God knows all things. That same day I received a letter from a source I could never have thought of, and it brought me a position.

My wife and I have been studying Christian Science now for seven years, and our children know nothing of any reliance but the truth of being for their welfare, and they are taught to work out their own problems in the same manner that we do. Two of them were born before the doctor or the nurse arrived, with not more than fifteen minutes of pain.

I could speak of many other demonstrations worthy of consideration, which have shown that "the physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle" (Science and Health, Pref., p. xi). If I could not use the knowledge of Christian Science in my daily life for the overcoming of seeming obstacles to my welfare and that of my family, it would not appeal to me. The straight and narrow way is not by any means one of laziness and selfishness, but the exact opposite. I am indeed thankful to Mrs. Eddy, who was good enough and brave enough to open this way for us.

W. E. James, Salt Lake City, Utah.

✧

I feel it my duty to testify to the power of Truth, and I do so with a sense of deep thankfulness to God, and gratitude to our beloved Leader, Mrs. Eddy.

In September, 1912, my little girl, then six years old, stepped on a nail when going to bed. She told me about it and began to cry, the pain was so intense. I read to her from Science and Health, as I had done in other cases, but she seemed to grow worse. She cried a great deal and her foot became red and swollen; then a large blister formed where the nail had entered the foot, and the third day it turned black. I began to be frightened, so I asked for help in Christian Science. After a week of absent treatment, the foot was healed.—Sarah Nessler, Chicago, Ill.

✧

During July and August, 1912, I had dental work done in Berlin, Germany. In preparing one tooth to be crowned, the dentist drilled two holes through the root, and not being aware of this, he put the porcelain tooth on with the root in this condition. In pressing the tooth on, a small quantity of the cement was forced into the jaw through the holes in the root. It was very painful at the time, but the dentist assured me that the tooth was sensitive. After three days of extreme pain, I sent for a Christian Science practitioner to come to me, and during her visit I was healed of the pain, which had been so great that I was hardly able to walk across the floor. I felt that the work was done, but later I found it necessary to have more help. An abscess formed and broke, but it did not seem to heal, and the dentist informed me (I had changed dentists) that the bone was carious. My fear was great for a few moments, but I again called for treatment in Christian Science and the fear was destroyed at once.

Treatment was continued, and I earnestly applied myself to the study of Christian Science. I visited the dentist many times, but he felt there was nothing to do. Finally one day he thought it best to have an X-ray picture, so that he could learn the exact condition. He found that the bone had healed, but that there was a foreign substance which needed to be removed. Without taking any opiate, I was enabled through Christian Science treatment to have the dentist cut into the gum and remove the piece of bone and cement which seemed to be causing the trouble. This was all done without any pain. The abscess had stopped even while this foreign substance was there, and in a few days the opening caused by the cutting was healed up. I am happy to say that the healing has been permanent.

I am unspeakably thankful to God for all the blessings that have come to me through Christian Science. I am deeply grateful for the understanding which is enabling me to separate error from personality, and also to forgive as I would be forgiven. I thank God for giving us this larger view, this wonderful truth, through our revered Leader, Mrs. Eddy.

Genevieve Ernst, Berlin, Germany.

I verify all that Mrs. Ernst has said, and I would like to state that it was a remarkable proof of the power of Christian Science to heal. The cement removed was the size of a small pea, and the bone removed was a quarter of an inch square.

H. Phillips, D.D.S, Berlin, W., Germany.

Digitized by Google

I wish to give my testimony, and I feel that I should have sent it in long ago. I have known of Christian Science for eight years, but was not interested in it till about five years ago, when my husband was healed of measles in a few days with no after effects, as so many have under medical treatment. He was the most inveterate smoker I ever saw, but he has never used tobacco in any form since having treatment in Christian Science.

In the fall of 1909 I had a bad attack of chills and fever with severe cold and cough. I took a great deal of medicine, but it did not do any good; instead, I was getting worse all the time. I was extremely weak, and at last I began to lose blood every time I coughed. I then decided to have Christian Science treatment and wrote at once to a practitioner. I began to improve immediately, but slowly. I was up all the time, however, and at the end of three weeks I had gained so much that I discontinued treatment. I had very good health until the next fall, when I seemed to have a worse cold than I had ever had, with great pain in my chest and side. This was overcome through absent treatment. Many other ills have given place to health through the understanding I have gained in studying the Lesson-Sermons, both for myself and three children. Colds, throat troubles, earache, croup, have all been overcome. Neuralgia in my face and an abscess on the gum were healed in less than a week through my own understanding of Christian Science, and with much less suffering than I had experienced on a previous occasion when I had used material means.

The most wonderful of all the physical benefits was the painless birth of my last child. I had decided to have absent treatment, but when the time came there was no way to let the practitioner know; nor had I any need, for everything went on as harmoniously as any one could wish, whereas at each birth before this I had suffered all but death, it seemed. The baby was a strong, healthy boy. He will be two years old next month and has never tasted any sort of medicine. There have been many more blessings, but I cannot tell of them here, though I am very grateful for them all, as well as for the literature and our text-book, Science and Health, which brings light to all earnest seekers after Truth.

Mrs. J. C. Moore, Pollocksville, N. C.

✧

Not because of any religious convictions or because I felt the need of spiritual aid did I begin the study of Christian Science; yet I builded better than I knew when through sheer desperation, after years of suffering and vainly seeking relief from doctors of every school and even from mind healing, I took the advice of a lady who knew of my condition and went to see a Christian Science practitioner. Since that time I fully realize that God is the healer of all our diseases, as revealed through Christian Science, and it is with a heart full of gratitude that I wish to tell how this realization was brought home to me.

For fifteen years I was a sufferer from acute inflammation of the stomach, which caused convulsions and fainting spells. The doctors said I had kidney colic and gall-stones. All the functions of the body seemed to be deranged and my skin was yellowish brown. This condition was accompanied by vomiting, and I also suffered from a bowel trouble of thirty years' standing; in fact, it would be hard to find a disease that I did not seem to have. I had worn out drugs and doctors, and was practically living on a "digestive." I went to see a Christian Science practitioner, and in about two weeks I did a hard day's work, such as I had not been able to do for twenty years or more. The diseased conditions of the body were soon destroyed, the functions became normal, and my weight greatly increased. My complexion cleared up, the eyes lost their dull, lusterless look and became clear and bright. I was also healed of a dislocation of the neck; the pain was removed quickly and the soreness soon left.

My husband has been reading Science and Health several years, and now I, too, read and study every day. I am indeed grateful, not only for the physical healing, but for the harmony and peace it has brought into our home.

Helen Cram, Los Angeles, Cal.

I desire to express my gratitude for the blessings I have received through Christian Science. I am a locomotive engineer, and all engineers are supposed to be more or less troubled with kidney disorder. I was healed by Christian Science after the doctor and medicines had failed, although I tried this treatment just to see what it would do and did not understand how the healing was brought about. I did not show any gratitude, so received no more benefit until I came nearer to God, and by reading and the help of a practitioner I was healed of the liquor and tobacco habits.

I smoked for thirty-seven years, and hardly knew what it was to be without a pipe in my mouth. I tried will-power a number of times, also material means; in fact I tried everything but the right thing, and that was Christian Science, which healed me. The third day of my demonstration I put my pipe away, but was very careful to put it where it could be found. I can truthfully say, however, I have never wanted it since. I hope this testimony may help some one who wants to quit using tobacco.

I have a better disposition than before I read Science and Health. I am truly thankful for the whole experience, and I think it was a fine demonstration.

J. O. Cram, Los Angeles, Cal.

✧

I feel it a privilege as well as a duty to tell what Christian Science has done for me. It is the greatest help and comfort that has ever come into my life. Mrs. Eddy says that when we demonstrate what we already know, we will be fitted to receive more. Some years ago I was using a sharp, heavy axe, when it slipped and cut the first finger on my left hand, severing the second joint, so that it was attached by only a small piece of skin. I vigorously denied the power of evil; then tied the finger up, and in a comparatively short time fear was destroyed, and I was able to go about my household duties as usual. The finger healed entirely, and I have as good use of it as of any of the others, notwithstanding that predictions were made of stiff joint, blood-poisoning, loss of finger, etc., unless I would have a doctor.

Besides this, I have been healed of a throat affection and my eyes have been very much helped. It would take me a long time to tell of the many times I have found that God is indeed "a very present help in trouble," and my heart is filled with gratitude to Mrs. Eddy for the blessings of Christian Science.—Lottie Hutter, Lynchburg, Va.

✧

I learned what Christian Science really is about a year ago, through a dear friend who came to visit me. I wish to express my deep gratitude to Mrs. Eddy, our revered Leader, for this knowledge of God as divine Mind, Truth, and Love, omnipotent and ever present. Through spiritual illumination and love she brought us to the understanding of good as the only power. I am also very grateful for the help of the Christian Science church and its literature, and to those Christian Scientists who have aided me in many ways.

Through the reading of Science and Health many physical ills have been vanquished. Stomach disorder, from which I

Digitized by Google

had suffered all my life, has disappeared, glasses have been laid aside, severe colds and mental troubles have been overcome. For these healings I am deeply grateful; but I could not express in words the peace and thankfulness which come from understanding God as Principle and man as His image and reflection, and the consciousness of the power of Truth and Love alone to meet every human need. I have never had a return of any of the old ailments, and every day more blessings are added.

I have found through the study of Christian Science that if we seek first the kingdom of God, and His righteousness, all good shall be added unto us.

MARTHA ANDERTON HOWE, Brookline, Mass.

✧

[Translated from the German]

I gladly avail myself of the opportunity afforded me to give thanks for the benefits which have come to me through Christian Science. About two years ago I became acquainted with its teachings through an aunt who had been healed of a very serious ailment. I was in a very inharmonious condition at that time, for I had suffered since early childhood from headaches and anemia, to which a stomach trouble was added within the last few years. I followed medical prescriptions for a long time, without obtaining permanent relief, and finally lost all faith in medical systems.

At the time of my greatest need I heard of Christian Science and immediately took an interest in it. I obtained the necessary information from a Christian Science practitioner and started on the right road with Truth illumining my thought. Every experience brought me a step farther, and now I am a happy and healthy person, for not only have the physical ills left me, but other errors as well. I thank God that a woman should have had the spiritual illumination required to show us the way of Truth.

MAGDA LOSS, Hannover, Germany.

✧

Gratitude for freedom in Truth and a desire to encourage others to seek the light impel me to add my word to the many testimonies given regarding the healing power of Truth as understood in Christian Science.

In 1895 I consulted an optician in the quest for relief from a distressing condition of the eyes, which seemed to be growing worse. I had taken material treatment without benefit. After a careful examination the optician said that it was a serious case of structural defect of the eye, that I had always needed glasses and would always have to wear them. I accepted the verdict, and for thirteen years wore glasses constantly, experiencing such a sense of relief that they never seemed a burden.

It was in 1905 that I became interested in Christian Science, and in reading the testimonies of healing which referred to the discarding of glasses, I could not imagine myself as likely to have that sort of experience, so thoroughly convinced was I that glasses were a necessity. Surely, a revelation to my consciousness was necessary, and it came. After more than two years of earnest study of the text-book, "Science and Health with Key to the Scriptures," one night I lay awake declaring the truth for a friend, when I realized that the choice between Spirit and matter must be made, also that Spirit was equal to all demands made upon it, and that I should be enabled to do my work without material aid. I did not put on my glasses in the morning, and have never worn them since. During this time I have done much stenographic and other work requiring close application, besides spending most of the evenings reading and writing. At times mental work has been necessary to maintain the realization of the truth that man's senses are spiritual, and I am glad to say that I have been able to demonstrate this fact as to the sense of sight.

Mine is but a drop in the ocean of gratitude that is constantly going forth from thousands of human hearts toward the woman whose clear vision, and obedience thereto, has made possible for all a sense of freedom from limiting and discordant conditions.

ELLA M. KINSLEY, South Pasadena, Cal.

✧

One day a shotgun was accidentally discharged close to my ear, and when I awoke the following morning, it was impossible for me to hear. On Monday morning I went to a Christian Science practitioner and received treatment, and by the next day my ear had relaxed so that I could hear a little. I continued treatment until Saturday, when I was able to hear as well as ever. As my father was not a Scientist, I did not tell him about my ear until after it was healed, and then he insisted on taking me to a specialist to have it examined. After examination the doctor said that the eardrum had been ruptured and that it was marvelous how it had healed so quickly. I have never been troubled with my ear since I was healed, and the hearing in that ear is perfect.

WILLIAM F. WINSHIP, Duluth, Minn.

✧

Christian Science was brought to my notice seventeen years ago, at which time I was a physical and mental wreck. I had just returned to my home in Iowa, satisfied that the pure air of Minnesota had no more help for me than did that of my own state. I had tried many physicians, and medicines of many different kinds, but I gradually grew worse. I then heard of faith-cure, but was told that it required a great amount of faith to receive benefit. If this was true, my case was hopeless, as I believed our sins could be healed only by going to God in earnest prayer, with a desire to live according to His laws in daily life practice; but I could not understand how a personal God could heal our diseases.

It was at this point that the message of Christian Science was sent to us through one of God's children, and we were told that it was faith with understanding which healed both sin and sickness. She sent me some tracts and other literature, together with "Science and Health with Key to the Scriptures." I read this book, but could not understand it. Like Peter, however, I had nowhere else to go, so I decided to give Christian Science a trial. I took some treatments from this same lady, and was instantly healed of bowel disorder of four years' standing, for which I had taken drugs daily. Again, I had been troubled with a throat affection for many years. This appeared in an alarming form, for my throat was in such a condition that I could not swallow. I was twenty miles from a Christian Scientist, so I took Science and Health and read for two days and the greater part of the night. The second day the canker began to disappear, and the swelling also. I had no treatments; the ailment was destroyed by reading the book, and it has never returned. These were two very convincing proofs to me. I continued the study of the text-book, together with the Bible, and since then have used no other means to destroy the discords of sense.

I have seen disease in the form of rheumatism, cholera infantum, appendicitis, the tobacco habit, eye trouble, and many other ills destroyed by the power of God as revealed through Christian Science. While I have problems yet to solve, and still have doubts and defeats as well as triumphs, I am thoroughly convinced that as we quit our reliance on

Digitized by Google

material things and grasp the spiritual, as our Leader tells us to do, harmony of mind and body will be attained.

I thank God for Christian Science, and I am grateful to our dear Leader for her untiring labors in establishing the Christian Science movement in our times.

LETTIE SHERMAN, Morgan, Minn.

✧

[Translated from the German]

On Sept. 25, 1913, my husband returned home from sea with what seemed a slight injury of the arm. Although it caused him some pain, he paid no attention to it, but on the following morning the arm was swollen and the pain more severe. On account of his work, and as he was expected to go to sea on the following Saturday, he went to a physician, who pronounced it a severe case of poisoning, and immediately sent him to the hospital, with the remark that he would have to stay there for at least four or five weeks. An incision was made at once, and was expected to be followed by a second on the following day. I then telegraphed to a Christian Science practitioner for help, with the result that after the first treatment the danger was over. No fever set in, and the physician in attendance was at a loss to account for it. He remarked to my husband and to the nurse that whereas he knew the case had been one of serious poisoning, this seemed to have practically disappeared. He then concluded that my husband had a very strong constitution, and the other physicians at the hospital seemed equally surprised. On the fifth day my husband was dismissed, and on the sixth he was pronounced well by the physician. He had four treatments in Christian Science, and in two weeks went to sea, completely healed.

It also affords me great joy to say that our little boy a year and a half old was healed of acute bowel trouble with two treatments. We are very grateful for these instances of healing through Christian Science, and are constantly striving to lay hold of the truth and assimilate its spirit.

FRAU MARIE GEIKER, Nordenham, Oldenburg, Germany.

[Written for the *Sentinel*]

"Songs in the night"

SAMUEL JOHNSTONE MACDONALD

A SONG may sing its simple way
  Where sermons fail to reach;
A song sometimes the heart may stay
  When prophets vainly preach.

Some loving hymn through seasons drear,
  When discord darkest seemed,
Has brought the heavenly presence near,
  And doubting hearts redeemed.

'Tis good to sing the good we know,
  A grateful song to raise,
Forever offering, as we grow,
  The ministry of praise.

'Tis Love divine that giveth songs
  When hours are dark and drear;
'Tis loving hearts to whom belongs
  The faith and joy to hear.

Our love should never silent be,
  It should not fail to sing;
And thus in joyous harmony
  Love's praise shall ever ring.

From Our Exchanges

[*The Universalist Leader*]

Will death do what life has not done? Is there a moral transformation in the grave, or at this door into the unseen, such as no changes in life and growth have wrought? We should speak modestly about the unseen world. The world has been cursed with the egotism and conceits of men who knew nothing about the life to come, and were too literal and too narrow to appreciate the vastness of the impending mystery. Therefore it is only as a suggestion that we remark that so far as we understand spiritual processes there is no prospect that the change we call death will obliterate our moral past, or disconnect the moral continuity of existence. All of the hopes that at death we shall be lifted completely out of the old order of existence are contrary to the facts of spiritual psychology as we see and understand them. We are not going to venture far in an exploration of the spiritual psychology of the life beyond death. Our only desire is to make it clear to those who read these words that the hope of perpetual peace and bliss through the obliteration of our past faults, at death, is contrary to spiritual processes as we see these at work.

[Rev. H. S. McClelland, B.A., B.D., in *The Christian Commonwealth*]

Another reason for our changing view-point on prayer is the fact that the sacred and the secular are merging into one. We do not regard Sunday any longer as a holier day than Monday. We all believe that we shall be just as surely in God's presence when we are at work tomorrow in the office, in the study, in the shop or the workroom, in the school, or in the home, as we are in this act of worship here today. But this doctrine of the immanence of God in every day and every duty is one that may be gloriously helpful or dangerously vague. The danger is lest we lose in depth what we gain in breadth, lest we lower our ideal of the holy instead of raising our concept of what we used to call the profane. It is just because we have ceased to divide our interests into religious and otherwise, into sacred and secular, and have come to see that God is honored or dishonored in every transaction of life, whether it take place in mart or temple, that we must see to it that the secular be raised to the level of the sacred, and beware of the continual temptation to lower the sacred to the former level of the secular. To believe that God is everywhere should mean more prayer, not less.

[William C. Billings in *The Standard*]

The Christian life is no mere careful preservation of dogmatic statements, nor a precise continuation of customs, nor devotion to an undying organization. It is the rational and moral nature of men coming to its full expression in character and social conduct because of our fellowship with God brought by Jesus Christ. The soul bows to spiritual reality discovered by itself in all regions of life, supremely in Jesus, who was and is "the way, the truth, and the life." Herein is vital religion, current in every generation yet never outgrown, at home in every nation yet never provincial, and final because none can ever get beyond it. The great eternities are here at one,—God unchanging and everlastingly eager for fellowship with men, and man growing and using all the growth of his light within to promote fellowship with God and service to men. Only in Christ has this been perfectly achieved. His life is the light of men, and in him is no darkness. Only as we become like him will we come to know our oneness with God. We have light within because he has en-

Digitized by Google

lightened every one that comes into the world. "If we walk in the light, as he is in the light, we have fellowship one with another," and the life of Jesus Christ cleanses us from all sin.

[Rev. T. Rhondda Williams in *The Christian World*]

There is a wide-spread belief among non-churchgoers that even when ministers are sincere in the sense that they believe what they say, they are not intellectually sincere, not making a full and candid use of all their powers in the examination of facts; that they turn away from evidence which they ought to examine, and pronounce judgment on questions which they have not properly studied. The church has already suffered enormously on account of this wide-spread impression among the masses of the people that it cares more for its own position and its prestige than it cares for truth. The church can never regain its power until it gets rid of this impression, and the only way to get rid of it is to become genuinely earnest for the truth itself. We want, indeed, a revival that shall mean breadth, a wider outlook upon things, a move up that will put us high enough to see over our paltry sectarian and dogmatic boundaries into the larger life of God's world, where the free winds blow off the entanglements of the spiders of bigotry and prejudice. This would not mean the end of ecclesiastical variations, but it would cause bitterness and unholy rivalry to cease.

[*The Watchman-Examiner*]

Dr. John R. Mott, in one of his striking addresses on Christian unity, calls attention to the fact that in his intercessory prayer in John xvii, Christ did not pray that all his disciples might be one simply for the beauty and peace of unity; but he prayed "that they may all be one; even as thou, Father, art in me, and I in thee, that they also may be in us: that the world may believe that thou didst send me." Dr. Mott's startling comment is: "An unbelieving world is the price we are paying for a divided Christianity." What reason is there, according to the words of Christ, for expecting that the world will believe in him if his disciples do not show that they believe in him enough to conform to his last petition, and be in unity, peace, and love with each other? The greatest heretic is an unloving Christian. When the church is filled with love, the world will believe and love the head of the church.

[Rev. John Haynes Holmes in *The Christian Work and Evangelist*]

New issues are coming to the front in this age and generation. The old divisions between the churches and denominations along theological lines are sinking into utter insignificance. In my church, as in all churches at the present time, there is a line of cleavage between the conservatives on the one hand and the liberals on the other, as regards the problems of sociology, which is deeper and wider than any division which separates church from church in the ancient problems of theology. All of which means, as I have said, that present-day lines of division are horizontal and not vertical.

[*Western Christian Advocate*]

If there was more praying for each other, there would be less malice toward each other and more forgiveness of one another. Jesus said, "If . . . thou art offering thy gift at the altar, and there rememberest that thy brother hath aught against thee, leave there thy gift before the altar, and go thy way, first be reconciled to thy brother, and then come and offer thy gift." The meaning of this Scripture is that we cannot remain at the altar of prayer with hate in our hearts.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by **MARY BAKER EDDY**, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original, standard, and only text-book on Christian Science Mind-healing. Cloth, single copy $3.18; two to eleven copies inclusive (cloth only), each $3.00; twelve or more to one address, each $2.75. Full leather, stiff, beveled boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1883 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under these titles in this price list.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

Subscription Price

Payable in Advance

Annual subscription price, postpaid, for the United States, Mexico, and Cuba, $2.00; six months, $1.20. For Canada add 45 cents and for all other countries 95 cents annually for postage. For subscriptions in quantities please refer to our catalogue.

Subscriptions to the SENTINEL are entered only from the first of the month and will begin with current month unless otherwise specified. Subscriptions terminate with the last of the month named on the wrapper at the left below the name and address. The Roman numeral XIIII indicates the year 1914; XV is used for the year 1915. This notation and the delivery of the periodical will indicate that a remittance has been credited and will be our acknowledgment of the subscription.

Bound volumes: Current year or two years previous, cloth, $3.00; half calf or half morocco, $3.50. On earlier volumes write for prices.

Entered at Boston, Mass., post-office as second-class matter.

Items of Interest

Through arrangements made by the United States forestry service, twenty-four boy scouts —eight from Washington, D. C., eight from Baltimore, and eight from Boston—are to build this coming summer a ten-mile trail in a remote part of the White Mountain national forest. This plan is to aid the scouts to practise their craft, to learn about forestry, and to awaken in them an interest in conservation. In return for this work the boy scouts will be paid at a rate equivalent to that which the government would have to pay for the construction of this trail were the work done by the regular force.

The trail which the boy scouts will build is intended primarily as a means of protection against fire. The boys will be working approximately ten miles from the nearest town, which is Gilead, Maine. They will camp in the valley of Wild river, a tributary of the Androscoggin river, and will have two stretches of trail to build. The first will be alongside of Wild river, and the work will consist merely of the improvement of a rough trail which needs to be put into condition so that horses can travel over it. The second stretch of trail will be located in the timber where no means of quick travel existed before.

The Mt. Vernon Ladies' Association, the owner of the home of George Washington, at its annual meeting recently at the old homestead, listened to annual reports and made up a program of activities for the coming year. According to the official figures, there were one hundred and twenty-nine thousand visitors at Mt. Vernon during the past year. Probably the most important work of the year was that of reshingling the mansion. The shingles are of cypress, hand made in North Carolina, and are of the same kind and size as those used in 1743, when the mansion was erected. The first reshingling was in 1785, and the second in 1860.

Arthur L. Sifton, premier of Alberta, Canada, recently in New York, said that the single tax had proved very successful in municipalities of Alberta, and that most of them had adopted it. "Alberta is growing rapidly," said Mr. Sifton. "The towns are spreading out at a rate which some think is a little too fast. One of the things a new country wants to avoid, if possible, is too rapid growth of its towns. But we have not had a real estate collapse in Alberta. Prices have not gone down; there has been merely a cessation of speculative sales. I do not think any good property could be bought for less than it brought in the midst of what has been referred to as 'the boom,' but land is not selling except for use."

Practically nothing may be recovered by those who lost relatives or baggage in the Titanic disaster, as a result of a decision by the United States Supreme Court. The owners of the Titanic, the Oceanic Steam Navigation Company, petitioned the federal court in New York to limit its liability under American law to the value of the salvage, the freight and passage money collected on the ocean voyage that was never completed. The passage money amounted to eighty-five thousand dollars, and the freight and salvage brought the total to ninety-one thousand dollars. In all claims, upward of thirteen million dollars have been filed.

The report of the dominions royal commission, recently issued, gives some interesting facts as to the comparative use of the Suez canal and Cape routes to the East. It appears from this report that in 1912, of the total tonnage of British steamers clearing from United Kingdom ports to Australia and New Zealand, only 25 per cent went by the Suez canal, the other 75 per cent taking the Cape route. In the homeward trade about 40 per cent used the Suez route, about 32 per cent the Cape, and about 28 per cent the South American route.

Some five years ago Prince Tsaishun, making a complete inspection of the Chinese dockyards for the Manchu government, determined to build a naval dock with platforms for heavy guns at Foochow. For this purpose a loan of thirty million dollars was negotiated with the Bethlehem Steel Company of the United States. The existence of this old undertaking of the Manchu government has now come to light, and has been strongly supported by Admiral Liu, who has great hopes for the future of the Chinese navy.

Among the many advantages possessed by the agriculturists of South Australia is the large number of outports from which produce may be despatched to the markets of the world. Port Pirie, the second port in importance in the state, is also the fourth port of the commonwealth, and in addition to serving a large area of wheat-growing country, is the shipping center for the output of the Broken Hill mines. During the last year Broken Hill sent away lead and zinc concentrates to the value of £4,259,746.

A report just received by the National Geographic Society in Washington shows that the United States now has exactly eight thousand islands, supporting a population of ten million, and with a commerce of three hundred million dollars annually. American capital invested in these islands aggregates approximately four hundred million dollars; they ship to the United States one hundred million dollars' worth of products every year and take in exchange products of about equal value.

Armstrong lake, within the Beartooth national forest, Montana, is said to rival the famed Lake Louise of the Canadian Rockies. It lies at an elevation of seven thousand feet, surrounded by towering mountains. A good road, which can be traveled in half a day by automobile, connects it with the railroad at Billings. A rustic hotel has recently been completed, and many trails make the surrounding region accessible.

A hundred and seventy-five square miles of asphaltum lies in the Athabasca district of Central Alberta awaiting development, according to the report of an oil expert who has just returned from an exploration trip in that territory, recently opened by the Edmonton-Athabasca line of the Canadian-Northern. According to his estimate there are probably two hundred billion tons of paving material there, the deposits ranging from fifty to three hundred feet in depth, and averaging a very high grade of asphaltum.

Detailed studies of local road-building systems in one hundred counties in the United States are now being carried on by the department of agriculture in cooperation with the state highway departments and local road authorities. The purpose of this study is to discover the points of excellence and the defects in existing local methods of building and maintaining roads which will aid the state authorities to put local road management on a systematized basis.

M. Noulens, French minister for war, performed the ceremony of declaring the first section of the Trans-Saharan railway open and of laying the foundation-stone of the railway station at Tugurt recently. This section of the railway across Sahara runs from Biskra to Tugurt, covering a distance of one hundred and thirty-five miles. Its eventual destination is Lake Chad, and it has been decided to continue building a further section to a distance of one hundred miles from Tugurt.

It is the intention of the Connecticut highway commissioner to complete seven trunk lines throughout the state prior to Oct. 1, 1915. There is at present a total of nine hundred miles constructed out of the fifteen hundred and twenty miles of trunk-line highways contemplated by the Legislature, and to complete the entire system the cost will be eight million dollars or more.

Land on both sides of the Columbia river, near Wenatchee, Wash., has been purchased by representatives of the Chicago, Milwaukee & St. Paul railway, and a large dam will be constructed across the river about fifteen miles below Beverly, where, it is reported, a large power plant will be built for use in electrifying the company's lines in this section.

The chairman of the industries committee of the Pretoria Civic Association, South Africa, states that bales of ordinary veldt grass were sent to Scotland and America for experimental purposes, and reports from Scotland go to show that it is nearly equal to esparto for the making of paper.

A decision has been reached by the Russian government to grant a subsidy of one hundred and twenty thousand rubles a year to a line of fast steamers to run between Odessa and Bushire on the Persian gulf. The scheme has long been advocated by Russian consuls at the various ports.

Warren Allen of the roads department of the department of the interior, and Mark Daniels, landscape engineer of the Yosemite valley, have left for the Yosemite to make a topographical map of the valley.

Of the two thousand houses for workmen authorized to be erected in Cuba by the government, according to a recent law, one thousand have been completed.

Essad Pasha, the late war minister of Albania, has sailed for Brindisi after undertaking not to return without Prince William's permission.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI June 13, 1914 No. 41

Interpreters

IRVING C. TOMLINSON, M.A.

ONE who has traveled in foreign lands where he is unable to speak the prevailing language, keenly appreciates the value of an interpreter. If in distress, it is only through an interpreter that he can find relief. When he is hungry, through this helper he is provided with food. When he has lost his way, the interpreter points out the true path home.

Thus, too, mortal man, far from the Father's house, is in need of a guide and interpreter, "one who explains and makes clear," and Christian Science teaches that Christ Jesus is this "best interpreter of man's needs" (Science and Health, p. 170). Mankind had forgotten the language of Spirit, and he came so to explain God that they might hear His voice and trustingly know Him as "our Father which art in heaven." Mortal man was far from home, and the Master became to him the way of life. He was starving for the "bread from heaven," and Jesus so presented spiritual truth to him that he was able to feed upon this heavenly manna. Mentally equipped with an understanding of the absolute all-power and all-presence of God, good, he overcame, and taught others to overcome, every phase of evil.

In our own day, mortals had again forgotten the true meaning of Life as taught by the "man of Galilee," and Mrs. Eddy became the interpreter of his teaching to this age. Her explanations of the Bible are so plain to those who read them aright, that the Scriptures have become a handbook on right living. She has so interpreted God to men that through a correct understanding of Him, He becomes available for every human need. She is the spiritual expounder of the life and teachings of the Master, so that to a great multitude he has become "the way, the truth, and the life," as he positively declared himself to be. The text-book of Christian Science, "Science and Health with Key to the Scriptures," contains a clear explanation of God and the spiritual universe, by means of which all who rightly apprehend it are enabled to become interpreters of a loving God and the healing Christ to their fellow men. Thus the earnest student may individually apply the teachings of Christ Jesus to human problems, and realizing the allness of God, come logically to discern the perfection of man as God's likeness.

All about us are many who have lost their way in the wilderness of error. It is our privilege so to interpret God's voice to them that they may be led out of darkness into light. Near at hand are many in distress, in suffering, and in sorrow. It is our prerogative so to explain the truth of being to them, that it becomes effectual and they are set free, healed. The world today is hungry for "the bread of life," and it is an abiding joy to become such an interpreter of the Bible that those who will, are fed with that bread of which it is written that, having once partaken, they "shall never hunger."

Practitioners, teachers, and readers are not the only exponents of Christian Science. One who is quietly, consistently living this vital religion, is a beacon-light to those that are in darkness; the truth he knows is a compass which guides the lost mariner over stormy seas to a haven of safety. He who has this scientific knowledge of God and is putting it into daily practice, is a faithful interpreter of God and His creation to all with whom he comes in contact. He is giving them of that which permanently feeds and sustains, administering healing balm to the wounded ones and the "water of life" to the thirsty. He is helping to make known to those lost in the wilderness of materialism, the ways of God which lead to life eternal. One great glory of this work is that it is inexhaustible, and that the more one gives the more he has to give. George Eliot writes that "the reward of one duty is the power to fulfil another," and so, relying on God's plans, and bravely walking in the path along which Truth leads us, we can give grateful thanks for every opportunity to serve "in our great Master's name."

That material man should not readily grasp the full import of the teachings included in the text-book of Christian Science and the other writings of its author, witnesses not against them, but in their favor. The gospel of Mark, in its concluding chapter, quotes Jesus as saying of his followers, that they were to "speak with new tongues." Material sense does not and cannot understand the new tongue of Spirit, for as the Bible says, spiritual things "are spiritually discerned." When one advances out of material sense into spiritual sense, he finds that Science and Health is indeed a "Key to the Scriptures," for it becomes such an interpreter of the Book of books that things which were once seen as "through a glass, darkly," are now beheld clearly under the full light of spiritual revelation. This book declares for the spiritual sense which understands God: "Its ideas are expressed only in 'new tongues;' and these are interpreted by the translation of the spiritual original into the language which human thought can comprehend" (p. 210).

We should be unceasingly grateful to divine Love for His chosen avenue of revelation to this age; that Mrs. Eddy has not only interpreted God aright, but has surrounded us with ample and adequate helps, so that we too may become interpreters. What a privilege to possess her writings, together with our periodicals, and to be able to attend the services of our church! All these are God's gifts to aid us in being true ministers of His healing word to our fellow men. As we make use of these divinely appointed agencies of good and are loyal to the Master's spiritual teachings, we may have the supreme joy of being true interpreters of the word to wanderers who are eagerly waiting to be guided to the "house not made with hands, eternal in the heavens."

The Demands of Truth

FRANK H. SPRAGUE

BECAUSE he was able to show by his works that he understood God better than did other men, Christ Jesus became the way of salvation for all mankind. As the truths of spiritual being unfolded to his consciousness, he found the lines of his endeavor converging toward one supreme end,—the overcoming of the world, the refutation of the claim that material modes belong to the divine order. Not only did he succeed in thus overcoming the world of material beliefs for himself, but he implanted in human consciousness the germ of truth which, as the great Teacher so clearly indicated in the parable

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

of the leaven, was destined eventually to do away with the illusion of error in its entirety.

In demonstrating the power and presence of the spiritual idea the Master's course ran in the main counter to that of friends, surroundings, and merely human inclinations. "In the world ye shall have tribulation," he said to the disciples as his earthly career was drawing to a close; "but," he added exultantly, "be of good cheer; I have overcome the world." Although Jesus has commonly been regarded as "a man of sorrows," that estimate does not accord with his own testimony; for even in the face of impending crucifixion, he prayed that his joy might remain with his followers.

Unlike the type of asceticism which seeks to subdue the desires of the flesh while believing in their reality, spiritual demonstration takes away the material sense of pleasure by proving that true satisfaction is found in the reflection of Spirit alone; it discriminates between the ephemeral gratification of a deceptive sense, which ultimates in discord and dissatisfaction, and the abiding consciousness of heavenly harmony from which there can be no reaction. The experience of the Wayshower proved disenthralment from material appetites and enchantments to be a blessing, and not in any true sense a deprivation. He declared that "it is the spirit that quickeneth; the flesh profiteth nothing." The spiritual law which antidotes fear, hate, greed, and like propensities of mortal mind, is equally efficacious in bringing all fleshly desires into subjection. "Love not the world," was the admonition of the beloved disciple, "neither the things that are in the world. . . . For all that is in the world, the lust of the flesh, and the lust of the eyes, and the pride of life, is not of the Father, but is of the world. And the world passeth away, and the lust thereof: but he that doeth the will of God abideth forever."

Certain it is that the lowly Nazarene lightly esteemed the things of "the world," although he might readily have achieved popularity and surrounded himself with the symbols of luxury and ease. Instead, however, he waived all such considerations with the declaration, "My kingdom is not of this world." His supreme motive was to do the Father's will, to prove the allness of Spirit and the spiritual reflection; and he could achieve that result only by facing the aggressions of error in a way that led to Gethsemane and Calvary.

To be sure, he might have avoided the issue and lived comparatively unmolested to teach the doctrines of spiritual being; but such a course would have defeated the very end he had in view, for it would not have eventuated, as did his final demonstrations over the flesh, in proving matter to be but a phase of mortal mind. Because every phase of error must be met and mastered, Gethsemane and Calvary stand as waymarks in the experience of all who accept without shrinking the obligations which Truth imposes, for they typify the struggle of personal sense when forced to yield to the harmony of spiritual being.

Although fraught with gloom and defeat from the standpoint of mortal sense, these experiences really stand for emergence into a fuller consciousness of the heavenly harmony which characterizes spiritual man. In such crucial tests the flesh which "profiteth nothing" is left behind, together with the sense of suffering which attends the belief of carnal existence. The mortal anguish results from the laceration of thought which clings to material hopes. Tribulation, the chastisement of material sense, is not to be escaped by dying, but rather by parting with a standpoint which does not accord with the reflection of Spirit.

Jesus taught his students to account it even a blessing when they were persecuted and maligned in the service of Truth, for he knew that the possibilities of spiritual demonstration are often best brought out when the demands of materiality seem most real and aggressive. "Truth," says Mrs. Eddy, "will at length compel us all to exchange the pleasures and pains of sense for the joys of Soul." "If we desire holiness above all else, we shall sacrifice everything for it" (Science and Health, pp. 390, 11). Because being is spiritual and not material, Christian Science, "the Spirit of truth," brings to every belief of the flesh not "peace, but a sword." When the material yields entirely, suffering ceases. This surcease is, however, of a wholly different order from the belief of ease which follows acquiescence in the ways of material sense.

The prophetic words of the Wayshower, "greater works than these shall he do," have echoed down the centuries, waiting a response from the Christian world. What greater works are possible short of the complete fulfilment of his mission, the final extinction of the claims of error? Meanwhile, even though using Cæsar's coin where it seems necessary to make temporary concessions to materiality, we need not estimate the coin according to Cæsar's standard by catering to material desires and ambitions. Through the healing ministry of Christian Science, mortals are waking one by one to a sense of spiritual harmony. The uplift which in so many cases attends the first glimpse of spiritual reality is, however, but a foretaste of more substantial joys, to be won through self-denial, consecration, and singleness of purpose in laying off the beliefs of fleshly existence.

To settle down into a routine in which the blessings of Christian Science are sought as an aid to personal enjoyment and self-satisfaction, is to stop at the threshold of Christian demonstration. "Woe to them that are at ease in Zion," exclaimed the prophet; and Paul cautions the Galatians to "use not liberty for an occasion to the flesh."

Of the "little book" which the angel in the Apocalypse is represented as holding in his hand, Mrs. Eddy says, "It will be indeed sweet at its first taste, when it heals you; but murmur not over Truth, if you find its digestion bitter . . . do not be surprised nor discontented because you must share the hemlock cup and eat the bitter herbs" (Science and Health, p. 559). Christian Science offers a full salvation, in that it delivers human consciousness from the belief of pleasure as well as pain in sense-existence, and proves that the real man is nothing more nor less than the reflection of Spirit, perfect, harmonious, immortal.

Independent Work

KATHLENE C. BURNETT

PAUL'S admonition, "Work out your own salvation," is the motto by which earnest seekers after Truth find themselves ascending the ladder of spiritual progress. But does this mean that one must grapple alone with each problem, never calling for a helping hand from those who have climbed higher? We know that this is not so, for there are hundreds of Christian Scientists who are devoting their lives to the healing of the sick, the sinning, and the sorrowful, all lending a helping hand to those who have not climbed so high on the ladder of understanding. Then, if we are privileged to seek help, how are we to know when is the time to ask?

The relation of a beginner in Christian Science to a practitioner is in some instances like that of the child to its mother. In its early days the child instinctively depends upon that mother for safe-keeping, but a wise mother wishes her child to become strong and self-dependent, so she early encourages its attempts at self-service and self-entertainment. She watches over her child's development patiently,

Digitized by Google

assisting at first, later encouraging only. Her work is inspired with love, and is first that of example only, and later of instruction. Like the mother, the mature students of Christian Science must patiently await the awakening understanding of those who are children in Christian Science, before urging upon them the "letter of instruction." Then, like all other children, if truly interested or ready, these beginners will be eager to know the "whys" and "hows" by which those more advanced have accomplished their work, and will listen with that concentration which grasps and makes knowledge its own. Having once made the fundamental teachings of Christian Science their own, these students will begin to work out demonstrations for themselves and will climb upward along the line of spiritual progress.

Then comes the question in how far the ascent should be made alone and in how far it is wise to seek or give help. Where a problem is faced and met fearlessly, with constant watchfulness, prayer, and work, even if the student feels that his understanding is slight, he will usually find it adequate for his need; for as we work on in Christian Science, we learn that we are not required to meet that for which we have not sufficient strength. And then, each problem met is a step forward, from which the watchful worker will not slip back. But there may be times when the problem seems too great to be solved alone, the step too great to be taken without assistance; then hesitation breeds fear, and faith and understanding seem inadequate. It is then that the beginner should call for help and help should be given. A false sense of pride and ambition, or a sense of shame that one has stumbled where another has climbed successfully, should never keep one from asking for help when it is needed. If help is sought when the fear first becomes aggressive, a renewed courage is given by the assistance, and the experience resolves itself into a desire for greater reliance upon Principle at every step of the way.

The climber who reaches out for help at every step, will not find himself gaining strength as he ascends, but will find himself growing so dependent on others that he must wait for them to climb ahead of him, in order that they may give him the assistance without which he can make no advance. Thus he will find his progress slow and uncertain, with the ever-constant fear of falling if the helping hand should be withdrawn. He who would climb swiftly, surely, and well, must take his steps alone with God as far as possible, and with each ascent he will find himself stronger and more courageous for the next. Where help is needed, he will ask for it, accepting it only until he again feels strong enough to go on alone. And for each step taken and each help held out, will come a sense of gratitude.

With this arises the question, What is gratitude? Is it merely an emotion of thanksgiving, expending itself without practical fruition? Rather, it is a demonstration or proof, through renewed effort, of what the "gift," or help, has meant in one's progress. When a boy receives an education from his parents, he cannot give back in coin or time what has been done for him; the only practical gratitude is in making the most of his advantages, and proving by his fruits the benefit that education has been. Parents expect this sort of return for their love and care, as God expects it of His children. Gratitude in this sense goes hand in hand with that humility which is a foundation-stone of progress and which makes one remember: "Abide in me, and I in you. As the branch cannot bear fruit of itself, except it abide in the vine; no more can ye, except ye abide in me." As the child is grateful to his parents for their guidance, and the beginner in Christian Science is grateful to those who have held out helping hands, so the mature student, who has in some degree outgrown the need of human help and learned to lean alone "on the sustaining infinite" (Science and Health, Pref., p. vii), comes to that larger gratitude to God, the guiding Principle behind all human effort, the Father of all. It is only the independent worker who grows to this larger sense of gratitude, with its clearer understanding and greater demonstrations.

Infinity

GEORGE G. JOHNSON

THERE are many words which have practically the same significance as has the word infinite, such as boundless, endless, unlimited, eternal, perpetual, inexhaustible. As Christian Scientists we have the right and should apply each and all of these to the words love, truth, supply, healing, and we will then more easily comprehend what God is to His children, and also the relationship which we as His children bear toward Him. Boundless love, endless love, unlimited love, eternal love, emphasizes that sense of Love which casts out all fear, all doubt, all discouragement.

While on a sea voyage lasting thirty-seven days, I seemed to comprehend more clearly the term infinite as applied to divine Love, mercy, and healing, than I had ever done before. Constantly running through my consciousness were the lines found on page 236 of our Christian Science Hymnal,—

> There's a wideness in God's mercy,
> Like the wideness of the sea.

To the material thought the "wideness of the sea" was very easy to comprehend, as for many days at a time there was no evidence of the world's commerce. The poet says, "No sail from day to day," and from this line I was made to realize anew and more deeply the "wideness in God's mercy," to understand more clearly and more helpfully what infinity implies and what a Christian Scientist has in store for him. To know that because divine Love is infinite, our supply is infinite, beyond measure, beyond limit, and all for our pleasure and help, now and always, is strengthening and inspiring. The sea, the sky, the mountains, all vast and impressive things, may serve to give us a spiritual uplift, an enlarged sense of at-one-ment with God, each day and hour, thus ministering to that growing perception of the greatness, the beauty, and the majesty of God, which in its fulness means life eternal.

Offending God

JESSIE BALFOUR ELLIS

ON page 425 of Science and Health Mrs. Eddy says: "Correct material belief by spiritual understanding, and Spirit will form you anew. You will never fear again except to offend God." To one whose early years have been darkened by the old concept of a terrible and jealous God, ready to visit with arbitrary punishment even the unwitting offenses of erring mortals, these words are not at first sight encouraging, since the exception seems to set a hopeless task. But here, as in so many other cases, we are helped by realizing how just and right Mrs. Eddy constantly was in her choice of words. The whole aspect of the passage is altered when we remember that the Latin verb *offendo* means to strike against. It now becomes easy to connect this sentence with that other on page 36 of Science and Health: "It is useless to suppose . . . that the hand of Love is satisfied with giving us only toil, sacrifice, cross-bearing, multiplied trials, and mockery of our motives in return for our efforts at well doing." It has a close relation also with those intensely

Digitized by Google

yearning utterances of the Master in which he strove to express the unfailing tenderness of the Father's heart as he knew it.

Divine Love never strikes against us, and the only way by which we can offend our Father is by leaving His house,—denying the consciousness that "in him we live, and move, and have our being," and going away into the far country of false beliefs and seeking to satisfy false desires. Their falsity once realized, and the impulse to return acted upon, the offense no longer exists; we are no longer striking against the Love which is "the same yesterday, and today, and forever," and which has never ceased to keep in readiness for us the best robe and the ring. To come once more into this consciousness is to begin to realize in humble and grateful amazement what it means to be "heirs of God, and joint-heirs with Christ," to an inheritance which is our inalienable right, because we are the children of infinite Love.

Correlation

ROBERT I. SAWYER

The following statement, familiar to all Christian Scientists, is read from *The Christian Science Quarterly* at each Sunday service as an introduction to the Lesson-Sermon: "The Bible and the Christian Science text book are our only preachers" (p. 4). A perfectly legitimate question often arises in the thought of the beginner in the study of the Lesson Sermons, with reference to the use of passages from the Bible and their correlative passages from the Christian Science text book. To the one who may approach this subject from the standpoint of one of the older churches, wherein the Bible has been strongly emphasized as a sacred book, the question is apt to present itself, "Why this new book? Is not everything in it contained in the Bible? Why may I not receive the same benefit through a study of the Bible alone?" On the other hand, a Jewish friend said to the writer, "The thought keeps coming to me, Why the Bible? Of course I know it to be a very old and wonderful book, but what do I know about it, and why the two books?"

The real value of any given authority, whether sacred or secular, lies in the measure of the perspective it brings to bear upon the subject of which it treats. No search for progress toward an objective point, either physical or metaphysical, can be advanced without a right perspective, and this point is attained only through correlation. An illustration of this fact may be found in the work of the surveyor, who in establishing a grade uses two instruments, one to establish the base upon which the work is to be carried on, the other to determine the elevation. The first, which is level and horizontal, is a counterpart in the Bible as a book of spiritual experience and law, corresponding to the human sense of the problem; while the Christian Science text book plays the part of the level, upon which as a focus point the whole work of Truth's revelation to the world depends.

The [illegible] the Bible, as it [illegible] as [illegible] and accepted as a [illegible] Science [illegible] the [illegible] it must be studied [illegible] and [illegible] the [illegible] Love [illegible] and [illegible] the promised land [illegible] [illegible] [illegible]

Selected Articles

[Frederick Dixon in *Wellington Journal*, Wellington Salop, England]

In a recent issue of your paper there is printed a brief report of a hospital Sunday sermon. In the course of this discourse the clergyman said that without going to the excess of Eddyism, there were doubtless spiritual remedies at their disposal. Permit me to say that the use of the term "Eddyism" to denote Christian Science is discourteous; in a way it answers itself, since Lutheranism, Calvinism, and Wesleyanism are still used to indicate great forms of the Protestant religion which have exerted a mighty influence on the world. At the same time, when an enormous number of people, whose churches have been established in every civilized country, adopt the name of Christian Scientists, it would be at least polite of a minister to refer to them by their own name.

The gentleman went on to say that prayer and faith without medicine were as senseless as medicine without prayer, and the two elements should work together. In other words, he laid down the doctrine that it was impossible to heal the sick without medicine, which is going a good deal farther than the great mass of the medical profession itself. One of the greatest medical men in the country, Sir Almroth Wright, has declared that "no drug has been discovered, so far as we know, which is capable of killing the microbe in the interior of the body." It would seem, therefore, that a patient with a microbe in his interior is in a parlous condition, since prayer and faith are useless without medicine, and medicine is in this case useless.

Then there is the awkward statement which was made by Richard Winfrey, who, in addressing the Public Pharmacists and Dispensers Association the other day, explained how he discovered a doctor's coachman, who had been allowed to dispense prescriptions, using the formula of spirits of chloroform for chloroform water. Mr. Winfrey declared that he did not know what would have happened when they got to the bottom of the bottle, if the mistake had not been discovered. To the ordinary man such dispensing would indeed seem rather a hindrance to prayer and faith than anything else. If medicine is senseless without prayer, it can only be said that an enormous number of the sick people in the world are treated senselessly, since it is certain that though they have doctors, they do not have prayers. These things, however, are in a measure by the way; the question is, from a Christian standpoint, whether drugs are a necessity or not.

Now it is perfectly certain that if the teaching of the Bible is true, there is no necessity for drugs. Jesus never used drugs for patients, nor did he indicate that prayer without them would be senseless. As a matter of fact, medicine has changed in an extraordinary way from year to year. In the early centuries of the Christian era the blood of red sea-scorpions was the specific for blindness. It would be interesting to know whether the critic really believes that the prayers of the early church without the blood of red sea-scorpions constituted a senseless practice. At any rate, it is perfectly certain that during those early centuries, up to the time of Constantine, the primitive church claimed to heal the sick without drugs. It is only necessary to read the Fathers to become conscious of that fact. Later, the court physician of Edward II relied on the heads and wings of crickets boiled in oil with beetles as a remedy for stone. One wonders again if the clergyman really believes that prayer without beetles and crickets would have been a senseless proceeding.

About the time of Sir Thomas Browne, doctors were indulging in powders of mummies. Would the critic maintain that it was necessary to add mummy powder to prayer in order to heal the sick? If not, at what precise year in the Christian calendar does he believe that prayer without medicine became senseless, and does he think that it was sensible to pray, say, up to the nineteenth century, and not use medicine, and that after the nineteenth century it only became sensible to pray if medicine was used? It was well for Paul that when he was bitten by the viper he did not find it necessary to send for the usual remedy, which consisted of viper's flesh boiled in a shallow pan and seasoned with dill.

Jesus declared that poison would be incapable of hurting those who believed his teaching. He also declared that those who believed in him would be able to do the miracles which he had done. There is nothing supernatural about a miracle, if we are going to accept the meaning of the Greek text of the New Testament; but what is equally certain is that in those words Jesus made the power, in some measure, to perform his works the test of a man's Christianity. In writing "Science and Health with Key to the Scriptures," the textbook of the Christian Science movement, Mrs. Eddy accepted the plain requirements of the New Testament, and declared that a man's right to be termed a Christian was proportionate to his ability to preach the gospel and heal the sick in the way which was demanded by the Founder of the Christian religion himself.

["Fair Play" in *Dallas* (Ore.) *Observer*]

The Rev. Mr. —— states that to be a Christian Scientist is to be "an unthinking nonentity." I am not a Christian Scientist, and know very little about this teaching; but I know much more now than I did, for the critic's remarks were such as would incline one to investigate. I have taken occasion to secure Science and Health and have read it to quite an extent, and my investigation has fully demonstrated to me that Christian Science reaches the very apex of Christianity. From my investigation I find that to be a Christian Scientist, every reliance must be placed upon the infinite power of our creator. The adherents of Christian Science are taught to follow the teachings of the Bible; they are taught to imitate, as nearly as it is possible for men to imitate, the life of Christ. They are taught to be Christians in accordance with the Bible, and are not taught that affiliation with a church, and a strict adherence to church rules and regulations made by man and subject to change at man's will, is essential to salvation. This is the impression I gained from a brief investigation.

I find that Mrs. Eddy uses the following words with reference to marriage as opposed to free love: "Marriage is the legal and moral provision for generation among human kind. . . . Marriage will continue, subject to such moral regulations as will secure increasing virtue. Infidelity to the marriage covenant is the social scourge of all races . . . The commandment, 'Thou shalt not commit adultery,' is no less imperative than the one, 'Thou shalt not kill' " (Science and Health, p. 56).

As for the grammar used by Mrs. Eddy, it seems to me that even if the reverend gentleman does qualify as a critic, and proves the grammar to be defective, I doubt very much if such proof will prove the death knell of this cause. The Bible does not teach that heavenly rewards will be meted out according as the applicant is possessed of a knowledge of grammar.

As far as a Christian Scientist being an unthinking nonentity is concerned, it is a well-known fact (and one which our critic knows) that many of the brightest men in public life today are Christian Scientists. Some of our United States senators, so it is said, are unthinking enough to seek salvation through the method taught by Mrs. Eddy. It is probable, however, that a Christian Scientist would pay little heed to such remarks in the way of resentment, but on the contrary would sympathize with him who gives them

Digitized by Google

utterance, on account of the total lack of the Christian spirit displayed. It is a well-known fact that Christian Scientists do not spend their time in denouncing the belief of others; they are fully occupied with elevating themselves, and as many others as possible.

To be a Christian Scientist, according to our critic, is to be on the direct road to the pit. If this be true, there will certainly be thousands of Christian people there when the time for reckoning arrives. The general tendency of modern times among churches is to work together for the elevation of mankind and to oppose the denunciation of other churches and beliefs. In olden times, denunciation of other beliefs was in style. I am sorry to learn that the reverend gentleman is not in sympathy with this spirit of progress; that he has reverted to a condition which existed once, but which has well-nigh been forgotten. He has gone back to the age when the great controversy was one Christian belief against another. If we are to revert to that condition of affairs, there will certainly be lots of people upon the wrong track. As a matter of fact, all persons endeavoring to live a Christian life will be bound for the unknown depths, for it will be difficult to ascertain which church is right. If such a condition is to exist, what will a poor sinner, desiring to become a Christian, with hopes of future reward in heaven, do? What church will he become connected with? If he joins one, he will be wrong according to another, and so on. Surely this cannot be the aim of true Christianity! Surely the church is not above Christ!

As stated before, I am not a Christian Scientist; as a matter of fact, I do not consider myself good enough to be a Christian; but I do love fair play. I believe in justice. I believe in doing unto others as I would that others should do unto me. I do not believe that one should bear false witness against another. I love the world of meaning contained in these few words from Christ's Sermon on the Mount, "Judge not, that ye be not judged." I believe in living, and letting my neighbor live.

I have always thought that churches were instituted for the purpose of elevating mankind, and through organization to carry on their work more effectively; and I know that most churches do carry out to the best of their ability the purposes of their existence. It should not be within the province of any church or minister of the gospel to denounce the teachings and beliefs of any other church made up of those who are endeavoring to lead a Christian life as they see it.

✧

[From *The Santa Ana* (Cal.) *Bulletin*]

It is remarkable how Christian Science is growing all over the country; in fact, its growth has been phenomenal. Instead of dying out as quickly as it sprang up, it has continued to grow. We may not all be believers in this faith, yet we must take off our hats to those who do believe that way, for no one can deny that they are made up of the best and most intelligent people of our land. That is a fact; and this condition exists wherever Christian Science is taught, Santa Ana being no exception to this rule.

✧

[W. C. Williams in *Baltimore* (Md.) *American*]

My critic advises that "a good stiff reading of an old-styled, old-school theologian would help my understanding." I imagine it would help me about as much as a good stiff studying of the methods of the good old doctors whose bloodletting was the *summum bonum* of healing. This critic claims that theologians and shrewd dialecticians have decided that "there is no possible theory which will free God from the full responsibility for at least the permissive existence of evil, sin, and pain, but dualism. And, unfortunately, dualism is logically contradictory to the essential truth of Christianity." No doubt we all agree on the proposition in the last sentence, omitting the word "unfortunately," but to contend that an "all-wise, all-powerful, all-merciful Deity" is responsible for both good and evil would appear to the "ordinary" thinker to be absolute dualism. Our friend admits that pain is mental, or psychical. Then from that standpoint it would depend on the attitude of the mind whether pain was or was not manifested in the body. But take man as the image of God, seeking first the kingdom of heaven and reflecting the "mind of the Lord," with no thought of evil, disease, or pain, and pain would not be expressed, for it would be banished from consciousness.

Christian Science is, contrary to the claims of our ministerial friend, scientific and rational, as the above truth is being daily demonstrated by Christian Scientists all over the world, and their works are ample proof of the faith that is in them. As the Bible states, "By their fruits ye shall know them." This minister also acknowledges that healing the sick is in the divine commission and was observed by the church for many years (in reality for nearly three centuries), but he says it was given up for something better (?), thus ignoring the divine commission. But the early Christians healed with the spirit, and not the letter as our friend claims, and this healing was only abandoned when human opinion took its place and destroyed its value. But why a divine commission, or physicians or hospitals, the latter two assisted in every way by the churches, if the "real problem of human life" is "the atoning mission of pain and suffering"? How can this critic consistently allow his parishioners, and perhaps himself, to call in a physician when suffering pain from whatever cause, if he believes that it is in opposition to the intention of the Father, who, he claims, has ordained suffering as a necessary concomitant of righteousness?

Your correspondent really allows, though, that this intention of God is imperfect; as he says, it is a truism that in a perfect world there would be no pain. Jesus is quoted as saying, "Be ye therefore perfect, even as your Father which is in heaven is perfect;" also, that "heaven is at hand." Why not strive, therefore, for the perfect world by knowing and teaching that righteous thoughts together with righteous living will overcome the thoughts of pain, disease, and their expression, and prove in a direct way that dualism is not the law of God, but that His creation is, as He pronounced it, good? Christian Scientists are working for the accomplishment of this perfect world, and they are gradually demonstrating it.

✧

[Charles D. Reynolds in *The Mirror and American*, Manchester, N. H.]

I have been a long-time reader of your One-minute Sermons, and have admired the idealism that so pervades them. It is this element, no doubt, that leads you to weave into your discourses occasional references to Christian Science, and I have not found it objectionable, the kindly purpose being always evident. Your reference, however, in Wednesday's edition is so incomplete that I am sure it misrepresents Christian Science and misleads the reader. With your statement that it is making people optimistic, I take no exception; but the reason for this success, implied by your comments, places this religion in a wrong light, and I would like the privilege of adding what is missing.

If we associate optimism with Christian Science, it should be made clear that this optimism is merely the fruit of a fixed and universal law perceived and obeyed by the Christian Scientist; otherwise the inference may obtain that this result of cheerfulness of mind has been cultivated by Christian Sci-

Digitized by Google

entists through the exercise of mere human will. By the Christian Science teaching the human will is subjected to an understood law. Cheerfulness is simply the result of the working of that law, and gloomy pessimism cannot live in its presence, but ceases as an unreality, as darkness disappears when light approaches.

When one is afflicted by some evil, it is a source of encouragement to him to know that there exists a law which, if obeyed, will result in changing the whole situation. To rely upon known and proven laws is the very reverse of working by the changing opinions and surmises and fancies of the human will. Law is victor over random efforts working by will-power. Of course those who are habitually cheerful become so in obedience to an existing law. Although they do not know, perhaps, what that law is, they practise it unconsciously. When one has a gloomy disposition to overcome, however, he should know that he needs a greater power than his own unaided will.

To be fair, every public reference to Christian Science should recognize this, or an erroneous impression of what it stands for will be inevitable. By observing this distinction, clearness will result, and the wide difference that exists between the practice of hypnotism and Christianity will also be made more definite. Divine law and a changing personal will never contribute anything to each other, and this separation of the tares from the wheat is just the accomplishment which intelligent people are today demanding,—that the practice of religion shall not be at random, but shall proceed by laws that are known and understood by their fruits.

✧

[Paul Stark Seeley in *Oregon City* (Ore.) *Courier*]

If the Rev. Mr. —— really believes Christian Science to be as noxious as his letter in a recent issue would indicate, and is at the same time informed with what eagerness and gratitude its teachings are being accepted by rapidly increasing numbers of his fellow men in the four corners of the earth, he is deserving of commiseration for the mental anguish which he must endure. Perchance these people do not all possess the critic's oracular sagacity in matters religious, a loss which, it might be inferred, his article is perhaps intended to supply. In this his latest and somewhat wordy fusillade against Christian Science, your contributor so far forgets the decorum of his calling as to slur, by truthless innuendo, a woman whose purity and Christianly devotion to the cause of human betterment has been marked by lasting tributes of highest regard from many able pens.

When in 1910 Mrs. Eddy passed away from earthly associations, an encomium of highest regard for her life, her character, and her lasting achievements went up from the English-speaking press throughout the entire world. In her home city, among those who knew her best, the city council referred to her as "an honored and a devoted friend, . . . whose motto was 'to injure no man, but to bless all mankind.'" If the reverend critic cannot agree with the religion founded by Mrs. Eddy, he would, we venture to say, win more respect for his own highroad to salvation were he to refrain from assailing the honest beliefs of his fellows and curb his inclination to belittle the high motives and goodness of a woman whose life-work he cannot yet understand, but which has nevertheless brought healing and happiness to multitudes, and that, too, while modern science has been prattling with its intellectual dogmas and theorizing as to how it could divide the atom into electrons and the electrons into something else.

In a tone of caustic glee the critic tells of a child who had Christian Science treatment and died. If he would be fair, let him take a peep behind the curtain of his prejudice. Let him consult the health office records of city or state, and he will learn, if perhaps the fact has escaped his attention, that people are dying by thousands who have sought health through the ministrations of orthodox medical practice. Indeed, so many have died under that treatment that the custom is now well established, and few have thought it strange, even while Christendom has been saying with its lips that God is Love. Had *materia medica* been meeting the need of mankind for life and health, Christian Science never would have gained its present place as a world-wide movement, for its appeal has not been in its words, but in its works. As God becomes better understood, and man's scientific unity with Him becomes worked out in life practice (see Science and Health, p. 202), Christian Scientists know that every failure due to mortal ignorance will disappear, and mankind will be able to demonstrate the absolute truth that God is omnipresent and supreme. That the absolutely infallible demonstration of Christian Science has been attained in this age, no Christian Scientist will contend; that Christian Science is healing where material systems have failed, and that its failures are less frequent, is beyond cavil.

After proving her discovery to be true, Mrs. Eddy proclaimed to the world in 1875, through the text-book of Christian Science, "Science and Health with Key to the Scriptures" (p. 468), the momentous fact that "there is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all." With ever-increasing volume this great truth has been taken up by thousands who have drunk deep of the woes of material beliefs and have turned in their hopelessness to the spiritual truths of Christian Science for surcease from sickness, sin, and woe. The tyranny of matter's claims over individual life and destiny is fast crumbling before the practical application of God's laws, as taught by Christian Science, to every human need. Humanity's mistaken belief in matter as the cause and concomitant of life is being proved to be counterfeit and untrue. God as Spirit, Love, and Truth is becoming understood, and man created by Him and like Him is being discerned in lives regenerated, sin destroyed, and disease healed. Christian Scientists make no claim that man will overcome in a day or a decade all the claims of mortal selfhood,—the child learning its first melody is not expected at once to master the grander symphony,—but for the good already received, Christian Scientists are most grateful. They rejoice that the way to greater happiness, better health, and more harmonious living, has been made plain, and that all who will may come and drink of the water of life freely.

[Written for the *Sentinel*]

Resurrection

ELIZABETH EARL JONES

WHY look we to another world
For heaven's glory to appear,
When now on every side unfurled,
Are tokens telling God is here?

The maple's budding feathery red;
Through blackened twigs the warm sap flows;
Spring's birth proclaims, There are no dead,
And through the world a new hope glows.

Thus quickens us the Life divine,
And lifts our thoughts above the sod,
To see in all Love's power sublime,
And every bush aflame with God.

Editorial

The Duty of Today

In these days of the manifest prosperity of Christian Science, it is well to ponder the words spoken by our wise Leader a number of years ago and republished on page 176 of "Miscellaneous Writings." Mrs. Eddy's endeavor at this time was to turn the thought of her students away from the commonplaces of life to the consecration of every-day living; from the satisfied sense of what had been done, to the more exalted sense of what might be done through the demonstration of Christian Science. She would awaken them to that high concept of responsibility which makes every man, in the right sense, his brother's keeper, and to their obligation to do whatever is possible to bless all mankind. She wished Christian Scientists to understand that they have a duty to perform, not vicariously and collectively, but individually; not perfunctorily, but actively and aggressively. She knew that by demonstrating Christian Science, and only by this demonstration, were the wrong conditions, which are "enmity against God," to be overcome and destroyed. Those were momentous questions in few words which she put to her followers:—

"But what of ourselves, and our times and obligations? Are we duly aware of our own great opportunities and responsibilities? Are we prepared to meet and improve them, to act up to the acme of divine energy wherewith we are armored?"

In teaching the system which she rightfully named Christian Science, Mrs. Eddy early learned that it was not by simply repeating "All is good," that the world was to be reformed and mankind regenerated. She recognized that those who would help their fellows must be "willing to point out the evil in human thought, and expose evil's hidden mental ways of accomplishing iniquity" (Science and Health, p. 571). There needed to be the scientific demonstration of the omnipotence and ever-presence of God, which lays bare "the great delusion of mortal mind, when it makes them [mortals] sick or sinful" (Science and Health, p. 570).

It is because men and women of high purpose and consecrated lives are giving their best to the cause of humanity in this way, that the Christian Science movement is, in some measure at least, making the progress which our great Leader foresaw even in the early days of contumely and isolation, when she trod the winepress alone with God. In those days she recognized, as her followers must and do recognize now, that "millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink" (Science and Health, p. 570). To meet this need, offer them the "cup of cold water" in Christ's name which it has been our privilege to receive,—this and none other is the high calling to which as Christian Scientists we stand today individually pledged.

In times of coming together in a large way, as Christian Scientists have done in the past, there is always a possibility that the quiet of the sanctuary of consecrated thought, and the blessing of the unseen deed of healing and loving-kindness, may be neglected for the more showy demonstration of numbers. May we not wisely realize that this is one of the dangers which Mrs. Eddy foresaw in the numbering of the people and in the large annual gatherings in Boston which she sought to do away with by Section 1 of Article XIII of the church by-laws (Manual, p. 56)? This view is confirmed by the statements which she caused to be published in 1908, and which appear on pages 140 to 142 of her book, "The First Church of Christ, Scientist, and Miscellany." Pondering these, we cannot fail to see the wisdom of her course in seeking to replace these concerted gatherings by the occasional visits of "distant members" which bring joy and refreshment to both visitor and visited.

ARCHIBALD MCLELLAN.

"This one thing"

The defeat of a good undertaking is always regrettable, not only because of the failure to realize an ideal in the specific instance, but especially because of the discouragement which it imposes upon the many who are striving to bring about better things. It is well for us to know that every noble, unselfish enterprise ought to succeed; more than this, we should know that it is possible and natural for it to succeed, because being right, in keeping with divine law, God is on its side. What with all the need and all this authorization and promise, the failure of a good cause to win becomes the more pitiful because it is usually traceable to the ignorance or stumbling zeal of those who are laboring heroically for it. Their narrowness of vision, their intemperance of statement, or their condemnatory urgency of address proves an offense to those whom they would benefit; and thus they put an end to their usefulness.

In ethical movements this human unwisdom most frequently takes the form of an overemphasis of a minor matter. A distorted sense of proportion, or the failure to perceive that a prevailing objectionable condition or habit is an effect and not a cause, crowds some secondary reform to the front and insists that one's salvation is to be determined, not by his character, but by the position he takes on this or that sequent and debatable issue. The fundamental or causative are thus made to give place, that a subsidiary question may monopolize the stage, and what amount to coercive mental measures are resorted to where only the illumination of Truth and the attraction of Love can ever be effective.

In no respect, perhaps, were the wisdom and strength of our Leader made more manifest than in her persistent refusal to consent to the identification of the Christian Science movement with side issues. With momentous persistence she ever stood with St. Paul and said, "This one thing I do." Unnumbered efforts were made to induce her to champion some incidental reform movement, to swerve from her course, but with eye fixed upon the pole-star she veered neither to the right nor to the left. She heartily sympathized with every worthy endeavor in the line of human betterment and contributed thoughtfully and heartily to their advance, but with keen, far-reaching vision she saw the danger of substituting devotion to issues for devotion to Principle.

Mrs. Eddy took the stand that every improved belief is to be encouraged as a present incidental means of human ascent, but that it is not to be allowed to distract our attention from that character building in Science, that establishment of right thought toward God and man, which will lead to the instant and instinctive assumption of the wise, helpful attitude and habit respecting every ethical question, whether social, political, judicial, civic, or economic. This undoubtedly explains the purpose and protective intent of her counsel as given in the Manual under "Church Organizations Ample" (p. 44). In this she was brave enough to be willing to be misunderstood by many, for a time, that she might conserve the permanent welfare of all concerned.

In all the years of the past, the higher spiritual interests of mankind have been depleted by the disposition of human sense to overemphasize the importance of subordinate mat-

Digitized by Google

ters, to become engrossed in the overscrupulous cleansing of "the outside of the cup and of the platter," and much of the failure of highly commendable philanthropies and efforts of reform is accounted for by the fact that they thus come to be thought of as being engineered by faddists. It is of supreme importance that we all learn to distinguish between the vital and the incidental, and to know that when the heart is made right toward God, when the substance of faith is gained and becomes dominant, the details of right living are fully provided for. The best way to bring about reform is to center attention upon cause rather than effect.

JOHN B. WILLIS.

"Live and let live"

THE familiar saying, "Live and let live," is usually thought of in relation to the business world, but like everything else it takes on a broader meaning when viewed in the light of Christian Science. Wherever applied, it may recall the admonition of St. Paul, "Look not every man on his own things, but every man also on the things of others." It is too often forgotten that the prosperity of one means the prosperity of all, and conversely, that the misfortune of one is shared in a measure by all. It is therefore of the utmost importance that we learn as soon as possible how to "live," that our living may tend toward universal harmony. Mrs. Eddy gives the true explanation of this fact of the underlying unity of all being when she says, "In the scientific relation of God to man, we find that whatever blesses one blesses all, as Jesus showed with the loaves and the fishes,—Spirit, not matter, being the source of supply" (Science and Health, p. 206). Until the concluding part of this statement is understood, we know neither how to live nor to let live.

So long as the belief is entertained that the supply for human need is material, hence limited, people do not live in any true sense. They are in constant fear that their health and strength will fail, be exhausted, or that those dear to them will suffer in the same way. Closely associated with this, is the fear of poverty; yet all the while the voice of Truth is saying, "I, even I, am he that comforteth you." Isaiah, who gives us this message, goes on to speak of the "captive exile," who hastens to be loosed "that he should not die in the pit, nor that his bread should fail." This expresses most graphically the state of thousands who are awakened in Christian Science and bidden to "stand up," to live, as all God's children should.

Inasmuch as Life is for all, we cannot too soon find out what Life means in Christian Science. As we proceed to do this, we learn that Life does not include sin or disease, nor even selfishness, which is limitation, and it is surely evident that it cannot include death. If death could exist in Life, then Life would be finite and would tend toward annihilation, as material sense would indicate. This, happily, is shown to be untrue as we begin to live in the understanding of God as our Life, and we have but to ponder the life of Christ Jesus to see what living meant to him. In the presence of the last enemy he needed but to declare the one infinite Life, and the so-called dead awoke from their sleep. In storm and tempest he proved Life's perpetual harmony, and he had nothing less than eternal life to offer his followers. "Because I live, ye shall live also," were his words.

And what of those who would deprive humanity of the God-bestowed privilege of living, by barring the way by which they would draw nigh to God through Christian Science? Physical science does not even claim to understand life, the late Professor Drummond frankly admitting that "the word Life still wanders through science without a definition." Where, then, can life be found? Christ Jesus did not hesitate to say, "I am come that they [his followers] might have life, and that they might have it more abundantly,"—not pills or potions, not surgery, but life itself, that men might "live and let live," not crush others or be themselves crushed under the dead weight of materialistic theories. To let live, we must heed the command, "Let this mind be in you, which was also in Christ Jesus." Unless we do this, we shall forever be harming ourselves or others through ignorance or malice; but all the time the law prevails that for every idle word spoken (and the word but expresses the thought), men shall be called to account in the day of judgment, and that day is every day.

It is well to remember that the words "let live" imply some mortal hindrance to the divine bestowal, and each day we should question ourselves as to what we are doing, whether we are helping others to find life, or hindering them. For those who partake of the fruit of the tree of life, "there shall be no more curse," for the sorcerers and all other evil-doers are shut out, but those who do God's will are bidden to "take the water of life freely."

ANNIE M. KNOTT.

Among the Churches

Current Notes

GREATER NEW YORK.—The past year has witnessed a marked growth in the reading-room work of Greater New York. Each of the eleven branch churches has a reading-room of its own, and in addition all unite in maintaining a reading-room in the Borough of Manhattan and one in the Borough of Brooklyn. It was found necessary to remove both of these rooms to larger and better quarters, where the seating capacity is almost doubled and the attendance and the sale of literature are proportionately increased. The Manhattan room now occupies the entire front of the eighth floor of Æolian Hall, overlooking the public library and Bryant park, a quiet location with an abundance of sunlight. The Brooklyn room is located on the ground floor at No. 216-A Livingston street, in the center of the shopping district. Since their opening, these new rooms have provided continuous opportunity for and proof of an increased activity in the healing work.—*Correspondence.*

GOSHEN, IND.—The Christian Scientists have purchased the residence at 111 North Fifth street, and will have the interior of the house remodeled at once for church purposes. The Christian Science church of Goshen has been contemplating the purchase of a home of their own for a number of years. For the past four years they have occupied rooms on the second floor of the Spohn Building. It is expected that the building will be ready for use within a few weeks. It is the intention of the church, however, to build a new structure on this location, perhaps within a few years.

Goshen News Times.

ALBANY, N. Y.—First Church of Christ, Scientist, has just opened its new reading-room, at 130 Arkay Building, corner of State and Pearl streets, and the old reading-room, which was in the church edifice at the corner of Quail street and Madison avenue, has been discontinued. The new location is in the center of the business and shopping district of the city and is easily accessible and convenient for all.

Correspondence.

Digitized by Google

MARSHALLTOWN, IOWA.—The Congregational church of this city recently dedicated a new building and invited all churches of the city to participate, among them being First Church of Christ, Scientist. This is the first time in the history of our church that an invitation to participate in services has been extended by any other denomination. We were thoroughly grateful.

The first meeting being a union meeting of all churches, represented by their ministers, we were represented by our first reader, who gave a short address. The second meeting was a banquet to the men of the various churches, and our representative, chosen from our church at large, responded in answer to a call by the toastmaster. At the third meeting, which was a union prayer-meeting, our church was represented by another chosen to speak for the church.

Correspondence.

MINNEAPOLIS, MINN.—The corner-stone of Fifth Church of Christ, Scientist, was laid May 9, at half past six in the morning. The service consisted of readings from the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, an article from "The First Church of Christ, Scientist, and Miscellany," and the "scientific statement of being" (Science and Health, p. 468). Only the officers of the church were present.—*Correspondence.*

✧ ✧ ✧

The Lectures

New York, N. Y.

Bicknell Young delivered two lectures on Christian Science in Second Church edifice. At the first one, the introductory remarks of Hugh H. Tweedy, first reader, were in part as follows:—

When Jesus, the Wayshower, who marked out the way for all to follow, was among men, he constantly and persistently explained that it was the doing of the works he did which made us his followers. In her book "Science and Health with Key to the Scriptures," the text-book of Christian Science, Mrs. Eddy says on page 147: "Late in the nineteenth century I demonstrated the divine rules of Christian Science. They were submitted to the broadest practical test, and everywhere, when honestly applied under circumstances where demonstration was humanly possible, this Science showed that Truth had lost none of its divine and healing efficacy, even though centuries had passed away since Jesus practised these rules on the hills of Judæa and in the valleys of Galilee." All through this wonderful book she constantly admonishes us to put into practice these "divine rules" of healing; that is, to prove our faith by our works, for nothing short of this will measure up to the standard of Christian Science.

At the second lecture the introductory remarks of Charles E. von Heitman were in part as follows:—

It is generally conceded that proof as to the value of any teaching rests largely, if not entirely, upon the results attained through its practical application in bettering the conditions of mankind. Jesus, the master teacher of all, emphasized this when he pointed to his works and asked to be believed "for the very works' sake," and when he cited the healing of sickness and sin as a proof of the divine source of his teaching. As in the time of Jesus, so it is today. Scientific Christianity is known by its fruit, and following the lead of the great Exemplar, students of Christian Science justly point to the healing of all manner of sickness and sin as sufficient evidence of its divine authority. There are thousands of dependable people throughout the world today who gratefully acknowledge the benefits which they have received through the study of Christian Science. Furthermore, among thinking people it is apparent that the inclination to criticize and condemn a religion which they do not understand, is fast giving place to a desire to have it clearly explained, and it is for this purpose that we have gathered here this afternoon.—*Correspondence.*

✧

Edinburgh, Scotland

The introductory remarks of Miss E. M. Ramsay at a lecture on Christian Science by Prof. Hermann S. Hering were in part as follows:—

We have invited you here tonight that you may have an opportunity to hear, from one who is well qualified to speak on this subject, of by far the most important discovery of this age, rich though it has been in valuable discoveries. It was eighteen years ago, in this same dim month of November, that the first rays of this wonderful new light fell upon my path. At that time there were very few people in these islands who knew anything of Christian Science, and there was not a single Christian Science organization outside the continent of North America. Now there are flourishing churches all over our islands and throughout the length and breadth of the English-speaking world,—in Australia, New Zealand, and South Africa, as well as in many places on the continent of Europe. When we ask how it is that the movement has attracted such vast numbers of people, rich and poor, learned and unlearned, people who were well-instructed members of many different churches as well as those to whom religion had previously made no appeal, the answer is, because it offers more and fulfils more than any other interpretation of the Scriptures.

When Christian Science first came into my life, I had been suffering from recurring attacks of anemia and weakness, which I had been told on the highest authority I should never outgrow. Now I enjoy health which I would describe as perfect, if I did not feel that it is constantly on the increase. This bodily change is the "outward and visible sign" of a great change of thought, wrought in me wholly by the study of Science and Health. My outlook on life is changed, and the world seems a much happier, brighter, and more interesting place than of old. We rejoice in knowing that this new-old truth, which has done so much for us, can do just as much for each one of you.—*Correspondence.*

✧

Montclair, N. J.

The Rev. William P. McKenzie, who delivered a lecture on Christian Science in the Montclair Theater, was introduced by Edward H. Holmes, who said:—

Jesus said, "Ye shall know the truth, and the truth shall make you free." This saying of our Master was disputed at the time by those who had eyes to see and ears to hear. Discovered less than fifty years ago, Christian Science came to a world of religious thought which had not yet outgrown the belief of original sin and was thoroughly in bondage to the conviction of the righteousness and necessity of sickness and death. It has proved itself, wherever honestly and intelligently applied, to be the same truth that the Master taught and practised. It is not an extravagant statement to say that through the application of Christian Science thousands have been made free from disease and bondage to sin, and many have been delivered from the very brink of the grave.

Digitized by Google

The attendance at Christian Science lectures the world over indicates that the proportion is diminishing of those who, having eyes, see not, and having ears, hear not, and your presence today shows your readiness to consider this truth, at least in so far as to listen to its exposition by one of its authorized spokesmen.—*Correspondence.*

Topeka, Kan.

In introducing Judge Clifford P. Smith, who delivered a lecture on Christian Science at the Orpheum Theater to a large and appreciative audience, Frank Jarrell, of the publicity department of the Atchison, Topeka & Santa Fé railroad, said in part:—

We are assembled this afternoon to hear an address about a system of religion which has gripped and held the attention of many people in many lands; a religion which makes for the redemption of humanity from itself,—for right thinking and right living,—for sunshine in the home, in the workshop, in the market-place, and in the house of worship, for universal peace and harmony; a religion which gives to suffering men and women who turn to it something that enables them to rise above their difficulties and count their blessings rather than their woes. I am not relating a personal experience: it is the story of those to whom this religion has been "a very present help in trouble," a story recorded on a hundred thousand pages of print, the voluntary testimony of grateful hearts.—*The Topeka State Journal.*

Salem, Mass.

The remarks of the Rev. Leon G. Miles in his introduction of Bliss Knapp, who lectured at the Empire Theater on Christian Science, were as follows:—

Even a casual study of history proves conclusively that the progress of the human race is not by any means constant and even, but it moves forward rather by waves and seasons of progress. This is a time of unrest in every realm of human thought; and those who have been students of religious thought have understood, and have asserted repeatedly, that for the last fifteen or twenty-five years we have been passing through a period of loosening such as has scarcely been known since the days of Martin Luther and John Knox. The churches are feeling the breaking away of blind loyalty to creed which was manifest, and men are asking for that which can satisfy the cravings of the heart. Christian Science has something to give men in answer to their call. You know there was one years ago who cried from the depths of his heart, "Oh that I knew where I might find him!" Christian Science is an answer to the cry of the heart which is seeking for the truth. Those who would know where to find God are being taught where to find Him,—right here, right now, and all about us everywhere.

But to my mind there is another question, which is perhaps even more important to a great many people today, and that is, How shall I know God? And when we come to the question of method, and when a method is offered to men, that is being offered which is the most practical today. Many have been saying to me the last weeks and months, It is all very well to want to know God, but I want to know how to know God. Christian Science answers the heart which is seeking the way to know God.

Time was when it was necessary to apologize for being a Christian Scientist. Today every known land, every civilized people, claims the knowledge in some measure—through the teachers, through those who have lived—of the Christ-teaching. That which was set forth in the matchless life and in the golden words of the great Teacher is apprehended as never before in every land and by increasing multitudes. By leaps and bounds the Christ-teaching is making itself felt and known, and is demonstrating its power to heal mankind of all their diseases, be they physical or mental.

I count it a great privilege to stand here tonight as a representative of the local Christian Science church. I say I count it a high honor, for I am not yet a member of that church. I count it an honor to stand here with one who has been practising while I have been preaching. I practised the best I knew how, but I am coming to see there is something far better, and that the preaching and practising need to go hand in hand,—one great whole, as we find it perfectly demonstrated in the ministry of our Saviour.

Correspondence.

New Rochelle, N. Y.

Virgil O. Strickler delivered a lecture on Christian Science in Loew's New Rochelle Theater. The speaker was introduced by Richard P. Verrall of New York city, who spoke in part as follows:—

To those in this large gathering who may have come here for the purpose of ascertaining what it is in Christian Science which is attracting the attention of such large numbers of intelligent people, I will say that Christian Science is a demonstrable religion. It combines theory with practice; it proves faith by works, and fulfils the twofold command of the Founder of Christianity, to preach the gospel and heal the sick.—*New Rochelle Paragraph.*

Lectures to be Delivered

Bexhill-on-Sea, Sussex, England.—Col. William E. Fell, Skating Rink, Buckhurst road, 8 p.m., June 29.

Brisbane, Queensland, Australia.—Prof. Hermann S. Hering, Albert Hall, Aug. 4.

Chico, Cal.—Bicknell Young, Majestic Theater, 8 p.m., June 26.

Colorado Springs, Col.—Virgil O. Strickler, Burns Theater, 8:30 p.m., June 21.

Denver, Col. (First Church).—Virgil O. Strickler, Church Edifice, 3 p.m., June 21, and 8 p.m., June 22.

Eldon, Iowa.—Virgil O. Strickler, I. O. O. F. Hall, 8 p.m., June 25.

Hoopeston, Ill.—Rev. William P. McKenzie, Church Edifice, corner Third and Washington streets, 8 p.m., June 15.

Los Angeles, Cal. (Second Church).—Bicknell Young, Church Edifice, 948 West Adams street, 8 p.m., June 20; Shrine Auditorium, 655 West Jefferson street, 3 p.m., June 21.

Oil City, Pa.—Rev. William P. McKenzie, Carnegie Hall, Central avenue, South Oil City, 8 p.m., June 25.

Pasadena, Cal.—Bicknell Young, Church Edifice, Oakland avenue, near Colorado, 8 p.m., June 22.

Richmond, Ky.—Rev. William P. McKenzie, Court-house, 8 p.m., June 23.

Roswell, N. Mex.—Francis J. Fluno, M.D., Masonic Temple, 8 p.m., June 16.

San Jose, Cal.—Bicknell Young, Victory Theater, 8 p.m., June 25.

Santa Ana, Cal.—Bicknell Young, Grand Opera House, 8 p.m., June 23.

Venice, Cal.—Bicknell Young, Church Edifice, corner Brooks and Second avenues, 8 p.m., June 21.

Washington, D. C.—Judge Clifford P. Smith, Polis Theater, 3:30 p.m., June 21.

Testimonies of Healing

Christian Science first came to my home some sixteen years ago, through a friend whom my mother had invited to spend the summer with us. This friend had not been in touch with mother for many years, and at the time she accepted the invitation she wrote that before coming she wished to tell us that she was a Christian Scientist. I well remember the remark called forth by this news,—"Well, she need not think she will make a Christian Scientist of me." All we knew of Christian Science was what little we had heard from people who were not at all friendly and probably knew little of the subject. The friend came, but she did not offer to discuss her religion, nor did she show her literature until asked to do so. Upon being questioned, she told mother of her healing through Christian Science of a bleeding malignant growth on her face, after having been given up to die by the physicians. There was not a mark left to show where the growth had been. Mother became very much interested and studied with her, but I was quite well satisfied with the old church.

At that time I was a physical wreck, and had left school on account of a nervous breakdown. This was one of the greatest trials of my life, as I loved to study. I was suffering with what the physician called dislocation of the shoulder-blade. Orders had been given me never to do anything that would strain the shoulder, such as sweeping, lifting heavy articles, etc., as it was feared that serious complications would ensue if great care was not exercised. In connection with this trouble I was told that there were two ribs on my right side which would slip out of place with certain movements.

For several years I had been unable to eat anything that one would wish to eat, all good things being on the list of "forbidden articles." For at least three years I was afflicted with nervous colic. Every morning I awoke in great pain, and would call for something hot to drink, after which I would go to sleep again. I was wearing glasses on account of what a specialist called a bad case of structural defect of the eye, and the verdict was, "You will always have to wear glasses." I was almost never without a headache, and at times the attacks were so violent that I could seem to find no place on the bed to put my head. Altogether, I was in a most deplorable condition.

I first began to read the Lesson-Sermons with mother, always choosing the Bible, as I was sure that was good for me, and when she read the Science and Health references, I was as one having ears who heard not, for I did not listen very attentively. I must have gained quite a few grains of truth, however, for I soon began to go to service with mother, though principally to please her, as we were very devoted to each other. After we took our letters from the church of which we were members, I went entirely to the Christian Science services and began to study in earnest. Gradually, without treatment, my troubles dropped from me, and after quite a period of time I would realize that one or another of the different ailments had gone. My side and shoulder strengthened, I laid aside the glasses, and headaches were a thing of the past. The stomach trouble was the longest in disappearing, but I am thankful to say I am free, and have been for some years! I am now in perfect health.

Each day I read the Lesson, and am proving that "if we live a life of prayer," as one of our hymns expresses it, "God is present everywhere." I have had the privilege of class instruction with one of Mrs. Eddy's loyal students, and through the understanding of God, as taught in the Bible and in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, our dear Leader, I have been able to help many along the way, and each day brings added opportunities to let my light shine to God's glory. I am increasingly grateful, with each issue of the *Sentinel*, the *Journal*, and the *Monitor*, and I find in each gems of thought to help in the every-day work. I am also glad for the privilege of forwarding the literature to a long list of interested friends.

RACHEL A. BANISTER, Northampton, Mass.

[Translated from the German]

Deep gratitude impels me to tell of my experience at the birth of my little daughter, God's protecting power being active in her behalf, since the law of premature birth which was held over her was entirely broken. I had absent treatment at the time of the birth, but was attended by a nurse who knew nothing of Christian Science. According to her own words she never witnessed, during her ten years' experience, a birth which to appearances was so unfavorable at first and then went on so harmoniously, contrary to all human expectation. The nurse came at half past eight in the morning, and two hours later baby was born. She told me later that upon seeing me first she felt sure the birth could not take place without the use of artificial means. Although I cannot say that my thought had sufficiently risen above material conditions to exempt me from pain, yet I am most grateful for the experience that I had of the efficacy of spiritual law in setting aside every material law so called, and for the proof that the operation of this spiritual law is quick and safe. After three days I got up, and since then I have been active and efficient as never before.

Four weeks later we again had the privilege of experiencing God's love and omnipotence. Our little one was taken ill with a severe attack of bowel trouble. Every one knows how dangerous such attacks are held to be in the case of infants. The same nurse who had assisted me at the birth happened to come to see me on that day. She was visibly alarmed at the sight of the child and urged me to call a physician. I declined medical aid of any kind, and instead immediately telegraphed to a Christian Science practitioner for treatment. At nine o'clock in the evening I received the answer by telegram, saying that treatment had been taken up. I had endeavored to work along Christian Science lines, but had been unable to master my sense of fear, which, though unconscious at first, increased during the afternoon to the point of anxiety, as I saw the child apparently getting worse every hour. When at last I held the practitioner's telegram in my hands, a wonderful sense of peace and trust came over me, and the child's healing dated from that moment. When the nurse returned the next morning, she was very much surprised to find the child entirely well, as she had not expected to see it alive. The little one has been well ever since, has developed wonderfully, and is the sunshine and joy of our home.

I cannot express in words my gratitude for these experiences, for they have made me see more clearly the activity of the law of Love, and they have also taught me how much I myself can and must do through faithful watching and working to keep the child in good health and have it develop harmoniously. More and more I realize how great a privilege it is to be able to raise the child in the thought of Christian Science, and to know with absolute certainty that no material law has power over it; that it is subject only to the spiritual

Digitized by Google

law which is of God, and is every hour under the protection of infinite Love. I cannot prove my gratitude better than by helping my child to become some day a good and faithful witness of the truth.

FRAU THEA SCHULZE, Berlin-Wilmersdorf, Germany.

✧

On Nov. 13, 1911, my little girl, aged five, was taken ill with fever, and two days later, alarming symptoms having developed, my wife called in a doctor, who diagnosed the case as blackwater fever, and said that he would take the child into his nursing home at the town thirteen miles away. I took her there with her mother that evening (Nov. 15) and cabled the same night to a Christian Science practitioner in England for treatment. I also told my little girl that I was going to do this, as she is being brought up as a Christian Scientist. She was no worse for two days and then made rapid improvement, to such a degree that on the eighth day after going into the nursing home I was able to bring her home. She has not been ill in any way since, but has been well and normal. I may say that blackwater fever is regarded as a dangerous type of fever out here; recovery is generally slow and convalescence long. My daughter had no medicines in the hospital, as the doctor could not get her to take the only medicine he wished to give her; and she told him before leaving that Christian Science had cured her, not the doctoring.

COL. H. G. KENNARD, Mergui, Burma, India.

Although not a Christian Scientist, I can vouch for the above statement made by my husband as regards my little girl. She certainly made a marvelous and rapid recovery, so much so that many people of our acquaintance doubted it really being blackwater fever. I myself would have doubted it if the symptoms had not been so remarkably different from the ordinary malaria.—MRS. A. KENNARD.

✦

I would like to express my gratitude for Christian Science, and to tell some of the blessings that have come into my life through the understanding of Truth during the past three years. When, as the result of business reverses, my husband's health failed some three years ago, I was practically without friends and with very little money on hand, his sickness and debts having consumed almost everything. About that time Christian Science found me, and since then I have been able to keep a comfortable home together under most trying conditions. My little boy, who is eleven years old, was healed about two years ago of a stomach trouble of seven years' standing. He went to Germany last summer all alone, remaining three months, and was not sick a day.

Before my marriage, I spent about eight years in hospitals and in private practice as a trained nurse. During the Spanish-American war I was sent to Camp Thomas and other places to minister to the sick soldiers, and I realize how great an effort it was to overcome my belief in the reality of sickness and death. I had become very melancholy, and at times wished for death, which I thought would relieve me of my trying problems. This condition has passed away, and now I rejoice greatly in the possession of that "grain of Christian Science" which "does wonders for mortals" (Science and Health, p. 449). I was healed of a rupture I had had from childhood, and which the doctor had said might prove dangerous after the birth of my boy. I wore a support for a number of years, and one day, about six months ago, I was surprised to find that the condition had been overcome.

I thank God for leading me into this wondrous truth, and I hope some day to be able to help others in the same loving and faithful way in which I have been treated by those who have helped me to see the light of divine Love. My gratitude is no less sincere for our dear Leader, who has done so much for suffering humanity by giving us the text-book of Christian Science, "Science and Health with Key to the Scriptures," by which we can work out our every problem.

LILY PAPE, Brooklyn, N. Y.

✦

A heart filled with gratitude for what Christian Science has done and is doing for me, impels me to give my testimony. More than thirteen years ago I was healed through Christian Science of a malady from which reputable physicians had failed to offer me any relief. Previous to my healing I attended a medical college at Louisville, Ky., and was in my third year of study when I became a nervous wreck and was afflicted with other troubles. I employed one of the lecturers, a member of the faculty of the college, to diagnose my case and to treat me. He was a physician in whom I had great confidence, and he was considered one of the best that could have been secured. He advised me to go to the infirmary connected with the college, and there he lovingly did all that he could for me. Finally he advised me to go to my home in Somerset, Ky. This I did, and applied to a local physician, but I failed to get any better under his treatment; instead, I gradually grew worse.

In the mean time I had heard that the physician who had treated me in Louisville, told some of my friends that he could do no more for me and that there was little chance for my recovery. I then tried other material remedies, and many so-called cures that some of my friends recommended to me; yet I received no relief, but gradually became weaker and suffered more. In this state of consciousness it seemed that death would claim me as a victim, since my condition was growing worse daily, and I fully believed that I could not live more than a few weeks at the most.

A few days before I had come to this point of view, I wrote to a friend in Tennessee who had been healed of an infirmity of long duration, and asked her to give me any information that might help me. She answered immediately, and advised me to try Christian Science, for she knew of many who had been healed by this treatment and whose conditions were just as serious as mine. She told me to think the matter over quietly and to consult no one who might advise me otherwise. She sent me many testimonies of healing through Christian Science and the name of a practitioner in Chattanooga, Tenn., also offered to go with me to the practitioner. As I was willing to try anything for relief, I accepted the offer, so was taken to the practitioner, and had a talk with her. She would not agree to treat me at once, but advised me to get a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. Following her advice, reading Science and Health, and listening to her helpful talks about God, I found that some of my material views about Him were changing. I then became anxious to be treated, and in three treatments I was completely healed. I was very much emaciated, but within thirty days I had gained greatly in weight. My healing has been permanent, and I am free from any vestige of the old troubles.

I have had the privilege of class instruction, and during that time I was healed of weak eyes, which had troubled me for many years. Since my healing, God has been my only physician, and through the study and application of the teachings of Science and Health and Mrs. Eddy's other

Digitized by Google

writings, I have found that God is indeed "a very present help in trouble" and heals all our diseases.

I can never express in words my gratitude for the benefits I have received from Christian Science and for what it is doing for me daily. I only hope to strive constantly to live a purer and better life and to follow the loving example of our revered Leader. NATHANIEL COLYER, Houston, Texas.

✦

I have desired for some time to express my gratitude for the many blessings which Christian Science has brought to me. About fourteen years ago our family physician told my parents that I had tubercular disease of the lungs, and advised them to send me to a different climate. This they did, but it was of no avail. Then a Christian Scientist, hearing of my illness, loaned my father a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and told him of various healings in her family that had been accomplished through Christian Science treatment, at the same time assuring him that it would also be of help to his family. Our gratitude to that dear lady for leading us to this healing truth is beyond expression. I read the book, and began to gain in strength and health, until I was entirely healed of the lung trouble, also of a stomach disorder and other ailments. Since then I have not taken a drop of medicine, but have relied absolutely on the power of Truth. Whenever discordant conditions have arisen, the study of the Bible, together with Science and Health, has proved of great benefit to me. Our entire family have been helped in many ways through Christian Science.

I am very grateful to those who have helped me along this path, and also for all the Christian Science literature. Words are inadequate to express my thankfulness to God, and my gratitude to our dear Leader, who was pure enough in thought to see this great light and reveal it to the world.

BESSIE M. MAYNES, Seattle, Wash.

✦

I send the following testimony to express my gratitude for Christian Science and what it has done for me. In the fall of 1902 I first came to Christian Science for help in the city of Colorado Springs, Colo., while there seeking health. After almost three years of search, my case indeed proved that "man's extremity is God's opportunity," as I had tried the best doctors of the various schools also treatment at a sanitarium. I remember saying that Christ in Science could not help me when it was mentioned to me before I started for the mountains. After arriving there and receiving only temporary relief, my doctor advised me to try another remedy, but that failed.

I was then ready for the truth, and two Scientists who lived across the street from where I stopped, asked me to try Christ in Science. I cannot tell how [illegible] I called on a [illegible] and how much help I received in only one week, and after two weeks of treatment, together with the study of Science and Health, I was well and ready to leave. So I left to go to work again at a [illegible] where I was [illegible] a month. Since then [illegible] Christian Science and divine Love has brought me through many trials.

[illegible] Science, and I now know it is a [illegible] and have seen such evidences of its great power [illegible]

[illegible]

Nearly two years ago my attention was called to Christian Science by an acquaintance in our village who had been wonderfully healed of a malady of long standing which had been pronounced incurable. At that time I was slowly recovering from a severe stomach trouble, asthma, etc., from which I had suffered for a number of years. I consented to have a Christian Science practitioner from Auburn, Maine, come to see me, but I had no faith in the treatments, as I had not studied into Science in the least, and in fact had no desire to do so. Nevertheless I was led in spite of myself to know what God and Christian Science can do when properly and divinely demonstrated, for I was permanently healed of my ills.

From my earliest childhood I have had religious training, thanks to a dear father and mother; but although I attended Sabbath school and listened to the best of religious instruction, I was never satisfied in regard to some very vital points, as I thought of them in mature years. The atonement as explained by all evangelical denominations was a great stumbling-block, until I read Science and Health, when order took the place of chaos, harmony of discord.

I can truly say that Christian Science has brought into my life more peace, happiness, and love than I ever experienced in any other belief, and the Lord's Prayer has taken on a new meaning since I became acquainted with Mrs. Eddy's spiritual interpretation of it.

HATTIE A. SMALL, Norway, Maine.

✦

Before coming into Christian Science I had been suffering for years from what was pronounced organic heart disease. I had many doctors, but their remedies did not help me, and two physicians said I could not live. One doctor, a friend, who examined me, asked me what I wished done about my burial.

A friend advised me to try Christian Science, but I scorned this advice, saying it was nothing but religious fanaticism. Nevertheless, one evening as I was passing the hall where the Christian Science meetings were held, I decided to go in, and I shall never forget the cheerful expression on the faces of those in that crowded hall. I listened attentively to the many interesting testimonies of healing. On learning that the first reader was also a practitioner, I sought her [illegible] early the next morning, and I shall always remember how kindly she greeted me and asked if I had come to learn something of Christian Science. I told her what the doctors had said about my physical condition, and she smiled and said, "You know that God made everything perfect." I had been a regular church attendant all my life, but that word "perfect" came to me with a new meaning, and I was instantly healed. I left the Scientist's office as one [illegible]. After that I secured a copy of Science and Health, and [illegible] I have all of our Leader's writings.

Why should any one wonder that we should love Mrs. Eddy for the truth she has made so plain? I am [illegible] deeply grateful to her. Every day I am gaining a better understanding of the Bible and of what God really is.

A. B. FRANK, San Francisco, [illegible]

✦

I have long thought of sending in my testimony as an expression of gratitude for the many blessings [illegible] through Christian Science. I became interested in [illegible] healing of chronic [illegible] incurable, [illegible] and to my mind [illegible] which doctors had failed to do any good. I was [illegible]

Digitized by Google

passed, and I have been richly rewarded for the stand I took for the truth. Four years ago I had the privilege of taking class instruction. I was in Boston at the time, and so had the pleasure of attending The Mother Church, of which my daughter and I are members.

Words cannot express my thankfulness to God, and my gratitude to our beloved Leader, Mrs. Eddy, for bringing to us this wonderful truth; also for Science and Health, through which the Bible has been made very plain.

HESTER CARR, New Orleans, La.

I wish to verify my mother's statement. The healing was accomplished at one visit. There has been no return of the rheumatism, and I have not had to call on a practitioner in all these years. Through the study of the Lesson-Sermon and the daily reading of our text-book, "Science and Health with Key to the Scriptures," also of the periodicals, I have gained a spiritual understanding which has enabled me to overcome all discord. The blessings we have received are innumerable, as they will be for all who follow Mrs. Eddy's teachings.—MRS. K. C. O'MEARA, New Orleans, La.

✧

I am very grateful for Christian Science and what it has done for me; and I send this testimony with the hope that it will encourage some one whose healing is slow. A few years ago I was taken sick with a nervous breakdown; it seemed as if every organ in my body was affected. As I was interested in Christian Science, however, I asked for treatment. My healing was slow; in fact, it was two years before there was much improvement, but through the sincere and prayerful study of Christian Science I was restored to health. When I do my best work, am faithful and earnest in my study and application of the teachings of Christian Science, I find that it meets every human need. I would also like to speak of an attack of scarlet fever, which was healed very quickly; in fact, I was in bed only three days. The fever left after the first treatment, and the extremely sore throat was overcome the second day.

Many are the benefits I have received through this saving truth, and I am indeed thankful to God, and grateful to Mrs. Eddy for Christian Science. I know that the way to show my gratitude is to live a better life, and this I am striving to do.—G. ENID BROWN, Los Angeles, Cal.

✧

[Translated from the German]

Great joy and gratitude prompt me herewith to testify publicly to the benefits received through Christian Science. I suffered from what was called nervous debility and chronic displacement of the stomach, and as a result was very much run down physically, besides being in a state of great mental depression. The physicians were unable to afford help, and the sojourn in a sanitarium brought me only temporary relief, while the stomach difficulty became more and more severe. I do not know what would have become of me if I had not found Christian Science. After the first treatment from a practitioner I experienced a decided improvement, and within a short time I gained in strength and became a well woman. I am now able to perform my duties without experiencing fatigue. As for the mental depression, it has completely vanished, and has been replaced by a happy and cheerful sense and the endeavor to reflect Truth and Love.

Grateful as I am for the physical healing, I feel still more indebted to Truth, when I consider the spiritual blessings which have come to me through Christian Science. I am most deeply grateful also to our dear Leader, Mrs. Eddy.

FRAU FRIEDA FRIEDEL, Berlin-Lichterfelde, Germany.

From Our Exchanges

[*The Christian Register*]

It is no new thing that strong theological fortifications should have to yield to quite unlooked-for influences. While inaccessible to argument, and able to hold its dogmatic strength, a dogma may find itself undermined and rendered ineffective by influences at a distance. While still impregnable to direct attack, it may find conditions taking place which bring about its downfall even at the moment of its greatest pride. Not only in British Africa, but at every other missionary point, the exigencies of the situation have modified the strictness of practice and opinion, bringing about a condition of things incompatible with the maintenance of rigid definition and exclusiveness. Christianity, setting out to convert the heathen, learns something never taught at home, and finds itself on the way to being itself converted. Having gone to save, it has returned to improve. Having set out to teach, it has found itself taught. The fixed and static faiths elaborated in reflection, find themselves faced by faiths become dynamic and operative, and meet the challenge of stresses and crises. They have been where things have to be done on the instant, not prepared for in the study, and have learned in hand-to-hand struggle what never was taught in the creeds. The lessons of liberalism refused by the mind become assimilated unconsciously by a sort of spiritual manual training, and, before they know it, the severest sticklers for consistency find themselves hospitable without the formality of proper introduction, and acting thoughts they were never able to think.

[*The Christian Commonwealth*]

We are convinced that the danger of shutting one's eyes to new truth is infinitely more dangerous than boldly facing it. We believe that for one working man who has lost his faith owing to the Christian teaching of Biblical criticism, there are hundreds who have lost their faith because Christian teachers have asked them to believe in an out-of-date and untrue view of the Bible as necessary for a saving faith. The majority of the bishops are moving toward liberalism,—they practise criticism of the Old Testament quite freely,—but they seem unwilling to allow an unlimited freedom to church teachers. All they give with one hand they take away with the other by prescribing the conclusions to which researchers shall come.

It is an astonishing notion of freedom which leads these bishops to tell scholars that their pursuit of truth is only tolerable in the church when it leads to no denial of traditional beliefs! It is deplorable that these good men should be so eager to hand on the "traditions of men" unimpaired, that they are deaf to the truth the Spirit is teaching the church by its prophets and scholars. The bishops are almost compelled by their duties to be amateurs in theological and critical studies; but unfortunately they have not shown the wisdom of accepting the advice of the learned teachers and professors who have urged them to refrain from this declaration against modernism.

[*The Universalist Leader*]

A man slipped. He was walking along the street in the performance of his duty; he was thinking about things he ought to think about; he was looking out for the welfare of other walkers so as not to run them down; his mind was wide-awake and intelligent, but he did not see the little bit of ice, and in an instant he was down on the pavement with a broken arm. And the people rushed to his rescue from all directions;

Digitized by Google

there were representatives of every race and every creed, all eager to be of service, and all expressing the most genuine sympathy, and the fortunate unfortunate man was aided to the hospital and cared for until he was well. Another man was walking through the crowded experiences of a real life, in possession of his full faculties and in pursuit of things worth while, but he did not see the bit of temptation in his way, and in an instant he was down with a broken moral character! And all around him were people of every race and every creed, and they turned their faces away from the "criminal" as they called him, and the police and patrol wagon took him away to the prison. And yet he but slipped as did the other.

[Rev. R. J. Campbell, M.A., in *The Christian Commonwealth*]

Have you never received intimations of a holy divine presence overshadowing you, never been made aware of the action upon your spirit of gracious, uplifting influences that forbade the acceptance of the things of the world at their face value? Have you never been soothed and comforted when you could give no explanation of the fact yourself, and all the evidence of your senses at the time was against it? Perhaps things could not have been worse than they were just then, from the point of view of human wisdom, and yet an unearthly peace stole in and wrapped you in its embrace. This is what I mean by the action of the superconscious when we are receptive to it and in need of it. It is doing far more with us unceasingly than we know. I will go further, and say that your best thoughts, hopes, purposes, and convictions are inspired in this way. They are not yours; they are given to you.

[Rev. A. R. Henderson, M.A., in *The British Congregationalist*]

We stand at the beginning of the development of spiritual life in the world. In other words, the kingdom of God has come, the kingdom that is to consist of a redeemed humanity, in which all that hurts the life and ruins the home and destroys the nation shall have disappeared. Christianity contemplates the reign of God in the hearts and lives of men, and in that reign all the cruelties of competition, all the bitterness of strife, all the inhumanity of man to man shall cease. And it is the possibility of every life to serve that kingdom, to share that glorious consummation. Wherefore, then, doth a living man complain? The humblest can put his hand to the greatest of all tasks, the lowliest can use his influence to further the divine purpose.

[*The Living Church*]

In one way or another we all climb unto some mount of vision where we may discern the Lord. We are all lifted up and out of ourselves for no matter how brief a season; and these are the revealing hours by which God shows us the beauty and glory of the things eternal. We never forget them; for they are the abiding memories, recalled with the advent of every other great and noble experience that follows, whether in our own life or that of others. We read them into song and story, breathe them in with fleeting odors, see them again in painting or picture, and laugh or cry over them with the strains of all the music that we hear.

[*Western Christian Advocate*]

The church should impress men that it is loaded with a cargo and ready to sail to the eternal port; that it is freighted for business also in this life and ready for the high seas; that it is seaworthy and cares not for the storms; that it will sail according to its appointments, whether the conditions are propitious or not. But words alone cannot put the church in motion. Only the Spirit can do it, with His blessed fulness and divinely driving power.

Special Announcements

From the Publisher of Mrs. Eddy's Works

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—For styles of bindings and prices see back cover of this periodical.

"THE FIRST CHURCH OF CHRIST, SCIENTIST, AND MISCELLANY."—A volume of the later writings of Mrs. Eddy, compiled from the files of *The Christian Science Journal* and *Sentinel*, together with historical matter pertaining thereto, as selected by her, is now on sale, and orders will be received by the publisher. Prices as follows: Cloth, single copy $2.25; six or more copies to one address, each $2.00. Morocco or pocket edition, single copy $4.00; six or more copies to one address, each $3.75. Orders for six or more copies to one address may include the two styles of bindings at the quantity prices.

In response to many requests, the "CHURCH MANUAL," heretofore published only in the cloth binding, is now issued in a "pocket edition," size 4 x 5¾ inches, morocco, limp, round corners, gilt edges, Oxford India Bible paper. Prices of this special edition: Single copy $2.00; six or more to one address, each $1.75.

Orders for the books named above and the other works by Mrs. Eddy should be addressed to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

✧

From the Editor

All manuscripts submitted for publication in the *Sentinel*, *Journal*, and *Herold*, whether articles, poems, or testimonies, and all correspondence relating thereto, should be addressed to the EDITOR, and not to individuals.

✧

From the Society

When a change of address is desired, subscribers, instead of asking their local postmaster to notify us, should write the Publishing Society direct and at least two weeks in advance, giving name and address exactly as it appears on the wrapper of the periodical, and the new address to which it is to be sent. It is necessary that each periodical for which the change is desired should be specified.

The lecture entitled "Christian Science: The Gospel of the Kingdom," by Judge Clifford P. Smith, has been translated into French ("La Science Chrétienne: C'est l'Evangile du Royaume"), and is now published and ready for distribution.

A translation into Spanish has been made of the pamphlet "The Providence of Good" ("La Providencia del Bien") and it is now printed and ready for distribution. Thirty-six pages and cover.

✧

From the Clerk of The Mother Church

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for use of the branch Churches of Christ, Scientist, with space for the names of the churches and their by-laws, can be had at seventy-five cents a hundred. Orders will not be taken for less than one hundred, and postage stamps should not be sent in payment.

Correspondence relative to the tenets or to membership with The Mother Church, should be sent to J. V. DITTEMORE, Clerk, 105 Falmouth Street, Boston, Mass.

✧

From the Church Treasurer

The annual per capita tax of members of The Mother Church is due June 1, but may be paid at any time during the year. The per capita tax of members uniting in November is reckoned from the preceding June, this being the beginning of the church year. Unless otherwise directed by the sender, the full amount of each remittance will be credited for the current year.

Please remit by postal or express money order, bank draft, or check. Currency should be sent by registered letter only.

Please advise promptly of any change in name or address.

Send all per capita taxes and contributions to ADAM H. DICKEY, Treasurer, 103 Falmouth Street, Boston, Mass.

The Christian Science Journal

Published Monthly

Founded April, 1883, by Mary Baker Eddy, Discoverer and Founder of Christian Science, and author of the Christian Science Text-book, "Science and Health with Key to the Scriptures."

This monthly magazine is the official organ of The First Church of Christ, Scientist, in Boston, Mass. In addition to articles, lectures, and testimonies not published elsewhere, it contains a complete list of Christian Science practitioners, and a directory of Christian Science Churches, Societies, and Reading Rooms.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States, Mexico, and Cuba, single copy, one year, $2; six months, $1.20. For Canada add 25 cents for postage. SALE PRICE: Single copy, 20 cents. In all other countries add 65 cents postage for each annual subscription. SALE PRICE: Single copy, 25 cents.

BOUND VOLUMES: Current and past year, cloth, $2.50; half calf or half morocco, $3. On earlier volumes write for prices.

The Christian Science Monitor

Published Every Day, Except Sunday

A daily newspaper for the home. Adequate news service. The various departments of a modern newspaper. Unique home forum page. Entire page of editorials dealing with the vital topics of the day. Contributions for the columns of the MONITOR should be addressed, Managing Editor, THE CHRISTIAN SCIENCE MONITOR.

SUBSCRIPTION PRICE, PAYABLE IN ADVANCE, POSTPAID: For the United States (except in the Boston Postal District), Canada, Mexico, and Cuba, $5 a year, $3 for six months. In all other countries additional postage at the rate of $3 yearly is required. When delivered by carrier through a local news-dealer, 12 cents a week, payable to the news-dealer. In the Boston Postal District, by mail, $7.25 a year. Quantity rates will be furnished on application.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

TERMS OF SUBSCRIPTION AND SALE: In the United States, Canada, Mexico, and Cuba, 50 cents annually; single copy, 15 cents; fifty copies or more to one address, 12½ cents each. In all other countries, 60 cents annually; single copy, 18 cents; fifty copies or more, 15 cents each.

Subscriptions not accepted for less than one year. Subscriptions begin with current quarter unless otherwise designated, and terminate with the last of the month named on wrapper.

Der Herold der Christian Science

Published Monthly

A magazine printed in German. It contains original and translated articles bearing upon Christian Science, testimonies of healing, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches. Improved and enlarged in 1910.

Works on Christian Science

Written by MARY BAKER EDDY, Discoverer and Founder of Christian Science and Author of its Text-book

Science and Health with Key to the Scriptures. In one volume, 700 pages. The original standard, and only textbook on Christian Science Mind-healing. Cloth, single copy $2.00; two to eleven copies inclusive (cloth only), each $1.75; twelve or more to one address, each $1.75. Full leather, stiff, reversed boards, gilt edges, same paper as in cloth binding, single copy $4.00; twelve or more, each $3.75. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $5.00; twelve or more, each $4.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper (wide margins, large-sized book), single copy $6.00; twelve or more, each $5.75. Quantity prices are on shipments to one address only.

GERMAN TRANSLATION. Printed on fine Scotch paper. Cloth, one to five copies inclusive, each $3.50; six or more, each $3.25. Printed on Oxford India Bible paper in same style as regular pocket edition of Science and Health. Morocco, one to five copies inclusive, each $5.50; six or more, each $5.25. Orders for the German translation in lots of six or more may include both bindings. Quantity prices are on shipments to one address only.

Orders for Science and Health in lots of twelve or more at quantity prices may include both English and German editions, and different styles of binding.

Miscellaneous Writings. A book of 471 pages, containing articles published in *The Christian Science Journal* from 1885 to 1896, with revisions and additions. Cloth, single copy $2.25; twelve or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; twelve or more, each $3.75. Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India Bible paper, single copy $5.00; twelve or more, each $4.75. Orders for Miscellaneous Writings in lots of twelve or more may include any or all of the different styles of binding. Quantity prices are on shipments to one address only. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

The First Church of Christ, Scientist, and Miscellany. A book of 364 pages, containing articles published in *The Christian Science Journal* and *Sentinel*, subsequent to the compilation of Miscellaneous Writings, together with historical matter pertaining thereto. Cloth, single copy $2.25; six or more copies, each $2.00. Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, single copy $4.00; six or more, each $3.75. Orders for six or more may include the two styles of binding at the quantity prices on shipments to one address only.

Concordance to Science and Health. This work contains about eighty thousand references (more than ten thousand words being indexed), also an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. Cloth, marbled edges, 607 pages, 10 x 7, and Addendum, single copy $5.00; six or more copies, each $4.50. Quantity prices are on shipments to one address only.

Church Manual. Containing the By-laws of The Mother Church. Cloth, single copy $1.00; six or more, each 75 cents. Pocket edition, morocco, limp, round corners, gilt edges, Oxford India Bible paper, single copy $2.00; six or more, each $1.75. Quantity prices are on shipments to one address only.

Christ and Christmas. An illustrated poem. Single copy $3.00; six or more copies, each $2.50.

Unity of Good and Other Writings. One volume, containing Unity of Good, Rudimental Divine Science, No and Yes, Retrospection and Introspection; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Christian Healing and Other Writings. One volume, containing Christian Healing, The People's Idea of God, Pulpit and Press, Christian Science *versus* Pantheism, Messages of 1900, 1901, 1902; uniform in style with the pocket edition of Science and Health. Morocco, limp, round corners, gilt edges, heavy Oxford India Bible paper, single copy $3.50; six or more copies, each $3.25.

Retrospection and Introspection. A biographical sketch of the author; the way she was led to the discovery of Christian Science; its fundamental idea and growth. Library edition, cloth, 95 pages, single copy $1.06; six or more, each 75 cents.

Unity of Good. This book lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. Library edition, cloth, marbled edges, 64 pages, single copy 65 cents; six or more, each 45 cents. Pocket edition, leather covers, single copy $1.00; six or more, each 75 cents.

Pulpit and Press. A unique work, of importance in the history and to the readers of Christian Science; containing the message or sermon written for the dedicatory service of The Mother Church, January 6, 1895, and scintillations from the press of that occasion. Library edition, cloth, 90 pages, single copy $1.06; six or more, each 75 cents.

Rudimental Divine Science. A brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. Pebbled cloth covers, gilt top, 17 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 55 cents; six or more, each 35 cents.

PRINTED in the New York point system of type for the use of the blind, single copy 50 cents; six or more copies, each 40 cents.

No and Yes. A brief statement of very important points in Christian Science. Pebbled cloth covers, 46 pages, single copy 32 cents; six or more copies, each 25 cents. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Messages to The Mother Church. Including in one volume, 94 pages, Christian Science *versus* Pantheism, and the Messages of 1900, 1901, and 1902. Library edition, cloth, marbled edges, single copy $1.56; six or more, each $1.15.

Christian Science *versus* Pantheism. The Pastor Emeritus' Message delivered at the Communion season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are pantheists. Pebbled cloth covers, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1900. Paper covers, deckled edges, 15 pages, single copy 26 cents; six or more copies, each 20 cents.

Message to The Mother Church, June, 1901. Paper covers, deckled edges, 35 pages, single copy 50 cents; six or more copies, each 38 cents.

Message to The Mother Church, June, 1902. Paper covers, deckled edges, 20 pages, single copy 50 cents; six or more copies, each 38 cents.

Christian Healing, and The People's Idea of God. Two sermons in one volume, 36 pages. Library edition, cloth, marbled edges, single copy 60 cents; six or more, each 45 cents.

Christian Healing. A sermon delivered in Boston. Paper covers, 20 pages, single copy 21 cents; six or more copies, each 17 cents.

The People's Idea of God. A sermon delivered in Boston. Paper covers, 14 pages, single copy 21 cents; six or more copies, each 17 cents.

Poems. This volume of 79 pages includes all of Mrs. Eddy's hymns, also her earlier poems which appeared in various publications from forty to sixty years ago. Specially bound. Single copy $1.50; six or more copies, each $1.25.

Feed My Sheep. Solo. Words by Mary Baker Eddy, music by Lyman F. Brackett. Single copy 50 cents; six or more copies, each 40 cents.

The foregoing prices cover all charges for express or postage on shipments either domestic or foreign.

Quantity prices are on shipments to one address, but quantity lots at quantity prices cannot be made up of different books or of different styles of binding. *Attention is called, however, to the exception to this rule which is made in the cases of Science and Health, and of Miscellaneous Writings, as given under their titles in this price list.*

Residents of Wallace, Idaho, now claim that the results of the disastrous forest fires in northern Idaho in 1910 are being made evident in the changed flow from a watershed, then burned over, which furnishes the water supply of the city. This basin included an area of approximately two thousand acres and was formerly well timbered with trees from fifty to two hundred years old. These were almost wholly destroyed by the fires of 1910. It is stated that before the fires the flow of the stream at its lowest stages was never below one thousand miners' inches, the unit of measurement which has been used. Since the fire, the records show, the minimum flow has fallen to about two hundred and fifty miners' inches, and it is now necessary for the company which furnishes water, light, and power to expend a considerable amount of money each year in developing power from steam and to use a considerable part of this power in pumping water. Records of the weather bureau at Wallace show that the precipitation for the years since the fire, has been about normal for the region. This seems to demonstrate the fact that the unevenness in the flow must be due to the destruction of the forest cover of the watershed and not to any change in climate or precipitation. In view of the situation, the forest service has undertaken to reforest the denuded watershed. The planting will probably have no immediate effect, yet it should influence the run-off as soon as forest conditions are restored.

United States secretary of agriculture has written to the forty-eight Governors of states asking them to designate the educational institutions to which funds provided by the Smith-Lever agricultural extension law are to go. This is the first step in putting into effect the law which was approved May 8. This law provides that, under certain conditions, government aid is to be extended to state agricultural colleges in the work of diffusing among the people useful and practical information on subjects related to agriculture and home economics. Each agricultural college in a state is to be paid ten thousand dollars a year by the government, and on that sum there is to be no return of any kind, nor is the state called upon to duplicate that sum. But there must be a duplication of all federal aid in excess of this ten thousand dollars.

Striking facts regarding our forest resources, their value and their waste, are condensed in an eight-page illustrated circular of the American Forestry Association, just issued. The lumber industry is said to employ seven hundred and thirty-five thousand people, to whom are paid annually three hundred and sixty-seven million dollars in wages, the worth of products being one billion two hundred and fifty million dollars. The forests of the country cover five hundred and fifty million acres. The annual loss by forest fires is twenty-five million dollars. Damage from insects and tree diseases, which follow fire, costs each year fifty million dollars. The cost of destruction resulting from floods is not estimated, but is given as "countless millions." It is pointed out that by planting forests, an annual income could be derived in the country of sixty-five million dollars; and by preservative treatment upon timber each year, one hundred million dollars could be saved.

Efforts to prove that the late Dr. Samuel Pierrepont Langley built the first aeroplane capable of flying with a man, culminated May 29, when the Langley machine made a very brief flight over Lake Keuka after it had lain idle for more than ten years since being wrecked in an attempt to launch it on the Potomac river. The trials were witnessed by Dr. Charles D. Walcott, successor of Dr. Langley as secretary of the Smithsonian Institution, and Dr. A. F. Zahm of the Smithsonian, an expert on aeronautics. Glenn H. Curtiss drove the machine, which he had restored to its original condition for the institution. No changes were made in the aeroplane, it is announced, except adding pontoons. These permitted the aeroplane to be launched from the water instead of from the top of a houseboat by a catapult, the method attempted by the inventor.

F. H. Gade, the former Norwegian consul in New York, is one of the members of a committee which has been appointed to draw up a program of the festivities which are to be held on July 4 in Christiania, in celebration of American independence. The day is to be devoted entirely to the Norwegian Americans, and the committee proposes that it shall commence with the unveiling of the statue of President Lincoln, the gift of the Norwegian population of North Dakota. During the course of the day some of the members of the immense band of musicians of Luther College will give a display of various American games, especially baseball.

The forestry commission has authorized the purchase, under the Weeks law, of thirty-one thousand one hundred acres of land in the New Hampshire White mountains, from the Publishers' Paper Company of Boston, at four dollars and sixty-two cents per acre. The land is in Grafton county, near Woodstock, and is part of the watershed of the Pemigewasset river, a tributary of the Merrimac. About three hundred acres are withheld by the company for a water-power site at Elbow pond, and twelve hundred and fifty acres for cordwood for the Liverpool Tripoli plant. Other purchases of White mountain land by the government are in contemplation.

An appropriation that will rise from $1,500,000 to $7,884,000 a year for federal aid to vocational education, is contemplated in the bill recommended by the vocational education commission and introduced by United States Senator Hoke Smith of Georgia, chairman of the commission. Three distinct classes of federal aid are provided in the bill, namely: paying salaries of teachers, directors, and supervisors of agricultural instruction; paying salaries of teachers of trade and industrial subjects; and preparing teachers in agricultural, trade, industrial, and home economics subjects. For agricultural instruction $500,000 is appropriated for 1916, $750,000 for 1917, and so on until 1924, when the annual amount of $3,000,000 is reached.

In several parts of New South Wales prune-growing has been carried on for some years with remarkable success. One orchardist last season averaged four pounds sterling per tree with silver prunes. The same orchardist has averaged over one hundred pounds per acre with French prunes for the past eight years. New South Wales prunes have established themselves on the Sydney market, and their size, flavor, and appearance have been much commented on by experts. There appears to be a good opening for small orchardists in New South Wales in a much more extensive cultivation of the prune. Not only is its cultivation a comparatively easy matter, but the average yield is much above that of apples.

Governor Major of Missouri has appointed fifteen lawyers to revise the criminal and civil codes of practice in the state and submit their recommendations to the next General Assembly. Following the election next November, he will add three members of the House and three from the Senate to the commission, so that they may have charge of such legislation as is proposed and be fully advised of each change recommended. Three of the appointees are circuit judges; one was a former member of the supreme court, another is a member of the St. Louis court of appeals.

What is termed the Zweckverband, or a society representing Berlin, Charlottenburg, and other suburbs of Berlin, has decided by a large majority to purchase the forests round greater Berlin for the sum of fifty million marks. This decision is of very considerable importance, since it means that the forests will be preserved, and that thereby the cheapest and best holiday resorts of the people will be insured.

Engaging the noted geologist, Dr. Johannes Bruger, to study the coal deposits of the country, the Chilean government believes it is in a position to announce that the carboniferous region of the province of Arauco could supply the needs of Chile for a period of two hundred years. The coast country is particularly rich in coal.

By a vote of 351 to 274, a majority of 77, the House of Commons read a third time the Irish Home Rule bill and passed the measure on to the House of Lords, where another effort will be made, by means of an amending bill, to bring the act into a shape which will secure it the good will of all classes of Irishmen.

An unusual drop of over three feet in the normal height of the St. Lawrence river at Montreal has alarmed shipping authorities there. The rainfall for May was just about one-twentieth of the usual average for that month, as shown by the figures for the past thirty-two years.

The United Fruit Company has completed arrangements for the purchase of the Revere Sugar Refinery of Boston, and they will proceed to build a new and modern cane sugar refinery capable of producing one million barrels of sugar yearly.

"What I say unto you, I say unto all, WATCH" Jesus

Vol. XVI June 20, 1914 No. 42

[From *The Christian Science Monitor*, June 9, 1914]

Annual Meeting of The Mother Church

THE annual business meeting of The First Church of Christ, Scientist, was held Monday. Reports of the growth of Christian Science throughout the world, and the report of the clerk as to increase in church-membership, showed that during the past year Christian Science has had the greatest growth in its history. Many new organizations have been formed during the year in the United States, in Alaska, and in foreign countries, including England, Scotland, Switzerland, Australia, New Zealand, China, and South Africa.

Announcement was made of the election of the following officers: President, John C. Lathrop, Brookline, Mass.; treasurer, Adam H. Dickey, Brookline, Mass.; clerk, John V. Dittemore, Brookline, Mass.; first reader, H. Cornell Wilson, New York city; second reader, Mrs. Blanche Hersey Hogue, Portland, Ore.

Reports from the field as read by Bliss Knapp, C.S.B., a member of the board of lectureship, included San Francisco, Cambridge, Chicago, Minneapolis, Greater New York, Memphis; also Ottawa, Canada.

Completion and dedication of the new edifice of First Church of Christ, Scientist, in San Francisco, the formation of two new churches, Fifth and Sixth, the building of a structure for Fourth Church, and the increased attendance at all of the churches in the city, were reported from that Western metropolis. In order to prepare for the increased attendance expected at the churches during the Panama-Pacific international exposition, a central free reading-room has been located in adequate quarters in the down-town district. The audiences at the eleven lectures on Christian Science given by four of the churches in the last year overflowed the auditoriums, it was stated.

The bimonthly meetings of the Christian Science Society of Harvard University at Cambridge were reported as providing a source of inspiration and encouragement to the college men in meeting the problems peculiar to university life. Through the annual lectures, the systematic distribution of literature, and the example of the members, it was said that the university had been made more acquainted with the nature of Christian Science.

Fifty-five lectures, including one under the joint auspices of all of the churches, with a total attendance approximating sixty-five thousand, were given in Chicago during the last year, and four new churches have been organized in the same period, according to the report from that city. Gratitude to the Discoverer and Founder of Christian Science, Mary Baker Eddy, for her revelation of scientific Christianity, was expressed. The opening of a fine, large church edifice at Evanston, commencement of building operations at Rock Island and Oak Park, remodeling of property for a church in the state capital, formation of a second church in Peoria, purchase of building sites by two Chicago churches, and formation of Sixteenth Church of Christ, Scientist, in the latter city, are evidences, in the report, as to the general conditions in the state of Illinois.

Beneficial results from the mission services in the public institutions, including the county jail, city workhouse, home for children and aged women, soldiers' home, and Bethany home, of Minneapolis, and increased interest at the down-town reading-rooms that are maintained by all of the churches, were recorded in a letter from that city. Establishment of a reading-room tent at the state fair, in which the St. Paul church also joined, was related in the report.

The placing of the *Monitor* on the news-stands throughout New York city, including the subway stations and the larger hotels, and supplying literature to more than two thousand "tramp" ships entering the port during the year, which has necessitated the purchase of a larger yacht to carry on the work of distribution, were spoken of in the report of the eleven churches of Greater New York. In the local prisons, the New York city report continues, the Lesson-Sermon is read each Sunday upon request of the men and women in the cells, and an ever-increasing attendance is appearing at the Sunday services in the Sing Sing state prison. Especially, the report states, are the writings of Mary Baker Eddy and *The Christian Science Monitor* receiving wide circulation in the reformatory institutions of Greater New York, with cases of instantaneous healing and reformation cited. Many of the boys in one institution put their knowledge of Christian Science into practice, when discharged, by joining with the Civic League in the making of gardens. Concerning the twenty-nine lectures given during the year, the churches record an attendance of approximately thirty-five thousand, and the publication of an accurate account in some one of the metropolitan newspapers.

Increased attendance at the new church edifices in Memphis and in Ottawa, was recounted by the reading of their reports. In the former city the new building enabled the giving of four instead of two lectures during the year, and there are evidences of greater spiritual awakening. Location of the new structure in the latter city, the capital of the Dominion, was described as being in one of the principal residential quarters, and the building is constructed of cut limestone and faces on three streets. The leading newspaper, the *Ottawa Citizen*, was referred to as striving to emulate *The Christian Science Monitor* in standing for clean journalism, accepting no advertisements for objectionable trade solicitations.

Individual testimonies from the audience of conditions in the field were given prior to the closing hymn, the communion doxology from "The Christian Science Hymnal." They included greetings from White Plains, N. Y.; Norfolk, Va.; Sydney, Australia; Portland, Ore.; the University of California; Hartford, Conn.; Lincoln, Neb.; Baltimore, Md.; Toronto, Canada; Lynn, Mass.; the state of New Mexico; southern California; Switzerland; Fort Wayne, Ind.; and Dallas, Texas.

Mr. Dixon, in retiring from the office of president, introduced his successor as follows:—

I remember years ago, when we were arranging for our first thanksgiving service in London, we chose the 1st of January. Later we wrote and told Mrs. Eddy what we had done. It was then she sent us the letter, printed in the last

Copyright, 1914, by The Christian Science Publishing Society

Digitized by Google

of her published books, in which she spoke of our choice as "a step in advance" (The First Church of Christ, Scientist, and Miscellany, p. 252). I want to take today the "hint" itself she spoke of in the same letter, and to dwell rather on the future of the movement than on the past.

I have no doubt that the last year has been the most successful in the history of the movement, simply because it has been the last, and that the next will be even more successful, simply because it will be the next. It is inevitable that this should be the case, because as every day Science and Health is read more often and by more people, the human mind is permeated more and more with Truth, with the effect that evil is increasingly seen to be unreal and impotent. It is for this very reason that it is the aim of Christian Scientists to give Mrs. Eddy's books more and more to the world, and in preparing the world to read them the value of the work of the distribution committees becomes ever more apparent.

It would be impossible to exaggerate the importance of the work these committees are accomplishing. They are placing the publications of the Publishing House in daily increasing numbers in the public's hands. Now the aim of all these publications is ultimately to interest the readers in Mrs. Eddy's writings, and in doing this no one of them, probably, is more efficacious than *The Christian Science Monitor*. *The Christian Science Monitor* is for this very reason in its way the most powerful instrument for good that Mrs. Eddy has placed in our hands. It finds its way where what are regarded as purely religious papers never could, and wherever it goes it brings that understanding of Christian Science which in the long run must interest its readers in the text-book.

I am not going to be guilty of telling The Mother Church what Mrs. Eddy meant by the *Monitor*, but I am going for a moment to endeavor to explain something of what it means to me. I believe that Mrs. Eddy saw in the *Monitor* something far vaster than a mere clean journal. I believe that, among other things, she has given us in it the means of welding the movement together throughout the universe. I think that in it she has given church-members something quite apart from their churches upon which they can unite in a common effort to build up and propagate something in which they may forget the smaller demands of their churches in the greater demands of the movement; something in which not only churches but districts may unite, forgetting local interests in world-wide interests; something in which country may unite with country, and continent with continent, in a common effort to bring about the federation of mankind. This federation will be achieved as men become loyal to one another owing to their common loyalty to Truth, through the reading of Science and Health. In this way the *Monitor* will play its part in fulfilling the words of the Moabitish Ruth when nation shall say to nation, "Thy people shall be my people, and thy God my God."

In working out this scheme of the new order the president of The Mother Church plays his part. He plays it silently and unobtrusively, but he plays it efficaciously just in proportion as he understands Mrs. Eddy's teaching. It is for this reason that I believe the new president of The Mother Church, Mr. Lathrop, will play his part efficaciously. His life has been given up to the effort to demonstrate Christian Science, and he has been loyal to our great Leader and to her conception, because he has been loyal to Truth. He has lived and worked like a Christian Scientist, and when I say that, I do not know what I can add to his praise. His efforts remind me of the saying of a very famous Englishman, that he hoped to be remembered as the man who had tried to do his duty. Mr. Lathrop has tried, and tried persistently, to do his duty, with the result that he has run his race after the manner of that great simile borrowed by the apostle Paul from the Isthmian games, when he was living in that hired house in Corinth. You know how he described the great foot-race, which it was the aim of every Greek to win. The prize of that race was the crown of withered parsley, but the crown of the Christian's race, Paul declared, was an incorruptible one. He describes the runner racing along the track, never troubling himself to look behind him for those following, never wasting his energy by even a glance to the right or to the left, but pressing steadily toward the mark, to gain that incorruptible crown which is "the prize of the high calling of God in Christ Jesus."

Mr. Lathrop responded as follows:—

I am grateful for the honor of holding the office of president of The Mother Church. In looking over this large assembly of earnest Christian Scientists gathered here from all sections of the globe, I am reminded of, and am tempted lovingly to contrast this year's quiet, composed gathering with, the corresponding assemblies of twelve and fifteen years ago, when Christian Scientists, in childlike and joyous expectancy, would flock to Boston in large numbers, and with zeal and enthusiasm would usually sweep all before them. Taking partial possession of trains, steamboats, and hotels, they would nightly hold impromptu testimonial meetings, make corridors of hotels resound with laughter and greetings, and generally be wrapped in an atmosphere of excitement and confusion which seldom resulted in the real blessing anticipated.

Today these conditions are entirely changed. The membership of The Mother Church has steadily increased, and keeping pace with this sound growth, has grown the understanding and the good judgment of Christian Scientists. This substantial progress in thought augurs well for the present and the future of our beloved cause. It can be said that everywhere among the members, in large and small Christian Science churches, is observed a more resolute looking to and dependence upon the one Mind, divine Principle, for guidance, rather than upon the fallacious opinions of personal sense or mortal personality. But attention should be called to two dangerous rocks in the pathway of Christian Scientists which would effectually block our progress, namely, the human ambition to sit on the Lord's right or left hand, that is, to be first, and the subtle temptation to mix Spirit and matter in the healing practice. May these danger places early be discerned and safely passed. The urgent need that physical cures be performed more quickly and wholly, should awaken Christian Scientists to the imperative necessity of living "under the constant pressure of the apostolic command to come out from the material world and be separate," for, as our Leader elsewhere says, "only through radical reliance on Truth can scientific healing power be realized" (Science and Health, pp. 451, 167).

There is today much to rejoice the hearts of the faithful followers of Mary Baker Eddy, the loyal disciples of our one Lord and Saviour Christ Jesus. The growth in the mental poise, unity, and strength of Christian Scientists is necessarily made manifest in manifold new works, which, built upon this spiritual rock of self-abnegation, are as promising and enduring as the spiritual idea which produced them. These works are to be seen in Boston and the world over. We do not need to be retold, but we joyously gather here again today to behold these fruits, and to find that they are most encouraging and good.

The future of Christian Science is auspicious as never before. This true "building of God, . . . not made with hands," brought to light in this age by our beloved Leader,

Digitized by Google

whose foundation she has so securely laid, the care and wisdom exercised by our tried and trusted Board of Directors in watching that this structure be safeguarded in its purity and honesty against all attacks from impersonal evil, irresponsible and impotent,—all this is an awakening inspiration to the universal field of Christian Science, and should arouse in every remote and near member a deeper consecration, a more active demonstration, a more intelligent and constant watchfulness, a saner and more loving unity, and a real rock-ribbed loyalty against which the waves of self-destroying evil will ever beat in vain.

The Treasurer's Report

By Mr. Dickey:—

General Fund: Cash on hand June 1, 1914, $72,731.86. Expenditures from June 1, 1913, to June 1, 1914, $401,023.65. This item of expense includes $15,000 paid for the purchase of Pleasant View from the executor of Mrs. Eddy's estate; $20,000 on account of deferred payment on park property; also the sum of $152,000 which was transferred from the general fund to the Publishing House Building Fund. The present indebtedness of the church amounts to $100,000, which is the balance not yet due on the real estate purchased for the park property in front of the church.

Publishing House Building Fund: Balance on hand June 1, 1913, $715.16. The total receipts for the building fund from June 1, 1913, to June 1, 1914, amount to $155,800.95. Of this amount, $3,688.49 was contributed by Christian Scientists in the field. The sum of $152,000 was transferred from the general fund to the building fund, and the interest from the bank, amounting to $112.46, brings the total receipts to $156,516.11.

The expenditures on the Publishing House Extension from June 1, 1913, to June 1, 1914, amount to $154,867.67, leaving a building fund balance on hand June 1, 1914, of $1,648.44. It will be seen that the church has been able to erect the present extension to the Publishing House at a cost, to date, of $154,867.67, without any assistance from the field, with the exception of $3,688.49 above referred to.

Contributions to the fund for a memorial to Mrs. Eddy received since June 2, 1911, including $1,570.41 interest received from banks, amount altogether to $71,649.66. There has been expended out of this fund by the directors the sum of $4,147.81. This amount was used in procuring nine different designs and models for the memorial, which leaves on hand today in the Memorial fund the sum of $67,501.85. The final selection of the design for the memorial has not yet been made.

The Clerk's Report

By Mr. Dittemore:—

"Growth," our Leader has declared, "is the eternal mandate of Mind" (Science and Health, p. 520). Christian Scientists have grown and outgrown during the past year, which has been but a period of unfoldment, and the Christian Science movement has reflected this individual development with the result that we have surpassed the records of all previous years.

Notwithstanding the helpful indications throughout the field of greater care and conservatism in approving applicants for membership with The Mother Church, the increase during the past year has exceeded the number elected in any previous year of our history. It seems important, however, again to recall the fact that the right to approve or countersign applications for membership with The Mother Church is a sacred trust, and one in which our action must be free from every personal consideration and governed alone by divine guidance. Each new member either weakens or strengthens our structure. Therefore, let us be sure that our material—the conditions of consciousness with which we are building—is capable of being "fitly joined together," according to the admonition of St. Paul.

The increase in new organizations has been satisfactory, and reports have been received from a number of fields where organizations have been consolidated, with the result that greater strength and vitality have been secured. Included in the countries where new churches and societies have been formed during the year are Alaska, England, Scotland, Switzerland, Australia, New Zealand, China, and South Africa.

Christian Science lectures have been attended during the past twelve months by about one million persons, the increase over the estimated attendance of last year being approximately one hundred thousand. A number of this year's lectures have been delivered in localities where the subject of Christian Science has never been publicly presented before. Lectures have also been delivered during the year in France and Switzerland in the French language, and in Germany and Switzerland in the German language, the results from which have been most gratifying.

Although local in its immediate effects, members of The Mother Church will be interested to know that over three hundred thousand pieces of Christian Science literature have been distributed in the metropolitan district of Boston, much of which has gone aboard ships sailing from Boston to every corner of the earth.

To sum up the whole situation, the onward march of Christian Science has been evidenced by undiminished strength in every department of The Mother Church and its branches and by unsurpassed loyalty and devotion among its members. We will soon enter upon the fiftieth year of the history of Christian Science—the history of the children of Israel of this age—and may this fiftieth year prove to be for the whole world truly a year of "jubilee." May the spirit of Christian Science so fill the consciousness of the members of The Mother Church during the coming year that they shall fulfil God's demand, as did our forefathers in ages past, by proclaiming "liberty throughout all the land unto all the inhabitants thereof," with those "signs following" which attest the divine mission of Christian Science.

Mr. Neal, chairman of the Trustees under the will of Mrs. Eddy, read the following statement:—

The Trustees under the will of Mary Baker Eddy, whose appointment and confirmation by the courts of New Hampshire took place a few months ago, have received substantially all of the property, the income of which Mrs. Eddy in her will provided should be used for "more effectually promoting and extending the religion of Christian Science as taught by" her. In addition to this general provision named in her will, her Trustees are especially fortunate in the possession of documents more specifically indicating the channels through which to accomplish the purposes intended. Final plans have not yet been perfected, but the principal lines of activity will be as follows:—

1. To contribute toward the expense of lectures given by Christian Science organizations outside the United States, Canada, and Great Britain.

2. To contribute toward the ever-increasing distribution of authorized Christian Science literature throughout the world.

3. To contribute toward the establishment and maintenance of circulating or lending libraries of authorized Chris-

Digitized by Google

tian Science literature in connection with Christian Science churches, societies, reading-rooms, and Sunday schools.

4. To assist, in so far as is possible and practicable, in building Christian Science church edifices.

The Trustees are now engaged in obtaining information which will enable them to work out detailed plans for the furtherance of these objects. When these plans are more definitely formulated, further information will be given to the field.

Why do Christian Scientists go to Church?

GEORGE H. MOORE

THE active campaign recently waged by the Protestant churches of the United States in furtherance of an enlarged church attendance, has called wide attention, by way of contrast, to the satisfying nature of the Christian Science church service. It has also aroused much serious inquiry as to just why, without the lure of personal preaching, the charm of ritual, music, or other adventitious aids, the problem of a full church attendance is to Christian Scientists no problem at all. This is a fair question which deserves cordial recognition, and the attempt to answer it may not be without value to those of us who enjoy the Christian Science service but who have not stopped to analyze the secret of its power.

That the problem of church attendance and support is not a local one, is evident from discussions appearing from time to time in the foreign reviews. A very frank clergyman discusses in the *Hibbert Journal* (January, 1914) the question, "Why has the Church of England failed?" After eliminating as unimportant the "mental unrest" and unbelief born of "current scientific and intellectual movements," he reduces his analysis of the causes underlying non-support of church services to a sort of "spiritual slackness" which has taken possession of its communicants, due to their greater absorption in so-called "temporal pursuits and enjoyments."

Without question, the church has lost its ancient hold on the minds of men as a divine arbiter, having in its keeping the keys of the kingdom. It is, however, or should be, taking its true place as a rallying ground for spiritual cooperation and culture, a radiating center of religious inspiration and comfort. The responsibility of the individual for his own spiritual estate and vision is taking its rightful place, which was formerly usurped by ecclesiastical authority and dogma. The modern man accepts this responsibility and chooses his own way of meeting it. As to whether he dawdles along the paths of least resistance, or exerts himself on the heights of spiritual aspiration and strong desire for self-betterment, depends entirely on the quality of his own moral fiber. If a chair by the fireside, with slippers and a book, makes a stronger appeal on a man's affection than the inspiration of the church service, then the fireside wins the day. If material comfort is of more concern to one than spiritual culture, then church attendance and church interests must suffer. Unless, on the other hand, the church has a message to offer which is peculiarly its own, a message manifestly effective and inviting, it is falling lamentably short of fulfilling its mission.

It is not safe to assume that either the church service in itself alone, or the partizan devotion of its participants, wholly explains the large attendance at Christian Science churches. Both of these elements play their part and contribute each to the other. That this service has inherent and distinctive spiritual power is an unquestioned fact to those familiar with its appeal. Its inspiration is not in any degree based on the capricious magnetism of a personal preacher or reader, on intellectual curiosity in the theme to be presented, or on expectancy of a spasmodic, personally aroused sense of spiritual aspiration. It is based in very large degree on the scientifically coordinating and uplifting power of united spiritual thought.

The Christian Science Lesson-Sermon is not new to its listeners and has in it no element of intellectual surprise. It has been studied time and again through the week by most of its hearers, and every statement is familiar. Its truth has been in varying degree understood and applied. All around the globe, in hundreds of the great centers of population, in countless isolated homes, and by numberless individuals alone on the plains, high in the mountains, or adrift on the seas, the same Lesson has been absorbed through the week, gathering spiritual momentum in the thoughts and lives of its students. As the Sunday service begins, this thought finds united expression not alone in the simple reading of the responses, but in the active mental realization of thousands of listeners. As one time-zone closes its reading of the Lesson, the next zone begins, and around the earth the divine impulse sweeps, uniting in one thought, one healing influence, its myriads of hearers, of literally all races and climes.

Mrs. Eddy has said, "The 'still, small voice' of scientific thought reaches over continent and ocean to the globe's remotest bound" (Science and Health, p. 559). Christian Scientists know and appreciate the tremendous cumulative power of right thinking, the appallingly self-destructive effect of wrong thinking. They know that in their realization of the Principle expressed in the Lesson-Sermons they are reflecting an influence of infinite scope, sweeping through time as it does through space, transcending both, that it may bring in the new day of God's kingdom on earth. Strangers wholly unfamiliar with its cause bear witness to the restful, uplifting effect of the Christian Science church service. The healing of prejudice and fear, of sin and sickness, which results constantly from its reading, bears evidence that this service is both efficacious and "divinely authorized," as stated in the Explanatory Note of the *Quarterly*. It is not its form alone, simple and beautiful though this is; not alone its textual expression, although this furnishes endless variety and freshness; it is not alone its logical appeal, direct and convincing as this is, nor any elocutionary charm of the reading, unaffected and unadorned as this generally is and should be,—its power is all this, and more. Every Christian Science service is a world sermon, a world treatment, rendering less tenable, less convincing, the persuasions of ignorance and plausible error, less permanent the conventions of evil and human limitation.

The hold of Christian Science on the minds of its students is due to knowledge of its comprehensive and fundamental nature. The Christian Scientist knows that he cannot accept or set up standards of thought and action at variance with the basic law of Christian Science, and at the same time maintain harmony in his living, any more than he can set up a multiplication table of his own and maintain business relations with his fellows. The law that good is self-perpetuating and therefore eternal, that evil is self-destructive and therefore temporary, enters into the very fiber of his daily thought and work. No segment of his life can be set apart from its influence. Spiritual culture, the understanding and application of spiritual law, becomes therefore the chief concern of his life, because on it everything else depends,—his business success, his physical health, his mental peace. To the Christian Scientist, "spiritual slackness" means nothing less than mental, moral, and physical deterioration; whereas spiritual thrift underlies and conserves all that is desirable, permanent, and good.

Going to church is to the Christian Scientist not a duty patiently endured; it is the assertion of his identity of interest with the greatest force in the world. It is rest, reenforcement of spiritual vitality, the primary opportunity of the day to which all else is secondary. No Christian Scientist goes to church merely to salve his conscience or conserve his respectability; he goes because he wants to go. He goes knowing that if he does not share mentally in the thought of the church service, there is no reason why he should go through the empty farce of mere physical attendance. He goes knowing that he profits by the service in proportion to his understanding of its meaning, mental participation in its rendering, and practical demonstration of its application. He knows or may know, all through the week preceding, that in preliminary study of the Sunday Lesson to realize its meaning, power, and purpose, he is doing definite constructive work in forwarding the cause of Christian Science, and that all over the world thousands upon thousands are working with him in helping to bring nearer to the thoughts of men the presence of the kingdom of God on earth.

Mrs. Eddy has made clear the unique importance of the Lesson-Sermon, characterizing it as "a lesson on which the prosperity of Christian Science largely depends" (Manual, Art. III, Sect. 1). That we should come to this service with single and devoted purpose, she has made clear in the by-law which requires that "the prayers in Christian Science churches shall be offered for the congregations collectively and exclusively" (Art. VIII, Sect. 5).

Critics of Christian Science are eager to explain the large attendance at our services as due largely to their novelty and to the human zest in promulgating anything that is distinctly new. Such shallow reasoning fails entirely to reach the heart of the matter, and applies if at all to a negligible percentage of the adherents of this church. If it were possible for church attendance to become either a mere habit or a burdensome duty to a Christian Scientist, rather than a spiritual delight and privilege, that day would initiate a sad decline of spiritual growth which would bode only ill to him and to the cause to which we owe so much.

Uses of Adversity

R. EDDY MATHEWS

WHY is discord? we have often asked ourselves in extremity. Why could not all suffering have been left out of mortal existence and life made a path of roses? Answers to this question are available in abundance in the Bible, and in Mrs. Eddy's writings as well. "We need 'Christ, and him crucified,'" she tells us. "We must have trials and self-denials, as well as joys and victories, until all error is destroyed." "Better the suffering which awakens mortal mind from its fleshly dream, than the false pleasures which tend to perpetuate this dream" (Science and Health, pp. 39, 196).

Causation, we learn, is in Mind, not in matter. All discord, to mortal sense a reality, originates in mortal mind, so our efforts toward eradicating discord should deal with this mental cause, not with material effects, whether the condition be physical suffering, sin, sorrow, or financial lack. If we could destroy pain with drugs; if we could overcome poverty merely by getting money; if we could find balm for grief in material pleasures; if we could atone for sin by doing penance,—by none of these processes could we experience healing. The cause of the discord being mental, the remedy must be Mind, the healing being accomplished only through a reformation in consciousness.

The purpose of healing should be, not merely to restore physical ease by banishing pain, not merely to meet financial need by getting money, or to forget grief in pleasure-seeking, but rather to correct the mental state which has permitted these errors to seem real; and when this has been done the healing will be accomplished and the discords will vanish. If one has no other desire in seeking healing than to restore bodily comfort, he would be more consistent to employ material remedies than to seek ease of body through mental processes. The constant aim should be to purify thought, to reflect more of God.

Again, we are told by our Leader that "mortals, if at ease in so-called existence, are in their native element of error, and must become *dis-eased*, disquieted, before error is annihilated" (Unity of Good, p. 58). Were it not for the discords of mortal existence, what would there be to urge us to forsake that existence for a higher, spiritual life, and to spur us to spiritual endeavor? The apparent presence of discord is a signal to us that something is wrong in consciousness. When that signal has been sufficiently heeded, its usefulness thereby terminated, it will disappear.

When the locomotive engineer sees the semaphore signaling his train to stop, or the red light shining above the switch-target as a warning that the track is not clear ahead, he stops his train. Does he wrench the semaphore arm to the "clear" position, or twist the lantern so as to show the green lens, and then proceed on his way assured that the obstacle to the train's progress has been removed? No. He investigates to learn the reason for the danger-signals. When the cause is ascertained and removed, the signals are changed by the authorities to whom is entrusted the right of way and the guidance of traffic. The engineer then moves ahead, knowing the truth of the situation, confident in his safety, and grateful for the signals that caused him to stop to investigate before plunging into the darkness and possible catastrophe.

On the skating-pond in the city park a danger sign is displayed when the ice is too thin for safety. Does removal of the sign by a group of wistful small boys remove the danger? No. The custodians of the pond will remove the sign when the ice has become safe. The skaters will then be permitted to enjoy their pastime in confidence, thankful that the authorities are jealous of the public welfare. When the musician has sounded a discordant note in striking a chord, harmony is restored by striking the right note, not by tuning up the wrong note in an attempt to make it harmonize in that particular chord.

So it is with all our mortal discords; they are invariably danger signals. A sick body indicates sick thoughts; poverty hints impoverished thoughts, or perhaps lack of love or some other limitation in consciousness; sinful habits mean sinful thoughts; grief tells of misplaced affection, and so on. There are signals of discord for every violation of the ten commandments. Obviously, then, there can be no healing until the mental cause is reached and the remedy there applied. If we, ostrich-like, hide our heads in the sand of materiality and think we have thereby protected ourselves from error's attack, we may be thankful that we are not preserved in our delusion. We have loving assurance that the omnipotent remedy for every discord, divine Mind, is ever present,—ours if we will but make it ours. The course is merely to open wide our consciousness for its reception and exclude all wrong concepts. Instead of wishing away discord, then, let us be thankful for the signals which awaken us to the demands of Truth, also for the exacting price of harmony demanded by our loving Father, and rejoice that we can say with Shakespeare, "Sweet are the uses of adversity."

Selected Articles

[Frederick Dixon in *Camberley News*, Aldershot, England]

A correspondent who writes on the subject of "Healing by Suggestion," puts one phase of such healing quite succinctly. He is, of course, entitled to explain his point of view, and I should not dream of intervening again in the discussion were it not that in advising your readers, as he does most generously, to "proceed logically, as Christian Scientists are trying to do," he gives the unwary unwittingly to think that the manipulation of thoughts, in the manner explained by him, is Christian Science. In these circumstances I am sure that you will permit me to point out that the attempt to neutralize or exterminate one thought by another thought is a process of mental suggestion, and constitutes a fundamental misunderstanding of Christian Science. You do not, for instance, attempt to displace a thought of sorrow with a thought of joy; that, to the Christian Scientist, is simply substituting one human belief for another, and is, in addition, mere jargon. What you really do is to deny the actual power and reality of evil through a metaphysical realization of the omnipresence and omnipotence of God, good, which is quite another thing. You do not, in a word, give a person a thought of joy, but, in the words of Mrs. Eddy on page 261 of Science and Health, you "hold thought steadfastly to the enduring, the good, and the true."

In the exact proportion in which a man succeeds in this attempt to let hold of the Christ, he will gain the Mind of Christ. This does not consist in merely holding thoughts of good, it consists of what the apostle terms, in a consistently [illegible] a state of knowledge of God. It is not enough [illegible] in order to demonstrate Christian Science to hold fast to a form of account of the enduring, [illegible] A [illegible] who supposed him to be a lawyer's cook, because of his [illegible] would be hopelessly [illegible] In the same way, a man [illegible] the [illegible] of the [illegible] of [illegible] and yet, [illegible] of the [illegible] of [illegible] [illegible] of the [illegible] of [illegible] [illegible] [illegible]

has given to the world an interpretation of the Bible which brings salvation from disease as well as from sin, a preacher at McKinney denounces her teachings; but the fruits of Christian Science show that his statements were prompted presumably by ignorance of the facts.

If it is unscientific to understand and to teach that God is infinite good and "a very present help in trouble," to know Him "the only true God," and Jesus Christ whom He sent, then Christian Science is unscientific. Science is knowledge of fundamental truth, and hence is demonstrable. Christian Science is scientific because its basis is the law of God and because it is demonstrable; it is Christian because it takes the teachings of Jesus the Christ as its authority, and through its understanding of these teachings it is fulfilling in the world today the mission Jesus delivered to his disciples: "As ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils."

The critic seems much disturbed because Mrs. Eddy affirms that the demonstrable spiritual truths expressed in "Science and Health with Key to the Scriptures" are not human opinions. He may perhaps not be aware of the fact that before this text-book of Christian Science was written, Mrs. Eddy submitted her ideas of God and His laws to broad, practical tests in the healing of hundreds of cases of sickness and sin. She felt it her duty to give to the world a statement of the Principle through the application of which these healings had been accomplished, in order that all mankind in succeeding generations might have the benefit of her experience of the unfailing power of God's law to heal both sickness and sin.

By way of refutation of the clergyman's statement that "love as a concrete fact, the love of the Samaritan, finds no place in the annals of Christian Science literature," we beg to submit one of many such quotations, which are to be found from beginning to end of Mrs. Eddy's writings: "Love cannot be a mere abstraction, or goodness without activity and power. As a human quality, the glorious significance of affection is more than words: it is the tender, unselfish deed done in secret; the silent, ceaseless prayer; the self-forgetful heart that overflows; the veiled form stealing on an errand of mercy, out of a side door; the little feet tripping along the sidewalk; the gentle hand opening the door that turns toward want and woe, sickness and sorrow, and thus lighting the dark places of earth" (Miscellaneous Writings, p. 250).

✧

[Editorial in *The Spectator*, Portland, Ore.]

That public interest in Christian Science is increasing daily, is proved by the fact that while a year or so ago one lecture sufficed to satisfy the curiosity of all the people who desired to learn of this religious movement, it is now necessary for the speakers to give three lectures. Clarence W. Chadwick, a very able and interesting expounder of the doctrines of Christian Science, delivered three lectures to crowds that on each occasion quite filled First Church of Christ, Scientist.

Christian Science has a peculiar appeal for the people, and its influence is spreading to every corner of the country. It seems to be a religion that satisfies the intellectual and spiritual longings of its followers. And, too, those who believe in it aver its efficacy as a guard against and remover of physical ailment. So far as the mere onlooker knows, it does this. But probably Christian Science is so rapidly gaining converts because of the mental exaltation enjoyed by its followers. The professors of the faith are a very cheerful lot of people, who have the ineffable happiness of thinking that they do not have to die to enjoy the delights of heaven. Some of us never permit ourselves fully to taste the happiness that we have here, through fear that it might spoil us for the joys we expect hereafter. The Christian Scientist seems to take a different view of the matter; he thinks that earth should be made as much like heaven as possible. There is bound to be a good deal of sunshine in a religion whose followers are determined to make this life all that we hope eternity may prove to be.

[W. C. Williams in *Baltimore* (Md.) *American*]

In a recent issue a correspondent claims that God intended His creatures to suffer pain. He contends that "pain is the most precious thing in the world," and that it is the "means God employs to bring us to Him." He quotes this passage from Hebrews to confirm his position: "Whom the Lord loveth he chasteneth." Our critic attributes to the word "chasten" an unwarranted meaning. He of course knows that it is derived from the Latin *castigare*, "to purify;" or in the text from Proverbs, "My son, despise not the chastening of the Lord," it may be rendered as "instruction."
